ALL PERPENDANT FIXTURES SHALL BE MOUNTED 10'-0" FROM FIN. FLOOR TO BOTTOM OF FIXTURES EXCEPT IN UNITS N & O.

GENERAL ELECTRICAL NOTES

1. VERIFY EXACT LOCATION OF ALL ELECTRICAL OUTLETS, PANELS AND EQUIPMENT ON JOB SITE.
2. VERIFY EXACT LOCATION OF ALL HEATING AND VENTILATING EQUIPMENT TO BE CONNECTED ON JOB SITE BY THIS CONTRACTOR.
3. ALL BRANCH CIRCUITS TO BE SWITCHED AT PANEL UNLESS OTHERWISE SHOWN.
4. ELECTRICIAN SHALL MAKE LINE VOLTAGE CONNECTIONS AND BE GUIDED BY DIAGRAMS SHOWN ON MECHANICAL DRAWINGS OR SUPPLIED BY THE MECHANICAL CONTRACTOR.

GENERAL NOTES

A. Typical details shall apply where no specific details or sections are given.

B. The Contractor shall verify all dimensions and conditions before starting work.

1. Soil Bearing Values: 4000 p.s.f. DL + LL @ 4'0" below natural grade. Nature of soil: Dense Clay. 2000 p.s.f. DL + LL @ 2'0" below natural grade. SOIL REPORT IS AVAILABLE.

2. All footings for Buildings B, C, D, E, L, to be a minimum of 1'6" below finish ~~or natural~~ grade, ~~whichever is lower;~~ all footings for all other buildings to be a minimum of 2'0" below finish ~~or natural~~ grade, ~~whichever is lower.~~ *The depth below natural grade is indicated by elevations or by a note as shown on Foundation Plans.*

3. Ultimate compressive strength of all poured in place concrete shall be 2000 p.s.i. in 28 days, except as noted below in Note 25 and as noted on drawings.

4. The bottom board on one side of the wall shall be temporarily omitted along the full length of the forms until after cleaning and inspection of the pour joint. Additional cleanouts shall be provided in the forms where necessary for proper cleaning and inspection.

5. Cement for concrete or masonry mortar shall be a standard brand meeting the requirements for Type I cement of ASTM Specifications C150-49 "Portland Cement."

6. Dry pack shall be 1:3 cement and sand mix.

7. All steel reinforcing shall be intermediate grade deformed bars and shall conform to ASTM A15-39. Deformations shall be as per ASTM A305-50.

8. The minimum concrete coverage of reinforcing steel is as follows:
   For footing concrete placed on ground, 3"
   Concrete cast in forms but exposed face in contact with earth, 2"
   All principal column reinforcement, 2"
   Walls: below grade, 2"; above grade, 1½"
   Slabs: 1", Formed Slabs, ¾"
   Beams: 1½"
   Above coverages apply unless otherwise specifically detailed.

9. All bars at splices shall lap at least 30 dia. unless otherwise noted and provide 1" clearance between bars. Splices in adjacent horizontal wall reinforcement shall be staggered. Bar splices in brick shall lap at least 40 dia.

10. All reinforcing steel, anchor bolts, dowels and other inserts shall be securely fastened in the forms before making the pour.

11. All structural steel shall comply with the "Standard Specifications for Structural Steel for Bridges and Buildings" ASTM A7-50. Shop drawings shall be submitted by the structural engineer for approval before fabrication. *Steel tubing is to meet strength requirements of 35000 p.s.i. with tensile strength.*

12. All steel pipe columns shall conform to "Standard Specification for Welded and Seamless Steel Pipe" ASTM A53-48 Grade B.

13. All welding shall be shielded arc type and shall be placed by experienced operators. All shop welding shall be performed by a licensed fabricator. ~~Continuous inspection not required for field welding - half stresses used.~~ See also Note 27.

14. All structural lumber shall conform with W.C.L.A. Grading Rules #14:
    Sills - D.F. No. 1 Pressure Treated
    Rafters & Joists - 1450f or better, D.F.
    Studs, blocking, miscellaneous framing - No. 1 grade, 1450f or better D.F.
    Plywood - Douglas Fir Exterior Grade per U.S.C.S. 45-48, see specifications. For non-structural plywood see Specs.

15. All 1" x 6" Diagonal sheathing shall be #1 dimension D.F. in conformity with par. 187 W.C.L.A. Grading Rules #14. Provide 2 - 8d nails at intermediate bearings and 3 - 8d each end. For Units B, C, D, E, L, there shall be at least one board between splices on the same bearing. There shall be at least one bearing between splices in adjoining boards. For other units, there shall be at least two boards between splices on the same bearing and at least one bearing between splices in adjoining boards. For nailing of plywood roof sheathing, see Sheet No. GU17.

16. Provide 2" solid blocking between joists at all points of support. Provide 2" x 3" cross bridging between joists where the joist span exceeds 8'0". The distance between the lines of bridging or bridging and bearing shall not exceed 8'0". *The above applies to Roof framing members only.*

17. All stud walls shall be fire stopped with 2" thick material at the floor, ceiling and midheight. 8'0" maximum height between blocking.

18. All bolt holes in wood shall be nominal diameter of bolts. Washers shall be placed under all nuts and heads of all bolts and lag screws as per washer schedule. All screws shall be screwed and not driven into place. All holes for lag screws shall first be bored to the same depth and diameter as the shank. The remainder of the hole occupied by the threaded portion shall be bored with a bit not larger than the diameter at the root of the thread.

19. At least 1" of dry pack shall be rammed under all wood sills to assure a uniform bearing. Sills shall be bolted to the concrete work with 5/8" ø x 1'0" bolts @ 4'0" o.c. maximum spacing with one bolt not more than 9" from ends of each piece.

20. Where wood is in contact with masonry or concrete, the wood shall be treated as required by the specifications.

21. See specifications for more specific descriptions of materials and methods of construction.

22. Minimum Nailing Schedule
    All nails to be common wire nails. Where driving of nails causes splitting, holes for the nails to be sub-drilled.

Joist or rafters to sides of studs:	Eight (8") inch joist or less - - - - - - - - - - - - - - - - 3 - 16d nails
	For each additional 4" in depth of joist - - - - - - - - - - 1 - 16d
Joist and rafters at all bearings:	Toe nail, each side - 2 - 10d
Studs to bearings, toe nail each side	- 2 - 10d
Blocking between joists and rafters:	To joists or rafters, toe nail each side, each end - - - - 2 - 10d
	To joists or rafter bearing, toe nail each side - - - - - - 2 - 10d
Sheathing	- See Note No. 15
Crossbridging between joist or rafters:	Toe nail each end - 2 - 8d
Herringbone blocking	- 2 - 10d
Ribbon to Studs:	One (1") inch ribbons - - - - - - - - - - - - - - - - - - - 2 - 8d
	Two (2") inch ribbons - - - - - - - - - - - - - - - - - - - 2 - 16d
Double Top Plates: (Lap 4'0" min.)	Lower Plate to top of studs - - - - - - - - - - - - - - 2 - 20d
	Upper Plate to Lower Plate - - - - - - - - - - - - - - 16d @ 18" o.c.
Multiple studs, stagger for widths of more than 4"	- 16d @ 12" o.c.

23. Washer Schedule (Unless otherwise shown or noted):

Bolt ø	M. I. Washer	Plate Washer
2½" ø x 1/4"	2½" ø x 1/4"	2½" x 1" x 2½"
5/8"	2-3/4" ø x 5/16"	2½" x 1" x 2½"
3/4"	3" ø x 7/16"	2-3/4" x 5/16" x 2-3/4"
7/8"	3½" ø x 7/16"	3¼" x 5/16" x 3-3/4"

24. Shop coat all structural steel as per specifications.

25. Ultimate compressive strength of all concrete for precast walls and transitional pours between panels, for all concrete columns, beams, and formed slabs, shall be 3000 p.s.i. in 28 days.

26. An approved bond preventive shall be used for all precast concrete wall panels before concrete is poured. Panels are not to be raised until after 7 days and/or when concrete has attained a strength of 2000 p.s.i. Forms shall be securely held down.

    All miscellaneous iron appurtenances, anchor bolts, inserts, etc. shall be securely wired in place prior to pouring.

    Erection sequence:
    1. Panels to be cast on smooth level concrete surface which shall be coated with approved anti-bonding solution.
    2. All lifts shall be made as vertical as possible.
    3. When using 4 point pick-up, angle between sling and panel surface shall not be less than 60° when panel is in horizontal position.
    4. When plumbing panels while using crane, care shall be taken to maintain tension on cables to avoid whipping of cables.
    5. Panels shall be securely shored until 7 days minimum after connecting elements are cast, and until roof steel framing has been installed.

27. All welding of reinforcing bars shall be done with low hydrogen type electrodes (A.W.S. E6015-16).

28. Brick shall be SW Grade, 2500 p.s.i. units.

29. Mortar shall be 1:3 cement and sand mix. Maximum of 1/2 part hydrated lime or lime putty may be added.

30. Grout shall be 1:3 cement and sand mix. Approved admixture may be added to grout.

31. For isolated bolts the brick joint shall be opened horizontally and vertically to a minimum of 4", the bolt centered therein and the space grouted. Wood members & steel shelf lgs supporting vert. loads shall be packed up with concrete or grout the full depth of chamber.

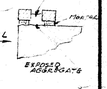
32. For clusters of bolts resisting loads the entire cluster shall be grouted as a unit with a minimum of 1½" of grout on all sides of any bolt. The minimum spacing of bolts shall be 4 diameter.

PRECAST PANELS

33. Unless otherwise detailed, all edges to have 3/4" chamfer.

34. Contractor to verify openings for utilities passing through panels. & verify all pertinent dimensions.

35. The connecting of precast walls shall be delayed as long as possible in order for shrinkage of the panel to take place.



36. All precast units shall be clearly marked so as to identify the date of pouring.

37. Rake out 1/2" joints and fill with drypack, strike smooth with an approved type jointing tool.

38. All rough edges and chamfers shall be ground smooth.

39. *Erection Stresses in precast panels are not to exceed 300p.s.i. in concrete tension or 22ksi in steel reinf. Stop down & calculations for erection stresses are to be submitted to the Structural Engineer for approval prior to erection process.*

GENERAL NOTES

- CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS, PROPERTY LINES ETC. PRIOR TO CONSTRUCTION
- FABRICATION AND INSTALLATION OF DEFERRED SUBMITTAL ITEMS SHALL NOT BE STARTED UNTIL CONTRACTOR'S DRAWINGS, SPECIFICATIONS, AND ENGINEERING CALCULATIONS FOR THE ACTUAL SYSTEMS TO BE INSTALLED HAVE BEEN ACCEPTED AND SIGNED BY THE ARCHITECT OR STRUCTURAL ENGINEER AND APPROVED BY THE DSA.
- CONTRACTOR SHALL NOTIFY ARCHITECT WHERE CONFLICT OCCURS ON ANY OF THE CONTRACT DRAWINGS OR DOCUMENTS. CONTRACTOR IS NOT TO ORDER MATERIAL OR CONSTRUCT ANY PORTION OF THE BUILDING THAT IS IN CONFLICT UNTIL CONFLICT IS RESOLVED WITH THE AFFECTED PARTIES.
- WHERE REQUIRED, ROOM OCCUPANCY CAPACITIES SHALL BE POSTED WITH THE REQUIREMENTS OF CALIFORNIA STATE FIRE MARSHAL & CBC 1004.3.
- SPECIAL REQUIREMENTS:
  A. ASSUMED PROPERTY LINES & FIRE SEPARATION DISTANCE PER GL111 SERIES
  B. ACCESSIBLE PATH OF TRAVEL PER SHEET AS101
  C. EMERGENCY VEHICLE ROAD ACCESS PER G-101
  D. FOR PARKING REQUIREMENTS SEE SHEET AS101
  E. FOR BUILDING SIGNAGE REQUIREMENTS SEE SHEETS G-513
- THE INTENT OF THESE DRAWINGS AND SPECIFICATIONS IS THAT THE WORK OF ALTERATION, REHABILITATION OR RECONSTRUCTION IS TO BE IN ACCORDANCE WITH TITLE 24, CCR. SHOULD ANY EXISTING CONDITIONS SUCH AS DETERIORATION OR NON-COMPLYING CONSTRUCTION BE DISCOVERED WHICH IS NOT COVERED BY THE CONTRACT DOCUMENTS WHEREIN THE FINISHED WORK WILL NOT COMPLY WITH TITLE 24, CCR, A CONSTRUCTION CHANGE DOCUMENT (CCD), OR A SEPARATE SET OF PLANS AND SPECIFICATIONS, DETAILING AND SPECIFYING THE REQUIRED WORK SHALL BE SUBMITTED TO AND APPROVED BY DSA BEFORE PROCEEDING WITH THE WORK (SECTION 4-317(C), PART 1, TITLE 24, CCR)
- CONSTRUCTION SHALL CONFORM TO ALL APPLICABLE CODES AND REGULATIONS, INCLUDING BUT NOT LIMITED TO:
  - 2019 CALIFORNIA ADMINISTRATIVE CODE (CAC), PART 1, TITLE 24 CCR
  - 2019 CALIFORNIA BUILDING CODE (CBC), PART 2, TITLE 24 CCR (2018 INTERNATIONAL BUILDING CODE, VOL 1 & 2, AND 2019 CALIFORNIA AMENDMENTS)
  - 2019 CALIFORNIA ELECTRICAL CODE (CEC), PART 3, TITLE 24 CCR (2017 NATIONAL ELECTRICAL CODE AND 2019 CALIFORNIA AMENDMENTS)
  - 2019 CALIFORNIA MECHANICAL CODE (CMC), PART 4, TITLE 24 CCR (2018 IAPMO UNIFORM MECHANICAL CODE AND 2019 CALIFORNIA AMENDMENTS)
  - 2019 CALIFORNIA FIRE CODE (CFC), PART 9, TITLE 24 CCR (2018 INTERNATIONAL FIRE CODE AND 2019 CALIFORNIA AMENDMENTS)
  - 2019 CALIFORNIA ENERGY CODE (CEC), PART 6, TITLE 24 CCR
  - 2019 CALIFORNIA EXISTING BUILDING CODE (CEBC), PART 10, TITLE 24 CCR (2018 INTERNATIONAL EXISTING BUILDING CODE AND 2019 CALIFORNIA AMENDMENTS)
  - 2019 CALIFORNIA GREEN BUILDING STANDARDS CODE (CALGREEN), PART 11, TITLE 24 CCR
  - 2019 CALIFORNIA REFERENCED STANDARDS CODE, PART 12, TITLE 24 CCR
  - TITLE 19 CCR, PUBLIC SAFETY, STATE FIRE MARSHAL REGULATIONS
  - 2016 ASME A17.1/CSA B44-13 SAFETY CODE FOR ELEVATORS AND ESCALATORS (PER 2019 CBC PART 2 CH 35)
  - NFPA 13 - STANDARD FOR THE INSTALLATION OF SPRINKLER SYSTEMS (CA AMENDED), 2016 EDITION
  - NFPA 14 - STANDARD FOR THE INSTALLATION OF STANDPIPE AND HOSE SYSTEMS (CA AMENDED), 2016 EDITION
  - NFPA 17 - STANDARD FOR DRY CHEMICAL EXTINGUISHING SYSTEMS, 2017 EDITION
  - NFPA 17A - STANDARD FOR WET CHEMICAL EXTINGUISHING SYSTEMS, 2017 EDITION
  - NFPA 20 - STANDARD FOR THE INSTALLATION OF STATIONARY PUMPS FOR FIRE PROTECTION, 2016 EDITION
  - NFPA 22 - STANDARD FOR WATER TANKS FOR PRIVATE FIRE PROTECTION, 2013 EDITION
  - NFPA 24 - STANDARD FOR THE INSTALLATION OF PRIVATE FIRE SERVICE MAINS AND THEIR APPURTENANCES (CA AMENDED), 2016 EDITION
  - NFPA 72 - NATIONAL FIRE ALARM AND SIGNALING CODE (CA AMENDED), 2016 EDITION
  - NFPA 80 - STANDARD FOR FIRE DOORS AND OTHER OPENING PROTECTIVES, 2016 EDITION
  - NFPA 2001 - STANDARD ON CLEAN AGENT FIRE EXTINGUISHING SYSTEMS (CA AMENDED), 2015 EDITION
  - UL 300 - STANDARD FOR FIRE TESTING OF FIRE EXTINGUISHING SYSTEMS FOR THE PROTECTION OF COMMERCIAL COOKING EQUIPMENT, 2005 (R2010)
  - UL 464 - AUDIBLE SIGNALING DEVICES FOR FIRE ALARM AND SIGNALING SYSTEMS, INCLUDING ACCESSORIES, 2003 EDITION
  - UL 521 - STANDARD FOR HEAT DETECTORS FOR FIRE PROTECTIVE SIGNALING SYSTEMS, 1999 EDITION
  - UL 1971 - STANDARD FOR SIGNALING DEVICES FOR THE HEARING IMPAIRED, 2002 (R2010)
- CHANGES TO THE APPROVED DRAWINGS OR SPECIFICATIONS SHALL BE MADE BY ADDENDA OR CONSTRUCTION CHANGE DOCUMENTS (CCD) APPROVED BY DSA, AS REQUIRED BY THE SECTION 4-338, PART 1, TITLE 24, CCR.
- A "DSA CERTIFIED" CLASS 1 PROJECT INSPECTOR EMPLOYED BY THE DISTRICT AND APPROVED BY THE DIVISION OF THE STATE ARCHITECT SHALL PROVIDE CONTINUOUS INSPECTION OF THE WORK.THE DUTIES OF THE INSPECTOR ARE DEFINED IN SECTION 4-342, PART 1, TITLE 24, CCR.
- ALL WORK SHALL CONFORM TO THE 2019 EDITION TITLE 24, CALIFORNIA CODE OF REGULATIONS.
- GRADING PLANS, DRAINAGE IMPROVEMENTS, ROAD AND ACCESS REQUIREMENTS AND ENVIRONMENTAL HEALTH CONSIDERATIONS SHALL COMPLY WITH ALL LOCAL ORDINANCES.

SCOPE OF PROJECT

- DEMOLITION OF EXISTING FIELD AREAS.
- CONSTRUCTION OF NEW TRACK, FOOTBALL / SOCCER FIELD, TENNIS COURTS, SOFTBALL FIELD, BASEBALL FIELD, BLEACHERS, DUG OUTS, AND STADIUM LIGHTING
- CONSTRUCTION OF:
  - CONCESSION BUILDING
  - ELECTRICAL YARD AND STORAGE BUILDING
  - (2) RESTROOM AND TEAM BUILDINGS
- EXPAND NORTHWEST PARKING LOT
- UPGRADE FIRE LANE
- RELOCATE CONDUITS FROM ROOFS AND CANOPIES TO UNDERGROUND
- CONSTRUCTION OF (3) PC SCOREBOARDS
  - BASEBALL PC SCOREBOARD PC#04-116016
  - SOFTBALL PC SCOREBOARD PC#04-116016
  - TRACK/FIELD SCOREBARD PC#04-116017

ARCHITECT'S STATEMENT

DSA APPLICATION NO. 03-120195 FILE NO. 19-H36

THE CIVIL, ELECTRICAL, LANDSCAPE, AND OTHER LISTED DRAWINGS IN THE SHEET INDEX AND SPECIFICATIONS HAVE BEEN PREPARED BY OTHER DESIGN PROFESSIONALS OR CONSULTANTS WHO ARE LICENSED AND/OR AUTHORIZED TO PREPARE SUCH DRAWINGS IN THIS STATE. THESE DOCUMENTS HAVE BEEN EXAMINED BY ME FOR THE DESIGN INTENT AND APPEAR TO MEET THE APPROPRIATE REQUIREMENTS OF TITLE 24, CALIFORNIA CODE OF REGULATIONS AND PROJECT SPECIFICATIONS PREPARED BY ME AND COORDINATION WITH MY PLANS AND SPECIFICATIONS IS ACCEPTABLE FOR INCORPORATION INTO THE CONSTRUCTION OF THIS PROJECT.

THE STATEMENT OF GENERAL CONFORMANCE "SHALL NOT BE CONSTRUED AS RELIEVING ME OF MY RIGHTS, DUTIES, AND RESPONSIBILITIES UNDER SECTIONS 17302 AND 81138 OF THE EDUCATION CODE AND SECTIONS 4-336, 4-341, AND 4-344" OF TITLE 24, PART 1. (TITLE 24, PART 1, SECTION 4-317 [b])

I FIND THAT: ☒ ALL DRAWINGS OR SHEETS LISTED ON THE COVER OR INDEX SHEET ☐ THIS DRAWING OR PAGE

SCOPE OF PROJECT

- DEMOLITION OF EXISTING FIELD AREAS.
- CONSTRUCTION OF NEW TRACK, FOOTBALL / SOCCER FIELD, TENNIS COURTS, SOFTBALL FIELD, BASEBALL FIELD, BLEACHERS, DUG OUTS, AND STADIUM LIGHTING
- CONSTRUCTION OF:
  - CONCESSION BUILDING
  - ELECTRICAL YARD AND STORAGE BUILDING
  - (2) RESTROOM AND TEAM BUILDINGS
- EXPAND NORTHWEST PARKING LOT
- UPGRADE FIRE LANE
- RELOCATE CONDUITS FROM ROOFS AND CANOPIES TO UNDERGROUND
- CONSTRUCTION OF (3) PC SCOREBOARDS
  - BASEBALL PC SCOREBOARD PC#04-116016
  - SOFTBALL PC SCOREBOARD PC#04-116016
  - TRACK/FIELD SCOREBARD PC#04-116017

- CHAIN LINK FENCE
- DF — HI-LO DRINKING FOUNTAIN WITH BOTTLE FILLING STATION
- (E) FIRE TRUCK ACCESS ROAD
- FIRELANE — 20' BARRIER-FREE FIRE TRUCK ACCESS ROAD

EMERGENCY FIRE TRUCK ACCESS PATH OF TRAVEL, ROUTE WITH A MINIMUM OF 20' WIDE BY 15'-6" VERTICAL CLEARANCE WITH 50' INSIDE TURNING RADIUS AND AN ADDITIONAL 2' OF WIDTH PROVIDED TO ALLOW FOR CLEARANCE OF APPARATUS BUMPER OVERHANG, TYP. VEHICLE BARRIERS SUCH AS GATES PROVIDED WITH A KNOX BOX AT CAMPUS ENTRY POINTS.

- (E) PATH OF TRAVEL (A#03-119484 - 2018)
- PATH OF TRAVEL :

"**DESIGN PROFESSIONAL IN GENERAL RESPONSIBLE CHARGE STATEMENT**: THE POT IDENTIFIED IN THESE CONSTRUCTION DOCUMENTS IS COMPLIANT WITH THE CURRENT APPLICATBLE CALIFORNIA BUILDING CODE ACCESSIBILITY PROVISIONS FOR **PATH OF TRAVEL REQUIREMENTS FOR ALTERATIONS, ADDITIONS AND STRUCTURAL REPAIRS**. AS PART OF THE DESIGN OF THIS PROJECT, THE POT WAS EXAMINED AND ANY ELEMENTS, COMPONENTS OR PORTIONS OF THE POT THAT WERE DETERMINED TO BE NONCOMPLIANT 1) HAS BEEN IDENTIFIED AND 2) THE DETAILS, DRAWINGS AND SPECIFICATIONS INCORPORATED INTO THESE CONSTRUCTION DOCUMENTS. ANY NONCOMPLIANT ELEMENTS, COMPONENTS OR PORTIONS OF THE POT THAT WILL NOT BE CORRECTED BY THIS PROJECT BASED ON VALUATION THRESHOLD LIMITATIONS OR A FINDING OF UNREASONABLE HARDSHIP ARE SO INDICATED IN THESE CONSTRUCTION DOCUMENTS.
DURING CONSTRUCTION, IF POT ITEMS WITHIN THE SCOPE OF THE PROJECT REPRESENTED AS CODE COMPLIANT ARE FOUND TO BE NONCONFORMING BEYOND RESONABLE CONSTRUCTION TOLERANCES, TEHY SHALL BE BOUGHT INTO COMPLIANCE WITH THE CBC AS A PART OF THIS PROJECT BY MEANS OF OF CONSTRUCTION CHANGE DOCUMENT."

DSA **810**

FIRE & LIFE SAFETY SITE CONDITIONS SUBMITTAL

To facilitate the Division of the State Architect's (DSA) fire and life safety plan review of project site conditions, DSA requires the design professional to provide the following information at time of project submittal for projects consisting of construction of a new campus, construction of new building(s), additions to existing buildings, and for site alternate design means for fire department emergency vehicle access, and fire suppression water supply.

Information associated with compliance items 1–3 below is to be provided for all project types indicated above. Information associated with items 4–7 is to be completed when an alternate means is utilized. Acknowledgement by the school district and signature from the local fire authority (LFA) is only required when an alternate design means is being requested.

Page 1 of the completed form must be imaged onto the fire access site plan. When an alternate design/means is proposed, completed pages 1 *and 2* are to be imaged on the fire access site plan.

For additional information refer to the instructions at the end of this form and DSA Policy 09-01.

PROJECT INFORMATION	
School District/Owner:	INGLEWOOD UNIFIED SCHOOL DISTRICT
Project Name/School:	MORNINGSIDE HIGH SCHOOL
Project Address:	10500 YUKON AVE S. INGLEWOOD, CA 90303

FIRE & LIFE SAFETY INFOMATION				
1.	Has a fire hydrant flow test been performed within the past 12 months? *(If yes, provide a copy of the test data.)*	Yes ☒		No ☐
2.	Was the fire hydrant water flow test performed as part of this LFA review?	Yes ☐		No ☒
3.	Is the project located within a designated fire hazard severity zone as established by Cal-Fire? *(If yes, indicate fire hazard zone classification below)*	Yes ☐		No ☒
	Refer to the following for fire hazard zone locations: www.fire.ca.gov/fire_prevention/fire_prevention_wildland_zones_maps	Moderate ☐	High ☐	Very High ☐
	Wildland Interface Area (WIFA) *(If any designations are checked, project design must meet the requirements of CBC Chapter 7A.)*			WIFA ☐

CONDITION MEANS AND METHODS RESOLUTION		ALTERNATE ACCEPTED			
		Yes	No	N/A	N/R
4.	Emergency vehicle access roadways do not meet CFC requirements.			☐	☐
4a.	**Acceptable Alternate:** Emergency vehicle and personnel access as proposed by the project architect is acceptable for providing fire suppression and protection of life and property.	☐	☐		
5.	**Fire Hydrants:** Number and spacing does not meet CFC requirements.			☐	☐
5a.	**Acceptable Alternate:** Number of fire hydrants and spacing as proposed by the project architect is acceptable for fire suppression and protection of life and property.	☐	☐		
6.	**Fire Hydrants:** Water flow and pressure are less than CFC minimum.			☐	☐
6a.	**Acceptable Alternate**: The available flow and pressure is acceptable for providing fire suppression and protection of life and property.	☐	☐		
7.	Location of fire department connection(s) serving fire sprinkler systems or standpipe systems does not meet CFC requirements.			☐	☐
7a.	**Acceptable Alternate:** The location of fire department connection serving the fire sprinkler system and/or standpipe system is acceptable for providing fire suppression and protection of life and property.	☐	☐		

School District Acceptance of Acceptable Design Alternates

By signing this form, the school district acknowledges and accepts the proposed design as an alternative to California Building Code (CBC) and California Fire Code (CFC) minimum requirements, as indicated by one or more of the conditions indicated at items 4a, 5a, 6a or 7a, for providing fire and life safety protection of life and property.

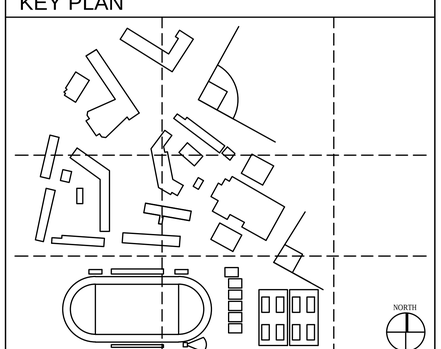
1 **OVERALL DEMOLITION PLAN**
SCALE: 1"=60'

GENERAL NOTES

1. CONTRACTOR IS TO COMPLY WITH ALL GENERAL AND STATE REQUIREMENTS INVOLVING THE REMOVAL AND DISPOSAL OF HAZARDOUS MATERIAL(S).
2. THE CONTRACTOR SHALL LOCATE & CLEARLY MARK (AND THEN PRESERVE THESE MARKERS) FOR THE DURATION OF CONSTRUCTION OF ALL TELEPHONE, DATA, LIGHTS, AND POWER FACILITIES THAT ARE IN OR NEAR THE AREA OF CONSTRUCTION.
3. CONTRACTOR'S BID IS TO INCLUDE ALL VISIBLE SURFACE AND ALL SUBSURFACE FEATURES IDENTIFIED TO BE REMOVED OR ABANDONED IN THESE DOCUMENTS.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR A SITE INSPECTION TO FULLY ACKNOWLEDGE THE EXTENT OF THE DEMOLITION WORK.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ANY AND ALL PERMITS NECESSARY FOR ENCROACHMENT, GRADING, DEMOLITION, AND DISPOSAL OF SAID MATERIALS AS REQUIRED BY PRIVATE, LOCAL AND STATE JURISDICTIONS. THE CONTRACTOR SHALL PAY ALL FEES ASSOCIATED WITH THE DEMOLITION WORK.
6. CONTRACTOR SHALL PAY DISPOSAL FEES.
7. BACKFILL ALL DEPRESSIONS AND TRENCHES FROM DEMOLITION TO THE SATISFACTION OF THE GEOTECHNICAL ENGINEER.
8. WITHIN LIMITS OF WORK, REMOVE SIDEWALKS, CURBS, GUTTERS, LANDSCAPING, TREES, ASPHALT, UNDERGROUND PIPES, ETC. AS INDICATED ON THE DRAWINGS.
9. REMOVAL OF LANDSCAPING SHALL INCLUDE ROOTS AND ORGANIC MATERIALS TO THE SATISFACTION OF THE GEOTECHNICAL ENGINEER.
10. PRIOR TO BEGINNING DEMOLITION WORK ACTIVITIES, CONTRACTOR SHALL INSTALL EROSION CONTROL MEASURES OUTLINED IN THE EROSION CONTROL PLAN & DETAILS.
11. CONTRACTOR SHALL BE RESPONSIBLE FOR DISPOSING ALL DEMOLITION MATERIALS, OR STORING SELECTED ITEM BY DISTRICT AT DESIGNATED LOCATIONS.
12. THE CONTRACTOR SHALL MAINTAIN ALL SAFETY DEVICES, AND SHALL BE RESPONSIBLE FOR CONFORMANCE TO ALL LOCAL, STATE AND FEDERAL SAFETY AND HEALTH STANDARDS LAWS AND REGULATIONS.
13. THE CONTRACTOR SHALL PROTECT FROM DAMAGE ALL EXISTING IMPROVEMENTS, FACILITIES, UTILITIES, AND STRUCTURES WHICH ARE TO REMAIN. ANY ITEMS DAMAGED BY THE CONTRACTOR OR HIS AGENTS OR ANY ITEMS REMOVED FOR HIS USE SHALL BE REPLACED IN EQUAL OR BETTER CONDITION AS APPROVED BY THE ARCHITECT OR OWNER'S REPRESENTATIVE.
14. COORDINATE WITH MEP, LANDSCAPE, AND ARCHITECTURAL DRAWINGS FOR UTILITY REMOVAL AND SHUT-DOWN/DISCONNECT LOCATIONS. CONTRACTOR IS TO SHUT OFF ALL UTILITIES AS NECESSARY PRIOR TO DEMOLITION. CONTRACTOR IS TO COORDINATE SERVICE INTERRUPTIONS WITH THE DISTRICT. DO NOT INTERRUPT SERVICES TO ADJACENT OFF-SITE OWNERS. SEE ARCHITECTURAL PLANS FOR ADDITIONAL DEMOLITION SCOPE OF WORK.
15. DEMOLITION INCLUDES REMOVAL OF ALL ITEMS ASSOCIATED WITH UTILITY, FENCE, TREE, ETC, AND SHALL INCLUDE PREPARING THE SITE FOR NEW UTILITIES, REMEDIAL/RELOCATED WORK OF EX UTILITIES DUE TO GRADE CHANGES, BUILDINGS, RETAINING WALLS, ETC. CAP EX UTILITY AT NEW PL AND ABANDON IN PLACE.
16. ALL MATERIALS TO BE DEMOLISHED AND REMOVED SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE LAWFULLY DISPOSED OF OFF-SITE.
17. THIS PLAN IS NOT INTENDED TO BE A COMPLETE CATALOGUE OF ALL EXISTING STRUCTURES AND UTILITIES. THIS PLAN INTENDS TO DISCLOSE GENERAL INFORMATION KNOWN BY THE ENGINEER AND TO SHOW THE LIMITS OF THE AREA WHERE WORK WILL BE PERFORMED. THIS PLAN SHOWS THE EXISTING FEATURES TAKEN FROM A FIELD SURVEY, FIELD INVESTIGATIONS AND AVAILABLE INFORMATION. THIS PLAN MAY OR MAY NOT ACCURATELY REFLECT THE TYPE OR EXTENT OF THE ITEMS TO BE ENCOUNTERED AS THEY ACTUALLY EXIST. WHERE EXISTING FEATURES ARE NOT SHOWN, IT IS NOT IMPLIED THAT THEY ARE NOT TO BE DEMOLISHED OR REMOVED. THE CONTRACTOR SHALL PERFORM A THOROUGH FIELD INVESTIGATION AND REVIEW OF THE SITE WITHIN THE LIMIT OF WORK SHOWN IN THIS PLAN SET TO DETERMINE THE TYPE, QUANTITY AND EXTENT OF ANY AND ALL ITEMS. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR DETERMINING THE EXTENT OF EXISTING STRUCTURES AND UTILITIES AND QUANTITY OF WORK INVOLVED IN REMOVING THESE ITEMS FROM THE SITE.
18. IF CONTRACTOR ENCOUNTERS UTILITIES THAT ARE NOT SHOWN ON THIS PLAN OR DETERMINED TO BE NONFUNCTIONAL, THEY SHALL CONTACT THE ARCHITECT OR ENGINEER PRIOR TO REMOVING UTILITY.
19. PROTECT IN PLACE ALL COLUMNS IN WALKWAY, UNLESS DIRECTED OTHERWISE.
20. REMOVE ALL EXISTING IRRIGATION SYSTEM. COORDINATE WITH LANDSCAPE PLANS.
21. EXISTING UTILITIES TO REMAIN, CONNECTIONS TO BUILDINGS SHALL BE PROTECTED IN PLACE. CAP EXISTING UTILITIES TO BE REMOVED, 5 FEET FROM BUILDING.



DEMOLITION NOTES

1. PROTECT IN PLACE
2. RELOCATE EXISTING...
3. REMOVE EX. CURB
4. REMOVE EX. WHEEL STOP
5. REMOVE EX. PARKING STRIPE
6. REMOVE EX. FENCE
7. REMOVE EX. TREE
8. REMOVE EX. GRATED INLET
9. REMOVE EX. RUBBERIZED TRACK
10. REMOVE EX. CONCRETE RAMP
11. REMOVE EX. TRACK & FIELD EQUIPMENT
12. REMOVE EX. SEWER
13. REMOVE EX. STORM DRAIN
13. REMOVE EX. RETAINING WALL
14. REMOVE EX. ELECTRICAL EQUIPMENT AND OVERHEAD LINE. SEE NOTE 14.
15. REMOVE EX. ELECTRICAL CONDUIT. SEE NOTE 14.
16. REMOVE EX. CURB AND GUTTER

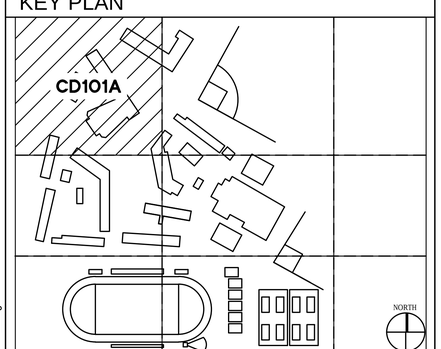
GENERAL NOTES

1. CONTRACTOR IS TO COMPLY WITH ALL GENERAL AND STATE REQUIREMENTS INVOLVING THE REMOVAL AND DISPOSAL OF HAZARDOUS MATERIAL(S).
2. THE CONTRACTOR SHALL LOCATE & CLEARLY MARK (AND THEN PRESERVE THESE MARKERS) FOR THE DURATION OF CONSTRUCTION OF ALL TELEPHONE, DATA, LIGHTS, AND POWER FACILITIES THAT ARE IN OR NEAR THE AREA OF CONSTRUCTION.
3. CONTRACTOR'S BID IS TO INCLUDE ALL VISIBLE SURFACE AND ALL SUBSURFACE FEATURES IDENTIFIED TO BE REMOVED OR ABANDONED IN THESE DOCUMENTS.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR A SITE INSPECTION TO FULLY ACKNOWLEDGE THE EXTENT OF THE DEMOLITION WORK.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ANY AND ALL PERMITS NECESSARY FOR ENCROACHMENT, GRADING, DEMOLITION, AND DISPOSAL OF SAID MATERIALS AS REQUIRED BY PRIVATE, LOCAL AND STATE JURISDICTIONS. THE CONTRACTOR SHALL PAY ALL FEES ASSOCIATED WITH THE DEMOLITION WORK.
6. CONTRACTOR SHALL PAY DISPOSAL FEES.
7. BACKFILL ALL DEPRESSIONS AND TRENCHES FROM DEMOLITION TO THE SATISFACTION OF THE GEOTECHNICAL ENGINEER.
8. WITHIN LIMITS OF WORK, REMOVE SIDEWALKS, CURBS, GUTTERS, LANDSCAPING, TREES, ASPHALT, UNDERGROUND PIPES, ETC. AS INDICATED ON THE DRAWINGS.
9. REMOVAL OF LANDSCAPING SHALL INCLUDE ROOTS AND ORGANIC MATERIALS TO THE SATISFACTION OF THE GEOTECHNICAL ENGINEER.
10. PRIOR TO BEGINNING DEMOLITION WORK ACTIVITIES, CONTRACTOR SHALL INSTALL EROSION CONTROL MEASURES OUTLINED IN THE EROSION CONTROL PLAN & DETAILS.
11. CONTRACTOR SHALL BE RESPONSIBLE FOR DISPOSING ALL DEMOLITION MATERIALS, OR STORING SELECTED ITEM BY DISTRICT AT DESIGNATED LOCATIONS.
12. THE CONTRACTOR SHALL MAINTAIN ALL SAFETY DEVICES, AND SHALL BE RESPONSIBLE FOR CONFORMANCE TO ALL LOCAL, STATE AND FEDERAL SAFETY AND HEALTH STANDARDS LAWS AND REGULATIONS.
13. THE CONTRACTOR SHALL PROTECT FROM DAMAGE ALL EXISTING IMPROVEMENTS, FACILITIES, UTILITIES, AND STRUCTURES WHICH ARE TO REMAIN. ANY ITEMS DAMAGED BY THE CONTRACTOR OR HIS AGENTS OR ANY ITEMS REMOVED FOR HIS USE SHALL BE REPLACED IN EQUAL OR BETTER CONDITION AS APPROVED BY THE ARCHITECT OR OWNER'S REPRESENTATIVE.
14. COORDINATE WITH MEP, LANDSCAPE, AND ARCHITECTURAL DRAWINGS FOR UTILITY REMOVAL AND SHUT-DOWN/DISCONNECT LOCATIONS. CONTRACTOR IS TO SHUT OFF ALL UTILITIES AS NECESSARY PRIOR TO DEMOLITION. CONTRACTOR IS TO COORDINATE SERVICE INTERRUPTIONS WITH THE DISTRICT. DO NOT INTERRUPT SERVICES TO ADJACENT OFF-SITE OWNERS. SEE ARCHITECTURAL PLANS FOR ADDITIONAL DEMOLITION SCOPE OF WORK.
15. DEMOLITION INCLUDES REMOVAL OF ALL ITEMS ASSOCIATED WITH UTILITY, FENCE, TREE, ETC, AND SHALL INCLUDE PREPARING THE SITE FOR NEW UTILITIES, REMEDIAL/RELOCATED WORK OF EX UTILITIES DUE TO GRADE CHANGES, BUILDINGS, RETAINING WALLS, ETC. CAP EX UTILITY AT NEW PL AND ABANDON IN PLACE.
16. ALL MATERIALS TO BE DEMOLISHED AND REMOVED SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE LAWFULLY DISPOSED OF OFF-SITE.
17. THIS PLAN IS NOT INTENDED TO BE A COMPLETE CATALOGUE OF ALL EXISTING STRUCTURES AND UTILITIES. THIS PLAN INTENDS TO DISCLOSE GENERAL INFORMATION KNOWN BY THE ENGINEER AND TO SHOW THE LIMITS OF THE AREA WHERE WORK WILL BE PERFORMED. THIS PLAN SHOWS THE EXISTING FEATURES TAKEN FROM A FIELD SURVEY, FIELD INVESTIGATIONS AND AVAILABLE INFORMATION. THIS PLAN MAY OR MAY NOT ACCURATELY REFLECT THE TYPE OR EXTENT OF THE ITEMS TO BE ENCOUNTERED AS THEY ACTUALLY EXIST. WHERE EXISTING FEATURES ARE NOT SHOWN, IT IS NOT IMPLIED THAT THEY ARE NOT TO BE DEMOLISHED OR REMOVED. THE CONTRACTOR SHALL PERFORM A THOROUGH FIELD INVESTIGATION AND REVIEW OF THE SITE WITHIN THE LIMIT OF WORK SHOWN IN THIS PLAN SET TO DETERMINE THE TYPE, QUANTITY AND EXTENT OF ANY AND ALL ITEMS. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR DETERMINING THE EXTENT OF EXISTING STRUCTURES AND UTILITIES AND QUANTITY OF WORK INVOLVED IN REMOVING THESE ITEMS FROM THE SITE.
18. IF CONTRACTOR ENCOUNTERS UTILITIES THAT ARE NOT SHOWN ON THIS PLAN OR DETERMINED TO BE NONFUNCTIONAL, THEY SHALL CONTACT THE ARCHITECT OR ENGINEER PRIOR TO REMOVING UTILITY.
19. PROTECT IN PLACE ALL COLUMNS IN WALKWAY, UNLESS DIRECTED OTHERWISE.
20. REMOVE ALL EXISTING IRRIGATION SYSTEM. COORDINATE WITH LANDSCAPE PLANS.
21. EXISTING UTILITIES TO REMAIN, CONNECTIONS TO BUILDINGS SHALL BE PROTECTED IN PLACE. CAP EXISTING UTILITIES TO BE REMOVED, 5 FEET FROM BUILDING.



DEMOLITION NOTES

1. PROTECT IN PLACE
2. RELOCATE EXISTING...
3. REMOVE EX. CURB

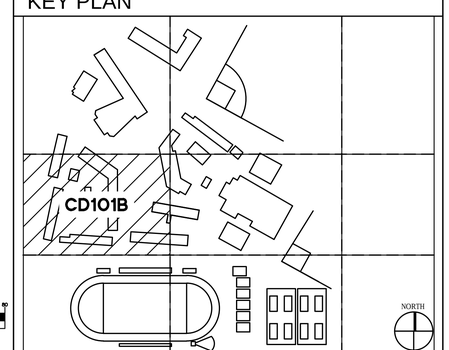
THIS PLAN MAY OR MAY NOT ACCURATELY REFLECT THE TYPE OR EXTENT OF THE ITEMS TO BE ENCOUNTERED AS THEY ACTUALLY EXIST. WHERE EXISTING FEATURES ARE NOT SHOWN, IT IS NOT IMPLIED THAT THEY ARE NOT TO BE DEMOLISHED OR REMOVED. THE CONTRACTOR SHALL PERFORM A THOROUGH FIELD INVESTIGATION AND REVIEW OF THE SITE WITHIN THE LIMIT OF WORK SHOWN IN THIS PLAN SET TO DETERMINE THE TYPE, QUANTITY AND EXTENT OF ANY AND ALL ITEMS. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR DETERMINING THE EXTENT OF EXISTING STRUCTURES AND UTILITIES AND QUANTITY OF WORK INVOLVED IN REMOVING THESE ITEMS FROM THE SITE.
18. IF CONTRACTOR ENCOUNTERS UTILITIES THAT ARE NOT SHOWN ON THIS PLAN OR DETERMINED TO BE NONFUNCTIONAL, THEY SHALL CONTACT THE ARCHITECT OR ENGINEER PRIOR TO REMOVING UTILITY.
19. PROTECT IN PLACE ALL COLUMNS IN WALKWAY, UNLESS DIRECTED OTHERWISE.
20. REMOVE ALL EXISTING IRRIGATION SYSTEM. COORDINATE WITH LANDSCAPE PLANS.
21. EXISTING UTILITIES TO REMAIN, CONNECTIONS TO BUILDINGS SHALL BE PROTECTED IN PLACE. CAP EXISTING UTILITIES TO BE REMOVED, 5 FEET FROM BUILDING.



DEMOLITION NOTES

1	PROTECT IN PLACE	13	REMOVE EX. RETAINING WALL
2	RELOCATE EXISTING...	14	REMOVE EX. ELECTRICAL EQUIPMENT AND OVERHEAD LINE. SEE NOTE 14.

(IN FEET)
1 inch = 20 ft.

GENERAL NOTES

1. CONTRACTOR IS TO COMPLY WITH ALL GENERAL AND STATE REQUIREMENTS INVOLVING THE REMOVAL AND DISPOSAL OF HAZARDOUS MATERIAL(S).
2. THE CONTRACTOR SHALL LOCATE & CLEARLY MARK (AND THEN PRESERVE THESE MARKERS) FOR THE DURATION OF CONSTRUCTION OF ALL TELEPHONE, DATA, LIGHTS, AND POWER FACILITIES THAT ARE IN OR NEAR THE AREA OF CONSTRUCTION.
3. CONTRACTOR'S BID IS TO INCLUDE ALL VISIBLE SURFACE AND ALL SUBSURFACE FEATURES IDENTIFIED TO BE REMOVED OR ABANDONED IN THESE DOCUMENTS.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR A SITE INSPECTION TO FULLY ACKNOWLEDGE THE EXTENT OF THE DEMOLITION WORK.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ANY AND ALL PERMITS NECESSARY FOR ENCROACHMENT, GRADING, DEMOLITION, AND DISPOSAL OF SAID MATERIALS AS REQUIRED BY PRIVATE, LOCAL AND STATE JURISDICTIONS. THE CONTRACTOR SHALL PAY ALL FEES ASSOCIATED WITH THE DEMOLITION WORK.
6. CONTRACTOR SHALL PAY DISPOSAL FEES.
7. BACKFILL ALL DEPRESSIONS AND TRENCHES FROM DEMOLITION TO THE SATISFACTION OF THE GEOTECHNICAL ENGINEER.
8. WITHIN LIMITS OF WORK, REMOVE SIDEWALKS, CURBS, GUTTERS, LANDSCAPING, TREES, ASPHALT, UNDERGROUND PIPES, ETC. AS INDICATED ON THE DRAWINGS.
9. REMOVAL OF LANDSCAPING SHALL INCLUDE ROOTS AND ORGANIC MATERIALS TO THE SATISFACTION OF THE GEOTECHNICAL ENGINEER.
10. PRIOR TO BEGINNING DEMOLITION WORK ACTIVITIES, CONTRACTOR SHALL INSTALL EROSION CONTROL MEASURES OUTLINED IN THE EROSION CONTROL PLAN & DETAILS.
11. CONTRACTOR SHALL BE RESPONSIBLE FOR DISPOSING ALL DEMOLITION MATERIALS, OR STORING SELECTED ITEM BY DISTRICT AT DESIGNATED LOCATIONS.
12. THE CONTRACTOR SHALL MAINTAIN ALL SAFETY DEVICES, AND SHALL BE RESPONSIBLE FOR CONFORMANCE TO ALL LOCAL, STATE AND FEDERAL SAFETY AND HEALTH STANDARDS LAWS AND REGULATIONS.
13. THE CONTRACTOR SHALL PROTECT FROM DAMAGE ALL EXISTING IMPROVEMENTS, FACILITIES, UTILITIES, AND STRUCTURES WHICH ARE TO REMAIN. ANY ITEMS DAMAGED BY THE CONTRACTOR OR HIS AGENTS OR ANY ITEMS REMOVED FOR HIS USE SHALL BE REPLACED IN EQUAL OR BETTER CONDITION AS APPROVED BY THE ARCHITECT OR OWNER'S REPRESENTATIVE.
14. COORDINATE WITH MEP, LANDSCAPE, AND ARCHITECTURAL DRAWINGS FOR UTILITY REMOVAL AND SHUT-DOWN/DISCONNECT LOCATIONS. CONTRACTOR IS TO SHUT OFF ALL UTILITIES AS NECESSARY PRIOR TO DEMOLITION. CONTRACTOR IS TO COORDINATE SERVICE INTERRUPTIONS WITH THE DISTRICT. DO NOT INTERRUPT SERVICES TO ADJACENT OFF-SITE OWNERS. SEE ARCHITECTURAL PLANS FOR ADDITIONAL DEMOLITION SCOPE OF WORK.
15. DEMOLITION INCLUDES REMOVAL OF ALL ITEMS ASSOCIATED WITH UTILITY, FENCE, TREE, ETC, AND SHALL INCLUDE PREPARING THE SITE FOR NEW UTILITIES, REMEDIAL/RELOCATED WORK OF EX UTILITIES DUE TO GRADE CHANGES, BUILDINGS, RETAINING WALLS, ETC. CAP EX UTILITY AT NEW PL AND ABANDON IN PLACE.
16. ALL MATERIALS TO BE DEMOLISHED AND REMOVED SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE LAWFULLY DISPOSED OF OFF-SITE.
17. THIS PLAN IS NOT INTENDED TO BE A COMPLETE CATALOGUE OF ALL EXISTING STRUCTURES AND UTILITIES. THIS PLAN INTENDS TO DISCLOSE GENERAL INFORMATION KNOWN BY THE ENGINEER AND TO SHOW THE LIMITS OF THE AREA WHERE WORK WILL BE PERFORMED. THIS PLAN SHOWS THE EXISTING FEATURES TAKEN FROM A FIELD SURVEY, FIELD INVESTIGATIONS AND AVAILABLE INFORMATION. THIS PLAN MAY OR MAY NOT ACCURATELY REFLECT THE TYPE OR EXTENT OF THE ITEMS TO BE ENCOUNTERED AS THEY ACTUALLY EXIST. WHERE EXISTING FEATURES ARE NOT SHOWN, IT IS NOT IMPLIED THAT THEY ARE NOT TO BE DEMOLISHED OR REMOVED. THE CONTRACTOR SHALL PERFORM A THOROUGH FIELD INVESTIGATION AND REVIEW OF THE SITE WITHIN THE LIMIT OF WORK SHOWN IN THIS PLAN SET TO DETERMINE THE TYPE, QUANTITY AND EXTENT OF ANY AND ALL ITEMS. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR DETERMINING THE EXTENT OF EXISTING STRUCTURES AND UTILITIES AND QUANTITY OF WORK INVOLVED IN REMOVING THESE ITEMS FROM THE SITE.
18. IF CONTRACTOR ENCOUNTERS UTILITIES THAT ARE NOT SHOWN ON THIS PLAN OR DETERMINED TO BE NONFUNCTIONAL, THEY SHALL CONTACT THE ARCHITECT OR ENGINEER PRIOR TO REMOVING UTILITY.
19. PROTECT IN PLACE ALL COLUMNS IN WALKWAY, UNLESS DIRECTED OTHERWISE.
20. REMOVE ALL EXISTING IRRIGATION SYSTEM. COORDINATE WITH LANDSCAPE PLANS.
21. EXISTING UTILITIES TO REMAIN, CONNECTIONS TO BUILDINGS SHALL BE PROTECTED IN PLACE. CAP EXISTING UTILITIES TO BE REMOVED, 5 FEET FROM BUILDING.

SCALE 1" = 60'-0"

NORTH

GENERAL NOTES

1. SEE CIVIL DRAWINGS FOR ADDITIONAL DEMOLITION INFORMATION, INCLUDING BUT NOT LIMITED TO UNDERGROUND UTILTIES, PAVING, GRADING, ETC.
2. CONTRACTOR SHALL DEMO & TRANSPORT OFF SITE ANY PAVING, CONCRETE, LANDSCAPE, TREES & ROOT, PORTALBE BUILDING FOUNDATIONS AND OTHER SITE MATERIAL AS REQUIRED TO PERFORM NEW WORK.
3. CONTRACTOR SHALL PATCH/REPAIR ALL ADJACENT AREAS AFFECTED BY DEMOLITION WORK AS REQUIRED TO MATCH EXISTING CONDITIONS.
4. ALL AREAS ON DEMOLITION PLAN ARE FOR REFERENCE ONLY. CONTRACTOR IS EXPECTED TO FIELD VERIFY ALL AREAS TO DETERMIND SPECIFIC SCOPE FOR EACH ITEMS.
5. ALL SAFEGUARDS MUST BE ADHERED TO DURING CONSTRUCTION AND DEMOLITION PER CDC CHAPTER 33 AND CFC.
6. SEE ELECTRICAL DRAWINGS FOR DEMO SCOPE AT CANOPIES
7. SEE OTHER DISCIPLINES FOR ADDITIONAL DEMOLITION SCOPE NOT NOTED HERE.

GENERAL NOTES

- CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS, PROPERTY LINES ETC. PRIOR TO CONSTRUCTION
- CONTRACTOR SHALL NOTIFY ARCHITECT WHERE CONFLICT OCCURS ON ANY OF THE CONTRACT DRAWINGS OR DOCUMENTS. CONTRACTOR IS NOT TO ORDER MATERIAL OR CONSTRUCT ANY PORTION OF THE BUILDING THAT IS IN CONFLICT UNTIL CONFLICT IS RESOLVED WITH THE AFFECTED PARTIES.
- THE INTENT OF THESE DRAWINGS AND SPECIFICATIONS IS THAT THE WORK OF ALTERATION, REHABILITATION OR RECONSTRUCTION IS TO BE IN ACCORDANCE WITH TITLE 24, CCR. SHOULD ANY EXISTING CONDITIONS SUCH AS DETERIORATION OR NON-COMPLYING CONSTRUCTION BE DISCOVERED WHICH IS NOT COVERED BY THE CONTRACT DOCUMENTS WHEREIN THE FINISHED WORK WILL NOT COMPLY WITH TITLE 24, CCR, A CONSTRUCTION CHANGE DOCUMENT (CCD), OR A SEPARATE SET OF PLANS AND SPECIFICATIONS, DETAILING AND SPECIFYING THE REQUIRED WORK SHALL BE SUBMITTED TO AND APPROVED BY DSA BEFORE PROCEEDING WITH THE WORK (SECTION 4-317(C), PART 1, TITLE 24, CCR)
- CONSTRUCTION SHALL CONFORM TO ALL APPLICABLE CODES AND REGULATIONS, INCLUDING BUT NOT LIMITED TO:
  - TITLE 19 CCR, PUBLIC SAFETY, STATE FIRE MARSHALL REGULATIONS
  - TITLE 24 CCR, PART 1 - 2019 BUILDING STANDARDS ADMINISTRATIVE CODE
  - TITLE 24 CCR, PART 2 - 2019 CALIFORNIA BUILDING CODE, VOL.1 & 2 (CBC) (2015 INTERNATIONAL BUILDING CODE, VOL. 1-2, AND 2013 CALIFORNIA AMENDMENTS)
  - TITLE 24 CCR, PART 3 - 2019 CALIFORNIA ELECTRICAL CODE (CEC) (2014 NATIONAL ELECTRICAL CODE, AND 2019 CALIFORNIA AMENDMENTS)
  - TITLE 24 CCR, PART 4 - 2019 CALIFORNIA MECHANICAL CODE (CMC) (2015 UNIFORM MECHANICAL CODE, AND 2019 CALIFORNIA AMENDMENTS)
  - TITLE 24 CCR, PART 5 - 2019 CALIFORNIA PLUMBING CODE (CPC) (2015 UNIFORM PLUMBING CODE, AND 2013 CALIFORNIA AMENDMENTS)
  - TITLE 24 CCR, PART 6 - 2019 CALIFORNIA ENERGY CODE
  - TITLE 24 CCR, PART 8 - 2019 CALIFORNIA HISTORICAL BUILDING CODE
  - TITLE 24 CCR, PART 9 - 2019 CALIFORNIA FIRE CODE (CFC) (2015 INTERNATIONAL FIRE CODE, AND 2016 CALIFORNIA AMENDMENTS)
  - TITLE 24 CCR, PART 10 - 2019 CALIFORNIA EXISTING BUILDING CODE
  - TITLE 24 CCR, PART 11 - 2019 CALIFORNIA GREEN BUILDING STANDARDS CODE
  - TITLE 24 CCR, PART 12 - 2019 CALIFORNIA REFERENCED STANDARDS
  - 2013 ASME A17.1 SAFETY CODE FOR ELEVATORS AND ESCALATORS W/ A17.1A/CSA B44A-13 ADDENDA)
  - 2018 NFPA 10 STANDARD FOR PORTABLE FIRE EXTINGUISHERS
  - 2019 NFPA 72, NATIONAL FIRE ALARM CODE (CA AMENDED)
  - 2016 UL 464, AUDIBLE SIGNALING DEVICES FOR FIRE ALARM AND SIGNALING SYSTEMS, INCLUDING ACCESSORIES
  - CFC CH 33 - FIRE SAFETY DURING CONSTRUCTION AND DEMOLITION
- A "DSA CERTIFIED" CLASS 1 PROJECT INSPECTOR EMPLOYED BY THE DISTRICT AND APPROVED BY THE DIVISION OF THE STATE ARCHITECT SHALL PROVIDE CONTINUOUS INSPECTION OF THE WORK.THE DUTIES OF THE INSPECTOR ARE DEFINED IN SECTION 4-342, PART 1, TITLE 24, CCR.
- ALL WORK SHALL CONFORM TO THE 2019 EDITION TITLE 24, CALIFORNIA CODE OF REGULATIONS.
- ENVIRONMENTAL HEALTH CONSIDERATIONS SHALL COMPLY WITH ALL LOCAL ORDINANCES.

REQUIRED NUMBER AND SPACING OF FIRE HYDRANTS:
FIRE FLOW REQUIREMENT: 1,500 OR LESS
MINIMUM NUMBER OF HYDRANTS: 1 HYDRANTS
AVERAGE SPACING BETWEEN HYDRANTS: 500 FEET
MAX. DISTANCE FROM ANY POINT ON THE STREET OR ROAD FRONTAGE TO A HYDRANT: 250 FEET

DSA 810

FIRE & LIFE SAFETY SITE CONDITIONS SUBMITTAL

Division of the State Architect (DSA) documents referenced within this publication are available on the DSA Forms or DSA Publications webpages.

To facilitate the Division of the State Architect's (DSA) file and life safety plan review of project site conditions, DSA requires the design professional to provide the following information at time of project submittal for projects consisting of construction of a new campus, construction of new building(s), additions to existing buildings, and for site alternate design means for fire department emergency vehicle access, and fire suppression water supply.

Information associated with compliance items 1 through 3 below is to be provided for all project types indicated above. Information associated with items 4 through 7 is to be completed when an alternate means is utilized. Acknowledgement by the school district and signature from the Local Fire Authority (LFA) is only required when an alternate design means is being requested.

The Project Information and Fire & Life Safety Information sections are to be completed for all projects and imaged onto the fire access site plan. When an alternate design/means is proposed, all sections on pages 1 and 2 are to be completed and imaged on the fire access site plan.

For additional information refer to the instructions at the end of this form and DSA Policy *PL 09-01: Fire Flow for Buildings*.

PROJECT INFORMATION	
School District/Owner:	INGLEWOOD UNIFIED SCHOOL DISTRICT
Project Name/School:	MORNINGSIDE HIGH SCHOOL BUILDING L
Project Address:	10500 YUKON AVE S INGLEWOOD CA 90303

FIRE & LIFE SAFETY INFORMATION				
1.	Has a fire hydrant flow test been performed within the past 12 months? *(If yes, provide a copy of the test data.)*	Yes ☑		No ☐
2.	Was the fire hydrant water flow test performed as part of this LFA review?	Yes ☑		No ☐
3.	Is the project located within a designated fire hazard severity zone (FHSZ) as established by Cal-Fire? *(If yes, indicate FHSZ classification below.)*	Yes ☐		No ☑
	Refer to the following website for FHSZ locations: http://egis.fire.ca.gov/FHSZ/	Moderate ☐	High ☐	Very High ☐
	Wildland Interface Area (WFA) *(If any designations are checked, project design must meet the requirements of CBC Chapter 7A.)*			WIFA ☐

DSA 810
FIRE & LIFE SAFETY SITE CONDITIONS SUBMITTAL

CONDITION MEANS AND METHODS RESOLUTION		ALTERNATE ACCEPTED			
		Yes	No	N/A	N/R
4.	Emergency-vehicle access roadways do not meet CFC requirements.				
4a	**Acceptable Alternate:** Emergency vehicle and personnel access as proposed by the project architect is acceptable for providing fire suppression and protection of life and property.				
5.	**Fire Hydrants:** Number and spacing does not meet CFC requirements.				
5a	**Acceptable Alternate:** Number of fire hydrants and spacing as proposed by the project architect is acceptable for fire suppression and protection of life and property.				
6.	**Fire Hydrants:** Water flow and pressure are less than CFC min mum.				
6a	**Acceptable Alternate:** The available flow and pressure is acceptable for providing fire suppression and protection of life and property.				
7.	Location of fire department connection(s) serving fire sprinkler systems or standpipe systems does not meet CFC requirements.				
7a	**Acceptable Alternate:** The location of fire department connection serving the fire sprinkler system and/or standpipe system is acceptable for providing fire suppression and protection of life and property.				

School District Acceptance of Acceptable Design Alternates:

By signing this form, the school district acknowledges and accepts the proposed design as an alternative to California Building Code (CBC) and California Fire Code (CFC) minimum requirements, as indicated by one or more of the conditions indicated at items 4a, 5a, 6a or 7a, for providing fire and life safety protection of life and property.

1 OVERALL DEMOLITION SITE PLAN
SCALE 1" = 60'-0"

GENERAL NOTES

1. (E) BUILDINGS NOTED TO BE DEMOLISHED SHALL BE DEMOLISHED IN THEIR ENTIRETY INCLUDING ALL UNDERGROUND CONCRETE FOOTINGS AND UTILITY LINES.
2. THE CONTRACTOR AND SUB-CONTRACTORS SHALL DEMOLISH AND TRANSPORT OFF SITE ANY PAVING, CONCRETE, LANDSCAPE, TREES, ROOTS, AND OTHER SITE MATERIALS AS REQUIRED TO PERFORM NEW WORK.
3. CONTRACTOR AND SUB-CONTRACTORS SHALL PATCH AND REPAIR ALL ADJACENT AREAS AFFECTED BY DEMOLISHING AS REQUIRED TO MATCH EXISTING CONDITIONS.
4. ALL AREAS ON DEMOLITION PLANS ARE FOR REFERENCE ONLY. CONTRACTOR AND SUB-CONTRACTORS ARE EXPECTED TO FIELD VERIFY ALL AREAS TO DETERMINE SPECIFIC SCOPE FOR EACH ITEM.
5. ALL SAFEGUARDS MUST BE ADHERED TO DURING CONSTRUCTION AND DEMOLITION PER CFC & CPC CHAPTER 33.
6. SEE OTHER DISCIPLINES FOR ADDITIONAL DEMOLITION SCOPE NOT NOTED HERE.
7. SHORE-IN-PLACE WHERE OPENING OCCURS.
8. NO DEMOLITION SHALL BEGIN UNTIL ALL PLANS INCLUDING THE DEMOLITION WORK HAVE BEEN APPROVED BY DSA.

The existing Woodworth Elementary School (Woodworth ES) campus is approximately 6-acres and is located within APN 4030-033-903 at 3200 W. 104th Street in Inglewood, Los Angeles County, California.
The school was constructed beginning in 1953 in a vernacular Mid-Century Modern style, with several permanent buildings and portable structures added over time.

It is located at the southwestern corner of West 104th Street and South 10th Avenue, and consists of 14 extant permanent buildings include Buildings A, B, C, D, E, F, G, H, CP, and J, and seven portable structures including Buildings I, K, L, M, N, O and P. [See Continuation Sheets]

***B5. Architectural Style:** Mid-Century Modern
***B6. Construction History:** (Construction date, alterations, and date of alterations)

Plans for Clyde Woodworth Elementary School were sent to the State Division of Architecture in 1953, with a targeted opening of January 15, 1954. Woodworth ES was named for city attorney Clyde Woodworth, who was born in Inglewood and served as the city attorney.[1] The neighborhood to the north of Woodworth ES was originally zoned for single-family houses, but developers convinced the City Council to allow apartment buildings to be built, increasing the density of residents near the school at mid-century.[2] The first buildings comprising Woodworth ES were Buildings A, B, C, D, and E, constructed between 1953 and 1954. The early buildings were designed by notable architect H. L. Gogerty who was known for his innovations in earthquake-proof design for southern California schools.[3] These initial five structures were constructed in the northern portion of the property, along W. 104th Steet. With the construction of Woodworth ES, 1954 was to be the first year that "all Inglewood school children can have a full day of schooling" due to an overcrowding problem when the campus was constructed.[4]

B13. Remarks:

(Sketch Map with north arrow required.)

***B14. Evaluator:** ESA
***Date of Evaluation:** February, 2023

(This space reserved for official comments.)

***P3a. Description (continued)**:

The campus currently includes classrooms, an administrative building, and an auditorium/cafeteria building on the north side, with paved play courts and a playground toward the center, and the Inglewood Unified School District Child Development Center (CDC), formerly the Woodworth Elementary Cerebral Palsy Unit at Building CP, located in the southeastern portion of the site. The property includes two paved parking lots: a smaller parking lot along W. 10th Street and a larger parking lot along S. 10th Avenue.

The portion of the site that comprises Woodworth ES is accessible from the north along W. 104th Street via a chain link fence that separates the campus from the street. The school has been closed in 2020-2021, and is presently vacant. Campus buildings are connected via concrete walkways covered by either generous building overhangs or metal overhangs supported by thin columns. The campus is characterized by one-story concrete buildings with rectangular footprints and horizontal massing. There are contemporary shade structures in the northeastern area of the property. Much of the space immediately south of the classroom buildings is paved in asphalt for use as basketball courts, racquetball courts, and other sporting and play equipment.

The CDC is located in the southeastern portion of the site which appears to have operated separately from the Woodworth ES campus. Originally, the CDC operated as Woodworth ES' Cerebral Palsy Unit, which was a part of a multi-school district program for handicapped children within Los Angeles County school districts that opened in 1955.

Buildings A, B, D, E, and F

Buildings A, B, D, E, and F were constructed in 1953 as part of the original Woodworth ES campus and include shared construction typologies. The buildings are located generally north and northeast within the site. Designed by architect H. L. Gogerty, the wood-framed buildings have rectangular floorplans, flat roofs, and exteriors clad in stucco. They do not have internal hallways but are instead oriented to the exterior spaces. Original windows on the north elevations consist of 1/1 metal awning windows found individually and in ribbons of six; the ribboned windows are arranged in vertical configurations of three. The elevations have wide concrete overhangs and framing concrete end walls. The south facades of the buildings include clerestory ribbons of 1/1 metal awning windows interspersed by single-leaf metal doors flush with the elevations with generous eaves and soffits that extend over doorways. Building A attaches to Building G to its west by a covered overhang. Interior details include vinyl tile flooring and dropped acoustical ceilings. The buildings are currently vacant.

Building C

Building C, the cafeteria/assembly building, was constructed in 1953 as part of the original Woodworth ES campus designed by H. L. Gogerty. The building sits to the north of a parking lot

along S. 10th Avenue. The double-height building is rectangular in plan with a flat roof, stucco exteriors, and wood framing. Building C is accessed from both the east and the west yet does not have a pronounced main entrance. Fenestration on the east elevation includes original 1/1 metal awnings with a single fixed-pane above and below, found in ribbons of 3 and 4. Fenestration on the west elevation are similar combinations of metal fixed-pane and awning windows with metal security grating. The building was used as the school's cafeteria and includes an industrial kitchen with an open central volume, and smaller rooms in the northwestern portion of the building. The southern portion of the building has a raised wood stage with three steps and a retractable fabric curtain system which would allow the space to also be used as an assembly room. Vinyl tile flooring covers most of the building, and a dropped acoustical panel ceiling sits above exposed beams. The building is currently vacant.

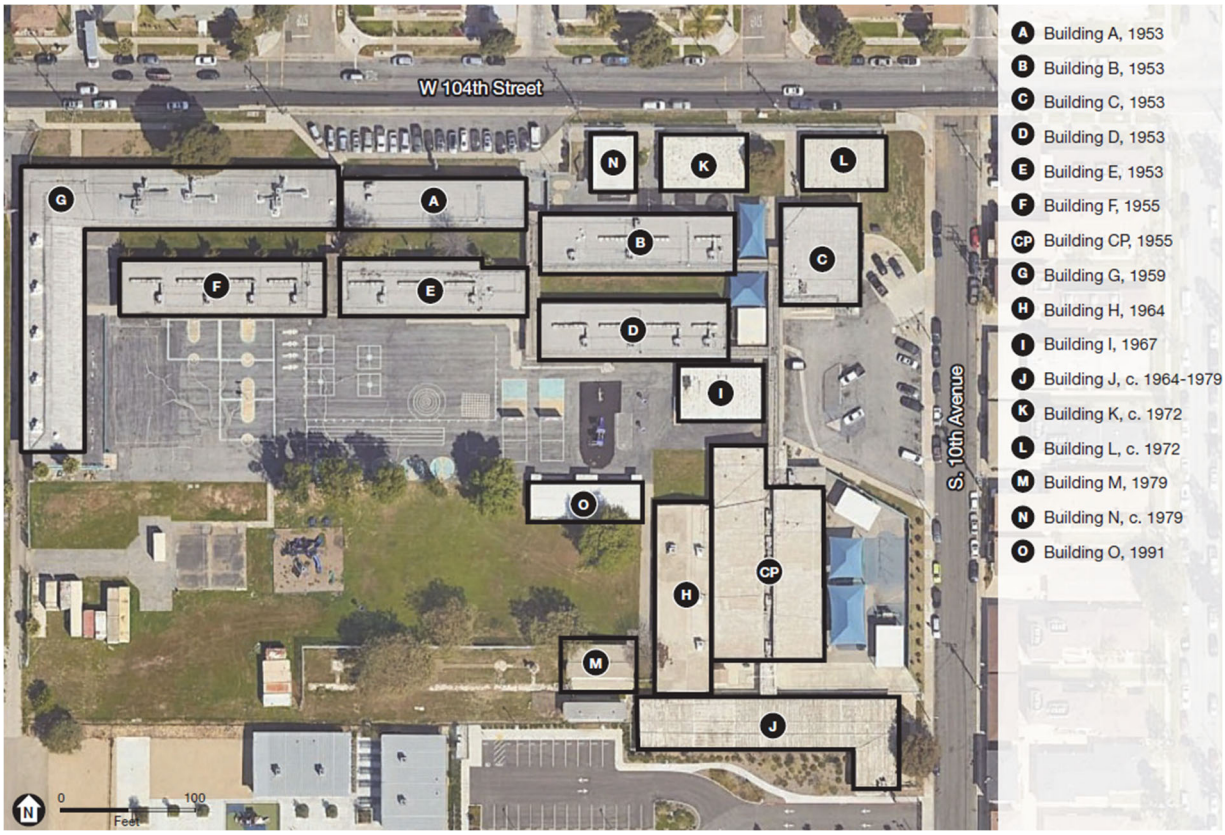
Building CP

Constructed as the Cerebral Palsy Unit, Building CP is one-story, has a flat roof, is clad in stucco, and is generally rectangular in plan. The building is located in the southeastern portion of the campus. Designed by G. L. Gogerty, the building was constructed in 1955, two years after the initial buildings on campus. A slight flat roof projection extends from the roofline. The building includes an original aluminum frame window assembly with transoms, sidelites, and large pane fixed windows at the main entrance along the north elevation. Double-leaf glazed doors with a single glazing panel in each leaf offer access from a covered walkway entrance. The east and west elevations include multi-lite metal awning windows with metal security bars, projecting overhangs and fixed metal shades. The interior includes a double loaded corridor with clerestory windows along the central hallway. According to original plans, spaces to accommodate students with cerebral palsy included an occupational therapy room, a conference room, speech room, physical therapy room, two exercise rooms, restrooms, and a matron dining room. The building included three classrooms, with attached restrooms, one for pre-school aged-children, one for primary grades, and another for upper grades, indicating that children of a wide-range of ages with cerebral palsy could be educated at this building. The building currently utilized by the District's CDC preschool program.

Building G

Building G was constructed in 1959, as an additional classroom building to the expanding Woodworth ES campus. Designed by architects H. L. Gogerty and D. Stewart Kerr, Building G sits along the northwestern border of the campus. The building is elevated from the play courts and accessible by a series of concrete steps at the southern end. The building is clad in stucco includes a gable to the south which culminates into a hipped roof at the northern portion of the building. Building G includes two rectangular volumes, with a roofline that forms a covered walkway. The building extends north from the southern play courts and turns to the east along W. 104th Street. The classrooms open out to the east elevation in the southern volume, and out to the south elevation in the northern volume. There are ribbons of multi-lite metal awning

windows at each classroom which includes a single-leaf metal door with transoms above flush with the elevation and located at both ends of the classroom. Building G attaches to Building A at its east with a covered walkway, forming an L-shape at the roofline. The building is currently vacant.



Building H

Building H was designed by Balch – Hutchanson – Perkins and constructed in 1964 as another additional classroom building to expand the campus. Building H is located to the west of Building CP and resembles a portable building in its exterior combination of stucco and wood paneling. The building includes a gabled roof, and two classroom units, which are each accessible from a ramp along the west elevation. The west elevation also includes a generous roof overhang which covers the west entrances and the ramps. Ribbons of multi-lite metal awning windows line both the east and west elevations. The interior includes vinyl tile flooring and acoustic drop panels at the ceiling. The building is currently vacant.

Buildings K, L, M, and N

Buildings K, L, M, and N are wood frame portable structures that share similar architectural characteristics. Buildings K and L were constructed circa 1972, and Buildings M and N were constructed circa 1979. Buildings K, L, and N sit oriented north along W. 104th Street and share a common paved sidewalk. Building M sits in the southern portion of the site and is oriented north. Each portable building has a rectangular footprint, vertical plywood paneled siding, a flat roof, and generous eaves and soffits that extend over doorways. Buildings K, L, M, and N are accessed directly from the outside, and do not share central corridors. The portable buildings include aluminum frame windows and single flush metal doors. Concrete ramps with metal handrails offer access. The buildings are currently vacant.

***B6. Construction History (continued):**

While most of the money from a 1954 school bond went to neighboring improvements at Morningside High School, some was earmarked for "a cerebral palsy unit" and "additional classrooms" at Woodworth ES.[1] As such, two additional school buildings were added to the Woodworth ES campus in 1955. This included Cerebral Palsy Unit, Building CP and Building F, classrooms are located in the western portion of the site. Building CP was designed as part of the "South West School Districts Co-operative Special Education Program," which was a program between multiple schools in the area, with each school serving a particular population of handicapped students. Building CP included features designed to support students with cerebral palsy including "toilets with railings, therapy room with mats, ladders, and steps beside regular gym equipment."[2]

[2] John Murphy, "Area Opens Arms to Handicapped Children," *The Los Angeles Times*, September 2, 1962.

Jet engines began landing at nearby Los Angeles International Airport (LAX) in January of 1959.[3] Immediately, noise from jet engine-powered planes taking off from and landing frequently interrupted teaching lessons. Jet noise would prove to be a continual issue for students, and a meeting of concerned Inglewood citizens at Woodworth ES later that year allowed for a platform to discuss such noise.[4]

A 14-acre section of open space was designated for a planned, shared, recreation center on land between Woodworth ES and neighboring Morningside High School and Monroe Junior High School. This shared land was originally deemed "unusable" yet was later graded and reassessed to be worth an estimated $50,000 per acre.[5] Aerial photographs from 1963 show the addition of what looks to be a track and a baseball field between the three schools, but it is not clear if the facilities mentioned were ever utilized by Woodworth ES as originally planned. In June of 1959, Building G had been constructed, along with an addition to Building A to expand the building to the west. By November of 1959, more buildings were needed at Woodworth ES due to overcrowding, and $204,432 was earmarked for ten new classrooms, a library, and a conference room for the educational complex, which may have also referred to neighboring Morningside High School and Monroe Junior High School.[6] Building H was constructed in 1964 to the immediate east of Building CP, in the southeastern extent of the property.

In 1970, Woodworth ES was one of five schools reported to be participating in an experimental soundproofing project due to its proximity to LAX. This project was to adapt five Woodworth ES classrooms by sealing windows "soundproofing door casings, installation of soundproofing materials in the ceilings of the rooms, pouring of four inches of lightweight concrete on the roofs of the building and the addition of air conditioning."[7] No plans for this project were located on file with the School District. Jet noise continued to trouble the school and Woodworth ES became one of fourteen schools studied by the University of California Los Angeles (UCLA) to understand if "the physical and emotional health of children attending schools near Los Angeles International Airport is being threatened by jet aircraft noise."[8] School officials reported that Inglewood schools had more fights among students and immense challenges in dealing with environmental pollution from jet fuel. Teachers either had to shout or use bullhorns to be able to teach over airplane noise.[9] Woodworth ES was specifically mentioned in the UCLA study as

having a particularly high level of noise pollution, which the study tied to potential negative health effects.[10]

Permanent Building J, and portable structures Buildings K and L were added to the campus around 1972 and in 1974, a new District central kitchen was built, likely supporting the campus' kitchen capabilities.[11] Parenting classes for local families were taught at the school in 1975.[12] In April of 1976, the District was one of five districts that received $20.9 million dollars in a settlement with LAX over jet engine noise, and Woodworth ES was specifically mentioned as most likely to receive funds.[13] In June of that year, a state superior court judge ruled that the District could abandon its busing program that had been implemented to accelerate school integration. Despite this ruling, Woodworth ES would then "serve all children in [its] attendance areas from kindergarten through sixth grade."[14] Overcrowding continued to be an issue, especially after the busing program ended. Building M, a portable classroom structure, was added in 1979, and Building N, another portable classroom structure was added around 1979.

In the 1980s, much news coverage related to Woodworth ES shifted to the school's interaction with the adjacent Darby-Dixon neighborhood, with boundaries located across 104th Avenue. The neighborhood was characterized as having one of the highest crime rates in Inglewood.[15] Coincidentally during this period, Woodworth ES was reported to have the lowest test scores in the District and twice as many students as other District elementary schools. In 1986, to reduce classroom overcrowding, Woodworth ES switched to year-round schooling.[16] Building O, a portable structure, was constructed in 1991.

The 2000s saw massive change and external investment in Inglewood, most notably with the construction of a new 70,000 seat National Football League stadium, which increased property values throughout the neighborhood. However, at the same time, declining enrollment, budget troubles, and low test scores resulted in the state of California's Department of Education taking over control of the District in 2012.[17] Players from the Los Angeles Rams football team, who play in Inglewood, built a new playground for Woodworth ES in 2016.[18]

In 2018, plans were announced to merge Woodworth ES and adjacent Monroe Magnet Middle School into one school.[19] The goal of this consolidation was to allow the District to remove the

portable classrooms and lease land near schools as a source of revenue.[20] Also in 2018, the Los Angeles County Office of Education took control of the District. Ground was broken for the "Woodworth-Monroe TK-8 Academy" in 2019, signaling the beginning of improvements for the school merger.[21] It appears that the Monroe Magnet Middle School campus underwent campus upgrades during this period, and that Woodworth ES campus ceased operation between 2020 and 2021.[22] District-wide enrollment continued to decline, with a 40% drop between 2012 and 2022.[23] Today, Woodworth ES's Building CP is utilized as the District's CDC, a preschool for children whose parents "work, go to school, are in training for jobs, seeking employment, and[/or] are homeless."[24] All available building plans are included in Table 1, below.

***B10. Significance (continued):**

The History of Inglewood: Settlement, Development and Growth (1822–Present)

During the rancho period, the area that is now the City of Inglewood was part of the *Rancho Aguaje de la Centinela* and the *Rancho Sausal Redondo*. A year after Mexico gained independence from Spain and control of California in 1822, Los Angeles resident Antonio Avila received a land grant for *Rancho Sausal Redondo* and grazed cattle there as well. The rancho encompassed the areas that are now the Cities of Redondo Beach, Inglewood, Hawthorne, El Segundo, Lawndale, Manhattan Beach and Hermosa Beach. In 1834 Ygnacio Machado, one of the original leather jacket soldiers that escorted settlers to Los Angeles, built the Centinela Adobe. The Centinela Adobe was in the center of what became a 2,200-acre ranch on a portion of the *Rancho Sausal Redondo*. Machado had moved onto what he claimed was still public land, which was granted to him as the *Rancho Aguaje de la Centinela*.

Soon after, Machado traded the *Rancho Aguaje de la Centinela* for a keg of whiskey and a home in the Pueblo of Los Angeles. The property traded hands many times and was eventually acquired by a Scottish nobleman named Robert Burnett, who eventually added the much larger *Rancho Sausal Redondo* to his holdings and once again combined the ranchos. Burnette eventually returned to Scotland and leased the ranch to a Canadian immigrant who was considered by many to be the founding father of Inglewood: Daniel Freemen. In spite of drought and other hardship Freeman successfully farmed barley on the ranch and purchased it from Burnette with gold in 1885. Freeman went on to become a major land developer in Inglewood.[25]

Centinella Springs (California Historical Landmark 363), or Aguaje de Centinela, was a valued source of spring water for the *Rancho Aguaje de la Centinela* and was described as continuously existing since the Pleistocene Era. The site is still located at the corner of Centinela Avenue and Florence Boulevard.[26]

Excursion trains from Los Angeles brought many prospective land buyers to Inglewood and it was able to grow to 300 residents by 1888. On May 21, 1888, a school opened with 33 students. Around this time, businesses, including Mrs. Belden's Boarding House, two grocery stores, a drug store, a planning mill, a wagon repair shop, a plumbing shop, a livery stable, and five real estate offices, were built on Commercial Street (now La Brea).[27] With a population of about 1,200, Inglewood was incorporated on February 10, 1908.

On the evening of June 21, 1920, a large earthquake struck Inglewood. While there was a lot of damage to buildings, there was no loss of life. The next few days saw a large number of tourists coming to Inglewood to view the damage. The climate impressed the visitors who had previously never been to Inglewood, and many settled there. The population grew to 3,286 in 1920, and in the next two years the population doubled, making Inglewood the fastest growing city in the nation at that time.[28]

The Andrew Bennett Ranch was leased by the City of Los Angeles and converted into Mines Field in 1927, the airport of Los Angeles. National Air Races were held on Mines Field in 1927, and the first passenger flight landed in 1928. In 1929, the Graf Zeppelin (a German hydrogen filed ridged airship) landed on the Mines Field.[29]

The 1932 Olympic Games were held in Los Angeles, and three Inglewood High School alumni won medals. Many buildings in Inglewood were used as training facilities, and the marathon

route went through the town.[30] Until World War II, Inglewood had largely been supported by agricultural industry. The defense industries, in response to WWII, transformed Inglewood into an urban community when industrial activities brought more people to live in the city. In 1946, major airlines moved operations to the Los Angeles International Airport (LAX) airport and two new hangers needed to be constructed.[31] In 1949, the airport was designated as an intercontinental air terminal by the federal government.[32]

In 1967, The Forum was opened as the home of the Los Angeles Lakers of the National Basketball Association and the Los Angeles Kings of the National Hockey League. It also hosted a number of events such as concerts, rodeos, boxing, the circus, and ice shows.[33] The Forum underwent a rehabilitation, was listed on the National Register and the California Register and reopened in 2014. Additionally, at that time, The Forum underwent an adaptation from an arena primarily designed for sporting events to an arena primarily used for music and entertainment events.

In the 1970s, a new health center was built on Manchester, and high-rise office buildings were constructed on La Brea. A new civic center was dedicated in 1973. Airport Park View Motel opened between Hollywood Park Race Track and The Forum.[34] Many senior housing developments were also built in Inglewood during the 1970s.

More recent developments include the closure of the Hollywood Park Race Track, in 2013, and demolition of the track in 2016. A new NFL stadium, the SoFi Stadium, is part of a new 298-mixed-use development in Inglewood that includes commercial office space, retail, a hotel, residential units and outdoor parks was recently constructed and is now in operation.[35] The stadium is home to the Los Angeles Chargers and the Los Angeles Rams, and recently hosted Super Bowl LVI and will host the Opening and Closing Ceremonies of the Olympic Games in 2028.

Mid-Century Modernism/Regional Modernism (1945–1960): Postwar Modern Functionalist Schools

The initial buildings at Woodworth ES campus (Buildings A, B, C, D, E and F) were designed by H. L. Gogerty in the Mid-Century Modern/Regional Modern style and constructed in 1953. As

30 Ibid.
31 Ibid.

35 "About SoFi Stadium," SoFi Stadium website, accessed May 19, 2022, https://www.sofistadium.com/.

identified in the Los Angeles Unified School District context, the Mid-Century Modernism, or Regional Modernism style was discussed as follows:

> Mid-Century Modernism, or Regional Modernism, represents a middle ground between the formal, machine-age aesthetic of the International Style and a regional idiom reflecting local precedent and identity. In the postwar period through the 1960s, as practiced in Southern California, Mid-Century Modernism took its cues from the region's first-generation modernist architects such as Richard Neutra, Rudolph Schindler, Gregory Ain, Frank Lloyd Wright, and Harwell Hamilton Harris. In the postwar period, second-generation practitioners such as Raphael Soriano, Whitney Smith, and A. Quincy Jones, among many others, established Los Angeles as a center for innovative architectural design and culture.
>
> Mid-Century Modernism is characterized by an honest expression of structure and function, with little applied ornament. Aesthetic effect is achieved through an asymmetrical but balanced, rhythmic design composition, often expressed in modular post-and-beam construction. Whether wood or steel, post-and-beam construction allowed for open floor plans, ease of expansion, and generous expanses of glazing to heighten indoor-outdoor integration. Infill panels of wood or glass are common, with glazing often extending to the gable. Buildings are generally one to two-stories, with an emphasis on simple, geometric forms. Capped with low-pitched gabled or flat roofs, a Mid-Century Modern building often displays wide eaves and cantilevered canopies, supported on spider-leg or post supports. Sheathing materials vary, with wood, stucco, brick and stone, or steel-framing and glass. Windows are generally flush-mounted, with metal frames.
>
> This style was seen in postwar institutional and commercial buildings, as well as residences, from 1945 until circa 1975, when Title 24 restrictions on the use of glass curtailed the expansive glazing that characterizes the style. Typical Character-Defining Features:
>
> - Horizontal design composition and massing; generally one to two stories
> - Simple, geometric volumes
> - Flat or shed roof, often with wide, cantilevered overhangs
> - Exterior materials include stucco, brick, or concrete
> - Modular design and planning
> - Aesthetic qualities derive from use of simply treated materials and excellent craftsmanship
> - Direct expression of structural systems, often in wood or steel post-and-beam
> - Lack of historicizing ornament
> - Generous expanses of fenestration, including bands of grouped multi-light windows

- Extensive use of sheltered exterior corridors, with flat or slightly sloped roofs supported by posts, piers, or pipe columns[36]

H.L. Gogerty, Architect

Henry L. Gogerty was born in 1894 in Zearing, Iowa and earned bachelor's degrees in architecture and engineering from the University of Illinois, and later, a special certificate of architecture from USC in 1923.[37] Gogerty attended Field Artillery Officer Training School and served as a superintendent of airport construction in the United States Army, Signal Corps, from 1917 to 1918. After serving in the Army's field artillery in World War I, he settled in Los Angeles and formed a partnership with architect Carl Jules Weyl in 1926 that lasted approximately two years. Gogerty obtained his license to practice architecture in the state of California in 1927 and shortly after, opened his own architectural practice, H. L. Gogerty Associates. On his own, he is credited with designing over 350 schools in Southern California as well as industrial complexes including the Hughes Aircraft complex in Mar Vista.[38] The massive, 274,000-square-foot Hughes Aircrafts cargo plane assembly building was considered a singular engineering achievement in wood framing.[39] In regard to his expertise in school design, Gogerty was well-known for his design of gliding acoustical walls for flexible classroom construction, which won him a national construction science achievement award from the American Institute of Architects.[40] Gogerty designed Buildings A, B, C, D, and E for Woodworth ES in 1953, and Buildings F and CP in 1955. He was awarded fellowship in the American Institute of Architects in 1953, and ceased practice under H. L. Gogerty Associates in 1968. Over the course of his career, he was additionally involved with designing shopping centers, office buildings, jails, and transportation-related structures.[41] Gogerty died in 1990 in Los Angeles at the age of 96.

Clyde Woodworth, City Attorney

Clyde Cyril Woodworth was born in Inglewood, California in 1890. He studied at Occidental College for one year before attending the USC's night law school, receiving his law degree in 1913.[42] That same year he became the youngest Inglewood city attorney. Woodworth was regarded as one of the most qualified men in the state on municipal law and municipal government in general.[43] In addition to Inglewood city attorney, he became city attorney of El Segundo in 1917, South Gate in 1930, Manhattan Beach in 1934, and Gardena in 1949. He

also served as the city attorney of Redondo Beach between 1929 and 1934.[44] He was the first graduate of Inglewood High School to later serve on as a trustee of the Inglewood School District. The Inglewood Board of Education dedicated a new elementary school to him, "Clyde Woodworth School," in 1955 and celebrated him in a "Founders' Day" celebration.[45] He maintained a private law office following his retirement until he died at the age of 75 in Inglewood in 1965. He is buried in Inglewood Park Cemetery.[46]

Cerebral Palsy Unit (Building CP) and Cerebral Palsy in Los Angeles County

The "South West School District's Co-operative Special Education Program" was a multi-school district program in the Centinela Valley which served students that were deaf, hard of hearing, blind, nearly blind, mentally handicapped, diagnosed with cerebral palsy, or were suffering from a deformity or bone disease.[47] Announced in 1954 and fully operational by 1958, students with cerebral palsy were enrolled at Woodworth ES in Inglewood, blind students were enrolled at Washington School in Hawthorne, partially-sighted students were enrolled at Perry and North School in Torrance, deaf and hard of hearing students were enrolled at Anderson School in Lawndale, and Hawthorne High School in Hawthorne, orthopedic and delicate students were enrolled at Buford School in Lennox, and those severely handicapped in both Lennox and Torrance.[48] Dr. Keith A. Hunsaker, director of the district's co-operative special education program noted, "we assume the physically handicapped students have the same needs as (able-bodied) children and we attempt to educate them with and near (able-bodied) children as much as possible.[49] He was himself a polio victim and spoke about the need to educate students with disabilities over speaking tours throughout Los Angeles County.[50]

Woodworth ES's Building CP was constructed in 1955 for "cerebral palsy victims [who would be provided with] toilets with railings, mats, and physical therapy room with matts, ladders, and steps besides regular gym equipment is provided."[51] Each of these special education programs were conducted at existing neighborhood schools with the idea of having handicapped children integrate with able-bodied children on the playground and in the classroom. It is unclear if handicapped students in fact integrated in the classroom and on the playground with able-bodied students, as original building plans for Building CP indicate distinct classrooms per grade level, and early aerial photographs indicate a separate, enclosed adjacent playground which remains today.

51 John Murphy, "Area Opens Arms to Handicapped Children," *The Los Angeles Times*, September 2, 1962.

These special education programs were considered successful by 1962 and many enrolled children moved to the area from neighboring states to attend them – especially those who were a part of the cerebral palsy classes at Woodworth ES.[52] The entire program cost $250,000 a school year and at least 75% of the cost was paid by the state, as there was no cost to the children's' parents.[53] The last record of reporting on this program was in 1962, yet it is unknown when Building CP stopped being used to educate students with cerebral palsy.

A preliminary search of historic newspapers indicates that cerebral palsy units have existed in the United States since at least 1942, with units located within hospitals, schools, and separate facilities.[54] Over 6,000 newspaper articles mentioning "Cerebral Palsy Unit" were published across the county between 1942 and 2010, with over 700 in California alone 300 of which were appeared in Los Angeles County newspapers.[55] Newly-opened cerebral palsy units in Los Angeles County in the 1940s and 1950s included those at the Orthopedic Hospital in Los Angeles (1949), the Lee Orthopedic School (later Seaside) in Long Beach (1951), the Lincoln School in Paramount (c. 1952), the North Hollywood Hospital in Los Angeles (c. 1955), a stand-alone unit located in Panorama City (1956), and the St. John's Hospital in Los Angeles (1957).[56] Further, the California's Elks Association program created mobile cerebral palsy units which serviced elementary schools in Antelope Valley (c. 1954), and additional cerebral palsy units catering to nursery-school aged children within Los Angeles County included those at White Memorial and Children's Hospital, and the UCLA School of Medicine.[57]

The high volume of cerebral palsy units serving handicapped children in the 1950s period reflects the statistics of an era where there were "more than 17,000 [cerebral palsied persons] in the Los Angeles County and 600,000 in the country. Statistics show that once every 53 minutes a child afflicted with cerebral palsy will be born."[58] Extensive studies and research at mid-century improved the understanding of how to diagnose and treat those affected with cerebral palsy.[59] Additionally, the United States experienced an initial decrease in the number of affected

children in the 1950s and 1960s due to "better understanding and treatment of maternal-fetal Rh incompatibility and improvements in obstetric techniques."[60]

Statement of Significance:

ESA evaluated the Woodworth ES campus, with its sixteen structures for eligibility for listing in the National Register and California Register as a potential historic district. Thirteen of the sixteen extant buildings at the Woodworth ES campus, including Buildings A, B, C, D, E, F, CP, G, H, I, J, K, and L, were considered for historic significance as a historic district as they met the age threshold of 45 years of age or more for CEQA.

Criterion A/1: Events

The Woodworth ES campus was constructed beginning in 1953, with additions ranging up until 1991. The campus was constructed as one of many in southern California and across the country during a period of immense population growth and rapid development following World War II. After the initial construction of Buildings A, B, C, D, and E, in 1953, two more buildings were constructed on campus in 1955, including Buildings F and CP. The school's expansion similarly paralleled the City of Inglewood's significant growth and development in the years that immediately followed the war. This included the development of many single- and multi-family homes in the Morningside Park neighborhood, and the construction of the adjacent Morningside High School (along W. 104th Street) and Monroe Middle School (along S. 10th Avenue). Yet while Woodworth ES was constructed during a period of tremendous development, the school does not appear to have been significant at a state or national level for its development within Inglewood during the mid-20th century period and as such the campus does not rise to a level of significance at the National or State level for eligibility under Criterion A/1 for its association with a larger Mid-Century pattern of development.

Three years after initial campus construction, the Cerebral Palsy unit, Building CP was constructed a part of a larger multi-district program to educate handicapped children. This unit offered various trainings and teachings to those who were disabled with cerebral palsy. While one newspaper article indicated that children came from out of state to attend the cerebral palsy program at Woodworth ES, it appears that there were many such programs located in both in schools, hospitals, and private facilities across the country most prominently between 1942 and the early 1980s, with some programs in operation today. There was no evidence to suggest that Building CP at Woodworth ES was a novel or influential school facility, nor was it the first building constructed to house such a treatment and education facility. It is unclear when Woodworth ES ceased utilizing Building CP explicitly for students affected by cerebral palsy, yet the last record that references the unit at the school was written in 1962, roughly 9 years after

[60] Frederick M. Azar MD, "Cerebral Palsy, Etiology," as taken from Campbell's Operative Orthopaedics, 2021, on ScienceDirect website, accessed February 6, 2023, https://www.sciencedirect.com/topics/nursing-and-health-professions/cerebral-palsy.

its construction. Therefore, Woodworth ES does not appear to have been significant at the state or national levels for its cerebral palsy unit, as this appears to have been one of many such facilities constructed and operated during the mid-century period when cerebral palsy appeared to be more prevalent. As such, the campus does not rise to a level of significance at the National or State level for eligibility under Criterion A/1 for Building CP's original use as a cerebral palsy unit in southern California.

Criterion B/2: Significant Persons

Woodworth ES, or the Clyde Woodworth School, was named after Inglewood city attorney, Clyde Woodworth upon its opening in 1953. In addition to serving as Inglewood city attorney, Woodworth was also the city attorney for El Segundo, South Gate, Manhattan Beach, Gardena, and Redondo Beach at various points, and led a private law office until he died in 1965. Woodworth ES was named after Woodworth toward the end of his life, yet aside from bearing his namesake in one of several cities where he presided as city attorney, Woodworth did not attend the school, nor did he participate in administrative activities, or notable events at the campus itself. He was celebrated at the school in 1955 in a Founder's Day celebration, where he participated for a few hours before returning to work. It does not appear that Woodworth had a significant connection to the school, other than bearing his name to the campus, nor does his legacy appear rise to a level of significance for Woodworth ES to satisfy Criterion B/2 for eligibility related to a historic personage. Woodworth ES is further not identified with the productive life of significant individual District teachers, principals, administrators, or any other persons important in our past.

Criterion C/3: Design/Construction

The first buildings constructed at Woodworth ES were Buildings A, B, C, D, and E, built between 1953 and 1954 to designs by notable architect H. L. Gogerty and designed in a vernacular Mid-Century Modern/Regional Modern style. Later Buildings CP and F were constructed in 1955, also to designs by Gogerty. Buildings G, H, I, K, and L were constructed as portable structures designed by Balch – Hutchason- Perkins between 1959 and about 1972. Portable structure Building J was constructed between 1964 and 1979 and its architect is unknown. The campus is a simplistic example of campus plant layout and is not reflective of a master planned campus. Woodworth ES does not include an innovative campus design, and its buildings lack distinction and share the same modular design, elevations, and floorplans. The utilitarian building includes several Mid-Century Modern/Regional Modern style character-defining features including one-story simple horizontal volumes, flat roofs with cantilevered overhangs, stucco, modular planning, lack of historicizing ornament, and bands of grouped multi-lite windows. Roughly half of the extant buildings at the campus were constructed as temporary portable structures to accommodate overcrowding and were not deliberately part of a larger master plan. As such, the campus is not a notable example of a Mid-Century Modern designed campus or school plant.

While southern California architect Henry L. (H.L.) Gogerty was involved with the design of the original buildings and several later additions, Woodworth ES was designed during the height of the architect's career, which spanned more than 40 years. Most notable for his work in post-war educational design, Woodworth ES was one of over 350 schools that Gogerty designed in California which appears to be a formulaic campus lacking distinction for its layout, circulation, and overall design. Gogerty was regarded for his innovative work in designing gliding acoustical walls for flexible classroom construction, one of which appears present at Building C. Gogerty was known for commissions including the Desert Air Hotel, Palm Desert Airpark, Hughes Aircraft, Benix Aviation, and Union Pacific Railroad buildings, in addition to shopping centers, offices, and jails. Two of the Hughes Aircraft campuses were adaptively reused in the 2010s.[61] The Woodworth ES campus did not win any awards for its design and appears utilitarian in its repetitive use of elongated structures and a lack of an overall campus plan. As such, Woodworth ES does not appear to rise to a level of significance to satisfy Criterion C/3 for eligibility related to its Mid-Century Modern style design, or for its association with architect H.L. Gogerty.

Criterion D/4: Data Potential

Woodworth ES is not likely to yield any information important to prehistory or history. Therefore, Woodworth ES does not meet the above criterion.

Architectural Coating Area Calculations

CalEEMod assumes the total surface for architectural coating equals:		
Residential Coating Area	2.7	times the floor square footage
	75%	interior
	25%	exterior
Nonresidential Coating Area	2	times the square footage
	75%	interior
	25%	exterior
Parking Lot Coating Area	6%	of the square footage
	0%	exterior for surface lot

Sources and Assumptions:

CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Project No. 19-1110

Inglewood Unified School District
401 S. Inglewood Avenue
Inglewood, CA 90303

Attention: Ms. Kimberly Munoz

SUBJECT: Limited Geotechnical Investigation Report
Morningside High School Site Upgrades
10500 Yukon Avenue South
Inglewood, CA 90303

1. INTRODUCTION

This report presents the results of a Limited Geotechnical Investigation performed by Koury Engineering & Testing, Inc. (Koury) for the proposed Morningside High School improvements located at 10500 Yukon Avenue South, Inglewood, California. The study was performed to evaluate the subsurface soil conditions in the area of the proposed improvements in order to provide geotechnical recommendations for design and construction. This report includes our findings and recommendations for the design and construction of the proposed buildings, bleachers and associated improvements.

The recommendations provided within this submittal are based on the results of our field exploration, laboratory testing and engineering analyses. Our services were performed in general accordance with our Proposal No. 19-1110, dated November 4, 2019.

Our professional services have been performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable geotechnical consultants practicing in this or similar localities. No other warranty, expressed or implied, is made as to the professional advice included in this report. This report has been prepared exclusively for the Inglewood Unified School District and their consultants for the subject project. The report has not been prepared for

use by other parties and may not contain sufficient information for the purposes of other parties or other uses.

2. SITE CONDITIONS

The Morningside High School is bounded by W 104th Street on the north, Yukon Avenue South on the west, W 108th Street and residential homes on the south and Monroe Middle School and commercial facilities on the east. The main access to the site is from Yukon Avenue South near the southwest corner of the campus. The proposed small one-story buildings are located in the southwest portion of the campus, south and northwest of the existing football field. The existing football field will be shifted west and the bleachers will be constructed north and south of the track that will surround the new football field.

The south portion of the campus is presently occupied by an existing football field, basketball courts and portable trailers. Most of the area is landscape except for the track, the basketball court, and the portable trailer area. The proposed expanded parking lot is presently occupied partially by an existing parking lot and landscape and walkway strips. The proposed electrical yard within the northern portion of the site is covered with grass landscape. Immediately east of the future electrical yard, a new baseball field will be constructed following the removal of some portable buildings and tennis courts. There will be a new softball field located northeast of the existing basketball courts and at the east end of the existing football field.

The site slopes gently to the south and southwest, and the ground surface lies at elevations between about 88 and 112 feet (NAVD88). Drainage of the site is generally by sheet flow toward the south.

3. PROPOSED IMPROVEMENTS

Koury understands that the Inglewood Unified School District is planning to add facilities to the Morningside High School consisting of several small one-story buildings, a football field with two sets of bleachers, running track, parking lot, tennis courts, and baseball and softball fields. Based on the site plan provided to us, there will be a new student visitor parking lot at the northwest corner of the campus supporting approximately 154 parking spaces. The proposed electrical yard to be located within the northern portion of the site east Building H and west of the new baseball

field will measure about 30 by 65 feet in plan and may have masonry walls with metal deck roofing.

Within the southwest corner of the campus, it is proposed to construct a new football field and an 8-lane track and new bleachers will be located on the north and south sides of the running track. The site plan shows also three small one-story buildings on the northwest side of the playfield area; these buildings are likely to contain bathrooms, locker rooms, storage rooms or concessions. The smallest building covers an area of about 700 square feet and the largest building covers an area of about 3,600 square feet. The third building appears to cover an area of about 1,900 square feet. The site plan also indicates that two rows of 3 side-by-side tennis courts are planned east of the football field and south of the future softball field. The basketball courts will be relocated west partially between the basketball courts and the east end of the new track.

The associated improvements at the site may consist of low walls, fire access road, new utility lines, sidewalks, fencing, light poles, scoreboard and various hardscape areas. Architectural and structural design details for the new buildings were not provided. Koury assumed maximum building column load of about 25 kips and maximum wall loads not exceeding 2 kips per lineal foot.

4. FIELD EXPLORATION

The field exploration program consisted of drilling ten soil test borings (B-1 through B-10) on January 2, 2020 using truck-mounted hollow-stem auger drilling equipment. The borings were drilled to depths ranging between about 6½ and 41½ below the existing ground surface.

The locations of the borings are shown on the Boring Location Map, Figure A-2, presented in Appendix A. Standard penetration test samples, California ring samples and bulk samples were obtained from the borings for laboratory testing. The depths, blow counts, and description of the samples are shown on the attached boring logs presented in Appendix B of this report. The contractor used a 140-lbs automatic hammer to drive the samplers a maximum of 18 inches into the soils.

5. LABORATORY TESTING

Laboratory tests, including moisture content, dry unit weight, #200 sieve wash, direct shear, pocket penetrometer, consolidation and expansion index were performed to aid in the classification of the materials encountered and to evaluate their engineering properties. Sulfates, chlorides, resistivity, and pH tests (corrosivity tests) were also performed on one sample. The results of pertinent laboratory tests are presented on the boring logs in Appendix B, and/or in Appendix C.

6. SOIL CONDITIONS

The subsurface soil profile consists of fill underlain by alluvial deposits. The fill depth was found to range between about 2 and 5 feet at the boring locations. Deeper fill may be encountered at utility locations, or at other locations between and beyond the borings. Except for Boring B-5 where 6 inches of asphalt was encountered, the asphalt pavement thickness at the boring locations consisted of about 3½ to 5 inches of asphalt concrete. The asphalt was found to be underlain by 2 to 3 inches of aggregate base except for Boring B-4 that indicated 6 inches of base.

Except for Boring B-2 drilled in the southwest portion of the campus in relatively close vicinity of Yukon Avenue South where clayey sand was encountered, the fill materials encountered in the borings consisted generally of firm to stiff sandy lean clay. The fill encountered were generally moist to very moist.

With a few exceptions, the underlying alluvium consists predominantly of interbedded sandy lean clay with clayey sand and silty sand. Interbeds of poorly graded sand were encountered in Borings B-6 and B-9 at depths exceeding 13 feet below the ground surface. The sandy clay alluvial soils are generally stiff to very stiff, and the sand are medium dense to dense.

With a few exceptions, the alluvial soils encountered are generally moist to very moist. Except for one sample of Boring B-9 at a depth of 21 feet where a moisture content of 31 percent was measured, the moisture contents of the sandy clay range from about 12½ to 21 percent with an average of about 14 percent, and the moisture contents of the sand range from about 2 to 14½ percent with an average of about 10 percent. The degree of saturation of the clay is generally high (about 90 to nearly 100 percent).

Our #200 sieve wash tests indicated that the fines contents of sand generally range from about 4 to 48 percent with an average of about 31½ percent. The fines contents of the clay vary from about 50 to 90 percent with an average of about 64½ percent. The dry unit weights of the clay tested range from about 100 to 127 pcf with an average of about 119½ pcf. The dry unit weights of sand range from about 108 to 127 pcf with an average of about 119 pcf.

The consolidation tests did not indicate significant collapse upon addition of water. Despite the high degree of saturation, however, the consolidation test from a depth of 9 feet indicated about 0.3% swell strain upon addition of water under a pressure of 3200 psf. The clay soils are generally overconsolidated and are considered moderately compressible. The rebound (unloading) curve of the consolidation tests indicate that some of the clay tested have potential for expansion. The direct shear test performed on a clayey sand sample indicated peak and ultimate friction angles of about 32 and 31 degrees and peak and ultimate cohesion of about 472 and 52 psf, respectively.

Pocket penetrometer test results indicate unconfined compression strengths of the tested soils ranging between about 1.5 and 4.5 tsf with an average of about 4.4 tsf. An expansion index test on a sandy lean clay of Boring B-1 at 0 to 2 feet yielded a value of 14 while a test on Boring B-4 on a sample near the surface yielded a value of 22.

Variations in the soil conditions as well as detailed descriptions are indicated on the attached boring logs in Appendix B. The soil conditions described in this report are based on the soils observed in the test borings drilled for this investigation and the laboratory test results. Variations between and beyond the borings should be anticipated.

7. GROUNDWATER

The site lies at approximately elevations 88 to 112 feet (NAVD88). Groundwater was not encountered in the borings drilled for this study. The Seismic Hazard Zone Report for the Inglewood 7.5-Minute Quadrangle, Los Angeles County CA, Seismic Hazard Zone Report 029, Department of Conservation, Division of Mines and Geology indicates that the historic high groundwater is at least 50 feet below ground surface (see Figure A-5 for the Historic High Groundwater Map).

8. SITE GEOLOGY

The site is located within the Los Angeles physiographic basin. The Los Angeles basin is bounded on the north by the Santa Monica and San Gabriel Mountains, on the east and southeast by the Santa Ana Mountains and the San Joaquin Hills, and on the west and south by the Pacific Ocean. The Los Angeles basin represents a down-warped block of basement rock overlain by approximately 31,000 feet of sediment.

The Los Angeles physiographic basin is part of the Peninsular Ranges Geomorphic Province. The Peninsular Ranges extend north to the San Gabriel Mountains and south into Mexico to the tip of Baja California. The Peninsular Ranges Province is characterized by alluviated basins, elevated erosion surfaces, and northwest-trending mountain ranges bounded by northwest trending faults.

The Geology Map of the Long Beach Quadrangle indicates that the subsurface conditions at the site consist of old alluvial floodplain deposits consisting of sand, silt and clay (see Figure A-3 for the Geology Map). The subsurface soil profile encountered in the borings consists of fill underlain by alluvial deposits.

9. OIL WELL

The State of California Department of Conservation, Division of Oil, Gas and Geothermal Resources indicates that Morningside High School is located about ½ mile south of the Potrero Oil/Gas Field and ½ mile west of the Howard Townsite Oil/Gas Field. The nearest dry hole is located about 1,000 feet north of the site and the nearest idle hole is about ½ mile northwest of the site. The nearest active well is located about 1½ miles southeast of the site (See Figure A-9, in Appendix A).

During our subsurface exploration, we did not observe oil-field derived hazardous or toxic materials within the borings drilled to the maximum depth of 41½ feet. No hazardous materials associated with oil fields are anticipated at the building sites.

10. SEISMIC CONSIDERATIONS

10.1. General

Morningside High School, like the rest of Southern California, is located within a seismically active region as a result of being located near the active margin between the North American and Pacific tectonic plates. The principal source of seismic activity is movement along the northwest-trending regional faults such as the San Andreas, San Jacinto, Newport-Inglewood and Whittier-Elsinore fault zones.

By definition of the California Geological Survey (CGS), an active fault is one which has had surface displacement within the Holocene Epoch (roughly the last 11,000 years). The CGS has defined a potentially active fault as any fault which has been active during the Quaternary Period (approximately the last 2,000,000 years). These definitions are used in delineating Earthquake Fault Zones as mandated by the Alquist-Priolo Geologic Hazard Zones Act of 1972 and as subsequently revised in 1997 as the Alquist-Priolo Earthquake Fault Zones. The intent of the act is to require fault investigations on sites located within Special Studies Zone to preclude new construction of certain inhabited structures across the trace of active faults.

The subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Probably the most important fault line to the site from a seismic shaking standpoint is the northwest trending Alquist-Priolo Newport-Inglewood Fault, located approximately 1,000 feet northeast of the site. The nearest Alquist-Priolo active segment of the Palos Verdes Fault is located approximately 13 miles south of the site and the Whittier Fault Zone nearest active segment is located about 19 miles east of the site. The Redondo Canyon Fault is located about 9½ miles southwest of the site, the Santa Monica Fault Zone is located about 10 miles northwest of the site and the Hollywood Fault Zone is located about 11 miles north of the site (see Figure A-6, Appendix A). The Puente Hills (LA) Fault is located about 5 miles to the northeast, the Puente Hills (Santa Fe Springs) Fault is about 11 miles to the southeast, and the Compton Fault is about 8¼ miles to the southwest.

Based on the information available at this time, it is our opinion that a Mw7.3 earthquake may occur on the Palos Verdes Fault, a Mw6.9 earthquake may occur on the Whittier Fault, a Mw7.2 earthquake may occur on the Newport-Inglewood Fault, a Mw6.2 earthquake may occur on the Redondo Canyon

Fault, a Mw7.0 earthquake may occur on the Santa Monica Fault, a Mw6.6 earthquake may occur on the Hollywood Fault, a Mw6.9 earthquake may occur on the Puente Hills (LA) Fault segment, a Mw6.6 earthquake may occur on the Puente Hills (Santa Fe Springs) segment, and a Mw6.9 earthquake may occur on the Compton Fault. Large earthquakes could occur on other faults in the general area, but because of their greater distance and/or lower probability of occurrence, they may be less important to the site from a seismic shaking standpoint.

Due to the proximity of the site to the Newport-Inglewood Fault, near field effects from strong ground motion associated with a large earthquake along this fault may occur at the site. These near field effects, including "fling" and directivity of strong ground motion, may result in significantly higher accelerations at the site.

According to the EQSEARCH program, within a search radius of 60 miles, about 63 earthquakes of magnitude 5 or greater have been recorded up to the year 2000. Within that same period, there are records of 11 earthquakes of magnitude 6 or greater, 5 earthquakes of magnitude 6.5 or greater and 3 earthquakes of magnitude 7 or greater within the same search area. The largest earthquake from the site was reported to have occurred in 1827 at a location about 38 miles from the site. Using the attenuation relationship of Campbell and Bozorgnia for alluvium (1997), the highest acceleration at the site could have been on the order of 0.22g. A summary of the earthquakes with magnitudes 5 and greater is attached in Appendix D.

10.2. Landsliding

The site is not located in a Landslide Hazard Zone on the State of California Seismic Hazard Zones Map (Figure A-4 in Appendix A). No evidence for landsliding was observed on or in the immediate vicinity of the site at the time of our field exploration. Based on topographic conditions, landsliding is not considered a potential hazard at the site.

10.3. Liquefaction

Liquefaction may occur when saturated, loose to medium dense, cohesionless soils are densified by ground shaking or vibrations. The densification results in increased pore water pressures if the soils are not sufficiently permeable to dissipate these pressures during and immediately following an

earthquake. When the pore water pressure is equal to or exceeds the overburden pressure, liquefaction of the affected soil layers occurs. For liquefaction to occur, three conditions are required:

- Ground shaking of sufficient magnitude and duration;
- Groundwater level at or above the level of the susceptible soils during the ground shaking; and
- Soils that are susceptible to liquefaction.

The Liquefaction Hazards zone on the State of California Seismic Hazards Zones Map (Figure A-4 in Appendix A) indicates that the site is not located in a liquefaction susceptibility zone. Due to the absence of shallow groundwater, the presence of clayey soils and some medium dense to dense sands, it is our opinion that the potential for liquefaction is remote. However; the potential for dry seismic settlement was evaluated.

For seismic dry settlement evaluation, we obtained an earthquake magnitude of Mw6.35 from a seismic-hazard deaggregation using the USGS Unified Hazard Tool. Our analysis also utilized a site acceleration of 0.898g (PGA_M) obtained from ASCE 7-16 Seismic Design Ground Motion Analysis. The seismic settlement calculations were performed for the deepest borings (B-6 and B-7) using the SPT and equivalent California sampler blow count data. The SPT tests were performed with an automatic hammer and unlined SPT samplers. The California sampler blow counts were multiplied by a factor of 0.65 to obtain the equivalent SPT blow counts.

Using the LiquifyPro software, we calculated seismic settlements on the order of ½ to ¾ inch (see result of calculations in Appendix C). Considering the recommendations in Section 7.66 of the SCEC Guidelines for Implementation of SP 117 and our total seismic settlement calculations, it is our opinion that a differential settlement on the order of ¼ inch in 40 feet may be considered for the design seismic event.

10.4. Tsunamis and Seiches

The site is located at an average elevation ranging from approximately 88 to 112 feet and 5½ miles away from the coastline. There is no mapped major reservoir in the immediate vicinity and upslope of the site. Therefore, tsunamis and seiches are not considered potential hazards.

11. FLOODING

The project site lies within an area of minimal flood hazard as shown on the FEMA Flood Map #06037C1780G, effective date December 21, 2018 (Figure A-7, Appendix A). Based on the County of Los Angeles GIS, the site is located within a 500-year flood zone; however, the site is not reported as being located in a dam inundation zone. Flooding is not considered a high potential hazard to the site.

12. COLLAPSIBLE SOILS

Soils prone to collapse are generally young and deposited by flash floods and wind. The onsite soils have been mapped as older alluvium and the soils at shallow depth have moisture contents that are near or above optimum, which aid in mitigating collapse potential. Our laboratory tests did not indicate significant collapse. Therefore, the potential for collapse is considered low. Overerexcavation and recompaction, and appropriate drainage are recommended to mitigate the potential for hydrocollapse.

13. CONCLUSIONS AND RECOMMENDATIONS

13.1. General

In our opinion, the planned improvements are feasible from a geotechnical engineering point of view provided the geotechnical recommendations presented in this report are followed. The main concerns from a geotechnical standpoint are the presence of clay soils and high moisture content soils.

The following sections contain preliminary geotechnical recommendations for the design and construction of the proposed improvements and include our recommendations and discussions about grading, bearing capacity, settlement, flatwork, slabs-on-grade, temporary excavations, and utility trenches.

13.2. Grading

13.2.1. Building Pads

The thickness of undocumented fill encountered at the boring locations range from about 2 to 5 feet. We recommend removing all undocumented fill within the proposed building pads and structure areas. The exact thickness of undocumented fill should be verified at the time of grading.

Any existing pavement, foundation, vegetation, organic material, abandoned underground utilities and other debris should be removed from the proposed building pad and structure areas. Additional recommendations for overexcavation are presented below.

Within building pad areas, we recommend complete overexcavation of the existing fill and the subgrade to at least 3½ feet below existing grades and 2 feet below footings, whichever is deeper. Where feasible, the overexcavation should extend laterally at least 5 feet beyond the building perimeter.

Following subgrade approval by the Geotechnical Engineer, the bottom of the removal excavation should be scarified to a depth of 8 inches, moisture conditioned to at least 125 percent of optimum and recompacted to 90% relative compaction for clay soils and moisture conditioned within 2½ percent of optimum and recompacted to 92% relative compaction for sand as determined by ASTM D1557. However, if the subgrade is firm and consists of undisturbed clay alluvium and the moisture content is at least 125 percent of optimum, the scarification should not be performed, and measures should be taken to prevent subgrade disturbance. The subgrade should be proof rolled with heavy construction equipment to determine its firmness, as needed.

All fill placed within the building pads should be compacted to at least 95% relative compaction at a moisture content within 2½ percent of optimum for sand/granular soils and to at least 90% relative compaction at a moisture content of at least 125 percent of optimum for sandy clay soils unless approved otherwise by the Geotechnical Consultant at the time of construction. The shallow on site sandy clay soils can generally be used as backfill; however, if encountered, any medium to high plastic onsite clay soils should not be used within 2 feet of footings or building slabs. All fill should be deemed as "failing" and unsuitable if the moisture content is less than the recommended value unless determined otherwise by the Geotechnical Engineer at the time of construction.

13.2.2. Exterior Flatwork, Sidewalk and Pavement Areas

Similarly to the building footprint areas, all abandoned utilities should be removed, and the excavations should be backfilled with engineered fill. We recommend overexcavating 18 inches of subgrade material and placing at least 18 inches of new engineered fill for the subgrade of all new non-structural flatwork and pavement. Prior to backfill placement, the subgrade should be scarified to a depth of 8 inches, moisture conditioned and recompacted to 90% relative compaction.

We further recommend the placement of at least 12 inches of non-expansive granular material below all new pedestrian concrete flatwork. It is critical that the upper 12 inches of clay soils below the non-expansive soils be thoroughly moisture conditioned to 125 percent of optimum except for asphalt pavement where it should be at least 115 percent of optimum.

Except for pavement areas, all fill outside the structure areas should be compacted to at least 90% relative compaction at moisture content within 2½ percent of optimum for sand and other granular material and at least 125 percent of optimum for clay soils except as indicated otherwise by the Geotechnical Engineer. Below pavement areas, all clay soils should be compacted to at least 90 percent relative compaction and all granular material to 95 percent relative compaction.

13.2.3. General Grading Requirements

1. All fill, unless otherwise specifically stated in the report, should be compacted to at least 90 percent of the maximum dry density as determined by ASTM D1557 Method of Soil Compaction for clay soils and 95 percent relative compaction for sand and other granular soils, unless specified otherwise.

2. No fill should be placed until the area to receive the fill has been adequately prepared and approved by the Geotechnical Consultant or his representative.

3. Fill soils should be kept free of debris and organic material.

4. Rocks or hard fragments larger than 3 inches may not be placed in the fill without approval of the Geotechnical Consultant or his representative, and in a manner specified for each occurrence. There should not be any concentrations of particle sizes of 2 inches or greater; proper mixing should be performed. If encountered, oversize materials should be disposed outside the structural fill and flatwork areas at the locations designated by the District representative.

5. The fill material should be placed in lifts which, when loose, should not exceed 8 inches per lift. Each lift should be spread evenly and should be thoroughly mixed during the spreading operation to obtain uniformity of material and moisture.

6. When the moisture content of the fill material is lower than the specified value or is too low to obtain adequate compaction, water should be added and thoroughly dispersed until the soil has a moisture within 2½ percent of optimum moisture content for sand material and 125 percent of optimum for clayey soils unless indicated otherwise in this report and/or by the Geotechnical Engineer at the time of construction.

7. When the moisture content of the fill material is too high to obtain adequate compaction, the fill material should be aerated by blading or other satisfactory methods until the soil has a moisture content as specified herein.

8. Permanent fill and cut slopes should not be constructed at gradients steeper than 2:1(H: V).

It should be noted that some of the clay soils have a high in-situ degree of saturation and moisture contents above optimum and outside the compactable moisture range. These soils are subject to disturbance and "pumping", specially under heavy rubber tire equipment. The contractor will have to select appropriate excavation and compaction equipment to avoid disturbing the high moisture content subgrade soils or soils with high degree of saturation and to be able to compact the fill to the project specifications above relatively soft subgrade. Any scarified clay soils must be compacted to at least 90 percent relative compaction as determined by ASTM D1557.

We recommend that all excavated clay soils be pre-mixed and moisture conditioned outside the fill area prior to reuse as fill. Where the soil consists of sandy clay (50 to 70% fines) and severe "pumping" conditions develop during compaction, the moisture conditioning requirement may be revised at the discretion of the Geotechnical Engineer. Pre-soaking or aeration will be required if the compaction moisture does not meet the above requirements.

13.3. Fill Materials

13.3.1. Onsite Materials

The onsite shallow clayey sand and sandy clay with low expansion potential are deemed suitable to be re-used as engineered fill, provided they are properly processed, moisture conditioned, and free from deleterious material prior to fill placement except as indicated. Some import non-expansive material should also be anticipated for backfilling purpose. The imported materials being used for backfilling should have a low expansion potential (EI less than 20) and should comply with the specifications of this report.

The onsite sandy clay soils may be used under asphalt pavement and concrete roadway areas provided they are properly moisture conditioned; however, they should not be used as backfill within the upper one foot below concrete pedestrian flatwork areas unless further testing at the time of construction indicates an expansion index less than about 20. Unless indicated otherwise, the shallow sandy clay soils are considered suitable for backfilling purpose where no concrete flatwork is anticipated provided, they are free of deleterious and oversize materials and are properly processed and moisture conditioned.

Overexcavation and re-compaction will induce fill shrinkage. Many factors such as mixing, relative compaction of the fill, and topographic approximations will affect shrinkage. We cannot estimate the exact amount of shrinkage; however, in our opinion, the shrinkage may be on the order of 10 to 15 percent for existing soils excavated and recompacted to 90 percent relative compaction. This estimate does not include the material that will be required to fill in the excavations after the removal of any subsurface structures from the prior use of the site and removal of topsoil.

13.3.2. Import

Import materials should contain sufficient fines (binder material) to be relatively impermeable and result in a stable subgrade when compacted. The imported materials should have an expansion index (EI) less than 20 and should be free of organic materials, debris, and cobbles larger than 2½ inches with no more than 40% passing the # 200 sieve. A bulk sample of potential import material, weighing at least 35 pounds, should be submitted to the Geotechnical Consultant at least 48 hours before fill operations. Other than aggregate base and bedding sand, all proposed import materials should be tested for corrosivity, should be environmentally cleared from contamination and should be approved by the Geotechnical Consultant prior to being imported onsite.

13.4. Temporary Excavations

Temporary excavations adjacent to un-surcharged areas are anticipated to be stable vertically to a depth up to 5 feet in fill and alluvium. For deeper excavations up to a depth of 8 feet, we recommend a gradient no steeper than ¾:1 (H:V) for unsurcharged excavations unless shoring is used.

The tops of slopes should be barricaded to prevent vehicles and storage loads within 6 feet of the tops of the slopes, or within a distance equal to at least the height of the slope, whichever is greater. A

greater setback may be necessary when considering heavy vehicles, such as concrete trucks and cranes; we should be advised of such heavy vehicle loadings so that specific setback requirements can be established. When excavating adjacent to existing footings or building supports, proper means should be employed to prevent any possible damage to the existing structures. Un-shored excavations should not extend below a 1½:1 (H:V) plane extending downward from the lower edge of adjacent footings and should start at least 2 feet away from the footing edge. Where there is insufficient space to slope back an excavation, shoring may be required. All regulations of State and Federal OSHA should be followed.

Temporary excavations are assumed to be those that will remain un-shored for a period of time not exceeding one week. In dry weather, the excavation slopes should be kept moist, but not soaked. If excavations are made during the rainy season (normally from November through April), particular care should be taken to protect slopes against erosion. Mitigative measures, such as installation of berms, plastic sheeting, or other devices, may be warranted to prevent surface water from flowing over or ponding at the top of excavations.

13.5. Floor Slabs

13.5.1. General

The grading recommendations for the new building pads are provided in Section 13.2.1. The building floor slabs-on-grade, as a minimum, should have a thickness of 5 inches and should contain as a minimum No. 4 bars spaced a maximum of 16 inches on centers, in both directions or as recommended otherwise by the Structural Engineer. The Structural Engineer should ultimately determine the size and spacing of the reinforcement to be used. We recommend a concrete strength of at least 4000 psi unless determined otherwise by the Structural Engineer.

13.6.2 Moisture Sensitive Floor Covering

Water vapor transmitted through floor slabs is a common cause of floor covering problems. In areas where moisture-sensitive floor coverings (such as tile, hardwood floors, linoleum or carpeting) are planned, a vapor retarder should be installed below the concrete slab to reduce excess vapor transmission through the slab.

The function of the recommended impermeable membrane (vapor retarder) is to reduce the amount of soil moisture or water vapor that is transmitted through the floor slab. The membrane should be at least 15-mil thick, Class A, and care should be taken to preserve the continuity and integrity of the membrane beneath the floor slab. The vapor retarder should conform to ASTM E1745.

A capillary break below the slab may be used at the discretion of the Project Architect. If used, the capillary break should consist of at least 4 inches of free draining gravel or coarse sand, with no more than 2 percent passing the ASTM No. 200 sieve, and should be placed below the vapor retarder. The gradation for the free draining material should conform to the requirements for No. 4 Concrete Aggregates as specified in Section 200-1.4 of the Standard Specifications for Public Works Construction (Greenbook).

Another factor affecting vapor transmission through floor slabs is the water to cement ratio in the concrete used for the floor slab. A high water to cement ratio increases the porosity of the concrete, thereby facilitating the transmission of water vapor through the slab. The project Structural Engineer should provide recommendations for design of the building slab in accordance with the latest version of the applicable codes. The placement of sand above the vapor retarder is the purview of the Structural Engineer.

13.6. Seismic Coefficients

Under the Earthquake Design Regulations of Chapter 16A, Section 1613A of the 2019 CBC, and based on the mapped values, the coefficients and factors presented in Table 1 were calculated using ASCE 7-16 and the USGS map parameters (Figure A-8, Response Spectrum).

Table 1 – Seismic Coefficients and Factors

Site Class (CBC 2019 – 1613A.3.2)	D
Seismic Design Category based on Occupancy Category III (CBC 2019-1604A.5 &1613A.3.5)	*D
Mapped Acceleration Parameter for Short Period (0.2 Second), S_S	1.895
Mapped Acceleration Parameter for 1.0 Second, S_1	0.667
Adjusted Maximum Spectral Response Parameter for Short Period (0.2 Second), S_{MS}	1.895
Adjusted Maximum Spectral Response Parameter for 1.0 Second Period, S_{M1}	*1.134
Design Spectral Response Acceleration Parameter, S_{DS}	1.263
Design Spectral Response Acceleration Parameter, S_{D1}	*0.756
Peak Ground Acceleration (PGA_M)	0.898

Project Site Coordinates: Longitude: W118.333090º Latitude: N33.929175º (WGS84)
*Based on F_v of 1.7. See Section 11.4.8 of ASCE 7-16 for calculation requirements

The site class is determined in accordance with ASCE 7 Chapter 20 using either shear wave velocity, SPT blow count or undrained shear strength. For a site to be classified as Site Class D the weighted average SPT blow count should be between 15 and 50 and the average weighted undrained shear strength should be between 1,000 and 2,000 psf within the upper 100 feet of soil. The SPT blow count test results presented on the boring logs indicate that the requirements for Class D are met.

13.7. Shallow Foundations

General: For the purpose of preparing this report, we assumed that the proposed building structures will impose maximum column loads of about 25 kips and wall loads less than 2 kips per lineal foot. The recommendations for preparation of the subgrade underlying the footings are provided in the "Earthwork" Section of this report. The Structural Engineer should design foundations in accordance with the requirements of the applicable building code.

Footings should have a minimum width of 2 feet for isolated footings and 18 inches for continuous footings. The bottom of building footings should be located at least 24 inches below the lowest adjacent finish grade, and reinforcement should consist of a minimum of two No. 5 bars, top and bottom or equivalent as determined by the Structural Engineer.

The proposed building structures may be supported on isolated and/or strip footings designed using a net allowable bearing pressure of 2,000 pounds per square foot (psf) for footings supported on at least 2 feet of engineered fill as indicated in the grading section of this report and embedded at least 24 inches below the lowest adjacent grade. This bearing pressure may be increased by 250 psf for each additional foot of depth and 200 psf for each additional foot of width to a maximum of 3,200 psf. A one-third increase in the bearing value may be used when considering wind or seismic loads. In the event of new footings located within one footing width of an existing footing, we recommend reducing the bearing pressure of the new footing by 30 percent.

Minor footings may be required for low height exterior landscape walls (4 feet or less in height), or other small ancillary structures. These footings should be supported on at least 2 feet of new engineered fill and should be embedded at least 18 inches. A vertical bearing pressure of 1,500 psf may be used for these footings.

Lateral Resistance of Footings: Lateral load resistance may be derived from passive resistance along the vertical sides of the foundations, friction acting at the base of the foundations, or a combination of the two. A coefficient of friction of 0.30 may be used between the footings, floor slabs, and the supporting soils comprised of engineered fill. Where visqueen is used below floor slabs, the friction coefficient should not exceed 0.1. The passive resistance of level properly compacted fill soils in direct contact with the footings may be assumed to be equal to the pressure developed by a fluid with a density of 250 pcf, to a maximum pressure of 2,500 psf. A one-third increase in the passive value may be used for wind or seismic loads. The frictional resistance and the passive resistance of the soils may be combined provided that the passive resistance is reduced by one third. We recommend that the first foot of soil cover be neglected in the passive resistance calculations if the ground surface is not protected from erosion or disturbance by a slab, pavement or in a similar manner.

Estimated Settlement of Footings: Based on the results of our analyses and provided that our recommendations in preceding sections of this report are followed, we estimate that the total static settlement of isolated and/or strip footings under sustained loads will be on the order of ¾ inch for the anticipated maximum structural load. The maximum static differential settlement, over a horizontal distance of 40 feet, is anticipated to be on the order of ½ inch for similarly loaded

footings. The differential settlement during the design seismic event is anticipated to be on the order of ¼ inch in 40 feet.

13.8. Retaining Walls

We have assumed that retaining walls, if needed, will have heights in the range of 1½ to 6 feet. Design earth pressures for retaining walls depend primarily on the allowable wall movement, wall inclination, type of backfill materials, backfill slopes, surcharges, and drainage. The earth pressures provided assume that non-expansive soil backfill will be used and a drainage system will be installed behind the walls so that external water pressure will not develop. A drainage system should be provided behind the walls to reduce the potential for development of hydrostatic pressure. If a drainage system is not installed, the cantilever level-backfilled walls, under static conditions, should be designed to resist a hydrostatic pressure equal to that developed by a fluid with a density of 95 pcf for the full height of the wall.

Determination of whether the active or at-rest condition is appropriate for design will depend on the flexibility of the wall. Walls that are free to rotate at least 0.002 radians (deflection at the top of the wall of at least 0.002 x H, where H is the unbalanced wall height) may be designed for the active condition. Walls that are not capable of this movement should be assumed rigid and designed for at-rest conditions. The recommended static active and at-rest earth pressures are provided in the following table.

Table 2 - Earth Pressures for Retaining Walls, Import Sand Backfill

Wall Movement	Backfill Condition	Equivalent Fluid Pressure
Free to Deflect	Level	40
Restrained	Level	65

The above lateral earth pressures do not include the effects of surcharge (e.g., traffic, footings, sloping ground) or compaction-induced wall pressures. Any surcharge (live, including traffic, dead load, or slope) located within a 1:1 plane drawn upward from the base of the excavation should be added to the lateral earth pressures. The lateral contribution of a uniform surcharge load

located immediately behind walls may be calculated by multiplying the surcharge by 0.33 for cantilevered walls and 0.5 for restrained walls. For vehicular surcharge adjacent to driveways or parking areas a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot traffic surcharge, should be used. The onsite clay soils should not be used as backfill for the walls unless the soil expansion is considered in the design due to an increase of lateral pressure.

Walls should be waterproofed using appropriate membranes, and properly drained or designed to resist hydrostatic pressures. The waterproofing membrane should be covered with a protection board or equivalent to prevent perforation during backfilling.

Except for the upper 2 feet, the backfill immediately behind retaining walls (minimum horizontal distance of 12 inches measured perpendicular to the wall) should consist of free-draining ¾-inch crushed rock wrapped with filter fabric. The upper 1½ feet of cover backfill should consist of relatively impervious onsite material. A 4-inch diameter perforated PVC pipe, placed perforations down at the bottom of the crushed rock layer, leading to a suitable gravity outlet, should be installed at the base of the walls. As an alternative to extending the crushed rock to within 1½ feet of the ground surface for the wall drain, geocomposite panel drains may be used. With wall drain panels, the 4-inch diameter perforated pipe located at the heel of the wall/footing should be surrounded with one cubic foot of ¾-inch crushed rock wrapped with filter fabric; the pipe invert should be supported on about 1½ inches of crushed rock. All drainage should be directed to the street in non-erosive devices.

In the event of a large earthquake, the lateral earth pressure on walls may be significant. When combining both static and seismic lateral earth pressures, a decreased factor of safety may be used in the design of retaining walls when checking for sliding and overturning stability. For cantilever walls, we have calculated the seismic increment of lateral pressure using the Mononobe-Okabe equation assuming the seismic coefficient to be 0.42 of the peak acceleration (PGA_M). We suggest using a dynamic earth pressure increment of 38 psf/ft for cantilever yielding walls with level backfill assuming the walls will not exceed 8 feet in height. The seismic pressure should be taken as a regular triangular distribution (not inverted). The point of application of the dynamic thrust may be taken at 0.37H above the toe of the wall, where H is the retained height. The Structural

Engineer should determine if a seismic increment of lateral earth pressure is applicable based on wall heights and allowable wall movements.

13.9. Utility Trench Backfill

Bedding material surrounding utility lines and extending to a point 12 inches above the lines should consist of either sand, fine-grained gravel, or sand-cement slurry to support and/or to protect the lines. A minimum of 4-inch thick bedding material should be placed below the bottom of the utility lines, on a firm and unyielding subgrade. The bedding material should meet the specifications provided in the latest edition of the "Standard Specifications for Public Works Construction" (Greenbook). Sand or gravel should be compacted in accordance with Greenbook specifications.

Above the bedding, up to finished subgrade in areas other than landscape and up to one foot below flatworks and pavements, utility trenches should be backfilled with onsite materials or imported granular materials and mechanically compacted to at least 90% of the maximum dry density of the soils.

For utility trenches within the building areas, the backfill should be compacted to the minimum required relative compaction indicated under the "Grading" section of this report. The backfill material should be observed, tested and approved by the Geotechnical Consultant. The trench bedding materials should be placed in accordance with Section 306-6 of the "Standard Specifications for Public Works Construction" (Greenbook).

When adjacent to any footings, utility trenches and pipes should be laid above an imaginary line measured at a gradient of 1½ (H:V) projected down from the bottom edges of any footings. Otherwise, the pipe should be designed to accept the lateral effect from the footing load, or the footing bottom should be deepened as needed to comply with this requirement. Backfill consisting of 2-sack sand cement slurry may also be used.

13.10. Drainage

Foundation, slab, flatwork, and pavement performance depend greatly on proper drainage within and along the boundary of the development. Perimeter grades around the buildings should be sloped in

a manner allowing water to drain away from the structures and not pond next to the foundations. Roof downdrains should be connected to underground pipes carrying water away from the structure areas or have extenders so water does not drain and pond next to the structures. Per the 2019 CBC, landscape areas within 10 feet of structures should slope away at gradients of at least 5 percent. Paved areas within 10 feet of structures should slope away at gradients of at least 2 percent. Proper drainage is recommended for all surfaces to reduce the risk of settlement due to hydroconsolidation and heave due to soil expansion.

We recommend minimizing the size and number of planters adjacent to the building and using drought resistant planting. Any planter located within 8 feet of the building should have a solid bottom and a drain outlet to the storm drain. To reduce the potential for overwatering, irrigation should be performed under the management of experienced landscape architects, and not under the control of a landscape contractor.

13.11. Asphalt Concrete (AC) Pavement

The required pavement structural sections depend on the expected wheel loads, volume of traffic, and subgrade soils. Based on soil classification and our experience with R-value correlations with fines contents and plasticity index, an R-value of 10 may be used for pavement design for the clayey subgrade soils. The R-value should be confirmed with additional tests, if necessary, at the time of construction. The following pavement sections are recommended based on assumed traffic indices of 4, 5, 5.5 and 6. We recommend a traffic index of at least 6 for driveways where trucks, including trash trucks and fire trucks will have access. The project Civil Engineer should determine the traffic index to be used for different areas of the site.

Table 3 – Alternative Pavement Sections for Vehicular Traffic

Traffic Index	Asphalt Thickness (Inches)	Base Course (CAB) Thickness (Inches)
4	3.0	6.5
5	3.0	9.5
5.5	3.5	10.5
6	4.0	11.0

Base course material should consist of Crushed Aggregate Base (CAB) as defined by Section 200-2.2 of the Standard Specifications for Public Works Construction ("Greenbook"). Base course and asphalt concrete should be compacted to at least 95 percent of the maximum dry density of that material. Crushed Miscellaneous Base (CMB) may be used only if the supplier can demonstrate that the aggregate does not contain contaminated material and provide documentation to that effect.

The subgrade underlying the pavement areas should be overexcavated 18 inches below the proposed base course layer. Prior to fill placement, the exposed surface should be scarified to a minimum depth of 8 inches, moisture conditioned within two percent of optimum moisture content for sand and to at least 115 percent of optimum moisture content for clay, and compacted to at least 90% of the maximum dry density obtained per ASTM D1557. The upper 12 inches of subgrade soils should be compacted to 95% relative compaction if sandy soils are present and to 90% for clayey soils. The subgrade should be in a "non-pumping" condition at the time of compaction.

Any onsite surficial organic soils within landscaped/turf areas should not be used as subgrade materials. Where feasible, the overexcavation should be laterally extended a minimum of 2 feet beyond the perimeters and edges of parking areas, roadways and curbs. Any abandoned footing and/or underground concrete structure within the work limit should be removed entirely and the excavation should be backfilled to grade.

In order to increase pavement performance and extend the pavement life, concrete curbs and gutters could be deepened to extend below the base course material and be seated in the compacted subgrade. Priority should be given to areas where heavier traffic is anticipated and where irrigation may be greater. The intent of deepening the curbs and gutters is to form a "cut-off" wall to reduce the amount of water flow through the base course material from adjacent landscaped areas. Subgrade soils, which become soaked as a result of water flowing through base course material, can reduce the life of the pavement and cause heaving of the pavement. Where feasible, the curbs should be deepened to an elevation at least 6 inches below the bottom level of the proposed base course section.

13.12. Portland Cement Concrete (PCC) Vehicular Pavement

The grading recommendations for vehicular PCC pavement are provided in Section 13.2.2 of this report. Base course material used in the pavement sections should consist of Crushed Aggregate Base (CAB) as defined by Section 200-2.2 of the Standard Specifications for Public Works Construction (Greenbook 2012). The aggregate base course should be compacted to at least 95% of the maximum dry density of that material. Crushed Miscellaneous Base (CMB), as defined by Section 200-2.4 of the Greenbook, may be used only if the supplier can demonstrate that the aggregate does not contain contaminated material.

The recommendations presented herein should be used for design and construction of the slabs and pertaining grading work underlying vehicular pavement areas. A minimum modulus of rupture of 550 psi for concrete has been assumed in designing of the PCC pavement sections; this corresponds to a concrete compressive strength of approximately 4,000 psi at 28 days. A qualified design professional should specify where heavy duty and standard duty slabs are used based on the anticipated type and frequency of traffic. The recommended PCC pavement sections are provided in the following table.

Table 4 - PCC Pavement Sections

Pavement Type	Portland Cement Concrete Thickness (inches)	Base Course (CAB) Thickness (inches)
Light Duty	6.0	6.0
Heavy Duty	7.5	6.0

These concrete pavement sections should be increased for bus traffic where applicable. The following recommendations should also be incorporated into the design and construction of PCC pavement sections:

- The pavement sections should be reinforced with No. 3 rebars spaced at 18 inches on centers each way to reduce the potential for shrinkage cracking.
- Joint spacing in feet should not exceed twice the slab thickness in inches, e.g., 12 feet for a 6-inch thick slab. Regardless of slab thickness, joint spacing should not exceed 15 feet.
- Layout joints should form square panels. When this is not practical, rectangular panels can be used if the long dimension is no more than 1.5 times the short one.

- Control joints should have a depth of at least 1/4 the slab thickness, e.g., 1 inch for a 4-inch thick slab.
- Where the pavement does not abut against a curb or gutter, an 8-inch thickened edge should be constructed.
- Pavement section design assumes that proper maintenance such as sealing, and repair of localized distress will be performed on a periodic basis.

Exterior concrete slabs for pedestrian traffic or landscape should be at least four inches thick. Weakened plane joints should be located at intervals of no more than about 6 feet unless slabs thicker than 4 inches are used. The pavement sections should be reinforced with No. 3 rebars spaced no further than 18 inches on centers each way to reduce the potential for shrinkage cracking. A thickened edge is recommended at the exterior edge of the flatwork adjacent to landscape subject to irrigation. The thickened edges should be a minimum of 12 inches deep and 8 inches wide and reinforced with two No. 3 bars at the top and bottom. In addition to the thickened edges, the walkway should be underlain by at least 12 inches of non-expansive soils and the upper 12 inches of the clay subgrade below the non-expansive soils should have a moisture content of at least 125 percent of optimum prior to placement of the non-expansive soils. The concrete strength for pedestrian walkways should be at least 2,500 psi unless determined otherwise by the Structural Engineer.

If pedestrian pavers are used, they should be supported on one inch of sand underlain by 4 inches of crushed aggregate base (CAB). For light vehicle traffic, the pavers should be underlain by one inch of sand and at least 10 inches of aggregate base (CAB). For heavy duty traffic area, we recommend increasing the aggregate base thickness to 16 inches. A separation/reinforcing fabric should be placed on the prepared subgrade prior to placement of the aggregate base.

13.13. Hardscape Play Courts

The overexcavation and subgrade preparation for the play courts such as tennis courts and basketball courts should be as indicated for the for the pavement sections (minimum 18 inches of overexcavation and moisture conditioning to 125% of optimum). If conventional concrete slabs are used, we recommend 5-inch thick slab reinforced with #4 bars at 16 inches on center unless indicated otherwise by the slab designer. The concrete strength should be at least 3500 psi and the

slabs should be underlain by at least 4 inches of aggregate base. Any portions of the slab adjacent to irrigated planter should have a reinforced thickened concrete edge extending 18 inches below the ground surface.

13.14. Grading of the Football Field

Any existing pavement, foundations, vegetation, abandoned underground utilities and other debris should be removed from the areas to be graded. All excavation should be backfilled with engineered fill. All topsoil should also be removed. Following removal of topsoil, we recommend overexcavating an additional 12 inches of material. Following geotechnical approval, the bottom of the removal excavations should be scarified to a depth of 10 inches, moisture conditioned within 2 percent of optimum for sand, above optimum for silt and to 125 percent of optimum for clay, and recompacted to at least 90% relative compaction as determined by ASTM D1557. All fill placed should be compacted to at least 90% relative compaction at moisture contents as indicated above.

Depending upon the time of the year the grading occurs and the irrigation of the lawn during the prior months, localized wet soils should be anticipated. These wet soils can induce "pumping conditions" and prevent compaction of the proposed backfill. It should be anticipated that the wet soils will require additional overexcavation and bridging with crushed rock, dryer soils, and with the use of geosynthetic. Landscape irrigation should be discontinued at least 4 weeks before grading to allow some drying at the surface.

It is recommended to slope the subgrade to at least one percent toward the internal drains. The thickness of the drain stone/rock above the subgrade can be adjusted as necessary to obtain the desired synthetic turf grade. The subgrade should be proof rolled using heavy rubber tire equipment or a loaded truck under the observation of the Geotechnical Engineer. Any unsuitable soft spots should be remediated as recommended by the Geotechnical Engineer.

Liner for Synthetic Turf Field

It should be noted that the upper soils within the football field area are relatively impervious and subject to develop "pumping" conditions once they become soaked, thus resulting in unstable subgrade. It is, therefore, recommended that an impervious liner overlain by a drainage system be installed for supporting the synthetic turf. Prior to installation of the membrane, it is recommended

to finish rolling the subgrade with a large smooth drum roller (at least 4 by 4 drums). The polyethylene/HDPE impervious liner should be highly flexible, resisting to abrasion, to puncture, and to the anticipated heat of the field. The grab tensile strength (ASTM D7004) and the puncture resistance (ASTM D4833) should be at least 300 pounds and 150 pounds, respectively, unless indicated otherwise by the field designer.

Drainage System

The drainage system is anticipated to consist of aggregate stone, flat drain collectors and perforated piping as designed by the landscape architect and/or the civil engineer. The drainage pipes are normally designed so that the main drain (s) are placed along the side of the field and lateral piping is installed at an angle across the slope of the field. The lateral drains are normally 15 to 20 feet apart. Drainage pipes should maintain a consistent slope to the outlet of at least 0.5 percent. Geotextile fabric is recommended as a barrier between unstable subsoil and the gravel drainage blanket. At least one inch of drain gravel is normally placed below round perforated piping, which should be installed with the perforation holes facing down.

All permeable stone should consist of clean, virgin crushed stone free of shale, soft limestone and sandstone, clay and organic material and any other deleterious material. For field perimeter drain, the drain gravel protected with filter fabric may consist of ¾-inch crushed rock conforming to the Greenbook Specifications or other aggregate as selected by the landscape architect/civil engineer. The crushed rock should be protected by a geotextile such as Mirafi 140N or approved equivalent and the fill cap above the geotextile should be at least 12 inches thick.

The stone mix must have enough fines to be stable but not so much as to reduce drainage excessively. Some construction system calls for a simple structural stone (free draining finishing stone) layer laid directly over the free draining crushed base stone. The sand equivalent of the base stone should be at least 75 and the percentage of wear at 500 revolutions (ASTM C131) should not exceed 40 unless approved otherwise by the designer. The crushed base stone should be at least 6 inches thick and should consist of modified Caltrans Class 2 permeable aggregate with the recommended following grading or approved equivalent by the Field Designer.

Sieve Size	Percent Passing
1”	100
¾”	90-100
½”	50-90
3/8	35-70
No. 4	25-40
No. 8	18-30
#30	6-15
#50	0-7
#100	0-4
#200	0-1

The base stone may fragment at every stage of the construction process and result in higher fine content than determined at the plant due to loading, unloading, spreading and compacting. The stone should be spread in such a way that it is immediately level with the field design gradient. It is important to avoid modifying the grade once the stone is laid out. Stockpile stones tend to separate by size during handling (the finer stones tend to move to the bottom). Preferably, stones should not be mix on site to avoid separation and the optimum moisture should be maintained to provide better cohesion and reduce segregation.

It is recommended to compact the stone base between 92 and 95 percent relative compaction as determined by ASTM D1557 unless determined otherwise by the Field Designer. Over compaction should be avoided since it will cause additional breakdown of the stone particles and may reduce the hydraulic conductivity/permeability. The contractor should establish circulation pattern in the field to avoid concentration of traffic that may result in over compaction/breakdown of the stone in localized areas. The Synthetic Turf Council’s suggests a minimum flow rate through the permeable base of 28 inches per hour. At the discretion of the Field Designer, the flow rate of the base stone should be measured in the field at the time of construction.

Running Track

Within the track area, we recommend overexcavating 18 inches of subgrade material below the pavement section. The overexcavation should extend at least 2 feet outside the track, where feasible. Prior to backfilling, the subgrade should be scarified to a depth of 8 inches, moisture conditioned and recompacted to 90 percent relative compaction. The upper 12 inches of subgrade should be

compacted to 92% relative compaction. The excavated material may be used as fill except for high plastic clay soils, if encountered.

The pavement section should consist of 4 inches of asphalt concrete underlain by 6 inches of Crushed Aggregate Base (CAB) as defined by Section 200-2.2 of the Standard Specifications for Public Works Construction ("Greenbook"). A material with shock absorbing properties may be placed over the asphalt concrete. Proper drainage adjacent to the track is essential to prevent soil movement due to water penetration below the ground surface. The curbs should extend 16 inches below the finish grade to serve as a barrier for water migration below the track unless indicated otherwise by the track designer.

14. SOIL EXPANSIVITY

The subsurface soils encountered at shallow depths within the building pad area ranges range from sandy lean clay to clayey sand. These types of material generally have a moderate susceptibility to expansion when facing seasonal cycles of saturation/desiccation. Expansion index testing on shallow samples of Borings B-1 and B-4 indicated values of 14 and 22, respectively, indicating low expansion potential, however, medium expansion potential soils may be present within the proposed improvement areas. As such, the recommendations provided in this report regarding drainage, moisture content during compaction, presoaking, the use of sand blankets and other pertinent recommendations for site improvements should be incorporated into the design and construction.

15. SOIL CORROSIVITY

The corrosion potential of the onsite materials to steel and buried concrete was preliminarily evaluated. Laboratory testing was performed on one soil sample to evaluate pH, minimum resistivity, chloride and soluble sulfate content. The test results are presented in the following table.

Table 5 - Corrosion Test Results

Boring	Depth (ft)	Minimum Resistivity (ohm-cm)	pH	Soluble Sulfate Content (ppm)	Soluble Chloride Content (ppm)
B-4	2 – 3	8060	6.8	60	15

These tests are only an indicator of soil corrosivity for the sample tested. Other soils found on site may be more, less, or of a similar corrosive nature. Imported fill materials should be tested to confirm that their corrosion potential is not significantly more severe than those noted. The concentrations of soluble sulfates indicate that the potential of sulfate attack on concrete in contact with the onsite soils is "negligible" based on ACI 318 Table 4.3.1. Cement Type II may be used in the concrete. Maximum water-cement ratios are not specified for the sulfate concentrations; however, the Structural Engineer should select a concrete with appropriate strength.

Further interpretation of the corrosivity test results, including the resistivity value, and providing corrosion design and construction recommendations are the purview of corrosion specialists/consultants.

16. OBSERVATION AND TESTING

This report has been prepared assuming that Koury Engineering & Testing, Inc. will perform all geotechnical-related field observations and testing. If the recommendations presented in this report are utilized, and observation of the geotechnical work is performed by others, the party performing the observations must review this report and assume responsibility for the recommendations contained herein. That party would then assume the title of "Geotechnical Consultant of Record". A representative of the Geotechnical Consultant should be present to observe all grading operations as well as all footing excavations.

17. CLOSURE

The findings and recommendations presented in this report were based on the results of our field and laboratory investigations, combined with professional engineering experience and judgment. The report was prepared in accordance with generally accepted engineering principles and practice. We make no other warranty, either expressed or implied. Subsurface variations between borings should be anticipated. Koury should be notified if subsurface conditions are encountered, which differ from those described in this report since updated recommendations may be required. Samples obtained during this investigation will be retained in our laboratory for a period of 45 days from the date of this report and will be disposed after this period.

Should you have any questions concerning this submittal, or the recommendations contained herewith, please do not hesitate to call our office.

Respectfully submitted,

KOURY ENGINEERING & TESTING, INC.

Earthquake Zones of Required Investigation
Inglewood Quadrangle

California Geological Survey

This Map Shows Both Alquist-Priolo Earthquake Fault Zones And Seismic Hazard Zones Issued For The Inglewood Quadrangle

This map shows the location of Alquist-Priolo (AP) Earthquake Fault Zones and Seismic Hazard Zones, collectively referred to here as Earthquake Zones of Required Investigation. The Geographic Information System (GIS) digital files of these regulatory zones released by the California Geological Survey (CGS) are the "Official Maps." GIS files are available at the CGS website http://maps.conservation.ca.gov/cgs/informationwarehouse/. These zones will assist cities and counties in fulfilling their responsibilities for protecting the public from the effects of surface fault rupture and earthquake-induced ground failure as required by the AP Earthquake Fault Zoning Act (Public Resources Code Sections 2621-2630) and the Seismic Hazards Mapping Act (Public Resources Code Sections 2690-2699.6). For information regarding the general approach and recommended methods for preparing these zones, see CGS Special Publication 42, *Earthquake Fault Zones, a Guide for Government Agencies, Property Owners/Developers, and Geoscience Practitioners for Assessing Fault Rupture Hazards in California*, Appendix C, and CGS Special Publication 118, *Recommended Criteria for Delineating Seismic Hazard Zones in California*.

For information regarding the scope and recommended methods to be used in conducting required site investigations refer to CGS Special Publication 42, and CGS Special Publication 117A, *Guidelines for Evaluating and Mitigating Seismic Hazards in California*. For a general description of the AP and Seismic Hazards Mapping acts, the zonation programs, and related information, please refer to the website at www.conservation.ca.gov/cgs/.

MAP EXPLANATION

EARTHQUAKE FAULT ZONES

Earthquake Fault Zones
Zone boundaries are delineated by straight-line segments; the boundaries define the zone encompassing active faults that constitute a potential hazard to structures from surface faulting or fault creep such that avoidance as described in Public Resources Code Section 2621.5(a) would be required.

Active Fault Traces
Faults considered to have been active during Holocene time and to have potential for surface rupture. Solid Line in Black or Red where Accurately Located; Long Dash in Black or Solid Line in Purple where Approximately Located; Short Dash in Black or Solid Line in Orange where Inferred; Dotted Line in Black or Solid Line in Rose where Concealed; Query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

SEISMIC HAZARD ZONES

Liquefaction Zones
Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Earthquake-Induced Landslide Zones
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

OVERLAPPING EARTHQUAKE FAULT AND SEISMIC HAZARD ZONES

Overlap of Earthquake Fault Zone and Liquefaction Zone
Areas that are covered by both Earthquake Fault Zone and Liquefaction Zone.

Overlap of Earthquake Fault Zone and Earthquake-Induced Landslide Zone
Areas that are covered by both Earthquake Fault Zone and Earthquake-Induced Landslide Zone.

Note: Mitigation methods differ for each zone –
AP Act only allows avoidance; Seismic Hazard Mapping Act allows mitigation by engineering/geotechnical design as well as avoidance.

ADDITIONAL INFORMATION

For additional information on the zones of required investigation presented on this map, the data and methodology used to prepare them, and additional references consulted, please refer to the following:

Geologic Time Scale			Years Before Present (Approx.)	Fault Symbol	Recency of Movement	DESCRIPTION	
						ON LAND	OFFSHORE
Quaternary	Late Quaternary	Historic	200			Displacement during historic time (e.g. San Andreas fault 1906). Includes areas of known fault creep.	
		Holocene	11,700			Displacement during Holocene time.	Fault offsets seafloor sediments or strata of Holocene age.
	Pleistocene		700,000			Faults showing evidence of displacement during late Quaternary time.	Fault cuts strata of Late Pleistocene age.
	Early Quaternary		1,600,000			Undivided Quaternary faults - most faults in this category show evidence of displacement during the last 1,600,000 years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age.	Fault cuts strata of Quaternary age.
Pre-Quaternary			4.5 billion (Age of Earth)			Faults without recognized Quaternary displacement or showing evidence of no displacement during Quaternary time. Not necessarily inactive.	Fault cuts strata of Pliocene or older age.

* Quaternary now recognized as extending to 2.6 Ma (Walker and Geissman, 2009). Quaternary faults in this map were established using the previous 1.6 Ma criterion.

FEMA

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) Zone A, V, A99
- With BFE or Depth Zone AE, AO, AH, VE, AR
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Ar
- of 1% annual chance flood with avera
- depth less than one foot or with drain
- areas of less than one square mile Zor
- Future Conditions 1% Annual Chance Flood Hazard Zone X
- Area with Reduced Flood Risk due to Levee. See Notes. Zone X
- Area with Flood Risk due to Levee Zone

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard Zone X
- Effective LOMRs
- Area of Undetermined Flood Hazard Z

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chanc
- Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approxim point selected by the user and does not repre an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/21/2019 at 12:21:48 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

KOURY
PASSION INTEGRITY QUALITY

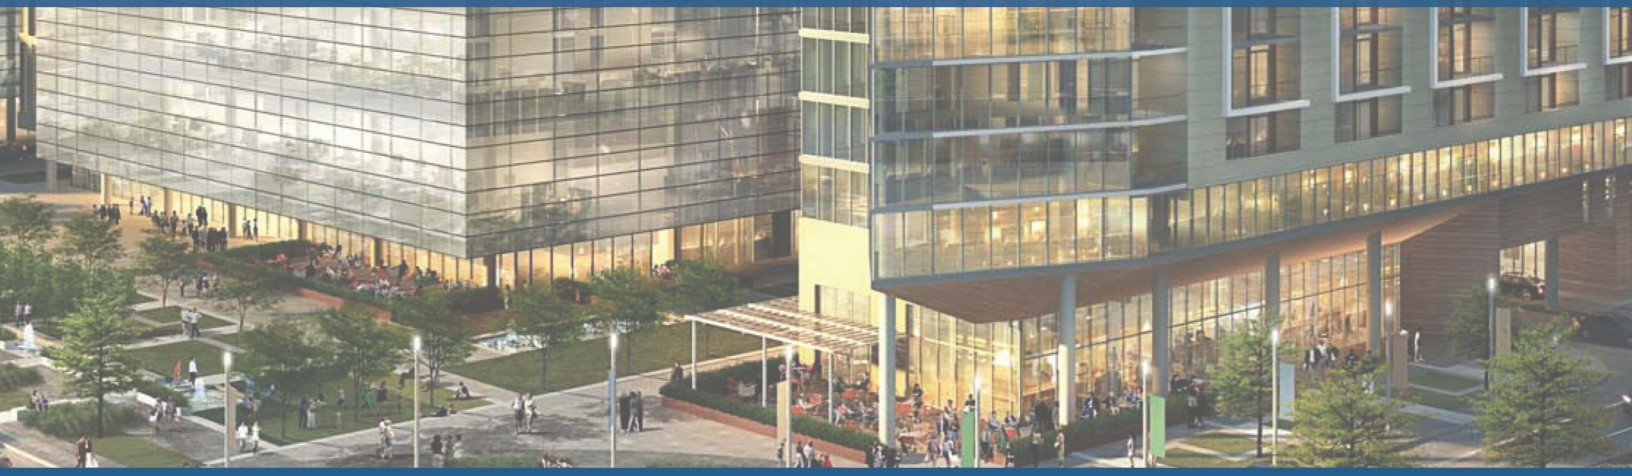
THE KOURY DIFFERENCE

We are a key member of the construction team while safeguarding the public. We improve operational logistics and provide superior quality control through the continuing development of our engineering staff and technical expertise, utilization of classroom training and field supervisors, thus defining the industry standard.



We increase market share and become the largest through superior management practices and planning.

Attn: Fatima Clark

re: Paleontological resources for the Morningside High School Site Upgrade Project (D202100446.01)

Dear Fatima:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Morningside High School Site Upgrade project area as outlined on the portion of the Los Angeles USGS topographic quadrangle map that you sent to me via e-mail on July 16, 2021. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM VP 1225	354 W 99th St., Los Angeles	Unknown formation (Pleistocene)	Mammoth (*Mammuthus*)	15-20 ft bgs
LACM VP 3266	W Athens Blvd & Menlo Ave	Unnamed formation (Pleistocene, calcareous siltstone)	Uncatalogued vertebrates	15-18 ft bgs
LACM VP 7332	Westchester, NW of intersection of West Century Blvd & Bellanca Ave	Unknown formation (Pleistocene; silty sand)	Mammoth (*Mammuthus*)	40 ft bgs
LACM VP 3789	8734 Bellanca Avenue, Westchester	Unknown (Pleistocene; pebbly gray-green to brown mud that directly overlies a gray-green fine sand)	Mammoth (*Mammuthus*)	14 ft bgs
LACM VP 4942	SE corner of Airport Blvd. & Manchester Ave, Westchester	Unknown formation (Pleistocene, massive sandy mudstone with	Mammoth (*Mammuthus*); bison (*Bison*); hare (*Lepus*)	16 ft bgs

		scattered pieces of gravel)		
LACM VP 3264	Los Angeles International Airport	Unknown formation (sands)	Elephant relative (Proboscidea)	25 ft bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

Architectural Coating Area Calculations

CalEEMod assumes the total surface for architectural coating equals:		
Residential Coating Area	2.7	times the floor square footage
	75%	interior
	25%	exterior
Nonresidential Coating Area	2	times the square footage
	75%	interior
	25%	exterior
Parking Lot Coating Area	6%	of the square footage
	0%	exterior for surface lot

Sources and Assumptions:

CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Road Dust

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)
k =	particle size multiplier
sL =	road surface silt loading (g/m^2)
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (\ s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ =	Unpaved Road Dust Emission Factor (having the same units as k)
k =	particle size multiplier
s =	surface material silt content (%)
Sp =	mean vehicle speed (mph)
M =	surface material moisture content (%)
C =	Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

Operational Energy Analysis

Estimated Electricity demand from Electric Vehicle Supply Equipment (EVSE)

Land Use Type	Number of EVSE Charging Spaces	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
Total	**25**	**4.4**	**365**	40,150	40.15

Electricity Emission Factor (MT CO2/MWh)	Electricity Emission Factor (lbs CO2/MWh)	Total EV Charging GHG Emissions Per Year
0.18	390.98	7.17

(MT CH4/MWh)	(lbs CH4/MWh)
1.32E-05	0.029

(MT N2O/MWh)	(lbs N2O/MWh)
2.80E-06	0.00617

Notes:

a. Estimated based on reference sources listed below.

b. Project would install 25 EV Charging Spaces

c. Project would install pre-wiring for EV charging spaces for 20 percent of its parking capacity for future use (so 10% in addition to the immediate use).

Terms of Use

This investigation and subsequent report have been performed and prepared for the exclusive of:

Inglewood Unified School District

by Ellis Environmental Management, Inc. Ellis will distribute any information regarding this assessment and report only upon the request of the client. This report is based upon data and information obtained during the site visits performed by Ellis personnel for the property identified herein and is based solely upon the condition of the property on the date of such inspection, supplemented by information and data obtained by Ellis and described herein. Information presented is based on professional interpretation of data available as of the date of report. Physical materials testing (radon, lead, asbestos) was not performed as part of this investigation. In evaluating the property, Ellis has relied in good faith upon representations and information furnished by individuals and agencies noted in the report with respect to operations and existing property conditions, and the historic uses of the property to the extent that they have not been contradicted by data obtained from other sources. Use of this report indicates acceptance and agreement that Ellis will incur no responsibility or liability for any loss, injury, claim or damage arising directly or indirectly from any use or reliance on this report, regardless of whether claimed loss, injury, claim or damage was caused by the deficiency, misstatements, omissions, misinterpretations, or fraudulent acts of persons interviewed. Ellis has performed this work, made findings, and proposed recommendations described in this report in accordance with generally accepted environmental science practices in effect at the time the work was performed and within the time frames requested by client. Additional information received following issuance of the report may alter initial findings and recommendations. This warranty stands in lieu of all other warranties, expressed or implied. While this report can be used as a guide, it must be understood that it is neither a rejection nor an endorsement of the property, or of the means or methods used in the treatment, storage or disposal of potentially hazardous materials. Changing circumstances in the environment and in the use of the property can alter the conclusions and information contained in the report.

A. ***Executive Summary***

From December 26, 2018 to January 30, 2019, Ellis conducted a survey for hazardous materials at the subject site, an historical high school in Inglewood, CA. Inspection efforts included a visual assessment and physical bulk sampling. Buildings included in these efforts are listed below:

1. Auditorium
2. Building A
3. Building B
4. Building C
5. Building C1
6. Building D
7. Building E
8. Building F
9. Building G
10. Building H
11. Building I
12. Building J
13. Building K
14. Building L
15. Building N
16. Building O1
17. Building O2
18. Building R
19. Building S
20. Building T
21. Building T1
22. Building V
23. Building W
24. Building W5
25. Building X and Y
26. Parent Student Building
27. Police and Transportation HQ

Structures were inspected for the following potential hazardous materials:

- Asbestos
- Lead
- PCBs
- Mercury.

Inspection efforts were requested prior to renovation efforts which will include the demolition of a portion of structures in the NE section of the property. A results section for each building is attached. A brief summary is below:

Asbestos.
Results indicate asbestos in underlying 9-inch tile in Buildings B, C, D, E, G, I, L, R, S, T and W. Asbestos was found in roofing mastics in Buildings C, D, E, I, J, K, O1, R, V and Building X/Y. Other notable results include asbestos containing thermal system insulation (TSI) in Buildings N and O1, transite pipe (AC pipe) in Buildings O1 and S, and asbestos containing window putty and ceiling wallboard in Building J. See Table 1 in each building summary for a complete list of asbestos results.

Lead.
XRF readings found lead in either interior walls and/or windows in buildings D, E, H, I, J, K, L, R, S, T, V and Building X/Y. Restroom wall tile contains lead in buildings A, D, N and O1. Lead based paint was found on exterior walkway posts and/or gutter drains in Buildings A, C and F. See XRF sheets in each building summary for a complete list of tested surfaces.

PCBs and Mercury. A visual inspection found mercury in thermostats in buildings H, I, L, V and W. No visual evidence of mercury in light switches was found. Inspected light fixtures contain ballasts labeled "No PCBs" Window putty samples were negative for PCBs. See the attached building summaries for details on each building.

Prior Sampling Efforts. In February 2016 Ellis sampled the roofs of Buildings B, H, G and the Auditorium. See Ellis Report 16-042 for those results.

Personnel working in any building should be aware that disturbance of walls and ceilings might expose (and could damage) hidden asbestos pipe insulation, original asbestos ceilings, lead paints or other hazardous materials. When exposed, such materials should be isolated from further access until they can be sampled and analyzed.

B. Regulatory Summary

NESHAPS
The National Emission Standard for Hazardous Air Pollutants (NESHAP), regulation 40 CFR Part 61, states that no visible emissions are allowed during building demolition or renovation activities which involve regulated asbestos-containing materials (RACMs). All buildings, regardless of construction date, must be surveyed for ACMs prior to demolition or renovation. The US EPA and/or the local air quality management district which implements US EPA actions must be notified prior to any building demolition, even if no ACMs are present. An ACM is defined as any material with an asbestos content of greater than one percent and which (a) is friable, or (b) Category I non-friable ACM that has or will become friable, or (c) Category II friable ACM that may become or will become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation.

According to NESHAP, ACM is material containing more than one percent asbestos as determined using the methods specified in Appendix A, Subpart E, 40 CFR Part 763, Section 1, PLM. The NESHAP classifies ACM as friable or non-friable. Friable ACM is ACM that

contains more than one percent asbestos and when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

Non-friable ACM also contains more than one percent asbestos and is further classified as either Category I ACM or Category II ACM. The materials are distinguished by their potential to release fibers when damaged. Category I ACMs are much more likely to release fibers when damaged.

In accordance with the US EPA's NESHAP regulation, facilities planned for renovation or demolition must be surveyed for the total amount of asbestos materials, which must be categorized as friable, Category 1 non-friable, and Category 2 non-friable ACMs.

Southern California Air Quality Management District (SCAQMD)

The SCAQMD is a government agency that regulates sources of air pollution within the area of the Los Angeles and surrounding counties. The District's regulating and enforcement authority comes from federal law. In response to the NESHAP requirements, the SCAQMD implemented Rule 1403 to specify work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials (ACM). The requirements for demolition and renovation activities include asbestos surveying, notification, ACM removal procedures and time schedules, ACM handling and clean-up procedures, and storage, disposal, and landfilling requirements for asbestos-containing waste materials (ACWM). All operators are required to maintain records, including waste shipment records, and are required to use appropriate warning labels, signs, and markings.

AHERA

The Asbestos Hazard Emergency Response Act (AHERA) requires performance of asbestos surveys and the development of Asbestos Management Plans for all of the nation's primary and secondary schools. The general procedures mandated under AHERA are considered the industry standard and are applied to all surveys performed.

Cal-OSHA

Per Cal-OSHA standards, 1926.1101, Asbestos-Containing Construction Materials (ACCMs) are defined as any material with an asbestos content greater than one-tenth of one percent (>0.1%). Cal-OSHA sets forth work requirements for disturbance of ACCMs including removal operations for all types of ACCMs. The requirements have been classified as Class I, Class II, Class III, or Class IV Asbestos related work. The classes are distinguished by their potential to release fibers. Cal-OSHA prescribes specific engineering controls and work practices for each Class of Asbestos related Work.

1. Class I – This Class refers to removal of ACMs identified as Thermal System Insulation (TSI) or surfacing (sprayed-on or troweled-on) materials. These materials are generally considered friable.
2. Class II – This Class refers to removal of ACMs identified that are not TSI or surfacing materials. These materials are generally considered non-friable.

3. Class III – This Class refers to repair and maintenance operations of all identified ACMs.
4. Class IV – This Class refers to incidental contact with identified ACMs such as custodial staff.

California Health and Safety Code

The California Health and Safety Code 25915 (former Connelly Bill) requires all building owners in the State of California to provide written notification to employees, tenants, and contractors of the presence and location of ACCMs within their buildings. Some exclusion to the notification rule for restricted access areas is allowed. All documentation related to asbestos surveys (and air monitoring) must be made available to employees, tenants, or contractors for review. ACCMs are defined as any materials with an asbestos content greater than one-tenth of one percent (>0.1%). The California Health and Safety Code also require that a seller with any knowledge of ACMs on a property disclose such information or knowledge to other parties involved in a real estate transaction.

Building Demolition / Renovation

In accordance with the US EPA's NESHAPs regulation and the SCAQMD, all structures planned for renovation or demolition must be surveyed for ACMs prior to the planned renovation or demolition. Subsequent removal of identified ACMs is also required. Removal involves, to the greatest extent practical, the complete removal, disposal, and replacement, if necessary, of the ACMs. Removal usually also requires encapsulation of the remaining structure to lock down residual fibers which may exist. Removal of ACMs is required prior to renovation and/or demolition activities. The US EPA and SCAQMD require removal of all RACMs prior to demolition or renovation. RACMs include friable and non-friable (Category I and II) which have or will become friable by demolition or renovation activities.

California Title 8. Industrial Relations, Division 1, Department of Industrial Relations, Chapter 4, Division of Industrial Safety, Subchapter 4, Construction Safety Orders, Article 4, Dusts, Fumes, Mists, Vapors, and Gases, §1532.1, Lead.

This section applies to all construction work where an employee may be occupationally exposed to lead. All construction work excluded from coverage in the general industry standard for lead by section 5198(a)(2) is covered by this standard. Construction work is defined as work for construction, alteration and/or repair, including painting and decorating. It includes but is not limited to the following:

(1) Demolition or salvage of structures where lead or materials containing lead are present;
(2) Removal or encapsulation of materials containing lead;
(3) New construction, alteration, repair, or renovation of structures, substrates, or portions thereof, that contain lead, or materials containing lead;
(4) Installation of products containing lead;
(5) Lead contamination/emergency cleanup;
(6) Transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed, and

(7) Maintenance operations associated with the construction activities described in this subsection.

California Health & Safety Code 17961 et al.
Deems a building to be in violation of state law if it contains lead hazards and requires local enforcement agencies to enforce provisions related to lead hazards. Makes it a crime for a person to engage in specified acts related to lead hazard evaluation, abatement, and lead-related construction courses unless certified or accredited by the Department. Permits local enforcement agencies to order the abatement of lead hazards or issue a cease and desist order in response to lead hazards.

California Labor Code 6716 to 6717 Lead-Related Activities in Construction Work
Provides for the establishment of standards that protect the health and safety of employees who engage in lead-related construction work, including construction, demolition, renovation and repair.

California Code of Regulations, Title 17, Section 35001
Includes requirements for lead hazard evaluation and abatement activities, accreditation of training providers, and certification of individuals engaged in lead-based paint activities.

C. Methodology

All inspection services were performed by Ellis employees and EPA-accredited building inspectors Sarah Covert, Certified Asbestos Consultant (CAC # 18-6220) and CDPH Lead Inspector/Assessor (I/A # 30042), Shawn Sokolsky, Certified Site Surveillance Technician (CSST 18-6177) and CDPH Lead Sampling Technician (T30767) and Sonny Baramy Certified Site Surveillance Technician (CSST 18-6178) and CDPH Lead Sampling Technician (T29900). All efforts were performed under the direction of Duane E. Behrens, an EPA-registered, Cal-OSHA certified building inspector and Certified Asbestos Consultant (CAC) employed by Ellis.

Ellis Environmental Management, Inc. is an independent environmental consulting firm located in Rancho Palos Verdes, CA.

During inspections, the inspector performed the following tasks:

1. A visual determination of whether suspect materials were present.
2. A physical assessment to determine the condition of remaining suspect materials.
3. Sampling and analysis of suspect materials in the buildings listed above.

Collected bulk samples were analyzed for asbestos at NVLAP and CA ELAP accredited laboratories, using the polarized light microscopy (PLM) methods described in 40 CFR 763, Subpart F, Appendix A (AHERA). Results are provided in percent asbestos by measured area and are included as an attachment to this report.

An XRF lead paint analyzer was first used to identify those surfaces with significant lead

content. It is often unnecessary to collect physical samples of surfaces in which lead was identified by XRF, thus potentially reducing field time and laboratory costs.

Painted surfaces were analyzed for the presence of lead-based paint using a pre-calibrated, handheld XRF gun. Sampling and analysis was performed according to the guidelines for a "Lead-Based Paint Inspection" as found in the HUD document, "Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing," July 2012.

A survey for PCBs and mercury included the visual inspection of light ballasts, evidence of leaking ballasts on light fixtures, and physical sampling of window putty (where present). Inspection for mercury included a visual assessment of thermostats and light switches.

D. ***Inaccessible Areas***

For all buildings, not all walls, ceilings or floors could be demolished to gain complete physical and visual access. The attached tabs are a useful beginning point to identify materials most likely to be impacted by planned renovation, and to prepare preliminary budgetary estimates. However, when renovation or demolition is being considered, a re-assessment of impacted areas should be performed.

Example: During the original survey of a 4-story residence hall in 2007, Ellis was allowed access into 3 residence rooms per floor, for a total of 12 rooms inspected. Residual asbestos mastic was identified under carpet in at least one room on each floor. Pursuant to AHERA guidelines, asbestos mastic is assumed under carpet in all rooms on all floors. When flooring replacement is scheduled, the inspecting agency should be provided with adequate notice and access to lift carpet in all impacted rooms. The inspector can then remove from the scope those rooms in which no mastic was identified, thus reducing project costs and time.

The above illustrates why listed quantities in the attached report should not be used for bidding purposes. But there are additional reasons that the attached material summary sheets should not be used as the sole tool in procuring abatement bids:

1. If the original inspecting agency is not present to confirm that identified materials are still present, there is potential for abatement contractors to submit bids for removal of materials that have in fact been removed since the last inspection.

2. Or (and far worse), if the original inspecting agency is not present to physically identify each suspect material that will be impacted, bidding contractors may miss, then omit, certain materials from their bids. When that error is discovered during the construction project, delays, additional expense and regulatory inspections/citations may result.

E. ***Results & Recommendations***

Asbestos. Results indicate asbestos in underlying 9-inch tile in Buildings B, C, D, E, G, I, L, R, S, T and W. Asbestos was found in roofing mastics in Buildings C, D, E, I, J, K, O1, R, V and Building X/Y. Other notable results include asbestos containing thermal system insulation (TSI)

in Buildings N and O1, transite pipe (AC pipe) in Buildings O1 and S, and asbestos containing window putty and ceiling wallboard in Building J. See Table 1 in each building summary for a complete list of asbestos results.

During Ellis' periodic inspections most identified asbestos materials exhibited little or no damage. Removal of an asbestos material that is in good condition is not required or recommended unless it will be impacted by renovation/demolition activities. Until they must be removed prior to renovation/demolition, all listed asbestos materials may be effectively managed under an asbestos operations and maintenance program, designed to repair any damage and otherwise inspect and maintain ACMs in their original condition.

Disturbance of asbestos-containing materials (ACMs) is regulated under federal (29CFR 1926.1101), state (Title 8 1529) and local (SCAQMD Rule 1403) agencies. Prior to demolition or renovation of areas where asbestos is present, a licensed abatement contractor must be retained to abate the ACMs identified in this report.

Lead. XRF readings found lead in either interior walls and/or windows in buildings D, E, H, I, J, K, L, R, S, T, V and Building X/Y. Restroom wall tile contains lead in buildings A, D, N and O1. Lead based paint was found on exterior walkway posts and/or gutter drains in Buildings A, C and F. See XRF sheets in each building summary for a complete list of tested surfaces.

Disturbance of lead-based paints and ceramic tile – particularly those efforts involving manual demolition, mechanical abrasion, torching or cutting – should be performed by a licensed abatement contractor.

PCBs and Mercury. A visual inspection found mercury in thermostats in buildings H, I, L, V and W. No visual evidence of mercury in light switches was found. Inspected light fixtures contain ballasts labeled "No PCBs" Window putty samples were negative for PCBs. See the attached building summaries for details on each building.

Initiate demolition of thermostats, light switches and light fixtures carefully. Separate, drum, profile, transport and dispose of electronic components separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

This report is not an endorsement or rejection of the means or methods used in the handling of potentially hazardous materials. Ellis Environmental Management, Inc., provides Phase I environmental site assessments (ESAs), monitoring for indoor contaminants (IAQ studies), testing for and administration of the removal of potentially hazardous building materials. Licensed to practice in the state of California, employees conducting asbestos surveys are certified by Cal-OSHA pursuant to regulations required by subdivision (b) of Section 9021.5 of the Labor Code and have taken and passed an EPA-approved Building Inspector course.

Floors:	2
Use:	ticket booth, lecture hall, theater
Const. Type:	concrete with plaster walls on wire
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building A), should be tested prior to further disturbance.

Non-Asbestos Materials

- 12-inch floor tile & mastic
- Ceiling tile
- cove base and mastic
- window putty
- wall tiles
- carpet glue
- wall and ceiling plaster
- ceiling wallboard

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- AHU insulation jacket
- roofing field and mastics

Lead in Paint
XRF readings of interior walls, doors and door frames, interior columns and handrails, exterior walls, exterior handrails, benches and support poles tested "negative" (<0.7 mg/cm^2).

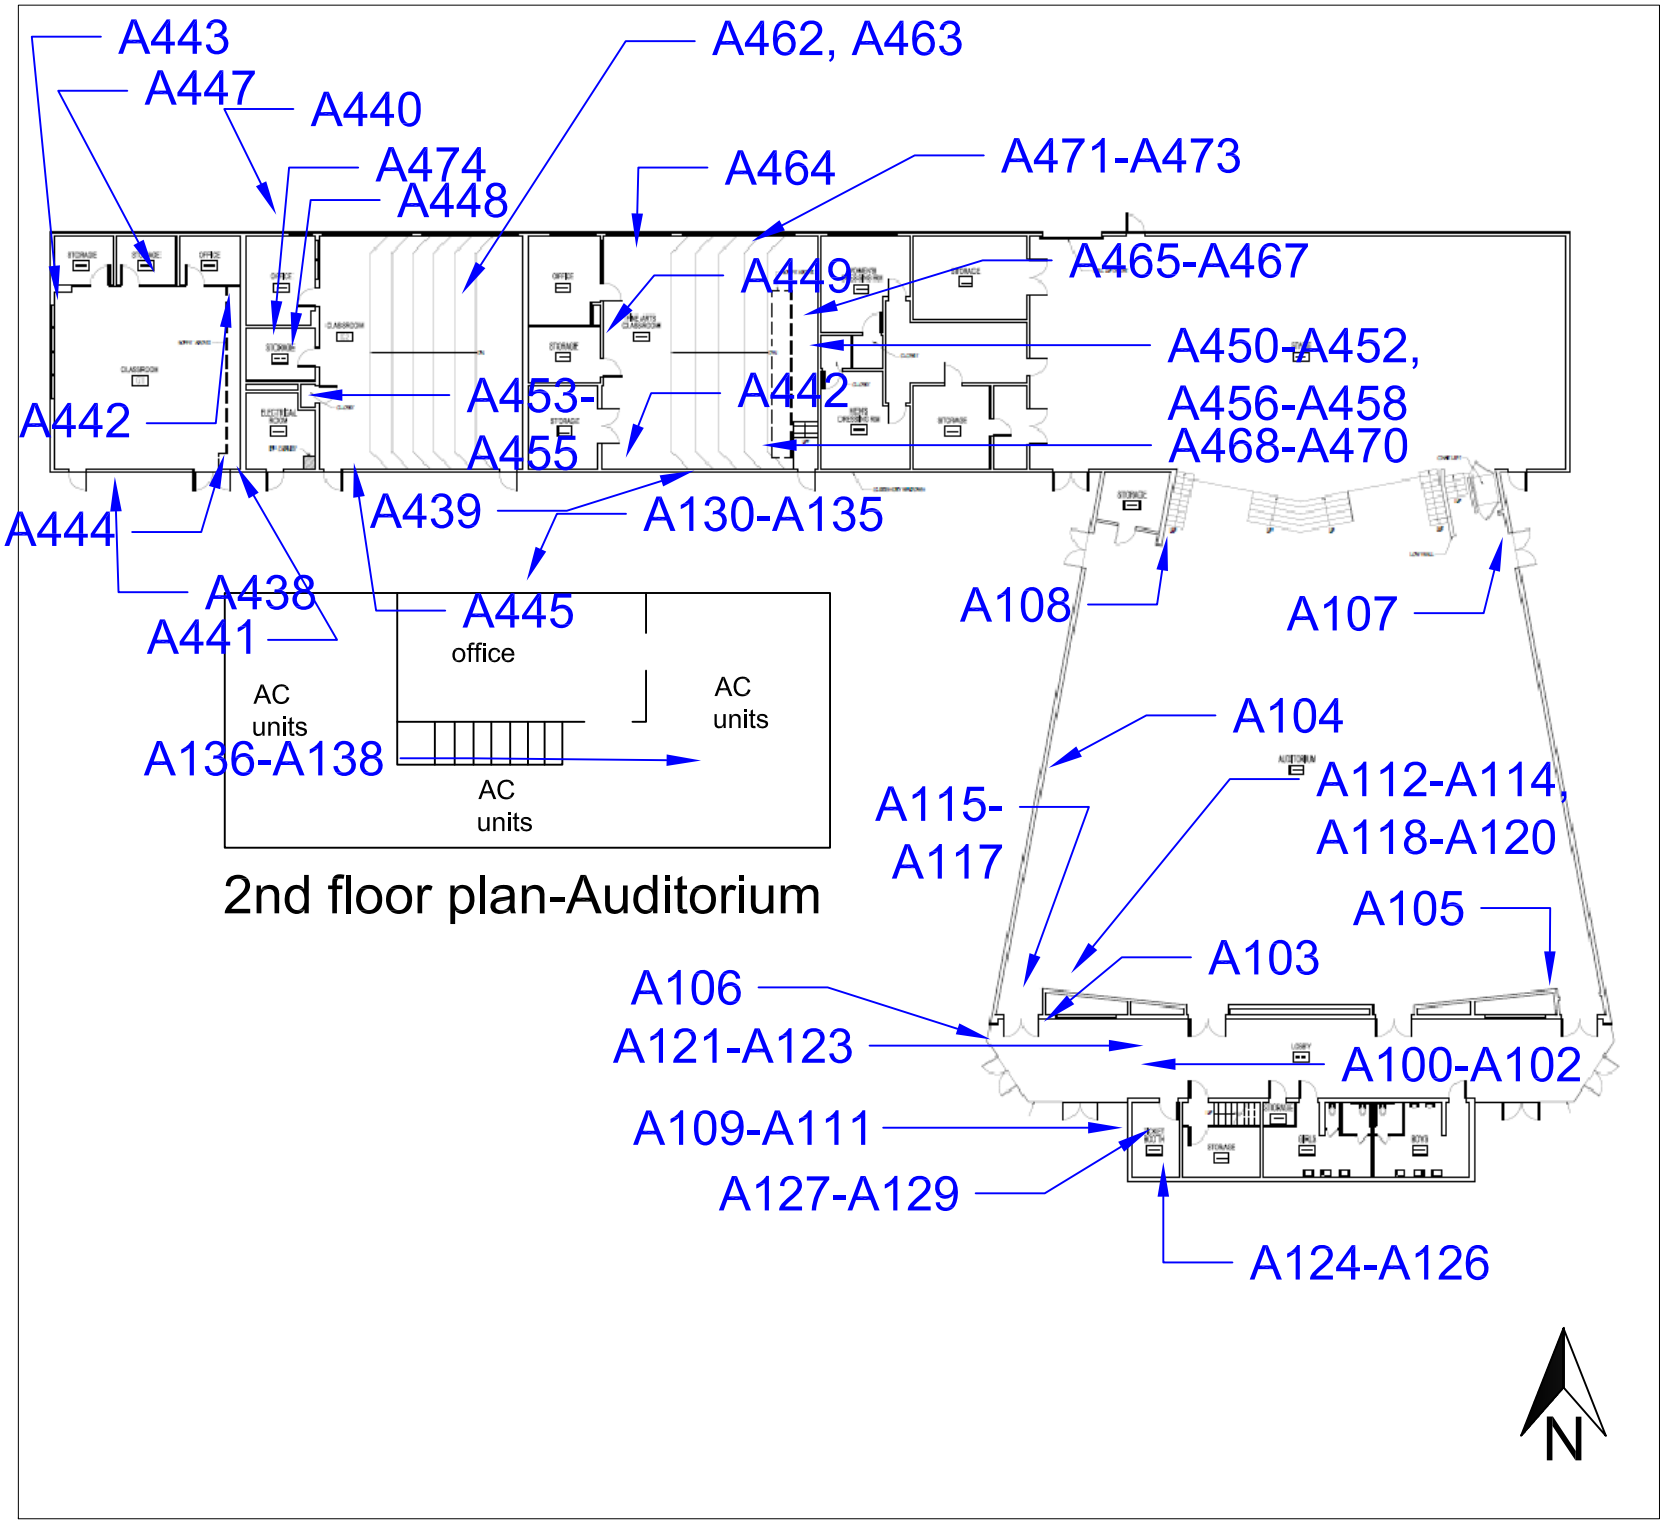
Lead in Ceramic Tile
XRF readings identified lead in beige 4-inch wall tile in the restrooms. Restroom green 1-inch floor tile was negative for lead.

PCB's
Light fixtures in the lobby contained ballasts which read "No PCB's". Fixtures in the auditorium were similar in size and design to non-PCB lights elsewhere on campus. No visual evidence of leaking PCB ballasts was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury
Thermostats in the auditorium were noted to be mechanical contact thermostats with no mercury.

Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.



Mechanical contact thermostat.

Auditorium wall tiles – no asbestos detected.

Building A

Total Area:	4,800 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Main office
Const. Type:	concrete with interior wallboard and exterior stucco
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building A), should be tested prior to further disturbance.

Non-Asbestos Materials

- wallboard and joint compound
- 2x4 lay-in ceiling tiles
- 4-inch cove base
- red 12-inch floor tile & mastic
- carpet glue
- exterior stucco
- roofing field and mastics

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior walls, doors, door frames and exterior walls and exterior roll-up windows tested "negative" (<0.7 mg/cm2). Red paint on exterior walkway columns is lead-based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

Lead in Ceramic Tile

XRF readings identified lead in yellow, ceramic cove base tile in the Principal's restroom. Restroom yellow 2-inch floor tile tested negative for lead.

PCBs

Window caulking samples were found to be negative for PCBs. Light fixtures throughout Building A contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building A were inaccessible (concealed behind a trophy case). Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building A corridor. Floor tile and cove base samples were negative for asbestos.

Restroom ceramic cove base contains lead. Yellow ceramic floor tile was found to be negative for lead.

Building A light fixtures contained ballasts labeled “NO PCBs”

1. Materials with less than 0.1% asbestos are not regulated by the SCAQMD; an abatement contractor is not required for removal of this material. Certain OSHA requirements (e.g. negative exposure assessment) may still apply. See Cal. Title 8 Section 1529.

Building B

Total Area:	7,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	concrete with interior wooden panels and exterior stucco
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 7,000 s.f. Location: throughout all classrooms under carpet. Good condition. Non-friable.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building B), should be tested prior to further disturbance.

Non-Asbestos Materials

- Gray 12-inch floor tile and mastic
- 12-inch ceiling tiles
- black 4-inch cove base and mastic
- window putty
- carpet glue
- exterior stucco

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

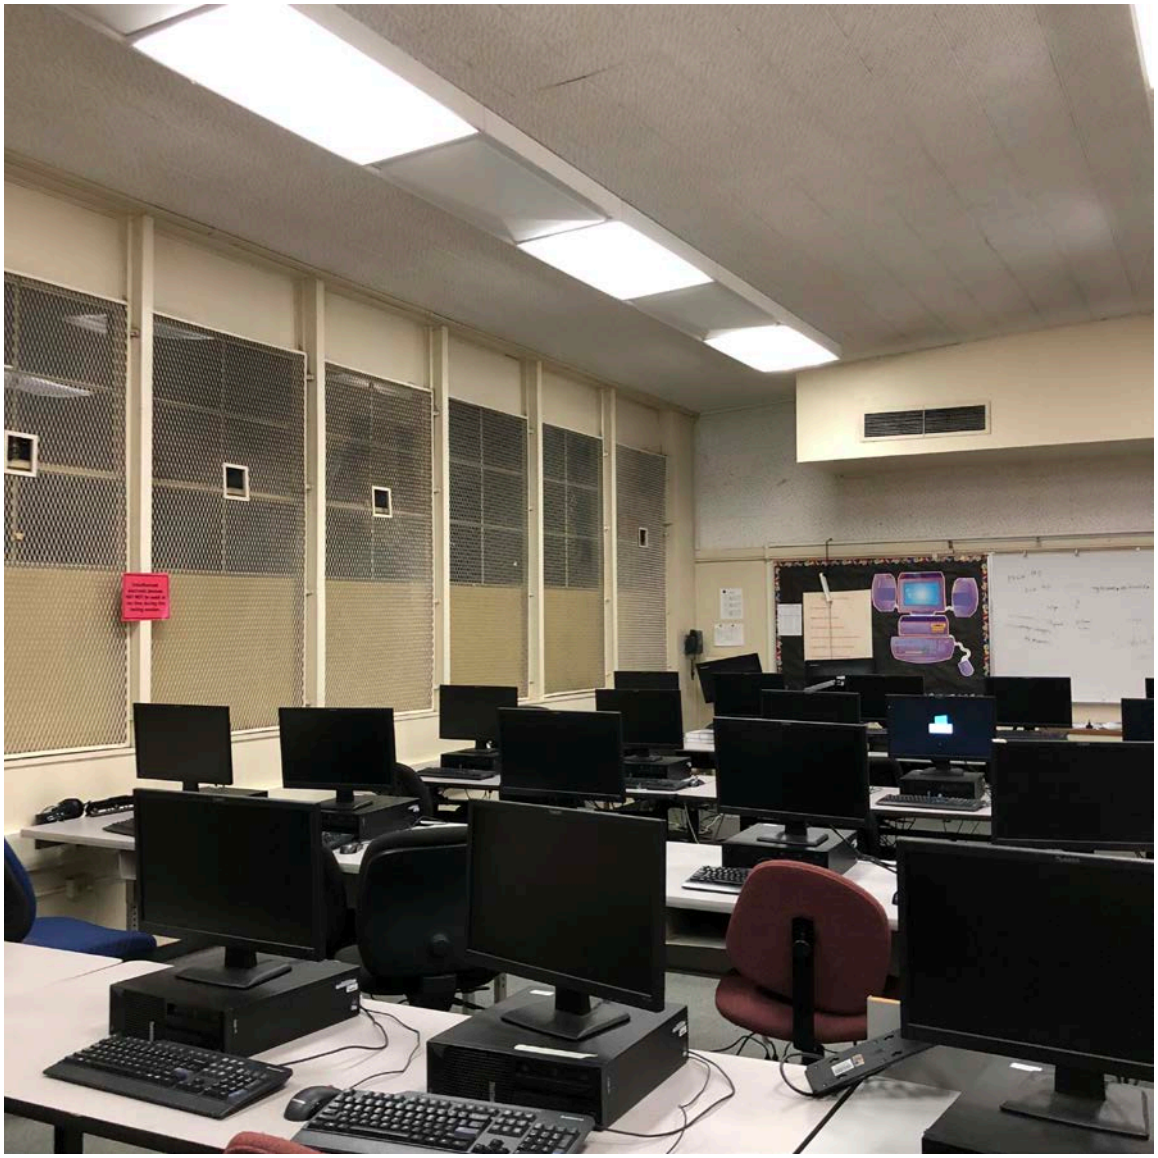
Lead in Paint

XRF readings of interior walls, doors, door frames, windows and window frames, screen doors and exterior walls tested negative (<0.7 mg/cm^2).

PCB's

Window caulking samples from Building B were found to be negative for PCBs. Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.



Mercury

No thermostats were visible at the time of inspection. Light switches did not appear to contain mercury.

Initiate demolition of thermostats carefully. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Gray 9-inch floor tile and mastic. 6,000 s.f. Good condition. Non-friable. Location: throughout classrooms under carpet.

- Carpet glue. 6,000 s.f. Good condition. Non-friable. Locations: throughout classrooms under carpet.

- Patch mastic. 50 s.f. Good condition. Non-friable. Location: roof, installation patches.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building C), should be tested prior to further disturbance.

Non-Asbestos Materials

- interior stucco (restrooms)

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- wall plaster
- roofing field (all layers)

Lead in Paint

XRF readings of interior doors and door frames, exterior walls and exterior I-beam posts tested negative (<0.7 mg/cm^2). Red paint on exterior gutter drain pipes is lead-based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCB's

Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

No thermostats were visible at the time of inspection.

Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building C1

Total Area:	5,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Portable building with wooden wall panels
Roof:	Corrugated roofing sheets

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building C1), should be tested prior to further disturbance.

Non-Asbestos Materials

- 2x4 ceiling tiles
- black 4-inch cove base
- red 12-inch floor tile and mastic
- white 12-inch floor tile and mastic
- gray 12-inch floor tile and mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior walls, doors, door frames, screen doors, exterior walls, exterior hand rails were negative (<0.7 mg/cm^2).

PCB's

Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats were noted to be mechanical contact thermostats with no mercury. Light switches did not appear to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building D

Total Area:	5,600 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Concrete building with plaster walls and exterior stucco
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 5,600 s.f. Good condition. Non-friable. Location: under carpet in all classrooms.

- Roofing patch mastic. 100 s.f. Good condition. Non-friable. Location: roofing installation patch work.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building D), should be tested prior to further disturbance.

Non-Asbestos Materials

- wall and ceiling plaster
- 1x1' ceiling tiles
- black 4-inch cove base and mastic
- white 12-inch floor tile

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- gray 12-inch floor tile
- exterior stucco
- roofing field (all layers)
- roofing HVAC pedestal mastic
- roofing penetration mastic

Lead in Paint

XRF readings of interior doors, door frames, windows and window frames, exterior walls, exterior window frames, exterior gutter drain pipes, were negative (<0.7 mg/cm^2).

Interior white wall paint in the teacher's lounge, classrooms and restrooms is lead-based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

Lead in Ceramic Tile

XRF readings in the men's and women's restrooms found lead in beige 4-inch ceramic wall tile. Readings ranged from 12.8 mg/cm^2 to 13.4 mg/cm^2. Green 1-inch ceramic floor tile was negative for lead in both restrooms.

PCB's

Lab results for window putty samples were negative for PCBs. Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in the auditorium were notes to be a mechanical contact thermostat with no mercury. Light switches did not appear to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building E

Total Area:	5,700 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Library
Const. Type:	Concrete building with interior painted concrete blocks and exterior stucco
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 5,600 s.f. Good condition. Non-friable. Location: under carpet.

- Roofing patch mastic. 100 s.f. Good condition. Non-friable. Location: roofing installation patch work.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building E), should be tested prior to further disturbance.

Non-Asbestos Materials

- wall and ceiling plaster
- 1x1' ceiling tiles
- black 4-inch cove base and mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- white 12-inch floor tile
- gray 12-inch floor tile
- exterior stucco
- roofing field (all layers)
- roofing HVAC pedestal mastic

Lead in Paint

XRF readings of library walls, doors, door frames, windows and window frames, exterior walls, exterior window frames, exterior gutter drain pipes, were negative (<0.7 mg/cm^2).

Library book storage room white wall paint is lead-based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCB's

Lab results for window putty samples were negative for PCBs. Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building E were noted to be mechanical contact thermostats with no mercury. Light switches did not appear to contain mercury.

Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building F

Total Area:	4,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Lecture hall, auditorium
Const. Type:	Concrete building with interior wallboard
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building F), should be tested prior to further disturbance.

Non-Asbestos Materials

- wallboard and joint compound
- ceiling wallboard
- gray 12-inch floor tile
- 1x1' ceiling tiles
- carpet glue
- black 4-inch cove base
- roofing field (all layers)
- roofing patch mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

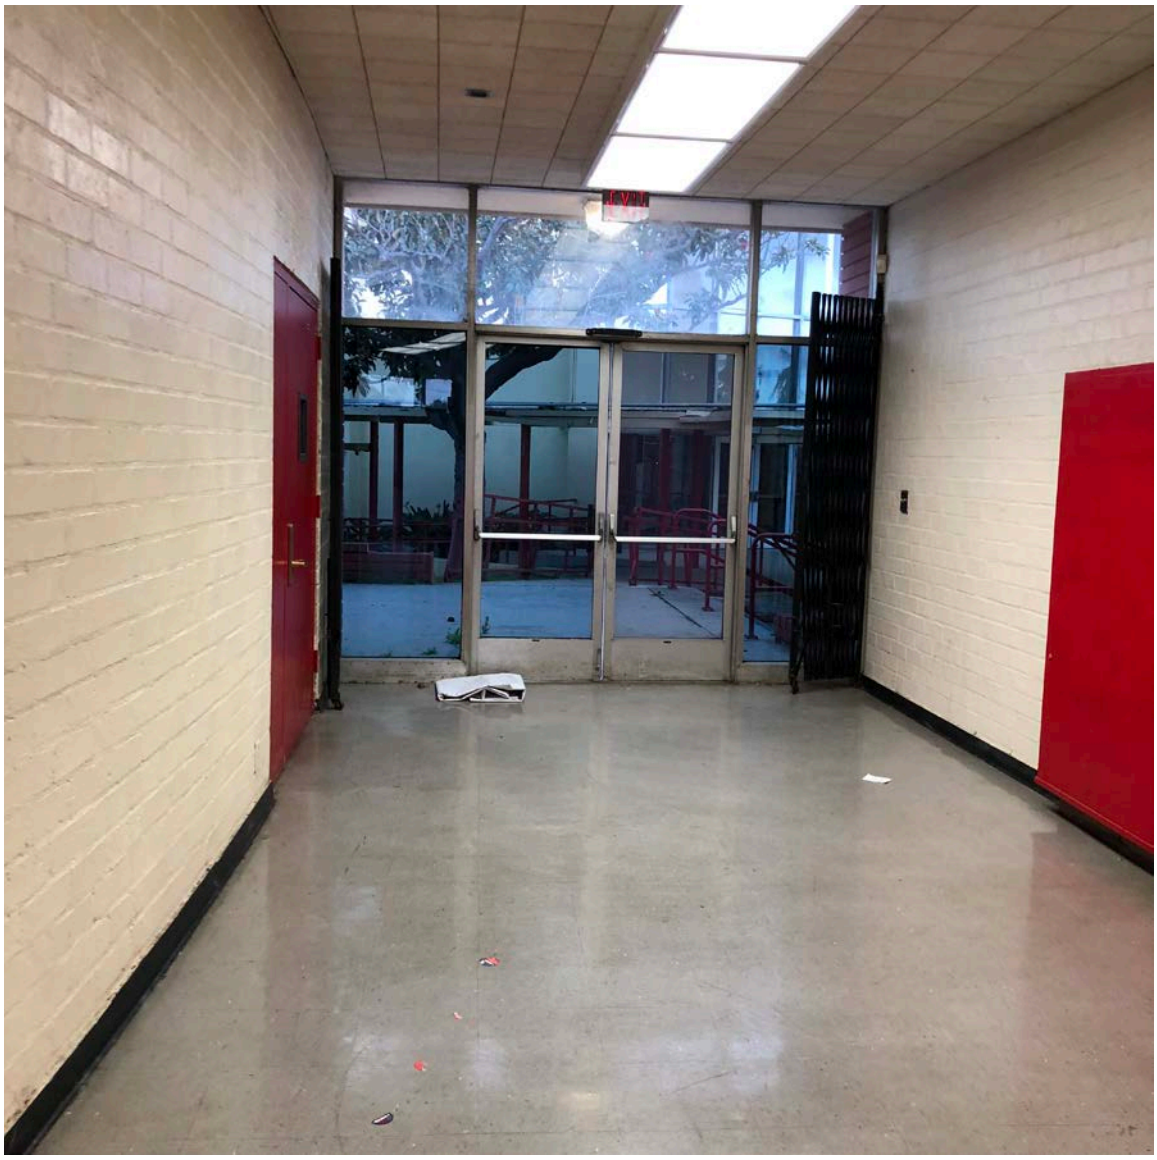
- roofing penetration mastic

Lead in Paint

XRF readings of interior walls, doors and door frames, interior handrails, exterior walls and exterior handrails were negative (<0.7 mg/cm^2). Red paint on exterior brick potters, poles and gutter drain pipes is lead-based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCB's

Lab results for window putty samples were negative for PCBs. Light fixtures in the lobby contained ballasts labeled "No PCBs". Light fixtures throughout the lecture hall were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.



Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building F were noted to be mechanical contact thermostats with no mercury. Light switches appeared to contain no mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mechanical contact thermostat.

Building G

Total Area:	7,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Concrete building with interior painted brick walls.
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 2,500 s.f. Good condition. Non-friable. Location: under 12-inch floor tile throughout classrooms and offices.

- Green 9-inch floor tile. 2,500 s.f. Good condition. Non-friable. Location: under 12-inch floor tile throughout classrooms and offices.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building G), should be tested prior to further disturbance.

Non-Asbestos Materials

- window putty
- gray 12-inch floor tile
- light gray 12-inch floor tile
- black 12-inch floor tile

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- red 12-inch floor tile
- black 4-inch cove base
- beige cove base and mastic
- wall plaster
- 1x1' ceiling tiles and hockey puck mastic

Lead in Paint

XRF readings of interior walls, doors and door frames, windows and window frames, interior handrails, exterior walls, exterior square columns, exterior gutter drain pipes and exterior handrails and elephant doors were negative (<0.7 mg/cm^2).

PCB's

Lab results for window putty samples were negative for PCBs. Light fixtures in Building G were similar in size and design as light fixtures elsewhere on campus which contained ballasts labeled "No PCBs". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building G were noted to be mechanical contact thermostats that do not contain mercury. Light switches did not appear to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building H

Total Area:	13,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Transportation/school bus mechanics center and classrooms
Const. Type:	concrete with interior painted brick
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building H), should be tested prior to further disturbance.

Non-Asbestos Materials
- 1'x1' ceiling tile
- ceiling wallboard
- wallboard and joint compound
- 2'x4' ceiling tile
- brown 4-inch cove base and mastic
- window putty
- terrazzo flooring

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior walls, doors, door frames, exterior walls, elephant doors, exterior walkway posts, exterior bench and 4-foot wall tested "negative" (<0.7 mg/cm2). White window paint in H3 and yellow exterior door frame paint (east facing wall, outside H3) is lead-based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCBs

Window caulking samples were found to be negative for PCBs. Light fixtures throughout Building H were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building H were noted to contain mercury contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

White window and window frame paint is lead based.

Wooden exterior door frame is coated with yellow lead-based paint.

Mercury containing thermostat in classroom H3.

Building I

Total Area:	5,600 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	concrete with interior painted brick
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Brown underlying floor tile. 5,600 s.f. Good condition. Non-friable. Location: throughout under newer 12-inch floor tile.

- Roofing penetration mastic. 100 s.f. Good condition. Non-friable. Location: roof penetrations.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building I), should be tested prior to further disturbance.

Non-Asbestos Materials

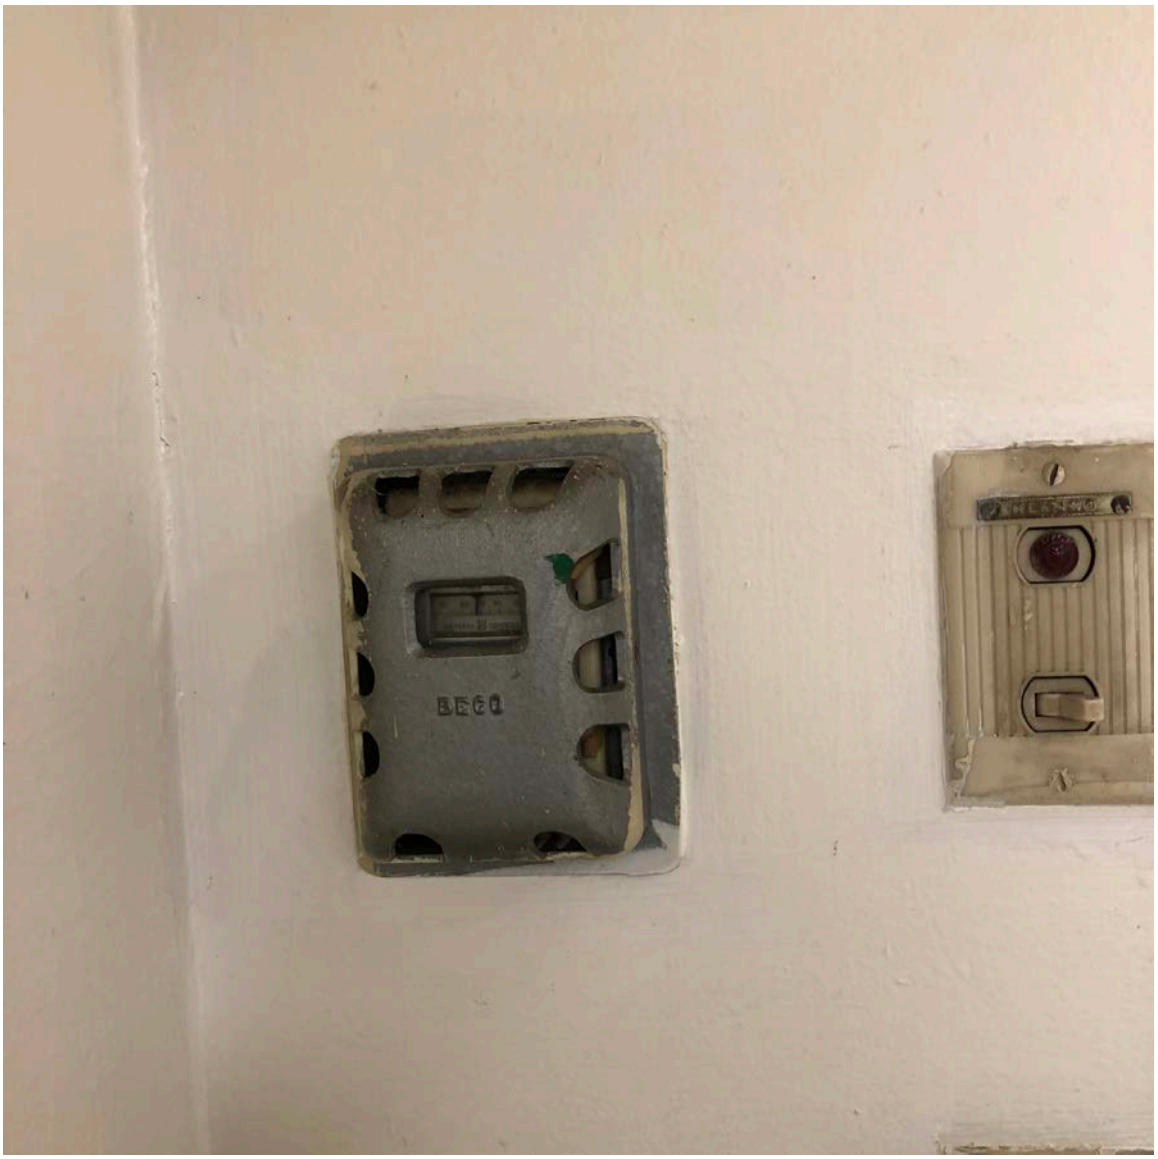
- Top layer of floor tile (12-inch beige and brown, white and red)
- 4-inch cove base
- 6-inch cove base

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- window putty
- roofing field (all layers)
- roofing patch mastic
- roofing HVAC pedestal mastic

Lead in Paint

XRF readings of interior walls, doors and door frames tested "negative" (<0.7 mg/cm2). White paint on windows and window frames is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.



PCBs

Building J

Total Area:	3,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Concrete with interior painted brick
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Ceiling wallboard/joint compound. 3,000 s.f. Good condition. Non-friable. Location: throughout.

- Roofing penetration mastic. 100 s.f. Good condition. Non-friable. Location: roof penetrations.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building J), should be tested prior to further disturbance.

Non-Asbestos Materials

- cove base
- carpet glue
- beige and red 12-inch floor tile

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- window putty
- roofing field (all layers)
- roofing penetration mastic
- roofing HVAC pedestal mastic

Lead in Paint

XRF readings of doors and door frames tested "negative" (<0.7 mg/cm2). White paint on windows and brick walls is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCBs

Light fixtures throughout Building J were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

No thermostats were visible during Ellis' inspection. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building K

Total Area:	6,500 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Concrete with interior painted brick
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Roofing HVAC pedestal mastic. 100 s.f. Good condition. Non-friable. Location: roofing HVAC pedestals.

- Roofing penetration mastic. 100 s.f. Good condition. Non-friable. Location: roof penetrations.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building K), should be tested prior to further disturbance.

Non-Asbestos Materials

- cove base
- carpet glue
- beige and red 12-inch floor tile

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- window putty
- roofing field (all layers)
- roofing penetration mastic
- roofing HVAC pedestal mastic

Lead in Paint

XRF readings of doors and door frames tested "negative" (<0.7 mg/cm2). White paint on windows and brick walls is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCBs

Light fixtures throughout Building K were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

No thermostats were visible during Ellis' inspection. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building L

Total Area:	10,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Concrete with interior wallboard and exterior stucco
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 10,000 s.f. Good condition. Non-friable. Location: throughout classrooms and offices underneath 12-inch tile and carpet.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building L), should be tested prior to further disturbance.

Non-Asbestos Materials

- exterior stucco
- plaster (restrooms)
- ceiling stucco (restrooms)
- window putty
- carpet glue
- wallboard

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- 2’x4’ ceiling tiles
- roofing field (all layers)
- roofing penetration mastic
- roofing HVAC pedestal mastic

Lead in Paint

XRF readings of exterior walls, doors and door frames tested “negative” (<0.7 mg/cm2). White paint on walls is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to “spot abate” paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

Lead in Ceramic Tile

Beige 4-inch ceramic wall tile in the restrooms contain lead. Brown 1-inch ceramic floor tile were negative.

PCBs

Light fixtures throughout Building L were similar in size and design as light fixtures throughout the campus which contained ballasts labeled “No PCB’s”. No visible evidence of PCB’s was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building L were noted to contain mercury contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building N

Total Area:	24,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Gymnasium
Const. Type:	Concrete with brick and interior plaster walls
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials

- Thermal system insulation (TSI). 700 l.f. Friable. Damaged in boiler room. Good condition in gymnasium and weight room. Assumed present in wall spaces and sub ceiling spaces.

Non-Friable Asbestos Materials

- Window putty. 500 l.f. Good condition. Non-friable. Location: windows.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building N), should be tested prior to further disturbance.

Non-Asbestos Materials

- red, black and white 12-inch floor tile
- 1'x1' ceiling tiles
- wall plaster
- ceiling plaster
- 2'x4' ceiling tiles
- roofing filed (all layers)
- roofing penetration mastic
- roofing pedestal mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior walls, doors and door frames, exterior walls, doors and door frames, restroom stalls and exterior walls tested "negative" (<0.7 mg/cm2).

Lead in Ceramic Tile

Beige 4-inch ceramic wall tile in the restrooms contain lead. Green 1-inch ceramic floor tile were negative.

PCBs

Light fixtures throughout Building N were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building N were noted to contain mechanical contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Beige 4-inch wall tile in the restrooms contains lead. Green 1-inch floor tile was negative.

Building O1

Total Area:	5,600 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Locker room/showers
Const. Type:	Brick building and interior plaster walls
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials

- Thermal system insulation (TSI). 150 l.f. Good condition. Friable. Assumed present in wall spaces and sub ceiling spaces.

Non-Friable Asbestos Materials

- Transite pipe (AC pipe). 50 l.f. Good condition. Non-friable. Location: roof. Assumed present in underground lines.

- Roof HVAC pedestal mastic. 100 s.f. Good condition. Non-friable. Location: roofing HVAC pedestals.

- Roof penetration mastic. 100 s.f. Good condition. Non-friable. Location: roofing penetrations.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building O1), should be tested prior to further disturbance.

Non-Asbestos Materials

- red, black and white 12-inch floor tile
- 1'x1' ceiling tiles
- wall plaster
- ceiling plaster

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- 2’x4’ ceiling tiles
- roofing filed (all layers)
- roofing penetration mastic
- roofing pedestal mastic

Lead in Paint

XRF readings of interior walls, doors and door frames, exterior walls, doors and door frames, restroom stalls and exterior walls tested “negative” (<0.7 mg/cm2).

Lead in Ceramic Tile

Beige 4-inch ceramic wall tile in the restrooms contain lead. Green 1-inch ceramic floor tile were negative.

PCBs

Light fixtures throughout Building O1 were similar in size and design as light fixtures throughout the campus which contained ballasts labeled “No PCB’s”. No visible evidence of PCB’s was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building O1 were noted to contain mechanical contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building O2), should be tested prior to further disturbance.

Non-Asbestos Materials

- wall plaster
- wallboard and joint compound
- terrazzo flooring
- ceiling wallboard
- gray 12-inch floor tile
- roofing field (all layers)
- roofing HVAC pedestal mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- roofing penetration mastic

Lead in Paint

XRF readings of interior walls, doors and door frames, cove base, benches, handrails, exterior walls and bollards tested “negative” (<0.7 mg/cm2).

PCBs

Light fixtures throughout Building O2 were similar in size and design as light fixtures throughout the campus which contained ballasts labeled “No PCB’s”. No visible evidence of PCB’s was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats in Building O2 were noted to contain mechanical contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building R

Total Area:	12,500 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Cafeteria, student lounge
Const. Type:	Brick building with interior plaster and wallboard
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 12,000 s.f. Good condition. Non-friable. Location: student lounge under carpet, kitchen under red tile.
- Roofing mastic. 700 s.f. Good condition. Non-friable. Location: upper roof, north and south lower roofs.
- Roofing field (all layers). 12,500 s.f. Good condition. Non-friable. Locations: upper roof, north and south lower roofs.
-

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building R), should be tested prior to further disturbance.

Non-Asbestos Materials

- wall plaster
- 1'x1' ceiling tiles

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- black, white, brown, gray, green and blue 4-inch cove base and mastics
- gray 12-inch floor tile
- blue 12-inch floor tile
- red 12-inch floor tile
- white/gray 12-inch floor tile
- window putty
- carpet glue
- wallboard and joint compound

Lead in Paint

XRF readings of interior walls, wall panels, doors and door frames, exterior walls, covered walkway posts, gutter drain pipes tested negative (<0.7 mg/cm^2). White window paint is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

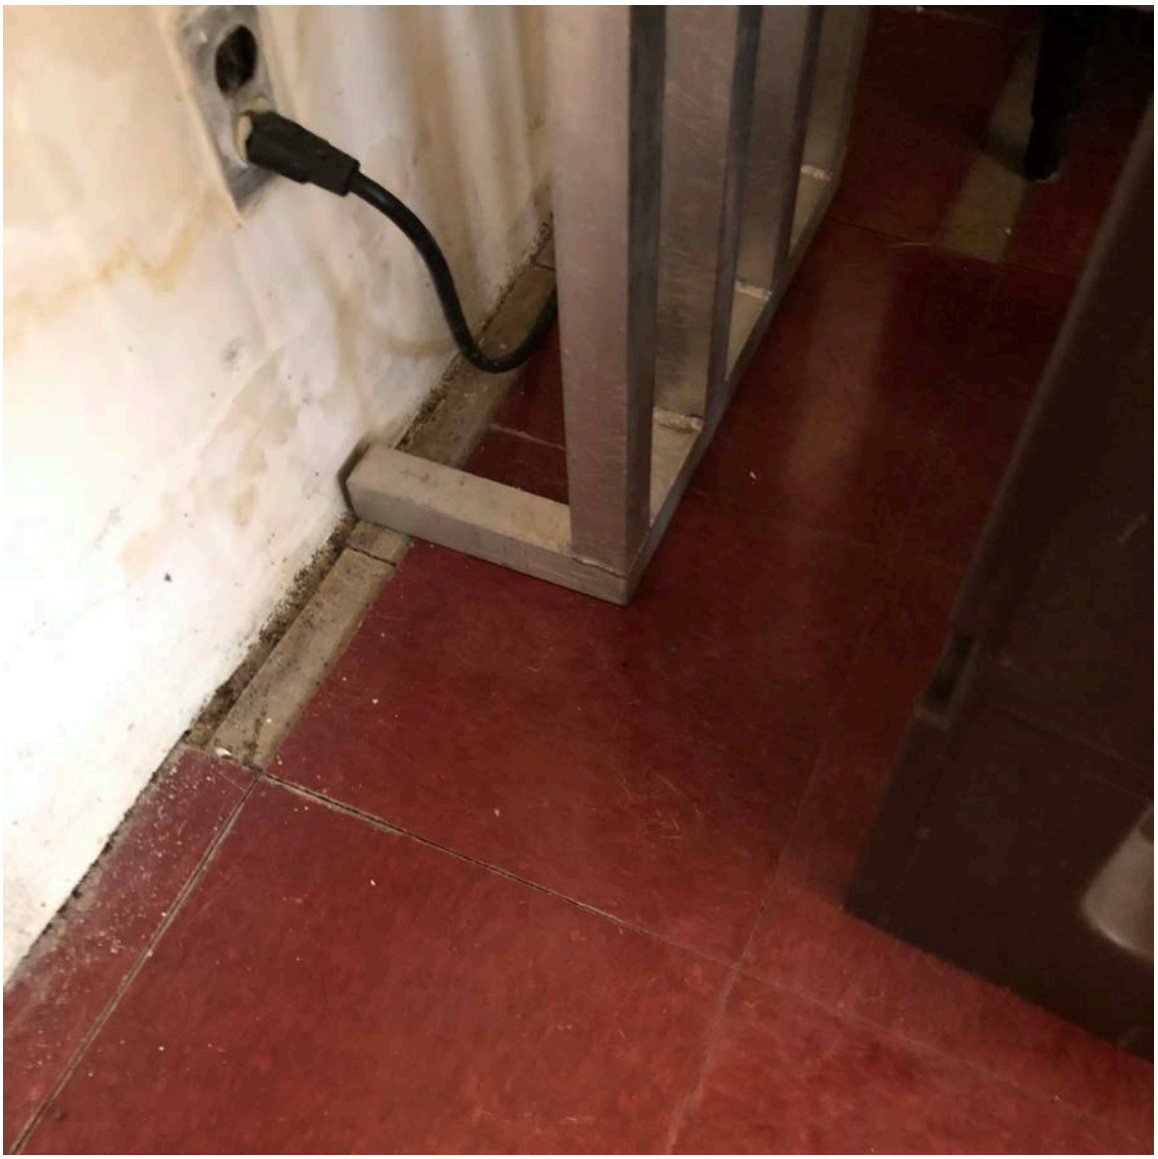
PCB's

Window caulking samples from Building R (cafeteria and student lounge samples) were found to be negative for PCBs. Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats were noted to contain mechanical contact switches. Light switches did not appear to contain mercury.



Initiate demolition of thermostats carefully. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

White window paint in Building R is lead-based.

Beige 9-inch floor tile in the student lounge.

Beige 9-inch floor tile visible under red 12-inch floor tile in the kitchen.

Building S

Total Area:	12,000 s.f.
Const. Date:	Pre-1970
Floors:	2
Use:	Classrooms
Const. Type:	Brick building
Roof:	Protected membrane – flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Beige 9-inch floor tile. 80 s.f. Good condition. Non-friable. Location: janitor's closet.
- Transite pipe (AC pipe). 50 l.f. Good condition. Non-friable. Location: roof. Assumed present in underground lines.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building S), should be tested prior to further disturbance.

Non-Asbestos Materials

- red, white and gray 12-inch floor tile
- beige terrazzo flooring
- 1'x1' wall tile
- hockey puck mastic
- acoustic ceiling
- ceiling wallboard
- black cove base

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- window putty

Lead in Paint

XRF readings of interior painted brick walls, doors and door frames, windows and window frames, dark room shelving, exterior walls, elevator door, vents and benches tested negative (<0.7 mg/cm^2). Door frames in the photography lab's Lightroom are lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCB's

Light fixtures throughout were similar in size and design to other light ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats were noted to contain mechanical contact switches. Light switches did not appear to contain mercury.

Initiate demolition of thermostats carefully. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building T), should be tested prior to further disturbance.

Non-Asbestos Materials

- cove base
- carpet glue
- beige and red 12-inch floor tile
- window putty
- roofing field (all layers)
- roofing patch mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- roofing penetration mastic
- roofing HVAC pedestal mastic

Lead in Paint

XRF readings of doors and door frames, exterior walls and exterior brick planter tested "negative" (<0.7 mg/cm2). Windows, window frames and interior walls, exterior covered walkway posts and gutter drains are coated with lead-based paint. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCBs

Window caulking samples were negative for PCBs. Light fixtures throughout Building T were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats were noted to have mechanical contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building T1

Total Area:	7,200 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Manufactured building with exterior wooden panels and interior wallboard
Roof:	Corrugated metal roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
None identified.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building T1), should be tested prior to further disturbance.

Non-Asbestos Materials

- cove base
- carpet glue
- 2'x4' ceiling tile
- wallboard
- red and orange 12-inch floor
- leveling compound

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior walls, doors and door frames, exterior walls and exterior gutter drain pipes tested “negative” (<0.7 mg/cm2).

PCBs

Building T1 does not have windows. Light fixtures throughout Building T1 were similar in size and design as light fixtures throughout the campus which contained ballasts labeled “No PCB’s”. No visible evidence of PCB’s was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats were noted to have mechanical contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building V

Total Area:	6,500 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Wooden exterior with interior wallboard
Roof:	Protected membrane flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials
Roofing mastics. 650 s.f. Good condition. Non-friable. Location: roofing penetrations, patch work and HVAC pedestals.

Assumed Asbestos Materials[1]

The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building V), should be tested prior to further disturbance.

Non-Asbestos Materials

- roofing field (all layers)
- beige 12-inch floor tile
- 1'x1' ceiling tiles
- wallboard and joint compound

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior windows and window frames, doors and door frames, exterior walls, steps and handrails and exterior gutter drain pipes tested "negative" (<0.7 mg/cm2). White paint on interior walls is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCBs

Building V does not have windows. Light fixtures throughout Building V were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats were noted to have mercury contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Negative readings are below LOD for XRF

Building W

Total Area:	5,200 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Wooden exterior with interior wallboard
Roof:	Protected membrane flat roof

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Underlying floor tile. 5,200 s.f. Good condition. Non-friable. Location: throughout classrooms.

- Roofing mastics. 500 s.f. Good condition. Non-friable. Location: roofing penetrations, patch work and HVAC pedestals.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building W), should be tested prior to further disturbance.

Non-Asbestos Materials

- roofing field (all layers)
- beige 12-inch floor tile
- 1'x1' ceiling tiles and mastic

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- wallboard and joint compound
- cove base and mastic

Lead in Paint
XRF readings of interior walls, doors and door frames, windows and window frames, and exterior walls tested "negative" (<0.7 mg/cm2).

PCBs
Light fixtures throughout Building W were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury
Thermostats were noted to have mercury contact switches. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Building W5

Total Area:	1,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Wooden exterior with interior wallboard
Roof:	Corrugated metal roofing

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Material
None identified.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building W5), should be tested prior to further disturbance.

Non-Asbestos Materials
- red 12-inch floor tile and mastic
- wallboard and joint compound

Lead in Paint
XRF readings of exterior walls, windows, doors and door frames and handrails tested "negative" (<0.7 mg/cm2).

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

PCBs

Light fixtures throughout Building W5 were similar in size and design as light fixtures throughout the campus which contained ballasts labeled “No PCB’s”. No visible evidence of PCB’s was noted.

Building X and Y

Total Area:	1,000 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Classrooms
Const. Type:	Concrete bldg. with exterior stucco with interior wooden panel walls
Roof:	Slant roof with asphalt shingles

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Materials

- Roofing penetration mastic. 50 s.f. Good condition. Non-friable. Location: roof penetrations.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Building X and Y), should be tested prior to further disturbance.

Non-Asbestos Materials

- exterior stucco
- gray 12-inch floor tile
- cove base
- 2'x4' ceiling tiles
- roof shingles

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

- underlying roofing materials

Lead in Paint

XRF readings of interior walls, doors and door frames tested "negative" (<0.7 mg/cm2). Beige paint on windows is lead based. For all paint types, mechanical grinding or torching should be avoided. If grinding or torching IS required, an abatement contractor should be retained to "spot abate" paint at all cut or torch points. See Cal. Title 8 Section 1532.1.

PCBs

Light fixtures throughout Building X and Y were similar in size and design as light fixtures throughout the campus which contained ballasts labeled "No PCB's". No visible evidence of PCB's was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

No thermostats were visible during Ellis' inspection. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Ellis

Police and Transportation HQ

Total Area:	2,500 s.f.
Const. Date:	Pre-1970
Floors:	1
Use:	Police and Transportation HQ
Const. Type:	Manufactured buildings with interior wallboard and exterior wooden panels
Roof:	Corrugated metal roofing

Identified Asbestos Materials

Friable Asbestos Materials
None identified.

Non-Friable Asbestos Material
None identified.

Assumed Asbestos Materials[1]
The following material types were inaccessible during the survey effort, but may be present in walls, ceiling spaces or underground:

- Mirror mastic (adhesive). Location: restrooms or wherever mirrors are present. Non-friable. Quantity and damage unknown.

- Thermal System Insulation (TSI). This includes pipe insulation in walls and above ceilings. May also be present in underground utility chases. Friable.

- Transite Pipe (AC pipe). Location: building vent pipes and underground pipes.

Additional suspect materials may be exposed during renovation/demolition activities. Any materials that are not listed in this report as a non-asbestos material (see below and Table 1 Police and Transportation HQ), should be tested prior to further disturbance.

Non-Asbestos Materials

- leveling compound
- wallboard
- gray and green 12-inch floor tile
- gray sheet flooring

[1] Not all walls, ceilings and carpet were demolished to gain complete visual access. Additional materials listed under this heading may be exposed during demolition/renovation activities and should be sampled prior to disturbance.

Lead in Paint

XRF readings of interior and exterior walls, exterior handrails, doors and door frames windows and window frames tested “negative” (<0.7 mg/cm2).

PCBs

Light fixtures throughout the Police and Transportation HQ were similar in size and design as light fixtures throughout the campus which contained ballasts labeled “No PCB’s”. No visible evidence of PCB’s was noted.

Initiate demolition of light fixtures carefully. Separate, drum, profile, transport and dispose of ballasts separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

Mercury

Thermostats did not appear to contain mercury. Light switches did not appear to contain to contain mercury. Avoid contact with any silver liquid. Do not break liquid vials. Separate, drum, profile, transport and dispose of thermostats separately from other demolition materials. Provide a copy of profile results to the accepting landfill.

A20 / A21	918121880-01	*Yes*	Trace (<0.1 % pc) [1] (by 1000 pt ct) by Paola Ducoing on 01/04/19
Location: Ext. Stucco			
Analyst Description: Beige/Grey, Homogeneous, Non-Fibrous, Cementitious, Stucco			
Asbestos Types: Chrysotile <0.1 % pc			
Other Material: Non-Asbestos/Inert 67.9 %			
Comment: Heat Sensitive (organic): 5.2%; Acid Soluble (inorganic): 27.0%; Inert (Non-asbestos): 67.9%			
A25 / A26 / A27	918121880-02	*Yes*	Trace (<0.1 % pc) [1] (by 1000 pt ct) by Paola Ducoing on 01/04/19
Location: 1 Ft. C.T. / Mastic			
Analyst Description: Beige/Grey/White, Homogeneous, Fibrous, Ceiling Tile			
Asbestos Types: Chrysotile <0.1 % pc			
Other Material: Non-Asbestos/Inert 45.8 %			
Comment: Heat Sensitive (organic): 51.4%; Acid Soluble (inorganic): 2.8%; Inert (Non-asbestos): 45.8%			

Reporting Notes:

(1) 1000 Point Count Analysis performed on Inert Residue remaining after 480C heat and HCl acid treatments

Analyzed By: Paola Ducoing ; Date Analyzed: 1/4/2019 1/4/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Just to be clear, I'm asking for one composite sample from samples A25, A26 and A27, and one composite sample from A20 and A21 to be analyzed.

Thank you,

RE: 18-547; IUSD; Morningside H.S. Bldg. C (Cont.), Bldg. L, Bldg. C1, C, Bldg. J

Client No. / HGA	Lab No.	Asbestos Present	Total % Asbestos
A313 & A315	919011504-01	*Yes*	0.2 % pc [1] (by 1000 pt ct) by Arturo A. Aldana on 01/21/19

Location: Bldg. C (Cont.) / Carpet Glue

Analyst Description: Yellow/Tan, Heterogeneous, Non-Fibrous, Glue / Debris
Asbestos Types: Chrysotile 0.2 %
Other Material: Non-Asbestos/Inert 31.3 %
Comment: Heat Sensitive (organic): 37.0%; Acid Soluble (inorganic): 31.5%; Inert (Non-asbestos): 31.3%

Reporting Notes:

(1) 1000 Point Count Analysis performed on Inert Residue remaining after 480C heat and HCl acid treatments

Analyzed By: Arturo A. Aldana ; Date Analyzed: 1/21/2019 1/21/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Hello All,

I have attached the project COC 918121843. The last three samples on this COC are A295, A296, and A297.

Please advise which samples you would like to analyze with 1000 pt count.

Thank you.

(1) 1000 Point Count Analysis performed on Inert Residue remaining after 480C heat and HCl acid treatments

Analyzed By: Paola Ducoing ; Date Analyzed: 2/15/2019 2/15/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Reporting Notes:

(1) Physically inseparable layers in sample - sample composited for analysis

Analyzed By: Lateef MacIntosh _____; Date Analyzed: 12/27/2018 12/28/18

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

PLM Bulk Asbestos Report

18-547; IUSD; Morning Side HS Bldg F, Auditorium, Bldg R, Auditorium Roof,

---

Reporting Notes:

(1) Insufficient material submitted for accurate quantitation during PLM analysis (no QC possible).

(2) Physically inseparable layers in sample - sample composited for analysis

(3) Asbestos suspected to be inseparable contamination from fibrous backing of flooring.

Analyzed By: Arturo A. Aldana ; Date Analyzed: 12/31/2018 12/31/18

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

PLM Bulk Asbestos Report

18-547; IUSD; Morning Side High School Bldg 1, Bldg X, Bldg Y, Bldg J, Bldg K, Bldg L, Bldg N,

---

Reporting Notes:

(1) Physically inseparable layers in sample - sample composited for analysis

Analyzed By: Arturo A. Aldana _____, Date Analyzed: 1/2/2019 1/2/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Client No. / HGA	Lab No.	Asbestos Present	Total % Asbestos
A347	919011015-53L2	***No***	NAD (by CVES) by Arturo A. Aldana on 01/08/19

Location: Bldg. J / 9" Beige Ft - Under

Analyst Description: Black, Homogeneous, Non-Fibrous, Mastic
Asbestos Types:
Other Material: Non-fibrous 100 %

Reporting Notes:

(1) Physically inseparable layers in sample - sample composited for analysis

(2) Trace amount of asbestos (<1%) suspected to be inseparable contamination from adjacent layer.

Analyzed By: Arturo A. Aldana ____at aod____; Date Analyzed: 1/7/2019 ____1/8/19____

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Subject: Re: Job #18-547, Three Extra samples Not on the listed - 919011015
From: Sarah Covert <SarahCovert@ellisenvironmental.com>
Date: 1/3/2019 9:05 AM
To: Mee Jones <pjones@amerisci.com>
CC: Duane Behrens <DuaneBehrens@ellisenvironmental.com>, Results <results@ellisenvironmental.com>, AmeriSci LA <ameriscila@amerisci.com>

Hi, please analyze A301, A302 and A303 via PLM, 3 day TAT. The sample "A18" is mislabeled and should be A318.

Thanks,

Sarah Covert

Good Morning,

For The attached COC We have three extra samples not on the listed labeled as #A301, A302, A303.

And on page 1 sample ID A18 but the bag labeled as A318.

Please let us know what you would like us to do.

Thankyou

PLM Bulk Asbestos Report

18-547; IUSD; Morning Side H.S. - Bldg. E (Library), Bldg. D, Bldg. T, T1, G

Reporting Notes:

Analyzed By: Paola Ducoing ; Date Analyzed: 1/9/2019 1/9/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

PLM Bulk Asbestos Report

18-547; IUSD; Morning H.S. - Bldg. S, Bldg. V, Bldg. W, Bldg. W5, Bldg. I, Bldg. H, Bldg. P&S, Bldg. 02

Reporting Notes:

(1) Physically inseparable layers in sample / sample composited for analysis

Analyzed By: Lateef MacIntosh _____; Date Analyzed: 1/24/2019 1/28/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Reporting Notes:

Analyzed By: Paola Ducoing Paola; Date Analyzed: 1/30/2019 1/30/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Reporting Notes:

Analyzed By: Paola Ducoing _____; Date Analyzed: 2/4/2019 2/4/19

*NAD = no asbestos detected; Detection Limit ≤1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Reporting Notes:

Analyzed By: Kristina Martinez K. M; Date Analyzed: 2/5/2019 2/5/19

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Notes and Definitions

S13	Surrogate recovery was below laboratory acceptance limit. Sample reanalysis showed the same low recovery.
M	Matrix spike recovery outside of acceptance limit.
L2	Laboratory control sample outside of acceptance limits. Reextraction and/or reanalysis is not possible due to limited amount of sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

NVLAP Lab Code: 200346-0

Dear Mr. Massey,

Thank you for continuing your accreditation for Asbestos Fiber Analysis under the National Voluntary Laboratory Accreditation Program (NVLAP). This accreditation is effective until December 31, 2018, provided that your laboratory continues to comply with the accreditation requirements contained in the NVLAP Procedures.

Your updated accreditation documents are enclosed. You may reproduce these documents in their entirety and use the NVLAP symbol and/or term to reference your accredited status in accordance with the requirements published in NIST Handbook 150, 1.8. Accreditation does not relieve your laboratory from observing and complying with any applicable existing laws and/or regulations.

We are pleased to have you participate in NVLAP and look forward to your continued association with this program. If you have any questions concerning your NVLAP accreditation, please direct them to Hazel Richmond, Program Manager, Laboratory Accreditation Program, National Institute of Standards and Technology, 100 Bureau Dr. Stop 2140, Gaithersburg, MD 20899-2140; (301) 975-3024.

Sincerely,

Dana S. Leaman, Chief
National Voluntary Laboratory Accreditation Program

United States Department of Commerce
National Institute of Standards and Technology

Certificate of Accreditation to ISO/IEC 17025:2005

NVLAP LAB CODE: 200346-0

AmeriSci Los Angeles

Carson, CA

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).

2018-01-01 through 2018-12-31

Effective 2018-01-01 through 2018-12-31

LEAD - "TRIGGER TASKS"

(SOURCE: California Title 8 Section 1532.1.)

Following testing, Construction Managers and Superintendents may use the following to decide whether (and for how long) an abatement contractor should be retained during disturbance of painted surfaces.

Paint Categories

1. Lead-Based. >.06% Lead by Weight. Start-to-finish, retain an abatement contractor to perform trigger tasks listed below.
2. Lead-Containing. 0.009 – 0.06% lead by weight. Avoid torching or mechanical grinding; no other special precautions.
3. Non-Lead-Containing <.009% lead by weight. No special lead-related precautions required.

TRIGGER TASKS - Lead-Based Paints Only:

Lowest Exposure Trigger Tasks:

Unless proven otherwise (NEA), assume exposures greater than 50 and up to 500 µg/m3 where lead-based coatings or paint are present:

- manual demolition of structures
- manual scraping
- manual sanding
- heat gun applications
- power tool cleaning with dust collection system
- spray painting with lead
- any other task where employees may be exposed over the PEL.

Medium Exposure Trigger Tasks:

Unless proven otherwise (NEA), assume exposures greater than 500 and up to 2,500 µg/m3 where lead-based coatings or paint are present:

- use of lead-containing mortar
- lead burning
- rivet busting
- power tool cleaning without dust collection systems
- cleanup of dry expendable abrasives
- abrasive blasting enclosure movement and removal

Highest Exposure Trigger Tasks:

Assume exposures greater than 2,500 µg/m3 unless proven otherwise where lead-based coatings or paint are present:

- abrasive blasting
- welding
- cutting
- torch burning

Re: Pipeline Risk Analysis Update for Inglewood Unified School District Morningside High School

Dear Mr. Guzman:

Groundwater & Environmental Services is pleased to provide this pipeline risk analysis to the Inglewood Unified School District. The analysis was prepared for the high pressure natural gas pipeline (the Line) operated by Southern California Gas Co. (SoCalGas) located adjacent to the Inglewood Unified School District Morningside High School located at 10500 Yukon Ave S. Inglewood, CA (the Site).

Site Information

Morningside High School

Morningside High School is located at 10500 Yukon Avenue in Inglewood, California. The Site is bordered by residential neighborhoods along West 108th St to the south, Monroe Middle School and Woodworth Elementary School to the east, the West 104th St. corridor to the north, and the Yukon Ave South corridor to the east. The northern property line of the Site is approximately 40 feet from the Pipeline and the nearest building is approximately 90 feet away. A satellite image with the pipeline location is provided as Attachment A.

Risk Assessment Protocol

The objective of the risk analysis is to determine potential health and safety hazards posed by the proximity of the natural gas pipeline to students, faculty, and staff. The analysis was prepared in accordance with California Code of Regulations, Title 5, Section 14010 (h) and the California Department of Education (CDE) Guidance Protocol for School Site Pipeline Risk Analysis dated February 2007 (the Protocol).

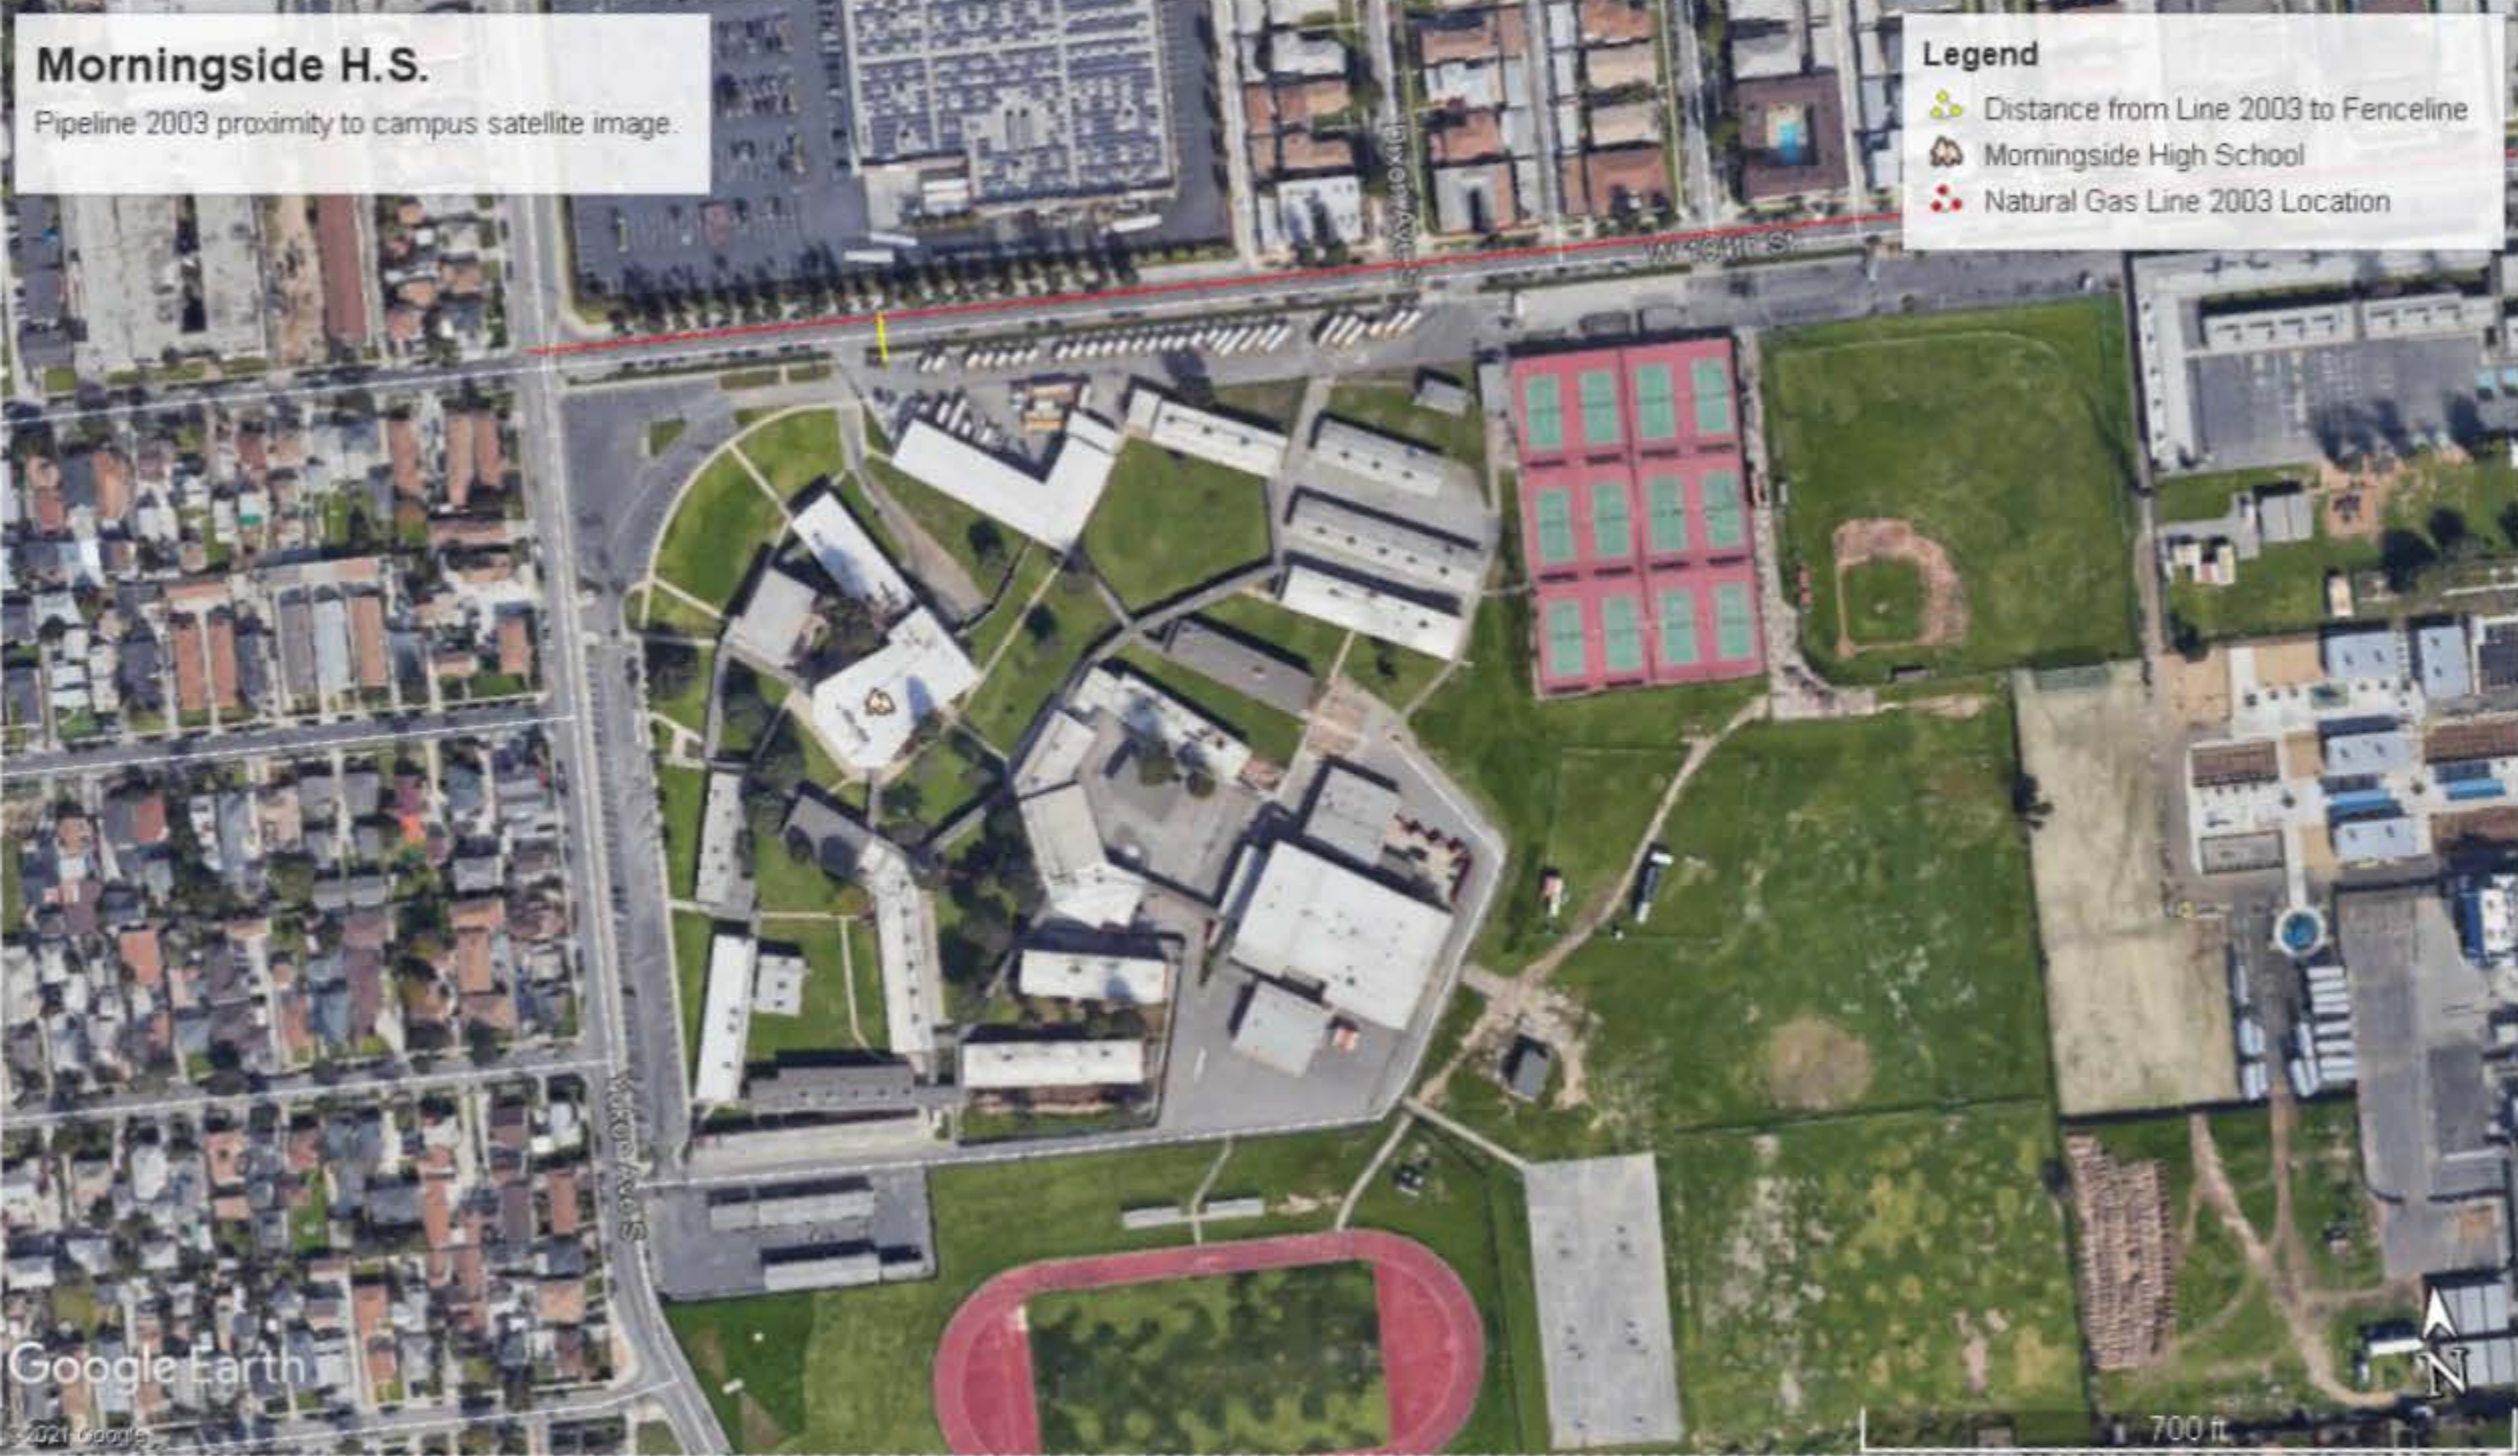
Risk Assessment Findings

The Protocol recommends an IR Significance Criterion of 1.0E-06. The risk assessment calculated an estimated IR value of 1.2E-07, therefore according to the protocol an insignificant degree of risk exists. Because the pipeline is an “insignificant risk” as defined by CDE, no limitations exist on new construction or modernization of existing buildings on the Morningside site as a result of the pipeline per the CDE.

Limitations

Numerous factors affect the risks associated with pipeline failures. Information on all the factors will typically be incomplete. Assumptions and default values will be required for some of the input data requirements. This necessarily limits the accuracy of the risk estimate for a specific length (segment) if a pipeline. It is especially difficult to determine the probability associated with a specific short segment of pipe. The relationship between factors that affect the likelihood of failure and the failure rate remains an area of ongoing industry interest and research. Relative risk models have been developed that can be used to adjust generic failure rate data to account for specific local attributes in a pipeline system. However, this information is typically proprietary to the pipeline operator and is not generally available to a LEA. Therefore, it must be recognized at the outset, that the risk values determined using this Protocol are, in fact, estimates. The probability estimate for the failure of a given line segment is a statistical probability that may differ from the actual value for a given segment. In spite of this uncertainty, CDE has determined that that the approach taken is reasonable within the context for which the Protocol was developed and for which the results will be used.

It has been a pleasure to work with you on this assessment. If you have any questions concerning this report or attachments, please call me at (925) 788-4331.



Sincerely,
Groundwater & Environmental Services, Inc.

1.0 INTRODUCTION

This Low Impact Development Report (LID) summarizes storm water protection requirements for the Morningside High School site upgrades (herein referred to as "the project").

This LID Report describes the permanent storm water Best Management Practices (BMPs) that will be incorporated into the project in order to mitigate the impacts of pollutants in storm water runoff from the proposed project. For the purposes of post-construction storm water quality management, the project will follow the guidelines and requirements set forth in the County of Los Angeles "Low Impact Development Standards Manual" dated February 2014 (herein "LID Manual").

Project Applicant: IUSD (Inglewood Unified High School)
401 S. Inglewood Ave
Inglewood, CA 90301

1.1 SITE AND PROJECT DESCRIPTION

The subject site is located in the City of Inglewood, Los Angeles County, California. The proposed campus upgrades will be located around the perimeter of the campus, primarily adjacent to the north, east, and south property lines. The campus upgrades will include a baseball field, softball field, tennis courts, basketball courts, track and football field, bathroom buildings, retaining walls, sidewalk, and landscaping.

The existing project area has an average slope of 2.0% draining in the southwesterly direction. Existing drainage is captured within landscape and hardscape area drains and piped into an underground storm drain system. The existing parking lots along the northerly and westerly property lines, surface flow and discharge to the public street, and eventually into an underground storm drain system.

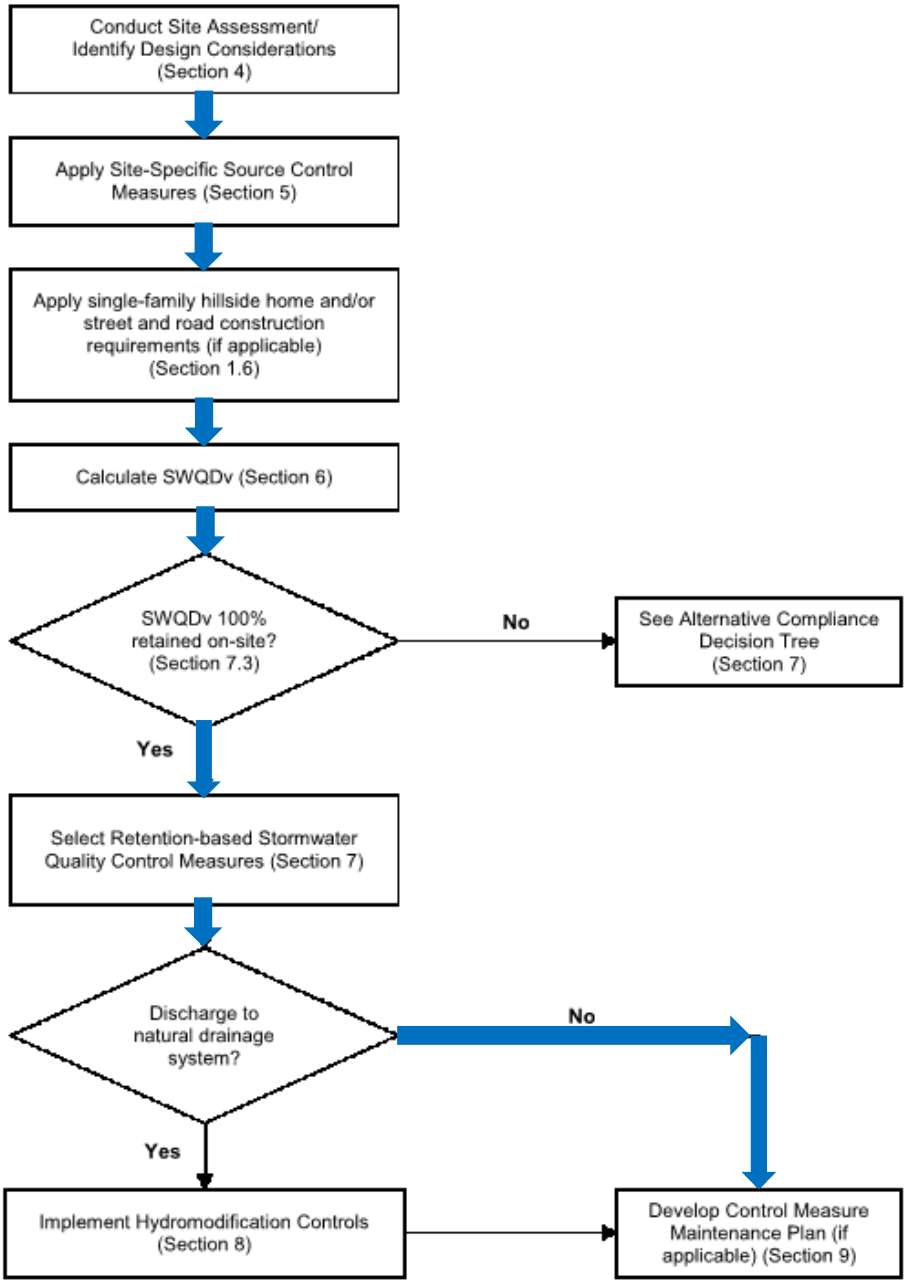
Drainage for the proposed campus upgrades are designed so that runoff drains away from the new structures and sports fields, and is captured into a network of area drains in the surrounding landscape and hardscape along the perimeter of the buildings and sports fields. Roof drainage will be conveyed through downspouts which tie into the proposed storm drain system. The stormwater for this site will be routed into underground infiltration vaults to retain runoff for the 85th percentile treatment storm.

2.0 DESIGNATED PROJECT REQUIREMENT

Requirements for permanent BMPs are determine based on the criteria set forth in the LID Manual. Projects are identified by four categories:

- Designated Project
- Non-Designated Project
- Small-Scale Non-Designated Project
- Large-Scale Non-Designated Project

2.1 DETERMINATION FOR PERMANENT BMP REQUIREMENT



The project is considered a **"Designated Project,"** based on the LID Manual. The project meets the following requirements to be a Designated Project:

1. All development projects equal to one acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area

All "Designated Projects" must retain 100 percent of the Storm Water Quality Design Volume (SWQDv) on-site through infiltration, evapotranspiration, stormwater runoff harvest and use, or a combination thereof unless it is demonstrated that it is technical infeasible to do so.

The project will retain the SWQDv for the site as outlined in the Design Process Chart Breakdown in Section 2.2. For this project site, an underground infiltration system will be utilized to treat the 65,233 cf of SWQDv. See Section 5.0, Section 6.0 and **Appendix E** for more information and calculations.

2.2 DESIGN PROCESS CHART BREAKDOWN

3.0 SITE ASSESSMENT AND DESIGN CONSIDERATIONS

This section discusses the steps taken for assessing the project site conditions and identifying design considerations to determine appropriate stormwater quality control measures for the project.

3.1 VICINITY MAP

3.2 PROJECT SUMMARY INFORMATION

Pre-Project

The existing site is currently occupied by an existing high school campus, that includes: an on-site parking lot at the northwest corner and along Yukon Ave, a bus parking lot along 104th street, instructional and administrative buildings, baseball field, tennis courts, softball field, basketball courts, football field with metal bleachers, track & field, and paved walkways and landscaping throughout the campus grounds.

The existing project area has an average slope of 2.0% draining in the southwesterly direction. Majority of the existing drainage is captured within landscape and hardscape area drains and piped into an underground storm drain system. The northwest corner, that includes a parking lot and bus parking lot, surface drains off-site to Yukon Ave, and then south to an underground storm drain system

Post-Project

In the post-project conditions, proposed campus upgrades include new athletic fields, parking lots, and walkways. Storm water runoff will mimic the existing drainage conditions. Storm drain inlets throughout the site and new athletic fields will capture surface flow into an underground storm drain pipe network.

The runoff is then routed into underground stormcapture infiltration vaults to the south and southwest where the SWQDv will be retained on site while additional overflow is discharged through an emergency outlet that discharges into the existing storm drain system to the southwest of the project area.

Percent Area Impervious Created or Replaced

The "Percent Area Impervious Created or Replaced" found was 100%. Since the impervious area created or replaced for the new development is greater than 50% of the impervious area of the previously existing development, the proposed development is required to retain 100% the SWQDv.

3.3 WATERSHED

The proposed development is located within the Dominguez Channel and Los Angeles/Long Beach Harbors Watershed and is part of the Dominguez Channel and Los Angeles/Long Beach Harbors Watershed Management Area. Surface flow from the project enters the municipal storm drain system which outlets into the Dominguez Channel and ultimately discharges into the Pacific Ocean.

Region:	Los Angeles Regional Water Quality Control Board (LARWQCB)
Receiving Water:	Dominguez Channel
Watershed:	Dominguez Channel and Los Angeles/Long Beach Harbors Watershed
303(d) Listing:	Ammonia, Copper, Dieldrin, Indicator bacteria, Lead, Sediment, Toxicity, Zinc

3.4 GEOTECHNICAL CONDITIONS

Geotechnical information outlined below was taken from the Geotechnical Report prepared by Koury Engineering & Testing, Inc., dated January 22, 2020.

Geologic Setting: The subsurface soil profile consists of fill underlain by alluvial deposits. The fill depth was found to range between about 2 and 5 feet at the boring locations. Deeper fill may be encountered at utility locations, or at other locations between and beyond the borings. Except for Boring B-5 where 6 inches of asphalt was encountered, the asphalt pavement thickness at the boring locations consisted of about 3½ to 5 inches of asphalt concrete. The asphalt was found to be underlain by 2 to 3 inches of aggregate base except for Boring B-4 that indicated 6 inches of base. Except for Boring B-2 drilled in the southwest portion of the campus in relatively close vicinity of Yukon Avenue South where clayey sand was encountered, the fill materials encountered in the borings consisted generally of firm to stiff sandy lean clay. The fill encountered were generally moist to very moist. With a few exceptions, the underlying alluvium consists predominantly of interbedded sandy lean clay with clayey sand and silty sand. Interbeds of poorly graded sand were encountered in Borings B-6 and B-9 at depths exceeding 13 feet below the ground surface. The sandy clay alluvial soils are generally stiff to very stiff, and the sand are medium dense to dense.

Groundwater: The site lies at approximately elevations 88 to 112 feet (NAVD88). Groundwater was not encountered in the borings drilled for this study. The Seismic Hazard Zone Report for the Inglewood 7.5-Minute Quadrangle, Los Angeles County CA, Seismic Hazard Zone Report 029, Department of Conservation, Division of Mines and Geology indicates that the historic high groundwater is at least 50 feet below ground surface (see Figure A-5 for the Historic High Groundwater Map).

3.5 GEOTECHNICAL HAZARDS

Geotechnical information outlined below was taken from the Geotechnical Report prepared by Koury Engineering & Testing, Inc., dated January 22, 2020.

The subject site is not located within an Alquist-Priolo Earthquake Fault Zone.

The site is not located in a Landslide Hazard Zone on the State of California Seismic Hazard Zones Map (Figure A-4 in Appendix A). No evidence for land sliding was observed on or in the immediate vicinity of the site at the time of our field exploration. Based on topographic conditions, land sliding is not considered a potential hazard at the site.

The Liquefaction Hazards zone on the State of California Seismic Hazards Zones Map (Figure A-4 in Appendix A) indicates that the site is not located in a liquefaction susceptibility zone. Due to the absence

of shallow groundwater, the presence of clayey soils and some medium dense to dense sands, it is our opinion that the potential for liquefaction is remote.

Flooding is not considered a high potential hazard to the site.

The onsite soils have been mapped as older alluvium and the soils at shallow depth have moisture contents that are near or above optimum, which aid in mitigating collapse potential. Our laboratory tests did not indicate significant collapse. Therefore, the potential for collapse is considered low. Over-excavation and re-compaction, and appropriate drainage are recommended to mitigate the potential for hydrocollapse.

3.6 SITE DESIGN PRINCIPLES

Site design can protect sensitive environmental features. The intention of site design principles is to reduce stormwater peak flows and volumes and other impacts associated with land development. The following text discusses the low impact development BMPs outlined in the LID Manual with respect to the project. Italicized text is taken directly from the LID Manual and reproduced for this report. Portions of the italicized text are condensed from the LID Manual. Immediately following and written in regular text, will be the response as it applies to the project.

Site Planning

- *Project applicants must implement a holistic approach to site design in order to develop a more hydraulically-functional site, help to maximize the effectiveness of on-site retention, and integrate stormwater management throughout the project site. Early project site planning can identify physical site constraints, reduce costs of downstream stormwater quality control measures, and prevent potential project site re-design.*
  Response:
  The project site layout conforms to natural landforms.

Protect and Restore Natural Areas

- *Conservation of natural areas, soils, and vegetation helps to retain numerous functions of pre-development hydrology, including rainfall interception, infiltration, and evapotranspiration. Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Sensitive areas, such as streams and their buffers, floodplains, wetlands, steep slopes, and highly-permeable soils, should be protected and/or restored. Slopes can be a major source of sediment and should be properly protected and stabilized. Locating development in less sensitive areas of a project site and conserving naturally vegetated areas can minimize environmental impacts from stormwater runoff.*

  Response:
  The site is currently developed, and therefore there is no opportunity to preserve existing natural vegetation. The proposed site will include new landscaping and new trees.

Minimize Impervious Area

- *The potential for discharge of pollutants in stormwater runoff from a project site increases as the percentage of impervious area within the project site increases because impervious areas increase the volume and rate of stormwater runoff. Pollutants deposited on impervious areas are easily mobilized and transported by stormwater runoff. Minimizing impervious area through site design is an important method to reducing the pollutant load in stormwater runoff. In addition to the environmental and aesthetic benefits, a highly pervious site may allow reduction of potential downstream conveyance and stormwater quality control measures, yielding savings in development costs. Minimizing impervious area will also reduce the stormwater runoff coefficient, which is directly proportional to the volume of stormwater runoff that must be retained on-site.*

  Response:
  The project incorporates landscaping/vegetated areas onsite to minimize the impervious footprint.

4.0 SOURCE CONTROL MEASURES

Source control measures are designed to prevent pollutants from contacting stormwater runoff or prevent discharge of contaminated stormwater runoff to the storm drain system and/or receiving water. This section describes structural type, source control measures that will be considered for implementation in conjunction with appropriate non-structural source control measures. The following text discusses the source control measures BMPs from the LID Manual with respect to the project. Italicized text is taken directly from the LID Manual, and reproduced for this report. Portions of the italicized text are condensed from the LID Manual. Immediately following and written in regular text, will be the response as it applies to the project. For more information regarding the Source Control Measures outlined below, see Appendix D from the LID Manual.

S-1: Storm Drain Message and Signage

- *Signs with language and/or graphical icons that prohibit illegal dumping, must be posted at designated public access points along channels and streams within the project area. Consult with Los Angeles County Department of Public Works (LACDPW) staff to determine specific signage requirements for channels and streams.*

- *Storm drain message markers, placards, concrete stamps, or stenciled language/icons (e.g., "No Dumping – Drains to the Ocean") are required at all storm drain inlets and catch basins within the project area to discourage illegal or inadvertent dumping. Signs should be placed in clear sight facing anyone approaching the storm drain inlet or catch basin from either side (see Figure D-1 and Figure D-2). LACDPW staff should be contacted to determine specific requirements for types of signs and methods of application. A stencil can be purchased for a nominal fee from LACDPW Building and Safety Office by calling (626) 458-3171. All storm drain inlet and catch basin locations must be identified on the project site map.*

Response:
All catch basins with open grates within the project site will be stenciled.

S-2: Outdoor Material Storage

- *Design specifications for material storage areas are regulated by local building and fire codes, ordinances, and zoning requirements. Source control measures presented in the LID Manual are intended to enhance and be consistent with local code and ordinance requirements while addressing stormwater runoff concerns. The design specifications, presented in Table D-2 in the LID Manual, must be incorporated into the design of outdoor material storage areas when stored materials could contribute pollutants to the storm drain system. The level of controls required varies relative to the risk category of the material stored.*

  Response:
  The project does not propose any outdoor material storage areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-3: Outdoor Trash Storage and Waste Handling Area

- *Wastes from commercial and industrial sites are typically hauled away for disposal by either public or commercial carriers that may have design or access requirements for waste storage areas. Design specifications for waste handling areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. The design specifications, listed below in Table D-3, are recommendations and are not intended to conflict with requirements established by the waste hauler. The design specifications are intended to enhance local codes and ordinances while addressing stormwater runoff concerns. The waste hauler should be contacted prior to the design of trash storage and collection areas to determine established and accepted guidelines for designing trash collection areas. All hazardous waste must be handled in accordance with the legal requirements established in Title 22 of the California Code of Regulations. Conflicts or issues should be discussed with LACDPW staff.*

  Response:
  The project site does not propose storage areas for trash storage areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor trash storage area will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-4: Outdoor Loading/Unloading Dock Area

- *Design specifications for outdoor loading/unloading dock areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. Additionally, individual businesses may have their own design or access requirements for*

loading docks. Design specifications presented in this fact sheet are intended to enhance and be consistent with these code and ordinance requirements while addressing stormwater runoff concerns. The design specifications presented in Table D-4 are not intended to conflict with requirements established by individual businesses, but should be followed to the maximum extent practicable.

Response:
The project does not propose any outdoor loading and unloading dock areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-5: Outdoor Vehicle/Equipment Repair/Maintenance Area

- *Design specifications for vehicle and equipment repair/maintenance areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. The design specifications presented in this fact sheet are intended to enhance and be consistent with these code and ordinance requirements while addressing stormwater runoff concerns. The design specifications required for vehicle and equipment repair/maintenance areas are presented in Table D-5. All wash water and hazardous and toxic wastes must be prevented from entering the storm drain system.*

  Response:
  The project does not propose any outdoor vehicle equipment repair areas, or outdoor vehicle maintenance areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-6: Outdoor Vehicle/Equipment/Accessory Washing Area

- *Design specifications for vehicle/equipment/accessory washing areas are regulated by local building and fire codes and current County ordinances and zoning requirements. The design specifications presented in Table D-6 are intended to enhance and be consistent with these requirements while addressing stormwater runoff concerns. All wash water and hazardous and toxic wastes must be prevented from entering the storm drain system.*

  Response:
  The project does not propose any outdoor vehicle equipment areas or outdoor vehicle accessory washing areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-7: Fuel and Maintenance Area

- *Design specifications for fuel and maintenance areas are regulated by local building and fire codes and current County ordinances and zoning requirements. The design*

specifications presented in Table D-7 are intended to enhance and be consistent with these code and ordinance requirements while addressing stormwater runoff concerns.

Response:
The project does not propose any fuel and maintenance areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-8: Landscape Irrigation Practices

- *Choose plants that minimize the need for fertilizer and pesticides.*
- *Group plants with similar water requirements and water accordingly.*
- *Use mulch to minimize evaporation and erosion.*
- *Include a vegetative boundary around project site to act as a filter.*
- *Design the irrigation system to only water areas that need it.*
- *Install an approved subsurface drip, pop-up, or other irrigation system. The irrigation system should employ effective energy dissipation and uniform flow spreading methods to prevent erosion and facilitate efficient dispersion.*
- *Install rain sensors to shut off the irrigation system during and after storm events.*
- *Include pressure sensors to shut off flow-through system in case of sudden pressure drop. A sudden pressure drop may indicate a broken irrigation head or water line.*
- *If the hydraulic conductivity in the soil is not sufficient for the necessary water application rate, implement soil amendments to avoid potential geotechnical hazards (i.e., liquefaction, landslide, collapsible soils, and expansive soils).*
- *For sites located on or within 50 feet of a steep slope (15% or greater), do not irrigate landscape within three days of a storm event to avoid potential geotechnical instability.*
- *Implement Integrated Pest Management practices*
- *For additional guidelines and requirements, refer to the Los Angeles County Department of Health Services.*

Response:
Irrigation practices and systems for the project will be designed pursuant to the guidelines shown above and in the LID Manual.

S-9: Building Material Selection

Lumber

- *Decks and other house components constructed using pressure-treated wood that is typically treated using arsenate, copper, and chromium compounds are hazardous to the environment. Pressure-treated wood may be replaced with cement-fiber or vinyl.*

Roofs, Fencing, and Metals

- *Minimizing the use of copper and galvanized (zinc-coated) metals on buildings and fencing can reduce leaching of these pollutants into stormwater runoff. The following building materials are conventionally made of galvanized metals:*
    - *Metal roofs*
    - *Chain-link fencing and siding*
    - *Metal downspouts, vents, flashing, and trim on roofs.*

  Architectural use of copper for roofs and gutters should be avoided. As an alternative to copper and galvanized materials, coated metal products are available for both roofing and gutter application. Vinyl-coated fencing is an alternative to traditional galvanized chain-link fences. These products eliminate contact of bare metal with precipitation or stormwater runoff, and reduce the potential for stormwater runoff contamination. Roofing materials are also made of recycled rubber and plastic. Green roofs may be an option. Green roofs use vegetation such as grasses and other plants as an exterior surface. The plants reduce the velocity of stormwater runoff and absorb water to reduce the volume of stormwater runoff. One potential problem with using green roofs in the Los Angeles County area is the long, hot and dry summers, which may kill the plants if they are not watered. See the Green Roof Fact Sheet (RET- 7) in Appendix E of the LID Manual.

  Response:
  Building material selection will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-10: Animal Care and Handling Facilities

- *Site barns, corrals, and pastures on property that drains away from the storm drain system and receiving waters.*
- *Locate animal washing areas, pastures, horse riding areas, stalls, or cages at least 50 feet away from storm drains, domestic wells, septic tank or leach field sites, and receiving waters.*
- *Design berms, gutters, or grassed ditches to divert stormwater runoff away from animal area, storm drain system, and receiving waters.*
- *Cover animal enclosures (i.e., stables) to protect them from precipitation.*
- *Prevent animals from entering sensitive environmental areas.*
- *Regularly sweep or shovel animal holding areas.*

  Response:
  The project does not propose any animal care or handling facilities. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

S-11: Outdoor Horticulture Areas

- *Do not allow wash water from the horticulture area to drain directly to the storm drain system or receiving waters*

Response:
The project does not propose outdoor horticulture areas. If these conditions change, it is the responsibility of the project site owner/operator to ensure that outdoor materials storage will be designed pursuant to the guidelines outlined above and in the LID Manual.

5.0 STORMWATER QUALITY DESIGN VOLUME CALCULATIONS

Current water quality requirements are based on treating a specific volume of stormwater runoff from the project site (stormwater quality design volume [SWQDv]). By treating the SWQDv, it is expected that pollutant loads, which are typically higher during the beginning of storm events, will be reduced or prevented from reaching the receiving waters.

5.1 DESIGN STORM EVENT

The design storm, for which the SWQDv is calculated, is defined as the greater of:

- *The 0.75-inch, 24-hour rain-event; or*
- *The 85th percentile, 24-hour rain event as determined from the Los Angeles County 85th percentile precipitation isoheytal map.*

It was determined that the 85th percentile, 24-hour rain event will be the design storm for which the SWQDv will be calculated for this project site as shown below.

The 85th percentile, 24-hour rain = 1.0-inch > 0.75-inches **[Use the 85th percentile]**

Note:
The 85th percentile, 24-hour rain event precipitation was found using the Los Angeles County Hydrology Map GIS Viewer, see **Appendix C**.

5.2 STORMWATER QUALITY DESIGN VOLUME (SWQDV)

The project site was determined to be a Designated Project, therefore the project site is required to retain 100% of the SWQDv on-site or provide biotreatment for 1.5 times the SWQDv. The SWQDv for the site was calculated using the HydroCalc software developed by Los Angeles County Department of Public Works (LACDPW). The software completes the full MODRAT calculation process and produces the peak stormwater runoff flow rates and volumes for single subareas. HydroCalc is limited to watersheds and project areas up to 40 acres.

The SWQDv required to be treated is summarized below.

HydroCalc Analysis – 85TH Percentile Storm

DMA 1A & 1B:

Peak Flow Hydrologic Analysis

6.0 STORMWATER QUALITY CONTROL MEASURES

Stormwater quality control measures are required to augment site design principles and source control measures to reduce the volume of stormwater runoff and potential pollution loads in stormwater runoff to the maximum extent practicable. Stormwater quality control measures are designed to handle the frequent, smaller storm events, or the initial volume of stormwater runoff from larger storm events (typically referred to as first flush events). The first flush of larger storm events is the initial period of the storm where stormwater runoff typically carries the highest concentration and loads of pollutants. Small, frequent storm events represent most of the total annual average precipitation in the County. The LID Ordinance requires that all Designated Projects retain the SWQDv on-site using retention-based stormwater quality control measures (infiltration and/or stormwater runoff harvest and use) or biofiltrate 1.5 times the SWQDv if infiltration is not feasible.

Based on the percolation test performed by Koury Engineering & testing, Inc., on June 29, 2021, the minimum design percolation rate was 3.2 in/hr. Based on these percolation rate results, it is feasible to infiltrate the full SWQDv for the site. See Appendix E for calculations.

All the stormwater quality control measures outlined in the LID Manual were evaluated. It was determined that the most practicable treatment BMP for the project will be the following:

- (4) Underground Infiltration Vaults

6.1 UNDERGROUND INFILTRATION SIZING

Stormwater runoff is intercepted by a series of inlet drains within the surrounding landscaping as well as the roof downspouts and is conveyed through underground storm drain pipe into the underground infiltration vaults. The underground infiltration vaults are designed to infiltrate the SWQDv of 65,233 cf for the project site. Overflow for excess stormwater will be conveyed through an emergency outlet device in the underground infiltration system and into the existing storm drain to the south. Calculations for the infiltration vaults are available in **Appendix E**.

7.0 HYDROMODIFICATION

All Designated projects located within natural drainage systems that have not been improved or drainage systems that are tributary to a natural drainage system are required to implement hydromodification controls.

Projects may be exempt from implementation of hydromodification control measures where assessments of downstream channel conditions and proposed discharge hydrology indicate adverse hydromodification effects to beneficial uses of natural drainage systems are unlikely.

The proposed project has been determined to be **EXEMPT** from hydromodification requirements since it is discharges to concrete-lined channels. Therefore, the site does not have any adverse hydromodification impacts to natural drainage systems.

8.0 STORMWATER QUALITY CONTROL MEASURE MAINTENANCE

Continued effectiveness of stormwater quality control measures specified in the LID Standards Manual depends on on-going inspection and maintenance. All publicly maintained stormwater quality control measures must have easements for access and maintenance or be in lots dedicated to the County in fee title. To ensure that such maintenance is provided, LACDPW may require the submittal of a Maintenance Plan and execution of a Maintenance Agreement with the owner/operator of stormwater quality control measures. The property owner or his/her designee is responsible for complying with the Maintenance Agreement outlined in the LID Manual. A copy of the Maintenance Agreement is provided in **Appendix H.**

8.1 MAINTENANCE RESPONSIBILITY

The Owner of the project site is the site operator and will be the party responsible to ensure implementation and funding of maintenance of permanent BMPs.

It is anticipated that the owner of the project will manage multiple separate maintenance contracts for different types of maintenance (e.g., landscape maintenance vs. maintenance of the BMPs). Throughout this section, the owner of the project is the "party responsible to ensure implementation and funding of maintenance of permanent BMPs." The party who actually performs the activities is the "inspector," "maintenance contractor," or "maintenance operator."

8.2 INSPECTION AND MAINTENANCE FOR SOURCE CONTROL MEASURES

The following source control measures for the project requires permanent maintenance:

- Storm Drain Message and Signage
- Outdoor Trash Storage and Waste Handling
- Landscape Irrigation Practices

The discussions below provide inspection criteria, maintenance indicators, and maintenance activities for the above listed source control measures that require permanent maintenance.

S-1 Storm Drain Message and Signage

Legibility and visibility of markers and signs should be maintained (e.g., signs should be repainted or replaces as necessary). If required by the City, the owner/operator or homeowner's association shall enter into a maintenance agreement with the agency or record deed restriction upon the property title to maintain the legibility of placards and signs.

S-3 Outdoor Trash Storage and Waste Handling Area

The integrity of structural elements that are subject to damage (e.g., screens, covers, signs) must be maintained by the owner/operator as required by local codes and ordinances. Outdoor trash storage and waste handling areas must be checked periodically to ensure containment of accumulated water and prevention of stormwater run-on. Maintenance agreements between the City and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

S-8 Landscape Irrigation Practices

Maintain irrigation areas to remove trash and debris and loose vegetation. Rehabilitate areas of bare soil. If a rain or pressure sensor is installed, it should be checked periodically to ensure proper function. Inspect and maintain irrigation equipment and components to ensure proper functionality. Clean equipment as necessary to prevent algae growth and vector breeding. Failure to properly maintain building and property may subject the property owner to citation.

8.3 INSPECTION AND MAINTENANCE FOR STORM QUALITY MEASURES

The following storm quality measure for the project requires permanent maintenance:

- Underground Infiltration System

The discussions below provide inspection criteria, maintenance indicators, and maintenance activities for the above listed storm quality measure that require permanent maintenance according to manufacturer recommendations. These proprietary systems shall be inspected and maintained per manufacturer specifications and recommendations. See **Appendix G** for the Operations and Maintenance of each BMP listed above.

8.4 INSPECTION AND MAINTENANCE FREQUENCY

The Table below lists the BMPs to be inspected and maintained and the minimum frequency of inspection and maintenance activities.

BMP	Inspection Frequency	Maintenance Frequency
Storm Drain Message and Signage	Monthly	Routine maintenance of marker and sign legibility and visibility. See Section 8.2.
Outdoor Trash Storage and Waste Handling	Monthly	Routine maintenance of structure and waste water within the trash area. See Section 8.2.
Landscape Irrigation Practices	Monthly	Routine trimming and trash removal; monthly non-routine maintenance as-needed based on maintenance indicators in Section 8.2.
Underground Infiltration System	Annual and after major storm events	Routine maintenance to clean the underground infiltration system of sediments, trash, and debris. As-needed maintenance based on maintenance indicators as outlined in **Appendix G**.

The frequencies given in the Summary Table of Inspection and Maintenance Frequency are minimum recommended frequencies for inspection and maintenance activities for the project. Typically, the frequency of maintenance required for permanent BMPs is site and drainage area specific. If it is determined during the regularly scheduled inspection and/or routine maintenance that a BMP requires more frequent maintenance (e.g., to remove accumulated trash) it may be necessary to increase the frequency of inspection and/or routine maintenance. If it is determined during the regularly scheduled inspection that the maintenance thresholds are consistently met or exceeded, it may be necessary to increase the frequency of inspection and routine maintenance.

8.5 RECORD KEEPING REQUIREMENTS

The party responsible to ensure implementation and funding of maintenance of permanent BMPs shall maintain records documenting the inspection and maintenance activities. The records must be kept a minimum of 5 years and shall be made available to the City of Inglewood for inspection upon request at any time.

9.0 SUMMARY

This Low Impact Development Report (LID) summarizes the permanent storm water management features proposed for the project site that will collectively meet the requirements set forth in the LID Manual. The project meets the hydromodification exemption criteria and is not required to implement hydromodification management facilities as discussed in Section 7.0 of this report.

The project is a "Designated Project," based on the LID Manual as discussed in Section 2.1.

Based on the "anticipated" pollutants of concern that may be generated on-site and identification of receiving waters that are listed as impaired on the 2010 CWA Section 303(d) List of Water Quality Limited Segments, the following are the project pollutants of concern: Ammonia, Copper, Dieldrin, Indicator bacteria, Lead, Sediment, Toxicity, and Zinc as outlined in Section 3.3 of this report.

In addition to treatment control BMPs, the project will incorporate source control BMPs which are described in Section 4.0 and Section 6.0.

The project includes a proposed network of storm water management features that will utilize source control measures to meet the requirements for stormwater quality design measure. The following list provides a summary of stormwater quality design measures selected for the project site:

- (4) underground infiltration vaults

The above stormwater quality design measure was selected for the project and provide "High" removal efficiency for the targeted pollutants of concern as discussed in Section 3.3 and Section 6.1.

The stormwater quality design measure maintenance in Section 8.0 of this report provides inspection criteria, maintenance indicators, and maintenance activities for the above-listed BMPs that require permanent maintenance.

This report accompanies a set of construction drawings and specifications which detail the construction, operation, and maintenance of the proposed Low Impact Development (LID) design elements for this site.

STORMWATER QUALITY DESIGN MEASURE CALCULATIONS

BKF Engineers
4675 MacArthur Court, Suite 400
Newport Beach, California 92660
P 949.526.8460

Stormwater Quality Design Measure Calculations

Date: 6/29/2022
Job No.: 181088
Project: MHS CAMPUS UPGRADES

Description and Assumptions:

** Based on County of Los Angeles Low Impact Development Standard Manual*

Design Frequency = 85th Percentile, 24-Hour Rain Event = 1.0 in

STORMWATER QUALITY DESIGN CALCS FOR BMP# 1 & 2

Area Summary

Surface Type	Area (sf)	Area (acres)
Impervious	809,941	18.59
Pervious	550,941	12.65
TOTAL	**1,360,881**	**31.24**

Step 1: Determine the Stormwater Quality Design Volume (SWQDv)

85th Percentile SWQDv per HydroCalc Output in Appendix D= 65,233 ft^3

HydroCalc Design Volume (SWQDv) output is an accepted value per section 6.3 in the LA County Low Impact Development Standards Manual
(See Appendix D for Hydrocalc Analysis)

Step 2: Determine the design infiltration rate

$f_{design} = f_{measured}/FS$

$f_{measured}$ = 3.2 in/hr

FS = 2

f_{design} = 1.60 **in/hr**

Step 3: Determine the bioretention surface area

$d_{max} = f_{design}/12 \times t$

Where:

d_{max}= Maximum depth of water that can be infiltrated within the max detention time [ft]
f_{design} = Design infiltration rate [in/hr]
t = Maximum retention time (max 96 hrs) [hr]

d_{max}= 12.8 ft

BKF Engineers
4675 MacArthur Court, Suite 400
Newport Beach, California 92660

Select a ponding depth less than the maximum ponding depth

$d_{max} \geq d_p$

Where:

d_{max} = Maximum depth of water that can be infiltrated within the maximum detention time [ft]

d_p = Ponding depth [ft]

d_p = 7 ft

Calculate the infiltrating surface area (bottom of the bioretention area) required

$A = SWQDv / d_p$

A= 9,319 sf

APPENDIX F

BMP FACT SHEETS

BKF Engineers

P 949.526.8460

GENERAL NOTES:

THE STORM CAPTURE™ SYSTEM BY OLDCASTLE PRECAST IS PART OF THE STORMWATER MANAGEMENT SYSTEM FOR THE RESPECTIVE SITE, AS PREPARED BY THE PROJECT DESIGN ENGINEER. IT IS THE RESPONSIBILITY OF THE DESIGN ENGINEER TO DETERMINE DESIGN FLOW RATES, PRE-TREATMENT AND POST-TREATMENT REQUIREMENTS, STORAGE VOLUME, AND ENSURE THE FINAL DESIGN MEETS ALL CONVEYANCE AND STORAGE REQUIREMENTS. SYSTEM DESIGN AND TYPE, SOIL ANALYSIS, LOADING REQUIREMENTS, COVER HEIGHT AND MODULE SIZE DETERMINE THE FOUNDATION TYPE AND REQUIREMENTS AS STATED HEREIN. ANY VARIATIONS FOUND DURING CONSTRUCTION FROM THE SITE AND SYSTEM ANALYSIS MUST BE REPORTED TO THE PROJECT DESIGN ENGINEER. THE PROJECT DESIGN ENGINEER IS RESPONSIBLE FOR OBTAINING A GEOTECHNICAL ENGINEERING REPORT VERIFYING THE BEARING CAPACITY STATED IN DESIGN NOTES.

DESIGN NOTES:

1. DESIGN LOADINGS:
   - A. AASHTO HS20-44 W/ IMPACT.
   - B. DEPTH OF COVER = 6" - 5'-0".
   - C. ASSUMED WATER TABLE = BELOW BOTTOM.
   - D. EQUIVALENT FLUID PRESSURE = 45 PCF.
   - E. LATERAL LIVE LOAD SURCHARGE = 80 PSF.
   - F. NO LATERAL SURCHARGE FROM ADJACENT STRUCTURES.
2. CONCRETE 28 DAY COMPRESSIVE STRENGTH SHALL BE 6,000 PSI.
3. STEEL REINFORCEMENT: REBAR, ASTM A-615, GRADE 60.
4. CEMENT: ASTM C-150 SPECIFICATION.
5. STORM CAPTURE MODULE TYPE = INFILTRATION.
6. DEPTH OF AGGREGATE BEARING LAYER TO BE DETERMINED IN ACCORDANCE WITH OLDCASTLE TECH NOTE SC-01.
7. ALLOWABLE SOIL BEARING PRESSURE ADDRESSED IN OLDCASTLE TECH NOTE SC-01.
8. REFERENCE STANDARDS:
   - A. ASTM C 890
   - B. ASTM C 891
   - C. ASTM C 913
9. LESS THAN 6" OR GREATER THAN 5' OF COVER REQUIRES CUSTOM STRUCTURAL DESIGN AND MAY REQUIRE THICKER AGGREGATE BEARING LAYER.

INSTALLATION NOTES:

THE STORM CAPTURE™ MODULE SYSTEM IS TO BE INSTALLED IN ACCORDANCE WITH ASTM C891, INSTALLATION OF UNDERGROUND PRECAST UTILITY STRUCTURES. PROJECT PLAN AND SPECIFICATIONS MUST BE FOLLOWED ALONG WITH ANY APPLICABLE REGULATIONS.

1. PLAN LINE, GRADE AND ELEVATIONS MUST BE FOLLOWED.
2. A. WHERE SPECIFIED, AN 8 OZ. NON-WOVEN GEOTEXTILE FABRIC MUST BE USED AS A SEPARATION LAYER AROUND THE STORM CAPTURE SYSTEM.
3. PENETRATIONS IN THE GEOTEXTILE MAY ONLY BE MADE WITH SMOOTH WALL PIPES. MAKE PENETRATIONS FOR ALL OUTLETS BEFORE MAKING PENETRATIONS FOR ANY INLETS.
4. THE AGGREGATE BEARING LAYER SHOULD CONSIST OF CLEAN, DURABLE CRUSHED AGGREGATE COMPACTED AS DIRECTED BY THE ENGINEER. OLDCASTLE RECOMMENDS MATERIALS SUCH AS NO. 56 OR NO. 57 STONE PER ASTM C33.
5. DESIGNATED EMBEDDED LIFTERS MUST BE USED. USE PROPER RIGGING TO ASSURE ALL LIFTERS ARE EQUALLY ENGAGED WITH A MINIMUM 60 DEGREE ANGLE ON SLINGS AS NOTED AND IN ACCORDANCE WITH OLDCASTLE LIFTING PROCEDURES.
6. MODULES MUST BE PLACED AS CLOSE TOGETHER AS POSSIBLE, AND GAPS SHALL NOT BE GREATER THAN 3/4". ALL EXTERIOR SYSTEM JOINTS SHALL BE COVERED WITH A MIN. 8" JOINT WRAP ON SIDES AND TOP (CS-212 CONSEAL OR EQUIVALENT). INSTALL ONE ROW CS-102 CONSEAL (OR EQUIVALENT) BETWEEN PRECAST PIECES.
7. AUTHORIZATION SHOULD BE GIVEN BY THE PROJECT ENGINEER OR DESIGNATED PERSON PRIOR TO PLACEMENT ON BACKFILL FOR THE SYSTEM. CARE SHOULD BE TAKEN DURING PLACEMENT OF BACKFILL NOT TO DISPLACE MODULES OR JOINT WRAP. BACKFILL SHALL BE COMPACTED TO 95% STANDARD PROCTOR DENSITY OR AS SPECIFIED, AND SHOULD NOT BE COMPACTED WITHIN 6" OF MODULE.
8. CONSTRUCTION EQUIPMENT EXCEEDING DESIGN LOADING SHALL NOT BE ALLOWED ON STRUCTURE.

SPLASH PADS, INLETS AND RISERS:

PLACE SPLASH PADS AS DESIGNATED TO PREVENT SCOUR FROM INLETS AND INLET PIPES. ALL PIPE INLETS SHALL EXTEND INSIDE MODULE A MINIMUM OF 4". PLACE A NON-SHRINK, NON-METALIC GROUT, MIN. 3,000 PSI IN ANNULAR SPACE TO ELIMINATE ALL VOIDS.

STORMCAPTURE®

Inspection and Maintenance Guide

Stormwater

Description

The StormCapture® system is an underground, modular, structural precast concrete storage system for stormwater detention, retention, infiltration, harvesting and reuse, and water quality volume storage. The system's modular design utilizes multiple standard precast concrete units with inside dimensions of 7 feet by 15 feet (outside dimensions of 8 feet by 16 feet) to form a larger storage system. The inside height of the StormCapture system can range from 2 feet to 14 feet. This modular design provides limitless configuration options for site-specific layouts.

StormCapture components can be provided as either open-bottom modules to promote infiltration or closed-bottom modules for detention. In some cases, StormCapture modules can be placed in a checkerboard configuration for an even more efficient design. A Link Slab, with a footprint of 9 feet by 17 feet, is then used to bridge each space without a module.

The standard StormCapture design incorporates lateral and longitudinal passageways between modules to accommodate internal stormwater conveyance throughout the system. These passageways may be classified as either a "window configuration" with standard 12-inch tall sediment baffles extending up from the floor of the module to the bottom of the window, or a "doorway configuration" without the sediment baffles. The function and drainage rate of a StormCapture system depends on site-specific conditions and requirements.

Stormwater typically enters the StormCapture system through an inlet pipe. Grated inlets can also be used for direct discharge into the system. The StormCapture system is rated for H-20 traffic loading with limited cover. Higher load requirements can also be accommodated. In addition, StormCapture systems are typically equipped with a limited number of maintenance modules that provide access to the system for ongoing inspection and maintenance.

Function

The StormCapture system is primarily used to manage water quantity by temporarily storing stormwater runoff from impervious surfaces to prevent flooding, slow down the rate at which stormwater leaves the site, and reduce receiving stream erosion. In addition, the StormCapture system can be used to capture stormwater runoff for water quality treatment. Regardless of how the StormCapture system is used, some sedimentation may occur in the modules during the time water is stored.

Configurations

The configuration of the StormCapture systems may vary, depending on the water quality and/or quantity requirements of the site. StormCapture configurations for detention, retention/infiltration, and retention/harvesting are described below.

Detention

StormCapture Detention systems are designed with a closed bottom to detain stormwater runoff for controlled discharge from the site. This design may incorporate a dead storage sump and a permanent pool of water if the outlet pipe is higher than the floor elevation. Discharge from the system is typically controlled by an outlet orifice and/or outlet weir to regulate the rate of stormwater leaving the system. StormCapture Detention systems are typically designed with silt-tight joints, however when conditions exist that require a StormCapture system to be watertight, the system may be wrapped in a continuous, impermeable geomembrane liner. If the StormCapture Detention system includes Link Slabs, a liner must be used to detain water since the chambers under each Link Slab have no floor slab. In this case, care must be taken by maintenance personnel not to damage the exposed liner beneath each Link Slab.

Retention/Infiltration

StormCapture Retention/Infiltration systems are designed with an open bottom to allow for the retention of stormwater onsite through infiltration into the base rock and surrounding soils. For infiltration systems, the configuration of the base of the StormCapture system may vary, depending on the needs of the site and the height of the system. Some systems may use modules that have fully open bottoms with no concrete floor, while other systems may use modules that incorporate floor openings in the base of each module. These are typically 24-inch by 24-inch openings. For open-bottom systems, concrete splash pads may be installed below inlet grate openings and pipe inlets to prevent erosion of base rock. A StormCapture Infiltration system may have an elevated discharge pipe for peak overflow.

Retention/Harvesting

StormCapture Retention/Harvesting systems are similar to detention systems using closed-bottom modules, but stormwater is typically retained onsite for an extended period of time and later reused for non-potable applications or irrigation. For rainwater harvesting systems, an impermeable geomembrane liner is typically installed around the modules to provide a water-tight system.

Inspection and Maintenance Overview

State and local regulations typically require all stormwater management systems to be inspected on a regular basis and maintained as necessary to ensure performance and protect downstream receiving waters. Inspections should be used to evaluate the conditions of the system. Based on these inspections, maintenance needs can be determined. Maintenance needs vary by site and system. Using this Inspection & Maintenance Guide, qualified maintenance personnel should be able to provide a recommendation for maintenance needs. Requirements may range from minor activities such as removing trash, debris or pipe blockages to more substantial activities such as vacuuming and removal of sediment and/or non-draining water. Long-term maintenance is important to the operation of the system since it prevents excessive pollutant buildup that may limit system performance by reducing the operating capacity and increasing the potential for scouring of pollutants during periods of high flow.

Only authorized personnel shall inspect and/or enter a StormCapture system. Personnel must be properly trained and equipped before entering any underground or confined space structure. Training includes familiarity with and adherence to any and all local, state and federal regulations governing confined space access and the operation, inspection, and maintenance of underground structures.

Inspection and Maintenance Frequency

The StormCapture system should be inspected on a regular basis, typically twice per year, and maintained as required. The maintenance frequency will be driven by the amount of runoff and pollutant loading encountered by a given system. Local jurisdictions may also dictate inspection and maintenance frequencies.

Inspection Equipment

The following equipment is helpful when conducting StormCapture inspections:

- Recording device (pen and paper form, voice recorder, iPad, etc.)
- Suitable clothing (appropriate footwear, gloves, hardhat, safety glasses, etc.)
- Traffic control equipment (cones, barricades, signage, flagging, etc.)
- Manhole hook or pry bar
- Confined space entry equipment, if needed
- Flashlight
- Tape measure
- Measuring stick or sludge sampler
- Long-handled net (optional)

Inspection Procedures

A typical StormCapture system provides strategically placed access points that may be used for inspection. StormCapture inspections are usually conducted visually from the ground surface, without entering the unit. This typically limits inspection to the assessment of sediment depth, water drain down, and general condition of the modules and components, but a more detailed assessment of structural condition may be conducted during a maintenance event.

To complete an inspection, safety measures including traffic control should be deployed before the access covers are removed. Once the covers have been removed, the following items should be inspected and recorded (see form provided at the end of this document) to determine whether maintenance is required:

- Observe inlet and outlet pipe penetrations for blockage or obstruction.
- If possible, observe internal components like baffles, flow control weirs or orifices, and steps or ladders to determine whether they are broken, missing, or possibly obstructed.
- Observe, quantify, and record the sediment depths within the modules.
- Retrieve as much floating trash as possible with a long-handled net. If a significant amount of trash remains, make a note in the Inspection & Maintenance Log.
- For infiltration systems, local regulations may require monitoring of the system to ensure drain down is occurring within the required permit time period (typically 24 to 72 hours). If this is the case, refer to local regulations for proper inspection procedure.

Maintenance Indicators

Maintenance should be scheduled if any of the following conditions are identified during the inspection:

- Inlet or outlet piping is blocked or obstructed.
- Internal components are broken, missing, or obstructed.
- Accumulation of more than six inches of sediment on the system floor or in the sump, if applicable.
- Significant accumulation of floating trash and debris that cannot be retrieved with a net.
- The system has not drained completely after it hasn't rained for one to three days, or the drain down does not meet permit requirements.
- Any hazardous material is observed or reported.

Maintenance Equipment

The following equipment is helpful when conducting StormCapture maintenance:

- Suitable clothing (appropriate footwear, gloves, hardhat, safety glasses, etc.)
- Traffic control equipment (cones, barricades, signage, flagging, etc.)
- Manhole hook or pry bar
- Confined space entry equipment, if needed
- Flashlight
- Tape measure
- Vacuum truck

Maintenance Procedures

Maintenance should be conducted during dry weather when no flow is entering the system. Confined space entry is usually required to maintain the StormCapture. Only personnel that are OSHA Confined Space Entry trained and certified may enter underground structures. Once safety measures such as traffic control have been deployed, the access covers may be removed and the following activities may be conducted to complete maintenance:

- Remove trash and debris using an extension on the end of the boom hose of the vacuum truck. Continue using the vacuum truck to completely remove accumulated sediment. Some jetting may be necessary to fully evacuate sediment from the system floor or sump. Jetting is acceptable in systems with solid concrete floors or base slabs (referred to as closed-bottom systems). However, jetting is not recommended for open-bottom systems with a gravel foundation since it may cause bedding displacement, undermining of the foundation, or internal disturbance.
- All material removed from the system during maintenance must be disposed of in accordance with local regulations. In most cases, the material may be handled in the same manner as disposal of material removed from sumped catch basins or manholes.
- Inspect inlet and outlet pipe penetrations for cracking and other signs of movement that may cause leakage.
- Inspect the concrete splash pads (applicable for open-bottom systems only) for proper function and placement.
- Inspect the system for movement of modules. There should be less than 3/4-inch spacing between modules.
- Inspect the general interior condition of modules for concrete cracking or deterioration. If the system consists of horizontal joints as part of the modules, inspect those joints for leakage, displacement or deterioration.

Be sure to securely replace all access covers, as appropriate, following inspection and/or maintenance. If the StormCapture modules or any of the system components show significant signs of cracking, spalling, or deterioration or if there is evidence of excessive differential settlement between modules, contact Oldcastle Stormwater at **800-579-8819.**

COVENANT AND AGREEMENT
REGARDING THE MAINTENANCE OF LOW IMPACT DEVELOPMENT (LID) & NATIONAL POLLUTANTS DISCHARGE ELIMINATION SYSTEM (NPDES) BMPs

The undersigned, _____ ("Owner"), hereby certifies that it owns the real property described as follows ("Subject Property"), located in the City of Walnut , State of California:

LEGAL DESCRIPTION

ASSESSOR'S ID #_____TRACT NO._____LOT NO._____

ADDRESS: _____

_____

Owner is aware of the requirements of the County of Los Angeles' Green Building Standards Code, Title 31, Section 4.106.4 (LID), and National Pollutant Discharge Elimination System (NPDES) permit. The following post-construction BMP features have been installed on the Subject Property:

- □ Porous pavement
- □ Cistern/rain barrel
- □ Infiltration trench/pit
- □ Bioretention or biofiltration
- □ Rain garden/planter box
- □ Disconnect impervious surfaces
- □ Dry Well
- □ Storage containers
- □ Landscaping and landscape irrigation
- □ Green roof
- ☒ Other Storm Capture Infiltration Vault

The location, including GPS x-y coordinates, and type of each post-construction BMP feature installed on the Subject Property is identified on the site diagram attached hereto as Exhibit 1.

Owner hereby covenants and agrees to maintain the above-described post-construction BMP features in a good and operable condition at all times, and in accordance with the LID/NPDES Maintenance Guidelines, attached hereto as Exhibit 2.

Owner further covenants and agrees that the above-described post-construction BMP features shall not be removed from the Subject Property unless and until they have been replaced with other post-construction BMP features in accordance with County of Los Angeles' Green Building Standards Code, Title 31 and NPDES permit.

Owner further covenants and agrees that if Owner hereafter sells the Subject Property, Owner shall provide printed educational materials to the buyer regarding the post-construction BMP features that are located on the Subject Property, including the type(s) and location(s) of all such features, and instructions for properly maintaining all such features.

Owner makes this Covenant and Agreement on behalf of itself and its successors and assigns. This Covenant and Agreement shall run with the Subject Property and shall be binding upon owner, future owners, and their heirs, successors and assignees, and shall continue in effect until the release of this Covenant and Agreement by the County of Los Angeles, in its sole discretion.

Project No. 19-1110

Inglewood Unified School District
401 S. Inglewood Avenue
Inglewood, CA 90303

Attention: Ms. Kimberly Munoz

SUBJECT: Limited Geotechnical Investigation Report
Morningside High School Site Upgrades
10500 Yukon Avenue South
Inglewood, CA 90303

1. INTRODUCTION

This report presents the results of a Limited Geotechnical Investigation performed by Koury Engineering & Testing, Inc. (Koury) for the proposed Morningside High School improvements located at 10500 Yukon Avenue South, Inglewood, California. The study was performed to evaluate the subsurface soil conditions in the area of the proposed improvements in order to provide geotechnical recommendations for design and construction. This report includes our findings and recommendations for the design and construction of the proposed buildings, bleachers and associated improvements.

The recommendations provided within this submittal are based on the results of our field exploration, laboratory testing and engineering analyses. Our services were performed in general accordance with our Proposal No. 19-1110, dated November 4, 2019.

Our professional services have been performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable geotechnical consultants practicing in this or similar localities. No other warranty, expressed or implied, is made as to the professional advice included in this report. This report has been prepared exclusively for the Inglewood Unified School District and their consultants for the subject project. The report has not been prepared for

use by other parties and may not contain sufficient information for the purposes of other parties or other uses.

2. SITE CONDITIONS

The Morningside High School is bounded by W 104th Street on the north, Yukon Avenue South on the west, W 108th Street and residential homes on the south and Monroe Middle School and commercial facilities on the east. The main access to the site is from Yukon Avenue South near the southwest corner of the campus. The proposed small one-story buildings are located in the southwest portion of the campus, south and northwest of the existing football field. The existing football field will be shifted west and the bleachers will be constructed north and south of the track that will surround the new football field.

The south portion of the campus is presently occupied by an existing football field, basketball courts and portable trailers. Most of the area is landscape except for the track, the basketball court, and the portable trailer area. The proposed expanded parking lot is presently occupied partially by an existing parking lot and landscape and walkway strips. The proposed electrical yard within the northern portion of the site is covered with grass landscape. Immediately east of the future electrical yard, a new baseball field will be constructed following the removal of some portable buildings and tennis courts. There will be a new softball field located northeast of the existing basketball courts and at the east end of the existing football field.

The site slopes gently to the south and southwest, and the ground surface lies at elevations between about 88 and 112 feet (NAVD88). Drainage of the site is generally by sheet flow toward the south.

3. PROPOSED IMPROVEMENTS

Koury understands that the Inglewood Unified School District is planning to add facilities to the Morningside High School consisting of several small one-story buildings, a football field with two sets of bleachers, running track, parking lot, tennis courts, and baseball and softball fields. Based on the site plan provided to us, there will be a new student visitor parking lot at the northwest corner of the campus supporting approximately 154 parking spaces. The proposed electrical yard to be located within the northern portion of the site east Building H and west of the new baseball

field will measure about 30 by 65 feet in plan and may have masonry walls with metal deck roofing.

Within the southwest corner of the campus, it is proposed to construct a new football field and an 8-lane track and new bleachers will be located on the north and south sides of the running track. The site plan shows also three small one-story buildings on the northwest side of the playfield area; these buildings are likely to contain bathrooms, locker rooms, storage rooms or concessions. The smallest building covers an area of about 700 square feet and the largest building covers an area of about 3,600 square feet. The third building appears to cover an area of about 1,900 square feet. The site plan also indicates that two rows of 3 side-by-side tennis courts are planned east of the football field and south of the future softball field. The basketball courts will be relocated west partially between the basketball courts and the east end of the new track.

The associated improvements at the site may consist of low walls, fire access road, new utility lines, sidewalks, fencing, light poles, scoreboard and various hardscape areas. Architectural and structural design details for the new buildings were not provided. Koury assumed maximum building column load of about 25 kips and maximum wall loads not exceeding 2 kips per lineal foot.

4. FIELD EXPLORATION

The field exploration program consisted of drilling ten soil test borings (B-1 through B-10) on January 2, 2020 using truck-mounted hollow-stem auger drilling equipment. The borings were drilled to depths ranging between about 6½ and 41½ below the existing ground surface.

The locations of the borings are shown on the Boring Location Map, Figure A-2, presented in Appendix A. Standard penetration test samples, California ring samples and bulk samples were obtained from the borings for laboratory testing. The depths, blow counts, and description of the samples are shown on the attached boring logs presented in Appendix B of this report. The contractor used a 140-lbs automatic hammer to drive the samplers a maximum of 18 inches into the soils.

5. LABORATORY TESTING

Laboratory tests, including moisture content, dry unit weight, #200 sieve wash, direct shear, pocket penetrometer, consolidation and expansion index were performed to aid in the classification of the materials encountered and to evaluate their engineering properties. Sulfates, chlorides, resistivity, and pH tests (corrosivity tests) were also performed on one sample. The results of pertinent laboratory tests are presented on the boring logs in Appendix B, and/or in Appendix C.

6. SOIL CONDITIONS

The subsurface soil profile consists of fill underlain by alluvial deposits. The fill depth was found to range between about 2 and 5 feet at the boring locations. Deeper fill may be encountered at utility locations, or at other locations between and beyond the borings. Except for Boring B-5 where 6 inches of asphalt was encountered, the asphalt pavement thickness at the boring locations consisted of about 3½ to 5 inches of asphalt concrete. The asphalt was found to be underlain by 2 to 3 inches of aggregate base except for Boring B-4 that indicated 6 inches of base.

Except for Boring B-2 drilled in the southwest portion of the campus in relatively close vicinity of Yukon Avenue South where clayey sand was encountered, the fill materials encountered in the borings consisted generally of firm to stiff sandy lean clay. The fill encountered were generally moist to very moist.

With a few exceptions, the underlying alluvium consists predominantly of interbedded sandy lean clay with clayey sand and silty sand. Interbeds of poorly graded sand were encountered in Borings B-6 and B-9 at depths exceeding 13 feet below the ground surface. The sandy clay alluvial soils are generally stiff to very stiff, and the sand are medium dense to dense.

With a few exceptions, the alluvial soils encountered are generally moist to very moist. Except for one sample of Boring B-9 at a depth of 21 feet where a moisture content of 31 percent was measured, the moisture contents of the sandy clay range from about 12½ to 21 percent with an average of about 14 percent, and the moisture contents of the sand range from about 2 to 14½ percent with an average of about 10 percent. The degree of saturation of the clay is generally high (about 90 to nearly 100 percent).

Our #200 sieve wash tests indicated that the fines contents of sand generally range from about 4 to 48 percent with an average of about 31½ percent. The fines contents of the clay vary from about 50 to 90 percent with an average of about 64½ percent. The dry unit weights of the clay tested range from about 100 to 127 pcf with an average of about 119½ pcf. The dry unit weights of sand range from about 108 to 127 pcf with an average of about 119 pcf.

The consolidation tests did not indicate significant collapse upon addition of water. Despite the high degree of saturation, however, the consolidation test from a depth of 9 feet indicated about 0.3% swell strain upon addition of water under a pressure of 3200 psf. The clay soils are generally overconsolidated and are considered moderately compressible. The rebound (unloading) curve of the consolidation tests indicate that some of the clay tested have potential for expansion. The direct shear test performed on a clayey sand sample indicated peak and ultimate friction angles of about 32 and 31 degrees and peak and ultimate cohesion of about 472 and 52 psf, respectively.

Pocket penetrometer test results indicate unconfined compression strengths of the tested soils ranging between about 1.5 and 4.5 tsf with an average of about 4.4 tsf. An expansion index test on a sandy lean clay of Boring B-1 at 0 to 2 feet yielded a value of 14 while a test on Boring B-4 on a sample near the surface yielded a value of 22.

Variations in the soil conditions as well as detailed descriptions are indicated on the attached boring logs in Appendix B. The soil conditions described in this report are based on the soils observed in the test borings drilled for this investigation and the laboratory test results. Variations between and beyond the borings should be anticipated.

7. GROUNDWATER

The site lies at approximately elevations 88 to 112 feet (NAVD88). Groundwater was not encountered in the borings drilled for this study. The Seismic Hazard Zone Report for the Inglewood 7.5-Minute Quadrangle, Los Angeles County CA, Seismic Hazard Zone Report 029, Department of Conservation, Division of Mines and Geology indicates that the historic high groundwater is at least 50 feet below ground surface (see Figure A-5 for the Historic High Groundwater Map).

8. SITE GEOLOGY

The site is located within the Los Angeles physiographic basin. The Los Angeles basin is bounded on the north by the Santa Monica and San Gabriel Mountains, on the east and southeast by the Santa Ana Mountains and the San Joaquin Hills, and on the west and south by the Pacific Ocean. The Los Angeles basin represents a down-warped block of basement rock overlain by approximately 31,000 feet of sediment.

The Los Angeles physiographic basin is part of the Peninsular Ranges Geomorphic Province. The Peninsular Ranges extend north to the San Gabriel Mountains and south into Mexico to the tip of Baja California. The Peninsular Ranges Province is characterized by alluviated basins, elevated erosion surfaces, and northwest-trending mountain ranges bounded by northwest trending faults.

The Geology Map of the Long Beach Quadrangle indicates that the subsurface conditions at the site consist of old alluvial floodplain deposits consisting of sand, silt and clay (see Figure A-3 for the Geology Map). The subsurface soil profile encountered in the borings consists of fill underlain by alluvial deposits.

9. OIL WELL

The State of California Department of Conservation, Division of Oil, Gas and Geothermal Resources indicates that Morningside High School is located about ½ mile south of the Potrero Oil/Gas Field and ½ mile west of the Howard Townsite Oil/Gas Field. The nearest dry hole is located about 1,000 feet north of the site and the nearest idle hole is about ½ mile northwest of the site. The nearest active well is located about 1½ miles southeast of the site (See Figure A-9, in Appendix A).

During our subsurface exploration, we did not observe oil-field derived hazardous or toxic materials within the borings drilled to the maximum depth of 41½ feet. No hazardous materials associated with oil fields are anticipated at the building sites.

10. SEISMIC CONSIDERATIONS

10.1. General

Morningside High School, like the rest of Southern California, is located within a seismically active region as a result of being located near the active margin between the North American and Pacific tectonic plates. The principal source of seismic activity is movement along the northwest-trending regional faults such as the San Andreas, San Jacinto, Newport-Inglewood and Whittier-Elsinore fault zones.

By definition of the California Geological Survey (CGS), an active fault is one which has had surface displacement within the Holocene Epoch (roughly the last 11,000 years). The CGS has defined a potentially active fault as any fault which has been active during the Quaternary Period (approximately the last 2,000,000 years). These definitions are used in delineating Earthquake Fault Zones as mandated by the Alquist-Priolo Geologic Hazard Zones Act of 1972 and as subsequently revised in 1997 as the Alquist-Priolo Earthquake Fault Zones. The intent of the act is to require fault investigations on sites located within Special Studies Zone to preclude new construction of certain inhabited structures across the trace of active faults.

The subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Probably the most important fault line to the site from a seismic shaking standpoint is the northwest trending Alquist-Priolo Newport-Inglewood Fault, located approximately 1,000 feet northeast of the site. The nearest Alquist-Priolo active segment of the Palos Verdes Fault is located approximately 13 miles south of the site and the Whittier Fault Zone nearest active segment is located about 19 miles east of the site. The Redondo Canyon Fault is located about 9½ miles southwest of the site, the Santa Monica Fault Zone is located about 10 miles northwest of the site and the Hollywood Fault Zone is located about 11 miles north of the site (see Figure A-6, Appendix A). The Puente Hills (LA) Fault is located about 5 miles to the northeast, the Puente Hills (Santa Fe Springs) Fault is about 11 miles to the southeast, and the Compton Fault is about 8¼ miles to the southwest.

Based on the information available at this time, it is our opinion that a Mw7.3 earthquake may occur on the Palos Verdes Fault, a Mw6.9 earthquake may occur on the Whittier Fault, a Mw7.2 earthquake may occur on the Newport-Inglewood Fault, a Mw6.2 earthquake may occur on the Redondo Canyon

Fault, a Mw7.0 earthquake may occur on the Santa Monica Fault, a Mw6.6 earthquake may occur on the Hollywood Fault, a Mw6.9 earthquake may occur on the Puente Hills (LA) Fault segment, a Mw6.6 earthquake may occur on the Puente Hills (Santa Fe Springs) segment, and a Mw6.9 earthquake may occur on the Compton Fault. Large earthquakes could occur on other faults in the general area, but because of their greater distance and/or lower probability of occurrence, they may be less important to the site from a seismic shaking standpoint.

Due to the proximity of the site to the Newport-Inglewood Fault, near field effects from strong ground motion associated with a large earthquake along this fault may occur at the site. These near field effects, including "fling" and directivity of strong ground motion, may result in significantly higher accelerations at the site.

According to the EQSEARCH program, within a search radius of 60 miles, about 63 earthquakes of magnitude 5 or greater have been recorded up to the year 2000. Within that same period, there are records of 11 earthquakes of magnitude 6 or greater, 5 earthquakes of magnitude 6.5 or greater and 3 earthquakes of magnitude 7 or greater within the same search area. The largest earthquake from the site was reported to have occurred in 1827 at a location about 38 miles from the site. Using the attenuation relationship of Campbell and Bozorgnia for alluvium (1997), the highest acceleration at the site could have been on the order of 0.22g. A summary of the earthquakes with magnitudes 5 and greater is attached in Appendix D.

10.2. Landsliding

The site is not located in a Landslide Hazard Zone on the State of California Seismic Hazard Zones Map (Figure A-4 in Appendix A). No evidence for landsliding was observed on or in the immediate vicinity of the site at the time of our field exploration. Based on topographic conditions, landsliding is not considered a potential hazard at the site.

10.3. Liquefaction

Liquefaction may occur when saturated, loose to medium dense, cohesionless soils are densified by ground shaking or vibrations. The densification results in increased pore water pressures if the soils are not sufficiently permeable to dissipate these pressures during and immediately following an

earthquake. When the pore water pressure is equal to or exceeds the overburden pressure, liquefaction of the affected soil layers occurs. For liquefaction to occur, three conditions are required:

- Ground shaking of sufficient magnitude and duration;
- Groundwater level at or above the level of the susceptible soils during the ground shaking; and
- Soils that are susceptible to liquefaction.

The Liquefaction Hazards zone on the State of California Seismic Hazards Zones Map (Figure A-4 in Appendix A) indicates that the site is not located in a liquefaction susceptibility zone. Due to the absence of shallow groundwater, the presence of clayey soils and some medium dense to dense sands, it is our opinion that the potential for liquefaction is remote. However; the potential for dry seismic settlement was evaluated.

For seismic dry settlement evaluation, we obtained an earthquake magnitude of Mw6.35 from a seismic-hazard deaggregation using the USGS Unified Hazard Tool. Our analysis also utilized a site acceleration of 0.898g (PGA_M) obtained from ASCE 7-16 Seismic Design Ground Motion Analysis. The seismic settlement calculations were performed for the deepest borings (B-6 and B-7) using the SPT and equivalent California sampler blow count data. The SPT tests were performed with an automatic hammer and unlined SPT samplers. The California sampler blow counts were multiplied by a factor of 0.65 to obtain the equivalent SPT blow counts.

Using the LiquifyPro software, we calculated seismic settlements on the order of ½ to ¾ inch (see result of calculations in Appendix C). Considering the recommendations in Section 7.66 of the SCEC Guidelines for Implementation of SP 117 and our total seismic settlement calculations, it is our opinion that a differential settlement on the order of ¼ inch in 40 feet may be considered for the design seismic event.

10.4. Tsunamis and Seiches

The site is located at an average elevation ranging from approximately 88 to 112 feet and 5½ miles away from the coastline. There is no mapped major reservoir in the immediate vicinity and upslope of the site. Therefore, tsunamis and seiches are not considered potential hazards.

11. FLOODING

The project site lies within an area of minimal flood hazard as shown on the FEMA Flood Map #06037C1780G, effective date December 21, 2018 (Figure A-7, Appendix A). Based on the County of Los Angeles GIS, the site is located within a 500-year flood zone; however, the site is not reported as being located in a dam inundation zone. Flooding is not considered a high potential hazard to the site.

12. COLLAPSIBLE SOILS

Soils prone to collapse are generally young and deposited by flash floods and wind. The onsite soils have been mapped as older alluvium and the soils at shallow depth have moisture contents that are near or above optimum, which aid in mitigating collapse potential. Our laboratory tests did not indicate significant collapse. Therefore, the potential for collapse is considered low. Overerexcavation and recompaction, and appropriate drainage are recommended to mitigate the potential for hydrocollapse.

13. CONCLUSIONS AND RECOMMENDATIONS

13.1. General

In our opinion, the planned improvements are feasible from a geotechnical engineering point of view provided the geotechnical recommendations presented in this report are followed. The main concerns from a geotechnical standpoint are the presence of clay soils and high moisture content soils.

The following sections contain preliminary geotechnical recommendations for the design and construction of the proposed improvements and include our recommendations and discussions about grading, bearing capacity, settlement, flatwork, slabs-on-grade, temporary excavations, and utility trenches.

13.2. Grading

13.2.1. Building Pads

The thickness of undocumented fill encountered at the boring locations range from about 2 to 5 feet. We recommend removing all undocumented fill within the proposed building pads and structure areas. The exact thickness of undocumented fill should be verified at the time of grading.

Any existing pavement, foundation, vegetation, organic material, abandoned underground utilities and other debris should be removed from the proposed building pad and structure areas. Additional recommendations for overexcavation are presented below.

Within building pad areas, we recommend complete overexcavation of the existing fill and the subgrade to at least 3½ feet below existing grades and 2 feet below footings, whichever is deeper. Where feasible, the overexcavation should extend laterally at least 5 feet beyond the building perimeter.

Following subgrade approval by the Geotechnical Engineer, the bottom of the removal excavation should be scarified to a depth of 8 inches, moisture conditioned to at least 125 percent of optimum and recompacted to 90% relative compaction for clay soils and moisture conditioned within 2½ percent of optimum and recompacted to 92% relative compaction for sand as determined by ASTM D1557. However, if the subgrade is firm and consists of undisturbed clay alluvium and the moisture content is at least 125 percent of optimum, the scarification should not be performed, and measures should be taken to prevent subgrade disturbance. The subgrade should be proof rolled with heavy construction equipment to determine its firmness, as needed.

All fill placed within the building pads should be compacted to at least 95% relative compaction at a moisture content within 2½ percent of optimum for sand/granular soils and to at least 90% relative compaction at a moisture content of at least 125 percent of optimum for sandy clay soils unless approved otherwise by the Geotechnical Consultant at the time of construction. The shallow on site sandy clay soils can generally be used as backfill; however, if encountered, any medium to high plastic onsite clay soils should not be used within 2 feet of footings or building slabs. All fill should be deemed as "failing" and unsuitable if the moisture content is less than the recommended value unless determined otherwise by the Geotechnical Engineer at the time of construction.

13.2.2. Exterior Flatwork, Sidewalk and Pavement Areas

Similarly to the building footprint areas, all abandoned utilities should be removed, and the excavations should be backfilled with engineered fill. We recommend overexcavating 18 inches of subgrade material and placing at least 18 inches of new engineered fill for the subgrade of all new non-structural flatwork and pavement. Prior to backfill placement, the subgrade should be scarified to a depth of 8 inches, moisture conditioned and recompacted to 90% relative compaction.

We further recommend the placement of at least 12 inches of non-expansive granular material below all new pedestrian concrete flatwork. It is critical that the upper 12 inches of clay soils below the non-expansive soils be thoroughly moisture conditioned to 125 percent of optimum except for asphalt pavement where it should be at least 115 percent of optimum.

Except for pavement areas, all fill outside the structure areas should be compacted to at least 90% relative compaction at moisture content within 2½ percent of optimum for sand and other granular material and at least 125 percent of optimum for clay soils except as indicated otherwise by the Geotechnical Engineer. Below pavement areas, all clay soils should be compacted to at least 90 percent relative compaction and all granular material to 95 percent relative compaction.

13.2.3. General Grading Requirements

1. All fill, unless otherwise specifically stated in the report, should be compacted to at least 90 percent of the maximum dry density as determined by ASTM D1557 Method of Soil Compaction for clay soils and 95 percent relative compaction for sand and other granular soils, unless specified otherwise.

2. No fill should be placed until the area to receive the fill has been adequately prepared and approved by the Geotechnical Consultant or his representative.

3. Fill soils should be kept free of debris and organic material.

4. Rocks or hard fragments larger than 3 inches may not be placed in the fill without approval of the Geotechnical Consultant or his representative, and in a manner specified for each occurrence. There should not be any concentrations of particle sizes of 2 inches or greater; proper mixing should be performed. If encountered, oversize materials should be disposed outside the structural fill and flatwork areas at the locations designated by the District representative.

5. The fill material should be placed in lifts which, when loose, should not exceed 8 inches per lift. Each lift should be spread evenly and should be thoroughly mixed during the spreading operation to obtain uniformity of material and moisture.

6. When the moisture content of the fill material is lower than the specified value or is too low to obtain adequate compaction, water should be added and thoroughly dispersed until the soil has a moisture within 2½ percent of optimum moisture content for sand material and 125 percent of optimum for clayey soils unless indicated otherwise in this report and/or by the Geotechnical Engineer at the time of construction.

7. When the moisture content of the fill material is too high to obtain adequate compaction, the fill material should be aerated by blading or other satisfactory methods until the soil has a moisture content as specified herein.

8. Permanent fill and cut slopes should not be constructed at gradients steeper than 2:1(H: V).

It should be noted that some of the clay soils have a high in-situ degree of saturation and moisture contents above optimum and outside the compactable moisture range. These soils are subject to disturbance and "pumping", specially under heavy rubber tire equipment. The contractor will have to select appropriate excavation and compaction equipment to avoid disturbing the high moisture content subgrade soils or soils with high degree of saturation and to be able to compact the fill to the project specifications above relatively soft subgrade. Any scarified clay soils must be compacted to at least 90 percent relative compaction as determined by ASTM D1557.

We recommend that all excavated clay soils be pre-mixed and moisture conditioned outside the fill area prior to reuse as fill. Where the soil consists of sandy clay (50 to 70% fines) and severe "pumping" conditions develop during compaction, the moisture conditioning requirement may be revised at the discretion of the Geotechnical Engineer. Pre-soaking or aeration will be required if the compaction moisture does not meet the above requirements.

13.3. Fill Materials

13.3.1. Onsite Materials

The onsite shallow clayey sand and sandy clay with low expansion potential are deemed suitable to be re-used as engineered fill, provided they are properly processed, moisture conditioned, and free from deleterious material prior to fill placement except as indicated. Some import non-expansive material should also be anticipated for backfilling purpose. The imported materials being used for backfilling should have a low expansion potential (EI less than 20) and should comply with the specifications of this report.

The onsite sandy clay soils may be used under asphalt pavement and concrete roadway areas provided they are properly moisture conditioned; however, they should not be used as backfill within the upper one foot below concrete pedestrian flatwork areas unless further testing at the time of construction indicates an expansion index less than about 20. Unless indicated otherwise, the shallow sandy clay soils are considered suitable for backfilling purpose where no concrete flatwork is anticipated provided, they are free of deleterious and oversize materials and are properly processed and moisture conditioned.

Overexcavation and re-compaction will induce fill shrinkage. Many factors such as mixing, relative compaction of the fill, and topographic approximations will affect shrinkage. We cannot estimate the exact amount of shrinkage; however, in our opinion, the shrinkage may be on the order of 10 to 15 percent for existing soils excavated and recompacted to 90 percent relative compaction. This estimate does not include the material that will be required to fill in the excavations after the removal of any subsurface structures from the prior use of the site and removal of topsoil.

13.3.2. Import

Import materials should contain sufficient fines (binder material) to be relatively impermeable and result in a stable subgrade when compacted. The imported materials should have an expansion index (EI) less than 20 and should be free of organic materials, debris, and cobbles larger than 2½ inches with no more than 40% passing the # 200 sieve. A bulk sample of potential import material, weighing at least 35 pounds, should be submitted to the Geotechnical Consultant at least 48 hours before fill operations. Other than aggregate base and bedding sand, all proposed import materials should be tested for corrosivity, should be environmentally cleared from contamination and should be approved by the Geotechnical Consultant prior to being imported onsite.

13.4. Temporary Excavations

Temporary excavations adjacent to un-surcharged areas are anticipated to be stable vertically to a depth up to 5 feet in fill and alluvium. For deeper excavations up to a depth of 8 feet, we recommend a gradient no steeper than ¾:1 (H:V) for unsurcharged excavations unless shoring is used.

The tops of slopes should be barricaded to prevent vehicles and storage loads within 6 feet of the tops of the slopes, or within a distance equal to at least the height of the slope, whichever is greater. A

greater setback may be necessary when considering heavy vehicles, such as concrete trucks and cranes; we should be advised of such heavy vehicle loadings so that specific setback requirements can be established. When excavating adjacent to existing footings or building supports, proper means should be employed to prevent any possible damage to the existing structures. Un-shored excavations should not extend below a 1½:1 (H:V) plane extending downward from the lower edge of adjacent footings and should start at least 2 feet away from the footing edge. Where there is insufficient space to slope back an excavation, shoring may be required. All regulations of State and Federal OSHA should be followed.

Temporary excavations are assumed to be those that will remain un-shored for a period of time not exceeding one week. In dry weather, the excavation slopes should be kept moist, but not soaked. If excavations are made during the rainy season (normally from November through April), particular care should be taken to protect slopes against erosion. Mitigative measures, such as installation of berms, plastic sheeting, or other devices, may be warranted to prevent surface water from flowing over or ponding at the top of excavations.

13.5. Floor Slabs

13.5.1. General

The grading recommendations for the new building pads are provided in Section 13.2.1. The building floor slabs-on-grade, as a minimum, should have a thickness of 5 inches and should contain as a minimum No. 4 bars spaced a maximum of 16 inches on centers, in both directions or as recommended otherwise by the Structural Engineer. The Structural Engineer should ultimately determine the size and spacing of the reinforcement to be used. We recommend a concrete strength of at least 4000 psi unless determined otherwise by the Structural Engineer.

13.6.2 Moisture Sensitive Floor Covering

Water vapor transmitted through floor slabs is a common cause of floor covering problems. In areas where moisture-sensitive floor coverings (such as tile, hardwood floors, linoleum or carpeting) are planned, a vapor retarder should be installed below the concrete slab to reduce excess vapor transmission through the slab.

The function of the recommended impermeable membrane (vapor retarder) is to reduce the amount of soil moisture or water vapor that is transmitted through the floor slab. The membrane should be at least 15-mil thick, Class A, and care should be taken to preserve the continuity and integrity of the membrane beneath the floor slab. The vapor retarder should conform to ASTM E1745.

A capillary break below the slab may be used at the discretion of the Project Architect. If used, the capillary break should consist of at least 4 inches of free draining gravel or coarse sand, with no more than 2 percent passing the ASTM No. 200 sieve, and should be placed below the vapor retarder. The gradation for the free draining material should conform to the requirements for No. 4 Concrete Aggregates as specified in Section 200-1.4 of the Standard Specifications for Public Works Construction (Greenbook).

Another factor affecting vapor transmission through floor slabs is the water to cement ratio in the concrete used for the floor slab. A high water to cement ratio increases the porosity of the concrete, thereby facilitating the transmission of water vapor through the slab. The project Structural Engineer should provide recommendations for design of the building slab in accordance with the latest version of the applicable codes. The placement of sand above the vapor retarder is the purview of the Structural Engineer.

13.6. Seismic Coefficients

Under the Earthquake Design Regulations of Chapter 16A, Section 1613A of the 2019 CBC, and based on the mapped values, the coefficients and factors presented in Table 1 were calculated using ASCE 7-16 and the USGS map parameters (Figure A-8, Response Spectrum).

Table 1 – Seismic Coefficients and Factors

Site Class (CBC 2019 – 1613A.3.2)	D
Seismic Design Category based on Occupancy Category III (CBC 2019-1604A.5 &1613A.3.5)	*D
Mapped Acceleration Parameter for Short Period (0.2 Second), S_S	1.895
Mapped Acceleration Parameter for 1.0 Second, S_1	0.667
Adjusted Maximum Spectral Response Parameter for Short Period (0.2 Second), S_{MS}	1.895
Adjusted Maximum Spectral Response Parameter for 1.0 Second Period, S_{M1}	*1.134
Design Spectral Response Acceleration Parameter, S_{DS}	1.263
Design Spectral Response Acceleration Parameter, S_{D1}	*0.756
Peak Ground Acceleration (PGA_M)	0.898

Project Site Coordinates: Longitude: W118.333090º Latitude: N33.929175º (WGS84)
*Based on F_v of 1.7. See Section 11.4.8 of ASCE 7-16 for calculation requirements

The site class is determined in accordance with ASCE 7 Chapter 20 using either shear wave velocity, SPT blow count or undrained shear strength. For a site to be classified as Site Class D the weighted average SPT blow count should be between 15 and 50 and the average weighted undrained shear strength should be between 1,000 and 2,000 psf within the upper 100 feet of soil. The SPT blow count test results presented on the boring logs indicate that the requirements for Class D are met.

13.7. Shallow Foundations

General: For the purpose of preparing this report, we assumed that the proposed building structures will impose maximum column loads of about 25 kips and wall loads less than 2 kips per lineal foot. The recommendations for preparation of the subgrade underlying the footings are provided in the "Earthwork" Section of this report. The Structural Engineer should design foundations in accordance with the requirements of the applicable building code.

Footings should have a minimum width of 2 feet for isolated footings and 18 inches for continuous footings. The bottom of building footings should be located at least 24 inches below the lowest adjacent finish grade, and reinforcement should consist of a minimum of two No. 5 bars, top and bottom or equivalent as determined by the Structural Engineer.

The proposed building structures may be supported on isolated and/or strip footings designed using a net allowable bearing pressure of 2,000 pounds per square foot (psf) for footings supported on at least 2 feet of engineered fill as indicated in the grading section of this report and embedded at least 24 inches below the lowest adjacent grade. This bearing pressure may be increased by 250 psf for each additional foot of depth and 200 psf for each additional foot of width to a maximum of 3,200 psf. A one-third increase in the bearing value may be used when considering wind or seismic loads. In the event of new footings located within one footing width of an existing footing, we recommend reducing the bearing pressure of the new footing by 30 percent.

Minor footings may be required for low height exterior landscape walls (4 feet or less in height), or other small ancillary structures. These footings should be supported on at least 2 feet of new engineered fill and should be embedded at least 18 inches. A vertical bearing pressure of 1,500 psf may be used for these footings.

Lateral Resistance of Footings: Lateral load resistance may be derived from passive resistance along the vertical sides of the foundations, friction acting at the base of the foundations, or a combination of the two. A coefficient of friction of 0.30 may be used between the footings, floor slabs, and the supporting soils comprised of engineered fill. Where visqueen is used below floor slabs, the friction coefficient should not exceed 0.1. The passive resistance of level properly compacted fill soils in direct contact with the footings may be assumed to be equal to the pressure developed by a fluid with a density of 250 pcf, to a maximum pressure of 2,500 psf. A one-third increase in the passive value may be used for wind or seismic loads. The frictional resistance and the passive resistance of the soils may be combined provided that the passive resistance is reduced by one third. We recommend that the first foot of soil cover be neglected in the passive resistance calculations if the ground surface is not protected from erosion or disturbance by a slab, pavement or in a similar manner.

Estimated Settlement of Footings: Based on the results of our analyses and provided that our recommendations in preceding sections of this report are followed, we estimate that the total static settlement of isolated and/or strip footings under sustained loads will be on the order of ¾ inch for the anticipated maximum structural load. The maximum static differential settlement, over a horizontal distance of 40 feet, is anticipated to be on the order of ½ inch for similarly loaded

footings. The differential settlement during the design seismic event is anticipated to be on the order of ¼ inch in 40 feet.

13.8. Retaining Walls

We have assumed that retaining walls, if needed, will have heights in the range of 1½ to 6 feet. Design earth pressures for retaining walls depend primarily on the allowable wall movement, wall inclination, type of backfill materials, backfill slopes, surcharges, and drainage. The earth pressures provided assume that non-expansive soil backfill will be used and a drainage system will be installed behind the walls so that external water pressure will not develop. A drainage system should be provided behind the walls to reduce the potential for development of hydrostatic pressure. If a drainage system is not installed, the cantilever level-backfilled walls, under static conditions, should be designed to resist a hydrostatic pressure equal to that developed by a fluid with a density of 95 pcf for the full height of the wall.

Determination of whether the active or at-rest condition is appropriate for design will depend on the flexibility of the wall. Walls that are free to rotate at least 0.002 radians (deflection at the top of the wall of at least 0.002 x H, where H is the unbalanced wall height) may be designed for the active condition. Walls that are not capable of this movement should be assumed rigid and designed for at-rest conditions. The recommended static active and at-rest earth pressures are provided in the following table.

Table 2 - Earth Pressures for Retaining Walls, Import Sand Backfill

Wall Movement	Backfill Condition	Equivalent Fluid Pressure
Free to Deflect	Level	40
Restrained	Level	65

The above lateral earth pressures do not include the effects of surcharge (e.g., traffic, footings, sloping ground) or compaction-induced wall pressures. Any surcharge (live, including traffic, dead load, or slope) located within a 1:1 plane drawn upward from the base of the excavation should be added to the lateral earth pressures. The lateral contribution of a uniform surcharge load

located immediately behind walls may be calculated by multiplying the surcharge by 0.33 for cantilevered walls and 0.5 for restrained walls. For vehicular surcharge adjacent to driveways or parking areas a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot traffic surcharge, should be used. The onsite clay soils should not be used as backfill for the walls unless the soil expansion is considered in the design due to an increase of lateral pressure.

Walls should be waterproofed using appropriate membranes, and properly drained or designed to resist hydrostatic pressures. The waterproofing membrane should be covered with a protection board or equivalent to prevent perforation during backfilling.

Except for the upper 2 feet, the backfill immediately behind retaining walls (minimum horizontal distance of 12 inches measured perpendicular to the wall) should consist of free-draining ¾-inch crushed rock wrapped with filter fabric. The upper 1½ feet of cover backfill should consist of relatively impervious onsite material. A 4-inch diameter perforated PVC pipe, placed perforations down at the bottom of the crushed rock layer, leading to a suitable gravity outlet, should be installed at the base of the walls. As an alternative to extending the crushed rock to within 1½ feet of the ground surface for the wall drain, geocomposite panel drains may be used. With wall drain panels, the 4-inch diameter perforated pipe located at the heel of the wall/footing should be surrounded with one cubic foot of ¾-inch crushed rock wrapped with filter fabric; the pipe invert should be supported on about 1½ inches of crushed rock. All drainage should be directed to the street in non-erosive devices.

In the event of a large earthquake, the lateral earth pressure on walls may be significant. When combining both static and seismic lateral earth pressures, a decreased factor of safety may be used in the design of retaining walls when checking for sliding and overturning stability. For cantilever walls, we have calculated the seismic increment of lateral pressure using the Mononobe-Okabe equation assuming the seismic coefficient to be 0.42 of the peak acceleration (PGA_M). We suggest using a dynamic earth pressure increment of 38 psf/ft for cantilever yielding walls with level backfill assuming the walls will not exceed 8 feet in height. The seismic pressure should be taken as a regular triangular distribution (not inverted). The point of application of the dynamic thrust may be taken at 0.37H above the toe of the wall, where H is the retained height. The Structural

Engineer should determine if a seismic increment of lateral earth pressure is applicable based on wall heights and allowable wall movements.

13.9. Utility Trench Backfill

Bedding material surrounding utility lines and extending to a point 12 inches above the lines should consist of either sand, fine-grained gravel, or sand-cement slurry to support and/or to protect the lines. A minimum of 4-inch thick bedding material should be placed below the bottom of the utility lines, on a firm and unyielding subgrade. The bedding material should meet the specifications provided in the latest edition of the "Standard Specifications for Public Works Construction" (Greenbook). Sand or gravel should be compacted in accordance with Greenbook specifications.

Above the bedding, up to finished subgrade in areas other than landscape and up to one foot below flatworks and pavements, utility trenches should be backfilled with onsite materials or imported granular materials and mechanically compacted to at least 90% of the maximum dry density of the soils.

For utility trenches within the building areas, the backfill should be compacted to the minimum required relative compaction indicated under the "Grading" section of this report. The backfill material should be observed, tested and approved by the Geotechnical Consultant. The trench bedding materials should be placed in accordance with Section 306-6 of the "Standard Specifications for Public Works Construction" (Greenbook).

When adjacent to any footings, utility trenches and pipes should be laid above an imaginary line measured at a gradient of 1½ (H:V) projected down from the bottom edges of any footings. Otherwise, the pipe should be designed to accept the lateral effect from the footing load, or the footing bottom should be deepened as needed to comply with this requirement. Backfill consisting of 2-sack sand cement slurry may also be used.

13.10. Drainage

Foundation, slab, flatwork, and pavement performance depend greatly on proper drainage within and along the boundary of the development. Perimeter grades around the buildings should be sloped in

a manner allowing water to drain away from the structures and not pond next to the foundations. Roof downdrains should be connected to underground pipes carrying water away from the structure areas or have extenders so water does not drain and pond next to the structures. Per the 2019 CBC, landscape areas within 10 feet of structures should slope away at gradients of at least 5 percent. Paved areas within 10 feet of structures should slope away at gradients of at least 2 percent. Proper drainage is recommended for all surfaces to reduce the risk of settlement due to hydroconsolidation and heave due to soil expansion.

We recommend minimizing the size and number of planters adjacent to the building and using drought resistant planting. Any planter located within 8 feet of the building should have a solid bottom and a drain outlet to the storm drain. To reduce the potential for overwatering, irrigation should be performed under the management of experienced landscape architects, and not under the control of a landscape contractor.

13.11. Asphalt Concrete (AC) Pavement

The required pavement structural sections depend on the expected wheel loads, volume of traffic, and subgrade soils. Based on soil classification and our experience with R-value correlations with fines contents and plasticity index, an R-value of 10 may be used for pavement design for the clayey subgrade soils. The R-value should be confirmed with additional tests, if necessary, at the time of construction. The following pavement sections are recommended based on assumed traffic indices of 4, 5, 5.5 and 6. We recommend a traffic index of at least 6 for driveways where trucks, including trash trucks and fire trucks will have access. The project Civil Engineer should determine the traffic index to be used for different areas of the site.

Table 3 – Alternative Pavement Sections for Vehicular Traffic

Traffic Index	Asphalt Thickness (Inches)	Base Course (CAB) Thickness (Inches)
4	3.0	6.5
5	3.0	9.5
5.5	3.5	10.5
6	4.0	11.0

Base course material should consist of Crushed Aggregate Base (CAB) as defined by Section 200-2.2 of the Standard Specifications for Public Works Construction ("Greenbook"). Base course and asphalt concrete should be compacted to at least 95 percent of the maximum dry density of that material. Crushed Miscellaneous Base (CMB) may be used only if the supplier can demonstrate that the aggregate does not contain contaminated material and provide documentation to that effect.

The subgrade underlying the pavement areas should be overexcavated 18 inches below the proposed base course layer. Prior to fill placement, the exposed surface should be scarified to a minimum depth of 8 inches, moisture conditioned within two percent of optimum moisture content for sand and to at least 115 percent of optimum moisture content for clay, and compacted to at least 90% of the maximum dry density obtained per ASTM D1557. The upper 12 inches of subgrade soils should be compacted to 95% relative compaction if sandy soils are present and to 90% for clayey soils. The subgrade should be in a "non-pumping" condition at the time of compaction.

Any onsite surficial organic soils within landscaped/turf areas should not be used as subgrade materials. Where feasible, the overexcavation should be laterally extended a minimum of 2 feet beyond the perimeters and edges of parking areas, roadways and curbs. Any abandoned footing and/or underground concrete structure within the work limit should be removed entirely and the excavation should be backfilled to grade.

In order to increase pavement performance and extend the pavement life, concrete curbs and gutters could be deepened to extend below the base course material and be seated in the compacted subgrade. Priority should be given to areas where heavier traffic is anticipated and where irrigation may be greater. The intent of deepening the curbs and gutters is to form a "cut-off" wall to reduce the amount of water flow through the base course material from adjacent landscaped areas. Subgrade soils, which become soaked as a result of water flowing through base course material, can reduce the life of the pavement and cause heaving of the pavement. Where feasible, the curbs should be deepened to an elevation at least 6 inches below the bottom level of the proposed base course section.

13.12. Portland Cement Concrete (PCC) Vehicular Pavement

The grading recommendations for vehicular PCC pavement are provided in Section 13.2.2 of this report. Base course material used in the pavement sections should consist of Crushed Aggregate Base (CAB) as defined by Section 200-2.2 of the Standard Specifications for Public Works Construction (Greenbook 2012). The aggregate base course should be compacted to at least 95% of the maximum dry density of that material. Crushed Miscellaneous Base (CMB), as defined by Section 200-2.4 of the Greenbook, may be used only if the supplier can demonstrate that the aggregate does not contain contaminated material.

The recommendations presented herein should be used for design and construction of the slabs and pertaining grading work underlying vehicular pavement areas. A minimum modulus of rupture of 550 psi for concrete has been assumed in designing of the PCC pavement sections; this corresponds to a concrete compressive strength of approximately 4,000 psi at 28 days. A qualified design professional should specify where heavy duty and standard duty slabs are used based on the anticipated type and frequency of traffic. The recommended PCC pavement sections are provided in the following table.

Table 4 - PCC Pavement Sections

Pavement Type	Portland Cement Concrete Thickness (inches)	Base Course (CAB) Thickness (inches)
Light Duty	6.0	6.0
Heavy Duty	7.5	6.0

These concrete pavement sections should be increased for bus traffic where applicable. The following recommendations should also be incorporated into the design and construction of PCC pavement sections:

- The pavement sections should be reinforced with No. 3 rebars spaced at 18 inches on centers each way to reduce the potential for shrinkage cracking.
- Joint spacing in feet should not exceed twice the slab thickness in inches, e.g., 12 feet for a 6-inch thick slab. Regardless of slab thickness, joint spacing should not exceed 15 feet.
- Layout joints should form square panels. When this is not practical, rectangular panels can be used if the long dimension is no more than 1.5 times the short one.

- Control joints should have a depth of at least 1/4 the slab thickness, e.g., 1 inch for a 4-inch thick slab.
- Where the pavement does not abut against a curb or gutter, an 8-inch thickened edge should be constructed.
- Pavement section design assumes that proper maintenance such as sealing, and repair of localized distress will be performed on a periodic basis.

Exterior concrete slabs for pedestrian traffic or landscape should be at least four inches thick. Weakened plane joints should be located at intervals of no more than about 6 feet unless slabs thicker than 4 inches are used. The pavement sections should be reinforced with No. 3 rebars spaced no further than 18 inches on centers each way to reduce the potential for shrinkage cracking. A thickened edge is recommended at the exterior edge of the flatwork adjacent to landscape subject to irrigation. The thickened edges should be a minimum of 12 inches deep and 8 inches wide and reinforced with two No. 3 bars at the top and bottom. In addition to the thickened edges, the walkway should be underlain by at least 12 inches of non-expansive soils and the upper 12 inches of the clay subgrade below the non-expansive soils should have a moisture content of at least 125 percent of optimum prior to placement of the non-expansive soils. The concrete strength for pedestrian walkways should be at least 2,500 psi unless determined otherwise by the Structural Engineer.

If pedestrian pavers are used, they should be supported on one inch of sand underlain by 4 inches of crushed aggregate base (CAB). For light vehicle traffic, the pavers should be underlain by one inch of sand and at least 10 inches of aggregate base (CAB). For heavy duty traffic area, we recommend increasing the aggregate base thickness to 16 inches. A separation/reinforcing fabric should be placed on the prepared subgrade prior to placement of the aggregate base.

13.13. Hardscape Play Courts

The overexcavation and subgrade preparation for the play courts such as tennis courts and basketball courts should be as indicated for the for the pavement sections (minimum 18 inches of overexcavation and moisture conditioning to 125% of optimum). If conventional concrete slabs are used, we recommend 5-inch thick slab reinforced with #4 bars at 16 inches on center unless indicated otherwise by the slab designer. The concrete strength should be at least 3500 psi and the

slabs should be underlain by at least 4 inches of aggregate base. Any portions of the slab adjacent to irrigated planter should have a reinforced thickened concrete edge extending 18 inches below the ground surface.

13.14. Grading of the Football Field

Any existing pavement, foundations, vegetation, abandoned underground utilities and other debris should be removed from the areas to be graded. All excavation should be backfilled with engineered fill. All topsoil should also be removed. Following removal of topsoil, we recommend overexcavating an additional 12 inches of material. Following geotechnical approval, the bottom of the removal excavations should be scarified to a depth of 10 inches, moisture conditioned within 2 percent of optimum for sand, above optimum for silt and to 125 percent of optimum for clay, and recompacted to at least 90% relative compaction as determined by ASTM D1557. All fill placed should be compacted to at least 90% relative compaction at moisture contents as indicated above.

Depending upon the time of the year the grading occurs and the irrigation of the lawn during the prior months, localized wet soils should be anticipated. These wet soils can induce "pumping conditions" and prevent compaction of the proposed backfill. It should be anticipated that the wet soils will require additional overexcavation and bridging with crushed rock, dryer soils, and with the use of geosynthetic. Landscape irrigation should be discontinued at least 4 weeks before grading to allow some drying at the surface.

It is recommended to slope the subgrade to at least one percent toward the internal drains. The thickness of the drain stone/rock above the subgrade can be adjusted as necessary to obtain the desired synthetic turf grade. The subgrade should be proof rolled using heavy rubber tire equipment or a loaded truck under the observation of the Geotechnical Engineer. Any unsuitable soft spots should be remediated as recommended by the Geotechnical Engineer.

Liner for Synthetic Turf Field

It should be noted that the upper soils within the football field area are relatively impervious and subject to develop "pumping" conditions once they become soaked, thus resulting in unstable subgrade. It is, therefore, recommended that an impervious liner overlain by a drainage system be installed for supporting the synthetic turf. Prior to installation of the membrane, it is recommended

to finish rolling the subgrade with a large smooth drum roller (at least 4 by 4 drums). The polyethylene/HDPE impervious liner should be highly flexible, resisting to abrasion, to puncture, and to the anticipated heat of the field. The grab tensile strength (ASTM D7004) and the puncture resistance (ASTM D4833) should be at least 300 pounds and 150 pounds, respectively, unless indicated otherwise by the field designer.

Drainage System

The drainage system is anticipated to consist of aggregate stone, flat drain collectors and perforated piping as designed by the landscape architect and/or the civil engineer. The drainage pipes are normally designed so that the main drain (s) are placed along the side of the field and lateral piping is installed at an angle across the slope of the field. The lateral drains are normally 15 to 20 feet apart. Drainage pipes should maintain a consistent slope to the outlet of at least 0.5 percent. Geotextile fabric is recommended as a barrier between unstable subsoil and the gravel drainage blanket. At least one inch of drain gravel is normally placed below round perforated piping, which should be installed with the perforation holes facing down.

All permeable stone should consist of clean, virgin crushed stone free of shale, soft limestone and sandstone, clay and organic material and any other deleterious material. For field perimeter drain, the drain gravel protected with filter fabric may consist of ¾-inch crushed rock conforming to the Greenbook Specifications or other aggregate as selected by the landscape architect/civil engineer. The crushed rock should be protected by a geotextile such as Mirafi 140N or approved equivalent and the fill cap above the geotextile should be at least 12 inches thick.

The stone mix must have enough fines to be stable but not so much as to reduce drainage excessively. Some construction system calls for a simple structural stone (free draining finishing stone) layer laid directly over the free draining crushed base stone. The sand equivalent of the base stone should be at least 75 and the percentage of wear at 500 revolutions (ASTM C131) should not exceed 40 unless approved otherwise by the designer. The crushed base stone should be at least 6 inches thick and should consist of modified Caltrans Class 2 permeable aggregate with the recommended following grading or approved equivalent by the Field Designer.

Sieve Size	Percent Passing
1”	100
¾”	90-100
½”	50-90
3/8	35-70
No. 4	25-40
No. 8	18-30
#30	6-15
#50	0-7
#100	0-4
#200	0-1

The base stone may fragment at every stage of the construction process and result in higher fine content than determined at the plant due to loading, unloading, spreading and compacting. The stone should be spread in such a way that it is immediately level with the field design gradient. It is important to avoid modifying the grade once the stone is laid out. Stockpile stones tend to separate by size during handling (the finer stones tend to move to the bottom). Preferably, stones should not be mix on site to avoid separation and the optimum moisture should be maintained to provide better cohesion and reduce segregation.

It is recommended to compact the stone base between 92 and 95 percent relative compaction as determined by ASTM D1557 unless determined otherwise by the Field Designer. Over compaction should be avoided since it will cause additional breakdown of the stone particles and may reduce the hydraulic conductivity/permeability. The contractor should establish circulation pattern in the field to avoid concentration of traffic that may result in over compaction/breakdown of the stone in localized areas. The Synthetic Turf Council’s suggests a minimum flow rate through the permeable base of 28 inches per hour. At the discretion of the Field Designer, the flow rate of the base stone should be measured in the field at the time of construction.

Running Track

Within the track area, we recommend overexcavating 18 inches of subgrade material below the pavement section. The overexcavation should extend at least 2 feet outside the track, where feasible. Prior to backfilling, the subgrade should be scarified to a depth of 8 inches, moisture conditioned and recompacted to 90 percent relative compaction. The upper 12 inches of subgrade should be

compacted to 92% relative compaction. The excavated material may be used as fill except for high plastic clay soils, if encountered.

The pavement section should consist of 4 inches of asphalt concrete underlain by 6 inches of Crushed Aggregate Base (CAB) as defined by Section 200-2.2 of the Standard Specifications for Public Works Construction ("Greenbook"). A material with shock absorbing properties may be placed over the asphalt concrete. Proper drainage adjacent to the track is essential to prevent soil movement due to water penetration below the ground surface. The curbs should extend 16 inches below the finish grade to serve as a barrier for water migration below the track unless indicated otherwise by the track designer.

14. SOIL EXPANSIVITY

The subsurface soils encountered at shallow depths within the building pad area ranges range from sandy lean clay to clayey sand. These types of material generally have a moderate susceptibility to expansion when facing seasonal cycles of saturation/desiccation. Expansion index testing on shallow samples of Borings B-1 and B-4 indicated values of 14 and 22, respectively, indicating low expansion potential, however, medium expansion potential soils may be present within the proposed improvement areas. As such, the recommendations provided in this report regarding drainage, moisture content during compaction, presoaking, the use of sand blankets and other pertinent recommendations for site improvements should be incorporated into the design and construction.

15. SOIL CORROSIVITY

The corrosion potential of the onsite materials to steel and buried concrete was preliminarily evaluated. Laboratory testing was performed on one soil sample to evaluate pH, minimum resistivity, chloride and soluble sulfate content. The test results are presented in the following table.

Table 5 - Corrosion Test Results

Boring	Depth (ft)	Minimum Resistivity (ohm-cm)	pH	Soluble Sulfate Content (ppm)	Soluble Chloride Content (ppm)
B-4	2 – 3	8060	6.8	60	15

These tests are only an indicator of soil corrosivity for the sample tested. Other soils found on site may be more, less, or of a similar corrosive nature. Imported fill materials should be tested to confirm that their corrosion potential is not significantly more severe than those noted. The concentrations of soluble sulfates indicate that the potential of sulfate attack on concrete in contact with the onsite soils is "negligible" based on ACI 318 Table 4.3.1. Cement Type II may be used in the concrete. Maximum water-cement ratios are not specified for the sulfate concentrations; however, the Structural Engineer should select a concrete with appropriate strength.

Further interpretation of the corrosivity test results, including the resistivity value, and providing corrosion design and construction recommendations are the purview of corrosion specialists/consultants.

16. OBSERVATION AND TESTING

This report has been prepared assuming that Koury Engineering & Testing, Inc. will perform all geotechnical-related field observations and testing. If the recommendations presented in this report are utilized, and observation of the geotechnical work is performed by others, the party performing the observations must review this report and assume responsibility for the recommendations contained herein. That party would then assume the title of "Geotechnical Consultant of Record". A representative of the Geotechnical Consultant should be present to observe all grading operations as well as all footing excavations.

17. CLOSURE

The findings and recommendations presented in this report were based on the results of our field and laboratory investigations, combined with professional engineering experience and judgment. The report was prepared in accordance with generally accepted engineering principles and practice. We make no other warranty, either expressed or implied. Subsurface variations between borings should be anticipated. Koury should be notified if subsurface conditions are encountered, which differ from those described in this report since updated recommendations may be required. Samples obtained during this investigation will be retained in our laboratory for a period of 45 days from the date of this report and will be disposed after this period.

Should you have any questions concerning this submittal, or the recommendations contained herewith, please do not hesitate to call our office.

Respectfully submitted,

KOURY ENGINEERING & TESTING, INC.

Earthquake Zones of Required Investigation
Inglewood Quadrangle

California Geological Survey

This Map Shows Both Alquist-Priolo Earthquake Fault Zones And Seismic Hazard Zones Issued For The Inglewood Quadrangle

This map shows the location of Alquist-Priolo (AP) Earthquake Fault Zones and Seismic Hazard Zones, collectively referred to here as Earthquake Zones of Required Investigation. The Geographic Information System (GIS) digital files of these regulatory zones released by the California Geological Survey (CGS) are the "Official Maps." GIS files are available at the CGS website http://maps.conservation.ca.gov/cgs/informationwarehouse/. These zones will assist cities and counties in fulfilling their responsibilities for protecting the public from the effects of surface fault rupture and earthquake-induced ground failure as required by the AP Earthquake Fault Zoning Act (Public Resources Code Sections 2621-2630) and the Seismic Hazards Mapping Act (Public Resources Code Sections 2690-2699.6). For information regarding the general approach and recommended methods for preparing these zones, see CGS Special Publication 42, *Earthquake Fault Zones, a Guide for Government Agencies, Property Owners/Developers, and Geoscience Practitioners for Assessing Fault Rupture Hazards in California*, Appendix C, and CGS Special Publication 118, *Recommended Criteria for Delineating Seismic Hazard Zones in California*.

For information regarding the scope and recommended methods to be used in conducting required site investigations refer to CGS Special Publication 42, and CGS Special Publication 117A, *Guidelines for Evaluating and Mitigating Seismic Hazards in California*. For a general description of the AP and Seismic Hazards Mapping acts, the zonation programs, and related information, please refer to the website at www.conservation.ca.gov/cgs/.

MAP EXPLANATION

EARTHQUAKE FAULT ZONES

Earthquake Fault Zones
Zone boundaries are delineated by straight-line segments; the boundaries define the zone encompassing active faults that constitute a potential hazard to structures from surface faulting or fault creep such that avoidance as described in Public Resources Code Section 2621.5(a) would be required.

Active Fault Traces
Faults considered to have been active during Holocene time and to have potential for surface rupture. Solid Line in Black or Red where Accurately Located; Long Dash in Black or Solid Line in Purple where Approximately Located; Short Dash in Black or Solid Line in Orange where Inferred; Dotted Line in Black or Solid Line in Rose where Concealed; Query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

SEISMIC HAZARD ZONES

Liquefaction Zones
Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Earthquake-Induced Landslide Zones
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

OVERLAPPING EARTHQUAKE FAULT AND SEISMIC HAZARD ZONES

Overlap of Earthquake Fault Zone and Liquefaction Zone
Areas that are covered by both Earthquake Fault Zone and Liquefaction Zone.

Overlap of Earthquake Fault Zone and Earthquake-Induced Landslide Zone
Areas that are covered by both Earthquake Fault Zone and Earthquake-Induced Landslide Zone.

Note: Mitigation methods differ for each zone –
AP Act only allows avoidance; Seismic Hazard Mapping Act allows mitigation by engineering/geotechnical design as well as avoidance.

ADDITIONAL INFORMATION

For additional information on the zones of required investigation presented on this map, the data and methodology used to prepare them, and additional references consulted, please refer to the following:

Geologic Time Scale			Years Before Present (Approx.)	Fault Symbol	Recency of Movement	DESCRIPTION	
						ON LAND	OFFSHORE
Quaternary	Late Quaternary	Historic	200			Displacement during historic time (e.g. San Andreas fault 1906). Includes areas of known fault creep.	
		Holocene	11,700			Displacement during Holocene time.	Fault offsets seafloor sediments or strata of Holocene age.
	Pleistocene		700,000			Faults showing evidence of displacement during late Quaternary time.	Fault cuts strata of Late Pleistocene age.
	Early Quaternary		1,600,000			Undivided Quaternary faults - most faults in this category show evidence of displacement during the last 1,600,000 years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age.	Fault cuts strata of Quaternary age.
Pre-Quaternary			4.5 billion (Age of Earth)			Faults without recognized Quaternary displacement or showing evidence of no displacement during Quaternary time. Not necessarily inactive.	Fault cuts strata of Pliocene or older age.

* Quaternary now recognized as extending to 2.6 Ma (Walker and Geissman, 2009). Quaternary faults in this map were established using the previous 1.6 Ma criterion.

National Flood Hazard Layer FIRMette

FEMA

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) Zone A, V, A99
- With BFE or Depth Zone AE, AO, AH, VE, AR
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Ar
- of 1% annual chance flood with avera
- depth less than one foot or with drain
- areas of less than one square mile Zor
- Future Conditions 1% Annual Chance Flood Hazard Zone X
- Area with Reduced Flood Risk due to Levee. See Notes. Zone X
- Area with Flood Risk due to Levee Zone

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard Zone X
- Effective LOMRs
- Area of Undetermined Flood Hazard Z

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chanc
- Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approxim point selected by the user and does not repre an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/21/2019 at 12:21:48 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

SIEVE SIZES	#200	#40	#10	#4	3/4"	3"	12"

KEY TO LOGS (continued)

SPT/CD BLOW COUNTS VS. CONSISTENCY/DENSITY					
FINE-GRAINED SOILS (SILTS, CLAYS, etc.)			**GRANULAR SOILS (SANDS, GRAVELS, etc.)**		
CONSISTENCY	***BLOWS/FOOT**		**RELATIVE DENSITY**	***BLOWS/FOOT**	
	SPT	**CD**		**SPT**	**CD**
SOFT	0-4	0-4	VERY LOOSE	0-4	0-8
FIRM	5-8	5-9	LOOSE	5-10	9-18
STIFF	9-15	10-18	MEDIUM DENSE	11-30	19-54
VERY STIFF	16-30	19-39	DENSE	31-50	55-90
HARD	over 30	over 39	VERY DENSE	over 50	over 90

* CONVERSION BETWEEN CALIFORNIA DRIVE SAMPLERS (CD) AND STANDARD PENETRATION TEST (SPT) BLOW COUNT HAS BEEN CALCULATED USING "FOUNDATION ENGINEERING HAND BOOK" BY H.Y. FANG. (**VALUES ARE FOR 140 Lbs HAMMER WEIGHT ONLY**)

DESCRIPTIVE ADJECTIVE VS. PERCENTAGE	
DESCRIPTIVE ADJECTIVE	**PERCENTAGE REQUIREMENT**
TRACE	1 - 10%
LITTLE	10 - 20%
SOME	20 - 35%
AND	35 - 50%

*THE FOLLOWING "DESCRIPTIVE TERMINOLOGY/ RANGES OF MOISTURE CONTENTS" HAVE BEEN USED FOR MOISTURE CLASSIFICATION IN THE LOGS.

APPROXIMATE MOISTURE CONTENT DEFINITION	
DEFINITION	**DESCRIPTION**
DRY	Dry to the touch; no observable moisture
SLIGHTLY MOIST	Some moisture but still a dry appearance
MOIST	Damp, but no visible water
VERY MOIST	Enough moisture to wet the hands
WET	Almost saturated; visible free water

KOURY
PASSION INTEGRITY QUALITY

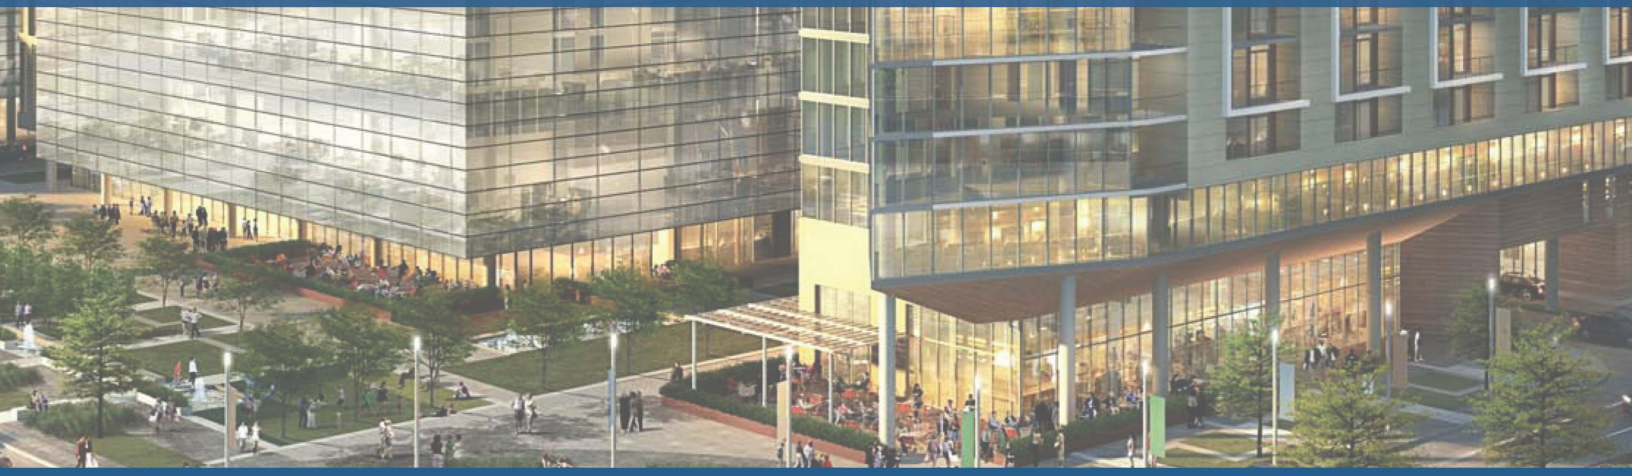
THE KOURY DIFFERENCE

We are a key member of the construction team while safeguarding the public. We improve operational logistics and provide superior quality control through the continuing development of our engineering staff and technical expertise, utilization of classroom training and field supervisors, thus defining the industry standard.



We increase market share and become the largest through superior management practices and planning.

Project No. 19-1110

Ms. Stephanie Pulcifer, Design & Construction Manager
Inglewood Unified School District
401 S. Inglewood Avenue
Inglewood, CA 90303

SUBJECT: Addendum Report - Percolation Testing
Morningside High School
10500 Yukon Avenue South, Inglewood, CA 90303
(CGS Application No. 04-CGS4351)

Reference: Limited Geotechnical Investigation Report, Morningside High School Upgrades, 10500 Yukon Avenue South, Inglewood, CA 90303, prepared by Koury Engineering & Testing, Inc., Project No. 19-1110, dated January 22, 2020.

Dear Ms. Pulcifer:

Presented herein are the results of percolation testing performed by Koury Engineering & Testing, Inc. (Koury) for the proposed storm water implementation project at the Morningside High School located at 10500 Yukon Avenue, City of Inglewood, California. (See Figure A-1 for Vicinity Map). This study was performed to provide information for BMP stormwater project planning from a geotechnical standpoint.

The recommendations provided within this addendum report are based on the results of our field exploration, laboratory testing, and engineering analysis. Our services were performed in general accordance with our proposal No. 19-1110 dated March 2, 2021.

Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by reputable geotechnical consultants practicing in this or similar localities. No other warranty, expressed or implied, is made as to the professional advise included in this report. This report has been prepared exclusively for the Inglewood Unified School District and their consultants for the subject project. The report has not been prepared for use by other parties and may not contain sufficient information for the purposes of other parties or other uses.

Site Conditions

Morningside High School is bounded by W 104th Street on the north, Yukon Avenue South on the west, W 108th Street and residential homes on the south and Monroe Middle School and commercial facilities on the east. The main access to the site is from Yukon Avenue South near the southwest corner of the campus. The percolation tests were performed on the west and south sides of the new location for the football field. The proposed new location of the football field is approximately 200 feet west of the old location.

The football field area slopes gently to the west, and the ground surface lies at elevations between about 82 and 87 feet (NAVD88). Drainage of the site is generally by sheet flow toward the west.

Proposed Infiltration System

We understand that it is proposed to construct two drywells south and west of the new football field and track complex located within the southern portion of the school campus. The drywells are anticipated to have a diameter of 4 to 5 feet and a depth on the order of about 35 feet. Infiltration will occur below a depth of 23 feet.

Percolation Borings

Percolation Borings P-1 and P-2 were drilled to a maximum depth of 46½ feet below ground surface on June 7, 2021. At these locations, the ground surface lies at elevations of about 85 and 82 feet, for P-1 and P-2, respectively. Truck-mounted hollow-stem auger drill rig equipment was used to drill the borings. The locations of the recent percolation borings and previous borings drilled by Koury are shown on the Percolation Boring Location Map, Figure A-2, presented in Appendix A.

Standard penetration test samples, California ring samples and bulk samples were obtained from the borings for laboratory testing. Sampling of Percolation Borings P-1 and P-2 were quasi continuous beyond a depth of 25 feet to characterize the subsurface conditions that may impede or promote water infiltration.

The depths, blow counts, and description of the samples are shown on the attached boring logs presented in Appendix B of this report. The contractor used 140-lbs automatic hammers to drive the samplers 18 inches into the soils or until practical refusal.

Laboratory Testing

Laboratory tests, including moisture content, dry unit weight, #200 wash, and gradation were performed on selected samples obtained from the borings to aid in the classification of the soils encountered and to evaluate their engineering properties. The results of laboratory tests are presented on the boring logs in Appendix A except for the Gradation/Particle Size Distribution Reports that are self-contained reports attached in Appendix B.

Soil Conditions

The Geology Map of the Long Beach Quadrangle indicates the subsurface conditions at the site consist of old alluvial floodplain deposits consisting of interbeds of sand, silt and clay (see Figure A-3 for the Geology Map).

The subsurface soil profile encountered consists of fill underlain by alluvial deposits. The fill depth was found to be about 3 feet at the boring locations. Also, at the boring locations, the ground surface exposes a mantle of grass over a thin cover of topsoil.

The alluvium underlying the fill generally consists of interbeds of sandy clay, clayey sand, poorly graded sand with silt, and silty sand. The alluvial sand is generally slightly moist to moist and medium dense to dense. The sand encountered in the recent borings has moisture contents in the range of about 3 to 10½ percent with an average of about 5½ percent. The silt and clay soils have moisture contents in the range of 6 to 17 percent with an average of about 12 percent.

Based on the laboratory test data, the clay and silt have 50 to 90 percent fines with an average of approximately 64 percent. The fine contents for sand soils range from about 6 to 47 percent with an average of about 16 percent. The pocket penetrometer test results show that the unconfined compression strength of the silt and clay tested is about 4½ tsf (tons per square foot). The particle size distribution reports for samples at depths of 35 and 27½ feet for Percolation Holes P-1 and P-2, respectively, indicate the presence of poorly graded sand (See Appendix C for test results).

Variations in the soil conditions as well as detailed descriptions are shown on the attached boring logs in Appendix A. The soil conditions described in this report are based on the soils observed in the recent test borings drilled for this study and the laboratory test results. Variations between and beyond the borings should be anticipated.

Groundwater

Groundwater was not encountered in any of the percolation borings drilled on campus to a maximum depth of 46½ feet. The Seismic Hazard Zone Report for the Inglewood 7.5-Minute Quadrangle, Los Angeles County CA, Seismic Hazard Zone Report 029, Department of Conservation, Division of Mines and Geology indicates the historic high groundwater is at least 50 feet below ground surface (see Figure A-4 in Appendix A).

Percolation Testing

Following soil sampling, the soil boreholes were used for percolation testing. The percolation testing was performed on a sunny day. The approximate locations of percolation tests were provided by the District design team as shown on the Percolation Boring Location Map, Figure A-2. The boring logs presented in Appendix A indicate the soil stratification encountered. The percolation holes extended to a depth of 46½ feet.

Koury performed the tests in substantial conformance with the boring percolation test procedure of the County of Los Angeles as defined in the Low Impact Development BMP Design Handbook dated 9/20/14, County Document GS200.2 dated 6/30/17. The test procedure consisted of drilling 9¼-inch diameter boreholes to the test depths and placing a 2- to 3-inch layer of filter gravel at the bottom of the holes. We also placed a 3-inch diameter perforated piping in the holes and filter rock within the annulus to prevent caving in the test zone.

The percolation holes were presoaked per the test method. Following pre-soaking, percolation testing began by filling the lower portion of the percolation holes with water and measuring the drop-in water level. The water column heights ranged predominantly from 17 to 26 feet for Percolation Hole P-1 and predominantly from 18 to 27 feet for Percolation Hole P-2. Based on

the rate of water dissipation during presoaking, 10-minute measuring intervals were selected for the tests. Refilling with water was repeated several times until consistent results were noted.

The following Table-1 summarizes the results of the falling head percolation tests. The falling head percolation tests yielded short-term infiltration rates on the order of 3 and 7 inches per hour for Percolation Hole P-1 and P-2, respectively (See Appendix A for calculations).

Table 1 – Summary of Falling Head Percolation Testing

Test Number	Depth (ft)	Short Term Infiltration *(in/hour)	Adjusted Long Term Infiltration (in/hour)
P-1	46.5	3.2	0.8
P-2	46.5	7.4	1.8

*No correction factor applied

To determine the long-term infiltration rates presented in Table 1, we have applied a correction factor of 4. The correction factor was selected per the test method to account for the Boring Percolation Testing Method, the number of tests, the number of borings, subsurface soil variability and long-term maintenance. The correction factor calculations and assumptions are indicated on the Percolation Test Data Sheets in Appendix C. The design professional may re-adjust the factor, if deemed appropriate. However, reduction factors that are too low may affect the longevity of the drywells.

Subsurface Soil Considerations

The zones of percolation testing for Borings P-1 and P-2 start at depths of about 20 feet from the ground surface. The soils within the percolation test zones of P-1 and P-2 include sandy clay, clayey sand, silty sand and poorly graded sand with silt. However, percolation is likely to have occurred only in the silty sand and the poorly graded sand with silt. Most likely, the water dispersion/infiltration has occurred mainly laterally in the sand layers.

Conclusions and Recommendations

Based on the nature of the site alluvial deposits, the soils are stratified, and the horizontal hydraulic conductivity tends to be higher than the vertical hydraulic conductivity, which affect the vertical infiltration. Based on the fine contents of soils and the percolation test results within the

percolation zones, infiltration within the silty sand and poorly graded sand with silt as indicated on the boring logs appears feasible. However, water mounting and a reduced infiltration rate should be expected when attempting to infiltrate a large volume of water.

The infiltration system is anticipated to consist of deep wells infiltrating below a depth of about 23 feet. Infiltration facilities should be kept at least 50 feet away or more from structures or foundations and 25 feet away from property lines due to greater hydraulic conductivity in the horizontal direction than in the vertical direction, which could detrimentally convey water laterally. Deep wells should be separated a distance of at least 100 feet or three times the depth of the deep wells, whichever is greater. Closer wells may be used; however, a reduction of infiltration rate may be required depending upon the soil stratigraphy present at the location selected.

The infiltration facilities should be designed to overflow to a storm conveyance in the event that the drainage capacity is exceeded or in case of future failure to infiltrate sufficiently. Because of the type of stratified soil deposits on site, changing the depth of infiltration or the location of the BMPs could have a significant impact on the rate of infiltration. The proposed infiltration design system should be reviewed by the Geotechnical Consultant prior to construction.

Closure

The findings and recommendations presented in this report are based on the results of our field and laboratory investigations, combined with professional engineering experience and judgment. The report was prepared in accordance with generally accepted engineering principles and practice. We make no other warranty, either expressed or implied. Subsurface variations between borings should be anticipated.

Koury should be notified if subsurface conditions are encountered, which differ from those described in this report since updated recommendations may be required. Samples obtained during this investigation will be retained in our laboratory for a period of 45 days from the date of this report and will be disposed after this period.

Should you have any questions concerning this submittal, or the recommendations contained herewith, please do not hesitate to call our office.

Respectfully submitted,

KOURY ENGINEERING & TESTING, INC.

Notes:

1. Reduction Factor, $R_f = ((2d_{H1} - \Delta d_H) / D) + 1$
2. Long Term Infiltration Rate = Short Infiltration Rate / Reduction Factor

Short Term Infiltration Rate = **3.2** **in/hr**

Adjusted Long Term Infiltration Rate = **0.8** **in/hr**

Reduction Factor Range, used to account for Long Term Moderate Siltation, Site Variability, Number of Tests, Test Scale Limitations and other Factors= 3 to 12

Reduction Factor for Boring Percolation Testing RFt = 2 Site Variability, Number of Tests & Borings RF_v=2 Long Term Maintenance RF_s 1-3 **RF** = RFt x RFv x RFs = 2 x 2 x 1 = 4

Percolation Testing

Job Name: Morningside High School

Job No.: 19-1110 **Test No.:** P-2

Test Location: About 85' E of Yukon Avenue S CL and 213' N of S school campus property fence line **Depth of Boring (d_b):** 558 in

Water Table Depth (ft): > 50 **Relatively Impervious Layer Depth (ft):** 0-23 & 38-47 **Diameter of Boring (D):** 9.25 in

Test Date: 6/8/2021 **Test Performer:** ABB

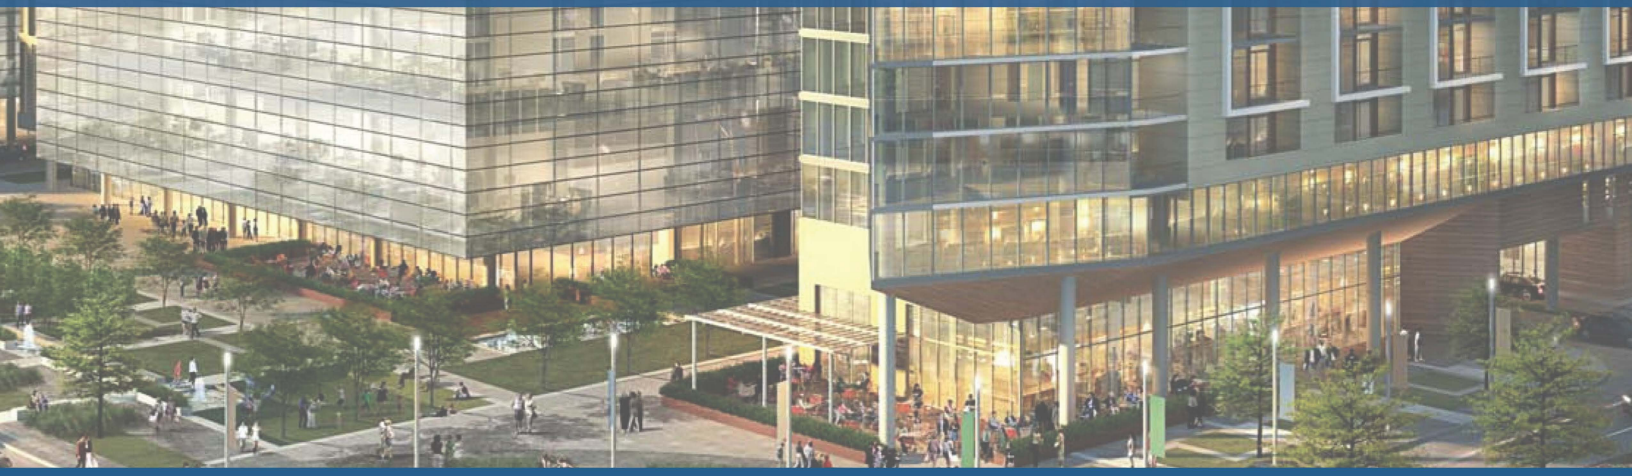
KOURY
PASSION INTEGRITY QUALITY

THE KOURY DIFFERENCE

We are a key member of the construction team while safeguarding the public. We improve operational logistics and provide superior quality control through the continuing development of our engineering staff and technical expertise, utilization of classroom training and field supervisors, thus defining the industry standard.



We increase market share and become the largest through superior management practices and planning.

TRANSPORTATION IMPACT STUDY

MORNINGSIDE HIGH SCHOOL SITE UPGRADE AND WOODWORTH ELEMENTARY SCHOOL DEMOLITION PROJECT

City of Inglewood, California
November 15, 2022

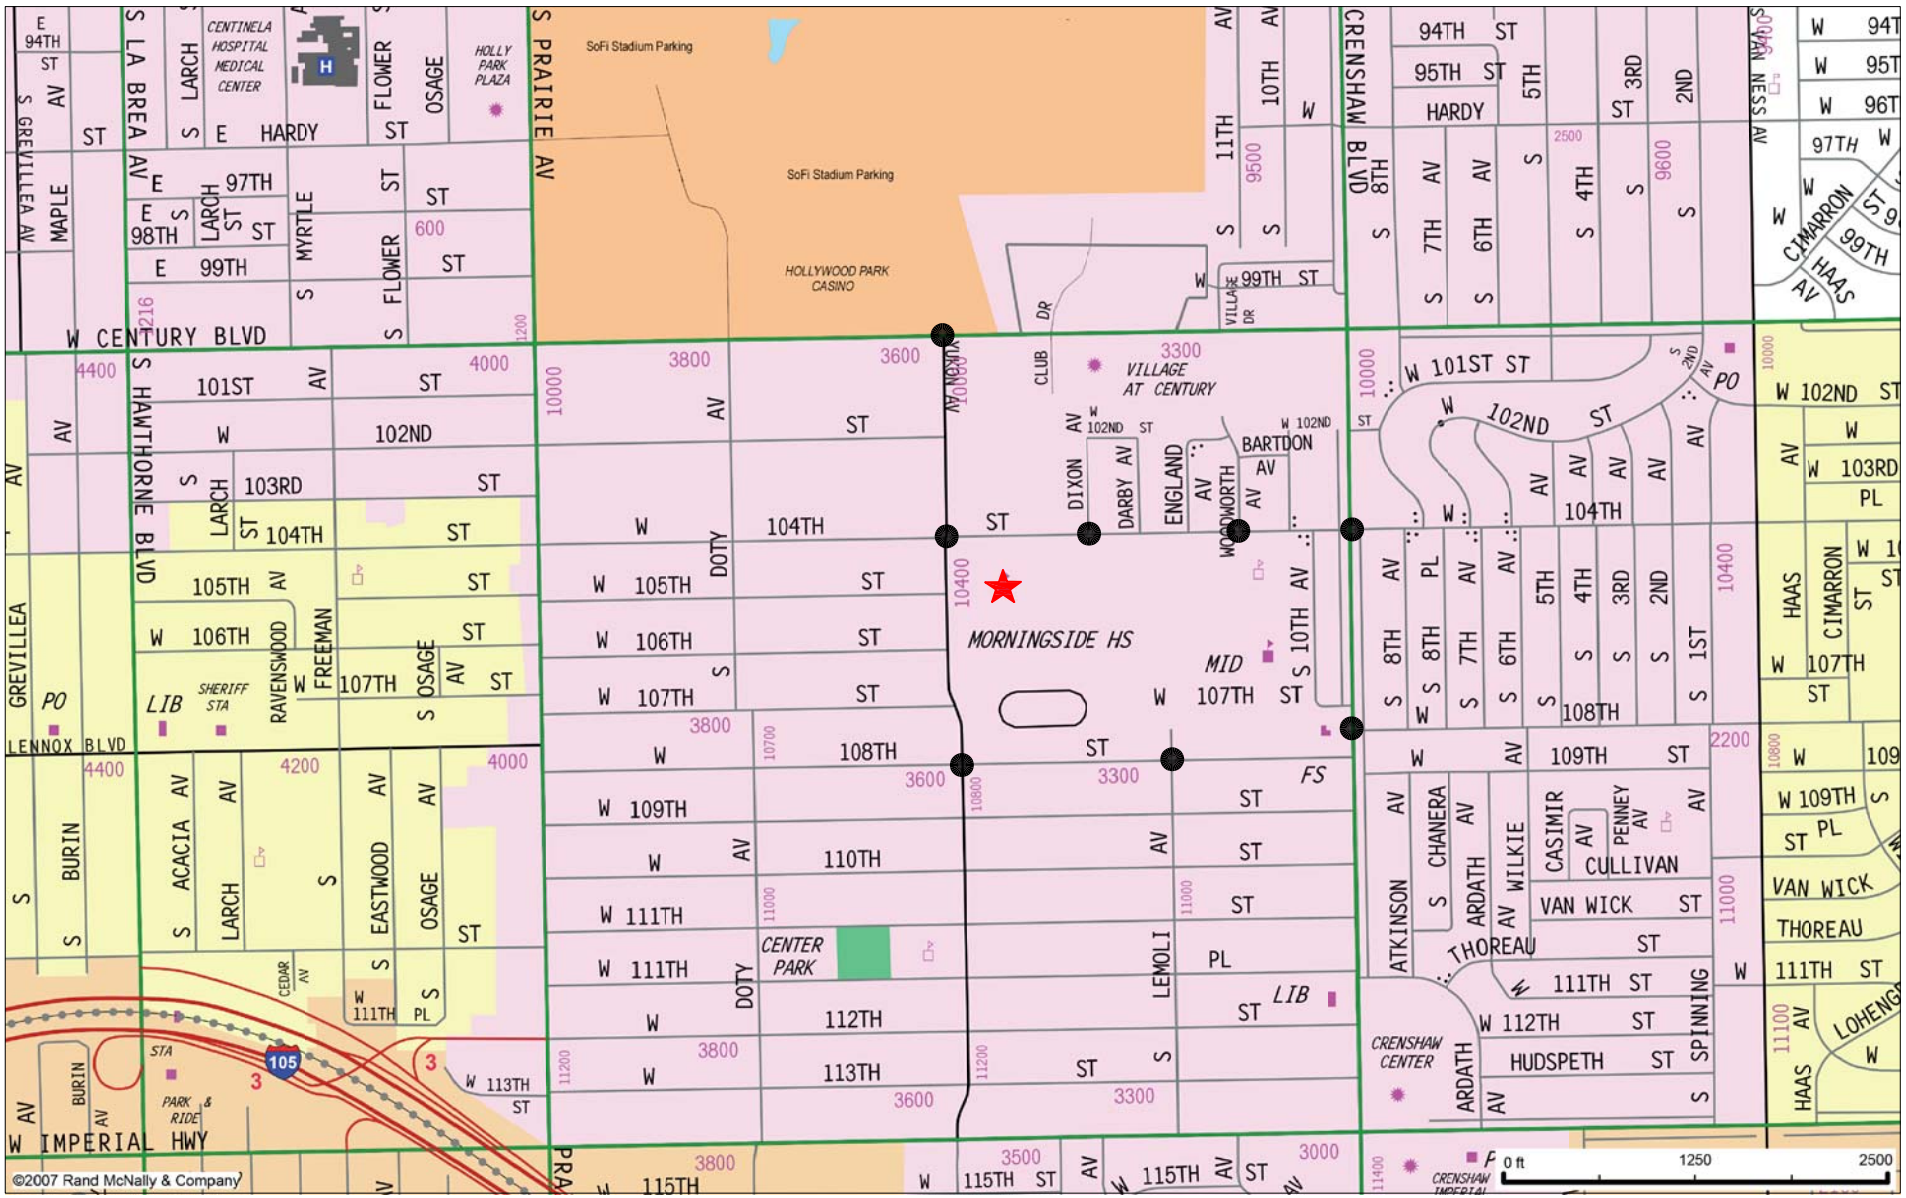
1.0 INTRODUCTION



1.1 Transportation Study Overview

This transportation impact study has been conducted to identify and evaluate the potential transportation impacts of the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project ("proposed project"). The project site is located at 10500 South Yukon Avenue in the City of Inglewood. The site is generally bounded by 104th Street to the north, residential uses to the south, the Woodworth-Monroe TK-8th Academy to the east, and Yukon Avenue to the west. The project site and general vicinity are shown in ***Figure 1-1***.

The City of Inglewood has not established Vehicle Miles Traveled (VMT) analysis procedures at this time for purposes of analyzing transportation impacts under the California Environmental Quality Act (CEQA) Sections 15064.3 and 15064.7; therefore, the project-related VMT impact has been assessed qualitatively based on guidance from the State of California Governor's Office of Planning and Research (OPR) Technical Advisory and review of VMT policies. In addition, the City maintains vehicle Level of Service (LOS) standards for local transportation infrastructure by utilizing the thresholds from the Los Angeles County Department of Public Works (LACPW) *Traffic Impact Analysis Report Guidelines*, January 1997, although the County has issued more recent guidelines. Therefore, the analysis contained herein identify both CEQA based analysis requirements and non-CEQA based analysis requirements for analyzing the potential transportation impacts of proposed development projects.

This study evaluates potential project-related VMT impacts pursuant to the screening criteria, analysis tools, and thresholds approved for use by the City of Inglewood. The study also evaluates potential project-related effects on LOS at eight (8) key intersections in the vicinity of the project site. The study intersections were determined in consultation with City of Inglewood Department of Public Works staff. The Intersection Capacity Utilization (ICU) methodology was used to determine LOS for the five (5) signalized study intersections and the Highway Capacity Manual (HCM) methodology was used for the three (3) unsignalized study intersections.

This report (i) presents the proposed project's existing transportation network context, (ii) presents existing traffic volumes, (iii) forecasts cumulative baseline conditions, (iv) forecasts project-generated traffic, (v) assesses the potential for project-related transportation impacts consistent with

the CEQA compliant and non-CEQA compliant metrics set forth by the City of Inglewood, and (vi) recommends transportation mitigation and/or improvement measures, where necessary.

1.2 Study Methodology

The CEQA and non-CEQA analysis criteria for this transportation assessment were identified in consultation with City of Inglewood staff. The analysis criteria were determined based on the City's guidelines, the proposed project description and location, and the characteristics of the surrounding transportation system. While the Inglewood Unified School District is the Lead Agency under CEQA, the City of Inglewood confirmed the appropriateness of the analysis criteria when it approved the transportation assessment Scope of Work Memorandum of Understanding (MOU) as contained in ***Appendix A***.

On September 27, 2013, Governor Brown signed Senate Bill (SB) 743 (Steinberg, 2013). Among other things, SB 743 created a process to change the methodology to analyze transportation impacts under CEQA (Public Resources Code section 21000 and following) in order to promote: 1) the reduction of greenhouse gas emissions, 2) the development of multimodal transportation networks, and 3) a diversity of land uses. On December 30, 2013, OPR released a preliminary evaluation of alternative methods of transportation analysis, which included analysis based on project VMT rather than impacts to intersection Level of Service. OPR issued other draft discussion documents in March 2015 and January 2016, suggesting some new revisions to the state CEQA Guidelines. In November 2017, OPR submitted the proposed amendments to the CEQA Guidelines to the State's Natural Resources Agency (that include a proposed new Guidelines section 15064.3 which governs how VMT-based analyses of potential traffic impacts should be conducted). On January 26, 2018, the Natural Resources Agency published a Notice of Rulemaking, commencing the formal rulemaking process for the amendments to the CEQA Guidelines. On December 28, 2018, the California Office of Administrative Law adopted the proposed amendments, formally implementing the use of VMT as the metric for transportation analysis under CEQA and providing a grace period allowing local agencies to opt-in to the new metrics. State-wide implementation of the new metric was required by July 1, 2020.

It is noted that SB 743 does not prevent agencies from continuing to analyze delay or LOS outside of CEQA review for other transportation planning or analysis purposes (i.e., general plans, impact fee programs, corridor studies, congestion reduction, or ongoing network monitoring). The City has LOS standards which local transportation infrastructure should strive to maintain. The LOS standards apply to discretionary approvals of new land use development projects. Therefore, the City also include requirements for non-CEQA analyses pursuant to the Los Angeles County Department of Public Works' previous guidelines on the utilization of the ICU and HCM methodologies to evaluate LOS at the study intersections.

The proposed project's CEQA transportation impacts have been evaluated based on guidance from the OPR's Technical Advisory and review of VMT screening criteria, methodology, and thresholds.

In order to evaluate the proposed project's effect on local transportation infrastructure, a non-CEQA analysis of eight (8) study intersections has been conducted for the weekday PM peak hour.

1.3 Los Angeles County Congestion Management Program Status

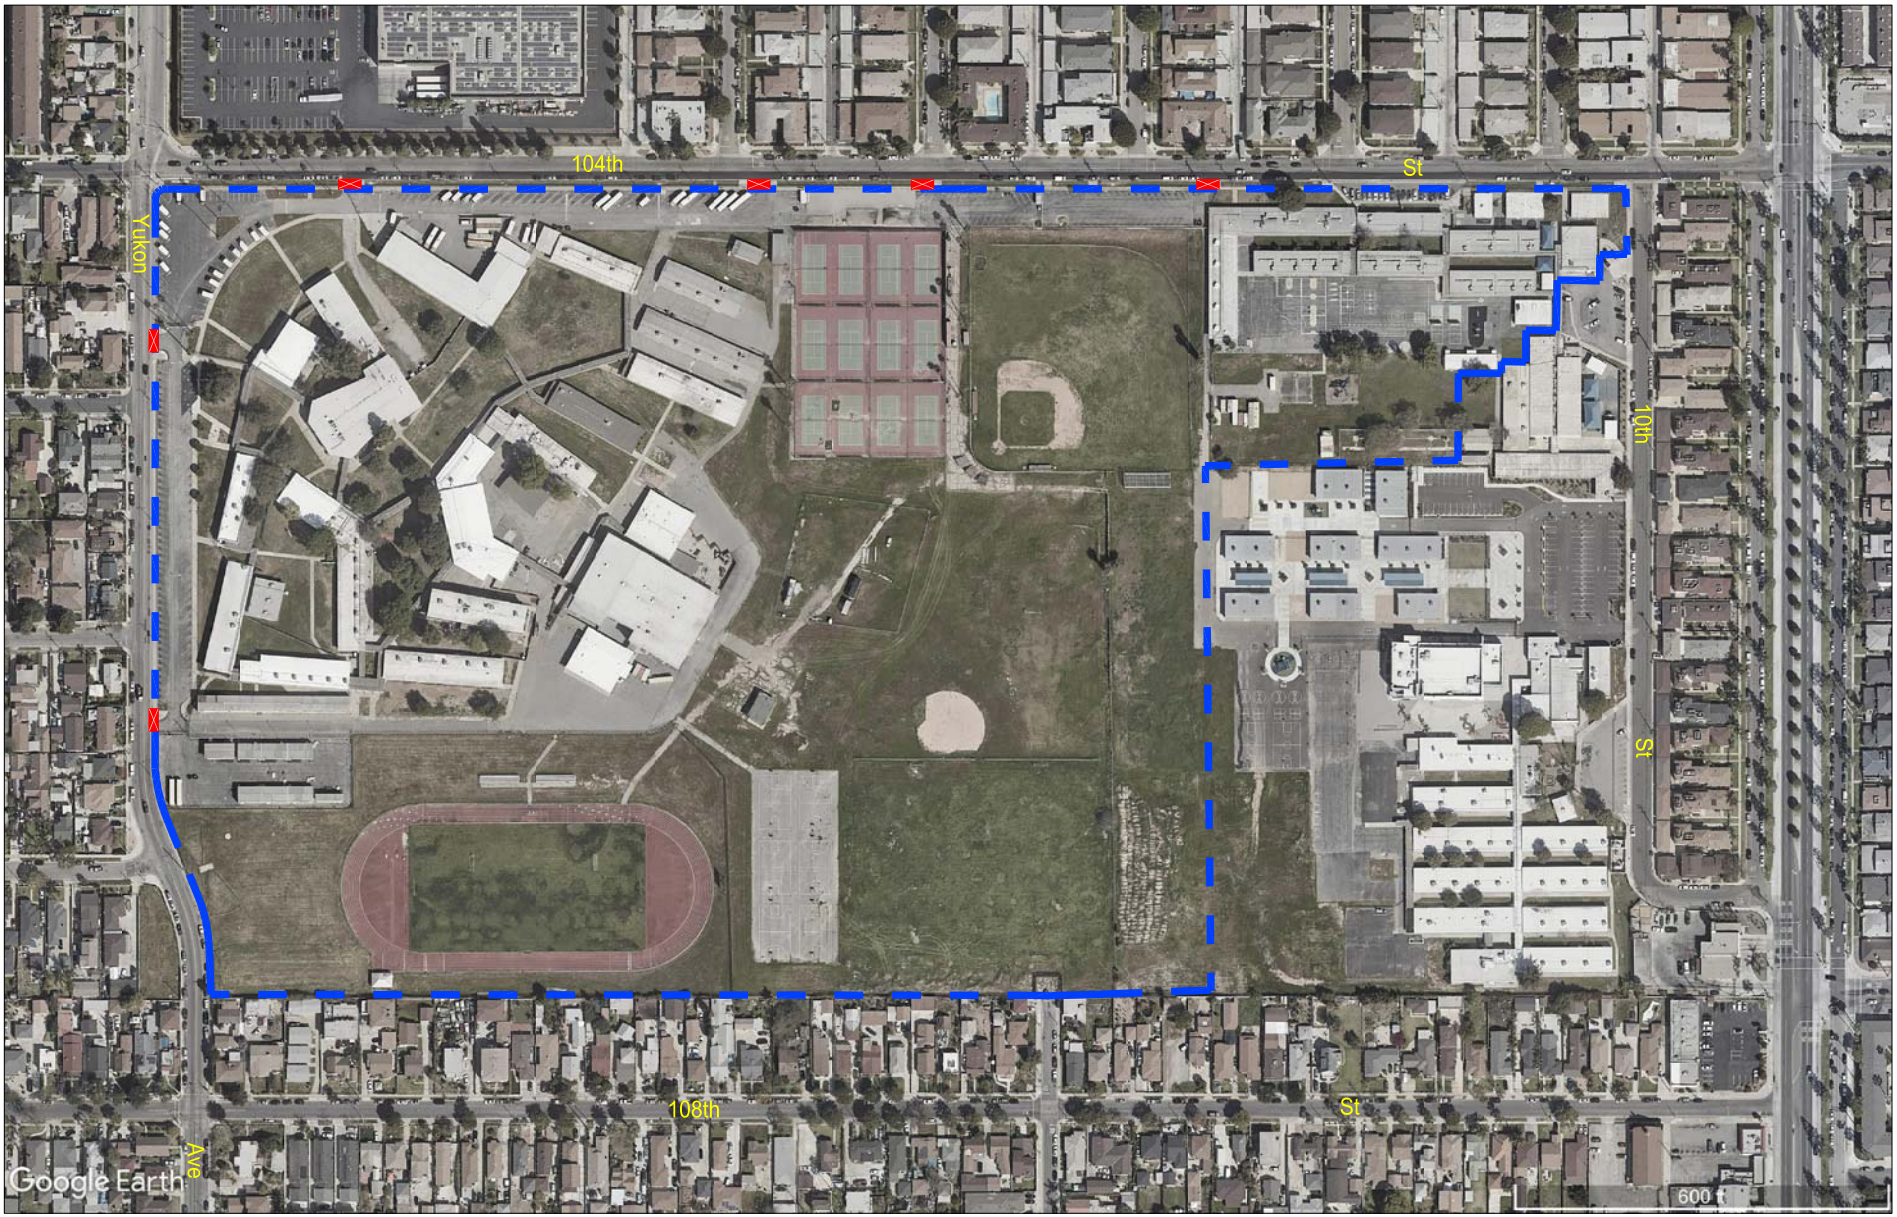
The Los Angeles County Congestion Management Program (CMP) was previously a state-mandated program that was enacted by the California State Legislature with the passage of Proposition 111 in 1990 that primarily utilized an LOS performance metric. Pursuant to California Government Code §65088.3, local jurisdictions may opt out of the CMP requirement without penalty if a majority of the local jurisdictions representing a majority of the County's population formally adopt resolutions requesting to opt out of the program. As stated in a letter from the Los Angeles County Metropolitan Transportation Authority (Metro)[1], by August 28, 2019 fifty-seven local jurisdictions, which in total represent 8.5 million in population, had adopted resolutions electing to be exempt from the CMP. With the Los Angeles County region having reached the statutorily required threshold, the provisions of the CMP are no longer applicable to any of the 89 local jurisdictions within Los Angeles County, regardless of whether or not a jurisdiction adopted an opt-out resolution. Therefore, CMP traffic impact analysis is no longer required.

[1] Kalieh Honish, Los Angeles County Metropolitan Transportation Authority, to Seleta Reynolds, City of Los Angeles Department of Transportation, "Re: Dissolution of the Congestion Management Program in Los Angeles County", August 28, 2019.

2.0 PROJECT DESCRIPTION

2.1 Existing Project Site

The project site is located at 10500 South Yukon Avenue in the southeastern portion of the City of Inglewood, California. The site is generally bounded by 104th Street to the north, residential uses to the south, the Woodworth-Monroe TK-8th Academy to the east, and Yukon Avenue to the west. The proposed project site and general vicinity are shown in *Figure 1-1*.



The site is currently occupied by the Morningside High School which offers grades 9 through 12 as of part the Inglewood Unified School District since it opened its doors in 1951. The School currently has a reported student enrollment of 583 for the 2021-2022 school year. The bell schedule for the School generally encompass 8:00 AM to 3:00 PM, Monday through Friday. Athletic events typically occur on campus from 3:00 PM to 9:00 PM on weekdays; however, all nighttime events currently occur inside the gym for basketball and volleyball games.

The existing Woodworth Elementary School campus currently includes 14 buildings comprised of classrooms and administrative buildings, as well as recreational courts and fields, and parking. The existing vacant buildings and hardscape on the Woodworth Elementary School campus would be demolished and improvements are proposed within the approximately 6-acre campus, which is proposed to be leased by the District. An aerial photograph of the existing project site is presented in ***Figure 2-1***.

2.2 Proposed Project Description

The proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project consists of improvements to the Morningside High School campus and demolition of the existing vacant Woodworth Elementary School campus (collectively referred to as the existing Project Site or existing campuses), including demolition of 14 buildings and hardscape on the Woodworth Elementary School campus and demolition of 13 buildings and hardscape on the Morningside High School campus. The Woodworth Elementary School campus is currently vacant after operations were merged with Monroe Middle School in 2019, creating the Woodworth-Monroe TK-8 Academy. The updates to the Morningside High School components include: 1) demolition of ten buildings and hardscape (including 12 tennis courts and 6 basketball courts); 2) reconstruction of the football stadium and track and team locker rooms; 3) reconstruction and relocation of the baseball field, softball field, six tennis courts, and basketball courts; 4) increase in the on-site parking supply by 169 spaces; 5) reduction of on-site bus parking by 20 spaces; and 6) corresponding landscape and hardscape updates. Additional seating is planned for the athletic fields with stadium seating increasing from 600 seats to 1,515 seats, baseball seating decreasing from 300 seats to 246 seats, and softball seating is planned to include 186 new seats.

No improvements are proposed within the approximately 17-acre eastern portion of the existing Morningside High School campus (which currently includes the tennis courts and basketball courts)

N

o:\job_file\4437\dwg\f2-1.dwg 11/09/2022 16:41:55 rodriquez

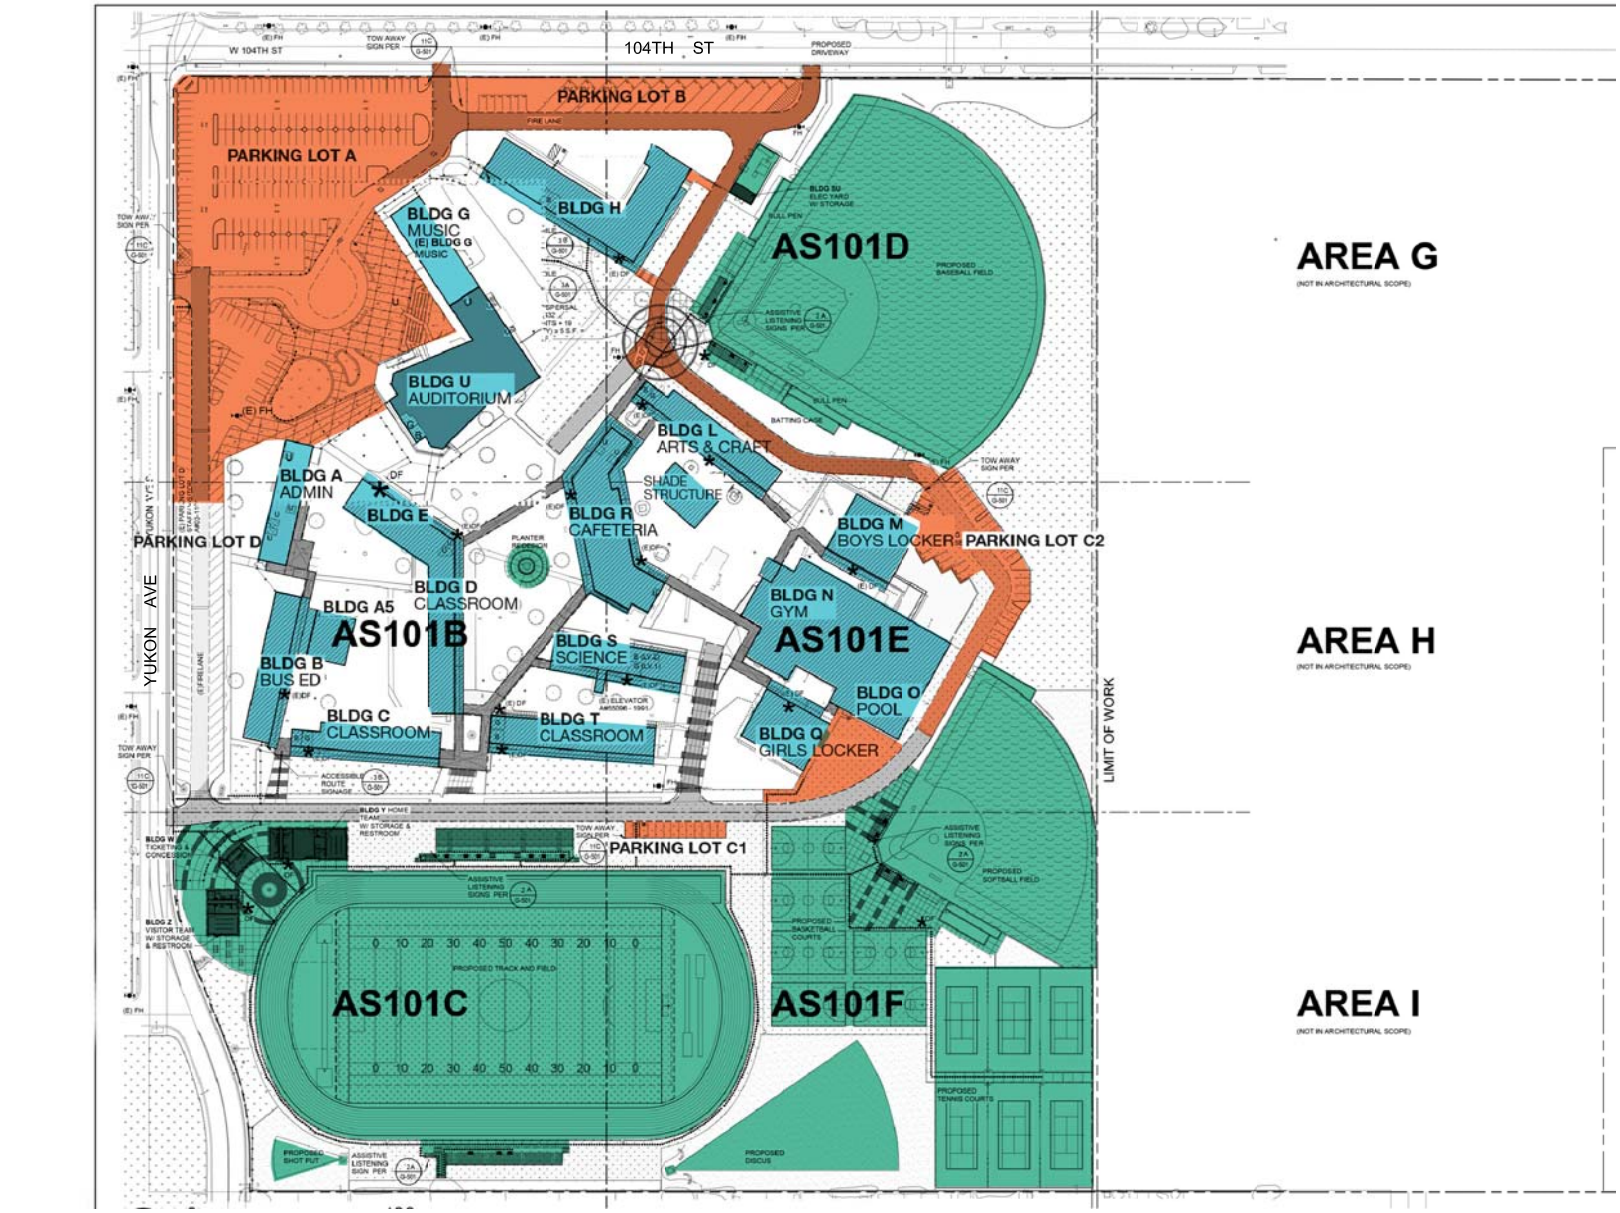
and the approximately 6-acre Woodworth Elementary School campus. The total 23 acres of the remaining eastern portion of the project site are proposed to be leased by the District.

The added open space on campus would reduce the total number of classrooms from 66 to 35; however, due to annually decreasing enrollment at the school, the reduction of classroom capacity would be able to accommodate the anticipated future student enrollment. Student enrollment and staffing/faculty populations are not expected to increase as part of the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project.

Vehicular access to the project site is planned to continue to be provided via Yukon Avenue and 104th Street. The conceptual project site plan is shown in ***Figure 2-2***. Construction is expected to commence in year 2023 with completion in 24 months by the year 2025.

2.3 Project Site Access

2.3.1 *Vehicular Site Access*



Direct vehicular access to the project site is planned to be accommodated by two (2) existing driveways on Yukon Avenue and three (3) existing driveways on 104th Street as shown in *Figure 2-1*. As part of the proposed project, the easternmost driveway on 104th Street would be eliminated. Descriptions of the project site access points are provided in further detail below:

- Yukon Avenue
  Two existing driveways along the east side of Yukon Avenue will continue to provide access to the on-site parking area/s. The southerly Yukon Avenue driveway will accommodate inbound movements only (i.e., left-turn and right-turn ingress movements only) from Yukon Avenue to Parking Lot D. The northerly Yukon Avenue driveway will accommodate full access (i.e., right-turn and left-turn ingress and egress movements) to both Parking Lots A and D.

- 104th Street
  Two driveways along the south side of 104th Street are planned to provide access primarily to Parking Lots A and B, with a connection also to Parking Lots C1 and C2. Both driveways are planned to accommodate full access (i.e., left-turn and right-turn ingress and egress movements).

Within the project site, vehicle circulation is accommodated by the drive aisles within the individual parking lots as well as a gated emergency access road that extends from Parking Lot D and the southernmost Yukon Avenue driveway into the center of the Project Site, northeast of the campus gym building.

Additional internal vehicular circulation would be limited to emergency vehicles and would be provided via an extension of the existing southern fire lane, which would continue to be accessed from Yukon Avenue. The southern fire lane extension would continue from the existing terminus and would then meander to the north to connect to the northern fire lane. Specifically, the extension

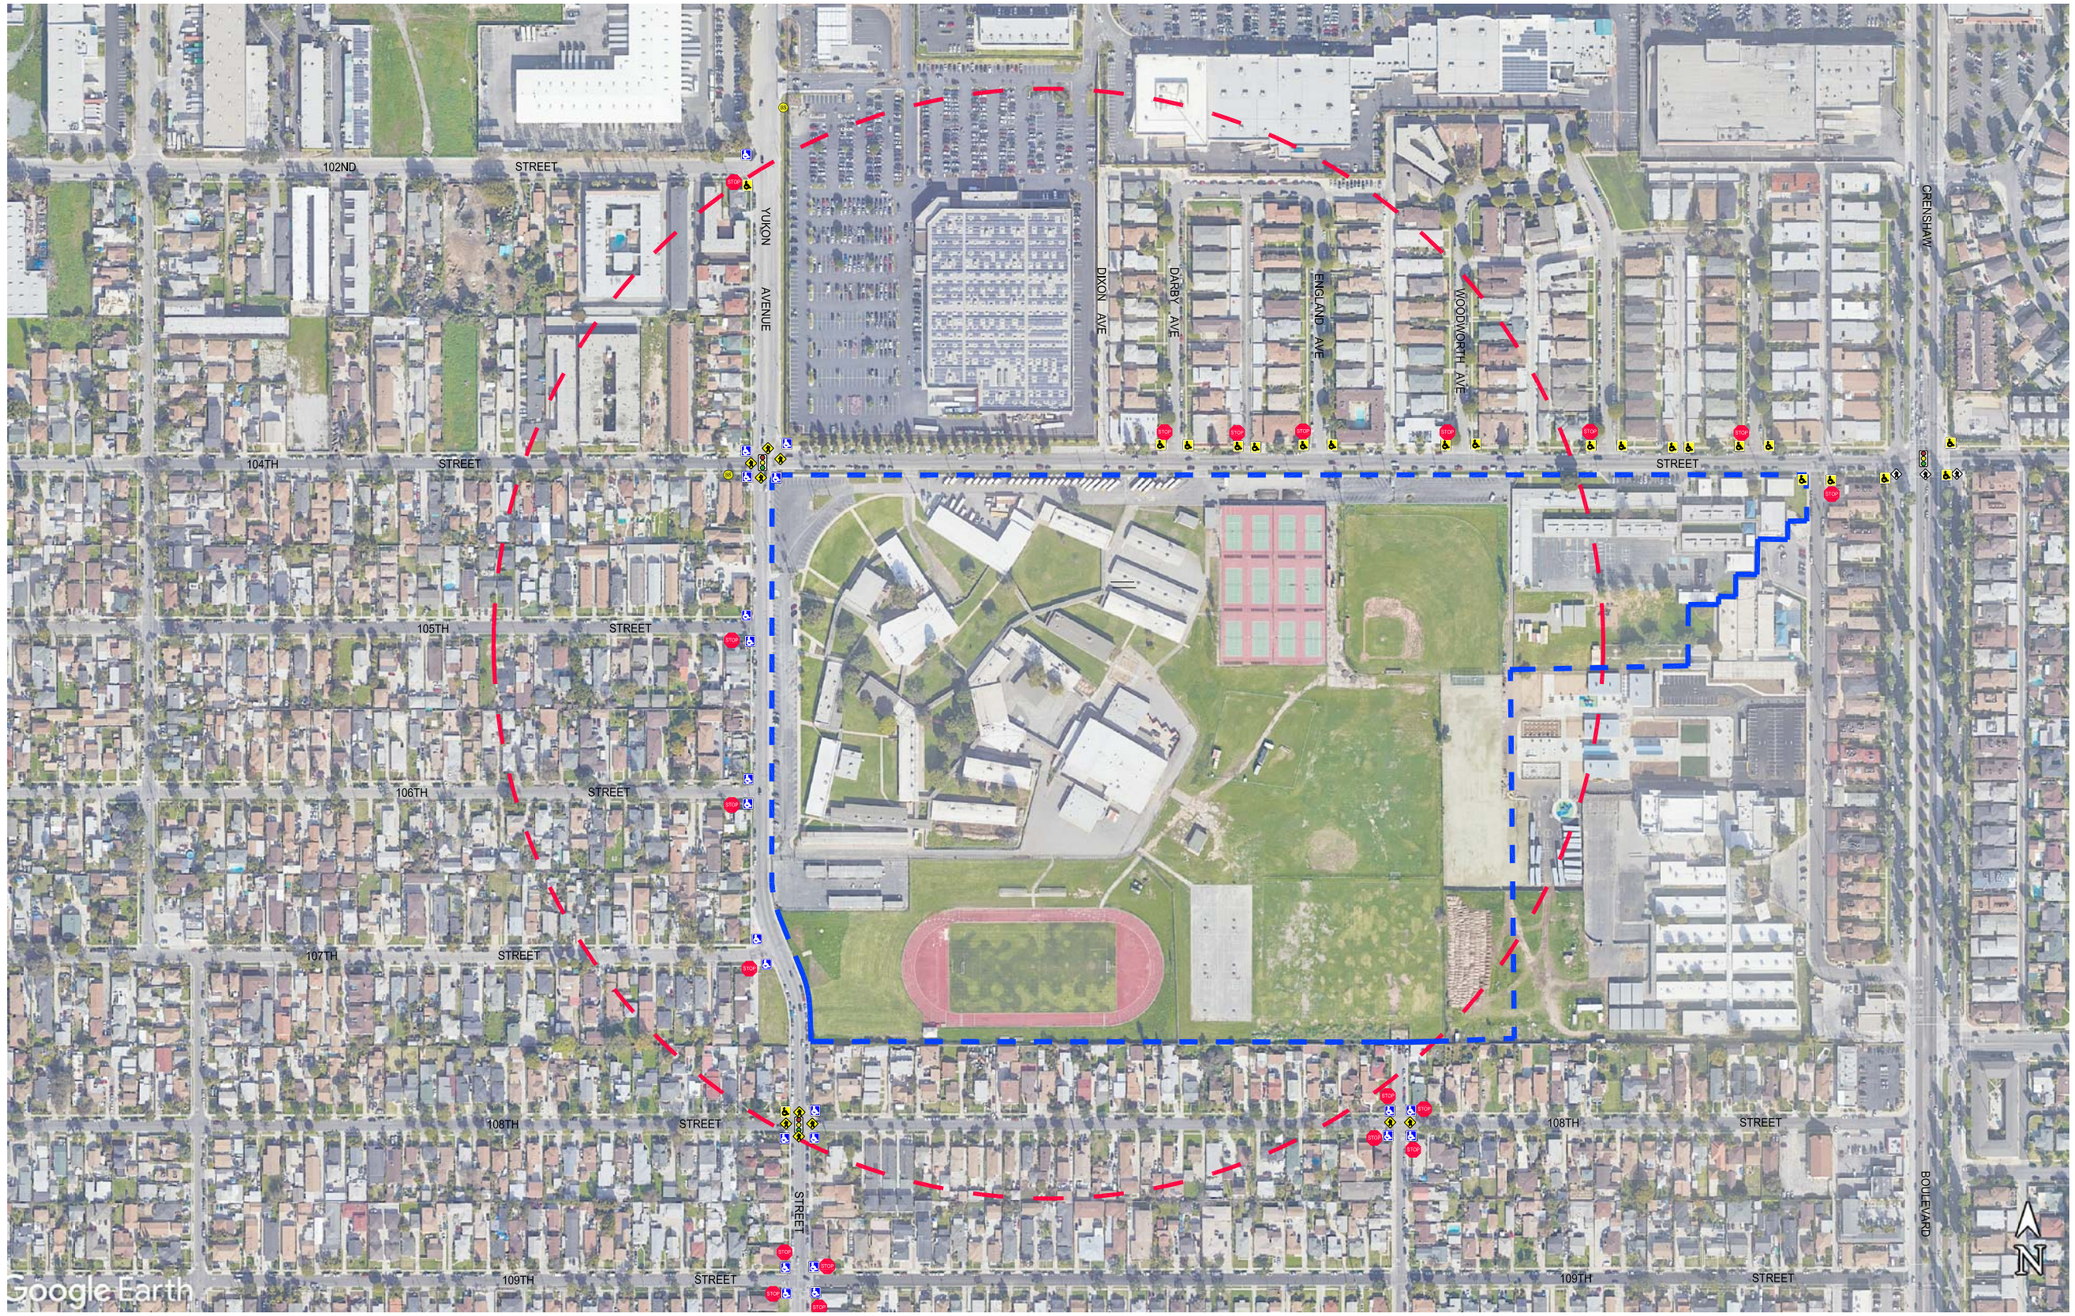
MAP SOURCE: LIONAKIS, 2022

o:\job_file\4437\dwg\f2-2.dwg 06/28/2022 10:11:46 rodriquez

LINSCOTT LAW & GREENSPAN engineers

Figure 2-2
Site Plan

would be constructed primarily within the eastern portion of the campus between the Buildings L, M, N, O and Q and past the proposed recreational components. The connection of the northern and southern fire lanes would occur within the proposed Lot C2 parking lot with a continuous access to each of the parking lots on campus. The proposed fire lane improvements would maintain a 20-foot-wide, barrier-free emergency access route to internal campus with minimum of 50-foot turning radii. The proposed fire lane improvements are not anticipated to affect emergency vehicle access and emergency response times. If required, drivers of emergency vehicles are trained to utilize or travel in opposing through lanes to pass through and traverse crowded or tight areas. Thus, the respect entitled to emergency vehicles and driver training allow emergency vehicles to negotiate typical as well as atypical roadway conditions.



2.3.2 *Non-Vehicular Site Access*

The project site is planned to continue to accommodate non-vehicular access to the Morningside High School campus. Pedestrian access within the project site will be accommodated by Americans with Disabilities Act (ADA) compliant walkways. New walkways will be provided to/from Yukon Avenue and 104th Street which will interconnect with the buildings on campus. These walkways will also provide exclusive pedestrian and bicycle access to/from the existing public sidewalk along the campus frontage. The walkways thus minimize the extent of pedestrian and bicycle interaction with vehicles at the site and provide a comfortable, convenient, and safe environment for pedestrians and bicyclists accessing the building from outside the project site. The existing pedestrian amenities and transit facilities in the project study area is presented in ***Figure 2-3***.

As part of the project, pedestrian walkways would be reconstructed and expanded which consists of the replacement of pavements and covered walkway canopies as needed throughout campus. In addition, the project would construct a Safe Dispersal Area consisting of 2,255 square feet of paved area, which would provide enough space for 432 students and 19 faculty members to evacuate to in the event of an emergency at the Site. The Safe Dispersal Area will allow those on campus to gather, while maintaining a safe distance from structures without leaving the campus and traveling to the public right-of-way. Additionally, emergency circulation for pedestrians would be improved through the addition of accessible route signage and improved circulation of internal walkways. Security improvements would include the addition of secured pedestrian and vehicular gates with lockable knox boxes for emergency service providers.

2.4 Existing Overall Site and Total Parking Supply

Parking for the Morningside High School campus is currently provided in three (3) existing surface parking lots (i.e., Lots A, B, and D) that wrap around campus. Lot A is located at the northwest corner, Lot B along the northern site boundary, and Lot D is situated along the western boundary. The proposed project includes improvements to the three existing surface parking lots (Lots A, B and D) as well as the creation of two new surface parking lots (i.e., Lots C1 and C2). Lot C1 is proposed near the proposed track and football field and Lot C2 is proposed near the proposed baseball stadium.

Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project

o:\job_file\4437\dwg\12-3.dwg 11/09/2022 17:03:30 rodriquez

Figure 2-2 also provides an illustration of the proposed conceptual site plan as well as the improved and proposed surface parking areas. As shown in *Figure 2-2*, the proposed breakdown of the on-site parking supply in each of the five (5) surface parking lots are summarized as follows:

- Lot A (staff/visitor) – 170 total spaces (164 standard spaces, 6 accessible spaces)
- Lot B (bus parking) – 7 total spaces (6 standard spaces, 1 accessible space) and 13 bus spaces
- Lot C1 (stadium) – 12 total spaces (11 standard spaces, 1 accessible space)
- Lot C2 (stadium) – 33 total spaces (31 standard spaces, 2 accessible spaces)
- Lot D (staff/visitor) – 86 total spaces (82 standard spaces, 4 accessible spaces)

The handicap accessible parking spaces are provided in each of the parking lots with bus parking provided only in Lot B. Altogether, the on-site parking supply totals 308 spaces (i.e., 294 standard spaces, 14 handicap accessible spaces) and 13 bus parking spaces.

2.5 City Code Parking Requirements

A calculation of the Code parking requirement was prepared in accordance with the City of Inglewood Municipal Code off-street parking requirements (Section 12-46, Institutional Parking Requirements). In accordance with the Municipal Code parking regulations, the following parking ratios most applicable to the proposed project are as follows:

- High Schools — Seven (7) parking spaces per each classroom, or one parking space for each one hundred square feet of total floor area in classrooms, assembly rooms or other instructional facilities (excluding physical education facilities), whichever is greater.

Source: City of Inglewood Municipal Code (Section 12-46).

Through strict application of the Municipal Code parking regulations, the following parking requirement would be calculated for the proposed project. As noted previously in the project description, the project is planned to demolish one classroom building (F) thus reducing the total number of classrooms to 35 classrooms (from 66 classrooms).

- High School: 35 classrooms x 7 spaces/classroom = 245 spaces
  Total Code Required Project Parking = 245 spaces

As summarized above, the Code parking requirement for the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project totals 245 spaces. At project completion, the campus is planned to provide a total of 308 parking spaces which exceeds the Code parking requirement of 245 spaces.

2.6 Comparison of Industry Standard Parking Ratios

2.6.1 *ITE Parking Demand Ratios*

In addition to reviewing Code parking requirements, the average peak parking demand for various land uses are often estimated using parking ratios contained in other industry standard parking publications. LLG reviewed parking ratios contained in the Institute of Transportation Engineers' (ITE) *Parking Generation Manual*[2] publication. The *Parking Generation Manual* presents the state-of-the-practice understanding of the relationship between parking demand and various characteristics associated with individual land use developments, based on parking studies conducted at locations throughout North America. Specifically, the ITE Land Use 530 (High School) average peak parking demand ratios were reviewed so that it could be compared with that expected through application of the Code parking requirements. When utilizing the ITE publication, the parking demand can be calculated through application of the average peak parking demand ratios based on the total student population figure. The average weekday parking demand ratio for the applicable land use type is summarized below:

- ITE Land Use Code 530 (High School) average weekday peak period parking demand ratio: 0.26 spaces per student (14 study sites, average number of students: 1,096 students)

Application of the ITE published parking demand ratio above to the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project (which is not expected to increase student enrollment) would yield an average weekday peak parking demand of 152 spaces (i.e., 583 students x 0.26 spaces/student = 152 parking spaces). The Code parking requirement for the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project of 245 spaces is 93 spaces more than the parking demand forecast utilizing the ITE parking demand ratios for a high school. Also, as part of the Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project, the campus is planned to provide a total of 308 parking spaces which exceeds the ITE forecast peak parking demand of 152 spaces.

2.7 Parking Management Strategies

It should be noted that site-specific programming details including the frequency and attendance figures for the proposed athletic events/games were provided and reviewed for the Morningside High School. It was determined that recurring special events/athletic games would continue to be provided as part of the typical site operations. During times when the parking demand is high at the site due to concurrent events or when less frequent special events/big athletic games are held, various parking management strategies are effective at managing those peak parking demands. Below are parking management strategies for implementation, specifically when special events/athletic events are held concurrently.

[2] *Parking Generation Manual*, 5th Edition, Institute of Transportation Engineers, Washington D.C., January 2019.

- A requirement to maintain an events calendar that is accessible and shared with the adjacent school (i.e., Woodworth-Monroe TK-8th Academy), which would include the date, time and duration of the event, including the expected attendance figure for each event. Special events/games where 100 attendees or more are expected would require further coordination with the adjacent school to ensure that any overlap of activities is minimized to the extent possible.

- Implementation of managed parking for some spaces within the on-site parking facility (i.e., both valet parking spaces and tandem parking spaces) which would increase the effective parking supply as valet-attended parking could occur within drive aisles located throughout the on-site parking areas.

- A provision in the Rules and Regulations which would prohibit visitors/vendor employees from parking on surrounding streets that are not immediately adjacent to the site frontages.

- To the extent feasible, special events held at the Morningside High School shall not be scheduled to begin or end such that it overlaps with the morning drop-off and afternoon pick-up peak time periods at the adjacent school (i.e., Woodworth-Monroe TK-8th Academy).

- A requirement to conduct a parking utilization monitoring study one year from issuance of the Project's Certificate of Occupancy. The parking utilization monitoring study must demonstrate that on-site parking is adequate to meet project demand during both weekday and weekend conditions. If the study shows that project parking demand exceeds the supply of parking within the project, the Applicant shall propose measures to reduce spillover parking impacts, subject to review and approval by the Director of Community Development. The parking reduction strategies may include, but are not limited to: 1) provision of transit passes and/or ride-share subsidies for employees, and/or 2) subsidized off-site parking options in order to minimize on-site employee parking demand or where concurrent special events/athletic games warrant additional parking, if necessary.

2.8 Project Trip Generation and Distribution

2.8.1 *Project Trip Generation*

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. As mentioned previously in Section 2.2, Project Description, the student enrollment and faculty/staffing population are not expected to increase due to the proposed project. As such, the trip generation of the proposed project was estimated using empirical trip rates derived from the proposed increase in seating capacity for stadium seating (i.e., the proposed 915-seat increase) and softball field seating (i.e., 186 new seats). Site-specific programming details including the frequency of the athletic events/games and estimated attendance figures for each of the proposed events/games was provided and reviewed. Thus, traffic volumes expected to be generated by the proposed project were estimated for the weekday commuter PM peak hour as well as over a 24-hour daily period based on the site-specific programming

information. The proposed project is not expected to generate new trips during the weekday commuter AM peak hour since the athletic games/events are expected to be scheduled in the late afternoon/early evening time periods.

Since an average vehicle occupancy (AVO) of only 1.5 persons per vehicle has been assumed for spectators, fifty percent (50%) of this increase is assumed to overlap with the weekday commuter PM peak hour. Typically, for larger-scale sporting events, a much higher AVO could be expected (i.e., in the range of between 2.0 and 2.75 AVO). Further, the trip generation forecast is conservative as it assumes full occupancy of the net increase in the seating capacity. The trip generation rates and forecast of the vehicular trips anticipated to be generated by the proposed project are presented in ***Table 2-1***. The project trip generation forecast was reviewed and approved by City staff as part of the Memorandum of Understanding scoping process (see *Appendix A*).

2.8.2 *Weekday Site-Specific Project Trip Generation Summary*

It was determined that recurring athletic events/games would continue to be provided as part of the typical site operations. Based on the site-specific programming data and person trips forecast for the project, the number of vehicles has been estimated using an average vehicle occupancy (AVO) of 1.5 persons per vehicle. As summarized in *Table 2-1*, using the site-specific data for a typical weekday with scheduled athletic home events/games, the proposed project is expected to generate 367 new vehicle trips (198 inbound trips and 169 outbound trips) during the weekday PM peak hour. Over a 24-hour period, the proposed project is forecast to generate approximately 1,468 new daily trip ends (734 inbound trips and 734 outbound trips) during a typical weekday. As previously mentioned, the proposed project is not expected to generate new trips during the weekday AM peak hour since the athletic games/events are expected to be scheduled in the late afternoon/early evening time periods and would not overlap with the commuter AM peak time period.

2.8.3 *Project Trip Distribution and Assignment*

Project traffic volumes both entering and exiting the site have been distributed and assigned to the adjacent street system based on the following considerations:

- The site's proximity to major traffic corridors (i.e., Century Boulevard, 104th Street, Imperial Highway, Prairie Avenue, Crenshaw Boulevard, etc.);
- Expected localized traffic flow patterns based on adjacent roadway channelization and presence of traffic signals;
- Existing intersection traffic volumes;
- Ingress/egress scheme planned for the proposed project;
- Nearby population and employment centers; and
- Input from City of Inglewood Public Works Department staff.

Table 2-1

Softball Field Seating (new)	[1]	186 Seats	248	--	--	--	33	29	62
TOTAL PROJECT TRIPS			***1,468***	***--***	***--***	***--***	***198***	***169***	***367***

[1] Trip generation rates are based on rates derived from the increase in seating capacity for the athletic fields as part of the proposed project when compared to the existing Morningside High School campus. An average vehicle ridership of 1.5 persons/vehicle was assumed to estimate the number of person trips to the number of vehicle trips. The athletic games are expected to occur in the late afternoon/early evening and it is assumed that 50% of the trips associated with the games/events would occur during the commuter PM peak hour.

[2] Trips are one-way traffic movements, entering or leaving.

The general, directional traffic distribution patterns for the proposed project are presented in ***Figure 2-4***. The forecast new weekday PM peak hour project traffic volumes at the study intersections associated with the proposed project is presented in ***Figure 2-5***. The traffic volume assignments presented in *Figure 2-5* reflect the traffic distribution characteristics shown in *Figure 2-4* and the project trip generation forecasts presented in *Table 2-1*.

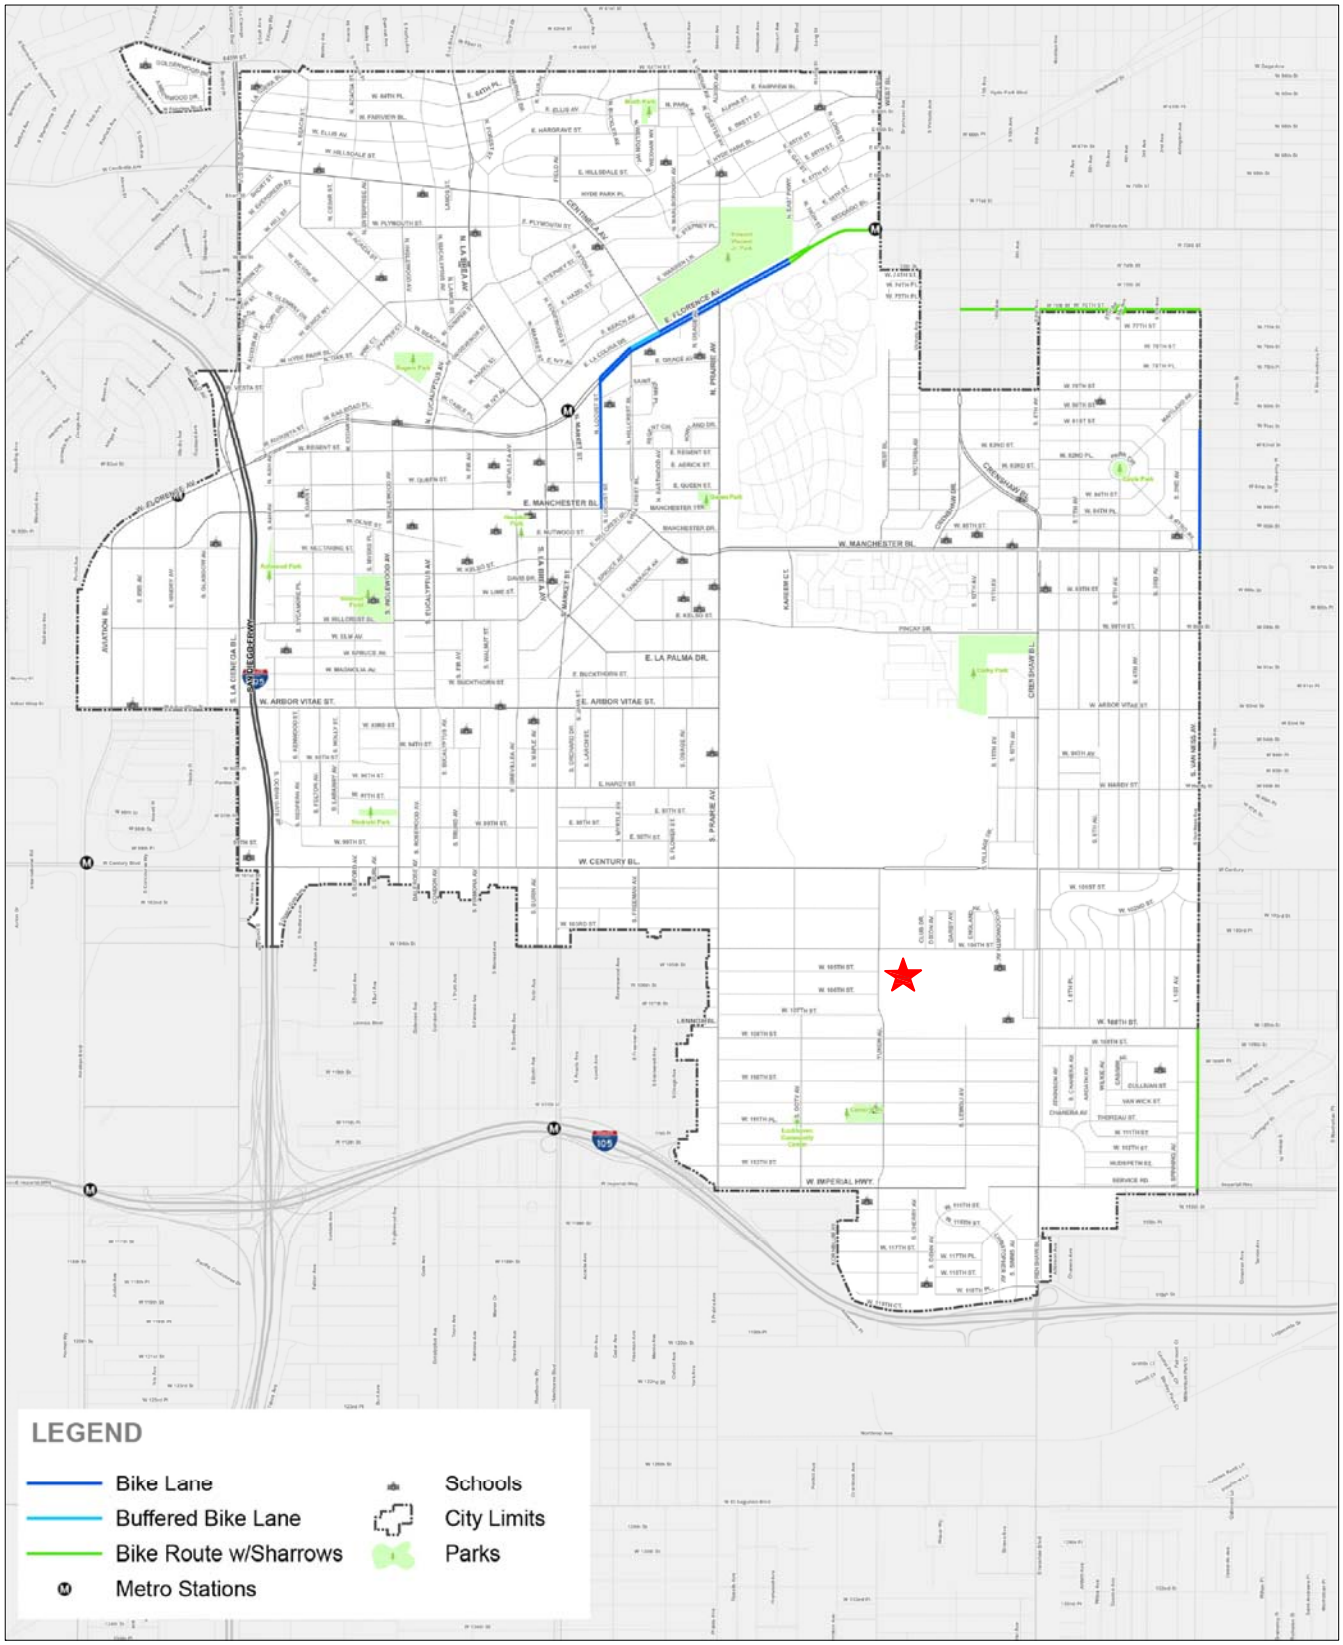
Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project

3.0 PROJECT SITE CONTEXT

The project site is located within a well-established multi-modal transportation network maintained by the City of Inglewood and surrounding jurisdictions. The following sections provide an overview of the transportation infrastructure in the vicinity of the proposed project, including infrastructure which supports both motorized and non-motorized transportation modes.

3.1 Non-Vehicle Network

Non-vehicular transportation generally encompasses walking, biking, and other active transportation modes. Distinct facilities are often provided for these non-vehicular modes. Most prominently, paved sidewalks are typically provided to facilitate pedestrian travel outside of the roadway. In some cases, bicycle facilities such as painted bike lanes or separated bike paths are provided within the roadway in order to separate bike traffic from vehicular traffic. Roadways which are designed to prioritize non-vehicular transportation modes utilize complimentary non-vehicular infrastructure in order to promote comfortable, safe travel for both pedestrians and bicyclists. A review of the pedestrian and bicycle infrastructure provided in the vicinity of the project site is provided below.



3.1.1 *Pedestrian System*

Pedestrian infrastructure consists of facilities such as sidewalks, crosswalks, pedestrian signals, curb access ramps, Americans with Disabilities Act (ADA) compliant tactile warning strips, and curb extensions, among other things. These facilities are widely provided within the study area. Sidewalks are currently provided along Century Boulevard and along other corridors adjacent to the site, including 104th Street and Yukon Avenue. Marked crosswalks, pedestrian signals, and curb ramps are provided at the study intersections.

3.1.2 *Bicycle System*

Bicycle infrastructure consists of both facilities within the roadway as well as public bicycle parking spaces. The Federal and State transportation systems recognize three primary bikeway facilities: Bicycle Paths (Class I), Bicycle Lanes (Class II), and Bicycle Routes (Class III). Bicycle Paths (Class I) are exclusive car free facilities that are typically not located within a roadway area. Bicycle Lanes (Class II) are part of the street design that is dedicated only for bicycles and identified by a striped lane separating vehicle lanes from bicycle lanes. Bicycle Routes (Class III) are preferably located on collector and lower volume arterial streets.

The City of Inglewood currently only has 3.2 total miles of bikeways, with 1.5 miles as Class II bike lanes and 1.7 miles as Class III bike routes. The nearest bicycle facility to the Morningside High School campus is approximately 0.8 miles east of the project site, which is a north-south Class III bike route located on Van Ness Avenue between 108th Street and Imperial Highway. The existing and proposed bicycle infrastructures in the project vicinity is illustrated in ***Figures 3-1(a)*** and ***3-1(b)***, respectively. As presented in *Figure 3-1(b)*, there are plans for a north-south Class II bike lane on Yukon Avenue between Century Boulevard and 104th Street and a Class II buffered bike lane on Yukon Avenue south of 104th Street to just north of Imperial Highway. In addition, along the project

★ Project Site

Figure 3-1B
Proposed Bicycle Facilities

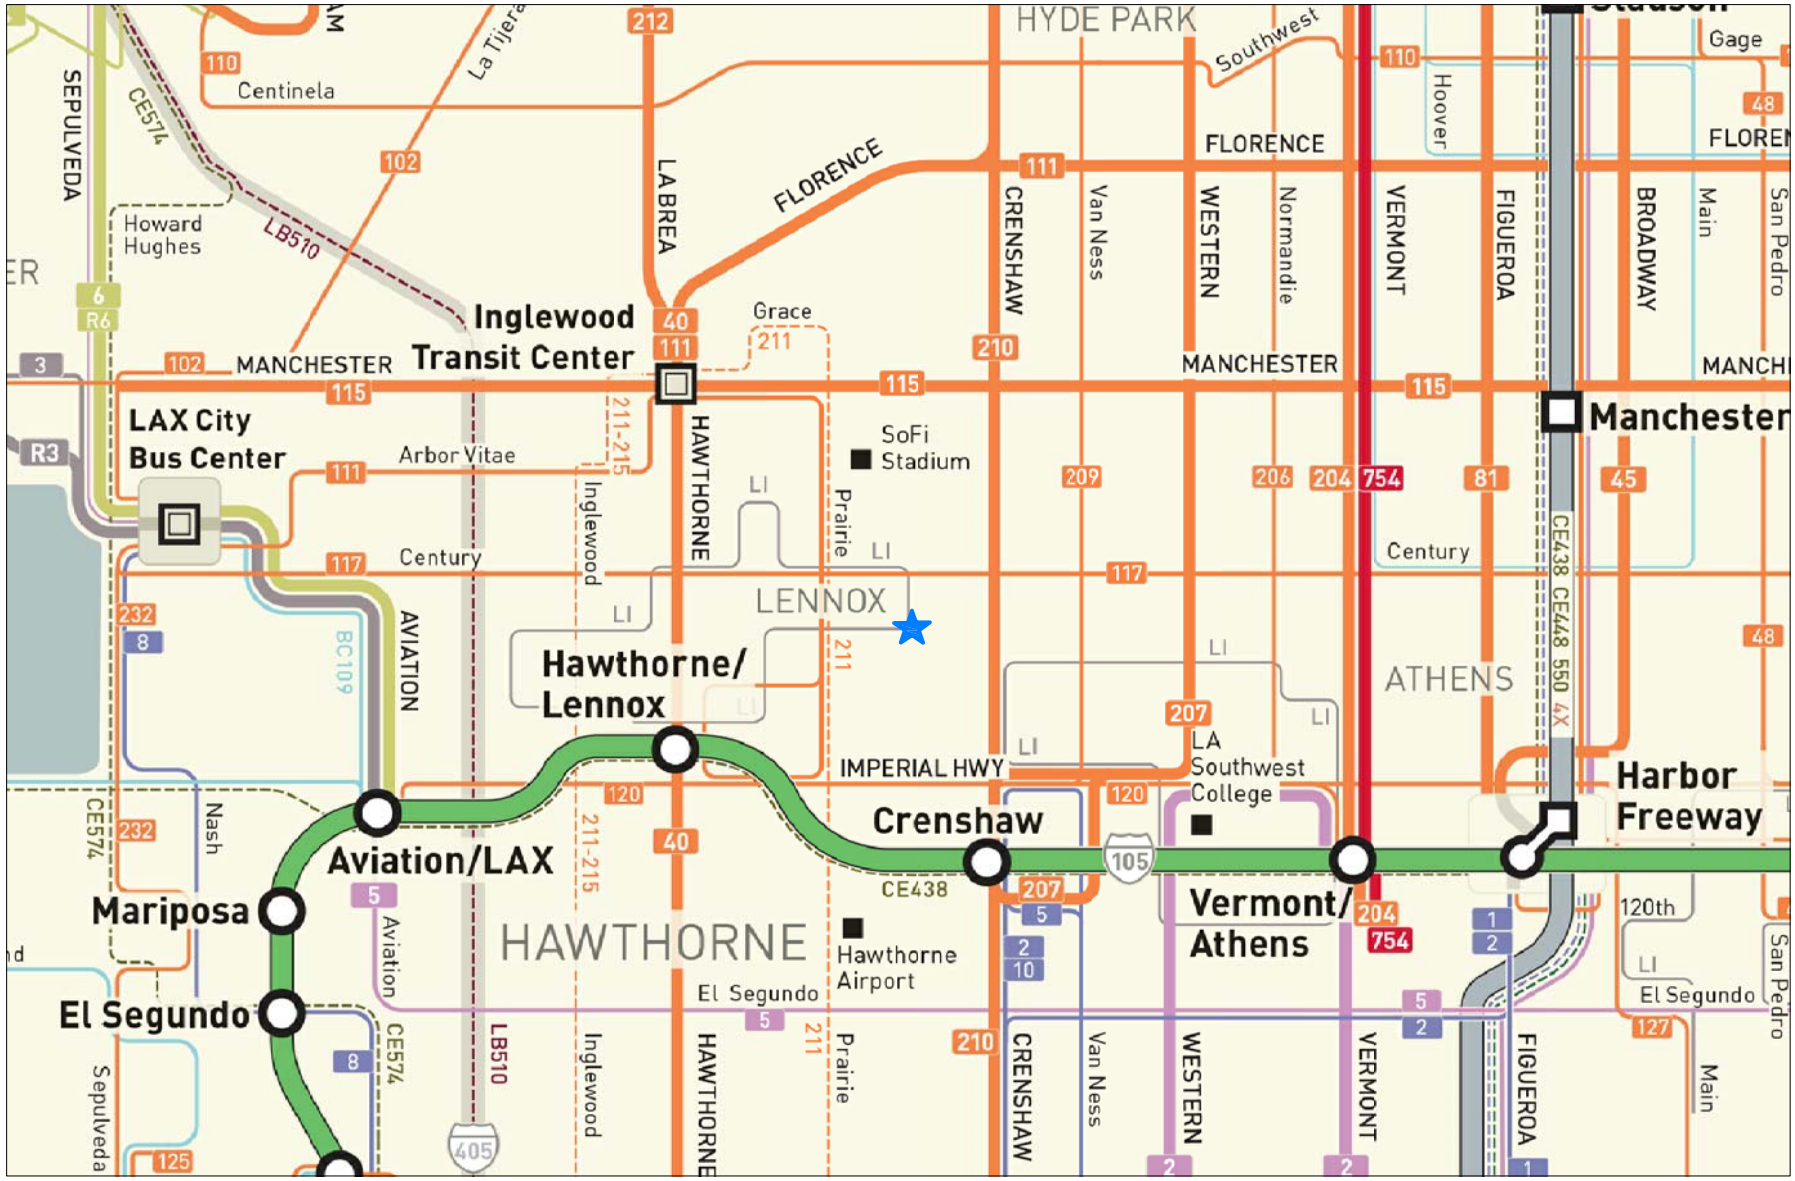
frontage, there are plans for an east-west Class I bike route with sharrows on 104th Street between Prairie Avenue and Van Ness Avenue.

3.2 Transit Network

Public bus transit services are provided within the project study area by the Los Angeles County Metropolitan Transportation Authority (Metro) lines, the County of Los Angeles shuttle system, and the City of Torrance (Torrance Transit). The existing public transit routes in the vicinity of the project site are illustrated in ***Figure 3-2***. A summary of the existing transit service in the vicinity of the project site is presented in ***Table 3-1***.

As shown in *Figure 3-2*, public transit access to the project site is accommodated by Metro which runs one line along Century Boulevard at a frequency of approximately 20 minutes during weekday and 30 minutes during Saturday peak service. The nearest bus stop for Metro Line 117 provides amenities including a bus shelter, bench and trash receptacle and is located approximately one-third mile northwest of the project site (i.e., along the north side of Century Boulevard west of Yukon Avenue). The Link-Lennox shuttle which is operated by the County of Los Angeles runs at a frequency of approximately 30 minutes. Only pole mounted signage is provided at the Link Lennox Line shuttle stop location, which is located along the south side of 104th Street just west of Yukon Avenue.

3.3 Vehicle Network



3.3.1 *Roadway Classifications*

The City of Inglewood, as stated in its General Plan Circulation Element[3], utilizes the roadway categories recognized by regional, state and federal transportation agencies. There are four categories in the roadway hierarchy, ranging from freeways with the highest capacity to two-lane undivided roadways with the lowest capacity. The roadway categories are summarized as follows:

- *Freeways* are limited-access and high speed travel ways included in the state and federal highway systems. Their purpose is to carry regional through-traffic. Access is provided by interchanges with typical spacing of one mile or greater. No local access is provided to adjacent land uses.

- *Arterial* roadways are major streets that primarily serve through-traffic and provide access to abutting properties as a secondary function. Arterials are generally designed with two to six travel lanes and their major intersections are signalized. This roadway type is divided into two categories: principal and minor arterials. Principal arterials are typically four-or-more lane roadways and serve both local and regional through-traffic. Minor arterials are typically two-to-four lane streets that service local and commuter traffic.

[3] The Circulation Element of the Inglewood General Plan, adopted December 15, 1992.

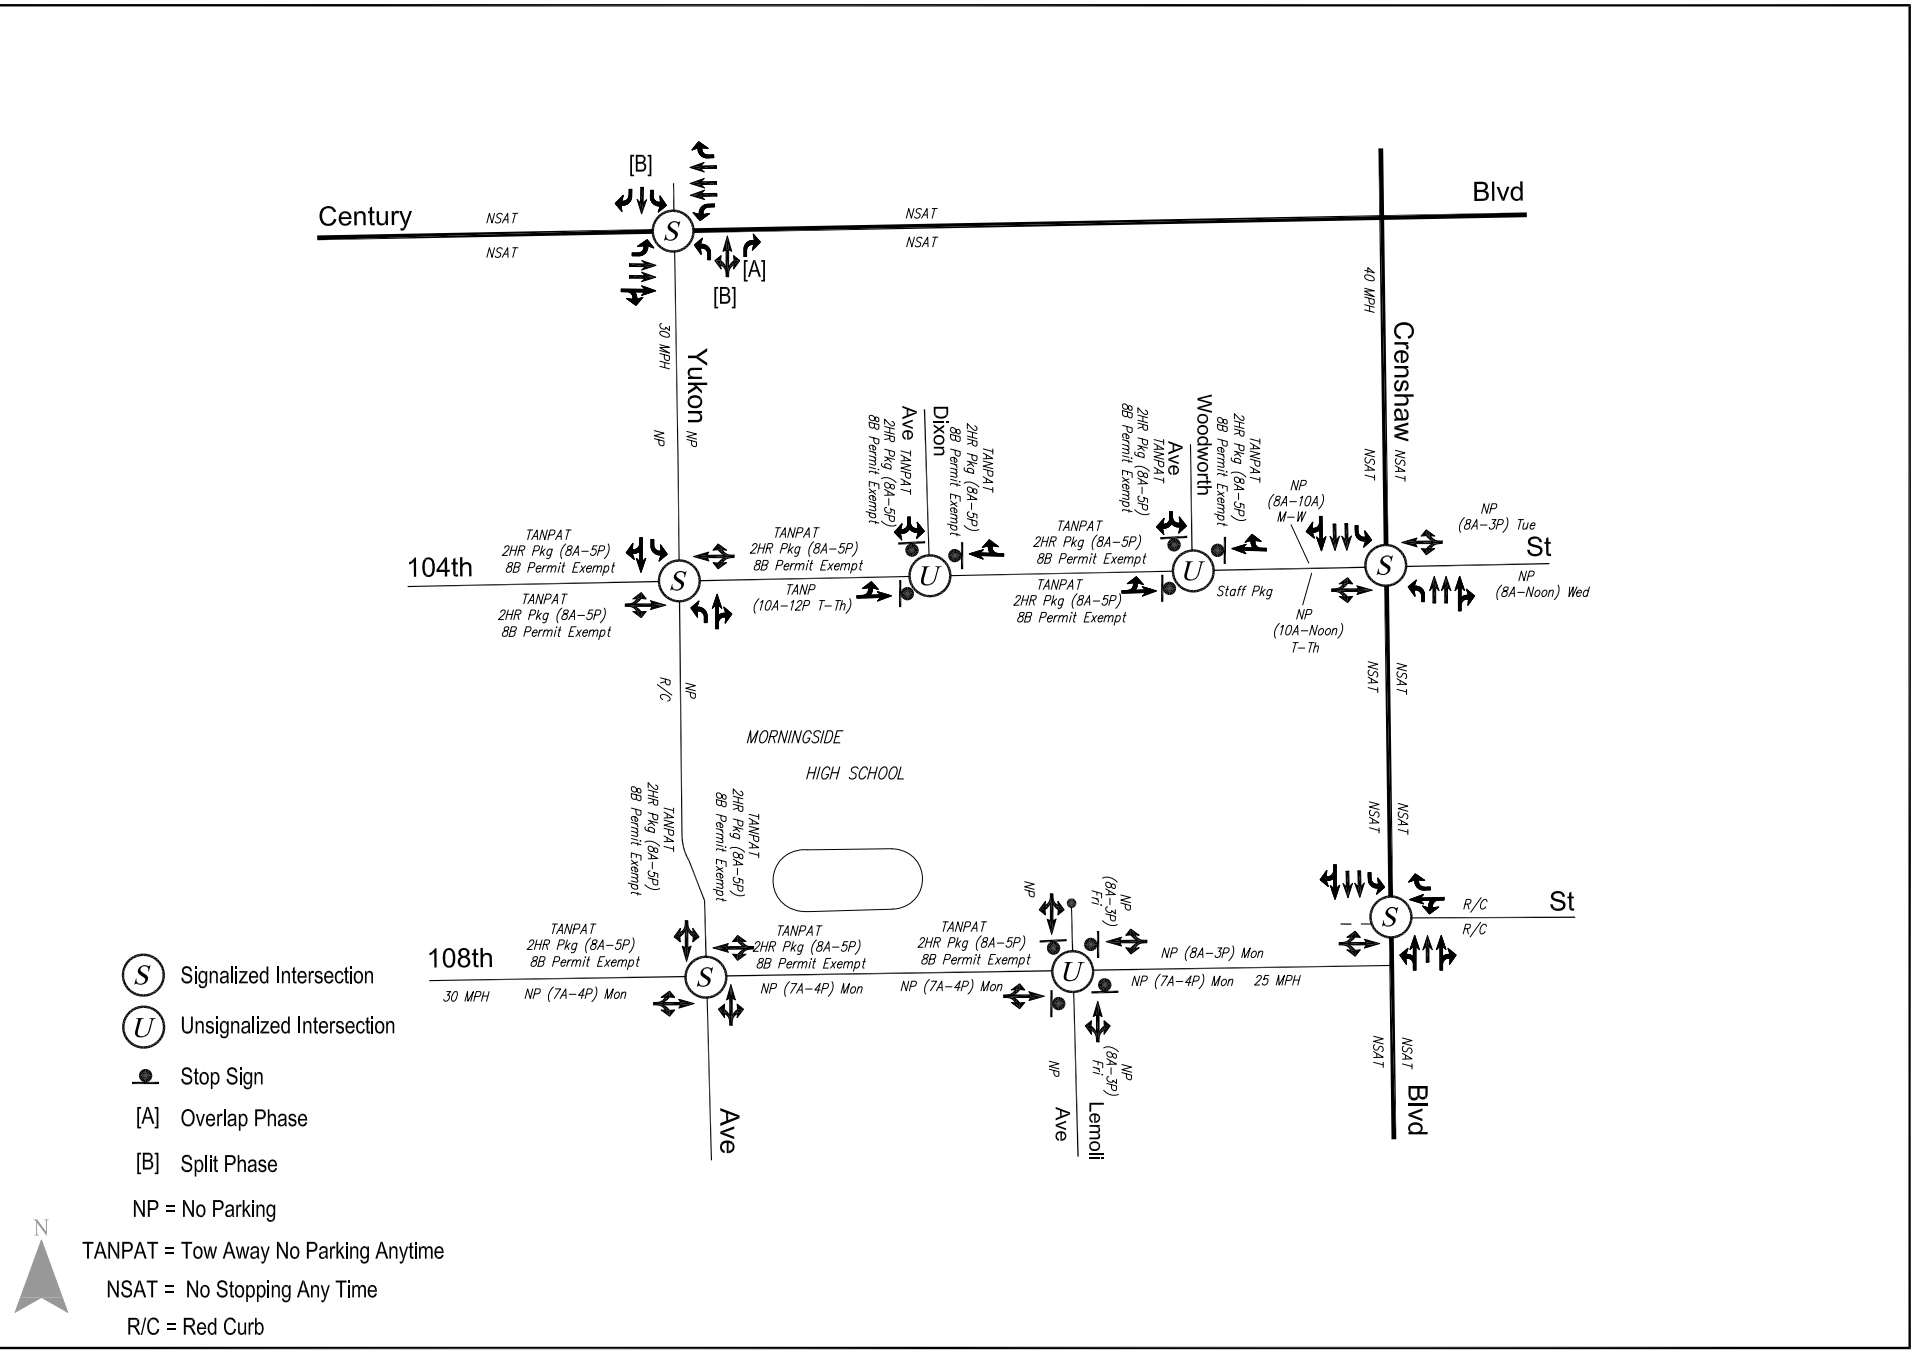
- *Collector* roadways are streets that provide access and traffic circulation within residential and non-residential (e.g., commercial and industrial) areas. Collector roadways connect local streets to arterials and are typically designed with two through travel lanes (i.e., one through travel lane in each direction) that may accommodate on-street parking. They may also provide access to abutting properties.

- *Local* roadways distribute traffic within a neighborhood, or similar adjacent neighborhoods, and are not intended for use as a through-street or a link between higher capacity facilities such as collector or arterial roadways. Local streets are fronted by residential uses and do not typically serve commercial uses. Generally, travel lanes are not striped, and parking may be accommodated on one or both sides of the roadway.

3.3.2 *Regional Highway System*



Primary regional access is provided by the *I-105 Freeway (Glenn Anderson Freeway)* approximately one mile south of the project site. The Glenn Anderson Freeway (I-105) is a major east-west oriented freeway connecting the I-405 (San Diego Freeway) less than two miles west of the site and the I-110 (Harbor Freeway) approximately three miles east of the site. The I-105 Freeway generally contains three to four mainline freeway lanes and one high occupancy vehicle lane in each direction near the study area. Eastbound and westbound on/off ramps are provided to and from the I-105 Freeway at Crenshaw Boulevard.

The *San Diego Freeway (I-405) Freeway* is a major north-south freeway located approximately two miles west of the project site. In the project vicinity, six mixed-flow freeway lanes and one high occupancy vehicle lane are provided in each direction on the I-405 Freeway with auxiliary merge/weave lanes provided between some interchanges. Northbound and southbound on/off ramps are provided to and from the I-405 Freeway in the project area via Century Boulevard and La Cienega Boulevard.

The *Harbor Freeway (I-110) Freeway* is a major north-south freeway located approximately three miles east of the project site. In the project vicinity, five mixed-flow freeway lanes and two high occupancy vehicle lanes are provided in each direction on the I-110 Freeway with auxiliary merge/weave lanes provided between some interchanges. Northbound on- and southbound off-ramps are provided to and from the I-110 Freeway in the project area via Century Boulevard, with full on-/off-ramps provided via Manchester Boulevard further north of the project study area.

3.3.3 *Roadway Descriptions*

The current lane configurations and traffic control measures at each study intersection is presented in ***Figure 3-3***. Descriptions of the roadways which comprise the study area are provided in ***Table 3-2***, including the roadway classification, number of lanes, median types, and speed limits designated by the City of Inglewood.

o:\job_file\4437\dwg\f3-3.dwg 05/31/2022 07:48:28 rodriquez

Century Boulevard	Major Arterial	EB-WB	6	RMI	40
104th Street	Collector	EB-WB	2	N/A	25
108th Street	Collector	EB-WB	2	N/A	30

Notes:

[1] Roadway classifications obtained from the *City of Inglewood Circulation Element of the General Plan* , adopted December 15, 1992.

[2] Direction of roadways in the project area: NB-SB = northbound and southbound; and EB-WB = eastbound and westbound.

[3] Number of lanes in both directions on the roadway.

[4] Median type of the road: RMI = Raised Median Island; 2WLT = 2-Way Left-Turn Lane; and N/A = Not Applicable.

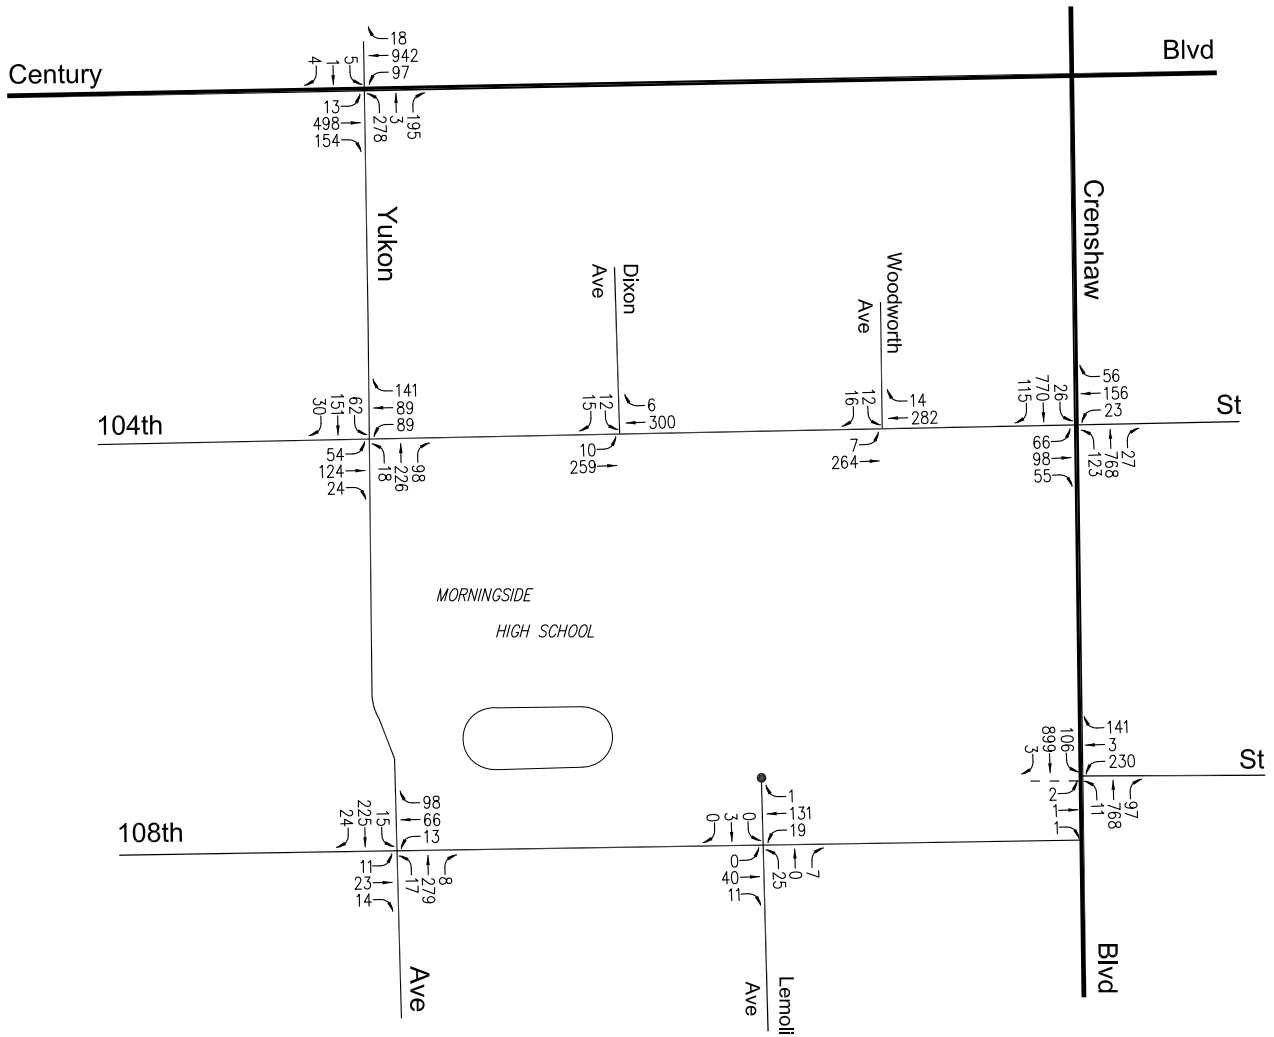
3.4 Traffic Count Data

Manual counts of vehicular turning movements were researched for the following eight (8) intersections identified for review in consultation with City staff:

1. Yukon Avenue/Century Boulevard (signalized)
2. Yukon Avenue/104th Street (signalized)
3. Yukon Avenue/108th Street (signalized)
4. Dixon Avenue/104th Street (unsignalized)
5. Lemoli Avenue/108th Street (unsignalized)
6. Woodworth Avenue/104th Street (unsignalized)
7. Crenshaw Boulevard/104th Street (signalized)
8. Crenshaw Boulevard/108th Street (northerly intersection) (signalized)

The traffic counts were conducted in March 2022 by an independent traffic count subconsultant at the study locations when local schools in the area were in full session. The traffic counts were conducted from 7:00 to 9:00 AM to determine the weekday AM peak commute hour, and from 4:00 to 6:00 PM to determine the weekday PM peak commute hour. Traffic volumes at the study intersections show the weekday morning and weekday afternoon peak periods typically associated with peak commute hours in the metropolitan area.

The existing weekday AM and PM peak hour intersection traffic volumes by approach are summarized in ***Table 3-3***. The existing vehicular turning movements at the study intersections during the weekday AM and weekday PM peak hours are shown in ***Figures 3-4*** and ***3-5***, respectively. For each study intersection, the highest one-hour total traffic volumes (i.e., four consecutive 15-minute time intervals) traversing through the intersection during the 7:00 to 9:00 AM and 4:00 to 6:00 PM time periods were selected so as to determine the respective weekday AM and PM peak hour traffic volumes for each study intersection. For purposes of the traffic impact analysis, this common traffic engineering practice ensures that a more conservative (i.e., worst-case) assessment of existing operating conditions be attained for each study intersection. Therefore, the traffic volumes shown in *Figures 3-4* and *3-5* for the study intersections do not necessarily reflect the same exact one-hour time period during the morning and/or afternoon peak commuter conditions (i.e., one intersection's peak hour may have occurred between 7:30 and 8:30 AM, while another intersection's peak hour may have occurred between 7:45 and 8:45 AM). Summary data worksheets of the manual traffic counts of the study intersections are contained in ***Appendix B*.**



3.5 Cumulative Development Projects

The forecast of future pre-project conditions was prepared in accordance to procedures outlined in Section 15130 of the CEQA Guidelines. Specifically, the CEQA Guidelines provide two options for developing the future traffic volume forecast:

Table 3-3

> "(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the [lead] agency, or
>
> (B) A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency."

Although the CEQA Guidelines do not strictly apply to the local transportation assessment required by the City of Inglewood, this traffic analysis provides a highly conservative estimate of future pre-project traffic volumes as it incorporates both the "A" and "B" options for purposes of developing the forecast.

3.5.1 *Related Projects*

A forecast of on-street traffic conditions prior to occupancy of the proposed project was prepared by incorporating the potential trips associated with other known development projects (related projects) in the area (i.e., within an approximate one-mile radius from the project site). With this information, the potential impact of the proposed project can be evaluated within the context of the cumulative impacts of all ongoing development. The related projects research was based on information on file with the Cities of Inglewood and Hawthorne Departments of Economic and Community Development as well as the County of Los Angeles Department of Regional Planning. It is anticipated that any potential development for the eastern portion of the site (i.e., 23 acres) to be leased by the District would occur after the completion of the Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project and would require a separate environmental review at that time. The list of related projects in the project site area is presented in ***Table 3-4***. The location of the related projects is shown in ***Figure 3-6***.

Traffic volumes expected to be generated by the related projects were calculated using rates provided in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*[4], or they were obtained from other traffic studies as sourced. The related projects' respective traffic generation for the weekday AM and PM peak hours, as well as on a daily basis for a typical weekday, is summarized in *Table 3-4*. The related projects traffic volumes were distributed and assigned to the street system based on the projects' locations in relation to the study intersections, their proximity to major traffic corridors, proposed land uses, nearby population and employment centers, etc. The

Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project

anticipated distribution of the related projects traffic volumes to the study intersections during the weekday PM peak hour are displayed in ***Figure 3-7***.

3.5.2 *Ambient Traffic Growth Factor*

Horizon year background traffic growth estimates have been calculated using an ambient traffic growth factor. The ambient traffic growth factor is intended to include unknown related projects in the study area as well as account for typical growth in traffic volumes due to the development of projects outside the study area. An annual growth rate of one percent (1.0%) per year was selected for this analysis in consultation with City of Inglewood staff during the scoping process.

Therefore, application of this one percent (1.0%) ambient growth factor in addition to the forecast traffic generated by the related projects allows for a very conservative forecast of future traffic volumes in the project study area as incorporation of both (i.e., an ambient traffic growth rate and a detailed list of cumulative development projects) is expected to overstate potential future traffic volumes.

4.0 CEQA TRANSPORTATION ASSESSMENT

The State of California Governor's Office of Planning and Research (OPR) issued proposed updates to the CEQA Guidelines in November 2017 that amends the Appendix G question for transportation impacts to delete reference to vehicle delay and level of service and instead refer to Section 15064.3, subdivision (b)(1) of the CEQA Guidelines asking if the project will result in a substantial increase in vehicle miles traveled (VMT). The California Natural Resources Agency certified and adopted the revisions to the CEQA Guidelines in December of 2018, and as of July 1, 2020 the provisions of the new section are in effect statewide. Concurrently, OPR developed the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018), which provides non-binding recommendations on the implementation of VMT methodology which has significantly informed the way VMT analyses are conducted in the State. Accordingly, for the purpose of environmental review under CEQA, neither the Inglewood Unified School District nor the City of Inglewood have established VMT analysis procedures at this time; therefore, the project-related VMT impact has been assessed qualitatively based on guidance from the OPR's *Technical Advisory* and review of VMT policies.

4.1 Vehicle Miles Traveled (VMT) Project Screening

Traditionally, public agencies have set certain thresholds to determine whether a project requires detailed transportation analysis or if it could be assumed to have less than significant environmental impacts without additional study. As mentioned previously, the project-related VMT impact has been assessed qualitatively based on guidance from the OPR's Technical Advisory and review of VMT policies. The Technical Advisory provides the following potential screening criteria for certain land development projects that may be presumed to result in a less than significant VMT. There are essentially three (3) screening criteria which may be applied to screen proposed projects out of detailed VMT analysis. Proposed projects are not required to satisfy all of the screening criteria in order to screen out of further VMT analysis; satisfaction of one criterion is sufficient for screening purposes. The following sections provide a detailed explanation of each screening criteria as it relates to the proposed project.

4.1.1 *Transit Priority Area Screening*

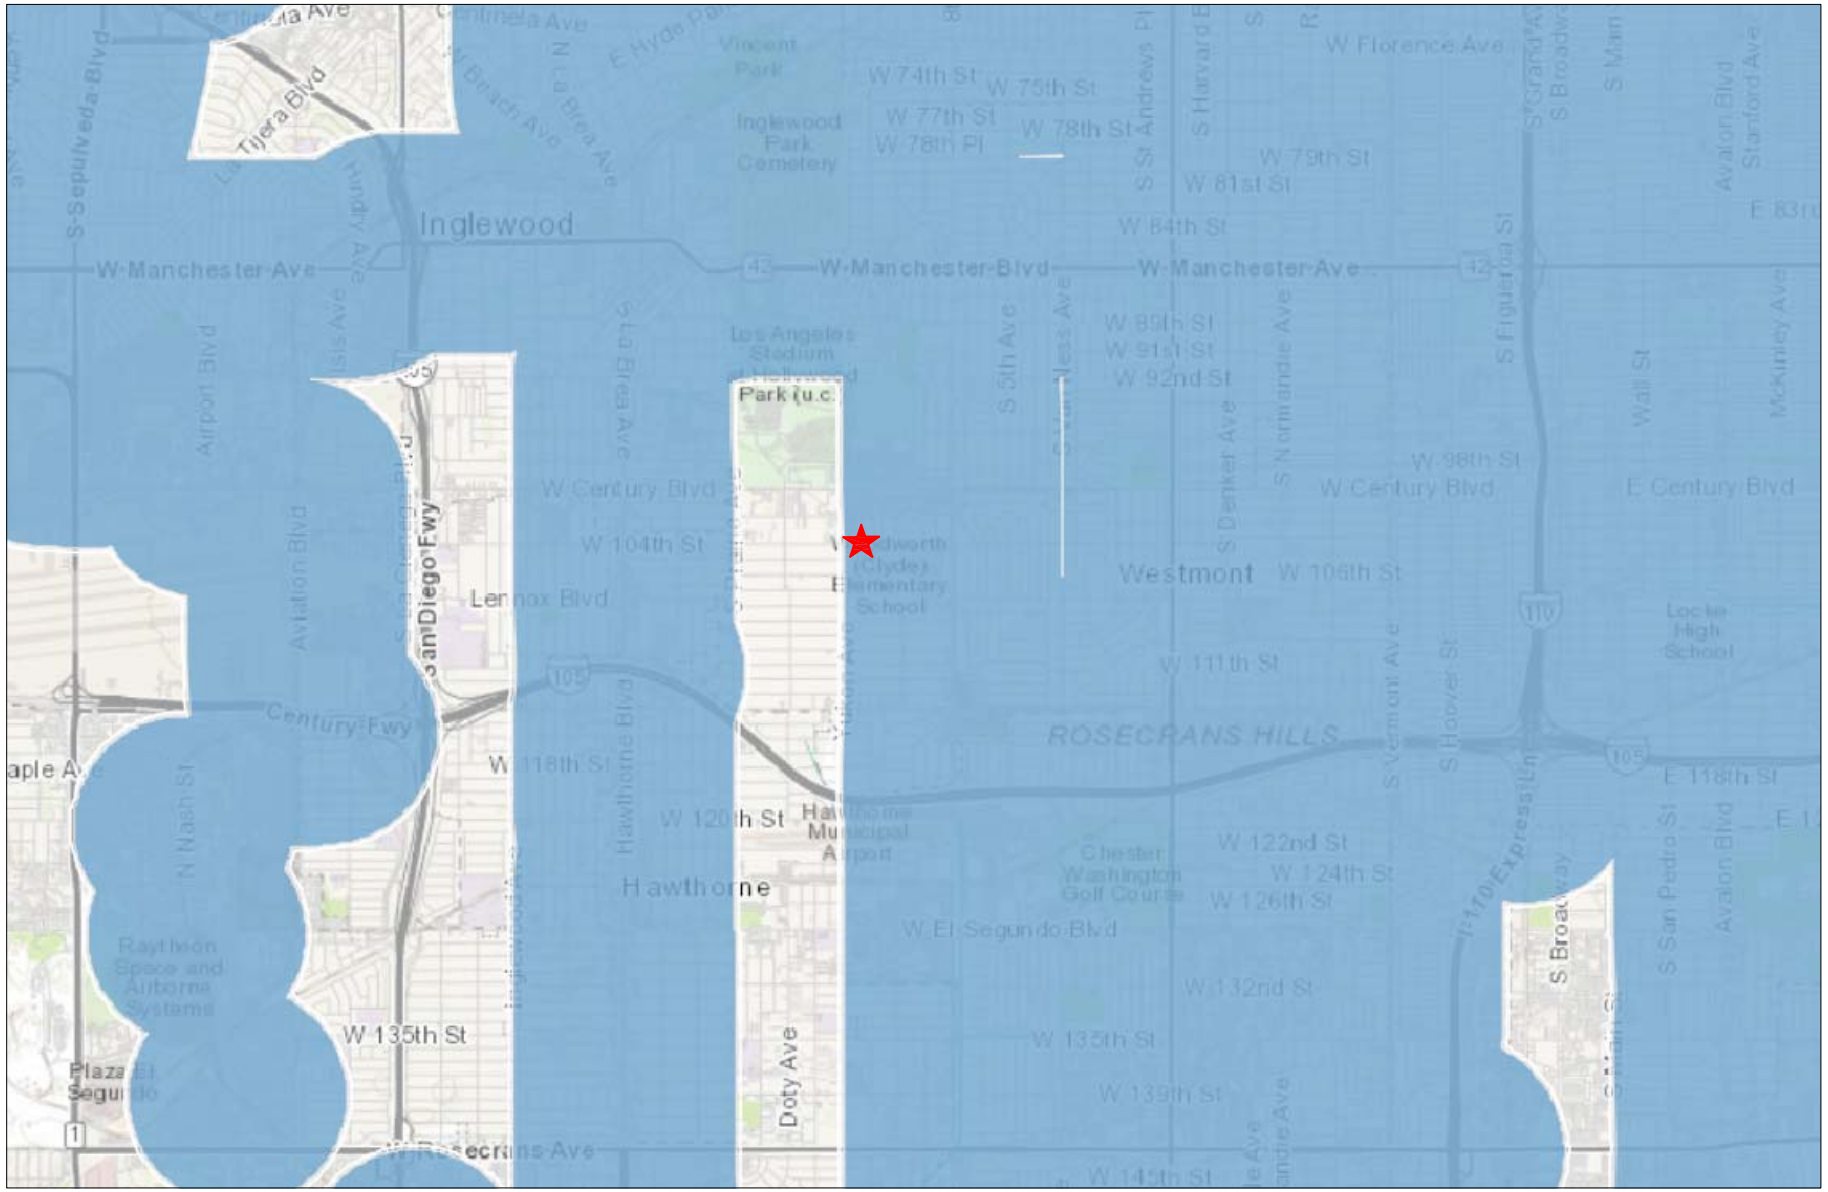
CEQA Guidelines Section 15064.3(b)(1) states in part: "Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact." In keeping with the statutory presumption of less than significant impacts due to nearby high-quality transit, the City of Inglewood has adopted a transit priority area[5] (TPA) screening criterion. Projects which are located

[5] Public Resources Code Section 21099(a)(7): ""Transit priority area" means an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program or applicable regional transportation plan."

within a TPA are presumed to have a less than significant impact, absent substantial evidence to the contrary. This presumption may not be appropriate if:

- The project has a floor area ratio (FAR) of less than 0.75.
- The project includes more parking for use by residents, customers, or employees of the project than required by the City.
- The project is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Southern California Association of Governments [SCAG]).
- The project replaces affordable residential units with a smaller number of moderate- or high-income residential units.

As described in *Section 3.2*, public transit service is provided in the vicinity of the proposed project. The Los Angeles County Metropolitan Transportation Authority (Metro) lines, the County of Los Angeles shuttle system, and the City of Torrance (Torrance Transit) which provide services in the immediate vicinity of the project site. As shown in ***Figure 4-1***, the project site is located within a High Quality Transit Area (HQTA) as identified by SCAG for the Final Connect SoCal (the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). However, as mentioned previously, the presumption that Projects which are located within a TPA/HQTA have a less than significant impact may not be appropriate if the project provides more parking for use than required by the City. At project completion, the campus is planned to provide a total of 308 parking spaces which exceeds the Code parking requirement of 245 spaces. Thus, the proposed project is not expected to screen out of VMT analysis due to the transit priority area screening criterion.



4.1.2 *Low VMT Area Screening*

It is assumed that projects which will be located within areas which currently exhibit low VMT, and that incorporate similar features pertaining to density, land use mix, and transit availability, will tend to exhibit similarly low VMT. In areas where the existing VMT generation already falls below the applicable thresholds, and where projects are likely to generate similar levels of VMT, projects may be screened out of preparing detailed VMT analysis. OPR notes that such screening is appropriate for residential and office projects. As the project neither falls within a residential or office land use type category, the proposed project is not expected to screen out of VMT analysis due to the low VMT area screening criterion.

4.1.3 *Project Type Screening*

Consistent with the OPR's *Technical Advisory*, the following potential screening criteria for certain land development projects that may be presumed to result in a less than significant VMT impact:

- Local-serving retail less than 50,000 square feet, including gas stations, banks, restaurants, shopping center.
- Local-serving K-12 schools, local parks, daycare centers, etc.
- Local-serving hotels (e.g., non-destination hotels)

N

MAP SOURCE: SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS (SCAG)

Project Site

High Quality Transit Areas

Figure 4-1
High Quality Transit Areas

Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project

o:\job_file\4437\dwg\f4-1.dwg 06/30/2022 08:52:35 rodriquez

- Local-serving assembly uses (places of worship, community organizations)
- Community institutions (public libraries, fire stations, local government)
- Affordable, supportive, or transitional housing
- Assisted living facilities, senior housing
- Projects generating less than 110 daily vehicle trips
- Public parking garages and public parking lots

As mentioned in the OPR's *Technical Advisory*, local serving uses typically redistributes and reroutes local trips rather than create new trips. By adding local serving opportunities into the urban fabric and thereby improving destination proximity, local-serving projects tends to shorten trips and reduce VMT. It is also noted that lead agencies may presume such local-serving projects create a less than significant transportation impact. Similarly, the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project will serve the local population and is a local-serving high school, thereby shortening travel distances and reducing VMT. Thus, the proposed project can be presumed to result in a less than significant VMT impact based on State guidance because it would reduce VMT by shortening trip lengths, similar to local-serving retail developments and other local-serving projects. Therefore, the proposed project satisfies the criteria to be considered a local serving use and is screened out from further VMT analysis as it is presumed to cause less than significant transportation impacts.

4.1.4 *Summary of Screening Conclusions*

The City of Inglewood has adopted three screening criteria which may be applied to screen proposed projects out of detailed VMT analysis. The project does not meet the criteria to be screened out of VMT analysis based on its location within a TPA or low VMT-generating area. The project does, however, satisfy the criteria based on the project land use type as a local serving community use. Therefore, the project is screened out of further VMT analysis.

4.2 VMT Impact Conclusions

As described in *Section 4.1.4*, the project meets the criteria for a local serving project and is screened out of further VMT analysis. The screening criterion is based on the presumption that local serving projects will cause less than significant impacts. Therefore, through satisfaction of the screening criteria, the project is determined to result in a less than significant transportation impact.

4.3 Active Transportation and Public Transit Analysis

A significant impact may also occur "if the project conflicts with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decreases the performance or safety of such facilities". The following section provides a brief review of the City's adopted policies, plans, and programs pertaining to active transportation and public transit analysis.

4.3.1 *Adopted Policies, Plans, or Programs*

The *2019 City of Inglewood Mobility Plan* provides the framework for addressing current and future infrastructure needs and establishes the vision, goals, policies, infrastructure enhancements and program requirements to improve the City's local transportation network and access to the regional transportation system. The relevant goals and objectives are identified below as well as the corresponding strategies to achieve the goals and objectives:

- Goal No. 1: Sustainability and Environmental Considerations

  Strategy 1.1 – Relieve Congestion. The City will apply Transportation Demand Management programs aimed to reduce travel of single-occupancy vehicle trips during peak commute hours. Some key components of the TDM programs may include, but are not limited to the following: a) offer employee incentives to walk, bicycle, or take transit to work, etc. b) provide bicycle-friendly facilities at employment areas, and c) facilitate carpool or vanpool programs for employees.

- Goal No. 3: Create an Efficient, Balanced, Multimodal Mobility Network

  Strategy 3.1 – Complete Streets. Develop and enhance a pedestrian network that consists of elements that encourage walking to/from destinations and first/last mile options. Provide bicycle infrastructure including, but not limited to, bike paths, bicycle lanes, hubs, and secure bicycle parking at major transit locations.

- Goal No. 5: Safety – Maintain and promote safety for pedestrians, bicyclists, motorists, transit riders, trucks and delivery vehicles.

  Strategy 5.1 – Promote Safer Transportation Network. Provide the most feasible, most appropriate multimodal infrastructure that is safe and accessible to every member of the community, especially vulnerable populations such as children and the elderly. Provide and maintain adequate sidewalk widths and amenities to ensure a safe experience for pedestrians citywide.

  Strategy 5.2 – Provide Safety Education and Implement Safety Programs to Public Schools. Implement a Safe Route to School Plan that would determine the routes used by the students and measures to improve mobility/safety/infrastructure to school. Implement Safe Route to School Programs to all Inglewood public schools. Provide active transportation safety education to the community. Use Neighborhood Traffic Control techniques when excessive vehicle speed, excessive volume, or pedestrian/vehicle safety concerns warrant them.

The City's *General Plan* Land Use Element, that was amended in 2009, outlines the following circulation goals and objectives that are consistent with the City's Mobility Plan:

- Promote and support adequate public transportation within the City and the region,

- Develop modified traffic systems that will discourage through traffic from utilizing neighborhood streets,

- Develop a safe and adequate pedestrian circulation system which is barrier free for the handicapped.

The purpose of the City's *Active Transportation and Safe Routes to School Master Plan (ATP/SRTS)*[6] is to create a Complete Streets update to the City of Inglewood General Plan. The ATP/SRTS Plan sets forth goals, policies and strategies pertaining to accident and traffic safety, transit and public transportation, ensuring easy and convenient access to the regional facilities, bicycle routes and pedestrian facilities, among other things. Relevant adopted policies include:

- Policy 1.2: Ensure that planning, design and implementation documents are adhered to – Ensure that new development projects go through review processes for compliance with the ATP/SRTS.

- Policy 1.3: Revise the Municipal Code on crosswalk installation, removal, and enhancement – Adopt the high-visibility continental crosswalk treatment as the standard along school routes and crossings with multi-lane streets, and where pedestrian activity demands it.

- Policy 3.1: Achieve a safe, comfortable and attractive pedestrian environment for people of all ages and abilities – Explore the use of 15 mph school zones by conducting necessary analysis.

- Policy 4.1: Facilitate the provision of quality bicycle support facilities at local and regional destinations – Provide convenient, highly visible, and secure bicycle parking at schools, parks, public buildings, private development including the Hollywood Park development site, and other destinations where demand is needed.

- Policy 5.1: Encourage and support comprehensive pedestrian and bicycle safety education awareness programs for pedestrians, bicyclists, and motorists – Work with local schools to implement and institutionalize a comprehensive pedestrian and bicycle education program that teaches all school children to follow the rules of the road. Encourage schools and school districts to implement a comprehensive pedestrian and bicycle education program for their students, faculty and staff. Encourage the inclusion of pedestrian and bicycle education for crossing guards and bus drivers in their training programs.

- Policy 5.2: Actively encourage City staff, employees, residents, visitors and students to walk and bicycle as often as possible – Encourage schools to coordinate a "Bike to School Day" event. Encourage schools to participate in "International Walk to School Day" every October.

[6] *City of Inglewood Active Transportation and Safe Routes to School Master Plan*, adopted May 17, 2022.

- Policy 6.1: Provide equal pedestrian and bicycle access for all through public engagement, program delivery, and capital investment – Strengthen partnerships with the County of Public Health, community-based organizations, school district, faith-based institutions and others that can help to realize the economic, health and societal benefits of walking and bicycling to the greater public.

- Policy 6.2: Improve personal safety for students walking and bicycling to school – Ensure students feel safe while walking and bicycling to and from school by providing enhanced street lighting and maintaining overgrown shrubbery along sidewalks.

The ATP/SRTS includes specific improvements to address pedestrian and bicycle safety concerns. As part of the Plan preparation, a SRTS workshop was held in 2016 and involved collaboration between the City and stakeholders to improve the safety of students traveling to/from school with an increased focus on students and road safety. The following study intersection improvements were also identified in the ATP/SRTS to address safety and crossing concerns near the Morningside High School campus:

- Yukon Avenue/Century Boulevard – Add white continental crosswalks and advance stop lines to all legs of the intersection, add countdown signals.

- Yukon Street/104th Street – Add yellow continental crosswalk and advance stop line to all legs of the intersection, add Assembly D signs and countdown signals, add curb extensions to the north and east legs of the intersection.

- Yukon Avenue/108th Street – Add white continental crosswalks and advance stop lines to all legs of the intersection, add curb extensions to the north and south legs, and add countdown signals.

- Crenshaw Boulevard/104th Street – Add white continental crosswalks to all legs of the intersection (including the frontage roads), add advance stop lines to the north and south legs (main road only), add median nose to the west side of the north and south legs (frontage road), add curb extensions and countdown signals.

Traffic calming elements are proposed in the area including installations of speed feedback signs on Yukon Avenue between 104th Street and 107th Street, and speed cushions on 105th Street from Prairie Avenue to Yukon Avenue.

4.3.2 *Qualitative Impact Conclusions*

The proposed project is not expected to result in a significant impact on active transportation or public transit in the vicinity of the project site. As described in *Section 3.1* herein, the project site is planned to accommodate pedestrian and bicycle access via exclusive walkways which connect the site to the public sidewalks. The walkways minimize the extent of pedestrian and bicycle interaction with vehicles at the site and provide a comfortable, convenient, and safe environment which in turn

can encourage use of active transportation modes. The project site is further planned to provide bicycle parking facilities for use on-site by students, faculty/staff, visitors, etc. to the campus. As mentioned in the *City of Inglewood Active Transportation and Safe Routes to School Master Plan (Appendix A)*, a total of 30 bicycle parking spaces are planned to be added along with an additional 30 racks for skateboards/scooters on campus. The proposed project is therefore found to be in alignment with the City's General Plan, the City's Mobility Plan, as well as the ATP/SRTS Plan goals to promote pedestrian and bicycle safety and provide appropriate and supportive active multi-modal transportation infrastructure.

The proposed project is located adjacent to 104th Street, which is currently served by public bus transit service provided by County's shuttle system (i.e., The Link). As noted in *Section 3.2*, the project site is within walking distance from an existing bus stop located along 104th Street at Yukon Avenue. The proposed project is not expected to affect access or safety at the existing bus stops, nor is it expected to hinder public transit service along 104th Street. The proposed project is not expected to preclude the City from constructing bicycle facilities or pursuing bicycle network improvements along local roadways within the study area. Development of the proposed project will not prevent the City from completing any proposed transit, bicycle, or pedestrian facilities.

Since the proposed project is not found to result in conflicts with adopted policies, plans, or programs, nor is it expected to negatively affect the performance or safety of existing or planned pedestrian, bicycle, or transit facilities, it is determined that the proposed project will have a less than significant impact on active transportation and public transit in the vicinity of the project site.

5.0 NON-CEQA ANALYSIS

The City of Inglewood has established vehicle Level of Service (LOS) standards which local infrastructure including project developments proposed by IUSD will strive to maintain. The LOS standards apply to discretionary approvals of new land use projects within the City. The following section presents the operational (i.e., Level of Service) analysis prepared for the proposed project pursuant to this requirement.

5.1 Analysis Methodology

In order to estimate the proposed project's effect on intersection operations, a multi-step process has been utilized. The first step is trip generation, which estimates the total arriving and departing traffic volumes on a peak hour and daily basis. The second step of the forecasting process is trip distribution, which identifies the origins and destinations of inbound and outbound project traffic volumes. These origins and destinations are typically based on demographics and existing/anticipated travel patterns in the study area. The third step is traffic assignment, which involves the allocation of project traffic to study area streets and intersections. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway links and intersection turning movements throughout the study area. The proposed project's forecast trip generation, distribution, and assignment is presented in *Section 2.8* herein. With the forecasting process complete and project traffic assignments developed, the effect of the proposed project is isolated by comparing operational conditions at the selected study intersections using existing and expected future traffic volumes without and with forecast project traffic.

The intersection traffic analysis was prepared using the Los Angeles County Intersection Capacity Utilization (ICU) operational methodology to determine volume-to-capacity (*v/c*) ratios and corresponding Levels of Service (LOS) at all of the signalized study intersections. The ICU method determines the volume-to-capacity (*v/c*) ratios on a critical lane basis (i.e., based on the individual *v/c* ratios for key conflicting traffic movements). The ICU numerical value represents the percent signal (green) time, and thus capacity, required by existing and/or future traffic. It should be noted that the ICU methodology assumes uniform traffic distribution per intersection approach lane and optimal signal timing. For the ICU operational methodology, the overall intersection *v/c* ratio is subsequently assigned a Level of Service (LOS) value to describe intersection operations. Level of Service varies from LOS A (free flow) to LOS F (congested condition). It should be noted that LOS D is typically recognized as the minimum acceptable level of service in urban areas. Descriptions of the ICU methods as well as the corresponding Levels of Service are provided in ***Appendix C***.

Unsignalized intersections such as two-way stop-controlled (TWSC) and all-way stop-controlled (AWSC) intersections are analyzed using the Highway Capacity Manual (HCM) method of analysis. The HCM methodology determines the average control delay (expressed in seconds per vehicle) at the intersection. Average control delay for any particular movement is a function of the capacity of the approach and the degree of saturation. The average control delay includes delay due to deceleration to a stop at the back of the queue from free-flow speed, move-up time within the queue,

stopped delay at the front of the queue, and delay due to acceleration back to free-flow speed. It should be noted that the TWSC methodology estimates the average control delay for each minor-street movement (or shared movement) as well as major-street left-turns and determines the LOS for each constrained movement. A detailed description of the HCM method and corresponding Level of Service is also provided in *Appendix C*.

5.2 Criteria for Non-CEQA Analysis

The relative impact of the added project traffic volumes to be generated by the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project was evaluated based on analysis of existing and future operating conditions at the study intersections, without and with the proposed project. As noted previously in *Section 2.8*, the Project's trip generation is expected to be nominal during the weekday AM peak hour since the athletic games/events are scheduled during the late afternoon/early evening time periods and are not expected to overlap with the commuter AM peak time period. Thus, the analysis contained herein for the future pre-project and with project conditions includes the weekday PM peak hour conditions only. The previously discussed capacity analysis procedures were utilized to evaluate the future *v/c* and delay relationships and service level characteristics at each study intersection.

Based on prior studies prepared in the City of Inglewood, the City utilizes the thresholds from the Los Angeles County Department of Public Works (LACDPW) *Traffic Impact Analysis Report Guidelines*, January 1997, although the County has issued more recent guidelines. The effect of the potential project generated traffic was identified using the traffic impact analysis guidelines set forth below as confirmed in the Scope of Work MOU (see *Appendix A*). According to the County's previous guidelines, the impact is considered deficient if the project-related increase in the *v/c* ratio equals or exceeds the threshold criteria presented in ***Table 5-1***.

Table 5-1

COUNTY OF LOS ANGELES
INTERSECTION IMPACT THRESHOLD CRITERIA

Pre-Project *v/c*	Level of Service	Project Related Increase in *v/c*
> 0.70 - 0.80	C	equal to or greater than 0.04
> 0.80 - 0.90	D	equal to or greater than 0.02
> 0.90	E and F	equal to or greater than 0.01

Pursuant to the County's *Traffic Impact Analysis Report Guidelines*, the ICU calculations utilize a lane capacity of 1,600 vehicles per hour (vph) for left-turn, through, and right-turn lanes, and 2,880 vph for dual left-turn lanes. A clearance factor of 0.10 is also utilized in the calculations.

The effect of project-generated traffic at each study intersection was also compared to the City of Inglewood's intersection LOS standards. The City's Mobility Plan recognizes that LOS D is

typically the minimum acceptable LOS in urban settings. For unsignalized intersections, it is assumed that the addition of project traffic to an intersection which results in the degradation of intersection operations from LOS D or better to LOS E or F operations is considered deficient and may require improvements.

5.3 Analysis Scenarios

In coordination with City staff, LOS calculations have been prepared for the following scenarios:

[a] Existing conditions.

[b] Existing with project conditions.

[c] Condition [a] plus one percent (1.0%) per year annual ambient traffic growth through year 2025 and with completion and occupancy of the related projects (i.e., future without project conditions).

[d] Condition [c] with completion and occupancy of the proposed project.

[e] Condition [d] with implementation of intersection improvement measures, if necessary.

The weekday PM peak hour LOS analysis prepared for the study intersections using the ICU and HCM methodology is summarized in ***Table 5-2***. The ICU/HCM data worksheets for the analyzed intersections are provided in *Appendix C*.

5.4 Existing Conditions

5.4.1 *Existing Conditions*

As indicated in column [1] of *Table 5-2*, all of the study intersections are presently operating at LOS B or better during the weekday AM and PM peak hours under existing conditions. The existing traffic volumes at the study intersections during the weekday AM and PM peak hours was previously displayed in *Figures 3-4* and *3-5,* respectively.

5.4.2 *Existing With Project Conditions*

As shown in column [2] of *Table 5-2,* all of the intersections are expected to continue operating at LOS B or better during the weekday PM peak hour under the existing with project conditions. The LOS and delays at the study intersections incrementally increase with the addition of project-generated traffic. The proposed project is not expected to cause any of the study intersections to operate at a deficient LOS, therefore no project-specific intersection improvements or project-specific transportation demand management measures are proposed or required. ***Figure 5-1*** illustrate the existing with project traffic volumes at the study intersections during the weekday PM peak hour.

6	Woodworth Avenue/	All-Way	AM	9.9 sec.	A	--	--	--	--	--	--	--
	104th Street [c]	Stop	PM	10.6 sec.	B	12.1 sec.	B	11.2 sec.	B	12.9 sec.	B	1.7
7	Crenshaw Boulevard	Signalized	AM	0.549	A	--	--	--	--	--	--	--
	104th Street		PM	0.576	A	0.622	B	0.619	B	0.665	B	0.046
8	Crenshaw Boulevard/	Signalized	AM	0.495	A	--	--	--	--	--	--	--
	108th Street		PM	0.516	A	0.532	A	0.549	A	0.565	A	0.016

[a] Level of Service (LOS) is based on the reported ICU value for signalized intersections and the delay value for unsignalized intersections.

[b] According to the County of Los Angeles Department of Public Works' *Traffic Impact Analysis Report Guidelines* , January 1, 1997, Page 6: an impact is considered significant if the project related increase in the volume-to-capacity ratio (v/c) equals or exceeds the thresholds shown below:

Level of Service	Pre-Project ICU	Project Related Increase in v/c
C	> 0.700 - 0.800	equal to or greater than 0.04
D	> 0.800 - 0.900	equal to or greater than 0.02
E/F	> 0.900	equal to or greater than 0.01

[c] All-Way Stop-Controlled Intersection. Reported values represent the delays (in seconds) associated with the most constrained approach of the intersection. Since no specific threshold is established by the City for unsignalized intersections, the following criteria is assumed for consistency with the City's Mobility Plan:
- Addition of project trips causes the peak hour LOS of the intersection to change from LOS D or better to LOS E or F.

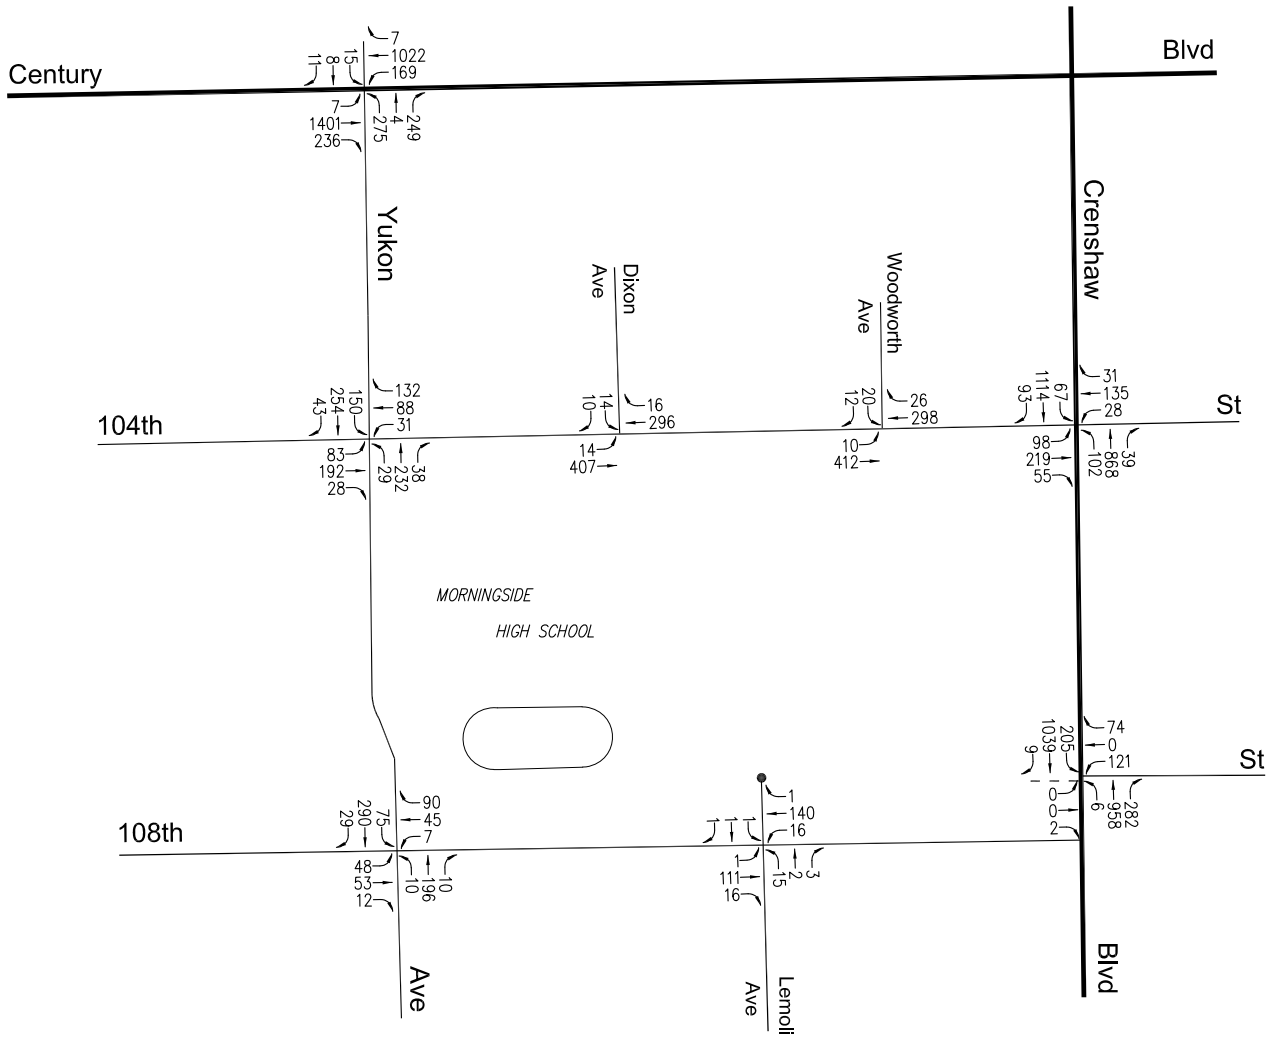
5.5 Future Year 2025 Cumulative Conditions

5.5.1 *Future Year 2025 Cumulative Without Project Conditions*

The future cumulative baseline conditions were forecast based on the addition of traffic generated by the completion and occupancy of the related projects, as well as the growth in traffic due to the combined effects of continuing development, intensification of existing developments and other factors (i.e., ambient growth). The LOS and delays at the study intersections are incrementally increased with the addition of ambient traffic and traffic generated by the related projects listed in *Table 3-4*. As presented in column [3] of *Table 5-2*, all of the study intersections are expected to operate at LOS B or better during the weekday PM peak hour with the addition of growth in ambient traffic and related projects traffic under the future without project conditions. The future without project (existing, ambient growth and related projects) traffic volumes at the study intersections during the weekday PM peak hour are presented in ***Figure 5-2***.

5.5.2 *Future Year 2025 Cumulative With Project Conditions*



As shown in column [4] of *Table 5-2,* all of the study intersections are expected to continue operating at LOS B or better under the future with project condition. The LOS and delays at the study intersections incrementally increase with the addition of project-generated traffic. The proposed project is not expected to cause any of the study intersections to operate at a deficient LOS, therefore no project-specific intersection improvements or project-specific transportation demand management measures are proposed or required. The future with project (existing, ambient growth, related projects and project) traffic volumes at the study intersections during the weekday PM peak hour are presented in ***Figure 5-3***.

6.0 SUMMARY AND CONCLUSIONS

- ***Project Description*** – The project site is located at 10500 South Yukon Avenue in the southeastern portion of the City of Inglewood, California. The site is generally bounded by 104th Street to the north, residential uses to the south, the Woodworth-Monroe TK-8th Academy to the east, and Yukon Avenue to the west. The proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project consists of revitalizing and updating the existing campus by replacing the aging athletic school facilities, including demolishing of ten buildings, reconstructing the football stadium and track and team locker rooms, reconstructing the baseball field, softball field, six tennis courts, and basketball courts, and increasing the on-site parking supply. Additional seating is planned for the athletic fields with stadium seating increasing from 600 seats to 1,515 seats, baseball seating decreasing from 300 seats to 246 seats, and softball seating is planned to include 186 new seats. Student enrollment and staffing/faculty populations are not expected to increase as part of the proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project. The project build-out and occupancy year is anticipated by the year 2025.

- ***Project Site Access*** – Vehicular access to the project site is planned to be accommodated by two (2) existing driveways on Yukon Avenue and two (2) driveways on 104th Street. Pedestrian access within the project site will be accommodated via walkways which connect from the public sidewalks to the campus.

- ***Project Parking –*** Parking for the Morningside High School campus is currently provided in three (3) existing surface parking lots (i.e., Lots A, B, and D) that wrap around campus. The proposed project includes improvements to the three existing surface parking lots (Lots A, B and D) as well as the creation of two new surface parking lots (i.e., Lots C1 and C2). Altogether, the on-site parking supply totals 308 spaces (i.e., 294 standard spaces, 14 handicap accessible spaces) and 13 bus parking spaces.

- ***Project Trip Generation*** – Based on review of the site-specific data for the scheduled athletic home events/games, the proposed project is expected to generate 367 new vehicle trips (198 inbound trips and 169 outbound trips) during the weekday PM peak hour. Over a 24-hour period, the proposed project is forecast to generate approximately 1,468 new daily trip ends (734 inbound trips and 734 outbound trips) during a typical weekday. The proposed project is not expected to generate new trips during the weekday AM peak hour since the athletic games/events are expected to be scheduled in the late afternoon/early evening time periods and would not overlap with the commuter AM peak time period.

- ***CEQA Vehicle Miles Traveled Assessment*** – For the purpose of environmental review under CEQA, the City of Inglewood has not established VMT analysis procedures at this time; therefore, the project-related VMT impact has been assessed qualitatively based on guidance from the OPR's *Technical Advisory* and review of VMT policies. Consistent with the requirements of CEQA Guidelines Section 15064.3, the Technical Advisory provides three

criteria for screening projects out of detailed VMT analysis. The proposed Morningside High School Site Upgrade and Woodworth Elementary School Demolition Project meets the criteria to be screened out of VMT analysis as it will serve the local population and is a local-serving high school, thereby shortening travel distances and reducing VMT. This screening criterion is based on the presumption that by adding opportunities into the urban fabric and improving destination proximity, local serving projects/developments tend to shorten trips and reduce VMT. Therefore, through satisfaction of the land use type screening criteria, the proposed project is determined to have a less than significant transportation impact.

- ***CEQA Active Transportation and Public Transit Assessment*** – The proposed project is found to be in alignment with the City's Mobility Plan, the City's Circulation Element, and the adopted City of Inglewood Active Transportation and Safe Routes to School Master Plan to promote pedestrian and bicycle safety and provide appropriate and supportive active transportation infrastructure. Further, development of the proposed project will not prevent the City from completing any proposed transit, bicycle, or pedestrian facilities. It is therefore determined that the proposed project will result in a less than significant impact on active transportation and public transit in the vicinity of the project site.

- ***Non-CEQA Analysis*** – Eight (8) study intersections were reviewed for consistency with the City of Inglewood's intersection standards. The study intersections were evaluated using the City-approved Intersection Utilization Capacity (ICU) methodology for signalized intersections and the Highway Capacity Manual (HCM) methodology for unsignalized intersections to determine the LOS under existing, existing with project, and future without and with project conditions. Based on application of the City's LOS standards, the proposed project is not required to identify or construct intersection improvements at any of the study intersections.

APPENDIX A

MEMORANDUM OF UNDERSTANDING

DRAFT

MEMORANDUM

To:	Boytrese Osias City of Inglewood – Public Works Department	Date:	October 6, 2021

Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit the following Transportation Impact Study Scope of Work for the proposed Morningside High School Site Upgrade Project ("proposed project") located at 10500 South Yukon Avenue in the City of Inglewood for your review and approval.

Transportation Study Scope of Work

The Transportation Impact Analysis Report for the proposed Morningside High School Site Upgrade Project will be prepared according to City of Inglewood analysis and significance criteria and methodology.

A. Project Location: The Morningside High School campus is located at 10500 South Yukon Avenue in the City of Inglewood, California. The site is generally bounded by 104th Street to the north, residential uses to the south, the Woodworth Elementary School and Monroe Middle School to the east, and Yukon Avenue to the west. Surface parking is currently provided on-site in surface lots fronting Yukon Avenue and bus parking is provided in the surface lot fronting 104th Street. See attached ***Figure 1-1, Site Vicinity Map***.

B. Project Description: The Morningside High School Site Upgrade Project consists of revitalizing and updating the existing campus by replacing the aging athletic school facilities. The proposed project components include: 1) demolition of ten buildings (eight permanent buildings and two portables); 2) reconstruction of the football stadium and track and team locker rooms; 3) reconstruction and relocation of the baseball field, softball field, six tennis courts, and basketball court; 4) increase in the on-site parking supply by 169 spaces; 5) reduction of on-site bus parking by 20 spaces, and 6) corresponding landscape and hardscape updates. Additional seating is planned for the athletic fields with stadium seating increasing from 600 seats to 1,515 seats, baseball seating decreasing from 300 seats to 246 seats, and softball seating is planned to include 186 new seats. The project build-out and occupancy year is anticipated by the end of year 2023. Student enrollment and faculty/staffing populations are not expected to increase as part of the proposed project. Please refer to the attached ***Figure 2-2, Site Plan***.

CEQA Transportation Assessment

C. Vehicle Miles Traveled (VMT) Analysis: The City of Inglewood has not established VMT analysis procedures at this time; therefore, the project-related VMT impact has been assessed qualitatively based on guidance from the OPR's Technical Advisory and review of VMT policies. The Technical Advisory provides the following potential screening criteria for certain land development projects that may be presumed to result in a less than significant VMT impact:

- Local-serving retail less than 50,000 square feet, including schools, daycare, student housing, etc.
- Small projects generating less than 110 trips per day
- Residential and office projects located in areas with low-VMT
- Projects near transit stations or major transit stop along a high quality transit corridor
- Residential projects with a high percentage of affordable housing

As mentioned in the *Technical Advisory*, schools are considered local serving in nature and tend to shorten trips and reduce VMT, similar to local serving retail uses. It is also noted that lead agencies may presume such local serving uses result in a less than significant transportation impact. Similarly, the proposed project would improve the proximity of schools serving the local community, thereby shortening travel distances and reducing VMT. Therefore, based on the above screening criteria, the proposed project is presumed to have a less than significant transportation impact for the purposes of CEQA environmental review.

D. Active Transportation and Public Transit Analysis:

A qualitative review will be conducted to evaluate whether the project is consistent with the City's adopted policies, plans, and programs regarding public transit, bicycle, and pedestrian facilities. This review will focus on the City's current General Plan Circulation Element.

Non-CEQA Transportation Assessment

E. Project Study Area: The following four (4) key study intersections have been identified for non-CEQA operational level of service analyses. See attached *Figure 1-1, Site Vicinity Map.*

Study Intersections

1. Yukon Avenue/Century Boulevard (signalized)
2. Yukon Avenue/104th Street (signalized)
3. Yukon Avenue/108th Street (signalized)

4. Crenshaw Boulevard/104th Street (signalized)

F. Traffic Counts: New manual intersection turning movement counts will be conducted for the weekday morning (7:00 to 9:00 AM) and afternoon (4:00 to 6:00 PM) peak commute periods at these locations. However, the volumes obtained from the new counts may need to be manually adjusted given the Covid-19 pandemic conditions to be determined through comparison with any historic counts at the study intersections, if available.

G. Year 2023 Cumulative Traffic:

- Ambient Growth Rate: 1.0% per year.
- Cumulative Projects: LLG will consult with the Los Angeles County Department of Regional Planning and the Cities of Inglewood and Hawthorne to identify planned development within one-half mile radius of the farthest outlying study intersections. ***Table 3-4, Related Projects List and Trip Generation*** and ***Figure 3-5, Location of Related Projects*** to be provided.

H. Project Traffic Generation: As mentioned previously, the proposed project is not expected to result in an increase in the student enrollment or faculty/staff population. As such, the trip generation potential of the proposed project will be estimated using empirical trip rates derived from the proposed increase in seating capacity for stadium seating (i.e., the proposed 915-seat increase) and softball field seating (i.e., 186 new seats) as well as site-specific programming information provided for the athletic events/games.

Since an average vehicle ridership (AVR) of only 1.5 persons per vehicle has been assumed for spectators and fifty percent (50%) of this increase is assumed to overlap with the weekday PM peak hour, the proposed project is conservatively forecast to generate 1,468 new daily trips, with 367 vehicle trips (198 inbound, 169 outbound) during the PM peak hour on a typical weekday with scheduled athletic home events/games. Typically, for larger-scale sporting events, a much higher AVR could be expected (i.e., in the range of between 2.0 and 2.75 AVR). See attached ***Table 2-1 – Project Trip Generation Forecast***.

I. Project Trip Distribution Pattern: See attached ***Figure 2-3, Project Trip Distribution***.

J. Analysis Scenarios: The following analysis scenarios will be prepared for the weekday AM and PM peak hour conditions in order to assess potential traffic impacts associated with the proposed project:

(a) Existing Traffic Conditions.
(b) Existing Plus Project Traffic Conditions.
(c) Future 2023 Cumulative Pre-Project Traffic Conditions.
(d) Future 2023 Cumulative Plus Project Traffic Conditions.
(e) Scenario (d) with Improvements, if necessary.

K. Thresholds of Significance:
Based on prior studies prepared in the City of Inglewood, we understand the City utilizes the thresholds from the Los Angeles County Department of Public Works (LACDPW) *Traffic Impact Analysis Report Guidelines*, January 1997, although the County has issued more recent guidelines. The potential impacts of project-generated traffic at each study intersection will be identified according to the County's methodology for calculating the level of impact due to traffic generated by the proposed project as follows:

COUNTY OF LOS ANGELES INTERSECTION IMPACT THRESHOLD CRITERIA		
Pre-Project *v/c*	**Level of Service**	**Project Related Increase in *v/c***
≥ 0.71 - 0.80	C	equal to or greater than 0.04
≥ 0.81 - 0.90	D	equal to or greater than 0.02
≥ 0.91 or more	E/F	equal to or greater than 0.01

The ICU calculations incorporate a lane capacity of 1,600 vehicles per hour (vph) for left-turn and shared lanes, 1,700 vph for through and right-turn lanes, and 2,880 vph for dual left-turn lanes. A clearance interval of 0.10 is also included in the ICU calculations.

L. Parking: The parking assessment will include a review of the current City of Inglewood Municipal Code off-street parking requirements as applicable to the proposed project. Determine the surplus or deficiency in the on-site parking supply as compared to the Code parking requirements. Based on input provided to LLG regarding the special events/programs/athletic events and anticipated attendance, the forecast peak weekday and weekend parking demand will be determined. Determine the weekday and weekend future peak parking demand for the Morningside High School Site Upgrade Project. Compare the forecast weekday and weekend peak shared parking demand to the future parking supply and identify any surplus or deficiency.

LINSCOTT LAW & GREENSPAN engineers

Pending your review of the above information, we will proceed with the transportation impact analysis. Please feel free to contact us at 626.796.2322 if you have any questions, comments, or suggested revisions regarding the above. Thank you.

[1] Trip generation rates are based on rates derived from the increase in seating capacity for the athletic fields as part of the proposed project when compared to the existing Morningside High School campus. An average vehicle ridership of 1.5 persons/vehicle was assumed to estimate the number of person trips to the number of vehicle trips. The athletic games are expected to occur in the late afternoon/early evening and it is assumed that 50% of the trips associated with the games/events would occur during the commuter PM peak hour.

[2] Trips are one-way traffic movements, entering or leaving.

APPENDIX C

ICU/HCM AND LEVELS OF SERVICE EXPLANATION
ICU/HCM DATA WORKSHEETS

INTERSECTION CAPACITY UTILIZATION (ICU) DESCRIPTION

Level of Service is a term used to describe prevailing conditions and their effect on traffic. Broadly interpreted, the Levels of Service concept denotes any one of a number of differing combinations of operating conditions which may occur as a roadway is accommodating various traffic volumes. Level of Service is a qualitative measure of the effect of such factors as travel speed, travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience.

Six Levels of Service, A through F, have been defined in the 1965 *Highway Capacity Manual*, published by the Transportation Research Board. Level of Service A describes a condition of free flow, with low traffic volumes and relatively high speeds, while Level of Service F describes forced traffic flow at low speeds with jammed conditions and queues which cannot clear during the green phases.

The Intersection Capacity Utilization (ICU) method of intersection capacity analysis has been used in our studies. It directly relates traffic demand and available capacity for key intersection movements, regardless of present signal timing, The capacity per hour of green time for each approach is calculated based on the methods of the *Highway Capacity Manual*. The proportion of total signal time needed by each key movement is determined and compared to the total time available (100 percent of the hour). The result of summing the requirements of the conflicting key movements plus an allowance for clearance times is expressed as a decimal fraction. Conflicting key traffic movements are those opposing movements whose combined green time requirements are greatest.

The resulting ICU represents the proportion of the total hour required to accommodate intersection demand volumes if the key conflicting traffic movements are operating at capacity. Other movements may be operating near capacity, or may be operating at significantly better levels. The ICU may be translated to a Level of Service as tabulated below.

The Levels of Service (abbreviated from the *Highway Capacity Manual*) are listed here with their corresponding ICU and Load Factor equivalents. Load Factor is that proportion of the signal cycles during the peak hour which are fully loaded; i.e. when all of the vehicles waiting at the beginning of green are not able to clear on that green phase.

Intersection Capacity Utilization Characteristics

Level of Service	Load Factor	Equivalent ICU
A	0.0	0.00 - 0.60
B	0.0 - 0.1	0.61 - 0.70
C	0.1 - 0.3	0.71 - 0.80
D	0.3 - 0.7	0.81 - 0.90
E	0.7 - 1.0	0.91 - 1.00
F	Not Applicable	Not Applicable

SERVICE LEVEL A
There are no loaded cycles and few are even close to loaded at this service level. No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication.

SERVICE LEVEL B
This level represents stable operation where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.

SERVICE LEVEL C
At this level stable operation continues. Loading is still intermittent but more frequent than at Level B. Occasionally drivers may have to wait through more than one red signal indication and backups may develop behind turning vehicles. Most drivers feel somewhat restricted, but not objectionably so.

SERVICE LEVEL D
This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak hour, but enough cycles with lower demand occur to permit periodic clearance of queues, thus preventing excessive backups. Drivers frequently have to wait through more than one red signal. This level is the lower limit of acceptable operation to most drivers.

SERVICE LEVEL E
This represents near capacity and capacity operation. At capacity (ICU = 1.0) it represents the most vehicles that the particular intersection can accommodate. However, full utilization of every signal cycle is seldom attained no matter how great the demand. At this level all drivers wait through more than one red signal, and frequently through several.

SERVICE LEVEL F
Jammed conditions. Traffic backed up from a downstream location on one of the street restricts or prevents movement of traffic through the intersection under consideration.

LEVEL OF SERVICE FOR UNSIGNALIZED INTERSECTIONS

In the *Highway Capacity Manual (HCM)*, published by the Transportation Research Board, 2000, level of service for unsignalized intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. The delay experienced by a motorist is made up of a number of factors that relate to control, geometrics, traffic, and incidents. Total delay is the difference between the travel time actually experienced and the reference travel time that would result during base conditions, in the absence of incidents, control, traffic, or geometric delay. Only the portion of total delay attributed to the traffic control measures, either traffic signals or stop signs, is quantified. This delay is called *control delay*. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay.

Level of Service criteria for unsignalized intersections are stated in terms of the average control delay per vehicle. The level of service is determined by the computed or measured control delay and is defined for each minor movement. Average control delay for any particular minor movement is a function of the service time for the approach and the degree of utilization. (Level of service is not defined for the intersection as a whole for two-way stop controlled intersections.)

Level of Service Criteria for TWSC/AWSC Intersections

Level of Service	Average Control Delay (Sec/Veh)
A	≤ 10
B	> 10 and ≤ 15
C	> 15 and ≤ 25
D	> 25 and ≤ 35
E	> 35 and ≤ 50
F	> 50

Level of Service (LOS) values are used to describe intersection operations with service levels varying from LOS A (free flow) to LOS F (jammed condition). The following descriptions summarize *HCM* criteria for each level of service:

LOS A describes operations with very low control delay, up to 10 seconds per vehicle.

LOS B describes operations with control delay greater than 10 and up to 15 seconds per vehicle.

LOS C describes operations with control delay greater than 15 and up to 25 seconds per vehicle.

LOS D describes operations with control delay greater than 25 and up to 35 seconds per vehicle.

LOS E describes operations with control delay greater than 35 and up to 50 seconds per vehicle.

LOS F describes operations with control delay in excess of 50 seconds per vehicle. For two-way stop controlled intersections, LOS F exists when there are insufficient gaps of suitable size to allow side-street demand to safely cross through a major-street traffic stream. This level of service is generally evident from extremely long control delays experienced by side-street traffic and by queuing on the minor-street approaches.

Re: Morningside High School Site Upgrade Project, Los Angeles County

Dear Ms. Clark:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Andrew Green
