Approximately three-quarters of Ventura County residents rely on Calleguas for all or part of their water. Calleguas distributes high quality drinking water on a wholesale basis to 19 cities, local water agencies, and investor-owned and mutual water companies throughout southeast Ventura County. These retail purveyors receive water through 140 miles of large-diameter pipeline operated and maintained by Calleguas. In turn, these purveyors deliver water to area residents, businesses, and agricultural customers. Only a small portion of the water delivered by Calleguas (approximately 5 percent) is used for agricultural purposes. Agricultural demands are generally met by other agencies or private entities using untreated surface water, recycled wastewater, and groundwater from various basins underlying the area.

Calleguas' mission is to provide its service area with a reliable supplemental supply of regional and locally developed water in an environmentally and economically responsible manner. All but one of the major cities in Ventura County rely upon Calleguas to provide a reliable imported water source to meet municipal and industrial water demands. Calleguas' primary job is importing and distributing water from MWD, water that arrives via SWP from northern California. To increase reliability, Calleguas can also pump water from its Las Posas Aquifer Storage and Recovery Project (Las Posas ASR Project) well field.

Figure 2: Calleguas Service Area shows Calleguas' service area and purveyor boundaries. Calleguas' service area encompasses approximately 366 square miles. Land use in the area is primarily residential, commercial, industrial, and agricultural. Although a large portion of the water use in Ventura County is for agricultural

purposes, these demands are generally served by other agencies or private entities using untreated surface water, recycled wastewater, and groundwater from various basins underlying the area.

1.4.2 Calleguas 2020 UWMP

Water planning is an essential function of water suppliers but becomes critical as California grapples with ongoing drought and expected long-term climate changes. Prior to the adoption of the UWMP Act,[26] there were no specific requirements that water agencies conduct long-term resource planning.

UWMP components that are required to be addressed and evaluated include:

- Water deliveries and uses
- Water supply sources
- Efficient water uses
- Demand management measures
- Water shortage contingency planning

The Final 2020 Calleguas UWMP was formally adopted by the Calleguas Board of Directors on June 16, 2021.[27]

1.5 Climate

The City of Thousand Oaks has a Mediterranean climate as evidenced by warm dry summers followed by moist, cool winters. Maximum summer temperatures can exceed 100 degrees Fahrenheit and winter temperatures occasionally drop below 32 degrees Fahrenheit. Average rainfall ranges from 12 to 14 inches. The majority of this rainfall occurs during the winter months.

Table 1: Precipitation and Evapotranspiration in the Ventura County Area – 2021/2022 Water Year presents monthly climate data in more detail.

1.6 Service Area Population

In the greater Southern California region, the population growth rate from 2015 to 2020 is an extension of the slow growth pattern observed during the 2000-2010 period. According to estimates by the California Department of Finance, California's population grew by 7.3% (or 2.7 million) from 2010 to the end of 2019.[28] Ventura County's estimated population is 851,297 with a growth rate of 0.02% in the past year according to the most recent United States census data.[29]

Every five years, agencies are required to update their UWMPs by CWC Section 10621.[30] This includes the most up to date population growth projections. The historical, current, and projected populations for Cal-Am's Ventura County District water service area within the City of Thousand Oaks and adjacent unincorporated area of Ventura County are shown in **Table 2: Historic, Current, and Projected Cal-Am's Ventura County District Service Area Population – 2020 to 2045**. It is not anticipated that the commercial

and industrial use on the proposed Project will result in significant number of new permanent residents within the Ventura County water service area in excess of these projections.

1.7 Definitions

For the purposes of this WSA, the following defined terms are used:

- Purchased Water: The amount of water purchased from Cal-Am's wholesale supply sources and put into the distribution system based on metered flows at each supply connection.
- Groundwater Production: The amount of water produced from Cal-Am groundwater supply sources and put into the distribution system based on metered flows at each well.
- Consumption: The amount of billed metered water consumed by customers.
- Demand: The amount of water distributed through the entire water system, which is the sum of groundwater production and purchased water. Demand includes non-revenue water, which is equal to the difference between water put into the distribution system and consumption.
- Unit Factor: The calculated amount of water demand per unit (e.g., acre, square feet: sq. ft or SF, dwelling unit, etc.) of a specific type of use (e.g., land use, development type, business type, etc.).

2.0 PROPOSED PROJECT

The proposed Conejo Summit Project (proposed Project) would provide for the development of a business park in the Conejo Specific Plan No. 7 planning area of the City.

2.1 Project Location

The Project Site is located near the western boundary of the City within the northwestern portion of the Rancho Conejo Industrial Area, approximately 1 mile north of the 101 Freeway. It is bounded by Rancho Conejo Boulevard, Corporate Center Drive, and Conejo Spectrum Street. Currently there is no address for the Project Site. **Figure 3: Project Location** shows the location of the Conejo Summit Project within the City.

The Project Site is located entirely within the City's Specific Plan No. 7 planning area, in the northwestern portion of the existing Rancho Conejo Industrial Area. Land that is owned and managed by the Conejo Open Space Conservation Area ("COSCA") is located to the north and west of the Project Site. Industrial development is located northeast of the project site as well as to the south and west of the parcels that would be developed, including the City's Municipal Service Center ("MSC").

The proposed Project Site consists of approximately 49.83 acres. The site includes the following assessor parcels: Parcel 1 – 667-0-340-045, 055, 065, 075, 085, 095, 105, 125, 135, 145, 155, 185; 195 and Parcel 2 – 667-0-340-030. Primary access to the proposed buildings would be from Rancho Conejo Boulevard and Conejo Center Drive.

Nearby land uses as identified in the City of Thousand Oaks General Plan include "Industrial," "Institutional," and "Existing Parks and Open Space." Adjacent to the Project Site to the north and west is land that is owned and managed by COSCA. Industrial development is located northeast of the project site as well as to the south and west of the parcels that would be developed, including the City's MSC.

2.2 Site Background and Existing Conditions

Specific Plan No. 7, which was originally adopted in 1983, covers approximately 1,862 acres of land.[31] Specific Plan No. 7 has been amended multiple times, most recently in January 2015 and again in October 2015.

Specific Plan 7 Amendment 15, which was adopted January 12, 2015, predesignated property under planning unit Q to Employment Park and evaluated the environmental impacts of the contemplated uses under that designation.[32] Specific Plan 7 Amendment 16, which was adopted October 20, 2015, changed planning unit 5 from High Density Residential to Employment Park. The City evaluated the environmental impacts of the contemplated uses under that designation.[33]

Currently, the southern portions of the Rancho Conejo Industrial Area have been developed resulting in a biotech corridor with companies such as Amgen and Teledyne Technologies. These companies make up the majority of the industrial businesses in the City. As of 2017, the Rancho Conejo Industrial Area contains over 120 industrial buildings ranging from 5,000 SF to 127,000 SF, with a vacancy rate of less than two percent.[34]

In 2000, the area was graded, and infrastructure such as streets, sidewalks, and utilities were installed to prepare for future buildings. Specific Plan No.7 designates the parcels as Employment Park and is zoned Industrial Park (M-1). The Project Site is currently vacant and unimproved, aside from basic infrastructure and utilities.

2.3 Project Characteristics

The proposed Project will consist of 15 buildings totaling approximately 854,222 square feet of office and manufacturing areas across 16 privately owned parcels, totaling in 49.83 acres (2,170,594.80 square feet). The 16 parcels include previously created lots that are in three separate clusters. Landscaping would be installed on each lot. The details of the proposed Project are shown in **Table 3: Conejo Summit Project Details**. The proposed site plan is shown in **Figure 4: Conejo Summit Site Plan**.

The lots are in three separate clusters: on the western side of Conejo Center Drive just northwest of the intersection of Conejo Center Drive and Conejo Spectrum Street; along the eastern side of Conejo Center Drive from Conejo Spectrum Street up to Rancho Conejo Boulevard; and north of the intersection of Conejo Center Drive and Rancho Conejo Boulevard, extending west to a parcel at the end of Rancho Conejo Boulevard. The application includes two proposed Vesting Tentative Tract Maps (VTTM) that will reconfigure the existing lots. No new lots are proposed.

Utility hookups would be installed from existing lines within the streets to the proposed buildings. Landscaping would be installed on each lot.

2.4 Project Water Demand and Regulatory Requirements

Because the proposed Project will exceed the requirements of SB 610 and consists of a proposed industrial, manufacturing, processing plant, or industrial park having more than 650,000 square feet of floor area, it is subject to the requirements of SB 610 and this water supply assessment has been prepared.

Water demands were estimated for the proposed Project's water use factors obtained from other water suppliers and other WSAs with comparable uses, including the Los Angeles Department of Water and Power and the Cal-Am Southern Division – Los Angeles County District. Water use for the proposed Project was calculated for the uses identified.

Table 4: Proposed Project Water Demand shows the total estimated water demand for the proposed Project for each component. Based on anticipated operations of the proposed Project, annual water demand includes the following:

- Office and Manufacturing: 5.5 days per week (5-day work week plus 0.5 day of weekend time) for 52 weeks for a total of 58.06 acre-feet per year (afy); and
- Landscaping: up to 3 days of exterior water use per week for 52 weeks for a total of 17.24 afy.[35]

The total estimated annual water demand for the prosed Project is 75.30 afy.

35 The exterior/landscape water demands are consistent with the landscape water efficiency standards are governed by the Model Water Efficient Landscape Ordinance (MWELO) enacted in 2015 via Executive Order B-29-15 (EO) that tasked the Department of Water Resources (DWR) with revising the 2010 updated MWELO to increase water efficiency standards for new and retrofitted landscapes through encouraging the use of more efficient irrigation systems, graywater usage, and onsite storm water capture, and by limiting the portion of landscapes that can be covered in turf. The EO also required that agencies report on their implementation and enforcement of local ordinances by December 31, 2015. The law directs Land Use Authorities (cities and counties) to ensure MWELO compliance on development projects with landscaped areas of 500 square feet or more. This applies to residential, commercial, industrial, and institutional projects that require a permit, plan check, or design review. Land Use Authorities are responsible for enforcing the ordinance. The City of Thousand Oaks has incorporated its requirements into the Municipal Code, Title 10, Utilities, Chapter 2, Water, Article 11, Water Conservation.

3.0 WATER SUPPLY SOURCES

3.1 Overview

This report addresses the requirements of Section 10910 of the California Water Code (SB 610) for the proposed Project in the City of Thousand Oaks and within Cal-Am's service area. The CWC requires a WSA be prepared for any "project" that would consist of one or more of the following:

- A proposed residential development of more than 500 dwelling units.
- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.
- A proposed hotel or motel, or both, having more than 500 rooms.
- A proposed industrial, manufacturing, processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.
- A mixed-use project that includes one or more of the projects specified in this subdivision.
- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500-dwelling unit project.

As previously noted, the proposed Project is a commercial and industrial development, as described in more detail in the Project Description section. The proposed Project includes future development of approximately 754,222 square feet of mixed-use office and industrial space across 15 buildings which surpasses the SB 610 criteria of an industrial park planned to have more than 650,000 square feet of floor area. The City has determined that the Project is subject to review under CEQA[36] and the State CEQA Guidelines.[37]

As the proposed Project would be constructed by and start operation in 2023, the WSA both reviews and makes a finding of meet future demands for the period 2023 to 2043.

3.2 Calleguas Municipal Water District

3.2.1 Water Supply and Demand

In 1960, Calleguas became a member agency of the MWD, which provides wholesale water from the Colorado River via the Colorado Aqueduct and from northern California via the SWP. MWD is comprised of 26 member agencies and Calleguas is the fifth largest member agency in terms of average annual water

deliveries. Nearly all of the potable water delivered by Calleguas to its member purveyors is purchased from MWD.

MWD's overall supply and demand projections for their member agencies and service area, including Calleguas, are for 2020 to 2040 and shown in **Table 5: Local Supplies for Normal and Dry Years (acre-feet).**

3.2.2 Imported Water

In 1953, faced with recurring droughts and an expanding population and economy that would soon exhaust local drinking water supplies, voters in southern Ventura County united to form Calleguas for the purpose of providing the region with a reliable supply of high-quality supplemental water. Finding a dependable water source for a semiarid region such as Ventura County was no simple feat: adequate rainfall is unreliable, rivers are seasonal, and groundwater is often brackish and unsuitable for both urban and agricultural uses. Due to the geographic location of its service area, Calleguas receives exclusively SWP water under normal operating conditions. The SWP is a 700-mile network of reservoirs, aqueducts, and pumping facilities that convey water from the northern Sierra Nevada Mountain Range to Northern California, the San Francisco Bay Area, the San Joaquin Valley, the Central Coast, and Southern California.

Following a thorough evaluation of potential water sources, MWD turned to the planned SWP's system of canals, reservoirs, and pumping plants to be built to convey water captured from the snow-covered peaks of the Sierras to many regions throughout the State. To secure water from the State system, voters approved another ballot measure in 1960 so that Calleguas could join MWD, a State water contractor.

Water delivered to Calleguas is treated by MWD at the Joseph Jensen Filtration Plant in Granada Hills and is typically delivered to Calleguas through MWD's West Valley Feeder No. 2 Pipeline. The West Valley Feeder No. 2 Pipeline is capable of delivering up to 300 cubic feet per second (cfs) of water to the East Portal of Calleguas' eight-foot-diameter Perliter Tunnel. The East Portal is located in the City of Chatsworth and is Calleguas' sole connection to MWD.

From this point, water is conveyed through the Perliter Tunnel into Simi Valley, where it is distributed through Calleguas' transmission system, stored in Lake Bard, or injected into the Fox Canyon aquifer. During planned and emergency shutdowns of imported supply, Lake Bard and the Las Posas ASR Project provide reliable water supplies to Calleguas' customers.

Lake Bard is located in the center of the Calleguas service area and can store approximately 10,500 AF of water, of which 7,500 AF is readily available with existing facilities. Water stored in Lake Bard is treated at the Lake Bard Water Filtration Plant (LBWFP), which has a treatment capacity of 65 million gallons per day (mgd). Water from the LBWFP can be delivered anywhere in Calleguas' service area.

The Las Posas ASR Project is located west of Moorpark and can store an estimated 50,000 AF of water in the Fox Canyon aquifer of the East Las Posas Basin through injection into 18 dual-purpose injection and extraction wells. Water stored in the aquifer is pumped out through the same eighteen wells, disinfected, and delivered into Calleguas' transmission system. Currently, water from the Las Posas ASR Project can be delivered to Camarillo, Moorpark, Somis, Oxnard, Port Hueneme, and nearby unincorporated areas. A pump station is

fully operational as of 2019[38] that enables the Las Posas ASR Project water to be delivered to Calleguas' entire service area.

Per the 2020 UWMP for the Ventura County District, Cal-Am provides domestic water to western Thousand Oaks, Newbury Park, and an unincorporated area north of Camarillo. The entire supply is potable water from Calleguas' imported supply,[39] except for the El Rio system which is supplied by local groundwater and not by Calleguas imported water.

3.2.3 Groundwater Basin Description/Supply

Groundwater has been used in Ventura County since the late 19th century, primarily for irrigation, but also for municipal and industrial water supply. With the passage of California's Sustainable Groundwater Management Act (SGMA) in 2014, prudent management of the State's critical groundwater basins is now a primary water resource concern and mandated by State law. SGMA required adoption of groundwater water sustainability plans by January 31, 2020, for all basins defined by the State as either a high or medium priority, and subject to critical overdraft. All other high or medium priority basin plans will be adopted by January 31, 2022.

Historically, the aquifer system in southern Ventura County has been in a state of overdraft, which has led to seawater intrusion. The non-consumptive portion of imported water utilized by the majority of Calleguas purveyor customers is treated at local wastewater treatment facilities and discharged to the Calleguas Creek watershed. This water ultimately percolates into the aquifers, serving as an important source of recharge. Unfortunately, over the past several decades, wastewater discharges, urban and agricultural runoff, applied irrigation, and native marine sediments have caused the aquifers to become increasingly saline. Increasing chloride concentrations have rendered many wells unsuitable for potable or irrigation purposes.

Calleguas participates in the Metropolitan Cyclic Storage Program, which allows for the purchase and storage of imported water when there is a surplus, and this allows Calleguas to potentially increase supplies for use during outages and drought periods.[40] Calleguas has incorporated groundwater storage strategies and transfer agreements into its water resources portfolio; all groundwater is stored in the East Los Posas Basin.[41] In addition to the Las Posas ASR Project, Calleguas has periodically stored water through in lieu means since the early 1990s. Under this storage method, Calleguas has supplied imported water to well operators who, in turn, reduce groundwater pumping. The reduction in pumping results in the creation of storage credits.

41 Calleguas Municipal Water District, *2020 Urban Water Management Plan*, June 2021, pp. 6-5.

Such storage credits are then transferred to Calleguas. In this way, groundwater can be stored and subsequently pumped during periods when imported supplies are curtailed. However, Calleguas does not pump water from the Las Posas Basin.[42] The Las Posas ASR is used for storage of imported water.[43]

Calleguas also accumulated additional groundwater storage credits through the Conejo Creek Diversion Project (CCDP).[44] The CCDP consists of a diversion structure and pipelines that were jointly constructed by Calleguas and the Camrosa Water District (Camrosa). Recycled wastewater from the City of Thousand Oaks is diverted from Conejo Creek and used for agricultural and landscape irrigation within Camrosa Water District's service area. Water that is not used within the Camrosa Water District is provided to the Pleasant Valley County Water District for agricultural irrigation in lieu of groundwater pumping. In return, Calleguas received groundwater storage credits from Fox Canyon Groundwater Management Agency (FCGMA) equal to the amount of water delivered. By agreement, historically some of these credits were pumped from wells operated by the United Water Conservation District (UWCD) to meet demands in the Cities of Oxnard and Port Hueneme. In 2014, Calleguas turned over all of its project facilities and obligations to Camrosa but retained the groundwater storage credits that it had accrued as a project participant up to that time.

As a result of drought conditions, Calleguas extracted stored water to help meet regional water demands from 2008 through 2011.[45] From 2011 through 2020, Calleguas steadily increased its stored water primarily via direct injection of imported water through the Las Posas ASR Project.[46] Calleguas is actively working with other groundwater pumpers in the Las Posas basins to develop a sustainable groundwater management plan consistent with SGMA that mitigates impacts on adjacent groundwater pumpers due to future operation of the Las Posas ASR Project.

As noted, all of the groundwater deliveries are provided on the Oxnard Plain, and not to the Cal-Am service area in the City of Thousand Oaks and Newbury Park.

3.2.4 Recycled Water and Desalinated Water

Recycled Water

Calleguas has actively supported the development and use of recycled wastewater within its service area. In the 1990s, Calleguas built recycled water delivery systems within the Conejo and Simi Valleys, and continues to own, operate, and maintain those facilities.

In the 2000s, Calleguas built recycled water facilities as a participant in the CCDP, as previously noted. The CCDP consists of a diversion structure and pipelines that were jointly constructed by Calleguas and Camrosa. Recycled wastewater from the City of Thousand Oaks is diverted from Conejo Creek and used for agricultural and landscape irrigation within Camrosa Water District's service area. Water that is not used within the Camrosa Water District is provided to the Pleasant Valley County Water District for agricultural irrigation in-lieu of groundwater pumping. As previously noted, Calleguas turned over ownership, operation, and maintenance of those facilities to Camrosa Water District in 2014.

In 2016, Calleguas began conveying treated wastewater from the City of Oxnard Advanced Water Purification Facility (AWPF) to agricultural customers for irrigation in lieu of groundwater pumping. The AWPF water is transported through the SMP, which is currently operating at very low capacity as a brine discharge facility. Because the AWPF water is extremely low in salinity, even when blended with the brine discharge in the SMP, it provides water of a quality suitable for agricultural irrigation. This activity is expected to continue until Oxnard builds a permanent pipeline to convey the water to these agricultural customers.

Calleguas has historically purchased recycled water from Triunfo Sanitation District and VCWWD No. 8 (City of Simi Valley) and delivered the water to customers for irrigation and landfill activities. Calleguas also conveys recycled water from the City of Oxnard AWPF to agricultural customers in an unincorporated area east of Oxnard. Calleguas does not provide any supplemental treatment to the recycled water it distributes.

Calleguas sold its interest in the recycled water systems in the Oak Park, North Ranch, and Lake Sherwood areas to Triunfo Water and Sanitation District in 2017. However, Calleguas currently owns a small pipeline that provides recycled water to the City of Simi Valley (VCWWD No. 8). Although this facility was projected to have been transferred to VCWWD No. 8 in 2020, this has not yet occurred. However, the City of Simi Valley is expected to take ownership, operation, and maintenance of this facility in the future.[47]

47 Calleguas, *2020 Urban Water Management Plan*, June 2021, pp. 6-9.

The Ventura County District does not own or operate wastewater collection, treatment facilities, or recycled water distribution facilities.[48] However, the wastewater collection and treatment agencies for both of the Ventura County District's service areas are currently recycling wastewater. The Ventura County District is continually looking for opportunities and working with its regional partners to increase the use of recycled water within the service area.

Seawater Desalination

In 2000, the MWD created the Seawater Desalination Program (SDP) and solicited projects from its member agencies. Calleguas does not currently utilize desalinated water and has no plans to pursue such at this time.

3.2.5 Written Contracts or Other Proof of Entitlement

As a member agency of MWD, Calleguas benefits from transfer agreements made through MWD. To date, Calleguas has not pursued independent transfer agreements.

3.2.6 Water Sources

The Cal-Am Ventura County District purchases its entire supply of water from Calleguas for the service area in the western portion of the City of Thousand Oaks and the adjacent unincorporated area.

Calleguas Municipal Water District

Calleguas is a wholesale water agency that delivers water to Cal-Am's Ventura County District. Calleguas' service area is shown in **Figure 2**. Calleguas' primary source of water is SWP water purchased from MWD. Typically, Calleguas delivers water from MWD directly to its retail customers. However, Calleguas has the ability to store excess water from MWD and local supplies in Lake Bard or at its Las Posas ASR well field for future delivery. Calleguas is working with other local agencies to increase the utilization efficiency of its local water supplies and is participating in numerous groundwater and desalination projects to reduce its reliance upon imported water.

Table 6: Calleguas Planned Sources of Supply (2025-2044) shows the planned sources of supply for Calleguas. For the years included in the 20-year forecast in this WSA for the proposed Project (2044), the amount shown has been extrapolated for comparison purposes only. The extrapolation for future water supplies or years 2040 and 2044, where applicable, did not assume any increase in supply beyond the projection of either Cal-Am in the 2020 UWMP or Calleguas in their 2020 UWMP. Further, the future demands

and deliveries for 2040 and 2044 assumed that Cal-Am would achieve the same demand requirements as for 2035 via ongoing conservation measures, as required under current legislation and through future improvements.

3.3 Cal-Am Ventura County Water District

Cal-Am's Ventura County District purchases all of its water from Calleguas, as shown in **Table 7: Cal-Am Ventura County District Potable Water Supply Projections to (2020-2045)**. For the years included in the 20-year forecast in this WSA for the proposed Project (2023, 2040 and 2043), the amounts shown have been extrapolated for comparison purposes only. The amounts for 2023 were extrapolated based on a straight-line project from year 2020 to year 2025, while out year extrapolations (years 2040 and 2043) were done on a straight-line basis using the year 2035 amounts.

Cal-Am's Ventura County District purchases all of the potable water required to meet the service area demands from Calleguas. There is no maximum or minimum water purchase amount with Calleguas. However, Cal-Am does not maintain a purchase order or agreement with Calleguas, noting that Calleguas does not have this concept of agreement/purchase orders for water delivery.[49]

3.3.1 Surface Water

The Cal-Am Ventura County District does not have its own surface water supply. Sources of supply for the wholesale water agencies that supply Cal-Am's Ventura County District are discussed in **Section 2.2**. Currently, the water is delivered through eleven turnouts. Ten of the turnouts distribute water into the Thousand Oaks service area where the proposed Project is located, and one turnout feeds the Las Posas service area; the El Rio system has two groundwater wells that service customers.

3.3.2 Groundwater

Cal-Am does not extract groundwater due to the poor quality of the groundwater within the Thousand Oaks and Los Posas service areas. Contaminant plumes from local industries have required Cal-Am to import all of its potable water supplies to those service areas. In El Rio, Cal-Am extracts groundwater through two wells to provide service to its customers.

3.3.4 Recycled Water Opportunities

Cal-Am does not own or operate wastewater collection, treatment facilities, or recycled water distribution facilities. However, the wastewater collection and treatment agencies for Cal-Am Ventura County District's service areas (Thousand Oaks, Las Posas Valley, and El Rio) are currently recycling the wastewater or will be considering recycled water in the near future. Cal-Am is continually looking for opportunities and working with its regional partners to increase the use of recycled water within the service area.

Wastewater System Description

Wastewater produced within Cal-Am's Ventura County District's service area is treated by two separate agencies. The City of Thousand Oaks treats the wastewater produced from the Thousand Oaks service area at the Hill Canyon Treatment Plant and the City of Oxnard treats wastewater from users within Cal-Am's Las Posas and El Rio service areas at the Oxnard Wastewater Treatment Plant. The Hill Canyon Treatment Plant treats approximately 98 percent of the Cal-Am's wastewater; however, this water is not available to the City of Thousand Oaks or Newbury Park portions of the Cal-Am service area.

Recycled Water Use Optimization

The largest potential use for recycled water within Cal-Am's Ventura County District is for landscape irrigation at public parks, golf courses, government offices, schools, and commercial and industrial complexes. Cal-Am does not project any recycled water will be used within the Thousand Oaks portion of the Ventura County District service areas in the next 20 years.

3.3.5 Future Water Projects

Cal-Am develops capital improvement projects as a part of the Comprehensive Planning Studies (CPSs), which are periodically prepared for each service area. CPSs are typically prepared on a five to eight-year cycle with interim updates prepared as conditions change or the need arises. Each service area is evaluated for specific needs from which a prioritized list of projects is developed. Projects are generally classified into one of several categories: Source of Supply, Storage, Conjunctive Use, and Water Quality / Water Efficiency. Some projects meet multiple planning goals across two or more of the listed categories. A storage project, for example, not only provides increased system reliability but also assists in meeting peak hour demands often delaying the need for additional source of supply.

3.3.6 Written Contracts or Other Proof of Entitlement

The Cal-Am Ventura County District purchases imported water from Calleguas, which in turn has transfer agreements with MWD. However, Cal-Am does not maintain a purchase order or agreement with Calleguas, noting that Calleguas does not have this concept of agreement/purchase orders for water delivery.[50]

4.0 WATER SUPPLY RELIABILITY AND SHORTAGE CONTINEGNCY PALNIG

4.1 Water Reliability

Calleguas has committed to provide water to meet 100 percent of the Cal-Am Ventura County District's demand, even in the event of an extreme water shortage. With the exception of one emergency connection in the Los Posas Valley and two groundwater wells in El Rio, the Ventura County District receives all of its water from Calleguas and, thus, has the same supply reliability as its wholesaler.

Calleguas utilizes imported and local water supplies. Imported water from Calleguas, which is purchased from MWD, is affected by multiple factors. MWD's supply is imported from the Colorado River and Bay-Delta through the Colorado River Aqueduct (CRA) and the SWP, respectively. The local and imported supplies are affected by legal, environmental, water quality, and climatic factors.

- **Legal:** Supply allocations from the CRA are dictated through legal agreements and, in some cases, court settlements. Supply from the SWP is affected by legal factors including the Bay-Delta Accord, which changed operating criteria of the SWP and can significantly reduce supply to MWD in dry years. Several of the groundwater basins within the Calleguas service area are regulated to ensure that the groundwater resources are utilized in the best interest of the public and for the common benefit of the all the water users.
- **Environmental:** Several species of fish located in the Bay-Delta have been listed as endangered, which has led to decreased pumping by the SWP and environmental litigation. Numerous environmental regulations limit the discharge of brine waste from desalination facilities. These regulations may impact Calleguas and its retail water providers by limiting utilization of local brackish groundwater resources.
- **Water Quality:** Disinfection byproducts pose water quality issues for the SWP. Disinfection byproducts form when organic carbon and bromide in the source water react with disinfectants at the water treatment plant. Groundwater inflows into the SWP also pose arsenic concerns. Total dissolved solids (TDS) levels in the Ventura County groundwater are increasing due to discharges from local wastewater treatment facilities. Increased groundwater treatment may be required to utilize local groundwater supplies.
- **Climatic:** Variable hydrology in the basins that feed the Sacramento-San Joaquin Delta affects SWP supply.

The supply reliability for the Cal-Am's Ventura County District is wholly dependent upon the supply reliability of its wholesale agency — Calleguas. The Ventura County District's arrangement with Calleguas provides 100 percent reliability of supply and, thus, the Ventura County District's supply reliability is set at 100 percent for all scenarios.

According to its 2020 UWMP, Calleguas has sufficient surplus to meet future demands under average year conditions. Calleguas' average year condition supply projections are shown in **Table 8: Calleguas Supply Reliability Projections-Average Year Conditions**.

Under single dry year conditions, Calleguas projects to maintain a supply surplus through 2035. **Table 9: Calleguas Supply Reliability Projections-Single Dry Year (Volume in afy)** shows the supply projections for Calleguas under single dry year conditions.

Under multiple dry year conditions, Calleguas projects to maintain a supply surplus through 2035. **Table 10: Calleguas Supply Reliability Projections-Multiple Dry Year Conditions (Volume in afy)** shows the supply projections for Calleguas under multiple dry year conditions.

4.2 Water Shortage Contingency Planning

4.2.1 Water Supply Shortage Stages and Conditions

Cal-Am is regulated by the California Public Utilities Commission (CPUC); accordingly, California American Water must obtain CPUC approval for any water conservation programs, including voluntary and/or mandatory measures. Cal-Am has Rule 14.1 on file with CPUC to obtain CPUC approval for a staged water conservation plan for the Ventura County District, which complies with UWMP Act requirements for a Water Shortage Contingency Plan. Conditions that require stages of action are defined in Section B of Rule 14.1. In the event of a 50 percent reduction in supply, Cal-Am would implement the mandatory conservation measures described within Section H of Rule 14.1 to achieve a 50 percent reduction in demand.

4.2.2 Catastrophic Supply Interruption Plan

In the event of a sudden and catastrophic loss of water supply, the Cal-Am Ventura County District has written an Emergency Response Plan (ERP), which is used to guide Cal-Am's employees. The ERP contains detailed action items to the following list of events that might result in a drastic loss in supply.

In the event of a power outage, Cal-Am's Ventura County District 's first response task is to activate/check the status of emergency power supply. Cal-Am will assign a monitor to oversee the status of the emergency supply during the incident and report any problems to the Incident Commander. Once the power has been restored, all affected equipment will be reset and restarted. The overall strategy is to determine if the reason for the outage is local to the plant or region, and the estimated time to return power. This will provide the Ventura County District with the degree of significance of the situation, which will help assess the need to secure additional diesel fuel for generators. The treatment process would also be operated to minimize the effects of the power loss.

The first response in the event of an earthquake is to perform a system audit to determine the extent of damage to utilities, piping, and processes. This audit will allow the Ventura County District to concentrate staff and resources on issues that need to be addressed immediately. Additional staff will be required for sampling, analysis, equipment repair, manual equipment and process operation, and communication. A report of the damage will be issued to the Incident Commander followed by a list of supplies that are necessary for repairs.

4.2.3 Minimum Water Supply

The Ventura County District purchases all of its water from Calleguas.[51] Currently, the water is delivered through thirteen turnouts.[52] Twelve of the turnouts distribute water into the Thousand Oaks service area (three are inactive) and one turnout feeds the Las Posas service area. Calleguas employs a tiered water rate structure with Tier 1 allocations based on 90 percent of the Ventura County Districts historical based demand or 10-year average. Ventura County District's allocation is currently 18,559.3 afy and this has been the allocation since 2015. There is no maximum or minimum water purchase amount specified in the contract with Calleguas. Per the Ventura County District Comprehensive Planning Study (CPS), the Ventura County District can exceed the allocation set by Calleguas but must pay a fee driven by MWD.

4.3 Drought Planning

Calleguas, MWD, and DWR are implementing several water supply strategies to ensure that sufficient supply is available in drought conditions. These strategies include investments in conservation, water recycling, transfer agreements, storage, and supply. Based on these investments, Calleguas, MWD, and DWR anticipate that there will be sufficient supply available to meet forecasted purveyor demands.

52 California American Water Company, *2020 Urban Water Management Plan for the Southern Division - Ventura County District*, June 2021, pp. 6-2.

DWR Strategies

Bay-Delta Conservation Plan – The primary objective of the Bay-Delta Conservation Plan is to restore the Bay-Delta in such a way that results in a more resilient ecosystem and more reliable supplies. Several alternatives for achieving the plan's objectives have been proposed and have been evaluated by DWR as part of an Environmental Impact Report/Environmental Impact Statement.

MWD Strategies

Transfer & Storage – The MWD is implementing transfer agreements and storage strategies to increase the reliability of the SWP and Colorado River supplies.

Transfer Opportunities – The MWD has developed water transfer agreements between agriculture and municipal water users to improve supply reliability.

Calleguas Strategies

Throughout its history, Calleguas has invested in local storage facilities to provide water when deliveries from Metropolitan are curtailed. Lake Bard and the Las Posas ASR Project were completed in the 1960s and 2000s, respectively. As discussed previously, these facilities provide essential local storage of imported water to be used during outages. Also, as described in Chapter 6, the SMP facilitates treatment of local groundwater is currently too saline for potable use. The construction of future desalters will improve overall regional supply reliability.

- **Las Posas Aquifer Storage and Recovery** - Calleguas and MWD have banked water within the Las Posas groundwater basin. This water can be pumped to maintain deliveries during times when surface water supplies are limited.
- **Lake Bard** – Lake Bard provides Calleguas with a local source of supply. The lake can store approximately 8,000 acre-feet of water and the treatment plant has a capacity of 100 cubic feet per second (cfs). These supplies can be utilized when imported supplies are curtailed.
- **Salinity Management Project** – The salinity management project treats local groundwater that is too saline for potable use. This enables Calleguas to increase groundwater supplies and improve regional supply reliability.

5.0 WATER CONSERVATION MEASURES

5.1 City Water Conservation Ordinance

California Water Code (CWC) Section 10632 requires that each urban water supplier must prepare a Water Shortage Contingency Plan (WSCP). The plan delineates the following six water shortage levels that correspond to progressively increasing estimated shortage conditions:[53]

- 10 percent reduction
- 20 percent reduction
- 30 percent reduction
- 40 percent reduction
- 50 percent reduction
- More than a 50 percent reduction in water usage

The City of Thousand Oak's City Council eliminated the Level One water restrictions on May 30, 2017, by adopting the Water Conservation Ordinance.[54] However, this ordinance was repealed and replaced in October 2022. The following water conservation measures were approved by the City Council:[55]

Level One City Water Conservation Measures

- Outdoor watering restricted to 3 days a week.
- Leaks, breaks, or malfunctions must be fixed within 7 days of receiving notice from the City.
- Operation of a water fountain or other running-water feature that does not recirculate water is prohibited.
- A hand-held bucket or similar container, or a hand-held hose equipped with a positive self-closing water shut-off nozzle, or device, must be used when using potable water to wash or clean a vehicle.

Level Two City Water Conservation Measures

- Use of water misters is prohibited.
- Showers at gyms and athletic facilities will be closed.

Emergency Water Conservation Actions

- In 2022, California recorded its driest January through March on record, entering a third consecutive year of drought. On March 18, 2022, the Department of Water Resources, operator of the SWP, announced that water agencies throughout California should prepare for an allocation of only 5 percent of a full supply for 2022. Without a local water source, the City of Thousand Oaks depends almost entirely on imported water from the SWP purchased through Calleguas. With the significantly reduced SWP allocation, there are insufficient supplies to meet current demands for water in SWP-dependent service areas.
- As a result of the drought emergency, which is affecting not only SWP-dependent communities but all Californians, on March 28, 2022, Governor Newsom issued Executive Order N-7-22[56] requiring each urban water supplier to undertake Stage 2 measures to reduce water usage by at least 20 percent and encouraging them to activate Stage 3 measures to reduce use by 30 percent. The order also directs the Department of Water Resources to develop emergency regulations defining and banning non-functional turf (ornamental grass) irrigation in commercial, institutional, and industrial sectors.
- On May 24, 2022, the City of Thousand Oaks City Council declared a Level 4 shortage, which reduces watering to one day a week, consistent with the announcements by its suppliers, MWD, and Calleguas.

5.2 Cal-Am Water Conservation Measures

Cal-Am has implemented the following schedule for watering as a conservation measure.[57] Using the watering schedule below, customers may run their irrigation systems three days per week:

- Odd-numbered addresses
  - Monday, Thursday, and Saturday
- Even-numbered addresses
  - Tuesday, Friday, and Sunday
- No watering on Wednesday

Other conservation considerations include:

- To avoid evaporation, please water outdoors before 9:00 AM or after 5:00 PM.
- Watering is limited to a total of 15 minutes per station, per allowed day.

56 Executive Department State of California, Executive Order N-7-22 (March 28,2022), https://acrobat.adobe.com/link/review?uri=urn:aaid:scds:US:be4bb10e-e4cd-3adf-aa3b-1358184e0ed5.

57 Cal-Am, *Ventura Conservation*, https://www.amwater.com/caaw/Conservation/District-Resources/Ventura/.

- Low-flow irrigation systems (including drip irrigation and micro spray) that emit less than two gallons per hour are exempt from day of week and time limitations.

Emergency Water Conservation

MWD has passed down requirements to limit watering to one-day-per-week. Per the emergency water conservation measures, outdoor water use should be limited to keeping trees and our urban forest alive, with the goal of conserving enough water as a community to retain essential turf at playing fields and parks.

On April 26, 2022, MWD declared a Water Shortage Emergency at a Special Board meeting in which they limited outdoor irrigation to one-day-per-week in SWP Dependent Areas.[58] This action affects approximately 6.6 million people, including the City of Thousand Oaks, and California Service Company and Cal-Am, as 100 percent of all these utilities' water comes from MWD and the SWP. These conditions are a result of the driest three years on record, the driest three months in the State's history, and the lowest three-year total water supply from the SWP.

As a result of the direction and requirements of the SWRCB, Cal-Am has implemented additional emergency conservation measures due to the significant Statewide drought conditions severely reducing water supplies. On June 1, 2022, Cal-Am's Ventura County District customers in Thousand Oaks, Newbury Park, and Camarillo are directed to follow the updated watering schedule below.

- One-day-A-Week Watering
  - Residential Odd Address (Addresses ending in 1, 3, 5, 7, 9): Saturday
  - Residential Even Address (Addresses ending in 2, 4, 6, 8, 0): Sunday
  - Non-residential (including multi-family apartments, retail and commercial properties, churches, schools, and parks): Wednesday
- No watering Monday through Friday for residential properties.
- To avoid evaporation, Cal-Am recommends that customers water outdoors before 9:00 a.m. or after 8:00 p.m.
- Watering is limited to a total of 15 minutes per station, per allowed day.
- Hand watering with a garden hose/nozzle and Low-flow irrigation systems (including drip irrigation and micro spray) that emits less than two gallons per hour are exempt from day of week and time limitation, except for irrigation of turf.

58 California American Water, Conservation, https://www.amwater.com/caaw/Conservation/District-Resources/Ventura/ accessed November 30, 2022.

- Turf grass irrigation (irrigation timer or garden hose) is only permissible on allowed watering day.

On June 1, 2022, Cal-Am's Ventura County District customers in El Rio are directed to follow the updated watering schedule below.

- Two-day-a-Week Watering
  - Residential Odd Address (Addresses ending in 1, 3, 5, 7, 9): Tuesday and Saturday
  - Residential Even Address (Addresses ending in 2, 4, 6, 8, 0): Thursday and Sunday
  - Non-residential (including multi-family apartments, retail and commercial properties, churches, schools, and parks): Wednesday
- No watering Monday, Wednesday, or Friday for residential properties.
- To avoid evaporation, Cal-Am recommends that customers water outdoors before 9:00 a.m. or after 8:00 p.m.
- Watering is limited to a total of 15 minutes per station, per allowed day.
- Hand watering with a garden hose/nozzle and Low-flow irrigation systems (including drip irrigation and micro spray) that emits less than two gallons per hour are exempt from day of week and time limitation, except for irrigation of turf.
- Turf grass irrigation (irrigation timer or garden hose) is only permissible on allowed watering day.

Cal-Am customers in the Piru service area are not under water restrictions at this time.

6.0 WATER DEMANDS

The methodology for developing demand projections incorporates ongoing and future water conservation efforts to reflect a reduced per-capita usage, as required by SB 7.

6.1 Baseline and Targets

The calculation of SB 7 baseline and target per capita water use is shown in **Table 11: Per Capita Water Use Targets – Baseline, 2015 & 2020** for the baseline, compliance, interim target, and target daily per-capita water use for the Ventura County District, expressed in gallons per capita per day (gpcd). As shown, the 2020 per capita use confirmed target is 234 gpcd.[59]

Since 1996, the Cal-Am Ventura County District's per-capita water use has varied. As shown in **Table 11**, the per capita water use increased 18.8% from the 2015 per capita use to the 2020 confirmed target. The declining trend in per capita water use from 2007 through 2020 is attributed to a combination of factors such as economic conditions, prolonged drought conditions, and State-mandated conservation regulations. It is assumed that these factors have resulted in subsequent physical changes (e.g., turf replacement, water fixture replacement, etc.) and behavioral changes (e.g., irrigating less or quicker showers due to various media conservation campaigns and materials) in customer demand patterns associated with effective conservation programs. While physical conservation related changes resulted in essentially permanent demand reductions, behavioral changes may not yield permanent demand reductions. State-mandated emergency water conservation regulations may have a short-term impact on demand reductions during

59 California American Water Company, *2020 Urban Water Management Plan for the Southern Division - Ventura County District*, June 2021, Appendix E.

drought conditions, but it is assumed that there will be a rebound to average demands due to customers' behavioral changes over the long-term. By nature, the State-mandated emergency regulations are temporary, but SB 7 requirements are long-term.

Therefore, for the purposes of projecting long-term Ventura County District-wide water use, the per-capita water use is based on the methodologies established in Appendix E – SBX7-7 Verification and Compliance Forms of the Cal-Am 2020 UWMP.[60]

6.2 Sales to Other Water Agencies

Although Calleguas has two emergency connections to the Crestview Mutual Water Company to deliver water in emergencies, Calleguas does not have any contracts to sell water to other agencies as a wholesaler. Additionally, Calleguas does not plan to sell water to other agencies in the future.

6.3 Additional Water Uses and Losses

Table 12: Cal-Am Ventura County District Estimated Non-Revenue Water shows the historic (2020) and estimated projected amount of non-revenue water (NRW) for the Ventura County District. NRW is defined as the water losses plus authorized unbilled (metered and unmetered) water consumption. In the Ventura County District, there are authorized unbilled accounts. Thus, NRW is the difference between the amount of water that Cal-Am purchases from the Calleguas and the amount of water Cal-Am delivers to its customers.

The Cal-Am Ventura County District operating reports are used to determine historical NRW. NRW as a percentage of total production has varied significantly in the past from 3.1% in 2011 to 7.6% in 2015.[61] This percentage of total supply was used to estimate future NRW. Cal-Am's Ventura County District actual water use for the past several years (2015 to 2021) is shown in **Table 13: Cal-Am Ventura County District Water Actual Water Deliveries (2015 – 2021).**

6.6 Historic and Projected Water Use by Sector

Table 16: Cal-Am Ventura County District Historic and Future Water Demand by Sector (2020 – 2045) shows the past, current, and projected demands. Use is identified into eight sectors: Residential, Commercial, Industrial, Fire, Other Public Authority (OPA), Miscellaneous, and Water Losses. Residential encompasses both single- and multifamily residential water use. Fire includes both fire hydrants and fire services. The

Miscellaneous sector primarily consists of construction meter usage and public and private fire service connections. No raw or recycled water is provided in the service area, so all numbers presented in **Table 16** are for potable water deliveries. Cal-Am is continually looking for opportunities and working with its regional partners to increase the use of recycled water within the service area.

7.0 WATER DEMAND ANALYSIS FOR PROPOSED PROJECT

7.1 Project Demand Analysis

Cal-Am's 2020 UWMP for the Ventura County District states that future water demand projections incorporate ongoing and future water conservation efforts to reflect a reduced per-capita usage, as required by SB 7 and CWC Section 10910(c)(1).[62,63] As previously noted, the calculation of SB 7 baseline and target per-capita water use in the Cal-Am Ventura County District 2020 UWMP is shown in **Table 11** for the baseline, compliance, interim target, and target daily per-capita water use for the Ventura County District.

Projections for commercial and industrial connections, and future water demand in the Cal-Am Ventura County District 2020 UWMP, were based on the assumption that the population growth will slow and stabilize.[64] The basis of the population growth rate was the Southern California Association of Governments (SCAG): The 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).[65] In preparing the 2020 UWMP, Cal-Am also solicited input from local land use planning agencies, including the City of Thousand Oaks for areas within the City limits and the County of Ventura for the unincorporated areas. As such, any future projects and development were included in the land use plans at that time; further, future development was accounted for in the SCAG growth projections provided in the 2020-2045 RTP/SCS. Any future project that would result in changes to land use planning after the local agencies land use input process (after September 2020)[66] would not be accounted for in SCAG's 2020-2045 RTP/SCS projections and not accounted for in the Ventura County District 2020 UWMP.

Prior Land Use Actions Concerning the Project Site and the 2015 UWMP

The Project site is located entirely within the City of Thousand Oaks. Currently, all 49.62 acres comprising the Project site is designated "Industrial" in the City of Thousand Oaks General Plan Land Use Map.[67] Prior to May 2015, the majority of the Project site, 39.73 acres, those areas east and south of Conejo Center

66 As of November 2014, the majority of the Project site, 39.73 acres, (those areas east and south of Conejo Center Drive [building sites 1A thru 1G, and 2] and north of Rancho Conejo Boulevard [building sites 5A, 5B, 6A and 6B] was designated in the General Plan for "Industrial Uses," the remainder of the Project site (9.9 acres) west of Conejo Center Drive [building sites 3, 4A and 4B] was designated as "High Density Residential."

67 City of Thousand Oaks, General Plan Land Use Map, adopted October 20, 2015.

Drive [building sites 1A thru 1G, and 2] and north of Rancho Conejo Boulevard [building sites 5A, 5B, 6A and 6B] was designated in the General Plan for "Industrial Uses," the remainder of the Project site (9.9 acres) west of Conejo Center Drive [building sites 3, 4A and 4B] was designated as "High Density Residential." The City amended the General Plan Land Use Map in May 2015 to change the land use designation to "Industrial," and the Rancho Conejo Specific Plan from "High Density Residential" to "Employment Park."[68] In addition, as portion of the Project site (Parcel 2; Building 5A) was changed from "Conejo Valley High School Site" to "Employment Park" per Amendment 15 to the Rancho Conejo Specific Plan (Specific Plan No.7) on January 13, 2015, this change did not have any effect on water demand estimates.

The land use designations at the time Cal-Am completed its inventory planning data (November 2014) were used for the preparation of water demand projects in the 2015 UWMP for the Cal-Am Ventura County District and were "Industrial Uses" for 39.73 acres and 9.9 acres "High Density Residential" for the Project site. These land uses were implemented during the preparation of the 2015 UWMP and were not part of the water demand projects at that time.

2020 UWMP and the Project's Water Demands

The 2020 Cal-Am Ventura County District 2020 UWMP was created with population and demographic forecasts based on land use data from SCAG.[69] These forecasts, along with GIS analysis, input from local planners and authorities, and other essential information are used to reflect the anticipated future populations and land uses.[70] The land uses and developments that were approved during the preparation of the 2015 UWMP but were not previously taken into consideration are now a part of the water demand projections in the 2020 UWMP. As discussed previously, the updated land use designations in the 2020 UWMP include the estimated water demand of the proposed Project.

Determination of Appropriate Land Use & Water Demand

The conversion of the land from residential use to industrial use as part of the 2015 General Plan amendment process would result in a corresponding change in the water demand estimates in the Cal-Am Ventura County District 2015 UWMP. As noted in the City's Negative Declaration, the approximate industrial building space for the parcels that had their land use designation change would be available for

up to 150,935 sq. ft. of "Industrial" development.[71] As such, the Negative Declaration noted that future industrial development of the portion the Project site that was re-designated as part of the General Plan amendment would require 9,056 gpd or 7.94 afy.[72] However, there was no separate consideration estimated in the Negative Declaration for landscape irrigation. The water demands for the proposed Project (see **Table 4**) are estimated to be 102,165 gpd or 75.30 afy with a landscape irrigation water demand of 17.24 afy.

The water demand projections in the Ventura County District 2020 UWMP considered this area to be residential use and the water demand was estimated based on per-capita basis based on population and density, resulting in 234 gallons per capita per day (gpcd) at that time. According to the City's General Plan, "Residential High Density" can be developed at a density of 15 to 30 dwelling units per acre. For the 9.9 acres of the portion of the project re-designated, this would be from 148 to 297 units. When originally estimated in 2020, the California Department of Finance (DOF) estimated the average persons per household to be 2.78 people,[73] which would result in a population of 408 to 825; this resulted in an estimated water demand of 86,472 gpd to 193,050 gpd (42.55 afy to 85.39 afy).[74]

As the projected water demand for the proposed Project (75.30 afy) will take place in the area previously designated as "Residential High Density" (42.55 afy to 85.16 afy), the water demand is within the amount that would have been included in the Cal-Am Ventura County District 2020 UWMP estimate. The future water demand for the Project was accounted for in the Cal-Am Ventura County District 2020 UWMP estimated water demand of 234 gpcd.

The proposed Project's entire water demand was included in the future water demand projections in the Cal-Am Ventura County District 2020 UWMP.

7.2 Average Water Year

Table 17: Average Potable Water Supply and Demand Comparison compares average water year supply and demand in five-year intervals for Cal-Am's Ventura County District Service Area. The analysis considers the 20-year period required for WSAs to evaluate water supply. As such, with the Project's first year of operation is 2023, the 20-year period is from 2023 to 2043.

74 Assumes 365 days for domestic water use.

As previously noted, the extrapolation for future water supplies for years 2040 and 2043, where applicable, did not assume any increase in supply beyond the projection of either Cal-Am in the Ventura County District 2020 UWMP or Calleguas in their 2020 UWMP. Further, the future demands and deliveries for 2040 and 2043 assumed that Cal-Am would achieve the same demand requirements as for 2040 via ongoing conservation measures as required under current legislation and through future improvements.

Calleguas has agreed to supply any additional demand requirements that the Ventura County District may require. Further, as indicated in **Table 13**, over the years 2015 to 2021, the Ventura County District has averaged deliveries of 14,355.0 afy. In 2020, there were deliveries of 15,125 afy.[75] The Ventura County District has achieved substantial conservation and reduced its overall deliveries compared to the projected amounts in the Cal-Am Ventura County District 2020 UWMP. However, in the future, demand is still projected to increase based on the projected population.[76]

Therefore, because the proposed Project is included in the Average Demand estimates for the period from 2023 to 2043, it is expected that Cal-Am's Ventura County District's typical average year supply will be sufficient.

7.3 Dry Water Years

Tables 18 through **22: Dry Water Years Supply and Demand Assessments** provide a comparison of the water supply and demands for single dry and multiple dry water years for the 20-year period for the proposed Project's operational from 2023 to 2043. As the water demand for the proposed Project water is part of the

future year projections in the Cal-Am Ventura County District 2020 UWMP, it is expected that Cal-Am's Ventura County District's single and multiple dry year supply will be sufficient for the 20-year period from 2023 to 2043.

Via Calleguas, the Cal-Am Ventura County District has access to additional water supplies via projects designed to drought-proof purveyors during dry years. A key element that would benefit the Thousand Oaks service area of the Ventura County District is the expansion of the Lake Bard Treatment Plant. It is expected that Cal-Am, as a retail customer of Calleguas, would receive some additional supplies in a drought lasting up to three years to meet any foreseeable deficit. If extreme multi-year shortages occurred beyond what MWD and Calleguas could provide, Cal-Am would invoke various water conservation ordinances and activities, provided in the *Section 5.0* of this WSA. It is unlikely that minor deficits would force Cal-Am to implement any of the water shortage actions listed.

Table 18: Single and Multiple Dry Water Years Supply and Demand Assessments (2023 to 2027) demonstrates that the Cal-Am Ventura County District's service area would be expected to utilize a portion of Calleguas reserves to ensure adequate supplies of imported water to meet the Ventura County District's demands during single dry and multiple dry year scenarios for the period 2023 to 2027.

Table 19: Single and Multiple Dry Water Years Supply and Demand Assessments (2028 to 2032) illustrates single and multiple dry year water supply and demand for the Cal-Am Ventura County District service area for years 2028 through 2032. As shown, it is expected that Cal-Am's Ventura County District's typical average year supply will be sufficient.

Table 20: Single and Multiple Dry Water Years Supply and Demand Assessments (2033 to 2037) illustrates single and multiple dry year water supply and demand for the Cal-Am Ventura County District service area for years 2033 through 2037. As shown, it is expected that Cal-Am's Ventura County District's supply will be sufficient to meet demands during this period.

Table 21: Single and Multiple Dry Water Years Supply and Demand Assessments (2038 to 2042) illustrates single and multiple dry year water supply and demand for the Cal-Am Ventura County District service area for years 2038 through 2042. As shown, it is expected that Cal-Am's Ventura County District's supply will be sufficient to meet demands during this period.

Table 22: Single and Multiple Dry Water Years Supply and Demand Assessments (2043 to 2047) illustrates single and multiple dry year water supply and demand for the Cal-Am Ventura County District's service area for years 2043 through 2047. As shown, it is expected that Cal-Am's Ventura County District's supply will be sufficient to meet demands during this period.

As noted above, **Tables 18** through **22** show that the existing water system and the addition of planned facilities and programs will be adequate for single and multiple dry years for the projected 20-year operational period of the proposed Project period (2023 to 2043).

8.0 REGULATORY MEASURES

Cal-Am's Ventura County District has adequate supplies for the 20-year period (2023 to 2043) to meet the proposed Project's demands. In addition, the proposed Project will be required to implement various water conservation measures in accordance with applicable regulatory measures identified in the 2019 California Green Building Standards Code.[77]

8.1 Outdoor Water Use (Landscaping) Conservation

8.1.1 Regulatory Requirements

The proposed Project will be required to implement the mandatory nonresidential outdoor water efficiency and conservation measures of the 2022 California Green Standards Building Code.[78] These include:

- **5.304.1 Outdoor potable water use in landscape areas.** Nonresidential developments shall comply with local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent.
- **5.304.6.1 Newly Constructed Landscapes.** New construction projects with an aggregate landscape area equal to or greater than 500 square feet
- .**5.304.6.2 Rehabilitated landscapes.** Rehabilitated landscapes projects with an aggregate landscape area equal to or greater than 1,200 square feet.

The proposed Project will use 0.31 acre-feet per day or 49.1 afy of water for irrigation.

8.2 Indoor Water Use Conservation

Three primary approaches to saving water indoors:

1. Hardware solutions, such as replacing a high-flow fixture with a water-efficient versions;
2. Operational solutions, such as finding alternatives to using water for cleaning tasks, instituting a regular leak inspection and repair program, and optimizing the water efficiency of appliances; and
3. Personnel solutions, such as educating employees to conserve water and to report leaks.

77 California Code of Regulation, Title 24, Part 11, California Building Standards Commission. 2022 California Green Building Standards Code, Effective January 1, 2023. https://codes.iccsafe.org/content/CAGBC2022P1.

The proposed Project will be required to implement the mandatory nonresidential indoor water efficiency and conservation measures of the 2022 California Green Standards Building Code.[79] These include:

- **5.303.1 Meters.** Separate submeters or metering devices shall be installed for the uses described in Sections 5.303.1.1 and 5.303.1.2.
- **5.303.1.1. New buildings or additions in excess of 50,000 square feet.** Separate submeters shall be installed as follows:
    1. For each individual leased, rented, or other tenant space within the building projected to consume more than 100 gal/day (380 Liters/day [l/day]).
    2. Where separate submeters for individual building tenants are unfeasible, water supplied to the following subsystems shall have provisions to monitor water use for the following:
        a. Makeup water for cooling towers where flow through is greater than 500 gpm (30 Liters/second [L/s]).
        b. Makeup water for evaporative coolers greater than 6 gpm (0.04 L/s).
        c. Steam and hot-water boilers with energy input more than 500,000 Btu/hour (147 kilowatts [kW]).
- **5.303.1.2 Excess consumption.** A separate submeter or metering device shall be provided for any tenant within a new building or within an addition that is projected to consume more than 1,000 gal/day.
- **5.303.4 Food waste disposers**. Disposers shall either modulate the use of water to no more than 1gpm when the disposer is not in use (not actively grinding food waste/no-load) or shall automatically shut off after no more than 10 minutes of inactivity. Disposers shall use no more than 8 gpm of water.
- **5.303.5 Areas of addition or alteration.** For those occupancies within the authority of the California Building Standards Commission, as specified in the Section 103, the provisions of the Sections 5.303.3 and 5.303.4 shall apply to new fixtures in additions or areas of alteration to the building,
- **5.303.6 Standards for plumbing for fixtures and fittings.** Plumbing fixtures and fittings shall be installed in accordance with the California Plumbing Code and shall meet the applicable standards referenced in Table 1701.1 of the California Plumbing Code.

9.0 SUMMARY

Sufficient water supplies exist to support the proposed Project based on the following facts:

- The Cal-Am Ventura County District has been identified as the primary public water supplier for the proposed Project.
- The total estimated water demand for the proposed Project at buildout is 75.30 afy.
- The estimated water demand for a portion of the proposed Project was included in the Cal-Am Ventura County District 2015 UWMP. However, as a result of land use designation changes for portions of the Project Site that occurred after the adoption of the 2015 UWMP, the water demand for uses changed. The water demand projections in the Ventura County District 2015 UWMP considered a portion of the Project Site to be residential use ("Residential High Density"). That land use designation was changed in 2015 to "Industrial" use. Since the estimated water demand for industrial uses is less than the water demand for residential uses included in the Cal-Am Ventura County District 2015 UWMP estimate, the future water demand for the Project was accounted for in the Cal-Am Ventura County District 2015 UWMP.
- The 2020 UWMP for the Cal-Am Ventura County District considers the entire site as Industrial. As such, the water demand calculation provided herein are consistent with that designation.
- The Cal-Am Ventura County District receives all of its water supplies as imported surface water from Calleguas, which receives its water from the MWD.
- Existing water supply sources are available to Calleguas to meet the Cal-Am Ventura County District's demands for imported surface water.
- Conclusions in the WSA are based on the Cal-Am Ventura County District 2020 UWMP and the Calleguas 2020 UWMP.
- The Cal-Am Ventura County District has sufficient supplies in normal, single dry and multiple dry years to meet demands.
- The Cal-Am Ventura County District has access to additional water supplies from Calleguas should they be needed to meet additional demands.
- The proposed Project is required to install water conservation measures and to follow the conservation measures of the Cal-Am Ventura County District and the City of Thousand Oaks' landscape irrigation ordinance.

RE: Regulatory Database Update to Phase I Environmental Site Assessment Report, dated January 2022 for 1691- 2000 Rancho Conejo Boulevard, Conejo Center Drive, Thousand Oaks, California 91320

Dear Mr. Taghdiri:

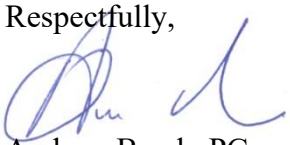
Terrax Environmental (Terrax) is pleased to provide an update to the results of the updated Environmental Data Resources, Inc (EDR), Regulatory Database review of the Terrax Phase I Environmental Site Assessment Report dated January 22, 2020 for the abovementioned address (the "subject property") (**Appendix A**).

The Terrax Phase I dated January 22, 2020 identified a number of recognized environmental conditions and recommended a soil vapor investigation to evaluate potential vapor intrusion impacts: Terrax prepared a Soil Vapor Investigation Report dated March 1, 2021 (Phase II). The Phase II comprised soil borings installed with soil vapor probes on-Site to assess potential soil vapor Volatile Organic Compounds (VOC) and/or Total Petroleum Hydrocarbon (TPH) impacts.

The following summation and conclusions were derived from the results of the investigation. Based upon the results of the investigation, VOC and TPH soil vapor impacts to a maximum depth of 15 feet bgs, were not recorded. A vapor intrusion concern was not identified.

Based upon a review of updated environmental records provided by EDR (**Appendix B**), the findings of the January 22, 2020 Terrax Phase I ESA are valid, as modified by the findings of the follow-on Terrax Soil Vapor Investigation Report dated March 1, 2021 (Phase II).

Terrax Environmental, Inc
Respectfully,



Andrew Brack, PG
Principal

Appendix A

Environmental Data Resources, Inc (EDR), Regulatory Database review, November 1, 2024

Terrax Environmental, Inc. (Terrax) reviewed an update to the regulatory databases (ordered November 1, 2024) provided by Environmental Data Resources, Inc (EDR) (**Appendix B**). A site visit or review of other environmental records was not undertaken. Changes to the Terrax Phase I report dated January 22, 2020, as a result of the review of updated records, are presented in bold. For ease of cross reference heading numbers have remained consistent with the Terrax 2020 Phase I report.

Terrax obtained an updated Radius Report (November 1, 2024) prepared by EDR for the subject property. The Federal, State, and local agency environmental records contained in the EDR report were compiled from publicly available sources and the locations of the listed sites are plotted utilizing a geographic information system, which geocodes the site addresses. Using the ASTM definition of migration, Terrax considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed in the EDR report, which includes solid, liquid, and vapor. A copy of the EDR report is included in Appendix B.

The following table provides a summary of the updated EDR report findings.

4.2.2 Subject Property Listings

The following subject property listings likely to impact the subject property were not listed in the EDR report.

4.2.3 Adjacent Property Listings

The following adjacent properties were listed in the EDR report and are further detailed below: Following a review of the updated records, bold text identifies changes to the 2020 Terrax Phase I report

- The Toaks HHW Facility (City of Thousand Oaks) site, addressed as 2010 Conejo Center Drive, is adjacent and located to the west of the subject property. This facility is considered to be down- to cross-gradient in terms of hydrogeology. This facility was listed in the EDR report as a CERS HAZ WASTE, VENTURA CO. BWT, and CERS site (EPA ID# CAD981571466; #10468351). This facility is a small quantity generator of hazardous wastes and household hazardous wastes types collection and transfer. Hazardous wastes are transferred off-site from this facility. The permit (#FA0033156) for this facility to operate as a hazardous wastes collection and transfer facility is open, and was issued by the Ventura County Environmental Health Division (VCDEH). This facility received violations for records keeping and facility housekeeping during routine inspections in 2015, 2017 **and 2023**. The wastes are generally collected in containers and hauled off-site by an environmental transport company. Based on the location of the presumed groundwater flow direction (west-northwest), the assumed regional depth to groundwater (approximately 45 feet bgs), and the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- **The adjacent property identified as Sideshow Collectibles / Sideshow, at address 2630 Conejo Spectrum Street, to the southeast, across Conejo Spectrum Street, was reported as a RCRA NonGEN / NLR site (ID# CAC003218214, CAL000455270) in the EDR Radius Map™ Report with GeoCheck® Inquiry Number: 7810098.2s, November 01, 2024. This facility was reported as occupied by a surgical supplies manufacturing company business, from at least February 2023 through 2024, and June 2020 to July 2020. This facility is a registered non-hazardous wastes generator facility since 2023; a graphic design facility. No unauthorized release investigations related to hazardous wastes were reported for this business in the regulatory database report. Based on the regulatory oversight, the overall good standing of this facility,**

and the absence of reported releases, the up-gradient relationship to the subject property is not considered a significant environmental concern.

- **The adjacent property identified as Trillium USA Company, LLC, addressed as 1993 Rancho Conejo Boulevard, is adjacent and located to the west-northwest of the subject property, and was reported as a RCRA NonGEN / NLR, E. MANIFEST site (ID# CAL000440037) in the EDR Radius Map™ Report with GeoCheck® Inquiry Number: 7810098.2s, November 01, 2024. This facility was reported as occupied by a landscape maintenance company business, from at least October 2018 through 2024. This facility is a registered non-hazardous wastes generator facility since 2018, and generated unspecified oil-containing waste (hydraulic oil) from a truck during 2018. No unauthorized release investigations related to hazardous wastes were reported for this business in the regulatory database report. Based on the regulatory oversight, the overall good standing of this facility, and the absence of reported releases, the up-gradient relationship to the subject property is not considered a significant environmental concern.**

- The City of Thousand Oaks Public Works Department (City of Thousand Oaks) site, addressed as 1993 Rancho Conejo Boulevard, is adjacent and located to the west-northwest of the subject property. This facility is considered to be cross-gradient in terms of hydrogeology. This facility was listed in the EDR report as a RCRA-SQG, UST, FINDS, ECHO, AST, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, HWTS, CIWQS, E. MANIFEST, and RCRA NonGen / NLR site (EPA ID# CA0000134908, CAL000330453, CAT000624247, CAH111000213; #'s 10333498, 110002613967). This facility is a small quantity generator of hazardous wastes, a permitted underground storage tank site, and an aboveground permitted storage facility. On-site USTs are used to fuel City service vehicles for Thousand Oaks municipal. The wastes generated at this facility are household hazardous wastes, waste oil and mixed oil, and other organic solids, since 1994 through 2021. These wastes are transferred off-site from this facility. The UST permit and permit for this facility to operate as a hazardous wastes collection and transfer facility is open, and was issued by the VCDEH. **This facility received inspections from the VCEHD during 2011 through 2023, where violations were issued for multiple non-compliance issues.** These violations were subsequently returned to compliance. The wastes are generally collected in containers and hauled off-site by an environmental transport company. Based on the location of the presumed groundwater flow direction (west-northwest), the assumed regional depth to groundwater (approximately 45 feet bgs),

and the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- The Golden State FC, LLC (DPS3)/Amazon COM Services site, addressed as 2405 Conejo Spectrum Street, is adjacent and located to the east-northeast of the subject property. This facility is considered to be up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a RCRA-SQG, CERS HAZ WASTE, VENTURA CO. BWT, NPDES, CIWQS, and CERS site (EPA ID# CAR000287201; #'s FA0037715). This facility is an active small quantity generator location of hazardous wastes, including dichlorobenzne, heavy metals, aqueous and alkaline solutions, and methyl ethyl ketone, as of August 2018. This is a permitted facility reported violations. The wastes generated at this facility are transferred off-site from this facility under manifest. The hazardous wastes generator permit for this facility was issued by the VCDEH. The wastes are generally collected in containers and hauled off-site by an environmental transport company. During 2018, this facility was issued an NPDES permit for the operations at the existing industrial building, in order to monitor wastes streams impacting stormwater. The NPDES/CIWQS permit is listed as active, and violations were reported for this facility for recordkeeping errors. Based on the location of the presumed groundwater flow direction (west-northwest), the types of wastes generated at this facility, the on-site equipment reported, the assumed regional depth to groundwater (approximately 45 feet bgs), and the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- **The Midnight Manufacturing – Conejo Spectrum site, addressed as 2435 Conejo Spectrum Street, is adjacent and located to the east of the subject property. This facility is considered to be up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a RCRA-LQG, and E. MANIFEST site (EPA ID# CAR000305664). - The Baxalta US, Inc./Baxter Healthcare Hyland/Baxter Healthcare Corp (Takeda Pharmaceuticals) site, addressed as 1700 Rancho Conejo Boulevard, is adjacent and located to the north-northeast of the subject property. This facility is considered to be cross- to up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a AST, HAZNET, MED WASTE VENTURA, NPDES, CIWQS, CERS, HWTS,

ENVIROSTOR, CERS HAZ WASTE, CERS TANKS, VENTURA CO. BWT, CERS, WDS, and RCRA-LQG site (EPA ID# CAR000010207, CAR000010207; #'s 10151705, FA0005744). This facility is an active large quantity generator location of hazardous wastes reporting large quantity generation activities between 1996 and 2018, including other alkaline solutions, aqueous solutions, asbestos-containing wastes, inorganics, metal dust, oxygenated solvents, waste oil and mixed oil, oil-containing wastes, latex wastes, pharmaceutical wastes, laboratory wastes, heavy metals, carbon tetrachloride and other halogenated solvents, organic solids, and empty containers as of October 2018. This is a permitted facility reported violations during 2005, 2007, 2008, 2014, 2017, and 2019. The wastes generated at this facility are transferred off-site from this facility under manifest. The hazardous wastes generator permit for this facility was issued by the VCDEH. The wastes are generally collected in containers and hauled off-site by an environmental transport company. This facility has 13,020 gallon capacity of AST(s) permitted. This NPDES/CIWQS permitted facility is permitted as a type that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping. As an ENVIROSTOR site (ID# 71003447), this facility, this business has been issued a "Tiered Permit" to generate hazardous wastes, and oversight was referred to the RWQCB and VCEHD. Based on the location of the presumed groundwater flow direction (west-northwest), the types of wastes generated at this facility, the on-site equipment reported, the assumed regional depth to groundwater (approximately 45 feet bgs), and the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- The Northrop Ventura Division/Northrop Corp/Northrop Grumman Corp. site, addressed as 1515 Rancho Conejo Boulevard, is adjacent and located approximately to the east-southeast of the subject property. This facility is considered to be up-gradient in terms of hydrogeology. This facility was listed in the EDR report as an CA BOND EXP. PLAN, EMI, ENVIROSTOR, LUST, CPS-SLIC, HIST CORTESE, CERS, CPS-SLIC, HIST UST, VENTURA CO. BWT, and Cortese site (ID#s CAR000196089, 56370005; RWQCB ID#s C-96044, T0611101110). In early 1985, the Northrop Corporation identified several leaking underground storage tanks at its facility. Information gathered by Northrop indicates the presence of chlorinated solvents in soil and ground water under the adjacent to the facility. Northrop Corporation is providing for the remediation of the site under RWQCB lead. The responsible parties will pay all costs associated with site cleanup. There

are no current plans for the expenditure of Bond funds for the site. As an EMI site, this facility had equipment/operations regulated by the VCAPCD during 1987, 1990, 1995, 1997, 1998, 1999, 2000, 2001, 2002, 2003, and 2004. The equipment was related to the extraction and removal of VOC contamination. As an ENVIRSTOR site, investigation of this facility began on December 21, 1983, and is considered a historical site, status, referred to the RWQCB for oversight on August 31, 1995. As an LUST, the former Five Tank Area (FTA) included five (5) USTs: four (4) 1,500 gallon USTs that contained 1,1,1-trichloroethane (1,1,1-TCA), methyl ethyl ketone (MEK), methylene chloride (MC), and toluene, respectively, and one 3,000 gallon waste UST. The five (5) USTs were removed in 1985. Case Closure as issued for the USTs only on October 3, 1996. As a CPS-SLIC site (ID# 0252), this facility is regarded as "Open – Remediation" status for the ongoing investigation activities that include groundwater monitoring and vapor extraction as of June 30, 2002. Groundwater monitoring, and subsequent remediation activities were initiated by Northrop Grumman Systems Corporation on a voluntary basis in the 1980s, and have continued following the sale and commercial redevelopment of the site by others. Based on a review of the LA RWQCB Geotracker investigation records, and VCEHD records, this facility is a historical industrial property (formerly 100 acres) under active investigation. In addition, this facility is a permitted Waste Discharge Requirements (WDR) site (ID#s 9067), permitted by the RWQCB as of August 8, 2006; the "Newbury Park Site Paraplast Area ISCO, Equipoise Project." Recent groundwater monitoring indicates VOCs in groundwater on abutting property groundwater monitoring wells. Based on the location of the presumed groundwater flow direction (west-northwest), the regional variations reported for depth to groundwater (approximately 45 to 60 feet bgs), and the potential for vapor migration/intrusion to the subject property, this facility is expected to present a recognized environmental concern to the subject property.

4.2.4 Non-Adjacent Property Listings

The following non adjacent properties were listed in the updated EDR report and are further detailed below: Bold text identifies changes to the 2020, Terrax Phase I report.

- **The Athens Hauling Facility Thousand Oaks site, located at address 2550 Conejo Center Drive, located approximately 950 feet to the southeast of the subject proeprty, was reported as a NPDES, CIWQS, and CERS site (ID#s 4 56C398196, 904746) in the EDR Radius Map™ Report with GeoCheck® Inquiry Number: 7810098.2s, November 01, 2024. Athens Hauling Facility Thousand Oaks is reported as having been issued a NPDES, CIWQS, and CERS stormwater monitoring ID# opened in August 1, 2022, which remains open to date. No violations were reported for the**

Athens Hauling Facility operations. Athens Hauling Facility is listed as a construction site, where run-off is being monitored. This facility has not generated wastes under manifests, and/or other solid waste during each year from 2022 through 2024. Hazardous wastes manifest were not reported for this business. No violations were reported related to CERS. The City of Thousand Oaks and SWRCB required businesses completing construction near waterways to register with the NPDES. Based on the location of the presumed groundwater flow direction (west-northwest), the regional variations reported for depth to groundwater (approximately 45 to 60 feet bgs), this facility is not expected to present a recognized environmental concern to the subject property.

4.2.5 Orphan Listings

The City of Thousand Oaks Public Works facility, located at 1993 Rancho Conejo Boulevard, is reported as an Orphan Listing in the EDR regulatory database report. This property was previously discussed above in Section 4.2.3 above.

No additional orphan listings likely to impact the subject property are identified in the EDR report.

Phase I Findings and Soil Vapor Investigation

The Terrax Phase I dated January 22, 2020 identified a number of recognized environmental conditions and recommended a soil vapor investigation to evaluate potential vapor intrusion impacts: Terrax prepared a Soil Vapor Investigation Report dated March 1, 2021 (Phase II). The Phase II comprised soil borings installed with soil vapor probes on-Site to assess potential soil vapor Volatile Organic Compounds (VOC) and/or Total Petroleum Hydrocarbon (TPH) impacts.

The following summation and conclusions were derived from the results of the investigation. Based upon the results of the investigation, VOC and TPH soil vapor impacts to a maximum depth of 15 feet bgs, were not recorded. A vapor intrusion concern was not identified.

Based upon a review of updated environmental records provided by EDR (the findings of the January 22, 2020 Terrax Phase I ESA are valid, as modified by the findings of the follow-on Soil Vapor Investigation conducted by Terrax dated March 1, 2021.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

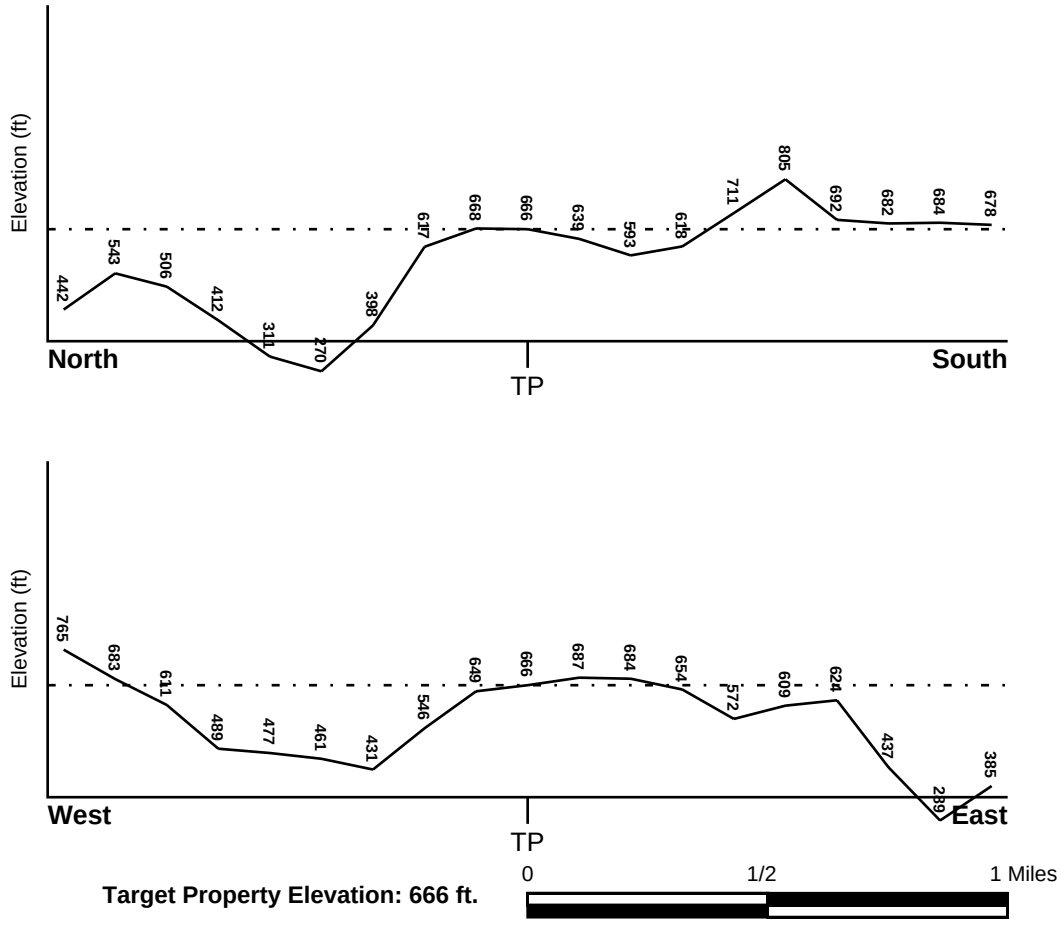
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 666 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 12 ENVIROSTOR sites within approximately 1 mile of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CITY OF THOUSAND OAKS PUBLIC WORKS DEPT (Continued) **1000886276**

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

CA BOND EXP. PLAN:

Reponsible Party:	RWQCB REFERRAL SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Northrop Corporation is providing for the remediation of the site under RWQCB lead. The responsible parties will pay all costs associated with site cleanup. There are no current plans for the expenditure of Bond funds for the site.
Site Description:	In early 1985, the Northrop Corporation identified several leaking underground storage tanks at its facility. These leaking tanks were subsequently removed. Information gathered by Northrop indicates the presence of solvents in soil and ground waterunder the adjacent to the facility.
Hazardous Waste Desc:	The following hazardous substances, among others, were handled on the site during past years of operation: trichloroethylene (TCE), 1,1,1 trichloroethane (TCA), trichlorotrifluoroethane, 1,1-dichloroethane (DCA), methyl ethyl ketone (MEK), acetone, benzene, toluene, xylene, and ethyl benzene. The following chemicals, among others, were detected in soil or ground water onsite: MEK, TCA, benzene, ethylbenzene, toluene, DCA, vinyl chloride and methylene chloride.
Threat To Public Health & Env:	The site exists in an area of deep canyons and gullies. A flowing spring exists adjacent to the site and has been affected by volatile organic chemicals. Contaminants that may have entered the ground water from the site could threaten the drinking water supply. In addition, disturbance of contaminated soils may result in a release of adverse air emissions that could expose workers and the public.
Site Activity Status:	Northrop has completed site characterization and an evaluation of remediation alternatives under RWQCB oversight. The RWQCB is requesting a draft RAP with concurrence of DHS.

POLYCORE ELECTRONICS INC (Continued) **1000441251**

Completed Date: 07/01/1991
Comments: Semtech Corp is the current owner who purchased the property from Great Southern Life Insurance Co in 1889. Polycore Electronics leased the property from Semtech Corp. and operated from 1977 to 1990. It was a vacant lot prior to 1977 and used for livestock grazing. In 1988 Semtech Corp. purchased Polycore Electronics and operated the company. Polycore Electronics is out of business. The activities on the property were the production of metal coated silicon wafers. Numerous hazardous chemicals were handled at the property during its operation. Ventura County Env. Health and City of Thousand Oaks cited numerous violation from 1982 to 1986. A massive overflow of the acid neutralization system occurred and contaminated the soil. Groundwater is about 50 feet below the surface. A medium priority PEA is required because of the evidence of contamination. RP submitted a PEA to the Dept. on 6/11/91 and is currently under review.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

MULTILAYER PROTOTYPES INC (Continued) **1000411694**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Quarterly Update: QUARTERLY UPDATE Quarterly Update Period: Jan-Mar 2024 Next activity: TFX, Inc. will submit a Post-Closure Permit renewal application, which is due in July 2024. Continuing activities: Pumping and treating of contaminated groundwater continued at the facility. Monitoring reports are submitted to DTSC for review on a quarterly basis. FACILITY DESCRIPTION/ HISTORY The TFX Aviation Facility (formerly known as Telair International, Talley Corporation, and Wendy Road Development) is located at 3085 Old Conejo Road, Newbury Park, California. Newbury Park is part of the municipality of Thousand Oaks located in Ventura County, and the Facility is located along U.S. 101 at Wendy Drive. The Facility property is approximately 13 acres which were formerly used for manufacturing civilian and military aircraft components. During the manufacturing process, hazardous wastes including metals, cyanide, chlorinated solvents, and

TFX AVIATION, INC. (FORMER TELAIR SITE, NEWBURY PARK) (Continued) **S109117147**

waste oils were generated. Soil and groundwater at the site were impacted from the on-site waste disposal practices that included a leach field and two evaporation ponds. Following demolition of manufacturing buildings and with remediation efforts, which began in the latter portion of the 1980s, the Facility has achieved industrial cleanup standards for surface soils. By the mid 2000s, the Talley Corporation sold the property for commercial redevelopment. By 2010, redevelopment of the Facility was completed and a thirty-one unit business complex had been constructed. Commercial sale of the business complex followed, and by 2015 all thirty-one units had been sold to interested parties. TFX Aviation remains the entity responsible for contamination and it retains liability for continued groundwater monitoring and cleanup. A Land Use Covenant dated May 26, 2005 requires DTSC notification when any ownership changes occur. A groundwater extraction and treatment system is located on site. Aside from the equipment associated with this system, no industrial machinery or permitted hazardous waste management units are present. PERMITTING REGULATORY DESCRIPTION/ HISTORY In the late 1980s as part of the Facility's closure, the onsite waste evaporation ponds were removed and approximately 3,000 cubic yards of underlying soil was excavated and disposed off-site. In 1989, a groundwater extraction and treatment system was implemented through corrective action interim measures to control groundwater contaminated with chlorinated solvents and hexavalent chromium. Additionally, during 1989 other impacted soil was removed and a soil vapor extraction system was installed to remediate chlorinated solvent vapors in the vadose zone. In 1995 a Hazardous Waste Facility Post-Closure Permit was issued to the Facility. The Post-Closure Permit established the operational requirements of the groundwater extraction and treatment system and soil vapor extraction system. In 2003 the remedial goals of soil vapor extraction were achieved and DTSC certified completion of soil vapor impacts in May 2004. Site surface soils have been remediated to industrial/commercial standards which has allowed for commercial redevelopment. The groundwater remedy is ongoing and is expected to continue for the foreseeable future. Since 2011, several class 1 permit modifications to update ownership changes due to sale of redeveloped commercial real-estate units have been completed. In January 2015, TFX Aviation presented a conceptual redesign of the Facility's groundwater treatment. The Facility's Post-Closure Permit renewal application is expected in April 2025.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Comments: The Department recived an EIR dated November 1993. The Specific Plan 16 is proposed by Amgen Inc., a biotechnology company. The plan proposes the development of the company on an approximately 100 acre site in the western portion of Thousand Oaks. Smith Pipe & Supply located within the Amgen project area is a Cortese listed site. Also, several sites located within the project area is contaminated with hazardous substances. Due to evidence of onsite release of hazardous substances, the Department recommended a PEA be conducted.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

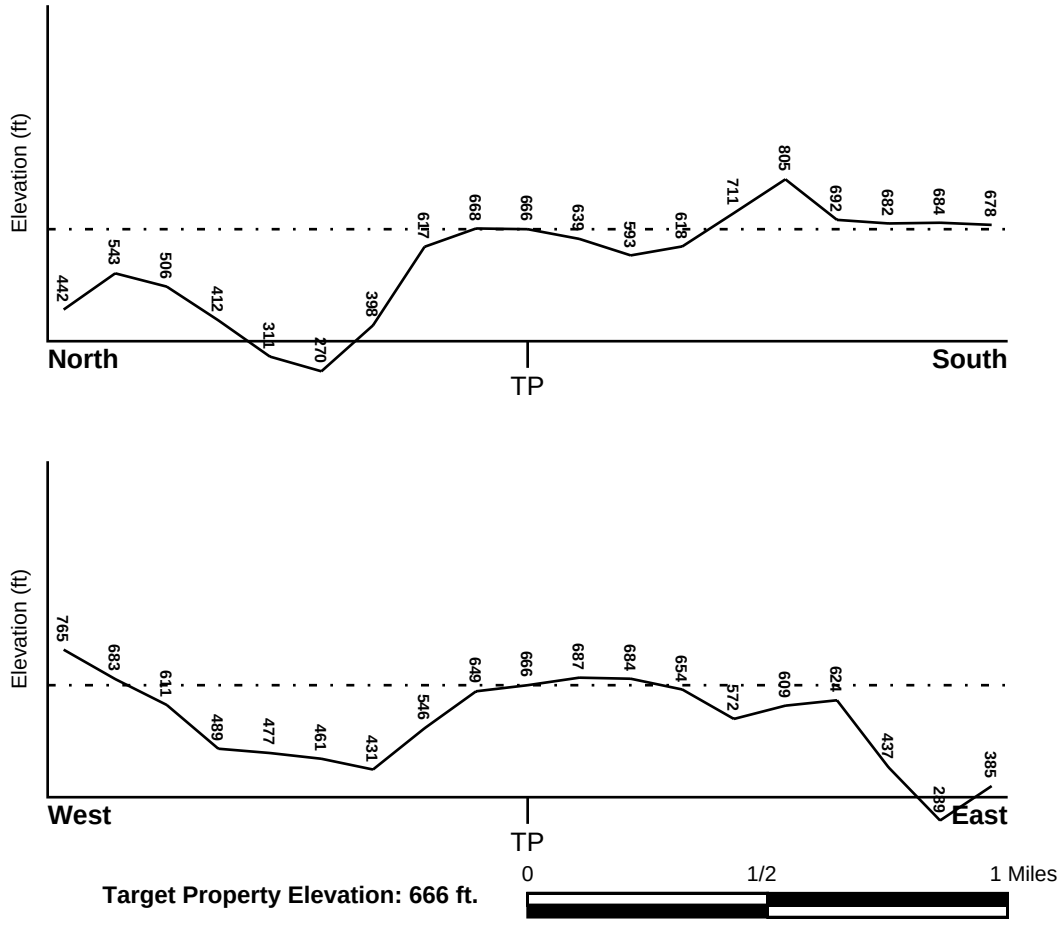
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 666 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

EXECUTIVE SUMMARY

Terrax Environmental, Inc. (Terrax) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of American Society for Testing and Materials (ASTM) Standard Practice E1527-13, the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312), and set forth by Shapell Properties, Inc. (Shapell) for the property located at 1691- 2000 Rancho Conejo Boulevard, Conejo Center Drive, Thousand Oaks, California 91320 (the "subject property"). This Phase I ESA report is designed to provide Thousand Oaks Master, LLC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Subject Property Address(es):	1691, 1711, 1721, 2000 Rancho Conejo Boulevard, Thousand Oaks, California 91320
Additional/Historic Addresses:	Conejo Center Drive, Thousand Oaks, California 91320
Nature of Use:	Open Space, Undeveloped Land, Industrial
Tenants:	None; Unoccupied
Year Built:	N/A; Vacant Land
Building Size:	N/A; Undeveloped Land

The subject property is comprised of 14 contiguous undulating, undeveloped parcels of land. The 14 parcels of land total 51.33 acres of semi-graded land, covered with native vegetation (grasses, forbs, shrubs) in the Conejo Canyons Open Space area. The subject property is located within an area that is zoned for industrial use according to the Thousand Oaks General Plan. In addition, the subject property has some utility fixtures onsite, including a pad-mounted transformer, cable coaxial pull boxes, along with some solid waste debris (concrete, stucco, tires, household goods). The subject property parcels are irregular-shaped parcels of land. Access to the subject property

is available along the eastern and western property boundaries, via Conejo Center Drive; and, along the northern and eastern property boundaries, via Rancho Conejo Boulevard.

According to available historical information, the subject property first appears as early as 1900 through 1985 as undulating undeveloped land (grass, soils, shrubs), as part of the Rancho Conejo cattle and horse ranch (MGM Ranch). The subject property topography varies from gentle to steeply sloping, with a dry creek and unpaved jeep trails.

By 1994 the subject property was partially graded with partly undeveloped parcels of land within the Rancho Conejo Industrial Park development. The subject property at this time abuts the Rancho Conejo Boulevard and Conejo Center Drive right-of-ways, and adjacent industrial and municipal buildings. As of August 2020, the subject property is primarily graded and/or undeveloped, undulating land covered with shrubs, grasses, and some solid waste debris (construction materials, abandoned equipment). Sixteen (16) state-of-the-art buildings are proposed for future development at the subject property by Thousand Oaks Master, LLC. The buildings will provide high-end space to a variety of businesses, ranging from research and development to Fortune 500 businesses.

The Baxalta US, Inc./Baxter Healthcare Hyland/Baxter Healthcare Corp (Takeda Pharmaceuticals) site, addressed as 1700 Rancho Conejo Boulevard, is adjacent and located to the north-northeast of the subject property. This facility is considered to be cross to up-gradient in terms of hydrogeology. This facility is an active large quantity generator of hazardous wastes, reporting large quantity generation activities between 1996 and 2018, including other alkaline solutions, aqueous solutions, asbestos-containing wastes, inorganics, metal dust, oxygenated solvents, waste oil and mixed oil, oil-containing wastes, latex wastes, pharmaceutical wastes, laboratory wastes, heavy metals, carbon tetrachloride and other halogenated solvents, organic solids, and empty containers as of October 2018. Based on the presumed groundwater flow direction (generally north) groundwater impacts are not expected to migrate to the subject property. However, the types of wastes generated at this facility, specifically volatile chemicals, potentially may present a significant vapor intrusion environmental concern to the subject property.

Beginning in the early 1960s the adjacent property (formerly 1515 Rancho Conejo Boulevard), to the southeast of the subject property, was formerly owned and occupied by Northrop Grumman Systems Corporation (NGSC). NGSC operated manufacturing aircraft subassemblies into the 1980s at this property. The former NGSC property was named “The Newbury Park Site,” and soil investigation, groundwater monitoring, and subsequent remediation activities

were initiated by NGSC on a voluntary basis in the 1980s, and continued following the sale and commercial redevelopment of The Newbury Park Site (NPS) by others. The NGSC was divided into three areas where former NGSC operations had impacted groundwater significantly:

1) the Paraplast area that is located in the western portion of the NGSC;
2) the East Manufacturing Building area (and Northern Area) that is located in the north-central portion of the NGSC; and
3) the former FTA that is located in the south-central portion of the Site between the two southernmost on-site buildings.

The Paraplast area is located within 550 feet of the subject property. Site investigation activities identified VOCs, primarily TCE, as the primary contaminant of concern in soil and groundwater at the former Paraplast Area. A full-scale ISCO remediation action included installation of 31 injection wells and 12 dual-nested monitoring wells in Zone A between November 2008 and May 2009. Potassium permanganate was injected into each of the injection wells in the Paraplast Area in May and June 2009 and two subsequent injection events were performed in 2010. In June 2011, approximately 1,100 pounds of potassium permanganate (2-percent solution) was injected into monitoring wells PA-MW-1, PA-MW-3S, PA-MW-4S, PA-MW-9S, PA-MW-9D, PA-MW-10S, PA-MW-10D and PPIRZ-6. As a result of an observed continual VOC rebounding condition (specifically TCE) following ISCO remedial activity, Northrop elected to remove the overlying unsaturated soils in the vicinity of monitoring wells MW-4S and MW-9S using a 3-foot diameter auger for environmental pattern drilling to a depth of approximately 60 feet bgs. The final excavation footprint was irregular in shape with the dimensions measured at approximately 24 to 27 feet wide by 30 to 35 feet long by approximately 60 feet deep. Confirmation sample results indicated that near surface samples had non-detectable concentrations of VOCs, with the exception of sample SS-3 and SS-5 with a maximum concentration of TCE at 9.6 micrograms per kilogram (ug/Kg).

Historical USTs, sumps/clarifiers, and sumps/tanks were previously located at the former Five Tank Area. The former FTA included four 1,500-gallon USTs containing chemical product including 1,1,1-trichloroethane (1,1,1-TCA), methylene chloride, 2-butanone (MEK), and toluene, and one 3,000-gallon UST used to store waste solvent. A soil vapor extraction (SVE) system was operated in the Five Tank Area from May 1994 through November 1996. The SVE system included 135 multi-completion wells and 213 pneumatic fracture points. Groundwater monitoring (in 2004 and 2005) indicated the presence of a thin layer of light non-aqueous phase liquid (LNAPL) in Zone A Well MW-11 in the Five Tank Area. Analytical results of the LNAPL indicated that it was composed primarily of light lubricating oil and approximately 12-percent

chlorinated solvent mixture. A two phase extraction (TPE) pilot test was performed in the Five Tank Area in 2008 with the off-gas being treated using a refrigeration/ condensation off-gas treatment unit. full scale TPE remediation activities began in late 2009 and are on-going. The TPE Remediation system was expanded in 2013 and 2014 with the addition of more wells and the relocation of the system. The Los Angeles RWQCB approved a supplementary soil, soil vapor and groundwater investigation work plan prepared by Equipose dated December 31, 2019. Equipose reported that based on discussion with the Los Angeles Regional Board during a meeting on December 10, 2019, further investigation of soil vapor impacts was recommended to evaluate the protection of human health from potential soil vapor impacts in the subsurface.

Information provided in geotracker reports for the NGSC site indicate the former presence of one UST, one settling sump/clarifier/ and one spill sump/tank east of the former East Manufacturing Building. Sampling of the shallow groundwater wells east of the former Manufacturing Building indicated the presence of VOCs.

An enhanced bioremediation pilot test (also referred to as IRZ) was initially conducted within deeper groundwater (Zone C) of the North Area to address elevated VOC (primarily TCE) concentrations. The initial IRZ pilot test was conducted between October 2001 and April 2002. Based on pilot test results, the injection well network was expanded and the IRZ implementation was continued in 2005/2006. Subsequent groundwater monitoring data indicated a reduction in the magnitude and areal extent of the VOC concentrations in groundwater which led to revising the remediation approach to a monitored natural attenuation approach. The WDR was closed in 2009.

To control VOCs in groundwater, a groundwater extraction system was installed and began operation in mid-1992. Groundwater was extracted from wells EW-1, EW-2, and EW-3. Well EW-1 was located to capture groundwater and “dry” a former spring in the Paraplast area; EW-2 was located to capture groundwater at the Five Tank Area; and EW-3 was located to capture groundwater at the East Manufacturing Building area. To evaluate current potential subject property groundwater conditions, contaminant data for a number of groundwater wells as reported in a monitoring report dated March 5, 2019, were selected for review. Groundwater wells selected were located in hydrological Zones A, C and D. The selected groundwater wells included four groundwater monitoring wells installed along the southern subject property boundary (MW-18AR, MW-24R, MW54R and MW98R; and one groundwater well located between the subject property and north of the five tank area. One selected groundwater well was located onsite (MW-100) and one groundwater well was located off site at the Takeda Pharmaceutical facility (MW-101). To evaluate current potential subject property groundwater

conditions, contaminant data for a number of groundwater wells as reported in a monitoring report dated March 5, 2019, were selected for review. Groundwater wells selected were located in hydrological Zones A, C and D. The selected groundwater wells included four groundwater monitoring wells installed along the southern subject property boundary (MW-18AR, MW-24R, MW54R and MW98R; and one groundwater well located between the subject property and north of the five tank area. One selected groundwater well was located onsite (MW-100) and one groundwater well was located off site at the Takeda Pharmaceutical facility (MW-101).

The most recent groundwater monitoring data indicates that VOC impacts to groundwater exist at the northern Northrop site boundary, given the groundwater flow direction and depth of groundwater; these impacts may potentially migrate off site above respective MCLs. Insufficient data exists along the subject properties southern site boundary to evaluate if vapor impacts migrate to the subject property from the NGSC site. The release of VOCs at the NGSC site, recorded groundwater impacts, the inferred groundwater flow direction and depth to groundwater present a potential significant vapor intrusion environmental concern to the subject property.

FINDINGS

A *Recognized Environmental Condition (REC)* refers to the presence or likely presence of any hazardous substance or petroleum product on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC includes hazardous substances and petroleum products even under conditions that might be in compliance with laws. The term is not intended to include "de minimis" conditions that do not present a threat to human health and/or the environment and that would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies. The following was identified during the course of this assessment:

Terrax identified the following RECs during the course of this assessment:

- The Baxalta US, Inc./Baxter Healthcare Hyland/Baxter Healthcare Corp (Takeda Pharmaceuticals) site, addressed as 1700 Rancho Conejo Boulevard, is adjacent and located to the north-northeast of the subject property. This facility is considered to be cross to up-gradient in terms of hydrogeology. This facility is an active large quantity generator of hazardous wastes, reporting large quantity generation activities between 1996 and 2018, including other alkaline solutions, aqueous solutions, asbestos-containing

wastes, inorganics, metal dust, oxygenated solvents, waste oil and mixed oil, oil-containing wastes, latex wastes, pharmaceutical wastes, laboratory wastes, heavy metals, carbon tetrachloride and other halogenated solvents, organic solids, and empty containers as of October 2018. This facility has a permitted 13,020 gallon capacity AST(s). This NPDES/CIWQS facility is permitted as a type that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping. Based on the presumed groundwater flow direction (generally north) groundwater impacts are not expected to migrate to the subject property. However, the types of wastes generated at this facility, specifically volatile chemicals, potentially may present a significant vapor intrusion environmental concern to the subject property.

- The Northrop Ventura Division/Northrop Corp/Northrop Grumman Corp. site, addressed as 1515 Rancho Conejo Boulevard, is adjacent and located approximately to the east-southeast of the subject property. This facility is considered to be up-gradient in terms of hydrogeology. In early 1985, the Northrop Corporation identified several leaking underground storage tanks at its facility. Northrop Corporation is conducting remediation of the site under RWQCB lead. The site was referred to the RWQCB for oversight on August 31, 1995. As a LUST, the former Five Tank Area (FTA) included five (5) USTs: four (4) 1,500 gallon USTs that contained 1,1,1-trichloroethane (1,1,1-TCA), methyl ethyl ketone (MEK), methylene chloride (MC), and toluene, respectively, and one 3,000 gallon waste UST. The five (5) USTs were removed in 1985. Case Closure as issued for the USTs only on October 3, 1996. As a CPS-SLIC site (ID# 0252), this facility is regarded as "Open – Remediation" status for the ongoing investigation activities that include groundwater monitoring and vapor extraction

  Based on a review of the LA RWQCB Geotracker investigation records, and VCEHD records, this facility is a historical industrial property (formerly 100 acres) under active investigation. The most recent groundwater monitoring data indicates that VOC impacts to groundwater exist at the northern Northrop site boundary, given the groundwater flow direction and depth of groundwater; these impacts may potentially migrate off site above respective CA maximum contaminant levels for drinking water. Insufficient data exists along the subject properties southern site boundary to evaluate if vapor impacts migrate to the subject property from the NGSC site. The release of volatile organic compounds at the NGSC site, recorded groundwater impacts, the inferred groundwater flow direction;

and depth to groundwater, present a potential significant vapor intrusion environmental concern to the subject property.

A *Controlled Recognized Environmental Condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Terrax did not identify any CRECs during the course of this assessment.

A *Historical Recognized Environmental Condition (HREC)* refers to an environmental condition which would have been considered a REC in the past, but which is no longer considered a REC based on subsequent assessment or regulatory closure. The following was identified during the course of this assessment:

- Terrax did not identify any HRECs during the course of this assessment.

An *Environmental Issue* refers to environmental concerns identified by Terrax, which do not qualify as RECs; however, require discussion. The following was identified during the course of this assessment:

- Terrax did not identify any Environmental Issues during the course of this assessment.

CONCLUSIONS, OPINIONS, AND RECOMMENDATIONS

Terrax has performed a Phase I Environmental Site Assessment for the property located at 1691-2000 Rancho Conejo Boulevard, Conejo Center Drive, Thousand Oaks, California 91320 (“Subject Property”) in conformance with the scope and limitations of ASTM Practice E1527-13. Any exceptions to or deletions from this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of RECs, CRECs, HRECs, or Environmental Issues identified in connection with the subject property.

- Terrax recommends that a Phase II ESA be performed at the subject property in order to confirm or deny the presence soil vapor and/or groundwater impacts as a result of historic adjacent property operations.

1.0 INTRODUCTION

Terrax Environmental, Inc. (Terrax) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of American Society for Testing and Materials (ASTM) Standard Practice E1527-13 and the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1691- 2000 Rancho Conejo Boulevard, Conejo Center Drive, Thousand Oaks, California 91320 (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this Phase I ESA is to identify existing or potential Recognized Environmental Conditions (RECs) as defined by ASTM Standard E-1527-13, affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require cleanup, remedial action, or other response with respect to hazardous substances or petroleum products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances.

The information contained in this Phase I ESA Report will be used by the Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout, or seller financing; 2) evaluate the subject property's overall development potential, the associated market value, and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout, or seller financing of the subject property. This Phase I ESA was performed to permit the Report User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*Landowner Liability Protections*," or "*LLPs*"). ASTM Standard E-1527-13 constitutes "*All Appropriate Inquiry* into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this Phase I ESA is in general accordance with the requirements of ASTM Standard E 1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Terrax contacted local agencies, such as environmental health departments, fire departments, and building departments in order to determine any current and/or former hazardous substances usage, storage, and/or releases of hazardous substances on the subject property. Additionally, Terrax researched available records for information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater at the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater at the property.

If requested by the Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paints (LBPs), mold, and/or radon.

1.3 Limitations

Terrax warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting a Phase I ESA of a property for the purpose of identifying RECs. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Terrax believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Terrax cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the

scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted. This practice does not address requirements of any State or local laws or of any Federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBPs, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, these are considered non-ASTM issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Thousand Oaks Master, LLC. engaged Terrax to perform this assessment in accordance with an agreement governing the nature, scope, and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Thousand Oaks Master, LLC. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Terrax granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Terrax, its officers, employees, vendors, successors, or assigns. Any such unauthorized user shall be responsible to protect, indemnify, and hold Terrax, the Client, and their respective officers, employees, vendors, successors, and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees), and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13. Specific limitations and exceptions to this Phase I ESA are more specifically set forth below:

- Interviews with the past owners, operators, and occupants were not reasonably ascertainable and thus constitute a data gap;
- Terrax was not able to adequately document the subject property prior to 1900, and in certain subsequent years, which constitutes a data gap;
- Due to the size of the subject property (approximately 51.33 acres), Terrax performed a reconnaissance of the subject property utilizing the field techniques of traversing the property and walking the property boundaries in an attempt to provide an overlapping field of view. Due to the size of the property and the dense vegetation present (post grading regrowth), and steep terrain on site, isolated areas of the property were not accessible for direct observation during the Terrax's site reconnaissance; and,
- Terrax contacted various regulatory agencies in order to request information pertaining to any current and/or historic hazardous material usage, storage, and releases associated with the subject property; some of the agencies contacted including the City of Thousand Oaks Building Division had not responded to Terrax as of the date of this report.

The Client has requested the report despite the above-listed limitations; however, none of the limiting conditions or data gaps listed above are considered critical or likely to change the conclusions of the report at this time.

The subject property is currently unoccupied. The subject property is zoned "Industrial," an industrial use area, according to the General Land Use Map for the City of Thousand Oaks.

Sixteen (16) state-of-the-art buildings are proposed for future development at the subject property by Thousand Oaks Master, LLC. The buildings will provide high-end space to a variety of businesses, ranging from research and development to Fortune 500 businesses.

2.3 Current Use of Adjoining Properties

The subject property is located in an area that is currently used for mixed uses including both commercial and industrial use (adjacent to the east), municipal use (City of TO Public Works, adjacent to the west), and for open space (hiking trails, etc.). During the site reconnaissance, Terrax observed the following land uses on the properties adjoining the subject property:

Immediately Surrounding Properties

North:	The Conejo Canyon open space area includes densely vegetated steeply sloping terrain and public access trails and vacant, undeveloped land to the north. Rancho Conejo Boulevard, and an industrial facility occupied by Takeda Pharmaceuticals (1700 Rancho Conejo Boulevard) lies to the northeast.
East:	Conejo Center Drive, followed by six commercial-industrial properties: Amazon DPS3 (2405 Conejo Spectrum Street), Rogers Bathroom Remodeling (2455 Conejo Spectrum Street), River Supply Co. (2535 Conejo Spectrum Street), Barefoot Dreams (2585 Conejo Spectrum Street), Amazon Delivery Station (2535 Conejo Spectrum Street), and unoccupied building (2615 Conejo Spectrum Street) lie to the east and southeast.
South:	Conejo Center Drive, followed by Conejo Vista Business Center (4630 Conejo Center Drive) to the south-southeast, and undeveloped, undulating land/open space land lie to the south-southwest.
West:	To the west of Conejo Center Drive and undeveloped, undulating land/open space land lie two municipal facilities: The City of Thousand Oaks Household Hazardous Waste Facility (2010 Conejo Center Drive), and the City of Thousand Oaks Municipal Services Center (1993 Rancho Conejo Boulevard).

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Newbury Park, California Quadrangle* 7.5-Minute Series topographic map was reviewed for this Phase I ESA. This map was published by the USGS in 1951, and photo-revised in 1967. According to the contour lines on the topographic map, ground surface elevation ranges from 644 to 699 feet above mean sea level AMSL. The contour lines in the area of the subject property indicate the overall region ranges from gently to steeply undulating land, generally sloping to the west-northwest. The subject property is depicted as undeveloped land; and Rancho Conejo Boulevard and Conejo Center Drive do not appear in the topographic map. Please refer to Figure 2: Topographic Map for additional information.

2.4.2 Geology/Soils

The subject property is situated within the Pacific Border physiographic province of the State of California. Information concerning the geology of the subject property was obtained from the USGS Ground Water Atlas of the United States, California region (1995). The subject property is located within the Pacific Border physiographic province, which is characterized by steep rolling hills and mountains and consists of severely folded, faulted, and commonly metamorphosed marine and continental sediments.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, Ventura County Area, California, the subject property is mapped as three different soil types:

1) To the north, *San Benito clay loam, 50 to 75 percent slopes (ScG)*. The *San Benito clay loam* series consists of shallow, well drained soils that formed from residuum weathered from calcareous shale. These soils are Hydrologic group 'C.' These soils are *clay loam* from 0 to 45 inches below ground surface (bgs), and *weathered bedrock* from 45 to 79 inches bgs;

2) To the center-east, *San Benito clay loam, 15 to 30 percent slopes, eroded (ScE2)*. The *San Benito clay loam* series consists of shallow, well drained soils that formed from residuum weathered from calcareous shale. These soils are Hydrologic group 'C.' These soils are *clay loam* from 0 to 60 inches bgs, and *weathered bedrock* from 60 to 79 inches bgs; and,

3) To the west-southwest, *Gilroy loam, 15 to 50 percent slopes, very rocky (GvF)*. The *Gilroy loam* series consists of shallow, well drained soils that formed from residuum weathered from igneous rock. These soils are Hydrologic group 'C.' These soils are *loam* from 0 to 5 inches bgs, *clay loam* from 5 to 9 inches bgs, *gravelly clay loam* from 9 to 20 inches bgs, and *bedrock* from 20 to 30 inches bgs.

According to information obtained from the San Diego Regional Water Quality Control Board (RWQCB) *Geotracker* online database, former environmental site investigations completed at the adjacent property (1515 Rancho Conejo Boulevard), the subject property is underlain by Quaternary-age alluvium that ranges in thickness from 15 feet to approximately 150 feet and consist of unconsolidated sand, silt, and clay. Underlying the alluvium, and exposed in the nearby hills, is the middle Miocene-age Conejo Volcanics. These volcanics have predominantly been mapped as basaltic and andesitic flows. Subunits include sedimentary-like rocks of volcanic origin (conglomerates and volcanic ash), dikes, and sills. Based on the adjacent site boring logs, the adjacent site is underlain by artificial fill, alluvium, and volcanic rock of varying thickness.

According to California's Groundwater Bulletin 118, produced by the California Department of Water Resources (DWR), the subject property belongs to the Conejo Valley Groundwater Basin of the South Coast Hydrologic Region (4-10). This groundwater basin underlies Conejo Valley in southern Ventura County. The primary water-bearing units in the basin are Quaternary alluvium and the Modelo, Topanga, and Conejo Formations. The basin is bounded by surface drainage divides. Ground surface elevation ranges from 644 to 669 feet AMSL and surface waters are drained westward by Conejo Creek.

Recharge to the basin is provided by percolation of rainfall to the valley floor, percolation of surface water from Conejo Creek and its tributaries, and irrigation return.

2.4.3 Hydrology/Hydrogeology

According to information obtained from the San Diego Regional Water Quality Control Board (RWQCB) *Geotracker* online database, former groundwater monitoring completed at the adjacent property (1515 Rancho Conejo Boulevard), reported in March 5, 2020, indicate that the approximate depth to first groundwater in the vicinity of the subject property is generally anticipated to be encountered at approximately 45 feet below ground surface (bgs).

Four hydrogeologic zones (A-D) have been identified beneath the adjacent Site to the south. The upper two zones (A and B) consist predominantly of fine-grained alluvium and are differentiated from one another by depth and differences in groundwater potentiometric surface level. The third zone (C) is composed predominantly of coarse-grained sand and gravel and is generally logged as a volcanic conglomerate. Groundwater potentiometric levels in this conglomeratic zone are different from those measured in both of the upper alluvial zones. The fourth zone (D) is the basaltic volcanic rock of the Conejo Volcanics, found as bedrock throughout the area. Groundwater is present in the volcanic rock, and the potentiometric levels are similar to those in the conglomeratic zone above.

Groundwater monitoring conducted at the adjacent property, reported by Equipoise Corporation in a Second Semester 2019 Groundwater monitoring report dated March 5, 2020 states groundwater flow directions as follows:

Shallow Groundwater (Zone A)
Zone A well groundwater elevations when contoured together, indicate that groundwater flow direction in Zone A was generally depicted toward the north/northwest, with the exception of the southeasterly area of the Site where groundwater appeared to flow to the east-southeast.

Groundwater Zone B, C and D
Groundwater flow in Zone B is generally to the southwest, flow in Zone C is generally to the northwest and north-northwest, and flow in Zone D is generally to the north, with the exception of the southeast corner of the Site where groundwater appears to flow to the west-northwest.

A public water system operated by the California American Water Company serves the subject property vicinity. According to the 2019 Water Quality Report, the sources of public water for the City of Thousand Oaks are treated surface water purchased from the Calleguas Municipal Water District. The Calleguas Municipal Water District is an authorized wholesaler of treated surface water received from the Metropolitan Water District of Southern California's (MWDSC) Jensen and Weymouth water treatment plants. The sources of the raw surface water are the Sacramento and Colorado Rivers. These waters are conveyed to Southern California via the California Aqueduct (also known as the State Water Project) and the Colorado River Aqueduct.

No ground water extraction wells are reported to be onsite at the subject property, nor were any water wells observed during the site reconnaissance. A groundwater monitoring well MW-100 is located on the subject property (Figure 3), monitoring results are discussed later in the report.

2.4.4 Flood Zone Information

Terrax performed a review of the Federal Emergency Management Agency's (FEMA's) Flood Insurance Rate Map (FIRM). According to Panel 958 of 1,275 Number 06111C-0958E (dated January 20, 2010) the subject property is located within Zone X, areas determined to be outside of 0.2% annual chance floodplain. A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

Terrax contacted various regulatory agencies in order to determine any current and/or historic hazardous materials usage, storage, and/or releases of hazardous substances on the subject property. Additionally, Terrax researched available information on the presence of AULs from these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or

limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include ICs and/or ECs, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater at the subject property. Copies of select regulatory agency records are included in Appendix B of this report.

4.2 Mapped Environmental Records Search

Terrax obtained a Radius Report prepared by Environmental Data Resources, Inc. (EDR) for the subject property. The Federal, State, and local agency environmental records contained in the EDR report are compiled from publicly available sources and the locations of the listed sites are plotted utilizing a geographic information system, which geocodes the site addresses. Using the

ASTM definition of migration, Terrax considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed in the EDR report, which includes solid, liquid, and vapor. A copy of the EDR report is included in Appendix C of this report.

4.2.2 Subject Property Listings

Subject property listings likely to impact the subject property were not listed in the EDR report.

4.2.3 Adjacent Property Listings

The following adjacent properties were listed in the EDR report and are further discussed below:

- The Toaks HHW Facility (City of Thousand Oaks) site, addressed as 2010 Conejo Center Drive, is surrounded to the north, west and south of the subject property. This facility is considered to be down to up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a CERS HAZ WASTE, VENTURA CO. BWT, and CERS site (EPA ID# CAD981571466; #10468351). This facility is a small quantity generator of hazardous wastes and household hazardous wastes types collection and transfer. Hazardous wastes are transferred off-site from this facility. The permit (#FA0033156) for this facility to operate as a hazardous wastes collection and transfer facility is open, and was issued by the Ventura County Environmental Health Division (VCDEH). This facility received violations for records keeping and facility housekeeping during routine inspections in 2015 and 2017. The wastes are generally collected in containers and hauled off-site by an environmental transport company. Based on the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- The City of Thousand Oaks Misc (City Services Facility) site, addressed as 1993 Rancho Conejo Boulevard, is surrounded to the north, east and south of the subject property. This facility is considered to be down and up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a RCRA-SQG, UST, FINDS, ECHO, AST, CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, HWTS, and RCRA NonGen / NLR site (EPA ID# CA0000134908, CAL000330453, CAT000624247; #'s 10333498, 110002613967). This facility is a small quantity generator of hazardous wastes, a permitted underground storage tank (UST) site, and an aboveground (AST) permitted storage facility. On-site USTs are used to fuel City service vehicles for Thousand Oaks municipal. The wastes generated at this facility since 1994 are household hazardous wastes, waste oil and mixed oil, and other organic solids. These wastes are transferred off-site from this facility. The UST permit; and the permit for this facility to operate as a hazardous wastes collection and transfer facility is open, and was issued by the VCDEH. The wastes are generally collected in containers and hauled off-site by an environmental transport company. Based on the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- The Golden State FC, LLC (DPS3)/Amazon COM Services site, addressed as 2405 Conejo Spectrum Street, is adjacent and located to the east of the subject property. This facility is considered to be cross-gradient in terms of hydrogeology. This facility was listed in the EDR report as a RCRA-SQG, CERS HAZ WASTE, VENTURA CO. BWT,

NPDES, CIWQS, and CERS site (EPA ID# CAR000287201; FA0037715). As of August 2018, this facility is an active small quantity generator location of hazardous wastes, including dichlorobenzne, heavy metals, aqueous and alkaline solutions, and methyl ethyl ketone. The wastes generated at this facility are transferred off-site from this facility under manifest. The hazardous wastes generator permit for this facility was issued by the VCDEH. The wastes are generally collected in containers and hauled off-site by an environmental transport company. During 2018, this facility was issued an NPDES permit for the operations at the existing industrial building, in order to monitor wastes streams impacting stormwater. The NPDES/CIWQS permit is listed as active, and violations were reported for this facility for recordkeeping errors. Based on the presumed groundwater flow direction (generally north), and the regulatory oversight of this facility as a local governmental agency, this facility is not expected to present a significant environmental concern to the subject property.

- The Nicotine River (Thousand Oaks, CA) site, addressed as 2435 Conejo Spectrum Street, is adjacent and located to the east and south of the subject property. This facility is considered to be up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a RCRA-LQG, CERS HAZ WASTE, VENTURA CO. BWT, and CERS site (EPA ID# CAR000286898; #'s 10775980, FA0037569). This facility is an active large quantity generator location of hazardous wastes, including other organic solids, and nicotine and salts as of August 2018. This is a permitted facility with reported record keeping violations during 2019. The wastes generated at this facility are transferred off-site from this facility under manifest. The hazardous wastes generator permit for this facility was issued by the VCDEH. The wastes are generally collected in containers and hauled off-site by an environmental transport company. Despite the presumed groundwater flow direction (generally north) and the assumed regional depth to groundwater (approximately 45 feet bgs), the types of wastes generated at this facility (nicotine and salts) are not expected to present a significant environmental concern to the subject property.

- The Baxalta US, Inc./Baxter Healthcare Hyland/Baxter Healthcare Corp (Takeda Pharmaceuticals) site, addressed as 1700 Rancho Conejo Boulevard, is adjacent and located to the north-northeast of the subject property. This facility is considered to be cross to up-gradient in terms of hydrogeology. This facility was listed in the EDR report as a AST, HAZNET, MED WASTE VENTURA, NPDES, CIWQS, CERS, HWTS, ENVIROSTOR, CERS HAZ WASTE, CERS TANKS, VENTURA CO. BWT, CERS, WDS, and RCRA-LQG site (EPA ID# CAR000010207, CAR000010207; #'s 10151705,

FA0005744). This facility is an active large quantity generator of hazardous wastes, reporting large quantity generation activities between 1996 and 2018, including other alkaline solutions, aqueous solutions, asbestos-containing wastes, inorganics, metal dust, oxygenated solvents, waste oil and mixed oil, oil-containing wastes, latex wastes, pharmaceutical wastes, laboratory wastes, heavy metals, carbon tetrachloride and other halogenated solvents, organic solids, and empty containers as of October 2018. This is a permitted facility reported violations during 2005, 2007, 2008, 2014, 2017, and 2019. The wastes generated at this facility are transferred off-site from this facility under manifest. The hazardous wastes generator permit for this facility was issued by the VCDEH. This facility has a permitted 13,020 gallon capacity AST. This NPDES/CIWQS facility is permitted as a type that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping. As an ENVIROSTOR site (ID# 71003447), this facility has been issued a "Tiered Permit" to generate hazardous wastes, and oversight was referred to the RWQCB and VCEHD. Based on the presumed groundwater flow direction (generally north) groundwater impacts are not expected to migrate to the subject property. However, the types of wastes generated at this facility, specifically volatile chemicals, potentially may present a significant vapor intrusion environmental concern to the subject property.

- The former Northrop Ventura Division/Northrop Corp/Northrop Grumman Corp (NGSC) site, addressed as 1515 Rancho Conejo Boulevard, is adjacent and located approximately to the east-southeast of the subject property. The Site encompassed approximately 100 acres and is an open case with the Los Angeles RWQCB, case number 0252; global ID SL204711661.

  This facility is considered to be up-gradient in terms of hydrogeology. This facility was listed in the EDR report as an CA BOND EXP. PLAN, EMI, ENVIROSTOR, LUST, CPS-SLIC, HIST CORTESE, CERS, CPS-SLIC, HIST UST, VENTURA CO. BWT, and Cortese site (ID#s CAR000196089, 56370005; RWQCB ID#s C-96044, T0611101110).

  Based on a review of the LA RWQCB Geotracker investigation records, and VCEHD records, this facility is a historical industrial property (formerly 100 acres) under active investigation. In addition, this facility is a permitted Waste Discharge Requirements

(WDR) site (ID#s 9067), permitted by the RWQCB (August 8, 2006) as the "Newbury Park Site Paraplast Area ISCO, Equipoise Project."

Site investigation, groundwater monitoring, and subsequent remediation activities were initiated by Northrop on a voluntary basis beginning in the 1980's. Investigation activities include the installation of over 100 groundwater monitoring and extraction wells. Remediation activities previously conducted at the former Northrup property include groundwater extraction, soil vapor extraction, two-phase extraction, in-situ reactive zone, in-situ chemical oxidation, and soil excavation. Northrop retains responsibility for ongoing remedial activities at the former Northrop property

In early 1985, the Northrop Corporation identified several leaking underground storage tanks at its facility. Information gathered by Northrop indicates the presence of chlorinated solvents in soil and ground water under the Northrop facility. As an ENVIRSTOR site, investigation of this facility began on December 21, 1983, and is considered a historical site, as it was referred to the RWQCB for oversight on August 31, 1995. As a leaking underground storage tank (LUST), the former Five Tank Area (FTA) included five (5) USTs: four (4) 1,500 gallon USTs that contained 1,1,1-trichloroethane (1,1,1-TCA), methyl ethyl ketone (MEK), methylene chloride (MC), and toluene, respectively, and one 3,000 gallon waste UST. The five (5) USTs were removed in 1985. Case Closure was issued for the USTs (only) on October 3, 1996. As a CPS-SLIC site (ID# 0252),

A review of historical aerial photographs indicates that the Site was undeveloped land from 1938 through 1959. The southern 48 acres of the Site was developed by Northrop Grumman in the early 1960s for the purpose of manufacturing aircraft subassemblies and related support activities. In 1990, Northrop operations were shut down, and the property was sold by parcels. The southern area originally consisted of four main buildings and several smaller buildings. Following cessation of Northrop's operations and demolition activity, three of the four main buildings remained and were remodeled, these include: the Manufacturing Building, the Tactical Products building, and the Engineering Building. The northern 52 acres (Paraplast Area**)** were undeveloped by Northrop, however, since the sale of the Site by Northrop, the new owners of the property have completed development of this area. Each of the key NGSC areas are discussed below:

Engineering Building, and Tactical Product Building (Conejo Spectrum Property) – Soil Impacts

This approximate 14.15 acres of land is a sub set of the former Northrop site and comprises the former Engineering Building, constructed at 1525 Rancho Conejo Boulevard in 1982; and, the Tactical Product Building constructed at 1535 Rancho Conejo Boulevard in 1961. These buildings were remodeled as a 61,917-square-foot two-story office building (Engineering Building); and a 97,000-square-foot one-story office building (Tactical Products Building) (Figure 3). This area of the former NGSC site is known as the Conejo Spectrum Property.

The Los Angeles RWQCB reviewed a Subsurface Investigation Results report dated June 7, 2017, prepared by Farallon Consulting, LLC (Farallon). The purpose of the subsurface investigation was to collect data in support of soil closure for the Conejo Spectrum Property. The subsurface investigation results were evaluated by the Office of Environmental Health Hazard Assessment (OEHHA). OEHHA concluded that the VOC and metals concentrations detected in soil did not at the time of the review exceed residential or industrial/commercial screening criteria; and are less than significant. Industrial/commercial and outdoor inhalation exposures and risks from soil vapor were evaluated by OEHHA to be below levels of concern. The Los Angeles RWQCB in a letter dated February 15, 2018 issued a "No Further Action Determination for the Conjejo Spectrum Property Subsurface Soil". The Los Angeles RWQCB concluded that, the soil conditions at the Conejo Spectrum Property meet the requirements for commercial/industrial soil closure.
