Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

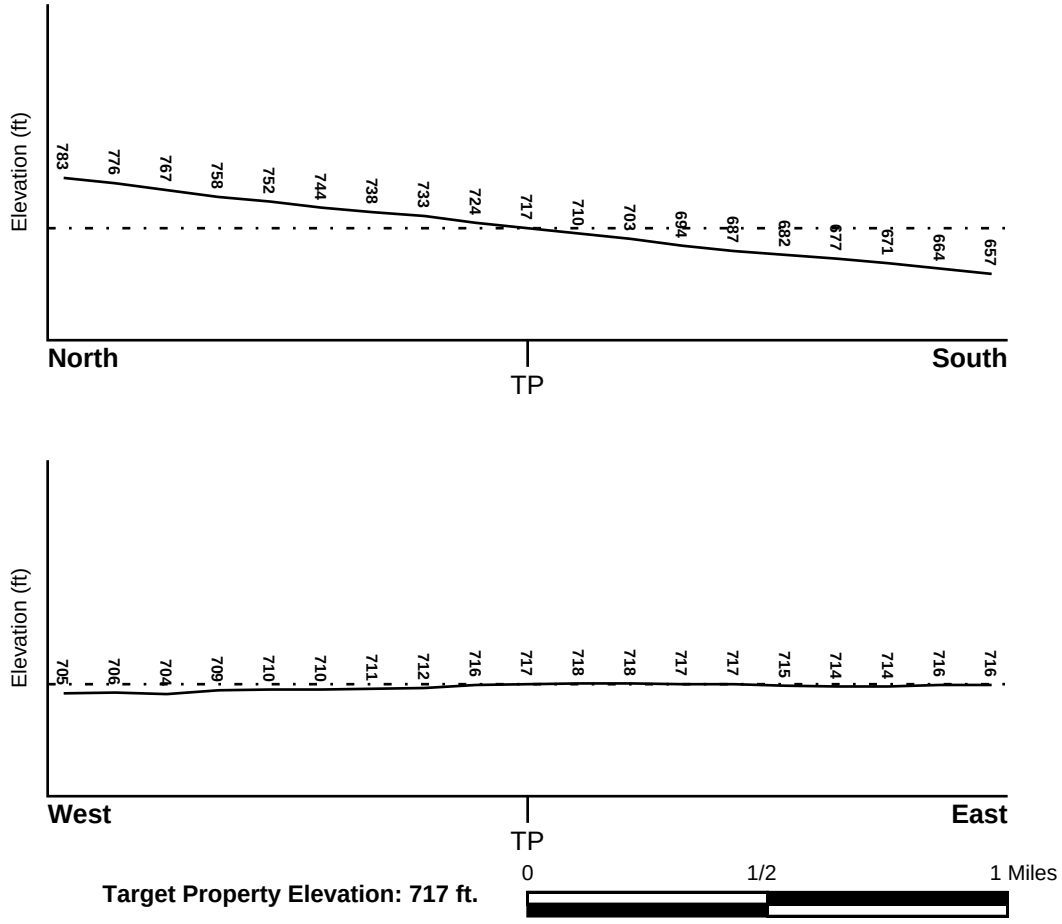
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

UNDERGROUND TANK CLOSURE REPORT

7255 Schaefer Avenue, Ontario, CA 91761

September 7, 2011

This report describes the removal of an underground storage tank from the property at 7255 Schaefer Avenue, Ontario, California. The tank was 550 gallons in volume, was of single-wall steel construction, and was formerly used to store diesel fuel. The dispenser island was located directly over the tank, and the tank-related piping did not extend beyond the tank excavation.

The soils covering the tank were excavated and stockpiled at the site on August 31, 2011. In compliance with SCAQMD Rule 1166, SCAQMD was notified prior to beginning the excavation, and volatile organic compound (VOC) concentrations in the air were monitored as the excavation progressed.

The tank-related piping was flushed with water, disconnected, and removed, and the tank was triple-rinsed/pressure-washed in-place and removed on September 1, 2011. Residual liquids and rinse water were collected in a vacuum truck and were manifested, transported, and disposed of (recycled) off-site at a licensed TSDF. Tank atmospheric readings were taken and dry ice was placed into the tank. Upon approval of on-site County and City Fire Department on-site representatives, the tank was removed from the excavation. The tank appeared to be in very good condition with no apparent holes or cracks. The tank was loaded into a dump truck and transported off-site for destruction and recycling.

After removal of the tank from the excavation, at the direction of Angela Samayoa of San Bernardino County Fire Department, a soil sample was collected from a depth of approximately three feet beneath the tank invert, approximately 12 feet beneath the ground surface. The sample was immediately stored on ice, and was delivered to a State-certified environmental laboratory on the same day. The sample was analyzed for TPH-carbon chain (E.P.A. Method 8015M), for VOC, BETX, MTBE, and fuel oxygenates (E.P.A. 8260B), and for lead (SW846 6010B).

Soil sample analytical results are displayed in the following table:

Compounds / test method:	Concentration:
V.O.C., B.E.T.X., M.T.B.E., fuel oxygenates / E.P.A. 8260B	Not detected
T.P.H. (C5-C24) / E.P.A. 8015M	Not detected
T.P.H. (C25-C40) / E.P.A. 8015M	57 mg/Kg
Lead / SW846 6010B	12 mg/Kg

Copies of the permits, inspection record, air monitoring log, tank rinse manifest, tank certification, dry ice receipt, tank destruction certificate, site map, and soil sample analytical report are attached herewith.

DISCHARGE AUTHORIZATION FOR ART VENEGAS DAIRY, 13835 EUCLID AVENUE, ONTARIO

Dear Mr. Venegas:

Thank you for submitting a Notice of Intent to comply with the requirements of the Regional Board's General Dairy Permit (Order No. R8-2018-0001, NPDES No. CAG018001). You submitted a Notice of Intent for Art Venegas Dairy at 13835 Euclid Avenue in the City of Ontario.

In your Notice of Intent, you indicate that you intend to implement an approved Engineered Waste Management Plan (EWMP) for this facility. Our records indicate that an EWMP, dated December 2003, was approved by the Executive Officer on September 28, 2005. You also indicate that a Nutrient Management Plan was approved. Our records do not indicate that a Nutrient Management Plan has been approved for this facility.

You are hereby authorized to discharge waste from the above referenced facility in accordance with the approved EWMP and the terms and conditions specified in the General Dairy Permit. The General Dairy Permit does not authorize you to discharge waste to land unless a Nutrient Management Plan has been approved by the Executive Officer. If there is any conflict between the General Dairy Permit and the EWMP, the terms and conditions of the General Dairy Permit prevail. The General Dairy Permit includes provisions that, in summary,

1) Prohibit the land application of manure anywhere in the Santa Ana Region for disposal purposes.
2) Require all facility operators to implement an Engineered Waste Management Plan.
3) Require all manure scraped from corrals be removed from the facility within 180 days.
4) Require operators that transfer manure to a third party to provide that party with a chemical analysis of the manure.

5) Require you to inspect your facilities on at least a weekly basis and record the findings in a log form.
6) Require the tracking of all manure removed from the facility.
7) Require a level marker within each pond or impoundment (indicators on each level marker must be placed by a licensed surveyor or a qualified person).
8) Require you to submit the following reports by January 15 of each year:
   - Annual Summary Report (the form will be transmitted to you near year-end)
   - Annual Summary Report of Storm Water Management Structure Inspections (i.e. a summary from the weekly inspection logs mentioned above. The form will be transmitted to you near year-end), and
   - Manure Tracking Manifest Form.

The General Dairy Permit and forms that you will need to comply with the requirements summarized above are available at the following web site:

https://www.waterboards.ca.gov/santaana/water_issues/programs/dairies/

If you wish to terminate coverage under this general permit, please submit the Notice of Termination form as soon as possible so that we can rescind this authorization and avoid billing you the annual fee.

Should you have any questions, please contact Jawed Shami at (951) 782-3288 (Jawed.Shami@waterboards.ca.gov) or Kyle Wright at (951) 320-6370 (Kyle.Wright@waterboards.ca.gov).

ANNUAL REPORT OF ANIMAL WASTE DISCHARGE FOR YEAR 2019

Dear Mr. Venegas:

Your facility located at 13835 Euclid Avenue in Ontario is currently regulated under the General Waste Discharge Requirements for Concentrated Animal Feeding Operations (Dairies & Related Facilities) within the Santa Ana Region, Order No. R8-2018-0001. This Order requires you to submit an annual report, including manure manifest forms and an annual summary of weekly inspections, to this office by **January 15** of each year. The required forms are enclosed with this letter. Additional information and instructions for completing the forms are below:

1) **Annual Report of Animal Waste Discharge Form (Form 3).** This form includes pre-printed information regarding your facility. If you find any of the information to be incorrect or incomplete, please make the necessary changes directly on the form.

   The front side of the form has an area where you are to record the amount of manure that was spread on cropland at the facility. Cropland does not include pasture areas or land areas not associated with the facility. Please include the amount of manure that was spread on cropland at the facility only.

   The back of the form has an area where you are to record that you have complied with the Order's requirement to provide the recipient of manure, litter or process wastewater with the most current nutrient analysis. Also, please record if you have a Nutrient Management Plan and if it has been certified.

2) **Manure Tracking Manifest Form (Form 4).** This form includes pre-printed information regarding your facility. You are required to record the disposition of all manure hauled from your facility. A separate Manure Tracking Manifest Form must be used for each hauling event. Each hauling event may include several loads to the same destination, and therefore, may last multiple days. However, a separate form must be completed for each different destination. You can make additional copies of this form as needed. Completed forms for all hauling events that occurred during 2019 must accompany your Annual Report of Animal Waste Discharge.

3) **Annual Summary of Weekly Inspections Form (Form 2).** This form includes pre-printed information regarding your facility. This form is to be used to summarize the information that you have recorded on your Weekly Inspection Log. This form must also accompany your Annual Report of Animal Waste Discharge.

Please note that you are submitting all the above forms under the penalty of perjury.

We are also enclosing Weekly Inspections Log Sheets (Form 1) to assist you in keeping your 2019 records.

Please note that failure to submit the annual report, or a late submittal, may result in a mandatory enforcement action. Failure to submit the forms by January 15, 2020 is a violation of Order No. R8-2018-0001 and, in accordance with California Water Code Sections 13385(h) and 13385.1(a)(1), could subject you to a mandatory minimum penalty of $3,000 for each 30-day period your report is not submitted. Therefore, we encourage you to avoid this by submitting your report no later than **January 15, 2020**.

Please send the completed forms electronically at RB8-SantaAna@waterboards.ca.gov or mail the completed forms to:

California Regional Water Quality Control Board
3737 Main Street, Suite 500
Riverside, CA 92501-3339

INSPECTION SUMMARY:

Regional Board staff conducted a compliance inspection on July 22, 2019. Facility is located at 13835 Euclid Avenue in the city of Ontario. During the inspection, Regional Board staff noted that the corrals showed signs of excess manure build up. Specifically, multiple stockpiles of manure noted in various areas such as a corral and outside in a what appeared to be a storage area. Regional Board staff noted smaller stockpiles to the east of the corrals. Upon closer inspection, Regional Board staff note the remains of several cows mixed in with the material.

Staff then was able to gain access to the pond area from a distance. Excess weed growth was found near the pond and limited staff from obtaining closer pictures. At distance, staff noted a pinkish tint to the containment pond. Similar conditions noted in other facilities in the area.

Regional Board staff was unable to contact dairy facility staff at time of the inspection. All violations will be addressed with the facility owner.

WASTE DISCHARGE REQUIREMENTS, ORDER NO. R8-2007-0001, NPDES NO. CAG018001, FOR ART VENEGAS DAIRY, LOCATED AT 13835 EUCLID AVENUE, ONTARIO

Mr. Venegas:

On September 7, 2007, the Regional Board adopted General Waste Discharge Requirements for Concentrated Animal Feeding Operations (Dairies and Related Facilities) Within the Santa Ana Region, NPDES No. CAG018001 (Order No. R8-2007-0001). Section II, Part B.3, of Order No. R8-2007-0001, requires the submittal of a Notice of Intent and filing fee for the discharge of wastes. If the proposed discharge meets the requirements of Order R8-2007-0001, the Executive Officer will provide the discharger with a written authorization to discharge wastes in accordance with the terms and conditions specified in Order No. R8-2007-0001.

You have submitted a Notice of Intent and filing fee for the discharge of wastes from the above facility. With receipt of your Notice of Intent and filing fee, you have complied with Section II, Part B.3, of Order No. R8-2007-0001. Therefore you are hereby authorized to discharge waste from your facility in accordance with the terms and conditions specified in Order No. R8-2007-0001.

Order No. R8-2007-0001 includes provisions, in part, that:

1) Prohibit the land application of manure anywhere in the Santa Ana Region for disposal purposes.
2) Prohibit the land application of manure as fertilizer in certain areas of the Region, and limit the land application of manure as fertilizer in the remainder of the Region.
3) Require all facility operators to develop and implement an Engineered Waste Management Plan (EWMP).
4) Require all manure scraped from corrals be removed from the facility within 180 days.
5) Require large CAFOs (greater than 700 cows) that transfer manure to a third party to provide that party with a chemical analysis of the manure for nitrogen compounds.

6) Require you to inspect your facilities on at least a weekly basis, and record the findings in the enclosed log form.
7) Require the tracking of all manure removed from the facility. Please use the enclosed form for all manure which is hauled from your facility.
8) Require you to submit the following reports by January 15 of each year:
   - Annual Summary Report (the form will be transmitted to you near year end)
   - Annual Summary Report of Storm Water Management Structure Inspections (i.e. a summary from the weekly inspection logs mentioned above. The form will be transmitted to you near year end)
   - New Manure Tracking Manifest (form enclosed)

Our records indicate that an EWMP for this facility was accepted on September 28, 2005. After an accepted EWMP is implemented, a certification letter indicating that the EWMP was implemented must be submitted to our office. As of this date, we have not received a certification letter that the accepted EWMP was implemented.

If you intend to develop a new EWMP or modify the accepted EWMP please submit the name of the engineer or qualified individual who will develop the EWMP and a time schedule to develop or modify the EWMP. If you intend to use the current accepted EWMP, a certification letter from the engineer who developed the EWMP, must be submitted to our office.

Please note that failure to fully develop and implement an EWMP and submit an implementation certification for this facility is a violation of Order No. R8-2007-0001, which could subject you to an administrative civil liability penalty of $10,000 per day for each day the violation occurs. To avoid a possible enforcement action by the Regional Board, please submit the above requested information by June 1, 2010.

As a reminder, a copy of the Order No. R8-2007-0001 can be downloaded from the Regional Board's website at: ***http://www.waterboards.ca.gov/santaana/pdf/07-01.pdf***. If you have any questions, I would encourage you to call Ed Kashak at (951) 782-3292 or Jawed Shami at (951) 782-3288.

Sincerely,

For Gerard J. Thibeault

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

EXPEDITED PAYMENT OPTION NOTICE TO ADDRESS MANDATORY MINIMUM PENALTIES FOR VIOLATIONS OF NPDES PERMIT NO. CAG018001

Mr. Venegas:

This is to notify you that you are alleged to have violated California Water Code (CWC) Section 13385(h) for which the Regional Board shall assess mandatory minimum penalties. This letter outlines an expedited methodology for settling the outstanding violations and the mandatory minimum penalties associated with them.

VIOLATIONS AND STATUTORY AND DISCRETIONARY LIABILITIES:

Pursuant to CWC Section 13385(h)(1), a mandatory penalty of three thousand dollars ($3,000) shall be assessed for each serious violation. CWC Section 13385.1 defines, in part, a serious violation as "...a failure to file a discharge monitoring report required pursuant to Section 13383 for each complete period of 30 days following the deadline for submitting the report..."

The Art Venegas Dairy is covered under General Waste Discharge Requirements for Concentrated Animal Feeding Operations (Dairies and Related Facilities) within the Santa Ana Region, Order No. R8-2007-0001, NPDES No. CAG018001 (General Permit). Attachment B, Sections X.A and X.B, provide specific information on the Reporting Requirements for the Monitoring and Reporting Program of the General Permit. Sections X.A.2 and X.B.2 provide a deadline of January 15 of each year for submitting an Annual Report of Animal Waste Discharge. The Regional Board has determined that Art Venegas Dairy has violated Sections X.A.2 and X.B.2 of the Permit for not submitting the required reports by January 15, 2012 and is therefore subject to mandatory penalties. As of this date, the required Annual Report has not been submitted and therefore Art Venegas Dairy has incurred three 30-day periods of violation (that is non-submittal of Annual Report by February 14, 2012, March 16, 2012, and April 16, 2012). In accordance with CWC Section 13385(h) and Section 13383, the total mandatory penalty for the three 30-day periods is nine thousand dollars (3 x $3,000 = $9,000).

Alternatively, in accordance with CWC Section 13385(c), the Regional Board may impose discretionary administrative civil liability for the violations cited above. The time period for the violations cited above represents 90 days of violation. Consequently, the maximum administrative civil liability which may be imposed for these violations is $900,000 ($10,000 per day of violation).

EXPEDITED PAYMENT PROGRAM:

Generally, the Regional Board would issue a formal administrative civil liability complaint to assess these penalties and conduct a public hearing. To conserve the discharger's as well as Regional Board staff resources, the State Water Resources Control Board, through its Office of Enforcement, has developed a methodology for the discharger to settle these types of violations through an expedited payment program. If Art Venegas Dairy desires to have an expedited settlement as stipulated in Attachment 1, "Acceptance of Conditional Resolution and Waiver of Right to Hearing", the Art Venegas Dairy must sign the Attachment and make a payment of nine thousand dollars ($9,000) to this office. If Art Venegas Dairy accepts this option by executing Attachment 1, Art Venegas Dairy would be also waiving its right to a hearing. The Regional Board will then forgo issuance of a formal administrative complaint and will waive its right to seek additional discretionary civil liabilities for the violations identified above. Please note that the expedited payment option does not address any violation that is not specifically identified in this notice.

ART VENEGAS DAIRY OPTIONS:

1. Accept this offer for expedited payment by signing and returning Attachment 1 by May 3, 2012. Federal regulations require the Regional Board to publish and seek public comments on any proposed settlement of actions related to NPDES permit violations (40 CFR 123.27(d)(2)(iii)). Upon receipt of your acceptance of the expedited payment option (signed Attachment 1), Regional Board staff will publish a notice of the proposed resolution of the violations cited above. If no significant public comments are received within 30 days, the Executive Officer will counter-sign Attachment 1 and it will be returned to you for payment of the mandatory minimum penalty of $9,000 within 30 days of acceptance by the Executive Officer. If significant public comments are received during the public comment period, Board staff will try to address those comments. If the comments cannot be satisfactorily addressed by staff, the expedited payment option will be withdrawn and a formal administrative complaint may be issued and a public hearing may be scheduled at a regularly scheduled Regional Board meeting.

2. If you choose to contest any of the violations cited above, please identify the basis for the challenge (e.g., factual error, affirmative defense, analytical error, etc.) prior to May 3, 2012 and contact Stephen D. Mayville at 951-782-4992. Board staff will evaluate the contested violation and determine that

either the violation is not supported and amend the violation, or determine that the alleged violation is meritorious and inform you of the staff decision. If you are not satisfied with the staff decision, a formal administrative complaint and a public hearing may be considered.

If you have any questions about this letter or the attachments, please contact Stephen D. Mayville at 951-782-4992 (by email to smayville@waterboards.ca.gov), or you may contact Ed Kashak at (951) 782-3292, or ekashak@waterboards.ca.gov

Sincerely,

ACCEPTANCE OF CONDITIONAL RESOLUTION AND WAIVER OF RIGHT TO HEARING

Art Venegas Dairy
Order No. R8-2012-0033

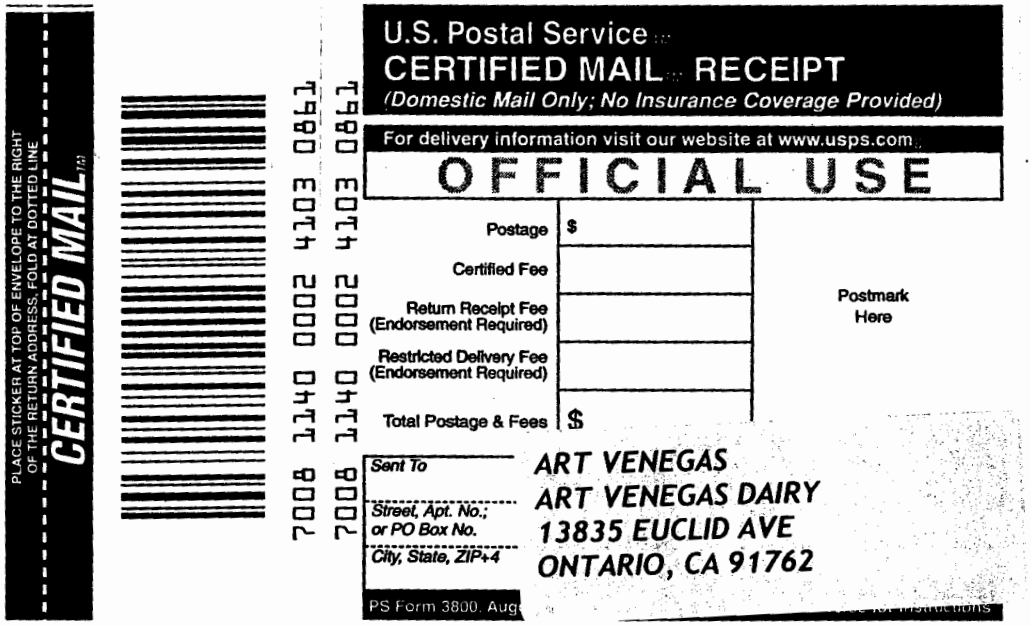
By signing and returning this Acceptance of Conditional Resolution and Waiver of Right to Hearing (Acceptance and Order), Art Venegas Dairy hereby accepts the resolution of the mandatory minimum penalty assessments for the violations cited in the Expedited Payment Option Notice, violations of NPDES Permit No. CAG018001, for which mandatory minimum penalties shall be assessed by the Regional Board. By signing the Acceptance and Order, Art Venegas Dairy also waives its right to a hearing before the Regional Board.

Art Venegas Dairy agrees that the Expedited Payment Option Notice and Attachment 1 together will serve as a Complaint pursuant to Article 2.5 of the California Water Code (CWC) and that no separate Complaint is required by the Regional Board to assert jurisdiction over the alleged violations. Art Venegas Dairy agrees to pay the mandatory minimum penalty of $9,000 as shown in the Expedited Payment Option Notice dated April 19, 2012, which shall be deemed payment in full for the violations listed in the Notice, pursuant to CWC Section 13385.

Art Venegas Dairy understands that pursuant to 40 CFR Section 123.27(d)(2)(iii), the Regional Board is required to provide public notice for at least 30 days and seek comments of any settlement agreement with the Art Venegas Dairy related to the NPDES permit violations, prior to the Executive Officer executing any settlement agreements such as this Acceptance and Order. Art Venegas Dairy understands that if significant comments are received, this Acceptance and Order may not be executed and the offer for expedited payment and settlement may be withdrawn and the Regional Board may choose to take formal enforcement action.

Art Venegas Dairy understands that once this Acceptance and Order is executed by the Executive Officer of the Regional Board, payment is due within 30 days and a check for $9,000 made payable to the State Water Resources Control Board, for deposit in the State Water Pollution Cleanup and Abatement account, shall be submitted to the Regional Board office.

Art Venegas Dairy understands that this Acceptance and Order only addresses the violations cited in the Expedited Payment Option Notice.



I hereby affirm that I am duly authorized to act on behalf of and to bind the Art Venegas Dairy in the making and execution of this Acceptance and Order.

WASTE DISCHARGE REQUIREMENTS, ORDER NO. R8-2007-0001, NPDES NO. CAG018001, FOR ART VENEGAS DAIRY, LOCATED AT 13835 EUCLID AVENUE, ONTARIO

Mr. Venegas:

On September 7, 2007, the Regional Board adopted General Waste Discharge Requirements for Concentrated Animal Feeding Operations (Dairies and Related Facilities) Within the Santa Ana Region, NPDES No. CAG018001 (Order No. R8-2007-0001). Section II, Part B.3, of Order No. R8-2007-0001, requires the submittal of a Notice of Intent and filing fee for the discharge of wastes. If the proposed discharge meets the requirements of Order R8-2007-0001, the Executive Officer will provide the discharger with a written authorization to discharge wastes in accordance with the terms and conditions specified in Order No. R8-2007-0001.

You have submitted a Notice of Intent and filing fee for the discharge of wastes from the above facility. With receipt of your Notice of Intent and filing fee, you have complied with Section II, Part B.3, of Order No. R8-2007-0001. Therefore you are hereby authorized to discharge waste from your facility in accordance with the terms and conditions specified in Order No. R8-2007-0001.

Order No. R8-2007-0001 includes provisions, in part, that:

1) Prohibit the land application of manure anywhere in the Santa Ana Region for disposal purposes.
2) Prohibit the land application of manure as fertilizer in certain areas of the Region, and limit the land application of manure as fertilizer in the remainder of the Region.
3) Require all facility operators to develop and implement an Engineered Waste Management Plan (EWMP).
4) Require all manure scraped from corrals be removed from the facility within 180 days.
5) Require large CAFOs (greater than 700 cows) that transfer manure to a third party to provide that party with a chemical analysis of the manure for nitrogen compounds.

6) Require you to inspect your facilities on at least a weekly basis, and record the findings in the enclosed log form.
7) Require the tracking of all manure removed from the facility. Please use the enclosed form for all manure which is hauled from your facility.
8) Require you to submit the following reports by January 15 of each year:
   - Annual Summary Report (the form will be transmitted to you near year end)
   - Annual Summary Report of Storm Water Management Structure Inspections (i.e. a summary from the weekly inspection logs mentioned above. The form will be transmitted to you near year end)
   - New Manure Tracking Manifest (form enclosed)

Our records indicate that an EWMP for this facility was accepted on September 28, 2005. After an accepted EWMP is implemented, a certification letter indicating that the EWMP was implemented must be submitted to our office. As of this date, we have not received a certification letter that the accepted EWMP was implemented.

If you intend to develop a new EWMP or modify the accepted EWMP please submit the name of the engineer or qualified individual who will develop the EWMP and a time schedule to develop or modify the EWMP. If you intend to use the current accepted EWMP, a certification letter from the engineer who developed the EWMP, must be submitted to our office.

Please note that failure to fully develop and implement an EWMP and submit an implementation certification for this facility is a violation of Order No. R8-2007-0001, which could subject you to an administrative civil liability penalty of $10,000 per day for each day the violation occurs. To avoid a possible enforcement action by the Regional Board, please submit the above requested information by June 1, 2010.

As a reminder, a copy of the Order No. R8-2007-0001 can be downloaded from the Regional Board's website at: ***http://www.waterboards.ca.gov/santaana/pdf/07-01.pdf***. If you have any questions, I would encourage you to call Ed Kashak at (951) 782-3292 or Jawed Shami at (951) 782-3288.

Sincerely,

For Gerard J. Thibeault

METHANE ASSESSMENT FOR PROJECTS IN THE NEW MODEL COLONY

Applicants shall provide for the Building Department's review and approval, a methane assessment report addressing whether the property in questions was ever used as a dairy, poultry ranch, hog ranch, livestock feed operation site, manure stockpile site, manure/livestock burial site, run-off ponds, or for any other purpose that might result in the deposition of materials which might produce methane.

The report shall be prepared by a licensed engineer or licensed geologist and shall include the following:

- Historic aerial photos and historic topographic map review.
- Interviewing the owner/land managers for possible locations of potential methane generation areas.
- Site reconnaissance to determine the current site usage and conditions.
- Identifying potential methane areas.
- A proposed scope of work for post-grading methane investigation based on the historical study.

This report may be included as part of the soils and geology report and shall be submitted to the Building Department for review and approval at the time building permit applications are filed.

All lots in potential methane areas identified in the Methane Site Assessment report shall be tested for the presence of any methane and its concentration 30 days after building pads are graded and created.

A report, prepared by a licensed engineer or geologist and separate from the Methane Site Assessment report, summarizing the methane test conducted, the location/lot where methane is found and its concentration, and the recommended mitigation measures shall be submitted to the Building Department for review and approval. This test report could be a standalone report or be a part of the soils and geology report. This test report should be submitted together with building plans when permit applications are filed, or thereafter as soon as it is available. No building permit will be issued until the test report is approved by the Building Department, and the lots with methane and any required mitigation measures are shown on building plans.

NOTES FOR EXISTING AT&T CELL SITES:

1. PRIOR TO THE SUBMISSION OF BIDS, THE BIDDING SUBCONTRACTOR SHALL VISIT THE CELL SITE TO FAMILIARIZE WITH THE EXISTING CONDITIONS AND TO CONFIRM THAT THE WORK CAN BE ACCOMPLISHED AS SHOWN ON THE CONSTRUCTION DRAWINGS. ANY DISCREPANCY FOUND SHALL BE BROUGHT TO THE ATTENTION OF CONTRACTOR.
2. SUBCONTRACTOR SHALL VERIFY ALL EXISTING DIMENSIONS AND CONDITIONS PRIOR TO COMMENCING ANY WORK. ALL DIMENSIONS OF EXISTING CONSTRUCTION SHOWN ON THE DRAWINGS MUST BE VERIFIED. SUBCONTRACTOR SHALL NOTIFY THE CONTRACTOR OF ANY DISCREPANCIES PRIOR TO ORDERING MATERIAL OR PROCEEDING WITH CONSTRUCTION.
3. THE EXISTING CELL SITE IS IN FULL COMMERCIAL OPERATION. ANY CONSTRUCTION WORK BY SUBCONTRACTOR SHALL NOT DISRUPT THE EXISTING NORMAL OPERATION. ANY WORK ON EXISTING EQUIPMENT MUST BE COORDINATED WITH CONTRACTOR. ALSO, WORK SHOULD BE SCHEDULED FOR AN APPROPRIATE MAINTENANCE WINDOW USUALLY IN LOW TRAFFIC PERIODS AFTER MIDNIGHT.
4. SINCE THE CELL SITE IS ACTIVE, ALL SAFETY PRECAUTIONS MUST BE TAKEN WHEN WORKING AROUND HIGH LEVELS OF ELECTROMAGNETIC RADIATION. EQUIPMENT SHOULD BE SHUTDOWN PRIOR TO PERFORMING ANY WORK THAT COULD EXPOSE THE WORKERS TO DANGER. PERSONAL RF EXPOSURE MONITORS ARE ADVISED TO BE WORN TO ALERT OF ANY DANGEROUS EXPOSURE LEVELS.
5. SUBCONTRACTOR SHALL DETERMINE ACTUAL ROUTING OF CONDUIT, POWER AND TI CABLES, GROUNDING CABLES AS SHOWN ON THE POWER, GROUNDING AND TELCO PLAN DRAWING. SUBCONTRACTOR SHALL UTILIZE EXISTING TRAYS AND/OR SHALL ADD NEW TRAYS AS NECESSARY. SUBCONTRACTOR SHALL CONFIRM THE ACTUAL ROUTING WITH THE CONTRACTOR.
6. SUBCONTRACTOR SHALL LEGALLY AND PROPERLY DISPOSE OF ALL SCRAP MATERIALS SUCH AS COAXIAL CABLES AND OTHER ITEMS REMOVED FROM THE EXISTING FACILITY. ANTENNAS REMOVED SHALL BE RETURNED TO THE OWNER'S DESIGNATED LOCATION.

UNDERGROUND TANK CLOSURE REPORT

7255 Schaefer Avenue, Ontario, CA 91761

September 7, 2011

This report describes the removal of an underground storage tank from the property at 7255 Schaefer Avenue, Ontario, California. The tank was 550 gallons in volume, was of single-wall steel construction, and was formerly used to store diesel fuel. The dispenser island was located directly over the tank, and the tank-related piping did not extend beyond the tank excavation.

The soils covering the tank were excavated and stockpiled at the site on August 31, 2011. In compliance with SCAQMD Rule 1166, SCAQMD was notified prior to beginning the excavation, and volatile organic compound (VOC) concentrations in the air were monitored as the excavation progressed.

The tank-related piping was flushed with water, disconnected, and removed, and the tank was triple-rinsed/pressure-washed in-place and removed on September 1, 2011. Residual liquids and rinse water were collected in a vacuum truck and were manifested, transported, and disposed of (recycled) off-site at a licensed TSDF. Tank atmospheric readings were taken and dry ice was placed into the tank. Upon approval of on-site County and City Fire Department on-site representatives, the tank was removed from the excavation. The tank appeared to be in very good condition with no apparent holes or cracks. The tank was loaded into a dump truck and transported off-site for destruction and recycling.

After removal of the tank from the excavation, at the direction of Angela Samayoa of San Bernardino County Fire Department, a soil sample was collected from a depth of approximately three feet beneath the tank invert, approximately 12 feet beneath the ground surface. The sample was immediately stored on ice, and was delivered to a State-certified environmental laboratory on the same day. The sample was analyzed for TPH-carbon chain (E.P.A. Method 8015M), for VOC, BETX, MTBE, and fuel oxygenates (E.P.A. 8260B), and for lead (SW846 6010B).

Soil sample analytical results are displayed in the following table:

Compounds / test method:	Concentration:
V.O.C., B.E.T.X., M.T.B.E., fuel oxygenates / E.P.A. 8260B	Not detected
T.P.H. (C5-C24) / E.P.A. 8015M	Not detected
T.P.H. (C25-C40) / E.P.A. 8015M	57 mg/Kg
Lead / SW846 6010B	12 mg/Kg

Copies of the permits, inspection record, air monitoring log, tank rinse manifest, tank certification, dry ice receipt, tank destruction certificate, site map, and soil sample analytical report are attached herewith.

Please contact me if you have questions or require anything further.

Sincerely,

Virgil Cicoria
Project Manager

Good Morning Gary,

I'm following up on the Phase 1 environmental questionnaire that I had sent to you previously. I've attached another copy. Could you give me an ETA for returning this to me?

My consultant finished his onsite walkthrough, is wrapping up the final report and needs this information to complete it.

Thank you,

Jason

Good Morning Gary,

My name is Jason Lee and I work with RC. I'm currently in process with the DD and my environmental consultant is requesting the owner completes the attached environmental questionnaire. If you could return it to me at your earliest convenience, I would appreciate it.

Also, we are in process of setting up our onsite phase 1 site walk, as well as the ALTA and boundary survey. I don't have exact dates yet, but will let you know when I get confirmation. Besides sending an email to you, is there a contact person onsite that you would like us to notify (so the tenants are aware when our consultants show up!).

Let me know.

Thank you,

Jason

1.0 Introduction

This *Limited Phase II Environmental Site Assessment (ESA)* report has been prepared by Converse Consultants (Converse) for RCCD, Inc. The sampling was conducted at the approximate 60-acre site on the southeast corner of Schaefer Avenue and Euclid Avenue in the City of Ontario, San Bernardino County, California (Site). Converse was retained by RCCD Inc. (*User*) to conduct the *Limited Phase II ESA* at the Site (see Figure 1, Site Location Map). The scope of this assessment was completed in general accordance with the revised proposal dated August 30, 2021.

Converse generally followed the standard practices of the American Society for Testing Materials (ASTM) Designation: E1903-19 *Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process* (ASTM, E 1903-19). The purpose of conducting the assessment in accordance with ASTM E1903-19 is to acquire and evaluate information sufficient to achieve the objective(s) set forth by the *User* and Converse.

Converse completed a Phase I ESA dated July 29, 2021, for the Site. The assessment identified no evidence of recognized environmental conditions (RECs) in connection with the Site except for the following:

- Agricultural use from as early as 1938 is a REC due to potential residual contamination from agricultural chemical use.
- On-site dairy operations and associated chemicals, manure, and equipment, from as early as 1946 are RECs.

The objectives of this assessment were to:

- Evaluate RECs in connection with the Site that were identified during the prior Converse Phase I ESA.
- Identify if potential target analytes are present at concentrations greater than threshold criteria.

2.1.3 Site and Vicinity General Characteristics

The Site is an irregular-shaped lot of agricultural land consisting of approximately 60 acres. The Site is generally level.

A goat cheese dairy operation occupies the northeastern portion of the Site along Schaefer Avenue (Drake Farm at 7235, 7255, and 7277 Schaefer Avenue). Pertinent structures include a milking barn, fenced areas with shade canopies for goats (animals present), an administrative/maintenance building, and storage barns. The eastern portion of the Drakes' tenant space, near the northeastern Site corner, also includes residential structures such as trailers and a single-family home. A vacant former dairy building adjoins the residential structures.

Approximately three (3) acres of the western portion of the Site along Euclid Avenue are occupied by Coco's Nursery (no address; western portion of APNs 1053-071-01 and 1053-071-02). The nursery consists of irrigated potted plants, stockpiles of potting soil, and storage sheds.

The remaining northern, northwestern, southern, eastern, and western portions of the Site are occupied by the Art Venegas Dairy (13835 Euclid Avenue; tenant). This tenant space encompasses plowed farmland near the intersection of Euclid and Schaefer Avenues on the northwest, and on the south towards Edison Avenue. A catch basin for runoff collection is located on the southwestern corner of the Site. A system of catch basins is also located on the eastern portion of the Site, south of Drakes' farm. The central portion of the Art Venegas Dairy includes fenced areas with shade canopies for cows (animals present), a maintenance shop area, and storage areas for farm/dairy equipment/vehicles. The Venegas' milking barn and associated residential and storage structures are located on the central-west portion of the Site along Euclid Avenue.

All structures within the Venegas' complex are associated with the address of 13835 Euclid Avenue, except for a maintenance shed for

Southern California Edison (SCE) pole-mounted transformer equipment (13813 Euclid Avenue), which is adjacent to the milking barn.

The surrounding area of the Site consists of residential, agricultural, and commercial uses. Commercial uses include a truck driving school, a church, retail stores, and restaurants.

2.2 Physical Setting

2.2.1 Topography

The Site is located approximately 700 to 720 feet above mean sea level with surface topography sloping towards the south (United States Geological Survey [USGS] Topographic Map, Ontario, California, 2012).

2.2.2 Geology

The Site is underlain by alluvium, lake, playa, and terrace deposits, unconsolidated and semi-consolidated (Division of Mines and Geology, Geologic Map of California, 2015).

2.2.3 Hydrogeology

According to the Chino Basin Watermaster Depth to Groundwater Contour Map, first groundwater at the Site was located between 125 to 150 feet below ground surface (bgs) in July 2016. According to the pertinent Groundwater Elevation Contour Map, the groundwater elevation was approximately 570 feet, and the direction of regional groundwater flow was to the south.

2.3 Site History and Land Use

According to historical sources, as early as 1897 the Site was undeveloped land. From as early as 1933, structures were evident along the northeastern and western Site lines, which were associated with agricultural operations by 1938.

Between 1946 and the present, the Site was used agriculturally, including one (1) dairy operation on the western portion of the Site, and another dairy operation on the northeastern portion of the Site.

From as early as 2006, the current day nursery operation on the southwestern portion of the Site was noted as well.

2.5 Summary of Previous Assessment Reports

Converse Consultants, Phase I Environmental Site Assessment Report, 60-Acre Property, Euclid Avenue and Schaefer Avenue, Ontario, California, July 29, 2021.

The report identified the following RECs in connection with the Site:

- Agricultural use from as early as 1938 is a REC due to potential residual contamination from agricultural chemical use.
- On-site dairy operations and associated chemicals, manure and equipment from as early as 1946 are RECs.

Converse recommended the following:

- Soil sampling over the Site. Areas to be assessed should include the farmland catch basins, maintenance areas, aboveground storage tank (AST; and drain underneath the AST) & underground storage tank (UST) areas, and livestock/manure areas.
- Containers of hazardous materials, equipment, and tires should be removed in accordance with applicable regulations.
- A methane assessment in accordance with the City of Ontario requirements should be conducted.

A *Limited Phase II ESA* Scope of Work was developed based on the User's needs.

Copyright 2021 Converse Consultants

3.0 Work Performed and Rationale

3.1 Scope of Assessment

A conceptual model was developed in order to screen the Site.

3.1.1 Target Analytes

Target analytes include volatile organic compounds (VOCs), total petroleum hydrocarbons (TPH), organochlorine pesticides (OCPs), arsenic, and metals in the soil and/or soil vapor due to the current and historical on-site dairy and agricultural operations.

3.1.2 Target Analytes First Entered the Environment

The target analytes would have first entered the environment by surface spills or releases to the surface soil, or leaks from a current on-site AST, or a historical on-site UST.

3.1.3 Environmental Media and Locations Most Likely to Have the Highest Concentrations of Target Analytes

The environmental media most likely to have the highest concentrations of the target analytes are soil and soil vapor.

This *Limited Phase II ESA* consisted of the following primary elements:

- A total of nine (9) borings (AST-1 and AST-2, UST -1 and UST-2, and AG-1 through AG-5) were completed.

  - One (1) boring (AST-1) was completed to a depth of 15 feet bgs.
  - One (1) boring (AST-2) was completed to a depth of 5 feet bgs.
  - Two (2) borings (UST-1 and UST-2) were completed to depths of 25 feet bgs.
  - Five (5) borings (AG-1 through AG-5) were completed to depths of 2 feet bgs.

- Soil samples were collected from the following depths:

  - 2, 5, 10 and 15 feet bgs from boring AST-1;
  - 0.5, 2 and 5 feet bgs from boring AST-2,
  - 5, 10, 15, 20 and 25 feet bgs from borings UST-1 and UST-2; and
  - 0.5 and 2 feet bgs from borings AG-1 through AG-5.

Copyright 2021 Converse Consultants

- Soil vapor samples were collected from depths of 10-feet bgs from borings AST-1 and UST-1.

- Analysis of soil and soil vapor samples was as follows:

  - Select soil samples from the AST and UST borings were analyzed in accordance with EPA Method 8260B for VOCs, EPA Method 8015M for TPH, and EPA Method 6010/7471A for metals.
  - All soil samples from the agricultural borings (AG-1 through AG-5), as well as the 0.5- and 2-feet bgs soil samples from boring AST-2, were analyzed in accordance with EPA Method 6010B for Arsenic and EPA Method 8081 for OCPs.
  - All soil vapor samples were analyzed in accordance with EPA Method TO-15 for VOCs.

3.2 Soil Sample Collection

Underground Services Alert (Dig Alert) was notified a minimum of 72 hours prior to commencing drilling activities.

On September 15, 2021, a total of nine (9) borings were completed by Interphase Environmental utilizing direct-push (Geoprobe) drilling methods. Boring locations were as follows:

- Boring AST-1 was completed in the vicinity of a 300-gallon diesel AST. The AST is mounted on a rack above a drain, which leads to a standpipe for flushing of a drainage pipe. The drainage pipe was broken approximately 5-feet below the ground surface, and approximately 20-feet east of the AST according to the occupant, Mr. Adrian Venegas of Art Venegas Dairy. Converse placed Boring AST-2 at the approximate location of the drainage pipe brake east of the AST as indicated by Mr. Venegas.
- Borings UST-1 and UST-2 were completed in the vicinity of a former UST location on the northeastern portion of the Site. The location was determined based on historical documentation from the San Bernardino County Fire Department and was confirmed by the occupant of this portion of the Site, Dr. Dan Drake of Drake Family Farms.
- Boring AG-1 was completed inside a coral for cows on the western portion of the Site (Art Venegas Dairy).
- Boring AG-2 was completed near the approximate center of an agricultural field on the southern portion of the Site (Art Venegas Dairy).
- Boring AG-3 was completed outside a coral for bulls on the northeastern portion of the Site.

Copyright 2021 Converse Consultants

- Boring AG-4 was completed near the approximate center of an agricultural field on the northeastern portion of the Site (Art Venegas Dairy).
- Boring AG-5 was completed near the approximate center of an agricultural field on the northwestern portion of the Site (Art Venegas Dairy).

Soil cores were continuously collected during the drilling process (where possible). Portions of the soils were collected into sealable plastic bags for lithologic descriptions and screened for VOCs using a photo-ionization detector (PID). It is noted that no VOC concentrations were detected with the PID, except for one transient detection of 5 parts per million (ppm) of VOCs during the collection of soil core AST-2, at approximately 2-feet bgs.

Soil samples for laboratory analysis were cut from the acetate sleeves at the appropriate depths. Encore sample containers were used to collect subsamples of soil from select sleeve in accordance with EPA Method 5035 for analysis for VOCs and TPH carbon chain.

3.4 Soil Vapor Sample Collection

Following the collection of soil samples, temporary soil vapor probes were set at depths of 10 feet bgs in borings AST-1 and UST-1. Soil vapor probes were constructed using a six-inch stainless steel vapor implant connected to ¼-inch Teflon tubing. The implants were surrounded by an approximate 1-foot sand pack that extended slightly above and below the implant. The remainder of each borehole was filled with hydrated bentonite granules.

After installation, the probes were allowed to equilibrate for approximately 2 hours before purging and sampling.

Prior to sampling, the probes were purged of approximately 1 liter of air using a syringe. After purging, samples were collected using 1-liter summa canisters. Purging and sampling were conducted at flow rates of approximately 200 milliliters per minute. Soil vapor sampling was completed in general accordance with the Advisory-Active Soil Gas Investigations by the California Department of Toxic Substances Control (DTSC) and RWQCB, dated July 2015.

3.5 Field Quality Assurance/Quality Control

The following quality assurance and quality control measures were taken to evaluate the quality of the data generated:

- Standard EPA sample handling protocol including chain-of-custody control were followed.

Copyright 2021 Converse Consultants

- New dedicated sampling equipment (acetate sleeves, Encore containers, and Teflon tubing) were used for the collection of samples.
- Reusable sampling equipment (cutting shoe) was decontaminated between uses.
- A shut-in test was conducted prior to the collection of soil vapor samples to evaluate the integrity of the fitting.

3.6 Chemical Analytical Methods

All samples were submitted under chain of custody documentation to Enthalpy Analytical in Orange, California. Enthalpy Analytical is certified by the State of California Environmental Laboratory Accreditation Program (ELAP) for the analyses conducted.

Select samples of soil from the AST and UST borings were analyzed in accordance with EPA Method 8260B for VOCs, EPA Method 8015M for TPH, and EPA Method 6010/7471A for metals.

All soil samples from the agricultural borings (AG-1 through AG-5), as well as the 0.5- and 2-feet bgs soil samples from boring AST-2, were analyzed in accordance with EPA Method 6010B for Arsenic and EPA Method 8081 for OCPs.

Soil vapor samples were analyzed for VOCs in accordance with EPA Method TO-15.

4.0 Presentation and Evaluation of Results

4.1 Subsurface Conditions

During drilling activities, subsurface soils were observed to be generally consistent across the Site. Soil types generally consisted of brown sandy silts in the upper 5 feet, and fine-grained silty sand with minor amounts of clay between 5 and the maximum depth assessed of 25-feet bgs. Red-brown coloring was noted in one (1) soil sample from boring UST-2, at 25-feet bgs.

No stained or odorous soils were observed. The moisture content was low.

Groundwater was not encountered in any of the borings to maximum depths of 25 feet.

4.2 Analytical Results

A summary of the results is provided below. Analytical results were compared to the San Francisco Bay RWQCB's Environmental Screening Levels (ESLs), and screening levels (SLs) based on the Department of Toxic Substances Control (DTSC) Human Health Risk Assessment (HHRA) Note 3 and/or EPA Regional Screening Levels (RSLs). The results for metals were also compared to State and Federal hazardous waste screening levels. Copies of the laboratory analytical reports are included in Appendix B.

4.2.1 Soil Samples

All reported concentrations of arsenic are above the screening levels for residential and for commercial land use of 0.067 milligrams per kilogram (mg/kg) and 0.31 mg/kg, respectively, but below the applicable regional background concentration of 12 mg/kg, established by DTSC.

Lead was reported in all nine (9) samples analyzed for metals, at concentrations ranging from 5.1 to 12 mg/kg. All reported concentrations are less than the DTSC SL for lead in a residential land use scenario of 80 mg/kg.

All other reported metals concentrations were less than their respective screening levels for both residential and commercial land use scenarios. All reported values were less than their respective hazardous waste disposal criteria.

Copyright 2021 Converse Consultants

Concentrations of TPH in the diesel range were reported in four (4) samples (UST-1-5, UST-1-15, UST-2-10, and UST-2-15). The concentrations in UST-1-15 (4,400 mg/kg) and UST-2-15 (1,200 mg/kg) were at or above the screening levels for residential and for commercial land use of 260 mg/kg and 1,200 mg/kg, respectively.

Concentrations of VOCs and TPH in the gasoline and heavy oil ranges were not reported in any of the samples analyzed.

Concentrations of three (3) OCPs were detected one or more samples from boring locations AST-2, AG-4, and AG-5. Dieldrin was reported in at a concentration of 0.015 mg/kg (15 micrograms per kilogram (µg/kg)). Maximum concentrations of DDE and DDT were reported at 0.41 and 0.031 mg/kg, respectively. All detected concentrations were below their respective screening levels for residential land use and applicable hazardous waste disposal criteria.

Tabulated data for soil samples is presented in Table 1.

4.2.2 Soil Vapor Samples

A total of 15 VOCs were detected in soil vapor sample AST-1-10, and a total of 12 VOCs were detected in soil vapor sample UST-1-10. Tabulated soil vapor sample data is presented in Table 2.

With the exception of benzene, ethylbenzene, and m,p-xylenes, the maximum concentrations of reported VOCs detected were below their ESLs and SLs for both residential and commercial land uses.

- Concentrations of benzene were reported in soil vapor samples AST-1-10 and UST-1-10 at 720 and 510 micrograms per cubic meter (µg/m^3), respectively. The reported concentrations are more than the screening levels for both residential and commercial land uses scenarios of 3.2 and 14 µg/m^3, respectively.
- Concentrations of ethylbenzene were reported in soil vapor samples AST-1-10 and UST-1-10 at 800 and 580 µg/m^3, respectively. The reported concentrations are more than the screening levels for both residential and commercial land uses scenarios of 37 and 160 µg/m^3.
- Concentrations of m,p-xylenes were reported in soil vapor samples AST-1-10 and UST-1-10 at 3,400 and 2,300 µg/m^3, respectively. The reported concentration in sample AST-1-10 is more than the residential screening level of 3,300 µg/m^3, but less than the commercial screening level of 15,000 µg/m^3.

4.3 Data Quality Assurance/Quality Control

4.3.1 Hold Times

All soil and soil vapor samples were transported to the laboratory under chain-of-custody documentation and were analyzed within appropriate hold times.

4.3.2 Laboratory Quality Assurance

The laboratories provided data to estimate precision, accuracy, and bias. The laboratory reports indicated that the method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives for soil, sub-slab, and soil vapor.

4.3.3 Reporting Limits

Reporting Limits (RLs) for soil and soil vapor samples were provided by the laboratory.

The RLs for VOCs in soil ranged from 4.0 to 9,600 µg/kg.

The RLs for TPH ranged from 9.9 to 400 mg/kg.

The RLs for OCPs ranged from 5.0 to 1,000 mg/kg.

The RLs for metals were 0.14 to 5.2 mg/kg. A dilution factor (DF) of 0.83 to 1.1 was applied to the soil samples.

The RLs for VOCs in soil vapor samples ranged from 8.3 to 70 µg/m^3.

5.0 Interpretation and Conclusions

5.1 RECs and Potential Release Area(s)

The Converse Phase I ESA identified the following RECs in connection with the Site:

- Agricultural use from as early as 1938 is a REC due to potential residual contamination from agricultural chemical use.
- On-site dairy operations and associated chemicals, manure, and equipment, from as early as 1946 are RECs.

5.2 Conceptual Model Validation/Adequacy of Investigations

It is our opinion that the field and analytical data validated the conceptual model.

5.3 Absence, Presence, Degree, Extent of Target Analytes

Soil:
All reported metals concentrations were less than their respective screening levels for both residential and commercial land use scenarios, or applicable regional background concentrations. All reported values were less than their respective hazardous waste disposal criteria.

Concentrations of TPH in the diesel range were reported in four (4) samples (UST-1-5, UST-1-15, UST-2-10, and UST-2-15). The concentrations in UST-1-15 (4,400 mg/kg) and UST-2-15 (1,200 mg/kg) were at or above the screening levels for residential and for commercial land use of 260 mg/kg and 1,200 mg/kg, respectively.

No VOCs or concentrations of TPH in the gasoline and heavy oil ranges were reported in the soil samples.

Concentrations of three (3) OCPs (dieldrin, DDE, and DDT) were detected at boring locations AST-2, AG-4, and AG-5. All detected concentrations were below their respective screening levels for residential and commercial land uses, and applicable hazardous waste disposal criteria.

Copyright 2021 Converse Consultants

Soil Vapor:
A total of 15 VOCs were detected in soil vapor sample AST-1-10, and a total of 12 VOCs were detected in soil vapor sample UST-1-10.

Except for benzene, ethylbenzene, and m,p-xylenes, the maximum concentrations of reported VOCs detected were below their respective screening levels for residential land use.

The presence of benzene, toluene, ethylbenzene, and xylenes (BTEX) are commonly associated with petroleum products, and are likely related to the releases from the diesel tanks.

5.4 Other Concerns

5.4.1 Significant Assumptions

No significant assumptions were made during this assessment.

5.4.2 Limitations and Exceptions

No limitations or exceptions were encountered during this assessment.

5.4.3 Special Terms and Conditions

No special terms or conditions need to be noted in this *Limited Phase II ESA* report.

5.5 Conclusions/Objectives Met

Converse has performed a *Limited Phase II ESA* at the approximate 60-acre Site at the southeast corner of Euclid and Schaefer Avenues in the City of Ontario, in conformance with the scope and limitations of ASTM, E1903-19 and the following objectives:

- Evaluate RECs in connection with the Site that were identified during the prior Converse Phase I ESA.
- Identify if potential target analytes are present at concentrations greater than threshold criteria.

Converse presents the following findings based on the results of this assessment:

Copyright 2021 Converse Consultants

- All reported metals concentrations were less than their respective screening levels for both residential and commercial land use scenarios, or applicable regional background concentrations. All reported values were less than their respective hazardous waste disposal criteria.
- TPH in the diesel range was reported in four (4) samples at the former UST location. The concentration in sample UST-1-15 was above the screening level for residential and commercial land use. The concentration in sample UST-2-15 was above the screening level for residential land use, but equal to the screening level for commercial land use. Concentrations of VOCs and TPH in the gasoline and heavy oil ranges were not reported in any of the samples analyzed.
- All detected OCP concentrations were less than their respective screening levels for residential land use, and applicable hazardous waste disposal criteria.
- A total of 15 VOCs were detected in soil vapor sample AST-1-10, and a total of 12 VOCs were detected in soil vapor sample UST-1-10. Except for benzene, ethylbenzene, and xylenes, the maximum concentrations of reported VOCs detected were below their screening levels for both residential and commercial land uses.
    - Benzene and ethylbenzene were detected at concentrations in excess of the respective screening levels for residential land use, and for commercial land use at both the current AST location, and the former UST location.
    - Concentrations of m,p-xylenes were reported in soil vapor sample AST-1-10 3,400 µg/m^3, which is more than the residential screening level of 3,300 µg/m^3, but less than the commercial screening level of 15,000 µg/m^3. The impacts from m, p-xylenes are therefore considered to be relatively minor and limited.

Based on the findings of this assessment Converse concludes the following:

- No impacts were identified associated with former agricultural uses of the Site.
- Both the soil and soil vapor appear to be impacted in the vicinity of the current ATS and former UST used for diesel.
    - The impacts to the soil appear to be relatively limited. Although TPH diesel was reported in excess of the commercial screening level at a depth of 15 feet bgs in boring UST-1, it was not detected in the samples from depths of 10 or 20 feet bgs. In boring UST-2 TPH diesel was only reported in the sample from 15 feet bgs, and the concentration was equal to the commercial screening level.

Copyright 2021 Converse Consultants

- Concentrations of benzene, ethylbenzene, and xylenes were detected in both soil vapor samples at concentrations in excess of screening levels. The screening levels that these concentrations exceed are based on potential impacts to occupants from vapor intrusion. The current impact to the Site from these concentrations is considered to be minimal based on the lack of occupied structures in the vicinity of the AST and UST areas.

6.0 Recommendations

Based on the findings of this assessment, the Site has been impacted from the diesel storage tanks (former UST and current AST). The impacts to the soil are considered to be relatively minor. The elevated concentrations of BTEX in soil vapor samples are not considered to pose a significant risk due to the lack of occupied structures in the vicinity of where there were detected. No further assessment appears warranted at this time. However, further testing should be conducted if Site uses change and structures are planned to be developed in the vicinity of the AST or former UST.

This data package contains sample and QC results for five soil samples, requested for the above referenced project on 09/15/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015M):
High RPD was observed for diesel C10-C28 in the MS/MSD of UST-1-15 (lab # 450596-003); the high RPD was not associated with any reported results. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
No analytical problems were encountered.

Pesticides (EPA 8081A):
Low recovery was observed for endrin in the MS of AG-3-0.5 (lab # 450592-005); the LCS was within limits. High RPD was observed for endrin and endrin ketone in the MS/MSD of AG-3-0.5 (lab # 450592-005); these analytes were not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of AST-1-2 (lab # 450593-001); the associated RPD was within limits. High recovery was observed for barium in the MSD of AST-1-2 (lab # 450593-001). High RPD was also observed for barium in the MS/MSD of AST-1-2 (lab # 450593-001). No other analytical problems were encountered.

This data package contains sample and QC results for eight soil samples, requested for the above referenced project on 09/15/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015M):

High RPD was observed for diesel C10-C28 in the MS/MSD of UST-1-15 (lab # 450596-003); the high RPD was not associated with any reported results. Low surrogate recovery was observed for n-triacontane in the MS for batch 274420; the parent sample was not a project sample. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

UST-1-15 (lab # 450596-003) was diluted due to high hydrocarbons. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD of AST-1-2 (lab # 450593-001); the associated RPD was within limits. High recovery was observed for barium in the MSD of AST-1-2 (lab # 450593-001). High RPD was also observed for barium in the MS/MSD of AST-1-2 (lab # 450593-001). No other analytical problems were encountered.

This data package contains sample and QC results for ten soil samples, requested for the above referenced project on 09/15/21. The samples were received cold and intact.

Pesticides (EPA 8081A):

Low recovery was observed for endrin in the MS of AG-3-0.5 (lab # 450592-005); the LCS was within limits. High RPD was observed for endrin and endrin ketone in the MS/MSD of AG-3-0.5 (lab # 450592-005); these analytes were not detected at or above the RL in the associated samples. A number of samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B):

No analytical problems were encountered.

I. PURPOSE AND SCOPE

The purpose of this study is to evaluate the onsite and offsite watershed area and required storm drain systems as part of the Euclid Mixed Use Specific Plan project. The project site is located within the City of Ontario Master Drainage Plan Area XIV and plans to construct several City of Ontario Master Drainage Plan storm drain facilities.

The scope of the study includes the following:

1. Determination of the 100-year peak flow rates for the onsite project area for the pre-project and post-project conditions.
2. Sizing of the proposed onsite storm drain systems and subsurface systems to ensure flood protection for the site and mitigation for the water quality volume and increased runoff mitigation volume.
3. Assess the existing and proposed MDP facilities adjacent to and downstream of the project site.
4. Preparation of a hydrology report, which consists of hydrological and analytical results and exhibits.

II. PROJECT DESCRIPTION AND MASTER DRAINAGE PLAN OVERVIEW

Euclid Mixed Use Specific Plan (EMUSP) is a proposed industrial development within the City of Ontario. The project site is bounded by Schaefer Avenue to the north, Euclid Avenue to the west, Edison Avenue to the south, and Sultana Avenue to the east, as shown on Figure 1 Vicinity Map. The project site is located within the City of Ontario's Master Drainage Plan (MDP) Area XIV, see Excerpt A. The City of Ontario's Master Drainage Plan Planned Facilities Map has been included as Excerpt B.

The MDP Area XIV is approximately bounded by Riverside Drive to the north, between Bon View Avenue and Grove Avenue to the east, Merrill Avenue to the south, and Euclid Avenue to the west, see Figure 1 Vicinity Map. Runoff flows to the south and is collected in storm drain facilities which ultimately discharge into the City of Chino Line I system located south of the southwestern corner of Area XIV near the intersection of Merrill Avenue and Euclid Avenue.

As part of the PM 20016 Project (Ontario Ranch Business Park) storm drain infrastructure is being constructed along Euclid Avenue, Eucalyptus Avenue, Merrill Avenue, Sultana Avenue, Campus Avenue, and Bon View Avenue. This project was assessed based on the downstream storm drain construction being completed and operational. The existing MDP facilities constructed per PM 20016 are shown on Figure 2. Based on the PM 20016 study, upstream projects are required to mitigate their flows to 80% of pre-project levels.

The EMUSP project proposes the following storm drain infrastructure:

1. Master Drainage Plan Facilities, as shown on Figure 3

   a. EULD-XIV-1 located on Euclid Avenue between Schaefer Avenue and Edison Avenue.
   b. EULD-XIV-3 located on Edison Avenue east of Euclid Avenue
   c. EULD-XIV-4 located on Schaefer Avenue east of Euclid Avenue
2. Onsite Drainage Facilities, as shown on Exhibit C
   a. Catch basins, inlets, and storm drain systems.
   b. Subsurface systems

III. ONSITE HYDROLOGY

The San Bernardino County Hydrology Manual (Reference 1) and the City of Ontario Master Draining Plan Area XIV Hydrology Calculations were used to develop the hydrological parameters for the hydrology analyses. The rational method and unit hydrograph method were used for the analyses and the computations were performed using the computer program developed by Civil Cadd/Civil Design.

The rainfall depths used in the hydrology calculations are as follows:

Table A. Rainfall Values	
Storm Event & Duration	**Rainfall (inches)**
100-Year, 1-Hour	1.2
100-Year, 3-Hour	2.1
100-Year, 6-Hour	3.0
100-Year, 24-Hour	6.0
Slope of Intensity	0.6

The existing soil classification for the on-site area consists of Hydrologic Soil Group "B". An Antecedent Moisture Condition of II was used for the 100-year calculations. The rainfall depths and Antecedent Moisture Condition are based on the City of Ontario MDP Area XIV hydrology calculations.

A land cover type of Commercial/Industrial was used for the onsite areas in the post-project condition. A land cover type of Undeveloped (poor cover) was used for the onsite area in the pre-project condition.

The impervious ratio and runoff index values from the rational method analysis were used for the unit hydrograph analyses. The time of concentration from the rational method analysis was used for calculating the lag time for the unit hydrograph. To compute a time of concentration for the pre-project areas, the post-project time of concentration was adjusted using a ratio between the Manning's N values for the pre-project and post-project conditions.

The rational method analysis analyzed Area A, Area B, and Area C. Area A consist of 7 sub-areas with a total of 34 acres. Area B consist of 5 sub-areas with a total area of 16 acres. Area

C consist of 2 sub-areas with a total area of 8 acres. An additional model was run with all three areas and user entry commands to confluence Area A, Area B, and Area C. The rational method analysis was performed for a 100-year storm event.

The results of the rational method analysis are as follows:

Table B. Rational Method Results		
Area	Post-Project Results	
	Peak Flow Rate, ft^3/s	Time of Concentration, min
A	89.26	12.89
B	52.78	8.24
C	25.85	9.02
Total	149.69	13.36

The unit hydrograph analysis analyzed the initial areas from rational method Area A, Area B, and Area C. The unit hydrograph analysis was performed for the 100-year storm event for the pre-project and post-project conditions.

The results of the unit hydrograph analysis are as follows:

Table C. Unit Hydrograph Results		
Area	Pre-Project	Post-Project
	Peak Flow Rate, ft^3/s	Peak Flow Rate, ft^3/s
A1	5.32	12.93
A2	8.69	19.41
A3	6.96	16.12
A4	8.14	20.73
A5	3.80	8.54
A6	6.34	14.62
A7	3.28	7.59
B1	6.26	14.63
B2	2.96	6.18
B3	7.20	16.13
B4	4.97	11.38
B5	3.45	7.14
C1	7.17	16.40
C2	4.15	9.78

The results of the rational method analysis will be used to provide pipe sizing for the onsite storm drain systems. The results of the unit hydrograph analysis will be used to calculate the storage volume required to provide increased runoff mitigation.

The post-project onsite rational method calculations have been included in Appendix A. The pre-project onsite unit hydrograph calculations have been included in Appendix B. The post-project onsite unit hydrograph calculations have been included in Appendix C. The onsite rational method hydrology map is included as Exhibit A.

IV. ONSITE HYDRAULICS

A drainage facilities map has been provided for the project site, see Exhibit C. The runoff from the onsite project areas is conveyed via a system of inlets and storm drains to the subsurface systems. The purpose of the subsurface systems is for mitigation of the water quality volume and to provide increased runoff mitigation.

A preliminary storm drain sizing calculation was performed based on the 100-year flow rates per the rational method hydrology analysis. The FlowMaster program was used to calculate the required pipe size such that the percent full is 75% or less to account for hydraulic losses. A slope of 0.5% was used for the analysis. The pipe sizing calculations are included in Appendix E.

The proposed subsurface systems were sized based on the water quality volume and increased runoff mitigation volume. The increased runoff mitigation volume was calculated based on the unit hydrograph results and a flow rate mitigation to 80% of the pre-project flow rate. The required volumes are included in Appendix C. A typical cross-section for a 96" subsurface system and the required system lengths for each area are included in Appendix C.

V. OFFSITE HYDROLOGY

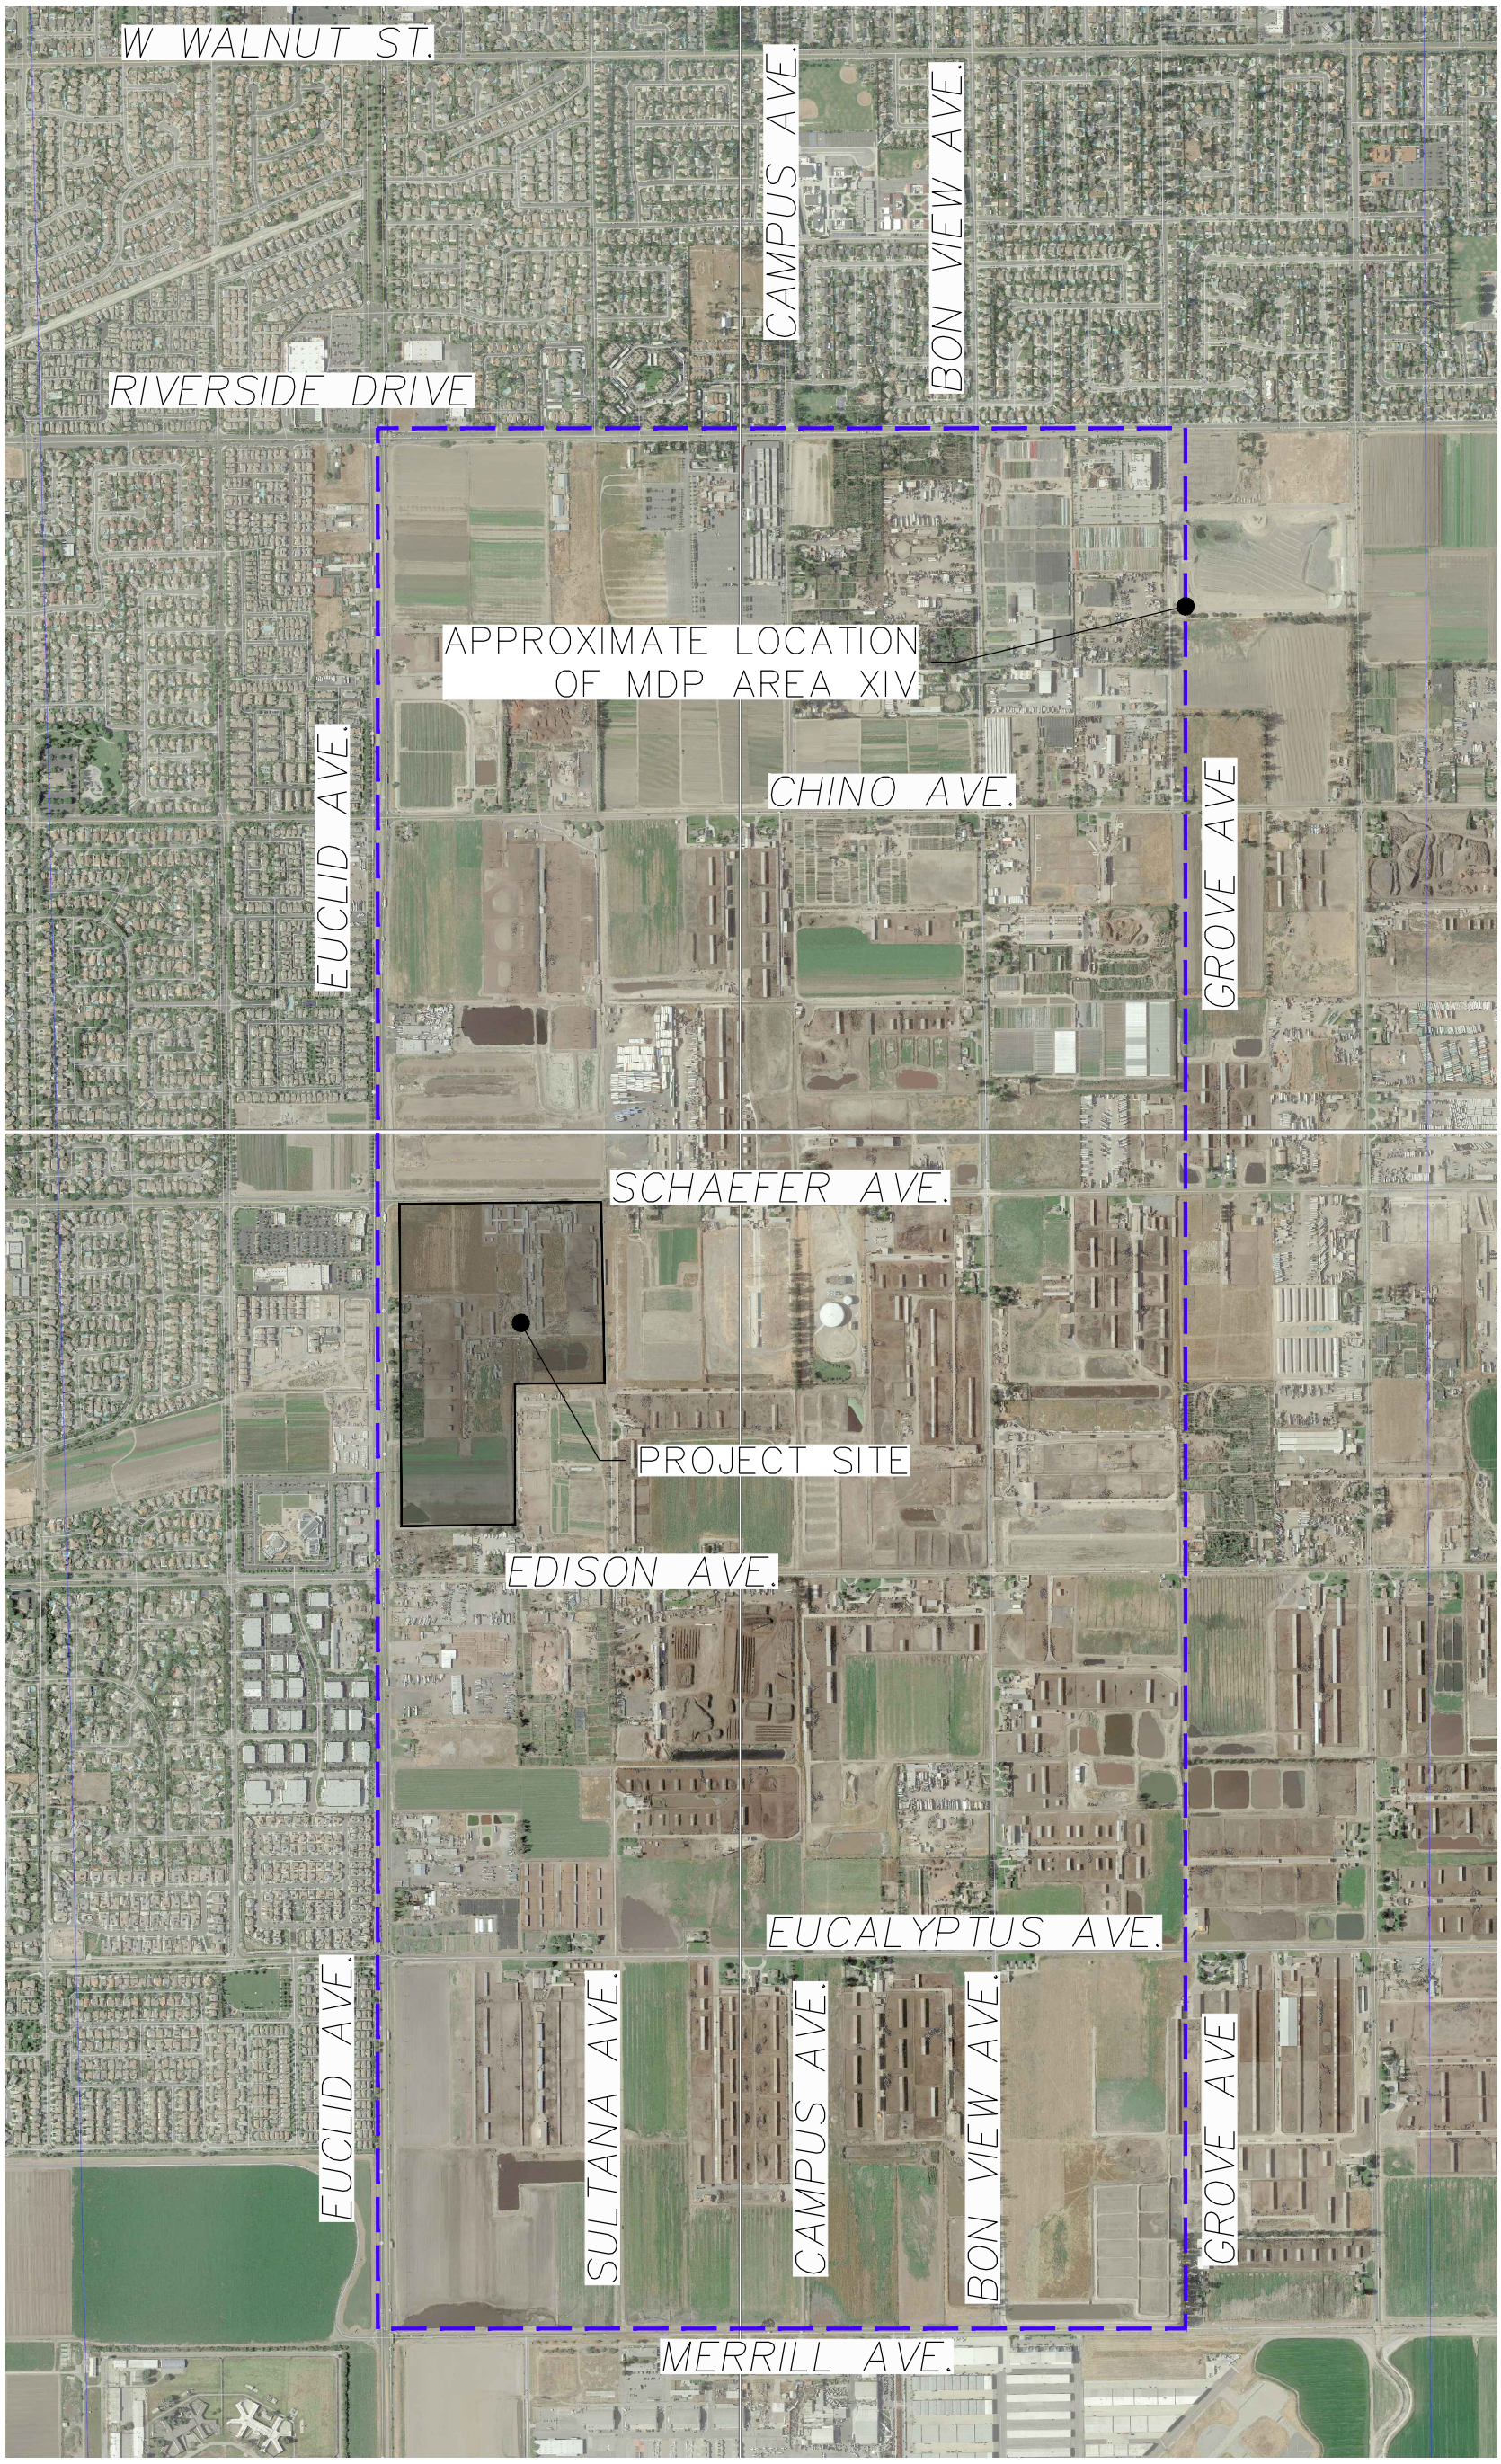
The project is proposing to construct storm drain infrastructure as required by the City of Ontario Master Drainage Plan. The flow rates within the MDP are based on a developed condition. However, an offsite hydrology analyses was performed for the 100 year condition to understand the interim flow rates that will flow towards Schaefer Avenue. Exhibit B was prepared to develop nodes, subareas and flowlines for Area A and Area B which are tributary to Schaefer Avenue. Watershed Areas A is approximately 240 acres and Watershed Area B is approximately 155 acres. The purpose of the hydrology is to determine the interim flow rate that will be required to be intercepted along Schaefer Avenue in the interim condition. The runoff from this area will be allowed to conveyed into the MDP Euld-XIV-4 Storm Drain system that is located along Schaefer Avenue and has a MDP defined flow rate of that ranges from 122 ft^3/s to 235 ft^3/s. The Euld-XIV-1 Storm Drain along Euclid Avenue has been planned to convey 570 ft^3/s. Table D below provides the flow rates for the 100 year condition for Area A and Area B.

Table D. Rational Method Results				
Area	Interim Condition Flow Rates			
	Peak Flow Rate, ft^3/s	Area (acres)	Time of Concentration, min	Intensity, in/hr
A	196.6	153.9	25.23	2.02
B	212.2	236.8	41.61	1.50

In the interim condition, the total flow rate for Area A and Area B will be approximately 360 ft^3/s based upon a confluence assessment. The capacity of the Euld-XIV-1 Storm Drain (570 ft^3/s) and the Euld-XIV-4 Storm Drain (235 ft^3/s to 122 ft^3/s) will allow the interim condition flow rates to be captured. This will provide the necessary flood protection measures to protect the project from flooding.

VI. CONCLUSION

The study evaluated the proposed industrial development to assess the drainage patterns and proposed storm drain systems for the onsite area and offsite area. It has been concluded that:



1. The proposed project is located within the City of Ontario Master Drainage Plan Area XIV which provides the regional storm drain system to flood protect the area.
2. Based on the existing downstream MDP systems, the project is required to mitigate onsite runoff to 80% of pre-project levels.
3. The project proposes onsite storm drain systems to sufficiently flood protect the project site and provide mitigation for water quality and increased runoff.
4. The project proposes to construct three MDP systems located to the north, west, and south of the project site. These MDP facilities will provide the necessary flood protection for the project.

I. PURPOSE AND SCOPE

The purpose of this study is to evaluate the offsite storm drain systems located in Euclid Avenue and proposed as part of the Euclid Mixed Use Specific Plan (EMUSP) project. The EMUSP project site is located within the City of Ontario Master Drainage Plan Area XIV and plans to construct several City of Ontario Master Drainage Plan storm drain facilities.

The scope of the study includes the following:

1. Determination of the 100-year peak flow rates for the Euclid Avenue storm drain systems based on the City of Ontario Master Drainage Plan.
2. Hydraulically assess the proposed mainline storm drain systems located in Euclid Avenue.
3. Preparation of a drainage report, which consists of hydraulic and analytical results and exhibits.

II. PROJECT DESCRIPTION AND MASTER DRAINAGE PLAN OVERVIEW

Euclid Mixed Use Specific Plan (EMUSP) is a proposed industrial development within the City of Ontario. The project site is bounded by Schaefer Avenue to the north, Euclid Avenue to the west, Edison Avenue to the south, and Sultana Avenue to the east, as shown on Figure 1 Vicinity Map. The Euclid Avenue mainline storm drain systems which are the focus of this report are located on Euclid Avenue from Eucalyptus Avenue to Schaefer Avenue, as shown on Figure 1 Vicinity Map. The project site is located within the City of Ontario's Master Drainage Plan (MDP) Area XIV, see Excerpt A. The City of Ontario's Master Drainage Plan Planned Facilities Map has been included as Excerpt B.

The MDP Area XIV is approximately bounded by Riverside Drive to the north, between Bon View Avenue and Grove Avenue to the east, Merrill Avenue to the south, and Euclid Avenue to the west, see Figure 1 Vicinity Map. Runoff flows to the south and is collected in storm drain facilities which ultimately discharge into the City of Chino Line I system located south of the southwestern corner of Area XIV near the intersection of Merrill Avenue and Euclid Avenue.

As part of the PM 20016 Project (Ontario Ranch Business Park) storm drain infrastructure is being constructed along Euclid Avenue, Eucalyptus Avenue, Merrill Avenue, Sultana Avenue, Campus Avenue, and Bon View Avenue. The EMUSP project was assessed based on the downstream storm drain construction being completed and operational. The existing MDP facilities constructed per PM 20016 are shown on Figure 2.

The EMUSP project proposes the following Master Drainage Plan Facilities, as shown on Figure 3:

1. EULD-XIV-1 located on Euclid Avenue between Eucalyptus Avenue and Schaefer Avenue.

2. EULD-XIV-3 located on Edison Avenue east of Euclid Avenue
3. EULD-XIV-4 located on Schaefer Avenue east of Euclid Avenue

This report focuses on the mainline analysis for the proposed MDP systems located on Euclid Avenue:

MDP System	Location	Name used in this report and on the SD Improvement Plans	Flow Rate per MDP (see Excerpt A)
EULD-XIV-1	Euclid Ave, north of Schaefer Ave	Euclid Ave SD / Line A	338.5 ft^3/s
EULD-XIV-1	Euclid Ave, south of Schaefer Ave, north of Edison Ave	Euclid Ave SD / Line A	568.4 ft^3/s
EULD-XIV-1	Euclid Ave, south of Edison Ave	Euclid Ave SD / Line A	829.1 ft^3/s
EULD-XIV-3*	Edison Avenue	Line B	289.0 ft^3/s
EULD-XIV-4*	Schaefer Avenue	Line C	234.5 ft^3/s

*Only the portions of the EULD-XIV-3 and EULD-XIV-4 storm drain systems located within Euclid Avenue were included in the analysis for this report. Separate reports shall be prepared to assess the rest of the EULD-XIV-3 and EULD-XIV-4 systems proposed as part of the EMUSP project.

III. OFFSITE HYDRAULICS

A Drainage Facilities Map has been provided, see Exhibit A. The Euclid Avenue storm drain systems were hydraulically assessed using the WSPG program.

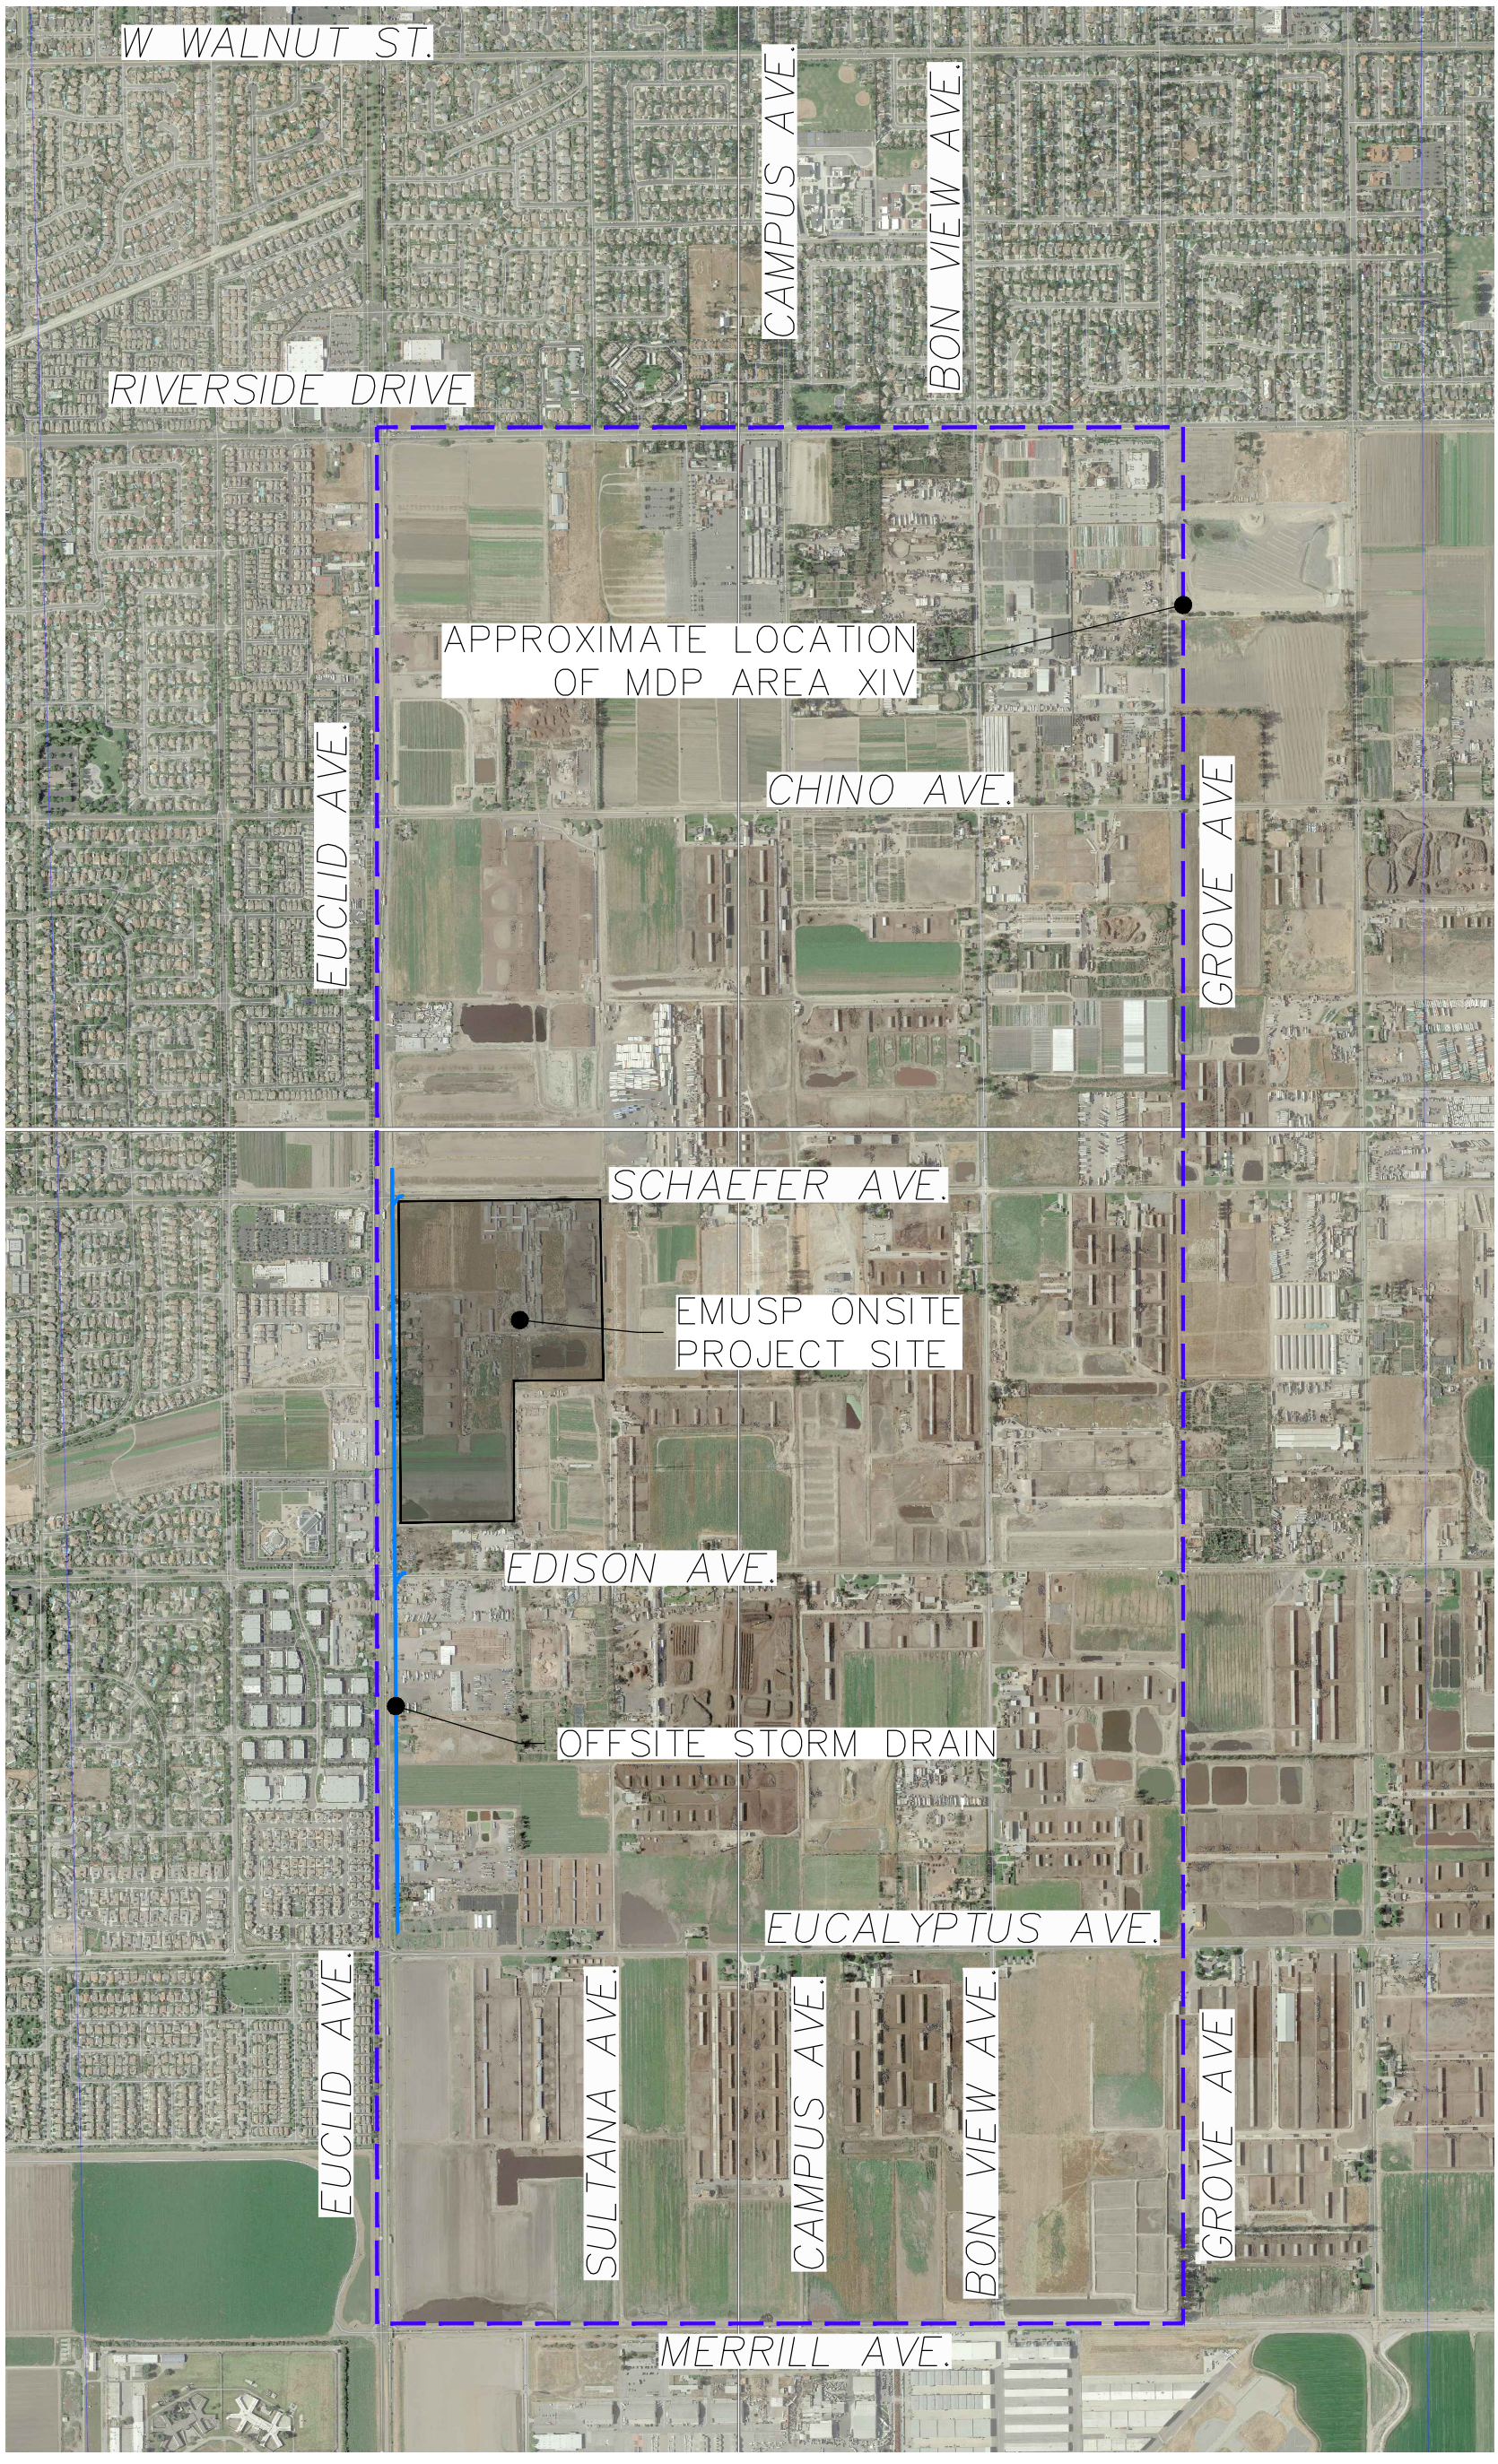
The flow rates used for the hydraulic analysis are per the flow rates established by the City of Ontario Master Drainage Plan. The flow rates used are listed on the table in the previous section and shown on the Drainage Facilities Map, Exhibit A.

The downstream control for the Euclid Ave/Line A system was 649.82 per the storm drain plans for the downstream storm drain system. The hydraulic grade line calculated for Euclid Ave/Line A was used as the downstream control for Line B and Line C. The improvement plans for the downstream storm drain system have been included as Excerpt C.

The WSPG calculations are included in Appendix A.

IV. CONCLUSION

The study evaluated the storm drain improvements located in Euclid Avenue associated with the Euclid Mixed Use Specific Plan project. It has been concluded that:



1. The proposed project is located within the City of Ontario Master Drainage Plan Area XIV which provides the regional storm drain system to flood protect the area.
2. The proposed Euclid Avenue storm drain systems are City of Ontario Master Drainage Plan planned facilities. The MDP has established flow rates for the proposed storm drain systems.
3. A hydraulic grade line has been established for the proposed storm drain systems.

DESIGN NOTES:

Design Specifications:
AASHTO LRFD Bridge Design Specifications, 6th Edition with California Amendments.

Loading:
Live load: (AASHTO LRFD 3.6.1.2)
HL-93 consists of design truck or design tandem and design lane load.

Impact Factor: (Apply to roof slab only)
$IM = 33(1.0\text{-}0.125D_E) \geq 0\%$ (AASHTO LRFD 3.6.2.2)
D_E = minimum depth of earth cover

Earth load:
Earth pressure for two conditions:
140 pcf vertical, 42 pcf horizontal
140 pcf vertical, 140 pcf horizontal

Load Factors:
AASHTO LRFD Table 3.4.1.1 & Table 3.4.1.2

Unit stresses:
f'_c = 3600 psi
f_y = 60,000 psi

Distribution "d" bars:
Up to and including 10'-0" cover
Express as a percentage of main positive reinforcement required: $\frac{100}{\sqrt{S}}$, Max 50%,
Over 10'-0" cover,
4 @ 12 maximum

Shear:
$V_c = (2.14\sqrt{f'_c}+4600\frac{A_s}{bd}\frac{Vud_e}{Mu})\,b_v d_e \leq 4.0\sqrt{f'_c}\,b_v d_e$ (Pounds)
V_c shall not be less than $3.00\sqrt{f'_c}\,b_v d_e$ for frame members and $2.5\sqrt{f'_c}\,b_v d_e$ for simply supported members.

Exclusion:
Compressive reinforcement and negative moment reduction (for continuity) do not apply.
Axial loading on members has not been considered.

CONSTRUCTION NOTES:

Construction loads:
Strutting required as shown on Standard Plan D88.
Strutting may be required on culvert extensions when existing parapet is removed.

Expansion joints:
Invert:
No expansion joints shall be permitted.

Roof and Walls:
When cover is less than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers outside the paved roadway lanes and place Bridge Detail 3-2, Standard Plan B0-3, at 30'-0" centers under paved roadway lanes.
When cover is more than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers and additional ½" premolded expansion joints at locations of change in foundation character, as directed by the Engineer.

Construction joints:
Temporary joints may be permitted if normal (or radial) to ℄ of RCB. Otherwise, the contractor is to submit a proposal for consideration.

Cutoff walls:
4'-0" cutoff walls are to be provided at inlet and/or outlet unless adjacent channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant.

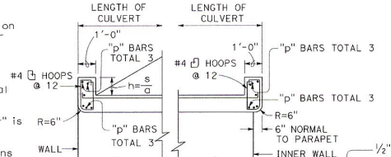
Earthwork:
See Standard Plan A62E.

Backfill:
See Standard Specifications, except that the difference in level of backfill (against outside walls) shall not exceed 2'-0".

GENERAL NOTES:

Designation:
Standard single or multiple box culverts are shown on plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10' or double 10' x 5' RCB with 20', followed by alternatives.

Alternatives:
Single cell: Invert will be sloped unless "trapezoidal invert", "flat invert" or "V invert" is included in designation.
Multiple cell: Invert will be vee unless "flat invert" is specified. Ends of culvert will be rounded unless "square ends" are designated. Parapets will be as shown unless designated in plans. Such designations may be different for inlet and outlet ends.



Quantities:
Quantities do not include the following:
- Concrete for parapet, paving notches and cut-off wall.
- Reinforcement for 2% splices, parapets, paving notches, cut-off wall and additional required bars for exposed top slab (D-80, Note 9).

Reinforcement placement:
Main reinforcement is to be placed transversely or, for curved culverts, radially. When radial, reinforcing spacing of the "a", "f" and "g" bars is measured along the centerline. Stagger splices not shown. Hooks may be rotated or tilted, as necessary, for clearance.

Special reinforcement coverage:
Box standard plans are not to be used for culverts in a corrosive environment or where there is a severe abrasive flow condition or in freeze-thaw locations.

Special designs
Required for culverts with conditions, loads, design bearing pressures or sizes greater than those given on this plan or Standard Plans D80 & D81. Also required for multiple cell culverts with unequal spans. For culverts with railroad loading, see the current AREMA design specification.

3 or more cells:
For culverts with more than two cells, use dimensions and reinforcement for the standard "double box culvert" and adjust quantities accordingly.

DESIGN NOTES:

Specifications:
AASHTO LRFD Bridge Design Specifications, 4th Edition with California Amendments.

Earth load:
Earth pressures for two conditions:
140 pcf Vert, 42 pcf Horiz
140 pcf Vert, 140 pcf Horiz

Unit stresses:
f'c = 5.0 ksi
fy = 65.0 ksi for weld wire fabric
n = 7

Shear:
Based on
$V_c = (2.14\sqrt{f'_c}+4600\ \frac{A_s}{bd_e}\frac{V_u d_e}{M_u})\, b.d_e \le 4.0\sqrt{f'_c} b.d_e$ (Pounds)
V_c shall not be less than $3.00\sqrt{f'_c} b.d_e$
for frame members and $2.5\sqrt{f'_c} b.d_e$
for simply supported members.

Exclusion:
Axial loading on the members has not been considered.

GENERAL NOTES:

Designation:
Standard single or multiple precast box culverts are shown on the plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10'-0" or double 10' x 5' RCB with 20'-0", followed by alternatives.

Alternatives:
Single cell:
Standard dimensions of AASHTO Material Specification 'M259' or 'M273'.
Multiple cell:
Constructed by placing single cells adjacent to each other. Inlet and outlet ends of culvert will be rounded unless square ends are designated. Parapet will be shown unless designated in plans. Such designation may be different for inlet and outlet ends.

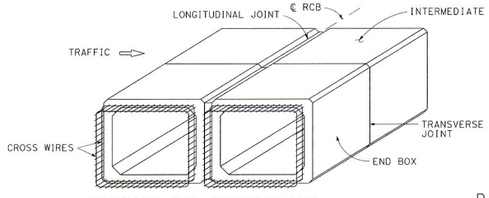
Limitations:
Where the overfill is less than 12", Precast RCB culverts are not to be used. Precast RCB culverts are not to be used in siphon or pressurized installations unless appropriate "watertight" jointing is provided.

Special reinforcement coverage:
Precast RCB culvert standard plans are not to be used in a corrosive environment or where there is a severe abrasive flow condition or freeze-thaw locations.

Special design:
Required for culvert with different conditions, loads or design bearing pressures greater than those given on these plans. Required for culverts where end details need higher skew angles, higher parapets or barrier sections.

CONSTRUCTION NOTES:

Cutoff walls:
4'-0" Cutoff walls are to be provided at inlet and/or outlet unless channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant. See Standard Plans D84, D85 and D86A.



Wingwalls:
Wingwalls shall be cast-in-place and shall conform to standard plan details for box culvert wingwalls. See Standard Plans D84, D85 and D86A.

Earthwork:
See Standard Plan A62G.

Construction loads:
Strutting may be required near temporary ends. For construction loads on culverts, See Standard Plan D88.

3. STATIONS SHOWN ON THE PLANS FOR LATERALS APPLY AT THE INTERSECTION OF CENTERLINES OF MAIN LINE AND LATERAL. STATIONS SHOWN ON THE PLANS FOR CATCH BASIN CONNECTOR PIPES APPLY AT THE INTERSECTION OF THE INSIDE WALL OF THE MAIN LINE WITH THE CONNECTOR PIPE CENTERLINE.
4. VALUES FOR A, B, C AND D SHALL BE SHOWN ON THE PLANS. ELEVATION R AND ELEVATION S SHALL BE SHOWN ONLY WHEN REQUIRED PER NOTE 5.
5. a. ELEVATIONS R AND S NEED NOT BE SHOWN ON THE PLANS IF THE INLET PIPE IS TO ENTER THE MAIN LINE RADIALLY.
   b. ELEVATION R SHALL BE SHOWN ON THE PLANS ONLY IF A STUB IS TO BE PROVIDED IN THE MAIN LINE FOR FUTURE CONNECTION OF AN INLET PIPE.
   c. ELEVATION S SHALL BE SHOWN ON THE PLANS IF AN INLET PIPE IS TO ENTER THE MAIN LINE OTHER THAN RADIALLY. INLET PIPE SHALL BE LAID ON A STRAIGHT GRADE FROM ELEVATION S TO THE CATCH BASIN OR GRADE BREAK IN LINE.
6. THE INLET PIPE SHALL ENTER THE MAIN LINE RADIALLY UNLESS OTHERWISE INDICATED. THE INLET PIPE MAY ENTER THE MAIN LINE OTHER THAN RADIALLY IF ANGLE A IS GREATER THAN 45°, B IS LESS THAN OR EQUAL TO 24" (600 mm) AND THE OUTSIDE DIAMETER OF THE INLET PIPE IS LESS THAN 0.5 D; OTHERWISE, SPPWC 340 SHALL BE USED.
7. NO MORE THAN ONE OPENING SHALL BE MADE IN ANY ONE SECTION OF PIPE.
8. THE OPENING FOR THE BREAKOUT SHALL BE RECTANGULAR AND CUT NORMAL TO THE PIPE SURFACE WITHOUT DAMAGING THE REINFORCING STEEL. THE TRANSVERSE REINFORCEMENT OF THE MAIN LINE SHALL BE CUT AT THE CENTER OF THE OPENING AND BENT INTO THE TOP AND BOTTOM SLABS OF THE SPUR.
9. THE MAIN LINE SHALL BE REINFORCED WITH A CONCRETE CRADLE AND ENCASEMENT (AS APPLICABLE). A CONCRETE ENCASEMENT IS REQUIRED IF A JOINT IN THE MAIN LINE FALLS WITHIN THE LIMITS OF THE CRADLE. THE CONCRETE ENCASEMENT SHALL EXTEND 12" (300 mm) ABOVE THE TOP OF THE MAIN LINE AND TO THE LIMITS OF THE CRADLE. IF CONNECTING TO AN EXISTING STORM DRAIN, PORTION OF CRADLE OPPOSITE INLET MAY BE OMITTED.
10. REINFORCING STEEL SHALL CONFORM TO ASTM A 615, GRADE 40, (ASTM A 615M, GRADE 300), AND BE PLACED 1 1/2" (40 mm) CLEAR FROM CONCRETE SURFACES, UNLESS OTHERWISE SHOWN F BARS SHALL BE CARRIED TO A POINT NOT LESS THAN J DISTANCE FROM CENTER LINE WITH J=7D/12 + 6" (150 mm).
11. FLOOR OF THE SPUR SHALL BE STEEL-TROWELED TO THE SPRING LINE OF THE SPUR.

NOTES:

1. Unless otherwise shown on the plans or specified in the special provisions, the Contractor shall have the option of selecting the class of RCP and the method of backfill to be used, provided the height of cover does not exceed the value shown for the RCP selected.
   Example:
   2'-0" RCP culvert with maximum cover of 19'-0" the options are:
   a) Class V Special or stronger with Method 1.
   b) Class III or stronger with Method 2.
   c) Class II or stronger with Method 3.
   Cover is defined as the maximum vertical distance from top of pipe to finished grade within the length of any given culvert.
2. The class of RCP, method of backfill and bedding selected shall be the same throughout the length of any given culvert.
3. The "length of any culvert" is defined as the culvert between:
   a) Successive drainage structures (inlets, junction boxes, headwalls, etc.).
   b) A drainage structure and the inlet or outlet end of the culvert.
   c) The inlet and outlet end of the culvert when there are no intervening drainage structures.
4. Slope or shore excavation sides as necessary.
5. Embankment height prior to excavation for installation of all classes of RCP under Methods 2 and 3A shall be as follows:
   Pipe sizes 1'-0" to 3'-6", I D = 2'-6"
   Pipe sizes 4'-0" to 7'-0", I D = 2/3 OD
   Pipe sizes larger than 7'-0", I D = 5'-0"
6. The maximum size for all classes of RCP placed under Method 1 is 6'-6" ID.
7. Non-reinforced precast pipe sizes 3'-0" or smaller may also be placed under Methods 1, 2 or 3.
8. Oval or arch shaped RCP shall be placed under Method 2 only.
9. Embankment compaction requirements govern over the 90% relative compaction backfill requirement within 2'-6" of finished grade.
10. Backfill shall be placed full width of excavation except where dimensions are shown for backfill width or thickness. Dimensions shown are minimums.
11. Where the precast non-reinforced concrete pipe is used as a substitute for the cast-in-place pipe, both the wall thickness and the concrete strength shall be at least as great as that specified for the cast-in-place pipe. The fill height allowed shall not exceed that shown for the cast-in-place pipe.

NOTES:

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. For boxes with span or height or cover greater than those shown in tables, a special design is required.
3. Quantities are approximate and for design purposes only.
4. It is permissible to eliminate the 180° hooks on every other "e" bar.
5. "e" bars are at half spacing.
6. Provide paving notch when top is exposed and when pavement is concrete, and adjust quantities.
7. For design and details not shown, see Standard Plan D82.
8. This plan sheet may be used for multiple cell culverts by making necessary adjustments.
9. Soil pressures shown are factored per AASHTO LRFD and include soil weight of fill over box, self weight of box and live load where applicable.

CONTINGENCY PLAN
(DEFORMATION LIMITS AND CORRECTIVE ACTION)

A. DEFORMATION LIMITS IDENTIFIED HEREIN AS THRESHOLD VALUES, CONTRACTOR CORRECTIVE ACTION VALUES, AND PROJECT SHUTDOWN VALUES FOR VARIOUS FEATURES BEING MONITORED ARE PROVIDED IN TABLE 1, RESPONSE VALUES OF MEASURED DEFORMATION.
B. CONTRACTOR'S CORRECTIVE ACTIONS, AS REQUIRED HEREIN, SHALL BE APPROVED BY THE DEPARTMENT PRIOR TO IMPLEMENTATION.
C. WHEN ANY OF THOSE ESTABLISHED MONITORING POINT'S MEASUREMENT INDICATES MOVEMENT EQUALS TO 50 PERCENT OF THE SHUTDOWN VALUE HAS OCCURRED, THE THRESHOLD VALUE IS SAID TO HAVE BEEN REACHED. AT THIS TIME, THE CONTRACTOR SHALL MEET WITH THE DEPARTMENT TO DISCUSS HIS/HER CONSTRUCTION MEANS AND METHODS TO DETERMINE WHAT CHANGES, IF ANY, SHALL BE MADE TO BETTER CONTROL GROUND MOVEMENT AND PREVENT DEFORMATION OF MONITORED FEATURES. MEASUREMENTS SHALL BE REQUIRED EVERY 2–HOURS, UNLESS MORE STRINGENTLY SPECIFIED, UNTIL FIVE CONSECUTIVE WORKING DAYS OF READINGS OBSERVED BEING BELOW THE THRESHOLD VALUE.
D. WHEN ANY OF THOSE ESTABLISHED MONITORING POINT'S MEASUREMENT INDICATES MOVEMENT EQUALS TO 75 PERCENT OF THE SHUTDOWN VALUE HAS OCCURRED, CONTRACTORS CORRECTIVE ACTION VALUE IS SAID TO HAVE BEEN REACHED. AT THIS TIME, THE CONTRACTOR SHALL ACTIVELY CONTROL GROUND MOVEMENT IN ACCORDANCE WITH THE APPROVED PLAN TO PREVENT DEFORMATION BEYOND THE CONTRACTOR CORRECTIVE ACTION VALUE. MEASUREMENTS SHALL BE REQUIRED EVERY 2–HOURS, UNLESS MORE STRINGENTLY SPECIFIED, UNTIL FIVE CONSECUTIVE WORKING DAYS OF READINGS OBSERVED BEING BELOW THE THRESHOLD VALUE.
E. WHEN ANY OF THOSE ESTABLISHED MONITORING POINT'S MEASUREMENT INDICATES MOVEMENT EQUALS TO 100 PERCENT OF THE SHUTDOWN VALUE HAS OCCURRED, THE SHUTDOWN VALUE IS SAID TO HAVE BEEN REACHED. AT THIS TIME, THE CONTRACTOR SHALL STOP ALL EXCAVATION WORK IMMEDIATELY, AND SHALL CONTINUE IMPLEMENTING MEASURES TO PREVENT FURTHER DEFORMATIONS, AND SHALL MEET THE DEPARTMENT TO DEVELOP A PLAN OF ACTION BEFORE EXCAVATION WORK CAN BE RESUMED.

PROTECTION AND PLACEMENT

A. ALL INSTRUMENTS AND INSTRUMENTATION POINTS SHALL BE PROTECTED FROM DAMAGE.
B. ALL INSTRUMENTS AND INSTRUMENTATION POINT DAMAGE RESULTING FROM CONSTRUCTION OPERATIONS, WEATHER, TRAFFIC, OR VANDALISM SHALL BE REPAIRED OR REPLACED AND RE–INSTALLED AT NO ADDITIONAL COST PRIOR TO CONTINUING TUNNELING, OR AS REQUIRED BY THE DEPARTMENT.

NOTES:

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. Quantities are approximate and for design purposes only.
3. For boxes with span or height or cover greater than those shown in tables, a special design is required.
4. It is permissible to eliminate the 180° hooks on every other bar.
5. "e" bars are at half spacing (spans 10' - 14' only).
6. "a" bars are at half spacing (spans 10' - 14' only).
7. Provide paving notch when top is exposed and when pavement is concrete, and adjust quantities.
8. For design and details not shown, see Standard Plan D82.
9. For exposed top, provide #4 @ 12 each way, lap "c" bars 2'-0" or use full span length.
10. Soil pressures shown are factored per AASHTO LRFD and include soil weight of fill over box, self weight of box and live load where applicable.

I. PURPOSE AND SCOPE

The purpose of this study is to evaluate the offsite storm drain systems located in Euclid Avenue and Schaefer Avenue which is proposed as part of the Euclid Mixed Use Specific Plan (EMUSP) project. The EMUSP project site is located within the City of Ontario Master Drainage Plan Area XIV and plans to construct several City of Ontario Master Drainage Plan storm drain facilities.

The scope of the study includes the following:

1. Determination of the 100-year peak flow rates for the Euclid Avenue and Schaefer Avenue storm drain systems based on the City of Ontario Master Drainage Plan.
2. Hydraulically assess the proposed mainline and lateral storm drain systems located in Euclid Avenue and Schaefer Avenue.
3. Preparation of a drainage report, which consists of hydraulic and analytical results and exhibits.

II. PROJECT DESCRIPTION AND MASTER DRAINAGE PLAN OVERVIEW

Euclid Mixed Use Specific Plan (EMUSP) is a proposed industrial development within the City of Ontario. The project site is bounded by Schaefer Avenue to the north, Euclid Avenue to the west, Edison Avenue to the south, and Sultana Avenue to the east, as shown on Figure 1 Vicinity Map. The Euclid Avenue mainline and Schaefer Avenue lateral storm drain systems which are the focus of this report are located on Euclid Avenue from Eucalyptus Avenue to Schaefer Avenue and within Schaefer Avenue, respectively, as shown on Figure 1 Vicinity Map. The project site is located within the City of Ontario's Master Drainage Plan (MDP) Area XIV, see Excerpt A. The City of Ontario's Master Drainage Plan Planned Facilities Map has been included as Excerpt B.

The MDP Area XIV is approximately bounded by Riverside Drive to the north, between Bon View Avenue and Grove Avenue to the east, Merrill Avenue to the south, and Euclid Avenue to the west, see Figure 1 Vicinity Map. Runoff flows to the south and is collected in storm drain facilities which ultimately discharge into the City of Chino Line I system located south of the southwestern corner of Area XIV near the intersection of Merrill Avenue and Euclid Avenue.

As part of the PM 20016 Project (Ontario Ranch Business Park) storm drain infrastructure is being constructed along Euclid Avenue, Eucalyptus Avenue, Merrill Avenue, Sultana Avenue, Campus Avenue, and Bon View Avenue. Similarly, the PM 20714 Project (Excerpt D) will seek to construct storm drain within Schaefer Avenue stemming from the Euclid Avenue mainline. The EMUSP project was assessed based on the downstream storm drain construction being completed and operational. The existing MDP facilities constructed per PM 20016 are shown on Figure 2.

The EMUSP project proposes the following Master Drainage Plan Facilities, as shown on Figure 3:

1. EULD-XIV-1 located on Euclid Avenue between Eucalyptus Avenue and Schaefer Avenue.
2. EULD-XIV-4 located on Schaefer Avenue east of Euclid Avenue

This report focuses on the mainline analysis for the proposed MDP systems located on Euclid Avenue and the lateral analysis for the proposed system in Schaefer Avenue which stems from the Euclid Avenue mainline:

MDP System	Location	Name used in this report and on the SD Improvement Plans	Flow Rate per MDP (see Excerpt A)
EULD-XIV-1	Euclid Ave, north of Schaefer Ave	Euclid Ave SD / Line A	338.5 ft^3/s
EULD-XIV-1	Euclid Ave, south of Schaefer Ave, north of Edison Ave	Euclid Ave SD / Line A	568.4 ft^3/s
EULD-XIV-1	Euclid Ave, south of Edison Ave	Euclid Ave SD / Line A	829.1 ft^3/s
EULD-XIV-3*	Edison Avenue	Line B	289.0 ft^3/s
EULD-XIV-4*	Schaefer Avenue	Line C	234.5 ft^3/s

*Only the portions of the EULD-XIV-3 and EULD-XIV-4 storm drain systems located within Euclid Avenue were included in the analysis for this report. Separate reports shall be prepared to assess the rest of the EULD-XIV-3 and EULD-XIV-4 systems proposed as part of the EMUSP project.

III. OFFSITE HYDRAULICS

A Drainage Facilities Map has been provided, see Exhibit A. The Euclid Avenue and Schaefer Avenue storm drain systems were hydraulically assessed using the WSPG program.

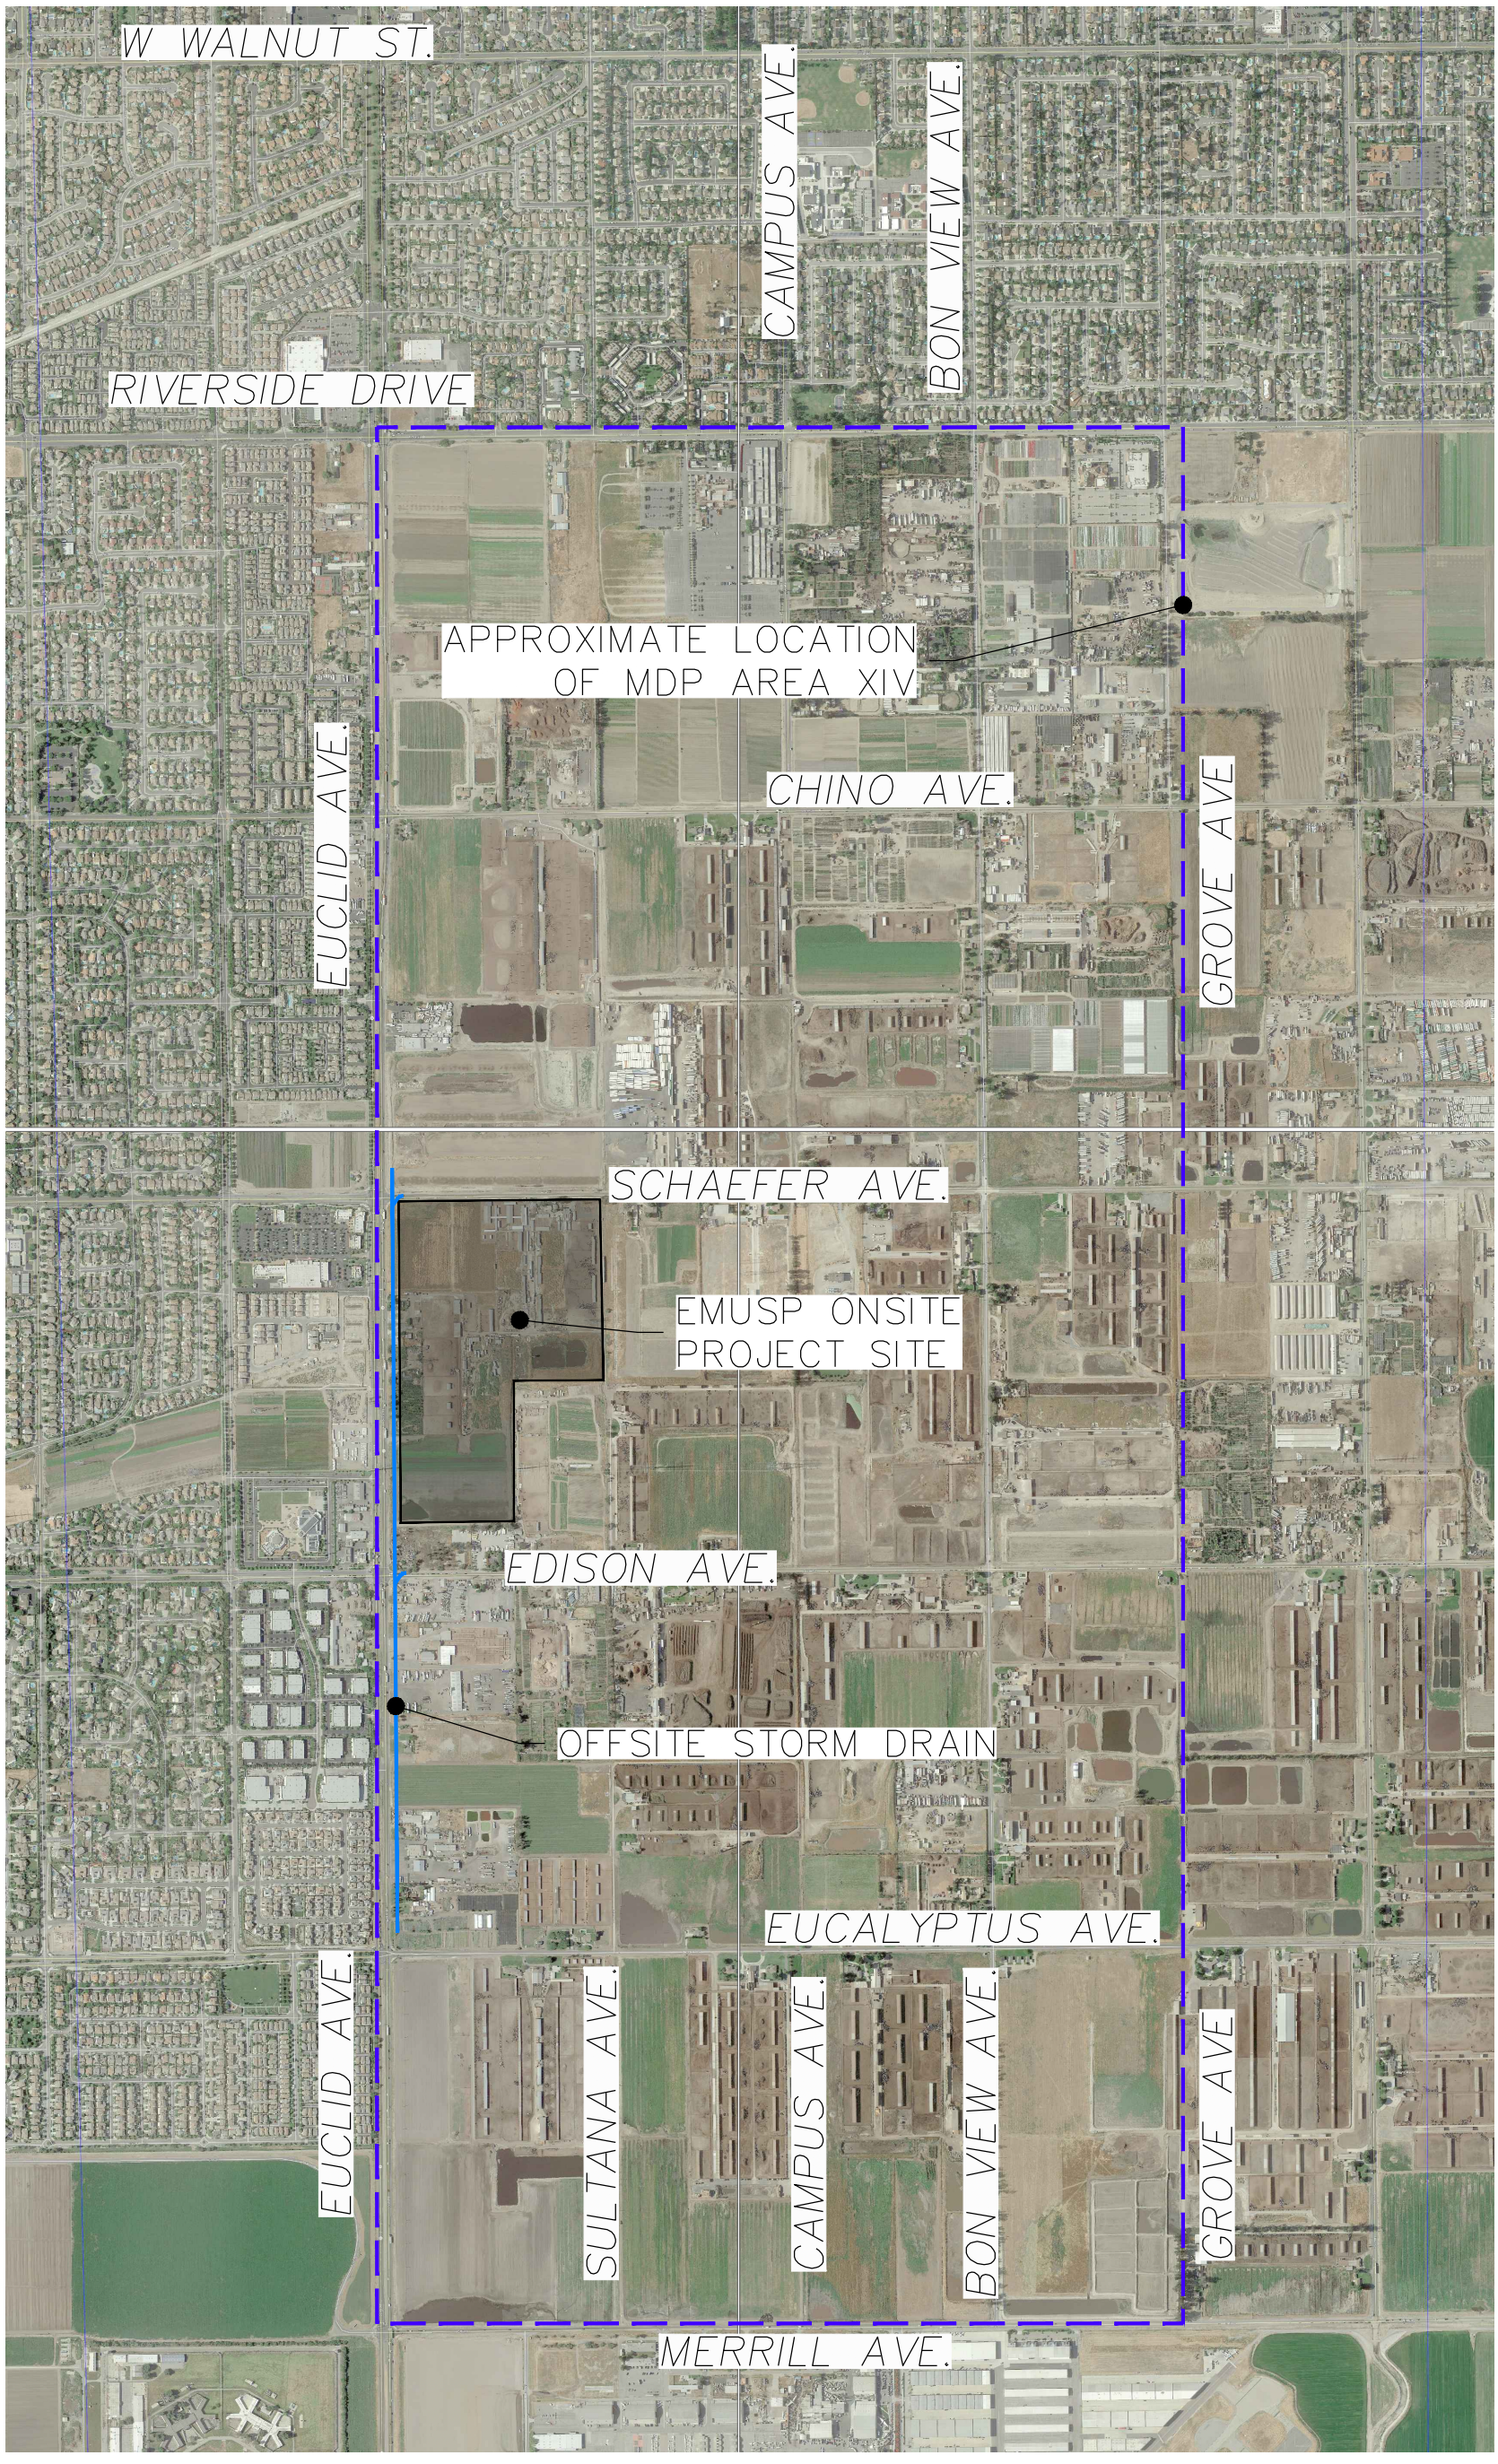
The flow rates used for the hydraulic analysis are per the flow rates established by the City of Ontario Master Drainage Plan. The flow rates used are listed on the table in the previous section and shown on the Drainage Facilities Map, Exhibit A.

The downstream control for the Euclid Ave/Line A system was 649.82 per the storm drain plans for the downstream storm drain system. The hydraulic grade line calculated for Euclid Ave/Line A was used as the downstream control for Line B and Line C. The improvement plans for the downstream storm drain system have been included as Excerpt C. Moreover, the downstream control for the Euclid Ave/Schaefer Ave system was 702.54 per the results of the Euclid Avenue analysis contained in Appendix A.1. All WSPG calculations are included in Appendix A.

It should be noted that at this time the Schaefer Avenue lateral (EULD-XIV-4) which stems from the Euclid Avenue mainline (EULD-XIV-1) does not currently account for the dissemination of the anticipated inflows along the alignment. Therefore, EULD-XIV-4 has been conservatively modeled with WSPG assuming the maximum expected MDP flowrate of 234.5 ft^3/s is propagated along the entire alignment. The calculations in the current WSPG output suggest that the design is sufficient under this assumption; however, the ultimate behavior of this alignment will improve once a more nuanced consideration of where the lateral will capture inflows has been assessed.

IV. CONCLUSION

The study evaluated the storm drain improvements located in Euclid Avenue and Schaefer Avenue associated with the Euclid Mixed Use Specific Plan project. It has been concluded that:



1. The proposed project is located within the City of Ontario Master Drainage Plan Area XIV which provides the regional storm drain system to flood protect the area.
2. The proposed Euclid Avenue storm drain systems are City of Ontario Master Drainage Plan planned facilities. The MDP has established flow rates for the proposed storm drain systems.
3. A hydraulic grade line has been established for the proposed storm drain systems.

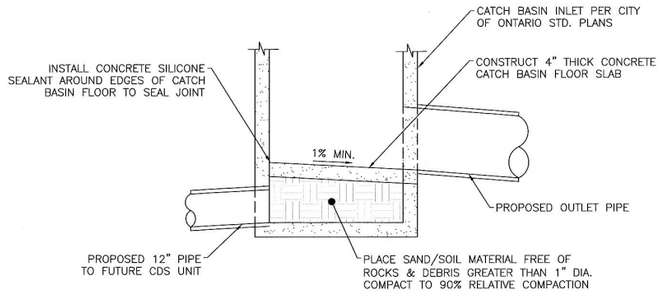
GENERAL NOTES

1. BIO CLEAN TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS, AND CAPACITIES ARE SUBJECT TO CHANGE.
3. THIS CPS UNIT IS DESIGNED FOR TREATMENT FLOWS THROUGH THE SCREEN. FLOWS GREATER THAN THE TREATMENT FLOW RATE WILL BYPASS OVER THE SCREEN.
4. A BYPASS LID IS REQUIRED WHEN THE OUTLET PIPE IS DIRECTLY BELOW THE CURB OPENING.
5. CPS IS COMPRISED OF 304 STAINLESS STEEL. THICKNESS IS 16 GAUGE. SCREEN PERFORATIONS ARE 5 MILLIMETERS IN DIAMETER. THE SCREEN AREA IS 51% OPEN SPACE.



INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS, AND INCIDENTALS REQUIRED TO INSTALL THE CPS UNIT AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURER'S SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. POSITION THE CPS SO IT IS EVENLY SPACED AROUND THE CONNECTOR PIPE, ENSURING A MIN. OF 4" SPACING AWAY FROM ANY CORNERS. SCREEN BOTTOM SHALL BE FLUSH WITH THE CATCH BASIN FLOOR, OR WITH GAPS NO GREATER THAN 5 MM.
3. IF A BYPASS LID IS REQUIRED, VERIFY THE BYPASS HEIGHT NEEDED AND MARK THAT LOCATION ON THE WALL DIRECTLY ABOVE THE BASE UPRIGHTS. LIFT THE LID IN PLACE AND MARK THE HOLE LOCATIONS FOR THE LID MOUNTING BRACKETS. SECURE THE LID WITH STAINLESS STEEL NUTS.

DESIGN NOTES:

Design Specifications:
AASHTO LRFD Bridge Design Specifications, 6th Edition with California Amendments.

Loading:
Live load: (AASHTO LRFD 3.6.1.2)
HL-93 consists of design truck or design tandem and design lane load.

Impact Factor: (Apply to roof slab only)
$IM = 33(1.0\text{-}0.125D_E) \geq 0\%$ (AASHTO LRFD 3.6.2.2)
D_E = minimum depth of earth cover

Earth load:
Earth pressure for two conditions:
140 pcf vertical, 42 pcf horizontal
140 pcf vertical, 140 pcf horizontal

Load Factors:
AASHTO LRFD Table 3.4.1.1 & Table 3.4.1.2

Unit stresses:
f'_c = 3600 psi
f_y = 60,000 psi

Distribution "d" bars:
Up to and including 10'-0" cover
Express as a percentage of main positive reinforcement required: $\frac{100}{\sqrt{S}}$, Max 50%,
Over 10'-0" cover,
4 @ 12 maximum

Shear:
$V_c = (2.14\sqrt{f'_c}+4600\frac{A_s}{bd}\frac{Vud_e}{Mu})\,b_v d_e \leq 4.0\sqrt{f'_c}\,b_v d_e$ (Pounds)
V_c shall not be less than $3.00\sqrt{f'_c}\,b_v d_e$ for frame members and $2.5\sqrt{f'_c}\,b_v d_e$ for simply supported members.

Exclusion:
Compressive reinforcement and negative moment reduction (for continuity) do not apply.
Axial loading on members has not been considered.

CONSTRUCTION NOTES:

Construction loads:
Strutting required as shown on Standard Plan D88.
Strutting may be required on culvert extensions when existing parapet is removed.

Expansion joints:
Invert:
No expansion joints shall be permitted.

Roof and Walls:
When cover is less than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers outside the paved roadway lanes and place Bridge Detail 3-2, Standard Plan B0-3, at 30'-0" centers under paved roadway lanes.
When cover is more than span length-
Place ½" premolded expansion joint filler at 30'-0" ± centers and additional ½" premolded expansion joints at locations of change in foundation character, as directed by the Engineer.

Construction joints:
Temporary joints may be permitted if normal (or radial) to ℄ of RCB. Otherwise, the contractor is to submit a proposal for consideration.

Cutoff walls:
4'-0" cutoff walls are to be provided at inlet and/or outlet unless adjacent channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant.

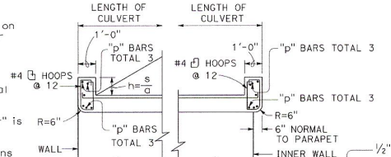
Earthwork:
See Standard Plan A62E.

Backfill:
See Standard Specifications, except that the difference in level of backfill (against outside walls) shall not exceed 2'-0".

GENERAL NOTES:

Designation:
Standard single or multiple box culverts are shown on plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10' or double 10' x 5' RCB with 20', followed by alternatives.

Alternatives:
Single cell: Invert will be sloped unless "trapezoidal invert", "flat invert" or "V invert" is included in designation.
Multiple cell: Invert will be vee unless "flat invert" is specified. Ends of culvert will be rounded unless "square ends" are designated. Parapets will be as shown unless designated in plans. Such designations may be different for inlet and outlet ends.



Quantities:
Quantities do not include the following:
- Concrete for parapet, paving notches and cut-off wall.
- Reinforcement for 2% splices, parapets, paving notches, cut-off wall and additional required bars for exposed top slab (D-80, Note 9).

Reinforcement placement:
Main reinforcement is to be placed transversely or, for curved culverts, radially. When radial, reinforcing spacing of the "a", "f" and "g" bars is measured along the centerline. Stagger splices not shown. Hooks may be rotated or tilted, as necessary, for clearance.

Special reinforcement coverage:
Box standard plans are not to be used for culverts in a corrosive environment or where there is a severe abrasive flow condition or in freeze-thaw locations.

Special designs
Required for culverts with conditions, loads, design bearing pressures or sizes greater than those given on this plan or Standard Plans D80 & D81. Also required for multiple cell culverts with unequal spans. For culverts with railroad loading, see the current AREMA design specification.

3 or more cells:
For culverts with more than two cells, use dimensions and reinforcement for the standard "double box culvert" and adjust quantities accordingly.

DESIGN NOTES:

Specifications:
AASHTO LRFD Bridge Design Specifications, 4th Edition with California Amendments.

Earth load:
Earth pressures for two conditions:
140 pcf Vert, 42 pcf Horiz
140 pcf Vert, 140 pcf Horiz

Unit stresses:
f'c = 5.0 ksi
fy = 65.0 ksi for weld wire fabric
n = 7

Shear:
Based on
$V_c = (2.14\sqrt{f'_c}+4600\ \frac{A_s}{bd_e}\frac{V_u d_e}{M_u})\, b.d_e \le 4.0\sqrt{f'_c} b.d_e$ (Pounds)
V_c shall not be less than $3.00\sqrt{f'_c} b.d_e$
for frame members and $2.5\sqrt{f'_c} b.d_e$
for simply supported members.

Exclusion:
Axial loading on the members has not been considered.

GENERAL NOTES:

Designation:
Standard single or multiple precast box culverts are shown on the plans as span times height with maximum cover over roof thus: 8' x 5' RCB with 10'-0" or double 10' x 5' RCB with 20'-0", followed by alternatives.

Alternatives:
Single cell:
Standard dimensions of AASHTO Material Specification 'M259' or 'M273'.
Multiple cell:
Constructed by placing single cells adjacent to each other. Inlet and outlet ends of culvert will be rounded unless square ends are designated. Parapet will be shown unless designated in plans. Such designation may be different for inlet and outlet ends.

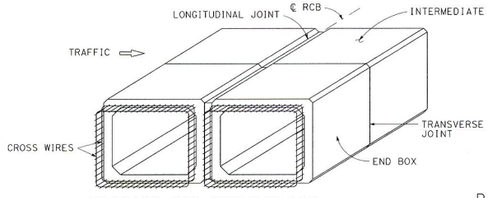
Limitations:
Where the overfill is less than 12", Precast RCB culverts are not to be used. Precast RCB culverts are not to be used in siphon or pressurized installations unless appropriate "watertight" jointing is provided.

Special reinforcement coverage:
Precast RCB culvert standard plans are not to be used in a corrosive environment or where there is a severe abrasive flow condition or freeze-thaw locations.

Special design:
Required for culvert with different conditions, loads or design bearing pressures greater than those given on these plans. Required for culverts where end details need higher skew angles, higher parapets or barrier sections.

CONSTRUCTION NOTES:

Cutoff walls:
4'-0" Cutoff walls are to be provided at inlet and/or outlet unless channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant. See Standard Plans D84, D85 and D86A.



Wingwalls:
Wingwalls shall be cast-in-place and shall conform to standard plan details for box culvert wingwalls. See Standard Plans D84, D85 and D86A.

Earthwork:
See Standard Plan A62G.

Construction loads:
Strutting may be required near temporary ends. For construction loads on culverts, See Standard Plan D88.

	USE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION	SHEET 1 OF 2

NOTES

1. THIS JUNCTION STRUCTURE SHALL BE USED WHEN THE OUTSIDE DIAMETER OF THE LATERAL IS GREATER THAN 1/2 THE INSIDE DIAMETER D OF THE MAIN LINE; OR WHEN THE INSIDE DIAMETER B OF THE LATERAL IS GREATER THAN 24" (600 mm). B SHALL NOT EXCEED 0.75 D OR 39" (975 mm).
2. IF THE MAIN LINE IS A REINFORCED MONOLITHIC ARCH STORM DRAIN, D SHALL REFER TO THE CLEAR SPAN OF THE ARCH. REINFORCING STEEL SHALL BE CUT AND BENT INTO THE JUNCTION STRUCTURE IN THE SAME MANNER AS FOR A PIPE. A CONCRETE CRADLE IS NOT REQUIRED FOR A REINFORCED MONOLITHIC ARCH.
3. STATIONS SHOWN ON THE PLANS FOR LATERALS APPLY AT THE INTERSECTION OF CENTERLINES OF MAIN LINE AND LATERAL. STATIONS SHOWN ON THE PLANS FOR CATCH BASIN CONNECTOR PIPES APPLY AT THE INTERSECTION OF THE INSIDE WALL OF THE MAIN LINE WITH THE CONNECTOR PIPE CENTERLINE.
4. VALUES FOR A, B, C AND D SHALL BE SHOWN ON THE PLANS. ELEVATION R AND ELEVATION S SHALL BE SHOWN ONLY WHEN REQUIRED PER NOTE 5.
5. a. ELEVATIONS R AND S NEED NOT BE SHOWN ON THE PLANS IF THE INLET PIPE IS TO ENTER THE MAIN LINE RADIALLY.
   b. ELEVATION R SHALL BE SHOWN ON THE PLANS ONLY IF A STUB IS TO BE PROVIDED IN THE MAIN LINE FOR FUTURE CONNECTION OF AN INLET PIPE.

7. NO MORE THAN ONE OPENING SHALL BE MADE IN ANY ONE SECTION OF PIPE.
8. THE OPENING FOR THE BREAKOUT SHALL BE RECTANGULAR AND CUT NORMAL TO THE PIPE SURFACE WITHOUT DAMAGING THE REINFORCING STEEL. THE TRANSVERSE REINFORCEMENT OF THE MAIN LINE SHALL BE CUT AT THE CENTER OF THE OPENING AND BENT INTO THE TOP AND BOTTOM SLABS OF THE SPUR.
9. THE MAIN LINE SHALL BE REINFORCED WITH A CONCRETE CRADLE AND ENCASEMENT (AS APPLICABLE). A CONCRETE ENCASEMENT IS REQUIRED IF A JOINT IN THE MAIN LINE FALLS WITHIN THE LIMITS OF THE CRADLE. THE CONCRETE ENCASEMENT SHALL EXTEND 12" (300 mm) ABOVE THE TOP OF THE MAIN LINE AND TO THE LIMITS OF THE CRADLE. IF CONNECTING TO AN EXISTING STORM DRAIN, PORTION OF CRADLE OPPOSITE INLET MAY BE OMITTED.
10. REINFORCING STEEL SHALL CONFORM TO ASTM A 615, GRADE 40, (ASTM A 615M, GRADE 300), AND BE PLACED 1 1/2" (40 mm) CLEAR FROM CONCRETE SURFACES, UNLESS OTHERWISE SHOWN F BARS SHALL BE CARRIED TO A POINT NOT LESS THAN J DISTANCE FROM CENTER LINE WITH J=7D/12 + 6" (150 mm).

METHOD 3

NON-REINFORCED CONCRETE PIPE

NOTES:

1. Unless otherwise shown on the plans or specified in the special provisions, the Contractor shall have the option of selecting the class of RCP and the method of backfill to be used, provided the height of cover does not exceed the value shown for the RCP selected.
   Example:
   2'-0" RCP culvert with maximum cover of 19'-0" the options are:
   a) Class V Special or stronger with Method 1.
   b) Class III or stronger with Method 2.
   c) Class II or stronger with Method 3.
   Cover is defined as the maximum vertical distance from top of pipe to finished grade within the length of any given culvert.
2. The class of RCP, method of backfill and bedding selected shall be the same throughout the length of any given culvert.
3. The "length of any culvert" is defined as the culvert between:
   a) Successive drainage structures (inlets, junction boxes, headwalls, etc.).
   b) A drainage structure and the inlet or outlet end of the culvert.
   c) The inlet and outlet end of the culvert when there are no intervening drainage structures.
4. Slope or shore excavation sides as necessary.
5. Embankment height prior to excavation for installation of all classes of RCP under Methods 2 and 3A shall be as follows:
   Pipe sizes 1'-0" to 3'-6", I D = 2'-6"
   Pipe sizes 4'-0" to 7'-0", I D = 2/3 OD
   Pipe sizes larger than 7'-0", I D = 5'-0"
6. The maximum size for all classes of RCP placed under Method 1 is 6'-6" ID.
7. Non-reinforced precast pipe sizes 3'-0" or smaller may also be placed under Methods 1, 2 or 3.
8. Oval or arch shaped RCP shall be placed under Method 2 only.
9. Embankment compaction requirements govern over the 90% relative compaction backfill requirement within 2'-6" of finished grade.
10. Backfill shall be placed full width of excavation except where dimensions are shown for backfill width or thickness. Dimensions shown are minimums.
11. Where the precast non-reinforced concrete pipe is used as a substitute for the cast-in-place pipe, both the wall thickness and the concrete strength shall be at least as great as that specified for the cast-in-place pipe. The fill height allowed shall not exceed that shown for the cast-in-place pipe.

NOTES

1. WHEN DEPTH M FROM STREET GRADE TO THE TOP OF THE BOX IS LESS THAN 2'-10 1/2" (867 mm) FOR PAVED STREETS OR 3'-6" (1060 mm) FOR UNPAVED STREETS, CONSTRUCT SHAFT PER SECTION C-C AND DETAIL "N". DEPTH M MAY BE REDUCED TO AN ABSOLUTE LIMIT OF 6" (150 mm) WHEN LARGER VALUES OF M WOULD REDUCE H IN SECTION C-C TO 3'-6" (1060 mm) OR LESS.
2. H (IN SECTION A-A AND B-B) SHALL NOT BE LESS THAN 4'-0" (1.2 m), BUT MAY BE INCREASED PROVIDED THAT THE VALUE OF M SHALL NOT BE LESS THAN THE MINIMUM SPECIFIED AND THAT THE REDUCER SHALL BE USED. FOR H (IN SECTION C-C) SEE NOTE 1.
3. L SHALL BE 4'-0" (1.2 m) UNLESS OTHERWISE SHOWN. L MAY BE INCREASED OR LOCATION OF MANHOLE SHIFTED TO MEET PIPE ENDS, BUT ANY CHANGE IN LOCATION OF THE SPUR MUST BE APPROVED BY THE ENGINEER.
4. T SHALL BE 8" (200 mm) FOR VALUES OF H UP TO AND INCLUDING 8'-0" (2.4 m) AND 10" (250 mm) FOR VALUES OF H OVER 8'-0" (2.4 m).
5. STATIONS OF MANHOLES SHOWN ON PLANS APPLY AT CENTERLINE OF SHAFT. ELEVATIONS ARE SHOWN AT CENTERLINE OF SHAFT AND REFER TO THE PROLONGED INVERT GRADE LINES. SEE NOTE 3.
6. REINFORCEMENT SHALL CONFORM TO ASTM A 615, GRADE 40 (ASTM A 615M, GRADE 300), AND SHALL TERMINATE 1 1/2" (40 mm) CLEAR OF CONCRETE SURFACES UNLESS OTHERWISE SHOWN.
7. FLOOR OF MANHOLE SHALL BE STEEL TROWELED TO SPRING LINE.
8. BODY OF MANHOLE SHALL BE POURED IN ONE CONTINUOUS OPERATION EXCEPT THAT A CONSTRUCTION JOINT WITH A LONGITUDINAL KEYWAY MAY BE PLACED AT SPRING LINE.
9. THICKNESS OF THE DECK SHALL VARY WHEN NECESSARY TO PROVIDE A LEVEL SEAT BUT SHALL NOT BE LESS THAN 8" (200 mm).
10. STEPS SHALL CONFORM TO SPPWC 635 OR 636, UNLESS OTHERWISE SHOWN, STEPS SHALL BE UNIFORMLY SPACED 14" (350 mm) TO 15" (375 mm) OC. THE LOWEST STEP SHALL NOT BE MORE THAN 24" (600 mm) ABOVE THE LEDGE AT THE SIDE OF THE MANHOLE.
