1-29-18

2018 STANDARD PLAN A62G

VERTICAL SECTION OF SPECIAL PRESSURE MANHOLE SHAFT

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS, INC. GREENBOOK COMMITTEE 1302 REV. 1998, 2009

PRESSURE MANHOLE SHAFT AND PRESSURE PLATE DETAIL 36" (914 mm) WITHOUT REDUCER

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 329-2 SHEET 1 OF 2

NOTES

1. THIS STRUCTURE MAY BE USED FOR HYDROSTATIC HEADS UP TO 25' (7.5 m) ABOVE THE PRESSURE PLATE.
2. 36" (914 mm) MANHOLE FRAME AND COVER PER SPPWC 633 SHALL BE USED.
3. REINFORCEMENT SHALL BE PER ASTM A 615, GRADE 40 AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN. HOOPS MAY BE ELECTRICALLY BUTT WELDED OR THE ENDS LAPPED 18" (450 mm).
4. THE MANHOLE SHAFT SHALL BE LOCATED ABOVE AND IN LINE WITH THE SIDE OF THE CONDUIT BELOW.
5. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC.
6. GASKET MATERIAL SHALL BE NEOPRENE (OR EQUAL) 1/16" (2 mm) THICK BY 1 1/4" (32 mm) WIDE.
7. BOLTS SHALL BE STAINLESS STEEL CONFORMING TO ASTM A 320 (ASTM A 320M), GRADE B8.
8. PRESSURE PLATE AND PRESSURE PLATE RING SHALL BE STEEL CONFORMING TO ASTM A 36 (ASTM A 36M) AND SHALL BE GALVANIZED. PLATES SHALL BE MARKED IN SETS AND A CHISELED ARROW STAMPED ON BOTH PLATES, AFTER DRILLING AND TAPPING, TO FACILITATE FIELD ASSEMBLY.
9. SEE CONTRACT SPECIFICATIONS FOR PHYSICAL REQUIREMENTS OF WATERSTOP.
10. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

    633 36" (914 mm) MANHOLE FRAME AND COVER
    635 STEEL STEP
    636 POLYPROPYLENE PLASTIC STEP

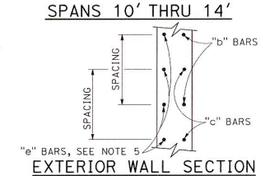
NOTES:



1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. For boxes with span or height or cover greater than those shown in tables, a special design is required.
3. Quantities are approximate and for design purposes only.
4. It is permissible to eliminate the 180° hooks on every other "e" bar.
5. "e" bars are at half spacing.
6. Provide paving notch when top is exposed and when pavement is concrete, and adjust quantities.
7. For design and details not shown, see Standard Plan D82.
8. This plan sheet may be used for multiple cell culverts by making necessary adjustments.
9. Soil pressures shown are factored per AASHTO LRFD and include soil weight of fill over box, self weight of box and live load where applicable.

CONTINGENCY PLAN
(DEFORMATION LIMITS AND CORRECTIVE ACTION)

A. DEFORMATION LIMITS IDENTIFIED HEREIN AS THRESHOLD VALUES, CONTRACTOR CORRECTIVE ACTION VALUES, AND PROJECT SHUTDOWN VALUES FOR VARIOUS FEATURES BEING MONITORED ARE PROVIDED IN TABLE 1, RESPONSE VALUES OF MEASURED DEFORMATION.
B. CONTRACTOR'S CORRECTIVE ACTIONS, AS REQUIRED HEREIN, SHALL BE APPROVED BY THE DEPARTMENT PRIOR TO IMPLEMENTATION.
C. WHEN ANY OF THOSE ESTABLISHED MONITORING POINT'S MEASUREMENT INDICATES MOVEMENT EQUALS TO 50 PERCENT OF THE SHUTDOWN VALUE HAS OCCURRED, THE THRESHOLD VALUE IS SAID TO HAVE BEEN REACHED. AT THIS TIME, THE CONTRACTOR SHALL MEET WITH THE DEPARTMENT TO DISCUSS HIS/HER CONSTRUCTION MEANS AND METHODS TO DETERMINE WHAT CHANGES, IF ANY, SHALL BE MADE TO BETTER CONTROL GROUND MOVEMENT AND PREVENT DEFORMATION OF MONITORED FEATURES. MEASUREMENTS SHALL BE REQUIRED EVERY 2–HOURS, UNLESS MORE STRINGENTLY SPECIFIED, UNTIL FIVE CONSECUTIVE WORKING DAYS OF READINGS OBSERVED BEING BELOW THE THRESHOLD VALUE.
D. WHEN ANY OF THOSE ESTABLISHED MONITORING POINT'S MEASUREMENT INDICATES MOVEMENT EQUALS TO 75 PERCENT OF THE SHUTDOWN VALUE HAS OCCURRED, CONTRACTORS CORRECTIVE ACTION VALUE IS SAID TO HAVE BEEN REACHED. AT THIS TIME, THE CONTRACTOR SHALL ACTIVELY CONTROL GROUND MOVEMENT IN ACCORDANCE WITH THE APPROVED PLAN TO PREVENT DEFORMATION BEYOND THE CONTRACTOR CORRECTIVE ACTION VALUE. MEASUREMENTS SHALL BE REQUIRED EVERY 2–HOURS, UNLESS MORE STRINGENTLY SPECIFIED, UNTIL FIVE CONSECUTIVE WORKING DAYS OF READINGS OBSERVED BEING BELOW THE THRESHOLD VALUE.
E. WHEN ANY OF THOSE ESTABLISHED MONITORING POINT'S MEASUREMENT INDICATES MOVEMENT EQUALS TO 100 PERCENT OF THE SHUTDOWN VALUE HAS OCCURRED, THE SHUTDOWN VALUE IS SAID TO HAVE BEEN REACHED. AT THIS TIME, THE CONTRACTOR SHALL STOP ALL EXCAVATION WORK IMMEDIATELY, AND SHALL CONTINUE IMPLEMENTING MEASURES TO PREVENT FURTHER DEFORMATIONS, AND SHALL MEET THE DEPARTMENT TO DEVELOP A PLAN OF ACTION BEFORE EXCAVATION WORK CAN BE RESUMED.

PROTECTION AND PLACEMENT

A. ALL INSTRUMENTS AND INSTRUMENTATION POINTS SHALL BE PROTECTED FROM DAMAGE.
B. ALL INSTRUMENTS AND INSTRUMENTATION POINT DAMAGE RESULTING FROM CONSTRUCTION OPERATIONS, WEATHER, TRAFFIC, OR VANDALISM SHALL BE REPAIRED OR REPLACED AND RE–INSTALLED AT NO ADDITIONAL COST PRIOR TO CONTINUING TUNNELING, OR AS REQUIRED BY THE DEPARTMENT.

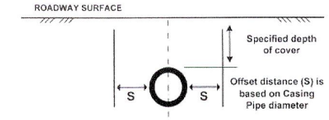
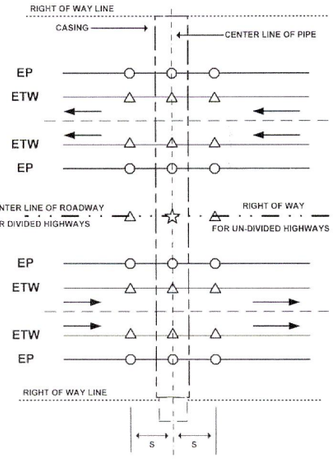
STATE OF CALIFORNIA - DEPARTMENT OF TRANSPORTATION
ENCROACHMENT PERMIT SURVEY GRID
TR-0151 (REV. 09/2006)



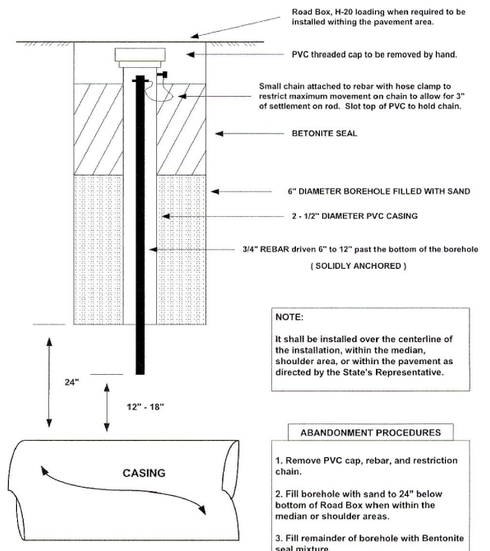
LEGEND:

- Octagon Data Points required when the diameter is < 8′.
- Octagon & Triangle Data Points required when the diameter is > 8′.
- Settlement Rod may be required when the diameter is > 5′. (Settlement Rod Detail is located in Appendix E of the Encroachment Permits Manual)
- EP — Edge of Pavement
- ETW — Edge of Travel Way (Fog line, Yellow Stripe, etc.)
- S — Offset Distance away from the pipe alignment, as follows:
  - 3′ for casing pipe diameters < 30″
  - 5′ for casing pipe diameters 30″ - 72″
  - 10′ for casing pipe diameters 72″ - 108″
  - 15′ for casing pipe diameters > 108″



NOTES:

Survey data is to be collected at the specific points along the casing alignment at the following times:



1. Prior to Start of Work.
2. Every two (2) hours continuously throughout the project.
3. Upon completion of the project.
4. Every two (2) months, during a six month period after the date of completion, and or As Required by the Department.

PROFILE

STATE OF CALIFORNIA - DEPARTMENT OF TRANSPORTATION
ENCROACHMENT PERMIT SETTLEMENT ROD DETAIL
TR-0152 (REV. 09/2006)

NOTE:

It shall be installed over the centerline of the installation, within the median, shoulder area, or within the pavement as directed by the State's Representative.

ABANDONMENT PROCEDURES

1. Remove PVC cap, rebar, and restriction chain.
2. Fill borehole with sand to 24" below bottom of Road Box when within the median or shoulder areas.
3. Fill remainder of borehole with Bentonite seal mixture.
4. Remove Road Box and back fill with an approved backfill.

NOTES:

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. Quantities are approximate and for design purposes only.
3. For boxes with span or height or cover greater than those shown in tables, a special design is required.
4. It is permissible to eliminate the 180° hooks on every other bar.
5. "e" bars are at half spacing (spans 10' - 14' only).
6. "a" bars are at half spacing (spans 10' - 14' only).
7. Provide paving notch when top is exposed and when pavement is concrete, and adjust quantities.
8. For design and details not shown, see Standard Plan D82.
9. For exposed top, provide #4 @ 12 each way, lap "c" bars 2'-0" or use full span length.
10. Soil pressures shown are factored per AASHTO LRFD and include soil weight of fill over box, self weight of box and live load where applicable.

MANHOLE SHAFT SAFETY LEDGE

USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 330–2 SHEET 1 OF 2

NOTES

1. MANHOLE SHAFT SAFETY LEDGE WILL BE NOTED ON THE PLANS WHEN REQUIRED. IT IS TO BE CONSTRUCTED WHEN DEPTH OF MANHOLE TO INVERT IS GREATER THAN 20' (6 m) AND MANHOLE SHAFT IS GREATER THAN 10' (3 m).
2. A SAFETY LEDGE SHALL NOT BE USED IF A PRESSURE MANHOLE IS REQUIRED.
3. STEPS SHALL CONFORM TO SPPWC 635 OR 636 AND SHALL BE ANCHORED 4" (100 mm) IN THE WALL OF THE STRUCTURE. STEPS SHALL BE PLACED TO MATCH THE SPACING OF THE MANHOLE SHAFT.
4. REINFORCEMENT SHALL BE PER ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300) AND SHALL TERMINATE 2" (50 mm) CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
5. GROUT HOLES, PIPE AND FITTINGS SHALL BE PROVIDED IN THE FLOOR SLAB. PRESSURE GROUTING SHALL BE USED TO FILL VOIDS AND TO SECURE UNIFORM BEARING. THE GROUT SHALL BE NEAT CEMENT GROUT AND GROUTING PRESSURES SHALL BE AS DETERMINED IN THE FIELD BY THE ENGINEER.
6. PIPE RAIL SHALL BE FABRICATED OF 1 1/4" (32 mm) STANDARD GALVANIZED PIPE COMPOSED OF TWO SECTIONS 7'–6" (2.25 m) & 18" (450 mm) IN LENGTH JOINED BY A GALVANIZED COUPLING. THE COUPLING SHALL BE THREADED A MINIMUM OF 2" (50 mm) ON EACH PIPE LENGTH.
7. ROOF AND FLOOR SLABS SHALL BE PRECAST AND KEYED FOR REINFORCED CONCRETE PIPE SECTIONS AS SHOWN. ALL JOINTS SHALL BE FILLED WITH CLASS C MORTAR AND NEATLY POINTED OR WIPED ON THE INSIDE.
8. 72" (1800 mm) RCP SHALL BE PROVIDED WITH TWO CIRCULAR CAGES OF REINFORCEMENT.
9. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

   324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
   326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
   635 STEEL STEP
   636 POLYPROPYLENE PLASTIC STEP

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION

PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1992 REV. 1996, 2009

MANHOLE PIPE-TO-PIPE
MAIN LINE ID=36" (900 mm) OR LARGER
USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION

STANDARD PLAN 320-2
SHEET 1 OF 4

NOTES

1. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'-10 1/2" (867 mm) FOR PAVED STREETS OR 3'-6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT MONOLITHIC SHAFT PER SECTION C-C AND DETAIL "N". SHAFT FOR ANY DEPTH OF MANHOLE MAY BE CONSTRUCTED PER SECTION C-C. WHEN DIAMETER D_1 IS 48" (1200 mm) OR LESS, CENTER OF SHAFT MAY BE LOCATED PER NOTE 2.
2. CENTER OF MANHOLE SHAFT SHALL BE LOCATED OVER CENTER LINE OF STORM DRAIN WHEN DIAMETER D_1 IS 48" (1200 mm) OR LESS, IN WHICH CASE PLACE E BARS SYMMETRICALLY AROUND SHAFT AT 45° WITH CENTERLINE AND OMIT J BARS.
3. L AND P SHALL HAVE THE FOLLOWING VALUES UNLESS OTHERWISE SHOWN ON THE PROJECT DRAWINGS:
   A. D_2=96" (2400 mm) OR LESS, L=5'-6" (1.7 m), P=5" (130 mm)
   B. D_2 OVER 96" (2400 mm), L=6'-0" (1.8 m), P=8" (210 mm)
   L MAY BE INCREASED OR LOCATION OF MANHOLE SHIFTED TO MEET PIPE ENDS. WHEN L GREATER THAN THAT SHOWN ABOVE IS SPECIFIED, D BARS SHALL BE CONTINUED 6" (150 mm) OC.
4. STATIONS OF MANHOLES SHOWN ON PLANS APPLY AT CENTERLINE OF SHAFT. ELEVATIONS ARE SHOWN AT CENTERLINE OF SHAFT AND REFER TO THE PROLONGED INVERT GRADE LINES.
5. REINFORCEMENT SHALL CONFORM TO ASTM A 615M, GRADE 300 (ASTM A 615, GRADE 40), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
6. FLOOR OF MANHOLE SHALL BE STEEL TROWELED TO SPRING LINE.
7. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
8. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN THE TABULAR VALUES FOR F SHOWN ON SHEET 2.
9. D BARS SHALL BE #4 (#13M) FOR D_2=39" (975 mm) OR LESS, #5 (#16M) FOR D_2= 42" (1050 mm) TO 84" (2100 mm) INCLUSIVE AND #6 (#19M) FOR D_2= 90" (2250 mm) OR OVER.
10. CENTERLINE OF INLET PIPE SHALL INTERSECT INSIDE FACE OF CONE AT SPRING LINE UNLESS OTHERWISE SHOWN.
11. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE INVERT.
12. THE FOLLOWING CRITERIA SHALL BE USED FOR THIS MANHOLE:
   A. MAIN LINE = 36" (900 mm) INSIDE DIAMETER OR LARGER, EXCEPT IF THE MAIN LINE RCP DOWNSTREAM OF MANHOLE IS 36" (900 mm) TO 42" (1050 mm) INSIDE DIAMETER AND THE MAIN LINE RCP UPSTREAM IS 33" (825 mm) OR LESS SPPWC 321 SHALL BE USED.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION
MANHOLE PIPE-TO-PIPE
MAIN LINE ID = 36" (900 mm) OR LARGER
STANDARD PLAN 320-2
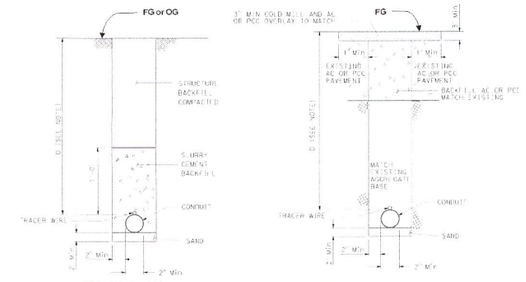
SHEET 2 OF 4



B. THE OUTSIDE DIAMETER OF THE LATERAL MUST BE LESS THAN OR EQUAL TO 1/2 THE INSIDE DIAMETER OF THE MAIN LINE. IF THE UPSTREAM AND DOWNSTREAM DIAMETERS OF THE MANHOLE ARE NOT THE SAME, THE GOVERNING INSIDE DIAMETER OF THE MAIN LINE SHALL BE CONSIDERED TO BE THAT WHERE THE EXTENDED CENTERLINE OF THE LATERAL ENTERS THE MANHOLE.
C. IN NO INSTANCE SHALL THE INSIDE DIAMETER OF THE LATERAL TO THE MANHOLE BE GREATER THAN 30" (750 mm).

13. MANHOLE FRAME AND COVER SHALL CONFORM TO SPPWC 630 UNLESS OTHERWISE SHOWN.
14. MANHOLE SHAFT SHALL CONFORM TO SPPWC 324 UNLESS OTHERWISE SHOWN.
15. WHERE A MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 326.
16. WHERE A PRESSURE MANHOLE SHAFT – WITH ECCENTRIC REDUCER IS SPECIFIED REFER TO SPPWC 328.
17. WHERE A PRESSURE MANHOLE SHAFT – 914 mm (36") WITHOUT REDUCER IS SPECIFIED REFER TO SPPWC 329.
18. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:
    324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
    326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
    328 PRESSURE MANHOLE SHAFT – WITH ECCENTRIC
    329 PRESSURE MANHOLE SHAFT 36" (914 mm) WITHOUT REDUCER
    630 24" (610 mm) MANHOLE FRAME AND COVER
    633 36" (914 mm) MANHOLE FRAME AND COVER
    635 STEEL STEP
    636 POLYPROPYLENE PLASTIC STEP

STATE OF CALIFORNIA - DEPARTMENT OF TRANSPORTATION
ENCROACHMENT PERMIT TRENCH DETAIL
TR-0153(Rev. 11/2019) Page 1 of 2

TYPICAL TRENCH DETAIL (NOT TO SCALE)

Notes: D - Depth of cover as identified & approved based on submitted plans.

FG - Finish Grade.

OG - Original Ground.

STATE OF CALIFORNIA - DEPARTMENT OF TRANSPORTATION
ENCROACHMENT PERMIT TRENCH DETAIL
TR-0153(Rev. 11/2019) Page 2 of 2

- **All work must be authorized by the encroachment permit, and/or as directed by the State's representative.**
- **A tracer wire must be placed on top of the conduit unless specified not to.**
- **Clearance between the trench wall and encroachment work less than 6 inches in width shall be a minimum of 2 inches. Clearance between the trench wall and encroachment work greater than 6 inches width shall be a minimum of 6 inches.**
- **When the trench width is less than 2' the backfill for subgrade must consist of either slurry cement or Controlled Low-Strength Material (CLSM).**
- **When trench width is greater than 2' compacted aggregate base may be used for backfill.**
- **Structure backfill must conform to Section 19-3.02C of the Standard Specifications.**
- **For trench located under unimproved surface, structure backfill can use the original soil. Soil must be compacted by mechanical means. Ponding, jetting or flooding are not allowed. Slurry cement backfill is optional at the discretion of the Caltrans District.**
- **Slurry cement backfill must conform to Section 19-3.02E of the Standard Specifications.**
- **Aggregate base shall conform to Section 26 of the Standard Specifications.**
- **CLSM must conform to Section 19-3.02G of the Standard Specifications. When CLSM is utilized the mix design and test results must be submitted to the State's representative. See Appendix H of the Encroachment Permits Manual for additional information.**
- **Cold planed surface and overlay shall be to the nearest lane line for the entire length of the trench/disturbed areas, and/or as directed by the State's representative.**
- **A paving notch ("T" Cut) shall be cold planed in exist asphalt concrete to a minimum width of 1.0' beyond each side of the trench and to a depth of 3" for the final layer of HMA.**
- **HMA or PCC to replace pavement section shall match existing pavement depth, unless directed otherwise by the State's representative.**
- **Hot mix asphalt must conform to Section 39 of the Standard Specifications.**
- **A tack coat of asphaltic emulsion conforming to Section 39-2.01C (3) (f) shall be applied.**
- **When the trench is within 4' of curb and gutter, additional cold planing may be required at the discretion of the State's representative.**
- **Pavement markings and/or striping removed or damaged during construction must be replaced as directed by the State's representative.**
- **Other trench related details are shown in Chapter 6 of the Encroachment Permits Manual as well as the Trenching and Shoring Manual. Both publications can be found on the State of California, Department of Transportation's website.**

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHT, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
3. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
4. STRUCTURE SHALL MEET AASHTO HS-20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 2', AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.
5. IF REQUIRED, PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.
6. CDS STRUCTURE SHALL BE PRECAST CONCRETE CONFORMING TO ASTM C-478 AND AASHTO LOAD FACTOR DESIGN METHOD.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE.
C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT INLET AND OUTLET PIPE(S). MATCH PIPE INVERTS WITH ELEVATIONS SHOWN. ALL PIPE CENTERLINES TO MATCH PIPE OPENING CENTERLINES.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

STRUCTURE WEIGHT
APPROXIMATE HEAVIEST PICK = 4000 LBS.
STRUCTURE IS DELIVERED IN 4 PIECES

MAX FOOTPRINT = Ø4'

CUT NO. 1: SAW THE TUBE AT AN ANGLE OF A/2 WITH THE TRANSVERSE PLANE. REVERSE ONE SECTION AND TAPE BOTH SECTIONS TOGETHER FORMING THE DEFLECTION ANGLE A.
CUT NO. 2: SAW THE TUBE LONGITUDINALLY REMOVING A STRIP 3.14 (D_2-D) WIDE ON THE SIDE OPPOSITE THE OPEN JOINT. BEND THE ENDS OF THE CUT TOGETHER AND INSERT THE TUBE IN THE PIPE.

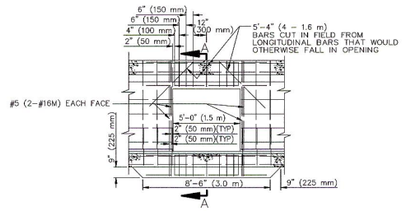
DETAIL "B"
TYPICAL JOINT FOR
REINFORCED CONCRETE PIPE

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS, INC. GREENBOOK COMMITTEE REV. 1996, 1997, 1999, 2009	CONCRETE COLLAR FOR RCB 12" (300 mm) THROUGH 72" (1800 mm)	STANDARD PLAN 380-4
	USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	SHEET 1 OF 2

NOTES

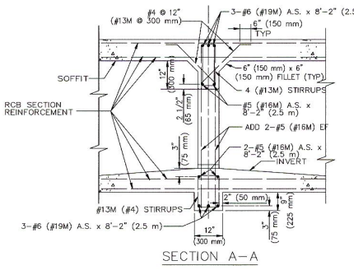
1. A CONCRETE COLLAR IS REQUIRED WHERE THE CHANGE IN GRADE EXCEEDS 10%.
2. FOR CURVE JOINTS (SEE DETAIL B, SHEET 1)
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS GREATER THAN 1" (25 mm), BUT IS LESS THAN 3" (75 mm) A CONCRETE COVER IS REQUIRED IN ACCORDANCE WITH SSPWC 306-1.2.4.
   IF THE EXTREME ENDS OF THE PIPE LEAVE A CLEAR SPACE THAT IS EQUAL TO OR GREATER THAN 3" (75 mm), BUT LESS THAN 6" (150 mm), A CONCRETE COLLAR IS REQUIRED. IF THE CLEAR SPACE IS 6" (150 mm) OR GREATER, A TRANSITION STRUCTURE IS REQUIRED.
3. CONCRETE COLLAR SHALL NOT BE USED FOR A SIZE CHANGE ON THE MAIN LINE.
4. CONNECTOR PIPES
   A. WHERE PIPES OF DIFFERENT DIAMETERS ARE JOINED WITH A CONCRETE COLLAR, L AND T SHALL BE THOSE OF THE LARGER PIPE. D=D_1 OR D_2, WHICHEVER IS GREATER.
   B. WHEN D_1 IS EQUAL TO OR LESS THAN D_2, JOIN INVERTS AND WHEN D_1 IS GREATER THAN D_2, JOIN SOFFITS.
5. FOR PIPE LARGER THAN 72" (1800 mm) SPECIAL COLLAR DETAILS ARE REQUIRED.
6. FOR PIPE SIZE NOT LISTED USE NEXT SIZE LARGER.
7. REINFORCEMENT SHALL CONFORM TO ASTM A 615 (A 615 M) GRADE 40 (300).
8. WHERE REINFORCING IS REQUIRED THE DIAMETER OF THE CIRCULAR TIES SHALL BE D+(2X WALL THICKNESS) + T.
9. REINFORCING SHALL BE USED WHERE THE PIPE DIAMETER IS GREATER THAN 21" (525 mm) AND ON ALL PIPES WHERE THE SPACES BETWEEN THE EXTREME OUTER ENDS IS 3" (75 mm) OR LARGER.

CIRCULAR TIES:



PIPE DIAMETER	NO. OF CIRCULAR TIES
21" (525 mm) OR LESS	3
24" (600 mm) TO 30" (750 mm)	3
33" (825 mm) TO 57" (1425 mm)	4
60" (1500 mm) TO 72" (1800 mm)	5

WHERE THE SPACE BETWEEN PIPE ENDS EXCEEDS 3" (75 mm), THE NUMBER OF CIRCULAR TIES SHALL BE INCREASED TO MAINTAIN AN APPROXIMATE SPACING OF 6" (150 mm) O.C.



10. WHERE THE PIPE IS 21" (525 mm) OR LESS IN DIAMETER AN INTERIOR FORM OF UNSEALED SONO-TUBE OR EQUAL SHALL BE USED TO PROVIDE A SMOOTH INTERIOR JOINT. THE PAPER FORM MAY BE LEFT IN PLACE (SEE DETAIL A). WHEN THE PIPE IS 24" (600 mm) OR LARGER A REMOVABLE INTERIOR FORM SHALL BE USED OR THE INTERIOR JOINT SHALL BE COMPLETELY FILLED WITH MORTAR AND NEATLY POINTED.

ELEVATION

SECTION A-A

NOTES

1. THIS STRUCTURE MAY BE USED WHERE:
   a. DEPTH OF COVER DOES NOT EXCEED 10' (3.0 m).
   b. CLEAR SPAN OF ONE BARREL DOES NOT EXCEED 12' (3.6 m). WHEN THESE LIMITS ARE EXCEEDED, WINDOW OPENING DETAILS SHALL BE AS SHOWN ON PLANS.
2. LONGITUDINAL BARS SHALL BE CUT IN THE FIELD 2" (50 mm) FROM OPENING.
3. ROUND ALL EDGES TO 2" (50 mm) RADIUS.
4. NO TRANSVERSE CONSTRUCTION JOINT SHALL BE PLACED WITHIN 5'-0" (1.5 m) OF WINDOW.

EXCERPT D: **STORM DRAIN IMPROVEMENT PLAN FOR PM-20714 SCHAEFER AVENUE FROM EUCLID AVENUE TO SULTANA AVENUE**

STORM DRAIN IMPROVEMENT PLAN

FOR PM 20714
SCHAEFER AVENUE
FROM EUCLID AVENUE TO SULTANA AVENUE
IN THE CITY OF ONTARIO

CITY OF ONTARIO GENERAL NOTES:

1. ALL WORK SHALL BE DONE IN STRICT CONFORMANCE WITH THE CURRENT CITY OF ONTARIO STANDARD SPECIFICATIONS AND STANDARD DRAWINGS AND CURRENT STANDARD SPECIFICATIONS AND STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION AND CALTRANS PERMIT UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
2. ANY CONTRACTOR PERFORMING WORK ON THIS PROJECT SHALL FAMILIARIZE HIMSELF/HERSELF WITH THE SITE AND SHALL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO EXISTING FACILITIES RESULTING DIRECTLY OR INDIRECTLY FROM HIS/HER OPERATIONS, WHETHER OR NOT THE FACILITY IS SHOWN ON THESE PLANS.
3. ALL OBSTRUCTIONS WITHIN THE AREA TO BE IMPROVED SHALL BE REMOVED AND/OR RELOCATED AT THE DIRECTION OF THE CITY ENGINEER. UTILITIES ARE TO BE RELOCATED BY THEIR RESPECTIVE OWNERS UNLESS NOTED OTHERWISE. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
4. UTILITY LINE LOCATIONS WERE TAKEN FROM AVAILABLE RECORD DATA AND WERE NOT LOCATED IN THE FIELD, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
5. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 6409(B) OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.
6. STATE LAW (SB 3019) REQUIRES THE CONTRACTOR TO CONTACT UNDERGROUND SERVICE ALERT AND OBTAIN AN IDENTIFICATION NUMBER PRIOR TO THE ISSUANCE OF CITY'S ENCROACHMENT PERMITS. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT AT 1-800-422-4133 A MINIMUM OF 48-HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITY.
7. PRIOR TO THE START OF ANY WORK THE CONTRACTOR SHALL OBTAIN A BUSINESS LICENSE FROM THE CITY OF ONTARIO. THE CONTRACTOR SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE ENGINEERING DEPARTMENT NO LESS THAN 48 HOURS PRIOR TO START OF ANY CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY.
8. THE CONTRACTOR SHALL OBTAIN A TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY. THE CONTRACTOR IS REFERRED TO SECTION 7-10.3 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
9. THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS, WHICH DURING HIS OPERATIONS HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED. RENEWAL OF TRAFFIC STRIPING AND MARKINGS SHALL BE DONE USING REFLECTIVE THERMO-PLASTIC MARKINGS IN CONFORMANCE WITH SECTION 84 & 85 OF THE CALTRANS STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER. ALL REGULATORY, WARNING, AND GUIDE SIGNS SHALL HAVE 3M DIAMOND, VIP GRADE SHEETING WITH SERIES 1160 PROTECTIVE OVERLAY FILM.
10. THE LAND SURVEYORS ACT, SECTION 8771 OF THE BUSINESS & PROFESSIONAL CODE, AND SECTIONS 732.5, 1492-5, 1810-5 OF THE STREETS AND HIGHWAY CODE REQUIRE THAT SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED.

    "IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR OTHERS PERFORMING THE CONSTRUCTION WORK TO RETAIN A QUALIFIED REGISTERED CIVIL ENGINEER AND/OR LICENSED LAND SURVEYOR PRIOR TO THE START OF CONSTRUCTION TO LOCATE, REFERENCE AND FILE THE NECESSARY CORNER RECORDS WITH THE COUNTY SURVEYOR'S OFFICE FOR SURVEY CONTROL POINTS/MONUMENTS THAT EXIST AS SHOWN ON RECORDED TRACT MAPS, PARCEL MAPS, RECORDS OF SURVEYS AND HIGHWAY MAPS, AND MAY BE DISTRIBUTED OR DAMAGED BY THE PROPOSED CONSTRUCTION"

    AFTER THE COMPLETION OF THE PROPOSED CONSTRUCTION, SAID MONUMENTS AND/OR CONTROL SURVEY POINTS SHALL BE RESET TO THE NEW SURFACE IN ACCORDANCE WITH THE CURRENT PROFESSIONAL LAND SURVEYING PRACTICES. CORNER RECORDS SHALL BE FILED WITH THE COUNTY SURVEYOR FOR ALL THE NEW MONUMENTS SET.
11. THE DEVELOPER SHALL PROVIDE THE CITY WITH A COMPLETED SET OF "AS BUILT", MYLAR DRAWINGS PRIOR TO THE FINAL INSPECTION.
12. A CITY ACCEPTED/APPROVED SET OF PLANS SHALL BE KEPT ON THE JOB SITE AT ALL TIMES.
13. A PRE-CONSTRUCTION MEETING SHALL OCCUR PRIOR TO CONSTRUCTION. ATTENDEES SHALL INCLUDE A CITY REPRESENTATIVE AND THE CONTRACTOR WHO WILL PERFORM THE WORK. "CUT-SHEETS" SHALL BE PROVIDED TO THE CITY AT THIS MEETING FOR ITS REVIEW.
14. CITY ACCEPTANCE OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST OF THE CITY INSPECTOR, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE CITY ENGINEER FOR REVIEW.
15. ANY REQUIRED RIGHT-OF-WAY OR EASEMENT SHALL BE DEDICATED TO AND ACCEPTED BY THE CITY PRIOR TO COMMENCEMENT OF CONSTRUCTION OF THE IMPROVEMENTS WITHIN THE REQUIRED RIGHT-OF-WAY OR EASEMENT.
16. WHERE UTILITIES NEED TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH A.P.W.A. STANDARD 224-1 UNLESS OTHERWISE INDICATED.
17. PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.
18. THE PIPE SHOWN HEREON SHALL BE INSTALLED IN ACCORDANCE WITH CASE III BEDDING AS SHOWN ON L.A.C.D.P.W. STANDARD 3080-2, UNLESS OTHERWISE SHOWN. "W" VALUE SHALL BE AS SPECIFIED ON L.A.C.D.P.W. STANDARD 3080-2 FOR CASE III BEDDING, NOTES 3 (A), 3 (B), AND 3 (C). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. ALL PROPOSED MODIFICATIONS TO THIS REQUIREMENT SHALL BE APPROVED BY THE CITY ENGINEER.
19. MINIMUM COVER OF STORM DRAIN MAIN SHALL BE 7 FEET FROM THE FINISHED SURFACE PER STANDARD DRAWING 1302-1304.
20. STORM DRAIN MAIN STATIONING IS PER PIPE CENTERLINE.
21. STREET CENTERLINE STATIONING IS PER THE STREET IMPROVEMENT PLANS AND PROVIDED FOR REFERENCE.
22. CONTRACTOR SHALL NOT BACKFILL TRENCH UNTIL THE CITY INSPECTOR HAS OBTAINED AS-BUILT STATIONING ON ALL STRUCTURES.
23. UPON COMPLETION OF CONSTRUCTION OF ALL STORM DRAIN LINES AND PRIOR TO PAVING, THE DEVELOPER SHALL HIRE A CITY APPROVED VIDEO COMPANY TO VIDEO TAPE THE PIPELINES. CITY SHALL REVIEW SAID VIDEOTAPES FOR POTENTIAL CONSTRUCTION DEFECTS PRIOR TO ACCEPTANCE OF THE PROJECT.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ONTARIO IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

LOTS 1, 2, 3, 16, 17, 18, 20, 21 AND 35 OF SECTION 18, TOWNSHIP 2 SOUTH, RANGE 7 WEST, SAN BERNARDINO BASE AND MERIDIAN, ACCORDING TO MAP OF SUBDIVISION OF PART OF RANCHO SANTA ANA DEL CHINO, AS PER PLAT RECORDED IN BOOK 6, PAGE 15, OF MAPS, RECORDS OF SAID COUNTY.

BASIS OF BEARING

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM (CCS83), ZONE 5, NORTH AMERICAN DATUM 1983 (NAD83) BASED LOCALLY ON CONTINUOUSLY OPERATING REFERENCE STATIONS (CORS) "LORS" AND "EWPP" (BASIS OF BEARINGS: S 81°29'26 E).

1	CONSTRUCT 90" RCP. TRENCH EXCAVATION & BACKFILL PER CITY OF ONTARIO STD. DRW. NO. 1306. D-LOAD PER PLAN. BEDDING PER LACDPW STD. 3080-3 OR APPROVED EQUAL.	399	LF
2	CONSTRUCT 72" RCP. TRENCH EXCAVATION & BACKFILL PER CITY OF ONTARIO STD. DRW. NO. 1306. D-LOAD PER PLAN. BEDDING PER LACDPW STD. 3080-3 OR APPROVED EQUAL.	1,010	LF
3	CONSTRUCT 48" RCP. TRENCH EXCAVATION & BACKFILL PER CITY OF ONTARIO STD. DRW. NO. 1306. D-LOAD PER PLAN. BEDDING PER LACDPW STD. 3080-3 OR APPROVED EQUAL.	73	LF
4	CONSTRUCT 24" RCP. TRENCH EXCAVATION & BACKFILL PER CITY OF ONTARIO STD. DRW. NO. 1306. D-LOAD PER PLAN. BEDDING PER LACDPW STD. 3080-3 OR APPROVED EQUAL.	92	LF
5	CONSTRUCT 18" RCP. TRENCH EXCAVATION & BACKFILL PER CITY OF ONTARIO STD. DRW. NO. 1306. D-LOAD PER PLAN. BEDDING PER LACDPW STD. 3080-3 OR APPROVED EQUAL.	218	LF
6	CONSTRUCT CATCH BASIN NO.2 PER CITY OF ONTARIO STD. DWG. 3003. "W" AND "V" PER PLAN	2	EA
7	CONSTRUCT LOCAL DEPRESSION FOR CATCH BASIN INLET PER CITY OF ONTARIO STD. DWG. 3005. REFER TO PERMIT PM 20714 STREET IMPROVEMENT PLANS FOR DETAILS.	2	EA
8	CONSTRUCT STORM DRAIN MANHOLE PER SPPWC STD. 320-2, DETAIL ON SHEET 8	4	EA
9	CONSTRUCT JUNCTION STRUCTURE PIPE TO PIPE PER SPPWC STD. 331-3, DETAIL ON SHEET 8	2	EA
10	CONSTRUCT BRICK AND MORTAR BULKHEAD PER DETAIL 10 ON SHEET 7	1	EA
11	CONSTRUCT 36" TEMPORARY CSP STANDPIPE (14 GUAGE) PER DETAIL 11 ON SHEET 6	5	EA
12	CONSTRUCT MANHOLE SAFETY LEDGE PER SPPWC 330-2, DETAIL ON SHEET 7	2	EA
13	INSTALL TEMPORARY CONCRETE BOTTOM TO CATCH BASIN, PER DETAIL 13 ON SHEET 7	2	EA
14	CONSTRUCT BIO CLEAN CONNECTOR PIPE SCREEN ON 12" PIPE PER DETAIL 14 ON SHEET 7	2	EA
15	INSTALL ALMETEK PLACARD "NO DUMPING, DRAINS TO OCEAN" OR EQUIVALENT	2	EA
16	CONSTRUCT MONOLITHIC CATCH BASIN CONNECTION PER SPPWC 308-2 PER DETAIL ON SHEET 8	2	EA
17	CONSTRUCT JUNCTION STRUCTURE PIPE TO PIPE PER SPPWC STD. 332-2, CASE 1, DETAIL ON SHEET 7	5	EA
18	REMOVE BRICK AND MORTAR PLUG	1	EA
19	CONSTRUCT 12" RCP. TRENCH EXCAVATION & BACKFILL PER CITY OF ONTARIO STD. DRW. NO. 1306. D-LOAD PER PLAN. BEDDING PER LACDPW STD. 3080-3 OR APPROVED EQUAL.	184	LF

CIVIL ENGINEERS NOTICE TO CONTRACTOR

1. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. TO THE BEST OF MY KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTION AND ANY MEASURES TO PROTECT THE UTILITIES AND STRUCTURES SHOWN AND OTHER LINES OR STRUCTURES NOT OF RECORD OR NOT SHOWN ON THESE PLANS, AND IS RESPONSIBLE FOR THE PROTECTION OF, AND ANY DAMAGE TO, THESE UTILITY LINES OR STRUCTURES.
2. THE CONTRACTOR AGREES THAT HE WILL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY AND NOT BE LIMITED TO A NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE OWNER AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER, OR ANY PUBLIC AGENCY.
3. THE ESTIMATES OF IMPROVEMENT QUANTITIES AS SHOWN HEREON ARE PROVIDED ONLY FOR THE PURPOSE OF SATISFYING DISTRICT PLAN INFORMATION REQUIREMENTS. THE CONTRACTOR SHALL PERFORM AN INDEPENDENT ESTIMATE OF ALL IMPROVEMENT QUANTITIES AND SHALL USE SAME AS A BASIS FOR HIS BID(S) AND CONTRACT(S).
4. CONTRACTOR TO VERIFY CLEARANCE AT ALL UTILITY CROSSINGS. IF INTERFERENCE OCCURS, OTHER THAN NOTED ON PLAN, CONTRACTOR SHALL CONTACT THE DESIGN ENGINEER FOR POSSIBLE REDESIGN. IF REDESIGN IS NOT FEASIBLE, CONTRACTOR TO RELOCATE UTILITY AT NO EXPENSE TO ENGINEER.
5. CONTRACTOR SHALL TAKE EXTREME CARE DURING STORM DRAIN CONSTRUCTION AND IS RESPONSIBLE FOR TRENCHING AND SHORING. CONTRACTOR SHALL SUBMIT A DETAILED SHORING PLAN PER SECTION 7-10.4.2.2 OF SPPWC AND A PERMIT FROM STATE DIVISION OF INDUSTRIAL SAFETY PRIOR TO COMMENCING WORK.
6. CONTRACTOR SHALL VERIFY PAVEMENT ELEVATION AT RIM PRIOR TO SETTING CONE.

ISO VIEW - U SHAPE

CPS U WITH 4.7 FT SCREEN LENGTH	
CPS HEIGHT (IN)	SCREEN FLOW (CFS)
12	6.67
18	12.26
24	18.88
30	26.40
36	34.71

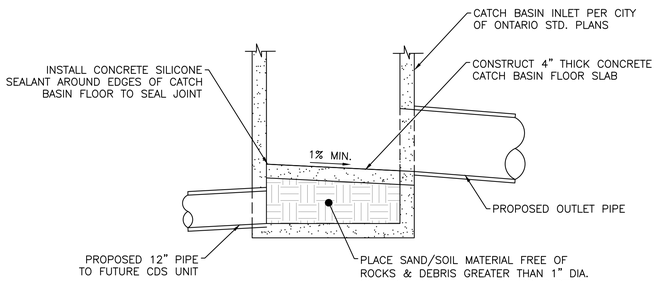
NOTE: BYPASS FLOW RATES VARY WITH VAULT DEPTH AND BYPASS HEIGHT. CONTACT BIO CLEAN FOR ADDITIONAL INFORMATION.

TOTAL SCREEN LENGTH ≈ 4.7'
SPAN LENGTH = 32"
COMPATIBLE WITH PIPES UP TO ø24"

TOP SECTION VIEW - U SHAPE

GENERAL NOTES

1. BIO CLEAN TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS, AND CAPACITIES ARE SUBJECT TO CHANGE.
3. THIS CPS UNIT IS DESIGNED FOR TREATMENT FLOWS THROUGH THE SCREEN. FLOWS GREATER THAN THE TREATMENT FLOW RATE WILL BYPASS OVER THE SCREEN.
4. A BYPASS LID IS REQUIRED WHEN THE OUTLET PIPE IS DIRECTLY BELOW THE CURB OPENING.
5. CPS IS COMPRISED OF 304 STAINLESS STEEL. THICKNESS IS 16 GAUGE. SCREEN PERFORATIONS ARE 5 MILLIMETERS IN DIAMETER. THE SCREEN AREA IS 51% OPEN SPACE.



INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS, AND INCIDENTALS REQUIRED TO INSTALL THE CPS UNIT AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURER'S SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. POSITION THE CPS SO IT IS EVENLY SPACED AROUND THE CONNECTOR PIPE, ENSURING A MIN. OF 4" SPACING AWAY FROM ANY CORNERS. SCREEN BOTTOM SHALL BE FLUSH WITH THE CATCH BASIN FLOOR, OR WITH GAPS NO GREATER THAN 5 MM.
3. IF A BYPASS LID IS REQUIRED, VERIFY THE BYPASS HEIGHT NEEDED AND MARK THAT LOCATION ON THE WALL DIRECTLY ABOVE THE BASE UPRIGHTS. LIFT THE LID IN PLACE AND MARK THE HOLE LOCATIONS FOR THE LID MOUNTING BRACKETS. SECURE THE LID WITH STAINLESS STEEL NUTS.

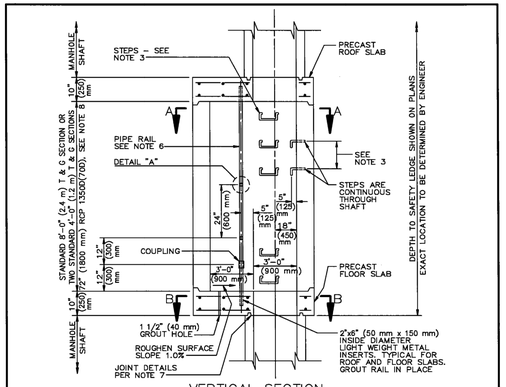
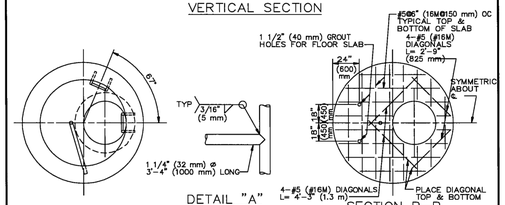
STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS, INC. GREENBOOK COMMITTEE 1994 REV. 1996, 2009	JUNCTION STRUCTURE – PIPE TO PIPE ID ≤ 24" (600 mm) USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	STANDARD PLAN 332–2 SHEET 1 OF 2

NOTES



CASE 1 AND CASE 2



1. IF ANGLE A IS LESS THAN 45° OR IF D IS LARGER THAN 24" (600 mm), THEN ANOTHER STANDARD STRUCTURE SHALL BE SPECIFIED.
2. THE OUTSIDE DIAMETER OF THE INLET PIPE SHALL NOT EXCEED 1/2 THE INSIDE DIAMETER OF THE MAIN LINE.
3. THE INLET PIPE SHALL ENTER THE MAIN LINE RADIALLY. IF THE INLET PIPE CANNOT ENTER RADIALLY, THEN ANOTHER STANDARD STRUCTURE SHALL BE SPECIFIED.
4. THE SIZE OF THE OPENING INTO THE MAIN LINE SHALL BE THE OUTSIDE DIAMETER OF THE INLET PIPE PLUS 1" (30 mm) MINIMUM TO 3" (75 mm) MAXIMUM.
5. ALL CONNECTOR PIPES FOR CASE 2 SHALL BE ENCASED IN CONCRETE IF LAID WITHIN THE MAIN LINE EXCAVATED TRENCH OR IF LAID ON FILL WHICH HAS NOT BEEN DENSIFIED.
6. BURN OR CHIP END OF CONNECTOR PIPE FLUSH WITH INNER SURFACE OF MAIN LINE. ROUND EDGE OF CONCRETE PIPE OR RCP.
7. ALL CSP AND FITTINGS SHALL BE GALVANIZED.
8. STATION SPECIFIED ON THE PLANS APPLIES AT THE INTERSECTION OF THE INSIDE WALL OF MAIN LINE AND THE CENTERLINE OF INLET PIPE.
9. CASE 2 SHALL NOT BE USED TO CONNECT TO THE FLOOR OF A GRATING CATCH BASIN WHERE THE GRATE WILL BE SUBJECT TO VEHICLE TRAFFIC.
10. FOR CASE 2, NOT MORE THAN 12' (3.5 m) OF INLET PIPE SHALL BE LOCATED WITHIN THE MAIN LINE EXCAVATED TRENCH.

CASE 3

11. CONNECTIONS TO PIPES 21" (525 mm) OR LESS IN DIAMETER WITHOUT JUNCTION STRUCTURES OR PRECAST Y BRANCHES SHALL BE MADE WITH SADDLES.
12. THE OUTSIDE DIAMETER OF THE INLET PIPE SHALL NOT EXCEED ONE–HALF THE INSIDE DIAMETER OF THE MAIN LINE.
13. TRIM OR CUT SADDLE TO FIT SNUGLY OVER THE OUTSIDE OF THE MAIN LINE SO ITS AXIS WILL BE ON THE LINE AND GRADE OF THE CONNECTOR PIPE.
14. THE OPENING INTO THE PIPE SHALL BE CUT AND TRIMMED TO FIT THE SADDLE SO THAT NO PART WILL PROJECT WITHIN THE BORE OF THE SADDLE PIPE.
15. THE CONNECTOR PIPE SHALL BE SUPPORTED AS SHOWN IN CASES 1 AND 2.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION	
JUNCTION STRUCTURE – PIPE TO PIPE (ID ≤ 24" (600 mm))	STANDARD PLAN 332–2 SHEET 2 OF 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS, INC. GREENBOOK COMMITTEE 1962 REV. 1996, 2009	MANHOLE SHAFT SAFETY LEDGE USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	STANDARD PLAN 330–2 SHEET 1 OF 2

NOTES

1. MANHOLE SHAFT SAFETY LEDGE WILL BE NOTED ON THE PLANS WHEN REQUIRED. IT IS TO BE CONSTRUCTED WHEN DEPTH OF MANHOLE TO INVERT IS GREATER THAN 20' (6 m) AND MANHOLE SHAFT IS GREATER THAN 10' (3 m).
2. A SAFETY LEDGE SHALL NOT BE USED IF A PRESSURE MANHOLE IS REQUIRED.
3. STEPS SHALL CONFORM TO SPPWC 635 OR 636 AND SHALL BE ANCHORED 4" (100 mm) IN THE WALL OF THE STRUCTURE. STEPS SHALL BE PLACED TO MATCH THE SPACING OF THE MANHOLE SHAFT.
4. REINFORCEMENT SHALL BE PER ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300) AND SHALL TERMINATE 2" (50 mm) CLEAR OF CONCRETE SURFACE UNLESS OTHERWISE SHOWN.
5. GROUT HOLES, PIPE AND FITTINGS SHALL BE PROVIDED IN THE FLOOR SLAB. PRESSURE GROUTING SHALL BE USED TO FILL VOIDS AND TO SECURE UNIFORM BEARING. THE GROUT SHALL BE NEAT CEMENT GROUT AND GROUTING PRESSURES SHALL BE AS DETERMINED IN THE FIELD BY THE ENGINEER.
6. PIPE RAIL SHALL BE FABRICATED OF 1 1/4" (32 mm) STANDARD GALVANIZED PIPE COMPOSED OF TWO SECTIONS 7'–6" (2.25 m) & 18" (450 mm) IN LENGTH JOINED BY A GALVANIZED COUPLING. THE COUPLING SHALL BE THREADED A MINIMUM OF 2" (50 mm) ON EACH PIPE LENGTH.
7. ROOF AND FLOOR SLABS SHALL BE PRECAST AND KEYED FOR REINFORCED CONCRETE PIPE SECTIONS AS SHOWN. ALL JOINTS SHALL BE FILLED WITH CLASS C MORTAR AND NEATLY POINTED OR WIPED ON THE INSIDE.
8. 72" (1800 mm) RCP SHALL BE PROVIDED WITH TWO CIRCULAR CAGES OF REINFORCEMENT.
9. THE FOLLOWING SPPWC ARE INCORPORATED HEREIN:

   324 MANHOLE SHAFT – WITH ECCENTRIC REDUCER
   326 MANHOLE SHAFT – 36" (900 mm) WITHOUT REDUCER
   635 STEEL STEP
   636 POLYPROPYLENE PLASTIC STEP

B	T
12" (300 mm)	5" (130 mm)
15" (375 mm)	5" (130 mm)
18" (450 mm)	5" (130 mm)
21" (525 mm)	5" (130 mm)
24" (600 mm)	5 1/2" (140 mm)
27" (675 mm)	5 1/2" (140 mm)
30" (750 mm)	6" (150 mm)
33" (825 mm)	6 1/2" (165 mm)
36" (900 mm)	6 1/2" (170 mm)
39" (975 mm)	7" (180 mm)

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1964 REV. 1996, 1999, 2009	JUNCTION STRUCTURE – PIPE TO PIPE INLET ID ≥ 24" (600 mm) OR OD > 1/2 MAIN LINE ID	STANDARD PLAN 331–3
	USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	SHEET 1 OF 2

NOTES

1. THIS JUNCTION STRUCTURE SHALL BE USED WHEN THE OUTSIDE DIAMETER OF THE LATERAL IS GREATER THAN 1/2 THE INSIDE DIAMETER D OF THE MAIN LINE; OR WHEN THE INSIDE DIAMETER B OF THE LATERAL IS GREATER THAN 24" (600 mm). B SHALL NOT EXCEED 0.75 D OR 39" (975 mm).
2. IF THE MAIN LINE IS A REINFORCED MONOLITHIC ARCH STORM DRAIN, D SHALL REFER TO THE CLEAR SPAN OF THE ARCH. REINFORCING STEEL SHALL BE CUT AND BENT INTO THE JUNCTION STRUCTURE IN THE SAME MANNER AS FOR A PIPE. A CONCRETE CRADLE IS NOT REQUIRED FOR A REINFORCED MONOLITHIC ARCH.
3. STATIONS SHOWN ON THE PLANS FOR LATERALS APPLY AT THE INTERSECTION OF CENTERLINES OF MAIN LINE AND LATERAL. STATIONS SHOWN ON THE PLANS FOR CATCH BASIN CONNECTOR PIPES APPLY AT THE INTERSECTION OF THE INSIDE WALL OF THE MAIN LINE WITH THE CONNECTOR PIPE CENTERLINE.
4. VALUES FOR A, B, C AND D SHALL BE SHOWN ON THE PLANS. ELEVATION R AND ELEVATION S SHALL BE SHOWN ONLY WHEN REQUIRED PER NOTE 5.
5. a. ELEVATIONS R AND S NEED NOT BE SHOWN ON THE PLANS IF THE INLET PIPE IS TO ENTER THE MAIN LINE RADIALLY.
   b. ELEVATION R SHALL BE SHOWN ON THE PLANS ONLY IF A STUB IS TO BE PROVIDED IN THE MAIN LINE FOR FUTURE CONNECTION OF AN INLET PIPE.
   c. ELEVATION S SHALL BE SHOWN ON THE PLANS IF AN INLET PIPE IS TO ENTER THE MAIN LINE OTHER THAN RADIALLY. INLET PIPE SHALL BE LAID ON A STRAIGHT GRADE FROM ELEVATION S TO THE CATCH BASIN OR GRADE BREAK IN LINE.
6. THE INLET PIPE SHALL ENTER THE MAIN LINE RADIALLY UNLESS OTHERWISE INDICATED. THE INLET PIPE MAY ENTER THE MAIN LINE OTHER THAN RADIALLY IF ANGLE A IS GREATER THAN 45°; B IS LESS THAN OR EQUAL TO 24" (600 mm) AND THE OUTSIDE DIAMETER OF THE INLET PIPE IS LESS THAN 0.5 D; OTHERWISE, SPPWC 340 SHALL BE USED.
7. NO MORE THAN ONE OPENING SHALL BE MADE IN ANY ONE SECTION OF PIPE.
8. THE OPENING FOR THE BREAKOUT SHALL BE RECTANGULAR AND CUT NORMAL TO THE PIPE SURFACE WITHOUT DAMAGING THE REINFORCING STEEL. THE TRANSVERSE REINFORCEMENT OF THE MAIN LINE SHALL BE CUT AT THE CENTER OF THE OPENING AND BENT INTO THE TOP AND BOTTOM SLABS OF THE SPUR.
9. THE MAIN LINE SHALL BE REINFORCED WITH A CONCRETE CRADLE AND ENCASEMENT (AS APPLICABLE). A CONCRETE ENCASEMENT IS REQUIRED IF A JOINT IN THE MAIN LINE FALLS WITHIN THE LIMITS OF THE CRADLE. THE CONCRETE ENCASEMENT SHALL EXTEND 12" (300 mm) ABOVE THE TOP OF THE MAIN LINE AND TO THE LIMITS OF THE CRADLE.
   IF CONNECTING TO AN EXISTING STORM DRAIN, PORTION OF CRADLE OPPOSITE INLET MAY BE OMITTED.
10. REINFORCING STEEL SHALL CONFORM TO ASTM A 615, GRADE 40, (ASTM A 615M, GRADE 300), AND BE PLACED 1 1/2" (40 mm) CLEAR FROM CONCRETE SURFACES, UNLESS OTHERWISE SHOWN F BARS SHALL BE CARRIED TO A POINT NOT LESS THAN J DISTANCE FROM CENTER LINE WITH J=7D/12 + 6" (150 mm).
11. FLOOR OF THE SPUR SHALL BE STEEL-TROWELED TO THE SPRING LINE OF THE SPUR.

				72" (1800 mm)	11" (280 mm)		
FOR B GREATER THAN 72" (1800 mm) SEE PLANS							

NOTES

1. REINFORCING STEEL SHALL BE 1–1/2" (40 mm) CLEAR FROM FACE OF CONCRETE UNLESS OTHERWISE SHOWN.
2. REINFORCING STEEL FOR INSIDE FACE OF CATCH BASIN SHALL BE CUT AT CENTER OF OPENING AND BENT INTO WALLS OF MONOLITHIC CATCH BASIN CONNECTION. REINFORCING STEEL FOR OUTSIDE FACE OF CATCH BASIN SHALL BE CUT 2" (50 mm) CLEAR OF OPENING.
3. CONNECTION SHALL BE PLACED MONOLITHIC WITH CATCH BASIN. THE ROUNDED EDGE OF OUTLET SHALL BE CONSTRUCTED BY PLACING CONCRETE WITH THE SAME CLASS OF CONCRETE AS THE CATCH BASIN AGAINST A CURVED FORM WITH A RADIUS OF 3" (75 mm).
4. CONNECTIONS SHALL BE CONSTRUCTED WHEN:
   (A) PIPES INLET OR OUTLET THROUGH CORNER OF CATCH BASIN
   (B) ANGLE A FOR PIPES THROUGH 30" (750 mm) IN DIAMETER IS LESS THAN 70° OR GREATER THAN 110°.

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
	MONOLITHIC CATCH BASIN CONNECTION	STANDARD PLAN 308–2
		SHEET 2 OF 2

STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION		
PROMULGATED BY THE PUBLIC WORKS STANDARDS INC. GREENBOOK COMMITTEE 1964 REV. 1996, 2009	MONOLITHIC CATCH BASIN CONNECTION	STANDARD PLAN 308–2
	USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	SHEET 1 OF 2

NOTES

1. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'–10 1/2" (867 mm) FOR PAVED STREETS OR 3'–6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT MONOLITHIC SHAFT PER SECTION C–C AND DETAIL "N". SHAFT FOR ANY DEPTH OF MANHOLE MAY BE CONSTRUCTED PER SECTION C–C. WHEN DIAMETER D_1 IS 48" (1200 mm) OR LESS, CENTER OF SHAFT MAY BE LOCATED PER NOTE 2.
2. CENTER OF MANHOLE SHAFT SHALL BE LOCATED OVER CENTER LINE OF STORM DRAIN WHEN DIAMETER D_1 IS 48" (1200 mm) OR LESS, IN WHICH CASE PLACE E BARS SYMMETRICALLY AROUND SHAFT AT 45° WITH CENTERLINE AND OMIT J BARS.
3. L AND P SHALL HAVE THE FOLLOWING VALUES UNLESS OTHERWISE SHOWN ON THE PROJECT DRAWINGS:
   A. D_2=96" (2400 mm) OR LESS, L=5'–6" (1.7 m), P=5" (130 mm)
   B. D_2 OVER 96" (2400 mm), L=6'–0" (1.8 m), P=8" (210 mm)
   L MAY BE INCREASED OR LOCATION OF MANHOLE SHIFTED TO MEET PIPE ENDS. WHEN L GREATER THAN THAT SHOWN ABOVE IS SPECIFIED, D BARS SHALL BE CONTINUED 6" (150 mm) OC.
4. STATIONS OF MANHOLES SHOWN ON PLANS APPLY AT CENTERLINE OF SHAFT. ELEVATIONS ARE SHOWN AT CENTERLINE OF SHAFT AND REFER TO THE PROLONGED INVERT GRADE LINES.
5. REINFORCEMENT SHALL CONFORM TO ASTM A 615M, GRADE 300 (ASTM A 615, GRADE 40), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
6. FLOOR OF MANHOLE SHALL BE STEEL TROWELED TO SPRING LINE.
7. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
8. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN THE TABULAR VALUES FOR F SHOWN ON SHEET 2.
9. D BARS SHALL BE #4 (#13M) FOR D_2=39" (975 mm) OR LESS, #5 (#16M) FOR D_2= 42" (1050 mm) TO 84" (2100 mm) INCLUSIVE AND #6 (#19M) FOR D_2= 90" (2250 mm) OR OVER.
10. CENTERLINE OF INLET PIPE SHALL INTERSECT INSIDE FACE OF CONE AT SPRING LINE UNLESS OTHERWISE SHOWN.
11. STEPS SHALL CONFORM TO SPPWC 635 OR 636. UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE INVERT.
12. THE FOLLOWING CRITERIA SHALL BE USED FOR THIS MANHOLE:
   A. MAIN LINE = 36" (900 mm) INSIDE DIAMETER OR LARGER. EXCEPT IF THE MAIN LINE RCP DOWNSTREAM OF MANHOLE IS 36" (900 mm) TO 42" (1050 mm) INSIDE DIAMETER AND THE MAIN LINE RCP UPSTREAM IS 33" (825 mm) OR LESS SPPWC 321 SHALL BE USED.

Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

for

Project Name:	**Euclid Mixed Use Specific Plan**
Ontario Project #:	**TBD**
Project Description:	**Industrial Building Development**
Applicant Name:	**Euclid Land Investments, LLC C/O RCCD Inc., Attn: Jason Lee**
Applicant Address:	**8101 E. Kaiser Blvd, Suite 140 Anaheim Hills, CA 92808**
Project Address:	**East side of Euclid Avenue between**
Size of Development:	**60 ACRES**

Submittal Date: March 16, 2023
Revised: __

Preliminary Water Quality Management Plan (PWQMP)

1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project-specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

Check below	**Project Categories**
	1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).

Check below	Project Categories
X	2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.
	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
X	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more, or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

3. Preliminary WQMP Objectives

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures.

Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		X
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		X
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		X
Install surface retention basins or infiltration trenches to receive impervious area runoff.		X
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		X
Install underground stormwater retention chambers where downstream landscaped areas are limited.	X	
Install approved Stormwater Drywells in detention areas.	X	
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	X	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.		X
Install “Engineered Soil” to increase uptake/soil storage capacity and/or evapotranspiration.		X
Install Rainwater Harvesting/Use Equipment.		X
Utilize approved off-site retention/infiltration, biotreatment or proprietary treatment, where it is infeasible to install, on-site.		X

Table 3-1 Minimum Effective Area[1] Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility[2] (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%

Mixed Use, Commercial/Industrial w/FAR< 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR> 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development[3]	5%	2.5%
Parking	5%	2.5%

[1] "Effective area" is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.

[2] Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.

[3] Transit oriented development is defined as a project with development center within one half mile of a mass transit center.

Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

B. Source Control BMPs – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	X	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	X	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		X
Provide solid roofs over all trash enclosures.	X	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	X	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	X	
Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.	X	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		X

C. Treatment Control BMPs – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease	X	
Proprietary Biofiltration vaults/devices		X
Media Cartridge Filtration Vaults		X
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains		X
Regional Treatment facilities are installed or are planned for installation, off-site, and provide a superior level of treatment or clear advantage to on-site treatment BMPs		X

4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities

1) Calculate the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in the BMP Drainage Area divided by 100.

2) Calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

3) Determine the area-averaged "6-hour Mean Storm Rainfall", P_6, for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.55"-0.6") by the appropriate regression coefficient from Table 1 (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5" (P_6 = 0.5*1.4807 = 0.74 and northern Ontario is approximately 0.6" in/hr (P_6 = 0.6*1.4807 = 0.89).

4) Determine the appropriate drawdown time. Use the regression constant a = 1.582 for 24 hours and a = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48 hour drawdown times; however, 48 hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24 hour drawdown time should be limited to drainage areas with coarse soils (Class 'A' soils, that readily drain.)*

5) Calculate the "Maximized Detention Volume", P_0, using the following equation:

$$P_0 = a \cdot C_{BMP} \cdot P_6$$

where: P_0 = Maximized Detention Volume, in inches

a = 1.582 for 24 hour and a = 1.963 for 48 hour drawdown,

C_{BMP} = composite runoff coefficient; and,

P_6 = 6-hour Mean Storm Rainfall, in inches

6) Calculate the "Target Capture Volume", V_0, using the following equation:

$$V_0 = (P_0 \cdot A) / 12$$

where: V_0 = Target Capture Volume, in acre-feet

P_0 = Maximized Detention Volume, in inches; and,

A = BMP Drainage Area, in acres

Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:

Variable	Factor/Formula	Area A1 Result	Area A2 Result	Area A3 Result	Area A4 Result	Area A5 Result	Area A6 Result	Area A7 Result

**For P_6 value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .

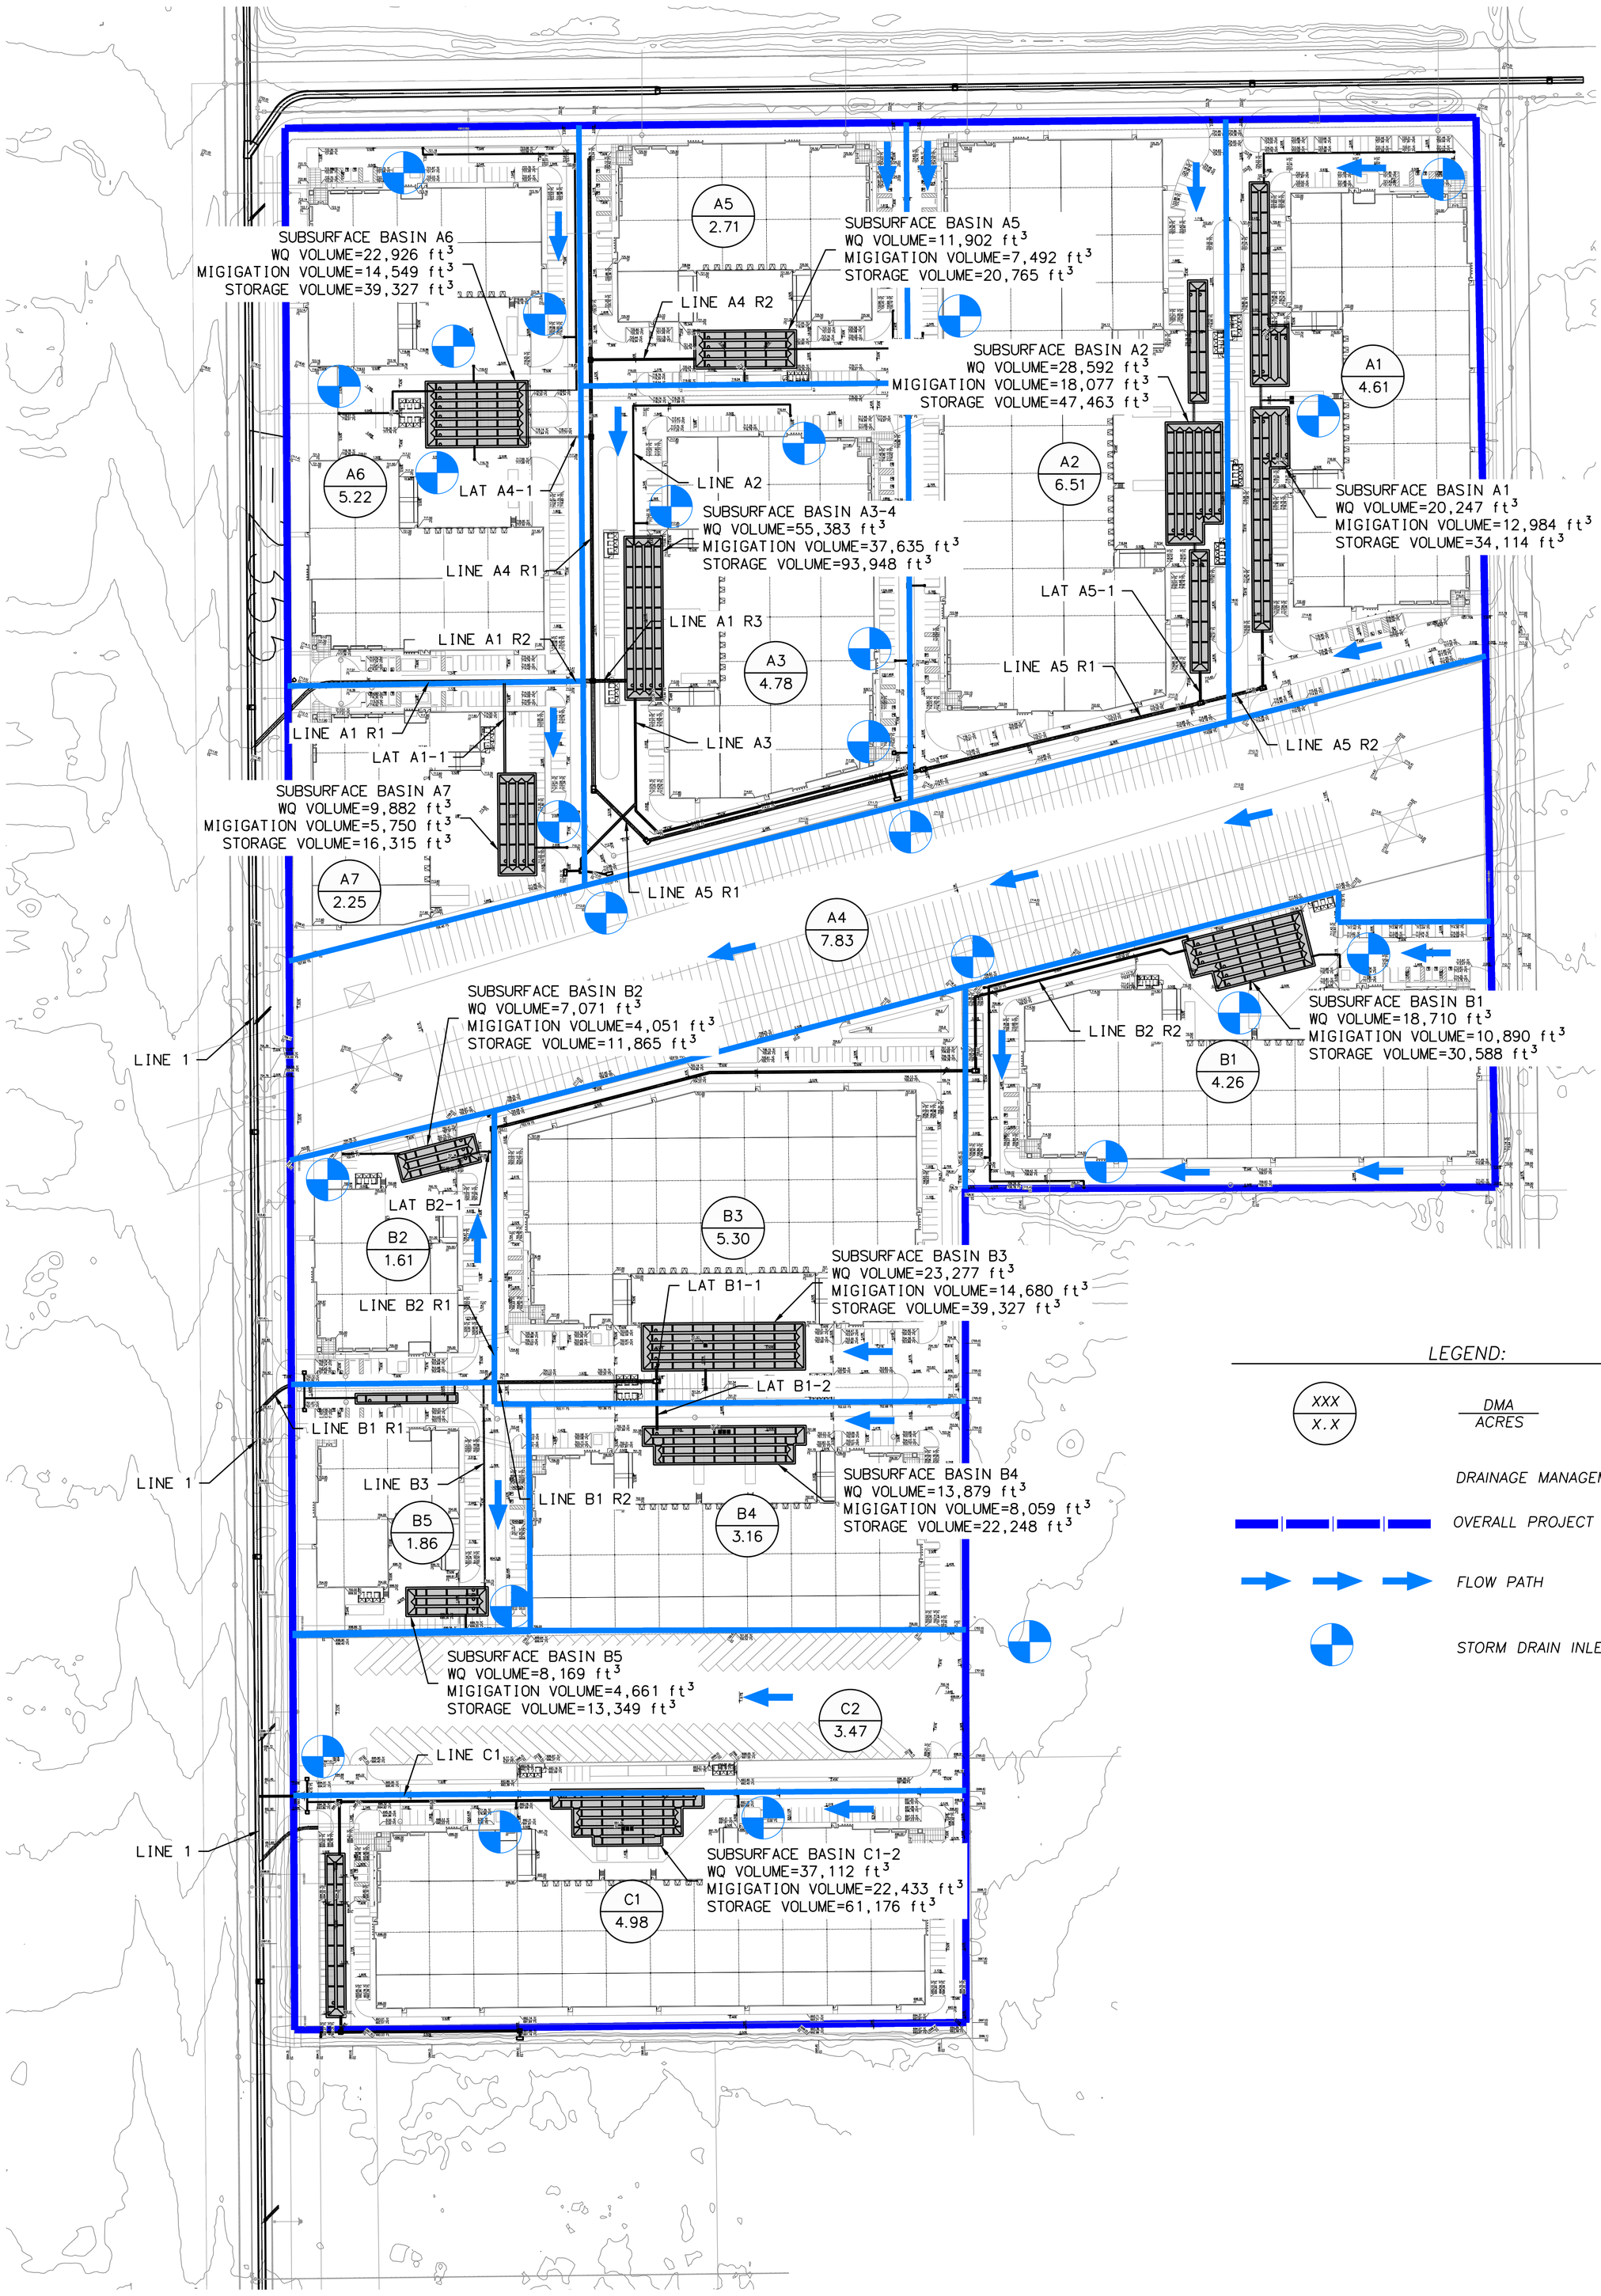
5. **Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:**

Project applicants may access the on-line HCOC Map at: http://sbcounty.permitrack.com/WAP/ . The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infilter, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes	**X**	No	
Biotreat the DCV but not infilter the runoff?	Yes		No	**X**
HCOCs identified downstream of site?	Yes		No	**X**

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltered or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):



6. **Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:**

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

AREA A6 (DMA A6)

1 Project area DA 1 (ft^2):	**2** Impervious area after applying preventative site design practices (Imp%): 0.9	3 Runoff Coefficient (Rc): 0.7303
227383.2		$R_c = 0.858(Imp\%)^3 - 0.78(Imp\%)^2 + 0.774(Imp\%) + 0.04$

4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.57 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

5 Compute P_6, Mean 6-hr Preciptiation (inches) 0.8440

*P_6 = Item 4 * C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*

6 Drawdown Rate

Use 48 hours as the default condition. Selection and use of the 24 hour drawdonw time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.

24-hrs ☐

48-hrs ☑

7 Compute design capture volume, DCV (ft^3) 22,926

*DCV = 1/12 * [Item 1 * Item 3 * Item 5 * C2], where C2 is a function of drawdown rate (24-hr = 1.582; 48-hr =1.963)*

Compute separate DCV for each outlet from the project site per schematic drawdown in Form 3-1 Item 2

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume
AREA A7 (DMA A7)

1 Project area DA 1 (ft^2):	**2** Impervious area after applying preventative site design practices (Imp%): 0.9	3 Runoff Coefficient (Rc): 0.7303
98010		$R_c = 0.858(Imp\%)^3 - 0.78(Imp\%)^2 + 0.774(Imp\%) + 0.04$

4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.57 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

5 Compute P_6, Mean 6-hr Preciptiation (inches) 0.8440

*P_6 = Item 4 * C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*

6 Drawdown Rate

Use 48 hours as the default condition. Selection and use of the 24 hour drawdonw time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.

LAS 90.0	55.3 dB

Noise Measurement Field Data

Project:	Euclid Mixed-Use Specific Plan	**Job Number:**	19524005
Site No.:	5	**Date:**	2/8/2023
Analyst:	Sarah Miller and Ali Abualia	**Time:**	3:32pm-3:42pm
Location:	7255 Schaefer Avenue Ontario, CA 91762		
Noise Sources:	Cars and trucks on Schaefer Avenue		
Comments:			

Results (dBA):

	Leq:	**Lmin:**	**Lmax:**	**Peak:**
Measurement 1:	73.0	46.0	86.4	101.5

Equipment	
Sound Level Meter:	LD SoundExpert LxT
Calibrator:	CAL200
Response Time:	Slow
Weighting:	A
Microphone Height:	5 feet

Weather	
Temp. (degrees F):	71
Wind (mph):	8
Sky:	Clear
Bar. Pressure:	30.16
Humidity:	22%

1 INTRODUCTION

This report presents the results of the Traffic Analysis (TA) for Euclid Mixed-Use Specific Plan ("Project"), which is bounded by Euclid Avenue (SR-83) to the west, Schaefer Avenue to the north, Ontario Ranch Road/Edison Avenue to the south, and Sultana Avenue to the east within the City of Ontario, as shown on Exhibit 1-1. The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the County of San Bernardino's Traffic Impact Study Guidelines and consultation with City staff during the traffic study scoping process. (1) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

1.1 PROJECT OVERVIEW

Exhibit 1-1 illustrates the location map for the proposed Project and Exhibit 1-2 shows the proposed land use plan. The proposed Project is to consist of the following uses:

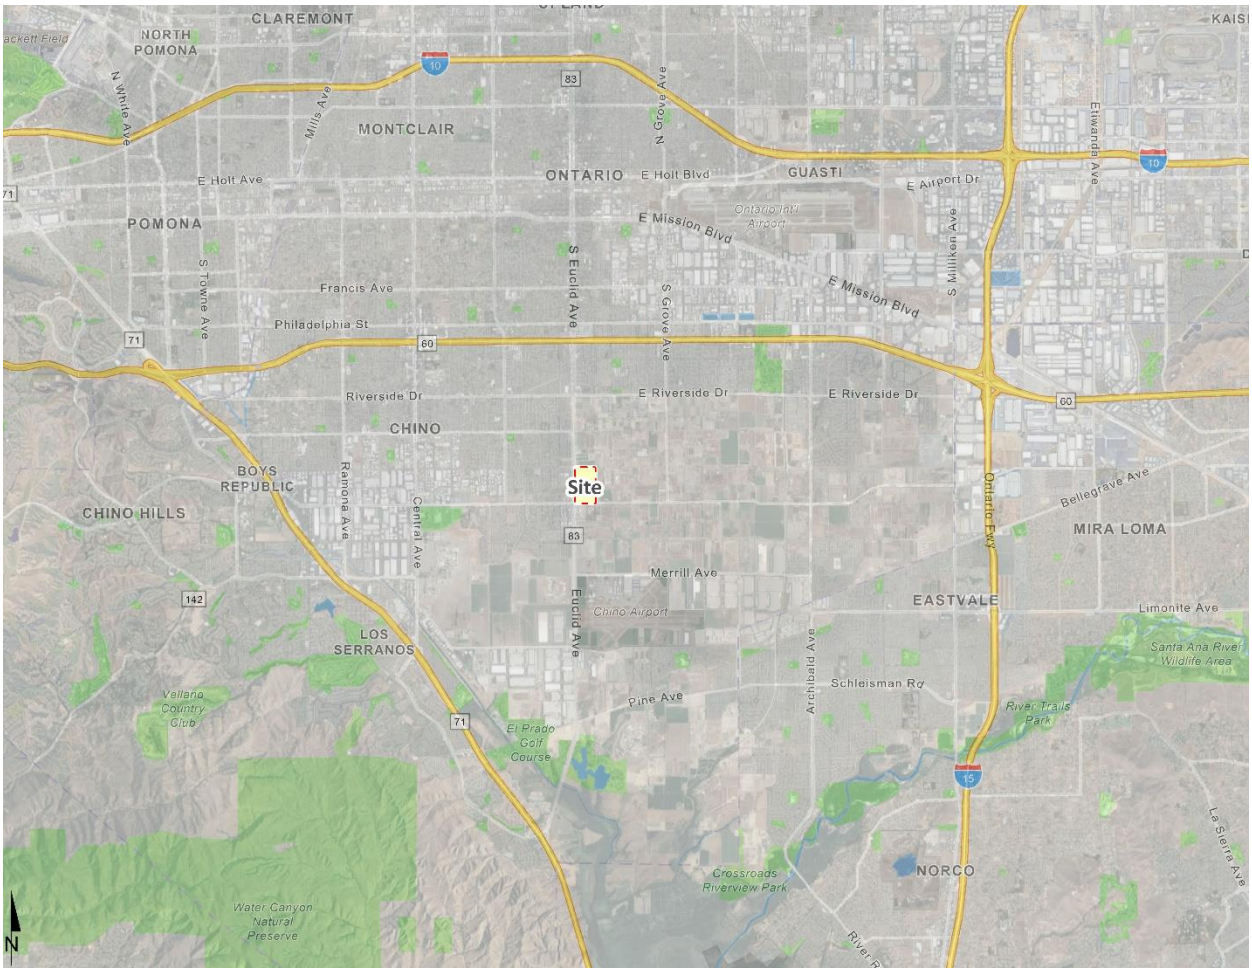
1. Planning Area 1 (Business Park): 135,841 square feet of business park uses fronting Euclid Avenue (SR-83) and 399,135 square feet of warehousing use
2. Planning Area 2 (Business Park): 55,537 square feet of business park uses fronting Euclid Avenue (SR-83) and 450,784 square feet of warehousing use
3. Planning Area 3A (Mixed Use): 122,898 square feet of warehousing use and 30,225 square feet of commercial retail use (10,000 square feet of fast-food restaurant use without drive-through window, 10,000 square feet of fast-food restaurant with drive-through window, and 10,225 square feet of retail space)
4. Planning Area 3B (Mixed Use): 466 multifamily residential dwelling units
5. Planning Area 4 (Truck/Trailer Parking): 7.4 acres
6. Planning area 5 (Truck/Trailer Parking): 4.8 acres

Note that Planning Area 3B and portions of Planning Areas 2 and 3A, shown as "Future Development" on Exhibit 1-2, are not controlled by the Project Applicant. Project Buildout is anticipated in Year 2027. Access to the proposed Project would be provided to the surrounding roadways of Schaefer Avenue to the north, Euclid Avenue to the west, Edison Avenue to the south, and Sultana Avenue to the east.

Regional access to the Project site is available from the SR-60 Freeway via Euclid Avenue and the I-15 Freeway via Cantu Galleano Road. Exhibit 1-3 depicts the location of the proposed Project in relation to the existing roadway network and the study area intersections.

The proposed Project, not including the Future Development uses, is anticipated to generate 2,228 two-way trip-ends per day in actual vehicles, with 212 actual AM peak hour trips and 218 actual PM peak hour trips.

EXHIBIT 1-1: LOCATION MAP



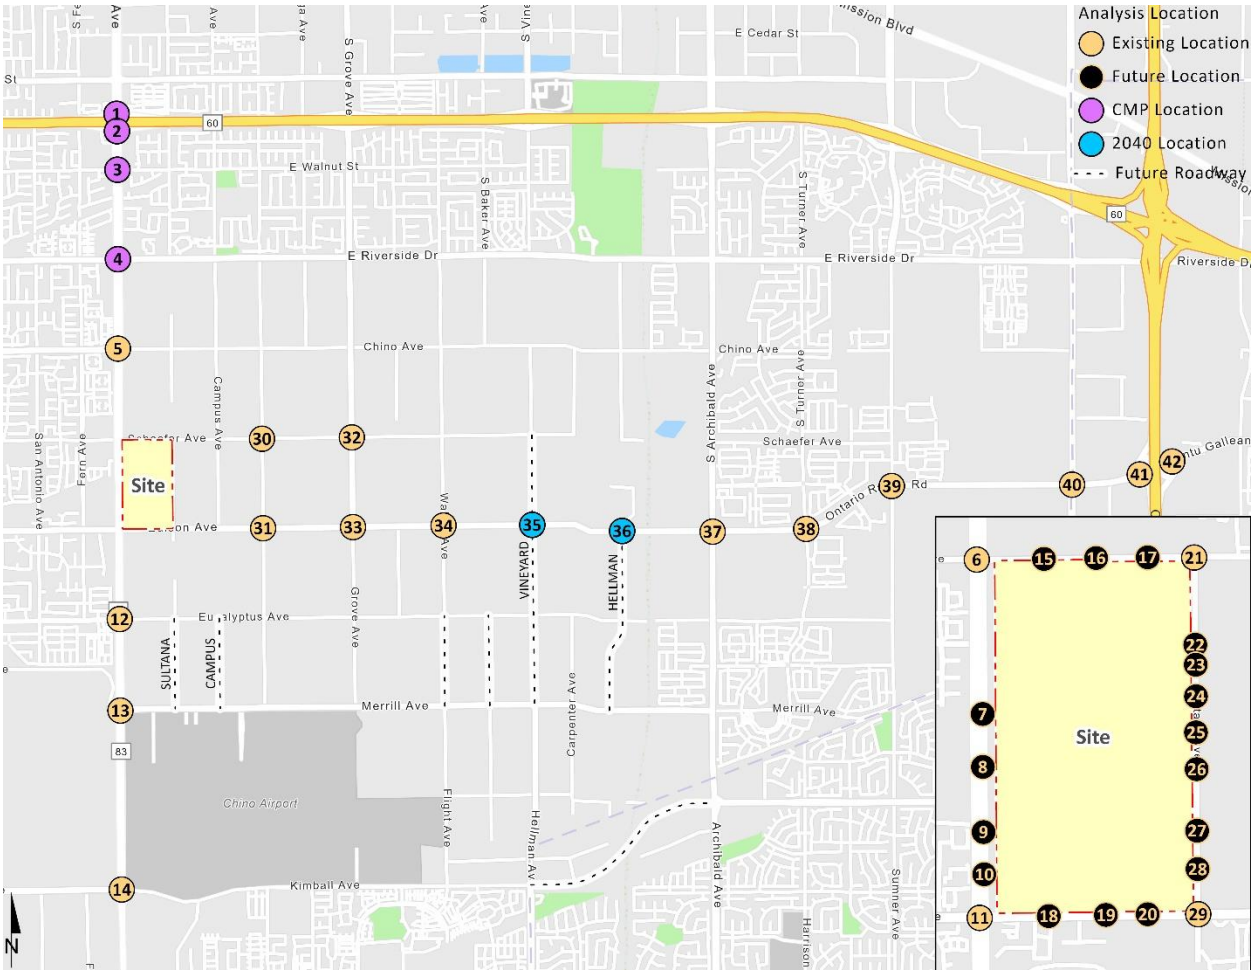


EXHIBIT 1-2: PRELIMINARY LAND USE PLAN

EXHIBIT 1-3: STUDY AREA

In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) for the following land uses have been utilized (2):

- Industrial Park (ITE Land Use Code 130)
- Warehousing (ITE Land Use Code 150)
- Multifamily (Low-Rise) Housing (ITE Land Use Code 220)
- Strip Retail (<40,000 square feet) (ITE Land Use Code 822)

The ITE Trip Generation Manual does not currently have any trip generation rates for a truck/trailer parking lot, as such, trip generation estimates for the proposed project have been developed using data collected at other facilities with operations similar to those proposed. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

1.2 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2022)
- Existing plus Project (E+P)
- Opening Year Cumulative (2027) Without Project
- Opening Year Cumulative (2027) With Project
- Horizon Year (2050) Without Project
- Horizon Year (2050) With Project

Note that the area shown previously on Exhibit 1-2 as "Future Development" will only be evaluated for E+P and Horizon Year (2050) traffic conditions only (not to be included for Opening Year Cumulative conditions).

1.3.1 EXISTING (2022) CONDITIONS

Information for Existing (2022) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

1.3.2 E+P CONDITIONS

The E+P analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. E+P traffic conditions have been evaluated in order to determine any potential off-site improvements.

1.3.3 OPENING YEAR CUMULATIVE (2027) CONDITIONS

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth factor from Existing conditions of 2% per year (compounded annually) are included for Opening Year Cumulative (2027) traffic conditions. The total growth factor for Opening Year Cumulative (2027) traffic conditions is 10.4% (or $1.02^{5\ years}$). Opening Year Cumulative traffic conditions have been evaluated for the proposed Project. This comprehensive list was compiled from information provided by the City of Ontario and other near-by agencies.

1.3.4 HORIZON YEAR (2050) CONDITIONS

Traffic projections for Horizon Year (2050) conditions were derived from the San Bernardino County Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing and is based on the currently adopted The Ontario Plan (TOP) 2050 General Plan Update, The Horizon Year conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs can accommodate the long-range cumulative traffic at the target Level of Service (LOS) identified in the City of Ontario (lead agency) General Plan. Each of the applicable transportation fee programs are discussed in more detail In Section 8 *Local and Regional Funding Mechanisms*.

1.3 STUDY AREA

To ensure that this TA satisfies the City of Ontario's traffic study requirements, Urban Crossroads, Inc. prepared a Project traffic study scoping package for review by City of Ontario staff prior to the preparation of this report. This agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology. The agreement approved by the City is included in Appendix 1.1 of this TA.

The following 42 study area intersections shown on Exhibit 1-3 and listed in Table 1-1 were selected for this TA based on consultation with City of Ontario staff. The "50 peak hour trip" criterion utilized by the City of Ontario is consistent with the methodology employed by the County of San Bernardino, and generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 peak hour trips.

The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. Study area intersections that are identified as CMP facilities in the County of San Bernardino per the San Bernardino County Transportation Authority (SBCTA) CMP are indicated in Table 1-1. (3)

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

#	Intersection

1.4 DEFICIENCIES

This section provides a summary of deficiencies by analysis scenario. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 3 *Area Conditions*, Section 5 *E+P Traffic Conditions*, Section 6 *Opening Year Cumulative (2027) Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions* includes the detailed analysis. A summary of Level of Service (LOS) results for all analysis scenarios is presented in Table 1-2.

1.5.1 EXISTING (2022) CONDITIONS

The following study area intersection is currently operating at an unacceptable LOS during the peak hours:

- Grove Avenue & Edison Avenue (#33) – LOS F PM peak hour only

1.5.2 E+P CONDITIONS

the following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P traffic conditions, in addition to the intersections identified under Existing (2022) traffic conditions:

- Driveway 9 & Edison Avenue (#19) – LOS F AM peak hour only
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hours

1.5.3 OPENING YEAR CUMULATIVE (2027) CONDITIONS

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2027) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#11) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#12) – LOS F AM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#13) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#14) – LOS F PM peak hour only
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hour
- Grove Avenue & Schaefer Avenue (#32) – LOS F AM and PM peak hour
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hour
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hour
- Archibald Avenue & Edison Avenue (#37) – LOS F AM and PM peak hour

● = A - E ● = F

The following additional study area intersections anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Opening Year Cumulative (2027) With Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS E AM peak hour

1.5.4 HORIZON YEAR (2050) CONDITIONS

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Horizon Year (2050) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#11) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#12) – LOS F AM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#13) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#14) – LOS F AM and PM peak hour
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hour
- Grove Avenue & Schaefer Avenue (#32) – LOS F AM and PM peak hour
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hour
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hour
- Vineyard Avenue & Edison Avenue (#35) – LOS F AM and PM peak hour
- Hellman Avenue & Edison Avenue (#36) – LOS F AM and PM peak hour
- Archibald Avenue & Edison Avenue (#37) – LOS F AM and PM peak hour
- Haven Avenue & Ontario Ranch Road (#39) – LOS F AM and PM peak hour
- Hamner Avenue & Ontario Ranch Road (#40) – LOS F AM and PM peak hour

The following additional study area intersections anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Horizon Year (2050) With Project traffic conditions:

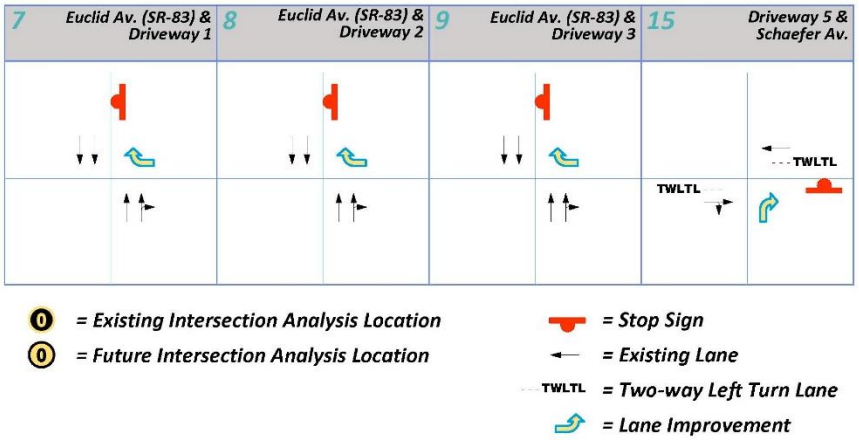
- Driveway 9 & Edison Avenue (#19) – LOS F AM and PM peak hours

1.5 RECOMMENDATIONS

1.5.1 SITE ADJACENT AND SITE ACCESS RECOMMENDATIONS

The following recommendations are based on the minimum improvements needed to accommodate site access and maintain acceptable peak hour operations for the proposed Project. The site adjacent recommendations are shown on Exhibit 1-4. The City of Ontario will be installing continuous two-way left turn lanes on Sultana Avenue and Schaefer Avenue along the Project's frontages and are shown on Exhibit 1-4. The site adjacent queuing analysis worksheets are provided in Appendix 1.2.

EXHIBIT 1-4: SITE ACCESS RECOMMENDATIONS (1 OF 2)



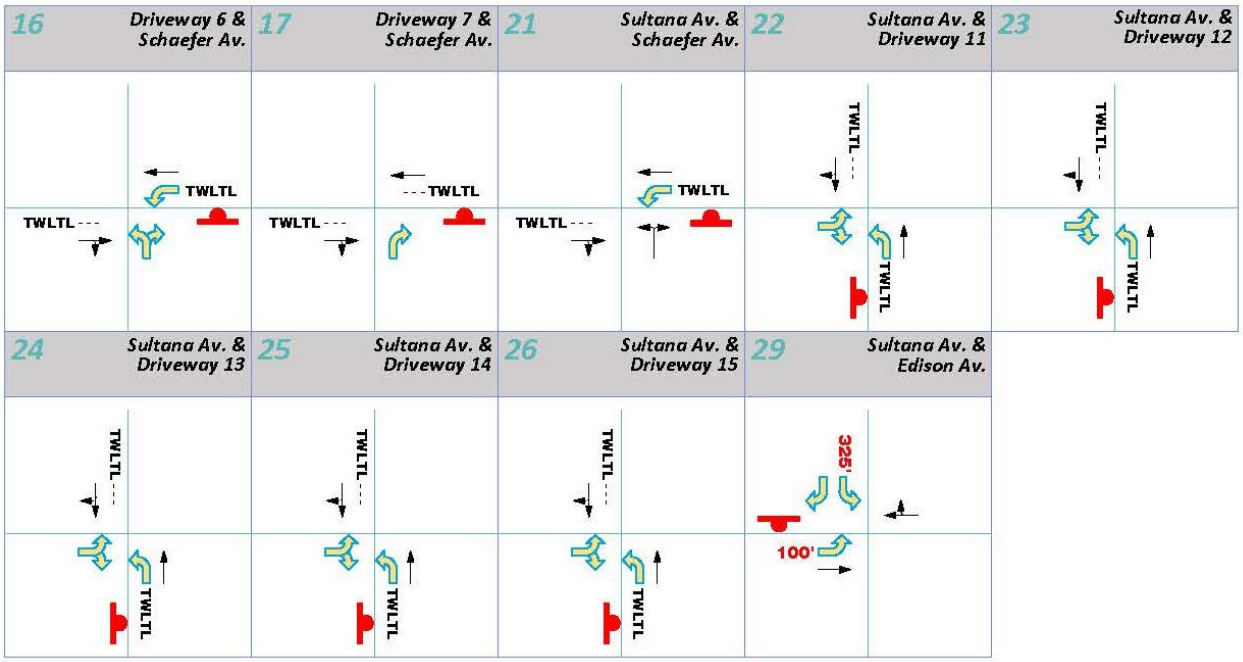


EXHIBIT 1-4: SITE ACCESS RECOMMENDATIONS (2 OF 2)

Recommendation 1 – ***Euclid Avenue (SR-83) & Driveway 1 (#7)*** – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the westbound approach and a right turn lane (Project driveway).

Recommendation 2 – ***Euclid Avenue (SR-83) & Driveway 2 (#8)*** – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the westbound approach and a right turn lane (Project driveway).

Recommendation 3 – ***Euclid Avenue (SR-83) & Driveway 3 (#9)*** – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the westbound approach and a right turn lane (Project driveway).

Recommendation 4 – ***Driveway 5 & Schaefer Avenue (#15)*** – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a right turn lane (Project driveway).

It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 5 – ***Driveway 6 & Schaefer Avenue (#16)*** – The following improvements are necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a westbound left turn lane with a minimum of 100-feet of storage.

It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 6 – ***Driveway 7 & Schaefer Avenue (#17)*** – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a right turn lane (Project driveway).

It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 7 – ***Sultana Avenue & Schaefer Avenue (#21)*** – The following improvements are necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a westbound left turn lane within a two-way left-turn lane.

It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 8 – Sultana Avenue & Driveway 11 (#22) – The following improvements are necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane within a two-way left-turn lane.

It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 9 – Sultana Avenue & Driveway 12 (#23) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane within a two-way left-turn lane.

It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 10 – Sultana Avenue & Driveway 13 (#24) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane within a two-way left-turn lane.

It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 11 – Sultana Avenue & Driveway 14 (#25) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane within a two-way left-turn lane.

It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 12 – Sultana Avenue & Driveway 15 (#26) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane within a two-way left-turn lane.

It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 13 – ***Sultana Avenue & Edison Avenue (#29)*** – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the southbound approach, a left turn lane with a minimum of 325-feet of storage, and a right turn lane.
- Project to construct an eastbound left turn lane with a minimum of 100-feet of storage.

It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage. As such, the two-way left-turn lane has been shown on Exhibit 1-4.

Recommendation 14 – ***Schaefer Avenue***– Schaefer Avenue is an east-west oriented roadway located along the Project's northern boundary. Project to construct Schaefer Avenue from Euclid Avenue to Sultana Avenue at its ultimate half-width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan. It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage.

Recommendation 15 – ***Sultana Avenue*** – Sultana Avenue is a north-south oriented roadway located on the Project's eastern boundary. Project to construct Sultana Avenue from Schaefer Avenue to the northern boundary of PA 2 at its ultimate half-width plus 12-feet of pavement on the east side (northbound direction) to facilitate site access, in compliance with the circulation recommendations found in City of Ontario General Plan. It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 16 – ***Euclid Avenue*** – Euclid Avenue is a north-south oriented roadway located on the Project's western boundary. Project to construct Euclid Avenue from Schaefer Avenue to driveway 4 at its ultimate half-width as a Principal Arterial (8-lanes, 124-foot right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Department of Transportation (Caltrans) California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

1.5.2 OFF-SITE RECOMMENDATIONS

A summary of the off-site intersection improvements is provided in Table 1-3. For those improvements listed in Table 1-3 and not constructed as part of the Project, the Project Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through

payment of fees or fair share that would be assigned to construction of the identified recommended improvements.

If any analyzed intersections and roadway improvements fall outside the jurisdiction of the City, the City does not have the authority to construct or demand the construction of such improvements. For this reason, the payment of fair-share fees for the improvements identified in this section are considered infeasible and therefore results in a significant and unavoidable impact.

TABLE 1-3: SUMMARY OF IMPROVEMENTS BY ANALYSIS SCENARIO (1 OF 4)

#	Intersection Location	Jurisdiction	Existing (2022)	E+P	2027 Without Project	2027 With Project	2050 Without Project	2050 With Project	Improvements in DIF?[1]	DIF Project #	Project Responsibility	Estimated Cost[2,3,4]	Project Fair Share %[4]	Fair Share Cost[5]

										Total Project Fair Share Contribution to the City of Chino [7]	$54,021		
										Total Project Fair Share Contribution to the City of Eastvale [8]	$12,634		

[1] Improvements included in City of Ontario DIF program for local, regional and specific plan components.
[2] Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs.
[3] Appendix "G" costs escalated by a factor of 1.819 per City direction except Traffic Signals.
[4] Program improvements constructed by project may be eligible for fee credit, at discretion of City. See Table 8-2 for Fair Share Calculations.
[5] Rough order of magnitude cost estimate.
[6] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Ontario.
[7] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Chino.
[8] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Eastvale.

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Ontario's Traffic Study Guidelines.

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors, such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6th Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (4) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

The City of Ontario requires signalized intersection operations analysis based on the methodology described in the HCM. (4) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1.

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0[1]
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F

Source: HCM, 6th Edition

[1] If V/C is greater than 1.0 then LOS is F per HCM.

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

Existing, E+P, and Opening Year Cumulative Traffic Conditions:

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

Horizon Year Traffic Conditions:

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive triple left: 1600 vphgpl

The traffic modeling and signal timing optimization software package Synchro (Version 11) has been utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Customary practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g., PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (4)

2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Ontario requires the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (4) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2). At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Delay for the intersection is reported for the worst individual movement at a two-way stop-controlled intersection. For all-way stop controlled intersections, LOS is computed for the intersection as a whole (average delay).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0[1]
Little or no delays.	0 to 10.00	A
Short traffic delays.	10.01 to 15.00	B
Average traffic delays.	15.01 to 25.00	C
Long traffic delays.	25.01 to 35.00	D
Very long traffic delays.	35.01 to 50.00	E
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F

Source: HCM, 6th Edition

[1] If V/C is greater than 1.0 then LOS is F per HCM.

2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or determine the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (5)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (5) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions and for all future analysis scenarios for existing unsignalized intersections. Warrant 3 is appropriate to use for this TA because it provides specialized warrant criteria for intersections with rural characteristics. For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection. Urban warrants have been used as posted speed limits on the major roadways with unsignalized intersections are 40 miles per hour or below and rural warrants have been used where speeds exceed 40 miles per hour.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. Similarly, the speed limit has been used as the basis for determining the use of Urban and Rural warrants.

Traffic signal warrant analyses were performed for the following study area intersection shown in Table 2-3:

TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS

#	Intersection
16	Driveway 6 & Schaefer Av.
19	Driveway 9 & Edison Av.
21	Sultana Av. & Schaefer Av.
22	Sultana Av. & Driveway 11
23	Sultana Av. & Driveway 12
24	Sultana Av. & Driveway 13
25	Sultana Av. & Driveway 14
26	Sultana Av. & Driveway 15
27	Sultana Av. & Driveway 16
28	Sultana Av. & Driveway 17
29	Sultana Av. & Edison Av.
30	Bon View Av. & Schaefer Av.
31	Bon View Av. & Edison Av.
32	Grove Av. & Schaefer Av.
33	Grove Av. & Edison Av.
34	Walker Av. & Edison Av.
35	Vineyard Av. & Edison Av.
36	Hellman Av. & Edison Av.

Although unsignalized, traffic signal warrants have not been evaluated at the intersections of Driveway 1, Driveway 2, Driveway 3, and Driveway 4 on Euclid Avenue, Driveway 5 and Driveway 7 on Schaefer Avenue, Driveway 8 and Driveway 10 on Edison Avenue, and Driveway 11, Driveway 12, Driveway 13, Driveway 14, Driveway 15, Driveway 16, and Driveway 17 on Sultana Avenue since these intersections are anticipated to have restricted access (right-in/right-out only) and would therefore not be suitable locations for installing a traffic signal.

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Conditions*, Section 6 *Opening Year Cumulative (2027) Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.4 QUEUING ANALYSIS

Consistent with Caltrans requirements, the 95th percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the SR-60 Freeway at the Euclid Avenue interchange and at the I-15 Freeway at the Cantu Galleano Road interchange. Specifically, the off-ramp queuing analysis is utilized to identify any potential queuing and "spill back" onto the SR-60 and I-15 Freeway mainlines from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95th percentile queue resulting from the Synchro progression analysis. The footnote from the Synchro output sheets indicates if the 95th percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95th percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95th percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The 95th percentile queue is derived from the average queue plus 1.65 standard deviations. The 95th percentile queue is not necessarily ever observed it is simply based on statistical calculations.

2.5 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

2.5.1 CITY OF ONTARIO

Per the Ontario Plan's Policy M-1, the City of Ontario utilizes a minimum acceptable LOS of LOS E, where feasible. (6)

2.5.2 CITY OF EASTVALE

The City of Eastvale General Plan Policy C-10 sets a standard of LOS C with LOS D as acceptable in commercial and employment areas and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramps. (7) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

2.5.3 CITY OF CHINO

According to the City of Chino's General Plan Objective TRA-1.2/Policy P1, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours, where feasible. (8)

2.5.4 CALTRANS

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway System facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. (9) If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways and intersections

is LOS D. Consistent with the City of Ontario LOS threshold of LOS D and in excess of the City of Ontario stated LOS threshold of LOS E, LOS D will be used as the target LOS.

2.5.5 CMP

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, in an effort to overstate as opposed to understate potential deficiencies, LOS D has been utilized for the CMP intersections for the purposes of this analysis, unless the intersection is located in the City of Ontario (which uses LOS E). (3)

2.6 DEFICIENCY CRITERIA

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-4).

The Project's contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project's contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level,
- Calculate the Project's share in the future traffic volume projections for the peak hours,
- Estimate the cost to implement recommended improvements, and
- Calculate the Project's fair-share contribution to improve the Project's traffic deficiencies

TABLE 2-4: DEFICIENCY CRITERIA

Without Project Level of Service	Level of Service	Deficient?	Improvement Required?
City of Ontario			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D-E	No	No
E	E	No	No
A-E	F	Yes	Yes, bring LOS to E or better
F	F	Yes	Yes, bring LOS to E or better
City of Eastvale, City of Chino			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D	No	No
A-D	E or F	Yes	Yes, bring LOS to D or better
E	E	Yes	Yes, bring LOS to D or better
E	F	Yes	Yes, bring LOS to D or better
F	F	Yes	Yes, bring LOS to D or better

2.7 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new traffic, and new traffic is total future (Opening Year) traffic less existing baseline traffic:

Project Fair Share % = Project AM/PM Traffic / (2050 With Project AM/PM Total Traffic – Existing AM/PM Traffic)

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 8 *Local and Regional Funding Mechanisms* of this TA. The cost of implementing the improvements shown in Table 1-3 have been estimated based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a total cost escalation factor of 1.82 to more closely approximate current (2023) costs. These cost estimates have been utilized in conjunction with the Project fair share percentages to determine the Project's fair share cost of the recommended improvements (see Table 7-2). These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or physical improvements.

If any analyzed intersections and roadway improvements fall outside of the jurisdiction of the City, the City does not have the authority to construct or demand the construction of such improvements. For this reason, the payment of fair share fees for the improvements identified in Table 1-3 is considered infeasible and therefore results in a significant and unavoidable impact for those locations outside of the City.

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Ontario General Plan Circulation Network, and a review of existing peak hour intersection operations, traffic signal warrant, and off-ramp queuing analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 42 existing and future intersections as shown previously on Exhibit 1-3. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

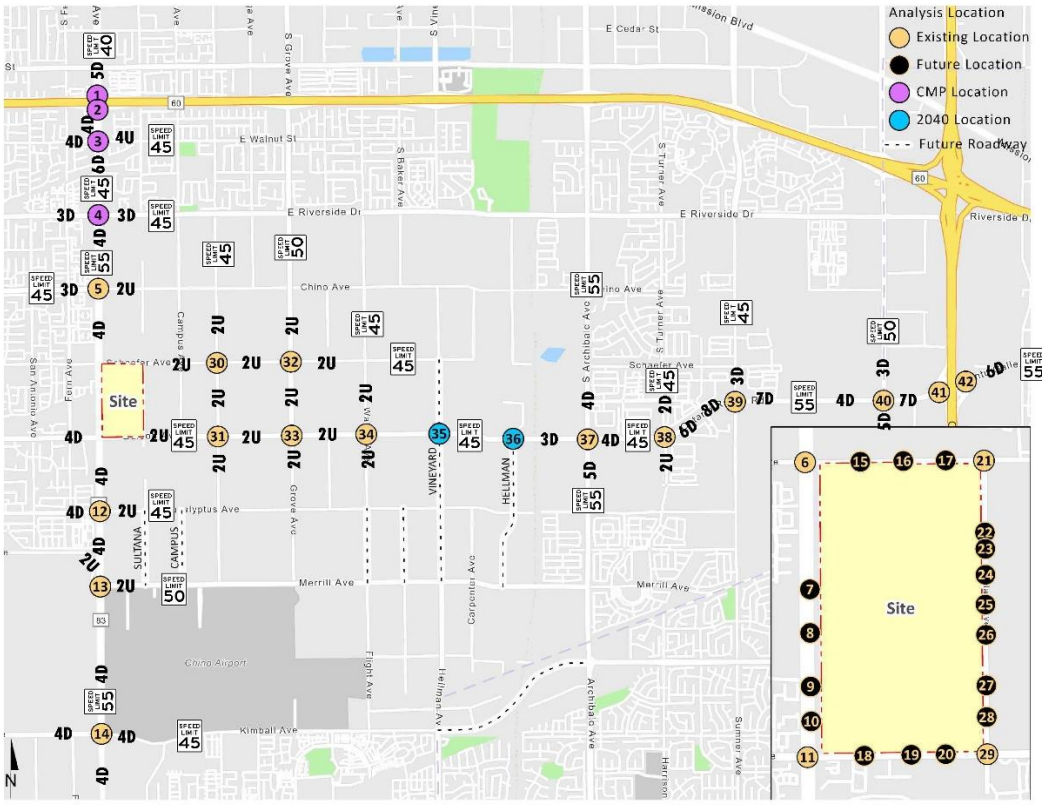
3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

The 2050 Ontario Plan circulation element is shown on Exhibit 3-2. The study area roadways that are classified as 8-lane Other Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Other Principal Arterials:

- Euclid Avenue
- Edison Avenue

The study area roadways that are classified as 6-lane Other Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Other Principal Arterials:

- Archibald Avenue
- Vineyard Avenue
- Hamner Avenue



The study area roadways that are classified as 4-lane Other Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Other Principal Arterials:

- Grove Avenue
- Haven Avenue, south of Riverside Drive

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Riverside Drive

EXHIBIT 3-1: EXISTING NUMBER OF THROUGH LANES AND INTERSECTION CONTROLS (PAGE 1 OF 2)

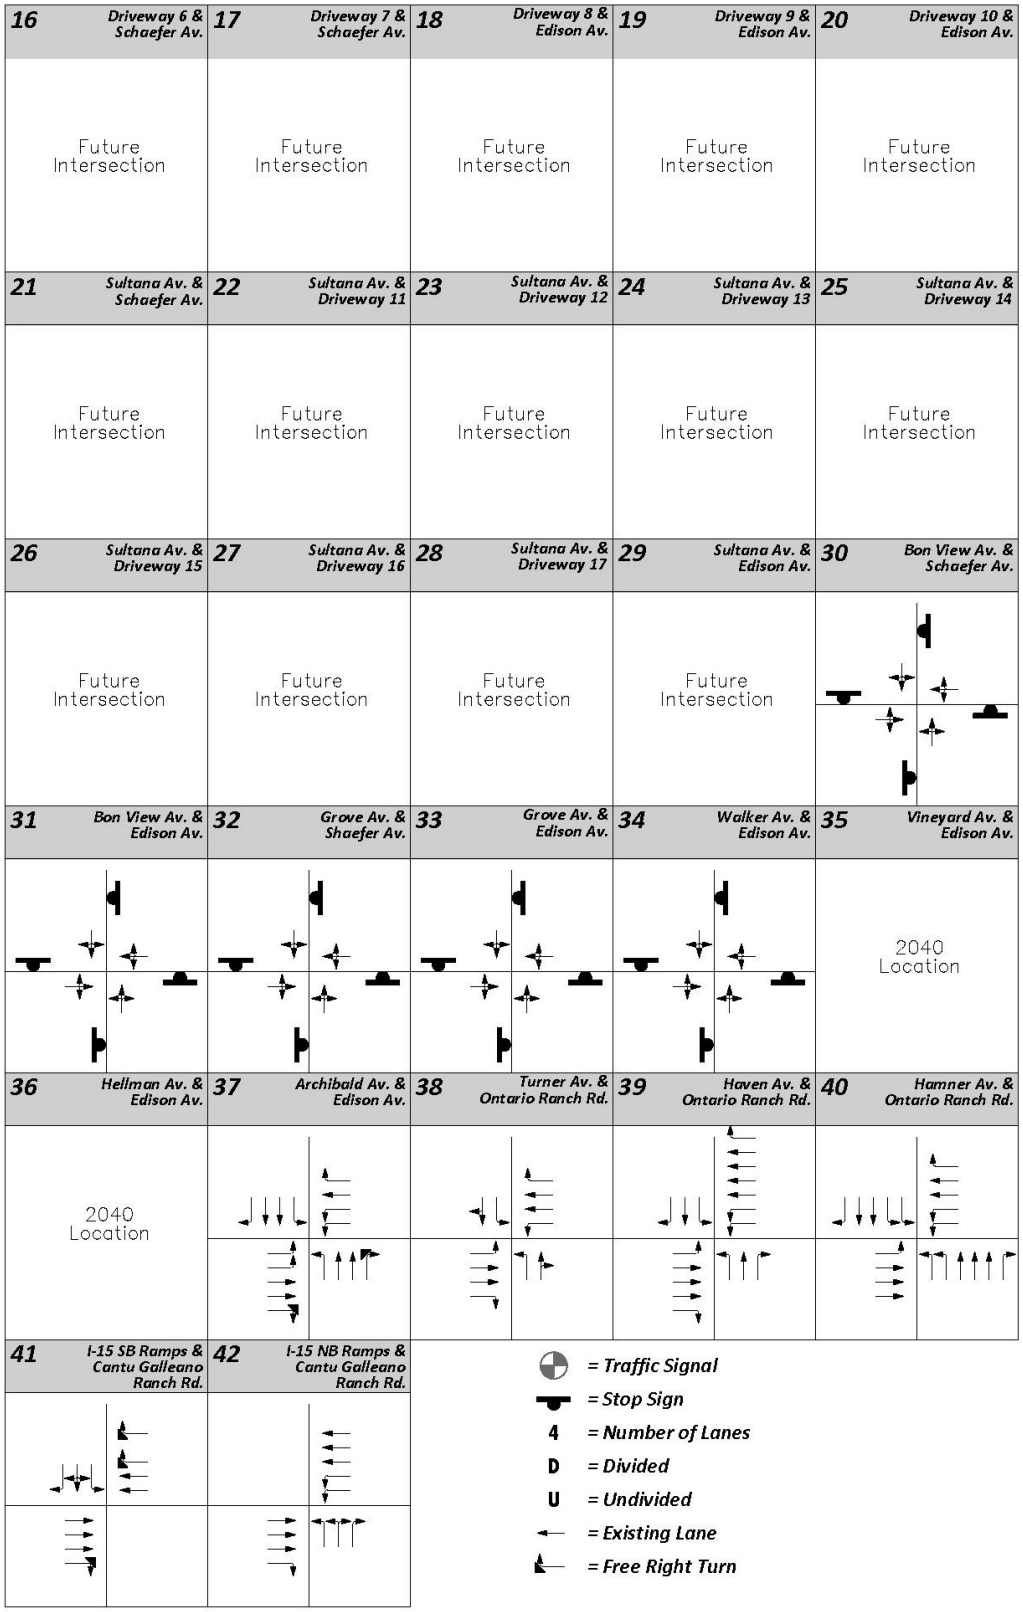
				Future Intersection

EXHIBIT 3-1: EXISTING NUMBER OF THROUGH LANES AND INTERSECTION CONTROLS (PAGE 2 OF 2



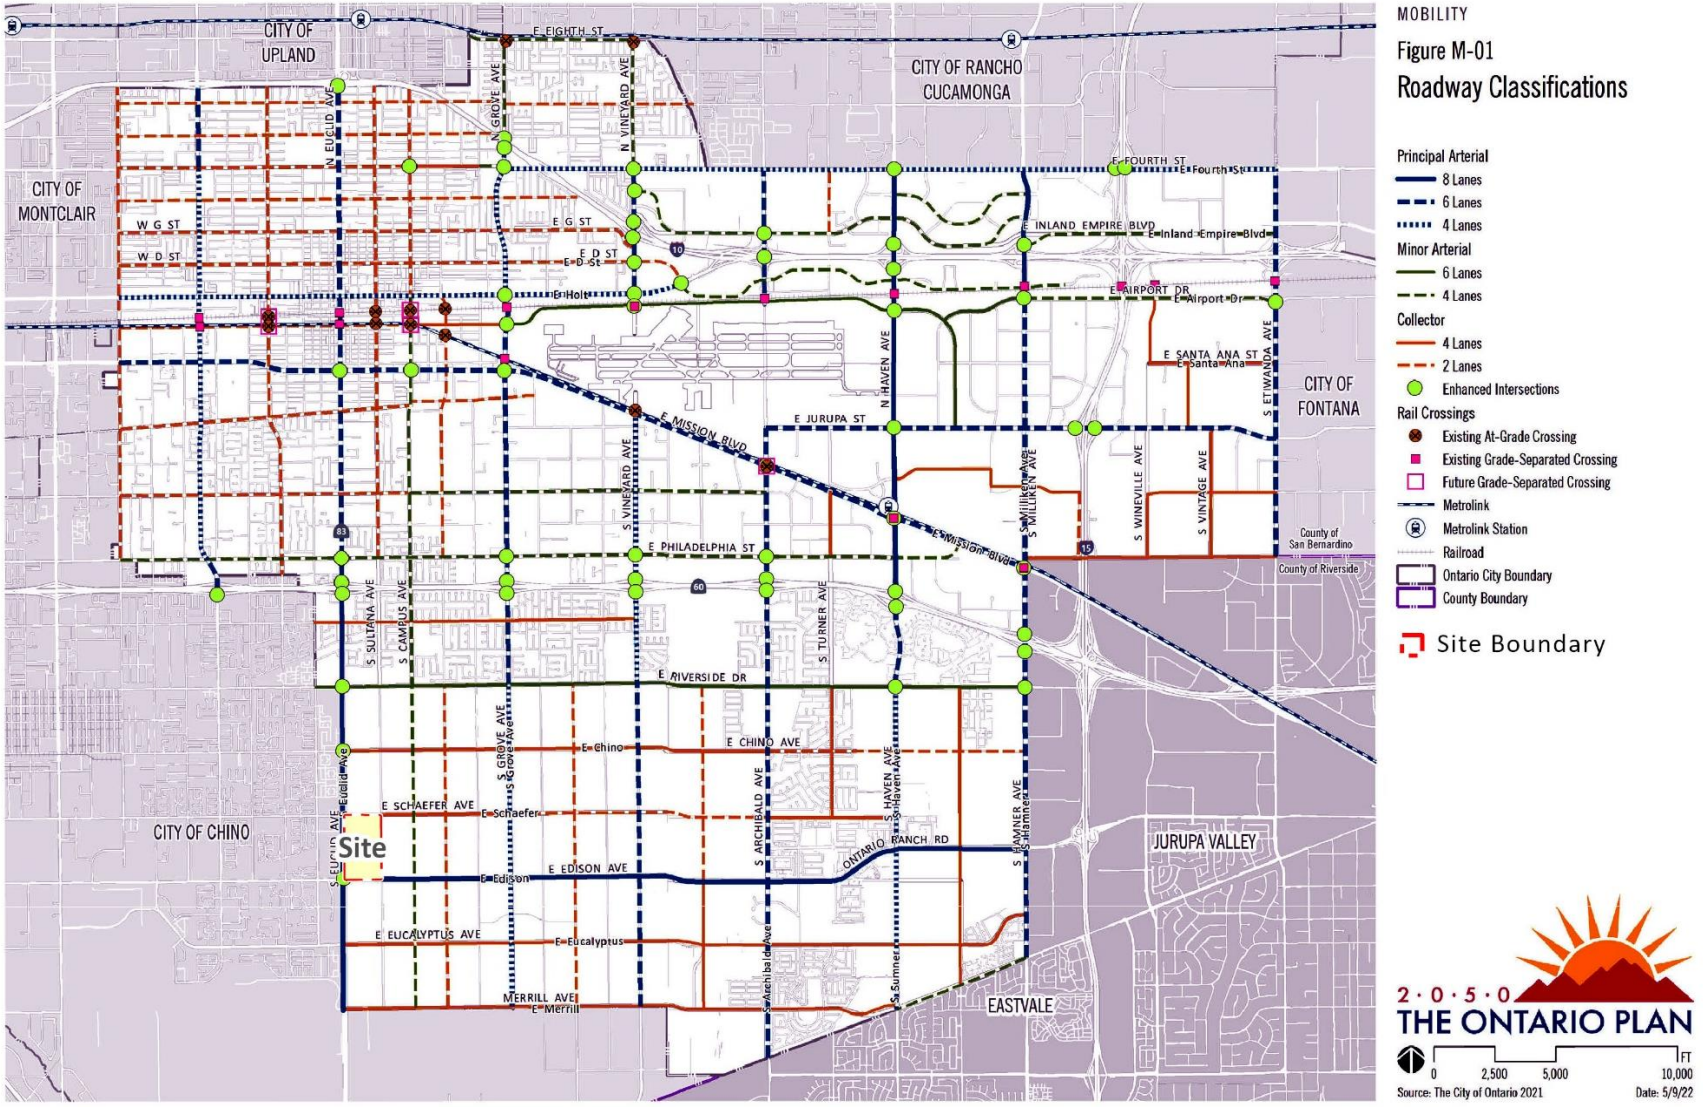


EXHIBIT 3-2: CITY OF ONTARIO 2050 GENERAL PLAN CIRCULATION ELEMENT

The study area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as Collector Streets:

- Walnut Avenue
- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Bon View Avenue
- Walker Avenue
- Hellman Avenue
- Turner Avenue

3.3 BICYCLE & PEDESTRIAN FACILITIES

Exhibit 3-3 illustrates the 2050 Ontario Plan bicycle facilities. Existing pedestrian facilities within the study area are shown on Exhibit 3-4. As shown on Exhibit 3-4, there are limited pedestrian facilities in the vicinity of the Project site. Field observations and traffic counts conducted in 2022 indicate light pedestrian and bicycle activity within the study area.

3.4 TRANSIT SERVICE

Exhibit 3-5 shows the 2050 Ontario Plan transit facilities. The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Exhibit 3-6 shows the existing transit facilities, which indicates that Omnitrans Route 83 could potentially serve the Project site. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans to potentially provide bus service to the site.

3.5 EXISTING (2022) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in 2022. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

EXHIBIT 3-3: CITY OF ONTARIO 2050 BICYCLE FACILITIES

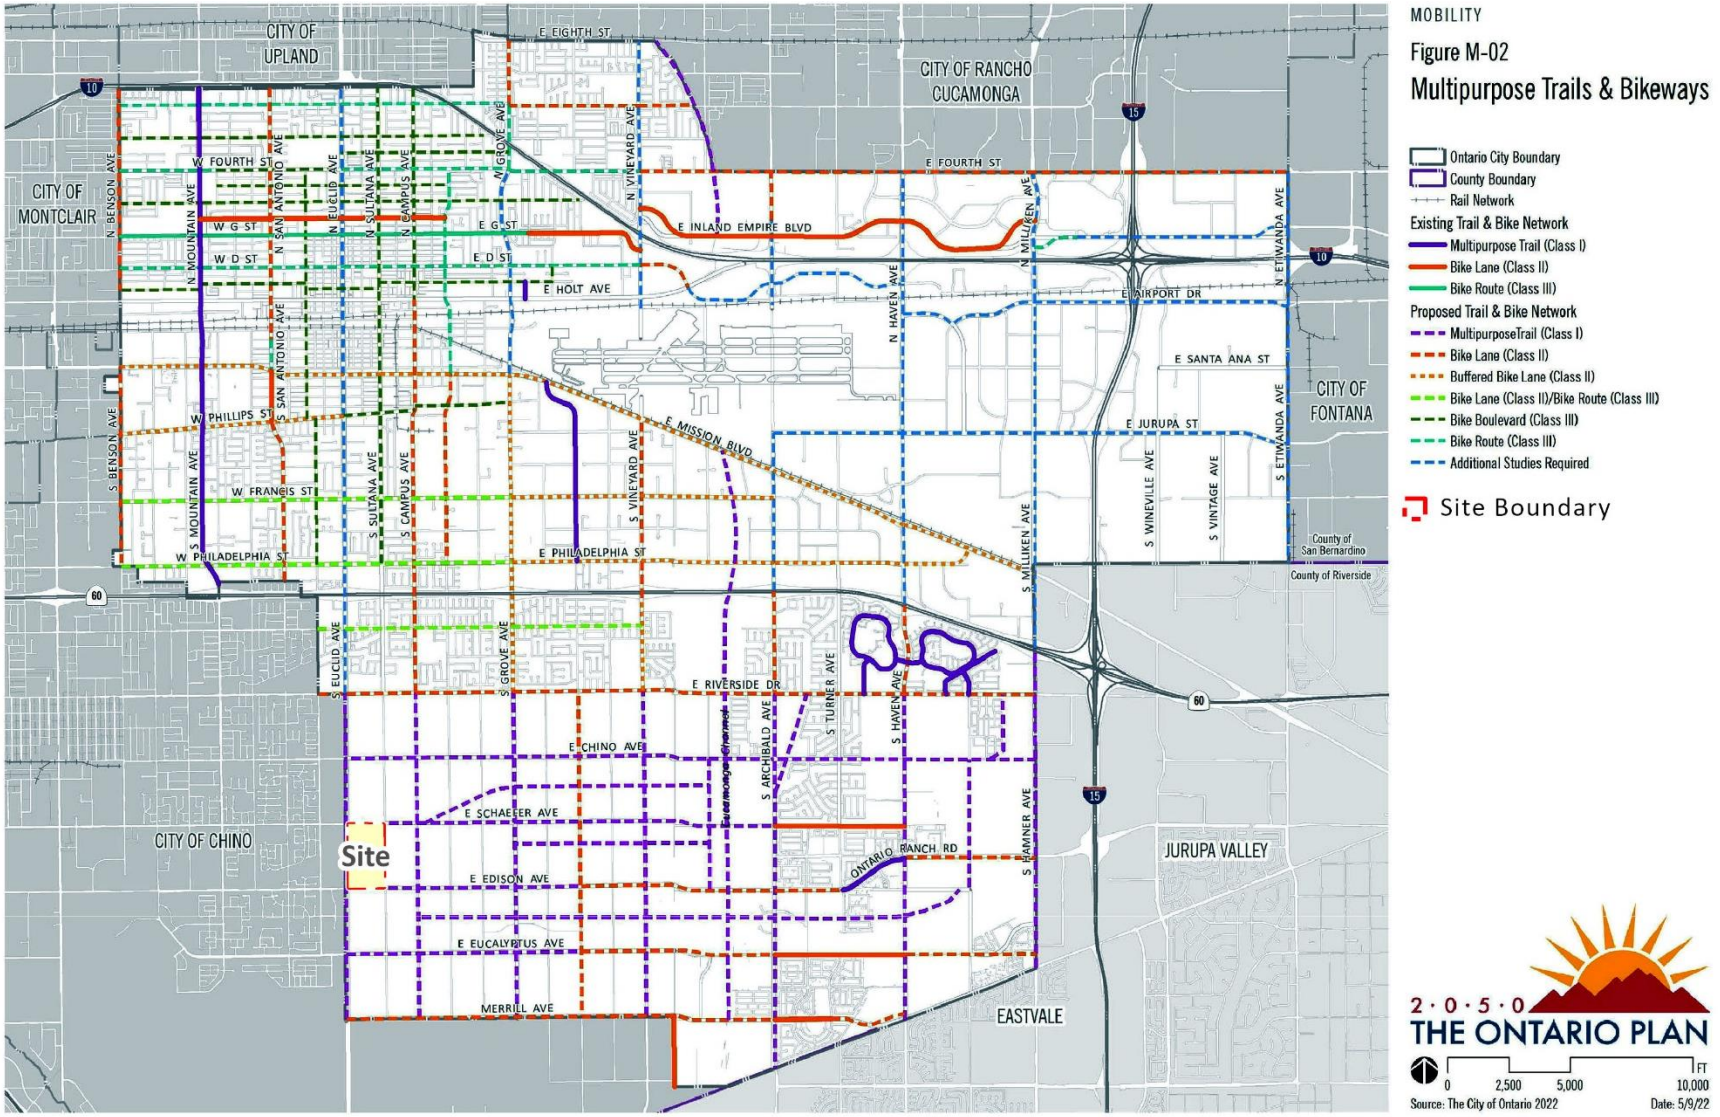

EXHIBIT 3-4: EXISTING PEDESTRIAN FACILITIES

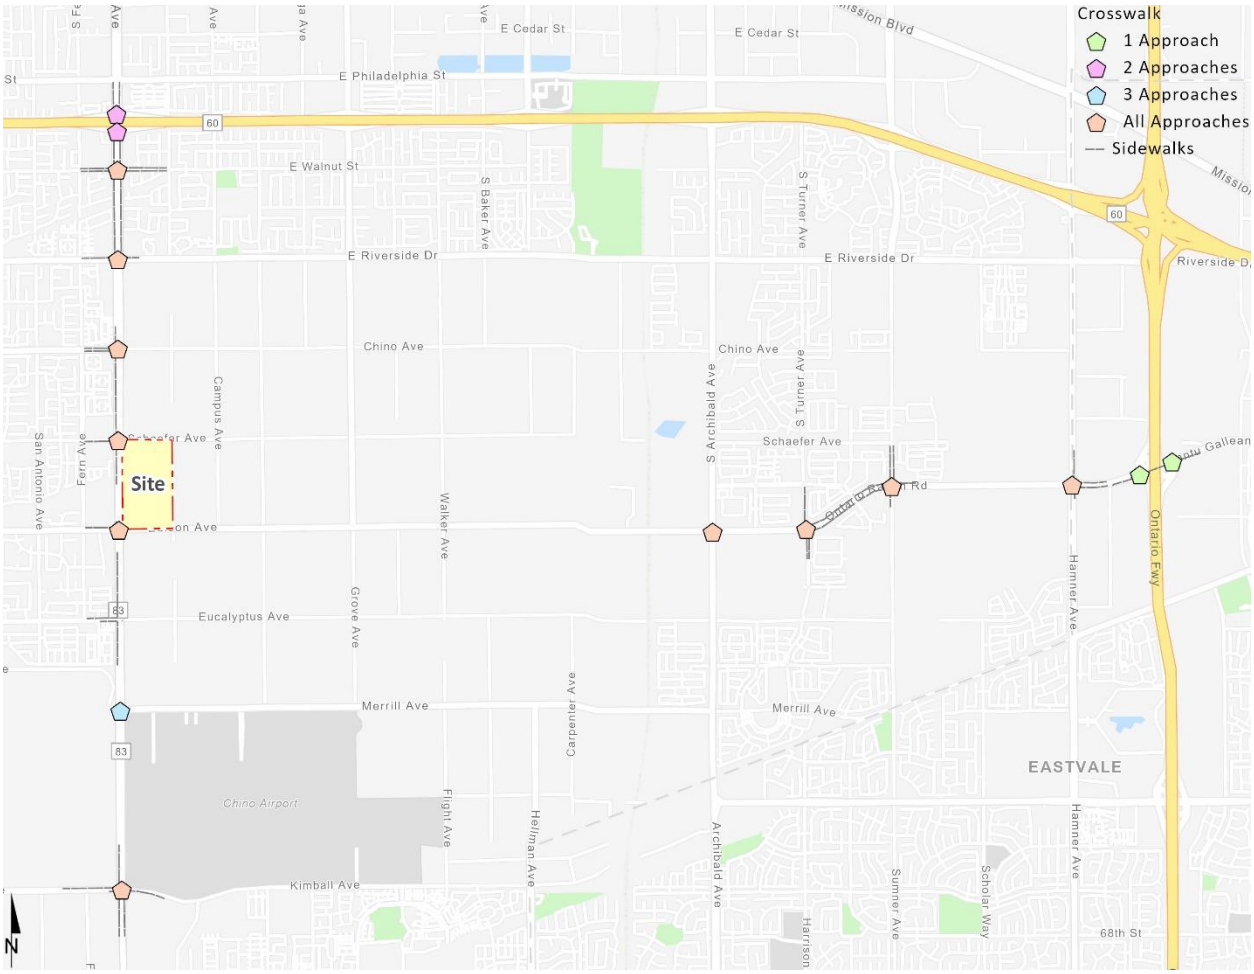

EXHIBIT 3-5: CITY OF ONTARIO 2050 GENERAL PLAN TRANSIT ROUTES

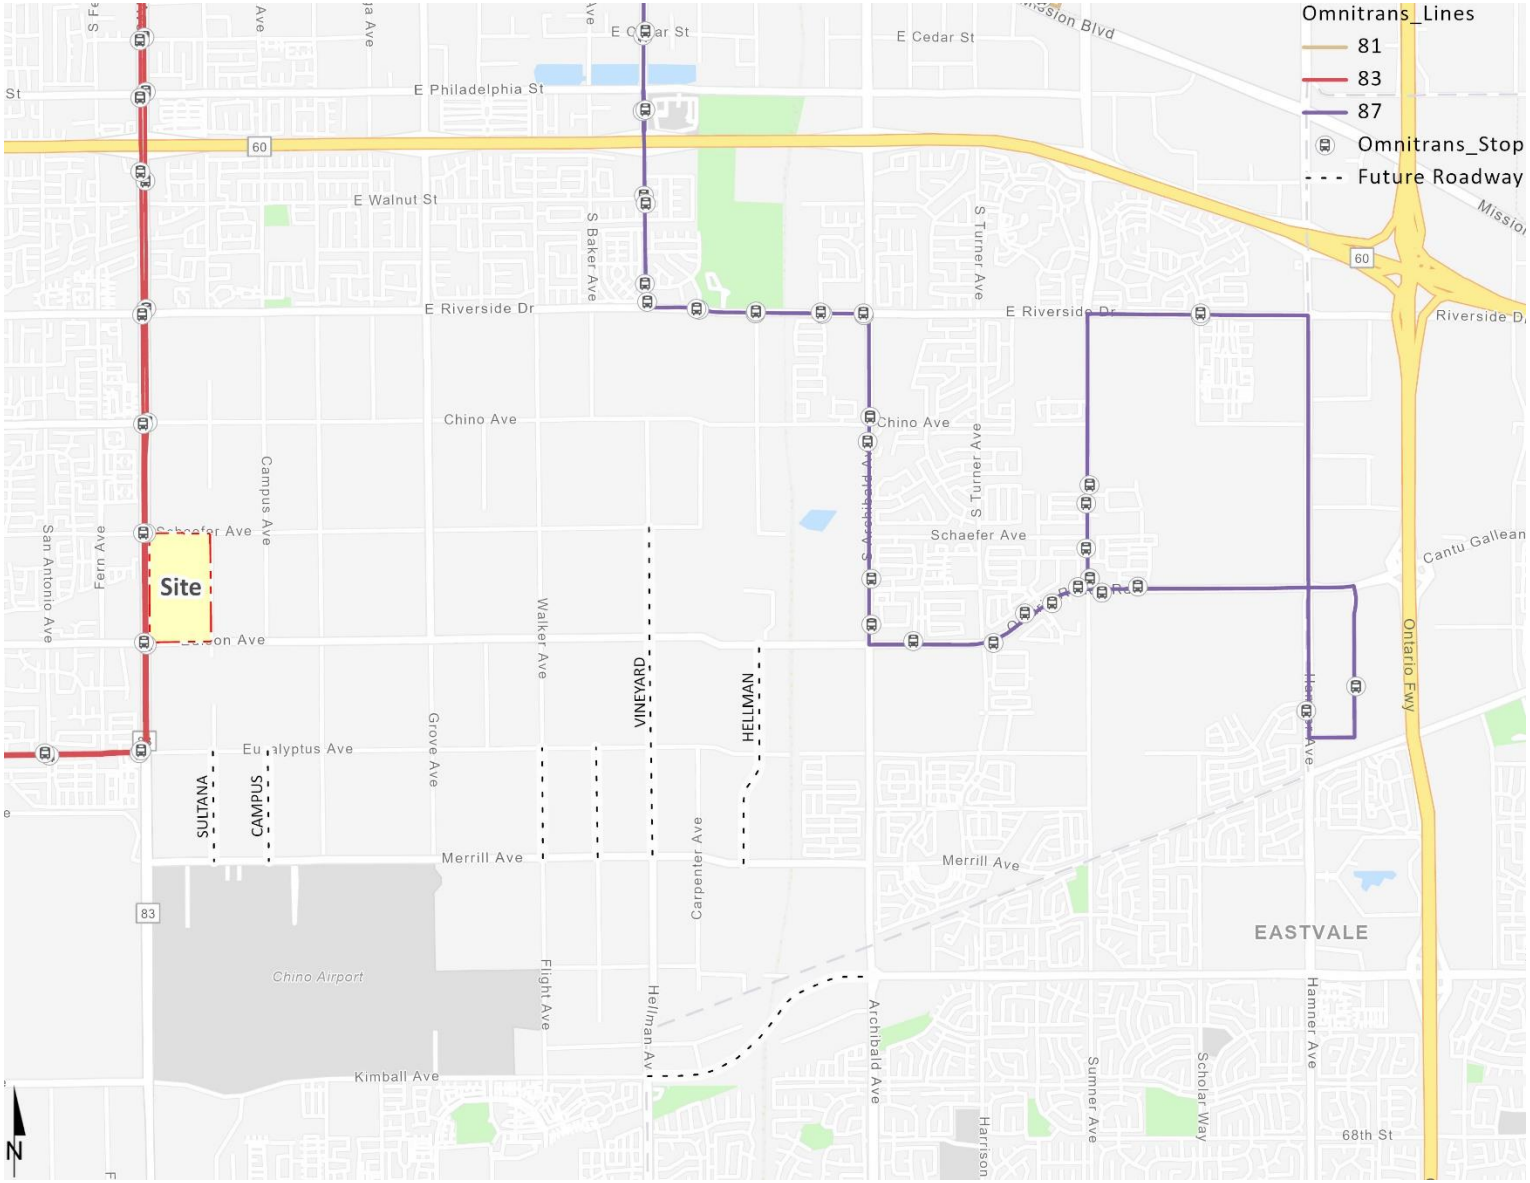

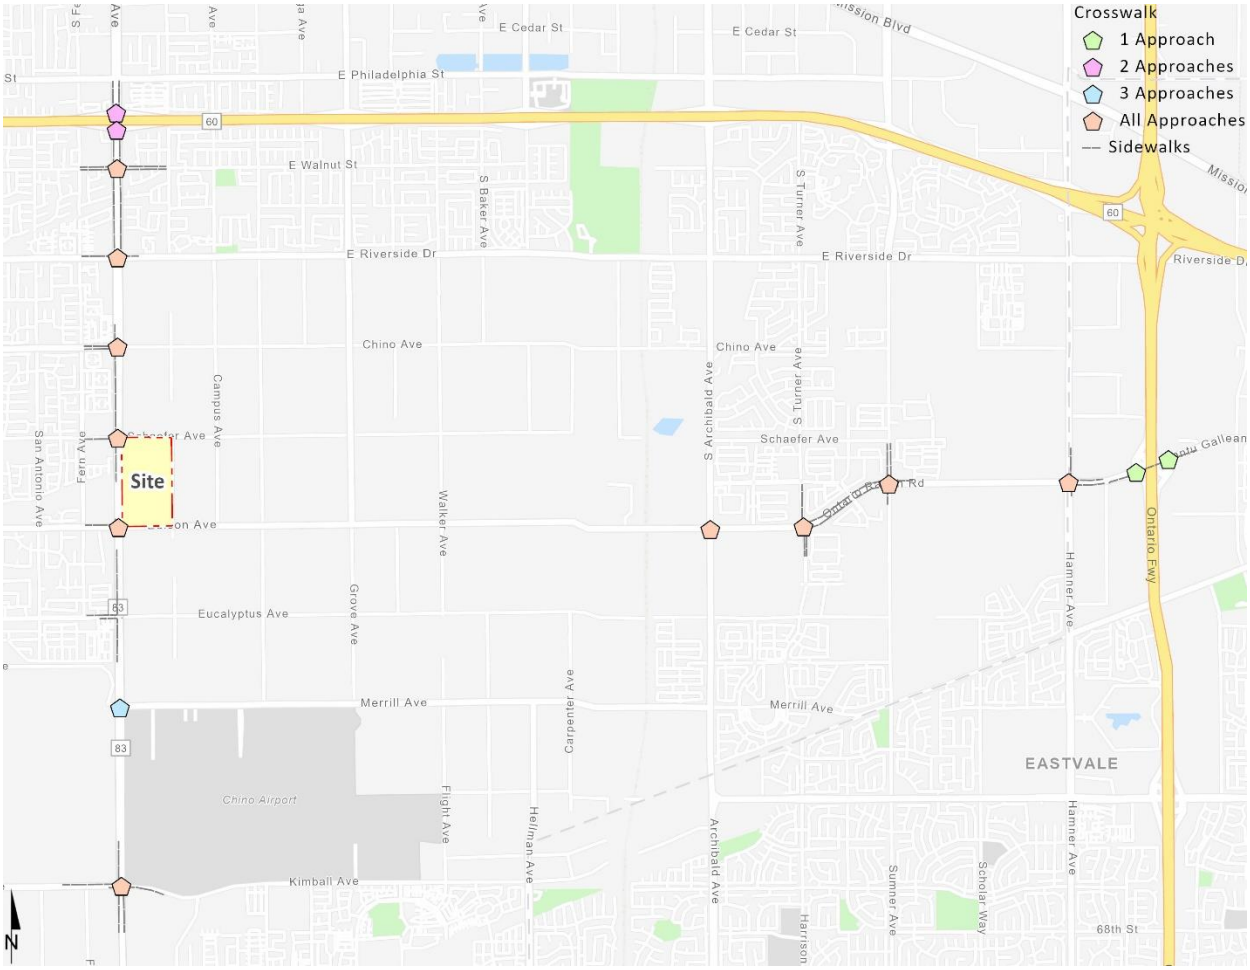

EXHIBIT 3-6: EXISTING TRANSIT FACILITIES

The 2022 weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. As such, no additional adjustments were made to the traffic counts to establish the baseline condition. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

Existing weekday ADT volumes are shown on Exhibit 3-7. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

Weekday PM Peak Hour (Approach Volume + Exit Volume) x 11.38 = Leg Volume

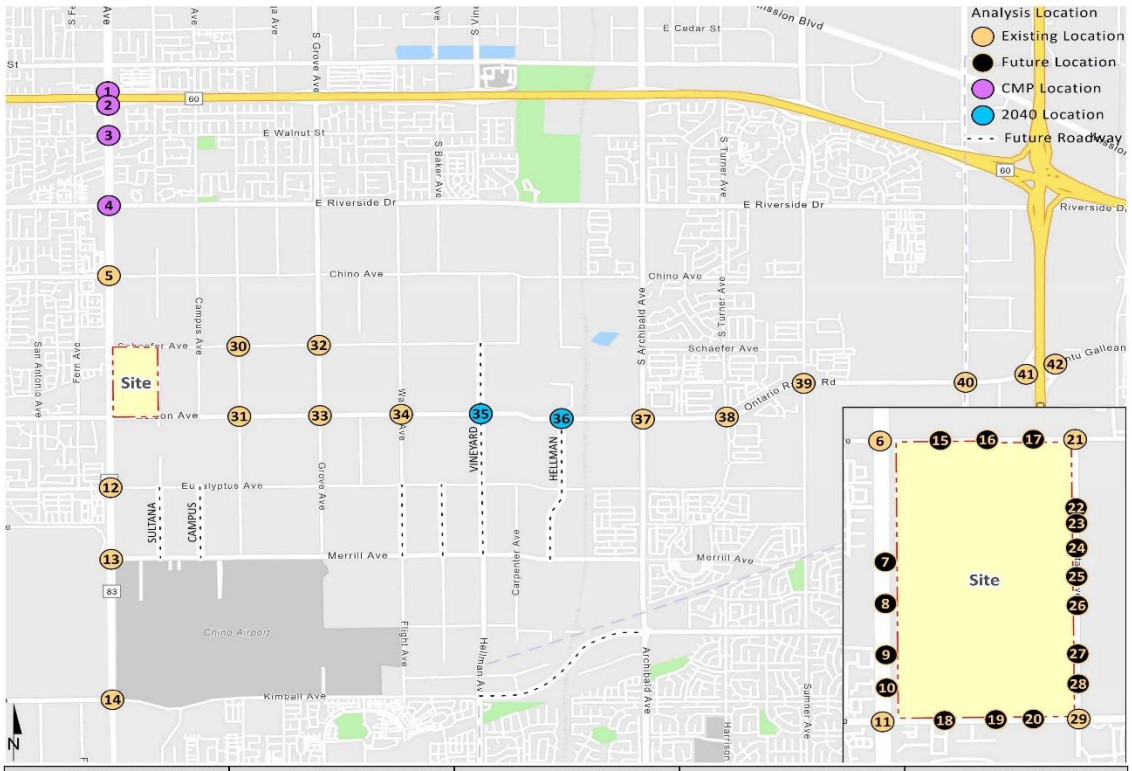
A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 8.79 percent. As such, the above equation utilizing a factor of 11.38 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of 8.79 percent (i.e., 1/0.0879 = 11.38) and was assumed to sufficiently estimate ADT volumes for planning-level analyses. Existing weekday and weekend peak hour intersection volumes, in actual vehicles, are also shown on Exhibit 3-7.

3.6 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1, which indicates that the following study area intersection is currently operating at an unacceptable LOS during one of the peak hours:

- Grove Avenue & Edison Avenue (#33) – LOS F PM peak hour only

The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.



3.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following intersections currently meet a traffic signal warrant under Existing (2022) traffic conditions:

- Bon View Avenue & Edison Avenue (#31)
- Grove Avenue & Schaefer Avenue (#32)
- Grove Avenue & Edison Avenue (#33)
- Walker Avenue & Edison Avenue (#34)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop

3.8 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the SR-60 Freeway at the Euclid Avenue interchange and the I-15 freeway at the Cantu Galleano Ranch Road interchange to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the SR-60 or I-15 Freeway mainline. Queuing analysis findings are presented in Table 3-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 3-2, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Existing (2022) traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

TABLE 3-2: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR EXISTING (2022) CONDITIONS

Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet)[3]		Acceptable? [1]	
			AM Peak Hour	PM Peak Hour	AM	PM
Euclid Av. & SR-60 WB Ramps	WBL	350	376 [3]	370 [3]	Yes	Yes
	WBL/T/R	1,415	379	381	Yes	Yes
	WBR	350	209	175	Yes	Yes
Euclid Av. & SR-60 EB Ramps	EBL	900	382	274	Yes	Yes
	EBL/R	1,290	472 [2]	234	Yes	Yes
I-15 SB Ramps & Cantu Galleano Ranch Rd.	SBL	1,435	127	156	Yes	Yes
	SBL/R	550	319	469	Yes	Yes
	SBR	455	289	423	Yes	Yes
I-15 NB Ramps & Cantu Galleano Ranch Rd.	NBL	1,615	149	125	Yes	Yes
	NBL/R	585	52	48	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.
[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.
[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-15Freeway mainline.

3.9 IMPROVEMENTS

Improvement strategies have been identified at intersections that have been identified as deficient under Existing (2022) traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better).

3.9.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the recommended improvement strategies to address Existing (2022) traffic deficiencies are presented on Table 3-3. Worksheets for Existing (2022) Conditions, with improvements, HCM calculation worksheets are provided in Appendix 3.5.

TABLE 3-3: INTERSECTION ANALYSIS FOR EXISTING (2021) CONDITIONS WITH IMPROVEMENTS

		Intersection Approach Lanes[1]												Delay[2] (secs.)		Level of Service		Acceptable
	Traffic	Northbound			Southbound			Eastbound			Westbound							
	Control[3]	L	T	R	L	T	R	L	T	R	L	T	R	AM	PM	AM	PM	LOS
33 Grove Av. & Edison Av.																		
Without Improvements:	AWS	0	1	0	0	1	0	0	1	0	0	1	0	39.0	**52.1**	E	**F**	E
With Improvements:	**TS**	0	1	0	0	1	0	0	1	0	0	1	0	8.1	9.2	A	A	

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] AWS = All-way Stop; **TS** = Traffic Signal

3.9.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 3-2, there are no peak hour queuing issues at the SR-60 Freeway and I-15 Freeway study area interchanges. As such, no improvements have been identified.

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. A preliminary land use plan for the proposed Project is shown previously on Exhibit 1-2. The proposed Project is to consist of the following uses:

1. Planning Area 1 (Business Park): 135,841 square feet of business park uses fronting Euclid Avenue (SR-83) and 399,135 square feet of warehousing use
2. Planning Area 2 (Business Park): 55,537 square feet of business park uses fronting Euclid Avenue (SR-83) and 450,784 square feet of warehousing use
3. Planning Area 3A (Mixed Use): 122,898 square feet of warehousing use and 30,225 square feet of commercial retail use (10,000 square feet of fast-food restaurant use without drive-through window, 10,000 square feet of fast-food restaurant with drive-through window, and 10,225 square feet of retail space)
4. Planning Area 3B (Mixed Use): 466 multifamily residential dwelling units
5. Planning Area 4 (Truck/Trailer Parking): 7.4 acres
6. Planning area 5 (Truck/Trailer Parking): 4.8 acres

A summary of the land uses is provided in Table 4-1. Note that the Multifamily (Low-Rise) Residential, Strip Retail, Fast-Food Without Drive-Through Window, Fast-Food With Drive-Through Window, and portions of the Truck/Trailer Parking Lot and Warehousing Uses, shown as "Future Development" on Exhibit 1-2, are not controlled by the Project Applicant. Project Buildout is anticipated in Year 2027. Access to the proposed Project would be provided to the surrounding roadways of Schaefer Avenue to the north, Euclid Avenue to the west, Edison Avenue to the south, and Sultana Avenue to the east.

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the ITE Trip Generation Manual (11th Edition, 2021) was used to estimate the trip generation. For purposes of this analysis, the following land use codes and vehicle mixes have been utilized:

- ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for up to 191,378 square feet along the Euclid Avenue (SR-83) frontage. The vehicle mix has been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following South Coast Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

TABLE 4-1: PROJECT TRIP GENERATION RATES

Land Use[1]	Units[2]	ITE LU Code	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Actual Vehicle Trip Generation Rates

[1] Trip Generation & Vehicle Mix Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

[2] TSF = thousand square feet; DU - Dwelling Units

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

[4] Trip generation rates based on empirical data of existing surveyed sites.

- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 972,817 square feet. A warehouse is primarily devoted to the storage of materials but may also include office and maintenance areas. The vehicle mix has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 220 (Multifamily Low-Rise Residential) has been used to derive site specific trip generation estimates for up to 466 dwelling units.
- ITE land use code 822 (Strip Retail), ITE land use code 933 (Fast-Food Restaurant Without Drive-Through Window), and ITE land use code 934 (Fast-Food Restaurant With Drive-Through Window) have been used to derive site specific trip generation estimates for up to 30,225 square feet of commercial retail use.
- The ITE Trip Generation Manual does not currently have any trip generation rates for a truck/trailer parking lot, as such, trip generation estimates for the proposed project have been developed using data collected at other facilities with operations similar to those proposed. Table A-1 in Appendix 1.1 summarizes the count data collected at 2 existing facilities located at 5087 Patterson Avenue in the City of Perris and 14769 San Bernardino Avenue in the City of Fontana. The actual driveway counts have been attached to this assessment for each of these facilities in Attachment A. In other words, this traffic analysis will conservatively assume the truck/trailer parking lot will be an independent use that does not specifically serve the adjacent warehouse use.

Refinements to the raw trip generation estimates have been made to provide a more detailed breakdown of trips between passenger cars and trucks. Trip generation for heavy trucks was further broken down by truck type (or axle type). The total truck percentage is comprised of 3 different truck types: 2-axle, 3-axle, and 4+-axle trucks. Passenger Car Equivalent (PCE) factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in County's Guidelines.

As the Project is proposed to include shopping center and restaurant uses, pass-by percentages have been obtained from the ITE Trip Generation Manual (11rd Edition, 2021). (10) Pass-by trips account for trips that are currently on the existing roadway network that would stop by uses within the proposed Project on their way to their ultimate destination. Pass-by trip reductions will be accounted for off-site intersections but will be added back to applicable commercial serving driveways to ensure access analysis accounts for all trips. Patrons of the uses may also visit other uses on-site, including the restaurants, and retail uses, without leaving the site. The ITE Trip Generation Handbook has been utilized to determine the internal capture for the applicable mix of uses.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site. In other words, trips may be made between individual retail uses on-site and can be made either by walking or using internal roadways without using external streets. As the trip generation for the site was conservatively estimated based on individual land uses (commercial and restaurant uses) as opposed to the average ITE Shopping Center rate, an internal capture reduction was applied to recognize the interactions that would occur between the various complementary land uses. In addition, the Project includes uses that would likely interact with the restaurant and shopping center uses.

The internal capture is based on the National Cooperative Highway Research Program's (NCHRP Report 684) internal capture trip capture estimation tool. The NCHRP internal capture estimation tool is based on the methodology outlined in the ITE Trip Generation Handbook. These internal capture worksheets are attached to this scoping agreement.

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project, including the Future Development uses, in actual vehicles and PCE are shown in Table 4-2 and Table 4-3, respectively. As shown in Table 4-2, the buildout of the proposed Project is anticipated to generate 8,820 two-way trip-ends per day in actual vehicles, with 864 actual AM peak hour trips and 732 actual PM peak hour trips. For the purposes of the operations analysis, the PCE trip generation shown in Table 4-3 has been utilized.

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project, not including the Future Development uses, in actual vehicles and PCE are shown in Table 4-4 and Table 4-5, respectively. As shown in Table 4-4, the proposed Project, not including the Future Development uses, is anticipated to generate 2,228 two-way trip-ends per day in actual vehicles, with 212 actual AM peak hour trips and 218 actual PM peak hour trips. For the purposes of the operations analysis, the PCE trip generation shown in Table 4-5 has been utilized.

4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. Since the distribution patterns is influence by the type of land use, separate distribution patterns have been evaluated for the residential, non-residential, and industrial (passenger cars and trucks) uses. The Project trip distribution patterns are shown on the following Exhibits:

- Exhibit 4-1: Project (Residential) Trip Distribution
    - Exhibit 4-2: Project (Residential) Detailed Site Trip Distribution
- Exhibit 4-3: Project (Retail) Trip Distribution
    - Exhibit 4-4: Project (Retail) Detailed Site Trip Distribution
- Exhibit 4-5: Project (Business Park – Passenger Cars) Trip Distribution
    - Exhibit 4-6: Project (Business Park - Passenger Cars) Detailed Inbound Site Trip Distribution
    - Exhibit 4-7: Project (Business Park – Passenger Cars) Detailed Outbound Site Trip Distribution
- Exhibit 4-8: Project (Business Park - Trucks) Trip Distribution
    - Exhibit 4-9: Project (Business Park - Trucks) Detailed Inbound Site Trip Distribution
    - Exhibit 4-10: Project (Business Park – Trucks) Detailed Outbound Site Trip Distribution

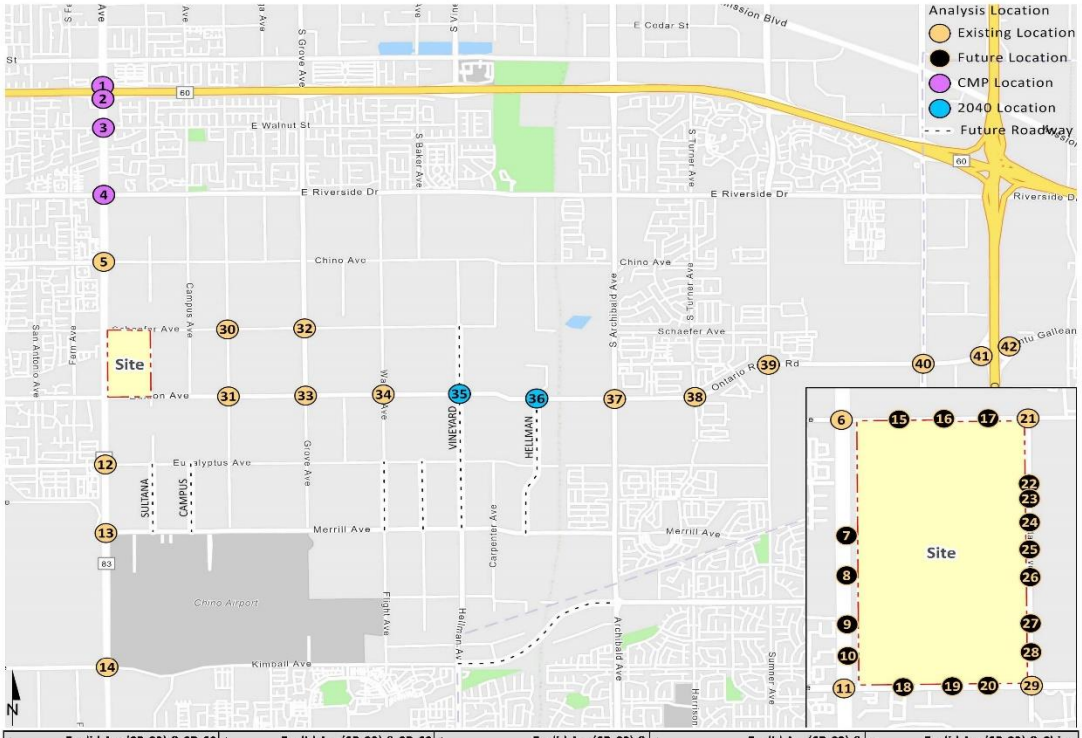
4.3 MODAL SPLIT

The potential for Project trips to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes.



4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project weekday ADT and weekday peak hour intersection turning movement volumes, with Future Development uses and without Future Development uses, in actual vehicles, are shown on Exhibit 4-11 and Exhibit 4-12, respectively.

4.5 BACKGROUND TRAFFIC

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year, compounded annually, for 2027 traffic conditions. The total ambient growth is 10.41% for 2027 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in conjunction with traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies. 2027 traffic volumes are provided in Section 6 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine With Project forecasts.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario and the neighboring jurisdictions of the City of Chino and City of Eastvale. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. Exhibit 4-13 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown in Table 4-4. If applicable, the traffic generated by individual cumulative projects was manually added to the Without Project forecasts to ensure that traffic generated by the listed cumulative development projects in Table 4-4 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5 *Background Traffic*. The Cumulative Only ADT and peak hour intersection turning movement volumes, in actual vehicles, are shown on Exhibit 4-14.

4.7 NEAR-TERM TRAFFIC CONDITIONS

The "buildup" approach combines existing traffic counts with a background ambient growth factor to forecast Opening Year Cumulative (2027) traffic conditions. An ambient growth factor accounts for background (area-wide) traffic increases that occur over time up to the year 2027 from the year 2022. Traffic volumes generated by the Project are then added to assess the near-term traffic conditions. The 2027 roadway networks are similar to the Existing conditions roadway network, with the exception of future driveways proposed to be developed by the Project.

The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Opening Year Cumulative (2027) Without Project
  - Existing 2022 counts
  - Ambient growth traffic (10.4%)
  - Cumulative Development Traffic

- Opening Year Cumulative (2027) With Project
  - Existing 2022 counts
  - Ambient growth traffic (10.4%)
  - Cumulative Development Traffic
  - Project (not including Future Development) traffic

4.8 HORIZON YEAR (2050) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2050) without Project conditions were derived from the SBTAM using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino and are based on the City on Ontario TOP 2050 currently approved General Plan forecasts. The traffic forecasts reflect the area-wide growth anticipated between Existing (2022) conditions and Horizon Year (2050) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2050) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in 2022. The SBTAM has a base (validation) year of 2016 and a horizon (future forecast) year of 2050. The difference in model volumes (2050-2016) defines the growth in traffic over the 32-year period.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 765), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3-hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4-hour PM peak period (an even distribution would result in a factor of 0.25).

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been

applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year (2050) forecasts. Horizon Year (2050) turning volumes were compared to Opening Year Cumulative (2027) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative (2027) and Horizon Year (2050) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2022) and Opening Year Cumulative (2027) conditions. Adjustments have not been made to study area intersections that may be affected by new future roadway connections (such as the extension of Pine Avenue or the extension of Kimball Avenue/Limonite Avenue), where travel patterns would likely get affected and forecasts may potentially decrease from the Opening Year Cumulative conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year (2050) peak hour forecasts.

The future Horizon Year (2050) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

The SBTAM does not include a truck component or have data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above Opening Year Cumulative (2027) traffic forecasts, which are presented and evaluated in PCE (see Section 3.5 *Existing (2022) Traffic Counts* for discussion on PCE). As such, the Horizon Year (2050) forecasts are also assumed to be in PCE for the purposes of this analysis. Post-processing worksheets for Horizon Year (2050) without Project traffic conditions are provided in Appendix 4.1.

5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for E+P conditions and the resulting intersection operations, traffic signal warrant, and off-ramp queuing analyses.

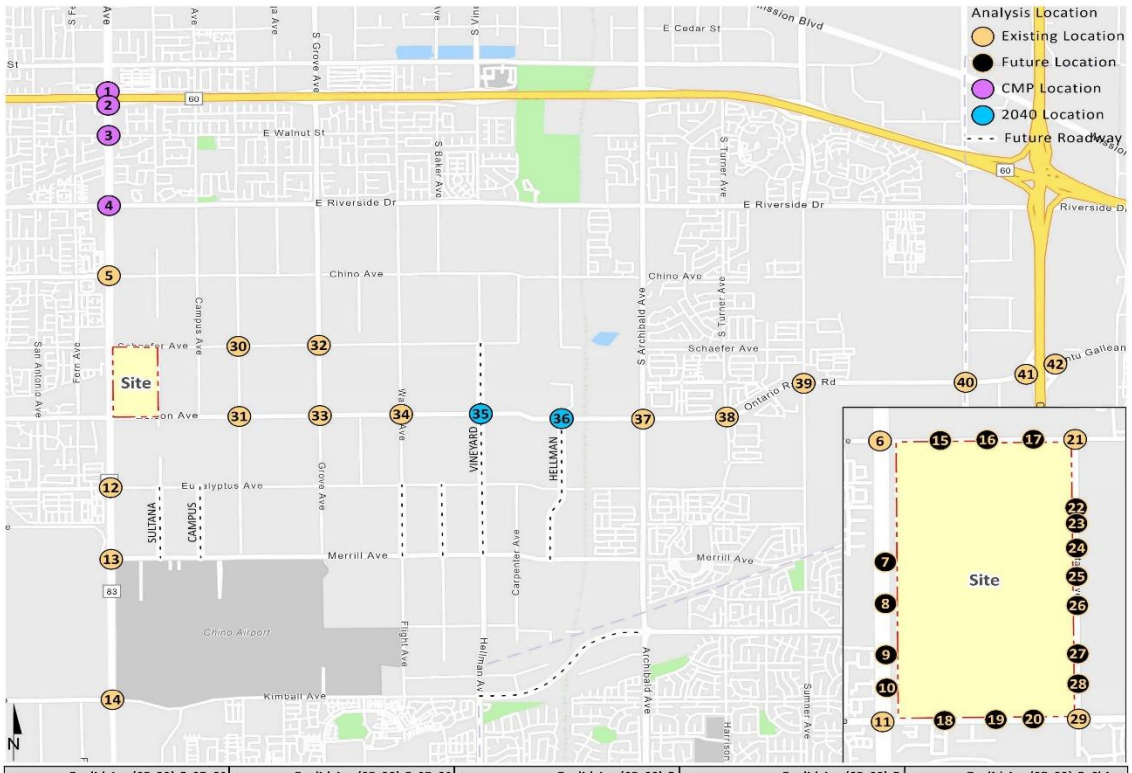
5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

5.2 E+P GROWTH TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus the addition of Project, with Future Development, traffic. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for E+P traffic conditions are shown on Exhibit 5-1.



5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 5-1 for E+P traffic conditions, which indicates that the following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P traffic conditions, in addition to the intersection identified under Existing (2022) traffic conditions:

- Driveway 9 & Edison Avenue (#19) – LOS F AM peak hour only
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for E+P traffic conditions are included in Appendices 5.1.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop

5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The traffic signal warrant analysis for E+P traffic conditions is based on the peak hour volumes or planning level ADT volume-based traffic signal warrants. The following unsignalized study area intersections of are anticipated to meet a traffic signal warrant under E+P traffic conditions (see Appendix 5.2):

- Sultana Avenue & Edison Avenue (#29)
- Bon View Avenue & Schaefer Avenue (#30)

5.5 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for E+P are presented in Table 5-2. As shown in Table 5-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows, consistent with Existing (2022) traffic conditions. Worksheets for E+P traffic conditions queuing analysis are provided in Appendix 5.3.

TABLE 5-2: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR E+P CONDITIONS

			Existing (2022)				E+P (Phase 1)			
		Available Stacking Distance	95th Percentile Queue (Feet)		Acceptable? [1]		95th Percentile Queue (Feet)		Acceptable? [1]	
Intersection	Movement	(Feet)	AM Peak	PM Peak	AM	PM	AM Peak	PM Peak	AM	PM
Euclid Av. & SR-60 WB Ramps	WBL	350	376 [3]	370 [3]	Yes	Yes	388 [3]	374 [3]	Yes	Yes
	WBL/T/R	1,415	379	381	Yes	Yes	423 [2]	402 [2]	Yes	Yes
	WBR	350	209	175	Yes	Yes	226	194	Yes	Yes
Euclid Av. & SR-60 EB Ramps	EBL	900	382	274	Yes	Yes	382	274	Yes	Yes
	EBL/R	1,290	472 [2]	234	Yes	Yes	569 [2]	296	Yes	Yes

	SBL/R	550	319	469	Yes	Yes	392	502	Yes	Yes
	SBR	455	289	423	Yes	Yes	356	451	Yes	Yes
I-15 NB Ramps & Cantu Galleano Ranch Rd.	NBL	1,615	149	125	Yes	Yes	164	151	Yes	Yes
	NBL/R	585	52	48	Yes	Yes	56	51	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60 and I-15 Freeway mainline.

5.6 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under E+P traffic conditions.

5.6.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under E+P traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address E+P traffic deficiencies are presented in Table

5-3. The intersection operations analysis worksheets for E+P conditions, with improvements, are included in Appendix 5.4.

5.6.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown in Table 5-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for E+P traffic conditions. As such, no improvements have been identified.

TABLE 5-3: E+P CONDITIONS INTERSECTION OPERATIONS ANALYSIS WITH IMPROVEMENTS

	Traffic	Intersection Approach Lanes[1]												Delay[2] (secs.)		Level of Service		Acceptable

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] TS = Traffic Signal; **TS** = Traffic Signal

It should be noted, the traffic signal improvement at the intersection of Driveway 9 & Edison Avenue (#19) will be installed by the future phases of PA 3A and 3B.

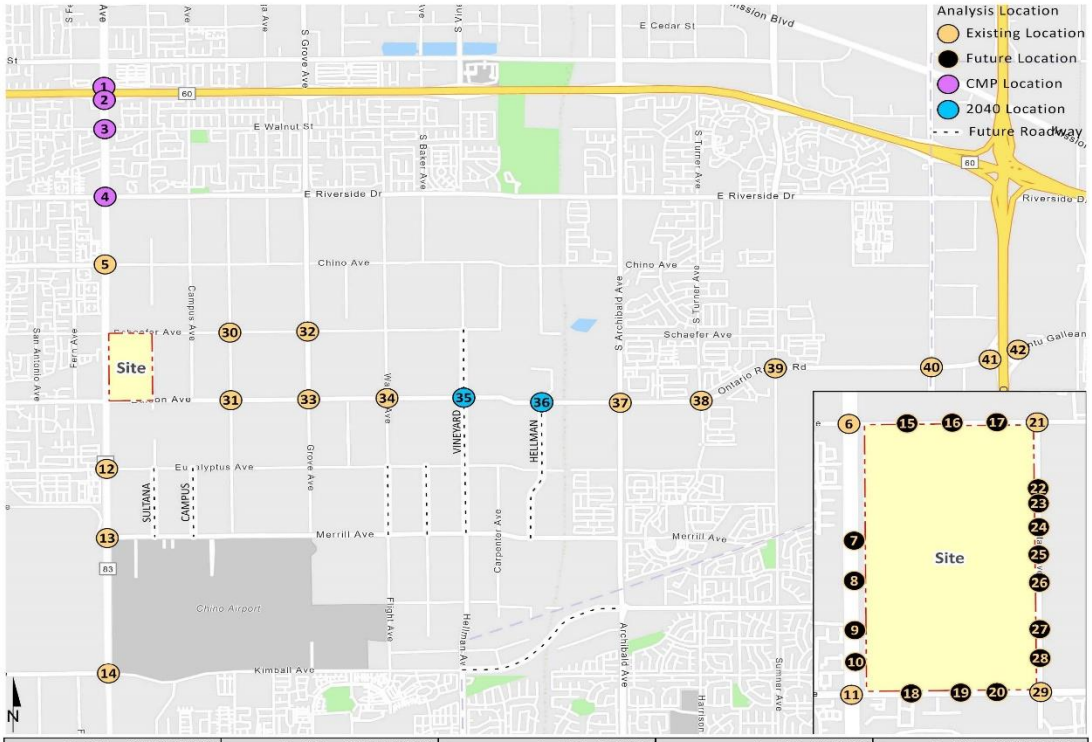
6 OPENING YEAR CUMULATIVE (2027) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Opening Year Cumulative (2027) conditions and the resulting intersection operations, traffic signal warrant, and off-ramp queuing analyses.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2027) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative (2027) conditions (e.g., intersection and roadway improvements at the Project's frontage and driveways).



6.2 OPENING YEAR CUMULATIVE (2027) WITHOUT PROJECT GROWTH TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 10.4% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Opening Year Cumulative (2027) Without Project traffic conditions are shown on Exhibit 6-1.

6.3 OPENING YEAR CUMULATIVE (2027) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2027) Without Project traffic in conjunction with the addition of Project, without Future Development, traffic. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Opening Year Cumulative (2027) With Project traffic conditions are shown on Exhibit 6-2.

Average Daily Trips

6.4 INTERSECTION OPERATIONS ANALYSIS

Opening Year Cumulative (2027) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 6-1 for Opening Year Cumulative (2027) traffic conditions, which indicates that the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2027) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#11) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#12) – LOS F AM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#13) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Kimball Avenue (#14) – LOS F PM peak hour only
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hours
- Archibald Avenue & Edison Avenue (#37) – LOS F AM and PM peak hours

There are no additional study area intersections anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Opening Year Cumulative (2027) With Project traffic conditions. The intersection operations analysis worksheets for Opening Year Cumulative (2027) Without Project and With Project traffic conditions are included in Appendices 6.1 and 6.2, respectively.

6.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

All existing unsignalized study area intersections are anticipated to meet a traffic signal warrant under previous scenarios. As such, traffic signal warrants have not been evaluated for Opening Year Cumulative (2027) Without Project traffic conditions. There are no additional unsignalized study area intersections anticipated to meet a daily volume-based traffic signal warrant under Opening Year Cumulative (2027) With Project traffic conditions, in addition to the locations previously identified under Existing and E+P traffic conditions (see Appendix 6.3).

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop

3 An all-way stop has been evaluated for this intersection for opening year conditions only, per the request of the City of Ontario.

4 Although an all-way stop has been evaluated at the City's request, the through volumes along Edison Avenue exceed the available capac therefore causing execessive delays and intersection deficiency during the peak hours. As such, it is recommended that the intersection a cross-street stop controlled intersection.

6.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Opening Year Cumulative (2027) traffic conditions are presented in Table 6-2. As shown in Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Opening Year Cumulative (2027) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 6.4 and 6.5, respectively.

TABLE 6-2: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR OPENING YEAR CUMULATIVE (2027) CONDITIONS

			2027 Without Project				2027 With Project			
		Available Stacking Distance	95th Percentile Queue (Feet)		Acceptable? [1]		95th Percentile Queue (Feet)		Acceptable? [1]	
Intersection	Movement	(Feet)	AM Peak	PM Peak	AM	PM	AM Peak	PM Peak	AM	PM

	SBL/R	550	1,006 [2,3]	905 [2,3]	Yes	Yes	1,034 [2,3]	921 [2,3]	Yes	Yes
	SBR	455	937 [2,3]	831 [2,3]	Yes	Yes	965 [2,3]	848 [2,3]	Yes	Yes
I-15 NB Ramps & Cantu Galleano Ranch Rd.	NBL	1,615	353 [2]	212	Yes	Yes	376 [2]	217	Yes	Yes
	NBL/R	585	85	64	Yes	Yes	86	64	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60 Freeway mainline.

6.7 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under Opening Year Cumulative (2027) traffic conditions.

6.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under Opening Year Cumulative (2027) traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2027) traffic deficiencies are presented in Table 6-3. Worksheets for Opening Year Cumulative (2027) Without Project and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendices 6.6 and 6.7, respectively.

TABLE 6-3: OPENING YEAR CUMULATIVE (2027) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WITH IMPROVEMENTS

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] TS = Traffic Signal; **TS** = Traffic Signal

6.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Opening Year Cumulative (2027) traffic conditions. As such, no improvements have been identified.

7 HORIZON YEAR (2050) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2050) Without and With Project traffic forecasts, and the resulting intersection operations and traffic signal warrant analyses.

7.1 ROADWAY IMPROVEMENTS

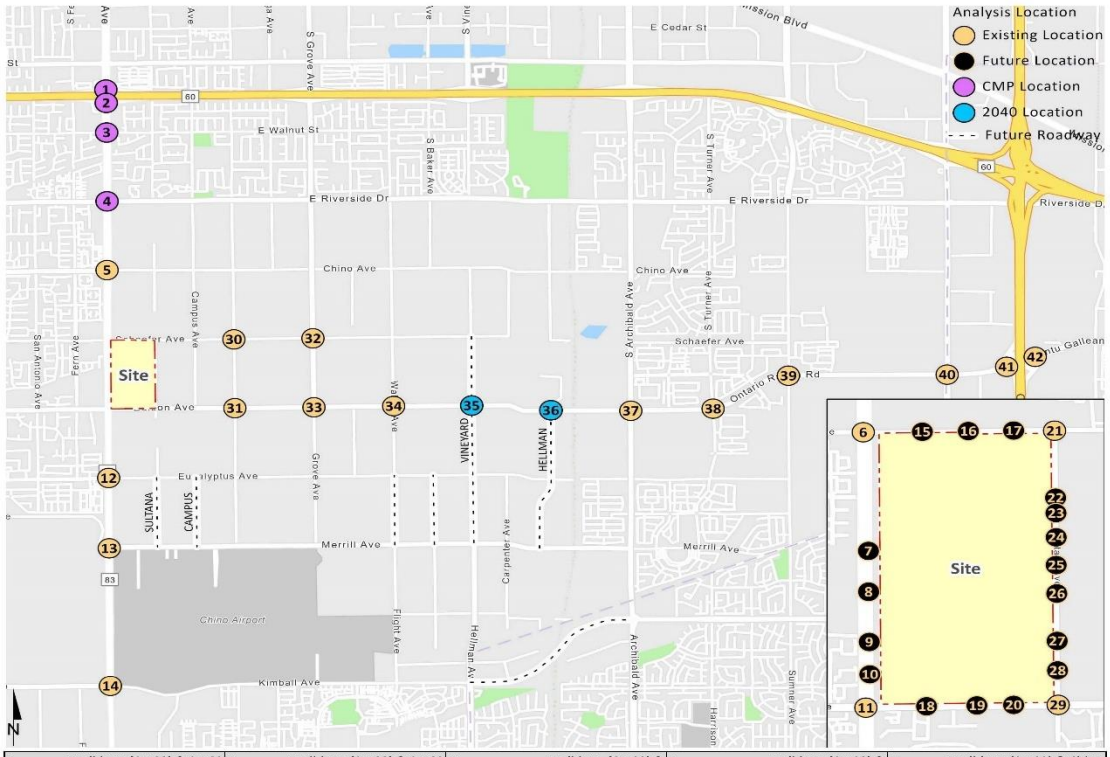
The lane configurations and traffic controls assumed to be in place for Horizon Year (2050) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- If applicable, driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only.

7.2 WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM (see Section 4.8 *Horizon Year (2050) Volume Development* of this TA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Horizon Year (2050) Without Project traffic conditions are shown on Exhibit 7-1.

7.3 WITH PROJECT TRAFFIC VOLUME FORECASTS



This scenario includes the refined post-process volumes obtained from the SBTAM, plus the variance in traffic generated by the buildout proposed Project compared to the approved Specific Plan. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Horizon Year (2050) With Project traffic conditions are shown on Exhibit 7-2.

7.4 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2050) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown in Table 7-1, the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#11) – LOS F AM and PM peak hours

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for interse with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service fc worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

[2] TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop

[3] A traffic signal has been evaluated for this intersection for Horizon Year conditions only, per the request of the City of Ontario.

- Euclid Avenue (SR-83) & Eucalyptus Avenue (#12) – LOS F AM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#13) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#14) – LOS F AM and PM peak hours
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hours
- Vineyard Avenue & Edison Avenue (#35) – LOS F AM and PM peak hours
- Hellman Avenue & Edison Avenue (#36) – LOS F AM and PM peak hours
- Archibald Avenue & Edison Avenue (#37) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#39) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#40) – LOS F AM and PM peak hours

As shown on Table 7-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS with the addition of the Project traffic, in addition to those identified under Horizon Year (2050) Without Project traffic conditions:

- Driveway 9 & Edison Avenue (#19) – LOS F AM and PM peak hours
- Bon View Avenue & Schaefer Avenue (#30) – LOS F PM peak hour only
- Turner Avenue & Ontario Ranch Road (#38) – LOS F AM peak hour only

The intersection operations analysis worksheets for Horizon Year (2050) Without Project and With Project traffic conditions are included in Appendices 7.1 and 7.2, respectively.

7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersections are anticipated to meet planning level (ADT) volume-based traffic signal warrants for Horizon Year (2050) Without Project traffic conditions (see Appendix 7.3), in addition to those previously warranted under Existing, E+P, and Opening Year Cumulative traffic conditions:

- Vineyard Av. & Edison Av. (#35)
- Hellman Av. & Edison Av. (#36)

The following study area intersection is anticipated to meet planning level (ADT) volume-based traffic signal warrant for Horizon Year (2050) With Project traffic conditions (see Appendix 7.4), in addition to those previously warranted under Horizon Year (2050) Without Project traffic conditions:

- Driveway 9 & Edison Av. (#19)

7.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Horizon Year (2050) traffic conditions are presented in Table 7-2. As shown in Table 7-2, the following movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows:

- Euclid Av. & SR-60 EB Ramps, EBL/R – AM peak hour only

Worksheets for Horizon Year (2050) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 7.5 and 7.6, respectively.

	NBL/R	585	101	112	Yes	Yes	103	115	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60 and I-15 Freeway mainline.

7.7 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under Horizon Year (2050) traffic conditions.

7.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under Horizon Year (2050) traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Horizon Year (2050) traffic deficiencies are presented in Table 7-3. Worksheets for Horizon Year (2050) Without Project and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendices 7.7 and 7.8, respectively.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] AWS = All-way Stop; CSS = Cross-street Stop; TS = Traffic Signal; **TS** = Traffic Signal

7.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

Improvement strategies have been recommended at study area off-ramps that have been identified as deficient under Horizon Year (2050) traffic conditions and are shown in Table 7-4. The improvements are consistent with the intersection improvements identified in Table 7-3. Worksheets for Horizon Year (2050) conditions, with improvements, off-ramp queuing analysis worksheets are provided in Appendices 7.9 and 7.10, respectively.

TABLE 7-4: PEAK HOUR QUEUING SUMMARY FOR HORIZON YEAR (2045) CONDITIONS WITH IMPROVEMENTS

			2050 Without Project				2050 With Project			
		Available Stacking Distance	95th Percentile Queue (Feet)		Acceptable? [1]		95th Percentile Queue (Feet)		Acceptable? [1]	
Intersection	Movement	(Feet)	AM Peak	PM Peak	AM	PM	AM Peak	PM Peak	AM	PM
Euclid Av. & SR-60 EB Ramps	EBL	900	561 [2]	337	Yes	Yes	561 [2]	337	Yes	Yes
	EBL/R	1,290	775 [2]	406 [2]	Yes	Yes	815 [2]	452 [2]	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

8.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in January 2020 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF fee program and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities.

8.2 MEASURE "I" FUNDS

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure "I," a one-half of one percent sales tax on retail transactions, through the year 2050, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure "I" extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by SBCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure "I" requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure "I" funds to deliver projects identified in the Nexus Study. While Measure "I" is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure "I" have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

TABLE 8-1: ESTIMATED FEE OBLIGATION

Fee Reference	$ PER UNIT
Business Park Uses	$5.824
Industrial Uses	$3.002

Source: City of Ontario General City (GC) Development Impact Fees (DIF), effective January 1, 2020.

Fee Calculation Program	Category	Unit Cost	Units	Local Circulation
Streets, Signals and Bridges	Business Park Uses	$5.824	191,378	$1,114,585
Streets, Signals and Bridges	Industrial Uses	$3.002	809,217	$2,429,269
			Total Transportation Impact Fees	**$3,543,855**

8.3 FAIR SHARE CONTRIBUTION

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided in Table 8-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

TABLE 8-2: PROJECT FAIR SHARE CALCULATIONS (1 OF 2)

APPENDIX 1.1: TRAFFIC STUDY SCOPING AGREEMENT

This Page Intentionally Left Blank

October 24, 2022

Mr. Jay Bautista
City of Ontario
303 E. B Street
Ontario, CA 91764

EUCLID MIXED-USE SPECIFIC PLAN TRAFFIC STUDY SCOPING AGREEMENT

Mr. Jay Bautista,

Urban Crossroads, Inc. has prepared the following assessment for the proposed Euclid Mixed-Use Specific Plan development (**Project**) to establish a traffic analysis (**TA**) scope of work. The Project is bounded by Euclid Avenue (SR-83) to the west, Schaefer Avenue to the north, Ontario Ranch Road/Edison Avenue to the south, and Sultana Avenue to the east within the City of Ontario. The following memo outlines the project-related trip generation, trip distribution patterns, proposed study area and analysis scenarios expected to be included in the Project traffic analysis.

PROJECT DESCRIPTION

Exhibit 1 illustrates the location map for the proposed Project and Exhibit 2 shows the preliminary site plan. The underlying land uses are consistent with the City's recently adopted The Ontario Plan (TOP) 2050. It is our understanding that the Project is to consist of the following uses:

1. Planning Area 1 (Business Park): 135,841 square feet of business park uses fronting Euclid Avenue (SR-83) and 399,135 square feet of warehousing use
2. Planning Area 2 (Business Park): 55,537 square feet of business park uses fronting Euclid Avenue (SR-83) and 450,784 square feet of warehousing use
3. Planning Area 3A (Business Park & Commercial Retail): 122,898 square feet of warehousing use and 30,225 square feet of commercial retail use (10,000 square feet of fast-food restaurant use without drive-through window, 10,000 square feet of fast-food restaurant with drive-through window, and 10,225 square feet of retail space)
4. Planning Area 3B (Multifamily Residential): 466 multifamily residential dwelling units
5. Planning Area 4 (Truck/Trailer Parking): 7.4 acres
6. Planning area 5 (Truck/Trailer Parking): 4.8 acres

Project Buildout is anticipated in Year 2027. Access to the proposed Project would be provided to the surrounding roadways of Schaefer Avenue to the north, Euclid Avenue (SR-83) to the west, Ontario Ranch Road/Edison Avenue to the south, and Sultana Avenue to the east.

Note that the area shown on Exhibit 2 as "Future Development" is not controlled by the Project Applicant.

EXHIBIT 1: LOCATION MAP

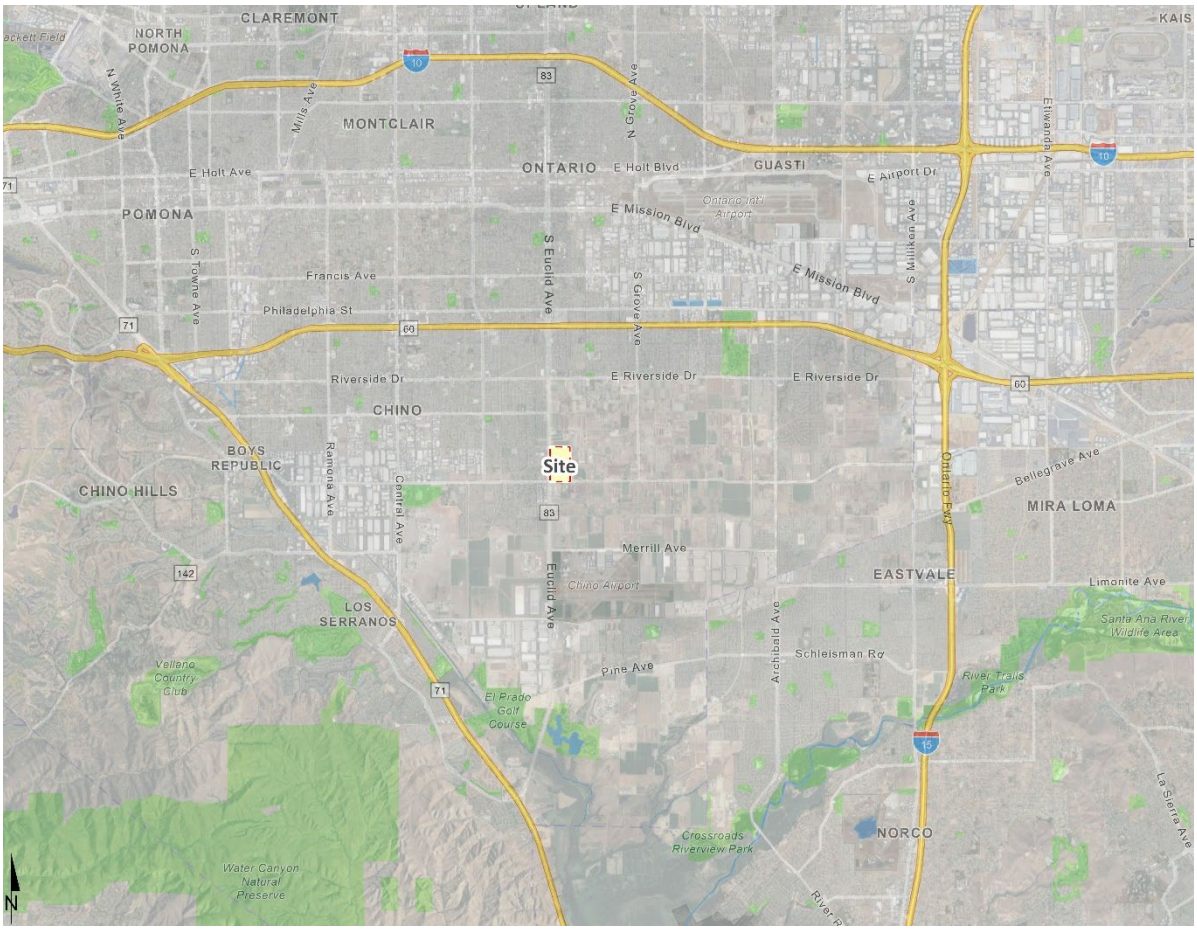

EXHIBIT 2: PRELIMINARY SITE PLAN

PROPOSED ANALYSIS SCENARIOS

The following analysis scenarios are proposed to be evaluated in the Traffic Study:

- Existing (2022)
- Existing plus Project
- Opening Year Cumulative (2027) Without Project
- Opening Year Cumulative (2027) With Project
- Horizon Year (2050) Without Project
- Horizon Year (2050) With Project

Horizon Year (2050) forecasts will be developed for the recently adopted TOP 2050 General Plan Update. Note that the area shown previously on Exhibit 2 as "Future Development" will only be evaluated for Existing plus Project (E+P) and Horizon Year (2050) traffic conditions only (not to be included for Opening Year Cumulative conditions).

EXISTING COUNT DATA

We are proposing to use new traffic counts for the study area intersections that were conducted earlier in 2022 while local schools were in session and will not apply any further adjustments in establishing the baseline as traffic counts would reflect the current conditions, including any foreseeable lasting effects due to the COVID-19 pandemic. Locations where recent counts are not available will be collected when local schools are in session and operating on normal schedules.

AMBIENT GROWTH

Future year traffic forecasts will be based upon a background (ambient) growth of 2% per year, compounded annually for five years. The growth factor for Opening Year Cumulative (2027) traffic conditions will be 10.41% (or $1.02^{5\ years}$).

TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11^{th} Edition, 2021) and empirical data were used to estimate the trip generation. The following trip generation rate and vehicle mix were utilized for calculating the trip generation for the proposed Project:

- Based on the types of uses anticipated to be developed within the business park area, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for up to 191,378 square feet along the Euclid Avenue (SR-83) frontage. The vehicle mix has been obtained from the ITE's latest

Trip Generation Manual. The truck percentages were further broken down by axle type per the following South Coast Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 972,817 square feet. A warehouse is primarily devoted to the storage of materials but may also include office and maintenance areas. The vehicle mix has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 220 (Multifamily Low-Rise Residential) has been used to derive site specific trip generation estimates for up to 466 dwelling units.
- ITE land use code 822 (Strip Retail), ITE land use code 933 (Fast-Food Restaurant Without Drive-Through Window), and ITE land use code 934 (Fast-Food Restaurant With Drive-Through Window) have been used to derive site specific trip generation estimates for up to 30,225 square feet of commercial retail use.
- The ITE Trip Generation Manual does not currently have any trip generation rates for a truck/trailer parking lot, as such, trip generation estimates for the proposed project have been developed using data collected at other facilities with operations similar to those proposed. Table A-1 in Attachment A summarizes the count data collected at 2 existing facilities located at 5087 Patterson Avenue in the City of Perris and 14769 San Bernardino Avenue in the City of Fontana. The actual driveway counts have been attached to this assessment for each of these facilities in Attachment A. In other words, this traffic analysis will conservatively assume the truck/trailer parking lot will be an independent use that does not specifically serve the adjacent warehouse use.

Table A-2 in Attachment A shows the trip generation rates for each existing facility which have been developed by dividing the data collected at the sites by their respective total acreage as shown on Table A-1. The average trip rate has been calculated by averaging the 2 comparable sites. A passenger-car equivalent (PCE) of 1.5, 2.0, and 3.0 have been applied to 2-axle, 3-axle, and 4+-axle vehicles, consistent with the City's Guidelines. PCE rates were calculated by taking the actual vehicle trip generation rates and applying the PCE factors shown in Table A-2. PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The trip generation rates used for the Project are summarized on Table 1.

TABLE 1: TRIP GENERATION RATES

[1] Trip Generation & Vehicle Mix Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

[2] TSF = thousand square feet; DU - Dwelling Units

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

[4] Trip generation rates based on empirical data of existing surveyed sites.

As the Project is proposed to include retail and restaurant uses, pass-by percentages have been obtained from the ITE Trip Generation Manual. Pass-by trips account for trips that are currently on the existing roadway network that would stop by uses within the proposed Project on their way to their ultimate destination. Patrons of the uses may also visit other uses on-site, including the restaurants, and retail uses, without leaving the site.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site. In other words, trips may be made between individual retail uses on-site and can be made either by walking or using internal roadways without using external streets. An internal capture reduction was applied to recognize the interactions that would occur between the various complementary land uses (residential, retail, and restaurant uses). The internal capture is based on the National Cooperative Highway Research Program's (NCHRP Report 684) internal capture trip capture estimation tool. These internal capture worksheets are attached to this scoping agreement (see Attachment B).

The Project trip generation summary is shown on Table 2 in actual vehicles. The proposed Project is anticipated to generate a total of 8,820 two-way trips per day with 864 AM peak hour trips and 732 PM peak hour trips (actual vehicles). Per the City's Guidelines, any operations analysis is to utilize the PCE trip generation. As shown on Table 3, the Project is anticipated to generate a total of 10,042 two-way PCE trips per day with 907 AM PCE peak hour trips and 792 PM PCE peak hour trips.

[2] Total Trips = Passenger Cars + Truck Trips.

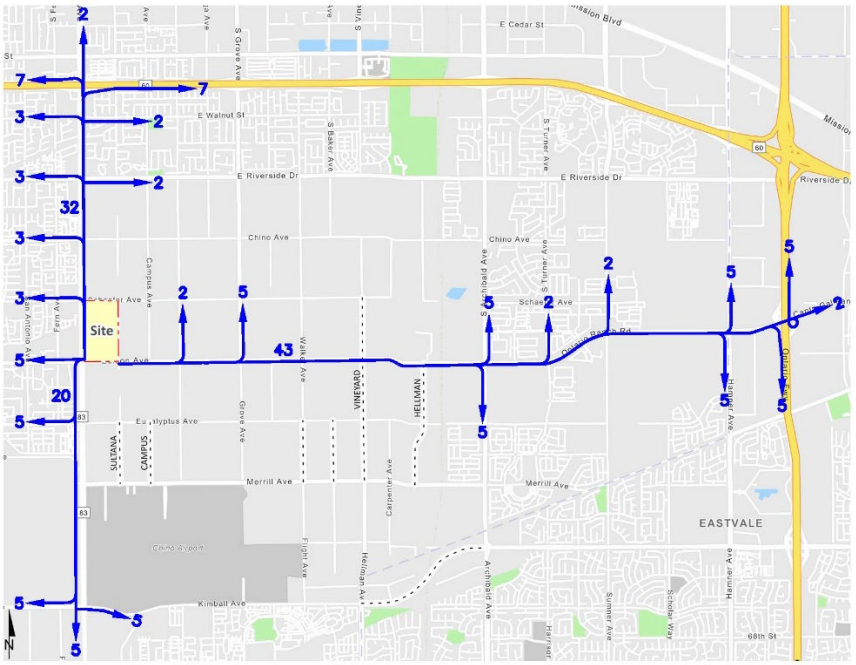
TRIP DISTRIBUTION

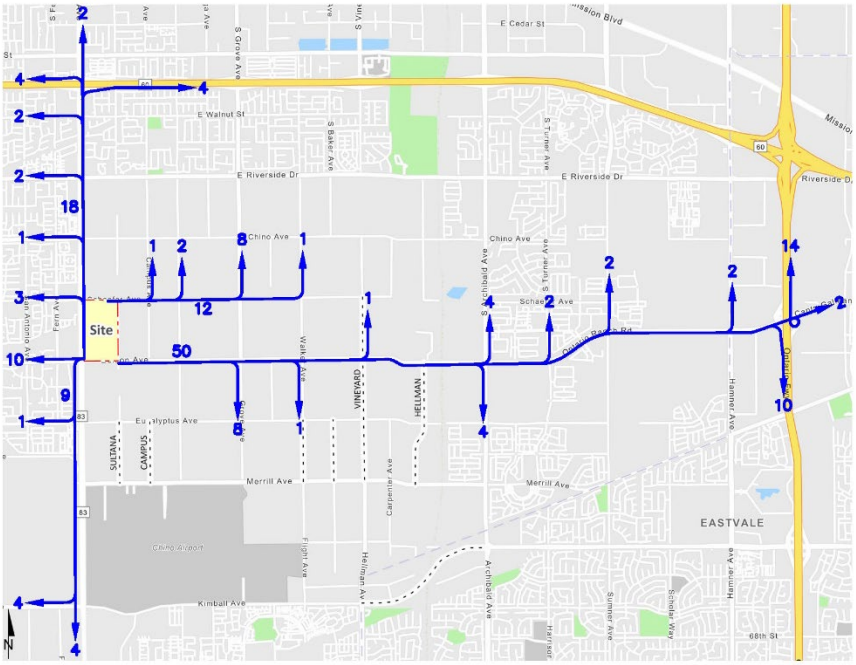
The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. Trip distribution patterns have been developed for each land use component of the Specific Plan as follows:

- Exhibit 3: Project (Residential) Trip Distribution
- Exhibit 4: Project (Retail) Trip Distribution
- Exhibit 5: Project (Business Park – Passenger Cars) Trip Distribution
- Exhibit 6: Project (Business Park – Trucks) Trip Distribution



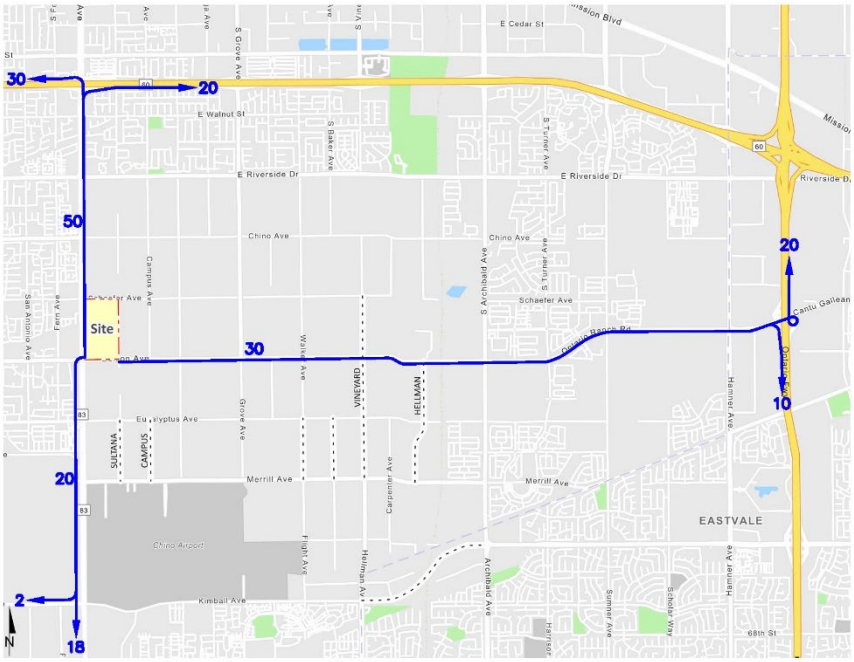
Trip distribution patterns for each project land use type is consistent with/similar to other projects in the vicinity. Detailed distributions at the site are provided in Attachment C.

EXHIBIT 3: PROJECT (RESIDENTIAL) TRIP DISTRIBUTION



10 = Percent To/From Project

EXHIBIT 4: PROJECT (RETAIL) TRIP DISTRIBUTION



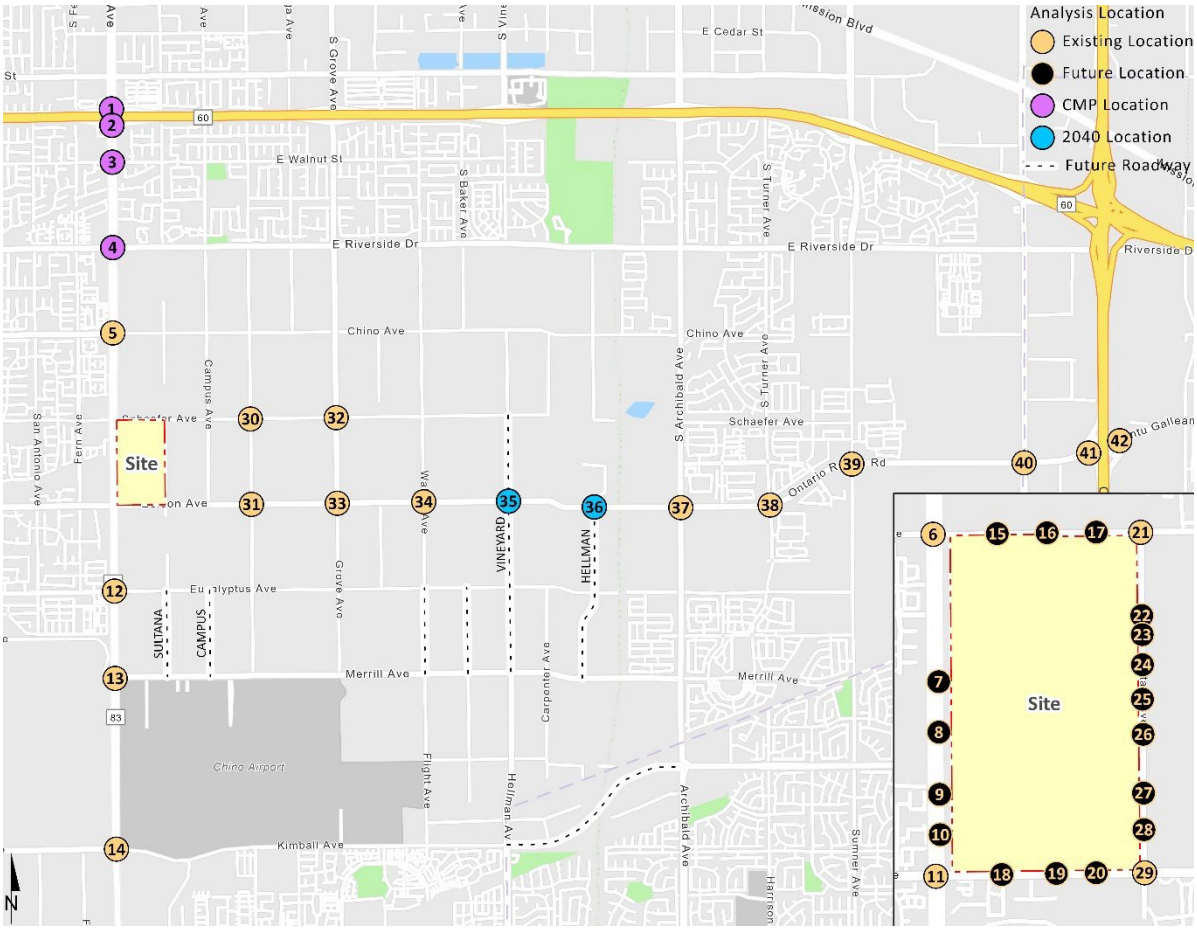
10 = *Percent To/From Project*

EXHIBIT 5: PROJECT (BUSINESS PARK – PASSENGER CARS) TRIP DISTRIBUTION

10 = *Percent To/From Project*

EXHIBIT 6: PROJECT (BUSINESS PARK – TRUCKS) TRIP DISTRIBUTION

10 = *Percent To/From Project*



INTERSECTION ANALYSIS LOCATIONS

Exhibit 7 depicts the recommended intersection analysis locations, based upon the Project trip generation and trip distribution patterns included as part of this letter. The study area intersections are consistent with the locations evaluated in the Specific Plan. Table 4 also includes a summary of the study area intersections.

TABLE 4: INTERSECTION ANALYSIS LOCATIONS

#	Intersection
1	Euclid Av. (SR-83) & SR-60 WB Ramps
2	Euclid Av. (SR-83) & SR-60 EB Ramps
3	Euclid Av. (SR-83) & Walnut Av.

EXHIBIT 7: STUDY AREA

VEHICLE MILES TRAVELLED (VMT)

The VMT thresholds and methodology outlined in the City of Ontario's May 2020 VMT guidelines will be utilized to conduct the VMT analysis for the Project. The VMT analysis will be prepared and submitted under separate cover.

TRAFFIC SIGNAL WARRANTS

Traffic signal warrant analysis will be conducted for all unsignalized full access driveways/intersections following the guidance of the California Manual on Uniform Control Devices (CA MUTCD).

SPECIAL ISSUES

The following special issues will be addressed as part of the TA:

- Traffic signal warrant analyses will be conducted for all unsignalized study area intersections for all applicable analysis scenarios.
- Off-ramp queues will be assessed at all Caltrans off-ramps at the SR-60 and I-15 Freeways.

OPEN ITEMS – CUMULATIVE DEVELOPMENT PROJECTS

It is requested that the City of Ontario provide a current list of cumulative development projects for inclusion in our traffic study. A preliminary list of cumulative development projects is provided on Table 5 and graphically shown on Exhibit 8.

OPEN ITEMS – SIGNAL TIMING

It is requested that the City provide traffic signal timing for any City controlled intersections that we should take into consideration in our operations analysis. Applicable signal timing for Caltrans facilities will be obtained from District 8.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So

Charlene So, PE
Principal

Residential	0	1	28	0		0
Hotel	0	0	0	0	0	

Table 5-A: Computations Summary

	Total	Entering	Exiting
All Person-Trips	1,089	537	552
Internal Capture Percentage	6%	6%	6%
External Vehicle-Trips[5]	1,021	503	518
External Transit-Trips[6]	0	0	0
External Non-Motorized Trips[6]	0	0	0

Table 6-A: Internal Trip Capture Percentages by Land Use

Land Use	Entering Trips	Exiting Trips
Office	N/A	N/A
Retail	14%	20%
Restaurant	6%	1%
Cinema/Entertainment	N/A	N/A
Residential	7%	20%
Hotel	N/A	N/A

[1]Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

[2]Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

[3]Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

[4]Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

[5]Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

[6]Person-Trips

*Indicates computation that has been rounded to the nearest whole number.
