Quarterly Update: This facility is also known as Pepper Industries. This facility conducted storage and transfer of PCBs in containers. An ISD was issued for this site on 5/16/83. A Part B application was submitted on 1/10/86. Part B permit was never issued and facility filed for bankruptcy. Facility ceased active operation during 1991. Facility submitted closure plan on 4/8/94. Closure plan was approved on 5/20/97. Facility was verified closed on 6/29/99. Besides the closure activities, no corrective action document could be found in files. File is limited on this site.

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE

ULTRAMAR INC WILMINGTON REFINERY (Continued) **1000353456**

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F037
Waste Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: F038
Waste Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS

ULTRAMAR INC WILMINGTON REFINERY (Continued) **1000353456**

THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: K024
Waste Description: DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.

Waste Code: K050
Waste Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K150
Waste Description: ORGANIC RESIDULES EXCLUDING SPENT CARBON ADSORBENT, FROM THE SPENT CHLORINE GAS AND HYDROCHLORIC ACID RECOVERY PROCESSES ASSOCIATED WITH THE PRODUCTION OF ALPHA (OR METHYL-) CHLORINATED TOLUNES, BENZOYL CHLORIDES, AND COMPOUNDS WITH MIXTURES OF THESE FUNCTIONAL GROUPS.

Waste Code: K169
Waste Description: CRUDE OIL STORAGE TANK SEDIMENT FROM PETROLEUM REFINING OPERATIONS

Waste Code: K170
Waste Description: CLARIFIED SLURRY OIL TANK SEDIMENT AND/OR IN-LINE FILTER/SEPARATION SOLIDS FROM PETROLEUM REFINING OPERATIONS

Waste Code: K171
Waste Description: SPENT HYDROTREATING CATALYST FROM PETROLEUM REFINING OPERATIONS,INCLUDING GUARD BEDS USED TO DESULFURIZE FEEDS TO OTHER CATALYTIC REACTORS (THIS LISTING DOES NOT INCLUDE INERT SUPPORT MEDIA)

Waste Code: K172
Waste Description: K172

Waste Code: K178
Waste Description: RESIDUES FROM MANUFACTURING AND MANUFACTURING-SITE STORAGE OF FERRIC CHLORIDE FROM ACIDS FORMED DURING THE PRODUCTION OF TITANIUM DIOXIDE USING THE CHLORIDE-ILMENITE PROCESS.

Waste Code: LABP
Waste Description: LAB PACK

Waste Code: U019
Waste Description: BENZENE (I,T)

Waste Code: U151
Waste Description: MERCURY

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U239

ULTRAMAR INC WILMINGTON REFINERY (Continued) **1000353456**

Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

CPS-SLIC:

Name:	VALERO WILMINGTON (FORMER ULTRAMAR REFINERY)
Address:	2402 EAST ANAHEIM ST
City,State,Zip:	WILMINGTON, CA 90744
Region:	STATE
Facility Status:	**Open - Remediation**
Status Date:	01/12/2009
Global Id:	SL373432446
Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	33.7812272994362
Longitude:	-118.237031325755
Case Type:	Cleanup Program Site
Case Worker:	DD
Local Agency:	Not reported
RB Case Number:	0570
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Crude Oil, MTBE / TBA / Other Fuel Oxygenates
Site History:	The Refinery (115 acres) is located in the Wilmington Oil Field, in an area previously used for oil well drilling and production operations. Oil production activities began in the late 1930s and continued to the present. Since 1985, Ultramar has installed a total of 35 monitoring wells to evaluate groundwater quality and hydrogeologic conditions at the site; thirteen wells have since been destroyed/abandoned, and 22 wells remain in place. Groundwater monitoring is conducted in accordance with the Los Angeles Water Board letter dated September 2003 and amended in July 2014. Depth to groundwater is approximately 5-10 feet below grade. Seven wells are monitored quarterly for free product monitoring (FPM) and removal. Investigation to delineate the lateral extent of free product began in 1997. The Los Angeles Water Board issued a Cleanup Abatement Order (CAO 98-003) on January 21, 1998. Types of impacts include viscous free products (crude oil), TPH, BTEX, MTBE and lead. Dissolved hydrocarbon concentrations are found to be stable beneath the site. Valero is currently operating the refinery and has updated the Hydrocarbon Source Identification and Elimination Program in 2008.

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

COMPLIANCE AND EMISSIONS REPORTING
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits

ULTRAMAR INC WILMINGTON REFINERY (Continued) **1000353456**

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ELECTRIC GENERATOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).
GREENHOUSE GAS REPORTER
US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Property History: In 1942, the U.S. War Department, War Shipping Administration acquired an unspecified number of acres from the Port of Los Angeles by lease agreement. The DOD beneficially used the existing terminal building, parking, shed, and piers associated with Berths 184 and 185. These records were neither specific nor complete. DOD improvements are unknown. The site was utilized for transporting troops and goods to Catalina Island, a troop training facility during World War II. In 1946, the War Department reconveyed to the Port of Los Angeles an unspecified number of acres of property. These records were neither specific nor complete. The property is currently occupied by Catalina Freight Line (Berth 184) and College of Oceaneering, Pier 2, Welding Pier (Berth 185). No DOD improvements

CATALINA TERMINAL (Continued) **1024904024**

are known to exist on the property today. Various hazardous materials (e.g. fuel, paint) were probably stored and transported by DOD at this facility between 1942 and 1946; however, no underground storage tanks or other hazardous materials containers related to DOD use are known to be present at the site today.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 10/09/2018. OBSERVATION: Observed two 55-gallon drums of used oil accumulating for more than 180 days and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of the used oil and submit a copy of the manifest/receipt to the CUPA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Quarterly Update:	This facility is also known as IT Corporation. The facility conducted a truck and equipment operation at the site that stored industrial cleaning waste. Part A application was submitted on 11/17/80. The facility received ISD on 4/6/81. A revised part A was submitted on 6/25/84. Unit information in part A application only show tank units (1980 part A showed three tank storage units and 1984 showed only one tank unit), however closure plans showed only container units. Database shows both container and tank units. Facility attempted to obtain a Part B permit and permit was public noticed on 11/9/84. However, facility failed to get part B permit and withdrew the permit application on 4/22/85. The closure process started in 1985 but facility did not get clean closure verification until 9/24/91. There no record of corrective action activity exists in file for this site.

Completed Date: 12/15/1997
Comments: The 405,400 cubic yard of sump soil was excavated, treated and stablized. The excavated and stabilized sump soil was placed in a layer above the existing road grade on top of clean imported fill. Three feet of clean imported fill and an asphalt pavement sections were placed over the sump material to bring the site to the desired grade. The completion of this project was verified by conducting a site inspection.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Remedial Action Completion or Implementation
Completed Date: 06/02/1997
Comments: The 405,400 cubic yards of sump soil was excavated, treated and stabilized. The excavated and stabilized sump soil was placed in a layer above the existing road grade on top of clean imported fill. Three feet of clean imported fill and an asphalt pavement section were placed over the sump material to bring the site to the desired grade. The completion of this project was verified by conducting a site inspection.

Background Info:	This site is a former disposal facility that accepted primarily oil field waste and tank bottom sludges from 1951 to 1972. It is believed to have accepted Class I wastes which included liquid industrial wastes and sludges. The property is currently owned by Union Pacific Resources Company and is vacant except for oil production wells that occupy a portion of the property. Soil samples collected by DHS were found to have detectable concentrations of xylene, polychlorinated biphenyls (PCBs), arsenic, lead, chromium, and zinc. Records of users of the

TCL CORP./TCL2 (PORT OF LONG BEACH) (Continued) **S105749949**

disposal facility have documented the deposit of hazardous substances such as resins, solvents, oil, paints, dyes, inorganic salts, and acids.
The site is located above a degraded, shallow aquifer and is adjacent to the Cerritos Channel in the Long Beach Harbor. Any further degradation of the groundwater or any surface waters may potentially impact the Los Angeles and Long Beach Inner Harbors, both of which have been termed critical habitats.
A Consent Order was signed in August 1988, whereby the landowner would conduct a preliminary assessment, remedial investigation, and feasibility study.
In 1993, to facilitate the development of the Toyota Parcel for use as an international vehicle distribution center, DTSC and UPRC agreed to remediate the Toyota Parcel while the supplemental remedial investigation of the rest of the TCL site continues.
In February 1994, the 240 acre TCL concent order area, except for the 34 acre northwestern portion, was acquired by the Port of Long Beach. The 34 acre property was purchased in late 1988 by Ultramar from UPRC. Therefore, the TCL site was was divided into three operable units: TCL1, TCL2, and TCL3. TCL1 is referred to as the Toyota Parcel; TCL2 is referred to as the Port of Long Beach Parcel; and TCL3 is referred to as the Ultramar Parcel.

Background Info:	The Toyota Parcel consists of 31 acres within the southern portion of the 240-acre TCL Consent Order Area. From 1951 through 1970, Union Pacific Railroad granted a lease to TCL TCL Corporation for the disposal of oil and gas drilling wastes. In 1981, investigations showed that other wastes such as paint sludge, spent catalyst and acetylene sludge were disposed at the site. Contaminants found in soil investigations are metals, total recoverable petroleum hydrocarbons (TRPH), volatile organic compounds, pesticides, polychlorinated biphenyls and semi-volatile organic compounds. Contaminants found in groundwater investigation include traces of metals and volatile organic compounds. The Toyota Parcel is currently used as an international vehicle distribution center for Toyota Motor Sales, U.S.A., Inc. When the area achieves full capacity by 1997, it will be capable of providing staging for 203,000 vehicles at the Port of Long Beach. Current revenues from the project are approximately 10 million dollars. Upon reaching peak capacity revenues will increase and the project will create 170 new jobs. For information concerning TCL Corporation Site see IDNUM 19510060.

CA BOND EXP. PLAN:
Reponsible Party: RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The landowner signed a consent order to conduct remedial activities under DHS oversight. The responsible parties will pay all costs associated with cleanup and have provided advance funds of $50,000 for DHS oversight activities.
Site Description: TCL operated a disposal facility from 1951 to 1972 that accepted primarily oil field waste and tank bottom sludges. It is believed to have accepted class I wastes that included liquid industrial wastes and sludges. The property is currently owned byUnion Pacific Resources Company and is vacant, except for oil production wells that occupy a portion of the property.
Hazardous Waste Desc: Soil samples collected by DHS were found to have detectable concentrations of xylene, polychlorinated biphenyls (PCBs), arsenic, lead, chromium and zinc. Records of users of the site during TCL's operation have documented the deposit of more than 12,700 tons of hazardous substances such as resins, solvents, oils, paints, dyes, inorganic salts and acids.
Threat To Public Health & Env: The disturbance or excavation of surface and subsurface soils may expose workers and the public to contaminated soils and dust. The site is located above a degraded, shallow aquifer and is adjacent to the Cerritos Channel in Long Beach Harbor. Any further degradation to the ground water or any surface waters may potentially impact the Los Angeles and Long Beach Inner Harbors, both of which have been termed critical habitats.
Site Activity Status: A consent order was signed in August, 1988 whereby the landowner, Union Pacific Resources, would conduct a preliminary assessment, remedial investigation and feasibility study. These activities are expected to commence in Fall 1988.

CERS Description:	Industrial Facility Storm Water

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	04-10-2013
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Staff inspected this site to evaluate compliance with the General Industrial Storm Water Permit. Several contractors were working at the site. Wells driller of petroleum oil and and maintenance people were at the site, but company representative were absent. Staff called headquarter and asked for permission to inspected the site. Permit was granted and later Mr. Don Cwan, (562) 577-5083, General Site Manager, returned called. He indicated that the SWPPP and MRP were at the office and that they were available for review. However, he was not in the office during inspection. Good housekeeping and BMPs implementation was noted through the site. The site look clean and organized. Photos from inspection are attached.

Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	On January 4, 2010 Tesoro notified California Emergency Management Agency of a naphtha release to ground water from a storage tank (Tank 80214). It is estimated that about 15,200 barrels of naphtha was released. The Regional Board issued a 13267 Order on January 14, 2010 and required Tesoro to complete the assessment and delineation. On April 11, 2011, the Regional Board issued a Cleanup and Abatement Order to direct Tesoro to assess, monitor, and clean up and abete

RB Case Number:	0230
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	The Tesoro Los Angeles Refinery (LAR) located at 2101 E. Pacific Coast Highway in Wilmington, California (Site). The Site is an active petroleum refinery operated by Tesoro and covers approximately 300 acres. The refining operations include gasoline, diesel fuel, jet fuel, fuel oil, and petroleum coke. Environmental investigation activities at the Site began in the early 1980s. Groundwater monitoring/sampling commenced in 1985. These investigations documented soil and groundwater impacts by petroleum hydrocarbons and other chemicals of concern (COCs), and defined the extent and magnitude of Light Non-Aqueous Phase Liquid (LNAPL) plumes in the Water Table Aquifer at the Site. Dissolved phase impacts have also been documented in deeper aquifers on and off site. COCs sourced from LAR are MTBE, TBA, and benzene and have migrated off site beyond Site boundaries into some adjacent areas. The cleanup is conducted under Cleanup and Abatement Order No. 88-70 and Order No. 85-17. Discharger participates in the Carson Regional Groundwater Group (CRGG) to assess regional deeper groundwater contamination matter with fuel oxygenates. Currently, there is ongoing LNAPL recovery, a soil vapor extraction system which is being expanded to the Wilmington Sales Terminal to include air sparging wells, and a biosparge boundary control system which is being installed along the western boundary.

Description:	RP states: Compressors for process unit shut down resulting in the release of more than 500lbs of SO2 to the atmosphere. The cause of the shut down is under investigation. The flaring event is ongoing and there is not currently an estimated stop time. Operations personnel are working to get the compressors running to stop the release. No impact to waterways.

Description:	A power outage occurred at the listed refinery. The incident has resulted in an ongoing sulfur dioxide release to the atmosphere in excess of 500 pounds and a flaring event. The facility is currently off-line. Technicians are on-site and attempting to resolve the problem. No fires or injuries occurred and no personnel evacuations were necessary. At the time of this report, no public notification (Community Warning System) was issued.

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

TESORO REFINING & MARKETING COMPANY-LOS ANGELES REFINERY (Continued) **1000144764**

Waste Code: F037
Waste Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: F038
Waste Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: K050
Waste Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K052
Waste Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K169
Waste Description: CRUDE OIL STORAGE TANK SEDIMENT FROM PETROLEUM REFINING OPERATIONS

Waste Code: K170
Waste Description: CLARIFIED SLURRY OIL TANK SEDIMENT AND/OR IN-LINE FILTER/SEPARATION SOLIDS FROM PETROLEUM REFINING OPERATIONS

Waste Code: K171
Waste Description: SPENT HYDROTREATING CATALYST FROM PETROLEUM REFINING OPERATIONS,INCLUDING GUARD BEDS USED TO DESULFURIZE FEEDS TO OTHER CATALYTIC REACTORS (THIS LISTING DOES NOT INCLUDE INERT SUPPORT MEDIA)

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code:	F037
Waste Description:	PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE,

TESORO REFINING & MARKETING COMPANY-LOS ANGELES REFINERY (Continued) **1000144764**

BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: F038
Waste Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: K050
Waste Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K052
Waste Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K169
Waste Description: CRUDE OIL STORAGE TANK SEDIMENT FROM PETROLEUM REFINING OPERATIONS

Waste Code: K170
Waste Description: CLARIFIED SLURRY OIL TANK SEDIMENT AND/OR IN-LINE FILTER/SEPARATION SOLIDS FROM PETROLEUM REFINING OPERATIONS

Waste Code: K171
Waste Description: SPENT HYDROTREATING CATALYST FROM PETROLEUM REFINING OPERATIONS,INCLUDING GUARD BEDS USED TO DESULFURIZE FEEDS TO OTHER CATALYTIC REACTORS (THIS LISTING DOES NOT INCLUDE INERT SUPPORT MEDIA)

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Quarterly Update:	Quarterly update: Jan - Mar 2022 Post-Closure Permit Renewal: The Facility submitted a timely renewal Post-Closure Permit Application, which DTSC has determined is complete. DTSC will draft a permit decision for public review and comment. Facility Description: The Tesoro Refining and Marketing Company, Wilmington Refinery (Facility) is located at 2101 East Pacific Coast Highway in the Cities of Carson and Wilmington, Los Angeles County, California. The entire refinery covers 300 acres west of the Dominguez Channel. The refinery processes approximately 100,000 barrels of heavy crude oil per day. It is equipped with a variety of processing units to refine crude oil into gasoline, diesel and other fuels. It also produces lubricating oil feed stocks and petroleum coke. Hazardous waste generated at the Facility is hauled to and disposed of at an off-site facility. DTSC issued a Post-Closure Permit which pertains to Ponds 8 and 9, which cover less than one acre of the 300-acre refinery. These ponds were constructed in 1969 in an abandoned channel created when the Dominguez channel was built in the 1940s. Ponds 8 and 9 consist of two lined surface impoundments formerly used for flow equalization (Pond 9) and polishing (Pond 8) of storm water and process wastewaters before treatment and discharge to the Los Angeles County Sanitation District (LACSD). Ponds 8 and 9 were backfilled with engineered fill and capped with an asphalt cap. An above-ground storage tank was placed on top of the backfilled area associated with Pond 9. The Regional Water Quality Control Board is the lead agency for Corrective Action at the facility. Facility History: The Facility was formerly known as the Texaco Los Angeles Plant and Texaco Refining and Marketing, Inc. Tesoro and its predecessors Shell, Texaco, and Equilon have owned and operated the Facility since 1928. The hazardous waste management units (HWMUs), comprised of Ponds 8 and 9, were part of the refinery s waste water management system and were first operated in 1969. Ponds 8 and 9 a

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info:	Transporter illegally stored and disposed of various chemicals; benzene, ether, adhesives, chromic acid, oxidizes and flammable wastes at site. The Department in conjunction with Los Angeles Police Department, District Attorney's office and Health Department obtained a search warrant regarding criminal violations at the site. Since the potential did exist for fire and explosion, the Department requested an immediate cleanup. The cleanup was performed by IT Corporation and was completed in 15 hours on September 1, 1985.

Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/24/1995
Comments: Site was identified from the non-emergency release report dated 11-11-94. Site is contaminated with 1,1,1-TCA, 1,1- DCA, methylene chloride, chloroethane, chloroform, PCE, vinyl chloride, 1,1-DCE, TCE, trans-1,2-DCE, benzene and carbon disulfide. The site is adjacent to Port of Long Beach Parcel #1 which is currently under remediation by the oversight of the Department. Due to evidence of con- tamination, Department recommended a PEA, and on 1-24-95, notified RP thereof.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/08/2022
Date Data Arrived at EDR: 08/08/2022
Date Made Active in Reports: 10/21/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Northeast Map:	11997952 LONG BEACH, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

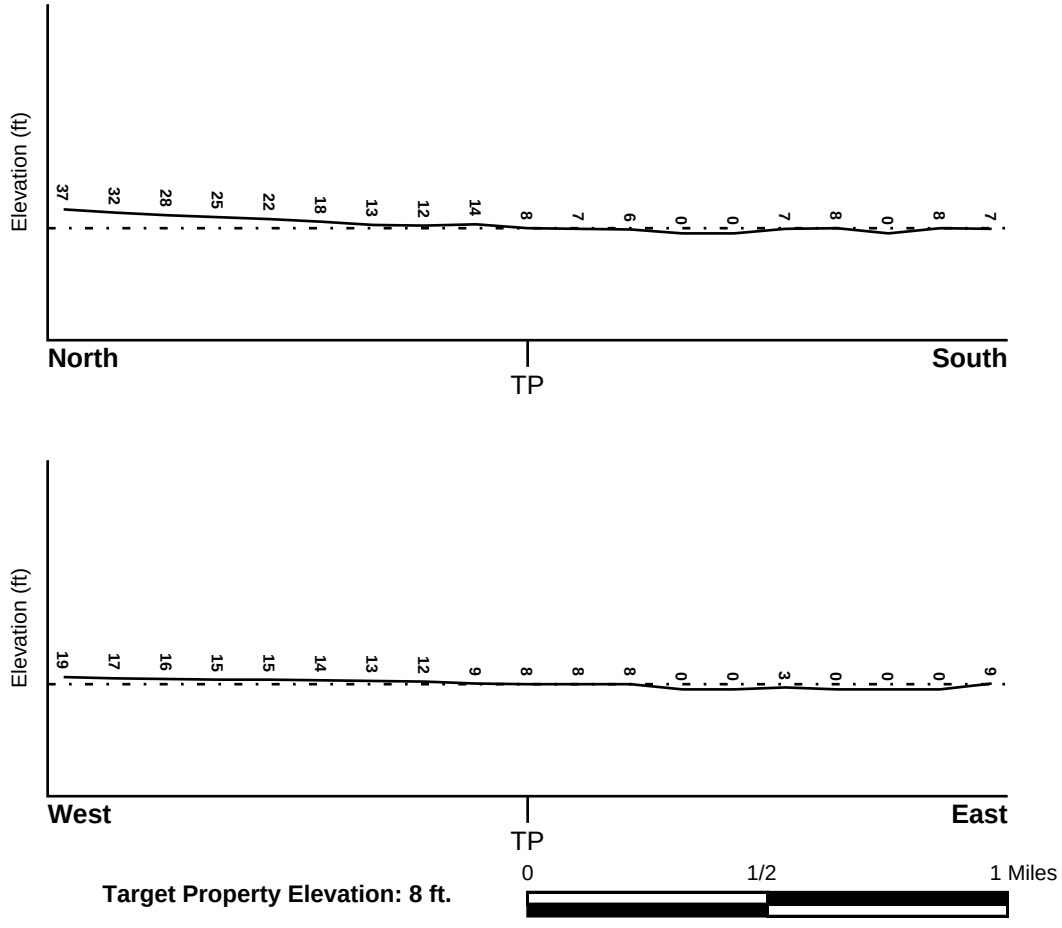
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 8 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1945F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1965F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NORTH LONG BEACH (OE)	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
K52	1/2 - 1 Mile West	Flat
K53	1/2 - 1 Mile West	Flat
1G	1/2 - 1 Mile West	Flat
2G	1/2 - 1 Mile West	Flat

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Qualifications of Environmental Professional

JESSICA HIMEBAUCH

SENIOR GEOLOGIST
LA METRO REGION

AREAS OF EXPERTISE

Phase I and II Environmental Site Assessments/Project Management

Technical Review/Quality Control

EDUCATION

BS, Geological Sciences, University of Southern California

YEARS OF EXPERIENCE

With Firm	27
With Other Firms	0

SUMMARY

Ms. Himebauch has over 25 years of environmental due diligence experience working for clients in the government and private sector. As an environmental due diligence consultant, Jessica's experience encompasses project management, report preparation, technical editing, quality control, and client interaction. She has worked with various regulatory agencies including the Regional Water Quality Control Board, the Department of Toxic Substances Control, local fire departments, and various city and county departments. A summary of past selected work experience is provided below.

EXPERIENCE

Due Diligence, Northern & Southern California, Multiple Projects, City and County of Los Angeles, TA Realty, TH Real Estate, The New Home Company, Toll Brothers, Rockefeller Group, Nuveen Real Estate, Cornerstone Real Estate Advisers LLC, Lincoln Property Company, Regency Centers, MetLife Real Estate Investments, Bixby Land Company, Pacific Harbor Line, and other private real estate investment/management firms. Senior Geologist providing project management, client interaction, reviewing and assisting with Phase I ESA report writing for various projects including industrial, manufacturing, agricultural, health care, commercial, and retail properties.

Hazardous Materials Lead Technical Resource, City of Los Angeles Department of Public Works, Bureau of Engineering, Homeless Bridge Housing Project in the City of Los Angeles, CA. Prepared hazardous materials technical memorandums and environmental site assessment reports in support of the Los Angeles City Mayor's Homeless Bridge Housing Project throughout the City's council districts.

Due Diligence, City of Irvine and Tierra Verde Industries at Orange County Great Park, Irvine, CA. Prepared Phase I ESA reports for City-leased property at the Orange County Great Park (former Marine Corps Air Station El Toro) to meet City of Irvine lease requirements.

Caltrans Initial Site Assessment; Long Beach Freeway (I-710) Corridor, Los Angeles County, CA; Los Angeles County Metropolitan Transportation Authority (Metro) and Partner Agencies. Managed and conducted a California Department of Transportation (Caltrans) Initial Site Assessment (ISA) for the properties associated with the proposed Long Beach Freeway (I-710) Corridor Project, which project involved 19 miles of I-710 between Long Beach and State Route 60 (SR-60). Purpose of the ISA was to evaluate the potential presence of hazardous materials prior to design and construction within the proposed project so that liability issues could be identified relating to site clean-up and construction impacts.

Caltrans ISA; The Old Road over Santa Clara River and Southern Pacific Transportation Company (SPT Co.) Bridge Project, County of Los Angeles Department of Public Works in Cooperation with Caltrans and City of Santa Clarita. Conducted a Caltrans ISA for The Old Road Improvement Project. The project consisted of 2.12 miles of The Old Road from Henry Mayo Drive and Magic Mountain Parkway in the unincorporated Castaic Junction in western Los Angeles County. The purpose of the ISA was to evaluate the potential for the presence of

hazardous materials prior to design and construction within the proposed improvements to Colima Road so that liability issues can be identified relating to site cleanup and construction impacts.

Caltrans ISA; Interstate 405 (I-405) Auxiliary Lanes Improvement Project, Los Angeles County, CA; Los Angeles County Metropolitan Transportation Authority (Metro), California Department of Transportation (Caltrans) District 7, and South Bay Cities Council of Governments (SBCCOG). Managed and conducted a Caltrans ISA for the proposed I-405 Auxiliary Lanes Project from Redondo Beach Boulevard to El Segundo Boulevard. Objective of the ISA was to evaluate the potential for the presence of hazardous materials prior to design and construction within the proposed project right-of-way so that liability issues can be identified relating to site clean-up and construction impacts.

Caltrans ISA; Colima Road Improvement Project; Los Angeles County, CA; County of Los Angeles Department of Public Works in Cooperation with the City of Industry and Caltrans. Conducted a Caltrans ISA for the Colima Road Improvement Project. The project consisted of Colima Road, extending 4.8 miles from the City of Whittier Boundary through unincorporated Hacienda Heights. Purpose of the ISA was to evaluate the potential for the presence of hazardous materials prior to design and construction within the proposed improvements to Colima Road so that liability issues can be identified relating to site cleanup and construction impacts.

Caltrans ISA; State Route 47 (SR-47) Interchange Project; City of Los Angeles, CA; Port of Los Angeles in cooperation with the City of Los Angeles and Caltrans. Conducted a Caltrans ISA for the SR-47 Interchange Project. The project included the proposed reconfiguration of the existing interchange at State Route 47/Vincent Thomas Bridge and Harbor Boulevard/Front Street. Purpose of the ISA was to identify sites that have the potential to affect the proposed project with hazardous materials and/or wastes from current and historical environmental conditions.

Principal Investigator and Project Manager, Phase I Environmental Site Assessments throughout the United States; Canada, and Colombia, Major Media and Entertainment Company (Confidential). Scope of work included a standard Phase I and the addition of a limited compliance and environmental health and safety audit of various facilities.

Other Projects include:

Lead Technical Resource of the PEA Program for the Los Angeles Unified School District (LAUSD). Directed the background research efforts for multiple proposed new schools and school additions for LAUSD. Assisted the project director in the preparation of work plans for LAUSD proposed school sites pursuant to California regulatory requirements and attended meetings with regulatory agencies on behalf of the LAUSD.

Assisted with the Palmdale to Burbank Section of the California High Speed (HSR) System, Hazardous Materials and Wastes Technical Report for the California High-Speed Rail Authority and US Department of Transportation (DOT) Federal Railroad Administration including technical review and QA/QC.

Assisted with the Westside Subway Extension Hazardous Materials Technical Report for Metro including report preparation/writing, QA/QC, and technical review.

Managed Phase I Investigations for the Alameda Corridor Transportation Authority (ACTA) including technical review, report preparation/writing, QA/QC, and client correspondence.

Performed environmental assessments for cellular telephone antenna installations for a major cellular operator. Tasks included inspections of numerous buildings, installations, additions, collocations, and vacant land, and asbestos and lead sampling at these facilities throughout Southern California.

Principal Investigator and participant in various Phase II Investigations including soil sampling, groundwater sampling, and soil-vapor sampling through Geoprobe

drilling techniques. Activities included review of historical documents, analysis of previous reports, scheduling and overseeing subcontractors, site reconnaissance, preparation of work plans and health and safety plans, regulatory agency interaction, data analysis, and technical report preparation.

TECHNICAL MEMORANDUM

Date: January 10, 2023

To: Shannon D. Ledet – AECOM

From: Brian Marchetti, AICP

Subject: Traffic Analysis of Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project, Wilmington Area

---

Overview

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (Project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the Project is approximately 5,400 feet, or 1.02 miles. The proposed Project would also include a center turn lane, painted median, bike lanes, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. Specifically, the Project would provide:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and bike lanes;
- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;
- Traffic signal installations at E Street, Eubank Avenue and Quay Ave at Harry Bridges Blvd.;
- Upgraded railroad crossings at Anaheim Street, E Street, Eubank Avenue and Harry Bridges Blvd.;
- Reconstruction and extension of existing storm drain systems.

The primary objectives of the proposed Project are to:

- Provide congestion relief,
- Improve goods movement and mobility by train and truck,
- Prevent flooding during high tide conditions, and
- Enhance mobility for pedestrians and cyclists.

Construction of the proposed Project would begin in December 2023 and last for approximately 2.5 to 3 years.

Project effects on peak-hour operations were analyzed at the intersection of Alameda Boulevard and Anaheim Street. Project effects on daily roadway operations were also evaluated at roadway segments along the Project corridor. This

analysis was conducted for existing conditions, peak construction period conditions, and the Project opening year. The Project opening was analyzed as occurring in the year 2026.

- Alameda Street, between George De La Torre Junior Avenue and East E Street
- Alameda Street, between East E Street and Anaheim Street
- Alameda Street, between Quay Avenue and George de la Torre Jr Avenue

Vehicle Miles Traveled (VMT) metrics were analyzed with pre- and post-Project roadway geometry to determine the extent that the Project may increase VMT in the surrounding area through induced travel demand.

The roadway widening would be completed by January 2026. This defined the future year of analysis.

Methodology

The focus of this traffic study was on the operational effects of the proposed widening of Alameda Street within the Project extent. The steps involved in the analysis included the collection of baseline traffic data, analysis of Level of Service (LOS) effects of from the Project at three study roadway segments and one study intersection, and analysis of potential Project-induced VMT impacts.

Weekday turning movement counts were conducted at the intersection of Alameda Street and Anaheim Street on Wednesday, November 30, 2022, from 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m. The roadway segment daily vehicle counts included auto/truck classifications and were conducted on the same date as the study intersection count. The study roadway segment daily count summaries are provided in Attachment A. The study intersection peak-period traffic count summaries are provided in Attachment B.

Level of Service Calculation

An LOS analysis was conducted to analyze the effects of the proposed Project. The analysis, however, was not conducted to analyze impacts of the Project. The California Environmental Quality Act (CEQA) guidelines do not require analysis of vehicle delay to determine if significant transportation impacts of a project would occur. As such, the LOS analysis is provided for informational purposes.

The LOS analysis for the Anaheim/Farragut intersection was based on the Highway Capacity Manual (HCM) 6th edition. The HCM method calculates LOS as the average control delay experienced by traffic on all approaches to an intersection. At signalized intersections, the average delay value is a function of the hourly volumes, signal phasing, and approach lane configuration on each leg of the intersection.

For the roadway segments, LOS was defined by the segment volume-to-capacity ratio, calculated as the volume of vehicles that pass through a segment divided by the capacity of that segment based on roadway classification. Roadway segment capacity is determined by the number of lanes on a segment, assuming a daily (24-hour) capacity of 10,000 vehicles per lane for an arterial roadway.

LOS values range from LOS A to LOS F. LOS A indicates excellent operating conditions with little delay to motorists, whereas LOS F represents congested conditions with excessive vehicle delay. LOS E is typically defined as the operating "capacity" of the roadway. Table 1 defines the LOS criteria used for the intersection delay and V/C ratio values.

Table 1. Level of Service Definitions

LOS	Flow Condition	Intersection Delay	Segment V/C Ratio
A	LOS A describes primarily free-flow operations at average travel speeds, usually about 90 percent of the free-flow speed for the arterial classification. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Stopped delay at signalized intersections is minimal.	0 - 10	0.00 - 0.60
B	LOS B represents reasonably unimpeded operations at average travel speeds, usually about 70 percent of the free-flow speed for the arterial classification. The ability to maneuver within the traffic stream is only slightly restricted and stopped delays are not bothersome. Drivers are not generally subjected to appreciable tension.	10 - 20	0.61 - 0.70
C	LOS C represents stable operations; however, the ability to maneuver and change lanes in mid-block locations may be more than at LOS B, and longer queues, adverse signal coordination, or both may contribute to lower average speeds of about 50 percent of the average free-flow speed for the arterial classification. Motorists will experience appreciable tension while driving.	20-35	0.71 - 0.80
D	LOS D borders on a range in which small increases in flow may cause a substantial increase in delay and hence decreases in arterial speed. LOS D may be due to adverse signal progression, inappropriate signal timing, high volumes, or some combination of these factors. Average travel speeds are about 40 percent for free-flow.	35-55	0.81 - 0.90
E	LOS E is characterized by significant delays and average travel speeds of one-third the free-flow speed or less. Such operations are caused by some combination of adverse progression, high signal density, high volumes, extensive delays at critical intersections, and inappropriate signal timing.	55-80	0.91 - 1.00
F	LOS F characterizes arterial flow at extremely low speeds below one-third to one-fourth of the free-flow speed. Intersection congestion is likely at critical signalized locations, with high delays and extensive queuing. Adverse progression is frequently a contributor to this condition.	>80	Over 1.00
Source: KOA Corporation			

Determination of VMT Impacts

All projects within the State of California are required to prepare a VMT analysis, unless screened out based on specific characteristics, to evaluate transportation-related impacts as part of the update to CEQA. The State of California Governor's Office of Planning and Research ("OPR") published the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018). This document outlines the recommended VMT analysis methodologies and procedures for various project types. Based on these recommendations, the Los Angeles Department of Transportation (LADOT) prepared the *Transportation Assessment Guidelines* (the "TA Guidelines") in 2019 and released an update to the guidelines in August 2022. These guidelines outline the methodology and significant impact thresholds to be applied for projects within the City. CEQA guidelines require that transportation impacts of a project be analyzed with VMT metrics. VMT is a measurement of vehicle miles traveled (e.g., trip generation of private automobiles, trucks and buses, and the length of typical trips). The LADOT's TA Guidelines stipulate that transportation projects that add roadway capacity need to be analyzed for their effects on VMT in the surrounding area. According to the guidelines, VMT effects should be evaluated by calculating the change in VMT between pre- and post-project conditions and adding an induced demand factor. If this results in a substantial net increase in VMT (with consideration of the induced demand effect), the project will have a potential significant impact per the LADOT's guidelines.

As stated in the TA Guidelines, the VMT calculations for the Project were calculated using the LADOT Travel Demand Forecasting (TDF) model. The LADOT TDF model was used to determine both the Project's direct impact on VMT and the induced VMT that would result from the expansion of the roadway segment. The VMT calculation methodology outlined below has been developed based on the TA Guidelines.

As part of the transportation impact analysis under CEQA, both the project impacts and cumulative impacts must be evaluated to determine the project's impact on the environment. However, as the expansion of Alameda Street is an improvement listed within the Southern California Association of Governments' (SCAG's) *2020-2045 Regional Transportation Plan/Sustainable Communities* Strategy, the Project is considered to be consistent with the long-term air quality requirements and greenhouse gas emission targets for the region. Thus, the Project would have a less-than-significant cumulative VMT impact. Therefore, a VMT analysis was conducted only to determine Project impacts using the TDF model baseline year (2018) and the Project completion year (2026). The VMT metrics were analyzed for the following traffic conditions:

- Baseline Year (2018) without-Project conditions;
- Baseline Year (2018) with-Project conditions;
- Completion Year (2026) without-Project conditions; and
- Completion Year (2026) with-Project conditions.

The Project's direct impact on VMT in the study area was determined by calculating the change in total roadway VMT traveling along segments in the study area without-Project conditions and with-Project conditions. The model roadway network was modified to include the proposed roadway expansion for the with-Project conditions. The LADOT TDF model was then run for the baseline and future years to determine vehicular assignments to the roadway network. The roadway VMT for each analysis scenario was determined using the final trip assignment from the model. The daily VMT for each segment in the study area was summed to determine the total roadway VMT. The final trip assignment outputs for the model baseline year were used to determine the VMT metrics for the Baseline Year (2018)

conditions. Interpolation was used between the final trip assignment outputs for the model baseline and future years to determine the VMT metrics for the Project completion year (2026) conditions.

The challenge of assessing VMT for a transportation project is to define the "boundary" of the entire area of which the travel pattern will be impacted by the roadway capacity enhancement project. Neither the LADOT TA Guidelines nor the OPR Technical Advisory have provided a detailed methodology on how to define the impacted area. The LADOT TA Guidelines state that the study area "must include the transportation analysis that contain a non-significant amount of vehicles traveling somewhere along their journey and also along the project corridor segment." KOA examined highway links within the TDF model along which VMT changed by more than one percent between without-Project and with-Project conditions. Based on this review, a clear pattern could not be identified demonstrating the area over which travel patterns would be impacted. Therefore, KOA conducted the analysis of both the direct VMT impact and the induced VMT impact based on the entire modeling area of the LADOT TDF model, which covers the entire County of Los Angeles. This area captures all potential trip deviations through the capacity-enhanced area of the Project corridor, from origin to destination.

In addition to the direct impact of the Project on existing trips, the Project is anticipated to also induce additional VMT as additional capacity is introduced to the existing roadway network. The induced VMT factor accounts for the potential of a new roadway project to increase travel demand through land use changes or mode shifts. The factor is calculated as follows.

$$\text{Induced VMT} = \%\ \text{increase in Study Area lane miles} \times \text{Study Area Existing VMT} \times \text{Elasticity Factor}$$

The induced demand elasticity factor is the ratio of the percent increase in VMT (due to induced demand) to the percent increase in roadway lane miles. According to the OPR's Technical Advisory, the LADOT's TA Guidelines, and existing studies examining the relationship between increases in network lane miles and increases in VMT, the elasticity of vehicle travel by lane miles is estimated to be 1.0 (i.e., a 1 percent increase in lane miles results in a 1 percent increase in vehicle travel). Therefore this elasticity factor was applied to determine the induced VMT resulting from the Project.

Operations Analysis – Roadway Segments

The existing study roadway segment count and analyzed volume data is summarized in Table 2, with daily auto and factored truck volumes. Truck volumes were separated by size and factored by passenger car equivalency (PCE) factors, while auto volumes were not factored. The volumes were then combined as the total PCE volume.

Table 2 – Roadway Segment Volumes with PCE Factors, Existing Conditions

Roadway	Segment	Total Volumes	Vehicles Only	Light Trucks	Heavy Trucks	PCE Light Trucks (x 1.5)	PCE Heavy Trucks (x 2.5)	Total PCE Volume	Bicycles
Alameda Street	Between George De La Torre Junior Avenue and East E Street	13,484	8,469	1,279	3,736	1,919	9,340	19,728	35
Alameda Street	Between East E Street and Anaheim Street	13,951	8,392	1,375	4,184	2,063	10,460	20,915	38
Alameda Street	Between Quay Avenue and George de la Torre Jr Avenue	13,200	8,343	1,263	3,594	1,895	8,985	19,223	35

PCE = Passenger Car Equivalency factors used to increase truck volumes accordingly, based on general size and speed characteristics.

Existing with-Project Conditions

Project trips were added to the existing conditions analysis, to provide an existing with-Project impact analysis. The existing with-Project volumes, volume-to-capacity (V/C) ratios, and LOS values for the study roadway segment are provided in Table 3. Traffic effects of the proposed Project were determined by comparing the existing conditions to the existing with-Project construction traffic conditions. The number of lanes on these roadway segments would be increased from four to six with the Project, and therefore, more capacity would be provided in the post-Project period, and improvements would occur in the V/C ratios, within the LOS A range.

Table 3 – Roadway Segment Operations –
Existing and Existing with-Project Conditions

		Existing Conditions			Existing with-Project Conditions		
Roadway	Segment	ADT	V/C	LOS	ADT	V/C	LOS
Alameda Street	Between George De La Torre Junior Avenue and East E Street	19,728	0.49	A	19,728	0.33	A
Alameda Street	Between East E Street and Anaheim Street	20,915	0.52	A	20,915	0.35	A
Alameda Street	Between Quay Avenue and George de la Torre Jr Avenue	19,223	0.48	A	19,223	0.32	A

ADT = Average daily traffic volumes; V/C = volume-to-capacity ratio; LOS = Level of Service value

Future with-Project Construction Conditions

The future volumes were analyzed at the study roadway segments for future with-Project construction conditions. The analysis included estimated vehicle volume growth from the LADOT traffic model, trips from the planned Project construction employee population and daily materials delivery and haul truck trips, and lane reductions required to implement the construction phases and roadway rebuilding and widening.

The estimated daily construction employee trips totaled 60, and the daily construction employee trips totaled 22. The truck trips were factored upward by PCE factors with a resulting total of 55.

Table 4 provides the results of the construction-period analysis for the roadway segments. The volume increases on Alameda Street estimated by the model and interpolated to the year 2026 would reduce LOS to E and F at the roadway segments for future conditions. With construction conditions, including the construction-related trips and lane reductions, the LOS at all of the roadway segments would be at F.

Table 4 – Roadway Segment Operations –
Future and Future with-Project Construction Conditions

		Future Conditions			Future with-Project Construction Conditions		
		ADT	V/C	LOS	ADT	V/C	LOS
Alameda Street	Between George De La Torre Junior Avenue and East E Street	37,916	0.95	E	38,031	1.90	F
Alameda Street	Between East E Street and Anaheim Street	40,198	1.00	F	40,313	2.02	F
Alameda Street	Between Quay Avenue and George de la Torre Jr Avenue	36,946	0.92	E	37,061	1.85	F

ADT = Average daily traffic volumes; V/C = volume-to-capacity ratio; LOS = Level of Service value

Construction Analysis

The LADOT TA Guidelines require an analysis of project construction activities for infrastructure projects that fulfill one or more of the following screening criteria.

1. The project requires construction activities within the right-of-way of a Boulevard or Avenue.
2. The project requires construction in the right-of-way of a Collector or Local Street, necessitating street closure for more than 7 days.
3. Project-related construction impedes normal vehicle, bicycle or pedestrian access.
4. Project-related construction hinders ADA access to a transit station, stop or facility.
5. Project-related construction activities require bus stop closure or re-routing of a bus route.

The Project construction will occur in the right-of-way of Alameda Street, a major street, and construction activities will require the closure of sidewalks and vehicle travel lanes in each direction on the roadway, potentially impeding vehicle and pedestrian access along the thoroughfare. Thus, the Project meets the first and third screening criteria, necessitating a construction analysis.

Project closures will affect both vehicle and pedestrian circulation. According to the TA Guidelines, the construction analysis should determine construction activity's impact on "normal bicycle, pedestrian, transit or vehicle access."

A pedestrian detour route will need to be established on a parallel roadway to Alameda Street, unless one sidewalk remains open during construction, based on the phases of construction. If one sidewalk does remain open, the detour would need be established to route pedestrians to the open sidewalk. Establishment of such detours for each Project phase will avoid any significant impacts to pedestrian access.

Future with-Project Completion Conditions

The future volumes with Project completion were analyzed at the study roadway segments, along with anticipated induced travel estimated by the LADOT model. As discussed above, the elasticity of vehicle travel by lane miles is estimated to be 1.0 (i.e., a 1 percent increase in lane miles results in a 1 percent increase in vehicle travel). Therefore this elasticity factor was applied to determine the induced VMT resulting from the Project, which was determined to be low at 0.277 percent. The same future baseline volumes were applied as those used for the construction analysis. The roadway lanes were increased from four to six for with-Project conditions.

Table 5 provides the post-Project analysis of roadway segment operations. LOS values would improve, based on this capacity increase, from E and F in the baseline period to B with the Project. Acceptable operations would result from the Project.

Table 5 – Roadway Segment Operations –
Future and Future with-Project Conditions

		Future Conditions			Future with-Project Conditions		
		ADT	V/C	LOS	ADT	V/C	LOS
Alameda Street	Between George De La Torre Junior Avenue and East E Street	37,916	0.95	E	37,933	0.63	B
Alameda Street	Between East E Street and Anaheim Street	40,198	1.00	F	40,215	0.67	B
Alameda Street	Between Quay Avenue and George de la Torre Jr Avenue	36,946	0.92	E	36,962	0.62	B

ADT = Average daily traffic volumes; V/C = volume-to-capacity ratio; LOS = Level of Service value

Operations Analysis – Study Intersection

The growth rate factor applied to the roadway segment volumes for the future analysis year was also applied to the study intersection. The construction scenarios were defined by the Project plans, which would require reductions in the capacity of lanes to one or two at some approaches. The configuration of the lanes would also require dedicated/split phasing at some approaches, requiring more signal cycle time allocation.

Project construction employee and truck trips were included in the intersection analysis, along with the construction-period lane reductions.

The operations of the study intersection in existing, construction, and post-Project scenarios are summarized in Table 6 below.

Table 6 – Intersection Operations Analysis – Alameda Street/Anaheim Street

Study Intersection		Peak Hour	Existing Conditions		Construction Phase 1		Construction Phase 2		Construction Phase 3		Opening with Project	
			Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1	Alameda Street/ Anaheim Street	AM	29.9	C	372.3	F	248.9	F	161.1	F	42.2	D
		PM	28.6	C	403.8	F	397.6	F	223.6	F	48.5	D

Delay = Average stopped delay per approaching vehicle; LOS = Level of Service

During the Project construction phases, LOS will be at F for all of those phases and in both peak hours, primarily due to required lane closures. Duration of Project construction phases should be minimized as much as possible to reduce potential impacts, and peak-time restrictions on construction activities with roadway plating to maintain open lanes should be considered to reduce peak-hour impacts.

The post-Project operations at the study intersection would be at LOS D, within good operating ranges. The large future increase in area volumes estimated by the model have an effect on the operations, versus the existing conditions period.

The study intersection operations analysis worksheets are provided in Attachment C.

Baseline Year VMT Analysis Results

Table 7 provides a summary of the Project's direct impact on VMT in the study area. This table shows the total roadway VMT in the LADOT TDF for the without-Project with-Project conditions for the model Baseline Year (2018) conditions. As shown, the Project is expected to result in a direct increase of 76,679 VMT in the study area. This direct impact equates to a 0.035 percent VMT increase due to the Project.

Table 7 – Project Direct VMT Impact, Baseline Year Conditions

	Vehicle Miles Traveled (VMT)			
	Without Project	With Project	Change	Percent Change
Baseline Year (2018)	216,352,058	216,428,737	76,679	0.035%

Table 8 summarizes the induced VMT calculation for the proposed Project under Baseline Year (2018) conditions. As shown, the Project would added approximately 2.04 lane miles to the existing roadway network. The entire LADOT TDF baseline year modeling area contains approximately 26,565 lane miles. Thus, the Project would represent a 0.008 percent increase in total lane miles. Therefore, applying an elasticity factor of 1.0 to the without-Project VMT of the study area, the Project is expected to induce 16,614 VMT.

Table 8 – Project Induced VMT Impact, Baseline Year Conditions

	Lane Miles (mi)			Vehicle Miles Traveled (VMT)	
	Project	Study Area	Percent Added	Without Project	Induced VMT
Baseline Year (2018)	2.04	26,565	0.008%	216,352,058	16,614

Finally, Table 9 presents an overall summary of the Project's total VMT impact under Baseline Year (2018) conditions. After adding the induced VMT to the with-Project VMT determined from the TDF model, the roadways in the study area are expected to experience a total of 216,445,352 VMT. Comparing this to the without-Project VMT, the Project would add 93,293 VMT to the study area, which represents an increase of 0.043 percent. This increase in VMT would be relatively minor compared to the total VMT experienced by the roadway network and the Project is considered to have a less-than significant VMT impact for the Baseline Year (2018) conditions.

Table 9 – Project Total VMT Impact, Baseline Year (2018) Conditions

	Vehicle Miles Traveled (VMT)			
	Without Project	With Project	Change	Percent Change
Baseline Year (2018)	216,352,058	216,445,352	93,293	0.043%

Completion Year (2026) VMT Analysis Results

Project VMT impacts were also evaluated for the Project completion year of 2026 to evaluate the VMT impact accounting for land use and roadway network changes planned up to the completion of the Project. Table 10 provides a summary of the Project's direct impact on VMT in the study area. This table shows the total roadway VMT in the LADOT TDF for the without-Project and with-Project conditions for the Completion Year (2026). As shown, the Project is expected to result in a direct increase of 655,250 VMT in the study area. This direct impact equates to a 0.27 percent VMT increase due to the Project.

Table 10 – Project Direct VMT Impact, Completion Year (2026) Conditions

	Vehicle Miles Traveled (VMT)			
	Without Project	With Project	Change	Percent Change
Completion Year (2026)	242,478,099	243,133,348	655,250	0.270%

Table 11 summarizes the induced VMT calculation for the proposed Project under Completion Year (2026) conditions. As shown, the Project would add approximately 2.04 lane miles to the roadway network. The entire LADOT TDF modeling area is expected to contain approximately 28,624 lane miles during the completion year. Thus, the Project would represent a 0.007 percent increase in total lane miles. Therefore, applying an elasticity factor of 1.0 to the without-Project VMT of the study area, the Project is expected to induce to 17,281 VMT.

Table 11 – Project Induced VMT Impact, Completion Year (2026) Conditions

	Lane Miles (mi)			Vehicle Miles Traveled (VMT)	
	Project	Study Area	Percent Added	Without Project	Induced VMT
Completion Year (2026)	2.04	28,624	0.007%	242,478,099	17,281

Table 12 presents an overall summary of the Project's total VMT impact under Completion Year (2026) conditions. After adding the induced VMT to the with-Project VMT determined from the TDF model, the roadways in the study area are expected to experience a total of 243,150,630 VMT. Comparing this to the without-Project VMT, the Project would add 672,531 VMT to the study area, which represents an increase of 0.277 percent. This increase in VMT would be relatively minor compared to the total VMT experienced by the roadway network and the Project is considered to have a less-than significant VMT impact for the Completion Year (2026) conditions.

Table 12 – Project Total VMT Impact, Completion Year (2026) Conditions

	Vehicle Miles Traveled (VMT)			
	Without Project	With Project	Change	Percent Change
Completion Year (2026)	242,478,099	243,150,630	672,531	0.277%

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alameda Street/Anaheim Street	Signalized	HCM 6th Edition	SB Thru	1.604	372.3	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alameda Street/Anaheim Street

Control Type:	Signalized	Delay (sec / veh):	372.3
Analysis Method:	HCM 6th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.604

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alameda Street/Anaheim Street	Signalized	HCM 6th Edition	NB Right	1.645	403.8	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alameda Street/Anaheim Street

Control Type:	Signalized	Delay (sec / veh):	403.8
Analysis Method:	HCM 6th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.645

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alameda Street/Anaheim Street	Signalized	HCM 6th Edition	NB Right	1.317	223.6	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alameda Street/Anaheim Street

Control Type:	Signalized	Delay (sec / veh):	223.6
Analysis Method:	HCM 6th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	1.317

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Alameda Street/Anaheim Street	Signalized	HCM 6th Edition	EB Left	0.669	42.2	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Alameda Street/Anaheim Street

Control Type:	Signalized	Delay (sec / veh):	42.2
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.669

Intersection Settings

Located in CBD	Yes
Signal Coordination Group	-
Cycle Length [s]	120
Coordination Type	Time of Day Pattern Coordinated
Actuation Type	Fixed time
Offset [s]	0.0
Offset Reference	Lead Green - Beginning of First Green
Permissive Mode	SingleBand
Lost time [s]	0.00
