CalEEMod Construction Modeling and Output

Conejo Summit Grading Revisions 10/2024 v2 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

3. Construction Emissions Details

3.1. Grading (2025) - Unmitigated

3.2. Grading (2025) - Mitigated

3.3. Grading (2026) - Unmitigated

3.4. Grading (2026) - Mitigated

3.5. Building Construction (2025) - Unmitigated

3.6. Building Construction (2025) - Mitigated

3.7. Building Construction (2026) - Unmitigated

3.8. Building Construction (2026) - Mitigated

3.9. Paving (2025) - Unmitigated

3.10. Paving (2025) - Mitigated

3.11. Paving (2026) - Unmitigated

3.12. Paving (2026) - Mitigated

3.13. Architectural Coating (2025) - Unmitigated

3.14. Architectural Coating (2025) - Mitigated

3.15. Architectural Coating (2026) - Unmitigated

3.16. Architectural Coating (2026) - Mitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Conejo Summit Grading Revisions 10/2024 v2
Construction Start Date	11/1/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	1.60
Location	34.203611, -118.9325
County	Ventura
City	Thousand Oaks
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3510
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.28

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Heavy Industry	187	1000sqft	13.5	187,485	51,270	—	—	—
Parking Lot	6.81	Acre	6.81	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	14.1	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	29.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.4
AQ-PM	41.5
AQ-DPM	54.6
Drinking Water	57.5
Lead Risk Housing	26.2
Pesticides	23.9
Toxic Releases	25.9
Traffic	88.0
Effect Indicators	—
CleanUp Sites	76.7
Groundwater	95.4
Haz Waste Facilities/Generators	99.0
Impaired Water Bodies	96.8
Solid Waste	0.00
Sensitive Population	—
Asthma	6.47

Cardio-vascular	23.6
Low Birth Weights	81.5
Socioeconomic Factor Indicators	—
Education	42.3
Housing	36.7
Linguistic	79.0
Poverty	41.7
Unemployment	63.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	50.891826
Employed	66.62389324
Median HI	80.00769922
Education	—
Bachelor's or higher	77.04350058

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	61.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

County	Ventura
City	Thousand Oaks
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3510
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Heavy Industry	363	1000sqft	21.6	363,400	131,882	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Waste	S-1/S-2	Implement Waste Reduction Plan
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	14.1	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	29.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.4
AQ-PM	41.5
AQ-DPM	54.6
Drinking Water	57.5
Lead Risk Housing	26.2
Pesticides	23.9
Toxic Releases	25.9
Traffic	88.0
Effect Indicators	—
CleanUp Sites	76.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	61.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Conejo Summit | Operations 2031 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Conejo Summit | Operations 2031
Operational Year	2031
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	1.60
Location	Conejo Center Dr, Thousand Oaks, CA 91320, USA
County	Ventura
City	Thousand Oaks
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3510
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Heavy Industry	764	1000sqft	49.6	764,222	259,949	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Waste	S-1/S-2	Implement Waste Reduction Plan
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	14.1	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	29.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.4
AQ-PM	41.5
AQ-DPM	54.6
Drinking Water	57.5
Lead Risk Housing	26.2
Pesticides	23.9
Toxic Releases	25.9
Traffic	88.0
Effect Indicators	—
CleanUp Sites	76.7
Groundwater	95.4
Haz Waste Facilities/Generators	99.0
Impaired Water Bodies	96.8
Solid Waste	0.00
Sensitive Population	—
Asthma	6.47
Cardio-vascular	23.6
Low Birth Weights	81.5
Socioeconomic Factor Indicators	—
Education	42.3
Housing	36.7
Linguistic	79.0
Poverty	41.7

Unemployment	63.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	50.891826
Employed	66.62389324
Median HI	80.00769922
Education	—
Bachelor's or higher	77.04350058
High school enrollment	100
Preschool enrollment	84.35775696
Transportation	—
Auto Access	24.89413576
Active commuting	79.73822661
Social	—
2-parent households	83.72898755
Voting	71.96201719
Neighborhood	—
Alcohol availability	57.74412935
Park access	81.35506224

1 Introduction

This report presents the findings of a biological resources assessment conducted by Dudek for the proposed Conejo Summit project (project). The purpose of this assessment was to evaluate the existing biological conditions in the project area and the potential impacts to sensitive biological resources associated with the proposed project. This report is prepared at a level of detail sufficient to address California Environmental Quality Act (CEQA) requirements, specifically the biological thresholds of significance included in Appendix G, as well as identifying the potential need for permits for sensitive resources protected under federal and state regulations.

1.1 Project Location

The project site is located in the City of Thousand Oaks, California (City), in Ventura County, approximately 0.75 miles north of U.S. Route 101 (see Figure 1, Project Location). The project includes the construction of several industrial buildings separated into three clusters: one on the western side of Conejo Center Drive just northwest of the intersection of Conejo Center Drive and Conejo Spectrum Street; another along the eastern side of Conejo Center Drive from Conejo Spectrum Street up to Rancho Conejo Boulevard; and the third north of the intersection of Conejo Center Drive and Rancho Conejo Boulevard, extending west to a parcel at the end of Rancho Conejo Boulevard. The approximately 50-acre project site is situated within Township 2 North, Range 20 West on the Newbury Park U.S. Geological Survey 7.5-minute quadrangle map.

1.2 Project Description

The proposed project includes construction of a 15-building business park on an approximately 50-acre project site (project site). Primary access to the proposed buildings would be from the existing Rancho Conejo Boulevard and Conejo Center Drive. In addition to building construction, the proposed project would include the construction of parking lots, generally located around each building, landscaping on each lot, and public improvements including utility work, sidewalks, and an approximately 500-foot extension to Academy Drive. Project grading would require approximately 100,000 cubic yards of cut and fill. In 2000, the project site was graded and infrastructure such as streets, sidewalks, and utilities were installed to prepare for future buildings. Grading for the proposed project would require minor cuts and fills to provide level building pads and parking and circulation areas and to level the previously graded pads.

The proposed project would consist of a maximum of seven phases, the first of which likely include all necessary vegetation removal and/or grading activities. The first phase is anticipated to be completed within approximately 18 months from the commencement of construction, concluding with completed site improvements, shell buildings and tenant improvements related to that phase. It is anticipated that the entire project phasing will be completed within approximately 10 years from the commencement of the first phase.

INTENTIONALLY LEFT BLANK

2 Regulatory Context

This section describes the regulatory framework relevant to the project.

2.1 Federal Regulations

2.1.1 Federal Endangered Species Act

The federal Endangered Species Act (FESA) of 1973 (16 USC 1531 et seq.), as amended, is administered by the U.S. Fish and Wildlife Service (USFWS) for most plant and animal species, and by the National Oceanic and Atmospheric Administration National Marine Fisheries Service for certain marine species. FESA serves as the enacting legislation to list, conserve, and protect threatened and endangered species, and the ecosystems on which they depend, from extinction. In addition, for those wildlife species listed as federally endangered, FESA provides for the ability to designate critical habitat, defined as that habitat considered "essential to the conservation of the species" and that "may require special management considerations or protection." FESA Section 9(a)(1)(B) prohibits the taking, possession, sale, or transport of any endangered fish or wildlife species. "Take" is defined to mean "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct" (16 USC 1532 [19]). With respect to any endangered species of plant, Sections 9(a)(2)(A) and 9(a)(2)(B) prohibit the possession, sale, and import or export of any such species, and prohibits any action that would "remove and reduce to possession any such species from areas under federal jurisdiction; maliciously damage or destroy any such species on any such area; or remove, cut, dig up, or damage or destroy any such species on any other area in knowing violation of any law or regulation of any State or in the course of any violation of a State criminal trespass law." FESA allows for the issuance of incidental take permits for listed species under Section 7, which is generally available for projects that also require other federal agency permits or other approvals, and under Section 10, which provides for the approval of habitat conservation plans on private property without any other federal agency involvement.

2.1.2 Migratory Bird Treaty Act and Bald and Golden Eagle Protection Act

The Migratory Bird Treaty Act was originally passed in 1918 as four bilateral treaties, or conventions, for the protection of a shared migratory bird resource. The primary motivation for the international negotiations was to stop the "indiscriminate slaughter" of migratory birds by market hunters and others (16 USC 703–712). Each of the treaties protects selected species of birds and provides for closed and open seasons for hunting game birds. The Migratory Bird Treaty Act protects more than 800 species. Two species of eagles that are native to the United States—bald eagle (*Haliaeetus leucocephalus*) and golden eagle (*Aquila chrysaetos*)—were granted additional protection within the United States under the Bald and Golden Eagle Protection Act (16 USC 668–668d) to prevent these species from becoming extinct.

2.1.3 Clean Water Act

The federal Water Pollution Control Act Amendments of 1972 (Clean Water Act) (33 U.S.C. 1251 et seq.), as amended by the Water Quality Act of 1987 (PL 1000-4), is the major federal legislation governing water quality. The

objective of the Clean Water Act (CWA) is to restore and maintain the chemical, physical, and biological integrity of the nation's waters.

2.1.3.1 Sections 303 and 304 of the Clean Water Act

Section 303 of the CWA requires states to adopt water quality standards for all surface waters of the United States (33 USC 1313). Section 303(c)(2)(b) of the CWA requires states to adopt numerical water quality standards for toxic pollutants for which the EPA has published water quality criteria and which could reasonably be expected to interfere with designated uses in a water body. Under Section 303(d) of the CWA, states, as well as territories and authorized tribes, are required to identify impaired waters (waterbodies that do not meet water quality standards for its designated use) and develop Total Maximum Daily Loads (TMDLs) for these waterbodies. A TMDL establishes the maximum amount of a pollutant allowed in a waterbody and serves as the starting point or planning tool for restoring water quality.

Section 304(a) requires the U.S. Environmental Protection Agency (EPA) to develop and publish water quality criteria that accurately reflect the latest scientific knowledge on the kind of effects and extent of effects that pollutants in water may have on health and welfare (33 USC 1314[a]). Where multiple uses exist, water quality standards must protect the most sensitive use. Water quality standards are typically numeric, although narrative criteria based on biomonitoring methods may be employed when numerical standards cannot be established or when they are needed to supplement numerical standards.

2.1.3.2 Section 401 of the Clean Water Act

The State Water Resources Control Board has authority over wetlands through Section 401 of the CWA, as well as the Porter–Cologne Act, California Code of Regulations Section 3831(k), and California Wetlands Conservation Policy. The CWA requires that an applicant for a Section 404 permit (to discharge dredge or fill material into waters of the United States) first obtain certification from the appropriate state agency stating that the fill is consistent with the state's water quality standards and criteria. In California, the authority to either grant certification or waive the requirement for permits is delegated by the State Water Resources Control Board to the nine regional boards. The Los Angeles Regional Water Quality Control Board has authority for Section 401 compliance in the project area. A request for certification is submitted to the regional board at the same time that an application is filed with the U.S. Army Corps of Engineers (USACE).

2.1.3.3 Section 402 of the Clean Water Act

Section 402 establishes the National Pollutant Discharge Elimination System, a permitting system for the discharge of any pollutant (except for dredge or fill material) into waters of the United States. The National Pollutant Discharge Elimination System program is administered by the Regional Water Quality Control Board. Conformance with Section 402 is typically addressed in conjunction with water quality certification under Section 401.

2.1.3.4 Section 404 of the Clean Water Act

Under Section 404 of the CWA, the USACE has the authority to regulate activities that could discharge fill or dredge material or otherwise adversely modify wetlands or other waters of the United States. The USACE implements the federal policy embodied in Executive Order 11990, which, when implemented, is intended to result in no net loss of wetland values or function.

2.2 State Regulations

2.2.1 California Endangered Species Act

The California Department of Fish and Wildlife (CDFW) administers the California Endangered Species Act (CESA), which prohibits the take of plant and animal species designated by the Fish and Game Commission as endangered or threatened in California. Under CESA Section 86, "take" is defined as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." CESA Section 2053 stipulates that state agencies may not approve projects that will "jeopardize the continued existence of any endangered species or threatened species, or result in the destruction or adverse modification of habitat essential to the continued existence of those species, if there are reasonable and prudent alternatives available consistent with conserving the species or its habitat which would prevent jeopardy."

CESA defines an endangered species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease." CESA defines a threatened species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the Commission as rare on or before January 1, 1985, is a threatened species." A candidate species is defined as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the Commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the Commission has published a notice of proposed regulation to add the species to either list." Take authorization for otherwise lawful activities may be obtained from CDFW under Section 2081 of the California Fish and Game Code.

2.2.2 California Fish and Game Code

Fully Protected Species

California Fish and Game Code Sections 3511, 4700, 5050, and 5515 identify fish, amphibian and reptile, bird, and mammal species, respectively, designated as fully protected in California. The classification of "fully protected" was the state's initial effort in the 1960s to identify and provide additional protection to those animals that were rare or faced possible extinction. Fully protected species may not be taken or possessed at any time, and no licenses or permits, including those discussed earlier under Section 2081, may be issued for their take except for collecting these species for necessary scientific research and relocation of the bird species for the protection of livestock.

Lake or Streambed Alteration

California Fish and Game Code, Sections 1600–1616, mandates that "it is unlawful for any person to substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds, without first notifying the department of such activity."

CDFW jurisdiction includes ephemeral, intermittent, and perennial watercourses (including dry washes) and lakes characterized by the presence of (1) definable bed and banks and (2) existing fish or wildlife resources. CDFW takes jurisdiction to the top of bank of the stream, or the limit of the adjacent riparian vegetation, which may include oak

woodlands in canyon bottoms. Historical court cases have further extended CDFW jurisdiction to include watercourses that seemingly disappear but reemerge elsewhere. Under the CDFW definition, a watercourse need not exhibit evidence of an OHWM to be claimed as jurisdictional. The CDFW does not have jurisdiction over ocean or shoreline resources.

Under California Fish and Game Code, Sections 1600–1616, the CDFW has the authority to regulate work that will substantially divert or obstruct the natural flow of, or substantially change or use any material from, the bed, channel, or bank of any river, stream, or lake. The CDFW also has the authority to regulate work that will deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. This regulation takes the form of a requirement for a Lake or Streambed Alteration Agreement and is applicable to all projects. Applications to the CDFW must include a complete certified CEQA document.

Sections 3503, 3513, 4150

California Fish and Game Code Section 3503 states that it is unlawful to take, possess, or needlessly destroy the nests or eggs of any bird, except as otherwise provided by this code or any regulation made pursuant thereto. California Fish and Game Code Section 3503.5 protects all birds-of-prey (raptors) and their eggs and nests. California Fish and Game Code Section 3513 states that it is unlawful to take or possess any migratory nongame bird as designated in the Migratory Bird Treaty Act. All nongame mammals, including bats, are protected by California Fish and Game Code Section 4150.

2.2.3 California Environmental Quality Act

CEQA requires identification of a project's potentially significant impacts on biological resources and ways that such impacts can be avoided, minimized, or mitigated. CEQA also provides guidelines and thresholds for use by lead agencies for evaluating the significance of proposed impacts.

Special-Status Plants and Wildlife

The CEQA Guidelines define endangered animals or plants as species or subspecies whose "survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors" (14 CCR 15380[b][1]). A rare animal or plant is defined in CEQA Guidelines Section 15380(b)(2) as a species that, although not currently threatened with extinction, exists "in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or … [t]he species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered 'threatened' as that term is used in the federal Endangered Species Act." Additionally, an animal or plant may be presumed to be endangered, rare, or threatened if it meets the criteria for listing as defined further in CEQA Guidelines Section 15380(c).

Special-Status Vegetation Communities

Section IV, Appendix G (Environmental Checklist Form) of the CEQA Guidelines (14 CCR 15000 et seq.) requires an evaluation of impacts to "any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or the USFWS."

2.2.4 Porter–Cologne Water Quality Control Act

Pursuant to provisions of the Porter–Cologne Water Quality Act, the Regional Water Quality Control Board regulates discharging waste, or proposing to discharge waste, within any region that could affect a water of the state (California Water Code, Section 13260[a]). The State Water Resources Control Board defines a water of the state as "any surface water or groundwater, including saline waters, within the boundaries of the state" (California Water Code, Section 13050[e]).

2.2.5 California Native Plant Protection Act

The California Native Plant Protection Act of 1977 directed the CDFW to carry out the Legislature's intent to "preserve, protect and enhance rare and endangered plants in this State." The Native Plant Protection Act gave the California Fish and Game Commission the power to designate native plants as "endangered" or "rare" and protect endangered and rare plants from take. CESA expanded on the original Native Plant Protection Act and enhanced legal protection for plants, but the Native Plant Protection Act remains part of the California Fish and Game Code (see Section 1900 et seq.). To align with federal regulations, CESA created the categories of "threatened" and "endangered" species. It converted all "rare" animals into the act as threatened species but did not do so for rare plants. Thus, there are three listing categories for plants in California: rare, threatened, and endangered. Because rare plants are not included in CESA, appropriate compensatory mitigation measures for significant impacts to rare plants are typically negotiated with CDFW.

2.3 Local Regulations

2.3.1 City of Thousand Oaks General Plan

The City of Thousand Oaks General Plan 2045 ("General Plan") serves as the "blueprint" for the City and directs all decisions related to land use and the City's physical form through the year 2045. It includes the eight state-mandated elements, including land use, circulation, housing, open space, conservation, noise, safety, and environmental justice, and additional optional elements. Each element includes goals and policies that direct action by the City to implement the vision and follow the guiding principles of the City. Implementation actions are also identified, which the City must undertake to execute the goals and policies within the General Plan (City of Thousand Oaks 2023).

The General Plan Conservation Element goals, policies, and implementation actions relevant to the proposed project and biological resources are presented below.

Community Forest

Goal C-3: Maintain and expand a healthy community forest in Thousand Oaks.

- 3.1. Street tree plantings. Ensure the use of street tree plantings of appropriate species, scale and spacing in all new developments, in accordance with City tree standards.
- 3.2. Tree diversity. Maintain a diversity of species and ages of trees throughout the City in order to avoid potentially unhealthy monocultures.
- 3.3. Tree planting. Actively plant or replant trees in existing neighborhoods where trees are sparse or lacking.

- 3.4. Tree replanting. Enhance the community forest to a level of 25% canopy coverage by planting climate-appropriate street trees, including the City's legacy oak trees, in public spaces and corridors as described in the Forestry Master Plan.

Implementation actions addressing Goal C-3.

- C-A.11. Forestry Master Plan. Continue to implement City-maintained planting and maintenance standards set forth in the Forestry Master Plan.

Goal C-4: Protect oak and landmark trees to maintain Thousand Oaks' unique environmental character.

- 4.1. Protected tree preservation. Continue to implement the City's Oak Tree and Landmark Tree Ordinances per the municipal code and the Oak Tree Preservation and Protection Guidelines.

Biological Resources

Goal C-5: Properly manage, conserve, and protect native plant communities.

- 5.1. Prohibit destructive practices. Prohibit practices such as off-road vehicle use, hunting, and trapping that are incompatible with the long-term survival and viability of resident and migratory wildlife populations.
- 5.2. Critical habitat protection. As feasible, protect, restore, and enhance critical wildlife habitat resources such as movement corridors, chaparral and coastal sage scrub plant communities, surface water impoundments, streams, and springs in order to maintain the biodiversity, biological productivity, and ecological integrity of natural open space areas.
- 5.4. Native landscaping and plant viability. Utilize native, pollinator-friendly plants appropriate to the soil type and environmental conditions of the site.
- 5.5. Landscape design. Encourage new development to incorporate native or regionally adaptive vegetation into landscape plans and prohibit the use of species known to be invasive according to the California Invasive Plant Inventory.
- 5.6. Nesting sites and foraging areas. Foster a holistic habitat that provides nesting sites and foraging areas for native pollinators.
- 5.7. Discontinue anticoagulants and rodenticides. Continue to educate the public on ecosystem impacts of using anticoagulant rodenticides and discourage the use of anticoagulants and rodenticides within the City.

Implementation actions addressing Goal C-5.

- C-A.9. Native plant communities. Encourage development adjacent to open space to minimize the area of required brush clearance to protect native plant communities.
- C-A.14. Anticoagulant rodenticides. Continue to prohibit the use of anticoagulants and rodenticides within the City.
- C-A.16. Native plant communities. Coordinate with partner agencies to produce invasive plant management plans for open space areas.

Goal C-6: Protect sensitive, rare, threatened, or endangered species.

- 6.1. Avoidance of species disturbance. Prioritize protection of rare and endangered species through avoidance as a first priority, utilizing other forms of mitigation only if avoidance is infeasible.
- 6.2. Natural space. Preserve complete ecosystems as natural open space in order to avoid the loss of sensitive plant and animal species.

Goal C-7: Connect wildlife habitat and wildlife populations.

- 7.1. Wildlife movement corridors. Design urban land uses adjoining natural open space in a manner that is sensitive to the needs of wildlife and avoids or minimizes adverse impacts to wildlife movement corridors.

Goal C-8: Preserve natural streams.

- 8.1. Stream and creek protection. Maintain streams and creeks in as natural a state as possible and protect from the adverse effects of development.
- 8.6. Development review. Review all development projects on properties that include or are adjacent to streams to ensure stream protection.

Goal C-9: Minimize disturbance of wetlands and riparian habitat.

- 9.1. Wetlands and riparian habitat. Preserve wetlands and riparian habitat by maintaining existing wetland and riparian buffers as open space to protect the community's water quality, biodiversity, and aesthetic value.

Implementation actions addressing Goal C-9.

- C-A.6. Wetland and riparian resources. Coordinate with local, State, and Federal agencies that protect and enhance wetland and riparian resources when designing and reviewing developments that may disturb a wetland or riparian habitat.

2.3.2 City of Thousand Oaks – Oak Trees and Landmark Trees

The City protects oak trees and landmark trees through City Ordinance and the City's Oak Tree Preservation and Protection Guidelines (Resolution 2010-014). The City requires a permit for removal, pruning, or encroachment into the protected zone of any oak tree or landmark tree, which are defined as follows:

- **Oak Tree:** Any oak tree of the genus Quercus including, but not limited to, valley oak (*Quercus lobata*), coast live oak (*Quercus agrifolia*), and Inland scrub oak (*Quercus berberidifolia*), measuring 2 inches or greater in diameter when measured at a point 4.5 feet above the tree's natural grade. (Thousand Oaks Municipal Code, Title 9, Chapter 4, Article 42: Oak Tree Preservation and Protection)
- **Landmark Tree:** Specimens of the following species which have reached the designated maturity: California sycamore (*Platanus racemosa*) which exceed twelve (12") inches in diameter when measured at a point four and one-half (4.5) feet above the natural grade at the base of the tree; California bay (*Umbellularia californica*), Southern California black walnut (*Juglans californica*), and toyon (*Heteromeles arbutifolia*) trees which exceed eight (8") inches in diameter when measured at a point four and one-half (4.5') feet above the natural grade at the base of the tree. Trees with multiple trunks shall be deemed to have reached

maturity if the sum of the diameters of the multiple trunks exceeds the required diameter plus two (2") inches of a single trunked tree. Landmark trees shall also include all designated historic trees. (Thousand Oaks Municipal Code, Title 9, Chapter 4, Article 43: Landmark Tree Preservation and Protection)

- **Protected Zone:** A specifically defined area totally encompassing an oak, landmark, or historic tree within which work activities are strictly controlled. When depicted on a map, the outermost edge of the protected zone will appear as an irregular shaped circle that follows the contour of the dripline of the tree. Using the dripline as a point of reference, the protected zone shall commence at a point five (5') feet outside of the dripline and extend inward to the trunk of the tree. In no case shall the protected zone be less than fifteen (15') feet from the trunk of a landmark tree (both code sections).

3 Methods

Data regarding biological resources present within the project site, plus a 300-foot buffer (study area), were obtained through a review of pertinent literature, field reconnaissance, and surveys conducted in 2022 and 2023.

3.1 Literature Review

Prior to conducting field investigations and again before preparing this Biological Resources Technical Report (BRTR), a literature review was conducted to aid in the evaluation of the environmental setting of the project site and to identify special-status biological resources that may be found on the project site. The CNDDB (CDFW 2023a) and CNPS Rare Plant Inventory (CNPS 2023a) were queried based on the U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle map for Newbury Park, California where the project site is located, as well as the surrounding eight USGS 7.5-minute quadrangle maps (i.e., Simi, Moorpark, Santa Paula, Thousand Oaks, Camarillo, Newbury Park, Point Dume, Point Mugu, and Triunfo Pass). General information regarding vegetation communities was obtained from A Manual of California Vegetation, Online Edition (CNPS 2023b). The potential for jurisdictional waters to be present was assessed using aerial photographs (Google Earth 2023; NETR 2023), the USGS Newhall 7.5-minute topographic quadrangle map (USGS 2018), the National Hydrography Dataset (NHD) and Watershed Boundary Dataset (USGS 2023), and the USFWS National Wetland Inventory (NWI) (USFWS 2023b). Additional data sources reviewed to assist with the assessment of biological resources include:

- State and Federally Listed Endangered, Threatened, and Rare Plants of California (CDFW 2023d)
- State and Federally Listed Endangered and Threatened Animals of California (CDFW 2023e)
- CDFW California Wildlife Habitat Relationships Life History Accounts and Range Maps (CDFW 2023f)
- U.S. Department of Agriculture (USDA) NRCS Web Soil Survey (USDA 2023a)
- CDFW Biogeographic Information and Observation System (CDFW 2023b)
- 2022 Locally Important Plant List (Ventura County Planning Division 2022a)
- 2022 Locally Important Animal List (Ventura County Planning Division 2022b)
- *South Coast Missing Linkages Project: A Linkage Design for the Santa Monica–Sierra Madre Connection* (Penrod et al. 2006)
- South Coast Missing Linkages analysis conducted by South Coast Wildlands (2008)
- California Essential Habitat Connectivity (CEHC) project: A Strategy for Conserving a Connected California (Spencer et al. 2010)
- Draft Conejo Summit project initial Study/Mitigated Negative Declaration (ESA 2022)

3.2 Field Surveys

Between September 2022 and June 2023, Dudek biologists conducted several biological surveys on the approximately 50-acre project site, including general reconnaissance surveys, focused rare plant surveys, focused surveys for Crotch's bumble bee (*Bombus crotchii*), and focused surveys for coastal California gnatcatcher (*Polioptila californica californica; CAGN*). Not all field surveys were conducted over the entire 50-acre project site; instead, surveys often targeted a particular "survey area" based on the focus of that survey effort, which may have

included portions or all of the project site as well as buffer areas outside of the project site. The survey area for each survey effort is described in the sections that follow. Table 1 provides a summary of the various biological studies conducted between 2022 and 2023 and biologist resumes are included in Appendix A. Based on a review of available data, as well as a site revisit on August 8, 2023, there is no reason to expect conditions on site have changed substantially since the last focused surveys were conducted in the summer of 2023.

All plant species encountered during the reconnaissance and focused rare plant surveys were identified and recorded. Latin and common names for plant species with a California Rare Plant Rank (CRPR) follow the CNPS Inventory (CNPS 2023a). For plant species without a CRPR, Latin names follow the Jepson Interchange List of Currently Accepted Names of Native and Naturalized Plants of California (Jepson Flora project 2023), and common names follow the USDA NRCS Plants Database (USDA 2023b). All wildlife species, as detected during reconnaissance and other wildlife surveys—by sight, calls, tracks, scat, or other signs—were identified and recorded. Binoculars were used to aid in the identification of observed wildlife. No trapping or focused surveys for special-status species or nocturnal species was conducted. In addition to species observed, expected wildlife usage of the study area was determined according to known habitat preferences of regional wildlife species and knowledge of their relative distributions in the area. Latin and common names for wildlife species referred to in this report follow Crother (2017) for reptiles and amphibians, American Ornithologists' Union Checklist (AOU 2018) for birds, Wilson and Reeder (2005) for mammals, and Moyle (2002) for fish.

Table 1. Summary of Biological Surveys Conducted for the Conejo Summit Project

Date	Time	Survey Type	Weather Conditions
9/29/2022	0930–1230	Reconnaissance	75°F–80°F, 20% cc, 0–5 mph winds
10/04/2022	0800–1200	Reconnaissance	70°F–87°F, 0% cc, 0–1 mph winds
03/24/2023	0715–1110	Focused coastal California gnatcatcher	48–70°F; 10% cloud cover; 0–2 mph wind
04/14/2022	0618–1105	Focused coastal California gnatcatcher	53–70°F; 60–70% cloud cover; 0–2 mph wind
04/26/2023	1130–1630	Focused Crotch's bumble bee	66–78°F; 0% cloud cover; 2–5 mph wind
04/28/2023	0648–1138	Focused coastal California gnatcatcher	55–63°F; 0–100% cloud cover; 0–2 mph wind
05/11/2023	0650–1117	Focused coastal California gnatcatcher	57–66°F; 0–30% cloud cover; 0–1 mph wind
05/24/2023	0830–1630	Focused rare Plant	58–63°F; 40–100% cloud cover; 0–2 mph wind
05/25/2023	1000–1245	Focused rare Plant	61–63°F; 100% cloud cover; 1–5 mph wind
05/26/2023	0620–1103	Focused coastal California gnatcatcher	58–67°F; 100% cloud cover; no wind
06/09/2023	0900–1000	Focused coastal California gnatcatcher	62–66°F; 0% cloud cover; 2–4 mph wind
06/15/2023	1400–1800	Focused Crotch's bumble bee	65–69°F; 0% cloud cover; 0–5 mph wind
06/28/2023	0900–1200	Focused rare Plant	65–73°F; 0–10% cloud cover; 0–3 mph wind
06/28/2023	1200–1600	Focused Crotch's bumble bee	69-75°F; 0–10% cloud cover; 3–7 mph wind

Notes: °F = degrees Fahrenheit; cc = cloud cover; mph = miles per hour.

3.2.1 General Field Reconnaissance

Dudek Biologist Galen Hagen conducted reconnaissance-level biological surveys on September 29, 2022, and October 4, 2022, which included vegetation and land cover mapping; and a habitat assessment, to evaluate the potential for biological resources, including special-status plant and wildlife species, to occur on the project site and/or be affected by the proposed project. The project site, plus a 300-foot buffer, was methodically surveyed, and all biological resources observed or detected were identified and inventoried.

Vegetation Community and Land Cover Mapping

Vegetation communities and land uses within the study area were mapped in the field using the Environmental Systems Research Institute (Esri) Collector, a mobile data collection application, on a digital aerial-based background (Esri 2023). Following completion of the fieldwork, all vegetation linework was finalized using Esri ArcGIS software and GIS coverage was created. Once in ArcGIS, the acreage of each vegetation community and land cover type within the study area was determined.

Vegetation communities were mapped using A Manual of California Vegetation, Online Edition (CNPS 2023b) and CDFW's California Natural Community List (CDFW 2023c), where feasible, with modifications made to accommodate the lack of conformity of the observed communities (e.g., developed/disturbed land cover types) using Oberbauer et al. (2008) and Jones and Stokes (1993). In accordance with state mapping standards (CDFW 2022), biologists generally employed a minimum mapping unit of 1 acre for upland communities not considered sensitive, and 0.25 acres for wetland, riparian, or sensitive vegetation communities. As described in CDFW's Survey of California Vegetation (2022), smaller minimum mapping units may be used in order to appropriately assess the potential for impacts to sensitive resources, such as with communities that support unique resources that may be used by sensitive wildlife. Vegetation communities were classified based on site factors, descriptions, distribution, and characteristic species present within an area. Each natural community was mapped to the association level, where feasible. Sensitive vegetation communities—those communities identified as high priority for inventory in the California Natural Communities List (CDFW 2023c) by a state rarity ranking of S1, S2, or S3—were documented wherever present within the study area.

3.2.2 Special-Status Plant and Wildlife Species Assessment

Endangered, rare, or threatened plant species as defined in Section 15380(b) of the CEQA Guidelines (14 CCR 15000 et seq.) are referred to as "special-status plant species" and, as used in this report, include (1) plant species listed, proposed for listing, or candidates for listing as endangered or threatened recognized in the context of CESA and the FESA (CDFW 2023d); and/or (2) plant species with a CRPR of 1 or 2 as designated by CNPS (2023a). Species with a CRPR or 3 or 4 generally do not qualify for protection under CEQA; therefore, they are not considered special-status and impacts to these species are not analyzed in this BRTR.

Endangered, rare, or threatened wildlife species as defined in CEQA Guidelines, Section 15380(b) (14 CCR 15000 et seq.), are referred to as "special-status wildlife species" and, as used in this report, include (1) wildlife species listed, proposed for listing, or candidates for listing as endangered or threatened recognized in the context of CESA and FESA (CDFW 2023e); (2) California Species of Special Concern (SSC) as designated by CDFW (2023g); and (3)

mammals and birds that are fully protected species as described in the California Fish and Game Code, Sections 4700 and 3511 (CDFW 2023h).

The potential for special-status plant species to occur within the study area was assessed based on known geographic and elevation ranges as well as habitat and soil conditions that are known to support species occurring in the region. Potential for special-status wildlife species to occur within the study area was assessed based on known geographic ranges, the presence/absence of suitable habitat, and other natural history elements that might predict their occurrence. After completion of the reconnaissance surveys, the potential for special-status plant and wildlife species to occur on or near the project site was summarized according to the following categories. Because not all species are accommodated precisely by a given category (i.e., category definitions may be too restrictive), an expanded rationale for each category assignment is provided:

- Known to occur: the species has been documented on the property by a reliable source
- High potential to occur: the species has not been documented on the property but is known to recently occur in the vicinity and suitable habitat is present
- Moderate potential to occur: the species has not been documented on the property or in the vicinity, but the site is within the known range of the species and suitable habitat for the species is present
- Low potential to occur: the species has not been documented in the vicinity or on the property, but the site is within the known range of the species; however, suitable habitat for the species on site is of low quality
- Not expected to occur: the property is outside the known geographic or elevational range of the species and/or the site does not support suitable habitat for the species

3.2.3 Rare Plant Surveys

Based upon the results of the literature review, reconnaissance survey, and special-status plant species assessment, it was determined that focused rare plant surveys were necessary. Dudek biologists Michael Cady and Tracy Park conducted the surveys during the typical blooming period[1] for the species with a moderate or high potential to occur. Reference sites were checked prior to surveys to ensure target species were in bloom during the surveys. The rare plant surveys were guided by the CNPS Botanical Survey Guidelines (CNPS 2001); CDFW Protocols for Surveying and Evaluating Impacts to Special Status Native Populations and Sensitive Natural Communities (CDFW 2018); USFWS General Rare Plant Survey Guidelines (Cypher 2002), and Guidelines for Conducting and Reporting Botanical Inventories for Federally Listed, Proposed, and Candidate Plants (USFWS 2000). The biologist walked transects in suitable habitat, spaced approximately 5 to 10 meters apart based on the density of vegetative cover, throughout the project site, plus a 100-foot buffer. Areas too steep to safely traverse were examined by conducting a thorough binocular search. The 100-foot buffer was chosen to ensure 100% coverage of suitable habitat for special-status plant species that may be affected by the proposed project. Digital mobile maps and 200-scale topographic plots of vegetation polygons were utilized to navigate the survey area. Plant species encountered during the field surveys were identified to subspecies or variety, if applicable, to determine sensitivity status. When rare plants were encountered, field personnel recorded data points demarcating the edge of polygon surrounding the population and assessed population numbers using a GPS with sub-meter accuracy.

[1] Blooming periods for each target species are provided in Appendix D.

3.2.4 Crotch's Bumble Bee Surveys

Based upon the results of the reconnaissance survey and special-status wildlife species assessment, it was determined that surveys for Crotch's bumble bee were necessary. The surveys were led by Dudek Senior Biologist Michael Cady, who took a 1-day bumble bee class taught by Jaime Pawelek[2] that focused on the identification and natural history of the species known to occur in California. Three survey passes were conducted during the peak flight period of queens, workers, and males of the species, which corresponds to April to early July (Koch et al. 2013). Survey methods generally followed CDFW's (2023i) Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species and consisted of large, meandering transects wherever floral resources were present on the project site. Photographs were taken of species observed and identified using Koch et al. (2013) and all special-status individuals were mapped using the Environmental Systems Research Institute (Esri) Collector, a mobile data collection application, on a digital aerial-based background (Esri 2023). No handling of bumble bees occurred.

3.2.5 Coastal California Gnatcatcher Protocol Surveys

Based upon the results of the literature review, reconnaissance survey, and special-status wildlife species assessment, it was determined that focused surveys for coastal California gnatcatcher were necessary. Dudek biologist Melissa Blundell (TE97717A) conducted presence/absence surveys for coastal California gnatcatcher from March 2023 to June 2023 following the currently accepted protocol of the U.S. Fish and Wildlife Service (USFWS) *Coastal California Gnatcatcher (Polioptila californica californica) Presence/Absence Survey Protocol* (USFWS 1997). The survey area included all areas of suitable habitat within the project site, plus a 500-foot buffer. Surveys were conducted in weather conditions and time frames appropriate for the detection of CAGN, as defined in the USFWS protocol (i.e., between 6:00 a.m. and 12:00 p.m. and outside of periods of excessive or abnormal heat, wind, rain, fog, or other inclement weather) (Table 1). Digital mobile maps and 200-scale topographic plots of vegetation polygons were utilized to navigate the survey area. Appropriate binoculars were used for visual detection and identification of wildlife. Vocalizations were played every 50–100 feet to induce responses from potentially present CAGN. Vocalizations would have ceased upon detection of CAGN to minimize harassment.

3.2.6 Survey Limitations

Binocular surveys were conducted in areas too steep and/or thick with vegetation to safely traverse. Climatic conditions during the surveys were generally favorable for identification of flora and fauna. Potential limitations of the survey included a diurnal bias, and the absence of focused trapping for small mammals and reptiles. Birds represent the largest component of the vertebrate fauna, and because they are active in the daytime, diurnal surveys maximize the number of observations of this portion of the fauna. In contrast, daytime surveys usually result in few observations of mammals, many of which may only be active at night. In addition, many species of reptiles and amphibians are secretive in their habits and are difficult to observe using standard meandering transects.

[2] Jaime Pawelek is an expert in bee identification who identifies native bee collections for university researchers, graduate students, and conservation business professionals and teaches bee taxonomy through in-depth workshops.

INTENTIONALLY LEFT BLANK

4 Environmental Setting

The project site is situated in the Conejo Valley, in the western portion of the City. The project site consists of undeveloped lands, with industrial development to the east and south of the project site and open space to the north and west. Most of the surrounding open space burned during the 2018 Hill Fire, but recovery is in progress and the area currently supports minimally disturbed natural and naturalized vegetation.

4.1 Land Use

The project site is heavily disturbed, with the vast majority of the site having been graded in the past. Historically, the site has been regularly maintained in accordance with applicable law, including fuel modification activities within 100 feet of existing structures on adjacent properties. Based on a review of aerial imagery and observations during survey efforts, the project site shows evidence of various physical anthropogenic disturbances. During surveys, the northern portion of the site was observed being used by hikers, dog walkers, and mountain bikers. The northern area also contained large piles of debris including electronics, mattresses, and clothes. Vehicles and dirt bikes were observed using the southwestern portion of the site, which contains systems of dirt roads and motorbike trails indicative of regular use by motorized vehicles. Figure 2, Environmental Setting, provides an aerial view of the project site, on which one can see the trail systems present in the northern and southwestern portions of the site.

The project site is located entirely within the City's Specific Plan No. 7 planning area, in the northwestern portion of the existing Rancho Conejo Industrial Area. The open space west and north of the project site is owned and managed by the Conejo Open Space Conservation Agency as the Conejo Canyons Open Space, a system of deeply eroded canyons, plateaus, and ridgelines totaling approximately 1,673 acres.

4.2 Topography

Most of the project site has previously been graded; therefore, site topography is largely homogenous. The highest point, located in the southern portion of the project site, is approximately 700 feet above mean sea level (amsl), while the lowest point, located in the northern portion of the project site, is approximately 630 feet amsl (Google Earth 2023). The topography the project vicinity is variable with flat, developed areas extending to the east and south and sloped terrain both descending and rising from the project site to the west, north, and south.

4.3 Soils

Nine soil types have been mapped in the study area by the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA 2023a). These soil types are listed below.

- San Benito clay loam, 15% to 30% slopes, eroded, MLRA 20
- Topdeck loam, 10% to 35% slopes
- Diablo clay, 9% to 15% slopes, warm MAAT
- Gilroy loam, 15% to 50% slopes, very rocky
- Linne silty clay loam, 9% to 15% slopes, eroded

- Hambright very rocky loam, 15% to 75% slopes
- San Benito clay loam, 50% to 75% slopes, MLRA 20
- San Benito clay loam, 9% to 15% slopes, eroded
- Linne silty clay loam, 15% to 30% slopes, eroded

Due to the historic disturbance, natural soils are present only along the edges of the project site. None of the mapped soils are listed on the National Hydric Soils List by State (USDA 2023a).

4.4 Hydrology

The study area is located in the Upper and Lower Conejo Arroyo subwatersheds (180701030104 and 180701030104, respectively) within the Calleguas Creek watershed (1807010301). The Calleguas Creek watershed drains approximately 343 square miles, conveying flows into the Calleguas Creek before they flow into Mugu Lagoon and eventually the Pacific Ocean (LARWQCB 2023). Various canyons and drainages west of the project site drain to the Arroyo Conejo, which connects directly with Calleguas Creek.

5 Results

Representative photos of the project site and the biological resources described in this section are included in Appendix B, Photo Exhibit.

5.1 Vegetation Communities and Land Covers

A total of 17 vegetation communities and 3 land cover types were mapped in the study area, which included the project site and a 300-foot buffer, during reconnaissance surveys. These vegetation communities and land cover types are described below, their acreages are presented in Table 2, and their spatial distributions are presented in Figure 3. As stated in Section 3.2.1, vegetation communities were mapped using A Manual of California Vegetation, Online Edition (CNPS 2023b) and CDFW's California Natural Community List (CDFW 2023c), where feasible, with modifications made to accommodate the lack of conformity of the observed communities (e.g., developed/disturbed land cover types) using Oberbauer et al. (2008) and Jones and Stokes (1993). The descriptions that follow are based on A Manual of California Vegetation, Online Edition (CNPS 2023b). A total of 5 sensitive vegetation communities were mapped in the study area, all of which are outside of the project boundary.

Notes: N/A = not applicable
Totals may not sum due to rounding.

1 The term semi-natural stands vs. alliance is used in the Manual of California Vegetation to distinguish between natural vegetation communities and vegetation types dominated by non-native plants (Sawyer et al. 2009).

2 The conservation status of a vegetation community is designated by a number from 1 to 5, preceded by a letter reflecting the appropriate geographic scale of the assessment (G = global, N = national, and S = subnational). The numbers have the following meaning based on NatureServe's Heritage Methodology (NatureServe 2023): 1 = critically imperiled; 2 = imperiled; 3 = vulnerable to extirpation or extinction; 4 = apparently secure; 5 = demonstrably widespread, abundant, and secure.

5.1.1 Native Vegetation Communities

Coastal Scrub

Bush Mallow Scrub

Bush mallow scrub (*Malacothamnus fasciculatus–Malacothamnus* spp. Shrubland alliance) communities include bush mallow (*Malacothamnus fasciculatus*) or gray bushmallow (*Malacothamnus aboriginum*) as the dominant or co-dominant species in the shrub canopy. Bush mallow scrub has an open to intermittent shrub canopy less than 3 meters (10 feet) in height with an herbaceous layer that is usually sparse. Communities in this alliance occur on gentle to very steep slopes of variable aspects. Species associated with the alliance include chamise (*Adenostoma fasciculatum*), California sagebrush (*Artemisia californica*), bigpod ceanothus (*Ceanothus megacarpus*), greenbark ceanothus (*Ceanothus spinosus*), birch leaf mountain mahogany (*Cercocarpus betuloides*), California brittle bush (*Encelia californica*), California buckwheat (*Eriogonum fasciculatum*), chaparral yucca (*Hesperoyucca whipplei*), toyon (*Heteromeles arbutifolia*), common deerweed (*Acmispon glaber*), laurel sumac (*Malosma laurina*), sugarbush (*Rhus ovata*), and black sage (*Salvia mellifera*) (CNPS 2023b). One association in the alliance, *Malacothamnus fasciculatus* association, was mapped on slopes in the western and northern portions of the study area. This alliance was not mapped on the project site.

California Buckwheat Scrub

California buckwheat scrub communities (*Eriogonum fasciculatum* shrubland alliance) include California buckwheat or chaparral yucca as the dominant or co-dominant species in the shrub canopy. This alliance has a continuous or intermittent shrub canopy less than 2 meters (7 feet) in height with a variable, sometimes grassy ground layer. Species associated with the alliance include California sagebrush, coyotebrush (*Baccharis pilularis*), bush monkeyflower (*Diplacus aurantiacus*), California brittle bush, Menzies' goldenbush (*Isocoma menziesii*), common deerweed, bush mallow, white sage (*Salvia apiana*), or black sage. Communities in this alliance typically occur on upland slopes, intermittently flooded arroyos, channels and washes, and rarely flooded terraces in coarse well-drained soils (CNPS 2023b). One association in the alliance, *Eriogonum fasciculatum* association, was mapped in the study area. This community is prevalent in the southern and eastern portions of the project site and occurs as a small patch in the northern portion of the project site. West of Conejo Center Drive, this community is highly disturbed and fragmented by regular off-road vehicle use.

California Sagebrush–(Purple Sage) Scrub

California sagebrush–(purple sage) scrub communities (*Artemisia californica–Salvia leucophylla* shrubland alliance) include California sagebrush and/or purple sage (*Salvia leucophylla*) as dominant or co-dominant shrubs in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height or in two tiers with the second tier less than 5 meters (16 feet) in height. Species associated with the California sagebrush scrub alliance include chamise, coyotebrush, bladderpod (*Peritoma arborea*), bush monkeyflower, California brittle bush, brittle bush (*Encelia farinosa*), California jointfir (*Ephedra californica*), narrowleaf goldenbush (*Ericameria linearifolia*), ashy buckwheat (*Eriogonum cinereum*), California buckwheat, chaparral yucca, golden-yarrow (*Eriophyllum confertiflorum*), Menzies' goldenbush, common deerweed, heartleaf keckiella (*Keckiella cordifolia*), southern honeysuckle (*Lonicera subspicata*), bush mallow, laurel sumac, coast prickly pear (*Opuntia littoralis*), hollyleaf redberry (*Rhamnus ilicifolia*), lemonade berry (*Rhus integrifolia*), sugarbush, white sage, black sage, and poison oak (*Toxicodendron diversilobum*) (CNPS 2023b). These communities typically occur on steep slopes or rarely

flooded terraces along streams in alluvial- or colluvial-derived soils (CNPS 2023b). Two associations in the alliance were mapped on the project site. *Artemisia californica* association was mapped in two patches in the northern portion of the site that shows evidence physical anthropogenic disturbance, including mowing. *Salvia leucophylla* association was mapped on the top of a small hill in the southern portion of the project site east of Conejo Center Drive.

California Brittle Bush–Ashy Buckwheat Scrub

California brittlebush–ashy buckwheat scrub communities (*Encelia californica–Eriogonum cinereum* shrubland alliance) include California brittlebush and/or ashy buckwheat as dominant or co-dominant shrubs in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height (CNPS 2023b). Species associated with this alliance include California sagebrush, coyotebrush, bladderpod, California buckwheat, chaparral yucca, Menzies' goldenbush, common deerweed, bush mallow, laurel sumac, coast prickly pear, lemonade berry, purple sage, black sage and other common coastal sage scrub species. These communities typically occur on sunny, steep slopes that are often rocky or eroded (CNPS 2023b). One association in the alliance, *Eriogonum cinereum* association, was mapped on the steep slopes of the study area north and west of the northern portion of the project site. This alliance was not mapped on the project site. The California brittlebush–ashy buckwheat scrub alliance, including the *Eriogonum cinereum* association, is considered a sensitive vegetation community by CDFW (2023c).

Coast Prickly Pear Scrub

Coast prickly pear scrub communities (*Opuntia littoralis–Opuntia oricola–Cylindropuntia prolifera* shrubland alliance) include coast prickly pear and/or other cacti as the dominant or co-dominant species in the shrub canopy. Coast prickly pear scrub has a two-tiered intermittent or continuous shrub canopy less than 2 meters (7 feet) in height with an open to continuous, diverse herbaceous layer. Species associated with this alliance include California sagebrush, bladderpod, bush rue (*Cneoridium dumosum*), California cholla (*Cylindropuntia californica*), coastal cholla (*Cylindropuntia prolifera*), California brittle bush, California buckwheat, cliff spurge (*Euphorbia misera*), chaparral yucca, laurel sumac, lemonade berry, black sage, and blue elderberry (*Sambucus mexicana*), and other cacti species (*Opuntia* spp.). This alliance typically occurs on south-facing slopes and headlands where soils are shallow and may be rocky (CNPS 2023b). One association in this alliance, *Opuntia oricola provisional* association, was mapped in the southwestern portion of the study area on slopes west of the project site. This provisional alliance was not mapped on the project site. The coast prickly pear scrub alliance, including the *Opuntia oricola provisional a*ssociation, is considered a sensitive vegetation community by CDFW (2023c).

Deerweed-Silver Lupine-Yerba Santa Scrub

Deerweed-silver lupine-yerba santa scrub communities (*Lotus scoparius–Lupinus albifrons–Eriodictyon spp.* Shrubland Alliance) include bush poppy (*Dendromecon rigida*), *California yerba santa* (*Eriodictyon californicum*), *thick leaf yerba santa* (*Eriodictyon crassifolium*), poodle-dog bush (*Eriodictyon parryi*), common deerweed, and/or silver bush lupine (*Lupinus albifrons*) as the dominant species in the shrub canopy. Deerweed scrub has an open to intermittent shrub canopy less than 3 meters (10 feet) in height with an herbaceous layer that is sparse to intermittent. Species associated with this alliance include chamise, California sagebrush, coyote brush, wedge leaf ceanothus (*Ceanothus cuneatus*), cup leaf ceanothus (*Ceanothus perplexans*), sand aster (*Corethrogyne filaginifolia*), bush monkeyflower, narrowleaf goldenbush, golden-yarrow, sawtooth golden bush (*Hazardia squarrosa),* slender sunflower (*Helianthus gracilentus*), California buckwheat, California jointfir, interior goldenbush, sawtooth goldenbush, chaparral yucca, yellowstem bushmallow (*Malacothamnus densiflorus*), desert apricot (*Prunus fremontii*), sugarbush, oak gooseberry (*Ribes quercetorum*), white sage, black

sage, Douglas' ragwort (*Senecio flaccidus* var. *douglasii*), poison oak, and Parish's bluecurls (*Trichostema parishii*) (CNPS 2023b). This alliance typically occurs on lower to upper slopes and ridges, typically in exposed, somewhat steep open settings, and often in areas with recent disturbance, such as through clearing, fire, or intermittent flooding. One association in the alliance was mapped in the study area: *Lotus scoparius* association. This association occurs in the study area on the slopes west of the project site and in a small patch within the northern portion of the project site.

Menzies' Golden Bush Scrub

Menzies' golden bush scrub communities (*Isocoma menziesii* shrubland alliance) include Menzies' golden bush as the dominant or co-dominant species in the shrub canopy. The alliance has an open to intermittent shrub canopy less than 1 meter (3 feet) in height with an open to continuous, diverse, and grassy herbaceous layer. Species associated with this alliance include island broom (*Acmispon dendroideus*), California sagebrush, coyote brush, California match weed (*Gutierrezia californica*), giant coreopsis (*Leptosyne gigantea*), silver bush lupine, and Virginia glasswort (*Salicornia depressa*). This alliance typically occurs on alluvial fans, arroyos, and stream terraces. One association in the alliance, *Isocoma menziesii* association, was mapped in a single location in the western portion of the study area. This alliance was not mapped on the project site. The Menzies' golden bush scrub alliance, including the *Isocoma menziesii* association, is considered a sensitive vegetation community by CDFW (2023c).

Chaparral

Bigpod Ceanothus Chaparral

Bigpod ceanothus chaparral communities (*Ceanothus megacarpus* shrubland alliance) include bigpod ceanothus as the dominant or co-dominant shrub in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height, with an herbaceous layer that is sparse or occasionally grassy. Species associated with this alliance include chamise, redshank (*Adenostoma sparsifolium*), greenbark ceanothus, birch leaf mountain mahogany, ashy buckwheat, chaparral yucca, toyon, laurel sumac, inland scrub oak (*Quercus berberidifolia*), lemonade berry, and black sage. One association in the alliance, *Ceanothus megacarpus–Malosma laurina* association, was mapped in an isolated patch of the study area south of the northern portion of the project site. This alliance was not mapped on the project site.

Holly Leaf Cherry–Toyon–Greenbark Ceanothus Chaparral

Hollyleaf cherry-toyon–laurel sumac chaparral communities (*Prunus ilicifolia–Heteromeles arbutifolia–Ceanothus spinosus* shrubland alliance) include hollyleaf cherry (*Prunus ilicifolia*), toyon, and/or greenbark ceanothus as the dominant or co-dominant shrubs in an open to continuous shrub canopy less than 15 meters (49 feet) in height. Species associated with this alliance include California sagebrush, bigpod ceanothus, birch leaf mountain mahogany, pipestem clematis (*Clematis lasiantha*), bush monkeyflower, California buckwheat, California ash (*Fraxinus dipetala*), bush penstemon (*Keckiella antirrhinoides*), heartleaf keckiella, inland scrub oak, hollyleaf redberry, sugarbush, and black sage. These communities typically occur on slopes that are often steep and north-facing, where soils are derived from bedrock or colluvium (CNPS 2023b). Two associations in the alliance were mapped in the study area: *Heteromeles arbutifolia–Malosma laurina* association and *Heteromeles arbutifolia* provisional association. Both associations are prevalent on north-facing slopes in the study area. *Heteromeles arbutifolia–Malosma laurina* association comprises large portions of the study area west and north of the southern part of the project site, overlapping with small sections of the project site. *Heteromeles arbutifolia* provisional association comprises large portions of the study area west and north of the northern part of the project site but

does not occur on the project site. The *Heteromeles arbutifolia* provisional association is considered a sensitive vegetation community by CDFW despite the overall alliance's G5S4 ranking (CDFW 2023c).

Scrub Oak Chaparral

Scrub oak chaparral communities (*Quercus berberidifolia* shrubland alliance) include inland scrub oak as the dominant or co-dominant shrub species in a continuous shrub canopy less than 6 meters (20 feet) in height. Species associated with this alliance include chamise, redshank, Eastwood's manzanita (*Arctostaphylos glandulosa*), bigberry manzanita (*Arctostaphylos glauca*), hoary leaf ceanothus (*Ceanothus crassifolius*), wedge leaf ceanothus, deerbrush (*Ceanothus integerrimus*), cup leaf ceanothus, chaparral whitethorn (*Ceanothus leucodermis*), hairy ceanothus (*Ceanothus oliganthus*), greenbark ceanothus, blue blossom (*Ceanothus thyrsiflorus*), woolly leaf ceanothus (*Ceanothus tomentosus*), mountain mahogany, California coffeeberry *(Frangula californica)*, California ash, toyon, chaparral pea (*Pickeringia montana*), hollyleaf cherry, interior live oak (*Quercus wislizeni*), hollyleaf redberry, sugarbush, poison oak, and mission manzanita (*Xylococcus bicolor*). These communities primarily occur on north-facing, steep slopes, where soils are deep to shallow, are well to extensively drained, and may be rocky (CNPS 2023b). One association within the alliance, *Quercus berberidifolia–Heteromeles arbutifolia a*ssociation, was mapped along the northern slopes of the study area, northeast of the project site. This alliance was not mapped on the project site.

Woodland

Coast Live Oak Woodland and Forest

Coast live oak woodland and forest communities (*Quercus agrifolia* forest and woodland alliance) include coast live oak (*Quercus agrifolia*) as dominant or co-dominant in the upland tree canopy, which is open to continuous or savanna-like and less than 30 meters (98 feet) in height. This alliance has a sparse to intermittent shrub layer and a sparse or grassy herbaceous layer. Species associated with this alliance include bigleaf maple (*Acer macrophyllum*), madrone (*Arbutus menziesii*), Southern California black walnut (*Juglans californica*), blue oak (*Quercus douglasii*), Engelmann oak (*Quercus engelmannii*), California black oak (*Quercus kelloggii*), valley oak (*Quercus lobata*), or California bay (*Umbellularia californica*). Communities in this alliance typically occur on canyon bottoms, slopes, and flats (CNPS 2023b). One association within the alliance, *Quercus agrifolia a*ssociation, was mapped on the western edge of the study area, outside of the project site.

Riparian

California Sycamore–Coast Live Oak Riparian Woodlands

California sycamore–coast live oak riparian woodlands communities (*Platanus racemosa–Quercus agrifolia* woodland alliance) include California sycamore (*Platanus racemose*) and/or coast live oak as dominant or co-dominant in the tree canopy in riparian habitats. This alliance has an open to intermittent tree canopy that is less than 35 meters (115 feet) in height, an open to intermittent shrub layer, and a sparse or grassy herbaceous layer. Species associated with this alliance include white alder (*Alnus rhombifolia*), Southern California black walnut, Fremont cottonwood (*Populus fremontii*), valley oak, narrowleaf willow (*Salix exigua*), Goodding's willow (*Salix gooddingii*), red willow (*Salix laevigata*), arroyo willow (*Salix lasiolepis*), yellow willow (*Salix lutea*), mulefat (*Baccharis salicifolia*), and California bay. Communities in this alliance typically occur in gullies, intermittent streams, springs, seeps, stream banks, and terraces adjacent to floodplains that are subject to high-intensity flooding (CNPS 2023b). One association within the alliance, *Platanus racemosa–Quercus agrifolia a*ssociation, was mapped along a

drainage bottom extending west from the study area, outside of the project site. The California sycamore–coast live oak riparian woodlands alliance, including the *Platanus racemosa–Quercus agrifolia a*ssociation, is considered a sensitive vegetation community by CDFW (2023c). These communities typically occur in fallow fields, rangelands, grasslands, roadsides, levee slopes, disturbed coastal scrub, disturbed riparian areas, and generally within disturbed areas (CNPS 2023b).

5.1.2 Naturalized Vegetation Communities

Grass and Herb Dominated

Poison Hemlock or Fennel Patches

Poison hemlock or fennel patches communities (*Conium maculatum–Foeniculum vulgare* herbaceous semi-natural alliance) feature sticky snakeroot (*Ageratina denophora*), poison hemlock (*Conium maculatum*), Fuller's teasel (*Dipsacus fullonum*), Indian teasel (*Dipsacus sativus*) and/or fennel (*Foeniculum vulgare*) or another non-native invasive species of the Apiaceae family in an open to continuous herbaceous layer less than 2 meters (6 feet) in height. One association in the alliance, *Foeniculum vulgare* association, was mapped in the northwest portion of the project site.

Upland Mustards or Star-Thistle Fields

Upland mustards or star-thistle fields communities feature black mustard (*Brassica nigra*), field mustard (*Brassica rapa*), Italian plumeless thistle (*Carduus pycnocephalus*), Maltese star-thistle (*Centaurea melitensis*), yellow star-thistle (*Centaurea solstitialis*), cardoon (*Cynara cardunculus*), Geraldton carnation weed (*Euphorbia terracina*), shortpod mustard (*Hirschfeldia incana*), Dyer's woad (*Isatis tinctoria*), cultivated radish (*Raphanus sativus*), or similar ruderal forbs as the dominant species in an open to continuous herbaceous layer less than 3 meters (10 feet) in height. This alliance predominates in the eastern and northern portions of the project site, where it is dominated by black mustard, Maltese star-thistle, fennel, and other non-native grasses and forbs.

Wild Oats and Annual Brome Grasslands

Wild oats and annual brome grasslands communities (*Avena* spp.–Bromus spp. Herbaceous semi-natural alliance) have slender oat (*Avena barbata*), wild oat (*Avena fatua*), purple false brome (*Brachypodium distachyon*), big quakinggrass (*Briza maxima*), ripgut brome (*Bromus diandrus*), soft brome (*Bromus hordeaceus*), and/or mouse barley (*Hordeum murinum*) as dominant or co-dominant with other non-natives in the herbaceous layer. These communities have an open to continuous cover less than 1.2 meters (4 feet) in height and occur in all topographic settings in foothills, waste places, rangelands, and openings in woodlands (CNPS 2023b). This alliance was mapped along the northern boundary of the eastern section of the project site, south of Rancho Conejo Boulevard. Dominant species here included wild oat, ripgut brome, red brome (*Bromus rubens*), and shortpod mustard.

5.1.3 Disturbed and Developed Land Cover Types

Disturbed Habitat

Although not described in the Manual of California Vegetation, Online Edition (CNPS 2023b), or the Natural Communities List (CDFW 2023c), disturbed habitat is described in the Draft Vegetation Communities of San Diego

County (Oberbauer et al. 2008). Disturbed habitat is described as areas generally lacking vegetation due to high levels of existing or historical human disturbance and no longer recognizable as a native or naturalized vegetation association. Areas mapped as disturbed habitat may include unpaved roads, trails, and graded areas. Vegetation in these areas, if present at all, is usually sparse and dominated by non-native weedy herbaceous species (Oberbauer et al. 2008). A portion of the study area immediately east of the northern section of the project site that was being graded during the surveys was mapped as disturbed habitat. This section was entirely unvegetated at the time of the surveys. This land cover type does not occur on the project site.

Parks and Ornamental Plantings

Although not described in the Manual of California Vegetation (CNPS 2023b) or the Natural Communities List (CDFW 2023c), parks and ornamental plantings (or ornamental vegetation) is described in Methods Used to Survey the Vegetation of Orange County Parks and Open Space Areas and The Irvine Company Property (Jones and Stokes 1993). This mapping unit is described as vegetation consisting of non-native trees, shrubs, flowers, and turf grass introduced for landscaping purposes. This mapping unit type typically occurs in greenbelts, parks, and horticultural plantings (Jones and Stokes 1993). One portion of the study area was mapped as ornamental plantings, on south-facing slopes south of the northern portion of the project site. Although the area consists of a stand of coast live oak, a native plant species, the vegetation in this area was likely planted and appears to be maintained/managed, based on the presence of irrigation and other signs of active management, such as weed control. This land cover type does not occur on the project site.

Urban/Developed

Although not described in the Manual of California Vegetation (CNPS 2023b) or the Natural Communities List (CDFW 2023c), the urban/developed mapping unit (or developed land) is described in Draft Vegetation Communities of San Diego County (Oberbauer et al. 2008). This mapping unit is described as areas supporting human-made structures, including homes, yards, sidewalks, and other highly modified lands supporting structures associated with dwellings or other permanent structures. Vegetation in these areas, if present at all, is typically associated with ornamental landscaping that has been included in the development footprint (Oberbauer et al. 2008). Developed lands include commercial and industrial buildings, parking lots, and associated ornamental vegetation in the eastern portion of the study area north of Rancho Conejo Boulevard and on either side of Conejo Spectrum Street, and in the central portion of the study area south of Rancho Conejo Boulevard and west of Conejo Center Drive. This land cover type does not occur on the project site.

5.2 Plants

A total of 111 species of vascular plants, including 63 (57%) native species and 48 (43%) non-native species, were recorded during biological surveys (see Appendix C). The project site is highly disturbed and common plant species found on site include many non-native species. The surrounding slopes in the study area, outside of the project site, consist of minimally disturbed open space composed primarily of native plant species associated with chaparral and scrub communities. Special-status plants species observed in the study area, including on the project site, are discussed in Section 5.4.1.

5.3 Wildlife

A total of 65 wildlife species were recorded during biological surveys, including 58 birds, 3 invertebrates, 1 reptile, and 3 mammals (see Appendix C). Additional birds may be present as residents or transients during foraging or migration. No fish or amphibian species were observed or are expected to occur due to a lack of suitable habitat. Common side-blotched lizard (*Uta stansburiana*) was the only common reptile observed. Western fence lizard (*Sceloporus occidentalis*) and Pacific rattlesnake (*Crotalus oreganus*) are common reptiles that would be expected to occur in the study area. Brush rabbit (*Sylvilagus bachmani*) was observed on site; sign of California ground squirrel (*Otospermophilus beecheyi*) and mule deer (*Odocoileus hemionus*) were detected in the study area, outside of the project site. Coyote (*Canis latrans*) and Virginia opossum (*Didelphis virginiana*) are common mammals that would be expected to occur in the study area; bats roosting in the project vicinity may also use the project site for foraging.

5.4 Special-Status Species Assessment

The literature review identified 37 special-status plant species and 44 special-status wildlife species with occurrence records in the USGS Newbury Park 7.5-minute quadrangle and eight surrounding quadrangles (CDFW 2023a; CNPS 2023a) or that are included in the IPaC report for the study area (USFWS 2023a). The potential for each special-status plant and wildlife species to occur on the project site is assessed in Appendix D and Appendix E, respectively. The project site is not within any designated critical habitat (USFWS 2023b).

5.4.1 Special-Status Plants

One special-status plant species was detected during focused rare plant surveys conducted in May and June of 2023: Conejo dudleya (*Dudleya parva*). This species is described in Table 3 and discussed further in this section. Potential impacts to this species are analyzed in Section 6.

Two species with a CRPR of 4.2—Catalina mariposa lily (*Calochortus catalinae*) and Southern California black walnut (*Juglans californica*)—were detected on the project site. In general, CRPR 4 species do not meet the definition of endangered, rare, or threatened pursuant to CEQA Guidelines Section 15380; therefore, these species are not considered special-status and impacts to these species are not analyzed in this BRTR. Southern California black walnut is protected under Article 43 of the Thousand Oaks Municipal Code and the City's Oak Tree Protection Standards (Resolution 2010-014). See section 5.7 for a discussion of impacts to protected trees, including to Southern California black walnut.

Based upon nearby occurrence records and the presence of suitable habitat on site, in addition to Conejo dudleya, 5 special-status plant species were initially determined to have a moderate potential to occur in the study area: Blochman's dudleya (*Dudleya blochmaniae* ssp. *blochmaniae*), Conejo buckwheat (*Eriogonum crocatum*), Lyon's pentachaeta (*Pentachaeta lyonii*), mesa horkelia (*Horkelia cuneata* var. *puberula*), and Ojai navarretia (*Navarretia ojaiensis*). Focused rare plant surveys, conducted during the blooming periods for these 5 species. Of the approximately 514 mapped Conejo dudleya individuals, 5 are located along the project site boundary, and an additional 32 individuals are located within approximately 25 feet of the proposed grading limits (Figure 3). The remaining mapped individuals are positioned on the hillside upslope and west of the project site, between approximately 25 feet and 150 feet from the grading limits. Potential impacts to Conejo dudleya are analyzed in Section 6.

Table 3. Special-Status Plant Species Present or With Moderate or High Potential to Occur in the Study Area

Scientific Name	Common Name	Status (Federal/State /CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[1]
Dudleya parva	Conejo dudleya	FT/None/1B.2	Coastal scrub, Valley and foothill grassland; Clay (sometimes), Gravelly (sometimes), Rocky (sometimes), Volcanic (sometimes)/perennial herb/May–June/195–1,475	Occurs. This species was observed during focused rare plant surveys in 2023. This species is known exclusively from a narrow strip of land stretching from the western Simi Hills to the Conejo Grade, including areas in the Conejo Canyons Open Space immediately north and west of the project site (USFWS 2015). The scattered rock outcrops and volcanic soils where this species grows are largely absent from the project site, except at the boundaries where the site abuts undisturbed open space. Several individuals were observed on north facing slopes at the southwestern corner of the study area, with approximately 5 individuals located along the project site boundary and an additional 32 individuals within 25 feet of the grading limits. The remaining mapped individuals are positioned on the hillside upslope and west of the project site, between approximately 25 feet and 150 feet from the grading limits. There is also a known occurrence from 2010 approximately 20 meters west of the study area (CDFW 2023a).

Notes:
Status Legend
Federal
FT: Federally listed as threatened
State
CRPR: California Rare Plant Rank
1B: Plants rare, threatened, or endangered in California and elsewhere
Modifiers:
.2 - Moderately threatened in California (20%–80% of occurrences threatened/moderate degree and immediacy of threat)
1 Refers to records within the Newhall U.S. Geological Survey (USGS) 7.5-minute quadrangle and surrounding eight quadrangles (i.e., Simi, Moorpark, Santa Paula, Thousand Oaks, Camarillo, Newbury Park, Point Dume, Point Mugu, and Triunfo Pass)

Conejo Dudleya

Conejo dudleya has a CRPR of 1B.1 and is listed as threatened under FESA. This perennial herb typically blooms from May to June and is found in coastal scrub and valley and foothill grasslands between 195 and 1,975 feet amsl (CNPS 2023a). Conejo dudleya is endemic to Southern California, currently restricted to eastern Ventura County within a narrow band of Conejo volcanics between the western portion of the Simi Hills and the Conejo Grade, which includes the Conejo Canyons Open Space Area to the north, west, and south of the project site. Conejo dudleya grows at the base of scattered rock outcrops of the Conejo volcanics in grassland and cactus dominated coastal scrub habitat (USFWS 2015).

There are several known records of Conejo dudleya near the project site, with the closest record approximately 20 meters west of the study area (CDFW 2023a). Most of the project site lacks rock outcrops and volcanic soils necessary to support Conejo dudleya. However, there are rocky outcrops and suitable coastal scrub habitat present on the slopes west and north of the project site, which extend up to and, in some cases, across the project boundary. Approximately 514 individuals[3] were observed in the study area during rare plant surveys, associated with volcanic rock outcrops on the slopes west of the project site. Of the approximately 514 mapped Conejo dudleya individuals, 5 are located along the project site boundary, and an additional 32 individuals are located within approximately 25 feet of the proposed grading limits. The remaining mapped individuals are positioned on the hillside upslope and west of the project site, between approximately 25 feet and 150 feet from the grading limits (Figure 3). Potential impacts to Conejo dudleya are analyzed in Section 6.

5.4.2 Special-Status Wildlife

One special-status invertebrate species (Crotch's bumble bee) was observed on the project site during biological surveys. One special-status bird species—yellow-breasted chat (*Icteria virens*)—was observed in the study area, outside of the project site.[4] Based upon nearby occurrence records and the presence of suitable habitat on site, in addition to Crotch's bumble bee, 3 special-status species were initially determined to have a moderate potential to occur on the project site: coastal California gnatcatcher, coastal whiptail (*Aspidoscelis tigris stejnegeri*), and loggerhead shrike (*Lanius ludovicianus*). Protocol surveys for coastal California gnatcatcher were conducted and the results were negative (see Appendix F).

Special-status wildlife species that were observed or have at least a moderate potential to occur on the project site are summarized in Table 4 and discussed further in this section. Burrowing owl, California condor, coastal California gnatcatcher, least Bell's vireo, and mountain lion, are included in Table 4 and the following discussion due to their level of sensitivity. Appendix E summarizes the special-status wildlife species with occurrence records in the vicinity, but which are considered to have low to no potential to occur, primarily due to the lack of suitable habitat and/or lack of observations within the project site during the focused surveys.[5]

[3] The total number of individuals was estimated due to clumping and the difficulty in distinguishing individuals in some cases.

[4] Coastal cactus wren (*Icteria virens)*, which is designated SSC by CDFW, was detected in the study area, outside of the project site, during botanical surveys in 2023; however, this species' SSC status applies only to those occurrences in San Diego and Orange Counties (CDFW 2022c) and this species is not addressed further in this BRTR.

[5] Six species designated as Birds of Conservation Concern (BCC) by the U.S. Fish and Wildlife Service were detected on the project site. In general, BCC species do not meet the definition of endangered, rare, or threatened pursuant to CEQA Guidelines Section 15380; therefore, these species are not considered special-status and impacts to these species are not analyzed in this BRTR. However, because they were observed on site, these species are included in Appendix E.

Table 4. Special-Status Wildlife Species Present or With Moderate or High Potential to Occur in the Study Area

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Invertebrates				
Bombus crotchii	Crotch's bumble bee	None/ SCE	Open grassland and scrub communities supporting suitable floral resources.	Occurs in the study area, including on the project site. Observed during focused surveys conducted in 2023.
Reptiles				
Aspidoscelis tigris stejnegeri	coastal whiptail	None/SSC	Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas.	Moderate potential to occur in the study area, including on the project site.
Birds				
Athene cunicularia (burrow sites & some wintering sites)	burrowing owl	None/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Low potential to nest and forage. The study area lacks the open grassland habitat and does not contain abundant ground squirrel burrows preferred and utilized by this species. In addition, there are no CNDDB occurrences of this species within 5 miles and none in the Conejo Valley (CDFW 2023a).
Gymnogyps californianus	California condor	FE/FP, SE	Nests in rock formations, deep caves, and occasionally in cavities in giant sequoia trees (Sequoiadendron giganteus); forages in relatively open habitats where large animal carcasses can be detected	Low potential to fly over the project site; not expected to nest or forage on the project site.
Icteria virens (nesting)	yellow-breasted chat	None/SSC	Nests and forages in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush	Occurs. Observed in the study area, outside of the project site, during focused surveys for coastal California gnatcatcher in 2023.

Table 4. Special-Status Wildlife Species Present or With Moderate or High Potential to Occur in the Study Area

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Lanius ludovicianus (nesting)	loggerhead shrike	None/SSC	Nests and forages in open habitats with scattered shrubs, trees, or other perches	Moderate potential to forage and nest on site.
Polioptila californica californica	coastal California gnatcatcher	FT/SSC	Nests and forages in various sage scrub communities, often dominated by California sagebrush and buckwheat; generally avoids nesting in areas with a slope of greater than 40%; majority of nesting at less than 1,000 feet above mean sea level	Absent. Protocol surveys for the species were negative, so the species is currently considered absent from the study area, and it is not expected to occur on the project site.
Vireo bellii pusillus (nesting)	least Bell's vireo	FE/SE	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season	Not expected to occur. Suitable habitat for the species is not present in the study area.
Mammals				
Puma concolor (Southern California/ Central Coast Evolutionarily Significant Unit)	mountain lion	None/SC	Scrubs, chaparral, riparian, woodland, and forest; rests in rocky areas and on cliffs and ledges that provide cover; most abundant in riparian areas and brushy stages of most habitats throughout California, except deserts	Low potential to occur in the study area, including on the project site.

Table 4 Notes:
Status Legend
Federal
FE: Federally listed as endangered
FT: Federally listed as threatened

State
SE: State listed as endangered
SC: State candidate for listing as threatened or endangered
SCE: State candidate for listing as endangered
SSC: California Species of Special Concern
FP: California Fully Protected Species
[1] Refers to records within the Newbury Park U.S. Geological Survey (USGS) 7.5-minute quadrangle and eight surrounding quadrangles (i.e., Simi, Moorpark, Santa Paula, Thousand Oaks, Camarillo, Newbury Park, Point Dume, Point Mugu, Triunfo Pass)

Crotch's Bumble Bee

Crotch's bumble bee is a candidate for listing as "Endangered" under CESA and is afforded the protection of CESA while the California Fish and Game Commission decides if listing the species is warranted. This species occurs primarily in California, including the Mediterranean region, Pacific Coast, Western Desert, Great Valley, and adjacent foothills through most of southwestern California (The Xerces Society 2018). In California, the species inhabits open grassland and scrub habitats (The Xerces Society 2018). The size of Crotch's bumble bee colonies has not been well documented, but like most other species of bumble bees, the species primarily nests underground (The Xerces Society 2018). Bumble bees, including Crotch's bumble bee, are generalist foragers and have been reported visiting a wide variety of flowering plants. Since it has a very short tongue, Crotch's bumble bee is best suited to forage at open flowers with short corollas (The Xerces Society 2018). The plant families most associated with observations or collections of the species from California include Fabaceae, Apocynaceae, Asteraceae, Lamiaceae, and Boraginaceae (The Xerces Society 2018). Nectar plants known to be visited by Crotch's bumble bee include the genera *Asclepias*, *Chaenactis*, *Lupinus*, *Medicago*, *Phacelia*, and *Salvia* (Williams et al. 2014, Xerces Society et al. 2018), but it is assumed flowering plants in other genera could also support foraging by this species.

A total of 6 individual Crotch's bumble bees were observed foraging on deerweed and purple sage within the project site during focused surveys for the species. Hundreds of Voznesenski bumble bee (*Bombus vosnesenskii*) and California bumble bee (*Bombus californicus*) individuals were also observed onsite during the surveys. Potential impacts to Crotch's bumble bee are analyzed in Section 6.

Coastal whiptail

Coastal whiptail is a CDFW Species of Special Concern (SSC). This species is a slim-bodied lizard with a long slender tail and can be found in a variety of habitats, including hot and dry open areas with sparse vegetation such as chaparral, woodland, and riparian areas (Nafis 2023). Coastal whiptail was not observed during the biological surveys and there are no California Natural Diversity Database records within 5 miles of the project site (CDFW 2023a); however, suitable habitat is present throughout the study area where vegetation is sparse and this species has a moderate potential to occur on site. Potential impacts to this species are analyzed in Section 6.

Burrowing Owl

Burrowing owl is a CDFW SSC. With a relatively wide-ranging distribution throughout the west, burrowing owls are considered habitat generalists (Lantz et al. 2004). In California, burrowing owls are year-long residents of open, dry grassland and desert habitats, and in grass, forb, and open shrub stages of pinyon-juniper and ponderosa pine habitats (Zeiner et al. 1990). Preferred habitat is generally typified by short, sparse vegetation with few shrubs, level to gentle topography, and well-drained soils (Poulin et al. 2020). According to Allen et al. (2016), the breeding activity of this species is mainly confined to the Antelope Valley; however, wintering and transient birds are occasionally seen in coastal locations of Los Angeles County and Ventura County.

The presence of suitable burrows (i.e., approximately 4 inches or greater at the entrance) is the most essential component of burrowing owl habitat, as they are required for nesting, roosting, cover, and caching prey. In California, burrowing owls most commonly live in burrows created by California ground squirrels but may occur in human-altered landscapes such as agricultural areas, ruderal grassy fields, vacant lots, and pastures if the vegetation structure is suitable (i.e., open and sparse), usable burrows are available, and foraging habitat occurs in close proximity (Gervais et al. 2008). Debris piles, riprap, culverts, and pipes can be used for nesting and roosting.

Neither burrowing owl nor its sign were observed during the biological surveys conducted on site and there are no California Natural Diversity Database records within 5 miles of the project site (CDFW 2023a). The nearest CNDDB occurrence is a little over 8 miles to the west at Camarillo Airport. California ground squirrels could be heard in the surrounding open space areas, but none were observed on the project site. Due to previous grading and other disturbance, soils on site are compacted and very few burrows were observed, none of which were suitable for burrowing owl (i.e., approximately 4 inches or greater at the entrance). Burrowing owl is not expected to nest or winter on site but could occur as a transient during migration. Therefore, the project is not expected to result in direct, indirect, or cumulative impacts to burrowing owl and impacts to this species are not further analyzed in this BRTR.

California Condor

California condor is listed as endangered under FESA and CESA and is a California Fully Protected species. California condor are obligate scavengers, eating carrion such as cattle, sheep, deer, and ground squirrel carcasses. This species requires vast expanses of open savannah, grassland, and foothill chaparral with cliffs, large trees, and snags for roosting and nesting. California condor nest in rock formations (crevices, overhung ledges, and potholes), deep caves, and occasionally, in cavities in giant sequoia trees (*Sequoiadendron giganteus*) (USFWS 1996; Snyder and Schmitt 2002).

No nesting habitat present on the project site. The sparse scrub vegetation community provides marginal foraging habitat for this species; however, no livestock grazing takes place within the project site and the project site does not support a regular, predictable source of large mammalian carrion (i.e., dead cattle) required by this species. Mule deer and other potential food sources occur within the project site, though these species are not anticipated to be common residents on site and the site would not be expected to provide the food source necessary for regular California condor use. Moreover, there are no California Natural Diversity Database records of this species in the project vicinity and no observations recorded on eBird south of the Santa Susana Mountains (CDFW 2023a, eBird 2023). Therefore, there is a low potential for California condor to fly over and this species is not expected to use the project site for foraging or nesting. The project is not expected to result in direct, indirect, or cumulative impacts to California condor and impacts to this species are not further analyzed in this BRTR.

Coastal California Gnatcatcher

Coastal California gnatcatcher (CAGN) is a CDFW SSC and listed as threatened under FESA. This species is a resident songbird found below 2,500 feet in elevation in Southern California. It generally prefers open sage scrub with low-growing, drought-deciduous shrubs, including California sagebrush, California buckwheat, and sages (*Salvia* spp.) as a dominant or co-dominant species (Mock 2004). Although much of the coastal scrub within the project site is disturbed and consists of fragmented stands, there are recent records from the adjacent Conejo Canyons Open Space area (CDFW 2023a; eBird 2023) and undisturbed suitable habitat is present in the open space surrounding the project site. Based on the initial literature review and reconnaissance surveys conducted in September and October 2022, it was determined that CAGN had a moderate potential to occur on the project site.

Protocol-level focused surveys were conducted in 2023 to determine presence or absence of the species (see Section 3.2.5 and Appendix F). No CAGN were observed or audibly detected during the six survey passes. CAGN is currently considered absent from the study area, and it is not expected to occur on the project site. Therefore, the project is not expected to result in direct, indirect, or cumulative impacts to CAGN and impacts to this species are not further analyzed in this BRTR.

Loggerhead Shrike

Loggerhead shrike is a CDFW SSC that occurs throughout the United States, Mexico, and portions of Canada and is widespread at the lower elevations in California (Humple 2008). Preferred habitats for the species are open areas that include scattered shrubs, trees, posts, fences, utility lines, or other structures that provide hunting perches with views of open ground, as well as nearby spiny vegetation or man-made structures (such as the top of chain-link fences or barbed wire) that provide a location to impale prey items for storage or manipulation (Humple 2008). Nest sites are chosen based more on the cover than the particular vegetation species and are usually constructed in a dense shrub or tree well below the crown and are well concealed (Yosef 1996). Although loggerhead shrike was not observed during the biological surveys, the species is regularly observed in the project vicinity, including in the Conejo Canyons Open Space adjacent to the project site (eBird 2023), and it has a moderate potential to forage and nest in the study area. Potential impacts to this species are analyzed in Section 6.

Yellow-Breasted Chat

Yellow-breasted chat is a CDFW SSC that has a broad geographic range occurring in several disjunct areas in the United States, southwestern portions of Canada, and Mexico (Eckerle and Thompson 2001). In Southern California, the yellow-breasted chat nests in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush with well-developed understories. One yellow-breasted chat was detected in the study area, approximately 60 feet from the project boundary, during the biological surveys. Suitable nesting habitat is absent from the project site, but this species could nest in the riparian woodland habitat present within the unnamed drainage extending west from the project site. Potential impacts to this species are analyzed in Section 6.

Mountain Lion

Mountain lion is not threatened or endangered in California; however, the southern and central coast California evolutionary significant units are candidate species for listing under CESA. Mountain lions are large predatory mammals that prefer areas with dense undergrowth and cover in deserts, humid coast forests, arid hillsides, and scrub and oak woodlands.

Neither mountain lions nor any sign (i.e., scat and/or tracks) was observed during the biological surveys. The slopes adjacent to the project site provide chaparral and scrub habitat with dense undergrowth and cover suitable for mountain lion. In addition, mule deer sign was observed during biological surveys. The study area is also contiguous with open space areas to the west and north that provide suitable habitat for this species, including the unnamed drainage extending west from the study area, which is densely vegetated with riparian woodland habitat.

The project site has been heavily disturbed and does not contain the dense vegetation in which mountain lion is likely to occur. Human activity associated with the surrounding developed parcels and recreational activities associated with the trails within the adjacent Conejo Canyons Open Space are expected to limit the presence of mule deer, which is one of the preferred prey for the species (Center for Biological Diversity and the Mountain Lion Foundation 2019). As such, mountain lion would be expected to utilize the project site only rarely during movement

through its home range or during the dispersal of young. This species has a low potential to occur on the densely vegetated slopes of the study area as a transient during foraging, movement through its home range, or during the dispersal of young. However, due to the proximity of the study area to development, lions are more likely to use the largely undisturbed open space areas surrounding the study area that are farther from existing human activity. No suitable habitat for natal dens is present on the project site and natal dens are not expected in the study area surrounding the project site since females typically avoid areas of human activity (Center for Biological Diversity and the Mountain Lion Foundation 2019). Because the project site does not provide suitable natal den opportunities or foraging habitat, the project is not expected to result in direct, indirect, or cumulative impacts to mountain lion and impacts to this species are not further analyzed in this BRTR.

5.5 Wildlife Corridors and Habitat Linkages

Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals and the dispersal of plants. Habitat linkages are narrow and/or small movement pathways that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation; they may be continuous or discrete habitat "islands" that function as steppingstones for wildlife dispersal and movement.

The project site is located at the intersection of existing development and undeveloped open space. U.S. Route 101, located approximately 0.75 miles to the southwest, is a major barrier to wildlife movement with additional wildlife connectivity restrictions from the industrial and commercial development immediately east and south of the project site. The Conejo Canyons Open Space, immediately north and west of the project site, is an approximately 1,673-acre area owned and managed by the Conejo Open Space Conservation Agency. This area is contiguous with the Conejo Mountains, Mount Clef Ridge, and other open space, much of which has been mapped as regional habitat connectivity and wildlife corridors (South Coast Wildlands 2008).

The Santa Monica–Sierra Madre Connection, identified in the South Coast Missing Linkages project (SCMLP), stretches from the Santa Monica Mountains to the peaks of the Santa Susana Mountains and the Sierra Madres Ranges of the Los Padres National Forest, and provides one of the few coastal-inland connections remaining in Southern California (South Coast Wildlands 2008). A variety of habitats are present in the Santa Monica–Sierra Madre Connection, dominated by scrub and chaparral, which supports a diversity of organisms and provides live-in and move-through habitat for numerous native species (Penrod et al. 2006). The Santa Monica–Sierra Madre Connection boundary is the basis for a habitat Connectivity and Wildlife Corridors overlay zone established by Ventura County to "preserve the functional connectivity for wildlife and vegetation … by minimizing direct and indirect barriers, minimizing loss of vegetation and habitat fragmentation and minimizing impacts to those areas that are narrow, impacted or otherwise tenuous with respect to wildlife movement" (Ventura County Ordinance Numbers 4537 and 4539).

The Santa Monica–Sierra Madre Connection overlaps approximately 1.7 acres of the project site along its northern boundary (CDFW 2023b; Figure 3).

Although the vegetation present on the project site is highly disturbed, composed primarily of non-native vegetation, such as black mustard, and disturbed native vegetation, it could provide move-through habitat for wildlife utilizing the adjacent Conejo Canyons open space. Wildlife usage is most likely in the northern and western portions of the site, which are contiguous with open space (the eastern portion of the project site is less likely to be utilized due to the commercial development located immediately to the southeast and because these parcels are disconnected from the other portions of the site and open space by the paved Rancho Conejo Blvd to the north and Conejo Center

Drive to the west). However, because the project site is highly disturbed, subject to regular human use, including off-road vehicles, and adjacent to existing development, wildlife is far more likely to utilize the higher quality habitat present in the open space to the north and west for movement and dispersal.

5.6 Jurisdictional Wetlands and Waters

A formal delineation of potentially jurisdictional aquatic resources was not conducted; however, the site was inspected for the presence of potentially jurisdictional wetlands and waters. No potential jurisdictional features were identified within the project site during the reconnaissance survey. Nor were any aquatic features identified during the desktop review of aerial imagery (Google 2023), the National Hydrography Dataset and Watershed Boundary Dataset (USGS 2023), and the USFWS National Wetland Inventory (USFWS 2023b). There is an ephemeral feature present west of the project site, which appears to originate west of Conejo Center Drive. This feature is potentially regulated by U.S. Army Corps of Engineers under Section 404 of the Clean Water Act, Central Coast Regional Water Quality Control Board under Section 401 of the Clean Water Act and the Porter–Cologne Water Quality Control Act, and/or CDFW under Sections 1600–1616 of the California Fish and Game Code.

5.7 Protected Trees

During biological surveys, several trees protected under Articles 42 and 43 of the Thousand Oaks Municipal Code and the City's Oak Tree Protection Standards (Resolution 2010-014) were observed within the study area. One toyon individual meeting the City's definition of a landmark tree (Title 9, Chapter 4, Article 43: Landmark Tree Preservation and Protection) was documented on the project site (Figure 4). Several coast live oaks protected under Article 42 of the Thousand Oaks Municipal Code and several toyon trees considered landmark trees under Article 43 are located near the project site boundary and the protected zones of these trees (i.e., 5 feet beyond the dripline, but no less than 15 feet from the trunk) may extend into the project site. Several sapling coast live oak trees and Southern California black walnut trees were observed within the project site boundary; however, these individuals do not meet the size criteria to be protected under the City's Oak Tree Ordinance or Landmark Tree Protection and Preservation Ordinance.

5.8 Local, Regional, or State Habitat Conservation Plans

The study area is not within any habitat conservation plan (HCP), natural community conservation plan (NCCP), or other approved local, regional, or state habitat conservation plan (CDFW 2019).

INTENTIONALLY LEFT BLANK

6 Project Impacts

This section addresses direct and indirect impacts to biological resources that would result from implementation of the proposed project.

6.1 Definition of Impacts

6.1.1 Direct Permanent Impacts

Direct permanent impacts refer to the absolute and permanent physical loss of a biological resource due to clearing, grading, and/or construction of structures, which can be determined in four ways: (1) permanent loss of vegetation communities, land covers, and general wildlife and their habitat; (2) permanent loss of or harm to individuals of special-status plant and wildlife species; (3) permanent loss of suitable habitat for special-status species; and (4) permanent loss of wildlife movement and habitat connectivity. It is assumed that the potential for direct impacts to biological resources will be limited to the first phase of the proposed project, during which all vegetation removal and grading would be completed.

6.1.2 Direct Temporary Impacts

Direct temporary impacts refer to a temporal loss of vegetation communities and land covers resulting from vegetation and land cover clearing. The main criterion for direct temporary impacts is that impacts would occur for a short period of time and would be reversible. Areas currently supporting native vegetation temporarily disturbed by construction activities would be restored and revegetated with a native species mix similar to that which existed prior to disturbance following completion of work in the area such that full biological function can be restored. Areas not currently supporting native vegetation would be adequately restored to prevent adverse effects such as erosion or establishment of invasive species following construction.

6.1.3 Indirect Impacts

Indirect impacts are reasonably foreseeable effects caused by project implementation on remaining or adjacent biological resources outside the direct construction disturbance zone that may occur during construction (i.e., short-term construction related indirect impacts) or later in time as a result of the development (i.e., long-term, or operational, indirect impacts). Indirect impacts may affect areas within the defined study area, but outside the construction disturbance zone. Indirect impacts include short-term effects immediately related to construction activities and long-term or chronic effects related to the human occupation of developed areas (i.e., development-related long-term effects) that are adjacent to naturalized areas.

For the proposed project, it is assumed that the potential indirect impacts resulting from construction activities include fugitive dust from earthmoving activities, leaks or spills from construction equipment, noise from construction activities, and general human presence that may temporarily disrupt species and habitat vitality, as well construction-related soil erosion and runoff that could affect downslope resources.

6.1.4 Explanation of Findings of Significance

Impacts to sensitive vegetation communities or riparian habitat, special-status plant species, special-status wildlife species, wildlife corridors and habitat connectivity, and regional resource planning must be analyzed to determine whether such impacts are significant. CEQA Guidelines Section 15064(b) states that an ironclad definition of "significant" effect is not possible because the significance of an activity may vary with the setting. However, CEQA Guidelines Section 15065(a) lists impacts that are helpful in defining whether a project may have a significant effect on the environment. Mandatory findings of significance occur when there is substantial evidence that a project could (1) substantially degrade the quality of the environment, (2) substantially reduce the habitat of a fish or wildlife species, (3) cause a fish or wildlife population to drop below self-sustaining levels, (4) threaten to eliminate a plant or animal community, or (5) reduce the number or restrict the range of a rare or endangered plant or animal.

The following questions from the CEQA Appendix G environmental checklist help guide the assessment of impacts to biological resources:

Impact BIO-1. Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as being a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS?

Impact BIO-2. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by CDFW or USFWS?

Impact BIO-3. Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Impact BIO-4. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impedes the use of native wildlife nursery sites?

Impact BIO-5. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Impact BIO-6. Would the project conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?

The evaluation of whether or not an impact to a particular biological resource is significant must consider both the resource itself and the role of that resource in a regional context. Substantial impacts are those that contribute to, or result in, permanent loss of an important resource, such as a population of a rare plant or animal. Impacts may be important locally because they result in an adverse alteration of existing site conditions but considered not significant because they do not contribute substantially to the permanent loss of that resource regionally. The severity of an impact and the offsetting benefits of mitigation are the primary determinants of whether or not that impact can be mitigated to a less-than-significant level.

6.2 Impact BIO-1: Special-Status Species

6.2.1 Special-Status Plants

As discussed in Section 5.4.1, one special-status plant species was documented during focused rare plant surveys: Conejo dudleya (*Dudleya parva*). Potential direct and indirect impacts to this species resulting from project implementation are discussed below.

Direct Impacts

All the mapped Conejo dudleya individuals are located outside of proposed work areas and no Conejo dudleya individuals would be removed as a result of the project (Figure 4). Therefore, project implementation would not result in direct impacts to Conejo dudleya. Besides Conejo dudleya, no other special-status plant species were observed during botanical surveys. Botanical surveys occurred in a year with greater-than-average rainfall (USDA 2023c), during the blooming period for special-status plant species that had been determined previously to have a moderate potential to occur on site. These surveys were conducted after reference checks at known populations in the area confirmed that target species were in bloom. It is anticipated that no other special-status plant species occur on the project site or would be directly impacted by the project.

Indirect Impacts

Of the approximately 514 mapped Conejo dudleya individuals, 5 are located along the project site boundary, and an additional 32 individuals are located within approximately 25 feet of the proposed grading limits. The remaining mapped individuals are positioned on the hillside upslope and west of the project site, between approximately 25 feet and 150 feet from the grading limits. Conejo dudleya individuals could be impacted by both short-term construction-related effects and long-term development-related effects associated with the project.

Short-term construction-related effects that have the potential to indirectly impact special-status plant species include fugitive dust; litter; accidental clearing, grading, and trampling; and increased erosion, runoff, sedimentation, and chemical pollution. Excessive dust generated during construction can decrease or limit plant survivorship by decreasing photosynthetic output, reducing transpiration, and adversely affecting reproductive success. Construction activities such as grading, which have the potential to alter the surface hydrology, thereby affecting plants by reducing access to sheet flow during rain events or increasing the chance of erosion, sedimentation, and chemical pollution, are unlikely to impact Conejo dudleya since the mapped individuals are all upslope of the proposed work areas. However, operation and maintenance of construction equipment could increase the chance of petroleum or other chemical spills or leaks (e.g., fuels, lubricants, cleaning solutions) that, although less likely to affect upslope individuals, could affect Conejo dudleya nearest to the work areas. Individual plants could also be crushed through the inadvertent clearing of vegetation or by construction personnel walking outside the designated disturbance limits.

Over the long term, the proposed development could result in an increase in human activity along the open space–urban interface (also referred to as “edge areas”). Human activity in these areas may result in the trampling of special-status plants and other vegetation and the compaction of soils, both of which interact with the soil chemistry and can affect soil moisture, water penetration, surface flows, and erosion, which in turn can affect the long-term viability of plants and plant communities. Human activity and development can also result in altered fire regimes that could affect special-status plants. As discussed in Section 4.1, historically, the project site has been regularly

maintained in accordance with applicable law, including fuel modification activities within 100 feet of existing structures on adjacent properties. Portions of the project are also currently subject to regular human use, including hiking, dog walking, mountain biking, off-road vehicle use, and trash dumping. These activities occur primarily in the northern and southwestern portions of the project site, adjacent to the Conejo Canyons Open Space (see Figure 2). In the long-term, development of the proposed project should result in a decrease in these uses, which currently contribute to edge effects and habitat degradation. Nevertheless, any increase in human use of the project site could contribute to edge effects in the long-term. Other long-term development-related effects that have the potential to indirectly impact special-status plant species include:

- Fertilizers and herbicides, which may be used in association with landscaped areas on the project site, may penetrate open space areas through runoff and overspray, adversely affecting special-status plant species by killing or weakening individuals and/or allowing establishment of non-native species in edge areas.

- Changes in hydrology due to increased urban and stormwater runoff from the installation of impervious surfaces, including roads and structures, and/or changes in the water table, which can result from mass grading, soil compaction, and development.

- Introduction of invasive plant species that thrive in edge habitats, which can degrade habitat by forming monocultures that displace native plants and can colonize areas that are subject to disturbance.

Short-term and long-term indirect impacts to special-status plant species, resulting in the loss of Conejo dudleya individuals or degradation of habitat, could be significant without mitigation. Implementation of **MM-BIO-1** (Worker Education and Awareness Program), **MM-BIO-2** (Biological Monitoring), **MM-BIO-3** (Demarcation of Disturbance Limits), and **MM-BIO-4** (Conejo Dudleya ESA Signage and Habitat Enhancement) would avoid and minimize the potential for inadvertent impacts to special-status plant species outside of the disturbance limits. In the event that impacts to occupied Conejo dudleya habitat are not avoided, **MM-BIO-4** also requires off-site in-kind habitat enhancement to achieve no net loss of occupied Conejo dudleya habitat. **MM-BIO-5** (Stormwater Pollution Prevention Plan) would reduce the potential for impacts due to fugitive dust and increased erosion, runoff, sedimentation, and chemical pollution. **MM-BIO-6** (Invasive Plant Species Prevention and Weed Control Plan) would avoid and minimize the introduction of invasive plant species and reduce the potential for impacts from fertilizers and herbicides. Implementation of **MM-BIO-1** through **MM-BIO-6** would reduce indirect impacts to special-status plants to less than significant.

6.2.2 Special-Status Wildlife

As discussed in Section 5.4.1, 2 special-status wildlife species (Crotch's bumble bee and yellow-breasted chat) were detected on or near the project site and 2 special-status wildlife species (coastal whiptail and loggerhead shrike) have a moderate potential to occur on site based on the presence of suitable habitat and their known occurrence in the project vicinity (see Table 4). Potential direct and indirect impacts to these species resulting from project implementation are discussed below.[6] The significance of direct impacts to each special-status species is evaluated based on the loss of suitable habitat and the project's potential to impact individuals through injury or

[6] In February 2022, a Mitigated Negative Declaration (MND) was prepared for the proposed project. The 2022 MND included mitigation to reduce impacts to coast horned lizard and San Diego desert woodrat to less than significant. Based on the analysis conducted in this BRTR, these species were determined to have a low potential to occur on the project site (see Appendix E) and therefore impacts are not analyzed and no mitigation to reduce impacts to these species is recommended.

mortality. Project-related impacts could be considered significant if the impact causes the greater population of the species to drop below self-sustaining levels.

Direct Impacts

Special-Status Invertebrates Species

Crotch's bumble bee is a generalist forager and could forage anywhere on site where suitable floral resources are present. Although much of the project site is disturbed with large portions dominated by non-native vegetation, floral resources that could support Crotch's bumble bee foraging are present throughout the site. The entire project site also has the potential to support nesting sites for bumble bee colonies, including Crotch's bumble bee, which are primarily located underground in abandoned holes made by ground squirrels, mice, and rats, but may be above ground in abandoned bird nests or empty cavities (Osborne et al. 2008, Williams et al. 2014).

Implementation of the proposed project would result in permanent direct impacts to Crotch's bumble bee through the removal of approximately 49.53 acres of potentially suitable habitat. Because Crotch's bumble bee typically nests underground, individuals would also be highly vulnerable to injury and mortality during construction, which could crush nests and individuals, if present on site.

Direct impacts to Crotch's bumble bee resulting from habitat loss would be less than significant. Abundant suitable habitat, including foraging and nesting resources, is present in the project vicinity, including throughout the approximately 1,673-acre Conejo Canyons Open Space adjacent to the project site. These areas will continue to provide habitat opportunities for this species. As a result, the loss of suitable habitat would not substantially reduce the habitat for the species and would not cause the species population to drop below self-sustaining levels; therefore, direct impacts resulting from the loss of habitat for Crotch's bumble bee would be less than significant.

Harm to or the loss of individuals during construction could be significant, absent mitigation. Potential significant direct impacts to Crotch's bumble bee would be avoided and reduced to less than significant with the implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-7**. **MM-BIO-1** (Worker Education and Awareness Program) and **MM-BIO-2** (Biological Monitoring) would ensure compliance with environmental/permit regulations and mitigation measures. **MM-BIO-7** (Crotch's Bumble Bee Pre-Construction Surveys) would require pre-construction habitat assessments and focused surveys to identify any Crotch's bumble bee nest(s) present within the impact footprint. The measure would require no-impact buffers to be established around nests, thereby avoiding potential direct impacts to Crotch's bumble bee resulting from the loss of individuals.

Special-Status Reptile Species

Coastal whiptail has a moderate potential to occur in the study area, including on the project site, based on the presence of suitable habitat and known occurrences in the region. Suitable habitat for this species occurs within the chaparral and scrub communities on the project site, totaling approximately 26.64 acres.

Implementation of the proposed project would result in permanent direct impacts to coastal whiptail through the loss of approximately 25.55 acres of suitable habitat. Individuals are cryptic and slow moving on the surface or are otherwise underground, and therefore, are highly vulnerable to injury and mortality during construction.

Direct impacts to coastal whiptail resulting from habitat loss would be less than significant. Abundant suitable habitat is present in the project vicinity, including throughout the approximately 1,673-acre Conejo Canyons Open

Space adjacent to the project site. These areas will continue to provide habitat opportunities for this species. As a result, the loss of suitable habitat would not substantially reduce the habitat for the species and would not cause the species population to drop below self-sustaining levels; therefore, direct impacts resulting from the loss of habitat for coastal whiptail would be less than significant.

Harm to or the loss of individuals during construction could be significant, absent mitigation. Potential significant direct impacts to coastal whiptail would be reduced to less than significant with the implementation of **MM-BIO-1** through **MM-BIO-3**, and **MM-BIO-8**. **MM-BIO-1** (Worker Education and Awareness Program) and **MM-BIO-2** (Biological Monitoring) would ensure compliance with environmental/permit regulations and mitigation measures. **MM-BIO-3** (Demarcation of Disturbance Limits) would prevent reptiles from moving into work areas. **MM-BIO-8** (Special-status Reptile Pre-construction Surveys) would require pre-construction surveys for coastal whiptail and the implementation of a City-approved relocation plan should special-status reptiles be found within the impact footprint.

Special-Status and Protected Nesting Bird Species

One special-status bird species was observed during biological surveys conducted on the project site: yellow-breasted chat. An additional special-status bird species – loggerhead shrike – has a moderate potential to nest and forage in the study area based on the presence of suitable habitat. There is no suitable nesting habitat for yellow-breasted chat on the project site and no direct impacts to this species are expected to occur. Loggerhead shrike nest sites are typically well concealed in a dense shrub or tree. Suitable vegetation for nesting is limited on the project site, but there is some potential for this species to nest in the scrub and chapparal communities on site, totaling approximately 26.64 acres.

Implementation of the proposed project would result in permanent direct impacts to loggerhead shrike through the loss of approximately 25.55 acres of suitable nesting habitat. Individual loggerhead shrike adults are unlikely to be directly killed or injured during construction activities because they are highly mobile and would likely leave the area during construction. However, nesting activities by this species, as well as nesting activities of other bird species protected under the Migratory Bird Treaty Act and California Fish and Game Code that have the potential to nest within the proposed development footprint, could be disrupted if construction occurs during the breeding season. Impacts to nesting birds could occur as a result of nest abandonment, reduced reproductive success, or other disruptions to nesting. Nests, eggs, and young could also be crushed or otherwise directly affected during vegetation clearing and grading.

Direct impacts to loggerhead shrike resulting from habitat loss would be less than significant. The nesting habitat on the project site is of low quality and abundant suitable habitat is present in the project vicinity, including throughout the approximately 1,673-acre Conejo Canyons Open Space adjacent to the project site. These areas will continue to provide nesting opportunities for this species. As a result, the loss of suitable habitat would not substantially reduce the habitat for the species and would not cause the species population to drop below self-sustaining levels; therefore, direct impacts resulting from the loss of nesting habitat for loggerhead shrike would be less than significant.

Harm to or the loss of individual loggerhead shrikes or other bird species protected under the MBTA and California Fish and Game Code (Sections 3503, 3503.5, and 3513), including eggs and young, could be significant, absent mitigation. These impacts would be reduced to less than significant with the implementation of **MM-BIO-1**, **MM-BIO-2**, and **MM-BIO-9**. **MM-BIO-1** (Worker Education and Awareness Program) and **MM-BIO-2** (Biological Monitoring) would ensure compliance with environmental/permit regulations and mitigation measures. **MM-BIO-9** (Nesting Bird

Avoidance) places seasonal restrictions on construction and, in instances where those restrictions are not feasible, requires preconstruction nesting bird surveys to be conducted during the breeding season and avoidance buffers to be established if active nests are identified.

Indirect Impacts

As a result of project implementation, special-status wildlife species may be indirectly impacted by short-term construction-related effects and by long-term development-related effects, which may occur as a result of both habitat degradation and effects on individuals.

Potential short-term construction-related indirect impacts to wildlife habitat include fugitive dust; runoff, sedimentation, chemical pollution, and erosion; litter; construction; and accidental clearing, grading, and trampling. These effects could result in habitat degradation in the same manner as is described for special-status plants (see discussion in Section 6.2.1). Over the long term, habitat degradation could occur as a result of altered hydrology, altered fire regimes, and invasion of non-native plant species. In addition, increases in human activity along the open-space-urban interface could result in trampling of vegetation and/or the compaction of soils, which can affect the long-term viability of plant communities and degrade wildlife habitat.

As discussed in Section 4.1, historically, the project site has been regularly maintained in accordance with applicable law, including fuel modification activities within 100 feet of existing structures on adjacent properties. Portions of the project site are also currently subject to regular human use, including hiking, dog walking, mountain biking, off-road vehicle use, and trash dumping. These activities occur primarily in the northern and southwestern portions of the project site, adjacent to the Conejo Canyons Open Space (see Figure 2). In the long-term, development of the proposed project should result in a decrease in these uses, which currently contribute to edge effects and habitat degradation. Nevertheless, any increase in human use on the project site could contribute to edge effects in the long-term.

Potential short-term construction-related effects on individuals generally include noise and vibration; lighting; accidental clearing and grading; increased human activity; and an increase in non-native, invasive animal species. Potential long-term development-related effects on individuals generally include lighting; increased predation or harassment by mesopredators; invasion by non-native and invasive wildlife species; pesticide use; altered fire regimes; and increased vehicle collisions. Although there is no suitable nesting habitat for yellow-breasted chat on the project site, this species could nest in the riparian habitat present along the unnamed drainage extending west from the project site. Approximately 0.73 acres of suitable nesting habitat exists in the study area, within 300-feet of the project site. The potential short-term and long-term indirect impacts described above have the potential to affect individual yellow-breasted chat, loggerhead shrike, and Crotch's bumble bee that may nest adjacent to the project site during and after construction. Coastal whiptail present on and adjacent to the project site may also be indirectly impacted during and after construction.

Potential short-term and long-term indirect impacts to special-status wildlife species from habitat degradation would be less than significant. Abundant suitable habitat is present in the project vicinity, including throughout the approximately 1,673-acre Conejo Canyons Open Space adjacent to the project site. These areas will continue to provide habitat for special-status wildlife species. As a result, indirect impacts resulting from habitat degradation outside the impact footprint and/or after development would not substantially reduce the habitat for special-status wildlife species and would not cause the special-status wildlife species populations to drop below self-sustaining levels. Potential indirect impacts to special-status wildlife species resulting from harm to or loss of individuals during and after construction, would be significant, absent mitigation. These impacts would be reduced to less than

significant with implementation of the following measures: **MM-BIO-1** (Worker Education and Awareness Program), **MM-BIO-2** (Biological Monitoring), and **MM-BIO-3** (Demarcation of Disturbance Limits) would ensure compliance with environmental/permit regulations and mitigation measures and prevent inadvertent impacts outside of the designated project footprint. Although not required as mitigation for impacts due to habitat degradation, **MM-BIO-5** (Stormwater Pollution Prevention Plan) would reduce the potential for fugitive dust and increased erosion, runoff, sedimentation, and chemical pollution to affect wildlife habitat outside of the impact footprint and **MM-BIO-6** (Invasive Plant Species Prevention and Weed Control Plan) would avoid and minimize the introduction of invasive plant species and reduce the potential for habitat degradation from fertilizers and herbicides. **MM-BIO-7** (Crotch's Bumble Bee Pre-Construction Surveys), **MM-BIO-8** (Special-status Reptile Pre-construction Surveys), and **MM-BIO-9** (Nesting Bird Avoidance) would reduce the potential for the loss of or harm to special-status wildlife individuals. **MM-BIO-10** (Lighting) would minimize indirect impacts from lighting during construction and after development is complete by requiring all lighting along the perimeter of natural areas to be downcast luminaries with light patterns directed away from natural areas.

6.3 Impact BIO-2: Riparian Habitat and Sensitive Communities[7]

Direct Impacts

Direct impacts to vegetation communities and land cover types would occur as a result of grading, which would result in the permanent loss of 49.53 acres, 96.7% of the total 51.28-acre project site. These impacts are summarized in Table 5 and depicted on Figure 4. Neither riparian habitats nor other sensitive vegetation communities were identified on the project site and no direct impacts would occur to these resources. Direct impacts to vegetation communities would be less than significant because the communities and land cover types on the project site (1) are not identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service and (2) are generally widespread in the region. The loss of these vegetation communities and land cover types would not substantially reduce their abundance and/or distribution.

Indirect Impacts

Sensitive vegetation communities adjacent to and outside of the proposed work areas could be indirectly impacted by project implementation. Potential indirect impacts to sensitive vegetation communities would be similar to indirect impacts to special-status plant species and would include short-term construction-related effects and long-term development-related effects. Short-term construction-related effects that have the potential to indirectly impact sensitive vegetation communities would primarily result from the generation of fugitive dust; litter; accidental clearing, grading, and trampling; and increased erosion, runoff, sedimentation, and chemical pollution. Potential long-term development-related effects that have the potential to indirectly impact sensitive vegetation communities include the use of fertilizers and herbicides; introduction of non-native invasive species; increased urban and stormwater runoff and changes in hydrology; and increased human activity, which could contribute to edge effects and alter of the natural fire regime.

A total of 5 sensitive vegetation communities were mapped in the study area, outside of the project site: *Eriogonum cinereum* association, *Opuntia oricola* provisional association, *Isocoma menziesii* association, *Platanus racemosa*–

[7] Impacts to native vegetation communities that are not considered sensitive are discussed in Impact-BIO-5, which addressed impacts resulting from potential conflicts with local policies or ordinances.

Quercus agrifolia association, and *Heteromeles arbutifolia* provisional association. Short-term and long-term indirect impacts that may cause degradation or loss of these sensitive communities could be significant, absent mitigation. Implementation of the following mitigation measures would reduce these impacts to less than significant: **MM-BIO-1** (Worker Education and Awareness Program), **MM-BIO-2** (Biological Monitoring), and **MM-BIO-3** (Demarcation of Disturbance Limits) would avoid and minimize the potential for inadvertent impacts to sensitive vegetation communities outside of the disturbance limits; **MM-BIO-5** (Stormwater Pollution Prevention Plan) would reduce the potential for impacts due to fugitive dust and increased erosion, runoff, sedimentation, and chemical pollution; **MM-BIO-6** (Invasive Plant Species Prevention and Weed Control Plan) would avoid and minimize the introduction of invasive plant species and reduce the potential for impacts from fertilizers and herbicides.

Grand Total[2]				***49.53***

Notes: N/A = not applicable.
Totals may not sum due to rounding.

1 The term semi-natural stands vs. alliance is used in the Manual of California Vegetation to distinguish between natural vegetation communities and vegetation types dominated by non-native plants (Sawyer et al. 2009).

2 The conservation status of a vegetation community is designated by a number from 1 to 5, preceded by a letter reflecting the appropriate geographic scale of the assessment (G = global, N = national, and S = subnational). The numbers have the following meaning, based on NatureServe's Heritage Methodology (NatureServe 2023: 1 = critically imperiled; 2 = imperiled; 3 = vulnerable to extirpation or extinction; 4 = apparently secure; 5 = demonstrably widespread, abundant, and secure.

3 The *Heteromeles arbutifolia* provisional association is considered a sensitive vegetation community by CDFW despite the overall alliance's G5S4 ranking (CDFW 2023c).

6.4 Impact BIO-3: Jurisdictional Wetlands and Waters

Direct Impacts

Potentially jurisdictional wetlands and waters were not identified on the project site. Therefore, there would be no direct impacts to jurisdictional wetlands and waters.

Indirect Impacts

Potential indirect impacts could result from construction activities and would include impacts from the generation of fugitive dust and the potential introduction of chemical pollutants (including herbicides). Excessive dust can decrease the vigor and productivity of vegetation through effects on light, penetration, photosynthesis, respiration, transpiration, increased penetration of phytotoxic gaseous pollutants, and increased incidence of pests and diseases. Erosion and the release of chemical pollutants (releases of fuel, oil, lubricants, paints, release agents, and other construction materials) can reduce the water quality downstream and degrade associated habitats. These potential impacts could be significant, absent mitigation. Indirect impacts to potentially jurisdictional resources would be avoided through implementation of **MM-BIO-5** (Stormwater Pollution Prevention Plan Preparation and Implementation).

6.5 Impact BIO-4: Wildlife Corridors and Nurseries

The Conejo Canyons Open Space, immediately north and west of the project site, is an approximately 1,673-acre area owned and managed by the Conejo Open Space Conservation Agency. This area is contiguous with the Conejo Mountains, Mountclef Ridge, and other open space, much of which has been mapped as regional habitat connectivity and wildlife corridors (SCWildlands 2008). The Santa Monica–Sierra Madre Connection, identified in the South Coast Missing Linkages Project (SCMLP), extends through much of the Conejo Canyons Open Space and overlaps approximately 1.7 acres of the project site along its northern boundary, all of which will be impacted by the proposed project (CDFW 2023b; Figure 4). However, the project site is located at the intersection of existing

development and undeveloped open space and wildlife movement is restricted by the existing industrial and commercial development immediately east and south of the project site, as well as U.S. 101, a major highway approximately 0.75 miles south of the project site. Although the vegetation present on the project site could provide move-through habitat, because the project site is highly disturbed, subject to regular human use, including off-road vehicles, and adjacent to development, wildlife is expected to preferentially utilize the higher quality habitat present in the open space to the north and west for movement and dispersal. For these reasons, impacts to wildlife corridors and habitat linkages would be less than significant.

The project would be required to comply with the MBTA and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code by preventing the disturbance of nesting birds during construction activities. This would generally involve clearing the project site of all vegetation outside the nesting season (from September 1 through January 1) or if construction would commence within the nesting season (which generally runs from February 1 through August 31 for passerine species and from January 1 through June 30 for raptors), conducting a pre-construction nesting bird survey to determine the presence of nesting birds or active nests at a construction site. Any active nests and nesting birds must be protected from disturbance by construction activities through buffers between nest sites and construction activities. The buffer areas may be removed only after the birds have fledged. Compliance with the MBTA would ensure that the implementation of the project would not interfere with the nesting of any native bird species. Therefore, direct and indirect impacts to nursery sites would be less than significant due to compliance with regulations.

6.6 Impact BIO-5: Local Polices and Ordinances

City-Protected Trees

The City protects oak trees and landmark trees through City Ordinance (see Municipal Code Sections 9-4.42 and 9-4.43) and the City's Oak Tree Preservation and Protection Guidelines (Resolution 2010-014). In accordance with the Oak Tree Ordinance, no person shall cut, remove, encroach into the protected zone, or relocate any oak tree on any public or private property within the City, unless a valid oak tree permit has been issued by the City pursuant to the provisions of the Oak Tree Ordinance and the oak tree preservation and protection guidelines. No person shall cut, remove, encroach into the protected zone, or relocate any landmark tree on any public or private property within the City unless a valid landmark tree permit has been issued by the City pursuant to the Landmark Tree Preservation and Protection Ordinance

As discussed in Section 5.7, a single toyon tree meeting the City's definition of a landmark tree was mapped on the project site (Figure 4).[8] Several coast live oak trees and toyon trees are located around the perimeter of the project site and the protected zones of these trees (i.e., 5 feet beyond the dripline, but no less than 15 feet from the trunk) may extend into the project site. The project will be designed to avoid the protected zone of City-protected oak and landmark trees. Nevertheless, inadvertent impacts outside of the designated impact footprint during construction could result in the trimming, pruning, removal, or encroachment into the protected zones of protected oak and landmark trees. There is also the potential for other short-term and long-term indirect impacts to affect oak trees and landmark trees adjacent to and outside of the proposed work areas. Potential indirect impacts to City-protected trees would be similar to indirect impacts to special-status plant species and would include short-term construction-related effects such as increased erosion, runoff, sedimentation, and chemical pollution and

[8] As discussed in Section 5.7, coast live oak and Southern California black walnut trees observed on site do not meet the size criteria for protection under the City's Oak Tree Ordinance and Landmark Tree Protection and Preservation Ordinance, respectively; therefore, impacts to these trees are not analyzed,

long-term development-related effects such as the use of fertilizers and herbicides; introduction of non-native invasive species; increased urban and stormwater runoff and changes in hydrology; and increased human activity, which could contribute to edge effects and alter of the natural fire regime.

Indirect impacts to City-protected oak and landmark trees would be significant, absent mitigation. Implementation of **MM-BIO-1** (Worker Education and Awareness Program), **MM-BIO-2** (Biological Monitoring), and **MM-BIO-3** (Demarcation of Disturbance Limits) would minimize the potential for inadvertent impacts and other short-term construction-related indirect impacts. **MM-BIO-5** (Stormwater Pollution Prevention Plan) would reduce the potential for impacts due to fugitive dust and increased erosion, runoff, sedimentation, and chemical pollution. **MM-BIO-6** (Invasive Plant Species Prevention and Weed Control Plan) would avoid and minimize the introduction of invasive plant species and reduce the potential for impacts from fertilizers and herbicides. Implementation of these mitigation measures, along with **MM-BIO-11a** (Protected Tree Removal and Replacement), **MM-BIO-11b** (Tree Protection Prior to Initial Vegetation Removal or Initial Grading Activities), **MM-BIO-11c** (Tree Protection and Maintenance During Construction), and **MM-BIO-11d** (Tree Maintenance After Construction), which would require compliance with City ordinance regarding protective measures and replacement of impacted trees, would reduce impacts to City-protected trees to less than significant.

Thousand Oaks General Plan 2045

The City's General Plan includes Goal C-4 and Policy 4.1, which provide for the protection of oak and landmark trees through implementation of the City's Oak Tree and Landmark Tree Ordinances (see Section 2.3.1). Implementation of **MM-BIO-1**, **MM-BIO-2**, **MM-BIO-3**. **MM-BIO-5**. **MM-BIO-6**, and **MM-BIO-11a through d**, as described above, would ensure the project does not conflict with the General Plan's goals and policies related to oak and landmark trees.

Goal C-5 in the General Plan's Conservation Element calls for the proper management, conservation, and protection of native plant communities. In particular, policy C-5.2 requires the City, as feasible, "to protect, restore, and enhance critical wildlife habitat resources such as…chaparral and coastal sage scrub plant communities…in order to maintain the biodiversity, biological productivity, and ecological integrity of natural open space areas" (see Section 2.3.1), Both chaparral (0.23 acres) and costal scrub (25.31 acres) communities are present on the project site, all of which would be lost as a result of project implementation (see Section 6.3). The loss of 25.55 acres of chaparral and coastal scrub communities could be significant, absent mitigation, due to a conflict with General Plan policy C-5.2. Implementation of **MM-BIO-12** (Native Habitat Enhancement) would result in the enhancement of a total of 25.5 acres of native plant communities, including 0.23 acres of chaparral communities and 23.1 acres of coastal scrub communities, providing 1:1 mitigation for these communities. With implementation of **MM-BIO-12**, impacts due to a conflict with local policies would be reduced to less than significant.

6.7 Impact BIO-6: Habitat Conservation Plan/Natural Community Conservation Plan

The study area is not within any HCP, NCCP, or other approved local, regional, or state HCP (CDFW 2019). As such, there are no impacts to HCP, NCCP, or other approved local, regional, or state HCP.

INTENTIONALLY LEFT BLANK

7 Recommended Measures

The following mitigation measures are recommended to be implemented during the proposed project to reduce potentially significant impacts identified in Section 6 to a less-than-significant level.

MM-BIO-1 **Worker Education Awareness Program (WEAP).** Prior to the initiation of the initial vegetation removal or initial grading activities, all personnel associated with those activities shall attend a worker education awareness program (program) conducted by a City-approved qualified biologist. In general, the program shall discuss any potentially occurring sensitive biological resources or species and habitat preference(s), occupied habitat in the area, life histories, as well as potential construction impacts, protection measures, and project limits. Legal protections and regulations pertinent to the biological resources that may be present shall also be included in the program. A species and habitat fact sheet shall be developed prior to the training program and distributed at the training program to all contractors, employers and other personnel involved with the construction of the project.

After the kickoff meeting, the project proponent shall notify the City-approved qualified biologist in advance if additional contractors are employed during the initial vegetation removal or initial grading activities. A sign-in sheet will be circulated for signatures to all personal that attend the workers educational training to confirm that program materials were received and that they understand the information presented.

MM-BIO-2 **Biological Monitoring.** The project Applicant shall fund a City-approved, Biological Monitor during the initial vegetation removal or grading activities in undeveloped areas to monitor those activities and to ensure compliance with all mitigation measures. Prior to the issuance of a grading permit, the project Applicant shall submit the qualifications of the City-approved Biological Monitor(s) to the City for review and approval. The City-approved Biological Monitor shall be experienced in construction monitoring and be able to identify potentially occurring sensitive biological resources in the area. The City-approved Biological Monitor shall be present on site during all vegetation removal and initial grading activities in undeveloped areas and shall implement and monitor any required no-disturbance buffers for Crotch's bumble bee and/or nesting birds based on the results of pre-construction surveys conducted under MM-BIO-7 and MM-BIO-9. Each day, prior to the commencement of activities, the City-approved Biological Monitor shall survey the construction project footprint and surrounding areas for compliance with all Mitigation Measures.

MM-BIO-3 **Demarcation of Disturbance Limits.** Prior to commencement of initial vegetation removal and grading, the construction limits shall be clearly demarcated using high-visibility construction fencing. All construction activities, including equipment staging and maintenance, shall be conducted within the marked disturbance limits to prevent inadvertent disturbance to sensitive biological resources outside the limits of work. The fencing shall be maintained throughout the duration of all construction activities where Conejo dudleya (Dudleya parva) is present within 50 feet of construction limits. Any windblown trash generated by the project that collects on the fence will be regularly removed.

MM-BIO-4 **Conejo Dudleya Environmentally Sensitive Area Signage and Habitat Enhancement.** Prior to initial vegetation removal, grading, or other construction activities, signage will be installed where Conejo dudleya (*Dudleya parva*) is present within 50 feet of construction limits. Signage will identify the area as an Environmentally Sensitive Area (ESA) and specifically state that access is prohibited. Signage will remain in place for the life of the project.

Should accidental clearing outside of grading limits result in loss of Conejo dudleya individuals and/or loss of occupied habitat, the project Applicant shall commit to off-site in-kind habitat enhancement at a 3:1 ratio to achieve no net loss of special-status plant species habitat. Enhancement will occur within lands managed by the Conejo Open Space Conservation Agency (COSCA), at the direction and approval of COSCA, with an acreage appropriate to achieve a total of 3:1 replacement for habitat loss.

MM-BIO-5 **Stormwater Pollution Prevention Plan.** Prior to issuance of a grading permits, the project Applicant shall develop a project-specific Stormwater Pollution Prevention Plan (SWPPP) requiring erosion and sediment control Best Management Practices (BMPs) to be implemented during construction and submit the SWPPP to the City for review and approval. The site-specific SWPPP shall include but not be limited to: (1) the regular use of water trucks or other means of site irrigation to minimize fugitive dust during earthmoving and prevent fugitive dust from escaping the property boundary; (2) prohibition of vehicle fueling on-site; (3) requirement that secondary containment be utilized for the temporary use all hazardous materials during construction activities and such containment shall be located as far as feasible from special-status plants and potentially jurisdictional resources.

MM-BIO-6 **Invasive Plant Species Prevention and Weed Control Plan.** Prior to issuance of grading permits, the project Applicant shall retain a City-approved restoration ecologist or qualified biologist to prepare a comprehensive Invasive Plant Species Prevention and Weed Control Plan (IPSP & WCP) in coordination with the project Applicant's landscape architect. The IPSP & WCP is to be implemented during construction and for a period of up to 5 years post-development, until the establishment of common landscaped areas associated within each completed phase of the project, as determined by the City-approved restoration ecologist or qualified biologist. The IPSP & WCP shall be submitted to the City and the Conejo Open Space Conservation Agency for review and approval and the IPSP & WCP shall be implemented within the landscaped areas of the project to minimize invasive plant species and weed invasion into open space areas. The IPSP & WCP shall include, but not be limited to, the following:

- Weed control treatments shall include the application of legally permitted herbicide, as well as manual and mechanical methods of removal. The application of herbicides shall be performed by a licensed landscape maintenance company and comply with state and federal laws and regulations under the supervision of a Pest Control Advisor and a Licensed Qualified Applicator. Herbicides shall not be applied during or within 72 hours of a forecasted measurable rain event or during high wind conditions that could cause spray drift onto native vegetation. Where manual or mechanical methods are used, plant debris shall be disposed of at a certified disposal site. The timing of the weed control treatment shall be determined for each plant species with the goal of controlling populations before they start producing seeds.

- Invasive plant species on the California Invasive Plant Council inventory shall not be included in project landscaping palettes. Project landscape palettes shall be reviewed and approved by the City to ensure that invasive plant species are excluded.
- All straw materials used during project construction and operation shall be weed-free rice straw or other weed-free product, and all gravel and fill material shall be weed free. If straw wattles are used, they shall not be encased in plastic mesh. All plant materials used within the project shall be certified weed-free and approved by the City of Thousand Oaks Community Development Department.
- Prior to entry to the project area for the first time, equipment must be free of soil and debris on tires, wheel wells, vehicle undercarriages, and other surfaces (a high-pressure washer and/or compressed air may be used to ensure that soil and debris are completely removed). Compliance with the provision is achieved by on-site inspection and verification or by demonstrating that the vehicle or equipment has been cleaned at a commercial vehicle or appropriate truck washing facility. In addition, the interior of equipment (cabs, etc.) shall be free of mud, soil, gravel, and other debris (interiors may be vacuumed or washed).
- All vegetative material removed from the project site shall be transported in a covered vehicle and will be disposed of at a certified disposal site.

MM-BIO-7 **Crotch's Bumble Bee Pre-Construction Surveys**. A pre-construction survey for Crotch's bumble bee shall be conducted within the construction footprint prior to the start of initial vegetation removal or initial grading activities occurring during the Crotch's bumble bee nesting period (February 1 through October 31). The survey shall ensure that no nests for Crotch's bumble bee are located within the construction area. The pre-construction survey shall include 1) a habitat assessment and 2) focused surveys, both of which will be based on recommendations described in the "Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species," released by the California Department of Fish and Wildlife (CDFW) on June 6, 2023, or the most current at the time of construction.

The habitat assessment shall, at a minimum, include historical and current species occurrences; document potential habitat onsite including foraging, nesting, and/or overwintering resources; and identify which plant species are present. For the purposes of this mitigation measure, nest resources are defined as abandoned small mammal burrows, bunch grasses with a duff layer, thatch, hollow trees, brush piles, and man-made structures that may support bumble bee colonies such as rock walls, rubble, and furniture. If nesting resources are present in the impact area, focused surveys will be conducted.

The focused survey will be performed by a City-approved qualified biologist with expertise in surveying for bumble bees and include at least three (3) survey passes that are not on sequential days or in the same week, preferably spaced two to four weeks apart. The timing of these surveys shall coincide with the Colony Active Period (April 1 through August 31 for Crotch's bumble bee). Surveys may occur between 1 hour after sunrise and 2 hours before sunset. Surveys will not be conducted during wet conditions (e.g., foggy, raining, or drizzling) and surveyors will wait at least 1 hour following rain. Optimal survey conditions are when there are sunny to partly sunny skies with temperatures that are greater than 60° Fahrenheit. Surveys may be conducted earlier if other bees or butterflies are flying. Surveys shall not be

conducted when it is windy (i.e., sustained winds greater than 8 mph). the City-approved qualified biologist shall look for nest resources suitable for bumble bee use. Ensuring that all nest resources receive 100% visual coverage, the City-approved qualified biologist shall watch the nest resources for up to five minutes, looking for exiting or entering worker bumble bees. Worker bees should arrive and exit an active nest site with frequency, such that their presence would be apparent after five minutes of observation. If a bumble bee worker is detected, then a representative shall be identified to species. City-approved qualified biologist should be able to view several burrows at one time to sufficiently determine if bees are entering/exiting them depending on their proximity to one another. It is up to the discretion of the City-approved qualified biologist regarding the actual survey viewshed limits from the chosen vantage point which would provide 100% visual coverage; this could include a 30- to 50-foot-wide area. If a nest is suspected, the surveyor can block the entrance of the possible nest with a sterile vial or jar until nest activity is confirmed (no longer than 30 minutes).

Identification will include trained City-approved qualified biologists netting/capturing the representative bumble bee in appropriate insect nets, per the protocol in U.S. National Protocol Framework for the Inventory and Monitoring of Bees. The bee shall be placed in a clear container for observation and photographically documented. The bee will be photographed using a macro lens from various angles to ensure recordation of key identifying characteristics. If bumble bee identifying characteristics cannot be adequately captured in the container due to movement, the container will be placed in a cooler with ice until the bumble bee becomes inactive (generally within 15 minutes). Once inert, the bumble bee shall be removed from the container and placed on a white sheet of paper or card for examination and photographic documentation. The bumble bee shall be released into the same area from which it was captured upon completion of identification. Based on implementation of this method on a variety of other bumble bee species, bees become active shortly after removal from the cold environment, so photography must be performed quickly.

If Crotch's bumble bee nests are not detected, no further mitigation shall be required, and no additional surveys shall be needed if construction begins within 14 days of the last survey for a given phase area. If construction in a given phase area does not start within 14 days of the last survey, or if construction in a given phase area stops for 14 days or longer, surveys shall be repeated if construction re-commences between February 1 and October 31,.

The mere presence of foraging Crotch's bumble bees would not require implementation of additional minimization measures because they can forage up to 10 kilometers from their nests. If nest resources occupied by Crotch's bumble bee are detected within the construction area, no construction activities shall occur within 100 feet of the nest, or as determined by a City-approved qualified biologist through evaluation of topographic features or distribution of floral resources. The nest resources will be avoided for the duration of the Crotch's bumble bee nesting period (February 1 through October 31). Outside of the nesting season, it is assumed that no live individuals would be present within the nest as the daughter queens (gynes) usually leave by September, and all other individuals (original queen, workers, males) die. The gyne is highly mobile and can independently disperse to outside of the construction footprint to surrounding open space areas that support suitable hibernacula resources.

A written survey report will be submitted to the City within 30 days of the pre-construction survey and shall be reviewed and approved by the City before the start of grading and construction activities. The survey report shall also be submitted to CDFW within the same timeframe for its consideration and action in accordance with applicable laws and regulations. The report will include survey methods, weather conditions, and survey results, including a list of insect species observed and a figure showing the locations of any Crotch's bumble bee nest sites or individuals observed. The survey report will include the qualifications/resumes of the surveyor(s) and City-approved qualified biologist(s) for identification of photo vouchers, detailed habitat assessment, and photo vouchers. If Crotch's bumble bee nests are observed, the survey report shall also include recommendations for avoidance, and the location information will be submitted to the California Natural Diversity Database (CNDDB) at the time of, or prior to, submittal of the survey report.

If the nest resources cannot be avoided during the nesting period, as outlined in this measure, the project applicant will consult with CDFW regarding the need to obtain an Incidental Take Permit. Any measures determined to be necessary through the Incidental Take Permit process to offset impacts to Crotch's bumble bee may supersede measures provided in this CEQA document and shall be incorporated into a habitat mitigation and monitoring plan.

In the event an Incidental Take Permit is needed, mitigation for direct impacts to Crotch's bumble bee will be fulfilled through compensatory mitigation at a minimum 1:1 nesting habitat replacement of equal or better functions and values to those impacted by the project, or as otherwise determined through the Incidental Take Permit process. Mitigation will be accomplished either through off-site conservation or through a CDFW-approved mitigation bank. If mitigation is not purchased through a mitigation bank, and lands are conserved separately, a cost estimate will be prepared to estimate the initial start-up costs and ongoing annual costs of management activities for the management of the conservation easement area(s) in perpetuity. The funding source will be in the form of an endowment to help the qualified natural lands management entity that is ultimately selected to hold the conservation easement(s). The endowment amount will be established following the completion of a project-specific Property Analysis Record to calculate the costs of in-perpetuity land management. The Property Analysis Record will take into account all management activities required in the Incidental Take Permit to fulfill the requirements of the conservation easement(s), which are currently in review and development.

MM-BIO-8 **Special-Status Reptile Pre-Construction Survey.** A pre-construction survey for coastal whiptail shall be conducted no more than 30 days prior to the initiation of initial vegetation removal or initial grading activities. If construction in a given phase area does not start within 30 days of the survey, or if construction in a given phase area stops for 30 days or longer, surveys shall be repeated. If coastal whiptail is observed on the project site, a salvage and relocation plan shall be developed and submitted to the City for review and approval. The plan shall be implemented to allow a City-approved qualified biologist to capture and relocate the species to suitable habitat outside of the impact footprint prior to the onset of ground disturbing activities. The results of special-status reptile pre-construction surveys shall be documented in a letter report that will be submitted to the City and CDFW.

MM-BIO-9 **Nesting Bird Avoidance.** Project construction shall be conducted in compliance with the conditions set forth in the MBTA and California Fish and Game Code to protect active bird/raptor nests. To the maximum extent feasible, vegetation removal shall occur during the non-breeding season for nesting birds and nesting raptors. If the project requires that work be initiated during the breeding season for nesting birds (February 1–August 31) or nesting raptors (January 1–June 30), in order to avoid direct impacts to active nests, a pre-construction survey shall be conducted in the study area by a City-approved qualified biologist (someone who has more than three years of experience of conducting nesting bird surveys and monitoring active nests in the project region) for nesting birds and raptors within 7 days prior to initial vegetation removal or initial grading activities. If the City-approved qualified biologist does not find any active nests within or immediately adjacent to the impact areas, the vegetation clearing/construction work shall be allowed to proceed. If construction in a given phase area does not start within 7 days of the survey, or if construction in a given phase area stops for 7 days or longer, nesting bird surveys shall be repeated.

If the City-approved qualified biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted by the initial vegetation removal or initial grading activities, the City-approved qualified biologist shall delineate an appropriate buffer zone around the nest depending on the sensitivity of the species and the nature of the construction activity. To protect any nest site, the following restrictions to construction activities shall be required until nests are no longer active, as determined by a City-approved qualified biologist: (1) clearing limits shall be established within a buffer around any occupied nest; and (2) access and surveying shall be restricted within the buffer of any occupied nest, unless otherwise determined by a City-approved qualified biologist. The buffer shall be a minimum of 100 feet for non-special-status passerine species, 200 feet for special-status passerine species, and 300 feet for nesting raptors (distances may be greater depending on the bird species and construction activity, as determined by the City-approved qualified biologist). Construction can proceed within the buffer when the City-approved qualified biologist has determined that the nest is no longer active.

MM-BIO-10 **Lighting.** To prevent an increase in lighting of wildlife habitats, construction activities shall be limited to the time between dawn and dusk. If construction activity time restrictions are not possible, down shielding or directional lighting will be used to avoid light trespass into adjacent natural open space areas (i.e., use a "Cobra" style light rather than an omnidirectional light system to direct light down to the work area).

Exterior lighting shall be designed to minimize upward-directed lighting and project design shall minimize the duration and amount of exterior and interior lighting to be in accordance with the Thousand Oaks Municipal Code Sections 8-1.19 and 9-4.2405 and any other related federal and state regulations, such as California Code of Regulations Title 24. Pursuant to this requirement, the following lighting design standards shall be incorporated, subject to modification by the City's Police Chief to account for changes to the project's lighting in order to meet applicable regulations and standards for required security:

- Incorporate fixture hoods/shielding to orient exterior lighting downward and eliminate horizontal glare, upward-directed light, and avoid light spillover and illumination of adjacent natural open space areas.
- Install automatic motion sensors and controls on exterior lighting to minimize lighting durations.
- During non-occupied hours, exterior building mounted/canopy lighting and exterior parking lighting are to be automatically dimmed, at a minimum, to 20% and 30% respectively.
- Institute measures to ensure that interior lights are turned off when not in use.
- Exterior lighting shall not exceed 3000K and shall avoid the excessive intensity that newer lighting technology facilitates.
- Assess site quality and quantity of light needed, avoiding over-lighting with newer technology.

MM-BIO-11a **Protected Tree Removal and Replacement**. Prior to construction activities, an International Society of Arboriculture (ISA) certified arborist shall review the proposed construction plans, visit the project site, and assess the condition, health, and structure of protected trees adjacent to proposed work areas and those protected trees proposed to be trimmed or removed. The certified arborist shall provide a letter documenting the results of the survey, which shall include recommendations for tree protection during construction, any limitations for tree pruning, and an assessment to determine if the proposed project could significantly impact any of the protected trees.

All protected trees which are removed shall be replaced at a 3:1 ratio with two 24-inch and one 36-inch box size trees, consisting of similar species to those being removed, and shall be planted and depicted on the landscape architect's approved planting plan. If different sized trees are proposed for installation or an alternate mitigation site is identified, the proposed size, quantity, and location shall be approved by the City of Thousand Oaks Community Development Director. Additionally, a 5-year tree maintenance fee shall be paid to the Community Development Department for any required off-site replacement trees. Replacement trees shall be installed per ISA tree planting specifications under the direction and supervision of an ISA certified arborist. Installed replacement trees shall be monitored by an ISA certified arborist for the first 5 years after installation. The ISA certified arborist shall submit an annual report documenting tree species, diameter, height above grade, measured dripline, appearance and health conditions, physical description, and photographs of each installed replacement tree.

MM-BIO-11b **Tree Protection Prior to Initial Vegetation Removal or Initial Grading Activities**. An ISA certified arborist shall be retained to oversee implementation of the following:

Fencing: All remaining protected trees whose protected zone is located within the project site boundaries and that will not be relocated or removed shall be preserved and protected in place. Preserved trees whose protected zone (i.e., 5 feet beyond the dripline, but no less than 15 feet from the trunk) is within the proposed construction disturbance limits, as determined by the ISA certified arborist, shall be temporarily fenced with chain link or other material satisfactory to City planning staff throughout construction activities. The fencing shall be installed prior to construction within protected zone of the preserved tree and shall

be installed 5 feet outside of the dripline of each tree (or edge of canopy for cluster of trees), be 4 feet tall, and staked every 6 feet. The fenced area shall be considered the tree protection zone (TPZ). Once construction is complete within 200 feet of each protected tree, as determined by the ISA certified arborist in consultation with the Community Development Director's designee, the fencing for that tree may be removed:

Flagging: Aboveground tree parts on preserved trees that could be damaged by construction equipment (e.g., low limbs, trunks) shall be flagged with red ribbon prior to the start of construction.

Pre-Construction Meeting: A pre-construction meeting shall be held between all contractors (including grading, tree removal/pruning, builders) and the ISA certified arborist. The ISA certified arborist shall instruct the contractors on tree protection practices and answer any questions. All equipment operators and spotters, assistants, or those directing operators from the ground, shall provide written acknowledgment of their receiving tree protection training. This training shall include information on the location and marking of protected trees, the necessity of preventing damage, and the discussion of work practices that will accomplish such.

MM-BIO-11c **Tree Protection and Maintenance During Construction.** An ISA certified arborist shall be retained to oversee implementation of the following:

Equipment Operation and Storage: Heavy equipment operation and storage shall be avoided around the protected trees. Operating heavy machinery around the root zones of trees will increase soil compaction, which decreases soil aeration and subsequently reduces water penetration in the soil. All heavy equipment and vehicles shall, at minimum, stay out of the fenced tree protection zone (TPZ), unless where specifically approved in writing and under the supervision of an ISA certified arborist or as provided by the approved landscape plan.

Storage and Disposal: Storing or discarding any supply or material, including paint, lumber, concrete overflow, etc. shall not occur within the tree protection zone. All foreign debris within the tree protection zone shall be removed; however, it is important to leave the duff, mulch, chips, and leaves around the preserved trees for water retention and nutrients. Draining or leakage of equipment fluids near preserved trees shall be avoided. Fluids such as gasoline, diesel, oils, hydraulics, brake and transmission fluids, paint, paint thinners, and glycol (anti-freeze) shall be disposed of properly. Equipment shall be parked at least 50 feet away from preserved trees to avoid the possibility of leakage of equipment fluids into the soil. The effect of toxic equipment fluids on the preserved trees could lead to decline and death.

Grade Changes: Grade changes, including adding fill, are not permitted within the TPZ without special written authorization and under the supervision of an ISA certified arborist or as provided by the approved landscape plan. Lowering the grade within this area will necessitate cutting main support and feeder roots, jeopardizing the health and structural integrity of the preserved tree(s). Adding soil, even temporarily, on top of the existing grade will compact the soil further and decrease both water and air availability to the trees' roots.

Moving Construction Materials: Care shall be taken when moving equipment or supplies near the preserved trees, especially overhead. Avoid damaging the preserved tree(s) when transporting or moving construction materials and equipment and working near the preserved trees (even outside of the fenced tree protection zone). Aboveground tree parts of preserved trees that could be damaged (e.g., low limbs, trunks) shall maintain flags in the form of red ribbon to be installed prior to the start of construction. If contact with the crown of a preserved tree is unavoidable, the conflicting branch(es) shall be pruned using ISA standards under the direction and supervision of an ISA certified arborist.

Root Pruning: Except where specifically approved in writing, all trenching shall be outside of the fenced tree protection zone. Roots primarily extend in a horizontal direction forming a support base to the tree similar to the base of a wineglass. Where trenching is necessary in areas that contain preserved tree roots, roots shall be pruned using a Dosko root pruner or equivalent and under the direction and supervision of an ISA certified arborist. All cuts shall be clean and sharp, to minimize ripping, tearing, and fracturing of the root system. The trench shall be made no deeper than necessary.

Irrigation: In the event that root pruning of the preserved trees is necessary, trees that have been substantially root pruned (30% or more of their root zone) will require irrigation for the first 12 months. The first irrigation shall be within 48 hours of root pruning. They shall be deep watered every 2 to 4 weeks during the summer and once a month during the winter (adjusted accordingly with rainfall). One irrigation cycle shall thoroughly soak the root zones of the trees to a depth of 3 feet. The soil shall dry out between watering; avoid keeping a consistently wet soil. Designate one person to be responsible for irrigating (deep watering) the trees. Check soil moisture with a soil probe before irrigating. Irrigation is best accomplished by installing a temporary above ground micro-spray system that will distribute water slowly (to avoid runoff) and evenly throughout the fenced protection zone *but never soaking the area located within 6 feet of the tree trunk, especially during warmer months*.

Pruning: Protected trees shall not be pruned until all construction is completed unless the exceptions identified within this Mitigation Measure in "Moving Construction Materials," "Root Pruning," or "Irrigation" are met. This will help protect the tree canopies from damage. All pruning shall be completed under the direction of an ISA certified arborist and using ISA guidelines. Only dead wood shall be removed from tree canopies.

Washing: During construction in summer and autumn months, if washing is determined to be needed by the ISA certified arborist, under the direction of a city approved ISA certified arborist, the foliage of protected trees within and adjacent to the construction site shall be washed with an application of water that mimics rainfall every two weeks in early hours before 10:00 a.m. to control mite and insect populations.

Inspection: An ISA certified arborist shall inspect the preserved trees on a monthly basis during construction. A report comparing tree health and condition to the original, pre-construction baseline shall be submitted following each inspection. Photographs of representative trees are to be included in the report on a minimum annual basis.

MM-BIO-11d **Tree Maintenance After Construction.** The following measures shall be performed to sustain and enhance the vigor of the preserved trees at the direction of a City-approved ISA certified arborist. Such maintenance measures may be implemented prior to construction.

Mulch: Provide a 4-inch mulch layer under the canopy of preserved trees. Mulch shall include clean, organic mulch that will provide long-term soil conditioning, soil moisture retention, and soil temperature control.

Pruning: The preserved trees will not require regular pruning. Pruning shall only be done to maintain clearance and remove broken, dead, or diseased branches. Pruning shall only take place following a recommendation by an International Society of Arboriculture (ISA) certified arborist and performed under the supervision of an ISA certified arborist. No more than 20% of the canopy shall be removed at any one time. All pruning shall conform to ISA standards.

Watering: The protected trees that are not disturbed shall not require regular irrigation, other than the 12 months following substantial root pruning. However, soil probing shall be necessary to accurately monitor moisture levels. Especially in years with low winter rainfall, supplemental irrigation for the trees that sustained root pruning and any newly planted trees may be necessary. Any supplemental irrigation shall be conducted only during the winter and spring months.

Watering Adjacent Plant Material: All landscape plants near the preserved trees shall be compatible with water requirements of said trees. The surrounding plants shall be watered infrequently with deep soaks and allowed to dry out in between, rather than frequent light irrigation. The soil shall not be allowed to become saturated or stay continually wet. Irrigation spray shall not hit the trunk of any preserved tree. A 60-inch dry-zone shall be maintained around all preserved tree trunks. An aboveground micro-spray irrigation system shall be used instead of typical underground pop-up sprays.

Washing: If washing is determined to be needed by the ISA certified arborist, the foliage of the preserved trees within the project site shall be washed under the direction of an ISA certified arborist with an application of water which mimics rainfall during construction but no more than once every 2 weeks. Washing shall occur before 10:00 a.m. to control mite and insect populations. Washing shall include the upper and lower leaf surfaces and the tree bark.

Spraying: If the preserved trees are maintained in a healthy state, regular spraying for insect or disease control shall not be necessary. If a problem does develop, an ISA certified arborist shall be consulted; the preserved trees may require application of insecticides to prevent the intrusion of bark-boring beetles and other invading pests. All chemical spraying shall be performed by a licensed applicator under the direction of a licensed pest control advisor.

Inspection: All preserved trees that were impacted during construction within the TPZ shall be monitored by an ISA certified arborist for the first 5 years after construction completion. The ISA certified arborist shall submit an annual report, photograph each preserved tree,

and compare tree health and condition to the original pre-construction baseline. The annual report shall be provided to, reviewed, and approved by the Community Development Directors designee. The project Applicant shall be billed by the City pursuant to the adopted Fee Schedule in effect during the review period.

MM-BIO-12 **Native Habitat Enhancement.** Prior to the issuance of a project building permit, the project Applicant shall contribute funds to the Conejo Open Space Conservation Agency (COSCA) to enhance 25.55 acres of native scrub vegetation located within adjacent COSCA land. The 25.55 acres would mitigate impacts to 0.23 acres of chaparral communities and 25.31 acres of coastal scrub communities at a ratio of 1:1. The proposed enhancement shall include, at a minimum, the treatment of non-native and/or invasive plant species (Cal-IPC moderate or high rating or as determined by COSCA staff) present within existing native vegetation. The proposed methods and extent of the proposed enhancement activities shall be approved by the City and COSCA.

Appendix A
Biologist Resumes

Melissa Blundell

BIOLOGIST

Melissa Blundell (*Mel-lis-uh BLUN-del; she/her*) is a biologist with 13 years' experience engaged in the biological resources. Ms. Blundell has a strong understanding of local, state, and federal regulations pertaining to biological resources, including, but not limited to, the Endangered Species Act, California Fish and Game Code, Clean Water Act, Porter-Cologne Act, Migratory Bird Treaty Act, Bald and Golden Eagle Protection Act, local Ventura and Santa Barbara County policies, agency jurisdictions and permitting processes, and a growing understanding of permitting shellfish aquaculture.

Ms. Blundell has experience performing biological resources assessments and producing a variety of technical documents, including documentation to support compliance with the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA), such as Negative Declaration (ND), Initial Study/Mitigated Negative Declaration (IS/MND), and Environmental Impact Report/Environmental Impact Statement (EIR/EIS); Biological Technical Reports (BTR)/Biological Assessments (BA); Wildlife Movement Plans; Habitat Protection Plans; Habitat Mitigation and Monitoring Plans; Habitat Conservation Plans; Bird and Bat Conservation Strategies; Eagle Conservation Plan; species-specific management plans; and assisting with wetland delineation reports. In addition, Ms. Blundell has authored and co-authored six peer-reviewed scientific journal articles.

Ms. Blundell currently holds state and federal permits to survey for the southwestern willow flycatcher (*Empidonax traillii extimus*) and coastal California gnatcatcher (*Polioptila californica californica*). In addition, she is experienced in surveying, nest monitoring, and banding the least Bell's vireo (*Vireo bellii pusillus*). She is experienced in performing nesting bird surveys and implementing survey protocol and/or focused surveys for a variety of special-status wildlife, including burrowing owl (*Athene cunicularia*), California red-legged frog (*Rana draytonii*), white-tailed kite (*Elanus leucurus*), coastal raptor surveys, Belding's savannah sparrow (*Passerculus sandwhichensis*), bank swallow (*Riparia riparia*), rare plants, and monarch butterflies (*Danaus plexippus*). Ms. Blundell also has experience developing electronic data collection forms, managing databases, performing statistical analyses (e.g., occupancy estimation, modeling take estimates), and performing biological construction monitoring.

Project Experience

Aquaculture

Ventura Shellfish Enterprise, Ventura Port District, Ventura, California. Provided project management support for a multi-party initiative to permit twenty 100-acre plots in federal waters for growing mussels within the Santa Barbara Channel. Coordinated team members for project task updates, assisted with tracking project

schedules, and handled administrative and technical functions (e.g., coordinating completion of work products required for permit applications, meeting agendas, distributing action items, presentations, hand-outs, etc.). Assisted with the production of necessary reports and letters associated with project permitting, including permits for a California Coastal Commission Consistency Determination, U.S. Army Corps of Engineers permit pursuant to Section 10 of the Rivers and Harbors Act (including response to public comments), and any reporting requirements for the California Sea Grant.

Development

Ventura Hideaway, New Urban West, Inc., Ventura, California. Performed a biological constraints analysis and authored a memorandum to assess the potential biological resources constraints associated with the property in consideration of future development.

Meadow View Environmental Quality Assurance Program, Meadow View TH, LLC, Orcutt, California. Served as project manager for the preparation of an Environmental Quality Assurance Plan (EQAP) for the Rice Ranch Specific Plan Area. The project proposes a residential development across a 14-acre neighborhood. The EQAP outlined the biological monitoring requirements for pre-construction, mass grading, and initial construction phases of the project.

Alpine Rancho Palo Verde, Palo Verde, California. Provided permitting assistance in preparing an application for a Water Quality Certification in accordance with the Clean Water Act. The project proposes the development of two bridges for future access to a residential development.

Sansum Clinic Development, Solvang, California. Served as the phase manager. Led the preparation of a Biological Resources Assessment Report (BRAR) that documented biological constraints, site visits and surveys, and the potential for special-status species to occur; analyzed impacts; and recommended measures to avoid and minimize impacts. The project proposed to construct a new clinic facility to expand medical health services for patients in the Santa Ynez Valley.

Sycamore Creek, Residential Development, Montecito, California. Provided review for a BRAR that documented biological constraints, site visits and surveys, and the potential for special-status species to occur; analyzed impacts; and recommended measures to avoid and minimize impacts. The project proposed to expand a residential development.

Huntington Drive, Residential Development, Goleta, California. Served as the project manager and conducted a biological site visit, assessment, and raptor surveys and prepared a BRAR that documented biological constraints, site visits and surveys, and the potential for special-status species to occur; analyzed impacts; and recommended measures to avoid and minimize impacts. The project proposed to expand a residential development.

Ocean Meadows Residential Development, County of Santa Barbara, California. Served as the phase manager and conducted vegetation mapping and coastal raptor surveys and assisted with wetland delineations. Led the preparation of a BRAR that documented biological constraints, site visits and surveys, and the potential for special-status species to occur; analyzed impacts; and recommended measures to avoid and minimize impacts. The project proposed to construct residential development adjacent to existing open space between Isla Vista and the City of Goleta and was seeking a Coastal Development Permit.

Cannabis Cultivation, Private Developer, Lompoc, California. Served as the phase manager and lead biologist in the preparation of several documents, including a BA, Existing Conditions Report, Wildlife Movement Plan, and California Tiger Salamander (*Ambystoma californiense*; CTS) Habitat Assessment. The BA and CTS Habitat

Assessment documented site visits and the potential for special-status species to occur, analyzed impacts, and recommended measures to avoid and minimize impacts. The project proposed to permit and construct facilities for cannabis cultivation and manufacturing, construct worker residential units, and construct an access bridge.

Cannabis Cultivation, Private Developer, Santa Ynez, California. Served as the phase manager and lead biologist in the preparation of several documents, including a BA, Wildlife Movement Plan, and Tree Protection Plan. The BA documented a site visit and the potential for special-status species to occur, analyzed impacts, and recommended measures to avoid and minimize impacts. The project proposed to permit and construct facilities for cannabis cultivation and manufacturing.

Cannabis Cultivation, Private Developer, Carpinteria, California. Served as the phase manager and lead biologist in the preparation of several documents, including a BRAR, Wildlife Movement Plan, and Tree Protection Plan. The BA documented a site visit and the potential for special-status species to occur, analyzed impacts, and recommended measures to avoid and minimize impacts. The project proposed to permit and construct facilities for cannabis cultivation and manufacturing.

Biological Study Report, Complete Wireless Consulting, Goleta, California. Served as project manager and conducted a site visit to assess the existing Environmentally Sensitive Habitat Areas (ESHA; wetlands), assess the potential impacts of the proposed project on ESHA, and provide recommendations for siting distances from ESHA. The final report included elements and discussion required by the City of Goleta, including an explanation on distance or buffer recommendations, proper screening measures, and recommended mitigation measures. The project proposed the construction of a wireless facility in Goleta for the improvement of wireless communications. Because the project is located adjacent to wetlands, the City of Goleta requested a Biological Study Report.

Berggruen Institute Project, Monteverdi LLC, Los Angeles, California. Due to the presence of suitable riparian woodlands within the canyons throughout the project area, conducted protocol-level surveys for least Bell's vireo and southwestern willow flycatcher surveys. The project proposes to construct a new institute, including a main building, scholar village, residences, cottages, and supporting facilities.

Hollister Ranch Biological Support, HR-2011 LLC, Santa Barbara County, California. Assisted in the production of a BA that documented biological constraints, site visits and surveys, and the potential for special-status species to occur; analyzed impacts; and recommended measures to avoid and minimize impacts. The project proposed to expand an existing barn.

The Buellton Hub (Pope Property), Capital Pacific Development Group, Buellton, California. Conducted southwestern willow flycatcher and least Bell's vireo protocol-level surveys. Produced the final report documenting survey methods and results for submission to the U.S. Fish and Wildlife Service (USFWS). Assisting with state and federal applications for impacts to aquatic resources.

1062 Coast Village Road, Luzich Partners LLC c/o Brian Cearnal, Santa Barbara, California. Served as phase manager. The project proposed the demolition of an existing apartment building and the construction of a new mixed-use development, including roof decks, commercial space, and a subterranean garage. Prepared a Biological Report requested by the City of Santa Barbara that evaluated the existing biological resources (e.g., habitat, wildlife corridor, and species use) of the project site and existing trees and identifies if proposed mitigation fully mitigates proposed impacts.

24600 Thousand Peaks Road, Adam Selkowitz, Calabasas, California. Provided field assistance with the biological resources inventory survey and documented biological resources on site. The project proposes to build a single-family residence over 8,000 square feet.

Nesting Bird and Tree Surveys, Plum Canyon LLC, Los Angeles County, California. Performed a pre-construction nesting bird survey and produced a report documenting the survey results. The project proposes a residential development located on a hillside adjacent to existing residential areas south of Plum Canyon Road and west of Whites Canyon Road in unincorporated Los Angeles County, California.

15 South Hope Avenue – Arroyo Burro Creek Buffer Analysis, Faring Capital, Santa Barbara, California. Performed a site visit and assisted with the production of a BRAR to provide the City of Santa Barbara with an updated analysis and assessment for the Arroyo Burro Creek buffer zone. The BRAR documented existing conditions, vegetation mapping, and the potential for special-status species to occur; provided a creek buffer assessment; and recommended mitigation. The project proposed to develop an integrated mixed-use development in an existing developed lot along Arroyo Burro Creek. The project would construct residential apartments with commercial retail space.

805 Park Lane West Biology Report, Bob Easton AIA Architect, Montecito, California. The project proposed to develop a single-family residence on an undeveloped lot along San Ysidro Creek. Conducted a site visit and prepared a BA that documented the existing conditions, vegetation communities, and the potential for special-status species to occur; delineated Environmentally Sensitive Habitats (ESH); assessed impacts; and recommended mitigation measures. Produced a Habitat Mitigation and Monitoring Plan to identify mitigation requirements for impacts to ESH and ESH buffers from the proposed development.

Jalama Beach Affordable Overnight Accommodation, County of Santa Barbara, California. The project proposed to develop new RV cabins and associated support facilities in the existing Jalama Beach Park campground. Performed site visits to assess existing conditions and the potential for special-status species to occur and performed a California red-legged frog protocol-level survey and monarch overwintering habitat survey. Prepared the Biological Resources section of an IS/MND, focused wildlife and floristic survey report, and recommended mitigation measure to avoid sensitive biological resources and recommend Environmental Sensitive Habitat Area buffers from limits of project construction.

Dry Canyon Artillery Range Remedial Investigation/Feasibility Study, Dawson Technical LLC, Ventura County, California. The project involved clearance surveys and controlled detonation of Explosives of Concern. Dudek provided biological support for site investigation and soil sampling. Conducted biological monitoring, including flagging sensitive species and resources within the sampling transects, and provided worker education training. Produced a final report for biological services.

Carpinteria Bluffs Area I, Capital Hall Partners/Plus Development, LLC, Santa Barbara County, California. Provided third-party review and verification for previously prepared surveys. Performed habitat suitability analyses and performed overwintering monarch butterfly surveys and wintering/nesting raptor surveys. The project proposes a combination of residential, recreation, and commercial uses on 24 acres adjacent to Carpentaria Bluffs Natural Preserve.

Bacara Consent Restoration Plan, SB Luxury Resort LLC c/o Ohana Real Estate Investors, Goleta, California. As a result of a California Coastal Commission Cease and Desist Order and Consent Restoration Order, the project involved restorative grading, implementing native habitat revegetation, mitigation, and implementing long-term monitoring. Assisted with on- and off-site restoration monitoring, including installation monitoring, quantitative and qualitative monitoring, post-storm visits to assess the functionality of straw wattles, nesting bird surveys, and photo documentation. Assisted with the preparation of a supplemental BTR for the proposed demolition and relocation of the existing beach house. The BTR described the existing conditions and potential project impacts and recommended measures for impacts.

Kavli Institute for Theoretical Physics Biological Resources Lighting Plan Analysis, The Towbes Group Inc., Santa Barbara, California. The project proposed exterior lighting improvements on existing residences. As a result, the California Coastal Commission (CCC) required a biological review of the lighting plans and analysis of potential effects on plant and wildlife in the adjacent wetlands. Performed a site visit and produced a memorandum fulfilling the CCC requirements, including a discussion of the anticipated lighting effects on the adjacent wetlands and recommended minimization measures.

Cabrillo Business Park, Sares-Regis Group, Goleta, California. Conducted biological construction monitoring of fence installation for the protection of adjacent wetland resources. The project involved a large commercial development.

San Carlos Ranch, Sheppard, Mullin, Richter & Hampton LLC, Montecito, California. Drafted Due Diligence for biological resources. Efforts included reviewing the Community Plan and field reconnaissance results for wildlife, waters/wetlands, and plants. Incorporated all methods and results into Due Diligence. The purpose of the report is to present due diligence for sensitive biological resources that occur or have a potential to occur on site and that may pose constraints to any future development.

Least Bell's Vireo Surveys, Southern California Edison Reliability Project, Santa Barbara and Ventura Counties, California. Served as the project manager to oversee the subcontractor agreement between Dudek and Garcia and Associates. The project involved improving infrastructure components for increased reliability to meet electrical demands during emergencies and enhance operational flexibility. Dudek activities involved performing protocol least Bell's vireo surveys in several riparian habitats at sites throughout Ventura and Santa Barbara counties. Biologists documented all wildlife occurrences during surveys and provided final site survey results and documentation to Garcia and Associates.

Newport Banning Ranch, Aera Energy LLC, Orange, California. Conducted least Bell's vireo surveys that included focused behavioral observations to determine pair/breeding status of all individuals detected on site. Participated in California gnatcatcher surveys that included focused behavioral observations to determine accurate population numbers and pair/breeding status. Project proposed a mixed-use development with an open space preserve, parklands, infill development, public roadways, and existing oil facilities.

Grapevine Project, Tejon Ranch Corporation, Kern County, California. Conducted focused surveys for special-status plants and burrow/den surveys with a focus on burrowing owl, San Joaquin kit fox (*Vulpes macrotis mutica*), American badger (*Taxidea taxus*), and kangaroo rat (*Dipodomys* spp.). Documented general wildlife observations while on site, including their special status. Assisted with San Joaquin kit fox camera stations setup and provided research support to examine suitable field markers for small mammal trapping efforts. The project proposed to implement the Grapevine Specific and Community Plan, including a new residential community and employment center, open space use, and infrastructure.

Guadalupe Dunes Asphalt Road Removal, County of Santa Barbara, California. The project involved the removal of approximately 0.36 miles of an eroded access road within the Rancho Guadalupe Dunes Park. Provided biological construction monitoring for the avoidance of impacts to native dune vegetation, wetlands, and aquatic habitats of the Santa Maria River. Monitoring activities were conducted under a special condition under a categorical exemption provided to the County of Santa Barbara under a Coastal Development Permit.

Otay Ranch University Villages Environmental Impact Report, SSBT LCRE V LLC c/o JPB Development LLC, San Diego, California. Assisted in drafting document addressing Habitat Loss and Incidental Take (HLIT) Ordinance General and Required Findings. Completed HLIT permit (General and Required sections).

Alessandro Business Park, Western Realco, Riverside, California. In accordance with mitigation measures, conducted biological resource monitoring during initial grading activities. Ensured avoidance of sensitive resources on site, including riverine/riparian resources, buffer avoidance for nesting species detected on site, jurisdictional resource on site, and additional specified mitigation measures. Provided a daily report of biological resources.

Portola Center, USA Portola Properties LLC/SunRanch Capital Partners LLC, San Diego, California. Biological resource monitoring for geotechnical efforts. Documented general wildlife observations, including detection of special-status species on site and habitat conditions. Ensured geotechnical efforts minimized and avoided sensitive biological resources impacts. Assisted in completing informal Section 7 consultation letter and wrote U.S. Army Corps of Engineers linear foot waiver request. Assisted in drafting the California gnatcatcher 45-day report.

Hydrogeology Studies, Confidential Client, San Diego County, California. Served as a project biologist for geotechnical exploration. Responsibilities included biological monitoring for the federally endangered Arroyo toad (*Anaxyrus californicus*) and federally endangered Stephens' kangaroo rat (*Dipodomys stephensi*), construction monitoring, and biological documentation preparation.

Paradiso del Mare Residential Development, CPH Dos Pueblos Associates, Gaviota Coast, California. The project proposed development of two single-family homes on two separate adjacent parcels totaling almost 143 acres. Provided pre-construction nesting birds survey support and performed raptor surveys.

Education

Biological Services, Wine and Viticulture Development/Fermentation Sciences Center Project, California Polytechnic University, San Luis Obispo, California. Served as project manager for implementation of biological mitigation measures, including field efforts to re-evaluate habitat suitability for California red-legged frogs, bat roosting surveys, arborist assessment, and nesting bird surveys. Conducted a biological site visit and drafted the biological section of the IS/MND for the project. In addition, conducted nesting bird surveys prior to construction and delivered reports documenting compliance with pre-construction bio mitigation measures. The project proposed to construct new facilities to provide a central location for education and research in fermentation sciences and related consumer products, including wine, beer, and distilled liquor.

Nesting Bird Survey, Henley Hall Tree Removal Project, University of California, Santa Barbara, California. The project involved tree removal for the construction of Henley Hall on the north side of the University of California, Santa Barbara's Main Campus. The CCC recommended raptor and other nesting bird surveys to be conducted for the approval of the Notice of Impending Development. Performed a nesting bird survey for compliance with CCC requests and for compliance with federal and state regulations (Migratory Bird Treaty Act and California Fish and Game Code). After the survey, produced a short memorandum that documented the methods and results of the survey.

West Campus Point Homeowners Association Tree Removal, University of California, Santa Barbara, California. The project proposed to remove eleven eucalyptus (*Eucalyptus* sp.) trees as risk of failure. For compliance with federal and state regulations (Migratory Bird Treaty Act and California Fish and Game Code), conducted a nesting bird survey to determine if active nests of protected special-status or common birds exist within or immediately adjacent to these focused eleven trees.

Raptor Habitat Assessments and Surveys, University of California, Santa Barbara, California. Dudek was contracted with the University of California, Santa Barbara to conduct raptor surveys, assess project areas for raptor habitat suitability, and document raptor activity for three proposed projects/activities (Ocean Road Housing Development Project, a proposed 16-acre neighborhood; Tennis Court Relocation Project; Main/West Campus tree

removal in 19 designated areas); and additional project areas. Since project activities have the potential to impact nesting raptor and/or raptor habitat, performed protocol coastal raptor surveys and habitat assessments for these projects. Assisted with the production of letter reports documenting the background, methods, results, discussion, and recommended measures for the raptor survey/assessments for each of the three projects.

Energy

Confidential Wind Development, Central California, California. The proposed project involved the proposed development of a wind farm. Assisted with the analysis of eagle data to provide a preliminary assessment for eagle take estimates and related analyses associated with the USFWS Eagle Conservation Plan Guidance.

Confidential Solar Project, Confidential Energy Client, City or County, California. The approximately 1,760 acre proposed project involved the construction of a solar photovoltaic and energy storage facility, including solar arrays, collection systems, energy storage structure, switchyard/substation, associated overhead towers, fencing, and access roads. Provided technical assistance in drafting a site assessment letter report to address the California red-legged frog and California tiger salamander.

Confidential Solar Project, Confidential Energy Client, Fresno, California. The approximately 585 acre proposed project involved the construction of a solar energy system, on-site substation, energy storage system, generation tie-line, and ancillary facilities in the Central Valley. Provided technical assistance in drafting a BTR that documented and assessed existing biological resources and site assessments and evaluated impacts to sensitive biological resources based on local, state, and federal policies and regulations.

Confidential Solar Project, Confidential Energy Client, Fresno, California. The approximately 1,288 acre proposed project involved the construction of a solar photovoltaic power generation facility, involving up to five different facilities. Provided technical assistance in evaluating and assessing the potential for special-status plants and wildlife to occur.

Development Project, Confidential Client, Bakersfield, California. The proposed project involved a significant number of acres of biological assessment area for the development of focused areas for oil and gas production. Assisted in the preparation of wildlife habitat assessments and special-status wildlife surveys; and provided California Fish and Game Code Section 2081 permit application support, including drafting avoidance plans for blunt-nosed leopard lizard (*Gambelia sila*) and giant kangaroo rat (*Dipodomys ingens*) and a relocation plan for the Nelson's antelope squirrel (*Ammospermophilus nelsoni*). Assessed project cumulative impacts.

Adera Solar Biological Monitoring, Solairedirect USA Inc., Madera, California. The approximately 160-acre proposed project involved the development of a solar photovoltaic facility. Performed pre-construction nesting bird surveys and Swainson's hawk (*Buteo swainsoni*) nest monitoring. Produced associated biological compliance, monitoring, and observation reports.

San Diego Gas and Electric Cleveland National Forest Electric Safety and Reliability Plan Project, California Public Utilities Commission, County of San Diego, California. The proposed project involved a variety of wood-to-steel pole conversions and replacement or undergrounding of equipment to improve the fire-resistance electrical facilities and infrastructure throughout San Diego County, located within and outside of Cleveland National Forest. Provided technical biological assistance for CEQA/NEPA analysis and documentation; and drafted the Biological Resources section for the EIR/EIS to document the existing biological resource, potentially occurring sensitive resources, project impacts, and avoidance, minimization, and mitigation measures.

Confidential Solar Project, Confidential Energy Client, San Diego County, California. Assembled the BTR, including compiling the entire report, coordinating review, compiling all sections, revising acreages, coordinating with geographic information system (GIS) analysts, and requiring figures. Responded to and provided revisions to the BTR and EIR sections.

Confidential Solar Project, Confidential Energy Client, Blythe, California. Drafted the preconstruction survey report for activities conducted in January 2015. The report included the introduction, methods, and results.

Confidential Solar Project, Confidential Energy Client, Riverside County, California. Dudek provided environmental compliance management and restoration support services for the 250-megawatt photovoltaic solar facility. Conducted pre-construction nesting bird surveys and associated reporting for the on-going compliance monitoring and reporting program during construction.

San Diego Gas and Electric TL637 Wood-to-Steel Replacement Project, California Public Utilities Commission, San Diego, California. The project proposed to fire-harden approximately 14 miles of existing 69-kV wood pole power lines between Creelman and Santa Ysabel substations. Provided technical support in drafting the biological section of an IS/MND for analysis and responded to public and agency comments on the draft. Provided support in reviewing Mitigation, Monitoring, and Compliance Reporting related to nesting bird surveys.

Confidential Solar Project, Confidential Energy Client, Riverside, California. This project involved the construction of a solar facility in Riverside County. In accordance with mitigation measures, drafted a Raven Monitoring, Management, and Control Plan consistent with most current USFWS-approved raven management guidelines. The Plan's purpose was to avoid any project-related increases in raven numbers during construction, operation, and closure; and to avoid project-related impacts from ravens to the desert tortoise (*Gopherus agassizii*) and other native wildlife.

Confidential Wind Repowering Project, Confidential Energy Client, Riverside County, California. Dudek prepared an ND for this project involving the decommissioning of approximately 170 wind turbines and repowering approximately 118 turbines. Supported the necessary BTRs for this project, including drafting biological resources reports and assisting with species occurrence evaluations.

Confidential Solar Project, Confidential Energy Client, San Diego, California. Dudek provided environmental support for the proposed 12-acre solar energy development, including completing necessary environmental surveys and associated documentation for project approvals. Conducted botanical surveys documenting the occurrences of the desert beauty (*Linanthus bellus*), Jacumba milk vetch (*Astragalus douglasii* var. *perstrictus*), and sticky geraea (*Geraea viscida*).

San Diego Gas and Electric Wind Interconnect Project, California Public Utilities Commission, San Diego, California. The project involved the development of an interconnection transmission facilities for two renewable energy projects: Manzanita Wind Project and the Shu'luuk Wind Project (formerly known as the Campo Wind Project) located in San Diego County. Dudek prepared the required CEQA/NEPA documents for this project. Assisted in drafting the Biological Resources section of the EIR, including the compilation of special-status species occurrence tables.

Bark Beetle Infestation Biology Services, Southern California Edison, San Bernardino and Riverside Counties, California. Dudek provided biological survey and monitoring services related to the Hazard Tree Removal project and in support of the transmission and distribution services. Dudek was responsible for conducting biological surveys along all Southern California Edison circuits within the San Bernardino and San Jacinto Mountains prior to removal of bark beetle-infested trees, drought-stressed trees, and other damaged trees from the vicinity of

its poles, lines, and other facilities. The project area encompassed 106 square miles, an estimated 62,000 acres of tree removal area, more than 22,000 power poles, and 538 linear miles of utility lines. Provided biological monitoring support before and during tree removal activities to avoid impacts to jurisdictional aquatic resources, U.S. Forest Service sensitive species, and state- and federally listed, proposed, and candidate species, including the least Bell's vireo, southwestern willow flycatcher, California red-legged frog, arroyo toad, southern mountain yellow-legged frog (*Rana muscosa*), San Bernardino kangaroo rat (*Dipodomys merriami parvus*), and various plant species.

Municipal

Santa Barbara Master Plan EIR, Coffman Associates, California. The proposed Master Plan provides guidance for the Airport's overall development for the subsequent 15 to 20 years and includes Taxiway extensions and improvements, operations and support facility changes, construction of a new parking lot, expansion of the air terminal, and relocation of a base operator. Assisted in researching and providing a response to agency comments on the Draft EIR for the proposed project regarding white-tailed kites (*Elanus leucurus*).

Western Snowy Plover Plan, City of Newport Beach, California. Drafted a western snowy plover (*Charadrius nivosus nivosus*) Management Plan.

Department of Public Works As-Needed Environmental Services, County of Los Angeles, California. Provided biological monitoring and conducted rare plant surveys.

On-Call Environmental Services, City of Los Angeles, California. Provided biological construction monitoring for sensitive biological resources adjacent to the Chatsworth Reservoir.

Resource Management

Analysis of Breeding Bird Data, Boulder County Parks and Open Space, Colorado. Prepared and provided a strategic memorandum related to the analysis of breeding bird data collected by Boulder County over decades. Provided quality assurance/quality control with the data, produced a strategic analysis document, performed distance sampling analysis to estimate avian density estimates, and produced a final report and R code training video.

Creek and Watershed Management Plan, City of Goleta, California. Dudek contracted with the City of Goleta to develop a Creek and Watershed Management Plan (Plan) under and implementation action in the City's General Plan. The over 450-page Plan focused on the City's existing twelve creek segments and provided details on a variety of topics, including stakeholder and public outreach, regulatory setting, baseline watershed characteristics, creek impairments, and an implementation program. In addition, wildlife corridor and riparian bird studies were included as a part of this plan. Served as deputy project manager, performed biological field assessments and field surveys, managed field efforts, and coordinated and drafted the various components of the Plan.

Resource Specialist Professional Services, California Department of Parks and Recreation, City of Ventura, California. Served as phase manager for wildlife surveys for five special-status wildlife species, including burrowing owl, Belding's savannah sparrow (*Passerculus sandwichensis*), bank swallow, least Bell's vireo, and southwestern willow flycatcher. Assisted with vegetation mapping and wetland delineations. Produced the final biological survey report documenting methods and results of survey efforts. In addition, as a Dudek biologist representative, attended project meeting with clients and staff to discuss coastal development strategies and project approaches to satisfy California Coastal Commission requirements.

McGrath State Beach Campground Relocation, California Department of Parks and Recreation, Oxnard, California. Served as the phase manager and lead biologist for wildlife surveys for five special-status wildlife species, including burrowing owl, Belding's savannah sparrow, bank swallow, least Bell's vireo, and southwestern willow flycatcher. Assisted with vegetation mapping and wetland delineations. Produced the final biological survey report documenting methods and results of survey efforts.

Avian and Vegetation Pilot Monitoring Studies, Rancho Mission Viejo Land Trust, Orange County, California. Over four years, served as project statistician to provide analysis for avian point count data collected during the breeding season. The project involved plans for residential development and the dedication and management of open space habitat. As part of an open space management plan, project activities involved conducting avian point count surveys in riparian systems throughout Orange County and advising on suitable habitat for least Bell's vireos. Avian point count data was collected as part of an ongoing biological resource-monitoring program. Primary statistical analysis performed includes occupancy estimation/modeling and zero-inflated mixed modeling. Software programs used for organization and analyses includes Access, PRESENCE, TRENDS, and R. After the analyses, annual reports were produced, which included the methods, results, and discussion of the analyses. In addition, activities involved providing vegetation data summaries/analysis using DSTPLAN software.

Merriam Mountains Land Development, Newland Sierra LLC, San Diego, California. Throughout breeding season, conducted least Bell's vireo surveys at six different locations. Assisted with USFWS 45-day report for least Bell's vireo and southwestern willow flycatcher surveys. Assisted in writing several documents associated with project development, including a memorandum summarizing on-site biological resources, such as plant and wildlife potential/occurrences. Wrote the biological resources section of the Open Space document; the Hardline Agreement memorandum, including conducting scientific literature review of wildlife movement potential; several sections of the BTR; and assisted with BTR revisions. Assisted/trained on vegetation mapping.

South Sacramento Habitat Conservation Plan and Aquatic Resources Plan, County of Sacramento, South Sacramento, California. Drafted Chapter 6 (Impacts) and Chapter 7 (Conservation Strategy) of the South Sacramento Habitat Conservation Plan. Chapters included details for seven covered plant species. Assisted with drafting details for invertebrate species.

Administrative Draft Desert Renewable Energy Conservation Plan and Public Draft; Aspen Environmental Group; Imperial, Inyo, Kern, Los Angeles, Riverside, San Bernardino, and San Diego Counties; California. Provided support to draft Desert Renewable Energy Conservation Plan (DRECP) documents. Revised documents based on changes to covered species list.

Countywide Habitat Preservation/Conservation Framework Phase I and Phase II (Draft Regional Conservation Investment Strategy), County of San Bernardino, California. Drafted and reviewed species accounts for the Regional Conservation Investment Strategy developed for the County of San Bernardino, San Bernardino County Transportation Authority, and Southern California Association of Governments.

Newhall Ranch Surveys Project, Newhall Land and Farming Company, Los Angeles County, California. Assisted with the Homestead South BTR (direct impacts and mitigation measures). Performed rare plant surveys for slender mariposa lily (*Calochortus clavatus* var. *gracilis*). Performed and assisted in the field management of burrowing owl and American badger surveys. Organized field data and produced full wildlife reports, including figures, for five survey project areas. Performed literature review for bat roost replacement; and American bullfrog (*Lithobates catesbeianus*), African clawed frog (*Xenopus laevis*), and crayfish management/control methods.

As-Needed Environmental Services, Parsons Brinckerhoff Inc., San Diego County, California. Completed training for working along the Mid-Coast Corridor Transit project within the railroad right-of-way. Conducted nesting bird surveys at three sites. Conducted biological monitoring for geotechnical efforts at two site locations to ensure and document the avoidance of sensitive biological and jurisdictional resources.

The Crossings Mitigation Monitoring, City of Carlsbad, California. Assisted in the daily operation and maintenance of brown-headed cowbird (*Molothrus ater*) trapping within the golf course. The trapping program is a USFWS requirement as mitigation for impacts to habitat for federally listed species, including least Bell's vireo, southwestern willow flycatcher, and California gnatcatcher.

California Energy Commission Environmental Protection DRECP, Aspen Environmental Group, Riverside County, California. Researched species information and wrote detailed species profile for Bendire's Thrasher (*Toxostoma bendirei*). Reviewed elf owl (*Micrathene whitneyi*) occurrences within Joshua Tree National Park.

Peter's Canyon Regional Park CEQA Study, Orange County Fire Authority, Irvine, California. Assisted with biological documentation preparation on botanical and wildlife sections of the final technical report. Assisted in preparation of a USFWS 45-day report for California gnatcatcher.

Santa Anita Stormwater Flood Management and Seismic Strengthening Project, Los Angeles Department of Public Works, Los Angeles County, California. Performed protocol-level surveys for southwestern willow flycatcher and least Bell's vireo. The project proposes remediation of the seismic deficiencies at the debris dam to improve public safety and reduce flood risk to downstream communities.

San Gabriel Reservoir Post-Fire Emergency Restoration Project, Los Angeles Department of Public Works, Los Angeles County, California. Performed protocol-level surveys for southwestern willow flycatcher and least Bell's vireo. The proposed project would result in the excavation of approximately 4.9 million cubic yards of debris and sediment from within an approximate 120-acre excavation area upstream of the San Gabriel Dam to restore flood control capacity of the San Gabriel Reservoir and ensure the protection of life and property downstream of the dam.

Transportation

Bear Valley Parkway, Spieth-Wohlford Inc., Escondido, California. Assisted with assembling a jurisdictional delineation report.

Transportation and Stormwater Department Regulatory Permitting, URS Corporation, San Diego, California. Conducted and documented least Bell's vireo surveys on Murphy Canyon Creek throughout breeding season. Assisted with permit applications and writing, reviewing, and addressing comments for the proposed channel maintenance project in Murphy Canyon Creek and Sorrento Creek, including Section 404 Nationwide Permit, Section 401 Water Quality Certification, and Section 1602 Streambed Alteration Agreement (SAA) and Lake and Stream Alteration extension packet for the CDFW SAA. Addressed comments on the Individual BA for Murphy Canyon and wrote the Regional Water Quality Control Board letter for Murphy Canyon permit application. Assisted in compiling the USFWS 45-day report for California gnatcatcher. Wrote the biological memorandum special-status species section incorporating three watersheds and approximately seven facilities.

As-Needed Environmental Services for Mid-Corridor Transit, PB Americas Inc., San Diego County, California. Participated in North County Transit District contractor safety training.

Water/Wastewater

San Joaquin Field Division Habitat Conservation Plan, Department of Water Resources, Central Valley, California. Supported field efforts for burrowing owl, blunt-nosed leopard lizard, and tricolored blackbird (*Agelaius tricolor*). Performed field surveys and summarized data from field crews. Provided field crew support and direction, along with field survey coordination. The surveys encompassing portions of the California Department of Water Resources California Aqueduct and Coastal Branch Aqueduct in Kern, King, and San Luis Obispo counties to support the development of the San Joaquin Field Division Habitat Conservation Plan Project.

Delta Dams Burrow Remediation Project, Department of Water Resources, Counties of Alameda and Contra Costa, California. Assisted with preparing permitting applications for submission to the U.S. Army Corps of Engineers, CDFW, and Regional Water Quality Control Board. Additional assistance included updating descriptions for the IS/MND and addressing agency comments. The project proposed to provide burrow remediation activities and associated supporting facilities at three reservoirs expanding across two counties.

Hill Canyon Wastewater Treatment Plant, Thousand Oaks, California. Served as phase manager for biological resource and led the field surveys and production of a biological constraints report. Subsequent efforts included rare plant surveys, aquatic resources delineation, and strategy memorandum for permitting and recommended biological surveys. The project proposes the construction of a debris basin and associated facility updates to re-route stormwater runoff from the adjacent, undeveloped landscape.

William B. Cater Water Treatment Plant, City of Santa Barbara, California. Served as the phase manager and coordinated the development of technical reports for noise, air quality/greenhouse gas, archaeology, and biological resources. For biological resources, led the preparation of a BRAR that documented biological constraints, site visits and surveys, and the potential for special-status species to occur; analyzed impacts; and recommended measures to avoid and minimize impacts. The project proposed to update facilities, including the construction of a new basin and supporting infrastructure.

Emergency Permits, Goleta Sanitary District, Santa Barbara County, California. The emergency work involved the installation of rip-rap adjacent to the Goleta Sanitary District sewer outfall, which was exposed as a result of sudden extreme winter weather events and high surf. Performed a biological site survey prior to emergency work and biological monitoring during activities to provide recommended guidance in avoiding impacts to sensitive resources, such as nesting birds, special-status species, or sensitive biological resources. Prepared a memorandum after monitoring activities to document the details of the emergency work, monitoring activities, and results.

Hexavalent Chromium Maximum Contaminant Level Response Program, Santa Ynez River Water Conservation District, Santa Barbara County, California. The project proposed to replace recently failed wells, establish water treatment facilities, and provide potable water for compliance with the California Maximum Contaminant Level for Hexavalent Chromium Response Program. Prepared the Biological Resources section of the IS/MND for compliance with CEQA. Preparation of this section involved a site visit, vegetation mapping, assessing the potential for special-status species to occur, impact assessment, and recommended avoidance and mitigation measures.

Braemar Forcemain No. 2 Rehabilitation Project, City of Santa Barbara, California. The project involved the addition of a forcemain on an existing bridge over Arroyo Burro Creek along Cliff Drive that would provide redundancy if pipe failure occurs. Produced a BA report for this project, which included assessing project components, assessing existing biological resources and the potential for special-status species to occur, mapping vegetation communities, analyzing impacts, and providing recommended measures to avoid and minimize impacts. The BA was developed to support the CEQA and Local Coastal Plan reporting and review process for the project.

Operations and Maintenance EIRs, Metropolitan Water District of Southern California, Orange and San Bernardino Counties, California. Performed surveys for least Bell's vireo and southwestern willow flycatchers across 10 survey sites. Assisting with coastal California gnatcatchers surveys. Organized field data and produced the USFWS 45-day vireo/flycatcher survey summary report.

Charles E. Meyer Desalination Plant Reactivation Project, Carollo Engineers Inc., Santa Barbara, California. The project involved both onshore (beach), offshore, and inland repair and maintenance activities. Performed a western snowy plover habitat assessment for onshore (beach) components and produced a BA in support of a Coastal Development Permit and Nationwide Permit (Section 10 Rivers and Harbors Act) for project activities. The BA documented a site visit and the potential for special-status species to occur, analyzed impacts, and recommended measures to avoid and minimize impacts. Assisted in the preparation of a nesting bird survey plan. Updated the BA for additional proposed repair and maintenance activities.

Southwest Costa Mesa Trunk Sewer Consolidation Project, Orange County Sanitation District, Costa Mesa, California. Assisted in ensuring final EIR and BTR consistency after changes in project design. The project involved the construction of a new trunk sewer, connecting pipelines, and the abandonment of several pump stations.

North Avenue Channel Protection Phase II Project, City of Oceanside, California. Provided support for minor revisions to CDFW and U.S. Army Corps of Engineers permit applications.

As-Needed Environmental Consulting Services, City of Vista, California. Conducted nesting bird surveys for Migratory Bird Treaty Act compliance and Regional Water Quality Control Board requirements. The project involved trenchless pipe rehabilitation for approximately 270 sewer pipelines (manholes) throughout Vista. Conducted surveys at 126 manholes. Documented any avian nesting behavior, species identification, and potential nesting locations.

Specialized Training

- Camera Trap Distance Sampling. March 2022. University of Saint Andrews. Online Lecture.
- Introduction to Distance Sampling. January 2022. University of Saint Andrews. Online Lecture.
- Basic Wetland Delineation. 2021. Wetland Training Institute. San Diego, California. Online/In-Person Combination.
- Plant Identification for Coastal Southern California. June 2017. Wetland Training Institute. San Diego, California.
- Introduction to Plant Families. April 2017. Santa Barbara Botanic Gardens. Santa Barbara, California.
- Vegetation Mapping Workshop. March 2017. California Native Plant Society. University of Redlands, California.
- Occupancy Estimation and Modeling Workshop, October 2014. University of California, Davis.
- Southwestern Willow Flycatcher Workshop, May 2013. Southern Sierra Research Station. Weldon, California.
- California Red-legged Frog Workshop, August 2013. Big Gun Conservation Bank, Placer County. California.
- CEQA Basic Workshop, October 2013. Association of Environmental Professionals. Ventura, California.
- Fairy Shrimp and Tadpole Shrimp Identification Course, San Diego County. December 2013.

Michael Cady

SENIOR BIOLOGIST

Michael Cady is a senior biologist with 15 years' experience with fieldwork and the application of environmental regulatory requirements for CEQA/NEPA compliance. Mr. Cady has worked extensively in a variety of habitats and jurisdictions throughout California. He has prepared biological technical reports in support for project and programmatic-level EIRs/EISs, initial studies (ISs), and environmental assessments (EAs). In addition, Mr. Cady has prepared permit applications and documentation to support federal ESA Section 7 and 10 consultations, CESA 2081 ITPs, CWA Section 401 and 404, and CFGC Section 1602 LSA.

Mr. Cady's field experience includes protocol surveys and habitat assessments for a variety of special-status wildlife species, rare plant surveys, general flora and fauna surveys, oak and general tree surveys, vegetation mapping, and nesting bird surveys. He has conducted wetland delineations in accordance with federal and State guidelines for a variety of aquatic resources in California. Mr. Cady's compliance monitoring experience includes both large-scale infrastructure projects and smaller projects within sensitive habitats. He has also provided environmental inspection for simple to complex projects.

Education

California State Polytechnic University, Pomona
BS, Environmental Biology, 2008

Certifications

CDFW Scientific Collecting Permit, No. SC-12259

CDFW State-Listed Plant Voucher Collection Permit, No. 2081(a)-11-15-V

Forestry and Wildlands Resources Certificate, Citrus College

40-Hour Wetland Delineation Training, Wetla

Southern California Botanists

Project Experience

Energy

Southern California Edison (SCE) O&M On-Call Biological Services, California. Served as Biological Resources Technical Lead, QA/QC Lead, Project Manager, and Field Director in multiple counties throughout SCE's service area in California and into Arizona (transmission lines). Work completed included more than 2,000 survey, monitoring, and report production work authorization tasks in support of various utility projects including deteriorated pole replacements, grid reliability and maintenance, GO 131-D, emergency services, vegetation management, and transmission line rating remediation. Projects were located on land administered by numerous agencies including the United States Air Force, the Bureau of Land Management (Barstow, Needles, Bakersfield, Ridgecrest, Palm Springs/South Coast), United States National Forests, The National Park Service, and California State Parks. Projects involved special-status species surveys and habitat assessments, nesting bird surveys, jurisdictional waters delineation and permitting, monitoring, and emergency response work.

Geokinetics Jacalito 3D Seismic Survey, Kern County, California. Served as lead biologist for inventory and monitoring for over 300 square miles in agricultural lands and sensitive native habitats for a seismic survey for oil and gas deposits. Special-status species surveys included blunt-nosed leopard lizard, San Joaquin kit fox, Tipton kangaroo rat, giant kangaroo rat, and burrowing owl. The project resulted in zero take of special-status species and impacts to sensitive habitat were limited to the minimal extent possible.

First Solar Stateline Solar Farm Project, San Bernardino County, California. Served as project manager and compliance manager/environmental compliance monitor for the third-party compliance management program representing the BLM during the construction of a 300-MW PV solar electricity generation project on 1,685 acres near the California-Nevada border. Services provided included review of preconstruction plan submittals, compliance management and daily monitoring, daily and weekly report preparation, variance preparation and management, and development of internal and public websites and periodic updates. Ensured that the SWPPP and all other BMPs were implemented correctly. Provided an interface between the client and BLM to expedite project needs and reduced delays to the project.

Pacific Gas and Electric (PG&E) Third-Party EA Support for Gas Pipeline Maintenance, San Bernardino County, California. Served as senior biologist for proposed maintenance of two PG&E gas pipelines in the Mojave Desert. Both pipelines are located on lands managed by the Bureau of Land Management that are regulated by the Desert Renewable Energy Conservation Plan. Provided review of special-status focal survey reports and preparation of biological resources technical reports and sections. The reporting includes impacts and mitigation analysis using the prescribed Conservation and Management Actions.

Los Angeles Department of Water and Power Victorville-Century 287 kV Transmission Lines, San Bernardino County, California. Served as senior biologist for the clearance of restoration sites on the Victorville-Century 287 kV Transmission Lines. Provided desert tortoise clearance surveys and updated the habitat assessment for the species in the area.

County of Kern Third-Party CEQA Consultant for Solar Energy Projects, Kern County, California. Served as a senior biologist that assisted Kern County with the review of natural resource reports that had been prepared for solar energy projects. Provided review of biological resources technical reports, jurisdictional waters delineation reports, and special-status focal survey reports for numerous solar energy projects. Prepared Biological Resources sections for EIRs, including providing appropriate mitigation measures.

EDF Renewables Valentine Solar Project, Kern County, California. Served as a senior biologist for the initial studies and permitting for a for a 2,000-acre solar project on natural lands. Conducted the jurisdictional waters delineation, vegetation mapping, and habitat assessments for sensitive plant and wildlife species. Also consulted with the regulatory agencies on the necessary permits and extent of impacts to jurisdictional waters.

NextEra San Gorgonio Wind Energy Center, Riverside County, California. Served as a project biologist for the initial studies, reporting, permitting, and monitoring for an 800-acre wind energy project. Conducted jurisdictional waters delineation, reporting, and acquisition of CWA 401 and 404, and CDFW SAA. Focused surveys for rare plants, flat-tailed horned lizard, desert tortoise, Le Conte's thrasher, and burrowing owl. Reporting and permitting for MND/CUP and EA. Produced and implemented a burrowing owl mitigation and monitoring plan. Lead biologist for biological monitors during project construction. Assisted in post-construction bird/bat mortality study setup and habitat restoration monitoring.

NextEra Blue Sky Wind Generation Project, Los Angeles County, California. Served as a senior Biologist for a proposed 7,500 acres wind project located within a Los Angeles County-designated Significant Ecological Area. Provided natural resources support that included vegetation mapping, rare plant surveys, avian point counts, and burrowing owl surveys. Produced the biological constraints analysis and the biological resources technical report.

NextEra WPP-91 Wind Energy Generation Facility Decommissioning, Riverside County, California. Served as a senior biologist for the decommissioning of a 200-acre wind energy facility project. Conducted jurisdictional waters delineation, reporting, and acquisition of CWA 401 and 404, and CDFW SAA. Focused surveys for rare

plants, flat-tailed horned lizard, Coachella Valley fringe-toed lizard, and burrowing owl. BLM-approved Field Contact Representative and Designated Biologist during project activities.

NextEra Kramer Junction Solar Energy Center, San Bernardino County, California. Served as a biologist for a proposed 300-acre solar energy facility. Provided surveys, reporting, and permitting. Focused surveys for rare plants, desert tortoise, Le Conte's thrasher, and burrowing owl. Reporting and permitting for MND/CUP and CESA 2081. Also provided habitat assessment for 20 parcels in the project vicinity for potential mitigation.

NextEra Lucerne Valley Solar Energy Center, San Bernardino County, California. Served as a biologist for the initial studies and permitting for a proposed 650-acre solar energy facility. Provided focused surveys for rare plants, desert tortoise, and burrowing owls. Prepared biological technical reports in support of EIR and CUP.

NextEra Dawn Solar Energy Center, Kern County, California. Served as a biologist for the initial studies of a proposed 600-acre solar energy facility. Provided focused surveys for rare plants, desert tortoise, and burrowing owls; conducted a jurisdictional waters delineation; and prepared biological technical reports

NextEra SEGS X Expansion Project, San Bernardino County, California. Served as a biologist for the initial studies for the proposed expansion of a solar energy facility located north of Harper Dry Lake. Provided general surveys, habitat assessment, rare plant surveys, vegetation mapping, and prepared the technical reports for the project.

Iberdrola – Camino Solar Project, Kern County, California. Served as the senior biologist for the initial studies for a proposed solar energy facility located within the Tylerhorse Wind Project. Provided general surveys, habitat assessment, rare plant surveys, vegetation mapping, and jurisdictional waters delineation, and prepared the technical reports for the project.

sPower Renewable Energy Projects, Los Angeles and Kern counties, California. Served as senior biologist for the initial studies for multiple small-scale solar energy facilities in the Antelope Valley. Provided general biological surveys, vegetation mapping, jurisdictional waters delineations, and reporting.

WKN USA Wagner Wind Energy Project, Palm Springs, California. Served as a project biologist for the initial studies, reporting, permitting, and monitoring for a 20-acre wind energy project. Conducted surveys for rare plants, desert tortoise, Le Conte's thrasher, and burrowing owl. Reporting and permitting for MND/CUP. Lead biologist for biological monitors during project construction.

Graham Pass Wind Energy Facility, Riverside County, California. Served as the senior biologist for the initial studies for a proposed wind energy facility located south of Desert Center in critical habitat for desert tortoise. Provided vegetation mapping, habitat assessments, desert tortoise surveys, and the preparation of a Biological Assessment for desert tortoise.

Tehachapi Wind Repower Project, Kern County, California. Served as the senior biologist for the initial studies for a proposed repower of a wind energy facility. Provided general surveys, habitat assessment, rare plant surveys, vegetation mapping, and jurisdictional waters delineation, and prepared the technical reports for the project.

Geokinetics Lake Mendocino 3d Seismic Survey, Colusa County, California. Served as lead biologist for surveys, reporting, and compliance monitoring oversight for a 500-acre seismic survey project. Conducted habitat assessments and focused surveys for Swainson's hawk and giant garter snake. Prepared Biological Resources Assessment report and assisted with FWS consultation, and preparation of an IS/MND. Provided oversight of the monitoring effort.

Plains All American Natural Resources Regulation Training, San Bernardino County, California. Served as biologist for delivering natural resources regulation training to the company's California engineers and project managers. Prepared and delivered the training that focused on CEQA, State and federal ESA, and waters regulations.

Kinder Morgan Meter Stations, Kern County, California. Served as lead biologist for proposed meter stations located in the oil and gas fields near Taft. Provided biological surveys, habitat assessments, and reporting for reports required by DOGGR.

PG&E PSEP Line 167-1 Pipeline Replacement, Butte County, California. Served as environmental inspector and wildlife monitor for 2.2-mile pipeline replacement that crossed jurisdictional waters and habitat associated with special-status species. Duties included enforcing the SWPPP and other BMP measures to limit the environmental impact of the project and to avoid the take of giant gartersnake and nesting raptors. Provided daily and weekly reporting to the client.

PG&E DFM-1815-02 Pipeline Replacement Project, Monterey, County, California. Senior biologist for the replacement of an approximately 11-mile natural gas replacement along State Route 68. Provided general surveys, habitat assessment, rare plant surveys, burrowing owl surveys, California red-legged surveys, and prepared the technical reports for the project.

SCE North Sky River Windhub Transmission Project, Kern County, California. Served as senior environmental monitor for the construction of interconnect transmission line. Ensured that there were no impacts to California condor and other sensitive species, and implemented a worker's environmental plan for the project.

PG&E Willow Creek Native Species Monitoring, Fresno County, California. Served as a field biologist for native species monitoring to keep the client in compliance with FERC regulations for upstream hydroelectric dams. Provided red-legged frog, western pond turtle, and native fish surveys (included electro-shocking).

SCE Fort Irwin Reliability Project, San Bernardino County, California. Served as senior wetland biologist for a transmission line improvement project located on lands administered by the BLM, Department of Defense, and private landowners. Provided oversight on the jurisdictional waters delineation and preparing the necessary permit packages.

Morgan Hills Wind Energy Transmission Line (Segments 1 and 2) and Access Roads, Kern County, California. Served as senior biologist for the proposed construction of transmission lines through a variety of habitats in the Tehachapi Mountains. Lead the vegetation mapping, rare plant surveys, desert tortoise surveys, and burrowing owl surveys, and prepared the reports.

SCE Kern River TLRR Project, Kern and Los Angeles Counties, California. Served as senior wetland biologist for an approximately 70-mile Southern California Edison transmission line improvement project. Provided jurisdictional waters delineation and rare plant surveys.

PG&E Contra-Costa-Moraga 230 kV Reconductoring, Contra Costa County, California. Served as a field biologist for due diligence surveys for a 27-mile long transmission line project. Provided Swainson's hawk and burrowing owl protocol surveys and prepared the technical reports.

SCE San Joaquin Cross Valley Loop Transmission Project, Tulare County, California. Served as a field biologist for initial studies for the construction of a new 19 mile double-circuit 220 kilovolt transmission line. Conducted rare plant surveys and verified jurisdictional waters/wetlands mapping.

Astoria Solar Project Vegetation Management Assistance, Kern County, California. Served as senior biologist for vegetation maintenance guidance that was needed to comply with North American Electric Reliability Commission requirements. Provided vegetation mapping and plant maintenance guidelines for plants beneath and adjacent to the project's gen-tie lines.

NextEra Suncrest Dynamic Reactive Power Support Project, San Diego County, California. Served as the senior biologist for the initial studies of a dynamic reactive device at the existing Suncrest Substation's 230 kilovolt bus. Provided vegetation mapping, habitat assessment, rare plant survey, and jurisdictional waters delineation, reporting, and permitting.

Riverside Energy Resource Center, Unit 3 and 4, Riverside, California. Served as the biologist for the construction of a gas-fired peaking project. Developed a workers environmental awareness plan and provided preconstruction surveys for burrowing owl and nesting birds.

Water/Wastewater

Los Angeles County Department of Public Works (LADPW) Cogswell Dam Restoration Project, Los Angeles County, California. Served as senior biologist for the proposed sediment removal in the Cogswell Dam Reservoir. Provided jurisdictional waters delineation and reporting for Cogswell Reservoir and adjoining streams, along with rare plant and least Bell's vireo protocol surveys.

LADPW Eaton Wash Dam Spillway Access Ramp, Pasadena, California. Served as a field biologist that provided environmental clearance for the commencement of construction of a spillway access ramp. Provided nesting bird surveys and reporting.

LADPW Eaton Canyon Reservoir Vegetation Maintenance, Pasadena, California. Served as a field biologist that provided surveys and monitoring for the clearance of vegetation within the reservoir. Duties included least Bell's vireo surveys and monitoring of the vegetation removal.

Los Angeles County Sanitation District On-Call Biological Services, Los Angeles County, California. Served as project biologist for the construction of various water-supply infrastructure in the Antelope Valley and Los Angeles Basin. Duties included the jurisdictional waters delineation of various wetlands and non-wetlands. Also prepared multiple biological resource assessments for a variety of projects, including the vegetation management plan for the sensitive Piute Ponds. Lead the biological monitoring for the construction of the pipeline and reservoirs. Also provided pre-construction surveys for desert tortoise, burrowing owl, American badger, nesting birds and rare plants on over 1,000 acres of the project area.

Palmdale Water District Water System Master Plan Update, Palmdale, California. Served as senior biologist for the technical studies for an EIR in support of a master plan update for a 43 square mile service area. Provided surveys, studies, and biological technical report preparation. Services provided also included providing CEQA impact-mitigation analysis for the project's EIR and cumulative impacts analysis.

City of Morro Bay Water Reclamation Facility, Morro Bay, California. Served as senior biologist for a proposed wastewater collection system modifications, a new pumping station, a new force main to convey the raw wastewater to the site, advanced water treatment, recycled water storage and pumping facilities, and injection wells for groundwater replenishment. Provided review of biological resources technical reports, jurisdictional waters delineation reports, and special-status focal survey reports for water reclamation facility located within a local coastal plan. Prepared Biological Resources sections for EIRs, including providing appropriate mitigation measures, and cumulative impacts analysis.

Development

Rancon Group – Ranch Storage and Temescal Canyon Road Improvement Project, Riverside County, California. Served as the project manager and senior biologist for the initial studies of a proposed storage facilities and improvements to the adjacent road. Provided project management, jurisdictional waters delineation and reporting, and a Western Riverside County MSHCP Consistency Analysis and Determination of Biologically Equivalent or Superior Preservation.

Andora Subdivision Project Natural Resources Permitting, Los Angeles, California. Served as the project manager and senior biologist for the natural resources permitting for a proposed 33-lot residential subdivision with an open space lot that was used for mitigation for impacts. Provided project management, jurisdictional waters delineation, rare plant survey, and technical support for a CESA 2081 Incidental Take Permit for Santa Susana tarplant and jurisdictional waters permits. Also prepared the Habitat Mitigation and Monitoring Plan and Land Management Plan for the permits and coordination with agencies. Prepared a Property Analysis Record (PAR) and Land Management Plan in support of establishing a conservation easement on the open space lot.

Copper Creek North and South, Los Angeles County, California. Served as a biologist for the initial studies of a proposed 484 home residential project that included public parks and an elementary school on 453 acres. Provided surveys and studies for biological technical report, environmental permitting, EIR preparation, and biological monitor Services provided included general and sensitive species surveys, vegetation mapping, rare plant surveys, jurisdictional waters delineation, oak tree surveys, oak tree permit, nesting bird surveys, Initial Study preparation, biological resource analysis, CUP/EIR preparation, agency consultation, and 404, 401, 202(p) permits preparation.

Centex Homes – Fagan Canyon Housing Development and Open Space Plan, Ventura County, California. Project biologist for proposed 2,176-acre housing development and open space plan. Lead the delineation of over five linear miles of perennial riparian, adjacent wetlands, and ephemeral drainages. Lead the oak tree assessment and survey. Conducted rare plant surveys and general biological surveys. Also developed a riparian and wetland restoration plan to mitigate project impacts. Surveyed undeveloped properties in the vicinity for potential mitigation sites.

KB Homes Coastal Mission 316 West Subdivision Project, San Marcos, California. Served as senior biologist for 67 multifamily dwelling units on approximately 3.71 acres. Provided surveys, reporting, and impact analysis to support an EIR for the project. Consulted with the U.S. Fish and Wildlife Service (USFWS) to avoid California gnatcatcher take.

Soledad Circle Estates, Santa Clarita, California. Served as the project biologist for a proposed 150 multifamily residential unit subdivision in natural lands. Provided vegetation mapping, habitat assessment, rare plant survey, jurisdictional waters delineation and reporting, waters permit application preparation, and biological resources technical report preparation.

Spring Canyon Residential Subdivision, Santa Clarita, California. Served as the project biologist for a proposed 499 multifamily residential unit subdivision on 550 acres of natural lands. Provided vegetation mapping, habitat assessment, rare plant survey, prepared a rare plant translocation plan, oak tree survey, jurisdictional waters delineation and reporting, waters permit application preparation, and biological resources technical report preparation. Also provided a wildlife corridor-habitat linkage analysis along the Interstate 14 in the vicinity of the project, and conducted extensive surveys for a 80-acre mitigation parcel located in Violin Canyon.

Stephenson Canyon Residential Project, Los Angeles County, California. Served as a biologist for the initials studies for a proposed residential development in natural lands in the foothills of the San Gabriel Mountains. Provided vegetation mapping, habitat assessment, rare plant survey, oak tree survey, jurisdictional waters delineation and reporting, and biological resources technical report preparation.

Verdugo Ranch Riparian Mitigation, Los Angeles County, California. Served as project manager and biologist for the mitigation plan design, implementation, and monitoring for creation of two acres of riparian habitat within a residential development. Monitored the project for five years and helped meet agency criteria for success.

University of California, Irvine Faculty and Staff Housing Project, Irvine, California. Served as project manager and biologist for the initial studies, reporting, permitting, and monitoring for a 20-acre wind energy project. Conducted general habitat assessment and vegetation mapping, and surveys for rare plants and burrowing owl. Prepared the biological resources technical report. Lead biologist for biological monitors during project construction.

Gordon Mull Subdivision Project, Glendora, California. Served as the senior biologist for a 71-acre residential project located in natural lands in the foothills of the San Gabriel Mountains. Provided vegetation mapping, habitat assessment, rare plant survey, jurisdictional waters delineation and reporting, and biological resources technical report preparation.

Lakeshore Town Center, Lake Elsinore, California. Served as senior biologist for the initial studies and permitting for a 24.5 acre mixed-use development on the shore of Lake Elsinore. Conducted general habitat assessment and vegetation mapping, surveys for rare plants and burrowing owl, and jurisdictional waters delineation, reporting, and permitting.

Scholl Canyon Landfill Project, Glendale, California. Served as senior biologist for the initial studies of a new facility within developed and natural lands within the landfill. Provided vegetation mapping, habitat assessment, rare plant survey, protected tree mapping, and biological resources technical report preparation.

Transportation

LOSSAN CP San Onofre to CP Pulgas Double Track Upgrade Project, San Diego County, California. Served as the project biologist for the surveys and reporting for a six mile portion of CP San Onofre to CP Pulgas railway. Services provided included sensitive and general species surveys, habitat assessments for sensitive species (arroyo toad, quino checkerspot butterfly, and San Diego ambrosia), vegetation mapping, and Biological Assessment preparation for ESA Section 7 consultation.

Riverside Municipal Airport Expansion Project, Riverside, California. Served as the biologist for the proposed expansion of the airport. Provided general biological surveys, rare plants surveys, and burrowing owl surveys. Prepared a biological resources technical report in support of an EIR that provided an impact analysis for sensitive biological resources.

Lynwood Urban Bicycle Trail Project, Los Angeles, California. Served as the senior biologist for a proposed 2-mile bike path that was located on undeveloped Caltrans land adjacent to the 105 Freeway. Provided a biological survey and NES-MI report preparation.

Burbank Bike Path Project, Los Angeles, California. Served as the project manager and biologist for a proposed 3-mile bike path that was located on undeveloped Caltrans land adjacent to the 5 Freeway. Provided a biological survey and NES-MI report preparation.

Azusa Intermodal Parking Facility Project, Azusa, California. Served as the senior biologist for the initial studies for a proposed parking structure. Provided general biological surveys, assisted with the tree survey, and prepared the biological technical report to support the project's EIR.

Los Alamitos Road Interchange Project, Murrieta, California. Served as the biologist for a proposed interchange project on Interstate 15. Provided a biological survey and NES-MI report preparation.

Santa Ysabel Roadway Project, San Diego County, California. Served as senior biologist for roadway improvement project within the Santa Ysabel Reservation. Provided general surveys, habitat assessment, rare plant surveys, vegetation mapping, and prepared the technical reports for the project.

Los Angeles County Metropolitan Transportation Authority Regional Connector Transit Corridor, Los Angeles, California. Served as senior biologist for the QA/QC of project technical documents and prepared the Biological Resources section of the EIR.

Municipality

LADPW Los Rancho Los Amigos South Campus Project, Downey, California. Served as the senior biologist for the construction of three new County administrative buildings on the Rancho Los Amigos Campus. Provided general surveys and habitat mapping, assisted with bat acoustic surveys, prepared the biological resources technical report, and prepared the Biological Resources section of the EIR for the project.

Adelanto North 2035 Comprehensively Sustainable Plan, Adelanto, California. Served as project manager and senior biologist to provide biological support for the development of a community plan for 55 square miles in the City of Adelanto and unincorporated San Bernardino County. Provided biological surveys, vegetation mapping, and reporting.

City of Los Angeles Park and Recreation Vegetation Maintenance Support, Los Angeles, California. Served as project manager and senior biologist for the maintenance of vegetation within the City of Los Angeles parks. Coordinated with the City to provide nesting bird surveys, nesting bird plans, and monitoring for numerous parks.

County of San Bernardino Flood Control District Sheep Creek Channelization Project, San Bernardino County, California. Served as the biologist for the channelization of a creek within the San Gabriel Mountains. Provided vegetation mapping, habitat assessment, and jurisdictional waters delineation, reporting, and permitting.

Compton Creek Master Plan, Compton, California. Biologist for a master plan for revitalizing Compton Creek. Provided general surveys, habitat assessment, and vegetation mapping, and prepared the biological resources technical report.

Resource Management

Los Angeles County Sanitation District Bixby Marshland Restoration Monitoring, Carson, California. Served as project manager and senior biologist for a 17 acres wetland and upland habitat restoration project. Set up a scientific study to provide statistical analysis of the project's progress in meeting agencies' criteria for success. Provided annual reporting over seven years that included recommended measures to counter any losses of established plants. Prepared and provided a nesting bird-training program to the maintenance crew.

Los Angeles County Sanitation District Piute Ponds Maintenance, Los Angeles County, California. Served as project biologist for the long-term maintenance of district facilities at the Piute Ponds. Provided surveys, reporting, and impact mitigation analysis for the highly sensitive habitat located within the Mojave Desert.

California Department of Water Resources Arroyo Toad Study, Ventura County, California. Served as the senior biologist for an arroyo toad population study in Piru Creek and its tributaries. Conducted a breeding season study to determine the population dynamics of arroyo toad as part of the mitigation for Pyramid Lake. Arroyo toads observed in all life stages and nighttime adult male vocal surveys conducted.

Bureau of Land Management Desert Tortoise Population and Threat Analysis, Arizona and Nevada. Served as a field biologist for an assessment of threats on the Gold-Butte Pakoon (Arizona and Nevada) desert tortoise population. Technical experience included conducting transect surveys; locating burrows; scat identification; collecting morphometric data; attaching transmitters; and radio-telemetry.

Department of Defense Fort Irwin Desert Tortoise Headstarting Project, San Bernardino County, California. Served as a field biologist for the study of juvenile desert tortoises that had been raised in protected pens before being released. Technical experience included conducting health assessments; collecting morphometric data; attaching transmitters; and radio-telemetry.

NV Energy Dry Lake Solar Energy Center at Harry Allen, Clark County, Nevada. Served as field biologist for desert tortoise population assessment. Duties included conducting transect surveys; locating burrows; scat identification; health assessments, collecting morphometric data; attaching transmitters; and radio-telemetry.

El Centro Solar Energy Transmission Line Project, Imperial County, California. Served as lead field biologist conducting flat-tailed horned lizard studies. Technical experience included conducting transect surveys; scat identification; handling, and collecting morphometric data; attaching transmitters.

Other

Bureau Veritas Third-Party Review for Verizon Cellular Towers NEPA Compliance, California. Served as senior biologist for the review of No Effect Findings reports for more than 100 proposed cell towers throughout California. For tower locations that were determined to have potential to have an effect on a sensitive biological resource, additional surveys and reporting was conducted, including jurisdictional waters delineations, burrowing owl surveys, desert tortoise surveys, and rare plant surveys.

Verizon Cajon Wash Permitting, San Bernardino, California. Served as senior biologist for after-the-fact permitting for impacts to the Cajon Wash. Provided vegetation mapping, habitat assessment, rare plant survey, jurisdictional waters delineation and reporting, waters permit application preparation, and agency consultation.

Desert Tortoise Health Assessment Training. USFWS. (2015)

Flat-tailed Horned Lizard Survey Training. Bureau of Land Management

Galen Hagen

BIOLOGIST

Galen Hagen is a biologist with 14 years' professional experience specializing in regulatory permitting, special-status species surveys, environmental compliance, and project management. Mr. Hagen has extensive experience preparing biological technical reports and natural resource sections of California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA) documents.

Education

University of Otago, New Zealand
Fulbright Fellow, 2004–2005

University of California, San Diego
BS, Cognitive Psychology, Minor in Economics, 2003

Mr. Hagen has strong writing and communication skills and extensive field experience conducting surveys of flora and fauna, including special-status species investigations for the state-listed endangered San Fernando Valley spineflower (*Chorizanthe parryi* var. *fernandina*), the state and federally listed endangered Gaviota tarplant (*Deinandra increscens* ssp. *villosa*), the federally listed endangered least Bell's vireo (*Vireo bellii pusillus*) and arroyo toad (*Anaxyrus californicus*), the federally listed threatened desert tortoise (*Gopherus agassizii*) and California red-legged frog (*Rana draytonii*), and the California Species of Special Concern burrowing owl (*Athene cunicularia*).

Project Experience

Municipal

San Gabriel Reservoir Post-Fire Emergency Sediment Removal Project, Los Angeles County Public Works, Los Angeles, California. Served as project manager for a large-scale and multiyear emergency sediment removal project at the San Gabriel Reservoir. Provided regulatory permitting expertise, including serving as the primary author for the 2021 biological assessment for Santa Ana sucker (*Catostomus santaanae*), and worked closely with multiple project teams to ensure project completion in compliance with environmental permits. Coordinated regularly with regulatory agencies, including the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), U.S. Army Corps of Engineers (USACE), and Regional Water Quality Control Board (RWQCB), regarding permitting and compliance with permits. Assisted with the relocation of Santa Ana sucker, Santa Ana speckled dace (*Rhinichthys osculus*), arroyo chub (*Gila orcuttii*), and rainbow trout (*Oncorhynchus mykiss*) by electroshocking, seining, and dip-netting. Conducted nesting bird surveys and wildlife relocations in accordance with agency-approved protocols.

Foothill Feeder Environmental Impact Report and Permitting, Metropolitan Water District of Southern California, Santa Clarita, California. Conducted general reconnaissance and vegetation mapping on site and assisted in preparation of the biological technical report and Environmental Impact Report biota section.

Development

Various Projects, Newhall Land and Farming Company, Los Angeles County, California. Coordinated and conducted botanical field surveys on over 1,000 acres of habitat, mainly coastal sage scrub and chaparral, including special-status plant focused surveys for the San Fernando Valley spineflower, state listed as endangered and a California Rare Plant Rank (CRPR) 1B.1 species, and slender mariposa lily (*Calochortus clavatus* var. *gracilis*), a CRPR List 1B.2 species. Fieldwork also included plant surveys to document the extent of and conditions of known spineflower populations, as well as monitoring known populations during ground disturbing activities. Also

assisted in the preparation of the Spineflower Conservation Plan and Incidental Take Permit, as well as various biological resource reports to support CEQA documents.

Yokohl Ranch Development Environmental Impact Report Project, The Yokohl Ranch Company CCL, Tulare County, California. Assisted in the preparation of various biological resource reports to support CEQA documents.

Barstow Industrial Park, San Bernardino County, California. Conducted biological surveys, including vegetation mapping and focused plant surveys.

Focused Wildlife Surveys, Yaqui Pass and Viking Farms, Borrego Springs, California. Conducted general nocturnal and diurnal surveys with a focus on special-status wildlife species on two proposed development properties in Borrego Springs. Conducted general plants surveys with a focus on special-status plant species.

Various Projects, High Speed Rail Authority, Fresno, Tulure, and King's Counties, California. Prepared amendments to the Incidental Take Permits and Biological Opinions associated with various projects of the California High-Speed Train System.

Energy

Confidential Wind Energy Project, Confidential Client, Santa Barbara County, California. Conducted approximately 212 hours (27 days) of rare plant surveys and native grassland mapping, including mapping the state and federally listed Gaviota tarplant. Additionally, conducted approximately 318 hours (40 days) of monitoring of ground disturbing activities during construction of wind farm.

Extension-of-Staff Biologist, Southern California Edison, California and Arizona. Managed the biological review of projects occurring under Southern California Edison's (SCE's) Operations and Maintenance program in several counties throughout SCE's service area in California and Arizona. Projects involved special-status species surveys and habitat assessments, nesting bird surveys, jurisdictional waters delineation, and monitoring. Projects occurred on both private and public lands and responsibilities included coordinating with personnel across several SCE departments and managing teams responsible for biological monitoring of SCE Operations and Maintenance field work.

Concepcion 16-Kilovolt Transmission Line Deteriorated Pole Project, SCE, Santa Barbara County, California. Conducted general biological investigations and focused surveys within environmentally sensitive habitat for the federally endangered species Gaviota tarplant along the Concepcion 16-kilovolt (kV) distribution line. Also performed construction monitoring for work intended to repair, upgrade, and replace facilities to ensure service reliability.

Devers–Palo Verde No. 2 500 kV Transmission Line, SCE, Riverside County, California. Conducted jurisdictional determinations and vegetation mapping along the route of the proposed Devers-Palo Verde No. 2 Electrical Transmission Line.

Hazard Tree Removal Project, SCE, San Bernardino and San Jacinto Mountains, San Bernardino County, California. Conducted nocturnal and diurnal surveys for arroyo toad, California red-legged frog, and mountain yellow-legged frog (*Rana muscosa*) in select drainages within the San Bernardino and San Jacinto Mountains. The surveys supported implementation of a tree removal project along existing power lines within San Bernardino County and were conducted to ensure avoidance of impacts to special-status amphibian species and their habitats. Surveys were negative.

As-Needed Biological Services, SCE, Southern California. Provided as-needed biological services, including biological assessments, vegetation mapping, monitoring, and preparation of biological technical reports for various projects conducted by SCE throughout Southern California.

Bark Beetle Tree Removal Project, SCE, San Bernardino and San Jacinto Mountains, Riverside and San Bernardino Counties, California. Conducted biological surveys along SCE circuits within the San Bernardino and San Jacinto Mountains prior to removal of bark-beetle-infested trees, drought-stressed trees, and other damaged trees from the vicinity of its poles, lines, and other facilities. The project area encompasses 106 square miles, an estimated 62,000 acres of tree removal, more than 22,000 power poles, and 538 linear miles of utility lines. Responsibilities included coordinating with SCE personnel and U.S. Forest Service biologists regarding site-specific sensitivities, conducting biological surveys of power lines within the San Bernardino National Forest, monitoring tree-cutting crews felling infected trees, and writing biological documents.

Western San Joaquin Valley Energy Project, Kern County, California. Part of a team conducting botanical surveys over approximately 30,000 acres in the western San Joaquin Valley covering potential development and mitigation lands associated with a large habitat conservation plan. The project sought to identify the potential for occurrence of San Joaquin kit fox (*Vulpes macrotis mutica*), blunt-nosed leopard lizard (*Gambelia sila*), San Joaquin antelope squirrel (*Ammospermophilus nelsoni*), giant kangaroo rat (*Dipodomys ingens*), Tipton kangaroo rat (*Dipodomys nitratoides nitratoides*), short-nosed kangaroo rat (*Dipodomys nitratoides brevinasus*), burrowing owl, Le Conte's thrasher (*Toxostoma lecontei*), and rare plants on potential development lands, and to assess the suitability of additional properties as mitigation lands for these species. Completed protocol surveys for blunt-nosed leopard lizard and focused rare plant surveys in select portions of the overall project area, which included positive identification of Kern mallow (*Eremalche parryi* ssp. *kernensis*), a federally endangered and CRPR 1B.1 species. Conducted burrow surveys to assess the potential for several species to occur within the survey areas, including San Joaquin kit fox, San Joaquin antelope squirrel, giant kangaroo rat, Tipton kangaroo rat, short-nosed kangaroo rat, and burrowing owl.

Resource Management

Land Management Plan, San Jacinto Wildlife Area, Riverside County, California. Conducted vegetation mapping during reconnaissance visits on the 20,000-acre San Jacinto Wildlife Area and performed a review of management plans, land use policies, and technical reports, as well as a review of the CEQA Initial Study Checklist (and possible NEPA) issues relevant to the area. Gathered and analyzed information to determine regulatory compliance and land use consistency for existing and planned San Jacinto Wildlife Area activities, including waterfowl and upland game hunting, dog training and field trials, special-status species management, agricultural activities, habitat restoration efforts, facilities improvements and construction, and trail use and interpretative services. Also assisted in coordinating public interest meetings to gather public input and potential concerns regarding the Draft Land Management Plan, developing a geographic information system (GIS) database to support the project documents, and preparing the Land Management Plan.

Specialized Training

- Basic Wetland Delineation, Wetland Training Institute Inc., January 24–25, 2022.
- Riparian Plant Identification for Coastal Southern California Rivers and Streams, Wetland Training Institute Inc., June 4–5, 2012.
- Birds of Southern California, Audubon Society, 2009.
- Fifty-One Plant Families in the Field, Jepson Herbarium, 2008.
- CEQA Seminar, Association of Environmental Professionals, 2007.

Tracy Park

BIOLOGIST

Tracy Park (*she/her*) is a biologist with 8 years' experience with focused wildlife and botanical surveys, jurisdictional delineation (JD) of aquatic resources, construction monitoring, vegetation mapping, environmental research, and report preparation. Ms. Park enjoys working with a broad range of floral and faunal taxa, with significant experience surveying for desert tortoise (*Gopherus agassizii*), burrowing owl (*Athene cunicularia*), arroyo toad (*Anaxyrus californicus*), least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii extimus*), grasshopper sparrow (*Ammodramus savannarum*), San Fernando Valley spineflower (*Chorizanthe parryi* var. *fernandina*), **Gaviota tarplant (*Deinandra increscens* ssp. *villosa*)**, southern tarplant (*Centromadia parryi* ssp. *australis*), and **slender mariposa lily (*Calochortus clavatus* var. *gracilis*)**. As a mid-level biologist with Dudek, she coordinates field surveys and prepares a broad range of biological reporting such as biological constraints analyses, biological technical reports (BTRs), focused survey reports, aquatic resources delineation reports, and biological sections of environmental impact reports. Her field experience extends throughout California.

Education

University of California, San Diego

BS, Environmental Systems, Ecology Behavior and Evolution, 2014

Project Experience

Energy

Strauss Wind Energy Project, BayWa, Santa Barbara County, California. Conducted raptor and eagle point-count surveys of proposed turbine locations, vegetation mapping, a formal JD of aquatic resources, native grassland mapping, rare plant surveys, and focused Gaviota tarplant surveys in 2018–2023. Other sensitive species documented include paniculate tarplant (*Deinandra paniculata*), black-flowered figwort (*Scrophularia atrata*), globe-fruited La Purissima manzanita (*Arctostaphylos purissima* ssp. *globosa*), Humboldt's lily (*Lilium humboldtii*), American badger (*Taxidea taxus*), grasshopper sparrow, and golden eagle (*Aquila chrysaetos*), among others. Approved as a Designated Botanist for monitoring of Gaviota tarplant and other rare plant species under the California Endangered Species Act Incidental Take Permit for the project. Led field efforts for Gaviota tarplant quantitative monitoring developed for implementation of the Incidental Take Permit in 2022 and 2023. (June 2018–August 2023)

Scarlet Solar, Fresno County, California. Collected field data for a formal JD for a solar project within unincorporated Fresno County. (February 2021)

Pelican Jaw Solar, Kern County, California. Collected field data for a formal JD for a solar project within unincorporated Kern County. (December 2020)

Edwards Solar, Terra-Gen Power LLC, Edwards Air Force Base (AFB), California. Collected field data for a formal JD within a segment of Edwards AFB slated for a proposed solar energy operation. Specifically, the JD involved mapping waters defined in the Methods to Describe and Delineate Episodic Stream Processes on Arid Landscapes for Permitting Utility-Scale Solar Power Plants. Prepared JD report for this effort. (May 2019)

Tesla-Solar City Nesting Bird Surveys, California. Conducted nesting bird surveys for construction of solar carports at various school campuses within Walnut Valley Unified School District and Chino Valley Unified School District. (2017–2019)

Resource Management

Initial Management Action Plan, Rancho Mission Viejo Land Trust, Orange County, California. Conducted avian point-count surveys for coastal sage scrub, grassland, and riparian bird species for the project. Target species documented during point-count surveys include Southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*), grasshopper sparrow, least Bell's vireo, coastal California gnatcatcher (*Polioptila californica californica*), yellow warbler (*Setophaga petechia*), yellow-breasted chat (*Icteria virens*), and San Diego cactus wren (*Campylorhynchus brunneicapillus sandiegensis*), among others. Also assisted with long-term vegetation monitoring surveys for this project. (April 2020–July 2023)

Newhall Ranch Middle Canyon Spring Preserve, Newhall Land and Farming Company, Santa Clarita, California. Serves as field lead, coordinating survey efforts for the preserve. Conducts quarterly photo-documentation visits, annual vegetation relevé surveys, and annual Newhall sunflower (*Helianthus inexpectatus*) census surveys for the Middle Canyon Spring at Newhall Ranch. Prepares the botanical section of the annual monitoring reports. (2018–Present)

Newhall Ranch Spineflower Preserves, Newhall Land and Farming Company, Santa Clarita, California. Conducted annual areal extent and quantitative monitoring of San Fernando Valley spineflower at spineflower preserves within the ranch in 2018, 2019, and 2020. Also conducted spineflower pollination surveys in 2019. Conducted monitoring during adaptive weed management activities. (June 2018–February 2022)

Chatsworth Reservoir Mitigation Feasibility Study, Los Angeles Department of Water and Power (LADWP), Chatsworth, California. Participated in rare plant surveys, reference population checks, JDs, vegetation mapping, vernal pool mapping within the 1,092-acre decommissioned reservoir slated for habitat restoration. Assisted with technical reporting for the project. Rare plants mapped within the project site included Santa Susana tarplant (*Deinandra minthornii*), southern tarplant, and manystem liveforever (*Dudleya multicaulis*). (Spring and Summer 2019)

Development

Mojave Industrial Park Project, Covington Group, City of Victorville, California. Acting biological lead for a 73-acre warehouse project. Coordinated field effort for vegetation mapping, a formal JD, habitat assessments, focused burrowing owl surveys, focused desert tortoise surveys, rare plant surveys, plant reference population checks, and focused Mohave ground squirrel (*Spermophilus mohavensis*) surveys. Conducted fieldwork for all but focused small mammal trapping surveys. A family of burrowing owl were recorded approximately 150 feet from the project during surveys. Prepared the BTR, JD report, burrowing owl relocation plan, kit fox relocation plan, and biological section of the environmental impact report. (September 2022–October 2023)

Whittaker–Bermite Specific Plan, Atlantis Group and New Urban West, Santa Clarita, California. Led and conducted vegetation mapping and rare plant surveys for a 1,000-acre property in Santa Clarita Valley. Assisted with focused Crotch bumblebee (*Bombus crotchii*) surveys. Sensitive species encountered during surveys include slender mariposa lily, Plummer's mariposa lily (*Calochortus plummerae*), Peirson's morning glory (*Calystegia peirsonii*), and western spadefoot (*Spea hammondii*). (March–July 2023)

Conejo Summit Project, Thousand Oaks, California. Led and conducted rare plant surveys for an approximately 50-acre property in Thousand Oaks. Sensitive species encountered during surveys include Catalina mariposa lily (*Calochortus catalinae*) and Conejo dudleya (*Dudleya parva*). Also conducted the plant population reference

checks for species encountered during surveys, as well as other target species such as Lyon's pentachaeta (*Pentachaeta lyonii*), Blochman's dudleya (*Dudleya blochmaniae* ssp. *blochmaniae*), Agoura Hills dudleya (*Dudleya cymosa* ssp. *agourensis*), Conejo buckwheat (*Eriogonum crocatum*), and Verity's dudleya (*Dudleya verityi*). (March–July 2023)

Berggruen Institute Project, City of Los Angeles, California. Conducted least Bell's vireo protocol surveys and implemented wildlife camera trapping surveys for an approximately 400-acre property. (February–May 2021)

East Lake Specific Plan, City of Lake Elsinore, California. Conducted least Bell's vireo protocol surveys identifying and documenting territorial individuals and breeding pairs. Sensitive species documented during vireo surveys include least Bell's vireo, yellow-breasted chat, and coastal California gnatcatcher. Also conducted vernal pool mapping surveys and spring botanical surveys. Assisted with writing the biological baseline report. (April–July 2020)

Caballero Country Club Golf Course Improvement Project, City of Los Angeles, California. Conducted vegetation mapping, habitat assessments, and a formal JD for a golf course improvement project within an existing golf course in the San Fernando Valley. Prepared the BTR and JD report. (December 2019)

Prairie Avenue Warehouse Project, City of Torrance, California. Conducted a focused rare plant survey for a prospective warehouse project in Torrance, California, where southern tarplant was identified and mapped. (August 2019)

Newhall Ranch Project, Newhall Land and Farming Company, Santa Clarita, California. Conducted vegetation mapping and focused native and rare plant surveys for an 1,870-acre development. Also updated vegetation mapping for other proposed developments within the ranch. Served as field lead for slender mariposa lily mapping survey in support of lily salvage efforts at several proposed developments. Conducted a formal JD of the Santa Clara River for the Commerce Center Drive Bridge Project. (May 2019–August 2023)

Smokey Bear Road Mixed-Use Project, Los Angeles County, California. Conducted vegetation mapping, habitat assessments, rare plant surveys, and a spring and fall wildlife corridor camera trapping study for a prospective 41.6-acre commercial mixed-use development in unincorporated Los Angeles County. Special-status species documented on site include slender mariposa lily and Blainville's horned lizard (*Phrynosoma blainvillii*). Prepared the BTR. (August 2018–May 2019)

Sterling Ranch Project, Los Angeles County, California. Conducted vegetation mapping, specifically identifying and mapping Palmer's goldenbush scrub (*Ericameria palmeri*) provisional alliance. (February 2020)

As-Needed Environmental Services, City of Fontana, California. Performed nesting bird surveys for various warehouse projects in Fontana, California. Also prepared associated nesting bird reports. (2018–2019)

Eastern Santa Monica Mountains Residential Projects, City of Los Angeles, California. Conducted general biological reconnaissance surveys and habitat assessments for numerous single-family residential projects in the Eastern Santa Monica Mountains residential projects. Prepared biological technical letter reports for each project. (2017–2022)

Public Works and Municipal

On-Call Environmental Services, LADWP, California. Performs on-call tasks such as nesting bird surveys, vegetation mapping, general biological reconnaissance surveys, construction and vegetation removal monitoring, wildlife camera monitoring, and hawk extractions for various LADWP projects and facilities. Conducted a formal JD

and California red-legged frog (*Rana draytonii*) monitoring for a bank stabilization project. Identified red-legged frog via camera trapping prepared guidance in accordance with the biological opinion for the project. (October 2017–Present)

Ben Clark Training Center, Riverside County, California. Conducted focused burrowing owl surveys in 2022, documenting occupied burrows, breeding pairs, and juveniles. In 2022, conducted burrowing monitoring, which included camera trapping of previously occupied burrows. (April 2022–May 2023)

San Joaquin Habitat Conservation Plan, California Department of Water Resources, Central Valley Region of California. Participated in the baseline survey effort along the California aqueduct in the Central Valley for developing a Habitat Conservation Plan for the San Joaquin Field Division. Conducted burrow mapping/habitat assessments, blunt-nosed leopard lizard (*Gambelia sila*) protocol surveys, wildlife camera studies, acoustic bat monitoring, and rare plant surveys. Assisted with writing the baseline biology report. (February 2021–August 2022)

Mockingbird Canyon Wash Project, Riverside County Flood Control and Water Conservation District, Riverside County, California. Conducted focused least Bell's vireo surveys for 26 acres of suitable habitat in Riverside County. Least Bell's vireo were detected and recorded in the project vicinity. (April–July 2022)

Encino Reservoir Fire Break Project, LADWP, City of Los Angeles, California. Conducted vegetation mapping and habitat assessments for a 4,000-foot-long fire break path. Prepared the biological constraints analysis report for the project. (August 2022)

As-Needed Environmental Compliance Services, Los Angeles County Department of Public Works (LA County DPW), Los Angeles County, California. Performed habitat assessments, formal JDs, and biological constraints analyses for various Los Angeles County slope and road repair projects. Prepared associated reporting. (March 2020–February 2021)

Delta Field Division Habitat Conservation Plan, California Department of Water Resources, Bay Area of California. Participated in the baseline survey effort for developing a Habitat Conservation Plan for the Delta Field Division. Conducted burrow mapping and rare plant surveys. (March 2021)

San Gabriel Canyon Reservoir Post-Fire Emergency Restoration, LA County DPW, Los Angeles County, California. Conducted vegetation mapping, habitat assessments, construction monitoring, and focused least Bell's vireo surveys for an emergency reservoir sediment removal project in unincorporated Los Angeles County. (December 2020–September 2021)

Middle Piru Creek Arroyo Toad Monitoring Project, California Department of Water Resources, Los Angeles County, California. Conducted focused arroyo toad surveys in occupied habitat within Middle Piru Creek and Agua Blanca Creek, Los Angeles County, California. Documented evidence of arroyo toad breeding (i.e., egg strands, larvae, metamorphosed juveniles, amplexus) and all observations of arroyo toad adults. Other sensitive species documented include two-striped garter snake (*Thamnophis hammondii*) and western pond turtle (*Actinemys pallida*). (March–June 2020)

County of Riverside Economic Development Agency As-Needed, Riverside County, California. Performed a burrowing owl and nesting bird survey for a Riverside County library project in French Valley, California. Also prepared reporting for this project as well as two other library sites. (March 2020)

Haynes Channel Fence Replacement Project, LADWP, City of Los Angeles, California. Led implementation of a post-construction plan for a project within sensitive salt marsh and scrub habitat, which included pre- and post-

construction assessments and photo-documentation, as well as daily monitoring during construction. Identified southern tarplant on site during pre-construction assessment and acted as field lead for ensuring avoidance of the species and sensitive vegetation communities during construction activities. Assisted with field coordination and prepared pre- and post-construction reports as required by the coastal development permit for the project. (September 2019–February 2020)

Old Road over Castaic Creek Bridge Repair Project, LA County DPW, Los Angeles County, California. Conducted focused arroyo toad and focused bat surveys for a bridge seismic retrofit project over Castaic Creek in Santa Clarita Valley. Focused bat surveys included a roost assessment, emergence survey, and active and passive acoustic monitoring for sensitive bat species. Common bat species detected during the surveys include Yuma myotis (*Myotis yumanensis*), California myotis (*Myotis californicus*), canyon bat (*Parastrellus hesperus*), and Mexican free-tailed bat (*Tadarida brasiliensis*). Led field coordination and prepared the California Department of Transportation Natural Environment Study. (April 2019–June 2019)

Valley Generating Station Demolition Project, LADWP, City of Los Angeles, California. Conducted focused bat surveys for a demolition project in the San Fernando Valley. Focused bat surveys included a roost assessment, emergence survey, and active and passive acoustic monitoring for sensitive bat species. Common bat species detected during the surveys include canyon bat and Mexican free-tailed bat. (October 2019)

Compton Creek Bridges Project, LA County DPW, City of Compton, Los Angeles County, California. Conducted vegetation mapping, habitat assessments, evaluation of potential jurisdictional wetlands or waters, and general resource mapping for a bridge maintenance project. Prepared the Natural Environment Study – Minimal Impacts report. (August 2019)

Oso Creek Project, Moulton Niguel Water District, City of Mission Viejo, Orange County, California. Conducted pre-construction surveys for nesting birds, two-striped garter snake, western pond turtle, and special-status bats for the Interstate-5 freeway bridge over Oso Creek. Focused bat surveys included a roost assessment, emergence survey, and active and passive acoustic monitoring. Common bat species detected during surveys include California myotis, Yuma myotis, and Mexican free-tailed bat. (August 2019)

Bridge Preventative Maintenance Program Group 21 Maintenance Project, LA County DPW, Los Angeles County, California. Conducted vegetation mapping, habitat assessments, evaluation of potential jurisdictional wetlands or waters, and general resource mapping for a bridge maintenance project. Prepared the Natural Environment Study – Minimal Impacts report. (February 2019)

Power Plant 1 and Power Plant 2 Transmission Line Project, LADWP, Los Angeles County, California. Performed rare plant surveys, formal JDs, and arroyo toad surveys along a transmission line project that spans across Santa Clarita Valley, unincorporated Los Angeles County, and the San Fernando Valley. Assisted with field coordination and prepared focused survey reports, notification letters, and the BTR. Sensitive species documented include Peirson's morning glory, Plummer's mariposa lily, slender mariposa lily, and Southern California black walnut (*Juglans californica*). (April 2018–January 2019)

Confidential Project, LADWP, City of Los Angeles, California. Conducted vegetation mapping and habitat assessments for an approximately 1,340-acre water management facility. Led and conducted least Bell's vireo protocol surveys in 2017 and 2022, identifying and documenting vireo territorial individuals, breeding pairs, and fledglings. Also led field coordination and prepared focused survey reports, notification letters, and a biological technical letter report for the project. (May–July 2018; May–July 2022)

De Soto Tanks Project, LADWP, City of Los Angeles, California. Conducted habitat assessments, focused burrowing owl surveys, and rare plant surveys for a municipal water storage project. Assisted with JD survey and preparation of a biological technical letter report for the project. (April–July 2018)

Relevant Previous Experience

Kern River Valley Avian Surveys, Southern Sierra Research Station, Weldon, California. Served as a member of a biological field team to conduct southwestern willow flycatcher protocol surveys in various locations within Kern River Valley, including Audubon California Kern River Preserve, Canebrake Ecological Preserve, and Sequoia National Forest South Fork Wildlife Area. Also conducted brown-headed cowbird (*Molothrus ater*) trapping, avian point counts, western yellow-billed cuckoo (*Coccyzus americanus*) protocol surveys, and flammulated owl (*Psiloscops flammeolus*) nest box surveys. (May–July 2017)

Vandenberg AFB Southwestern Willow Flycatcher Surveys, Southern Sierra Research Station, Vandenberg AFB, California. Served as an avian field technician. Conducted southwestern willow flycatcher protocol surveys in Vandenberg AFB and surrounding riparian areas. Documented western pond turtle in survey area. (May–July 2017)

Central Valley Project Conservation Program Project, Southern Sierra Research Station, Weldon, California. Served as avian field technician and participated in Monitoring Avian Productivity and Survivorship banding stations to assess the success of Central Valley Project Conservation Program-funded restoration efforts. Conducted vegetation surveys in riparian habitats. Also conducted nest searching and monitoring surveys for indicator riparian bird species in the Kern River Valley. (May–July 2017)

Edwards AFB Desert Tortoise Density Surveys, Redhorse Corporation, Edwards AFB, California. Conducted base-wide quantitative desert tortoise surveys as part of a field team, covering approximately 9.21 square miles. Identified and recorded desert tortoises and desert tortoise signs according to U.S. Fish and Wildlife Service abundance survey protocol. Also documented direct observations and/or diagnostic signs of other sensitive species such as Mohave ground squirrel, desert cymopterus (*Cymopterus deserticola*), and burrowing owl when observed. (February–May 2017)

Environmental Record Search, Laguna Hills, California. Served as a research associate, researching regulatory and historical data for Phase I Environmental Site Assessments and other environmental due diligence reports. (October 2015–September 2016)

Grand River Grasslands Dickcissel Surveys, University of Illinois, Lamoni, Iowa. Served as avian field technician. Conducted spot-mapping surveys for target species, dickcissels (*Spiza americana*), to delineate individual territories within private pastureland and public land managed by the Iowa Department of Natural Resources in the Grand River Grasslands Important Bird Area. Also conducted nest searching, nest monitoring, arthropod surveys, vegetation surveys, and nesting bird camera studies. (May–August 2015)

Relevant Volunteer Experience

Owens River Valley Protocol Southwestern Willow Flycatcher Surveys. Assisted Southern Sierra Research Station team with southwestern willow flycatcher protocol surveys in the Owens River Valley. Documented more than 20 willow flycatcher territorial males and assisted with nest searching with several breeding females present. (Summer 2022)

Specialized Training

- Surface Water Ambient Monitoring Program (SWAMP) Bioassessment Procedures: Benthic Macroinvertebrate, Algae and Physical Habitat Field Training, Dudek, San Diego County, California. September 2021.
- Introduction to Desert Tortoises and Field Techniques, Desert Tortoise Council. November 2019.
- Vegetation Mapping Workshop, California Native Plant Society. March 2019.
- Basic Wetland Delineation Course, Wetland Training Institute Inc. January 2018.
- Introductory Plant Families Workshop, Jepson Herbarium, University of California, Berkeley. May 2018.
- CEQA Essentials Workshop, Association of Environmental Professionals (AEP). October 2018.
- Southwestern Willow Flycatcher Workshop, Southern Sierra Research Station, Weldon, California. May 2017.
- Yellow-billed Cuckoo Workshop, Southern Sierra Research Station, Weldon, California. July 2017.

Appendix B
Photo Exhibit

Photo 1: Managed/maintained coast live oaks on slope adjacent to the northern portion of the project site.

Photo 2: Representative photo of *Hirschfeldia incana* Provisional Semi-natural Association.

Photo 3: Representative photo of disturbed *Eriogonum fasciculatum* Shrubland Alliance in southeastern portion of the study area.

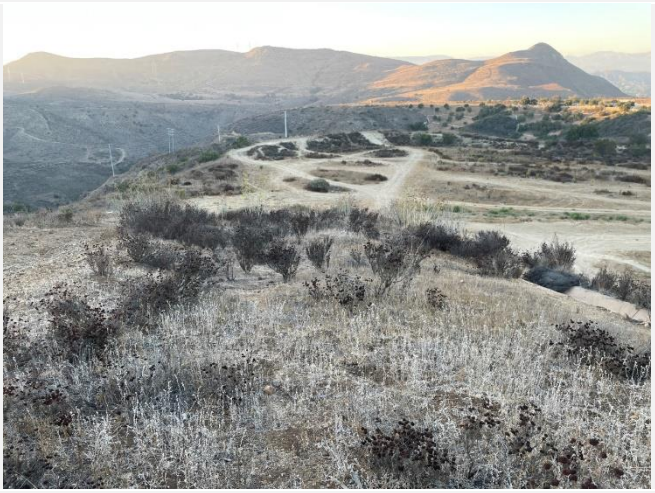

Photo 4: Representative photo of *Eriogonum fasciculatum* Shrubland Alliance in the study area (foreground) and *in the off-road vehicle* area on the project site (background).

Photo 5: Representative photo of cactus (*Opuntia* spp.) dominated coastal scrub in the study area west of the project site.

Photo 6: Representative photo of the *Artemisia californica–Salvia leucophylla* Shrubland Alliance on the project site.

Photo 7: Overview of western and eastern portions of the project site.

Photo 8: Dudleya parva observed in the study area.

Photo 9: Crotch bumble bee observed on the project site.

Appendix C
Species Compendia

* signifies introduced (non-native) species

PLANTS

EUDICOTS

AMARANTHACEAE—AMARANTH FAMILY

* *Amaranthus albus*—prostrate pigweed

ANACARDIACEAE—SUMAC OR CASHEW FAMILY

Malosma laurina—laurel sumac
Rhus integrifolia—lemonade berry
Rhus ovata—sugarbush
* *Schinus molle—Peruvian peppertree*
Toxicodendron diversilobum—poison oak

APIACEAE—CARROT FAMILY

* *Foeniculum vulgare—fennel*

ASTERACEAE—SUNFLOWER FAMILY

Artemisia californica—California sagebrush
Baccharis pilularis—coyotebrush
Baccharis salicifolia ssp. *salicifolia*—mulefat
Brickellia californica—California brickellbush
* *Carduus pycnocephalus* ssp. *pycnocephalus*—Italian plumeless thistle
* *Centaurea melitensis*—Maltese star-thistle
Centaurea solstitialis—yellow star-thistle
Corethrogyne filaginifolia—sand-aster
Deinandra fasciculata—clustered tarweed
Encelia californica—California brittle bush
Encelia farinosa—brittle bush
* *Erigeron bonariensis*—asthmaweed
Eriophyllum confertiflorum var. *confertiflorum*—golden-yarrow
* *Gazania linearis*—treasureflower
Grindelia camporum—Great Valley gumweed
Hazardia squarrosa var. grindelioides—sawtooth bristleweed
* *Hedypnois rhagadioloides*—crete weed
* *Helminthotheca echioides*—bristly oxtongue
Heterotheca grandiflora—telegraphweed
* *Hypochaeris glabra*—smooth cat's ear
Isocoma menziesii var. *menziesii*—Menzies' goldenbush
* *Lactuca serriola*—prickly lettuce

Logfia filaginoides—California cottonrose
Malacothrix saxatilis var. tenuifolia—cliff desertdandelion
Pseudognaphalium biolettii—two-color rabbit-tobacco
Pseudognaphalium californicum—ladies' tobacco
Pseudognaphalium microcephalum—Wright's cudweed
Rafinesquia californica—California plumeseed
* *Sonchus asper ssp. asper*—spiny sowthistle
* *Sonchus oleraceus*—common sowthistle
* *Uropappus lindleyi*—Lindley's silverpuffs

BORAGINACEAE—BORAGE FAMILY
* *Echium candicans*—pride of Madeira
Phacelia distans—distant phacelia

BRASSICACEAE—MUSTARD FAMILY
* *Brassica nigra*—black mustard
* *Hirschfeldia incana*—shortpod mustard

CACTACEAE—CACTUS FAMILY
Cylindropuntia prolifera—coastal cholla
Opuntia oricola—chaparral pricklypear

CHENOPODIACEAE—GOOSEFOOT FAMILY
Atriplex lentiformis—quailbush
* Atriplex semibaccata—Australian saltbush
* *Chenopodium album*—lambsquarters
* Salsola tragus—prickly Russian thistle

CONVOLVULACEAE—MORNING-GLORY FAMILY
Calystegia macrostegia—island false bindweed

CRASSULACEAE—STONECROP FAMILY
Dudleya parva—Conejo dudleya

CUCURBITACEAE—GOURD FAMILY
Marah macrocarpa—Cucamonga manroot

EUPHORBIACEAE—SPURGE FAMILY
* *Euphorbia maculata*—spotted sandmat

FABACEAE—LEGUME FAMILY
Acmispon glaber var. *glaber*—common deerweed

Acmispon maritimus var. maritimus—coastal bird's-foot trefoil
* *Lotus corniculatus*—bird's-foot trefoil
Lupinus succulentus—hollowleaf annual lupine
* *Medicago polymorpha*—burclover
* *Melilotus albus*—white sweetclover
* *Melilotus indicus*—annual yellow sweetclover
Vicia americana ssp. americana—American vetch
* *Vicia villosa ssp. villosa—winter vetch**

FAGACEAE—OAK FAMILY

Quercus agrifolia var. *agrifolia*—coast live oak
Quercus berberidifolia—Inland scrub oak

GERANIACEAE—GERANIUM FAMILY

* *Erodium botrys*—longbeak stork's bill
* *Erodium cicutarium*—redstem stork's bill

GROSSULARIACEAE—GOOSEBERRY FAMILY

Ribes speciosum—fuchsiaflower gooseberry

JUGLANDACEAE— WALNUT FAMILY

Juglans californica—Southern California black walnut

LAMIACEAE—MINT FAMILY

* *Marrubium vulgare*—horehound
Salvia leucophylla—purple sage
Salvia apiana—white sage
Salvia mellifera—black sage
Trichostema lanceolatum—vinegarweed

MALVACEAE—MALLOW FAMILY

Malacothamnus fasciculatus var. *fasciculatus*—Mendocino bushmallow
* Malva parviflora—cheeseweed mallow

MYRSINACEAE—MYRSINE FAMILY

* *Lysimachia arvensis*—scarlet pimpernel

ONAGRACEAE—EVENING PRIMROSE FAMILY

Clarkia purpurea ssp. quadrivulnera—winecup clarkia
Epilobium canum ssp. canum—hummingbird trumpet
Epilobium canum—hummingbird trumpet

PAPAVERACEAE—POPPY FAMILY

Eschscholzia californica—California poppy

PLATANACEAE—PLANE TREE, SYCAMORE FAMILY

Platanus racemosa—California sycamore

POLYGONACEAE—BUCKWHEAT FAMILY

Eriogonum cinereum—ashy buckwheat

Eriogonum fasciculatum var. *foliolosum*—California buckwheat

* *Polygonum aviculare—prostrate knotweed*

* *Rumex crispus*—curly dock

RHAMNACEAE— BUCKTHORNFAMILY

Ceanothus megacarpus var. megacarpus—bigpod ceanothus

ROSACEAE—ROSE FAMILY

Adenostoma fasciculatum—chamise

Heteromeles arbutifolia—toyon

SALICACEAE—WILLOW FAMILY

Populus fremontii—Fremont cottonwood

Salix lasiolepis—arroyo willow

SOLANACEAE—NIGHTSHADE FAMILY

* *Nicotiana glauca*—tree tobacco

Solanum xanti—purple nightshade

VIBURNACEAE—MUSKROOT FAMILY

Sambucus mexicana—blue elderberry

ZYGOPHYLLACEAE— CALTROP FAMILY

* *Tribulus terrestris*—puncturevine

GYMNOSPERMS AND GNETOPHYTES

PINACEAE—PINE FAMILY

* *Pinus halepensis*—Aleppo pine

MONOCOTS

AGAVACEAE—AGAVE FAMILY

Hesperoyucca whipplei—chaparral yucca

LILIACEAE—LILY FAMILY

Calochortus catalinae—Catalina mariposa lily

POACEAE—GRASS FAMILY

Aristida purpurea var. purpurea—purple threeawn

* *Avena fatua*—wild oat

* *Bromus diandrus*—ripgut brome

* *Bromus hordeaceus*—soft brome

* *Bromus rubens*—red brome

* *Cynodon dactylon*—Bermudagrass

Elymus condensatus—giant wild rye

* *Festuca myuros*—rat-tail fescue

* *Festuca perennis*—perennial rye grass

Hordeum murinum—mouse barley

* *Pennisetum setaceum*—fountain grass

* *Stipa miliacea* var. *miliacea*—smilograss

THEMIDACEAE—BRODIAEA FAMILY

Bloomeria crocea var. crocea—common goldenstar

Dipterostemon capitatus ssp. capitatus—bluedicks

WILDLIFE

INVERTEBRATE

APIDAE—BEES

Bombus californicus—California bumble bee
Bombus crotchii—Crotch bumble bee
Bombus vosnesenskii—Vosnesensky bumble bee

REPTILE

PHRYNOSOMATIDAE—IGUANID LIZARDS

Uta stansburiana—common side-blotched lizard

BIRD

ICTERIDAE—BLACKBIRDS

Icterus cucullatus—hooded oriole
Sturnella neglecta—western meadowlark

AEGITHALIDAE—LONG-TAILED TITS & BUSHTITS

Psaltriparus minimus—bushtit

CARDINALIDAE—CARDINALS & ALLIES

Passerina amoena—lazuli bunting
Passerina caerulea—blue grosbeak
Pheucticus melanocephalus—black-headed grosbeak

FALCONIDAE—CARACARAS & FALCONS

Falco sparverius—American kestrel

FRINGILLIDAE—FRINGILLINE & CARDUELINE FINCHES & ALLIES

Haemorhous mexicanus—house finch
Spinus lawrencei—Lawrence's goldfinch
Spinus psaltria—lesser goldfinch

TYRANNIDAE—TYRANT FLYCATCHERS

Empidonax difficilis—Pacific-slope flycatcher
Myiarchus cinerascens—ash-throated flycatcher
Sayornis nigricans—black phoebe
Tyrannus verticalis—Western kingbird
Tyrannus vociferans—Cassin's kingbird

ACCIPITRIDAE—HAWKS, KITES, EAGLES, & ALLIES

Accipiter cooperii—Cooper's hawk

Buteo jamaicensis—red-tailed hawk

ARDEIDAE—HERONS, BITTERNS, & ALLIES

Ardea alba—great egret

TROCHILIDAE—HUMMINGBIRDS

Calypte anna—Anna's hummingbird

Calypte costae—Costa's hummingbird

Selasphorus sasin—Allen's hummingbird

CORVIDAE—CROWS & JAYS

Aphelocoma californica—California scrub-jay

Corvus brachyrhynchos—American crow

Corvus corax—common raven

MIMIDAE—MOCKINGBIRDS & THRASHERS

Mimus polyglottos—northern mockingbird

Toxostoma redivivum—California thrasher

ODONTOPHORIDAE—NEW WORLD QUAIL

Callipepla californica—California quail

CATHARTIDAE—NEW WORLD VULTURES

Cathartes aura—turkey vulture

SYLVIIDAE—SYLVIID WARBLERS

Polioptila caerulea—blue-gray gnatcatcher

COLUMBIDAE—PIGEONS & DOVES

*Streptopelia decaocto—Eurasian collared-dove**

Zenaida macroura—mourning dove

CUCULIDAE—CUCKOOS, ROADRUNNERS, & ANIS

Geococcyx californianus—greater roadrunner

STURNIDAE—STARLINGS

Sturnus vulgaris—European starling*

HIRUNDINIDAE—SWALLOWS

Petrochelidon pyrrhonota—cliff swallow

Stelgidopteryx serripennis—northern rough-winged swallow

Tachycineta bicolor—tree swallow

APODIDAE—SWIFTS

Aeronautes saxatalis—white-throated swift

VIREONIDAE—VIREOS

Vireo gilvus—warbling vireo

ANATIDAE—DUCKS, GEESE, & SWANS

Anas platyrhynchos—mallard

PARULIDAE—WOOD-WARBLERS

Cardellina pusilla—Wilson's warbler
Geothlypis trichas—common yellowthroat
Setophaga coronata—yellow-rumped warbler
Leiothlypis celata—orange-crowned warbler

PICIDAE—WOODPECKERS & ALLIES

Melanerpes formicivorus—acorn woodpecker
Dryobates nuttallii—Nuttall's woodpecker
Dryobates pubescens—downy woodpecker

TROGLODYTIDAE—WRENS

Campylorhynchus brunneicapillus sandiegensis—coastal cactus wren
Thryomanes bewickii—Bewick's wren

PASSERELLIDAE—NEW WORLD SPARROWS

Aimophila ruficeps canescens—Southern California rufous-crowned sparrow
Chondestes grammacus—lark sparrow
Junco hyemalis—dark-eyed junco
Melospiza melodia—song sparrow
Melozone crissalis—California towhee
Passerculus sandwichensis—savannah sparrow
Pipilo maculatus—spotted towhee
Zonotrichia leucophrys—white-crowned sparrow

ICTERIIDAE—YELLOW-BREASTED CHAT

Icteria virens—yellow-breasted chat

TIMALIIDAE—BABBLERS

Chamaea fasciata—wrentit

MAMMAL

LEPORIDAE—HARES & RABBITS

Sylvilagus bachmani—brush rabbit

SCIURIDAE—SQUIRRELS

Otospermophilus beecheyi—California ground squirrel

CERVIDAE—DEERS

Odocoileus hemionus—mule deer

Appendix D

Assessment of Special-Status Plant Species Potentially Occurring in the Study Area

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Arenaria paludicola	marsh sandwort	FE/SE/1B.1	Marshes and swamps; Openings, Sandy/perennial stoloniferous herb/May–Aug/10–560	Not expected to occur. Suitable habitat is absent from the study area.
Astragalus brauntonii	Braunton's milk-vetch	FE/None/1B.1	Chaparral, Coastal scrub, Valley and foothill grassland; Burned areas (sometimes), Carbonate, Disturbed areas (sometimes), Sandstone (usually)/perennial herb/Jan–Aug/15–2,095	Not expected to occur. Suitable chaparral and coastal scrub habitats are present; however, suitable micro-habitat (sandstone with carbonate layers) is not present in the study area. Nearly all observations of this species are approximately 5-8 miles east of the project site (CDFW 2023a).
Atriplex coulteri	Coulter's saltbush	None/None/1B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub, Valley and foothill grassland; Alkaline (sometimes), Clay (sometimes)/perennial herb/Mar–Oct/10–1,505	Not expected to occur. The only known records in Ventura County are from coastal areas approximately 11 miles southeast of the project site (CDFW 2023). Coastal dune and coastal bluff habitats, where this species typically occurs, are absent from the project site.
Baccharis malibuensis	Malibu baccharis	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland/perennial deciduous shrub/Aug/490–1,000	Not expected to occur. Suitable habitat is present in the study area, including on the project site. However, this species is a conspicuous perennial shrub and would have been observed during botanical surveys, were it present.
Calochortus clavatus var. gracilis	slender mariposa lily	None/None/1B.2	Chaparral, Coastal scrub, Valley and foothill grassland/perennial bulbiferous herb/Mar–June (Nov)/1045–3280	Not expected to occur. Suitable habitat is present in the study area, including on the project site, but the site is outside of the species' known elevation range. Slender mariposa lily was not observed during focused rare plant surveys conducted during the blooming period for the species. The closest known record is from approximately 6 miles to the east.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Centromadia parryi ssp. australis	southern tarplant	None/None/1B.1	Marshes and swamps, Valley and foothill grassland, Vernal pools/annual herb/May–Nov/0–1,570	Not expected to occur. Suitable habitat is not present.
Chaenactis glabriuscula var. orcuttiana	Orcutt's pincushion	None/None/1B.1	Coastal bluff scrub, Coastal dunes/annual herb/Jan–Aug/0–330	Not expected to occur. The project site is outside of the species' known elevation range and there is no suitable habitat present.
Chloropyron maritimum ssp. maritimum	salt marsh bird's-beak	FE/SE/1B.2	Coastal dunes, Marshes and swamps/annual herb (hemiparasitic)/May–Oct(Nov)/0–100	Not expected to occur. The project site is outside of the species' known elevation range and there is no suitable habitat present.
Chorizanthe parryi var. *parryi*	Parry's spineflower	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; Openings, Rocky (sometimes), Sandy (sometimes)/annual herb/Apr–June/900–4,000	Not expected to occur. Suitable habitat is present, and there is a known occurrence of this species from Wildwood Regional Park, approximately 3 miles northeast of the project site (Calflora 2023). However, the site is outside of the species' known elevation range and there is only one known record for this species in Ventura County. This species was not observed during botanical surveys.
Deinandra minthornii	Santa Susana tarplant	None/SR/1B.2	Chaparral, Coastal scrub; Rocky/perennial deciduous shrub/July–Nov/920–2,490	Not expected to occur. Suitable habitat is present in the study area, including on the project site, but the site is outside of the species' known elevation range. Moreover, this species would have been observed, were it present, during botanical surveys.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Delphinium parryi ssp. blochmaniae	dune larkspur	None/None/1B.2	Chaparral, Coastal dunes/perennial herb/Apr–June/0–655	Not expected to occur. Suitable habitat is present in the study area; however, there is no sandy substrate or dune habitat present to support this species in the study area. There are no known occurrences recorded within 5 miles of the study area (Calflora 2023, CDFW 2023).
Dudleya blochmaniae ssp. blochmaniae	Blochman's dudleya	None/None/1B.1	Chaparral, Coastal bluff scrub, Coastal scrub, Valley and foothill grassland; Clay (often), Rocky, Serpentinite/perennial herb/Apr–June/15–1,475	Not expected to occur. Suitable habitat is present in the study area, including on the project site. However, open, rocky slopes are only present in the study area north and west of the project site and at the boundaries of the project site. There are several known occurrences of this species in the vicinity of the project site, with the nearest being a 2016 record from approximately 430 meters to the southwest. However, Blochman's dudleya was not observed during focused rare plant surveys conducted during the blooming period for the species.
Dudleya cymosa ssp. agourensis	Agoura Hills dudleya	FT/None/1B.2	Chaparral, Cismontane woodland; Rocky, Volcanic/perennial herb/May–June/655–1,640	Not expected to occur. The study area is outside the known distribution of this species, which is limited to the western Santa Monica Mountains, south of U.S. Route 101 (Route 101). The project site also lacks suitable rocky, volcanic microhabitat, except along the project site boundaries. If present, Agoura Hills dudleya would have been observed during focused rare plant surveys conducted during the blooming period for the species.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Dudleya cymosa ssp. marcescens	marcescent dudleya	FT/SR/1B.2	Chaparral; Rocky, Volcanic/perennial herb/Apr–July/490–1,705	Not expected to occur. The study area is outside the known distribution of this species, which is limited to the Santa Monica Mountains, south of Route 101. The project site also lacks suitable volcanic rock microhabitat.
Dudleya cymosa ssp. ovatifolia	Santa Monica dudleya	FT/None/1B.1	Chaparral, Coastal scrub; Rocky, Volcanic (sometimes)/perennial herb/Mar–June/490–5,495	Not expected to occur. The project site lacks the shaded, conglomerate rock outcrops on which this species occurs. The nearest known record for this species is from 1980, approximately 1.75 miles west of the project site (Calflora 2023); all other records are more than 5 miles from the study area.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Dudleya parva	Conejo dudleya	FT/None/1B.2	Coastal scrub, Valley and foothill grassland; Clay (sometimes), Gravelly (sometimes), Rocky (sometimes), Volcanic (sometimes)/perennial herb/May–June/195–1,475	Occurs. This species was observed during focused rare plant surveys in 2023. This species is known exclusively from a narrow strip of land stretching from the western Simi Hills to the Conejo Grade, including areas in the Conejo Canyons Open Space immediately north and west of the project site (USFWS 2015). The scattered rock outcrops and volcanic soils where this species grows are largely absent from the project site, except at the boundaries where the site abuts undisturbed open space. Several individuals were observed on north facing slopes at the southwestern corner of the study area, with approximately 5 and an additional 32 individuals within 25 feet of the grading limits. The remaining mapped individuals are positioned on the hillside upslope and west of the project site, between approximately 25 feet and 150 feet from the grading limits. individuals located along the project site boundary. There is also a known occurrence from 2010, approximately 20 meters west of the study area (CDFW 2023).

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Dudleya verityi	Verity's dudleya	FT/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub; Rocky, Volcanic/perennial herb/May–June/195–395	Not expected to occur. The project site is outside the species' known elevation range. Also known occurrences of this species are limited to the western Santa Monica Mountains, south of Route 101. The project site also lacks suitable volcanic rock outcrops.
Eriogonum crocatum	Conejo buckwheat	None/SR/1B.2	Chaparral, Coastal scrub, Valley and foothill grassland; Rocky, Volcanic/perennial herb/Apr–July/165–1,900	Not expected to occur. Suitable habitat is present in the study area, including on the project site, but the project site lacks rocky volcanic outcrops except along the project site boundaries. There are several known occurrences of this species in the vicinity of the project site, north and west of the study area. The nearest occurrence, from 2010, is approximately 0.7 miles west of the study area (CDFW 2023). However, Conejo buckwheat was not observed during focused rare plant surveys conducted during the blooming period for the species.
Erysimum insulare	island wallflower	None/None/1B.3	Coastal bluff scrub, Coastal dunes/perennial herb/Mar–July/0–985	Not expected to occur. Coastal dune and coastal bluff habitats are absent from the study area. This species is primarily known from the Anacapa Islands, with the only known mainland occurrence from 1928 at Point Mugu, approximately 11 miles southwest of the study area (Calflora 2023).

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Horkelia cuneata var. *puberula*	mesa horkelia	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub; Gravelly (sometimes), Sandy (sometimes)/perennial herb/Feb–July(Sep)/230–2,655	Not expected to occur. Suitable chaparral and coastal scrub habitats are present in the study area, including on the project site, to support this species. However, mesa horkelia was not observed during focused rare plant surveys conducted during the blooming period for the species. The nearest record for this species is from 2013, approximately 2.8 miles north of the study area (Calflora 2023).
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	None/None/1B.1	Marshes and swamps, Playas, Vernal pools/annual herb/Feb–June/5–4,000	Not expected to occur. Suitable habitat is not present.
Lupinus paynei	Payne's bush lupine	None/None/1B.1	Coastal scrub, Riparian scrub, Valley and foothill grassland; Sandy/perennial shrub/Mar–Apr (May–July)/720–1,375	Not expected to occur. Suitable habitat is present; however, there is no sandy substrate to support this species. Moreover, this species likely would have been observed, were it present, during botanical surveys. There are no known records of this species within 5 miles of the study area (Calflora 2023, CDFW 2023).
Monardella hypoleuca ssp. *hypoleuca*	white-veined monardella	None/None/1B.3	Chaparral, Cismontane woodland/perennial herb/(Apr)May–Aug(Sep–Dec)/165–5,000	Not expected to occur. Suitable chaparral habitat is not present on the project site. There is chaparral habitat on the slopes of the study area, adjacent to the project site, that could support this species, but the nearest known record for this species is from 2008, approximately 5 miles south of the study area (Calflora 2023) and this species was not observed durin botanical surveys.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Monardella sinuata ssp. *gerryi*	Gerry's curly-leaved monardella	None/None/1B.1	Coastal scrub; Openings, Sandy/annual herb/Apr–June/490–805	Not expected to occur. Suitable habitat is present and there is an undated record approximately 0.9 miles south of the project site. However, there is no sandy substrate in the study area to support this species. The nearest record with a known date is from 2013, approximately 3 miles north of the study area.
Nasturtium gambelii	Gambel's water cress	FE/ST/1B.1	Marshes and swamps/perennial rhizomatous herb/Apr–Oct/15–1,080	Not expected to occur. Suitable habitat is not present.
Navarretia fossalis	spreading navarretia	FT/None/1B.1	Chenopod scrub, Marshes and swamps, Playas, Vernal pools/annual herb/Apr–June/100–2,145	Not expected to occur. Suitable habitat is not present.
Navarretia ojaiensis	Ojai navarretia	None/None/1B.1	Chaparral (openings), Coastal scrub (openings), Valley and foothill grassland; clay/annual herb/May–July/900–2,030	Not expected to occur. Suitable habitat is present in the study area, including on the project site, and there are several known occurrences from the Conejo Canyons Open Space, the nearest from 2014, approximately 250 meters southwest of the study area (CDFW 2023). However, Ojai navarretia was not observed during focused rare plant surveys conducted during the blooming period for the species.
Nolina cismontana	chaparral nolina	None/None/1B.2	Chaparral, Coastal scrub; Gabbroic (sometimes), Sandstone (sometimes)/perennial evergreen shrub/(Mar)May–July/460–4,180	Not expected to occur. Suitable habitat is present in the study area, including on the project site; however, the project site lacks suitable gabbroic and sandstone microhabitats. There are no known occurrences of this species within 5 miles of the project site (Calflora 2023, CDFW 2023). Moreover, this species was not observed during botanical surveys.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Orcuttia californica	California Orcutt grass	FE/SE/1B.1	Vernal pools/annual herb/Apr–Aug/45–2,165	Not expected to occur. Suitable habitat is not present.
Pelazoneuron puberulum var. *sonorensis*	Sonoran maiden fern	None/None/2B.2	Meadows and seeps/perennial rhizomatous herb/Jan–Sep/165–2,000	Not expected to occur. Suitable habitat is not present.
Pentachaeta lyonii	Lyon's pentachaeta	FE/SE/1B.1	Chaparral, Coastal scrub, Valley and foothill grassland; Clay, Rocky/annual herb/(Feb)Mar–Aug/100–2,260	Not expected to occur. Suitable habitat is present in the study area, including on the project site, and there are several known occurrences from the Conejo Canyons Open Space, the nearest from 1997, approximately 80 meters southwest of the study area (CDFW 2023). Rocky outcrops are present only on the boundaries of the project site and suitable clay soils and openings in coastal scrub habitat could support this species. However, Lyon's pentachaeta was not observed during focused rare plant surveys conducted during the blooming period for the species.
Pseudognaphalium leucocephalum	white rabbit-tobacco	None/None/2B.2	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland; sandy, gravelly benches, dry stream bottoms, canyon bottoms/perennial herb/(July)Aug–Nov(Dec)/0–6,885	Not expected to occur. Suitable microhabitats (sandy, gravelly benches, dry stream bottoms, canyon bottoms) are not present in the study area.
Quercus dumosa	Nuttall's scrub oak	None/None/1B.1	Chaparral, Closed-cone coniferous forest, Coastal scrub; Clay, Loam, Sandy/perennial evergreen shrub/Feb–Apr(May–Aug)/50–1,310	Not expected to occur. Suitable habitat is present; however, this species is a conspicuous perennial shrub and would have been observed, were it present, during botanical surveys.

Scientific Name	Common Name	Status[1] (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur[2]
Senecio aphanactis	chaparral ragwort	None/None/2B.2	Chaparral, Cismontane woodland, Coastal scrub; alkaline flats or dry open rocky areas/annual herb/Jan–Apr(May)/45–2,620	Not expected to occur. The closest known occurrence is from 2006, approximately 250 meters southwest of the study area (Calflora 2023) and Suitable habitat is present in the study area, including on the project site. However, alkaline soils, where this species is typically found, are absent from the study area. and the species was not observed during botanical surveys.
Suaeda californica	California seablite	FE/None/1B.1	Marshes and swamps/perennial evergreen shrub/July–Oct/0–50	Not expected to occur. Suitable habitat is not present.
Suaeda esteroa	estuary seablite	None/None/1B.2	Marshes and swamps/perennial herb/(Jan–May)July–Oct/0–15	Not expected to occur. Suitable habitat is not present.
Tortula californica	California screw moss	None/None/1B.2	Chenopod scrub, Valley and foothill grassland; Sandy/moss/35–4,790	Not expected to occur. Suitable habitat is not present.

Notes:

[1] **Status Abbreviations**

Federal and State Statuses

FE: Federally listed as endangered
FT: Federally listed as threatened
SE: State listed as endangeredSR: State designated as rare

CRPR: California Rare Plant Rank

CRPR 1A: Plants presumed extirpated in California and either rare or extinct elsewhere
CRPR 1B: Plants rare, threatened, or endangered in California and elsewhere
CRPR 2A: Plants presumed extirpated in California but common elsewhere
CRPR 2B: Plants rare, threatened, or endangered in California but more common elsewhere
.1 - Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
.2 - Moderately threatened in California (20% - 80% of occurrences threatened/moderate degree and immediacy of threat)
.3 - Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat)

[2] Refers to records within the *Newbury Park* U.S. Geological Survey (USGS) 7.5-minute quadrangle and surrounding eight quadrangles (i.e., Simi, Moorpark, Santa Paula, Thousand Oaks, Camarillo, Newbury Park, Point Dume, Point Mugu, Triunfo Pass)

Appendix E

Assessment of Special-Status Wildlife Species Potentially Occurring in the Study Area

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Invertebrates				
Bombus crotchii	Crotch's bumble bee	None/ SCE	Open grassland and scrub communities supporting suitable floral resources.	Occurs in the study area, including on the project site. Suitable scrub habitat with floral resources is present in the study area, including on the project site. Several individuals were observed foraging on site during surveys in 2023. The nearest CNDDB occurrence was recorded in roadside mountain chaparral in 2020, approximately 3.6 miles south of the study area (CDFW 2023a).
Branchinecta lynchi	vernal pool fairy shrimp	FT/None	Vernal pools, seasonally ponded areas within vernal swales, and ephemeral freshwater habitats	Not expected to occur. Suitable pool habitat for the species is not present in the study area.
Danaus plexippus pop. 1	monarch	FC/None	Wind-protected tree groves with nectar sources and nearby water sources	Not expected to occur. No suitable wind-protected tree groves are present in the study area to support this species.
Euphydryas editha quino	quino checkerspot butterfly	FE/None	Annual forblands, grassland, open coastal scrub and chaparral; often soils with cryptogamic crusts and fine-textured clay; host plants include *Plantago erecta, Antirrhinum coulterianum*, and *Plantago patagonica* (Silverado Occurrence Complex)	Not expected to occur. The study area does not contain host plant species. In addition, this species is considered extirpated from Ventura County by the USFWS (USFWS 2019).
Streptocephalus woottoni	Riverside fairy shrimp	FE/None	Vernal pools, non-vegetated ephemeral pools	Not expected to occur. Suitable pool habitat for the species is not present in the study area.
Fishes				
Catostomus santaanae	Santa Ana sucker	FT/None	Small, shallow, cool, clear streams less than 7 meters (23 feet) in width and a few centimeters to more than a meter (1.5 inches to more than 3 feet) in depth; substrates are generally coarse gravel, rubble, and boulder	Not expected to occur. Suitable habitat for the species is not present in the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Eucyclogobius newberryi	tidewater goby	FE/None	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County, to the mouth of the Smith River	Not expected to occur. Suitable habitat for the species is not present in the study area.
Gasterosteus aculeatus williamsoni	unarmored threespine stickleback	FE/FP, SE	Slow-moving and backwater areas	Not expected to occur. Suitable habitat for the species is not present in the study area.
Gila orcuttii	arroyo chub	None/SSC	Warm, fluctuating streams with slow-moving or backwater sections of warm to cool streams at depths >40 centimeters (16 inches); substrates of sand or mud	Not expected to occur. Suitable habitat for the species is not present in the study area.
Oncorhynchus mykiss irideus pop. 10	southern steelhead - southern California DPS	FE/SCE	Clean, clear, cool, well-oxygenated streams; needs relatively deep pools in migration and gravelly substrate to spawn	Not expected to occur. Suitable habitat for the species is not present in the study area.
Amphibians				
Spea hammondii	western spadefoot	None/SSC	Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture	Not expected to occur. Suitable pool habitat for the species is not present in the study area.
Reptiles				
Anniella stebbinsi	southern California legless lizard	None/SSC	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and moist sandy or loose, loamy soils	Low potential to occur in the study area; not expected to occur on the project site. This species could occur in the dry wash extending west from the central portion of the study area; however, there is no suitable habitat in the project site.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Arizona elegans occidentalis	California glossy snake	None/SSC	Commonly occurs in desert regions throughout southern California. Prefers open sandy areas with scattered brush. Also found in rocky areas.	Low potential to occur in the study area; not expected to occur on the project site. Suitable habitat is present in the study area, including on the project site; however, open sandy areas this species prefers are absent. There is a low potential this species could occur in the rocky slopes adjacent to the project site, but it is not expected to occur on the project site. There are no known records within 5 miles of the project site (CDFW 2023a)
Aspidoscelis tigris stejnegeri	coastal whiptail	None/SSC	Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas.	Moderate potential to occur in the study area, including on the project site. There are no CNDDB records within 5 miles of the project site; however, coastal whiptail is widely distributed over much of its range in California and suitable habitat is present throughout the study area where vegetation is sparse.
Diadophis punctatus modestus	San Bernardino ring-necked snake	None/None	Moist habitats including wet meadows, rocky hillsides, gardens, farmland grassland, chaparral, mixed-conifer forest, and woodland	Not expected to occur. Suitable habitat is present; however, suitable moist microhabitats are absent from the study area, including the project site. The nearest CNDDB occurrence is from 2015, approximately 3 miles north of the project site (CDFW 2023a); there are no other records within 15 miles of the project site.
Emys marmorata	western pond turtle	None/SSC	Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter	Not expected to occur. Suitable habitat for the species is not present in the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Low potential to occur in the study area, not expected to occur on the project site. Suitable scrub and chaparral habitats are present in the study area, including on the project site. However, sandy areas, washes, and flood plains that typically support this species are absent. Moreover, the project site lacks the fine, loose soils this species requires for burrowing. The nearest CNDDB occurrence is from 2007, approximately 2.8 miles north of the project site (CDFW 2023a).
Thamnophis hammondii	two-striped gartersnake	None/SSC	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	Not expected to occur. Suitable habitat for the species is not present in the study area.
Thamnophis sirtalis ssp. (Southern California coastal plain from Ventura County to San Diego County, and from sea level to about 850 m)	south coast garter snake	None/SSC	Marsh and upland habitats near permanent water and riparian vegetation	Not expected to occur. Suitable habitat and aquatic resources are not present.
Birds				
Agelaius tricolor (nesting colony)	tricolored blackbird	None/SSC, ST	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberrry; forages in grasslands, woodland, and agriculture	Not expected to nest. No suitable freshwater aquatic resources, or emergent wetland habitat is present to support nesting of this species.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Aquila chrysaetos (nesting & wintering)	golden eagle	None/FP, WL	Nests and winters in hilly, open/semi-open areas, including shrublands, grasslands, pastures, riparian areas, mountainous canyon land, open desert rimrock terrain; nests in large trees and on cliffs in open areas and forages in open habitats	Low potential to forage; not expected to nest. Large trees and cliffs suitable for nesting are absent from the study area. Suitable foraging habitat is present throughout the study area and in the contiguous Conejo Canyons Open Space, though the potential for foraging is diminished by the proximity to development. This species has been documented nesting in the Santa Monica Mountains only once since the 1980s, in 2019 (Santa Monica Mountains National Recreation Area 2019) and, though there are Ebird observations in the Conejo Valley, they are not common (Ebird 2023).
Athene cunicularia (burrow sites & some wintering sites)	burrowing owl	None/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Low potential to nest and forage. The study area lacks the open grassland habitat and does not contain abundant ground squirrel burrows preferred and utilized by this species. In addition, there are no CNDDB occurrences of this species within 5 miles and none in the Conejo Valley (CDFW 2023a).
Calypte costae (nesting)	Costa's hummingbird	BCC/None	Nests and forages in desert wash, edges of riparian and valley–foothill riparian, coastal scrub, desert scrub, desert succulent scrub, lower-elevation chaparral, and palm oasis	Occurs. Observed during focused surveys for coastal California gnatcatcher in 2023.
Campylorhynchus brunneicapillus sandiegensis (San Diego & Orange Counties only)	coastal cactus wren	None/SSC	Southern cactus scrub patches	Observed in the study area, outside of the project site, during botanical surveys in 2023. High potential to occur in cactus-dominated coastal scrub adjacent to the project site; low potential to occur in isolated patches of cactus on the project site.
Chamaea fasciata	wrentit	BCC/None	Primarily coastal scrub and chaparral, but also riparian habitats, oak woodland, mixed hardwood, and mixed conifer forests	Occurs. Observed during focused surveys for coastal California gnatcatcher in 2023.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Charadrius nivosus nivosus (nesting)	western snowy plover	FT, BCC/SSC	On coasts nests on sandy marine and estuarine shores; in the interior nests on sandy, barren or sparsely vegetated flats near saline or alkaline lakes, reservoirs, and ponds	Not expected to occur. Suitable habitat for the species is not present in the study area.
Coccyzus americanus occidentalis (nesting)	western yellow-billed cuckoo	FT/SE	Nests in dense, wide riparian woodlands and forest with well-developed understories	Not expected to occur. Suitable habitat for the species is not present in the study area.
Dryobates nuttallii	Nuttall's woodpecker	BCC/None	Primarily oak woodlands, but also riparian woodland, chaparral, and rarely conifer forests	Occurs. Observed during focused surveys for coastal California gnatcatcher in 2023.
Elanus leucurus (nesting)	white-tailed kite	None/FP	Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands	Low potential to nest in the study area; not expected to nest on the project site. A small amount of suitable nesting habitat is present in a limited portion of the study area. No suitable nesting habitat is present on the project site, though foraging could occur. Although there are multiple observations of this species, mostly during wintering or migratory periods, in open space areas west and north of the project site, as well as south in the Santa Monica Mountains (eBird 2023), documented nesting occurrences are sporadic in Ventura County, with the nearest CNDDB occurrence from 2009, approximately 6 miles southwest of the study area (CDFW 2023a).
Empidonax traillii extimus (nesting)	southwestern willow flycatcher	FE/SE	Nests in dense riparian habitats along streams, reservoirs, or wetlands; uses variety of riparian and shrubland habitats during migration	Not expected to occur. Suitable habitat for the species is not present in the study area.
Icteria virens (nesting)	yellow-breasted chat	None/SSC	Nests and forages in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush	Occurs. Observed in the study area, outside of the project site, during focused surveys for coastal California gnatcatcher in 2023.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Gymnogyps californianus	California condor	FE/FP, SE	Nests in rock formations, deep caves, and occasionally in cavities in giant sequoia trees (Sequoiadendron giganteus); forages in relatively open habitats where large animal carcasses can be detected	Low potential to fly over the project site; not expected to nest or forage on the project site. No nesting habitat present on the project site and large carrion is not expected to be present due to the lack of livestock grazing; however, there is the potential for deer, coyotes, and dogs to occur on the project site. Also, California condors are attracted to microtrash (i.e., broken glass, paper and plastic waste, small pieces of metal), which may be present in portions of the project site due to ongoing human use. However, there are no CNDDB records of this species in the project vicinity and no observations recorded on eBird south of the Santa Susana Mountains (CDFW 2023a, eBird 2023).
Lanius ludovicianus (nesting)	loggerhead shrike	None/SSC	Nests and forages in open habitats with scattered shrubs, trees, or other perches	Moderate potential to forage and nest on site. Suitable habitat, including open areas with scattered shrubs, is present in the study area, including on the project site. Although there are no CNDDB records for this species in the project vicinity (CDFW 2023a), this species is regularly observed in the area, including in open space areas west and north of the project site (eBird 2023).
Passerculus sandwichensis beldingi	Belding's savannah sparrow	None/SE	Nests and forages in coastal saltmarsh dominated by pickleweed (Salicornia spp.)	Not expected to occur. Suitable habitat for the species is not present in the study area.
Pelecanus occidentalis californicus (nesting colonies & communal roosts)	California brown pelican	FPD/FP, SCD	Forages in warm coastal marine and estuarine environments; in California, nests on dry, rocky offshore islands	Not expected to occur. Suitable habitat for the species is not present in the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Polioptila californica californica	coastal California gnatcatcher	FT/SSC	Nests and forages in various sage scrub communities, often dominated by California sagebrush and buckwheat; generally avoids nesting in areas with a slope of greater than 40%; majority of nesting at less than 1,000 feet above mean sea level	Moderate potential to occur in the study area, including on the project site. Coastal scrub communities present on the project site and surrounding slopes provide suitable habitat for this species. 3 individuals were observed during focused surveys for gnatcatcher in 2023. There are several recent CNDDB records from the surrounding open space areas, including Conejo Canyons Open Space, with one record from 2019 overlapping the southwest corner of the project site and another from 2016 overlapping the northern boundary of the study area (CDFW 2023a). There are also multiple recent observations in nearby open space areas, including in the Conejo Canyons Open Space immediately adjacent to the project site (eBird 2023).
Rallus obsoletus levipes	Ridgway's rail	FE/FP, SE	Coastal wetlands, brackish areas, coastal saline emergent wetlands	Not expected to occur. Suitable habitat for the species is not present in the study area.
Riparia riparia (nesting)	bank swallow	None/ST	Nests in riparian, lacustrine, and coastal areas with vertical banks, bluffs, and cliffs with sandy soils; open country and water during migration	Not expected to occur. Suitable habitat for the species is not present in the study area.
Setophaga petechia (nesting)	yellow warbler	None/SSC	Nests and forages in riparian and oak woodlands, montane chaparral, open ponderosa pine, and mixed-conifer habitats	Low potential to nest in the study area; not expected to nest on the project site. Riparian woodland habitat is present in a limited portion of the study area and provides marginally suitable nesting habitat. No suitable nesting habitat is present on the project site, though foraging could occur.
Spinus lawrencei (nesting)	Lawrence's goldfinch	BCC/None	Nests and forages in open oak, arid woodlands, and chaparral near water	Occurs. Observed during focused surveys for coastal California gnatcatcher in 2023.
Sternula antillarum browni (nesting colony)	California least tern	FE/FP, SE	Forages in shallow estuaries and lagoons; nests on sandy beaches or exposed tidal flats	Not expected to occur. Suitable habitat for the species is not present in the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Toxostoma redivivum	California thrasher	BCC/None	Primarily chaparral, but also coastal scrub, riparian woodland, oak woodland, piñon and juniper woodland, Joshua tree woodland, lower desert scrub, Great Basin scrub, and mesquite thickets	Occurs. Observed during focused surveys for coastal California gnatcatcher in 2023.
Vireo bellii pusillus (nesting)	least Bell's vireo	FE/SE	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season	Not expected to occur. Suitable habitat for the species is not present in the study area.
Mammals				
Antrozous pallidus	pallid bat	None/SSC	Grasslands, shrublands, woodlands, forests; most common in open, dry habitats with rocky outcrops for roosting, but also roosts in man-made structures and trees	Low potential to occur in the study area; low potential to forage, but not expected to roost, on the project sight. Cliffs, crevices, and rocky outcrops suitable for roosting are not present in the study area. This species may roost in hollow trees or buildings in the study area, but these features are absent from the project site. There are limited documented occurrences of this species in Ventura County and the nearest CNDDB occurrence was detected acoustically during surveys between 2002 and 2004, approximately 9 miles east of the project site (CDFW 2023a).
Eumops perotis californicus	western mastiff bat	None/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, and tunnels	Not expected to occur. Vertical cliff and canyon walls are not present in the project vicinity. There are limited documented occurrences of this species in Ventura County and the nearest CNDDB occurrence was detected acoustically during surveys between 2002 and 2004, approximately 9 miles east of the project site (CDFW 2023a).

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Lasiurus blossevillii	western red bat	None/SSC	Forest, woodland, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange; roosts in tree canopy	Low potential to roost in the study area. No suitable roosting habitat is present on the project site, though foraging could occur. Although suitable trees are present in the study area, there are no documented occurrences of this species in Ventura County, with the closest occurrence documented in 2004, approximately 10 miles southeast of the study area in the Santa Monica Mountains (CDFW 2023a).
Microtus californicus stephensi	south coast marsh vole	None/SSC	Tidal marshes	Not expected to occur. Suitable habitat for the species is not present in the study area.
Neotoma lepida intermedia	San Diego desert woodrat	None/SSC	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Moderate potential to occur on slopes in the study area adjacent to the project site; low potential to occur on the project site. Desert woodrats are particularly abundant in rock outcrops and rocky cliffs and slopes (CDFW 2023b). Suitable rocky, scrub and chaparral habitats are present on the slopes adjacent to the project site. However, no middens were observed on the project site, , which is more sparsely vegetated, flat, and lacks the rocky substrate of the surrounding areas. If present on the surrounding slopes, San Diego desert woodrat could occur on site during foraging and/or dispersal, but this species is not expected to establish middens on the project site. The nearest CNDDB occurrence is from 2016, approximately 3.3 miles south of the project site (CDFW 2023a).

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Puma concolor (Southern California/ Central Coast Evolutionarily Significant Unit)	mountain lion	None/CST	Scrubs, chaparral, riparian, woodland, and forest; rests in rocky areas and on cliffs and ledges that provide cover; most abundant in riparian areas and brushy stages of most habitats throughout California, except deserts	Low potential to occur in the study area, including on the project site. Mule deer (*Odocoileus hemionus*) sign was observed in the study area and the slopes in the study area adjacent to the project site provide chaparral and scrub habitat with dense undergrowth and cover suitable for this species. The study area is also contiguous with open space areas to the west and north that provide suitable habitat for this species, including the unnamed drainage extending west from the study area, which is densely vegetated with riparian woodland habitat. Therefore, this species has the potential to occur in the study area as a transient during foraging, movement through its home range, or during the dispersal of young. However, due to the proximity of the project site to development, lions are more likely to use the undisturbed open space areas surrounding the study area, and natal dens of this species are not expected since females typically avoid areas of human activity (Center for Biological Diversity and the Mountain Lion Foundation 2019). Also, because the project site is highly disturbed and supports a more open scrub habitat with less cover than the surrounding areas, mountain lions are likely to avoid use of the project site.
Sorex ornatus salicornicus	southern California saltmarsh shrew	None/SSC	Saltmarsh, saltgrass, dense willow, bulrush	Not expected to occur. Suitable habitat for the species is not present in the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur[1]
Taxidea taxus	American badger	None/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils	Low potential to occur. The study area is contiguous with open space areas and may support suitable friable soils; however, no suitable burrows for this species were observed during field surveys. In addition, the nearest CNDDB occurrence is from 2013, approximately 4.5 miles west of the study area (CDFW 2023a).

Notes:
Status Legend
Federal
BCC: Bird of Conservation Concern (U.S. Fish and Wildlife Service)
FE: Federally listed as endangered
FT: Federally listed as threatened
State
SE: State listed as endangered
ST: State listed as threatened
CST: Candidate for State Threatened
SSC: California Species of Special Concern
FP: California Fully Protected Species

Subject: Focused California Gnatcatcher Survey Results for the Conejo Summit Project, City of Thousand Oaks, California

Dear Recovery Permit Coordinator:

This report documents the results of protocol-level presence/absence surveys for the coastal California gnatcatcher (*Polioptila californica californica*; hereafter, gnatcatcher). Focused surveys were conducted throughout all areas of suitable habitat for the Conejo Summit Project (project) located in the City of Thousand Oaks, Ventura County, California (Figure 1). There are approximately 69 acres of suitable habitat for gnatcatcher in the project site and surrounding 500-feet study area (Figure 2).

The gnatcatcher is a federally listed as threatened species and a California Department of Fish and Wildlife (CDFW) Species of Special Concern (SSC). It is closely associated with coastal sage scrub habitat and typically occurs below 950 feet elevation and on slopes less than 40% (Atwood 1990), but gnatcatchers have been observed at elevations greater than 2,000 feet. The species is threatened primarily by loss, degradation, and fragmentation of coastal sage scrub habitat, and is also impacted by brown-headed cowbird (*Molothrus ater*) nest parasitism (Braden et al. 1997).

1 Location and Existing Conditions

The project site is located in the City of Thousand Oaks, California, approximately 1 mile north of U.S. Route 101 (Figure 1). The Project includes the construction of several industrial buildings separated into three clusters: one on the western side of Conejo Center Drive just northwest of the intersection of Conejo Center Drive and Conejo Spectrum Street (SW Site); another along the eastern side of Conejo Center Drive from Conejo Spectrum Street up to Rancho Conejo Boulevard (E Site); and the third north of the intersection of Conejo Center Drive and Rancho Conejo Boulevard, extending west to a parcel at the end of Rancho Conejo Boulevard (N Site). For purposes of this report, these areas will be referred to as SW Site, E Site, and N Site. The approximately 51.28-acre project site is situated within Township 2 North, Range 20 West on the Newbury Park U.S. Geological Survey 7.5-minute quadrangle map.

The study area is situated in the Conejo Valley, in the western portion of the City. The project site consists of undeveloped lands surrounded by the Conejo Canyons Open Space Area to the north, west, and south. The majority of the surrounding open space burned during the 2018 Woolsey Fire, but it has largely recovered and currently

supports natural and naturalized vegetation. Commercial and industrial development is present immediately east and south of the project site.

The majority of the project site is highly disturbed, with large portions having been graded in the past. Based on a review of aerial imagery, the project site shows evidence of various physical anthropogenic disturbances, including mowing and regular off-road vehicle use in the west portion of the site. During surveys, the northern portion of the site was observed to be used by hikers and mountain bikers.

Most of the project site has previously been graded; therefore, site topography is largely homogenous. The highest point, located in the southern portion of the project site, is approximately 700 feet above mean sea level (amsl), while the lowest point, located in the northern portion of the project site, is approximately 630 feet amsl (Google 2022). The topography of the surrounding study area is variable with flat, developed areas extending to the east and south and sloped terrain both descending and rising from the project site to the west, north, and south.

2 Vegetation Communities

Vegetation communities and land uses within the study area were mapped in the field using the ESRI Collector mobile application. Following completion of the fieldwork, all vegetation polygons were digitized using ESRI ArcGIS software and a geographic information system (GIS) coverage was created. Once in ArcGIS, the acreage of each vegetation community and land cover present on site was determined. Natural vegetation communities were classified using the California Natural Community List (CDFW 2022b), which is based on A Manual of California Vegetation, Second Edition (Sawyer et al. 2009) and A Manual of California Vegetation, Online Edition (CNPS 2022b), where feasible, with modifications to accommodate the lack of conformity of the observed communities.

The study area includes a variety of native and non-native upland vegetation communities and developed areas. Twenty vegetation communities and land covers were identified within the study area, which are shown in Figure 3 and summarized in Table 1. Nine of these vegetation communities were identified as potentially suitable gnatcatcher habitat, including bush mallow scrub, California buckwheat scrub, California sagebrush, purple sage scrub, ashy buckwheat scrub, deerweed scrub, Menzies's golden bush scrub, bigpod ceanothus chaparral, and toyon-laurel sumac chaparral. Suitable habitat within the study area is described in Table 1 and detailed below.

Table 1. Suitable Vegetation Communities in the Study Area[1]

Vegetation Community/Land Cover Type	Alliance	Association	Ranking[2] (Global/State)	Study Area Acreage	Project Site Acreage
Native Vegetation Communities					
Scrub					
Bush Mallow Scrub	Malacothamnus fasciculatus-Malacothamnus spp. Shrubland Alliance	*Malacothamnus fasciculatus* Association	G4/S4	13.96	0
California Buckwheat Scrub	*Eriogonum fasciculatum* Shrubland Alliance	*Eriogonum fasciculatum* Association	G5/S5	35.85	23.23

Table 1. Suitable Vegetation Communities in the Study Area[1]

Vegetation Community/Land Cover Type	Alliance	Association	Ranking[2] (Global/State)	Study Area Acreage	Project Site Acreage
California Sagebrush–(Purple Sage) Scrub	*Artemisia californica–Salvia leucophylla* Shrubland Alliance	*Artemisia californica* Association	G4/S5	2.88	2.13
		Salvia leucophylla Association	G4/S4	0.14	0.14
California Brittle Bush–Ashy Buckwheat Scrub	*Encelia californica–Eriogonum cinereum* Shrubland Alliance	*Eriogonum cinereum* Association	G2G3/S2S3	3.37	0
Deerweed-Silver Lupine-Yerba Santa Scrub	*Lotus scoparius-Lupinus albifrons-Eriodictyon spp.* Shrubland Alliance	*Lotus scoparius* Association	G5/S5	1.66	0.90
Menzies's Golden Bush Scrub	*Isocoma menziesii Shrubland Alliance*	*Isocoma menziesii* Association	G3/S3	0.90	0
Chaparral					
Bigpod Ceanothus Chaparral	*Ceanothus megacarpus* Shrubland Alliance	*Ceanothus megacarpus–Malosma laurina* Association	G4/S4	0.34	0
Holly Leaf Cherry–Toyon–Greenbark Ceanothus Chaparral	*Prunus ilicifolia - Heteromeles arbutifolia - Ceanothus spinosus* Shrubland Alliance	*Heteromeles arbutifolia–Malosma laurina* Association	G5/S4	10.16	0.23
			Total[2]	*69.26*	*26.64*

Table 1 Notes:

[1] Study Area includes the project site plus a 500-foot buffer.

[2] The ranking of a vegetation community is designated by a number from 1 to 5, preceded by a letter reflecting the appropriate geographic scale of the assessment (G = global and S = State). The numerical component of the rankings are described below. Natural Communities with ranks of S1-S3 are considered Sensitive Natural Communities (CDFW 2022b). Vegetation communities and land covers not identified in A Manual of California Vegetation (Sawyer et al. 2009) are not assigned a rarity rank.

1 = critically imperiled
2 = imperiled
3 = vulnerable to extirpation or extinction
4 = apparently secure
5 = demonstrably widespread, abundant, and secure

[3] Totals may not sum due to rounding.

NA = not applicable

4.1.1 Native Vegetation Communities

Coastal Scrub

Bush Mallow Scrub

Bush mallow scrub (*Malacothamnus fasciculatus–Malacothamnus* spp. shrubland alliance) communities include bush mallow (*Malacothamnus fasciculatus*) or gray bushmallow (*Malacothamnus aboriginum*) as the dominant or co-dominant species in the shrub canopy. Bush mallow scrub has an open to intermittent shrub canopy less than 3 meters (10 feet) in height with an herbaceous layer that is usually sparse. Communities in this alliance occur on gentle to very steep slopes of variable aspects. Species associated with the alliance include chamise (*Adenostoma fasciculatum*), California sagebrush (*Artemisia californica*), bigpod ceanothus (*Ceanothus megacarpus*), greenbark ceanothus (*Ceanothus spinosus*), birch leaf mountain mahogany (*Cercocarpus betuloides*), California brittle bush (*Encelia californica*), California buckwheat (*Eriogonum fasciculatum*), chaparral yucca (*Hesperoyucca whipplei*), toyon (*Heteromeles arbutifolia*), common deerweed (*Acmispon glaber*), laurel sumac (*Malosma laurina*), sugarbush (*Rhus ovata*), and black sage (*Salvia mellifera*) (CNPS 2022b). One association in the alliance, *Malacothamnus fasciculatus* association, was mapped on slopes in the western and northern portions of the study area. This alliance was not mapped on the project site.

California Buckwheat Scrub

California buckwheat scrub communities (*Eriogonum fasciculatum* shrubland alliance) include California buckwheat or chaparral yucca as the dominant or co-dominant species in the shrub canopy. This alliance has a continuous or intermittent shrub canopy less than 2 meters (7 feet) in height with a variable, sometimes grassy ground layer. Species associated with the alliance include California sagebrush, coyotebrush (*Baccharis pilularis*), bush monkeyflower (*Diplacus aurantiacus*), California brittle bush, Menzies' goldenbush (*Isocoma menziesii*), common deerweed, bush mallow, white sage (*Salvia apiana*), or black sage. Communities in this alliance typically occur on upland slopes, intermittently flooded arroyos, channels and washes, and rarely flooded terraces in coarse well-drained soils (CNPS 2022b). One association in the alliance, *Eriogonum fasciculatum* association, was mapped in the study area. This community is prevalent in the southern and eastern portions of the project site and occurs as a small patch in the northern portion of the project site. West of Conejo Center Drive, this community is highly disturbed and fragmented by regular off-road vehicle use.

California Sagebrush–(Purple Sage) Scrub

California sagebrush–(purple sage) scrub communities (*Artemisia californica–Salvia leucophylla* shrubland alliance) include California sagebrush and/or purple sage (*Salvia leucophylla*) as dominant or co-dominant shrubs in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height or in two tiers with the second tier less than 5 meters (16 feet) in height. Species associated with the California sagebrush scrub alliance include chamise, coyotebrush, bladderpod (*Peritoma arborea*), bush monkeyflower, California brittle bush, brittle bush (*Encelia farinosa*), California jointfir (*Ephedra californica*), narrowleaf goldenbush (*Ericameria linearifolia*), ashy buckwheat (*Eriogonum cinereum*), California buckwheat, chaparral yucca, golden-yarrow (*Eriophyllum confertiflorum*), Menzies' goldenbush, common deerweed, heartleaf keckiella (*Keckiella cordifolia*), southern honeysuckle (*Lonicera subspicata*), bush mallow, laurel sumac, coast prickly pear (*Opuntia littoralis*), hollyleaf redberry (*Rhamnus ilicifolia*), lemonade berry (*Rhus integrifolia*), sugarbush, white sage, black sage, and poison oak (*Toxicodendron diversilobum*) (CNPS 2022b). These communities typically occur on steep slopes or rarely

flooded terraces along streams in alluvial- or colluvial-derived soils (CNPS 2022b). Two associations in the alliance were mapped on the project site. *Artemisia californica* association was mapped in two patches in the northern portion of the site that shows evidence physical anthropogenic disturbance, including mowing. This association was also mapped in the far northeast portion of the study area. *Salvia leucophylla* association was mapped on the top of a small hill in the southern portion of the project site east of Conejo Center Drive.

California Brittle Bush–Ashy Buckwheat Scrub

California brittlebush–ashy buckwheat scrub communities (*Encelia californica–Eriogonum cinereum* shrubland alliance) include California brittlebush and/or ashy buckwheat as dominant or co-dominant shrubs in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height (CNPS 2022b). Species associated with this alliance include California sagebrush, coyotebrush, bladderpod, California buckwheat, chaparral yucca, Menzies's goldenbush, common deerweed, bush mallow, laurel sumac, coast prickly pear, lemonade berry, purple sage, black sage and other common coastal sage scrub species. These communities typically occur on sunny, steep slopes that are often rocky or eroded (CNPS 2022b). One association in the alliance, *Eriogonum cinereum* association, was mapped on the steep slopes of the study area north and west of the northern portion of the project site. This alliance was not mapped on the project site. The California brittlebush–ashy buckwheat scrub alliance, including the *Eriogonum cinereum* association, is considered a sensitive vegetation community by CDFW (2022b).

Deerweed-Silver Lupine-Yerba Santa Scrub

Deerweed-silver lupine-yerba santa scrub communities (*Lotus scoparius–Lupinus albifrons–Eriodictyon spp.* Shrubland Alliance) include bush poppy (*Dendromecon rigida*), *California yerba santa* (*Eriodictyon californicum*), *thick leaf yerba santa* (*Eriodictyon crassifolium*), poodle-dog bush (*Eriodictyon parryi*), common deerweed, and/or silver bush lupine (*Lupinus albifrons*) as the dominant species in the shrub canopy. Deerweed scrub has an open to intermittent shrub canopy less than 3 meters (10 feet) in height with an herbaceous layer that is sparse to intermittent. Species associated with this alliance include chamise, California sagebrush, coyote brush, wedge leaf ceanothus (*Ceanothus cuneatus*), cup leaf ceanothus (*Ceanothus perplexans*), sand aster (*Corethrogyne filaginifolia*), bush monkeyflower, narrowleaf goldenbush, golden-yarrow, sawtooth golden bush (*Hazardia squarrosa),* slender sunflower (*Helianthus gracilentus*), California buckwheat, California jointfir, interior goldenbush, sawtooth goldenbush, chaparral yucca, yellowstem bushmallow (*Malacothamnus densiflorus*), desert apricot (*Prunus fremontii*), sugarbush, oak gooseberry (*Ribes quercetorum*), white sage, black sage, Douglas' ragwort (*Senecio flaccidus* var. *douglasii*), poison oak, and Parish's bluecurls (*Trichostema parishii*) (CNPS 2022b). This alliance typically occurs on lower to upper slopes and ridges, typically in exposed, somewhat steep open settings, and often in areas with recent disturbance, such as through clearing, fire, or intermittent flooding. One association in the alliance was mapped in the study area: *Lotus scoparius* association. This association occurs in the study area on the slopes west of the project site and in a small patch within the northern portion of the project site.

Menzies's Golden Bush Scrub

Menzie's golden bush scrub communities (*Isocoma menziesii* shrubland alliance) include Menzie's golden bush as the dominant or co-dominant species in the shrub canopy. The alliance has an open to intermittent shrub canopy less than 1 meter (3 feet) in height with an open to continuous, diverse, and grassy herbaceous layer. Species associated with this alliance include island broom (*Acmispon dendroideus*), California sagebrush, coyote brush, California match weed (*Gutierrezia californica*), giant coreopsis (*Leptosyne gigantea*), silver bush lupine, and

Virginia glasswort (*Salicornia depressa*). This alliance typically occurs on alluvial fans, arroyos, and stream terraces. One association in the alliance, *Isocoma menziesii* association, was mapped in a single location in the western portion of the study area. This alliance was not mapped on the project site. The Menzie's golden bush scrub alliance, including the *Isocoma menziesii* association, is considered a sensitive vegetation community by CDFW (2022b).

Chaparral

Bigpod Ceanothus Chaparral

Bigpod ceanothus chaparral communities (*Ceanothus megacarpus* shrubland alliance) include bigpod ceanothus as the dominant or co-dominant shrub in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height, with an herbaceous layer that is sparse or occasionally grassy. Species associated with this alliance include chamise, redshank (*Adenostoma sparsifolium*), greenbark ceanothus, birch leaf mountain mahogany, ashy buckwheat, chaparral yucca, toyon, laurel sumac, inland scrub oak (*Quercus berberidifolia*), lemonade berry, and black sage. One association in the alliance, *Ceanothus megacarpus–Malosma laurina* association, was mapped in an isolated patch of the study area south of the northern portion of the project site. This alliance was not mapped on the project site.

Holly Leaf Cherry–Toyon–Greenbark Ceanothus Chaparral

Hollyleaf cherry-toyon–laurel sumac chaparral communities (*Prunus ilicifolia–Heteromeles arbutifolia–Ceanothus spinosus* shrubland alliance) include hollyleaf cherry (*Prunus ilicifolia*), toyon, and/or greenbark ceanothus as the dominant or co-dominant shrubs in an open to continuous shrub canopy less than 15 meters (49 feet) in height. Species associated with this alliance include California sagebrush, bigpod ceanothus, birch leaf mountain mahogany, pipestem clematis (*Clematis lasiantha*), bush monkeyflower, California buckwheat, California ash (*Fraxinus dipetala*), bush penstemon (*Keckiella antirrhinoides*), heartleaf keckiella, inland scrub oak, hollyleaf redberry, sugarbush, and black sage. These communities typically occur on slopes that are often steep and north-facing, where soils are derived from bedrock or colluvium (CNPS 2022b). Two associations in the alliance were mapped in the study area: *Heteromeles arbutifolia*–M*alosma laurina* association and *Heteromeles arbutifolia* provisional association. Both associations are prevalent on north-facing slopes in the study area. *Heteromeles arbutifolia*–M*alosma laurina* association comprises large portions of the study area west and north of the southern part of the project site, overlapping with small sections of the project site. *Heteromeles arbutifolia* provisional association comprises large portions of the study area west and north of the northern part of the project site but does not occur on the project site. The *Heteromeles arbutifolia* provisional association is considered a sensitive vegetation community by CDFW despite the overall alliance's G5S4 ranking (CDFW 2022b). The understory of this community in the central-western portion of the study area, outside of the project site, has a significant amount of *Artemisia californica* composing the understory.

3 Methods

The focused surveys for gnatcatcher were conducted between March 24 and June 9, 2023, by Melissa Blundell (TE-97717A) (Table 2). The surveys were conducted following the currently accepted protocol of the U.S. Fish and Wildlife Service (USFWS) *Coastal California Gnatcatcher (Polioptila californica californica) Presence/Absence Survey Protocol* (USFWS 1997). The survey areas occurs outside of a Natural Communities Conservation Plan (NCCP) enrolled area; therefore the survey included six passes at a minimum of 7-day intervals during the breeding season.

In accordance with the protocol, no more than 80 acres of suitable habitat were surveyed by a single permitted biologist during each site visit conducted. Survey routes are shown on Figure 3 and allowed for complete audible and visual coverage of all suitable gnatcatcher habitat on site. Birding binoculars (e.g., 8x42 magnification) were used to aid in detecting and identifying bird species. Recorded vocalizations were used frequently in order to elicit a response from the species. The tape was played approximately every 50 to 100 feet. If gnatcatchers would have been detected, the playing of the tape would have ceased to avoid harassment.

A digital aerial map overlain with vegetation polygons and the site area was used for the survey. The digital mobile map was also utilized during the surveys to assist in navigating and mapping any gnatcatchers present. Weather conditions, time of day, and season were appropriate for the detection of gnatcatchers and are provided in Table 2.

Table 2
Survey Dates and Conditions

Survey Pass	Date	Biologist's Initials[1]	Time	Survey Conditions[2]
1	2023-03-24	MB	7:15 –11:10 AM	48–70°F; 10% cc; 0–2 mph wind
2	2023-04-14	MB	6:18 –11:05 AM	53–70°F; 60–70% cc; 0–2 mph wind
3	2023-04-28	MB	6:48 –11:38 AM	55–63°F; 0–100% cc; 0–2 mph wind
4	2023-05-11	MB	6:50 –11:17 AM	57–66°F; 0–30% cc; 0–1 mph wind
5	2023-05-26	MB	6:20 –11:03 AM	58–67°F; 100% cc, 0–2 mph wind
6	2023-06-09	MB	6:15 –11:30 AM	60–62°F; 80–100% cc; 0–3 mph wind

[1] MB = Melissa Blundell
[2] °F = degrees Fahrenheit; % cc = percent cloud cover; mph = mile per hour

4 Results

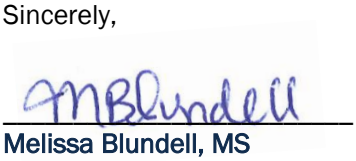
On April 26, 2023 three adults California gnatcatchers were observed outside of the study area, approximately 0.25 mile (1,440 feet) southwest of the project site, near patches of cactus and coastal sage scrub habitat. On April 28 a pair (male and female) were observed in coastal sage scrub approximately 0.30 mile (1,600 feet) southwest of the project site. On return visits to this location, a male was detected on May 11 and May 26. The male and female were observed together again on June 9. No sign of nesting (e.g., nest building, carrying food, agitation to biologist presence) was observed; however, its possible the pair attempted breeding at this location due to its regular presence in the area. The coastal sage scrub habitat at this location was composed of characteristic species, such as California sagebrush, buckwheat, purple sage, California brittlebush, deerweed, and similar species. It should also be note that coastal California gnatcatchers are known to occur in the Conejo Canyons Open Space and adjacent Wildwood Regional Park in the surrounding area (CDFW 2023, eBird 2023).

Overall, fifty-two avian species were observed during the surveys. Seven special-status species were observed within or near the study area during the surveys including California thrasher (*Toxostoma redivivum*, U.S. Fish and Wildlife Service Bird of Conservation Concern [BCC]), coastal California gnatcatcher (*Polioptila californica californica*, federally threatened/California Species of Special Concern), Costa's hummingbird (*Calypte costae*, BCC), Lawrence's goldfinch (*Spinus lawrencei*, BCC), Nuttall's woodpecker (*Dryobates nuttallii*, BCC), wrentit

(*Chamaea fasciata*, BCC), and yellow-breasted chat (*Icteria virens*, SSC). A full list of avian species observed during the survey is provided in Attachment A. Photo documentation is provided in Attachment B.

Please feel free to contact me at mblundell@dudek.com or (760) 214-1878 (cell) with questions or if you require additional information regarding this survey. I certify that the information in this survey report and attached exhibits fully and accurately represent my work.

Sincerely,



Melissa Blundell, MS
Biologist (TE97717A)

Attachment A

List of Bird Species Observed

Birds Species Observed

ACCIPITRIDAE—HAWKS, KITES, EAGLES, & ALLIES

Buteo jamaicensis—red-tailed hawk

AEGITHALIDAE—LONG-TAILED TITS & BUSHTITS

Psaltriparus minimus—bushtit

ANATIDAE—DUCKS, GEESE, & SWANS

Anas platyrhynchos—mallard

ARDEIDAE—HERONS, BITTERNS, & ALLIES

Ardea alba—great egret

CARDINALIDAE—CARDINALS & ALLIES

Passerina amoena—lazuli bunting

Passerina caerulea—blue grosbeak

Pheucticus melanocephalus—black-headed grosbeak

CATHARTIDAE—NEW WORLD VULTURES

Cathartes aura—turkey vulture

COLUMBIDAE—PIGEONS & DOVES

Zenaida macroura—mourning dove

Streptopelia decaocto—Eurasian collared-dove*

CORVIDAE—CROWS & JAYS

Aphelocoma californica—California scrub-jay

Corvus brachyrhynchos—American crow

FALCONIDAE—CARACARAS & FALCONS

Falco sparverius—American kestrel

FRINGILLIDAE—FRINGILLINE & CARDUELINE FINCHES & ALLIES

Haemorhous mexicanus—house finch

Spinus lawrencei—Lawrence's goldfinch

Spinus psaltria—lesser goldfinch

HIRUNDINIDAE—SWALLOWS

Petrochelidon pyrrhonota—cliff swallow

ICTERIDAE—BLACKBIRDS

Icterus cucullatus—hooded oriole
Sturnella neglecta—western meadowlark

ICTERIIDAE—YELLOW-BREASTED CHAT

Icteria virens—yellow-breasted chat

MIMIDAE—MOCKINGBIRDS & THRASHERS

Mimus polyglottos—northern mockingbird
Toxostoma redivivum—California thrasher

ODONTOPHORIDAE—NEW WORLD QUAIL

Callipepla californica—California quail

PARULIDAE—WOOD-WARBLERS

Cardellina pusilla—Wilson's warbler
Geothlypis trichas—common yellowthroat
Setophaga coronata—yellow-rumped warbler
Leiothlypis celata—orange-crowned warbler

PASSERELLIDAE—NEW WORLD SPARROWS

Aimophila ruficeps canescens—southern California rufous-crowned sparrow
Chondestes grammacus—lark sparrow
Melospiza melodia—song sparrow
Melozone crissalis—California towhee
Passerculus sandwichensis—savannah sparrow
Pipilo maculatus—spotted towhee
Zonotrichia leucophrys—white-crowned sparrow

PICIDAE—WOODPECKERS & ALLIES

Melanerpes formicivorus—acorn woodpecker
Dryobates nuttallii—Nuttall's woodpecker
Dryobates pubescens—downy woodpecker

POLIOPTILIDAE—GNATCATCHERS

Polioptila caerulea—blue-gray gnatcatcher
Polioptila californica californica—coastal California gnatcatcher

STURNIDAE—STARLINGS

Sturnus vulgaris—European starling*

SYLVIIDAE—SYLVIID WARBLERS

Chamaea fasciata—wrentit

TROCHILIDAE—HUMMINGBIRDS

Calypte anna—Anna's hummingbird
Calypte costae—Costa's hummingbird
Selasphorus sasin—Allen's hummingbird

TROGLODYTIDAE—WRENS

Campylorhynchus brunneicapillus—cactus wren
Thryomanes bewickii—Bewick's wren

TYRANNIDAE—TYRANT FLYCATCHERS

Empidonax difficilis—Pacific-slope flycatcher
Myiarchus cinerascens—ash-throated flycatcher
Sayornis nigricans—black phoebe
Sayornis saya—Say's phoebe
Tyrannus vociferans—Cassin's kingbird

VIREONIDAE—VIREOS

Vireo gilvus—warbling vireo

* signifies introduced (non-native) species

Subject: Focused California Gnatcatcher Survey Results for the Conejo Summit Project, City of Thousand Oaks, California

Dear Recovery Permit Coordinator:

This report documents the results of protocol-level presence/absence surveys for the coastal California gnatcatcher (*Polioptila californica californica*; hereafter, gnatcatcher). Focused surveys were conducted throughout all areas of suitable habitat for the Conejo Summit Project (project) located in the City of Thousand Oaks, Ventura County, California (Figure 1). There are approximately 69 acres of suitable habitat for gnatcatcher in the project site and surrounding 500-feet study area (Figure 2).

The gnatcatcher is a federally listed as threatened species and a California Department of Fish and Wildlife (CDFW) Species of Special Concern (SSC). It is closely associated with coastal sage scrub habitat and typically occurs below 950 feet elevation and on slopes less than 40% (Atwood 1990), but gnatcatchers have been observed at elevations greater than 2,000 feet. The species is threatened primarily by loss, degradation, and fragmentation of coastal sage scrub habitat, and is also impacted by brown-headed cowbird (*Molothrus ater*) nest parasitism (Braden et al. 1997).

1 Location and Existing Conditions

The project site is located in the City of Thousand Oaks, California, approximately 1 mile north of U.S. Route 101 (Figure 1). The Project includes the construction of several industrial buildings separated into three clusters: one on the western side of Conejo Center Drive just northwest of the intersection of Conejo Center Drive and Conejo Spectrum Street (SW Site); another along the eastern side of Conejo Center Drive from Conejo Spectrum Street up to Rancho Conejo Boulevard (E Site); and the third north of the intersection of Conejo Center Drive and Rancho Conejo Boulevard, extending west to a parcel at the end of Rancho Conejo Boulevard (N Site). For purposes of this report, these areas will be referred to as SW Site, E Site, and N Site. The approximately 51.28-acre project site is situated within Township 2 North, Range 20 West on the Newbury Park U.S. Geological Survey 7.5-minute quadrangle map.

The study area is situated in the Conejo Valley, in the western portion of the City. The project site consists of undeveloped lands surrounded by the Conejo Canyons Open Space Area to the north, west, and south. The majority of the surrounding open space burned during the 2018 Woolsey Fire, but it has largely recovered and currently

supports natural and naturalized vegetation. Commercial and industrial development is present immediately east and south of the project site.

The majority of the project site is highly disturbed, with large portions having been graded in the past. Based on a review of aerial imagery, the project site shows evidence of various physical anthropogenic disturbances, including mowing and regular off-road vehicle use in the west portion of the site. During surveys, the northern portion of the site was observed to be used by hikers and mountain bikers.

Most of the project site has previously been graded; therefore, site topography is largely homogenous. The highest point, located in the southern portion of the project site, is approximately 700 feet above mean sea level (amsl), while the lowest point, located in the northern portion of the project site, is approximately 630 feet amsl (Google 2022). The topography of the surrounding study area is variable with flat, developed areas extending to the east and south and sloped terrain both descending and rising from the project site to the west, north, and south.

2 Vegetation Communities

Vegetation communities and land uses within the study area were mapped in the field using the ESRI Collector mobile application. Following completion of the fieldwork, all vegetation polygons were digitized using ESRI ArcGIS software and a geographic information system (GIS) coverage was created. Once in ArcGIS, the acreage of each vegetation community and land cover present on site was determined. Natural vegetation communities were classified using the California Natural Community List (CDFW 2022b), which is based on A Manual of California Vegetation, Second Edition (Sawyer et al. 2009) and A Manual of California Vegetation, Online Edition (CNPS 2022b), where feasible, with modifications to accommodate the lack of conformity of the observed communities.

The study area includes a variety of native and non-native upland vegetation communities and developed areas. Twenty vegetation communities and land covers were identified within the study area, which are shown in Figure 3 and summarized in Table 1. Nine of these vegetation communities were identified as potentially suitable gnatcatcher habitat, including bush mallow scrub, California buckwheat scrub, California sagebrush, purple sage scrub, ashy buckwheat scrub, deerweed scrub, Menzies's golden bush scrub, bigpod ceanothus chaparral, and toyon-laurel sumac chaparral. Suitable habitat within the study area is described in Table 1 and detailed below.

Table 1. Suitable Vegetation Communities in the Study Area[1]

Vegetation Community/Land Cover Type	Alliance	Association	Ranking[2] (Global/State)	Study Area Acreage	Project Site Acreage
Native Vegetation Communities					
Scrub					
Bush Mallow Scrub	Malacothamnus fasciculatus-Malacothamnus spp. Shrubland Alliance	*Malacothamnus fasciculatus* Association	G4/S4	13.96	0
California Buckwheat Scrub	*Eriogonum fasciculatum* Shrubland Alliance	*Eriogonum fasciculatum* Association	G5/S5	35.85	23.23

Table 1. Suitable Vegetation Communities in the Study Area[1]

Vegetation Community/Land Cover Type	Alliance	Association	Ranking[2] (Global/State)	Study Area Acreage	Project Site Acreage
California Sagebrush–(Purple Sage) Scrub	*Artemisia californica–Salvia leucophylla* Shrubland Alliance	*Artemisia californica* Association	G4/S5	2.88	2.13
		Salvia leucophylla Association	G4/S4	0.14	0.14
California Brittle Bush–Ashy Buckwheat Scrub	*Encelia californica–Eriogonum cinereum* Shrubland Alliance	*Eriogonum cinereum* Association	G2G3/S2S3	3.37	0
Deerweed-Silver Lupine-Yerba Santa Scrub	*Lotus scoparius-Lupinus albifrons-Eriodictyon spp.* Shrubland Alliance	*Lotus scoparius* Association	G5/S5	1.66	0.90
Menzies's Golden Bush Scrub	*Isocoma menziesii Shrubland Alliance*	*Isocoma menziesii* Association	G3/S3	0.90	0
Chaparral					
Bigpod Ceanothus Chaparral	*Ceanothus megacarpus* Shrubland Alliance	*Ceanothus megacarpus–Malosma laurina* Association	G4/S4	0.34	0
Holly Leaf Cherry–Toyon–Greenbark Ceanothus Chaparral	*Prunus ilicifolia - Heteromeles arbutifolia - Ceanothus spinosus* Shrubland Alliance	*Heteromeles arbutifolia–Malosma laurina* Association	G5/S4	10.16	0.23
			Total[2]	*69.26*	*26.64*

Table 1 Notes:

[1] Study Area includes the project site plus a 500-foot buffer.

[2] The ranking of a vegetation community is designated by a number from 1 to 5, preceded by a letter reflecting the appropriate geographic scale of the assessment (G = global and S = State). The numerical component of the rankings are described below. Natural Communities with ranks of S1-S3 are considered Sensitive Natural Communities (CDFW 2022b). Vegetation communities and land covers not identified in A Manual of California Vegetation (Sawyer et al. 2009) are not assigned a rarity rank.

1 = critically imperiled
2 = imperiled
3 = vulnerable to extirpation or extinction
4 = apparently secure
5 = demonstrably widespread, abundant, and secure

[3] Totals may not sum due to rounding.

NA = not applicable

4.1.1 Native Vegetation Communities

Coastal Scrub

Bush Mallow Scrub

Bush mallow scrub (*Malacothamnus fasciculatus–Malacothamnus* spp. shrubland alliance) communities include bush mallow (*Malacothamnus fasciculatus*) or gray bushmallow (*Malacothamnus aboriginum*) as the dominant or co-dominant species in the shrub canopy. Bush mallow scrub has an open to intermittent shrub canopy less than 3 meters (10 feet) in height with an herbaceous layer that is usually sparse. Communities in this alliance occur on gentle to very steep slopes of variable aspects. Species associated with the alliance include chamise (*Adenostoma fasciculatum*), California sagebrush (*Artemisia californica*), bigpod ceanothus (*Ceanothus megacarpus*), greenbark ceanothus (*Ceanothus spinosus*), birch leaf mountain mahogany (*Cercocarpus betuloides*), California brittle bush (*Encelia californica*), California buckwheat (*Eriogonum fasciculatum*), chaparral yucca (*Hesperoyucca whipplei*), toyon (*Heteromeles arbutifolia*), common deerweed (*Acmispon glaber*), laurel sumac (*Malosma laurina*), sugarbush (*Rhus ovata*), and black sage (*Salvia mellifera*) (CNPS 2022b). One association in the alliance, *Malacothamnus fasciculatus* association, was mapped on slopes in the western and northern portions of the study area. This alliance was not mapped on the project site.

California Buckwheat Scrub

California buckwheat scrub communities (*Eriogonum fasciculatum* shrubland alliance) include California buckwheat or chaparral yucca as the dominant or co-dominant species in the shrub canopy. This alliance has a continuous or intermittent shrub canopy less than 2 meters (7 feet) in height with a variable, sometimes grassy ground layer. Species associated with the alliance include California sagebrush, coyotebrush (*Baccharis pilularis*), bush monkeyflower (*Diplacus aurantiacus*), California brittle bush, Menzies' goldenbush (*Isocoma menziesii*), common deerweed, bush mallow, white sage (*Salvia apiana*), or black sage. Communities in this alliance typically occur on upland slopes, intermittently flooded arroyos, channels and washes, and rarely flooded terraces in coarse well-drained soils (CNPS 2022b). One association in the alliance, *Eriogonum fasciculatum* association, was mapped in the study area. This community is prevalent in the southern and eastern portions of the project site and occurs as a small patch in the northern portion of the project site. West of Conejo Center Drive, this community is highly disturbed and fragmented by regular off-road vehicle use.

California Sagebrush–(Purple Sage) Scrub

California sagebrush–(purple sage) scrub communities (*Artemisia californica–Salvia leucophylla* shrubland alliance) include California sagebrush and/or purple sage (*Salvia leucophylla*) as dominant or co-dominant shrubs in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height or in two tiers with the second tier less than 5 meters (16 feet) in height. Species associated with the California sagebrush scrub alliance include chamise, coyotebrush, bladderpod (*Peritoma arborea*), bush monkeyflower, California brittle bush, brittle bush (*Encelia farinosa*), California jointfir (*Ephedra californica*), narrowleaf goldenbush (*Ericameria linearifolia*), ashy buckwheat (*Eriogonum cinereum*), California buckwheat, chaparral yucca, golden-yarrow (*Eriophyllum confertiflorum*), Menzies' goldenbush, common deerweed, heartleaf keckiella (*Keckiella cordifolia*), southern honeysuckle (*Lonicera subspicata*), bush mallow, laurel sumac, coast prickly pear (*Opuntia littoralis*), hollyleaf redberry (*Rhamnus ilicifolia*), lemonade berry (*Rhus integrifolia*), sugarbush, white sage, black sage, and poison oak (*Toxicodendron diversilobum*) (CNPS 2022b). These communities typically occur on steep slopes or rarely

flooded terraces along streams in alluvial- or colluvial-derived soils (CNPS 2022b). Two associations in the alliance were mapped on the project site. *Artemisia californica* association was mapped in two patches in the northern portion of the site that shows evidence physical anthropogenic disturbance, including mowing. This association was also mapped in the far northeast portion of the study area. *Salvia leucophylla* association was mapped on the top of a small hill in the southern portion of the project site east of Conejo Center Drive.

California Brittle Bush–Ashy Buckwheat Scrub

California brittlebush–ashy buckwheat scrub communities (*Encelia californica–Eriogonum cinereum* shrubland alliance) include California brittlebush and/or ashy buckwheat as dominant or co-dominant shrubs in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height (CNPS 2022b). Species associated with this alliance include California sagebrush, coyotebrush, bladderpod, California buckwheat, chaparral yucca, Menzies's goldenbush, common deerweed, bush mallow, laurel sumac, coast prickly pear, lemonade berry, purple sage, black sage and other common coastal sage scrub species. These communities typically occur on sunny, steep slopes that are often rocky or eroded (CNPS 2022b). One association in the alliance, *Eriogonum cinereum* association, was mapped on the steep slopes of the study area north and west of the northern portion of the project site. This alliance was not mapped on the project site. The California brittlebush–ashy buckwheat scrub alliance, including the *Eriogonum cinereum* association, is considered a sensitive vegetation community by CDFW (2022b).

Deerweed-Silver Lupine-Yerba Santa Scrub

Deerweed-silver lupine-yerba santa scrub communities (*Lotus scoparius–Lupinus albifrons–Eriodictyon spp.* Shrubland Alliance) include bush poppy (*Dendromecon rigida*), *California yerba santa* (*Eriodictyon californicum*), *thick leaf yerba santa* (*Eriodictyon crassifolium*), poodle-dog bush (*Eriodictyon parryi*), common deerweed, and/or silver bush lupine (*Lupinus albifrons*) as the dominant species in the shrub canopy. Deerweed scrub has an open to intermittent shrub canopy less than 3 meters (10 feet) in height with an herbaceous layer that is sparse to intermittent. Species associated with this alliance include chamise, California sagebrush, coyote brush, wedge leaf ceanothus (*Ceanothus cuneatus*), cup leaf ceanothus (*Ceanothus perplexans*), sand aster (*Corethrogyne filaginifolia*), bush monkeyflower, narrowleaf goldenbush, golden-yarrow, sawtooth golden bush (*Hazardia squarrosa),* slender sunflower (*Helianthus gracilentus*), California buckwheat, California jointfir, interior goldenbush, sawtooth goldenbush, chaparral yucca, yellowstem bushmallow (*Malacothamnus densiflorus*), desert apricot (*Prunus fremontii*), sugarbush, oak gooseberry (*Ribes quercetorum*), white sage, black sage, Douglas' ragwort (*Senecio flaccidus* var. *douglasii*), poison oak, and Parish's bluecurls (*Trichostema parishii*) (CNPS 2022b). This alliance typically occurs on lower to upper slopes and ridges, typically in exposed, somewhat steep open settings, and often in areas with recent disturbance, such as through clearing, fire, or intermittent flooding. One association in the alliance was mapped in the study area: *Lotus scoparius* association. This association occurs in the study area on the slopes west of the project site and in a small patch within the northern portion of the project site.

Menzies's Golden Bush Scrub

Menzie's golden bush scrub communities (*Isocoma menziesii* shrubland alliance) include Menzie's golden bush as the dominant or co-dominant species in the shrub canopy. The alliance has an open to intermittent shrub canopy less than 1 meter (3 feet) in height with an open to continuous, diverse, and grassy herbaceous layer. Species associated with this alliance include island broom (*Acmispon dendroideus*), California sagebrush, coyote brush, California match weed (*Gutierrezia californica*), giant coreopsis (*Leptosyne gigantea*), silver bush lupine, and

Virginia glasswort (*Salicornia depressa*). This alliance typically occurs on alluvial fans, arroyos, and stream terraces. One association in the alliance, *Isocoma menziesii* association, was mapped in a single location in the western portion of the study area. This alliance was not mapped on the project site. The Menzie's golden bush scrub alliance, including the *Isocoma menziesii* association, is considered a sensitive vegetation community by CDFW (2022b).

Chaparral

Bigpod Ceanothus Chaparral

Bigpod ceanothus chaparral communities (*Ceanothus megacarpus* shrubland alliance) include bigpod ceanothus as the dominant or co-dominant shrub in an intermittent to continuous shrub layer less than 2 meters (7 feet) in height, with an herbaceous layer that is sparse or occasionally grassy. Species associated with this alliance include chamise, redshank (*Adenostoma sparsifolium*), greenbark ceanothus, birch leaf mountain mahogany, ashy buckwheat, chaparral yucca, toyon, laurel sumac, inland scrub oak (*Quercus berberidifolia*), lemonade berry, and black sage. One association in the alliance, *Ceanothus megacarpus–Malosma laurina* association, was mapped in an isolated patch of the study area south of the northern portion of the project site. This alliance was not mapped on the project site.

Holly Leaf Cherry–Toyon–Greenbark Ceanothus Chaparral

Hollyleaf cherry-toyon–laurel sumac chaparral communities (*Prunus ilicifolia–Heteromeles arbutifolia–Ceanothus spinosus* shrubland alliance) include hollyleaf cherry (*Prunus ilicifolia*), toyon, and/or greenbark ceanothus as the dominant or co-dominant shrubs in an open to continuous shrub canopy less than 15 meters (49 feet) in height. Species associated with this alliance include California sagebrush, bigpod ceanothus, birch leaf mountain mahogany, pipestem clematis (*Clematis lasiantha*), bush monkeyflower, California buckwheat, California ash (*Fraxinus dipetala*), bush penstemon (*Keckiella antirrhinoides*), heartleaf keckiella, inland scrub oak, hollyleaf redberry, sugarbush, and black sage. These communities typically occur on slopes that are often steep and north-facing, where soils are derived from bedrock or colluvium (CNPS 2022b). Two associations in the alliance were mapped in the study area: *Heteromeles arbutifolia*–M*alosma laurina* association and *Heteromeles arbutifolia* provisional association. Both associations are prevalent on north-facing slopes in the study area. *Heteromeles arbutifolia*–M*alosma laurina* association comprises large portions of the study area west and north of the southern part of the project site, overlapping with small sections of the project site. *Heteromeles arbutifolia* provisional association comprises large portions of the study area west and north of the northern part of the project site but does not occur on the project site. The *Heteromeles arbutifolia* provisional association is considered a sensitive vegetation community by CDFW despite the overall alliance's G5S4 ranking (CDFW 2022b). The understory of this community in the central-western portion of the study area, outside of the project site, has a significant amount of *Artemisia californica* composing the understory.

3 Methods

The focused surveys for gnatcatcher were conducted between March 24 and June 9, 2023, by Melissa Blundell (TE-97717A) (Table 2). The surveys were conducted following the currently accepted protocol of the U.S. Fish and Wildlife Service (USFWS) *Coastal California Gnatcatcher (Polioptila californica californica) Presence/Absence Survey Protocol* (USFWS 1997). The survey areas occurs outside of a Natural Communities Conservation Plan (NCCP) enrolled area; therefore the survey included six passes at a minimum of 7-day intervals during the breeding season.

In accordance with the protocol, no more than 80 acres of suitable habitat were surveyed by a single permitted biologist during each site visit conducted. Survey routes are shown on Figure 3 and allowed for complete audible and visual coverage of all suitable gnatcatcher habitat on site. Birding binoculars (e.g., 8x42 magnification) were used to aid in detecting and identifying bird species. Recorded vocalizations were used frequently in order to elicit a response from the species. The tape was played approximately every 50 to 100 feet. If gnatcatchers would have been detected, the playing of the tape would have ceased to avoid harassment.

A digital aerial map overlain with vegetation polygons and the site area was used for the survey. The digital mobile map was also utilized during the surveys to assist in navigating and mapping any gnatcatchers present. Weather conditions, time of day, and season were appropriate for the detection of gnatcatchers and are provided in Table 2.

Table 2
Survey Dates and Conditions

Survey Pass	Date	Biologist's Initials[1]	Time	Survey Conditions[2]
1	2023-03-24	MB	7:15 –11:10 AM	48–70°F; 10% cc; 0–2 mph wind
2	2023-04-14	MB	6:18 –11:05 AM	53–70°F; 60–70% cc; 0–2 mph wind
3	2023-04-28	MB	6:48 –11:38 AM	55–63°F; 0–100% cc; 0–2 mph wind
4	2023-05-11	MB	6:50 –11:17 AM	57–66°F; 0–30% cc; 0–1 mph wind
5	2023-05-26	MB	6:20 –11:03 AM	58–67°F; 100% cc, 0–2 mph wind
6	2023-06-09	MB	6:15 –11:30 AM	60–62°F; 80–100% cc; 0–3 mph wind

[1] MB = Melissa Blundell
[2] °F = degrees Fahrenheit; % cc = percent cloud cover; mph = mile per hour

4 Results

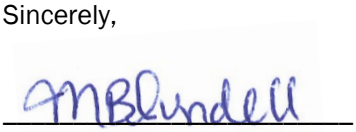
On April 26, 2023 three adults California gnatcatchers were observed outside of the study area, approximately 0.25 mile (1,440 feet) southwest of the project site, near patches of cactus and coastal sage scrub habitat. On April 28 a pair (male and female) were observed in coastal sage scrub approximately 0.30 mile (1,600 feet) southwest of the project site. On return visits to this location, a male was detected on May 11 and May 26. The male and female were observed together again on June 9. No sign of nesting (e.g., nest building, carrying food, agitation to biologist presence) was observed; however, its possible the pair attempted breeding at this location due to its regular presence in the area. The coastal sage scrub habitat at this location was composed of characteristic species, such as California sagebrush, buckwheat, purple sage, California brittlebush, deerweed, and similar species. It should also be note that coastal California gnatcatchers are known to occur in the Conejo Canyons Open Space and adjacent Wildwood Regional Park in the surrounding area (CDFW 2023, eBird 2023).

Overall, fifty-two avian species were observed during the surveys. Seven special-status species were observed within or near the study area during the surveys including California thrasher (*Toxostoma redivivum*, U.S. Fish and Wildlife Service Bird of Conservation Concern [BCC]), coastal California gnatcatcher (*Polioptila californica californica*, federally threatened/California Species of Special Concern), Costa's hummingbird (*Calypte costae*, BCC), Lawrence's goldfinch (*Spinus lawrencei*, BCC), Nuttall's woodpecker (*Dryobates nuttallii*, BCC), wrentit

(*Chamaea fasciata*, BCC), and yellow-breasted chat (*Icteria virens*, SSC). A full list of avian species observed during the survey is provided in Attachment A. Photo documentation is provided in Attachment B.

Please feel free to contact me at mblundell@dudek.com or (760) 214-1878 (cell) with questions or if you require additional information regarding this survey. I certify that the information in this survey report and attached exhibits fully and accurately represent my work.

Sincerely,



Melissa Blundell, MS
Biologist (TE97717A)

Attachment A

List of Bird Species Observed

Birds Species Observed

ACCIPITRIDAE—HAWKS, KITES, EAGLES, & ALLIES

Buteo jamaicensis—red-tailed hawk

AEGITHALIDAE—LONG-TAILED TITS & BUSHTITS

Psaltriparus minimus—bushtit

ANATIDAE—DUCKS, GEESE, & SWANS

Anas platyrhynchos—mallard

ARDEIDAE—HERONS, BITTERNS, & ALLIES

Ardea alba—great egret

CARDINALIDAE—CARDINALS & ALLIES

Passerina amoena—lazuli bunting

Passerina caerulea—blue grosbeak

Pheucticus melanocephalus—black-headed grosbeak

CATHARTIDAE—NEW WORLD VULTURES

Cathartes aura—turkey vulture

COLUMBIDAE—PIGEONS & DOVES

Zenaida macroura—mourning dove

Streptopelia decaocto—Eurasian collared-dove*

CORVIDAE—CROWS & JAYS

Aphelocoma californica—California scrub-jay

Corvus brachyrhynchos—American crow

FALCONIDAE—CARACARAS & FALCONS

Falco sparverius—American kestrel

FRINGILLIDAE—FRINGILLINE & CARDUELINE FINCHES & ALLIES

Haemorhous mexicanus—house finch

Spinus lawrencei—Lawrence's goldfinch

Spinus psaltria—lesser goldfinch

HIRUNDINIDAE—SWALLOWS

Petrochelidon pyrrhonota—cliff swallow

ICTERIDAE—BLACKBIRDS

Icterus cucullatus—hooded oriole
Sturnella neglecta—western meadowlark

ICTERIIDAE—YELLOW-BREASTED CHAT

Icteria virens—yellow-breasted chat

MIMIDAE—MOCKINGBIRDS & THRASHERS

Mimus polyglottos—northern mockingbird
Toxostoma redivivum—California thrasher

ODONTOPHORIDAE—NEW WORLD QUAIL

Callipepla californica—California quail

PARULIDAE—WOOD-WARBLERS

Cardellina pusilla—Wilson's warbler
Geothlypis trichas—common yellowthroat
Setophaga coronata—yellow-rumped warbler
Leiothlypis celata—orange-crowned warbler

PASSERELLIDAE—NEW WORLD SPARROWS

Aimophila ruficeps canescens—southern California rufous-crowned sparrow
Chondestes grammacus—lark sparrow
Melospiza melodia—song sparrow
Melozone crissalis—California towhee
Passerculus sandwichensis—savannah sparrow
Pipilo maculatus—spotted towhee
Zonotrichia leucophrys—white-crowned sparrow

PICIDAE—WOODPECKERS & ALLIES

Melanerpes formicivorus—acorn woodpecker
Dryobates nuttallii—Nuttall's woodpecker
Dryobates pubescens—downy woodpecker

POLIOPTILIDAE—GNATCATCHERS

Polioptila caerulea—blue-gray gnatcatcher
Polioptila californica californica—coastal California gnatcatcher

STURNIDAE—STARLINGS

Sturnus vulgaris—European starling*

SYLVIIDAE—SYLVIID WARBLERS

Chamaea fasciata—wrentit

TROCHILIDAE—HUMMINGBIRDS

Calypte anna—Anna's hummingbird
Calypte costae—Costa's hummingbird
Selasphorus sasin—Allen's hummingbird

TROGLODYTIDAE—WRENS

Campylorhynchus brunneicapillus—cactus wren
Thryomanes bewickii—Bewick's wren

TYRANNIDAE—TYRANT FLYCATCHERS

Empidonax difficilis—Pacific-slope flycatcher
Myiarchus cinerascens—ash-throated flycatcher
Sayornis nigricans—black phoebe
Sayornis saya—Say's phoebe
Tyrannus vociferans—Cassin's kingbird

VIREONIDAE—VIREOS

Vireo gilvus—warbling vireo

* signifies introduced (non-native) species

Attachment B

Photo Documentation

Photo 1. Coastal sage scrub habitat occupied by California gnatcatcher, approx. 0.3 mile SW of the Project boundary. Photo facing west. June 9, 2023.

Photo 2. Coastal sage scrub habitat occupied by California gnatcatcher, approx. 0.3 mile SW of the Project boundary. Photo facing west. June 9, 2023.

Photo 3. View of *Eriogonum fasciculatum* in the northern portion of the eastern Project area (E Site). Photo facing southeast. June 9, 2023.

Photo 4. View of *Eriogonum fasciculatum* in the southern portion of the eastern Project area (E Site). Photo facing west. June 9, 2023.

Photo 5. View of *Eriogonum fasciculatum* in the western Project area (W Site). Photo facing southeast. June 9, 2023.

Photo 6. *Artemisia californica* interspersed in *Heteromeles arbutifolia-Malosma laurina* along the slopes immediately north of the W Site. Photo facing west. June 9, 2023.

Photo 7. Mapped *Malacothamnus fasciculatus* on hill in background along public hiking trail with terraced oak plantings in foreground. This area is immediately south of the N Site. Photo facing west. October 4, 2022.

Photo 8. Mapped *Heteromeles arbitufolia* and *Malacothamnus fasciculatus* at northern edge of 500-foot buffer, north of the N Site. Photo facing southwest. June 9, 2023.

Technical Memorandum

date	November 21, 2024
to	City of Thousand Oaks
cc	
from	Sara Dietler, Principal Cultural Resources Specialist, Environmental Science Associates
subject	Shapell Conejo Summit Industrial Project – Phase I Cultural Resources Survey Report

Environmental Science Associates (ESA) prepared a Phase I Cultural Resources Survey Report in June of 2020. The purpose of this memo is to confirm the validity of ESA's survey report. The project description and location have not changed since that time. The study found an eligible precontact site that qualifies as a historical resources pursuant to CEQA. The site is located within a portion of the project site that will not be subjected to any development or disturbances so the study finds that there would be no direct impact to the site, indirect impacts could occur during and after construction and expose the site to disturbance and/or damage. In order to avoid impacts to the significance of the site, Mitigation Measures CUL-1 through CUL-5 to protect and preserve the site and provide unanticipated discovery protocol. No changes since 2020 have been made to the project site. The prior conclusions and mitigation recommendations for the project remain valid as of the date of this memo.

Conejo Summit
Operational GHG Analysis

Estimated Electricity demand from Electric Vehicle Supply Equipment (EVSE)

Land Use Type	% Of spaces with EV Chargers	Number of EVSE Charging Spaces	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
Total	**33%**	**247**	**4.4**	**365**	395,896	396

Electricity Emission Factor	Electricity Emission Factor	Total EV Charging GHG Emissions Per Year
(MT CO2/MWh)	**(lbs CO2/MWh)**	63
0.16	346.20	
(MT CH4/MWh)	**(lbs CH4/MWh)**	
1.50E-05	0.033	
(MT N2O/MWh)	**(lbs N2O/MWh)**	
1.81E-06	0.004	

Notes:

a. Estimated based on reference sources listed below.

b. Project would install EV charing spaces for 10 percent of its parking capacity for immediate use

c. Project would install pre-wiring for EV charging spaces for 30 percent of its parking capacity for future use (so 20% in addition to the immediate use).

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	14.1	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	29.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.4
AQ-PM	41.5
AQ-DPM	54.6
Drinking Water	57.5
Lead Risk Housing	26.2
Pesticides	23.9
Toxic Releases	25.9
Traffic	88.0
Effect Indicators	—
CleanUp Sites	76.7
Groundwater	95.4
Haz Waste Facilities/Generators	99.0
Impaired Water Bodies	96.8
Solid Waste	0.00
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	61.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	14.1	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	29.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.4
AQ-PM	41.5
AQ-DPM	54.6
Drinking Water	57.5
Lead Risk Housing	26.2
Pesticides	23.9
Toxic Releases	25.9
Traffic	88.0
Effect Indicators	—
CleanUp Sites	76.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	61.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Conejo Summit | Operations 2031
Operational Year	2031
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	1.60
Location	Conejo Center Dr, Thousand Oaks, CA 91320, USA
County	Ventura
City	Thousand Oaks
Air District	Ventura County APCD
Air Basin	South Central Coast
TAZ	3510
EDFZ	8
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Heavy Industry	764	1000sqft	49.6	764,222	259,949	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Waste	S-1/S-2	Implement Waste Reduction Plan
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	14.1	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	29.4	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.4
AQ-PM	41.5
AQ-DPM	54.6
Drinking Water	57.5
Lead Risk Housing	26.2
Pesticides	23.9
Toxic Releases	25.9
Traffic	88.0
Effect Indicators	—
CleanUp Sites	76.7
Groundwater	95.4
Haz Waste Facilities/Generators	99.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	61.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

Subject: **Geotechnical Site Evaluation Update, Commercial Development of Tract 4823, Phases 1 and 3, Conejo Center Drive and Rancho Conejo Boulevard in the Newbury Park area of Thousand Oaks California.**

1. INTRODUCTION

This report was prepared to present our geotechnical evaluation regarding commercial development within the remaining lots within Tract 4823 Phases 1 and 3 as shown on the attached Geotechnical Map, Plate 1. The lots are on either side of Conejo Center Drive and Rancho Conejo Boulevard in the Newbury Park area of Thousand Oaks California. The development will consist of commercial/industrial buildings with loading docks. The proposed grading and building footprints are shown on Plate 1 based on grading plans by Sikand Engineering.

In addition to our site evaluation, included herein are our geotechnical recommendations for design and construction within the lots. A list of the applicable reports addressing the lots and tract are presented in the Reference section at the end of this report.

This update is based wholly on information contained in the referenced reports and a recent site visit by a geologist from this office. The site visit was performed to visually evaluate changes in the surface condition of the construction area since the referenced reports (see attached reference list). The lots were previously graded as a super pads with a shallow slope for drainage. They remain suitable for the proposed construction provided recommendations presented herein are incorporated into the design and construction of the site improvements. The buildings may be supported on conventional footings. Minor removal and recompaction will be required to prepare the lots for the proposed construction as addressed later herein.

2. PROPOSED CONSTRUCTION

The lots will be developed for light industrial buildings at the approximate locations shown on Plate 1. Typically the buildings will have office space at the front of the units with warehouse/light manufacturing in the rear with loading docks for truck access. The buildings are anticipated to be of conventional tilt-up

panel construction with concrete interior slabs on grade. Foundation loads could range from 5 to 10 kips per linear foot and may be supported on conventional footings. Interior column loads could be roughly 100 kips or greater depending upon the column spacing. Grading will consist of minor cuts and fills to provide level building pads and parking and drive areas and to remove the upper weathered desiccated soils. Additional grading will be needed to remove daylight lines within building footprints.

3. SCOPE OF SERVICES

The scope of services provided was performed to evaluate the geotechnical site conditions affecting the proposed building design and construction in general accordance with our proposal dated December 31, 2018 (Proposal Number: 6700-28). All phases of the evaluation were conducted by or under the supervision of a State registered geotechnical engineer.

Geotechnical information obtained from our research and prior site observation and testing programs were used in engineering analyses to develop geotechnical recommendations for site development and construction. Recommendations resulting from our completed scope of services are presented herein.

4. SITE LOCATION AND DESCRIPTION

The lots are on either side of Conejo Center Drive and Rancho Conejo Boulevard in the Newbury Park area of Thousand Oaks California. This area is north of the US 101 Freeway near the north end of a gently rolling mesa above Arroyo Conejo.

The lots remain basically as originally rough graded with weathering and desiccation of the upper surface soils. Rough grading left the pads slightly slope towards the street for drainage. Numerous rodent holes are within the pad surfaces. Some minor disturbance of the ground surface has been caused by vehicle traffic.

A brief description of the observed condition of the building areas area as follows:

1A to 1B – Sparse grasses – burned. Ground surface probed to 1.5 feet. Rodent burrows. Slopes from Conejo Center to pads soft to 2 feet. Locally rutted from sheet flow towards storm drain inlet at Conejo Center. On 1B three 4 inch metal pipes with grout vertical – near subdrain.

1C to 1D – Moderate to dense growth of seasoned weeds and grasses. Vegetation to 4 feet high. Ground surface probed to 1 to 1.5 feet. Minor debris piles on pad D. Seepage and surficial slope failure via rodent burrows 2 foot wide and deep.

1E to 1G – Slope to Conejo Center – soft probed to 2 feet, rodents.

2 – Vegetation burned. Sparse scorched weeds and grasses. Scattered soil stockpiles. Ground surface probed to 1 to 1.5 feet. Cut slope (Tcv) performing well.

3 – Abundant stockpiles. Soil, rock, locally heavily rutted. Cannot see Pad. Ground surface probed to 1 to 1.5 feet. Cut slope (Tcv) performing well.

4A to 4B – Sparse to moderate vegetation. Ground surface probed to 1 to 1.5 feet. Locally to heavily rutted from off road vehicles. Erosion to upper pad. Scattered debris. Water lowing on pad from toe of cut slope. Scattered soil piles. Fill slope northwest of 4A Upper terrace drain buried. Slope performing well. Scorched weeds and grasses – moderate. Rodent burrows, locally 6 inch diameter and 18 inches deep. Northeast cut slope (Qt) eroded due to off running.

5A – Recently burned, few pepper and oak trees partially burned, space weeds and grasses. Ground surface probed to one foot. Pad rutted from off road vehicles, locally. Fill slope to south, minor rodents, terraces clear, scattered oak trees, moderate weeds and grasses, and performing well. Natural slopes devoid of vegetation – all burned.

5B – Burned, sparse scorched weeds and grasses – locally heavily rutted from off road vehicles. Ground surface probed to one foot. Natural slopes devoid of vegetation and burned.

Lots 6A and 6B – Sparse seasoned weeds and grasses. Ground surface probed to two feet. Locally rutted from off road vehicles. Fill slope in good condition. Scorched weeds and grasses. Access road rutted.

5. REGIONAL GEOLOGY

The site is within the Conejo Valley basin area of Ventura County. The Conejo Valley basin is a non-structural basin bounded on the south and west by the western Santa Monica Mountains and on the north and east by highlands formed of the Conejo Volcanics. The basin is part of the Transverse Ranges Geomorphic Province, a series of sub parallel east to west trending ridgelines and valleys. This province is tectonically characterized by active compression in a north south direction with associated east to west trending reverse/thrust faulting, folding, and normal faulting.

6. SITE GEOLOGY

Prior to the grading of the lots, the area was a wide mesa with drainages along the northern edge. This mesa was predominately comprise of a thick sequence of Older Alluvium (Terrace Deposits). During grading the higher areas of the mesa were cut and the low lying areas were filled with engineered compacted fill. The limits of the engineered fill are shown on Plate 1. At depth, the Older Alluvium is underlain by bedrock of the Conejo Volcanics.

6.1 BEDROCK

Bedrock directly underlying the Older Alluvium at depth and within the bedrock cut slopes consists of the Conejo Volcanics of Miocene age. The usage of the name Conejo Volcanics follows Taliaferro (1924), Yerkes and Campbell (1979), and Dibblee and Ehrenspeck (1990) and is equivalent to the middle member of the Topanga Formation of Durrell (1954). Conejo Volcanics in the immediate vicinity is represented primarily by very thick units of basalt agglomerate/breccia. Overall, the basaltic agglomerate/breccia lacks distinct internal stratification and appears massive. The Conejo Volcanics is a wide spread rock unit in the Thousand Oaks/Newbury Park area and is generally considered the region's most stable bedrock unit.

Conejo Volcanics in the immediate vicinity is represented primarily by very thick units of basalt and basalt agglomerate/breccia. An orange-tan varnish develops locally on reddish brown weathering basalt. Fresh breaks show the basalt to range in color from dark grayish black to greenish black. The basalt is rarely vesicular or amygdaloidal. Jointing is irregular and randomly oriented. Discontinuous fracturing of the basalt is common. Northeast trending "bedding" joints are locally well developed that dip at low angle to the northwest (4° to 23°). Deep weathering of the basalt is typical and exposure is limited to steep canyon slopes or road cuts.

Basaltic agglomerate/breccia is relatively resistant to erosion and supports steep slopes and outcrops of bold relief. An orange-tan varnish is also commonly developed on exposed agglomerate outcrops which have an overall grey color. Basaltic clasts are closely packed, generally subrounded to angular and range from granule-size to large blocks. Overall, the basaltic agglomerate/breccia lacks distinct internal stratification and appears massive. The contact between the basalt and basalt agglomerate/breccia unit is poorly exposed, but the outcrop pattern suggests that these units dip at moderate angle to the north. Northeast trending, high angle, porphyritic basalt dikes are relatively common.

6.2 OLDER ALLUVIUM

Covering a large area of the mesa is a thick sequence (locally over 100+ feet thick) of sediments referred to as Older Alluvium (referenced in previous reports as Terrace Deposits). Overall, this sequence is graded (i.e., upward fining) and sub-horizontally stratified. Silty clay, clayey sand, fine to coarse sand,

and gravelly sand are characteristic of these deposits. Clasts range from subrounded to subangular, are gravel to cobble-size and consist of various volcanic types. Coarser facies range from grayish to orangish brown and tan, while light gray and greenish grey are typical of the finer sediments. The sediments (soils) are generally in a dense to hard condition (from a geotechnical engineering standpoint).

Caliche (calcium carbonate) is common in the finer grained sediments of the Older Alluvium. Calcareous occurrence is variable ranging from large indurated blocks to small nodules and from punky irregular masses to faint "veinlets." Calcareous crusts are common on clasts.

Based on off-site exposures and prior subsurface investigation for adjacent projects, the Older Alluvium/bedrock contact is relatively sharp and gently undulates under the "mesa". Vertebrate fossils have been recovered from Older Alluvium near the site. Preliminary analysis of the faunal remains and the geologic context and unconsolidated nature (geologically) of this unit suggest it is of Pleistocene age.

6.3 ENGINEERED FILL SOILS

The lots were graded in phases, with completion in 2000, using cuts and fills with surface soil removal and/or recompaction for which the approximate limits of the fill is shown on Plate 1. The maximum 50± feet deep engineered fill soils were substantially placed as recommended from a geotechnical standpoint based on our compaction tests and observations. Fill compaction within the upper 25 feet of grade was to a minimum of 93% relative compaction. Fills below 25 feet were compacted to at least 95% relative compaction. Fills within 45 feet horizontal of all slope faces were compacted to at least 90% relative compaction with a minimum average compaction of 93%. Relative compaction is the ratio of the in-place dry soil density to the maximum dry soil density as determined in general conformance with ASTM test method D 1557.

Fills consist predominately of sandy silty clay and clayey silt and sand. Prior to placing the compacted fill, native overburden was removed to either bedrock or Older Alluvial soils having a minimum relative compaction of 90 percent. Removal of native soils within areas to receive engineered fill, where applicable, extended approximately 2 to 3 feet below existing grades. These removals were in addition to the removal of any encountered non-engineered fill. The upper 12 inches of exposed soil were processed after completion of the removals and recompacted.

6.4 SUBDRAINS

Eight and ten inch diameter subdrains were installed in the main drainage at the approximate locations shown on Plate 1 that received fills exceeding 10 feet in thickness. The drains were constructed in general accordance with recommendations provided by Gorian and Associates, Inc. as warranted by field conditions.

6.5 ROCK DISPOSAL

Oversized rock disposal areas were constructed at the base of the deeper canyon fills. Rock from various bedrock cuts was placed per the rock disposal detail contained in the referenced geotechnical reports. Observations were conducted during rock fill operations to determine that fill placement was substantially per the placement requirements and that no observable voids were present.

6.6 CUT SLOPES

Cut slopes were designed at a 1½(horizontal):1(vertical) slope ratio up to a maximum height of 40 feet. The cut slopes expose Conejo Volcanics, Quaternary terrace deposits, and/or colluvium/topsoil.

The Conejo Volcanics consist chiefly of intercalated basalt and basaltic flow breccia. Bedding is rarely defined, but where present dips at moderate angle (~30°) to the northeast. These rocks are cut by a series of high angle porphyritic basaltic dikes that trend to the northeast. In addition, hydrothermal alternation appears to be present in several zones and along some fractures. A prominent pattern of inter-

secting high angle northeast and northwest trending fractures and joints is present. The volcanic rocks are typically very hard and represent one of the most stable rock units in the Thousand Oaks area.

Overlying the volcanic rocks is a mantle of older alluvial deposits (referred here as terrace deposits) that consist of approximately horizontally interbedded clay, silt, sand and sand with gravel. These beds are commonly tabular and laterally extensive. As discussed in a previous grading report for the adjacent Parcel Map L.D. 644 (Gorian, 1992b), these deposits are non-marine and of Pleistocene age. In addition, these sediments appear to be, at least in part, temporally correlative with the Saugus Formation (Sunshine Ranch Member).

Topsoil/colluvium is locally exposed along the top of some cut slopes adjacent to the natural areas. The topsoil/colluvium typically consists of very dark grayish brown to black expansive silty clay.

No adverse geologic conditions were observed for the on-site cut slopes and overall geologic structure is considered favorable for the cut slopes.

6.7 FILL AND FILL-OVER-CUT SLOPES

Fill and fill-over-cut slopes were constructed at 2 and 1½(horizontal):1(vertical) gradients. A minimum 15-foot wide keyway was cut into firm material at the toe of each fill slope. Benching into firm native soil or bedrock was performed where necessary as fill placement progressed. The maximum 65 feet high fill slope faces were overfilled and trimmed back or compacted during grading and subsequently gridrolled or trackwalked on the surface.

6.8 GROUNDWATER

Perched water is present locally in the Older Alluvium and at the Older Alluvium-bedrock contact as encountered during previous subsurface explorations and grading adjacent to the site by this office. On-site exploration by others (McLaren 1988) encountered groundwater of depths ranging from 12 to greater than 88 feet below existing grade. In the *Seismic Hazard Zone Report of the Newbury Park 7.5 Minute Quadrangle, Ventura County, California* (CDMG, 2002, rev. 1-13-06) it appears the historic high groundwater could be 10 feet or more in depth.

Groundwater is not anticipated to be encountered during the proposed site development. However, groundwater levels can fluctuate depending upon the season and rainfall, such as in a perched condition and can vary based on seasonal rains and landscape watering. In addition, seepage can occur from fractures within the Conejo Volcanics.

7. GENERAL FAULTING AND SEISMICITY

The Conejo Valley/Santa Monica Mountains area is in a seismically active region prone to occasional damaging earthquakes. The destructive power of earthquakes can be grouped into fault-rupture, ground shaking (strong motion), and secondary effects of ground shaking such as tsunami, liquefaction, settlement, landslides, etc. The hazard of fault-rupture is generally thought to be associated with a relatively narrow zone along well-defined pre-existing active or potentially active faults. No doubt there are and will be exceptions to this, because it is not possible to predict the precise location of a new fault where none existed before (CDMG, 1975).

No active faults are known to cross the site nor is it currently within an Alquist-Priolo Earthquake Fault Zone as defined by the State (CGS, 2018). However, the potential for on-site ground rupture due to faulting is considered remote during the life expectancy of the project. The closest fault to the site is the Simi Santa Rosa Fault.

The property will be subjected to ground motion from occasional earthquakes in the region. Significant earthquakes have occurred within a 40-mile radius of the site within the last 45 years. The 1994

Northridge earthquake produced strong ground motion at the site and a peak horizontal acceleration of approximately 0.25 (g) to 0.3 (g) for the soil / rock site (Chang, et al., 1994). Significant earthquakes will likely occur in this area within the life expectancy of the proposed project and the site will experience strong ground shaking from these events.

Secondary effects of strong ground motion include tsunami, seiche, liquefaction, settlement, landslides, etc. Tsunami (seismic sea wave) and seiche (standing wave) are not hazards inherent to the site due to its distant proximity to the ocean or any large bodies of water. Earthquake induced landslides, liquefaction, and seismic settlement affecting the proposed site development are discussed below.

8. LIQUEFACTION AND SEISMICALLY INDUCED LANDSLIDE HAZARD

The proposed development is not within an area shown to have a potential for liquefaction or landsliding on the State's Seismic Hazard Zones Map (CDMG, 2002). The alluvium and engineered fill underlying the site are not considered susceptible to liquefaction or seismic induced settlement. Geomorphic features typical of significant landslides were not identified on or directly off-site the site.

Areas prone to seismically induced landslides are slopes with steep gradients covered with weakly indurated bedrock, loose weak soils, or debris from previous landslides. These soil conditions combined with strong ground shaking caused by an earthquake can cause the cohesive strength of soils to weaken and move down slope under the force of gravity.

9. CONCLUSIONS AND RECOMMENDATIONS

9.1 GENERAL

The lots were graded as a super pads as addressed in the referenced report dated September 1, 2000. The grading resulted in the pads being in either cut or fill. The engineered compacted fill remains suitable for the support of the proposed construction. However, cut/fill daylight lines do exist at the approximate locations shown on Plate 1 that will require undercutting of limited areas of the building areas as addressed herein. In addition, the upper surface soils are weathered and will need surface removal and recompaction prior to building construction. No adverse geological conditions were encountered that would preclude the project development. The lots may be developed as previously described earlier in this report provided recommendations presented herein are followed and incorporated into the project design and construction.

9.2 GEOTECHNICAL SEISMIC DESIGN

As previously discussed, active faults identified by the State are not onsite nor is the site within an Alquist-Priolo Earthquake Fault Zone. Nevertheless, the site is within a seismically active region prone to occasional damaging earthquakes.

Structures within the site may be designed using a simplified code based approach and ground motion procedures for seismic design using the procedures in the current California Building Code (CBC). Seismic ground motion values based on ASCE/SEI 7-10 are initially determined on site class B (rock) conditions. The values are adjusted to obtain the maximum considered earthquake (MCE) spectral acceleration values for the site based on its site class of C. The seismic design parameters for the site's coordinates (latitude 34.2037 N and longitude 118.9331 W) were obtained from the USGS web based spectral acceleration response maps and calculator: (http://earthquake.usgs.gov/hazards/designmaps/) and are presented on the following page.

The purpose of the building code earthquake provisions is primarily to safeguard against major structural failures and loss of life, not to limit damage nor maintain function. Therefore, values provided in the building code should be considered minimum design values and should be used with the understanding

site acceleration could be higher than addressed by code based parameters. Cracking of walls and possible structural damage should be anticipated in a significant seismic event.

SEISMIC PARAMETER	VALUE PER CBC
Short Period Mapped Acceleration (S_s)	1.69g
Long Period Mapped Acceleration (S_1)	0.62g
Site Class Definition	C
Site Coefficient (F_a)	1.0
Site Coefficient (F_v)	1.3
$S_{MS} = F_aS_s$	1.69g
$S_{M1} = F_vS_1$	0.81g
$S_{DS} = 2/3S_{MS}$	1.13g
$S_{D1} = 2/3S_{M1}$	0.54g
PGA_m	0.65g

9.3 SITE PREPARATION

9.3.1 General

The lots were originally graded as supper pads with slopes along the property lines. The upper surface of the pads have become weathered or disturbed. Therefore, reconditioning of the upper soil zone will be necessary prior to construction of the proposed buildings. In addition, areas of undercutting will be necessary where a daylight line exists within the building areas. All aspects of grading including site preparation, grading, and fill placement should be performed per the City of Thousand Oaks standards.

9.3.2 Existing Utilities

Existing utilities are present in the street with laterals to the lot. Therefore, protection of existing utilities to remain will be necessary during remedial grading and care should be taken to avoid surcharging them with proposed construction or building loads.

9.3.3 Site Clearing

The site should be cleared of unnecessary improvements, stockpiles, vegetation, and debris prior to beginning remedial removal operations. Material generated during site clearing should be disposed of off-site. The removal should include soils disturbed during the removal process. Roots over 1/2 inch diameter should be removed when encountered within the areas of soil removal. Brush should be cut from the slopes and not pulled resulting in disturbance of the slope surface.

9.3.4 Soil Removals

The upper soils have become weathered or disturbed. Therefore, within all areas of construction or grading soil removals should extend uniformly to firm in-place previously placed engineered fill or native soils. Anticipated removals are 18 inches from the present grade. After the removals are completed, the exposed soil should be observed by this office to evaluate if additional removals are needed. No fill soils should be placed until the geotechnical observation of removal areas is complete.

9.3.5 Monitoring Wells

Soils disturbed due to removal of monitoring wells (if encountered) should be removed to firm in place soils. The bottom of the removal areas should be observed by this office prior to processing and fill placement.

9.3.6 Existing Slopes

The existing slopes have performed relatively well. However, if loose soils or slough is present on the slope faces the materials should be removed and the surface compacted prior to planting with appropriate landscaping. In addition, where a slope is eroded significantly or broken down due to past activities it should be rebuilt.

9.3.7 Building Pad Undercutting

The building pad should be undercut where a daylight line or shallow fills are be present within the building pad and 5 feet beyond. Daylight lines or shallow fills within the building areas should be removed so that there is a minimum of 5.5 feet of compacted fill below the pad grade or three feet of compacted fill below the deepest foundation, whichever is the greater. The removals should extend to a minimum of 5 feet past the building line or a distance equal to the removal depth, whichever is the greater. Where the existing fill within the building pad meets the above undercut requirement, the removal may be stopped and only the surface removal is needed.

9.3.8 In-Place Soil Processing

Prior to placing fill, the exposed soil surface should be processed. Processing consists of scarifying the exposed surface to a depth of 6 inches, conditioning the scarified material to slightly above the optimum moisture content, and compacting the scarified material.

9.3.9 Fill Placement and Compaction

Excavated on-site soils and fill may be reused provided the soils are cleaned of major vegetation, trash, and debris prior to placement as fill. Fill soils should be placed in 6 to 8 inch lifts, brought to slightly above optimum moisture content, and compacted to a minimum of 90% relative compaction. Relative compaction is the ratio of the in-place (in situ) dry soil density to the maximum dry soil density as determined in general accordance with ASTM test method D 1557.

9.3.10 Utility Trenches

Utility trenches, including those associated with site drainage piping systems, should be compacted to at least 90% relative compaction.

9.3.11 Soil Shrinkage

Shrinkage is the volume loss of soils from cut to fill and from removal areas and will vary depending upon placement and compaction of the soils. Bulking is the volume expansion of the earth materials from cut to fill. The amount of volume change will depend on the material in situ density, the final compacted density achieved, losses due to spillage, etc. Subsidence is considered to account for densification on the upper 6 inches of surface soils over the site and stripping of vegetation from the site.

Estimated shrinkage and subsidence values are estimated to be 2 to 5 percent and 2 to 3 inches, respectively. Below the weathered zone, shrinkage should be negligible, since this was previously compacted fill or cut.

Estimated factors based on an assumption the fills will be placed and compacted as recommended herein. The values are provided for gross estimating purposes only. If quantities are critical, test strips should be performed and monitored at the site using actual grading equipment.

9.3.12 Maximum Density and Optimum Moisture

Below are the maximum density and optimum moisture of the onsite soils from the original grading of the lots.

SOIL TYPE	VISUAL SOIL CLASSIFICATION	Maximum Dry Density - pcf	Optimum Moisture Content - %
I	Dark brown sandy silty clay	103.0	20.0
II	Yellow brown clayey silt and sand with gravel	111.0	17.0
III	Light brown clayey silt and sand	117.0	13.0
IV	Light brown clayey silt and sand	111.0	16.0
V	Grey brown sandy silty clay	104.0	20.5
VI	Grey brown sandy silty clay	107.0	18.0
VII	Dark grey brown sandy silty clay	108.5	17.5
VIII	Light brown clayey silt and sand with rock fragments	119.0	13.5
IX	Dark brown silty clay	108.5	18.0
X	Dark brown silty clay with rock fragments	109.0	17.5
XI	Tan to white sandy clay with rock fragments	98.5	25.5
XII	Tan silty fine sand with rock fragments	114.0	17.0
XIII	Red brown sandy clay	118.0	14.0
XIV	Tan to medium brown sandy clay	114.0	15.5
XV	Grey brown sandy silt and clay	109.5	18.0
XVI	Tan clayey fine sand	117.0	14.5
XVII	Tan silty sand	116.5	15.0
XVIII	Light brown clayey sand	122.5	11.5
XIX	Aggregate base	123.0	10.5
XX	Aggregate base	125.0	10.0
XXI	Yellow brown silty sand and gravel	122.0	14.0

9.3.13 Excavations

During construction, the contractor is responsible for the excavation and maintenance of safe and stable slope angles considering the subsurface conditions and the methods of operations. Temporary excavations should be made per the applicable requirements of current excavation regulations. Surcharge loads should be setback from the top of the temporary excavations a minimum horizontal distance of 10 feet. Appropriate barricades should be placed at the top of all temporary excavations that are approached by pedestrians or vehicle traffic. All excavation backfill should be properly placed and compacted.

9.4 SLOPES

The lots were originally graded with cut and fill slopes along the perimeter of the lots. These slope have performed relatively well however have become weathered and in areas the surface has been perforated by rodent burrows. Excessive erosion on the existing slopes should be repaired. Additional recommendations for repair of erosion can be provided by this office after observation of the eroded area. New slopes should be constructed at a constructed at a 2(horizontal):1(vertical) gradient or flatter.

9.4.1 Cut Slopes

Cut slopes are expected to expose competent alluvial or previously placed engineered compacted fills. No significant adverse geologic conditions are anticipated. Erosion mitigation may be required where friable sands are encountered on the face of a cut slope within the alluvium. Vegetation and/or matting designed to reduce erosion, or other erosion mitigation measures should be used within these areas.

9.4.2 Fill Slopes

Fill slopes should be keyed and benched into firm competent native materials per the City of Thousand Oaks Building Code. All keyways should be a minimum of 15 feet wide and cut to a minimum depth of 2 feet at the toe into firm competent in place materials (or as directed by this firm). Keyways should be tilt-

ed into the slope and should be at least 3 feet deep at the heel (measured from below the slope toe elevation). A representative of this office should observe the keyways prior to fill placement.

Select grading will be required when placing fill materials within 15 feet of slope faces. Fill soils near slope faces should have enough clay to develop at least 250 pounds per square foot of cohesive shear strength for a 2(horizontal):1(vertical) slope. This is a minimum cohesion based on standard practice to provide for surficial slope stability. However, highly expansive clayey soils should not be placed near a slope face.

Where possible the outer slope faces should be overfilled and trimmed back to provide for firm, well-compacted surfaces. The slope faces should be tested and reworked as necessary to achieve the required compaction.

9.4.3 Slope Maintenance

Slopes require maintenance or protection to reduce the risk of erosion and degradation with time due to natural or man-made conditions. Future performance of slopes will depend on control of rodents and maintenance of drainage structures and slope vegetation as discussed below. Drainage should be provided away from the top or toe of the slopes.

Slope planting should consist of dense, deep rooting, drought resistant groundcover and shrubs or trees. A reliable irrigation system should be installed, adjusted so over-watering does not occur, and periodically checked for leakage. Over-watering of slopes can cause expansion, erosion, and surficial failures, and should be avoided. Care should be taken to maintain a uniform, near optimum moisture content below the slope surface, and to avoid over drying, or excess irrigation. These conditions can reduce the potential for soil softening and strength loss, which could lead to slumping of the slope face. All drainage structures should be kept in good condition and cleaned the entire length to the outlet in an approved drainage course. Burrowing animals (e.g., ground squirrels) can destroy slopes; therefore, where present, immediate measures should be taken to eliminate them.

9.5 SOIL EXPANSIVENESS

Soils within the lot should be considered to be in the 91 to 130 expansion range. Final expansion tests should be performed at the conclusion of grading within each building pad.

Expansive soils contain clay particles that change in volume (shrink or swell) due to a change in the soil moisture content. The amount of volume change depends upon the soil swell potential (amount of expansive clay in the soil), availability of water to the soil, and the soil confining pressure. Swelling occurs when soils containing clay become wet due to excessive water from poor surface drainage, over-irrigation of lawns and planters, and sprinkler or plumbing leaks. Swelling clay soils can cause distress to residential structures, walks, drains, and patio slabs.

Swelling clay soils can cause distress to construction (generally as uplift). Construction on expansive soil has an inherent risk that should be acknowledged and understood by the property owner. The geotechnical recommendations presented herein are intended to reduce the potential for expansive soil action. However, these recommendations are not intended, nor designed to provide complete and full mitigation of expansive soil conditions. If requested, additional recommendations can be provided to further reduce the risk of expansive soil movement. Soil movement can be roughly 1± inches depending upon the expansion potential and surcharge loading. The following should be maintained within the lots.

a) Positive drainage should be consistently provided and maintained away from all structures. Drainage should not be changed creating an adverse drainage condition. Ponding or trapping of water in localized areas adjacent foundations can cause differential moisture levels in subsurface soils.

b) Landscape watering should be held to a minimum and irrigation systems should be maintained. Sprinkler or plumbing leaks should be immediately repaired so the subgrade soils underlying or adjacent the structures do not become saturated. Trees should be spaced so that roots will not extend under foundations or slabs.

9.6 FOUNDATIONS

9.6.1 General

The buildings described herein may be supported on conventional shallow foundations. Foundation systems and slabs-on-grade should be designed by a structural engineer in accordance with the current applicable building codes. Presented below are the minimum requirements for foundation design and construction from a geotechnical standpoint. The recommendations are based on highly expansive soils (expansion index range of 91-130). The actual expansion potential of the soils exposed at the surface should be determined at the conclusion of grading.

9.6.2 Conventional Foundations

Footings should have a minimum width of 12 and 24 inches for continuous and isolated footings, respectively. The embedment should be a minimum of 30 inches for interior and exterior footings. These dimensions apply for either continuous footings and/or individual spread footings, and satisfy the minimum requirements of the City of Thousand Oaks Building Code. The lowest adjacent grade is the lowest soil grade adjacent the footings, interior or exterior. However, the embedment of interior footings may be measured from the top of the interior concrete slab on-grade. Steel reinforcement should be per the structural engineer's recommendations. However, minimum reinforcement for continuous footings should consist of two number five bars in the top and bottom for 91-130 expansion range (minimum total of four bars). The project structural engineer may require additional reinforcement to meet the structural design requirements. Slab reinforcement should be extended into the footings to within 3 inches of the bottom.

Footings may be designed using an allowable bearing pressure of 3000 pounds per square foot (psf). This may be increased by 400 psf for each additional foot of width and 750 psf for each additional foot of depth (below inside floor level) to a maximum of 6000 psf. These pressures apply for dead plus live loads and may be increased by one-third when considering wind or seismic loads. Footings adjacent a retaining wall (such as loading dock walls) should be stepped down below a 2(horizontal):1(vertical) plane projecting upward from the bottom of the retaining wall footings.

In addition, footings should be deepened below infrastructure / utilities if a conflict between a footing and utility exists. One known condition is the storm drain along the southern edge of Building 6B. Where a post-construction detention / water quality basin is constructed adjacent a building the drainage should be directed away from the building and the buildings footings should be deepened so that the embedment starts below the bottom of any basin.

For support of lightly loaded structures such as site walls outside of the buildings, footings may be designed to impose an allowable bearing pressure of 1,500 pounds per square foot (psf). Footings should have a minimum width of one foot. Footing embedment measured below the lowest adjacent interior or exterior grade should be 30 inches. Footing reinforcement should be a minimum of two number 5 bars in the top and bottom (total of 4 bars).

Lateral forces on foundations may be resisted by passive earth pressure and base friction. Footings bearing against engineered compacted fill or competent native soils may be designed using a lateral passive earth pressure equal to that exerted by an equivalent fluid weighing 350 pounds per cubic foot (pcf). Base friction may be computed at 0.4 times the normal load. Base friction and passive earth pressure may be combined without reduction.

9.6.3 Footings on or Adjacent Slopes

Footings on or near the top or toe of slopes should be deepened or setback to provide footing support and to reduce the impact of changes that can occur on slope faces. Deepened footings or setbacks should be used for all buildings and accessory structures (including fences) sensitive to differential movement. The setbacks presented in the current Uniform Building Code Chapter 18 should be used as a minimum.

9.6.4 Foundation Settlement

Settlement of footings should be evaluated once building footing locations and structural loads are known. However, footing settlement for static loading is anticipated on the order of 1 inch or less, with a maximum differential settlement of 1/2± inch over a span of approximately 30 feet or between adjacent individual footings. This is provided building construction is started directly after footing excavation, footings are cast soon after the footing excavation, and construction is completed in a timely manner. Settlements due to static loading are expected to occur rapidly as the loads are applied.

Minor wall cracking could occur within the structure associated with expansion and contraction of the structural wood members due to thermal or moisture changes. In addition, wall or slab cracking may be associated with settlement or expansive soil movement. All structures settle during construction and some minor settlement of the structures can occur after construction during the life of the project. Additional settlement/soil movement could occur if the soils become saturated due to excessive water infiltration generally caused by excessive irrigation, poor drainage, etc.

9.6.5 Footing Excavations

Footings and edges should be cut square and level and cleaned of slough and soils silted into the excavations during the premoistening operations. Soil excavated from the footing trenches should not be spread over areas of construction unless placed as a properly compacted fill. This office should observe the footing excavations prior to placing reinforcing steel. The footings should be cast as soon as possible to avoid deep desiccation of the footing subsoils.

9.6.6 Footing Subgrade Moisture

Subgrade soils for footings loaded to greater than 3000 pounds per square foot (psf) should be kept near the optimum soil moisture content until the footings are poured and should not be saturated due to the high soil bearing pressures provided. Saturated soils should be removed from the footing excavation prior to casting the footings.

Where the footings are loaded to 3000 pounds per square foot (psf) or less, the footing subgrade soils should be moistened to a minimum of 3% over the optimum moisture content to a minimum depth of 18 inches. The above moisture should be obtained and maintained at least a suggested 2 days prior to casting the concrete. Subgrade soil premoistening should be observed by this office prior to placing concrete. Soils silted into the footing excavations during the premoistening operations should be removed prior to casting the concrete.

9.7 SLABS-ON-GRADE

9.7.1 Site Preparation

Concrete slabs on-grade may be supported on firm in-place soils. Subgrade soils should be recompacted prior to placing the sand subbase, if the soils were disturbed during footing or utility construction.

9.7.2 Design Data

Concrete slabs on-grade should be at least five inches thick and underlain by a minimum of six inches of sand or sand-rock base. Slab reinforcement should consist of a minimum of number 3 bars placed on 18 inch centers. The reinforcement should be placed and kept at slab mid-depth. The slab reinforcement

should be extended into the footings / grade beams to within 3 inches of the footing / grade beam bottom. Concrete slabs on grade should be provided with tooled crack control joints at 10-15 foot centers or as specified by the structural engineer.

The above slab designs are for a lightly loaded slab only. Heavily loaded slabs should be designed by the project structural engineer for a modulus of subgrade reaction of 120 pcf.

9.7.3 Premoistening

Soils under lightly loaded slabs on-grade should be premoistened to 3% over the optimum moisture content for a depth of 18 inches. The subgrade soils should be observed for moisture by a representative of this office prior to concrete placement.

9.7.4 Moisture Vapor Retarder Layer

A properly installed moisture retarder is recommended for at grade slabs to minimize vapor transmission through interior slabs on-grade within commercial spaces. This applies to areas that will be covered with moisture sensitive floor coverings or where moisture through the floor would be problematic.

Ten-mil plastic sheeting is commonly used as a moisture retarder. However, to provide improved resistance to moisture vapor transmission a retarder layer specifically manufactured per ASTM E 1745-97 *Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs* should be considered below the interior concrete slabs on-grade. The class of moisture vapor retarder layer should be strong enough to withstand abrasion during construction. The retarder should be installed per ASTM E1643-98(2005) *Standard Practice for Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs*.

Perforations through the moisture vapor retarder such as at pipes, conduits, columns, grade beams, and wall footing penetrations should be sealed per the manufacture's specifications or ASTM E1643-98(2005) *Standard Practice for Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs*. Proper construction practices should be followed during construction of slabs on-grade. Repair and seal tears or punctures in the moisture barrier that may result from the construction process prior to concrete placement.

Minimizing shrinkage cracks in the slab on-grade can further minimize moisture vapor emissions. A properly cured slab utilizing low-slump concrete will reduce the risk of shrinkage cracks in the slab as described herein.

The concrete contractor should be made aware of the moisture vapor retarder and required to protect the layer. Perforations made in the layer should be properly sealed prior to concrete placement. In addition, if the concrete is placed directly on top of the layer the concrete contractor should make the necessary changes in the concrete placement and curing. Placing the concrete directly on top of the moisture vapor retarder layer allows the layer to be observed for damage directly prior to concrete placement.

The slabs should be tested for moisture content prior to the selection of the flooring and adhesives. Moisture in the slabs should not exceed the flooring manufacture's specifications. The concrete surface should be sealed per the manufacture's specifications if the moisture readings are excessive. It may be necessary to select floor coverings that are applicable to high moisture conditions.

Where cuts are made into the slab for future construction, the moisture vapor retarder layer should be repaired per the manufacture's recommendation. Information regarding the need to repair the moisture vapor retarder layer and information on the selection of acceptable floor coverings should be conveyed to the building tenants.

9.7.5 Concrete

Concrete shrinks as it cures resulting in shrinkage tension within the concrete mass. Development of tension results in cracks within the concrete, since, concrete is weak in tension. Therefore, concrete should be placed using procedures to minimize concrete cracking. Concrete shrinkage cracks can become excessive if water is added to the concrete above the allowable limit and proper finishing and curing practices are not followed during construction. Concrete mixing, placement, finishing, and curing should be performed per appropriate methods such as provided by the American Concrete Institute). The concrete slump during concrete placement should not exceed the design slump specified by the structural engineer or as a suggested value of 5 inches. Concrete slabs on grade should be provided with tooled crack control joints at 10-15 foot centers or as specified by the structural engineer.

9.8 SOIL CORROSION

Previously soil samples from the general area were submitted to a subcontracted corrosion engineer for corrosion testing. Tested soils are considered negligible for sulfate exposure. However, the testing indicated the soils are considered corrosive to unprotected ferrous metals and corrosion engineer suggests concrete used for construction be designed with Type II cement. Additional corrosion tests can be performed during grading upon request.

9.9 RETAINING WALLS

9.9.1 General

Retaining walls may be designed using the foundation recommendations previously provided herein.

9.9.2 Lateral Earth Pressures

Retaining walls that are allowed to yield at the top may be designed for an active pressure of 45 and 65 pcf for a level backfill and 2(horizontal):1(vertical) condition, respectively considering expansive backfill conditions. Aerial surcharge may be treated as additional height of backfill where one foot of additional height is assumed for each 125 psf of aerial surcharge. Lateral force from an adjacent foundation surcharge loading should be determined using acceptable methods. A pressure distribution of the surcharge to a retaining wall can be provided where surcharge conditions are identified from adjacent foundations.

9.9.3 Lateral Seismic Pressure

Lateral seismic soil pressure should be applied in the design of retaining walls when the wall height exceeds 6 feet. Seismic pressure may be taken as equal to $3/8*K_h*\gamma*H^2$ where γ = 120 pcf, $K_h = S_{ds}/2.5$, and H = height of retained soil (ft.).

9.9.4 Waterproofing

Retaining walls should be waterproofed prior to installing the drainage system and wall backfill.

9.9.5 Drainage

A drainage system should be constructed behind the retaining walls to mitigate possible buildup of hydrostatic pressures. The drainage system may consist of either a drainage composite or granular drain consisting of a minimum 12 inch wide zone of 3/4 ± inch rock separated from the native materials by a single layer of filter cloth. The drainage system should extend to within 2 feet of finish grade with the upper 2 feet backfilled with native material. The drainage system should be hydraulically connected to a perimeter pipe drain consisting of a minimum 4 inch diameter perforated PVC (Schedule 40) pipe or equivalent. The pipe may be laid horizontally on the footing with the pipe invert at least 6 inches below any adjacent top of slab-on-grade. The outlet pipe from the perimeter drain should be a non-perforated 4 inch diameter PVC (Schedule 40) pipe that is sloped to and connected to a storm drain system or sump. An as-built plan should be prepared detailing the location of the wall drainage system.

9.9.6 Backfilling

Retaining walls should be backfilled when possible with soils having a soil expansion of less than 50, which may require select grading or import. The backfill should be placed in 6-inch lifts at slightly over optimum moisture content and compacted to at least 90 percent relative compaction. If the backcut is flatter than ½(h):1(v), the backfill should be benched into the backcut slope. Light equipment should be used immediately behind the walls to prevent possible over-stressing. Bracing needed to resist wall movement should be in-place prior to placing the backfill.

9.10 EXTERIOR SLABS AND WALKWAYS (Hardscape)

Lightly loaded hardscape exterior concrete slabs-on-grade (non-auto traffic) and walkways should be a minimum of 4 inches thick and underlain by a minimum of 4 inches of sand. Exterior slabs should be reinforced with minimum No. 3 bars on 24 inch centers in each direction. The reinforcement should be placed at mid-depth of the slab. Sidewalks may be constructed of non-reinforced concrete provided the sidewalks are cut into square panels (i.e., 4 foot wide walks should be cut into 4 foot by 4 foot squares). A deepened edge should be considered on all exterior slabs (non-auto traffic) to prevent water from entering the sand base. The edge should extend a minimum of 8 inches into the subgrade soils.

Slabs-on-grade should have tooled crack control joints at intervals of 10 to 15 feet or per the structural engineer's recommendation. Recommendations for concrete placement were previously provided here-in.

Concrete slab subgrade soils should be properly placed and compacted for support of concrete flatwork. Prior to placing concrete, subgrade soils should be premoistened to a minimum of 3% over the optimum moisture content for a minimum depth of 18 inches. Proper premoistening can reduce the risk of slab subgrade expansion, if used in addition to other preventive measures. Where critical, subgrade soil premoistening should be observed by the project geotechnical consultant prior to placing concrete.

Exterior slabs can experience differential uplift caused by non-uniform expansion of subgrade soils due to varied migration of water beneath slabs. Differential uplift can occur at the corner, edge, or center of slab. Therefore, all planter areas should be graded in a manner that enables excess water to drain onto, rather than beneath, adjacent concrete flatwork, or to drain positively away.

9.11 PRELIMINARY PAVEMENT DESIGN

The structural sections shown on the following page are based on an R value of 18. Repair of existing pavement should meet the existing section. The final structural section designs may be confirmed at the conclusion of grading based on actual R-Value tests performed on the upper subgrade soils.

Portland cement concrete pavement within entrance drive and other trafficked areas may consist of 6 inches of concrete underlain by a minimum of 6 inches of Class II aggregate base. In areas of high abra-sion loads due to startups and stops, tight truck turns, and high wheel loads a thicker sections should be considered consisting of 8 inches of concrete underlain by a minimum of 6 inches of Class II aggregate base. Concrete reinforcement should consist of #3 bars at 18 inches on center each way. The concrete sections are based on a minimum 28 day compressive strength of 3500 pounds per square inch (psi) and a modulus of rupture of 500 psi.

The upper 6 inches of subgrade, and base material, should be compacted to at least 95 percent of the maximum dry density, just prior to placing asphalt. Planter areas should be graded so that water drains onto, rather than beneath, the adjacent AC pavement and curbs.

Asphaltic Concrete Pavement Designs

Facility	"R" Value	Traffic Index	Recommended Structural Section
Parking stalls	18	4.0	3 inches of asphaltic concrete on 6 inches of aggregate base
Drive areas (vehicle traffic)	18	5.0	3 inches of asphaltic concrete on 8 inches of aggregate base
Drive areas (medium truck access)	18	6.0	3 inches of asphaltic concrete on 11 inches of aggregate base or 4 inches of asphaltic concrete on 9 inches of aggregate base

9.12 SITE DRAINAGE

Positive drainage should be provided away from structures during and after construction per the grading plan or applicable building codes. Water should not be allowed to gather or pond against foundations. In addition, planters near a structure should be constructed so that irrigation water will not saturate footing and slab subgrade soils.

Where a post-construction detention / water quality basin is constructed adjacent a building, the drainage should be directed away from the building and the buildings footings should be deepened so that the embedment starts below the bottom of any basin.

9.13 RECOMMENDED GEOTECHNICAL SERVICES FOR FINAL DESIGN

Final plans and specifications should be reviewed by this office to evaluate if the general intent of the geotechnical recommendations has been applied in the design.

10. CLOSURE

This report was prepared under the direction of State registered geotechnical engineer for Thousand Oaks Master, LLC and their design consultants solely for design and construction of the project as described herein. No warranty, express or implied, is made as to conclusions and professional advice included in this report. Gorian and Associates, Inc. disclaim any and all responsibility and liability for problems that may occur if the recommendations presented in this report are not followed.

This report may not contain sufficient information for other uses or the purposes of other parties. Recommendations should not be extrapolated to other areas or used for other facilities without consulting Gorian and Associates, Inc. Services of this office should not be construed to relieve the owner or contractors of their responsibilities or liabilities.

The scope of the services provided by Gorian and Associates, Inc. and its staff, excludes responsibility and/or liability for work conducted by others. Such work includes, but is not limited to, means and methods of work performance, quality control of the work, superintendence, sequencing of construction and safety in, on, or about the jobsite.

The recommendations are based on interpretations of the subsurface conditions concluded from information gained from prior testing and observation and a surficial site reconnaissance. The interpretations may differ from actual subsurface conditions, which can vary horizontally and vertically across the site. Due to possible subsurface variations, this office should observe all aspects of field construction addressed in this report. Persons using this report for bidding or construction purposes should perform such independent investigations as they deem necessary.

oOo

Please contact our office if you have questions regarding the information or recommendations contained in this report or require additional consultation.

Respectfully,

Gorian and Associates, Inc.

By: Jerome J. Blunck, GE 151
Principal Geotechnical Engineer

To whom it may concern,

Sikand Engineering Associates has reviewed the stormwater calculations prepared by Sikand dated February 2020. We have determined that under the current circumstances, this analysis remains valid.

Sincerely,

SIKAND ENGINEERING ASSOCIATES
(A California corporation)

Doug Farmer, P.E.

INTRODUCTION

The following study has been prepared by Sikand Engineering Associates, to determine the required Stormwater Quality and detention facilities for all buildings of the proposed Conejo Summit Industrial project. The project will consist of 15 industrial buildings with loading docks in the Newbury Park area of Thousand Oaks to be constructed on existing vacant lots. Because of existing adjacent groundwater contamination from neighboring properties, infiltration was not considered in treatment of storm water. Water quality solutions were chosen in order of viability, from natural bioswales to biological contact in proprietary media to catch basin filters.

BUILDING 1A

Detention Calculations

Soil Type ---------- 002

SUMP Volume per City of Thousand Oaks Figure 7 ---------- 950 CF/Acre

Aproject1 consists of subareas 1A-1, 1A-2, & 1A-4 ---------- 2.49 Acre

Vsump1 ---------- 2.49*950=2362 CF

Aproject2 consists of subarea 1A-3 & 1B-4 ---------- 0.53 Acre

Vsump2 ---------- 0.53*950=502 CF

Assume 48" CMP
Cross Sectional Area=12.57 SF

Length of 48" CMP for Detention1 = 2362 CF/12.57 SF = 187' < **190'** provided

Length of 48" CMP for Detention2 = 502 CF /12.57 SF= 40' < **45'** provided

Per storm drain system master plan:

Subarea 910D Q_{10}=1.99 cfs/Ac
Q_{100}=3.30 cfs/Ac

1A-1: Q_{10}=1.99 cfs/Ac * 0.79 Ac = 1.58 cfs Q_{100}=3.30 cfs/Ac * 0.79 Ac = 2.62 cfs

1A-2: Q_{10}=1.99 cfs/Ac * 1.57 Ac = 3.13 cfs Q_{100}=3.30 cfs/Ac * 1.57 Ac = 5.19 cfs

1A-3: Q_{10}=1.99 cfs/Ac * 0.32 Ac = 0.63 cfs Q_{100}=3.30 cfs/Ac * 0.32 Ac = 1.05 cfs

1A-4: Q_{10}=1.99 cfs/Ac * 0.12 Ac = 0.24 cfs Q_{100}=3.30 cfs/Ac * 0.12 Ac = 0.39 cfs

1B-4: Q_{10}=1.99 cfs/Ac * 0.21 Ac = 0.42 cfs Q_{100}=3.30 cfs/Ac * 0.21 Ac = 0.69 cfs

Stormwater Quality Treatment Calculations

Area 1A-1

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.79 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.769

I ---------- 0.2

SQDF=C*I*A ---------- .122 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.79 Ac = 2.18 cfs x10% = ---------- **.218 cfs**

Treatment device used for Area 1A-1: Bioswale

Vegetated Swale Calculations

n=0.2

s=0.009

b=2′

SQDF=.218 cfs

V=.27 fps (per attached flow master calculations in Appendix A)

Using 7 minute residence time

L=60*7*.27=113′ of swale required < **120′** of bioswale provided

Area 1A-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 1.57 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.926

I ---------- 0.2

SQDF=C*I*A ---------- .291 cfs

Or use 10% of $Q_{50} = Q_{100}/1.2$ = (3.30 cfs/Ac)/1.2x1.57 Ac = 4.33 cfs x10% = ---------- **.433 cfs**

Treatment device used for Area 1A-2: OldCastle BioPod Biofilter Underground

BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.433 cfs/ .00401 fps = 108 sq. ft. of infiltration area. Because of the limited feasible landscape area in this tributary area, an underground biofiltration device will be used. Therefore, we will use the 8'x16' BioPod Underground Biofilter, BPU-816 model, which provides 112 sf of area.

Area 1A-3

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.32 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.758

I ---------- 0.2

SQDF=C*I*A ---------- .047 cfs

Or use 10% of $Q_{50} = Q_{100}/1.2$ = (3.30 cfs/Ac)/1.2x0.32 Ac = 0.880 cfs x10% = ---------- **.088 cfs**

Treatment device used for Area 1A-3: OldCastle BioPod Biofilter Planter

Although there is some landscape area for the surface flow, there is not enough space for a natural bioswale. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.088 cfs/ .00401 fps = 22 sq. ft. of infiltration area. Therefore, we will use the 4'x6.5' BioPod Biofilter Planter, BPP-46-SI model, which provides 26 sf of area.

Area 1A-4

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.12 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.818

I ---------- 0.2

SQDF=C*I*A ---------- .019 cfs

Or use 10% of $Q_{50} = Q_{100}/1.2$ = (3.30 cfs/Ac)/1.2x0.12 Ac = 0.330 cfs x10% = ---------- **.033 cfs**

Treatment device used for Area 1A-4: OldCastle Catch Basin Filter

Area 1A-4 does not have sufficient area for a vegetated swale or a BioPod BioFilter. Because the required flow is a small volume, a catch basin filter will be used to treat the storm water (See Appendix C for spec sheet).

Area 1B-4

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.21 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.846

I ---------- 0.2

SQDF=C*I*A ---------- .034 cfs

Or use 10% of $Q_{50} = Q_{100}/1.2$ = (3.30 cfs/Ac)/1.2x0.21 Ac = 0.580 cfs x10% = ---------- **.058 cfs**

Treatment device used for Area 1B-4: OldCastle Catch Basin Filter

Area 1B-4 does not have sufficient area for a vegetated swale or a BioPod BioFilter. Because the required flow is a small volume, a catch basin filter will be used to treat the storm water (See Appendix C for spec sheet).

BUILDING 1B

Detention Calculations

Soil Type ---------- 002

SUMP Volume per City of Thousand Oaks Figure 7 ---------- 950 CF/Acre

Aproject consists of subareas 1B-1 & 1B-2 ---------- 0.65 Acre

Vsump ---------- 0.65*950=613 CF

Assume 48″ CMP
Cross Sectional Area=12.57 SF

Length of 48″ CMP for Detention = 613 CF/12.57 SF = 49′ < 5**5′** provided

Per storm drain system master plan:

Subarea 910D Q_{10}=1.99 cfs/Ac
Q_{100}=3.30 cfs/Ac

1B-1: Q_{10}=1.99 cfs/Ac * 0.53 Ac = 1.05 cfs Q_{100}=3.30 cfs/Ac * 0.53 Ac = 1.74 cfs

1B-2: Q_{10}=1.99 cfs/Ac * 0.12 Ac = 0.23 cfs Q_{100}=3.30 cfs/Ac * 0.12 Ac = 0.39 cfs

Stormwater Quality Treatment Calculations

Area 1B-1

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.53 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.903

I ---------- 0.2

SQDF=C*I*A ---------- .095 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.53 Ac = 1.45 cfs x10% = ---------- **.145 cfs**

Treatment device used for Area 1B-1: OldCastle BioPod Biofilter Underground

Because of the limited feasible landscape area in this tributary area, an underground biofiltration device will be used. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.145 cfs/ .00401 fps = 36 sq. ft. of infiltration area. Therefore, we will use the 4'x13' BioPod Underground Biofilter, BPU-413 model, which provides 44 sf of area.

Area 1B-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.12 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.781

I ---------- 0.2

SQDF=C*I*A ---------- .018 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.12 Ac = 0.32 cfs x10% = ---------- **.032 cfs**

Treatment device used for Area 1B-2: Bioswale

Vegetated Swale Calculations

n=0.2

s=0.018

b=2′

SQDF=.032 cfs

V=.18 fps (per attached flow master calculations in Appendix A)

Using 7 minute residence time

L=60*7*.18=76′ of swale required = 76′ of bioswale provided

BUILDING 1C

Detention Calculations

Soil Type ---------- 002

SUMP Volume per City of Thousand Oaks Figure 7 ---------- 950 CF/Acre

Aproject consists of subareas 1C-1 & 1C-2 ---------- 1.90 Acre

Vsump ---------- 1.90*950=1809 CF

Assume 48″ CMP
Cross Sectional Area=12.57 SF

Length of 48″ CMP for Detention = 1809 CF/12.57 SF = 144′ < **150′** provided

Per storm drain system master plan:

Subarea 910D Q_{10}=1.99 cfs/Ac
Q_{100}=3.30 cfs/Ac

1C-1: Q_{10}=1.99 cfs/Ac * 1.59 Ac = 3.16 cfs Q_{100}=3.30 cfs/Ac * 1.59 Ac = 5.24 cfs

1C-2: Q_{10}=1.99 cfs/Ac * 0.13 Ac = 0.26 cfs Q_{100}=3.30 cfs/Ac * 0.13 Ac = 0.42 cfs

1C-3: Q_{10}=1.99 cfs/Ac * 0.19 Ac = 0.37 cfs Q_{100}=3.30 cfs/Ac * 0.19 Ac = 0.62 cfs

Stormwater Quality Treatment Calculations

Area 1C-1

Stormwater Quality Design Flow (SQDF)

Area ---------- 1.59 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.913

I ---------- 0.2

SQDF=C*I*A ---------- .290 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x1.59 Ac = 4.37 cfs x10% = ---------- **.437 cfs**

Treatment device used for Area 1C-1: OldCastle BioPod Biofilter Underground

. Because of the limited feasible landscape area in this tributary area, an underground biofiltration device will be used. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.437 cfs/ .00401 fps = 109 sq. ft. of infiltration areaTherefore, we will use the 8'x16' BioPod Underground Biofilter, BPU-816 model, which provides 112 sf of area.

Area 1C-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.13 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.804

I ---------- 0.2

SQDF=C*I*A ---------- .020 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.13 Ac = 0.35 cfs x10% = ---------- **.035 cfs**

Treatment device used for Area 1C-2: OldCastle Catch Basin Filter

Area 1C-2 does not have sufficient area for a vegetated swale or a BioPod BioFilter. Because the required flow is a small volume, a catch basin filter will be used to treat the storm water (See Appendix C for spec sheet).

Area 1C-3

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.19 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.679

I ---------- 0.2

SQDF=C*I*A ---------- .025 cfs

Or use 10% of $Q_{50} = Q_{100}/1.2$ = (3.30 cfs/Ac)/1.2x0.19 Ac = 0.51 cfs x10% = ---------- **.051 cfs**

Treatment device used for Area 1C-3: OldCastle Catch Basin Filter

Area 1C-3 does not have sufficient area for a vegetated swale or a BioPod BioFilter. Because the required flow is a small volume, a catch basin filter will be used to treat the storm water (See Appendix C for spec sheet).

BUILDING 1D

Detention Calculations

Soil Type ---------- 002

SUMP Volume per City of Thousand Oaks Figure 7 ---------- 950 CF/Acre

Aproject consists of subareas 1D-1, 1D-2 & 1D-3 ---------- 1.73 Acre

Vsump ---------- 1.73*950=1642 CF

Assume 48″ CMP
Cross Sectional Area=12.57 SF

Length of 48″ CMP for Detention = 1642 CF/12.57 SF = 130′ < **136′** provided

Per storm drain system master plan:

Subarea 910D Q_{10}=1.99 cfs/Ac
Q_{100}=3.30 cfs/Ac

1D-1: Q_{10}=1.99 cfs/Ac * 1.33 Ac = 2.65 cfs Q_{100}=3.30 cfs/Ac * 1.33 Ac = 4.39 cfs

1D-2: Q_{10}=1.99 cfs/Ac * 0.35 Ac = 0.69 cfs Q_{100}=3.30 cfs/Ac * 0.35 Ac = 1.14 cfs

1D-3: Q_{10}=1.99 cfs/Ac * 0.06 Ac = 0.11 cfs Q_{100}=3.30 cfs/Ac * 0.06 Ac = 0.18 cfs

Stormwater Quality Treatment Calculations

Area 1D-1

Stormwater Quality Design Flow (SQDF)

Area ---------- 1.33 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.708

I ---------- 0.2

SQDF=C*I*A ---------- .222 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x1.33 Ac = 3.66 cfs x10% = ---------- **.366 cfs**

Treatment device used for Area 1D-1: OldCastle BioPod Biofilter Planter

Although there is some landscape area for the surface flow, there is not enough space for a natural bioswale. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.366 cfs/ .00401 fps = 91 sq. ft. of infiltration area. Therefore, we will use the 8'x12' BioPod Biofilter Planter, BPP-812-SI model, which provides 96 sf of area.

Area 1D-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.06 Acres

Q_{100}=3.30 cfs/Ac

1E-1: Q_{10}=1.99 cfs/Ac * 1.35 Ac = 2.68 cfs Q_{100}=3.30 cfs/Ac * 1.35 Ac = 4.45 cfs

1E-2: Q_{10}=1.99 cfs/Ac * 0.98 Ac = 1.94 cfs Q_{100}=3.30 cfs/Ac * 0.98 Ac = 3.23 cfs

1E-3: Q_{10}=1.99 cfs/Ac * 0.78 Ac = 1.56 cfs Q_{100}=3.30 cfs/Ac * 0.78 Ac = 2.59 cfs

1E-4: Q_{10}=1.99 cfs/Ac * 0.16 Ac = 0.31 cfs Q_{100}=3.30 cfs/Ac * 0.16 Ac = 0.52 cfs

1E-5: Q_{10}=1.99 cfs/Ac * 0.11 Ac = 0.23 cfs Q_{100}=3.30 cfs/Ac * 0.11 Ac = 0.38 cfs

1B-3: Q_{10}=1.99 cfs/Ac * 0.61 Ac = 1.21 cfs Q_{100}=3.30 cfs/Ac * 0.61 Ac = 2.00 cfs

Stormwater Quality Treatment Calculations

Area 1B-3

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.61 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.904

I ---------- 0.2

SQDF=C*I*A ---------- .110 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.61 Ac = 1.67 cfs x10% = ---------- **.167 cfs**

Treatment device used for Area 1B-3: OldCastle BioPod Biofilter Planter

Although there is some landscape area for the surface flow, there is not enough space for a natural bioswale. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.167 cfs/ .00401 fps = 42 sq. ft. of infiltration area. Therefore, we will use the 4'x13' BioPod Biofilter Planter, BPP-413-SI model, which provides 52 sf of area.

Area 1E-1

Stormwater Quality Design Flow (SQDF)

Area ---------- 1.35 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.909

I ---------- 0.2

SQDF=C*I*A ---------- .245 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.49 Ac = 1.35 cfs x10% = ---------- **.371 cfs**

Treatment device used for Area 1E-1: OldCastle BioPod Biofilter Planter

Although there is some landscape area for the surface flow, there is not enough space for a natural bioswale. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.371 cfs/ .00401 fps = 93 sq. ft. of infiltration area. Therefore, we will use the 8'x16' BioPod Biofilter Planter, BPP-816-SI model, which provides 128 sf of area.
.

Area 1E-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.98 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.908

I ---------- 0.2

SQDF=C*I*A ---------- .166 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.98 Ac = 2.69 cfs x10% = ---------- **.269 cfs**

Treatment device used for Area 1E-2: OldCastle BioPod Biofilter Underground

Because of the limited feasible landscape area in this tributary area, an underground biofiltration device will be used. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.269 cfs/ .00401 fps = 67 sq. ft. of infiltration area. Therefore, we will use the 8'x12' BioPod Underground Biofilter, BPU-812 model, which provides 80 sf of area.

Area 1E-3

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.78 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.820

I ---------- 0.2

SQDF=C*I*A ---------- .129 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.78 Ac = 2.16 cfs x10% = ---------- **.216 cfs**

Treatment device used for Area 1E-3: OldCastle BioPod Biofilter Planter

Although there is some landscape area for the surface flow, there is not enough space for a natural bioswale. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.216 cfs/ .00401 fps = 54 sq. ft. of infiltration area. Therefore, we will use the 4'x17' BioPod Biofilter Planter, BPP-417-SI model, which provides 68 sf of area.

Area 1E-4

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.16 Acres

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.17 cfs/Ac)/1.2x1.39 Ac = 3.68 cfs x10% = ---------- **.368 cfs**

Treatment device used for Area 3-1: OldCastle BioPod Biofilter Underground

Because of the limited feasible landscape area in this tributary area, an underground biofiltration device will be used. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.368 cfs/ .00401 fps = 92 sq. ft. of infiltration area. Therefore, we will use the 8'x16' BioPod Underground biofilter, BPU-816 model, which provides 112 sf of area.

Area 3-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.83 Acres

Soil Type ---------- 002

Using 7 minute residence time

L=60*7*.20=84′ of swale required = **84′** of bioswale provided

Area 6A-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 1.55 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.826

I ---------- 0.2

SQDF=C*I*A ---------- .255 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x1.55 Ac = 4.25 cfs x10% = ---------- **.425 cfs**

Treatment device used for Area 6A-2: Bioswale

Vegetated Swale Calculations

n=0.2

s=0.020

b=3′

SQDF=.425 cfs

V=.41 fps (per attached flow master calculations in Appendix A)

Using 7 minute residence time

L=60*7*.41=172′ of swale required < **276′** of bioswale provided

Area 6A-3

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.66 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.720

I ---------- 0.2

SQDF=C*I*A ---------- .095 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.66 Ac = 1.82 cfs x10% = ---------- **.182 cfs**

Treatment device used for Area 6A-3: Bioswale

Vegetated Swale Calculations

n=0.2

s=0.005

b=3′

SQDF=.281 cfs

V=.19 fps (per attached flow master calculations in Appendix A)

Using 7 minute residence time

L=60*7*.19=80′ of swale required < **156′** of bioswale provided

Area 6A-4

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.09 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.850

I ---------- 0.2

SQDF=C*I*A ---------- .015 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.09 Ac = 0.24 cfs x10% = ---------- **.024 cfs**

Treatment device used for Area 6A-4: OldCastle Catch Basin Filter

Area 6A-4 does not have sufficient area for a vegetated swale or a BioPod BioFilter. Because the required flow is a small volume, a catch basin filter will be used to treat the storm water (See Appendix C for spec sheet).

BUILDING 6B

Detention Calculations

Soil Type ---------- 002

SUMP Volume per City of Thousand Oaks Figure 7 ---------- 950 CF/Acre

Aproject1 consists of subareas 6B-1, 6B-3, & 6B-4 ---------- 4.51 Acre

Vsump1 ---------- 4.51*950=4283 CF

Aproject2 consists of subarea 6B-2 ---------- 0.78 Acre

Vsump2 ---------- 0.78*950=740 CF

Assume 48″ CMP
Cross Sectional Area=12.57 SF

Length of 48″ CMP for Detention1 = 4283 CF/12.57 SF = 340′ < **350′** provided

Length of 48″ CMP for Detention2 = 740 CF/12.57 SF = 59′ < **65′** provided

Per storm drain system master plan:

Subarea 910D Q_{10}=1.99 cfs/Ac
Q_{100}=3.30 cfs/Ac

6B-1: Q_{10}=1.99 cfs/Ac * 4.06 Ac = 8.09 cfs Q_{100}=3.30 cfs/Ac * 4.06 Ac = 13.41 cfs

6B-2: Q_{10}=1.99 cfs/Ac * 0.78 Ac = 1.55 cfs Q_{100}=3.30 cfs/Ac * 0.78 Ac = 2.57 cfs

6B-3: Q_{10}=1.99 cfs/Ac * 0.33 Ac = 0.66 cfs Q_{100}=3.30 cfs/Ac * 1.09 Ac = 5.44 cfs

6B-4: Q_{10}=1.99 cfs/Ac * 0.11 Ac = 0.23 cfs Q_{100}=3.30 cfs/Ac * 0.11 Ac = 0.38 cfs

Stormwater Quality Treatment Calculations

Area 6B-1

Stormwater Quality Design Flow (SQDF)

Area ---------- 4.06 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.813

I ---------- 0.2

SQDF=C*I*A ---------- .661 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x4.06 Ac = 11.18 cfs x10% = ---------- **1.118 cfs**

Treatment device used for Area 6B-1: Bioswale

Vegetated Swale Calculations

n=0.2

s=0.005

b=3′

SQDF=1.118 cfs

Using 7 minute residence time

L=60*7*.34=143′ of swale required < **360′** of bioswale provided

Area 6B-2

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.78 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.849

I ---------- 0.2

SQDF=C*I*A ---------- .132 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.78 Ac = 2.14 cfs x10% = ---------- **.214 cfs**

Treatment device used for Area 6B-2: OldCastle BioPod Biofilter Surface

Although there is no space for landscape or vegetation to treat the surface flow, there is space for a BioPod surface biofilter, which provides the biological contact needed for water quality without the surface vegetation. BioPod Biofilters use biological contact through proprietary media to achieve an infiltration rate of 1.80 gpm/sf (see attached documentation in Appendix B). 1.80 gpm/ sf is equivalent to .00401 ft/sec.

.214 cfs/ .00401 fps = 53 sq. ft. of infiltration area. Therefore, we will use the 6'x12' BioPod Biofilter Surface, BPS-612-SI model, which provides 72 sf of area.

Area 6B-3

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.33 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.815

I ---------- 0.2

SQDF=C*I*A ---------- .054 cfs

Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.33 Ac = 0.91 cfs x10% = ---------- **.091 cfs**

Treatment device used for Area 6B-3: Bioswale

Vegetated Swale Calculations

n=0.2

s=0.010

b=2′

SQDF=.091 cfs

V=.21 fps (per attached flow master calculations in Appendix A)

Using 7 minute residence time

L=60*7*.21=88′ of swale required < **90′** of bioswale provided

Area 6B-4

Stormwater Quality Design Flow (SQDF)

Area ---------- 0.11 Acres

Soil Type ---------- 002

Cp for soil type 2 ---------- 0.1

C=0.95*Imp+Cp(1-Imp) ---------- 0.818

I ---------- 0.2

SQDF=C*I*A ---------- .019 cfs

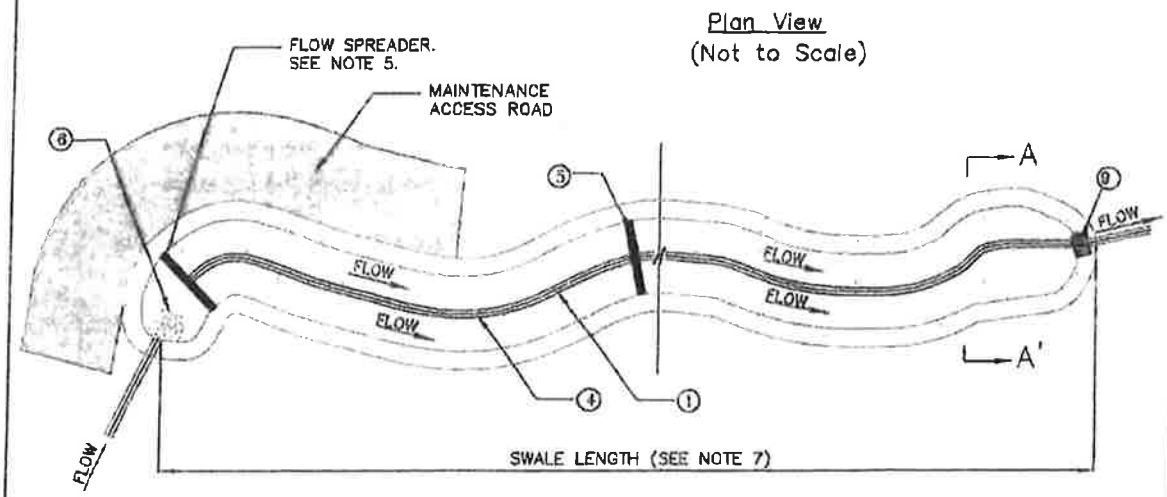
Or use 10% of Q_{50} = Q_{100}/1.2 = (3.30 cfs/Ac)/1.2x0.11 Ac = 0.31 cfs x10% = ---------- **.031 cfs**

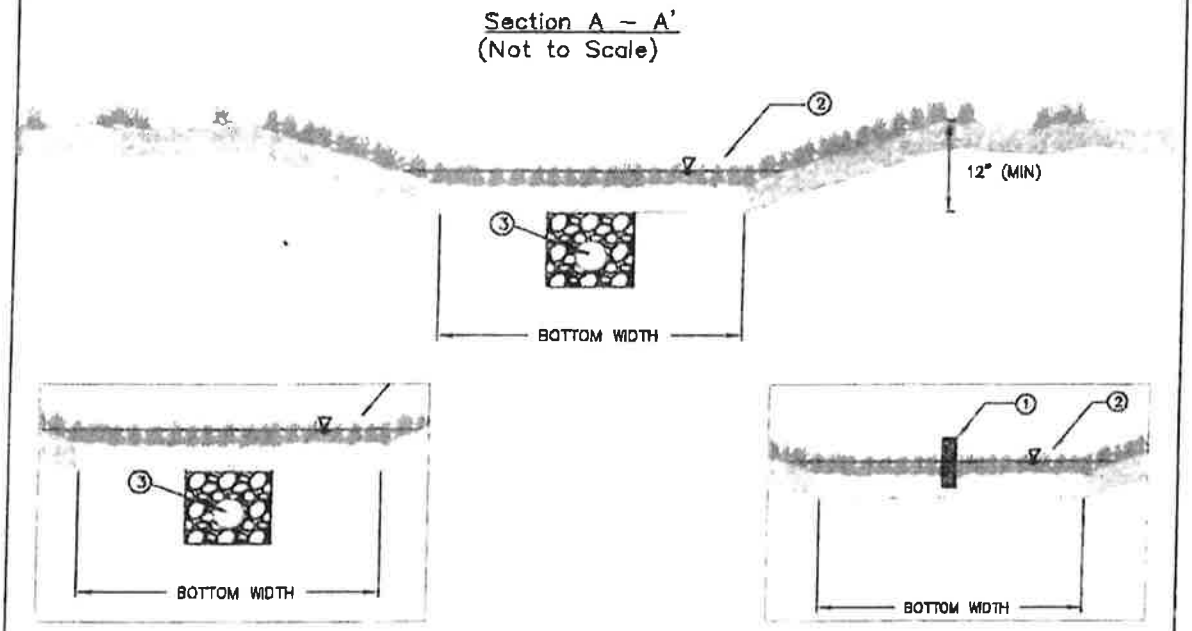
Treatment device used for Area 6B-4: OldCastle Catch Basin Filter

Area 6B-4 does not have sufficient area for a vegetated swale or a BioPod BioFilter. Because the required flow is a small volume, a catch basin filter will be used to treat the storm water (See Appendix C for spec sheet).

APPENDIX A

BIOSWALE CALCULATION WORKSHEETS





NOTES:

1. SWALE DIVIDER REQUIRED FOR BOTTOM WIDTHS > 10'. MINIMUM REQUIRED BOTTOM WIDTH IS 2' EXCLUDING WIDTH OF LOW FLOW CHANNEL. MAXIMUM BOTTOM WIDTH WITH DIVIDER IS 16'.
2. DEPTH OF FLOW FOR WATER QUALITY TREATMENT MUST NOT EXCEED TWO-THIRDS OF VEGETATION HEIGHT OR NOT GREATER THAN 2" FOR FREQUENTLY MOWED TURF.
3. IF AN UNDERDRAIN IS REQUIRED, IT MUST CONSIST OF AN AT LEAST 6" DIAMETER PERFORATED PIPE IN COARSE AGGREGATE BED CONNECTED TO STORM DRAIN. GRAVEL BED MUST EXTEND 6" BELOW AND 12" TO THE SIDE AND TOP OF THE PIPE.
4. IF NO UNDERDRAIN, LOW FLOW DRAIN SHALL EXTEND ENTIRE LENGTH OF SWALE AND SHALL HAVE A DEPTH OF 6" MINIMUM AND WIDTH NO MORE THAN 50% SWALE BOTTOM WIDTH. ANCHORED PLATE FLOW SPREADER IF USED, SHALL HAVE V-NOTCHES (MAX TOP WIDTH = 3% OF SWALE WIDTH) OR HOLES TO ALLOW PREFERENTIAL EXIT OF LOW FLOWS.
5. INSTALL CHECK DAMS OR GRADE CONTROL STRUCTURES FOR SLOPES > 2% AT 50' MAXIMUM SPACING TO ACHIEVE A MAXIMUM EFFECTIVE LONGITUDINAL SLOPE OF 2%. FLOW SPREADERS SHALL BE PROVIDED AT INLET AND AT THE BASE OF EACH CHECK DAM.
6. INSTALL ENERGY DISSIPATOR AT THE INLET OF VEGETATED SWALE.
7. SWALE LENGTH SHALL LENGTH REQUIRED TO PROVIDE 7 MINUTES RESIDENCE TIME.
8. INSTALL APPROPRIATE OUTLET STRUCTURE. ACCOMODATE LOW FLOW CHANNEL AND/OR UNDERDRAIN (IF PRESENT).
9. AMEND SOILS WITH 2" OF COMPOST TILLED INTO 8" OF NATIVE SOIL UNLESS NATIVE SOIL ORGANIC CONTENT > 10%

SECTION 1

FEATURES & BENEFITS

Oldcastle Precast®

FLOGARD® CATCH BASIN INSERT FILTER

Removes Pollutants from Runoff Prior to Entering Waterways

Efficient System
Catches pollutants where they are easiest to catch, at the inlet.

Variable Design
Able to be retrofitted or used in new projects.

Treatment Train
Can be incorporated as part of a "Treatment Train".

No Standing Water
Helps to minimize bacteria and odor problems.

Focused Treatment
Removes petroleum hydrocarbons, trash and Total Suspended Solids (TSS).

Maximum Flexibility
Available in a variety of standard sizes to fit round and square inlets.

Economical
Earn a higher return on system investment.

Two-part stainless-steel insert to filter solids and oils/grease

Easy to install, inspect and maintain, even on small and confined sites

By the Numbers*:

Filter will remove up to 80% of Total Suspended Solids (TSS), at least 70% of oils and grease, and up to 40% of Total Phosphorus (TP) associated with organic debris as well as Polycyclic Aromatic Hydrocarbons (PAH) from oil leaks and spills.

**Approx. for urban street application*

Catch Basin Filter Test Results Summary

Testing Agency	% TSS Removal	% Oil & Grease Removal	% PAH Removal
UCLA	80	70 to 80	
U of Auckland Tonking & Taylor, Ltd. (for City of Auckland)	78 to 95		
U of Hawaii (for City of Honolulu)	80		20 to 40

Call us today **(800) 579-8819** or visit our website for detailed product information, drawings and design tools at **www.oldcastlestormwater.com**

INLET FILTRATION

Multi-Purpose Catch Basin Insert Retains Sediment, Debris, Trash and Oils/Grease

FloGard® Catch Basin Insert Filters are recommended for areas subject to silt and debris as well as low-to-moderate levels of petroleum hydrocarbons (oils and grease). Examples of such areas include vehicle parking lots, aircraft ramps, truck and bus storage yards, business parks, residential and public streets.

Catch Basin Filter Competitive Feature Comparison

Evaluation of Catch Basin Filters (Based on flow-comparable units) (Scale 1-10)	Oldcastle Stormwater	Other Insert Filter Types**

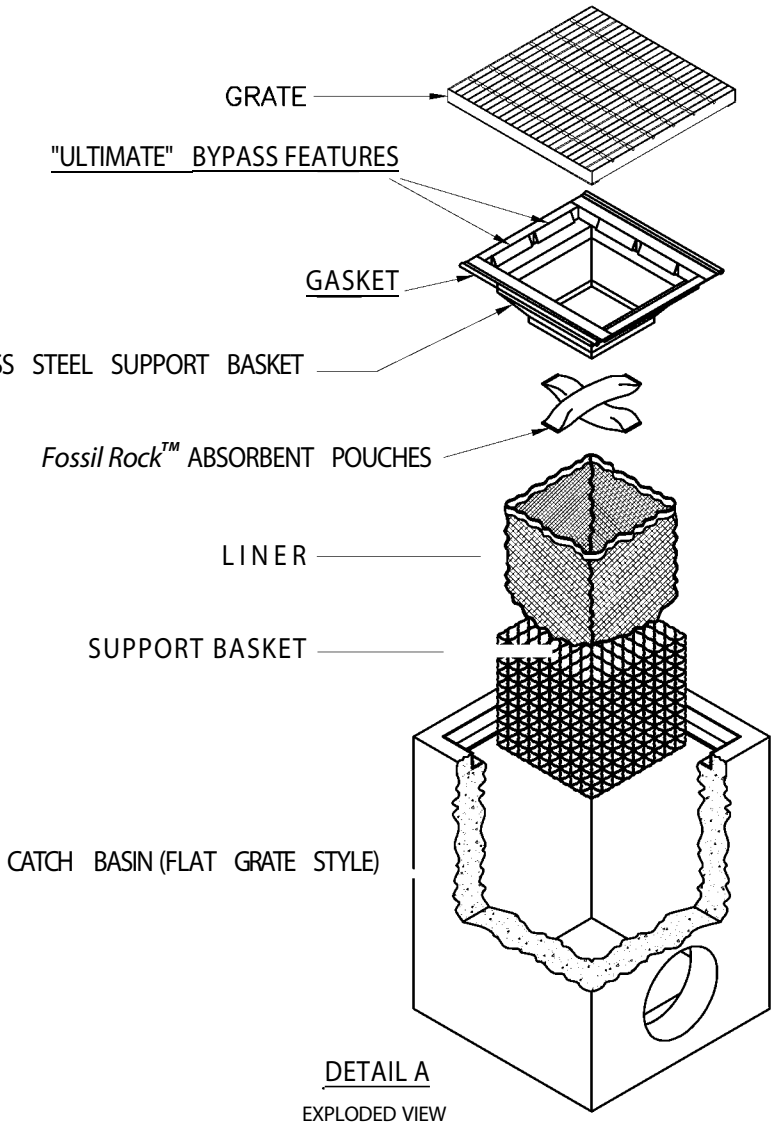
-INSTALLED INTO CATCH BASIN-



DETAIL A

EXPLODED VIEW

NOTES:

1. Filter insert shall have a high flow bypass feature.
2. Filter support frame shall be constructed from stainless steel Type 304.
3. Filter medium shall be *Fossil Rock* installed and maintained in accordance with manufacturer specifications.
4. Storage capacity reflects 80% of maximum solids collection prior to impeding filtering bypass.

U.S. PATENT# 6,00,023 & 6,877,029

DETAIL A
EXPLODED VIEW

FloGard® FILTER
-INSTALLED INTO CATCH BASIN-

U.S. PATENT # 6,00,023 & 6,877,029

NOTES:

1. Filter insert shall have a high flow bypass feature.
2. Filter support frame shall be constructed from stainless steel Type 304.
3. Filter medium shall be *Fossil Rock* ™, installed and maintained in accordance with manufacturer specifications.
4. Storage capacity reflects 80% of maximum solids collection prior to impeding filtering bypass.

TECHNICAL MEMORANDUM

To:	City of Thousand Oaks	**From:**	Iteris, Inc. 801 S. Grand Avenue, Suite 750 Los Angeles, CA 90017
Date:	September 30, 2024		
RE:	Shapell Conejo Summit Industrial Project – CEQA Transportation Analysis Validation		

The purpose of this memorandum is to confirm the validity of Iteris' CEQA Transportation analysis of the Shapell Conejo Summit Industrial project in the City of Thousand Oaks. The Shapell Conejo Summit Industrial project consists of 754,222 square feet of light industrial park land use. The project site is surrounded by industrial, institutional, and open space land-uses. Access to the site is provided by Rancho Conejo Boulevard and Conejo Center Drive.

Based on the described project description, Iteris prepared a CEQA Transportation Analysis for the project on March 20, 2024. The project description and location have not changed, nor have there been any appreciable changes to the circulation network in the project's vicinity. Thus, the prior findings and conclusions of the CEQA Transportation Analysis (dated March 20, 2024) remain valid as of the date of this letter.

TECHNICAL MEMORANDUM

To: City of Thousand Oaks	**From:** Iteris, Inc. 801 S. Grand Avenue, Suite 750 Los Angeles, CA 90017
Date: March 20, 2024	
RE: Shapell Conejo Summit Industrial Project –CEQA Transportation Analysis	

EXECUTIVE SUMMARY

Under the California Environmental Quality Act (CEQA), the assessment of transportation impacts uses a metric of the average length of vehicle trips taken by users of the proposed Shapell Conejo Summit Industrial project site as compared to the citywide average. The trip lengths (Vehicle miles traveled or VMT) were calculated from a computerized travel demand model which estimates the project-related and citywide VMT in a dynamic relationship with other land uses in the southern California region. Based on the analysis, the employees at this location would average longer trips taken by vehicles than the citywide average—necessitating mitigation actions to reduce vehicle trips and trip lengths. A mitigation program was developed in conjunction with City staff and the project applicant to reduce the project to less than significant impacts under CEQA.

After the implementation of all feasible mitigation measures, the Project would reduce its significant impact under CEQA Guidelines § 15064.3, subdivision (b) by resulting in a project level of VMT per employee below the City's threshold for daily VMT. The Proposed project would not have residual significant impacts after the implementation of all feasible mitigation measures. Note that this memorandum supersedes the original analysis prepared by Iteris (December 2020) and contains an updated estimate of project VMT based on a new travel demand model and new levels of effectiveness for mitigation measures from recent advances in supportive literature and analysis.

INTRODUCTION

This memorandum presents Iteris' CEQA analysis of the Shapell Conejo Summit Industrial project in the City of Thousand Oaks. The Shapell Conejo Summit Industrial project consists of 754,222 square feet of light industrial park land use. The project site is surrounded by industrial, institutional, and open space land-uses. Access to the site is provided by Rancho Conejo Boulevard and Conejo Center Drive.

CEQA analysis for determining potential significant transportation impacts from vehicles transitioned in 2020 from an automobile delay or capacity measure to a VMT metric as required by Senate Bill (SB) 743. VMT is an area-wide performance measure which helps compare the overall performance of a project or project alternatives and is also used as a metric to ultimately assess the transportation environmental impacts of a project. VMT analysis shifts the focus towards impacts caused by the distance traveled by vehicles rather than the localized congestion created by vehicles (i.e., intersection-level delay).

VMT is generally calculated using a travel demand model that captures the movement of all trips over a highway network. For this analysis, the time period was defined as a 24-hour period on a typical weekday. Per Public Resources Code 15064.3, subdivision (a) 'vehicle miles traveled' refers to the amount and distance of on-road passenger vehicle travel attributable to a project. It should be noted that travel-demand modeling outputs are unique, thus differ between model runs even when minimal land use or circulation network edits are made. As a result, the outputs generated for this project should only be applied to this analysis. This is discussed in more detail later in this memorandum.

METHODOLOGY

Iteris utilized the Ventura County Transportation Model (VCTM) to generate the VMT statistics, following the City's administrative policy on CEQA transportation analysis. This land-use based model, which is a subarea model of the Southern California Association of Government's (SCAG) travel demand model, is consistent with the 2016 SCAG RTP/SCS travel-demand model assumptions and inputs. The model consists of a 2016 base year scenario and 2040 future year estimated prediction scenario. It should be noted that the land use and travel patterns of the VCTM are generally considered the regionwide standard for existing and baseline conditions analysis.

The VCTM consists of a detailed traffic analysis zone (TAZ) structure in the City of Thousand Oaks. The model consists of 110 TAZ's within the City. **Figure 1** shows the location of the proposed project's TAZ (60169101) in relation to the regional area.

Consistent with California Code of Regulations Title 14 – Natural Resources Section 15064.3, subdivision (a), for the purposes of this section, 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project. As described in the Governor's Office of Planning and Research Technical Advisory on Evaluating Transportation Impacts in CEQA, the term "automobile" refers to on-road passenger vehicles, specifically cars and light trucks. Heavy-duty truck VMT is not part of the daily VMT impact assessment under Section 15064.3, subdivision (b), however VMT associated with heavy vehicle trips are analyzed as part of the air quality, noise, and greenhouse gas emissions sections of environmental analysis.

CEQA ANALYSIS

This section describes the potential screening, thresholds of significance, and VMT impact evaluation for the proposed project.

Screening Criteria

The City utilizes screening criteria in order to provide CEQA relief to projects that support the State's GHG emission goals, and those projects which meet the screening criteria are presumed to have a less than significant transportation impact on the environment. The proposed Shapell Conejo Summit Industrial Project does not meet any of the screening criteria, thus is required to undergo a CEQA Transportation Assessment.

Thresholds of Significance

The City has adopted an administrative policy stating that thresholds of significance will be determined on a case-by-case basis. As the CEQA lead agency, the City defines the threshold for significance for an impact under Public Resources Code Section 15064.3 (b) for this project as: a significant impact would occur if the VMT per capita or VMT per employee exceeds the citywide average VMT per capita or per employee of the baseline.

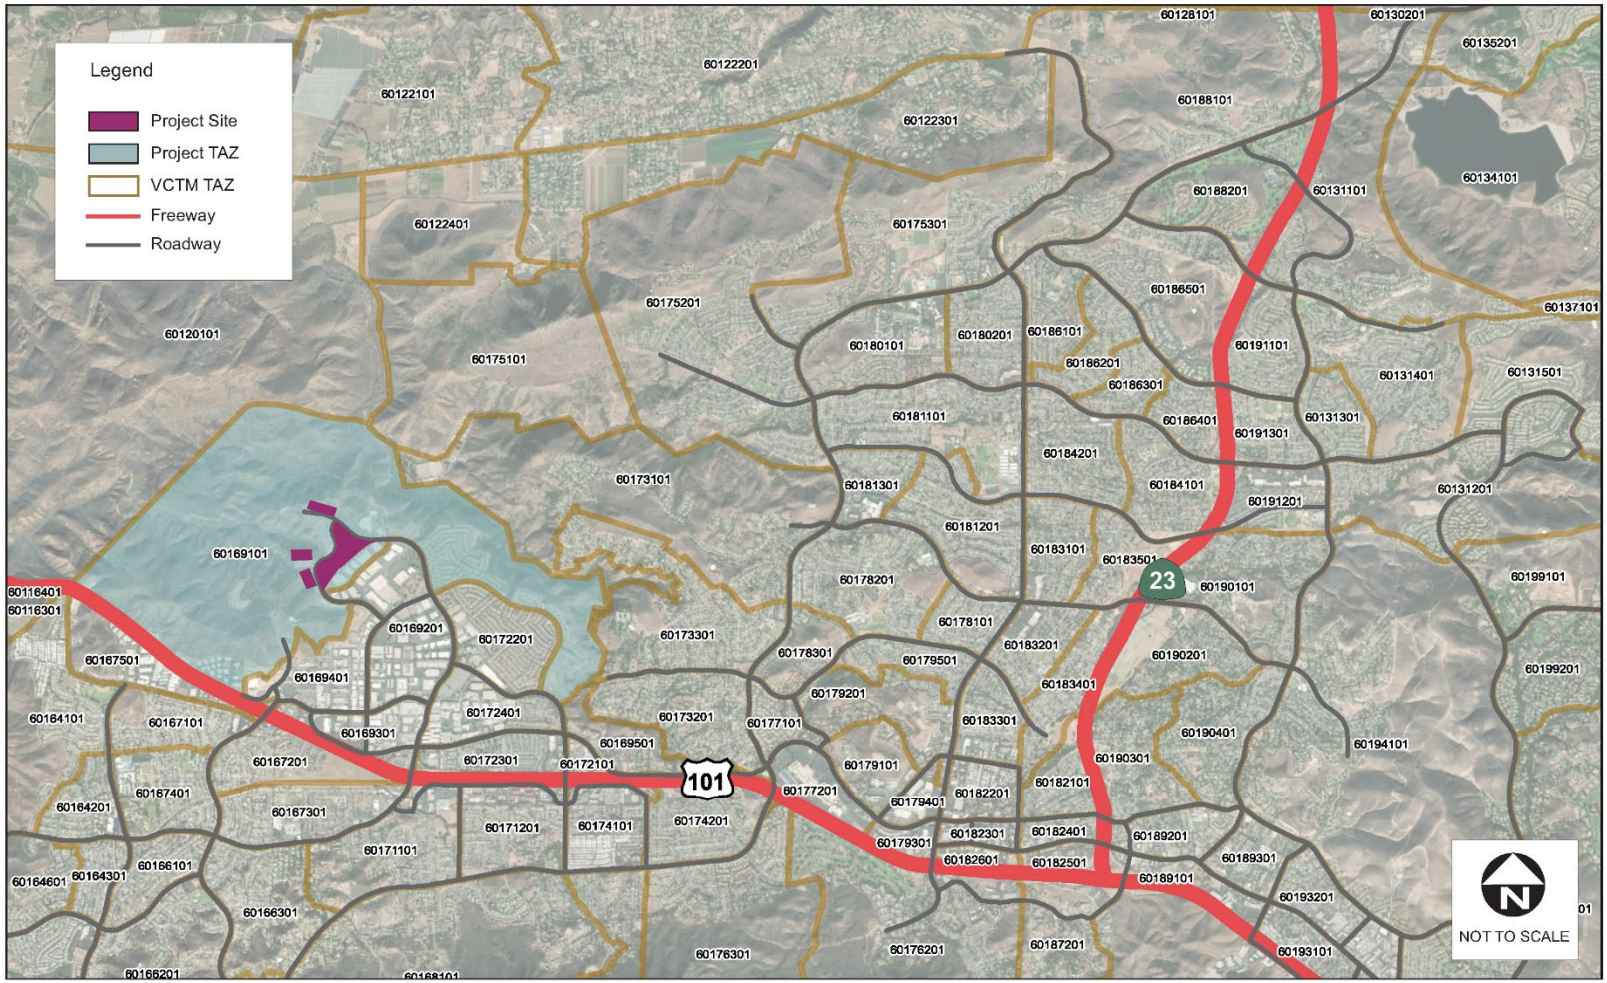

Figure 1
Project Location and Transportation Analysis Zones (TAZ)

VMT IMPACT EVALUATION

The proposed project is non-residential, thus the VMT will be reported as Employment VMT per employee, calculated as such: (Home-Based Work Attraction VMT + Work-Based Production) / Number of Employees. In order to determine the project's potential level of impact, a new VCTM scenario including the proposed project land use within TAZ 60169101 was prepared, utilizing the existing/baseline year of the model. The 2021 version of VCTM is an update to the previous model used to develop the VMT data in the previous analysis prepared by Iteris (December 2020). The index of VMT per employee values changes between the two models, however the proportional change between the citywide and Project site VMT were similar, and it is the proportional difference of the Project compared to the Citywide value that determines significance and is affected by VMT reduction strategies and mitigation measures.

From this model scenario output, the following two metrics were determined for significant impact determination:

- Regional average daily VMT per employee; and
- Project TAZ daily VMT per employee.

Based on the City's adopted guidelines, the "region" for CEQA analysis purposes is assumed to be the City of Thousand Oaks. The new VCTM scenario resulted in a Citywide average daily VMT per employee, as calculated for use in this analysis only, of 22.7; and a daily VMT per employee of 26.5. for the TAZ that contains the Project site.

The resulting outputs from the most recent (2021) validated VCTM[1] forecasted the Project would generate 26,073 daily vehicle miles traveled prior to the implementation of VMT reduction measures as either a component of the project site or buildings as proposed by the applicant or components required by City of Thousand Oaks Municipal Code (TOMC) including the 2022 California Green Building Standards Code adopted by reference in TOMC Title 8, Chapter 16.

The raw model outputs summarized above were further refined with VMT reduction measures that are regulatory requirements of the project. The VMT reduction measures analyzed are "direct" VMT and emissions being avoided and are quantified using industry standard methods as developed by the California Air Pollution Control Officers Association (CAPCOA). In addition, the analysis was based on review of City ordinances, the Project description, site plan, the *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (August 2021) by the CAPCOA, and *Quantifying Greenhouse Gas Mitigation Measures* (August 2010) by CAPCOA. This methodology was also used for the recommended mitigation measures in the next section. Note when a reduction used an average VMT per employee as part of its calculation, the citywide average of 22.7 VMT per day was used as opposed to a project-specific VMT reduction per day to have a more conservative analysis—initial VMT calculation for the Project VMT on a per employee was higher than the citywide average and therefore basing a reduction level on a higher level of VMT per employee may overstate VMT reduction strategy and mitigation effectiveness.

Project VMT Reduction Measures as Project Elements or Required by City Code

The Project will have site-specific VMT reduction measures either as a component of the project site or buildings as proposed by the applicant or components required by City of Thousand Oaks Municipal Code. Each Project VMT reduction measure is discussed and an adjustment is applied to the raw travel demand model outputs to yield a Project VMT assessment.

Five VMT reduction measures were identified as part of the Project:

1. Provide Pedestrian & Bicycle Network Improvements
2. Provide Bicycle Parking
3. Implement Preferential Rideshare Parking Program
4. Commute Trip Reduction Marketing
5. Electric Vehicle Charging Facilities

1. Provide Pedestrian & Bicycle Network Improvements

Sidewalks or other designated pathways following, to the greatest extent feasible, direct and safe routes from the external (public or private) pedestrian circulation system to each, and between each building in the development. Safe access shall be provided to minimize conflicts with vehicles and bicycles as determined by the Public Works Department. Within the scope of project requirements, this includes construction of peripheral sidewalks along Conejo Center Drive and Rancho Conejo Boulevard as well as internal pedestrian connections among the Project site buildings.

These project elements can reduce as much as 6.4% VMT from vehicle travel in the plan area.[2] However since this is a project site rather than an area study, a lower level of reduction was used in the analysis. The Sacramento Metropolitan Air Quality Management District (SMAQMD) Recommended Guidance for Land Use Emission Reductions attributes 1% reduction for a project connecting to existing external streets and pedestrian facilities.[3]

This allocates an overall 1% reduction for on-site and off-site (adjacent) pedestrian network improvements. The calculated VMT reduction due to pedestrian improvements is 1% multiplied by the Project daily VMT of 26,073 equaling 261 VMT per day.

2. Provide Bicycle Parking

Safe and convenient bicycle access shall be provided from the external circulation system (e.g., from public access bike paths, bike lanes, and/ or bike routes) to bicycle parking facilities on-site. Safe access shall be provided so as to minimize conflicts with other vehicles and pedestrians as determined by the Public Works Department.

Consistent with City guidelines, nonresidential development projects capable of holding 100 employees or more shall provide the following: bicycle racks or other secure bicycle parking shall be provided near building entrances to accommodate four bicycles per the first 50,000 gross square feet of nonresidential

[2] CAPCOA, *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (August 2021) https://www.airquality.org/ClimateChange/Documents/Handbook%20Public%20Draft_2021-Aug.pdf

[3] Sacramento Metropolitan Air Quality Management District, Recommended Guidance for Land Use Emission Reductions. (p. 11) http://www.airquality.org/ceqa/GuidanceLUEmissionReductions.pdf

development and one bicycle per each additional 50,000 gross square feet of nonresidential development. Calculations which result in a fraction of 0.5 or higher shall be rounded up to the nearest whole number. A bicycle parking facility may also be a fully enclosed space or locker accessible only to the owner or operator of the bicycle, which protects the bike from inclement weather. Specific facilities and location (e.g., provision of racks, lockers or locked bike room) shall be per the requirements of the Public Works and Community Development Departments imposed as conditions on each entitlement request.

Short-term bicycle parking spaces are to be provided on site near the front entrance. Bicycle parking should be located along the natural desire lines of travel from the bikeways to the facility entrance, in well-lit areas visible from the front entrance and public areas, in the nature of a bicycle corral or racks. Bicycle parking shall be located outside of pedestrian walkways, loading areas, landscape planters, etc. Where feasible, bicycle-parking areas should be covered.

Long-term bicycle parking spaces shall be convenient from the street and shall be provided in one or more of the following configurations:

a. Covered, lockable enclosures with permanently anchored racks for bicycles;
b. Lockable bicycle rooms with permanently anchored racks; or
c. Lockable, permanently anchored bicycle lockers.

The applicant shall submit a bicycle parking plan to be reviewed and approved by the Chief Building Official, Traffic Engineering representative in the Engineering Services Division, and the Community Development Director (or his/her appointee). All bicycle parking shall comply with AASHTO, NACTO, or APBP standards, as permitted by the California Building Code.

Staff shall review all construction documents prior to building permit issuance to assure that the bicycle rack has been provided and is not in conflict with the applicable development standards for building in the M-1 zone.

These project elements were not quantified in CAPCOA's *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity,* however it states this measure may achieve VMT reductions and co-benefits on their own or may enhance the ability of quantified measures to attain expanded reductions and co-benefits. Quantification was calculated based on the Center for Clean Air Policy (CCAP) guidebook attributing a 1% to 5% reduction in VMT to the use of bicycles, which reflects the assumption that their use is typically for shorter trips. Based on the CCAP Guidebook, the TIAX report allots 2.5% reduction for all bicycle-related measures and a quarter of that for this bicycle parking alone. This allocates a 0.625% reduction to bicycle parking. The calculated VMT reduction due to bicycle parking is 0.625% multiplied by the daily modeled total VMT of 26,073 equaling 163 VMT reduced per day.

3. Implement Preferential Rideshare Parking Program

Not less than ten percent of "employee parking area" (employee parking area shall be calculated from TOMC Section 9-4.4002(i) and TOMC Section 9-4.2402) shall be located as close as is practical to the employee entrance(s), and shall be reserved for use by carpool/vanpool vehicles, without displacing handicapped and customer parking needs. This preferential carpool/vanpool parking area shall be identified on the site plan for the applicable entitlement. A statement that preferential carpool/vanpool

spaces for employees is available and a description of the method for obtaining such spaces must be included on the required transportation information board. Spaces will be signed and striped. Additional carpool/vanpool spaces shall be provided as demand warrants. The following minimum spaces shall be provided in any case: at least one space for projects of 50,000 gross square feet to 100,000 gross square feet and two spaces for projects over 100,000 gross square feet will be signed and/or striped for carpool and/or vanpool vehicles.

Preferential parking spaces reserved for vanpools must be accessible to vanpool vehicles. Adequate turning radii for vanpool vehicles shall be provided. Parking space dimensions in vanpool parking areas shall be a minimum nine feet by 20 feet.

A safe and convenient zone if feasible and appropriate as determined by the Public Works and Community Development Departments in which vanpool and carpool vehicles may deliver or board their passengers. Passenger loading areas should be located as close as possible to the building entrance and should be designated in a manner that does not impede vehicular circulation in the parking area. A passenger loading zone or van turn-out area may be required to accomplish this requirement. In the case of multiple-tenant developments, more than one passenger loading zone may be required and the location and number of vanpool/carpool passenger loading zones shall be distributed in a manner acceptable to the Public Works and Community Development Departments.

These project elements can reduce as much as 4% VMT from vehicle travel in the plan area.[4] The calculation of reduction was based on an increase of one rideshare (carpool) trip per Project site building (15) resulting in a daily VMT reduction of 15 buildings * 22.7 average daily citywide VMT per employee equaling 341 daily VMT reduced. This conservative approach to calculating the daily VMT reduction due to the provision of rideshare/van share parking spaces is taken in order not to double count reductions from a supportive measure of commute trip reduction marketing.

4. Commute Trip Reduction Marketing

A Transportation Demand Management (TDM) program shall be prepared by the property owner and company that will occupy the building. The TDM program shall include, but not be limited to, all of the following standards and measures as required by the Thousand Oaks Municipal Code Section 9-4.4003, with an intent to further reduce VMT within the City. Prior to the release of final occupancy permit and subsequent business licenses affiliated with the property, the TDM program must be submitted to the City for review and approval by the Community Development Director and Public Works Director.

The property owner and company that will occupy the building shall jointly provide calculations or information for determining the number of employees expected to work at the project site. If the developer is unable to provide sufficient information to accurately determine the expected number of employees, then an estimate shall be made which may be subject to verification by the City at a later date. A typical calculation to estimate the number of employees shall be based on: the number of parking spaces required as determined in Thousand Oaks Municipal Code (TOMC) Section 9-4.2402 title entitled,

[4] CAPCOA, *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (August 2021) https://www.airquality.org/ClimateChange/Documents/Handbook%20Public%20Draft_2021-Aug.pdf

Parking Space Required; assume one employee per parking space; and the "employee parking area" factors listed under TOMC Section 9-4.4002(i).

This TDM program will implement marketing strategies to reduce commute trips. Information sharing and marketing are important components to successful commute trip reduction strategies. Implementing commute trip reduction strategies without a complementary marketing strategy will result in less effective (lower) VMT reductions.

Consistent with City requirements for nonresidential development projects capable of holding 50 employees or more shall provide all of the following measures:

- A bulletin board, display case or kiosk displaying transportation information located where the greatest number of employees are likely to see it. Information displayed shall include, but is not limited to, the following: current map routes and schedules for public transit routes serving the site; ridesharing promotional material supplied by commuter-oriented organizations; telephone numbers for referrals on transportation information including numbers for the regional ridesharing agency; Dial-A-Route and local transit operators; bicycle route and facility information, including regional and local bicycle maps and bicycle safety information; and a listing of facilities and services available for carpoolers, vanpoolers, bicyclists, transit riders and pedestrians at the site.
- All proposed public, private streets or driveways that serve as the main access from project buildings to the exterior street system shall include sidewalk facilities per City standards for pedestrians and bike routes.
- In cases involving multiple tenants, a bulletin board/display case shall be provided by each tenant, or it shall be provided at a common area acceptable to the Public Works and Community Development Departments.

The VMT reduction calculation is based on a percent of eligible employees that would be a part of the program with a commute reduction percentage of 4% as determined through empirical research.[5] This effectiveness assumes there are alternative commute modes available which have on-going employer support. For a program to receive credit for such outreach and marketing efforts, it should contain guarantees that the program will be maintained permanently, with promotional events delivered regularly and with routine performance monitoring. Therefore, this measure is tied to the provision of rideshare and vanpool parking.

The low-range estimate of 20% of employees eligible for the TDM program and a 4% VMT reduction effectiveness for a total reduction of 0.8%. Applying this percentage of VMT reduction to the daily Project VMT of 26,073 results in a daily reduction of 209 VMT per day.

5. Provide Electric Vehicle Charging Infrastructure

This VMT reduction strategy would install 84 onsite electric vehicle chargers and 249 EV-capable parking spaces (making it easy to add electrical vehicle chargers in the future) per the 2022 California Green

[5] Pratt, Dick. Personal communication regarding the *Draft of TCRP 95 Traveler Response to Transportation System Changes – Chapter 19 Employer and Institutional TDM Strategies.* Transit Cooperative Research Program.

Building Standards at buildings with designated parking areas for electrical vehicle charging. This VMT reduction measure would reduce VMT from gas-powered vehicles and directly reduce on-road GHG emissions from the project. The reduction in gasoline-powered VMT from electric vehicle charging at the 15 site buildings is estimated by Building and Safety to require 84 charging locations to reduce gas-powered VMT by 1,907 VMT per day (84 chargers x 22.7 VMT/employee from Table 1). Inclusion of employer-sponsored electric vehicle charging incentives would further support the use of the facilities and increase the effectiveness of this strategy. The 249 EV-capable parking spaces are not considered in the VMT reduction to provide a conservative analysis. However, if additional EV chargers are installed in the future, it would further reduce gas-powered VMT.

Project VMT Significance Determination

As shown in Table 1, the Project's daily VMT was calculated to be 23,192 per day or 23.5 daily VMT per employee as compared to a 22.7 daily VMT per employee as the Citywide average.[6] Because the Project's daily VMT per employee exceeds the citywide average, the proposed project would result in a significant transportation impact and the project would need to mitigate its daily VMT per employee to a less than significant level. The project would need to mitigate 0.8 daily VMT per employee or 788 total daily VMT.

Table 1: Project VMT Assessment

	VMT Assessment	Reduction Calculation	Daily VMT	Description
1	Provide Pedestrian & Bicycle Network Improvements	1% reduction	(261)	Install sidewalks and paths to connect buildings.
2	Provide Bike Parking	0.625% reduction	(163)	Bike racks and lockers
3	Implement Preferential Rideshare Parking Program	22.7 VMT/Employee reduction per building	(341)	Provide rideshare/vanpool parking
4	Commute Trip Reduction Marketing	0.8% reduction	(209)	Promote commute alternatives to single occupancy vehicles
5	Electric Vehicle Charging Facilities	Per Charging Space: (22.7) average Citywide VMT/employee	(1,907)	Installation of electrical vehicle chargers per Green Code standards
6	Total VMT Reduction from Project Elements		(2,881)	*Sum of rows 1-5*
7	Base Raw VMT Value from Travel Demand Model		26,073	
8	**Estimated Project Site Daily VMT**		**23,192**	*Sum of rows 6-7*
9	Site Employees		985	Number of site employees
10	Project Daily VMT per Employee		23.5	Project site daily VMT / site employees. *Row 8 divided by row 9*

[6] The Citywide average daily VMT per employee, is 22.68, as calculated for use in this analysis only

VMT Assessment		Reduction Calculation	Daily VMT	Description
11	Citywide Average Daily VMT per Employee		22.7	Citywide daily VMT / employee
12	**Daily VMT per Employee Above Threshold**		0.8	*Row 10 minus row 11*
13	**Total Daily VMT Reduction Required for Less Than Significant Impact**		**788**	Total daily VMT to be mitigated for less than significant transportation impact. *Row 12 multiplied by row 9.*

This estimate of vehicle miles generated is based on an estimate of onsite employees. Overall commuting trip patterns since the COVID-19 pandemic had a major shift to at-home working / telecommuting. Based on data from the US Census 5-Year American Community Surveys from 2019 and 2021, the change in work from home commute in Ventura County was from six percent in 2019 to 18.8 percent in 2021.[7] Though consideration of at-home working/telecommuting would result in a decrease of estimated vehicle miles generated by the proposed project, all employees were assumed to work onsite to provide a conservative analysis.

As mentioned, it should be noted that travel-demand modeling outputs are unique, thus differ between model runs even when minimal land use or circulation network edits are made. Therefore, the approach to analyzing a project's VMT impact is to only compare outputs (citywide average vs. project TAZ) that are extracted from the same model run. As described in this memo, the key measure for significant impact determination is the relative percentage difference between the two outputs from the same model run, rather than the absolute numbers themselves, as the citywide average output will be slightly different between separate model runs (i.e., not a static value). Thus, the citywide average output should only be applied to this analysis.

MITIGATION ANALYSIS

CEQA requires that an environmental impact report identify feasible alternatives and mitigation measures that could avoid or substantially reduce a project's significant environmental impacts. Mitigation options as generally recommended by the Office of Planning and Research (OPR) include provision of on-site transportation infrastructure, on-site transportation demand management, off-site infrastructure improvements, including roadway improvements which may also include active transportation and multimodal infrastructure, or off-site multimodal improvements.

The mitigations analyzed and recommended would reduce VMT and greenhouse gas (GHG) emissions by avoiding vehicle travel by site users through promotion of alternative modes, carpooling and strategies to reduce travel to and from the project site. These are "direct" VMT and emissions being avoided and are quantified using industry standard methods as developed by the California Air Pollution Control Officers Association (CAPCOA). Potential mitigation measures for analysis were developed in review of City

[7] https://data.census.gov/table?q=means+to+work&g=040XX00US06_050XX00US06111_160XX00US0678582&tid=ACSDT5Y2019.B08301

ordinances, the Project description, site plan, the *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (August 2021) by the CAPCOA, and *Quantifying Greenhouse Gas Mitigation Measures* (August 2010) by CAPCOA. The recommended mitigation measures were based on the feasibility of implementation for the Project site. Potential mitigation measures reviewed but not recommended are also discussed in this memorandum.

Recommended Mitigation Measures

Five mitigation measure options were determined to be feasible in reducing VMT from the Project:

1. Provide Pedestrian & Bicycle Network Improvements
2. Electric Chargers for Bicycles and Scooters
3. Provide End of Trip Facilities
4. On-Site Facilities
5. Electric Vehicle Charging Facilities above the required amount

The recommended mitigation measures and the analysis of their effectiveness in reducing Project-related VMT are discussed in the following sections:

Provide Pedestrian & Bicycle Network Improvements

The Project is to close gaps in the sidewalk system along the west side of Rancho Conejo Boulevard from Conejo Center Drive to Conejo Spectrum Street and the east side of Conejo Center Drive from Rancho Conejo Boulevard to approximately 500 feet south of Rancho Conejo Boulevard.

This mitigation measure can reduce as much as 6.4% VMT from vehicle travel in the plan area.[8] However since this is a focused and somewhat isolated area, a lower level of reduction was used in the analysis. The Sacramento Metropolitan Air Quality Management District (SMAQMD) Recommended Guidance for Land Use Emission Reductions attributes 1% reduction in VMT for minimizing pedestrian barriers. [9]

This allocates an overall 1% reduction for off-site pedestrian network improvements. The calculated VMT reduction due to pedestrian improvements is 1% multiplied by the Project daily VMT of 23,192 equaling 232 VMT per day. This mitigation measure has two separate components. Assigning a value to each in proportion to their length results in:

- 1,500 feet of the west side of Rancho Conejo Boulevard from Conejo Center Drive to Conejo Spectrum Street – 78% of VMT reduction for this mitigation measure or 180 VMT per day.

- 430 feet of the east side of Conejo Center Drive from Rancho Conejo Boulevard to approximately 500 feet south of Rancho Conejo Boulevard Street – 22% of VMT reduction for this mitigation measure or 52 VMT per day.

[8] CAPCOA, *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (August 2021) https://www.airquality.org/ClimateChange/Documents/Handbook%20Public%20Draft_2021-Aug.pdf

[9] Sacramento Metropolitan Air Quality Management District, Recommended Guidance for Land Use Emission Reductions. (p. 11) http://www.airquality.org/ceqa/GuidanceLUEmissionReductions.pdf

Electric Chargers for Bicycles and Scooters

The incorporation of electrical charging for bicycles and scooters would further encourage the use of bicycles and scooters as an alternative to vehicle travel for commute trips and trips within the site and to nearby destinations. The element effectiveness was derived from the CAPCOA Handbook measure T-21-B Implement Electric Bikeshare Program which has the potential to reduce VMT by 0.06% in the community. The reduction percentage was only applied to trips generated from the project site and not the overall community. In order to meet the level of charging capacity to reach the VMT reduction, a minimum capacity to charge two bicycles or scooters per building (30 total) would need to be installed. The 0.06% reduction applied to the site trips equates to 14 VMT per day or 0.47 daily VMT per charging capacity installed with a reasonable maximum level of reduction being the number of required EV vehicle charging stations (84). While not a major reduction in VMT, this mitigation measure would provide capacity for the facilitation for new mobility options.

Provide End of Bicycle Trip Facilities

Development design shall incorporate, at least, showers, changing rooms, and lockers, for employees who bicycle, jog or walk to work, into each industrial building included in the Shapell Conejo Summit Industrial Project. The Project component reduces VMT by providing end-of-trip facilities for the project's employees, which encourages bicycle trips in place of vehicle trips. This VMT reduction strategy is included as a mitigation measure due to the assessment of feasibility required by the Public Works Department and Building Division.

This mitigation measure can reduce as much as 4.4% VMT from vehicle travel in the plan area.[10] However, given the location of the project site, a more conservative reduction value of 0.625% reduction in VMT was used. This is based on the Center for Clean Air Policy (CCAP) guidebook attributing a 1% to 5% reduction in VMT to the use of bicycles. Based on the CCAP Guidebook, the TIAX report allots 2.5% reduction for all bicycle-related measures and a quarter of that for this bicycle parking alone. This allocates a 0.625% reduction to bicycle parking. The calculated VMT reduction due to end of trip facilities is 0.625% multiplied by the daily Project VMT of 23,192 equaling 145 VMT per day.

On-Site Facilities

Development design shall incorporate all of the following elements, with a minimum of one element per each industrial building, into the whole of the Shapell Conejo Summit Industrial Project: cafeterias, eating establishments, ATMs, day care facilities, and gyms, or other facilities as determined by the Community Development Director and Public Works Director which demonstrate they will reduce the need for mid-day driving. The requirement of this subparagraph will be deemed to be satisfied if the developer enters into a written agreement between all Shapell Conejo Summit Industrial Project properties to develop, maintain, and mutually share eating areas, cafeterias, eating establishments, ATMs, day care facilities, and gyms or other facilities as determined by the Community Development Director and Public Works Director.

[10] CAPCOA, *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (August 2021) https://www.airquality.org/ClimateChange/Documents/Handbook%20Public%20Draft_2021-Aug.pdf

The VMT reduction for this mitigation measure was calculated by estimating 20 percent of employees utilizing off-site services during the mid-day period. The average distance traveled for mid-day trips was assumed to be three miles to the Ventu Park Road/US 101 interchange (six miles roundtrip). Multiplying the six mile round trip by 20 percent utilization and 985 employees yields a daily VMT reduction of 1,182.

Provide Electric Vehicle Charging Infrastructure

This mitigation measure would install onsite electric vehicle chargers in an amount beyond what is required by the 2022 California Green Building Standards (84 EV chargers and 249 EV-capable parking spaces) at buildings with designated parking areas. This mitigation measure would reduce VMT from gas-powered vehicles and directly reduce on-road GHG emissions from the project. Each charging station is estimated to reduce gas-powered VMT by 22.7 VMT/employee which is the citywide VMT per employee in the City of Thousand Oaks from Table 1. Inclusion of employer-sponsored electric vehicle charging incentives would further support the use of the facilities and increase the feasibility of the mitigation measure. For purposes of clarity, providing an additional 35 EV chargers in an amount above the 84 EV chargers required by the 2022 California Green Building Standards would satisfy the VMT reduction requirements in full.

Together these mitigation measures reduce the Project to a less than significant condition. The mitigation measures, their estimated daily reduction in VMT from project-related trips and additional description of the mitigation measure are shown in **Table 2**. Collectively the listed mitigation measures are assessed to exceed the amount of VMT reduction necessary to bring the project to a less than significant condition. This is intended to provide flexibility in the application of feasible mitigation measures in coordination with the City of Thousand Oaks, the CEQA lead agency for the Project.

Table 2: Mitigation Measures

	Mitigation Strategy	Reduction Calculation	Estimated Daily VMT Reduction	Description
1	Provide Pedestrian & Bicycle Network Improvements	Grouped reduction assumption of 1%	(232)	Off-site pedestrian and bicycle system improvements
2	Electric Chargers for Bicycles and Scooters	Grouped reduction assumption of 0.06%	(14)	Incorporate electric charging above the Green Building Code
3	Provide End of Trip Facilities	Grouped reduction assumption of 1%	(145)	Provide End of Trip Facilities
4	On-Site Facilities	Per Employee: 1.2 VMT/day (20% employee use for an average of 6 miles)	(1,182)	Provision of an on-site cafeteria, ATMs, Gym, Daycare or other services
5	Electric Vehicle Charging Facilities	Per Charging Space: (22.7) average Citywide VMT/employee	(795)	Installation of 35 electrical vehicle chargers that exceed Green Code standards
6	Total Reduction from Feasible Mitigation Measures		(2,368)	*Sum of rows 1-5*

	Mitigation Strategy	Reduction Calculation	Estimated Daily VMT Reduction	Description
7	Daily VMT Reduction Required for Mitigation of significant Impact		788	*From Table 1 row 13*
8	Difference in Daily VMT		(1,580)	Daily VMT reduction with application of all feasible mitigation measures would reduce the impact to less than significant

For purposes of clarity, the applicant, at applicant's discretion, may choose one or more (or any combination thereof) of the mitigation measures listed herein to satisfy the VMT reduction requirements.

Potential Mitigation Measures Investigated but Not Included in Recommendation

Provide Employer-Sponsored Vanpool

This measure will implement an employer-sponsored vanpool service. Vanpooling is a flexible form of public transportation that provides groups of 5 to 15 people with a cost-effective and convenient rideshare option for commuting. The mode shift from long-distance, single-occupied vehicles to shared vehicles reduces overall commute VMT.

The CAPCOA *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* states the VMT reduction potential of this measure is up to 20.4% of employee commute VMT. However, the measure includes the capital cost of vehicle acquisition and maintenance, employee incentives, and the hiring of dedicated drivers. The administrative structure of this mitigation measure is not appropriate for a Project sitewide mitigation. Whereas it could be accomplished by individual employers, the tenants of the buildings are not currently determined and therefore this mitigation measure was deemed infeasible.

CONCLUSIONS

The Shapell Conejo Summit Industrial Project consists of 754,222 square feet of light industrial park land use. The project does not meet CEQA transportation screening criteria, thus is required to undergo a CEQA Transportation Assessment. Based on the described thresholds of significance and after analysis using transportation demand modeling of the Project area and application of Project elements estimated to reduce site-specific VMT the proposed Shapell Conejo Summit Industrial project would result in a significant transportation impact requiring mitigation to a less than significant level.

A program of feasibility mitigation measure strategies is recommended in order to reduce Project's daily VMT, which include on-site and off-site programs and physical infrastructure improvements. Collectively, these mitigation measures are assessed to exceed the amount of VMT reduction necessary to bring the project to a less than significant condition. This is intended to provide flexibility in the application of feasible mitigation measures in coordination with the City of Thousand Oaks, the CEQA lead agency for the Project.

Implementation of these mitigation measures is estimated to mitigate the Project's potential significant impact under CEQA Guidelines § 15064.3, subdivision (b) and the Proposed project would not have residual significant impacts after the implementation of all feasible mitigation measures.

Kimley»Horn

TECHNICAL MEMORANDUM

To:	Mark Anthony Bueno, PE, City of Thousand Oaks
From:	Maya Bouchet, AICP, Kimley-Horn and Associates, Inc. Trevor Briggs, PE, Kimley-Horn and Associates, Inc.
Date:	September 27, 2024
Subject:	Shapell Traffic Study

Kimley-Horn and Associates Inc. (Kimley-Horn) prepared a Traffic Study (dated March 27, 2024) for the proposed Shapell Development project located in the City of Thousand Oaks. The proposed project totals approximately 754,222 square feet of industrial park space. The Traffic Study analyzed the Shapell Development and its effects on following four neighboring signalized intersections:

- Rancho Conejo Boulevard / Hillcrest Drive
- Camino Dos Rios / Teller Road at Hillcrest Drive
- Ventu Park Road / Hillcrest Drive
- Broadbeck Drive/ Camino Dos Rios

The study was prepared with information provided by the City's Traffic Impact Mitigation Fee Nexus Study (TIMF) to address the traffic-related effects of the proposed Shapell Development. The trip generation estimates for the proposed project were based on the 11th Edition of the Institute of Transportation Engineers (ITE) Trip General Manual. The Traffic Study included a description of existing traffic conditions in the vicinity of the project area, estimated project trip generation and distribution, future traffic growth, and an assessment of project-related effects on the roadway system. Kimley-Horn conducted the assessment using the Highway Capacity Manual (HCM) methodology and the City's analysis standards.

The project description and location have not changed, and no appreciable changes have occurred in the project's vicinity that could alter the findings and conclusions of the Traffic Study. The prior findings and conclusions of the Traffic Study (dated March 27, 2024) remain valid as of the date of this letter.

EXECUTIVE SUMMARY

The proposed location for the Shapell Development in the City of Thousand Oaks totals approximately 754,222 square feet of industrial park space. This traffic impact study analyzes the Shapell Development and its impacts on four neighboring signalized intersections:

- Rancho Conejo Boulevard / Hillcrest Drive
- Camino Dos Rios / Teller Road at Hillcrest Drive
- Ventu Park Road / Hillcrest Drive
- Broadbeck Drive/ Camino Dos Rios

This Traffic Study (2023) supersedes the prior 2020 Traffic Study. The study has been prepared with information provided by the City's Traffic Impact Mitigation Fee Nexus Study (TIMF) to address the traffic-related impacts of the proposed Shapell Development in the City of Thousand Oaks. The Trip Generation Analysis was produced using the 11th Edition of the ITE Trip General Manual.

Existing (2023) Conditions

Traffic count data collected in May of 2023 was used for Existing (2023) conditions. Under these conditions, all study intersections operate at an acceptable level of service (LOS) of C or better.

Existing (2023) + Project Conditions

For the Existing (2023) + Project conditions, the study intersections would continue to operate at an acceptable LOS of C or better. Therefore, no recommended improvements are required under this condition.

Build Out (2040) Conditions

The year 2040 was chosen as the build out year in accordance with the TIMF time frame and consideration of the project's anticipated build-out. In the Build Out (2040) scenario, the project has a significant impact on the intersection of Ventu Park Road at Hillcrest Drive (PM peak hour). It is recommended to make signal timing changes to better accommodate vehicular demand. It is also recommended to change the lane assignment of the southbound approach to be a through, through, through-right approach. Improvements for this intersection are included in the City's TIMF program, thus the applicant for the Shapell Development will be required to pay traffic impact fees towards future transportation improvements that may improve LOS. It is anticipated that when the Academy Drive extension is built during future planned projects and connects to the project site, it will alleviate the traffic experienced on Ventu Park Road and therefore decrease the delay seen at the intersection of Ventu Park Road at Hillcrest Drive. The Shapell Development will be required to construct road improvements within the project boundaries for this future connection.

INTRODUCTION

The City of Thousand Oaks is the second largest city in Ventura County covering approximately 56 square miles and holding a population of 125,766 people[1]. Over the years, the City has experienced growth in both residential and employment opportunities. Companies are looking to Thousand Oaks as a viable location for business as there is more space compared to the City of Los Angeles and there is access to nearby residents.

In the 1980s, the City of Thousand Oaks adopted Specific Plan No. 7. The Specific Plan envisioned a Project, which is now ready for implementation. The Project is an industrial park that totals approximately 754,222 square feet. The site has already been graded with utilities stubbed to lots. The Project will provide site improvements such as site access improvements, parking, landscaping, and utility infrastructure. The Project site is surrounded by industrial, institutional, and open space land uses. Site access is planned from Rancho Conejo Boulevard and Conejo Center Drive. Planned projects for the future include extension of Academy Drive that will connect to Conejo Center Drive between Lots 10 and 11/12. The Shapell Development will contribute to the extension of Academy Drive by constructing road improvements within the project boundaries for this future connection. It is anticipated for the extension of Academy Drive to be completed during future planned projects.

TRAFFIC STUDY

This traffic impact study has been prepared to address the traffic-related impacts of the proposed Shapell Development in the City of Thousand Oaks. This traffic study has been conducted using traffic counts from May 2023 and the Traffic Impact Mitigation Fee Nexus Study (TIMF), completed in 2019. The TIMF Study provides build-out scenarios of the Study Area. The Trip Generation Analysis was produced using the 11th Edition of the ITE Trip General Manual.

This report includes a description of existing traffic conditions in the surrounding area, estimated project trip generation and distribution, future traffic growth, and an assessment of project-related impacts on the roadway system.

STUDY METHODOLOGY

This document analyzes study area traffic conditions under three conditions:

- Existing (2023)
- Existing (2023) + Project
- Build Out (2040)

The project study area and site location for this traffic impact study were defined by City of Thousand Oaks staff. The year 2023 is the defined year for existing conditions. Traffic volumes for the Existing (2023) conditions were collected in May 2023. Approved 2040 traffic volumes from the TIMF were used for the Build Out (2040) analysis. The City has mentioned that there will be an Academy Drive extension project that would connect to the study area but does not have a set construction date. This will be further discussed in the Build Out (2040) section.

1 https://www.toaks.org/business/economic-development/community-snapshot

Existing operations and peak hour project traffic impacts were analyzed at four intersections within the vicinity of the project. **Table 1** presents the intersections analyzed, their type of intersection control, and in which jurisdiction they are located.

TABLE 1 – STUDY AREA INTERSECTIONS

Intersection		Control	Jurisdiction
1	Rancho Conejo Boulevard at Hillcrest Drive	Signalized	City of Thousand Oaks
2	Camino Dos Rios/Teller Road at Hillcrest Drive	Signalized	City of Thousand Oaks
3	Ventu Park Road at Hillcrest Drive	Signalized	City of Thousand Oaks
4	Broadbeck Drive at Camino Dos Rios	Signalized	City of Thousand Oaks

The four intersections were selected based on the experienced high traffic volumes and their proximity to the project site. This report includes a description of existing traffic conditions, future traffic growth, and project-related impacts on the selected intersections with the purpose of developing mitigations to reduce congestion in the roadway system.

Level of Service Analysis Criteria

The study area intersections were analyzed using Synchro Version 11 to determine the Level of Service (LOS) using the Highway Capacity Manual (HCM). Under the HCM Methodology, study intersections were analyzed using HCM 2000 to be consistent with the TIMF.

Table 2 presents the average intersection delay (per vehicle), capacity ratio, and the corresponding LOS, using HCM methods.

TABLE 2 – LEVEL OF SERVICE (LOS) DEFINITIONS

HCM Value (sec/veh)	Level of Service (LOS)
≤ 10	A
> 10 – 20	B
> 20 – 35	C
> 35 – 55	D
> 55 – 80	E
> 80	F

HCM Data Source: Highway Capacity Manual, 6th Edition for Signalized Intersections

The traffic impact study guidelines utilized by the City of Thousand Oaks state that a project will have a significant traffic impact if the addition of project generated trips causes an intersection operating at acceptable LOS to operate at unacceptable LOS (lower than LOS C).

As stated in the TIMF Study, the City has established a minimum of LOS C as acceptable at study intersections identified in this report, with the exception of Rancho Conejo Boulevard at Hillcrest Drive where LOS D is acceptable. Additionally, City Council Resolution 2019-011 allows the Ventu Park Road at Hillcrest Drive intersection to operate at LOS D.

Analysis of Existing (2023) traffic conditions is based upon collected traffic counts from May 2023. The peak hour intersection counts were conducted on a typical weekday between the hours of 7:00 AM and 9:00 AM, and 4:00 PM and 6:00 PM during 2023.

EXISTING (2023) CONDITIONS

A description of study area roadways and an analysis of existing intersection operating conditions are provided in the following pages.

Study Area Roadway Descriptions

Descriptions of study area roadways that provide primary travel routes to and from the project site are provided below:

Rancho Conejo Boulevard is a six-lane divided north-south roadway at Hillcrest Drive that leads to the Project Site. North of Teller Road, Rancho Conejo Boulevard becomes a four-lane roadway. By Conejo Center Drive, Rancho Conejo Boulevard becomes a two-lane roadway. Rancho Conejo Boulevard is a designated bikeway with exclusive bike lanes on both sides of the street. The posted speed limit is 40 miles per hour north of Hillcrest Drive, and 45 miles per hour north of Lawrence Drive. Rancho Conejo Boulevard has an interchange at the Ventura (US-101) Freeway.

Hillcrest Drive is an east-west arterial roadway. West of Rancho Conejo Boulevard, Hillcrest Drive has two travel lanes in each direction and narrows to one lane in each direction as it curves to parallel the Ventura Freeway. The posted speed limit is 40 miles per hour. Hillcrest Drive links Camino Dos Rios with Rancho Conejo Boulevard and its access ramps with the Ventura (US-101) Freeway.

Ventu Park Road is a divided north-south roadway. North of Hillcrest Drive, Ventu Park Road is a four-lane roadway. Ventu Park Road has a dedicated bike lane on both sides of the street. The posted speed limit is 40 miles per hour.

Broadbeck Drive is a two-lane divided north-south roadway with right-turn pockets at the intersection. The north leg of Broadbeck Drive dead ends at Academy Drive and turns into a driveway at Camino Dos Rios.

Camino Dos Rios is a six-lane divided east-west arterial south of the project site. Camino Dos Rios is a designated bikeway with exclusive bike lanes on both side of the street. The posted speed limit is 40 miles per hour. Camino Dos Rios becomes Teller Road east of the Hillcrest Drive intersection. Camino Dos Rios provides local access to many of the commercial and industrial sites in the area.

Teller Road is a four-lane east-west roadway west of the project site. The posted speed limit is 40 miles per hour. East of Lawrence Drive, Teller Road becomes a two-lane roadway with a posted speed limit of 40 miles per hour.

Lawrence Drive is a two-lane north-south roadway. The posted speed limit is 40 miles per hour. Lawrence Drive provides local access to many of the commercial and industrial sites in the area.

Existing (2023) Intersection Operations

Figure 3 illustrates the existing lane configurations and control type at the study intersections. The existing AM and PM peak hour traffic volumes for the study intersections are illustrated on **Figure 4**.

Existing (2023) intersection peak hour operations were evaluated using the HCM methodology. The HCM results are summarized in **Table 3**. For the Existing (2023) conditions, all study intersections operate at an acceptable level of service of C or better.

HCM LOS analysis worksheets for the Existing (2023) conditions are provided in **Appendix A.**

PROJECT TRAFFIC

Project Trip Generation

Traffic volumes generated by the proposed Shapell Project were developed using the 11th Edition of the ITE Trip Generation Manual. Information regarding trip generation was taken from Industrial Park, which has the code of 130. Due to the size of the development, the intensity for the Shapell Project is 754.22 KSF. Trip generation estimates were developed using the average rates from the following time periods:

- Weekday (Daily)
- Weekday, Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 AM
- Weekday, Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 PM

Table 4 displays the trips generated from the Shapell Development.

TABLE 4 – PROJECT TRIP GENERATION

Land Use	Intensity	Daily Trips	AM Peak Hour of Adjacent Street			PM Peak Hour of Adjacent Street		
			Total	In	Out	Total	In	Out
[ITE Code] Existing Site Traffic								
130[1] Industrial Park	754.22 KSF	2,542	256	207	49	256	56	200
Proposed Subtotal		**2,542**	**256**	**207**	**49**	**256**	**56**	**200**
Internal Capture Trips		0	0	0	0	0	0	0
Driveway Volumes		**2,542**	**256**	**207**	**49**	**256**	**56**	**200**
Pass-By Trips		0	0	0	0	0	0	0
Proposed Site Trips		**2,542**	**256**	**207**	**49**	**256**	**56**	**200**

Note: Trip generation is based on ITE's Trip Generation, 11th Edition.

[1] Code 130 is used for Industrial Park areas that contain a number of industrial and/or related facilities (mix of manufacturing, service, and warehouse).

Project Trip Distribution

Project trip distribution was developed based upon input from City staff, knowledge of the local roadway network, the type of development proposed, and other land uses within the vicinity of the site. **Figure 5, Figure 6,** and **Figure 7** illustrate the trip distribution percentages and project traffic volumes for the proposed project.

EXISTING (2023) + PROJECT CONDITIONS

Project traffic was added to Existing (2023) traffic volumes at the four study area intersections and analyzed for peak hour operations. **Figure 8** illustrates the AM and PM peak hour volumes for the Existing (2023) + Project conditions. The HCM results are summarized in **Table 5**.

For the Existing (2023) + Project conditions, all study intersections operate at an acceptable level of service of C or better, based on current City criteria.

HCM LOS analysis worksheets are provided in **Appendix A.**

TABLE 5 – EXISTING (2023) + PROJECT INTERSECTION LEVEL OF SERVICE - HCM

		Existing (2023)		Existing (2023) + Project						Project Impact?
		AM	PM	AM Peak Hour			PM Peak Hour			
	Intersection	Delay[1]	Delay[1]	Delay[1]	Diff	LOS	Delay[1]	Diff	LOS	
1	Rancho Conejo Boulevard at Hillcrest Drive	18.3	25.2	18.9	0.6	B	26.5	1.3	C	No
2	Camino Dos Rios/Teller Road at Hillcrest Drive	16.1	26.2	15.8	-0.3	B	26.2	0.0	C	No
3	Ventu Park Road at Hillcrest Drive	21.7	27.7	23.0	1.3	C	28.5	0.8	C	No
4	Broadbeck Drive at Camino Dos Rios	16.9	20.3	16.4	-0.5	B	19.8	-0.5	B	No

[1] Delay recorded in seconds per vehicle

As review of **Table 5** shows, the analysis results indicate that the average delay actually decreases with the addition of project traffic at Camino Dos Rios/Teller Road at Hillcrest Drive (AM peak hour) and Broadbeck Drive at Camino Dos Rios (AM and PM peak hour). Delay at signalized intersections is calculated based on the overall average delay of the intersection. The decrease in overall average delay for the intersections is due to the addition of project traffic on the eastbound and westbound through approaches at both intersections, which have a lower delay than the overall average delay at the intersection. As a result, the overall average delay for the intersection decreases at these intersections at the peak hours noted above. The addition of project traffic marginally increased overall average delay for the other two intersections, but they are still within acceptable LOS as shown above.

BUILD OUT (2040) CONDITIONS

Build Out (2040) conditions were determined based on the TIMF Study. The TIMF Study determined Build Out (sometimes referred to as Future) volumes from the 2035 Thousand Oaks Boulevard Specific Plan. These volumes from the 2035 Thousand Oaks Boulevard Specific Plan were grown further by 0.376% annually for 5 years for a total increase of 1.88% to the year 2040 to obtain future volumes. If 2035 Specific Plan volumes were not available for the intersection location, the existing traffic volumes were grown by the growth rate factor of 0.376% annually from the year they were collected (2023) to 2040 (build out year). The Build Out (2040) conditions already include the Shapell Development but does not include the future extension of Academy Dr. As a conservative approach, if a turning movement volume produced by this process was less than the Existing (2023) volume for that movement, manual adjustments were made to assure that all forecast built-out year volumes would not be less than the Existing (2023) volumes. **Figure 9** illustrates the AM and PM peak hour volumes for the Build Out (2040) condition.

The HCM results are summarized in **Table 6**. For the Build Out (2040) all study intersections operate at an acceptable LOS except for Ventu Park Road at Hillcrest Drive (PM peak hour). HCM LOS analysis worksheets are provided in **Appendix A.**

TABLE 6 – BUILD OUT (2040) INTERSECTION LEVEL OF SERVICE - HCM

	Intersection	AM Peak Hour		PM Peak Hour		Cumulative Impact?
		Delay[1]	LOS	Delay[1]	LOS	
1	Rancho Conejo Boulevard at Hillcrest Drive	23.3	C	37.7	D	No
2	Camino Dos Rios/Teller Road at Hillcrest Drive	14.4	B	27.8	C	No
3	Ventu Park Road at Hillcrest Drive	35.8	D	60.8	**E**	**Yes**
4	Broadbeck Drive at Camino Dos Rios	14.2	B	18.8	B	No

[1] Delay recorded in seconds per vehicle

As review of **Table 6** shows, the analysis results indicate that the average delay actually decreases with the addition of project traffic at Camino Dos Rios/Teller Road at Hillcrest Drive (AM peak hour) and Broadbeck Drive at Camino Dos Rios (AM and PM peak hour). The decrease in overall average delay for the intersections is due to the addition of generated project traffic on the eastbound and westbound through approaches at both intersections, which has a lower delay than the overall average delay at the intersection. As a result, the overall average delay for the intersection decreases at these intersections at the peak hours noted above.

All study intersections continue to operate at an acceptable LOS, except for the intersection of Ventu Park Road at Hillcrest Drive (PM peak hour). Improvements for the intersection of Ventu Park Road at Hillcrest Drive are included in the City's TIMF program, thus the applicant will be required to pay traffic impact fees towards future transportation improvements that will improve LOS. Furthermore, it is anticipated that when the Academy Drive extension is built during future planned projects, it would alleviate the traffic experienced on Ventu Park Road and therefore decrease the delay seen at the intersection of Ventu Park Road at Hillcrest Drive.

Significant Impact and Recommended Improvements

In an “unmitigated” condition, the Ventu Park Road at Hillcrest Drive intersection would operate at an unacceptable LOS (PM peak hour). It is recommended to make signal timing changes to better accommodate the vehicular demand. It is also recommended to change the lane assignment of the southbound approach on Ventu Park Road at Hillcrest Drive to be a through, through, through-right approach per direction noted by the TIMF Study to accommodate traffic volumes. By applying these mitigations, Ventu Park Road at Hillcrest Drive during AM peak hour resulted in a LOS C and PM peak hour resulted in LOS D with a decrease in delay. The recommended improvements would improve LOS by one service level in the AM and PM peak hour. Under future planned projects, the extension of Academy Drive is anticipated to improve intersection LOS by reducing some of the intersection traffic volumes through Ventu Park Road at Hillcrest Drive, which should result in decreased delay to better meet intersection traffic demand. Furthermore, the Shapell Development will implement additional project components required by the City of Thousand Oaks Municipal Code, which are anticipated to reduce traffic congestion and better accommodate vehicular demand at the intersection. This may include, but is not limited to the following conditions:

- The Applicant shall provide pedestrian access network that internally links all uses and connects to all existing or planned external streets and pedestrian facilities contiguous with the project site and eliminate physical barriers such as walls, landscaping, and slopes that impede pedestrian circulation.
- The Applicant shall provide bike parking at each building and “end-of-trip” facilities for bicycle riders including bicycle racks and lockers.
- The Applicant shall construct road improvements within the project boundaries and/or dedicate easement to connect to the Hill Canyon Wastewater Treatment Plan Access Road as required by the City.

Table 7 summarizes the HCM results after mitigation. HCM LOS analysis worksheets are provided in **Appendix A.**

TABLE 7 - BUILDOUT (2040) INTERSECTION LEVEL OF SERVICE - HCM (MITIGATION)

		Build Out (2040)		Build Out (2040) + Mitigation					
		AM	PM	AM Peak Hour			PM Peak Hour

CONCLUSION AND RECOMMENDATIONS

The City of Thousand Oaks traffic impact analysis guidelines state that a significant project traffic impact occurs if the addition of project generated trips causes an intersection operating at acceptable LOS to operate at unacceptable LOS. As stated in the TIMF Study, the City has established a minimum of LOS C as acceptable at study intersections identified in this report, except for Rancho Conejo Boulevard at Hillcrest Drive and Ventu Park Road at Hillcrest Drive where LOS D is acceptable.

Under the Existing (2023) conditions, all study intersections operate at an acceptable LOS C or better.

Under the Existing (2023) + Project conditions, all study intersection would continue to operate at an acceptable LOS C or better.

In the Build Out (2040) scenario, all study intersections would continue to operate at an acceptable LOS, except for the intersection of Ventu Park Road at Hillcrest Drive (PM peak hour). It is recommended to make signal timing changes to better accommodate the vehicular demand and to change the lane assignment of the southbound approach on Ventu Park Road at Hillcrest Drive to be a through, through, through-right approach. For purposes of clarity, the applicant's fair share of roadway improvements contemplated in this report at the intersection of Ventu Park Road at Hillcrest Drive are included in the applicant's payment of City's traffic impact mitigation fees. Furthermore, the Shapell Development will implement project components required by the City of Thousand Oaks Municipal Code which are anticipated to reduce congestion in the vicinity of the project site and the four neighboring intersections. Applying the three City-required project components identified in this report is anticipated to improve LOS and better accommodate traffic volumes, thus reducing congestion at each intersection. It is anticipated that when the Academy Drive extension is built and connects to the project site, it could potentially alleviate the congestion on Ventu Park Road and therefore decrease the anticipated delay at the intersection of Ventu Park Road at Hillcrest Drive.

CALIFORNIA AMERICAN WATER

April 17, 2023

Re: Conejo Summit Water Supply Assessment

Conejo Summit,

The attached Water Supply Assessment (WSA) dated March 2023 was prepared on behalf of California-American Water (CAW) to satisfy the requirements of California Water Code Section 10910 (Senate Bill 610) for the Conejo Summit Development (Project).

As required by Senate Bill 610, this WSA assessed whether the total projected water supplies available during average, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand for the Project, in addition to CAW's existing and planned future uses. The water demands of the proposed Project were accounted for in CAW's 2015 Urban Water Management Plan for the Southern Division - Ventura County District. This WSA concluded that CAW's total projected water supplies are sufficient to meet the projected water demand for the Project.

This WSA is approved by California American Water on April 17, 2023 and is being provided to the City of Thousand Oaks as the Lead Agency for the Project to support your determination of whether water suppl ies will be sufficient to satisfy the demands of the project in addition to planned and future uses.

Should you have any concerns or require additional information regarding this WSA please contact me.

Sincerely,

Mark Reifer

1.0 INTRODUCTION

Thousand Oaks Master LLC ("Applicant") is proposing to implement the Conejo Summit Project (proposed Project), a multiple-phase business park development that would include 15 industrial buildings within the City of Thousand Oaks ("City"). The City, as the Lead Agency, has determined that the proposed project is subject to the California Environmental Quality Act ("CEQA"), and that the preparation of this Water Supply Assessment ("WSA") is required.

1.1 Purpose and Acknowledgement

This WSA was prepared on behalf of the Applicant for the proposed Project for California-American Water (Cal-Am) to satisfy the requirements of California Water Code (CWC) Section 10910 (Senate Bill 610) for this proposed Project. The proposed Project is located within the city limits of the City of Thousand Oaks and lies within Cal-Am's Ventura County District water service area. The City is the Lead Agency for the Project's environmental review, as required by CEQA.

Effective January 1, 2002, State law was amended through two companion bills to improve the link between information on water supply availability and certain land use decisions made by cities and counties. These two bills, Senate Bills 610 (SB 610) and Senate Bill 221 (SB 221) seek to promote more collaborative planning between local water suppliers and cities and counties. Both statutes require specified information regarding water availability to be provided to local decision-makers prior to approval of large development projects.[1] Both statutes also require this detailed information be included in the administrative record.[2]

While SB 610 requires preparation of a Water Supply Assessment for certain projects (as discussed in additional detail below), SB 221 requires an affirmative written verification of sufficient water supply prior to approval of certain residential subdivisions. SB 221 is intended as a "fail safe" mechanism to ensure that finding the needed water supplies to serve a new large subdivision occurs before construction begins. However, not every project that is subject to the requirements of SB 610 is also subject to mandatory water verification under SB 221. Conversely, not every project subject to SB 221 also requires the preparation of an SB 610 water supply assessment.[3] Here, the Project is not a residential subdivision requiring verification under SB 221; however, it is subject to the requirements of SB 610.

As required by SB 610, Cal-Am is responsible for assessing whether the total projected water supplies available during average, single dry, and multiple dry water years during a 20-year projection will meet the

[1] California Department of Water Resources, *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001*, October 2003.
[2] Id.
[3] Id.

projected water demand for the proposed Project, in addition to Cal-Am's existing and planned future uses. A water supplier's Urban Water Management Plan (UMWP) serves as a foundational document for a WSA. As explained in **Section 7.1** of this WSA, the water demands of the proposed Project were accounted for in Cal-Am's 2020 UWMP for the Southern Division - Ventura County District (2020 UWMP), as submitted to the California Department of Water Resources (DWR) in June 2021.[4] In addition, based on the analysis contained herein, sufficient water supplies exist to support the proposed Project.

This WSA includes the following:

- Description of the Project and proposed water demand;
- Overview of Cal-Am's water system;
- Information on Cal-Am's current and projected water demands in the Ventura County District water service area;
- Information on Cal-Am's current and projected water supplies;
- Discussion of water supply reliability;
- Comparison of water supplies and water demands for average, single dry, and multiple dry years; and
- Determination of water supply sufficiency and a description of the facilities necessary to provide additional water supplies to serve the demands of the proposed Project.

Urban Water Management Plans (UWMPs) are prepared by urban water suppliers every five years. These plans support the suppliers' long-term resource planning to ensure that adequate water supplies are available to meet existing and future water needs. The requirements for UWMPs are found in two sections of California Water Code, Sections 10610-10656[5] and Section10608.[6]

This WSA is based on information provided in the water supply and demand data from the Cal-Am Ventura County District 2020 UWMP.[7] Content from the 2020 UWMP has been updated and incorporated into this document, which reflects the supply and demand information presented in the 2020 UWMP. Additional information from other sources is also incorporated into this WSA to document supplies from all sources, including purchased water. Documentation includes identifying and quantifying water rights, contracts, and/or entitlements to the supply. Cal-Am must provide the results of the assessment to the City, as the Lead Agency, for inclusion in the CEQA document for the proposed Project. Further, as Cal-Am is a retail

6 California Water Code, Division 6 Part 2.55 §10608, Sustainable Water Use and Demand Reduction.
7 California American Water Company, *2020 Urban Water Management Plan,* June 2021.

water purveyor and receives water from the Calleguas Municipal Water District (Calleguas); information from Calleguas' 2020 UWMP[8] has been included as appropriate.

The WSA addresses the overall water supply available to meet the demands of Cal-Am's existing customers, development of the proposed Project, and other future demands within the Cal-Am Ventura County District service water service area.

1.2 Legislation

1.2.1 Urban Water Management Act

The California Urban Water Management Planning Act (UWMP Act)[9] requires all urban water suppliers with more than 3,000 connections or distributing more than 3,000-acre feet per year (afy) to complete an UWMP every five years ending in '5' and '0.' These plans support the suppliers' long-term resource planning to ensure that adequate water supplies are available to meet existing and future water needs. The requirements for UWMPs are found in two sections of California Water Code, Sections 10610-10656[10] and Section10608.[11] Every urban water supplier that either provides over 3,000 acre-feet of water annually, or serves more than 3,000 urban connections, is required to submit an UWMP.

Water Code Section 10631(d)[12] requires an urban water suppliers to comply to the following: (1) For an urban retail water supplier, quantify, to the extent records are available, past and current water use, over the same five-year increments described in subdivision (a), and projected water use, based upon information developed pursuant to subdivision (a), identifying the uses among water use sectors, including, but not necessarily limited to, all of the following: single-family residential, multifamily, commercial, industrial, institutional and governmental, landscape, sales to other agencies, saline water intrusion barriers, groundwater recharge, or conjunctive use, or any combination thereof, agricultural, and distribution system water loss.[13] This requirement provides for land use considerations to be incorporate into UWMP projections.

13 California Department of Water Resources, 2020 Urban Water Management Plan Guidebook, Appendix K. Estimating Future Water Savings from Adopted Codes, Standards, Ordinances, or Transportation and Land-Use Plans, Final March 2021. https://water.ca.gov/-/media/DWR-Website/Web-Pages/Programs/Water-Use-And-Efficiency/Urban-Water-Use-Efficiency/Urban-Water-Management-Plans/Final-2020-UWMP-Guidebook/UWMP-Guidebook-2020---Final-032921.pdf

The Ventura County District for Cal-Am does not release information on total connections; the 2020 Cal-Am Ventura County District UWMP[14] covers the Ventura County District and the two service areas it contains: Thousand Oaks and Las Posas. Combined, these two service areas exceed 3,000 customers and deliver 3,000 afy or more. The UWMP Act is administered by DWR, who is responsible for compiling data for Statewide and regional analysis and publishing the accepted documents online for public access.

The UWMP is a valuable planning document used for multiple purposes:

- Serves as a valuable resource to the community and other interested parties regarding water supply and demand, conservation, and other water related information;
- Meets a statutory requirement of the California Water Code;
- Provides a key source of information for city and county General Plans, WSAs, and Written Verifications of Water Supply;
- Supports regional long-range planning documents including City and County General Plans;
- Provides a standardized methodology for water utilities to assess their water resource needs and availability;
- Serves as a critical component of developing Integrated Regional Water Management Plans (IRWMPs); and
- Provides a resource for regional involvement in the California Water Plan.

1.2.2 SB 610

Senate Bill (SB) 610[15] amended the Public Resources Code to incorporate CWC requirements for certain types of development projects to improve the link between information on water supply availability and certain land use decisions made by cities and counties. SB 610 seeks to promote more collaborative planning between local water suppliers, cities, and counties by requiring detailed information regarding water availability to be provided to the city and county decision-makers prior to approval of specified large development projects.

Under SB 610, water suppliers must prepare WSAs for projects meeting certain size criteria for inclusion in any environmental documentation subject to the California Environmental Quality Act (CEQA).

- A proposed residential development of more than 500 dwelling units.

---

14 California American Water Company, *2020 Urban Water Management Plan,* June 2021, pp. 1-1.

15 SB 610, Costa. California Water Code, Division 6, Conservation, Development and utilization of State Water Resources, Part 2.10, §§ 10910 – 10915. Water Supply Planning to Support Existing and Planned Future Uses, effective January 1, 2002.

- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.
- A proposed hotel or motel, or both, having more than 500 rooms.
- A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.
- A mixed-use project that includes one or more of the projects specified in this subdivision.
- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500-dwelling unit project.

The criteria that trigger preparation of a WSA are listed above; this Project is a proposed industrial, manufacturing, processing plant, or industrial park having more than 650,000 square feet of floor area. A WSA is required because the proposed Project includes development of approximately 754,222 square feet of office and industrial space on lots totaling approximately 49.83 acres. The proposed Project is a commercial and industrial development, as described in more detail in the Project Description section.

Based on the above, the City has determined that the Project is a "project" as defined in California Water Code Section 10912.[16] The City has determined that the proposed Project is subject to review under CEQA[17] and the State CEQA Guidelines.[18]

This WSA reviews and makes a finding of reasonable sufficiency of water supplies that either are available or will be available to the City to meet future demands for the period from year 2023 to year 2043.

1.2.3 Other Legislation

In November 2009, the California legislature passed the comprehensive 2009 Delta/Water Legislation.[19] The package consists of five bills whose content reflects the inextricable linkages between the health of the California Delta and California's Statewide water supply management practices and policies. The bills descend directly from those goals set out in the blue-ribbon Delta Vision Strategic Plan, a December 2008 document

16 California Water Code, Division 6, Conservation, Development and utilization of State Water Resources, Part 2.10, § 10912.
17 California Environmental Quality Act (CEQA), Public Resources Code, Section 21000 et seq.
18 CEQA Guidelines, California Code of Regulations, Section 15000 et. seq.
19 2009 Comprehensive Water Legislation Package consists of four bills adopted on November 4, 2009 - SBX7-1 (Simitian) Delta Governance; SBX7-6 (Steinberg) Groundwater Monitoring; SBX7-7 (Steinberg) Water Conservation; SBX7-8 (Steinberg) Water Diversions.

with findings and recommendations for managing the Delta as a crucial component of California's water supply system.

The 2009 Delta/Water Legislation—in codifying policies such as a 20 percent per capita urban use reduction target, mandatory monitoring of groundwater levels, new measuring requirements for agriculture, enhanced penalties for improper diversion, alongside establishing a new governance structure for the Delta—directly implements some of the Delta Vision Strategic Plan's most important recommendations.

Of the five bills identified in the 2009 Delta/Water Legislation package, the Urban and Agricultural Water Conservation bill (SBX7-7)[20] would have the greatest influence on the City, Calleguas, and Metropolitan Water District of Southern California (MWD). This bill establishes a Statewide urban water conservation target of 10 percent by 2015 and 20 percent by 2020. This target is consistent with the Governor's February 2008 proposal and is part of the legislation recommended by the Delta Vision Strategic Plan.[21] SBX7-7 also provides options for how water agencies can achieve higher levels of water conservation but requires those options to meet a per capita reduction in water use.

1.2.4 Emergency Drought Actions

As climate change-induced extreme weather continues to disrupt California's water system, the State Water Resources Control Board (SWRCB) has adopted emergency regulations that prohibit certain wasteful water use practices Statewide and encourages water suppliers and Californians to monitor water use more closely while building habits to use water wisely and make conservation a way of life.

On July 8, 2021, Governor Newsom issued Executive Order N-10-2, calling on all Californians to voluntarily reduce water use by 15 percent from 2020 levels. Calleguas Municipal Water District (Calleguas) declared a Level 2 Water Shortage (10 – 20 percent use reduction) and requested the implementation of measures across its service area sufficient to conserve 15 percent of water when compared to 2020.

On January 4, 2022, the State Water Board adopted its first emergency regulation of 2022 that prohibits certain wasteful water use practices Statewide and encourages Californians to monitor their water use more closely while building habits to use water wisely. On January 18, 2022, the emergency regulation went into effect.

On March 28, 2022, Governor Newsom issued Executive Order N-7-22, requiring each urban water supplier to undertake Level 2 measures to reduce water usage by 20 percent. The order also directed the Department

20 California Department of Water Resources, Water Conservation Act of 2009 (Senate Bill X7-7), November 2009.
21 California Resources Agency, *Delta Vision Strategic Plan,* October 2008.

of Water Resources (DWR) to develop emergency regulations defining and banning the irrigation of non-functional turf (ornamental turf) in commercial, institutional, and industrial sectors.

On April 26, 2022, MWD declared a Water Shortage Emergency Condition and adopted an Emergency Water Conservation Program for service areas that depend on supplies from the State Water Project (SWP). On April 27, 2022, Calleguas adopted Resolution No. 2042 declaring a Water Shortage Emergency Condition and adopted an Emergency Water Conservation Program to reduce non-essential uses of water and preserve available water supplies for the greatest public benefit in their service area.

On May 24, 2022, SWRCB adopted a second Statewide emergency water conservation regulation that bans using potable (drinkable) water on decorative or non-functional grass at commercial, industrial, and institutional properties – including areas of nonfunctional turf under homeowners' association control. It went into effect on June 10, 2022. It also requires urban water suppliers to implement all demand-reduction actions under Level 2 of their Water Shortage Contingency Plans. It will remain in effect for one year from the effective date, unless the Board modifies it, readopts it, or ends it before then.

Additionally, on June 1, 2022, Cal-Am implemented additional emergency conservation measures for Ventura County District customers in Thousand Oaks, Newbury Park, and Camarillo. Customers are directed to follow water conservation measures including watering limited to one designated day per week, watering restricted to certain times of day, and limits on the length of watering times.

On December 21, 2022, the State Water Board readopted the emergency regulation and it will remain in effect for one year from the effective date, unless the State Water Board modifies it, readopts it, or ends it before then.

SWRCB conservation requirements are listed in the table below. There are also requirements not listed here. Column A lists prohibitions on the use of potable water that apply to all Californians. Column B lists additional requirements for urban water suppliers. This table was updated on July 28, 2022.

State Water Board Water Conservation Requirements
Effective July 28, 2022

EFFECTIVE DATE	A. PROHIBITED FOR ALL CALIFORNIANS	B. ADDITIONAL REQUIREMENTS FOR URBAN WATER SUPPLIERS
[1] Effective until January 2023	• Outdoor watering that lets water run onto sidewalks and other areas (except incidental runoff) • Washing vehicles without an automatic shutoff nozzle • Washing hard surfaces like driveways or sidewalks that do not absorb water • Street cleaning or construction site preparation • Filling decorative fountains, lakes, or ponds • Outdoor watering within 48 hours after at least 1/4 inch of rainfall • Watering ornamental turf on public medians	• Follow all prohibitions in column A • If needed, exercise authority to adopt more stringent local conservation measures
[2] Effective until June 2023	• Watering non-functional lawns in commercial, industrial, and institutional areas, including common areas of homeowners' associations (HOAs)	• Follow all prohibitions in column A • Implement all local Level 2 demand reduction actions [*] • If needed, exercise authority to adopt more stringent local conservation measures
Enforcement	• All water use prohibitions in column A are "infractions," and any organization that already has the authority to enforce infractions may do so; this may include local water suppliers and cities. Violations may be punishable by a fine of up to $500 per day.	

[1] = These requirements are from the first water conservation emergency regulation of 2022 that became effective on January 18, 2022 and is in effect for one year from the effective date, unless the State Water Board modifies, readopts, or ends it before then.

[2] = These requirements are from the second water conservation emergency regulation of 2022 that became effective on June 10, 2022 and is in effect for one year from the effective date, unless the State Water Board modifies, readopts, or ends it before then.

[*] = "Level 2" refers to the second level of urban water suppliers' water shortage contingency plan as defined by the State. Local water suppliers may use different words and definitions to indicate water shortage levels, such as stages or phases. Check with your local water supplier to know what is required by your supplier's Level 2. Local suppliers should have a "crosswalk" diagram that compares the State's Levels and local levels.

1.3 California American Water Company

1.3.1 Cal-Am System Description

Cal-Am is a privately owned public utility providing water services to over 630,000 people in 50 communities throughout California. Cal-Am is regulated by the California Public Utility Commission (CPUC), CPUC Utility #U210W. Therefore, its facilities, operations, and financial structure (including customer rates) are subject to extensive regulation by the CPUC, as well as environmental, health, safety, and water quality regulations by federal, State, and local governments. The CPUC sets rules and regulates public utility companies in California. The intent of the regulations set by the CPUC is to ensure provision of high-quality water service at a fair price. All increases in service rates are directly related to the cost of providing quality service and are subjected to a public review process and approval by the CPUC.

Cal-Am is operated by three Division Offices: Northern Division, Central Division, and Southern Division. The Northern Division includes the Sacramento County and Larkfield Districts, the Central Division includes the Monterey County District, and the Southern Division includes the Ventura County, Los Angeles County, and San Diego County Districts.

The Cal-Am Ventura County District contains three Public Water Systems (PWSs) – Thousand Oaks, Las Posas Valley, El Rio, and Piru; PWSs are the systems that provide drinking water for human consumption. These systems are regulated by SWRCB, Division of Drinking Water (DDW) with separate operating permits.

The Cal-Am Ventura County District service area covers approximately 31.4 square miles and is located within southern Ventura County along Highway 101, northwest of Los Angeles. The service areas consist of 1) approximately one half of the City of Thousand Oaks (25 square miles) and 2) portions of unincorporated Ventura County identified as Las Posas Valley (1.6 square miles), El Rio (2.0 square miles), and Piru (2.8 square miles). Of the 2020 Cal-Am Ventura County District UWMP, the Cal-Am Ventura County District had acquired the El Rio water system and the Piru water service area. Combined, the service areas exceed 3,000 customers and deliver 3,000 afy or more.

1.3.2 Cal-Am Ventura County District 2020 Urban Water Management Plan

The Cal-Am Ventura County District 2020 UWMP for Cal-Am's Southern Division Ventura County District[22] is the current applicable document for use in planning future water demand and supplies.

Cal-Am's 2020 UWMP was prepared based on guidance from the DWR 2020 Urban Water Management Plans Guidebook for Urban Water Suppliers (UWMP Guidebook).[23] The Final 2020 Southern Division Ventura County District UWMP was formally adopted by California American Water on June 16, 2021.

Cal-Am is a member of the California Urban Water Conservation Council (CUWCC) and is a signatory to the CUWCC Memorandum of Understanding (CUWCC MOU).[24] The CUWCC MOU outlines Best Management Practices (BMPs) that correspond with the Demand Management Measures (DMM) outlined in the UWMP Act. The UWMP Act allows CUWCC members to submit their CUWCC BMP reports in lieu of completing a DMM section if the member is in full compliance with the BMPs.

1.4 Calleguas Municipal Water District

1.4.1 Overview and Description

Calleguas is an independent special district that was formed by the voters of southern Ventura County in 1953 for the purpose of providing a safe, reliable water supply. Named for the watershed in which it is located, Calleguas is a public agency established under the Municipal Water District Act of 1911.[25] It is governed by a five-member board of directors elected by voters to represent each of the five geographic divisions within the Calleguas service area.

In 1960, Calleguas became a member agency of MWD, which provides wholesale water from the Colorado River via the Colorado Aqueduct and from northern California via the State Water Project (SWP). Metropolitan is comprised of 26 member agencies and Calleguas is the fifth largest member agency in terms of average annual water deliveries.
