MITIGATED NEGATIVE DECLARATION
(Article I, City CEQA Guidelines)

LEAD AGENCY AND ADDRESS:	City of Angeles c/o Bureau of Engineering 1149 Broadway, Suite 600 Los Angeles, CA 90015-2213	**COUNCIL DISTRICT** 15

PROJECT TITLE: **Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard**

PROJECT LOCATION: The Project is located within the public-right-of way on Alameda Street between Anaheim Street and Harry Bridges Boulevard, in the Wilmington – Harbor City Community Plan Area of the City of Los Angeles.

DESCRIPTION: The proposed Project would: (1) widen and reconstruct Alameda St, from Anaheim St to Harry Bridges Blvd at Quay Ave, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width; (2) upgrade four existing railroad crossings at Anaheim St, "E" Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) and Harry Bridges Blvd; (3) modify two traffic signals on Alameda St at Anaheim St and at the ILWU-13 property driveway entrance, and install three new traffic signals on "E" Street at Alameda St, George De La Torre Jr. Avenue at Alameda St, and Quay Avenue at Harry Bridges Blvd; (4) meet the requirements of the California Coast Trail, LA Harbor Waterfront Pedestrian Trail and the City of Los Angeles 2010 Bicycle Plan (Backbone Bikeway Network) by installing a Class I (off street) eight foot wide, two-way bike trail and shared pedestrian path, which would commence at the southernmost portion of the Project at Harry Bridges Blvd and run along the eastern side of Alameda St until Alameda St intersects Anaheim St; (5) upgrade Alameda St to a Modified Major Highway Class II Street; (6) relocate, construct, and extend storm drain systems; (7) construct a new sidewalk on the southern side of Anaheim St, with all sidewalks constructed in compliance with the latest version of the BOE Plan Standards; and (8) street tree removal and replacement. Installation of new and relocation of existing utilities would also be required along with right-of-way acquisition.

NAME AND ADDRESS OF APPLICANT IF OTHER THAN CITY AGENCY: N/A

FINDING: The City Engineer of the City of Los Angeles has determined the proposed project will not have a significant effect on the environment. See attached Initial Study.

SEE THE ATTACHED PAGES FOR ANY MITIGATION MEASURES IMPOSED

Any written objections received during the public review period are attached, together with the responses of the lead City agency.

INITIAL STUDY

Council District: 15 Date: March 2023

Lead City Agency: Department of Public Works, Bureau of Engineering

Project Title: Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project, Work Order No. E1907671

I. INTRODUCTION

A. Purpose of an Initial Study

The California Environmental Quality Act (CEQA) was enacted in 1970 for the purpose of providing decision-makers and the public with information regarding environmental effects of proposed Projects; identifying means of avoiding environmental damage; and disclosing to the public the reasons behind a project's approval even if it leads to environmental damage. The Bureau of Engineering Environmental Management Group has determined that the proposed Project is subject to CEQA and no exemptions apply. Therefore, the preparation of an Initial Study (IS) is required.

An IS is a preliminary analysis conducted by the lead agency, in consultation with other agencies (responsible or trustee agencies, as applicable), to determine whether there is substantial evidence that a project may have a significant effect on the environment. If the IS concludes that the project, with incorporation of mitigation, may have a significant effect on the environment, an Environmental Impact Report (EIR) should be prepared; otherwise, the lead agency may adopt a Negative Declaration (ND) or Mitigated Negative Declaration (MND).

The IS/MND contained herein has been prepared in accordance with CEQA (Public Resources Code §21000 et seq.), the State CEQA Guidelines (Title 14, California Code of Regulations, §15000 et seq.), and the City of Los Angeles CEQA Guidelines (1981, amended July 31, 2002).

B. Document Format

This IS/MND is organized into eight sections as follows:

Section I, Introduction: provides an overview of the Project and the CEQA environmental documentation process.

Section II, Project Description: provides a description of the Project location, Project background, Project components, and proposed construction and operation.

Section III, Existing Environment: provides a description of the existing environmental setting with focus on features of the environment that could potentially affect the proposed Project or be affected by the proposed Project.

Section IV, Environmental Effects/Initial Study Checklist: presents the City of Los Angeles' Checklist for all impact areas and mandatory findings of significance. This Section includes a discussion of the environmental effects and identifies applicable mitigation measures.

Section V, Mitigation Measures: provides the mitigation measures that would be implemented to ensure that potential adverse impacts of the proposed Project would be reduced to a less than significant level.

Section VI, Preparation and Consultation: provides a list of key personnel involved in the preparation of this report and key personnel consulted.

Section VII, Determination – Recommended Environmental Documentation: provides the recommended environmental documentation for the proposed Project.

Section VIII, References: provides a list of reference materials used during the preparation of this report.

C. CEQA Process

The proposal to adopt a ND (or MND) initiates a 20-day public comment period, 30 days if a State Agency is involved. The purpose of this comment period is to provide public agencies and the general public an opportunity to review the IS and comment on the adequacy of the analysis and the findings of the lead agency regarding potential environmental impacts of the proposed Project. If a reviewer believes there is substantial evidence that the project may have a significant effect on the environment, the reviewer should (1) identify the specific effect, (2) explain why it is believed the effect would occur, and (3) explain why it is believed the effect would be significant. Facts or expert opinion supported by facts should be provided as the basis of such comments.

Prior to making a determination, the decision-making body must consider the IS together with any comments received during the public comment review process. The decision-making body would adopt the IS only if it finds, on the basis of the whole record before it, that there is no substantial evidence that the project would have a significant effect on the

environment and that the study reflects the lead agency's independent judgment and analysis.

The IS/MND will be considered by the City of Los Angeles Board of Public works. Public notification of agenda items for the Board of Public Works is posted prior to the public meeting. The agenda for the Board of Public Works can be obtained via the internet at: https://dpw.lacity.org/board-public-works-meetings.

Following consideration by the Board of Public Works, the Los Angeles City Council will decide whether to adopt the Mitigated Negative Declaration and approve the project. The agendas for the City Council and for Council Committees can be obtained via the internet at: https://clerk.lacity.gov/calendar.If the project is approved, the City would file a Notice of Determination (NOD) with the County Clerk within 5 days. The NOD would be posted by the County Clerk within 24 hours of receipt. This begins a 30-day statute of limitations on legal challenges to the approval under CEQA. The ability to challenge the approval in court may be limited to those persons who objected to the approval of the project, and to issues which were presented to the lead agency either orally or in writing, during the public comment period.

As a covered entity under Title II of the *Americans with Disabilities Act* (ADA), the City of Los Angeles does not discriminate on the basis of disability and, upon request, would provide reasonable accommodation to ensure equal access to its programs, services, and activities.

II. PROJECT DESCRIPTION

A. Introduction

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed Project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the Project is approximately 5,400 feet, or 1.02 miles. The proposed Project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street.

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along eastern side of the street;

- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;

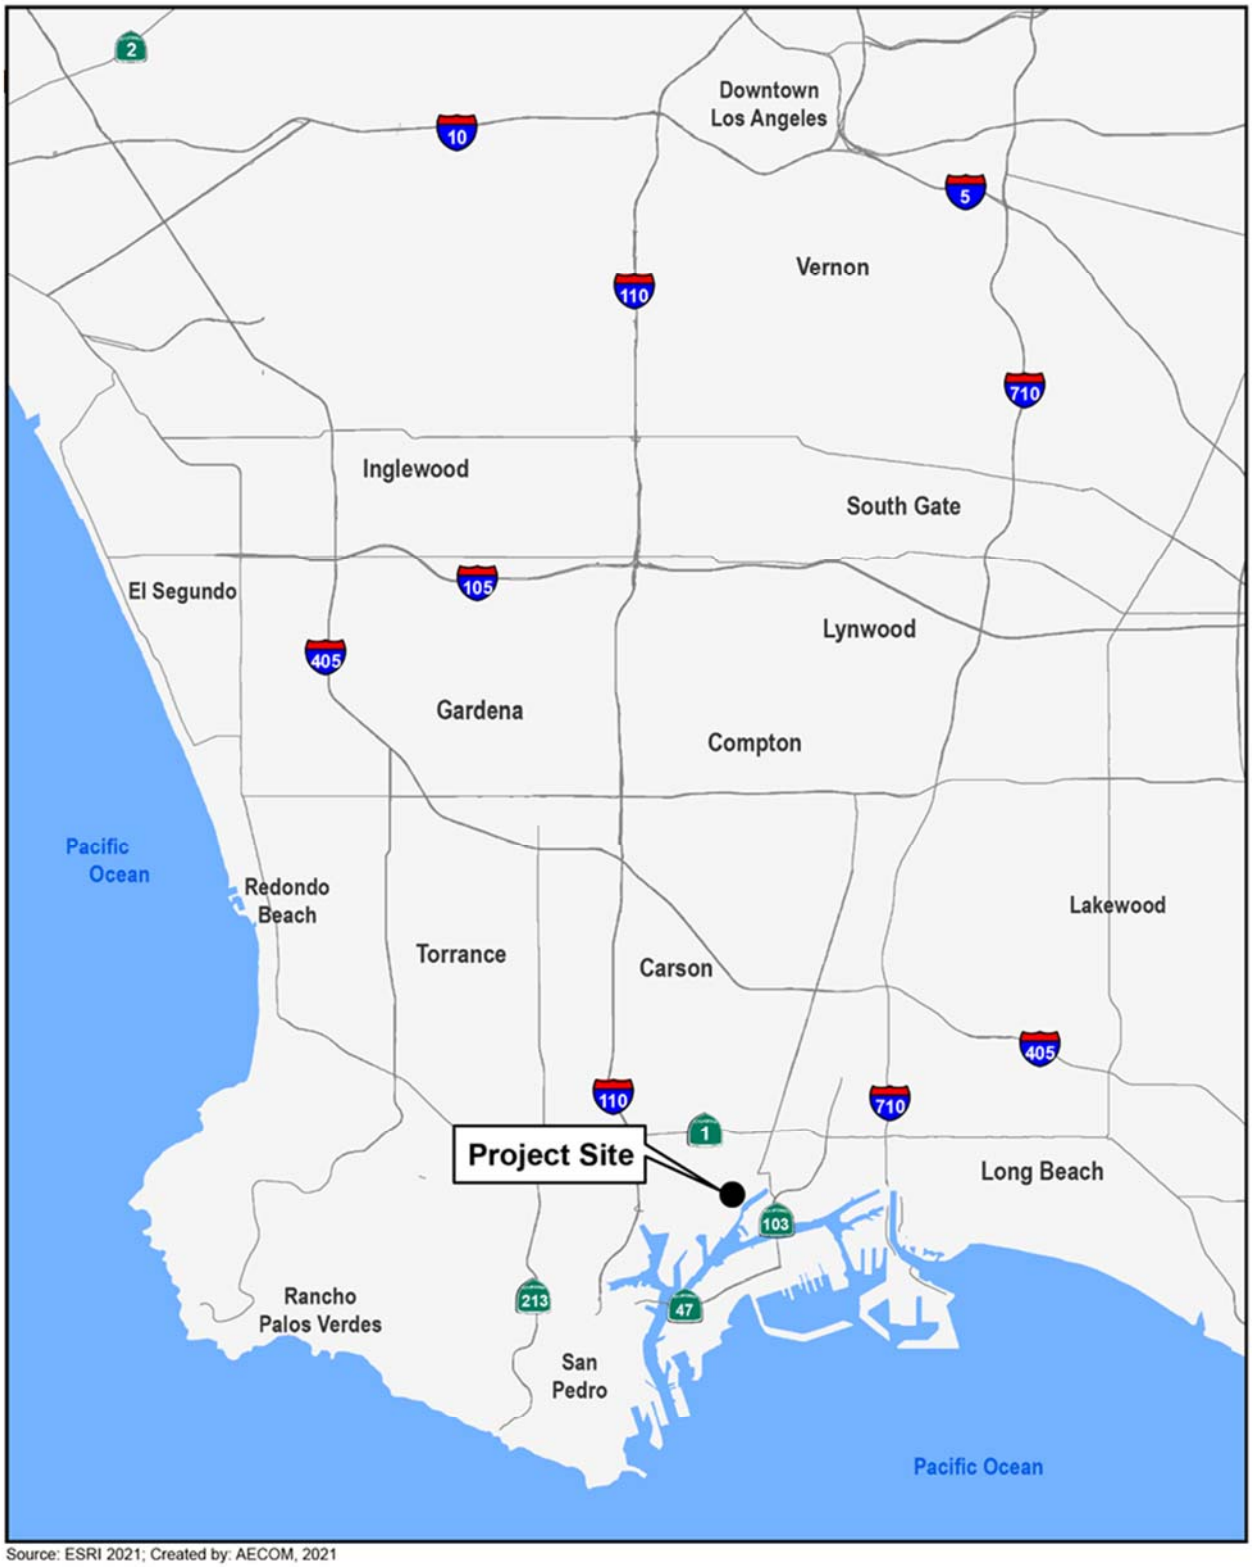
- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Ave at Harry Bridges Boulevard;

- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and

- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

The Port of Los Angeles (POLA) has delegated the design and construction of the Alameda Street widening improvements to BOE, which are identified as mitigation for the POLA Berth 200 Rail Yard expansion project.

The proposed improvements will aid in the movement of goods both via trains and trucks to and from the POLA and Port of Long Beach. Although separate from the POLA Berth 200 Rail Yard expansion project, the proposed Project would fulfill a required component and mitigation for the POLA project by improving traffic congestion, goods movement by train and truck, localized flooding, and public safety.



B. Location

The Project location is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County**.** It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed Project is shown in Figure 1.

The Project area is an approximately 1.02-mile segment of Alameda Street with an existing variable 70- to 100-foot right-of-way (ROW) and two lanes in each direction. The posted speed limit is 40 miles per hour and there is no on-street parking permitted within the Project limits. At the northernmost portion of the Project limits where Alameda Street intersects Anaheim Street, there is a sidewalk that runs on the east side of Alameda Street, terminates just south of the Alameda Street driveway into the International Longshoremen and Warehouse Union Local 13 Dispatch Hall (ILWU-13), then reconvenes, still on the east side of Alameda Street, just north of where George De La Torre Jr Avenue (formerly known as Eubank Avenue) intersects Alameda Street, and continues for the remainder of the Project limits.

C. Setting

The area is a developed urban setting surrounded by both light and heavy industrial uses. There are existing aboveground and underground utilities within the Project location that include a Los Angeles Department of Water and Power (LADWP) water line, multiple buried oil and fuel lines, storm drains, streetlights, and LADWP overhead power lines and poles throughout the Project limits. At this location, Alameda Street is utilized for local traffic as well as trips to and from the Ports of Long Beach and Los Angeles, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the Project site. The Project site location is shown in Figure 2.

Source: ESRI 2021; Created by: AECOM, 2021

Figure 1
Regional Map

Figure 2
Project Location Map

California State Route 47 ("North Henry Ford Avenue") and California State Route 103 are located to the east, California State Freeway 47 ("Seaside Freeway") is to the south, Harbor Freeway 110 is to the west, and Pacific Coast Highway is to the north. The Long Beach Transit lines 45, 191, and 192 serve the area east of the Project site, on Anaheim Street at Santa Fe Avenue and the Metro 202 and 232 bus line travels on Anaheim Street to and from Los Angeles International Airport from Long Beach Boulevard.

D. Background

Alameda Street in the vicinity of the Project is used extensively by trucks travelling to and from the Port of Los Angeles. The condition of the roadway has deteriorated, and the proposed Project is intended to improve traffic circulation and increase capacity on Alameda Street. Street intersection upgrades and improvements at the existing at-grade railway crossings will improve safety, mobility and connectivity. Additionally, Alameda Street near Harry Bridges Boulevard is subject to flooding during storm events that occur during periods of high tide. The storm drain components of the Project are intended to alleviate flooding at this sump location for storms occurring during low-tide conditions. However, future improvements for the existing in-line City of Los Angeles storm drain pump station are planned to alleviate this roadway flooding during high-tide conditions.

E. Purpose

The primary objectives of the proposed Project are to:

- Provide congestion relief,
- Improve goods movement and mobility by train and truck,
- Minimize roadway flooding for storms during low-tide conditions, and
- Enhance mobility for pedestrians and cyclists.

F. Proposed Project

The proposed Project would: (1) widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width; (2) upgrade four existing railroad crossings at Anaheim Street, "E" Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; (3) modify two traffic signals on Alameda Street at Anaheim Street and at the ILWU-13 property driveway entrance, and install three new traffic signals on "E" Street at Alameda Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) at Alameda Street, and Quay Avenue at Harry Bridges Boulevard; (4) meet the requirements of the California Coast Trail, LA Harbor Waterfront Pedestrian Trail and the City of Los Angeles 2010 Bicycle Plan (Backbone Bikeway Network) by installing a Class I (off street) eight foot wide, two-way bike trail and shared pedestrian path, which would commence at the southernmost portion of the Project at Harry Bridges Boulevard and run along the eastern side of Alameda Street until Alameda Street intersects Anaheim Street; (5) upgrade Alameda Street to a Modified Major Highway Class II Street; (6) relocate, construct, and extend the City of Los Angeles and Los Angeles County Flood Control District storm drain

systems; (7) construct a new sidewalk on the southern side of Anaheim Street, with all sidewalks constructed in compliance with the latest version of the BOE Plan Standards; and (8) street tree removal and replacement. Installation of new and relocation of existing utilities such as water, oil, gas, power poles, streetlight poles, and sewers would also be required along with right-of-way acquisition.

Table 1 includes a street tree inventory and removal summary as presented in the Arborist Report (Part 1 and Part 2) prepared for the Project (see Appendix B of this IS/MND). Part 1 of the Arborist Report addresses trees on the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street within the Project site. Part 2 of the Arborist Report addresses trees on the north side of Harry Bridges Boulevard and the westerly side of Alameda Street within the Project site. No locally protected tree species would be impacted by the proposed Project. The City of Los Angeles Municipal Code requires that street trees removed for construction be replaced at a ratio of two 24-inch box-size trees for each tree removed.

Table 1
Street Tree Inventory

Total number of trees occurring in the public ROW within Project site	134 trees
Total number of trees to be removed (not including dead trees, including street trees where natural grade within dripline is changed)	104 trees
Total number of street trees to be impacted by construction (within driplines)	5 trees
Total number of street trees not dead, not to be removed, and/or where natural grade is unchanged.	11 trees

Source: Greeley, Kay J., Board Certified Arborist. *Arborist Report (Part 1 and Part 2), Alameda Street Widening from Harry Bridges Boulevard to Anaheim Street, Wilmington, California 90744*. September 25, 2020 and May 3, 2020.

G. Project Construction

Construction of the proposed Project would begin on approximately December 30, 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed Project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented.

The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the Project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the Project at the start of

construction and would remain on site for most of the Project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the Project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

Best Management Practices (BMPs)

An appropriate combination of monitoring and resource avoidance would be employed during all construction activities, including implementation of the following Best Management Practices (BMPs):

- Construction of the proposed Project is anticipated to occur every day of the week from 7:00 a.m. to 4:00 p.m**.** Should construction be required outside of the anticipated hours, construction activity would comply with the allowable hours of construction as dictated in the *Los Angeles Municipal Code Section 41.40*, the City's noise ordinance, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or City holidays.

- The proposed Project would implement Rule 403 fugitive dust control measures required by the South Coast Air Quality Management District (SCAQMD), which requires reasonable precautions to be taken to prevent visible particulate matter from being airborne, under normal wind conditions, beyond the property from which the emission originates. Reasonable precautions include, but are not limited to, the following:

    - Application of water on dirt roads, material stockpiles, and other surfaces that can give rise to airborne dusts; and

    - Maintenance of roadways in a clean condition

- The proposed project would implement erosion control where necessary that may include, but would not be limited to, the following:

    - Minimizing the extent of disturbed areas and duration of exposure;

  - Stabilizing and protecting disturbed areas;
  - Keeping runoff velocities low;
  - Retaining sediment within the construction area;
  - Use of silt fences or straw wattles
  - Temporary soil stabilization
  - Temporary drainage inlet protection
  - Temporary water diversion around the immediate work area; and
  - Minimizing debris from construction vehicles on roads providing construction access

- The proposed Project would implement Rule 402 measures required by the SCAQMD, which prohibits the discharge from any source whatsoever, such quantities of air contaminants or other materials that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public or which endanger the comfort, repose, health, or safety of any such persons or the public or that cause or have a natural tendency to cause injury or damage to business or property.

- BOE would ensure that all construction crews have fire-suppression equipment (such as fire extinguishers) on site to respond to the accidental ignition of a fire.

- Spill kits will be available onsite for potential leaks or spills of hazardous materials.

- BOE or its contractor would minimize short-term construction noise through: (1) proper maintenance and tuning of all construction equipment engines to minimize noise emissions; and (2) proper maintenance and functioning of the mufflers on all internal combustion and equipment engines.

- BOE or its contractor would implement the recommendations for the protection, removal, and/or replacement of street trees detailed in the Arborist Report (see Appendix B of this IS/MND), as applicable and in consultation with the City's Urban Forestry Division and/or Board of Public Works.

Project Design Features (PDFs)

In addition to BMPs, the following Project Design Features (PDFs) would be required to be implemented as part of the proposed Project:

PDF-BIO-1: To avoid impacts to nesting birds protected under the MBTA and CFGC resulting from construction activities that may occur during the nesting season, the following will be implemented:

Construction activities, including tree removal shall occur outside of the nesting season (generally February 1 through September 30). If construction activities must occur within this time period, the following measures shall be employed:

- A pre-construction nesting survey shall be conducted by a qualified biologist within 3 days (72 hours) prior to the start of construction activities to determine whether active nests are present within or within 500 feet of the construction zone. All nests found shall be recorded.

- A minimum 300-foot no-work buffer shall be established around any active passerine bird nest. A minimum 500-foot no-work buffer shall be established around any active raptor nest. The qualified biologist shall monitor the nest on a weekly basis, and construction activities within 300 feet of an active nest of any passerine bird or within 500 feet of an active nest of any raptor shall be postponed until the biologist determines that the nest is no longer active. However, the standard 300/500 foot no-disturbance buffer distance may be adjusted (including increases or reductions to the buffer) by a qualified biologist on a case-by-case basis taking into consideration the location, type, duration and timing, and severity of work, distance of nest from work area, surrounding vegetation and line-of-sight between the nest and work areas (also taking into account existing ambient conditions from human activity within the line of sight), the influence of other environmental factors, and species' site specific level of habituation to the disturbance. If the qualified biologist determines nesting activities may fail as a result of work activities, the biologist shall immediately inform the construction manager and all Project work shall cease (except access along established roadways) within the recommended no-disturbance buffer until the biologist determines the adults and young are no longer reliant on the nest site.

- Buffers will be delineated on-site with bright flagging, for easy identification by Project staff. The on-site construction supervisor and operator staff will be notified of the nest and the buffer limits and instructed of the sensitivity of the area to ensure the buffer is maintained.

A summary of preconstruction surveys and methodologies employed, monitoring efforts, and any no-disturbance buffers that were installed shall be documented in a report by the qualified biologist at the conclusion of each nesting season.

PDF-CUL-1: In the unlikely event that any cultural resources are encountered during ground-disturbing activities, they would be left in place to not disturb the discovery context, and work in the immediate vicinity would be suspended until the discovery is assessed by a qualified archaeologist and appropriate treatment, if necessary, is carried out, in accordance with 36 Code of Federal Regulations Part 800.13(b) (3) and California Public Resources Code Section 21083.2(i). Work in the area would not resume until evaluation and treatment of the resource is completed in accordance with the provisions of CEQA Guidelines Section 15064.5 and the National Historic Preservation Act.

PDF-CUL-2: If human remains are discovered, work in the immediate vicinity of the discovery will be suspended and the Los Angeles County Coroner contacted. If the remains are deemed Native American in origin, the Coroner will contact the Native American Heritage Commission and identify a Most Likely Descendant pursuant to Public Resources Code Section 5097.98 and California Code of Regulations Section 15064.5. Work may continue on other parts of the Project site while consultation and treatment are conducted.

H. Operation and Maintenance

The operation and maintenance of the proposed Project following the completion of construction activities would be similar to existing conditions. The Project site would continue to operate as a street for vehicular traffic and maintenance activities would be the same as the City's current maintenance of street roadways.

I. Project Actions and Approvals

Numerous approvals and/or permits would be required to implement the proposed Project. The environmental documentation for the Project would be used to facilitate compliance with federal and state laws and the granting of permits by various state and local agencies having jurisdiction over one or more aspects of the Project. These approvals and permits may include, but may not be limited to, the following as listed in Table 2:

Table 2
Required Permits and Approvals

Agency	Permit/Requirement	Issue
Regional		
Los Angeles Flood Control / Los Angeles County Department of Public Works / BOE	Existing-Catch Basin Relocation Storm Drain Design and Connection Permit	Construct New and Relocate Existing Catch Basin
Los Angeles Flood Control / Los Angeles County Department of Public Works / BOE	New Catch Basin Connection Storm Drain Design and Connection Permit	New Catch Basins-Construct New Storm Drain Mainline, Lateral and Connector Pipes
City of Los Angeles/Port of Los Angeles	BOE-POLA Agreement for Courtesy Approval	Street Design and Construction Utility Coordination and Relocation Storm Drain Design and Construction
Metro	Approval	Bus stop modifications and construction detour coordination (Route 232 bus stop at SW corner of Alameda and Anaheim Streets) – Hold existing location.
Pacific Harbor Line	Approval	Railroad design criteria
Los Angeles Department of Transportation	Approval	Bike path design criteria; streetlight design criteria; traffic signal design criteria Traffic Striping and Signage
BOE	Approval	Roadway design criteria Street Design Storm Drain Design Retaining Wall
BOE	Utility Permit	Utility Potholing and Relocation

Agency	Permit/Requirement	Issue
Los Angeles Bureau of Street Services	Approval	Relocation and installation of streetlights and traffic signals-Urban Forestry-Street Trees
Los Angeles Department of Water & Power (Water Systems and Power Systems)	Approval and BOE Utility Permit	Design and relocation of power poles and above ground water facilities
Los Angeles Bureau of Street Lights	Approval	Street Light Design
State		
California Coastal Commission	Coastal Development Permit	Within California Coastal Zone
California Public Utilities Commission	Approval	Railroad design criteria

III. EXISTING ENVIRONMENT

The Project site is in the community of Wilmington within the City of Los Angeles in Los Angeles County. The parcels adjacent to the west of Alameda Street are zoned M2 (Light Industrial) and designated for Light Manufacturing uses in the City of Los Angeles General Plan (General Plan).[1] The parcels to the east of Alameda Street are zoned M3 (Heavy Industrial) and designated for General/Bulk Cargo (Non Hazardous Industrial and Commercial) uses in the General Plan. The parcels at the northeast portion of the Project site beginning at Anaheim Street are zoned M3 (Heavy Industrial) and designated for Heavy Manufacturing in the General Plan. The parcels at the southernmost portion of the Project site, south of Harry Bridges Boulevard are also zoned M3 (Heavy Industrial) and designated for Heavy Manufacturing in the General Plan. Additionally, those southern parcels are located within the California Coastal Zone, in an area identified as a dual permit jurisdiction area.

The California Department of Conservation, California Geological Survey's Seismic Hazard Zonation Program Map indicates that the Project site is not within an Alquist-Priolo Earthquake Fault Zone.[2] The nearest fault zone to the Project site is the Palos Verdes Fault, which is located approximately 1.6 miles west of the site and no active faults are known to cross the Project site.[3] The Project site is also located within a designated liquefaction zone.[4]

IV. ENVIRONMENTAL EFFECTS/INITIAL STUDY CHECKLIST

This section documents the screening process used to identify and focus upon environmental impacts that could result from the proposed Project. The IS Checklist below follows closely the form prepared by the Governor's Office of Planning and Research and was used in conjunction with the City's *L.A. CEQA Thresholds Guide* and other sources to screen and focus upon potential environmental impacts resulting from this Project. Impacts are separated into the following categories:

- No Impact. This category applies when a project would not create an impact in the specific environmental issue area. A "No Impact" finding does not require an explanation when the finding is adequately supported by the cited information sources (e.g., exposure to a tsunami is clearly not a risk for projects not near the coast). A finding of "No Impact" is explained where the finding is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

- Less Than Significant Impact. This category is identified when the project would result in impacts below the threshold of significance, and would therefore be less than significant impacts.

- Less Than Significant After Mitigation. This category applies where the incorporation of mitigation measures would reduce a "Potentially Significant Impact" to a "Less Than Significant Impact." The mitigation measures are described briefly along with a brief explanation of how they would reduce the effect to a less than significant level. Mitigation measures from earlier analyses may be incorporated by reference.

- Potentially Significant Impact. This category is applicable if there is substantial evidence that a significant adverse effect might occur, and no feasible mitigation measures could be identified to reduce impacts to a less than significant level. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required. There are no such impacts for the proposed Project.

Sources of information that adequately support these findings are referenced following each question. All sources so referenced are available for review at the offices of the Bureau of Engineering, 1149 South Broadway, Suite 600, Los Angeles, California 90015.

Please contact Cherry Villanueva at (213) 485-5754 or at cherry.villanueva@lacity.org for information regarding the environmental document.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
1. AESTHETICS – Would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒

Reference: 10 (General Plan)

Comment: A scenic vista generally provides focal views of objects, settings, or features of visual interest; or panoramic views of large geographic areas of scenic quality, primarily from a given vantage point. A significant impact would occur if the proposed Project introduced incompatible visual elements within a field of view containing a scenic vista or substantially altered a view of a scenic vista.

The City of Los Angeles General Plan indicates that scenic views or vistas are panoramic public views of various natural features, including the ocean, striking or unusual natural terrain, or unique urban or historic features. Public access to these views may be available from nearby parklands, private or publicly owned sites, and public rights-of-way. The Wilmington-Harbor City Community Plan does not designate any specific views as scenic vistas within the Project area. The Project site is currently developed as a roadway in an industrial area. The Project site does not offer views of any scenic resources and views of the Project site would not be considered scenic. Therefore, the proposed Project would not have a substantial adverse effect on a scenic vista, and no impact would occur.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒

Reference: 7(Caltrans Scenic Highway Systems List), 10 (General Plan)

Comment: A significant impact would occur where scenic resources within a state scenic highway were damaged or removed as a result of the proposed Project.

The Project site is located in an industrial area and Alameda Street is not a state designated scenic highway. There are no state designated scenic highways near the Project site. Therefore, the proposed Project would not damage scenic resources within a state scenic highway, and no impact would occur.

c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☐	☒

Reference: L.A. CEQA Thresholds Guide (Sections A.1 and A.2)

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Comment: A significant impact would occur if the proposed Project introduced incompatible visual elements to the Project site or the area surrounding the Project site.

The proposed Project would widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width. Right-of-way acquisition would be required along the easterly and westerly sides of the Project site. Acquired parcels would be transferred from one government entity to another, and would become part of the Project site. No existing structures or buildings would be impacted. Once acquired, Project construction and operation would take place entirely within the right-of-way. Additionally, implementation of the proposed Project would not change the existing use at the Project site. Therefore, the proposed Project would not conflict with applicable zoning and other regulations governing scenic quality. No impact would occur.

d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Reference: L.A. CEQA Thresholds Guide (Section A.4)

Comment: A significant impact would occur if the proposed Project caused a substantial increase in ambient illumination levels beyond the property line or caused new lighting to spill-over onto light-sensitive land uses such as residences, some commercial and institutional uses that require minimum illumination for proper function, and natural areas.

The existing roadway currently contains streetlights in accordance with City requirements. Any new or relocated streetlights installed as part of the proposed Project would comply with existing requirements regarding location, brightness, focusing of light onto the roadway, etc. It is not anticipated that new and/or relocated streetlights would result in significantly additional light than under existing conditions. Some night and weekend construction would be anticipated, including the use of light towers. BMP's regarding construction hours would be implemented to ensure impacts from night construction remain less than significant. Additionally, such occurrences would be infrequent and temporary, terminating once construction is complete. Furthermore, given the current presence of streetlights in use at the Project site, the impact of the light towers at nighttime would be comparable to existing conditions. Adherence to existing

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

regulations would ensure that impacts related to light and glare would be less than significant.

2. AGRICULTURE AND FOREST RESOURCES – Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? ☐ ☐ ☐ ☒

Reference: 2 (Farmland Mapping and Monitoring Program California Important Farmland Finder)

Comment: A significant impact would occur if the proposed Project resulted in the conversion of state-designated agricultural land from agricultural use to a non-agricultural use.

No prime or unique farmland, or farmland of statewide importance exists within the Project area or vicinity. The Project site and surrounding land consists of urban, built-out land. The Project site is not located on or near any property zoned or otherwise intended for agricultural uses. Therefore, no impact to state-designated agricultural land would occur

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract? ☐ ☐ ☐ ☒

Reference: 3 (California Department of Conservation Williamson Act Reports and Statistics)

Comment: A significant impact would occur if the proposed Project resulted in the conversion of land zoned for agricultural use, or indicated under a Williamson Act contract, from agricultural use to a non-agricultural use.

The Project site and adjacent parcels are not zoned or developed for agricultural uses. Furthermore, the only land in Los Angeles County currently under a Williamson Act contract is located on Santa Catalina Island. The proposed Project would not conflict with existing zoning or a Williamson Act contract. Therefore, no impact would occur.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)) or timberland (as defined in Public Resources Code Section 4526)?	☐	☐	☐	☒

References: 11 (ZIMAS)

Comment: A significant impact would occur if the proposed Project conflicted with an existing zoning classification of forest land or timberland, or caused rezoning of an area classified as forest land or timberland.

The parcels adjacent to the Project site to the north and south and along the west side of Alameda Street are zoned and developed for light and heavy industrial uses, and the parcels along the east side of Alameda Street are zoned and developed for heavy industrial and bulk cargo uses. No portion of the Project site is zoned for forest land or timberland, and no forest lands are located on or near the Project site. Therefore, the proposed Project would not conflict with existing zoning for, or cause rezoning of forest land or timberland. No impact would occur.

d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒

References: Refer to Section 2 (c) above.

Comment: Refer to Section 2 (c) above.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Reference: Refer to Section 2 (a) and 2(b) above.

Comment: Refer to Section 2 (a) and 2(b) above. No impact would occur.

3. AIR QUALITY – Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐

Reference: *L.A. CEQA Thresholds Guide (Sections B1 and B2); 16, Air Quality Technical Memorandum, 2022 (Appendix A of this IS/MND)*

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Comment: A significant impact may occur if the proposed Project would conflict with or obstruct implementation of the applicable air quality plan.

The South Coast Air Quality Management District (SCAQMD) monitors air quality within the Project area and the South Coast Air Basin, which includes Orange County and portions of Los Angeles, Riverside, and San Bernardino counties. The South Coast Air Basin is bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino and San Jacinto mountains to the north and east; and the San Diego County line to the south.

Air quality plans describe air pollution control strategies to be implemented by a city, county, or regional air district. The primary purpose of an air quality plan is to bring an area that does not attain federal and state air quality standards into compliance with those standards pursuant to the requirements of the Clean Air Act and California Clean Air Act. The South Coast Air Basin is currently designated as nonattainment for 8-hour ozone and particulate matter with aerodynamic diameter less than 2.5 microns ($PM_{2.5}$) for both state and federal standards and nonattainment for particulate matter with aerodynamic diameter less than 10 microns (PM_{10}) for the state standards.

The most recent *Air Quality Management Plan* (AQMP) was adopted by the SCAQMD in February 2016. The AQMP was prepared by SCAQMD in partnership with the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (ARB), and is the legally enforceable blueprint for how the region will meet and maintain state and federal air quality standards.

Projects that would be consistent with the 2016 AQMP, and growth projections within the Southern California Association of Governments (SCAG) *2016–2040 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS), would be considered to have a less than significant impact. Consistency with the AQMP is determined through evaluation of project-related air quality impacts and demonstration that project-related emissions would not increase the frequency or severity of existing violations, or contribute to a new violation of the air quality standards. As described in *Alameda Street Widening Project – Air Quality Assessment for the California Environmental Quality Act (CEQA)* (Appendix A of this IS/MND), criteria established in the SACQMD's CEQA Air Quality Handbook were utilized to determine the proposed Project's consistency with applicable SCAQMD and SCAG policies, described below.

Nitrogen oxides (NO_X), carbon monoxide (CO), PM_{10}, and $PM_{2.5}$ emissions were analyzed for the proposed Project in order to: (1) ascertain potential effects on localized concentrations; and (2) determine if there is a potential for such

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

emissions to cause or affect a violation of the ambient air quality standards. As demonstrated in the analysis in Table 3 below, localized emissions would not exceed the SCAQMD-recommended localized thresholds.

With respect to the determination of consistency with AQMP growth assumptions, the projections in the AQMP for achieving air quality goals are based on assumptions in SCAG's 2016–2040 RTP/SCS regarding population, housing, and growth trends. Determining whether or not a project exceeds the assumptions reflected in the AQMP involves the evaluation of three criteria: (1) consistency with applicable population, housing, and employment growth projections; (2) project mitigation measures; and (3) appropriate incorporation of AQMP land use planning strategies. The following discussion provides an analysis with respect to each of these three criteria.

Implementation of the proposed Project would not introduce new residential uses to the Project area, and therefore population and housing projections for the region would not be affected. The commercial uses would generate minimal new employment that would have no potential to alter citywide and regional employment projections. The proposed Project would not have any potential to result in growth that would exceed the projections incorporated into the AQMP or the SCAG 2016–2040 RTP/SCS.

The proposed Project would comply with all applicable regulatory standards (e.g., SCAQMD Rules 402 and 403) as required by the SCAQMD. As demonstrated in this analysis, the proposed Project would not result in significant air quality impacts and no mitigation measures are required to reduce emissions. As such, the proposed Project meets this AQMP consistency criterion.

The proposed Project would be consistent with the *City of Los Angeles General Plan.* The Project site is surrounded by parcels zoned as light and heavy industrial and would not require rezoning for any areas. The proposed Project would be consistent with goals and objectives within the Plan.

Implementation of the proposed Project would not interfere with air pollution control measures listed in the 2016 AQMP and would not conflict with the goals of the General Plan Air Quality Element. No significant impacts have been identified related to the proposed Project. Impacts will be less than significant, and no mitigation measures are required.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐

Reference: 16 *(Air Quality Technical Memorandum,* 2022 [Appendix A of this IS/MND])

Comment: A significant impact would occur if the proposed Project's incremental air quality effects are considerable when viewed in connection with the effects of past, present, and future projects.

Construction

The South Coast Air Basin (SCAB) is designated as nonattainment of the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS) for ozone (O_3), PM_{10}, and $PM_{2.5}$. Therefore, there is an ongoing regional cumulative impact associated with these air pollutants. Taking into account the existing environmental conditions, the SCAQMD propagated guidance that an individual project can emit allowable quantities of these pollutants on a regional scale without significantly contributing to the cumulative impacts. Table 3 shows a comparison of the maximum daily emissions during each phase of construction to the applicable SCAQMD air quality significance thresholds. Despite the region being in nonattainment of the ambient air quality standards for O_3, PM_{10}, and $PM_{2.5}$, the SCAQMD does not consider individual project emissions of lesser magnitude than the mass daily thresholds to be cumulatively considerable. The proposed Project would not result in a cumulatively considerable net increase of nonattainment pollutants. Therefore, this impact would be less than significant, and no mitigation is required.

Issues

Potentially Significant Impact | Less Than Significant With Mitigation | Less Than Significant | No Impact

Table 3
Estimated Construction Emissions

Note: Emissions modeling files can be found in the Appendix A of this IS/MND.
SOURCE: TAHA, 2022.

Operation

Implementation of the proposed Project would introduce approximately 12 new daily vehicle trips on Alameda Street. This would only increase vehicle miles traveled in the Project area by approximately 0.043 percent. Maximum daily emissions of all regulated pollutants would remain substantially below the applicable SCAQMD operational mass daily thresholds. Therefore,

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

implementation of the proposed Project would result in a less than significant impact related to operational air pollutant emissions, and no mitigation is required.

c) Expose sensitive receptors to substantial pollutant concentrations? ☐ ☐ ☐ ☒

Reference: 16 *(Air Quality Technical Memorandum,* 2022 [Appendix A of this IS/MND])

Comment: A significant impact may occur if construction or operation of the proposed Project generated pollutant concentrations to a degree that would significantly affect sensitive receptors.

Some members of the population are especially sensitive to air pollutant emissions and should be given special consideration when evaluating air quality impacts from projects. These people include children, older adults, persons with preexisting respiratory or cardiovascular illness, and athletes and others who engage in frequent exercise. For the purposes of a CEQA analysis, the SCAQMD considers a sensitive receptor to be a location such as a residence, hospital, or convalescent facility where it is possible that an individual could remain for 24 hours.

Construction

The SCAQMD devised its Localized Significance Threshold (LST) values to prevent the occurrence of localized hot spots of criteria pollutant concentrations at sensitive receptor locations surrounding the Project site. The LST values were determined using emissions modeling based on ambient air quality measured throughout the SCAB. If maximum daily emissions remain below the LST values during construction activities, it is highly unlikely that air pollutant concentrations in ambient air would reach substantial levels sufficient to create public health concerns for sensitive receptors. As shown in Table 3 above, maximum daily emissions of criteria pollutants and O_3 precursors from sources located on the Project site would not exceed any applicable LST values. Therefore, construction of the proposed Project would not result in exposure of sensitive receptors to substantial concentrations of criteria pollutants.

With regards to emissions of air toxics, carcinogenic risks, and non-carcinogenic hazards, the use of heavy duty construction equipment and haul trucks during construction activities would release diesel PM to the atmosphere through exhaust emissions. Diesel PM is a known carcinogen, and extended exposure to elevated concentrations of diesel PM can increase excess cancer risks in individuals. However, carcinogenic risks are typically assessed over timescales

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

of several years to decades, as the carcinogenic dose response is cumulative in nature. Short term exposures to diesel PM would have to involve extremely high concentrations in order to exceed the SCAQMD Air Quality Significance Threshold of 10 excess cancers per million. Therefore, the proposed Project would not result in an impact related to construction pollutants and would not result in exposure of sensitive receptors to substantial concentrations of air pollution.

Operation

The SCAQMD recommends that a health risk assessment be conducted for substantial sources of diesel PM emissions (e.g., truck stops and distribution facilities). Exposure is dependent on the distance from the source of emissions to the sensitive receptor. There are two factors leading to a conclusion that the proposed Project would not expose sensitive receptors to substantial pollutant concentrations. First, the proposed Project would only increase vehicle miles traveled in the Project area by approximately 0.043 percent. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. Second, the nearest sensitive receptors are residences located approximately 300 feet to the west of Alameda Street along Flint Avenue, Pioneer Avenue, and Watson Avenue south of Anaheim Street. There are no sensitive receptors fronting Alameda Street and exposure due to proposed Project effects would be minimal. Therefore, the proposed Project would not result in an impact related to operational pollutants.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒

Reference: 16 *(Air Quality Technical Memorandum,* 2022 [Appendix A of this IS/MND])

Comment: A significant impact would occur if the Project created objectionable odors during construction or operation that would affect a substantial number of people.

The occurrence and severity of odor impacts depend on numerous factors, including the nature, frequency, and intensity of the source; wind speed and direction; and the presence of sensitive receptors. While offensive odors rarely cause any physical harm, they still can be very unpleasant, leading to considerable distress and often generating citizen complaints to local governments and regulatory agencies.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Construction

Odors are the only potential construction emissions other than the sources addressed above. Potential sources that may produce objectionable odors during construction activities include equipment exhaust, application of asphalt and architectural coatings, and other interior and exterior finishes. Odors from these sources would be localized and generally confined to the immediate area surrounding the Project site and would be temporary in nature and would not persist beyond the termination of construction activities. The proposed Project would utilize standard construction techniques, and the odors would be typical of most construction sites and temporary in nature. In addition, as construction-related emissions dissipate away from the construction area, the odors associated with these emissions would also decrease and would be quickly diluted. The construction contractor will ensure that activities comply with SCAQMD Rules 401 (Visible Emissions) and 402 (Nuisance) to prevent the occurrence of public nuisances and visible dust plumes traveling off-site. Therefore, the proposed Project would not result in an impact related to construction odors and other nuisances.

Operation

Odors are the only potential operational emissions other than the sources addressed above. Land uses and industrial operations that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The operations would comply with SCAQMD Rule 402, which would prohibit any air quality discharge that would be a nuisance or pose any harm to individuals of the public. The proposed Project would not include an operational source of emissions. Therefore, the proposed Project would not result in a significant impact related to operational odors or other nuisances**.**

4. BIOLOGICAL RESOURCES – Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☒	☐	☐

Reference: 10 (General Plan Conservation Element), 15 (*Biological Resources Technical Memorandum*)

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Comment: A significant impact would occur if the proposed Project removed or modified habitat for any species identified or designated as a candidate, sensitive, or special status species in local or regional plans, policies, or regulation, or by the state or federal regulatory agencies cited.

Potential impacts to biological resources associated with the proposed Project were determined from the results presented in the Biological Resources Memorandum prepared for the proposed Project, which is included as Appendix C to this IS/MND.

A search of relevant regional databases for special-status biological resources in the vicinity of the Project area was conducted prior to conducting a field survey. The Project runs north-south along Alameda Street and occurs almost entirely within the southwestern portion of the U.S. Geological Survey's Long Beach quadrangle. A search of this quad and the surrounding seven quadrangles, including San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance was made of the California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB) and of the California Native Plant Society's (CNPS) on-line Inventory of Rare and Endangered Plants of California. Additionally, the U.S. Fish and Wildlife Service's (USFWS) online Information for Planning and Consultation (IPaC) (USFWS 2022) database was queried for special-status species, sensitive natural communities, and protected areas known from the Project region and are referenced and discussed further in this section.

The area evaluated for biological resources includes the proposed Project limits and a 500-foot survey buffer, combined the Biological Survey Areas (BSA). A buffer around the Project limits was evaluated in order to capture potential indirect effects to biological resources from implementation of the proposed Project. Indirect effects could include elevated noise and dust levels and increased human activity within the BSA. A 500-foot survey buffer is appropriate for capturing potential indirect impacts from a project on biological resources. It is anticipated that indirect impacts beyond 500 feet for this proposed Project are generally diffuse and would not significantly impact biological resources.

Prior to conducting a field survey, aerial imagery of the BSA was reviewed for the presence of areas that could potentially support special-status biological resources. Since most of the BSA is developed by hardscape features (i.e., roadways, rail tracks, buildings), the desktop review focused on identifying any significant green or otherwise open spaces in the vicinity of the proposed Project. On September 10, 2021, a field survey of the proposed Project limits and 500-foot survey buffer was conducted by AECOM biologists to document existing

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

biological resources that occur or have the potential to occur within and adjacent to the BSA, and to evaluate the potential for special-status plant and wildlife species to occur within the BSA. Binoculars were utilized to scan for evidence of wildlife activity in the BSA. Seasonal, species-specific botanical or wildlife surveys were not conducted as part of this evaluation; however, based on the survey conducted and an assessment of habitat conditions in the BSA, it is apparent that special-status plant and wildlife species are not anticipated within the urbanized environment of the BSA.

The entire BSA is urbanized or has otherwise been previously disturbed. It is composed primarily of paved roadways, railroad corridors on both sides of Alameda Street, and commercial and industrial buildings and associated parking lots. A significant amount of rail and truck traffic occurs through the BSA to and from the ports. No open spaces, parks, or similar areas occur within the BSA. Vegetation is sparse and consists primarily of non-native ornamental trees and ruderal herbaceous vegetation. No native plant communities occur within or adjacent to the BSA. Non-native ornamental tree species occur along the west side of Alameda Street and in landscaped areas.

Sensitive Plants

Special-status plant species include those listed as Endangered, Threatened, Rare or those species proposed for listing (Candidates) by the United States Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), and the California Native Plant Society (CNPS).[5,6,7] The CNPS listing is sanctioned by CDFW and serves as their list of "candidate" plant species that meet the definitions of the California Endangered Species Act (CESA), and are eligible for state listing.

A total of 46 plant species were identified from the CNDDB[8] and CNPS[9] database searches to have historically been recorded from the Long Beach and surrounding

[5] Species listed or proposed for listing as threatened or endangered under the federal Endangered Species Act (Title 50 Code of Federal Regulations [CFR] 17.12 [listed plants], Title 50 CFR 17.11 [listed animals] and includes notices in the Federal Register for proposed species).

[6] Species listed or proposed for listing by the State of California as threatened or endangered under the California Endangered Species Act (Title 14 California Code of Regulations 670.5).

[7] Plants listed as rare under the California Native Plant Protection Act (California Fish and Game Code Section 1900 *et seq.*).

[8] California Department of Fish and Wildlife. *California Natural Diversity Data Base (CNDDB).* Full condensed report for the Long Beach, San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance quadrangles. Generated November 1, 2022.

[9] California Native Plant Society, Rare Plant Program. 2022. Inventory of Rare and Endangered Plants (online edition, v9-01 0.0). Available at: http://www.rareplants.cnps.org/. Accessed November 1, 2022.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

seven quadrangles, and from a search of IPaC[6] for the Project vicinity, including the eight federal and/or State-listed species below:

- Ventura Marsh milk-vetch (*Astragalus pycnostachyus* var. *lanosissimus*; federally and State-listed Endangered)
- coastal dunes milk-vetch (*Astragalus tener var. titi*; federally and State-listed Endangered)
- salt marsh bird's-beak (*Chloropyron maritimum ssp. maritimum*; federally and State-listed Endangered)
- San Diego button-celery (*Eryngium aristulatum* var. *parishii;* federally and State-listed Endangered)
- Gambel's watercress (*Nasturtium gambellii;* federally-listed Endangered and State-listed Threatened)
- spreading navarretia (*Navarretia fossalis* federally-listed Threatened)
- California Orcutt grass (*Orcuttia californica*; federally and State-listed Endangered)
- Lyon's pentachaeta (*Pentachaeta lyonia*; federally and State-listed Endangered)

No special-status plant species were detected during the field survey. CNDDB records for two special-status plant species, prostrate vernal pool navarretia (*Navarretia prostrata* CRPR 1B.1) and Lyon's pentachaeta, coincided with the BSA. These records represent historical known occurrences of these species prior to development of the area and these species are anticipated to be extirpated from the BSA. No suitable habitats for the regional special-status plant species identified during the database searches occurs within the BSA. No USFWS-designated Critical Habitat for any special-status plant species coincides with the BSA.

Construction

No federal or State-listed plant species were identified during the field survey, and special-status plants are not expected to occur in the BSA due to a lack of potentially suitable habitat. Additionally, no USFWS-designated critical habitat for any federally-listed plant species coincides with the BSA. As a result, significant direct or indirect impacts to special-status plants are not anticipated. Additionally, no tree species protected under the City's Native Tree Protect Ordinance occur

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

within the BSA; however, street trees located in the public ROW would be removed or disturbed during construction.

As discussed under Section II(F) above, an Arborist Report (Part 1 and Part 2) was prepared for the Project (see Appendix B of this IS/MND). Part 1 of the Arborist Report addresses trees on the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street within the Project site. Part 2 of the Arborist Report addresses trees on the north side of Harry Bridges Boulevard and the westerly side of Alameda Street within the Project site. In total, the Arborist Report recorded 134 street trees occurring in the public ROW of the Project site, and six private trees within the Biological Survey Area (BSA).[10] Inventory of tree species included; carrot wood (*Cupaniopsis anacardiodes*), Brisbane box (*Lophostemon confertus*), Mexican Fan palm (*Washingtonia robusta*), floss silk tree (*Cieba speciosa*), and lemon-scented gum (*Corymbia citriodoria*). Inventoried trees were located on both sides of Harry Bridges Boulevard and Alameda Street. In total, 104 street trees would be removed (not including dead trees, including street trees where natural grade within dripline is changed), 5 would be impacted by construction (within driplines), and 11 are not dead, not to be removed, and/or where natural grade is unchanged. The Project would adhere to the City's 2015 Street Tree Removal and Replacement Policies regarding removal of street trees, which would occur in consultation with the Urban Forestry Division (UFD) and/or Board of Public Works (Board) if a Tree Removal Permit is required.[11]

As mentioned above, one hundred and four (104) total street trees would be removed during construction (15 from the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street; and 89 from the north side of Harry Bridges Boulevard and the westerly side of Alameda Street). The City of Los Angeles Municipal Code requires that street trees removed for construction be replaced at a ratio of two 24-inch box-size trees for each tree removed. Based on that ratio, approximately 208 24-inch box size trees would be included in Project design to mitigate for the trees removed. Replacement tree species selection will consider existing overhead power lines that may be present. Several of the trees to be removed are dead or dying, thus the actual replacement number will be determined by UFD or the Board. As a result of Project compliance with the City's Street Tree Policy, no conflicts with an applicable local ordnance or policy are anticipated.

Operation

Impacts to vegetation communities and special-status plant species during operation and maintenance of the Project are not anticipated as such activities would be conducted within previously disturbed and developed surfaces containing non-native vegetation and would generally not change biological conditions from those present prior to and after Project construction.

Sensitive Wildlife Species

Special-status wildlife species include those listed by the USFWS under the federal Endangered Species Act and by CDFW under CESA. USFWS and CDFW officially list species as either Threatened, Endangered, or as Candidates for listing. Additional species receive federal protection under the Bald Eagle Protection Act (e.g., bald eagle, golden eagle), the *Migratory Bird Treaty Act* (MBTA), and state protection under the *California Environmental Quality Act (CEQA) Section 15380(d).*

All birds, except European starlings, English house sparrows, rock doves (pigeons), and non-migratory game birds such as quail, pheasant, and grouse, are protected under the MBTA. However, non-migratory game birds are protected under California Fish and Game Code Section 3503. Many other species are considered by CDFW to be California Species of Special Concern, and others are on a CDFW Watch List. The California Natural Diversity Database also tracks species within California for which there is conservation concern, including many that are not formally listed, and assigns them a California Natural Diversity Database (CNDDB) rank. Although Species of Special Concern, CDFW Watch List species, and species that are tracked by the CNDDB are not formally listed or afforded official legal status, they may receive special consideration during the CEQA review process. CDFW further classifies some species as "Fully Protected," indicating that the species may not be taken or possessed except for scientific purposes, under special permit from CDFW. Additionally, California Fish and Game Code Sections 3503, 3505, and 3800 prohibit the take, destruction or possession of any bird, nest, or egg of any bird except English house sparrows and European starlings unless authorization is obtained from the CDFW.

A total of 46 wildlife species were identified from the CNDDB[12] search of the Long Beach and surrounding seven quadrangles and from a search of IPaC[13] for the Project vicinity, including the 18 federal and/or State-listed wildlife species below:

- tricolored blackbird (*Agelaius tricolor*; State-listed Threatened)
- Swainson's hawk (*Buteo swainsoni*; State-listed Threatened)
- western snowy plover (*Charadrius nivosus;* federally-listed Threatened)
- western yellow-billed cuckoo (*Coccyzus americanus occidentalis*; federally-listed Threatened and State-listed Endangered)

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

- southwestern willow flycatcher (*Empidonax traillii extimus*; federally and State-listed Endangered)
- Belding's savannah sparrow (*Passerculus sandwichensis beldingi*; State-listed Endangered)
- coastal California gnatcatcher (*Polioptila californica californica*; federally-listed Threatened)
- light-footed Ridgway's rail (*Rallus obsoletus levipes;* federally and State-listed Endangered)
- bank swallow (*Riparia riparia*; State-listed Threatened)
- California least tern (*Sternula antillarum browni;* federally and State-listed Endangered)
- least Bell's vireo (*Vireo bellii pusillus*; federally and State-listed Endangered)
- green turtle (*Chelonia mydas;* federally-listed Threatened)
- Mohave tui chub (*Siphateles bicolor mohavensis;* federally and State-listed Endangered)
- Crotch bumble bee (*Bombus crotchii*; Candidate for State listing as Endangered)
- monarch- California overwintering population (*Danaus plexippus pop.* 1; Candidate for federal listing)
- Palos Verdes blue butterfly (*Glaucopsyche lygdamus palosverdesensis;* federally-listed Endangered)
- Riverside fairy shrimp (*Streptocephalus woottoni* federally-listed Endangered)
- Pacific pocket mouse (*Perognathus longimembris pacificus;* federally-listed Endangered)

No special-status wildlife species were detected during the field survey. CNDDB records of three special-status wildlife species, Palos Verdes blue butterfly, Pacific pocket mouse, and western tidal-flat tiger beetle (Habroscelimorpha gabii; tracked by CDFW in the CNDDB) coincide with the BSA. These records represent historical occurrences prior to development of the area and these species are anticipated to be extirpated from the BSA due to a lack of suitable habitats. No

[12] California Department of Fish and Wildlife. *California Natural Diversity Data Base (CNDDB).* Full condensed report for the Long Beach, San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance quadrangles. Generated November 1, 2022.

[13] Information for Planning and Consultation. 2022. U.S. Fish and Wildlife Service. Available at: https://ecos.fws.gov/ipac/. Accessed November 1, 2022.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

suitable habitats for the regional special-status wildlife species identified during the database searches occurs within the BSA.

Several federally and state-listed bird species have the potential to occur within the BSA as a migrating transient or while moving between areas within the ports. However, suitable nesting and foraging habitat for special status bird species is absent from the BSA.

Mature ungroomed palm trees that maintain their dead fronds, such as those occurring in the BSA, may provide roosting habitat for bat species, including western yellow bat, a CDFW Species of Special Concern (SSC). No bats or indications of the presence of bats (i.e., urine staining, guano droppings) were observed during the field survey; however, a survey focused on bats was not conducted. With the presence of potentially suitable tree roosting habitat in the BSA, and a CNDDB record of western yellow bat from the region in 1990, as well as CNDDB records of other special-status bat species from the region, there is a remote chance that an individual or small group of special-status bats could roost in the BSA. No USFWS-designated critical habitat for any special-status wildlife species coincides with the BSA.

Construction

Project construction could potentially affect wildlife and wildlife habitat, including construction-related noise disturbance and disruption of movement and potential wildlife mortality. Short-term impacts of construction on wildlife resources would result from wildlife avoidance of the immediate construction zones. Noise and other disturbances caused by heavy equipment and construction crews may indirectly cause wildlife to move away from the construction zone. Species with limited mobility could be crushed during Project activities.

No special-status wildlife species were identified during the field survey, and they are not expected to occur in the BSA due to a lack of potentially suitable habitat. Palm trees within the BSA may provide potentially suitable roosting and maternity roosting habitat for common bat species. As a result, the removal of mature palm trees during construction could result in direct impacts to special-status bats and also result in direct impacts to a wildlife nursery, in this instance a bat maternity roost, which are protected under CEQA. However, with implementation of Mitigation Measure (MM)-BIO-1, which would require a field survey prior to construction to determine the potential presence of special-status bats and maternity roosting bats, and tree removal under the supervision of a qualified bat

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

biologist, the potential direct impacts to special-status bats and maternity roosts would be less than significant.

Indirect impacts to special-status bats and maternity roosts during construction could occur as a result of noise, vibration, dust, and increased human presence, potentially leading to the failure of maternity roosts. Such impacts would be considered significant. The Project would implement standard best management practices and mitigation measures to reduce such indirect impacts. Additionally, by implementing the avoidance and minimization measures outlined in MM-BIO-1, which require a pre-construction bat survey to determine whether special-status bats or maternity roosting is present within or directly adjacent to the construction zone, avoidance, and buffer areas, indirect impacts to maternity roosting would be reduced to less than significant.

Additionally, no United States Fish and Wildlife Service (USFWS)-designated critical habitat for any federally-listed wildlife species coincides with the BSA, and no designated critical habitat areas would be impacted.

Ornamental landscaping, particularly mature palm trees occurring in the BSA, provide foraging and nesting habitat for bird species, including raptors, which are common in urban environments. Birds protected by the *Migratory Bird Treaty Act* (MBTA) and California Fish and Game Commission (CFGC) have the potential to nest in the Biological Survey Area (BSA), although nesting within the Project footprint is not anticipated due to a lack of vegetation. Mature palm trees would be removed during Project construction. If tree removal occurs during the nesting bird season, the direct impact to birds protected by the MBTA would be significant. By avoiding vegetation removal during the nesting bird season or adhering to avoidance and minimization measures provided in Project Design Feature (PDF)-BIO-1, which requires a pre-construction nesting survey to determine whether active nests are present within or directly adjacent to the construction zone, avoidance, and buffer areas, the direct impacts of tree removal on nesting birds and their associated nesting habitat would be reduced to less than significant.

Indirect impacts to nesting birds within the BSA could occur as a result of noise, increased human presence, and vibrations resulting from construction activities. Disturbances related to construction could result in increased nestling mortality due to nest abandonment or decreased feeding frequency. With implementation of MM-BIO-1, PDF-BIO-1, and adherence to Best Management Practices related to the control of fugitive dust and noise, indirect impacts to nesting birds would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Operation

Impacts during operations and routine maintenance would be limited; however, wildlife could be affected by human presence and noise. Impacts are expected to be minimal, short term, and in most cases would not directly affect wildlife. As a result, impacts to special status wildlife species are not anticipated during operation and maintenance activities.

Mitigation Measures

The following mitigation measure is recommended to avoid, minimize, or reduce potentially significant impacts to biological resources during implementation of the proposed project. The measure is geared towards roosting bats and would reduce potential project impacts to biological resources to a less than significant.

MM-BIO-1. *Avoid and minimize Project related impacts to special-status and/or roosting bat species.*

During the maternity season (April 15 through August 31) prior to construction, a field survey shall be conducted by a qualified biologist to determine the potential presence of colonial bat roosts within mature ungroomed palm trees along the west side of Alameda Street. A visual inspection and/or one-night emergence survey of trees shall be completed utilizing acoustic recognition technology to determine what species of bats and if any maternity roosts are present.

To avoid any impacts on special-status species and roosting bats resulting from construction activities, the following shall be implemented:

- All palm trees to be removed as part of the Project should be evaluated by a qualified biologist for their potential to support roosting bat by conducting a one-night emergence survey during acceptable weather conditions, or if conditions permit, physically examine the trees for presence or absence of bats (such as with lift equipment) two weeks prior to the start of construction/tree removal.
- If active bat roosts are present during the maternity season (April 15 through August 31), the tree shall be avoided until after the maternity season when young are self-sufficient.
- If active bat roosts are present and tree removal is not possible outside the maternity season, a qualified bat biologist shall determine the species of bats present and the type of roost (i.e., day roost, night roost, maternity roost). If the biologist determines that the roosting bats are not a special-status species

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

and the roost is not being used as a maternity roost, then the bats may be evicted from the roost by a qualified bat biologist experienced in developing and implementing bat mitigation and exclusion plans.

- If special-status bat species or a maternity roost of any bat species is present in trees slated for removal, a qualified bat biologist experienced in developing bat mitigation and exclusion plans shall develop a mitigation plan to compensate for the lost roost site. Removal of the roost shall only occur when the mitigation plan has been approved by BOE and only when bats are not present in the roost. The mitigation plan shall detail the methods of excluding bats from the roost and the plans for a replacement roost in the vicinity of the Project site.
- If the pre-construction survey determines that no special-status bat species or active roosts are present, then trees shall be removed within two weeks following the preconstruction survey, or additionally pre-construction surveys may be needed to confirm special-status bats or active roosts are absent.
- All potential roost trees shall be removed in a manner approved by a qualified bat biologist, which may include presence of a biological monitor.
- All construction activity in the vicinity of an active roost shall be limited to daylight hours.
- The results of bat surveys, evaluations, and monitoring efforts that are undertaken shall be documented in a report by the qualified biologist at the conclusion of all bat-related activities.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	☒

Reference: 10 (General Plan Conservation Element)

Comment: Sensitive natural communities are those that are designated as rare in the region by the CNDDB, support special-status plant or wildlife species, or receive regulatory protection (i.e., Section 404 of the Clean Water Act (CWA) and/or Sections 1600 et seq. of the CFGC). Rare communities are given the

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

highest inventory priority.[14,15] Based on a review of the CNDDB,[16] four sensitive vegetative communities have been recorded within the Long Beach and surrounding seven quadrangles, including Southern Coastal Bluff Scrub, Southern Coastal Salt Marsh, Southern Dune Scrub, and Southern Foredunes. No sensitive natural vegetation communities occur within the BSA. Vegetation consists primarily of non-native ornamental trees and ruderal herbaceous species that are common in urban environments.

No aquatic features protected under the CWA and/or Section 1600 of the CFGC coincide with the BSA. Tidal waters in Consolidated Slip, located in the East Basin area of the POLA, are present just outside the eastern perimeter of the BSA. All waters in San Pedro Bay, including Consolidated Slip, are considered Essential Fish Habitat (EFH),[17] a sensitive natural community falling under the jurisdiction of the National Oceanic and Atmospheric Association's National Marine Fisheries Service (NMFS).[18] However, the Project alignment is separated from Consolidated Slip by a large railroad corridor and fence lines and impacts to biological resources in the form of EFH occurring in Consolidated Slip are not anticipated.

Implementation of the proposed Project would not result in direct or indirect impacts to any sensitive natural communities. No sensitive natural communities occur within the Project site and surrounding area. Therefore, no impacts to sensitive natural communities would occur.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? ☐ ☐ ☐ ☒

Reference: 17 (U.S. Fish and Wildlife Service National Wetlands Inventory)

[18] Magnuson Act Provisions; Essential Fish Habitat. (EFH). 1997. National Oceanic and Atmospheric Administration. Interim Final Rule [62 Fed. Reg. 66551, Section 600.10 Definitions].

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Comment: A significant impact would occur if federally protected wetlands, as defined by Section 404 of the Clean Water Act, were modified or removed.

Aquatic resources, including riparian areas, wetlands, and certain aquatic vegetation communities, are considered sensitive natural communities that can fall under the jurisdiction of several regulatory agencies. No wetlands or wetland features occur within the BSA. The closest wetlands area is the Dominguez Channel, located approximately 0.23-mile west of the Project site, which is identified as Estuarine and Marine Deepwater. All Project activities would occur within the existing road ROW and no work would occur near or within the Dominguez Channel. Therefore, the proposed Project would not result in a substantial adverse effect on protected wetlands, and no impact would occur.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐

Reference: 10 (General Plan Conservation Element)

Comment: A significant impact would occur if the proposed Project interfered or removed access to a migratory wildlife corridor or impeded the use of native wildlife nursery sites.

In an urban context, a wildlife migration corridor can be defined as a linear landscape feature of sufficient width and buffer to allow animal movement between two comparatively undisturbed habitat fragments, or between a habitat fragment and some vital resource that encourages population growth and diversity. Habitat fragments are isolated patches of habitat separated by otherwise foreign or inhospitable areas, such as urban/suburban tracts or highways. Two types of wildlife migration corridors seen in urban settings are regional corridors, defined as those linking two or more large areas of natural open space, and local corridors, defined as those allowing resident wildlife to access critical resources (food, cover, and water) in a smaller area that might otherwise be isolated by urban development.

There is no native habitat on or near the Project site and, due to the existing urban and industrial development, the Project site does not function as a regional wildlife corridor for the movement of native or migratory wildlife. However, the removal of ornamental street trees could result in direct impacts to a wildlife nursery, in this instance a bat maternity roost, and indirect impacts to localized bird movement.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

With implementation of MM-BIO-1 and PDF-BIO-1, and best management practices related to the control of fugitive dust and noise, construction impacts to roosting bats would be less than significant.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? ☐ ☐ ☒ ☐

Reference: 10 (General Plan) and 13 (LARAP Tree Care Manual)

Comment: A significant impact would occur if the proposed Project caused an impact that was inconsistent with local regulations pertaining to biological resources.

Native tree species protected under the City's Native Tree Protection Ordinance (Ordinance No. 177404) include oak trees, such as valley oak (*Quercus iobata*) and California live oak, and any other tree of the oak genus indigenous to California but excluding scrub oak (*Q. dumosa*); southern California black walnut (*Juglans californica*); western sycamore; and California bay (*Umbellularia californica*) (Section 17.02 of City Municipal Code). In December 2020, the City added two native shrub species, blue elderberry (*Sambucus nigra ssp. Caerulea*) and toyon (*Heteromeles arbutifolia*). Pursuant to the ordinance, native trees that were planted or grown as part of a tree planting program are not "Protected Trees." Trees and shrubs must be four inches or greater in diameter at 4.5 feet above ground to be considered protected. The City's Board of Public Works (Public Works) must issue a permit before any alterations to protected trees are made that could cause them to be damaged, relocated or removed. Pruning also requires a permit and must comply with the pruning standards set forth by the Western Chapter of the International Society of Arboriculture in a manner that does not cause permanent damage or adversely affect the health of the trees. Per the ordinance, the tree removal permit may require replanting of native trees within the Project area or at another location within the City to compensate for the removal of these trees. The ordinance requires replacement of protected trees, with the size and number of replacement trees approximating the value of the tree or shrub to be replaced. No tree species protected under the City's Native Tree Protect Ordinance occur within the BSA. The City of Los Angeles Department of Recreation and Parks (LARAP) also has a tree replacement policy that can be found within the LARAP's *Tree Care Manual*. The LARAP tree replacement policy requires "whenever trees are removed, the existing trees' aggregate diameter, measured at breast height shall be replaced at an equal or greater rate of caliper of new trees." The removal and replacement of ornamental trees at the Project site would occur in compliance with the City's tree removal and replacement

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

policies, as applicable. Adherence to existing regulations would ensure that impacts to protected trees would be less than significant.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? ☐ ☐ ☐ ☒

Reference: 6 (CDFW Conservation Plans Map), 10 (General Plan)

Comment: A significant impact would occur if the proposed Project were inconsistent with the provisions of the adopted habitat conservation plans of the cited type.

The study area is not located within any adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved regional or state habitat conservation plan areas. Thus, the proposed Project would not be subject to the provisions of any such conservation plans. Accordingly, implementation of the proposed Project would not conflict with any Habitat Conservation Plan; Natural Community Conservation Plan; or other approved local, regional, or state habitat conservation plans, and no impact would occur.

5. CULTURAL RESOURCES – Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in California Code of Regulations Section 15064.5? ☐ ☐ ☐ ☒

Reference: 19 (Cultural Resources Assessment, Appendix D of this IS/MND)

Comment: A significant impact would result if the proposed Project caused a substantial adverse change to the significance of a historical resource.

Archival research for the proposed Project was conducted in November 2021, which included a review of South Central Coastal Information Center for site records and report data, historical site and property inventories, and historical maps. Inventories of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California State Built Environment Resource Directory (BERD), California Historical Landmarks and Points of Interest, Los Angeles Historic Resources Inventory, and the list of City of Los Angeles Historic-Cultural Monuments were also reviewed to identify cultural resources within the study area. Supplemental research in published and unpublished sources was also conducted to provide prehistoric and historic

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

contexts for the Project area. The research focused on the identification of previously recorded cultural resources and cultural resources reports within the study area, which comprises the Project Area of Potential Effects (APE) and a 0.5-mile buffer. The horizontal APE was established to include the entire Project site. The vertical APE is confined to the approximate maximum depths of excavation for the proposed Project, which have a maximum depth of 11.2 feet below surface.

A resource is generally considered "historically significant" if the resource meets at least one of the four criteria for listing on the California Register of Historical Resources (CRHR) (Public Resources Code Section 5024.1[a]). The CRHR is used as a guide by state and local agencies, private groups, and citizens to identify the state historical resources and to include which properties are to be protected, to the extent prudent and feasible, from substantial adverse change. The CRHR evaluation criteria are similar to the National Register of Historic Places (NRHP) criteria. For a property to be eligible for inclusion in the CRHR, it must meet one or more of the following criteria:

- It is associated with events that have made a significant contribution to the broad patterns of California history and cultural heritage;
- It is associated with the lives of persons important in our past;
- It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- It has yielded, or may be likely to yield, important information in prehistory or history.

The CRHR may also include various other types of historical resources that meet the criteria for eligibility, including the following:

1. Individual historic resources
2. Resources that contribute to a historic district
3. Resources identified as significant in historic resource surveys
4. Resources with a significance rating of Category 3 through Category 5 in the State Inventory (Categories 3 and 4 refer to potential eligibility for the NRHP; Category 5 indicates a property with local significance)

Although the NRHP standard includes the evaluation of resources that are 50

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

years old or older, the California Office of Historic Preservation (OHP) endorses recording and evaluating resources over 45 years of age to accommodate the five-year lag in the planning process.

The archival research identified 32 previously recorded cultural resources within 0.5 mile-radius of the Project area. Of these 32 previously recorded cultural resources, two are within the Project area (Table 4), a historic archaeological site consisting of building foundations, refuse deposits, and railroad grade remnants (P-19-004325), and a historic road segment of the Mojave Road (P-19-187085). The Project would not impact P-19-004325. The Mojave Road segment is listed in the CRHR, however, the Project design would avoid alterations to the resource.

Table 4
Previously Recorded Cultural Resources within 0.5-Mile of the APE

Primary Number (P-19-)	Description	Date Recorded	Within APE?
004325	Refuse deposits, building foundations, and railroad grade remnants associated with Consolidated Lumber Company	Historic (ca.1880-post WWII)	Yes
187085	Mojave Road	Prehistoric to Historic (military road established ca. 1859 along preexisting routes)	Yes

The archival research revealed no California Historical Landmarks or Los Angeles Historic-Cultural Monuments within the APE. No properties are listed in the BERD within 0.5 miles of the APE. Additionally, the proposed Project would not cause any adverse effects to cultural resources that has not already occurred. Based on this assessment in relation to the Project APE, there would be no adverse change in the significance of a historical resource, and no impact would occur.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to California Code of Regulations Section 15064.5? ☐ ☐ ☒ ☐

Reference: 19 (Cultural Resources Assessment, Appendix D of this IS/MND)

Comment: A significant impact would occur if the proposed Project caused a substantial adverse change in the significance of an archaeological resource, which falls under the CEQA Guidelines section cited above.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Based on the results of the archival research and field survey, no archaeological sites were identified within the APE and there is a low potential for historic or prehistoric archaeological resources to be discovered during ground-disturbing activities for the proposed Project. The Project site has been an active roadway since at least the 1890s. Flooding, roadbuilding and maintenance activities, as well as the installation of utilities within the right-of-way, are likely to have disturbed any archaeological deposits that did exist at shallow depths.

In the unlikely event that any cultural resources are encountered during ground-disturbing activities, as part of the implementation of PDF-CUL-1, they would be left in place to not disturb the discovery context, and work in the immediate vicinity would be suspended until the discovery is assessed by a qualified archaeologist and appropriate treatment, if necessary, is carried out, in accordance with 36 Code of Federal Regulations Part 800.13(b) (3) and California Public Resources Code Section 21083.2(i). Work in the area would not resume until evaluation and treatment of the resource is completed in accordance with the provisions of CEQA Guidelines Section 15064.5 and the National Historic Preservation Act. As such, archaeological impacts would be less than significant during construction of the proposed Project.

c) Disturb any human remains, including those interred outside of dedicated cemeteries? ☐ ☐ ☒ ☐

Reference: 19 (Cultural Resources Assessment, Appendix D of this IS/MND)

Comment: A significant impact would occur if grading or excavation activities associated with the proposed Project disturbed interred human remains.

No known burial sites are located within the Project site and the area has been previously disturbed with development at the Project site. No evidence of human remains was observed during the reconnaissance-level survey and, as such, human remains are not expected to be encountered during construction.

If human remains are discovered, as part of the implementation of PDF-CUL-2, work in the immediate vicinity of the discovery will be suspended and the Los Angeles County Coroner contacted. If the remains are deemed Native American in origin, the Coroner will contact the Native American Heritage Commission and identify a Most Likely Descendant pursuant to Public Resources Code Section 5097.98 and California Code of Regulations Section 15064.5. Work may continue on other parts of the Project site while consultation and treatment are conducted. Compliance with existing regulations would ensure a less than significant impact to human remains.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
6. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐

Reference: 20 (Energy Technical Memorandum, Appendix E of this IS/MND)

Comment: A significant impact would occur if the construction or operation of the Project resulted in the wasteful, inefficient, or unnecessary consumption of energy resources.

Construction

Energy would be consumed during the demolition, excavation, and construction phases of the proposed Project by heavy-duty equipment, which is usually diesel powered. Construction of the proposed Project would generate an increased demand for electricity use related to the treatment and conveyance of water for dust suppression activities during the excavation and grading phase, and the consumption of gasoline and diesel fuels associated with haul trucks, deliveries, and worker commute trips. Construction activities typically do not require the consumption of natural gas to power equipment or heavy machinery. A one-time expenditure of approximately 243,232 gallons of diesel fuel and 14,919 gallons of gasoline would be needed to construct the proposed Project. This represents a small demand on local and regional fuel supplies that would be easily accommodated, and this demand would cease once construction is complete. Moreover, construction-related energy consumption would be temporary, and no permanent new source of energy demand would result from Project construction activities. While construction would result in a short-term increase in energy use, construction-related fuel use would have no noticeable effect on peak or baseline demands for energy and construction design features would help conserve energy. Furthermore, construction activity would be required to comply with California Air Resources Board In-Use Off-Road Diesel Fueled Fleets Regulation, which prohibits excessive engine idling of vehicles when not in use, thereby reducing overall fuel consumption during construction. Therefore, construction of the proposed Project would result in a less than significant impact related to the wasteful, inefficient or unnecessary consumption of energy resources.

Operations

The purpose of the Project is to provide congestion relief and improve goods movement and mobility. Congestion relief and capacity-increasing projects

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

improve the capability of a roadway facility to address existing and future traffic demand. This results in changes to direct energy consumption (i.e., fuel usage) from vehicles using the facility. Another important consideration is that for operation of a project over the long term, newer and more fuel-efficient vehicles would enter the fleet, resulting in an overall lower potential for an increase in energy consumption due to vehicle traffic. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. As such, the proposed Project would only increase vehicle miles traveled in the Project area by approximately 0.043 percent. There would be minimal changes in daily fuel as a result of the congestion relief project. In addition, operation of the proposed Project would not require the use of electricity or natural gas. Therefore, operation of the proposed Project would result in a less than significant impact related to the wasteful, inefficient or unnecessary consumption of energy resources.

No significant impacts have been identified related to the proposed Project. Therefore, no mitigation measures are required.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? ☐ ☐ ☐ ☒

Reference: 20 (Energy Technical Memorandum, Appendix E of this IS/MND)

Comment: A significant impact would occur if the proposed Project conflicted with or obstructed a State or local plan for renewable energy or energy efficiency.

The proposed Project would widen a 1.02-mile roadway segment near the Ports of Los Angeles and Port of Long Beach. The Project would reduce congestion on this segment thereby improving fuel efficiency, and would be designed to comply with all applicable State and local codes. There is no potential for the proposed Project to obstruct a State or local plan for renewable energy or energy efficiency, including the Southern California Association of Governments 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy. Therefore, the proposed Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. No mitigation is required.

7. GEOLOGY AND SOILS – Would the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area ☐ ☐ ☒ ☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Reference: 10 (General Plan Safety Element)

Comment: A significant impact would occur if the proposed Project were located within a state-designated Alquist-Priolo Zone or other designated fault zone and appropriate building practices were not followed.

The Project site is not located in an Alquist-Priolo Earthquake Fault Zone. The Project site is located in a seismically active area, as is most of southern California. However, no active faults are known to cross the Project site. The proposed Project would be designed and constructed in accordance with all applicable federal, state, and local codes relative to seismic criteria. Compliance with existing regulations would ensure a less than significant impact related to fault rupture.

ii) Strong seismic ground shaking? ☐ ☐ ☒ ☐

Reference: 10 (General Plan Safety Element)

Comment: A significant impact would occur if the proposed Project design did not comply with building code requirements intended to protect people from hazards associated with strong seismic ground shaking.

Although the Project site is located in a seismically active area and ground shaking due to nearby and distant earthquakes would be anticipated, the proposed Project would be required to be designed and constructed in accordance with the latest engineering codes. With adherence to all applicable building codes, impacts related to strong seismic ground shaking would be less than significant.

iii) Seismic-related ground failure, including liquefaction? ☐ ☐ ☒ ☐

Reference: 4 (Seismic Hazard Zones Map, Long Beach Quadrangle), 10 (General Plan Safety Element)

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Comment: A significant impact would occur if the proposed Project were located in an area identified as having a high risk of liquefaction and appropriate design measures required within such designated areas were not incorporated into the Project.

Liquefaction occurs when water saturated sediments are subjected to extended periods of shaking. Pressure increases in the soil pores temporarily alter the soil state from solid to liquid. Liquefied sediments lose strength, in turn causing the failure of adjacent infrastructure, including bridges and buildings. Whether a soil would resist liquefaction depends on a number of factors, including grain size, compaction and cementation, saturation and drainage, characteristics of the vibration, and the occurrence of past liquefaction. Granular, unconsolidated, saturated sediments are the most likely to liquefy, while dry, dense or cohesive soils tend to resist liquefaction. Liquefaction is generally considered to be a hazard where the groundwater is within 40 to 30 feet of the surface. With proper soil drainage, the pore pressure, which builds up when ground motion shakes unconsolidated soil, would be more easily dissipated; thus, soils with proper drainage are less likely to liquefy.

The Project site is located within a state- and City-designated liquefaction area. Maximum excavation would be limited to approximately 11.2 feet at storm drain trenches and 21 inches at the roadway, and as previously discussed, the proposed Project would be designed and constructed in accordance with all applicable codes relative to seismic criteria. With adherence to all applicable building codes, impacts related to liquefaction would be less than significant.

iv) Landslides? ☐ ☐ ☐ ☒

Reference: 4 (Seismic Hazard Zones Map, Long Beach Quadrangle), 10 (General Plan Safety Element)

Comment: A significant impact would occur if the proposed Project were located in an area identified as having a high risk of landslides and appropriate design measures required within such designated areas were not incorporated into the Project.

The Project is located in an area that is relatively flat and is not identified as a potential landslide hazard area by the California Department of Mines and Geology. Additionally, the Project site is not located within a City-designated hillside area or earthquake induced landslide area. Therefore, the proposed

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Project would not expose people or structures to potential adverse effects from landslides. No impact to landslides would occur.

b) Result in substantial soil erosion or the loss of topsoil? ☐ ☐ ☒ ☐

Reference: 10 (General Plan Safety Element)

Comment: A significant impact would occur if the proposed Project exposed large areas to the erosion effects of wind or water for a prolonged period of time.

The proposed Project would include ground-disturbing activities, such as excavation, grading and compaction of soil, and paving. These activities could result in the potential for erosion to occur at the Project site, though soil exposure would be temporary and short-term in nature. As discussed in Section II.E, Construction Schedule and Procedures, the proposed Project would implement construction erosion control BMPs, which may include; temporary soil stabilization; temporary drainage inlet protection; and diversion dikes and interceptor swales. With implementation of appropriate construction BMPs, impacts associated with soil erosion of the loss of topsoil would be less than significant.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? ☐ ☐ ☒ ☐

Reference: 4 (Seismic Hazard Zones Map, Long Beach Quadrangle), 10 (General Plan Safety Element)

Comment: A significant impact would occur if the proposed Project were built in an unstable area without proper site preparation or design features to provide adequate foundations for project buildings, thus posing a hazard to life and property.

One of the major types of liquefaction induced ground failure is lateral spreading of mildly sloping ground. Lateral spreading involves primarily side-to-side movement of earth materials due to ground shaking, and is evidenced by near-vertical cracks to predominantly horizontal movement of the soil mass involved. See items 7(a)(iii) and 7(a)(iv) above. With adherence to all applicable building codes, impacts related to liquefaction would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project were built on expansive soils without proper site preparation or design features to provide adequate foundations for project buildings, thus posing a risk to life and property.

Expansive soils are clay-based soils that tend to expand (increase in volume) as they absorb water and shrink (lessen in volume) as water is drawn away. If soils consist of expansive clays, foundation movement and/or damage can occur if wetting and drying of the clay does not occur uniformly across the entire area.

The Project site is underlain with a combination of artificial fill, old alluvial valley deposits, and younger alluvial deposits, which contain alluvial soft clay, silt, silty sand, and sand. The presence of clay indicates that expansive soils could be present at the Project site. With adherence to all applicable building codes, impacts related to expansive soils would be less than significant.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project were built on soils that were incapable of adequately supporting the use of septic tanks or alternative wastewater disposal system, and such a system were proposed.

The proposed Project would widen and improve the existing roadway. While existing storm drains within the Project site would be reconstructed and expanded, no alternative wastewater disposal systems are proposed as part of the Project. No impact would occur.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒

Reference: 19 (Cultural Resources Technical Memorandum), 10 (General Plan)

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Comment: A significant impact may occur if grading or excavation activities associated with the proposed Project would disturb unique paleontological resources or unique geologic features.

The Project site is currently developed and has been disturbed by previous roadway development. During the field survey, no archaeological sites were identified. The Project area is located in a heavily disturbed urban area; no historic resources were observed within the APE and no historic resources will be impacted by construction. No impact would occur.

8. GREENHOUSE GAS EMISSIONS – Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? ☐ ☐ ☒ ☐

Reference: 18 (Greenhouse Gas Emissions Technical Memorandum, Appendix F of this IS/MND)

Comment: A significant impact may occur if the proposed Project would generate greenhouse gas emissions that would have a significant impact on the environment.

Certain gases in the earth's atmosphere, classified as greenhouse gases (GHGs), play a critical role in determining the earth's surface temperature. A portion of the solar radiation that enters earth's atmosphere is absorbed by the earth's surface, and a smaller portion of this radiation is reflected back toward space. This infrared radiation (i.e., thermal heat) is absorbed by GHGs within the earth's atmosphere; as a result, infrared radiation released from the earth that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the "greenhouse effect," is responsible for maintaining a habitable climate on Earth. Without the naturally occurring greenhouse effect, Earth would not be able to support life as we know it.

GHGs are present in the atmosphere naturally, are released by natural and anthropogenic sources, and are formed from secondary reactions taking place in the atmosphere. Natural sources of GHGs include the respiration of humans, animals and plants, decomposition of organic matter, and evaporation from the oceans. Anthropogenic sources include the combustion of fossil fuels, waste treatment, and agricultural processes.

Carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O) are the GHGs that that are widely accepted as the principal contributors to human-induced global

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

climate change and would be generated by the proposed Project. The majority of CO_2 emissions are byproducts of fossil fuel combustion. CH_4 is the main component of natural gas and is associated with agricultural practices and landfills. N_2O is a colorless GHG that results from industrial processes, vehicle emissions, and agricultural practices.

Global warming potential (GWP) is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to CO_2. The GWP of a GHG is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and length of time (i.e., lifetime) that the gas remains in the atmosphere ("atmospheric lifetime"). The GWP of each gas is measured relative to CO_2, the most abundant GHG. GHGs with lower emissions rates than CO_2 may still contribute to climate change because they are more effective at absorbing outgoing infrared radiation than CO_2 (i.e., high GWP). The concept of CO_2-equivalents (CO_2e) is used to account for the different GWP potentials of GHGs to absorb infrared radiation.

The proposed Project would generate GHG emissions primarily from construction activities. Construction of the proposed Project would produce approximately 2,491 MTCO2e, or 83 MTCO2e annually over a 30-year period. Regarding operational activities, the traffic analysis completed for the proposed Project determined that the approximately one mile widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and bike lanes would not significantly induce new demand. The proposed Project would only increase vehicle miles traveled in the Project area by approximately 0.043 percent. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. There is no potential for operation of the proposed Project to generate significant GHG emissions. Therefore, implementation of the proposed Project will result in a less-than-significant impact related to GHG emissions.

b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases? ☐ ☐ ☐ ☒

Reference: 18 (Greenhouse Gas Emissions Technical Memorandum, Appendix F of this IS/MND)

Comment: A significant impact may occur if the proposed Project would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHG.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006, requires that statewide GHG emissions be reduced to 1990 levels by 2020. ARB's *Scoping Plan* is the state's plan to achieve the GHG reductions in California required by AB 32 and also reiterates the state's role in the long-term goal established in Executive Order S-3-05, which is to reduce GHG emissions to 80% below 1990 levels by 2050.

ARB is required to update the *Scoping Plan* at least once every five years to evaluate progress and develop future inventories that may guide this process. ARB approved the first update to the *Climate Change Scoping Plan: Building on the Framework* in 2014 (ARB 2014). The Scoping Plan update confirms that the state is on track to meet the 2020 emissions reduction target, but will need to maintain and build upon its existing programs, scale up deployment of clean technologies, and provide more low-carbon options to accelerate GHG emission reductions, especially after 2020, in order to meet the 2050 target. The Scoping Plan update did not directly create any regulatory requirements for construction of the proposed Project. However, the Scoping Plan update includes recommended actions (e.g., Phase 2 heavy-duty truck GHG standard standards, enhance and strengthen the Low Carbon Fuel Standard) that would indirectly address GHG emissions from construction activities.

In May 2007, the City of Los Angeles released its Climate Action Plan (CAP), *"Green LA: An Action Plan to Lead the Nation in Fighting Global Warming."* The Plan sets forth a goal of reducing the City's greenhouse gas emissions to 35% below 1990 levels by the year 2030. The CAP is a voluntary plan that identifies over 50 action items, grouped into focus areas, to reduce emissions. ClimateLA is the implementation program that provides detailed information, including a context, lead departments, and a timeline for completion, for each action item discussed in the GreenLA CAP. Where possible, the ClimateLA program document includes potential CO_2 emission reductions from full implementation of the measures.

The proposed Project would comply with plans, policies and regulations adopted for reducing emissions of GHGs including Assembly Bill 32 Scoping Plan, which includes goals such as the expansion of energy efficiency and producing energy from renewable resources. The City of Los Angeles has published the GreenLA, An Action Plan to Lead the Nation in Fighting Global Warming (the LA Green Plan), where the City will increase renewable energy generation, improve energy conservation and efficiency. Senate Bill 375 requires the metropolitan planning organizations to prepare an SCS in their regional transportation plans to achieve the per capita GHG reduction targets and the region's SCS is contained within SCAG's 2016–2040 Regional Transportation Plan/Sustainable Communities

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Strategy (RTP/SCS). The RTP/SCS focuses on job growth in high quality transit areas, resulting in more opportunity for transit-oriented development.

Executive Order (E.O.) B-30-15 established an interim GHG reduction target of 40 percent below 1990 levels by 2030, and E.O. S-3-05 established a long-term goal of reducing statewide GHG emissions to 80 percent below 1990 levels by 2050. Achieving these long-term GHG reduction policies will require systemic changes in how energy is produced and used. State sponsored studies conclude that deep reductions in GHG emissions can only be achieved with significant changes in electricity production, transportation fuels, and industrial processes. The systemic changes that will be required to achieve E.O. B-30-15 and E.O. S-3-05, if they are legislatively adopted, will require significant policy, technical, and economic solutions. The extent to which the proposed Project emissions and resulting impacts would be mitigated through implementation of statewide (and nationwide) changes is not known. However, some of the anticipated statewide actions (e.g., decarbonization, energy efficiency, alternative transportation) can be facilitated, at least to some extent, through implementation of specific GHG reduction measures in large-scale developments. The proposed Project is not inconsistent with anticipated long-term statewide strategies to reduce GHG emissions. Accordingly, the proposed Project would not conflict with the goals in E.O. B-30-15 and E.O. S-3-05.

The primary objectives of the proposed Project include providing congestion relief and enhancing mobility for pedestrians and cyclists. The purpose of a GHG reduction plan is to reduce emissions. Improving active transportation and congestion relief are common components of GHG reduction plans. In addition, as discussed above, the proposed Project would not result in significant emissions. The proposed Project would only increase vehicle miles traveled in the Project area by approximately 0.043 percent. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. There is no potential for this amount of activity to generate significant emissions. Similarly, there is no potential for the congestion-relief project to interfere with any GHG reduction plan. The proposed Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHG.

9. HAZARDS AND HAZARDOUS MATERIALS – Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Reference: 21 (Phase I Environmental Site Assessment, Appendix H of this IS/MND)

Comment: A significant impact would occur if the proposed Project utilized substantial amounts of hazardous materials as part of its routine operations and could potentially pose a hazard to the public under accident or upset conditions.

Construction activities would be temporary in nature and would involve the limited transport, storage, use, and disposal of hazardous materials. Such hazardous materials could include on-site fueling/servicing of construction equipment, and the transport of fuels, lubricating fluids, and solvents. These types of materials are not acutely hazardous, and all storage, handling, and disposal of these materials are regulated by the California Department of Toxic Substances Control, United States Environmental Protection Agency, the Occupational Safety & Health Administration, the City of Los Angeles Fire Department, and the Los Angeles County Department of Public Health. The transport, use, and disposal of construction-related hazardous materials would occur in accordance with applicable federal, State, and local regulations governing such activities.

Asbestos-containing materials (ACMs) are materials that contain asbestos, a naturally-occurring fibrous mineral that was historically used in building materials for its thermal properties and tensile strength. When left intact and undisturbed, these materials do not pose a health risk to building occupants. There is, however, potential for exposure when ACMs become damaged to the extent that asbestos fibers become airborne and are in haled. These airborne fibers are carcinogenic and can cause lung disease. The age of a building is directly related to its potential for containing elevated levels of ACMs, and asbestos was used routinely in many building materials until 1978. Buried utility lines within the ROW may contain ACMs associated with pipe insulation. Relocation of buried utility lines in the proposed Project ROW is not anticipated, but nonetheless, there is potential for ACMs to be disturbed. If ACMs are discovered during this work, they would be abated in compliance with all applicable local, state, and federal regulations.

Lead based paint (LBP), which can result in lead poisoning when consumed or inhaled, was widely used in the past to coat and decorate buildings. Lead poisoning can cause anemia and damage to the brain and nervous system, particularly in children. Like ACMs, LBP generally does not pose a health risk to building occupants when left undisturbed; however, deterioration, damage, or disturbance could result in hazardous exposure. In 1978, the use of LBP was federally banned by the Consumer Product Safety Commission. Therefore, structures built before 1978 are likely to contain LBP, as well as those built shortly thereafter, as the phase-out of LBP was gradual. Suspect LBP associated with

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

painted curbs and protective bollards were identified in the Project area. If LBP is discovered during construction, it would be handled and abated in compliance with all applicable local, state, and federal regulations.

Thermoplastic paint and yellow painted traffic stripes and pavement markings, which typically contains lead chromate, have been identified at the Project site. Additionally, existing timber components within the Project site, including signposts, could include old wood materials that have been treated with chemicals to prevent decay and prolong their use. Finally, due to its use as a roadway in an industrial area, the Project site may contain aerially deposited lead. These materials would be removed, handled, and disposed in accordance with all applicable local, state, and federal regulations.

The Phase I Environmental Site Assessment (Appendix H of this IS/MND) prepared for the proposed Project identified any hazardous waste sites within 500 feet of the Project site that could contribute to the generation of hazardous emissions during construction. The proposed Project is located within the Wilmington Oil Field which was historically used for the exploration and production of crude oil. A subsurface investigation in 2014 revealed the presence of petroleum hydrocarbons in shallow soils. This environmental condition would require the removal and proper disposal during construction of the proposed Project. Furthermore, numerous abandoned oil wells were identified along the proposed Project as well as petroleum pipelines. The City of Los Angeles has designated the area where the proposed Project is located as a Methane Zone due to its proximity to historical oil production. Therefore, the proposed Project area has developmental regulations that are required by the City and County of Los Angeles that will be adhered to during construction of the Project. Hazardous materials encountered during Project construction would be handled in compliance with all applicable local, state, and federal regulations. With adherence to existing regulations, the short-term construction impact would be less than significant.

Operation of the proposed Project would be similar to existing conditions and would not involve transport, use, or disposal of hazardous materials. As such, no operational impacts would occur.

b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Reference: 21 (Phase I Environmental Site Assessment, Appendix H of this IS/MND)

Comment: A significant impact would occur if the proposed Project utilized substantial amounts of hazardous materials as part of its routine operations and could potentially pose a hazard to the public under accident or upset conditions.

Construction may involve the transport, storage, use or disposal of some hazardous materials, such as on-site fueling/servicing of construction equipment. These types of materials are not acutely hazardous. All construction activities involving the transportation, usage, and disposal of hazardous materials would be subject to federal, state, and local health and safety requirements. Such transport, use, storage and disposal would not create a significant hazard to workers or the community. Also, prior to construction, the Project contractor would develop an emergency response plan, spill prevention plan, or similar plan. Project personnel would have available adequate spill containment and cleanup resources on site at all times and be prepared to contain, control, clean up, and dispose of any potential fuel spill quickly and completely. During construction, Project personnel would follow all applicable rules and regulations governing the storage, transportation, use, handling, and disposal of hazardous materials.

Methane gas is known to be generated in the area, and the Project site is located within a City-designated Methane Zone. Methane is generated by the biodegradation of organic matter in the absence of oxygen. Methane is not toxic; however, it is combustible and potentially explosive at concentrations above 53,000 parts per million in the presence of oxygen. Non-pressurized methane is not normally problematic if properly monitored and controlled per California Occupational Safety and Health Administration regulations. If the gas accumulates to high concentrations and becomes pressurized, detectable levels may enter the interior of a structure through cracks or other penetrations present in floor slabs. Development of structures within a Methane Zone is governed by Division 71 of the LAMC, which mandates the implementation of various elements such as methane detection systems, proper ventilation, etc. The proposed Project would be required to be designed and constructed to comply with the regulations of Division 71 of the LAMC. Additionally, all excavation work would be conducted in accordance with the California Occupational Health and Safety Administration regulations, which require monitoring before and during construction, as well as BOE Standard Specifications to document tested methane levels and provide those levels to construction contractors working at the site. Adherence to these existing regulations would ensure that impacts related to on-site methane seepage in structures would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒

Reference: 21 (Phase I Environmental Site Assessment, Appendix H of this IS/MND)

Comment: A significant impact would occur if the proposed Project were located within one-quarter mile of an existing or proposed school site and were projected to release toxic emissions which would pose a hazard beyond regulatory thresholds.

There are no schools located within one-quarter mile of the Project site. Project construction would involve the handling of hazardous materials (fuels, lubricants, and oils). However, construction activities are temporary in nature and the handling of minor amounts of hazardous materials would be in compliance with applicable regulations. As discussed, the proposed Project would not pose a substantial risk involving the routine transport, use, and disposal of hazardous materials. Additionally, operation of the proposed Project would not generate industrial wastes or toxic substances. Therefore, no impact associated with the emission of hazardous materials near an existing or proposed school would occur.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐

Reference: 21 (Phase I Environmental Site Assessment, Appendix H of this IS/MND)

Comment: California Government Code Section 65962.5 requires various State agencies to compile lists of hazardous waste disposal facilities, unauthorized release from underground storage tanks, contaminated drinking water wells, and solid waste facilities from which there is known migration of hazardous waste and submit such information to the state Secretary for Environmental Protection on at least an annual basis. A significant impact may occur if the Project site is included on any of the above referenced lists and, therefore, would pose an environmental hazard to surrounding sensitive uses.

A Phase I Environmental Site Assessment was prepared for the proposed Project, which included a review of hazardous materials sites databases. Three sites were identified on a contamination-related database in close proximity (i.e., 500 feet) of the proposed Project. Databases that were reviewed include: DTSC's online

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

EnviroStore, California EPA's SWRCB online GeoTracker, Cal/EPA's Regulated Site Portal, U.S. EPA's Envirofacts, U.S. EPA's SEMS, and databases maintained by the City of Los Angeles (ZIMAS, NavigateLA, Bureau of Engineering, Department of Public Works).

TSM Recovery & Recycling is located approximately 225 feet northwest of the proposed Project at 317 Eubanks Avenue, Unit 2, and is listed in the Permitted Facilities with Inspections/Enforcements sites traced in Envirostor (ICE), EnviroStor Permitted Facilities Listing (HWP), and Medical Waste Management Program Listing (MWMP) databases. These databases listed the facility status as "No Action" and the type as "historical-non-operating". The nature of the listings and lack of listing in a contamination-related database renders this listing not representative of a Recognized Environmental Condition to the Project Site.

Former Texaco at 1222 to 1230 East Anaheim Street was also identified in the database search and is located approximately 225 feet west of the northern portion of the proposed Project and listed in the LUST and Cortese databases. This site has been a gasoline station and automotive repair facility since at least 1969. The LUST cleanup status is reported as "Open-Remediation" as of 2010. Active remediation has not been conducted at the site since April 2017. According to groundwater data, water quality objectives have not been achieved at this site. The petroleum release is limited to the soil and shallow groundwater. Based on the distance and location relative to the proposed Project (i.e., greater than 225 feet down-gradient) this listing is not considered to represent a Recognized Environmental Condition to the Project site.

Texaco at 1625 East Anaheim Street is located approximately 500-feet east of the northern portion of the proposed Project and is listed in the LUST, Cortese, and CERS databases. The site is occupied by a self-service car wash. The LUST cleanup status is reported as "Open-Remediation" as of 2004. Active remediation has not been conducted at the site since 2004 and water quality objectives have not been achieved. Based on the distance and location relative to the proposed Project (i.e., approximately 500-feet cross to down-gradient), this listing is not considered to represent a Recognized Environmental Condition to the Project site.

As discussed, the sites identified on a contamination-related database within close proximity to the proposed Project are not considered to represent a Recognized Environmental Condition to the Project site. Therefore, the Project site's listing on an environmental database would not create a significant hazard to the public or the Environment. The impact would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
e) Be located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, and would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒

Reference: 1 (AirNav Airport Information)

Comment: A significant impact may occur if the proposed Project site were located within a public airport land use plan area, or within two miles of a public airport, and would create a safety hazard or excessive noise.

The Project site is not located within a public airport land use plan area, or within two miles of a public airport, and would not create a safety hazard or excessive noise. No impact would occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project substantially interfered with roadway operations used in conjunction with an emergency response plan or evacuation plan or generated sufficient traffic to create traffic congestion that would interfere with the execution of these plans.

During construction, partial and full lane closures would be required; some closures would occur for the duration of the proposed Project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Construction would last for approximately 2.5 to 3 years and begin in December of 2023. However, ingress and egress to the site and surrounding properties, particularly for emergency response vehicles, would be maintained at all times during construction. Additionally, BOE would coordinate with all applicable agencies regarding construction schedules and worksite traffic control and detour plans, including LAPD and LAFD. The proposed Project will aid in the movement of goods both via trains and trucks to and from the Port of Los Angeles and Port of Long Beach by improving traffic congestion, localized flooding, and public safety. Operation of the proposed Project would not impair or interfere with implementation of an adopted emergency response plan or emergency evacuation plan. The impact would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project were located in a wildland area and poses a significant fire hazard, which could affect persons or structures in the area in the event of a fire.

The Project site is not located within a designated High Fire Hazard Severity Zone according to the City of Los Angeles General Plan. The Project site and surrounding areas are completely developed with industrial uses and there are no wildlands adjacent to the site. Therefore, no impact related to wildland fires would occur.

10. HYDROLOGY AND WATER QUALITY – Would the project:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐

Reference: 11 (ZIMAS)

Comment: A significant impact may occur if the proposed Project discharged water which did not meet the quality standards of agencies which regulate surface water quality and water discharge into storm-water drainage systems, or included potential sources of water pollutants with the potential to substantially degrade water quality.

Construction activities have the potential to degrade water quality through the exposure of surface runoff to exposed soils, dust, and other debris, as well as from runoff from construction equipment. Other than the sources described for construction activities, the proposed Project does not include other potential sources of contaminants that could potentially degrade water quality. As discussed in Section II.E, Construction Schedule and Procedures, above, the proposed Project would implement construction erosion control BMPs, which may include gravel bag barriers; temporary soil stabilization; and temporary drainage inlet protection. With implementation of construction BMPs, construction activities would not violate water quality standards or waste discharge requirements. The impact would be less than significant during construction.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

The Project site comprises the existing right-of-way, which consists of impermeable surfaces. With implementation of the proposed Project, the permeable surfaces at the Project site would not change. As such, storm water flows from the Project site would be similar to existing conditions. Additionally, the Project proposes the reconstruction and extensions of the current storm drain system in the Project vicinity. As such, any runoff leaving the Project site would drain to the improved storm drain system in the area. Specifically, catch basins would be widened in order to prevent flooding during high tide conditions. Therefore, impacts to water quality during operation of the proposed Project would be less than significant.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? ☐ ☐ ☐ ☒

Reference: 10 (General Plan)

Comment: A project would normally have a significant impact on groundwater supplies if it were to result in a demonstrable and sustained reduction of groundwater recharge capacity or change the potable water levels sufficiently that it would reduce the ability of a water utility to use the groundwater basin for public water supplies or storage of imported water, reduce the yields of adjacent wells or well fields, or adversely change the rate or direction of groundwater flow.

Excavations up to 11.2 feet at storm drain trenches and 21 inches at the roadway would be required for construction of the proposed Project. However, it is not anticipated that groundwater would be encountered, as deep excavations would not be necessary. Additionally, the proposed Project does not involve any direct extraction of groundwater. The proposed Project would expand upon the existing storm drain system but widening catch basins, meeting a component of the POLA project aimed at mitigating localized flooding during high tide conditions. The proposed Project would also meet the requirements of the Backbone Bikeway Network by installing an off-street bike trail; this, in addition to new sidewalks proposed by the Project would increase impermeable surfaces compared to existing conditions. However, such improvements are necessary for flood mitigation and public safety and would neither decrease the amount of storm water entering the groundwater table, nor interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin. There would be no impact to groundwater supply and recharge.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in a substantial erosion or siltation on- or off-site?	☐	☐	☒	☐

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project resulted in a substantial alteration of drainage patterns that resulted in a substantial increase in erosion or siltation during construction or operation of the Project.

No streams or rivers cross the Project site. The Project site and surrounding area is completely developed and would not be susceptible to erosion from uncontrolled runoff. The Project site is completely flat and excavation within the Project site would not alter existing drainage patterns in a negative manner. Rather, the current drainage pattern, which has a history of flooding, would be improved with widened catch basins proposed by the Project. Any stormwater conveyed from the site would drain into the improved storm drains that serve the site. Implementation of the proposed Project would marginally increase impermeable surfaces at the Project site by installing a bike trail and new sidewalks. However, the increase in impermeable surfaces would not result in substantial erosion or siltation on- or off-site as the improved catch basin system would drain increased stormwater. The impact would be less than significant.

ii) substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?	☐	☐	☐	☒

Reference: Preceding analyses

Comment: A significant impact would occur if the proposed Project resulted in increased runoff volumes during construction or operation of the proposed Project that would result in flooding conditions affecting the Project site or nearby properties.

Refer to items 10(a) and 10(c)(i) above. The proposed Project would not result flooding on- or off-site; rather, the Project proposes improvements to the current storm drain system to specifically address the issue of flooding that occurs under existing conditions. There would be no impact.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐

Reference: Preceding analyses

Comment: A significant impact may occur if the volume of runoff were to increase to a level which exceeded the capacity of the storm drain system serving a Project site. A significant impact may also occur if the proposed Project would substantially increase the probability that polluted runoff would reach the storm drain system.

Refer to items 10(a) and 10(c)(i) above. Implementation of the proposed Project would marginally increase impermeable surfaces at the Project site by installing a bike trail and new sidewalks. However, any increase in runoff resulting from the increase in impermeable surfaces would be conveyed into the improved storm drain system proposed by the Project, which would include wider catch basins. The impact would be less than significant.

iv) impede or redirect flood flows?	☐	☐	☒	☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project would impede or redirect flood flows, causing flooding elsewhere.

Refer to items 10(a), 10(b), and 10(c)(i) above. One of the objectives of the proposed would be to expand upon the existing storm drain system by widening catch basins. This component is required by the POLA project to mitigate localized flooding during high tide conditions. No impact would occur.

d) In a flood hazard, tsunami, or seiche zones, risk release of pollutant due to project inundation?	☐	☐	☒	☐

Reference: 10 (General Plan)

Comment: A significant impact may occur if the proposed Project were located in a flood hazard, tsunami, or seiche zones, and may release pollutants due to Project inundation

The proposed Project would widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width. Right-of-way acquisition would be required along the easterly and westerly sides of the Project site. Acquired parcels would be transferred from one government entity to another, and would become part of the Project site. No existing structures or buildings would be impacted, and no new buildings constructed. The current use of the Project site as a roadway would not change with implementation of the proposed Project. Although the Project site is located within a tsunami inundation zone due to its proximity to the Pacific Ocean, implementation of the proposed Project would not increase the risks over existing conditions. Therefore, the impact related to risk release of pollutants due to Project inundation would be less than significant.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? ☐ ☐ ☒ ☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project were inconsistent with a water quality control plan or sustainable groundwater management plan, designated to avoid or mitigate a significant potential environmental impact.

As discussed in item 10(a), the proposed Project would implement construction erosion control BMPs, and would not violate water quality standards. Additionally, due to the shallow depth of excavation (11.2 feet at storm drain trenches and 21 inches at the roadway), it is not anticipated that groundwater would be encountered during construction activities. With implementation of the proposed Project, the permeable surfaces at the Project site would not significantly increase from existing conditions. During operation, any runoff leaving the Project site would drain to the proposed improved storm drain inlets in the surrounding area. As such, the proposed Project would not conflict with or obstruct implementation of a water quality control plan.

As discussed in item 10(b), the proposed Project is not anticipated to result in a change in the amount of storm water entering the groundwater table or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin. The impact would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
11. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒

Reference: 10 (General Plan)

Comment: A significant impact may occur if the proposed Project were sufficiently large or otherwise configured in such a way as to create a physical barrier within an established community.

The proposed Project would widen the existing roadway and implement associated improvements. Construction of the proposed Project would require partial road closures; however, detours would be maintained through construction and the closures would be temporary. Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, would be widened to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width. Right-of-way acquisition would be required along the easterly and westerly sides of the Project site. Acquired parcels would be transferred from one government entity to another, and would become part of the Project site. Once acquired, Project construction and operation would take place entirely within the right-of-way. As such, the proposed Project would not cause a permanent disruption to an established community or otherwise create a physical barrier within an established community. No streets or sidewalks would be permanently closed as a result of the proposed Project, and no separation of existing uses or disruption of existing access between land use types would occur. Therefore, the proposed Project would not physically divide an established community, and no impact would occur.

b) Cause a significant environmental impact due to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project were inconsistent with the General Plan, or other applicable plan, or with the site's zoning if designated to avoid or mitigate a significant potential environmental impact.

The Project site is located within the Wilmington-Harbor City Community Plan Area of the City of Los Angeles and implementation of the proposed Project would be subject to the development regulations outlined in the Community Plan and

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

the Los Angeles Municipal Code. The parcels at the southernmost portion of the Project site, south of Harry Bridges Boulevard, are located within the California Coastal Zone, in an area identified as a dual permit jurisdiction area. It is anticipated to require an exemption or a waiver from the Local Coastal Development permit office. The proposed Project involves widening the existing roadway, associated improvements. The proposed Project would widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width. Right-of-way acquisition would be required along the easterly and westerly sides of the Project site. Acquired parcels would be transferred from one government entity to another, and would become part of the Project site. Once acquired, Project construction and operation would take place entirely within the right-of-way. Therefore, the proposed Project would not conflict with any applicable land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. No impact would occur.

12. MINERAL RESOURCES – Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒

Reference: 5 (California Department of Conservation, Division of Oil, Gas & Geothermal Resources), 10 (General Plan)

Comment: A significant impact may occur if the project were located in an area used or available for extraction of a regionally important mineral resource, if the project converted an existing or potential present or future regionally-important mineral extraction use to another use, or if a project affected access to such a site.

The Project site is located within the Wilmington Oil Field and several wells are located in the Project vicinity; however, no active wells exist along or adjacent to the Project footprint. The proposed Project would widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width. Right-of-way acquisition would be required along the easterly and westerly sides of the Project site. Acquired parcels would be transferred from one government entity to another, and would become part of the Project site. Once acquired, Project construction and operation would take place entirely within the right-of-way. As

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

such, the proposed Project would not result in the permanent loss of or access to any significant mineral resources, and no impact would occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? ☐ ☐ ☐ ☒

Reference: Refer to item 12(a) above. No impact would occur.

Comment: Refer to item 12(a) above. No impact would occur.

13. NOISE – Would the project result in:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? ☐ ☐ ☒ ☐

Reference: 22 (Noise and Vibration Technical Memorandum, Appendix G of this IS/MND)

Comment: A significant impact would occur if the proposed Project exposed persons to or generated noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Existing Noise Levels

The impact analysis is predicated on the location of noise- and vibration-sensitive land uses and the existing setting. Sensitive receptors are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. They typically include residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas.

The Project site is located in a developed urban setting surrounded by light industrial and community commercial uses, such as automotive and tire shops, a refinery, equipment shops, and railroad tracks. Roadway, industrial, and noise from port activities are the primary source of noise in the Project area. The nearest sensitive receptors are residences located approximately 300 feet to the west of Alameda Street along Flint Avenue, Pioneer Avenue, and Watson Avenue south of Anaheim Street.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

To characterize the existing noise environment around the Project site, ambient noise was monitored using a SoundPro DL Sound Level Meter on Wednesday, November 30, 2022 from 11:30 a.m. to 3:00 p.m. in 15-minute increments. This time of day represents a typical construction time without the added noise source of peak hour traffic. Monitored noise levels ranged from 64.5 to 76.2 dBA L_{eq}. Traffic was the primary source of noise at each site. Table 5 demonstrates monitored noise levels.

Table 5
Existing Ambient Noise Levels at Monitoring Location

Noise Monitoring Location	Noise Level (dBA, L_{eq})
Harry Bridges Blvd. and Broad St.	76.1
East E St. and Alameda St.	75.3
Residences along Flint Ave.	64.5
Watson Ave. and East G St.	65.6
Anaheim St.	75.3
East I St. and Alameda St.	76.2

Source: TAHA, 2022. See Appendix G of this IS/MND.

Construction Noise

Construction of the proposed Project would begin on December 30, 2023 and last for approximately 2.5 to 3 years. LAMC allows construction activity to occur Monday through Friday between the hours of 7:00 a.m. and 9:00 p.m., although daily construction would not likely occur after 6:00 p.m. Construction would occur between the hours of 8:00 a.m. and 6:00 p.m. on Saturdays. There would be no construction activities on Sundays or federal holidays, and no construction would occur during prohibited hours. Noise impacts from construction of the proposed Project would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers. Construction activities typically require the use of numerous pieces of noise-generating equipment. Table 6 summarizes noise levels produced by construction equipment that are expected to be used during the construction. Construction equipment is expected to generate noise levels ranging from 63.2 to 82.5 dB at a distance of 50 feet, and noise produced by construction equipment would be reduced over distance at a rate of about 6 dB per doubling of distance.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Table 6
Construction Noise Levels by Equipment

Construction Equipment	Noise Level at 50 Feet (Dba, L_{eq})
Air Compressor	73.7
Backhoe	73.6
Forklift	63.2
Generator	77.6
Haul Truck	72.5
Pavement Scarifier	82.5
Paver	74.2
Pickup Truck	71.0
Combined Noise Level from Multiple Equipment	**84.2**

SOURCE: FHWA, *Roadway Construction Noise Model (RCNM) Version 1.1*.

The impact analysis is based on the construction limits described in the LAMC. Construction activity would comply with the allowable hours of construction in the LAMC, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or federal holidays. The LAMC limits equipment noise levels to 75 dBA L_{eq} at 50 feet unless technically infeasible within 500 feet of any residential zone. The Project area consists of primarily industrial and commercial uses with three areas of residences along Flint Avenue, Pioneer Avenue, and Watson Avenue. Table 7 presents the estimated noise levels at sensitive receptors associated with construction. As shown below, construction noise would not exceed 75 dBA at sensitive receptors. Therefore, the proposed Project would result in a less than significant impact related to noise generated by construction equipment.

Issues

Potentially Significant Impact | Less Than Significant With Mitigation | Less Than Significant | No Impact

Table 7
Construction Noise Levels

Sensitive Receptor	Distance (feet)	Intervening Building /a/	Reference Noise Level (dBA)	Max Construction Noise (dBA, Leq)	Existing Ambient (dBA, Leq)	LA City Noise Threshold	Exceed Threshold?
Residences along Pioneer Avenue	270	4.5	84.2	65.1	65.6	75	No
Residences along Watson Ave.	340	4.5	84.2	63.0	65.6	75	No
Residences along Flint Avenue	360	4.5	84.2	62.6	64.5	75	No

SOURCE: TAHA, 2022. See Appendix G of this IS/MND.
/a/ -4.5 dB for on intervening row of buildings and -1.5 dB for each subsequent row

In addition to on-site construction activities, noise would be generated off-site by construction-related trucks. However, the amount of construction equipment traveling to and from the Project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be transported to the Project site at the start of construction and would remain on site for the majority of the construction duration, which would minimize daily travel to and from the site.

An estimated 16,577 total haul truck trips would be required for material export and import. The maximum number of haul truck trips would occur during the grading and excavation phase. It is anticipated that approximately 14 truck trips per hour would occur during this phase. A doubling of traffic volumes is typically needed to audibly increase noise levels along a roadway. An audible increase in noise would occur if haul truck noise resulted in an increase of 5 dBA L_{eq} or more. As shown in Table 8, the incremental increase in noise would be a maximum of 0.2 dBA L_{eq}. As such, the incremental increase in noise related to haul trucks would be less than the 5 dBA L_{eq} threshold. Therefore, the proposed Project would result in a less than significant impact related to noise generated by construction trucks.

Issues

Potentially Significant Impact | Less Than Significant With Mitigation | Less Than Significant | No Impact

Table 8
Haul Truck Noise Analysis

Roadway	Existing AM Peak Hour Noise Level (dBA, L_{eq})	Haul Truck Noise Level (dBA, L_{eq})	Increase (dBA, L_{eq})
Harry Bridges Blvd. between Quay Avenue and George De la Torre Jr Ave.	74.5	74.7	0.2
Alameda St. between East E St. and Anaheim St.	73.4	73.2	0.2
Alameda St. between George De la Torre Jr Ave. and East E St.	73.6	73.8	0.2

SOURCE: TAHA, 2022. See Appendix G of this IS/MND.

Operations

The proposed Project would not include stationary sources of noise. Similar to the existing condition, vehicles passing along roadway would be the primary source of noise. The proposed Project would include the addition of a single travel lane in each direction for a 1.02-mile segment of Alameda Street between Anaheim Street and Harry Bridges Boulevard. Existing noise levels at residences fall within the “conditionally acceptable” category (55 to 70 dBA CNEL), as shown in Table 7 above.

The mobile noise analysis includes an analysis of Existing (2022), Future No Project (2026), and Future Plus Project (2026) traffic conditions. As shown in Table 9, Future Plus Project mobile noise levels would result in a maximum incremental increase of 3.1 dBA CNEL over existing conditions for residences on Pioneer Avenue. As such, the proposed Project would not increase noise levels at residences by 5 dBA CNEL or more within the “conditionally acceptable” category. Therefore, impacts from off-site mobile noise due to the proposed Project would be less than significant.

Issues | Potentially Significant Impact | Less Than Significant With Mitigation | Less Than Significant | No Impact

Table 9
Mobile Noise Analysis

Receptor	Noise Level (dBA, CNEL)				
	Existing (2022)	**Future No Project (2026)**	**Future with Project (2026)**	**Future with Project Minus Future No Project**	**Future with Project Minus Existing**
Residences on Flint Ave.	63.7	66.5	66.7	0.2	3.0
Residences on Pioneer Ave.	65.7	68.5	68.8	0.3	3.1
Residences on Watson Ave.	64.5	67.2	67.4	0.2	2.9

SOURCE: TAHA, 2022. See Appendix G of this IS/MND.

As discussed above, noise impacts associated with the construction and operation of the proposed Project would be less than significant. No mitigation is required.

b) Generation of excessive ground borne vibration or ground borne noise levels? ☐ ☐ ☒ ☐

Reference: 22 (Noise and Vibration Technical Memorandum, Appendix G of this IS/MND)

Comment: A significant impact would occur if the Project generated excessive groundborne vibration or groundborne noise levels.

Vibration levels rarely affect human health, although high levels of vibration may damage buildings. The peak particle velocity is most frequently used to describe vibration impacts to buildings and is measured in inches per second.

Heavy trucks can generate ground-borne vibrations that vary depending on vehicle type, weight, and pavement conditions. As heavy trucks typically operate on major streets, existing ground-borne vibration in the Project vicinity is largely related to heavy truck traffic on the surrounding roadway network.

Construction

Construction activity can generate varying degrees of vibration, depending on the procedure and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, and to slight damage at the highest levels. In most cases, the primary concern regarding construction vibration relates to damage.

The FTA provides vibration levels for various types of construction equipment with an average source level reported in terms of velocity.[19] Typical equipment anticipated to be used during construction and their associated vibration levels are shown in Table 10. Equipment utilized during Project construction would be most similar to a large bulldozer, which generates a vibration level of 0.089 inches per second. Construction would occur within the street right-of-way and structures would typically be located approximately 50 feet away. At this distance a large bulldozer would generate a vibration level of approximately 0.031 inches per second, which would be below the 0.3 inches per second building damage criterion.

Table 10
Vibration Levels for Construction Equipment

Equipment	Vibration Level at 25 feet (Inches/Second)
Loaded Trucks	0.076
Large Bulldozer	0.089
Small Bulldozer	0.003

SOURCE: FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

In addition to on-site construction activities, construction trucks on the roadway network have the potential to expose vibration-sensitive land uses. Rubber-tired vehicles, including trucks, rarely generate perceptible vibration. It is not anticipated that Project-related trucks would generate perceptible vibration adjacent to the roadway network.

The analysis above demonstrates that construction vibration would not damage buildings or annoy sensitive uses. Therefore, the proposed Project would result in a less than significant impact construction vibration.

Operation

The proposed Project would not include significant sources of vibration. Similar to the existing condition, vehicles passing along roadway would be the primary

[19] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, September 2018.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

source of vibration. However, rubber-tired vehicles typically do not generate vibration that is perceptible. Therefore, operation of the proposed Project would result in less than significant impacts due to the generation of excessive ground-borne vibration or ground-borne noise levels. No significant impacts have been identified related to the proposed Project. Therefore, no mitigation measures are required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? ☐ ☐ ☐ ☒

Reference: 22 (Noise and Vibration Technical Memorandum, Appendix G of this IS/MND)

Comment: A significant impact would occur if the proposed Project exposed people residing or working in the Project area to excessive noise levels due to the Project site being located within an airport land use plan or within two miles of a public airport where such a plan has not been adopted.

The Project site is not located within an airport land use plan nor is it located within two miles of a public airport or private airstrip. Therefore, no impact related to airport or airstrip noise would occur.

14. POPULATION AND HOUSING – Would the project:

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? ☐ ☐ ☐ ☒

Reference: Preceding analyses

Comment: A significant impact may occur if population growth is induced in an area, either directly or indirectly, such that the population of the area may exceed the planned population of that area.

The proposed Project involves roadway widening and associated street improvements along Alameda Street between Anaheim Street and Harry Bridges Boulevard. As discussed in Section II, Project Description, the primary objectives of the proposed Project are to provide congestion relief, improve goods movement

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

and mobility, prevent flooding, and enhance public safety and mobility for pedestrians and cyclists. The proposed Project would not induce population growth. No impact would occur.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? ☐ ☐ ☐ ☒

Reference: Preceding analyses

Comment: A significant impact may occur if the Project would result in a net loss of 15 single-family dwellings or 25 dwellings in multi-family housing.

No housing currently exists on the Project site and the proposed Project would not displace any people or housing. No impact would occur.

15. PUBLIC SERVICES

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection? ☐ ☐ ☒ ☐

Reference: 10 (General Plan)

Comment: A significant impact may occur if the City of Los Angeles Fire Department (LAFD) could not adequately serve the proposed Project based on response time, access, or fire hydrant/water availability.

Fire protection services in the City are provided by the City of Los Angeles Fire Department. The Project site is served by Fire Station 38, located approximately 1 mile west of the Project site at 124 East I Street, and Fire Station 49, located approximately 0.5-mile south of the Project site at 400 Yacht Street. The proposed Project would not result in an increase in population, and thus, would not generate a need for new or altered fire protection facilities. The proposed Project would be constructed in accordance with all applicable fire codes set forth by the State Fire

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Marshall and Los Angeles Fire Department. Therefore, the proposed Project would not be considered a fire hazard and would not exceed the capacity of the Los Angeles Fire Department to serve the site or other areas with existing fire protection services. The nearest local fire responders would be notified, as appropriate, of the construction schedule so as to coordinate emergency response routing during construction work. In addition, the Los Angeles City Fire Department would be notified and coordinated with in the development of the Traffic Management Plan (TMP). The impact would be less than significant.

ii) Police protection? ☐ ☐ ☒ ☐

Reference: 10 (General Plan)

Comment: A significant impact may occur if the proposed Project were to result in an increase in demand for police services that would exceed the capacity of the police department responsible for serving the site.

The City of Los Angeles Police Department is the local law enforcement agency responsible for providing police protection services in the City. The Project site is served by the Harbor Community Police Station, located at 2175 John S. Gibson Boulevard. As previously discussed, the proposed Project would not generate population growth. Therefore, construction and operation of the proposed Project would not require the construction or expansion of police protection facilities. The local police station would be notified, as appropriate, of the construction schedule so as to coordinate emergency response routing during construction work. The impact would be less than significant.

iii) Schools? ☐ ☐ ☐ ☒

Reference: 10 (General Plan)

Comment: A significant impact would occur if the proposed Project included substantial employment or population growth that would generate demand for school facilities that exceeded the capacity of the school district responsible for serving the Project site.

As the proposed Project does not include development of any residential uses, no increase in residential population would occur. Additionally, no housing or employment opportunities would be provided by the proposed Project. Therefore, no indirect population growth would occur. No new students would be generated,

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

and no increase in demand for local schools would result. No impact to schools would occur.

iv) Parks? ☐ ☐ ☐ ☒

Reference: 10 (General Plan)

Comment: A significant impact may occur if the recreation and park services available could not accommodate the population increase resulting from the implementation of the proposed Project.

As stated previously, the proposed Project does not include development of any residential uses and would not generate any new permanent residents that would increase the demand for local and regional park facilities. Therefore, no impact to parks would occur.

v) Other public facilities? ☐ ☐ ☐ ☒

Reference: 10 (General Plan)

Comment: Projects that do not result in a net increase of 75 residential units normally would not have a significant impact on public libraries.

Construction and operation of the proposed Project would not induce growth, either directly or indirectly, and, therefore, would not increase the demand for or use of libraries or other public facilities in the area. Therefore, no impact to other public facilities would occur.

16. RECREATION – Would the project:

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? ☐ ☐ ☐ ☒

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project includes substantial employment or population growth that may generate demand for public park facilities that exceed the capacity of existing parks.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

The proposed Project would widen and improve Alameda Street from Anaheim Street to Harry Bridges Boulevard and construct other improvements that would include a center turn lane, painted median, bike lanes, traffic signal installations and modifications, upgrades to railroad crossings, catch basin improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. The proposed Project would not induce growth, either directly or indirectly, and, therefore, would not increase the demand for parks or other recreational facilities in the area. No impact would occur.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment? ☐ ☐ ☐ ☒

Reference: Preceding analyses

Comment: A significant impact may occur if a project includes the construction or expansion of park facilities and such construction would have a significant adverse effect on the environment.

The proposed Project does not include new or require the expansion of existing recreational facilities. No impact would occur

17. TRANSPORTATION – Would the project:

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities? ☐ ☐ ☒ ☐

Reference: 24 (Traffic Analysis Technical Memorandum, Appendix I of this IS/MND)

Comment: A significant impact may occur if the proposed Project conflicts with a program, plan, ordinance, or policy that addresses the circulation system, including the capacity of the street system and those in support of alternative transportation.

The proposed Project construction will occur in the right-of-way of Alameda Street, a major street, and construction activities will require the closure of sidewalks and vehicle travel lanes in each direction on the roadway, potentially impeding vehicle and pedestrian access along the thoroughfare.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

The study area applied to the proposed Project includes the study intersection of Alameda Boulevard and Anaheim Street within the local area. This analysis was conducted for existing conditions, peak construction period conditions, and the Project opening year. VMT metrics were analyzed at:

- Alameda Street, between George De La Torre Junior Avenue and East E Street
- Alameda Street, between East E Street and Anaheim Street
- Alameda Street, between Quay Avenue and George Del La Torre Junior Avenue

Construction of the proposed Project is anticipated to begin in December of 2023 and last for approximately 2.5 to 3 years. It is assumed that the majority of the construction workers would arrive at the construction site by personal vehicles during the a.m. peak hour and all depart during the p.m. peak hour. During the proposed Project construction period, daily haul/delivery truck trips would occur over an eight-hour period that begins during the a.m. peak hour and is completed during the p.m. peak hour. It is estimated that daily construction employee trips would total 60, and the daily construction employee trips would total 22. Truck trips would total approximately 55.

The CEQA guidelines state that a project would have a potentially significant impact if the project would conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. the expansion of Alameda Street is an improvement listed within the Southern California Association of Governments' (SCAG's) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy, the Project is considered to be consistent with the short- and long-term transportation development goals in the region. The proposed Project would also be consistent with applicable policies and goals in the Los Angeles General Plan and the Wilmington-Harbor City Community Plan, which discusses the need for improved vehicular and truck access to and from industrial areas and POLA through Alameda Corridor and Harry Bridges Boulevard realignment, as well as future street widenings needed in the area.

The Project would not cause significant environmental impacts due to conflicts with any transportation plan, policy, or regulation, and the Project would not preclude the City's implementation of any adopted policy and/or program. Therefore, impacts would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐

Reference: 24 (Traffic Analysis Technical Memorandum, Appendix I of this IS/MND)

Comment: A significant impact may occur if the proposed Project would conflict or be inconsistent with CEQA Guidelines section 15064.3(b).

All projects within the State of California are required to prepare a VMT analysis, unless screened out based on specific characteristics, to evaluate transportation-related impacts as part of the update to the California Environmental Quality Act (CEQA). The State of California Governor's Office of Planning and Research ("OPR") published the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018). This document outlines the recommended VMT analysis methodologies and procedures for various project types. Based on these recommendations, the Los Angeles Department of Transportation (LADOT) prepared the *Transportation Assessment Guidelines* (the "TA Guidelines") in 2019 and released an update to the guidelines in August 2022. These guidelines outline the methodology and significant impact thresholds to be applied for projects within the City. CEQA guidelines require that transportation impacts of a project be analyzed with VMT metrics. VMT is a measurement of miles traveled (e.g., trip generation of private automobiles, trucks and buses, and the length of typical trips). The LADOT's TA Guidelines stipulate that transportation projects that add roadway capacity need to be analyzed for their effects on VMT in the surrounding area. According to the guidelines, VMT effects should be evaluated by calculating the change in VMT between pre- and post-Project conditions and adding an induced demand factor. If the results in a net increase in VMT (with consideration of the induced demand effect), then the Project will have a potential significant impact per the LADOT's guidelines.

The proposed Project would widen and reconstruct Alameda Street to provide three through lanes each way with a center turn lane/painted median and bike lanes. The Project would also include traffic signal modifications and installations and upgraded railroad crossings. The Project's overall impact is summarized in Table 11 and was analyzed under Completion Year (2026) conditions. As such, the proposed Project would increase VMT by 0.277% which is minor compared to the total VMT experienced by the roadway network. The Project would be considered to have a less than significant impact.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Table 11
Project Total VMT Impact, Completion Year (2026) Conditions

	Vehicle Miles Traveled (VMT)			
	Without Project	**With Project**	**Change**	**Percent Change**
Completion Year (2026)	242,478,099	243,150,630	672,531	0.277%

c) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? ☐ ☐ ☒ ☐

Reference: 24 (Traffic Analysis Technical Memorandum, Appendix I of this IS/MND)

Comment: A significant impact may occur if the proposed Project substantially increased road hazards due to a geometric design feature or incompatible uses. The proposed Project involves the widening and improvement of Alameda Street and surrounding areas. It would not substantially increase hazards due to a design feature or incompatible uses. The objectives of the Project include: to provide congestion relief, improve goods movement and mobility by train and truck, prevent flooding during high tide conditions, and enhance mobility for pedestrians and cyclists. Furthermore, there would be no conflicts with the existing land use and zoning regulations governing development of the Project site because the construction activities are improvements of existing conditions. The proposed Project is not expected to generate any hazards from design features that would result in a safety hazard to pedestrians, personnel, visitors, or nearby neighbors. The impact would be less than significant.

d) Result in inadequate emergency access? ☐ ☐ ☒ ☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project resulted in inadequate emergency access.

The proposed Project construction will occur in the right-of-way of Alameda Street, a major street, and construction will require the closure of sidewalks and vehicle travel lanes in each direction on the roadway, potentially impeding vehicle and pedestrian access along the thoroughfare. Construction BMPs would ensure that adequate emergency access would be maintained throughout construction. BOE would coordinate with all applicable agencies regarding construction schedules and worksite traffic control and detour plans, including LAPD and LAFD. In addition, the nearest local fire responders and police station would be

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

notified, as appropriate, of construction schedules so as to coordinate emergency response routing during construction work, if necessary. Following construction, operation would not result in inadequate emergency access but instead provide congestion relief and improved emergency access for Alameda Street. Therefore, the impact would be less than significant.

18. TRIBAL CULTURAL RESOURCE – Would the project cause a substantial adverse change in the significance of a tribal cultural resources, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) Listed of eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or? ☐ ☐ ☒ ☐

Reference: 19 (Cultural Resources Assessment, Appendix D of this IS/MND)

Comment: A significant impact may result if the proposed Project caused a substantial adverse change to the significance of a tribal resource (as identified above).

Construction of the proposed Project would include earth-disturbing activities, such as excavation and grading. No previously identified archaeological resources associated with Native American culture have been identified within the APE. In September 2021, a request letter was sent to the Native American Heritage Commission (NAHC) for information regarding the presence of sacred lands and cultural resources known to exist within or near the APE. A response was received October 19, 2021 and the search results were negative. The response also included an attachment of Native American tribes who may have knowledge of cultural resources in the Project area. A letter of invitation to consult on the Project was sent to the appropriate tribes. Should any tribal cultural resources be identified during ongoing Native American consultation pursuant to AB 52, the City would consult with appropriate tribal representatives and incorporate a monitoring program for the proposed Project. Letters including the details of the proposed Project, a Project map, and BOE staff contact information were mailed to nine (9) tribal representatives on January 26, 2023 and January 27, 2023.Ongoing Native American consultation would ensure that impacts to previously unidentified tribal cultural resources would remain less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
b) A resources determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

Reference: 19 (Cultural Resources Assessment, Appendix D of this IS/MND)

Comment: A significant impact may result if the proposed Project caused a substantial adverse change to the significance of a tribal resource (as identified above). A significant impact would occur if the Project caused a substantial adverse change in the significance of a tribal cultural resource, as defined in California Public Resources Code Section 21074, as determined by substantial evidence, and as determined through consultation with a California Native American tribe.

No previously identified archaeological resources associated with Native American culture have been identified within the Project APE. Correspondence with the NAHC was initiated in September 2021. The Project site has been an active roadway since at least the 1890s. Flooding, roadbuilding and maintenance activities, as well as the installation of utilities within the right-of-way, are likely to have disturbed any archaeological deposits that did exist at shallow depths; therefore, the potential to discover an unknown tribal cultural resource within the Project site is very low. The NAHC responded to the request and the SLF search results came back negative.

Although excavation within the existing Project site is not likely to encounter or adversely affect tribal cultural resources, in the event of the discovery of a tribal cultural resource, they would be left in place to not disturb the discovery context. Work in the immediate vicinity would be suspended until the discovery is assessed by a qualified archaeologist and Native American representative, and appropriate treatment, if necessary, is carried out, in accordance with 36 Code of Federal Regulations Part 800.13(b) (3) and California Public Resources Code Section 21083.2(i). This shall include a determination of eligibility for listing in the California Register of Historic Resources pursuant to criteria set forth in Section 5024.1 of the California Public Resources Code. Work in the area would not resume until evaluation and treatment of the resource is completed in accordance

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

with the provisions of CEQA Guidelines Section 15064.5 and the National Historic Preservation Act.

As such, the proposed Project would not cause a substantial adverse change in the significance of a tribal cultural resource pursuant to the criteria in subdivision (c) of PRC Section 5024.1. Therefore, impacts would be less than significant

19. UTILITIES AND SERVICE SYSTEMS – Would the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project resulted in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities that could result in an adverse environmental effect that could not be mitigated.

As discussed in Section II, Project Description, there are existing utilities within the Project location that include an aboveground Los Angeles Department of Water and Power (LADWP) water line, multiple buried fuel lines, and storm drains, streetlights, and powerline poles throughout the Project limits. Installation of new and relocation of existing utilities such as power poles, streetlight poles, and sewers would be included as part of the proposed Project. The utility relocations would occur within the existing ROW. Activities associated with the utility relocations would not result in impacts beyond those already identified for the proposed Project in this document. The impact associated with utility relocations would be less than significant.

Additionally, construction activities would require water for activities such as dust control and electricity for equipment. However, these activities are limited and temporary, and would not consume large amounts of water or electricity, requiring the construction of new water treatment or electric facilities; therefore, construction impacts would be less than significant.

Runoff from the Project site is currently collected by storm water drainage facilities in the surrounding roadway. As part of the proposed Project existing catch basins would be widened and new catch basins would be added to prevent future

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

flooding. Any runoff leaving the Project site would be directed to the new storm drain system, which would connect to existing infrastructure in the surrounding area. Installation of the new storm drain would not result in impacts beyond those already identified for the proposed Project in this document. The impact would be less than significant.

Nominal amounts of electricity would be required for the proposed Project during operation for streetlights and traffic signals. Existing electricity service is provided to the site by the LADWP, and the proposed Project would not result in the relocation or construction of new or expanded electric power facilities. The impact would be less than significant. No impact related to natural gas facilities would occur.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years? ☐ ☐ ☒ ☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project's water demands would exceed the existing and projected water supplies that serve the site.

Construction activities are anticipated to occur over an approximate 2.5 to 3 year period and would require water for activities such as dust control. However, these activities are limited and temporary, and would not consume large amounts of water. Existing water supplies would be sufficient; therefore, construction impacts would be less than significant. Operation of the proposed Project would not require water supply.

c) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? ☐ ☐ ☒ ☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project would increase wastewater generation to such a degree that the capacity of facilities currently serving the Project site would be exceeded.

The proposed Project involves widening the existing roadway and implementing related improvements. The proposed Project would not use additional water or

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

generate additional wastewater that would exceed existing capacity. Nominal amounts of wastewater would be generated from construction activities and would flow into the existing storm drain system currently serving the Project site. The impact would be less than significant.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impact the attainment of solid waste reduction goals? ☐ ☐ ☒ ☐

Reference: 9 (LAMC)

Comment: A significant impact may occur if the proposed Project were to increase solid waste generation to a degree that existing and projected landfill capacities would be insufficient to accommodate the additional waste, or if the proposed Project would conflict with solid waste reduction goals.

The proposed Project would excavate and haul away approximately 100,245 cubic yards of soil. There are no City-owned landfills currently in operation; therefore, waste from the proposed Project would be hauled to private or County-operated landfills. The City standard for public works requires demolition debris to be recycled where feasible, in accordance with the Citywide Construction and Demolition Debris Recycling Ordinance. Thus, the amount of solid waste generated during construction would be minimized to the greatest extent feasible. Construction impacts related to landfill capacity would be less than significant. Operation of the proposed Project would not generate solid waste.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? ☐ ☐ ☒ ☐

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project would generate solid waste that was in excess of or was not disposed of in accordance with applicable regulations.

The proposed Project would be designed and constructed following all applicable laws, regulations, ordinances, and formally adopted City standards regarding solid waste disposal. The proposed Project would incorporate source reduction techniques and recycling measures and maintain a recycling program to divert waste in accordance with the Citywide Construction and Demolition Debris Recycling Ordinance. The impact would be less than significant.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
20. Wildfire – Would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒

Reference: 11 (ZIMAS).

Comment: A significant impact may occur if the proposed Project is located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and may substantially interfere with roadway operations used in conjunction with an emergency response plan or evacuation plan or would generate sufficient traffic to create traffic congestion that would interfere with the execution of such plan.

The Project site is not located within a state responsibility area or a designated very high fire hazard severity zone. The Project site and surrounding areas are completely developed with industrial uses. Therefore, construction and operation of the proposed Project would not introduce or exacerbate wildfire risks. During construction, partial road closures would be anticipated; however, detours would be maintained through construction and the closures would be temporary. Additionally, emergency responders would be notified, as appropriate, of the construction schedule so as to coordinate emergency response routing during construction work. Therefore, the proposed Project would not impair emergency response plans or emergency evacuation plans. No impact would occur

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒

Reference: 11 (ZIMAS).

Comment: A significant impact may occur if the proposed Project is located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and if construction or operation of the proposed Project would expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

The Project site is not located within a state responsibility area or a designated very high fire hazard severity zone. Additionally, the Project site and surrounding areas are completely developed with industrial uses and there are no wildlands adjacent to or near the site. Therefore, no impact would occur.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒

Reference: Preceding analyses

Comment: A significant impact may occur if the proposed Project is located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and if the proposed Project resulted in installation or maintenance of associated infrastructure that could result in exacerbated fire risk that could not be mitigated.

The proposed Project involves widening of the existing roadway and associated improvements, which include utility relocation. However, the area surrounding the Project site is completely developed with industrial uses and there are no wildlands in the Project vicinity. Additionally, the Project site is not located within a state responsibility area or a designated very high fire hazard severity zone. Therefore, no impact would occur.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

Reference: 11 (ZIMAS).

Comment: A significant impact may occur if the proposed Project is located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and if the proposed Project were located in a hillside area with conditions that would suggest high potential for sliding or flooding and appropriate design measures were not implemented.

The Project site is not located within a state responsibility area or a designated very high fire hazard severity zone. Additionally, the Project site and surrounding areas are completely developed with industrial uses, and the Project site is flat and does not contain slopes. Therefore, no impact would occur.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact
21. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐

Reference: Preceding analyses

Comment: No plant or animal species listed on any state or federal lists for endangered, threatened or special status species were identified on-site. However, ungroomed palm trees may provide suitable nesting habitat for special-status bats and maternity roosting bats. Additionally, noise, dust, vibration, and increased human presence generated during construction could potentially lead to the failure of maternity roosts. The implementation of MM-BIO-1, a pre-construction bat survey, would ensure that special-status bats and maternity roosting are not significantly affected.

There are no known cultural resources located on-site.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐

Reference: Preceding analyses

Comment: The proposed Project is consistent with local and regional land use, air quality, water quality, and transportation plans. In addition, the proposed Project is not expected to make a cumulatively considerable contribution to a significant cumulative impact. The impact would be less than significant. Project-level traffic impacts are less than significant and no mitigation measures are required. As a result, construction of the Project would not result in a cumulatively considerable contribution to a significant cumulative traffic impact to construction. No traffic impacts would occur during operation.

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant	No Impact

Based on the above, significant cumulative impacts from related projects are not anticipated in any of the impact categories.

c) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals? ☐ ☐ ☐ ☒

Reference: Preceding analyses

Comment: The overall purpose of the proposed Project is to provide congestion relief and improve goods movement and mobility. The Project would implement construction BMPs to minimize potential impacts and would not achieve short-term environmental goals to the disadvantage of long-term environmental goals; No impact is anticipated.

d) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly? ☐ ☐ ☒ ☐

Reference: Preceding analyses

Comment: With implementation of the mitigation measure identified for potentially significant impacts, the proposed Project is not anticipated to have significant impacts that would cause substantial adverse effects on human beings, either directly or indirectly. Therefore, all potentially significant environmental effects associated with the proposed Project can be mitigated to less than significant levels.

V. MITIGATION MEASURES

The following mitigation measure form the foundation of a mitigation monitoring program (MMP) for the proposed Project. CEQA requires public agencies to adopt a reporting or monitoring program for the changes to the project that have been adopted to mitigate or avoid significant effects on the environment (Public Resources Code Section 21081.6). The program must be adopted by the public agency at the time findings are made regarding the project. The State CEQA Guidelines allow public agencies to choose whether its program will monitor mitigation, report on mitigation, or both (14 CCR Section 15097(c)).

The mitigation measure described herein are supplemental to those required as standard procedure for the City and its contractors. The City and its contractors are the parties responsible for: (1) the necessary implementing actions; (2) verifying that the necessary implementing actions are taken; and (3) the primary record documenting the necessary implementing actions.

The mechanisms for verifying that mitigation measures have been implemented include design drawings, project plans and specifications, construction documents intended for use by construction contractors and construction managers, field inspections, field reports, and other periodic or special reports. All records pertaining to this mitigation program will be maintained and made available for inspection by the public in accordance with the City's records management systems.

Mitigation Measure BIO-1: *Avoid and minimize Project related impacts to special-status and/or roosting bat species.*

During the maternity season (April 15 through August 31) prior to construction, a field survey shall be conducted by a qualified biologist to determine the potential presence of colonial bat roosts within mature ungroomed palm trees along the west side of Alameda Street. A visual inspection and/or one-night emergence survey of trees shall be completed utilizing acoustic recognition technology to determine what species of bats and if any maternity roosts are present.

To avoid any impacts on special-status species and roosting bats resulting from construction activities, the following shall be implemented:

- All palm trees to be removed as part of the Project should be evaluated by a qualified biologist for their potential to support roosting bat by conducting a one-night emergence survey during acceptable weather conditions, or if conditions permit,

physically examine the trees for presence or absence of bats (such as with lift equipment) two weeks prior to the start of construction/tree removal.

- If active bat roosts are present during the maternity season (April 15 through August 31), the tree shall be avoided until after the maternity season when young are self-sufficient.

- If active bat roosts are present and tree removal is not possible outside the maternity season, a qualified bat biologist shall determine the species of bats present and the type of roost (i.e., day roost, night roost, maternity roost). If the biologist determines that the roosting bats are not a special-status species and the roost is not being used as a maternity roost, then the bats may be evicted from the roost by a qualified bat biologist experienced in developing and implementing bat mitigation and exclusion plans.

- If special-status bat species or a maternity roost of any bat species is present in trees slated for removal, a qualified bat biologist experienced in developing bat mitigation and exclusion plans shall develop a mitigation plan to compensate for the lost roost site. Removal of the roost shall only occur when the mitigation plan has been approved by BOE and only when bats are not present in the roost. The mitigation plan shall detail the methods of excluding bats from the roost and the plans for a replacement roost in the vicinity of the Project site.

- If the pre-construction survey determines that no special-status bat species or active roosts are present, then trees shall be removed within two weeks following the preconstruction survey, or additionally pre-construction surveys may be needed to confirm special-status bats or active roosts are absent.

- All potential roost trees shall be removed in a manner approved by a qualified bat biologist, which may include presence of a biological monitor.

- All construction activity in the vicinity of an active roost shall be limited to daylight hours.

- The results of bat surveys, evaluations, and monitoring efforts that are undertaken shall be documented in a report by the qualified biologist at the conclusion of all bat-related activities.

VII. DETERMINATION - RECOMMENDED ENVIRONMENTAL DOCUMENTATION

A. Summary

The proposed Project would result in significant impacts that can be mitigated to below the thresholds of significance.

B. Recommended Environmental Documentation

On the basis of this initial evaluation, the City should find that the Project could not have a significant effect on the environment, and a **Mitigated Negative Declaration** should be adopted.

RE: Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project – Air Quality Assessment for the California Environmental Quality Act (CEQA)

INTRODUCTION

Terry A. Hayes Associates Inc. (TAHA) has completed an Air Quality Assessment for the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project) in accordance with provisions of CEQA Statutes and Guidelines. This assessment is organized as follows:

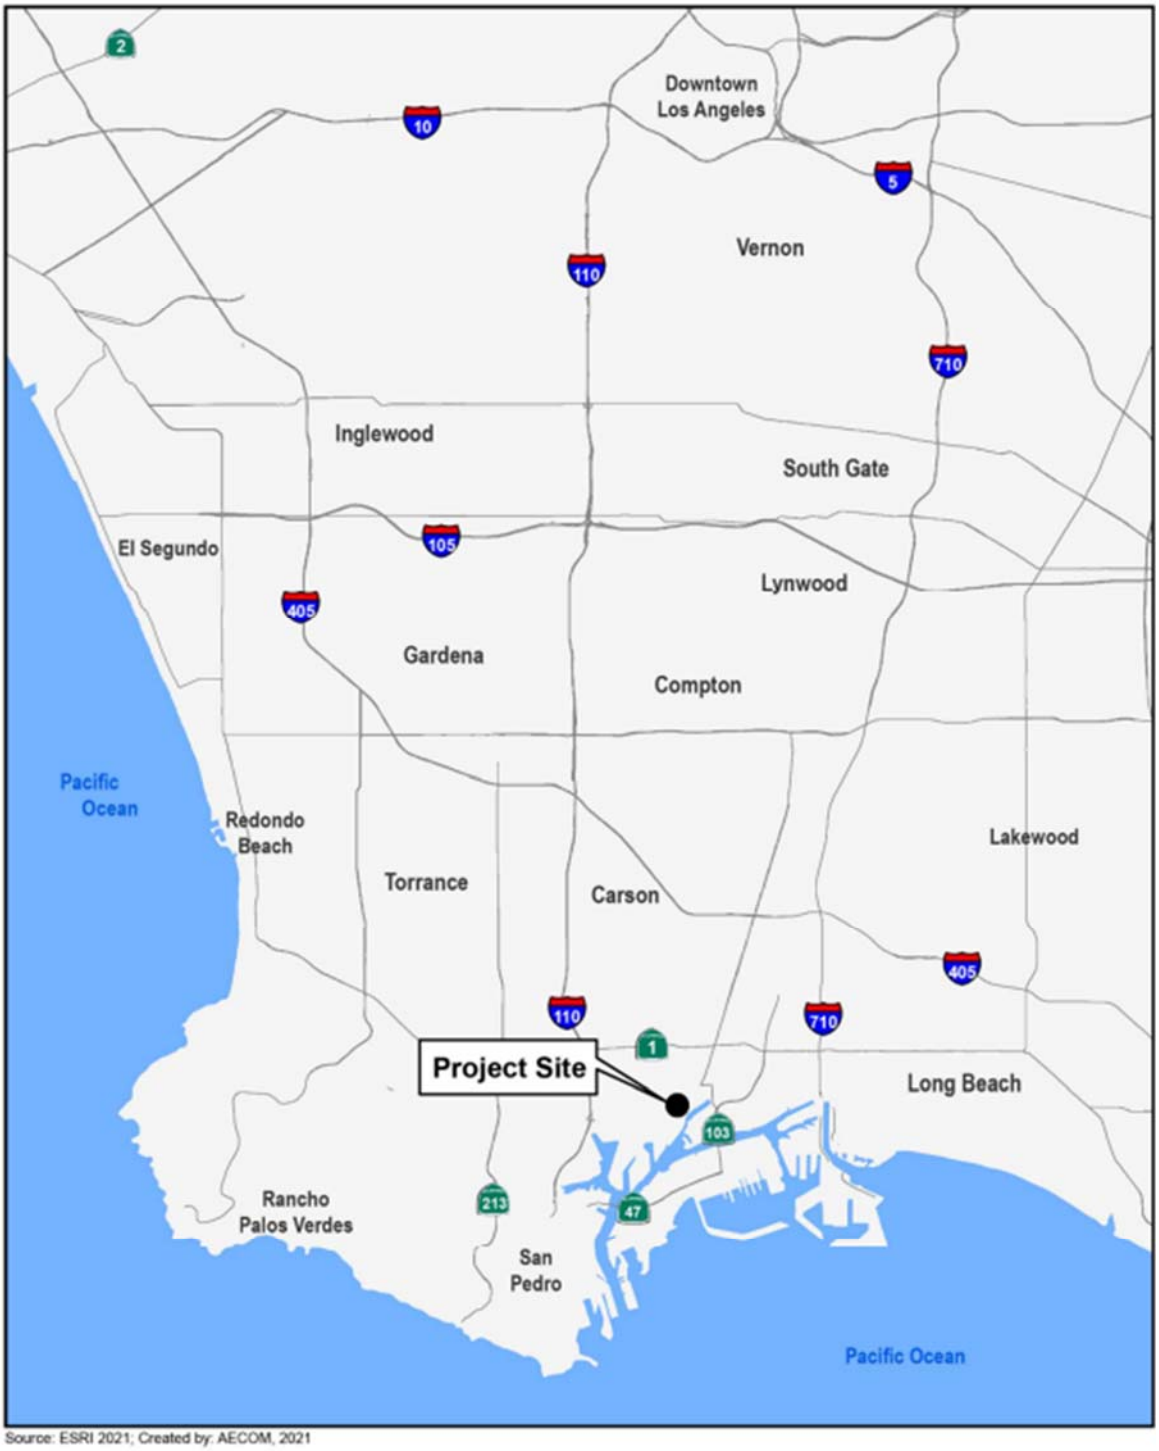
- Introduction
- Project Description
- Traffic Data
- Air Quality Topical Information
- Existing Setting
- Regulatory Framework
- Significance Thresholds
- Methodology
- Impact Assessment
- References

PROJECT DESCRIPTION

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the project is approximately 5,400 feet, or 1.02 miles. The proposed project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. Specifically, the project would provide:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along the eastern side of the street ;
- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;

Terry A. Hayes Associates Inc.
3535 Hayden Avenue, Suite 350
Culver City, California 90232
310.839.4200 fax 310.839.4201



- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Avenue at Harry Bridges Boulevard;
- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

The project location is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed project is shown in **Figure 1**. The area is a developed urban setting surrounded by both light and heavy industrial uses. There are existing aboveground and underground utilities within the project location that includes a Los Angeles Department of Water and Power (LADWP) water line, multiple buried oil and fuel lines, and storm drains, streetlights, and LADWP overhead power lines and poles throughout the project limits. At this location, Alameda Street is utilized for local traffic as well as trips to and from the Ports of Long Beach and Los Angeles, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the project site. The project site location is shown in **Figure 2.**

Construction of the proposed project would begin on December 30, 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented. The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the project at the start of construction and would remain on site for most of the project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

Project Location Map

TRAFFIC DATA

A traffic analysis was completed to examine the project effects on Alameda Street and effects to vehicle miles traveled (VMT). Existing traffic volumes on Alameda Street within the project limits range from 13,200 to 13,484 average daily trips. The heavy-duty truck percentage is between approximately 27 and 30 percent. The traffic analysis demonstrates that vehicle volumes on Alameda Street will grow by 92 percent between 2022 and 2026. However, the proposed project effect on vehicle miles traveled is only an increase of 0.043 percent. The rest of the traffic growth on Alameda Street is unrelated to the proposed project and occurs under future without project conditions.

AIR QUALITY TOPICAL INFORMATION

Air quality is typically characterized by ambient air concentrations of seven specific pollutants identified by the United States Environmental Protection Agency (USEPA) to be of concern with respect to health and welfare of the general public. These specific pollutants, known as criteria air pollutants, are pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. These pollutants are common byproducts of human activities and have been documented through scientific research to cause adverse health effects. The federal ambient concentration criteria are known as the National Ambient Air Quality Standards (NAAQS), and the California ambient concentration criteria are referred to as the California Ambient Air Quality Standards (CAAQS). Federal criteria air pollutants include ground-level ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), respirable particulate matter ten microns or less in diameter (PM_{10}), fine particulate matter 2.5 microns or less in diameter ($PM_{2.5}$), and lead (Pb). In addition to the federal criteria pollutants, the state regulates visibility-reducing particles, sulfates, hydrogen sulfide, and vinyl chloride.

Air toxics are generally defined as those contaminants that are known or suspected to cause serious health problems, but do not have a corresponding ambient air quality standard. Air toxics are also defined as an air pollutant that may increase a person's risk of developing cancer and/or other serious health effects; however, the emission of a toxic chemical does not automatically create a health hazard. Air toxics include, but are not limited to, diesel PM, metals, gases absorbed by particles, and certain vapors from fuels and other sources.

EXISTING SETTING

The South Coast Air Basin (SCAB) is subject to high levels of air pollution due to the immense magnitude of emissions sources and the combination of topography, low mean atmospheric mixing height, and abundant sunshine. Although the SCAB has a semiarid climate, air near the surface is generally moist because of the presence of a shallow marine layer. With very low average wind speeds, there is a limited capacity to disperse air contaminants horizontally. The mountains and hills surrounding the SCAB contribute to the variation of rainfall, temperature, and winds throughout the region. During the spring and early summer, pollution produced during any one day is typically blown out of the SCAB through mountain passes or lifted by warm, vertical currents adjacent to mountain slopes. The vertical dispersion of air pollutants in the SCAB is limited by temperature inversions in the atmosphere close to the Earth's surface. The combination of stagnant wind conditions and low inversions produces the greatest pollutant concentrations. On days of no inversion or high wind speeds, ambient air pollutant concentrations are lowest. During periods of low inversions and low wind speeds, air pollutants become more concentrated in urbanized areas with pollution sources of greater magnitude.

Air quality within the SCAB region is characterized by concentrations of air pollutants measured at 37 monitoring stations located throughout the South Coast Air Quality Management District (SCAQMD) jurisdiction. The SCAB is divided geographically into 38 source receptors areas (SRAs), each of which contains an air quality monitoring station, excluding SRA 7. The SRA boundaries were drawn based on proximity to the nearest air monitoring station, the local emission inventories, and surrounding topography. The proposed project is located in SRA 4 (South Los Angeles County Coastal). Ambient concentrations of O_3 and $PM_{2.5}$ exceeded the associated NAAQS and CAAQS numerous times over the three-year period. Additionally, concentrations of PM_{10} exceeded the CAAQS in all three years. The data demonstrates the ongoing challenges that the region faces with regards to improving air quality and bringing the SCAB into attainment of the federal and state standards.

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. The California Air Resources Board (CARB) has identified the following groups who are most likely to experience adverse health effects due to exposure to air pollution: children less than 14 years of age, the elderly over 65 years of age, athletes, and people with cardiovascular and chronic respiratory diseases. According to the SCAQMD, land uses that constitute sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The SCAQMD has established 500 meters or 1,640 feet, as the distance for assessing localized air quality impacts. The proposed project is located in an industrial environment near the Port of Los Angeles and the Port of Long Beach. The nearest sensitive receptors are residences located approximately 300 feet to the west of Alameda Street along Flint Avenue, Pioneer Avenue, and Watson Avenue south of Anaheim Street.

REGULATORY FRAMEWORK

The following discussion includes relevant regulations, policies, and programs that have been adopted by federal, state, regional, and local agencies to protect air quality and public health.

Federal

The Clean Air Act (CAA) governs air quality at the national level, and the USEPA is responsible for enforcing the regulations provided in the CAA. Under the CAA, the USEPA is authorized to establish NAAQS that set protective limits on concentrations of air pollutants in ambient air. Enforcement of the NAAQS is required under the 1977 CAA and subsequent amendments. As required by the CAA, NAAQS have been established for the seven criteria air pollutants: O_3, NO_2, CO, SO_2, PM_{10}, $PM_{2.5}$, and Pb. These pollutants are common byproducts of human activities and have been documented through scientific research to cause adverse health effects. The CAA grants the USEPA authority to designate areas as attainment, nonattainment, or maintenance (previously nonattainment and currently attainment) for each criteria pollutant based on whether the NAAQS concentrations have been met on a regional scale relying upon air monitoring data from the most recent three-year period. The NAAQS are summarized in **Table 1**.

TABLE 1: AMBIENT AIR QUALITY STANDARDS AND ATTAINMENT STATUS DESIGNATIONS

Pollutant	Averaging Period	California		Federal	
		Standards (CAAQS)	Attainment Status	Standards (NAAQS)	Attainment Status
Ozone (O_3)	1-Hour Average	0.09 ppm (180 µg/m^3)	Nonattainment	--	--
	8-Hour Average	0.070 ppm (137 µg/m^3)	Nonattainment	0.070 ppm (137 µg/m^3)	Pending – Nonattainment
Carbon Monoxide (CO)	1-Hour Average	20 ppm (23 mg/m^3)	Attainment	35.0 ppm (40 mg/m^3)	Attainment
	8-Hour Average	9.0 ppm (10 mg/m^3)	Attainment	9.0 ppm (10 mg/m^3)	Attainment
Nitrogen Dioxide (NO_2)	1-Hour Average	0.18 ppm (338 µg/m^3)	Attainment	0.10 ppm (188 µg/m^3)	Attainment
	Annual Arithmetic Mean	0.03 ppm (57 µg/m^3)	Attainment	0.053 ppm (100 µg/m^3)	Attainment
Sulfur Dioxide (SO_2)	1-Hour Average	0.25 ppm (655 µg/m^3)	Attainment	0.075 ppm (196 µg/m^3)	Pending – Attainment
	24-Hour Average	0.04 ppm (105 µg/m^3)	Attainment	0.14 ppm (365 µg/m^3)	Attainment
	Annual Arithmetic Mean	--	--	0.030 ppm (80 µg/m^3)	Attainment
Respirable Particulate Matter (PM_{10})	24-Hour Average	50 µg/m^3	Nonattainment	150 µg/m^3	Attainment (Maintenance)
	Annual Arithmetic Mean	20 µg/m^3	Nonattainment	--	--
Fine Particulate Matter ($PM_{2.5}$)	24-Hour Average	--	--	35 µg/m^3	Nonattainment
	Annual Arithmetic Mean	12 µg/m^3	Nonattainment	12.0 µg/m^3	Nonattainment
Lead (Pb)	30-day Average	1.5 µg/m^3	Attainment	--	--
	Calendar Quarter	--	--	1.5 µg/m^3	Unclassified/ Attainment
	Rolling 3-Month Average	--	--	0.15 µg/m^3	Unclassified/ Attainment
Sulfates	24-Hour Average	25 µg/m^3	Attainment	**No Federal Standards**	
Hydrogen Sulfide	1-Hour Average	0.03 ppm (42 µg/m^3)	Attainment		
Vinyl Chloride	24-Hour Average	0.01 ppm (26 µg/m^3)	Attainment		

CAAQS = California Ambient Air Quality Standards; NAAQS = National Ambient Air Quality Standards; ppm = parts per million; µg/m^3 = micrograms per cubic meter.
SOURCE: SCAQMD, *NAAQS and CAAQS Attainment Status for South Coast Air Basin*, February 2016.

State

Air quality in California is also governed by more stringent regulations under the California Clean Air Act (CCAA). The CCAA is administered by the CARB at the state level and by the air quality management districts at the regional and local levels. The CCAA requires all areas of the state to achieve and maintain the CAAQS by the earliest feasible date, which is determined in the most recent State Implementation Plan (SIP) based on existing emissions and reasonably foreseeable control measures that will be implemented in the future.

The CAAQS are also summarized in **Table 1**, which also presents the attainment status designations for the Los Angeles County portion of the SCAB. The CARB's statewide comprehensive air toxics program was established in the early 1980s. The Toxic Air Contaminant Identification and Control Act created California's program to reduce exposure to air toxics. Under the Toxic Air Contaminant Identification and Control Act, the CARB is required to prioritize the identification and control of air toxics emissions. In selecting substances for review, the CARB must consider criteria relating to the risk of harm to public health, such as amount or potential amount of emissions, manner of and exposure to usage of the substance in California, persistence in the atmosphere, and ambient concentrations in the community.

Regional

The 1977 Lewis Air Quality Management Act established the SCAQMD in order to coordinate air quality planning efforts throughout Southern California. The SCAQMD has jurisdiction over a total area of 10,743 square miles, consisting of the SCAB—which comprises 6,745 square miles including Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties—and the Riverside County portion of the Salton Sea and Mojave Desert Air Basins. The proposed project would be located in the community of Wilmington within the City of Los Angeles, which is situated in the SCAB portion of Los Angeles County and is within the jurisdiction of the SCAQMD.

The SCAQMD is tasked with preparing regional programs and policies designed to improve air quality within the SCAB, which are assessed and published in the form of the Air Quality Management Plan (AQMP). The AQMP is updated every four years to evaluate the effectiveness of the adopted programs and policies and to forecast attainment dates for nonattainment pollutants to support the SIP based on measured regional air quality and anticipated implementation of new technologies and emissions reductions. The most recent publication is the 2022 AQMP, which is intended to serve as a regional blueprint for achieving the federal air quality standards and healthful air.

The 2022 AQMP is the current AQMP for areas under SCAQMD jurisdiction and contains a comprehensive strategy for achieving air quality standards and healthful air throughout the SCAB. The 2022 AQMP builds upon measures already in place from previous AQMPs. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low NO_X technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other CAA measures to achieve the 2015 8-hour ozone standard.

The 2016 AQMP represents a thorough analysis of existing and potential regulatory control options, and includes available, proven, and cost-effective strategies to pursue multiple goals in promoting reductions in GHG emissions and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. The 2016 AQMP focuses on demonstrating NAAQS attainment dates for the 2008 8-hour O_3 standard, the 2012 annual $PM_{2.5}$ standard, and the 2006 24-hour $PM_{2.5}$ standard. The 2016 AQMP acknowledged that the most significant air quality challenge

in the SCAB is the reduction of NO_X emissions sufficient to meet the upcoming ozone standard deadlines. The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approach attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the NAAQS are not met by the established date. The SCAQMD has also established various rules to manage and improve air quality in the SCAB. The project proponent shall comply with all applicable SCAQMD Rules and Regulations pertaining to construction activities, including, but not limited to:

- Rule 402 (Nuisance) states that a person should not emit air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
- Rule 403 (Fugitive Dust) controls fugitive dust through various requirements including, but not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the project site, limiting vehicle speeds on unpaved roads to 15 miles per hour, and maintaining effective cover over exposed areas. Rule 403 also prohibits the release of fugitive dust emissions from any active operation, open storage piles, or disturbed surface area beyond the property line of the emission source and prohibits particulate matter deposits on public roadways.

SIGNIFICANCE THRESHOLDS

This Assessment was undertaken to determine whether construction or operation of the proposed project would have the potential to result in significant environmental impacts related to Air Quality in the context of the Appendix G Environmental Checklist criteria of the CEQA Statute and Guidelines. Implementation of the proposed project may result in a significant environmental impact related to Air Quality if the proposed project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard;

c) Expose sensitive receptors to substantial pollutant concentrations; and/or,

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The Environmental Checklist acknowledges that, "[w]here available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make" the impact determinations. The SCAQMD published a *CEQA Air Quality Handbook* to guide air quality assessments for CEQA projects within its jurisdiction, which has been revised and updated through several iterations since the original publication in 1993.[1] SCAQMD methodologies recommend that air pollutant emissions be analyzed in both regional and local contexts. In its original 1993 *CEQA Air Quality Handbook*, the SCAQMD established regional-scale screening thresholds for criteria air pollutant and O_3 precursor emissions based on maximum allowable mass daily emissions from construction and operation of proposed projects that were derived from previously adopted quarterly and annual USEPA thresholds. Regional

[1]SCAQMD, *CEQA Air Quality Handbook (Version 3)*, revised 2001.

emissions refer to all sources of emissions that would be associated with construction and operation of a project—both those located on the project site as well as remote or mobile sources of emissions— while localized emissions refer to only those emissions that would be produced by sources located on the project site. In addition to the regional thresholds, the SCAQMD subsequently promulgated its guidance on using localized significance thresholds (LSTs) for screening on-site emissions in 2003 and updated the guidance in 2008.[2] The applicable SCAQMD thresholds for mass daily emissions are summarized below in **Table 2**.

TABLE 2: SCAQMD AIR QUALITY SIGNIFICANCE THRESHOLDS – MASS DAILY EMISSIONS

Pollutant	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
CONSTRUCTION						
Regional Threshold (lbs/day)	75	100	550	150	150	55
Localized Threshold (lbs/day)	--	68	1,180	--	29	10
OPERATIONS						
Regional Threshold (lbs/day)	55	55	550	150	150	55

SOURCE: SCAQMD, 2019.

Regarding substantial pollutant concentrations, a significant air quality impact would occur if the proposed project resulted in a residential carcinogenic risk above 10 excess cancers per million, or an acute Hazard Index (HI) equal to or greater than 1.0.

Table 2 shows the regional mass daily thresholds for emissions of volatile organic compounds (VOC), NO_X, CO, sulfur oxides (SO_X), and particulate matter less than 10 microns in aerodynamic diameter (PM_{10}) and particulate matter less than 2.5 microns in aerodynamic diameter ($PM_{2.5}$) generated by projects subject to CEQA within the SCAB. The SCAQMD considers any project that would not produce daily emissions in excess of any regional threshold to be less than significant at both the project level and for cumulative impacts. Conversely, if construction or operation of a project would generate daily mass emissions exceeding the regional threshold values presented in **Table 2**, those emissions would be considered significant. The SCAQMD has established localized significance thresholds that extend are applicable for projects located within 500 meters (1,640 feet) of sensitive receptors. The LST values presented in **Table 2** are specific to SRA 4 for a construction site up to one acre with sensitive receptors within 330 feet (approximately 100 meters) and were obtained from the SCAQMD LST guidance document.

METHODOLOGY

Construction emissions are estimated using the latest Sacramento Metropolitan Air Quality Management District's Roadway Construction Emissions Model. While the model was developed for Sacramento conditions in terms of fleet emission factors, silt loading, and other model assumptions, it is considered adequate for estimating road construction emissions by the SCAQMD (in its CEQA guidance) and is used for that purpose in this analysis. Construction emissions were estimated for the Build Alternative using detailed equipment inventories and construction scheduling information provided by the engineering team combined with emissions factors from the EMFAC and OFFROAD models. Operational emissions are qualitatively assessed due to the minimal increase of 0.043 percent in vehicle miles traveled associated with the proposed project.

[2]SCAQMD, *Final Localized Significance Threshold Methodology*, revised July 2008.

IMPACT ASSESSMENT

a) Would the proposed project conflict with or obstruct implementation of the applicable air quality plan? (Less-Than-Significant Impact)

The following analysis addresses the consistency with applicable SCAQMD and SCAG policies, including the SCAQMD's 2016 AQMP and growth projections within the SCAG's 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). In accordance with the procedures established in the SCAQMD's CEQA Air Quality Handbook, the following criteria are required to be addressed in order to determine the consistency with applicable SCAQMD and SCAG policies:

- Would the proposed project result in any of the following?
  - An increase in the frequency or severity of existing air quality violations;
  - Cause or contribute to new air quality violations; or
  - Delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

- Would the proposed project exceed the assumptions utilized in preparing the AQMP?
  - Is the project consistent with the population and employment growth projections upon which AQMP forecasted emission levels are based;
  - Does the project include air quality mitigation measures; or
  - To what extent is project development consistent with the AQMP land use policies?

The first indicator is assessed by comparing emissions of air pollutants that would be produced by construction and operation of the proposed project to the SCAQMD significance thresholds, both on regional and localized scales. The air quality significance thresholds were designed to prevent the occurrence and exacerbation of air quality violations resulting from construction and operation of individual CEQA projects in the context of existing ambient air quality conditions. The second indicator is assessed by determining consistency of permanent operations with population, housing, and employment assumptions that were used in the development of the AQMP and the RTP/SCS.

Construction

Site preparation and roadway construction would involve clearing, cut-and-fill activities, grading, removing or improving existing roadways, and paving roadway surfaces. During construction, short-term degradation of air quality is expected from the release of particulate emissions (airborne dust) generated by excavation, grading, hauling, and other activities related to construction. Emissions from construction equipment powered by gasoline and diesel engines are also anticipated and would include CO, NO_X, VOCs, directly emitted PM_{10} and $PM_{2.5}$, and toxic air contaminants (TAC), such as diesel exhaust particulate matter. Construction activities are expected to increase traffic congestion in the area, resulting in increases in emissions from traffic during the delays. These emissions would be temporary and limited to the immediate area surrounding the construction site.

Under the transportation conformity regulations (40 Code of Federal Regulations (CFR) 93.123(c)(5)), construction-related activities that cause temporary increases in emissions are not required in a hot-spot analysis. These temporary increases in emissions are those that occur only during the construction phase and last five years or less at any individual site. They typically fall into two main categories:

- *Fugitive Dust*: A major emission from construction due to ground disturbance. All air districts and the California Health and Safety Code (Sections 41700-41701) prohibit "visible emissions" exceeding three minutes in one hour – this applies not only to dust but also to engine exhaust. In general, this is interpreted as visible emissions crossing the right-of-way line.

  Sources of fugitive dust include disturbed soils at the construction site and trucks carrying uncovered loads of soils. Unless properly controlled, vehicles leaving the site may deposit mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions may vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions depend on soil moisture, silt content of soil, wind speed, and the amount of equipment operating. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

- *Construction Equipment Emissions*: Diesel exhaust particulate matter is a California-identified TAC, and localized issues may exist if diesel-powered construction equipment is operated near sensitive receptors.

The construction period for the proposed project is approximately 2.5 to 3 years. In addition, transportation project construction emissions have not been identified as a significant contributor to nonattainment conditions. Therefore, an analysis of construction emissions is not needed for conformity purposes.

Implementation of the following measures, some of which may also be required for other purposes such as storm water pollution control, would reduce air quality impacts resulting from construction activities. Although these measures are anticipated to reduce construction-related emissions, these reductions cannot be quantified at this time.

- Construction equipment and vehicles would be properly tuned and maintained. All construction equipment would use low sulfur fuel as required by California Code of Regulations Title 17, Section 93114.

- The construction contractor must comply with SCAQMD rules, including Rule 401 (Visible Emissions), Rule 402 (Nuisance), Rule 403 (Fugitive Dust), and Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities).

Construction of the proposed project has the potential to create air quality impacts through the use of heavy-duty construction equipment and through vehicle trips by construction workers and haul trucks traveling to and from the project site. Fugitive dust emissions would primarily result from site preparation (e.g., demolition and grading) activities. NO_X emissions would predominantly result from the use of construction equipment and haul truck trips. The assessment of construction air quality impacts considers all of these emissions sources. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions.

It is mandatory for all construction projects in the SCAB to comply with SCAQMD Rule 403 for Fugitive Dust. Rule 403 requirements include measures to prevent the generation of visible dust plumes. Measures include, but are not limited to, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system or other control measures to remove bulk material from tires and vehicle undercarriages before vehicles exit the project site, and maintaining effective cover over exposed areas. Compliance with the provisions and best management practices propagated by Rule 403—such as the application of water as a dust suppressant to exposed stockpiles and disturbed ground surfaces—would reduce

regional fugitive dust PM_{10} and $PM_{2.5}$ emissions associated with construction activities by approximately 61 percent.

Table 3 shows the maximum unmitigated daily regional emissions for each activity, including emissions from sources located both on- and off-site. As stated above, the unmitigated emissions account for the provisions of SCAQMD Rule 403, which requires best management practices in fugitive dust control that would result in a 61 percent reduction from on-site fugitive dust sources, including disturbed ground surface and material stockpiles. Maximum daily emissions of all air pollutants would remain below all applicable regional SCAQMD thresholds during construction of the proposed project, and as a result, the proposed project would have a less than significant impact on regional air quality. Impacts related to conflict with or obstruction of implementation of the applicable air quality plan would be less than significant during construction.

TABLE 3: ESTIMATED CONSTRUCTION EMISSIONS

Phase and Source Location	Maximum Daily Emissions (Pounds Per Day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
SITE PREPARATION						
On-Site Emissions	1.3	10.5	13.2	<0.1	0.3	0.3
Off-Site Emissions	0.1	2.5	1.8	<0.1	12.7	2.7

Operations

The traffic analysis completed for the proposed project determined that the approximately one-mile widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane, painted median, and bike lanes would not significantly increase vehicle miles traveled. The proposed project would only increase vehicle miles traveled in the project area by approximately 0.043 percent. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. There is no potential for operation of the proposed project to exceed any applicable SCAQMD air quality significance threshold. Operational emissions in ensuing years would likely be lower due to improved engine technologies and fuel efficiency, as well as fleet turnover of older vehicles.

The second consistency criterion requires that the proposed project not exceed the assumptions in the AQMP, thereby rendering the regional emissions inventory inaccurate. Implementation of the proposed project would not introduce new population, housing, and employment projections for the region. The proposed project would not have any potential to result in growth that would exceed the projections incorporated into the AQMP or the 2020–2045 RTP/SCS. The proposed project would not interfere with air pollution control measures listed in the 2016 AQMP and would not conflict with the goals of the General Plan Air Quality Element. Therefore, the proposed project is consistent with these plans and would not impair or delay the region's ability to achieve the SCAQMD's goals for attainment of air quality standards. Impacts related to conflict with or obstruction of implementation of the applicable air quality plan would be less than significant during operations.

Mitigation Measures

No mitigation measures are required.

b) Would the proposed project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard? (Less-than-Significant Impact)

The SCAB is currently designated nonattainment for O_3, PM_{10}, and $PM_{2.5}$ under the state standards and nonattainment for O_3 and $PM_{2.5}$ under the federal standards. Therefore, a project may result in a cumulatively considerable air quality impact under this criterion if daily emissions of ozone precursors (VOC and NO_X) or particulate matter (PM_{10} and $PM_{2.5}$) exceed applicable air quality thresholds of significance established by the SCAQMD. The SCAQMD designed the significance thresholds to prevent projects from exceeding the ambient air quality standards and potentially resulting in air quality violations. The SCAQMD suggests that if any quantitative air quality significance threshold is exceeded by an individual project during construction activities or operation, that project is considered cumulatively considerable and would be required to implement effective and feasible mitigation measures to reduce air quality impacts.

Conversely, the SCAQMD propagates the guidance that if an individual project would not exceed the regional mass daily thresholds, then it is generally not considered to be cumulatively significant. This method of impact determination allows for the screening of individual projects that would not represent substantial new sources of emissions in the SCAB; it also serves to exclude smaller projects from the responsibility of identifying potentially concurrent new or proposed construction and operation emissions nearby since the incremental contribution to regional emissions is minor. As discussed above, implementation of the proposed project would not exceed any applicable SCAQMD regional mass daily thresholds during construction or operation.

Therefore, the proposed project would not generate cumulatively considerable emissions of ozone precursors or particulate matter, and impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

c) Would the proposed project expose sensitive receptors to substantial pollutant concentrations? (No Impact)

Construction

The SCAQMD's LST methodology is used to evaluate localized ambient air quality impacts and whether construction would expose sensitive receptors to substantial pollutant concentrations. The SCAQMD devised its LST values to prevent the occurrence of localized hot spots of criteria pollutant concentrations at sensitive receptor locations. The LST values were determined using emissions modeling based on ambient air quality measured throughout the SCAB. If maximum daily emissions remain below the LST values during construction activities, it is highly unlikely that air pollutant concentrations in ambient air would reach levels sufficient to create public health concerns for sensitive receptors. With regards to TAC emissions, off-road equipment exhaust would contain diesel particulate matter (PM), which is the most prevalent air toxic in the greater Los Angeles region. However, each individual piece of equipment would only be in operation for a portion of the workdays. Carcinogenic risks are typically assessed on timescales of several years to multiple decades, as the risk accumulates over extended periods of exposure. Short-term exposures to diesel PM would have to involve extremely high concentrations in order to exceed the SCAQMD Air Quality Significance Threshold of 10 excess cancers per million. Therefore, as the proposed project would not exceed SCAQMD's thresholds during construction, the proposed project would not result in exposure of sensitive receptors to substantial concentrations of air pollution.

Operation

The SCAQMD recommends that a health risk assessment be conducted for substantial sources of diesel PM emissions (e.g., truck stops and distribution facilities). Exposure is dependent on the distance from the source of emissions to the sensitive receptor. There are two factors leading to a conclusion that the proposed project would not expose sensitive receptors to substantial pollutant concentrations. First, the proposed project would only increase vehicle miles traveled in the project area by approximately 0.043 percent. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. Second, the nearest sensitive receptors are residences located approximately 300 feet to the west of Alameda Street along Flint Avenue, Pioneer Avenue, and Watson Avenue south of Anaheim Street. There are no sensitive receptors fronting Alameda Street, and exposure to proposed project's impacts would be minimal. Therefore, the proposed project would not result in exposure of sensitive receptors to substantial concentrations of air pollution during operation.

Mitigation Measures

No mitigation measures are required.

d) Would the proposed project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people? (No Impact)

Construction

Odors are the only potential construction emissions other than the sources addressed above. Potential sources that may produce objectionable odors during construction activities include equipment exhaust, application of asphalt and architectural coatings, and other interior and exterior finishes. Odors from these sources would be localized and generally confined to the immediate area surrounding the project site and would be temporary in nature and would not persist beyond the termination of construction activities. The proposed project would utilize standard construction techniques, and the odors would be typical of most construction sites and temporary in nature. In addition, as construction-related emissions dissipate away from the construction area, the odors associated with these emissions would also decrease and would be quickly diluted. The construction contractor would also ensure that activities comply with SCAQMD Rules 401 (Visible Emissions) and 402 (Nuisance) to prevent the occurrence of public nuisances and visible dust plumes traveling off-site. Therefore, the proposed project would not result in construction odors adversely affecting a substantial number of people.

Operations

Odors are the only potential operational emissions other than the sources addressed above. Land uses and industrial operations that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The proposed project would comply with SCAQMD Rule 402, which would prohibit any air quality discharge that would be a nuisance or pose any harm to individuals of the public. The proposed project would not include an operational source of emissions. Therefore, the proposed project would not result in operational odors adversely affecting a substantial number of people.

Mitigation Measures

No mitigation measures are required.

Notes:

Project Start Year ->	2023
Project Length (months) ->	36
Total Project Area (acres) ->	5
Maximum Area Disturbed/Day (acres) ->	1
Water Truck Used? ->	Yes

	Total Material Imported/Exported Volume (yd^3/day)		Daily VMT (miles/day)			
Phase	Soil	Asphalt	Soil Hauling	Asphalt Hauling	Worker Commute	Water Truck
Grubbing/Land Clearing	200	0	300	0	720	40
Grading/Excavation	2,000	0	3,000	0	720	40
Drainage/Utilities/Sub-Grade	200	0	300	0	720	40
Paving	0	400	0	600	720	40

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

Total Emission Estimates by Phase for -> Alameda Street Widening

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

The CO2e emissions are reported as metric tons per phase.

Road Construction Emissions Model **Version 9.0.1**
Data Entry Worksheet

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with a
yellow or blue background can be modified. Program defaults have a white background.
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project types.
Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new project.

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

Input Type

Project Name	Alameda Street Widening	
Construction Start Year	2023	Enter a Year between 2014 and 2040 (inclusive)
Project Type	2	1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway 2) Road Widening : Project to add a new lane to an existing roadway 3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane 4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee construction
Project Construction Time	36.00	months
Working Days per Month	22.00	days (assume 22 if unknown)
Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	1	1) Sand Gravel : Use for quaternary deposits (Delta/West County) 2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the Ione formation (Scott Road, Rancho Murieta) 3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)
Project Length	1.02	miles
Total Project Area	5.00	acres
Maximum Area Disturbed/Day	1.25	acres
Water Trucks Used?	1	1. Yes 2. No

Please note that the soil type instructions provided in cells E18 to E2 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County. NEW LINK 8-2-2022.

	Paving	20.00	400.00	0.00

Mitigation Options

On-road Fleet Emissions Mitigation	2010 and Newer On-road Vehicles Fleet	Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer
Off-road Equipment Emissions Mitigation	20% NOx and 45% Exhaust PM reduction	Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAQMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure (http://www.airquality.org/Businesses/CEQA-Land-Use-Planning/Mitigation). Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standard

The remaining sections of this sheet contain areas that can be modified by the user, although those modifications are optional.

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F53.

Construction Periods	User Override of Construction Months	Program Calculated Months	User Override of Phase Starting Date	Program Default Phase Starting Date
Grubbing/Land Clearing		3.60	12/30/2023	1/1/2023

Arborist Report

Alameda Street Widening
From Harry Bridges Boulevard to Anaheim Street
Wilmington, California 90744

INTRODUCTION

This Arborist Report was prepared at the request of Mr. Randall Berry, P.E. of Harris & Associates. Harris & Associates received Task Order Solicitation Number 48 from the Department of Public Works at the City of Los Angeles to provide design and design support services during construction for the widening of Alameda Street from Anaheim Street to Harry Bridges Boulevard. It is Part 2 of a two-phased study and addresses trees on the north side of Harry Bridges Boulevard and the westerly side of Alameda Street. Part 1 of the report, prepared previously, addressed trees on the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street.

In addition to the proposed street widening, the Project also includes upgrades to the existing storm drain system, as this area has been subject to extensive flooding during and after major storm events. A dedicated bike path will be constructed on the easterly side of Alameda Street.

This report was prepared in accordance with the standards of the City of Los Angeles and the International Society of Arboriculture. The City of Los Angeles protects street trees. Street trees may not be removed, have their canopies pruned or root-pruned without first obtaining approval from the Urban Forestry Division within the City of Los Angeles.

The purpose of this Arborist Report is to document findings related to a ground level visual analysis of 116 trees within and immediately adjacent to the subject roadway and to provide a project impact analysis, tree photographs and tree location map and to discuss a mitigation plan for the subject trees in relation to the project as proposed.

SCOPE OF WORK

The study area started on the north side of East Harry Bridges Boulevard, just west of Quay Avenue. The inventory continued east along East Harry Bridges Boulevard, which changes to Alameda Street as the roadway turns to the northeast. The inventory continued along the northwesterly side of Alameda Street, past East Anaheim Street to East I Street.

The species, trunk diameter, canopy diameter, height, health, appearance, and condition of 113 street trees and 4 private trees were observed and recorded in September 2020 by Certified Arborist Patricia Lear of Lynn Capouya Inc.

A photograph of each tree is provided in Appendix B for general reference and record purposes. A Tree Location Map is included in Appendix C. The tree map is depicted on the proposed roadway improvement plan.

All information provided by the preparer is certified to be true and correct as of the date of the field observations.

TREE CHARACTERISTICS AND SITE CONDITIONS

As noted above, 113 street trees and four private trees exist within the study area. The site topography is relatively flat. The tree inventory includes three species as shown on Table 1 in Appendix A. Mexican fan palm (*Washingtonia robusta*) is the predominant species. Each tree is shown on the Tree Location Map contained in Appendix C.

The trees rated between "C" (average) to "F" (dead) in condition and appearance. Many of the 106 Mexican fan palms exhibited burnt frond edges and the presence of red palm weevil infestations were noted. The 106 Mexican fan palms include 11 stumps from street trees that were previously removed. The eight floss silk trees generally exhibited a lack of foliage and chlorosis.

The subject trees' scientific name, common name, diameter at breast height, average canopy width, overall height, health rating, appearance rating, and significant comments are summarized in Table 2 in Appendix A. Tree #1 through tree #23 were inventoried in Part 1 of the study, performed previously.

IMPACT ANALYSIS

The disposition, map page and reason for removal or encroachment for each tree are summarized in Table 3 in Appendix A. In determining whether a tree could be preserved, guidelines contained in the International Society of Arboriculture Best Management Practices (BMP) for Managing Trees during Construction and BMP for Root Management were utilized.

The four private trees would not be impacted by the project. Specific comments are grouped by the plan sheet depicting them and are as follows:

Tree #24 –This mature Mexican fan palm is outside of the area of construction impact. It will not be impacted by the project.

Tree #25 – A concrete curb will be constructed on the south side of this mature, 25-inch diameter lemon-scented gum. Excavation will occur within approximately 20 feet of the trunk. The exact location of this tree must be surveyed; the location plotted is approximate.

Using the BMP guidelines and with the opinion that lemon-scented gums have at least moderate tolerance to construction damage, the recommended TPZ for a mature lemon-scented gum of this size is approximately 25 feet. Construction of the curb would occur within this area. Therefore, it is possible that the tree could be destabilized if major structural roots are disturbed. Given that the curb will likely be constructed at the existing grade, it is possible to retain this tree if careful construction protocols, as discussed in the General Recommendations section of this report, are followed.

Tree #26 – A concrete curb will be constructed on the south side of this mature, 14.5-inch diameter lemon-scented gum. Excavation will occur within approximately 20 feet of the trunk. The exact location of this tree must be surveyed; the location plotted is approximate.

Using the BMP guidelines and with the opinion that lemon-scented gums have at least moderate tolerance to construction damage, the recommended TPZ for a mature lemon-scented gum of this size is approximately 14.5 feet. Construction of the curb would therefore not impact this tree.

Tree #27 – A concrete curb will be constructed on the south side of this young, 7.5-inch diameter lemon-scented gum. Excavation will occur within approximately 10 feet of the trunk. The exact location of this tree must be surveyed; the location plotted is approximate.

Using the BMP guidelines and with the opinion that lemon-scented gums have at least moderate tolerance to construction damage, the recommended TPZ for a mature lemon-scented gum of this size is approximately 7.5 feet. Construction of the curb would therefore not impact this tree.

Tree #28 through #32 – These five mature Mexican fan palms are outside of the area of construction impact. They will not be impacted by the project.

Tree #33 – A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur within approximately 6 feet of the trunk. If work is performed carefully in accordance with the General Recommendations section of this report, the tree should not be adversely impacted.

Tree #34 - A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur within approximately 4 feet of the trunk. If work is performed carefully in accordance with the General Recommendations section of this report, the tree should not be adversely impacted.

Tree #35 - A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur at the trunk. Therefore, this tree will be removed.

Tree #36 - A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur within approximately 3 feet of the trunk. If work is performed carefully in accordance with the General Recommendations section of this report, the tree should not be adversely impacted.

Tree #37 through #41 – These five mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #42 through #45 – These four trees are Mexican fan palm stumps from trees that were previously cut down.

Tree #46 and #47 - These two trees are Mexican fan palm stumps from trees that were previously cut down.

Tree #48A – This mature Mexican fan palm will be removed to widen Alameda Street.

Tree #48B through #52 – These five trees are Mexican fan palm stumps from trees that were previously cut down.

Tree #53 through #56 – These five mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #57 through #65 – These nine mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #66 through #76 – These 11 mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #77 through #86 – These 10 mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #87 through #94 – These four mature Mexican fan palms and four floss silk trees are within the area of the street widening. They will therefore be removed.

Tree #88 through #107 – These 11 mature Mexican fan palms and two floss silk trees are within the area of the street widening. They will therefore be removed.

Tree #108 through #121 – These 13 mature Mexican fan palms and one floss silk tree are within the area of the street widening. They will therefore be removed.

Tree #122 through #126 – These five mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #127 - A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur within approximately 3 feet of the trunk. If work is performed carefully in accordance with the General Recommendations section of this report, the tree should not be adversely impacted.

Tree #128 – This mature Mexican fan palm is within the area of the street widening. It will therefore be removed.

Tree #129 and #130 – These two mature Mexican fan palms are outside of the work area and should not be impacted.

Tree #131 – This mature floss silk tree is within the area of the street widening. It will therefore be removed.

Tree #132 - A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur within approximately 5 feet of the trunk. If work is performed carefully in accordance with the General Recommendations section of this report, the tree should not be adversely impacted.

Tree #133 - A concrete curb will be constructed on the southeasterly side of this mature Mexican fan palm. Excavation will occur within approximately 4 feet of the trunk. If work is performed carefully in accordance with the General Recommendations section of this report, the tree should not be adversely impacted.

Tree #134 through #136 – These three mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

Tree #136 through #139 – These three mature Mexican fan palms are within the area of the street widening. They will therefore be removed.

The project impacts to the 21 street trees within the study area may be summarized as follows:

Total number of street trees listed on map	113
Total number of dead or previously removed street trees on map	11
Total number of street trees to be removed (not including dead trees, including street trees where natural grade within dripline is changed)	89
Total number of street trees to be impacted by construction (within driplines)	4
Total number of street trees not dead, not to be removed, and/or where natural grade is unchanged	9

As noted previously, four private trees that will remain were also included in the inventory due to their proximity to the proposed project. These trees should not be impacted by the project. All work will need to be performed in strict accordance with the provisions contained in the following General Recommendations section.

MITIGATION

A Mitigated Negative Declaration (MND) was prepared for the project by the City of Los Angeles Bureau of Engineering Environmental Management Group, dated July 2, 2015. That MND did not address the trees on the north side of Harry Bridges Boulevard and the northwesterly side of Alameda Street.

The City of Los Angeles Municipal Code requires that street trees removed for construction be replaced at a ratio of two 24-inch box-size trees for each tree removed. Based on the current analysis, the project will result in the removal of 89 street trees. Therefore, a total of 178 24-inch box-size trees must be included in the project design to mitigate for the trees to be removed.

GENERAL RECOMMENDATIONS

The following general recommendations should be followed to establish and maintain a healthy cultural environment for trees. It must be understood that these recommendations apply to both native and ornamental native trees in general; specific questions should always be referred to the project arborist.

WORK WITHIN THE TREE PROTECTION ZONE

The Tree Protection Zone is an area surrounding a tree, and varies by tree age, size, and species. Great care must be taken when work is conducted within the tree protection zone to ensure that the tree will not decline or fail. Specific recommendations are as follows:

Observation -- All work conducted within the Tree Protection Zone should be performed within the presence of a qualified arborist. Usually this work will also require a permit

from the local government. This will help to ensure that work is performed in a manner that will not harm a tree.

Notice – At least forty-eight hours' notice should be provided to the arborist prior to the planned start of work. This notification must usually be provided to the local government also. The notice will ensure that the project receives the highest possible scheduling priority and avoid delays.

Hand Tools -- All work should be accomplished with the use of hand tools only. Except under special circumstances, tractors, backhoes, and other vehicles cannot be operated in a manner that will preserve major tree roots, minimize soil compaction, and ensure the safety of both the vehicle operator and the tree.

Certification -- All work conducted within the Tree Protection Zone should be certified by a qualified arborist. For work performed under a permit, this may be a requirement of the local government.

WORK OUTSIDE OF THE TREE PROTECTION ZONE

To protect trees within the vicinity of major construction, trees should be temporarily fenced at the edge of the drip line prior to the beginning of construction operations on a site. The fence should be constructed of orange safety fencing affixed to t-posts. The arborist should be contacted to develop a fencing plan, generally required by local ordinance. The fence may be removed at the completion of the construction upon approval by the local government.

In this instance, the drip line of trees #2228 and #2229 encompass the new driveway. The driveway contractor will need to keep all vehicles, materials, equipment, and spoils out of the parkway area beneath the trees to minimize soil compaction.

WATERING AND FERTILIZATION

Winter rains should be enough to provide the water needed for established street trees. Trees in landscaped areas will usually receive enough water from adjacent plantings. If it is suspected that a tree needs supplemental water, contact a qualified arborist for advice.

Watering -- If supplemental water is required, use a water probe, such as a "Ross Root Feeder" to apply the water. Alternatively, a low volume soaker hose could be utilized. Apply the water at various locations, just outside the dripline of the tree. A total of 15 to 20 hours of low volume application should suffice. Repeat this watering cycle every one-to-two months as needed.

Fertilization -- Fertilizer can be applied along with the water. A total of 0.75 pound of actual nitrogen per inch of trunk diameter per year is a basic rule-of-thumb. However, ask your local certified nurseryman for a specific recommendation and follow the manufacturer's directions carefully. Over-fertilization can be deadly.

Aeration -- Ventilation of the root system can be beneficial in areas where soil is compacted. Hand dig holes 6 inches in diameter to a depth of 2 feet. Do not cut any roots more than 1 inch in diameter. Dig the holes 2 feet on center, in concentric circles around the trunk, throughout the dripline. If possible, add holes outside of the dripline. Fill the holes with an organic matter. If leaf litter is not available, a mixture such as 50

percent "Kellogg's Nitrohumus" and 50 percent nitrolized redwood shavings will be beneficial. This organic matter will be decomposed, producing a year-round source of fertilizer for the tree.

DISEASES AND INSECTS

Effective pest control starts with observation by the homeowner. Changes, such as abnormal leaf drop, oozing sap, and discolored or dying leaves indicate that something changed and expert inspection is required. Homeowners should be careful when using pesticides around a tree. Herbicides should not be utilized within 100 feet of trees, unless applied by a certified pesticide applicator. Misuse of these compounds can lead to the death of beneficial organisms or even to the death of the tree.

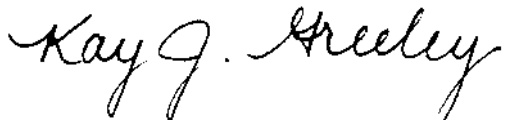
GRADE CHANGES

Any change to the grade at the root crown of tree can have a negative impact. As little as 6 inches of change throughout the drip line can lead to the death of the tree. Drainage patterns should be maintained to prevent water from flowing and ponding at the base of a tree. If fill soil exists, use a shovel to remove the excess soil. The flare at the root crown should just be visible.

WARRANTY

The trees discussed herein were generally reviewed for physical, biological, functional, and aesthetic conditions. This examination was conducted in accordance with presently accepted industry procedures: an at-grade, macro-visual observation only. No extensive microbiological, soil/root excavation, upper crown examination, nor internal tree investigation was conducted and therefore, the reportings herein reflect the overall visual appearance of the trees on the date reviewed. No warranty is implied as to the potential failure, health or demise of any part or the whole of any tree described in this report.

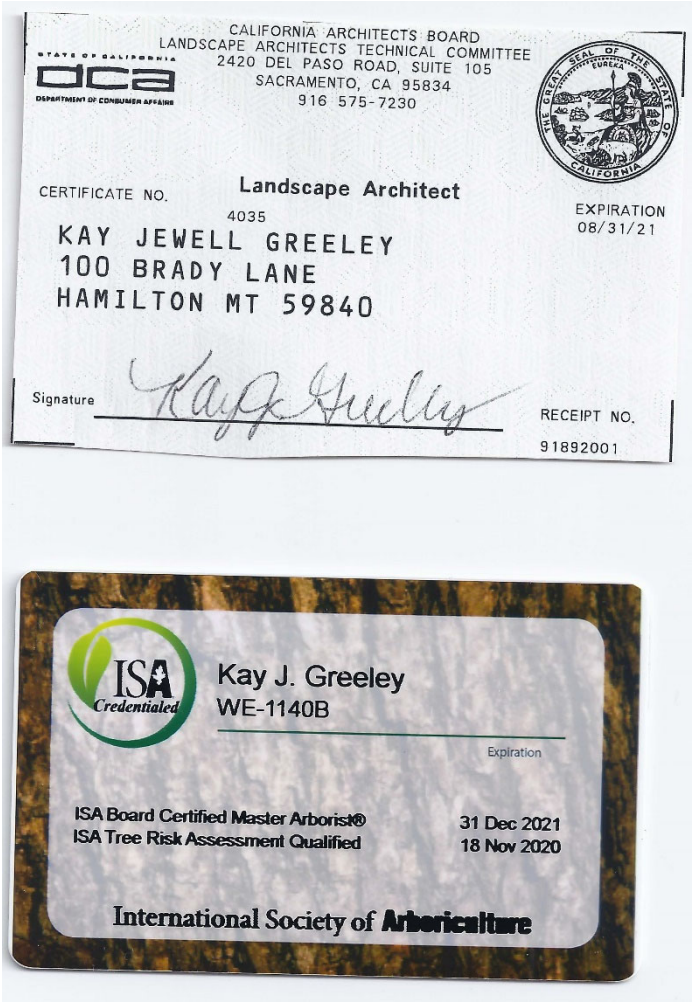
Clients are advised that should physical or biological concerns be evidenced for any specimen within this report, prudent further investigation, detailed analysis, or remedial action may be required.



As living organisms, plants continually exhibit growth and response to environmental changes that influence the development, health, and vigor of the specimen. These influences may not be externally visible and may be present or develop over various time periods depending on the site conditions.

It is recommended that due to the general nature of plant development and continued environmental and physical influences on vegetation at a specific site, regular monitoring by a qualified arborist is scheduled.

Locations of property lines or exact tree locations, site amenities, structures or easements are assumed to be as illustrated on any enclosed maps. They are a composite of information provided by the client, records of fact and/or on-site field review. No investigation was made to verify these conditions.



This report represents the independent opinion of the preparer and was conducted per the client's scope of request. The report is therefore limited to the extent described herein.

Arborist Report

Alameda Street Widening
From Harry Bridges Boulevard to Anaheim Street
Wilmington, California 90744

INTRODUCTION

This Arborist Report was prepared at the request of Mr. Randall Berry, P.E. of Harris & Associates. Harris & Associates received Task Order Solicitation Number 48 from the Department of Public Works at the City of Los Angeles to provide design and design support services during construction for the widening of Alameda Street from Anaheim Street to Harry Bridges Boulevard.

In addition to the proposed street widening, the Project also includes upgrades to the existing storm drain system, as this area has been subject to extensive flooding during and after major storm events. A dedicated bike path will be constructed on the easterly side of Alameda Street.

This report was prepared in accordance with the standards of the City of Los Angeles and the International Society of Arboriculture. The City of Los Angeles protects street trees. Street trees may not be removed, have their canopies pruned or root-pruned without first obtaining approval from the Urban Forestry Division within the City of Los Angeles.

The purpose of this Arborist Report is to document findings related to a ground level visual analysis of 23 trees within and immediately adjacent to the subject roadway and to provide a project impact analysis, tree photographs and tree location map and to discuss a mitigation plan for the subject trees in relation to the project as proposed.

SCOPE OF WORK

The study area started on the south side of East Harry Bridges Boulevard, just west of Quay Avenue. The inventory continued east along East Harry Bridges Boulevard, which changes to Alameda Street as the roadway turns to the northeast. The inventory continued along Alameda Street, past East Anaheim Street to East I Street. The inventory also included the south side of Anaheim Street for a small distance east of Alameda Street.

The species, trunk diameter, canopy diameter, height, health, appearance, and condition of 21 street trees and two private trees were observed and recorded in April 2020 by Certified Arborist Patricia Lear of Lynn Capouya Inc.

A photograph of each tree is provided in Appendix B for general reference and record purposes. A Tree Location Map is included in Appendix C. The tree map is depicted on the proposed roadway improvement plan.

All information provided by the preparer is certified to be true and correct as of the date of the field observations.

TREE CHARACTERISTICS AND SITE CONDITIONS

As noted above, 21 street trees and two private trees exist within the study area. The site topography is relatively flat. The tree inventory includes three species as shown on Table 1 in Appendix A. Mexican fan palm (*Washingtonia robusta*) is the predominant species. Each tree is shown on the Tree Location Map contained in Appendix C.

The trees rated between "C" (average) to "F" (dead) in condition and appearance. Most of the 16 Mexican fan palms exhibited burnt frond edges. The four carrot wood trees exhibited a significant amount of canopy die-back. The three Brisbane box trees appeared to have been planted sometime between 2012 and 2014 based on Google Maps imagery. All three trees are still double staked, likely since the time they were planted.

The subject trees' scientific name, common name, diameter at breast height, average canopy width, overall height, health rating, appearance rating, and significant comments are summarized in Table 2 in Appendix A.

IMPACT ANALYSIS

The disposition, map page and reason for removal or encroachment for each tree are summarized in Table 3 in Appendix A. In determining whether a tree could be preserved, guidelines contained in the International Society of Arboriculture Best Management Practices (BMP) for Managing Trees during Construction and BMP for Root Management were utilized. Specific comments are as follows:

Tree #1 – A sidewalk ramp will be constructed on the east side of this mature, 14-inch diameter mature carrot wood to create a transition between the existing sidewalk and the street improvements to the east. The work will start approximately 4.25 feet from the trunk, within the dripline.

Using the BMP guidelines and with the opinion that carrot woods have at least moderate tolerance to construction damage, the recommended TPZ for a mature carrot wood of this size is approximately 14 feet. Construction of the sidewalk ramp would occur well within this area. Therefore, it is our opinion that the tree could be destabilized, especially given the small size of the tree well. Therefore, the tree will be removed.

Tree #2 – This mature carrot wood will be removed due to the street widening.

Tree #3 – A sidewalk ramp will be constructed on the west side of this mature, 18-inch diameter mature carrot wood to create a transition between the existing sidewalk and the street improvements to the west. The work will start approximately 7.5 feet from the trunk, just outside of the dripline.

Using the BMP guidelines and with the opinion that carrot woods have at least moderate tolerance to construction damage, the recommended TPZ for a mature carrot wood of this size is approximately 18 feet. Construction of the sidewalk ramp would occur well

within this area. Therefore, it is our opinion that the tree could be destabilized, especially given the small size of the tree well. Therefore, the tree will be removed.

Tree #4 – A bike path will be constructed on the south side of this mature, 18-inch diameter mature carrot wood, requiring that the adjacent grade be lowered and compacted. The work will start approximately 2.8 feet from the trunk, within the dripline.

Using the BMP guidelines and with the opinion that carrot woods have at least moderate tolerance to construction damage, the recommended TPZ for a mature carrot wood of this size is approximately 18 feet. Construction of the sidewalk ramp would occur well within this area. Therefore, it is our opinion that the tree could be destabilized, especially given the small size of the tree well. Therefore, the tree will be removed.

Tree #5 and #6 – These two mature Mexican fan palms grow on private property, just outside the limit of the new bike path. They should be able to survive the construction as long as they are fenced at the work limit prior to the start of work. If field staking indicates that the one or both trees require removal to complete the proposed work, the adjacent property owner will need to be contacted at that time for coordination.

Tree # 7 through #12 – These six mature Mexican fan palms will be removed due to the street widening.

Tree #13 – This Mexican fan palm was cut down in 2012 or earlier. The stump remains.

Tree #14 and Tree #15 - These two mature Mexican fan palms will be removed due to the street widening.

Tree #16 – This Mexican fan palm was cut down in 2011 or earlier. The stump remains.

Tree #17 – This mature Mexican fan palm will be encroached upon within its dripline to replace the existing pavement to the north of the tree. It should be able to remain in place with no long-term adverse impacts since the grade will not be changed.

Tree #18 – This Mexican fan palm was removed prior to the inventory, likely due to interference with a vault project presently under way.

Tree #19 – This mature Mexican fan palm will be removed due to the street widening.

Tree #20 and Tree #21 – These small Brisbane box trees will be removed due to the street widening.

Tree #22 and Tree #23 – This Brisbane box tree and Mexican fan palm are outside of the work limits and will not be directly impacted by the project.

The project impacts to the 21 street trees within the study area may be summarized as follows:

Total number of street trees listed on map	21
Total number of dead or previously removed street trees on map	3
Total number of street trees to be removed (not including dead trees, including street trees where natural grade within dripline is changed)	15
Total number of street trees to be impacted by construction (within driplines)	1
Total number of street trees not dead, not to be removed, and/or where natural grade is unchanged	2

As noted previously, two private trees that will remain were also included in the inventory due to their proximity to the proposed project. All work will need to be performed in strict accordance with the provisions contained in the following General Recommendations section.

MITIGATION

A Mitigated Negative Declaration (MND) was prepared for the project by the City of Los Angeles Bureau of Engineering Environmental Management Group, dated July 2, 2015. That MND determined that 11 Mexican fan palms would be removed to allow for the street widening and stated that 22 24-inch box-size trees would be planted to replace the trees in accordance with City requirements. The MND noted that replacement tree species selection needs to consider the presence of overhead power lines on Alameda and Anaheim streets.

Based on the current analysis, the project will result in the removal of 15 street trees. Therefore, a total of 30 24-inch box-size trees must be included in the project design to mitigate for the trees to be removed.

GENERAL RECOMMENDATIONS

The following general recommendations should be followed to establish and maintain a healthy cultural environment for trees. It must be understood that these recommendations apply to both native and ornamental native trees in general; specific questions should always be referred to the project arborist.

WORK WITHIN THE TREE PROTECTION ZONE

The Tree Protection Zone is an area surrounding a tree, and varies by tree age, size and species. Great care must be taken when work is conducted within the tree protection zone to ensure that the tree will not decline or fail. Specific recommendations are as follows:

Observation -- All work conducted within the Tree Protection Zone should be performed within the presence of a qualified arborist. Usually this work will also require a permit from the local government. This will help to ensure that work is performed in a manner that will not harm a tree.

Notice – At least forty-eight hours' notice should be provided to the arborist prior to the planned start of work. This notification must usually be provided to the local government also. The notice will ensure that the project receives the highest possible scheduling priority and avoid delays.

Hand Tools -- All work should be accomplished with the use of hand tools only. Except under special circumstances, tractors, backhoes and other vehicles cannot be operated in a manner that will preserve major tree roots, minimize soil compaction, and ensure the safety of both the vehicle operator and the tree.

Certification -- All work conducted within the Tree Protection Zone should be certified by a qualified arborist. For work performed under a permit, this may be a requirement of the local government.

WORK OUTSIDE OF THE TREE PROTECTION ZONE

To protect trees within the vicinity of major construction, trees should be temporarily fenced at the edge of the drip line prior to the beginning of construction operations on a site. The fence should be constructed of orange safety fencing affixed to t-posts. The arborist should be contacted to develop a fencing plan, generally required by local ordinance. The fence may be removed at the completion of the construction upon approval by the local government.

In this instance, the drip line of trees #2228 and #2229 encompass the new driveway. The driveway contractor will need to keep all vehicles, materials, equipment, and spoils out of the parkway area beneath the trees to minimize soil compaction.

WATERING AND FERTILIZATION

Winter rains should be enough to provide the water needed for established street trees. Trees in landscaped areas will usually receive enough water from adjacent plantings. If it is suspected that a tree needs supplemental water, contact a qualified arborist for advice.

Watering -- If supplemental water is required, use a water probe, such as a "Ross Root Feeder" to apply the water. Alternatively, a low volume soaker hose could be utilized. Apply the water at various locations, just outside the dripline of the tree. A total of 15 to 20 hours of low volume application should suffice. Repeat this watering cycle every one-to-two months as needed.

Fertilization -- Fertilizer can be applied along with the water. A total of 0.75 pound of actual nitrogen per inch of trunk diameter per year is a basic rule-of-thumb. However, ask your local certified nurseryman for a specific recommendation and follow the manufacturer's directions carefully. Over-fertilization can be deadly.

Aeration -- Ventilation of the root system can be beneficial in areas where soil is compacted. Hand dig holes 6 inches in diameter to a depth of 2 feet. Do not cut any roots in excess of 1 inch in diameter. Dig the holes 2 feet on center, in concentric circles

around the trunk, throughout the dripline. If possible, add holes outside of the dripline. Fill the holes with an organic matter. If leaf litter is not available, a mixture such as 50 percent "Kellogg's Nitrohumus" and 50 percent nitrolized redwood shavings will be beneficial. This organic matter will be decomposed, producing a year-round source of fertilizer for the tree.

DISEASES AND INSECTS

Effective pest control starts with observation by the homeowner. Changes, such as abnormal leaf drop, oozing sap, and discolored or dying leaves indicate that something changed and expert inspection is required. Homeowners should be careful when using pesticides around a tree. Herbicides should not be utilized within 100 feet of trees, unless applied by a certified pesticide applicator. Misuse of these compounds can lead to the death of beneficial organisms or even to the death of the tree.

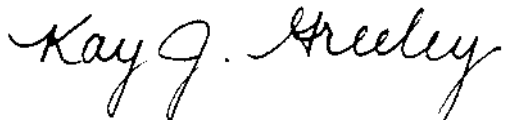
GRADE CHANGES

Any change to the grade at the root crown of tree can have a negative impact. As little as 6 inches of change throughout the drip line can lead to the death of the tree. Drainage patterns should be maintained to prevent water from flowing and ponding at the base of a tree. If fill soil exists, use a shovel to remove the excess soil. The flare at the root crown should just be visible.

WARRANTY

The trees discussed herein were generally reviewed for physical, biological, functional, and aesthetic conditions. This examination was conducted in accordance with presently accepted industry procedures: an at-grade, macro-visual observation only. No extensive microbiological, soil/root excavation, upper crown examination, nor internal tree investigation was conducted and therefore, the reportings herein reflect the overall visual appearance of the trees on the date reviewed. No warranty is implied as to the potential failure, health or demise of any part or the whole of any tree described in this report.

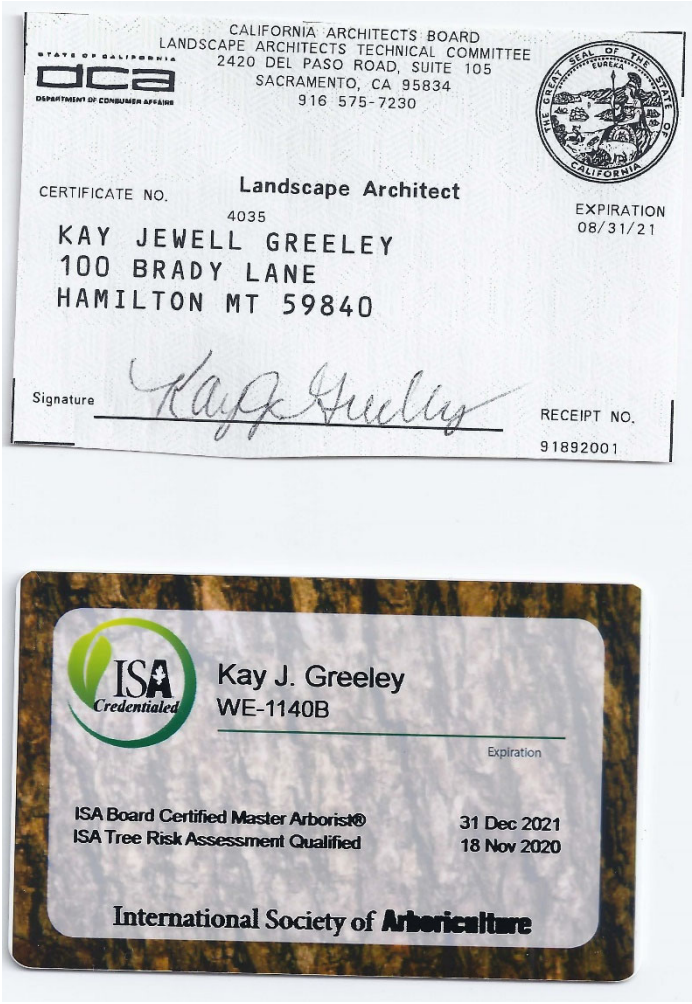
Clients are advised that should physical or biological concerns be evidenced for any specimen within this report, prudent further investigation, detailed analysis or remedial action may be required.



As living organisms, plants continually exhibit growth and response to environmental changes that influence the development, health and vigor of the specimen. These influences may not be externally visible and may be present or develop over various time periods depending on the site conditions.

It is recommended that due to the general nature of plant development and continued environmental and physical influences on vegetation at a specific site, regular monitoring by a qualified arborist is scheduled.

Locations of property lines or exact tree locations, site amenities, structures or easements are assumed to be as illustrated on any enclosed maps. They are a composite of information provided by the client, records of fact and/or on-site field review. No investigation was made to verify these conditions.



This report represents the independent opinion of the preparer and was conducted per the client's scope of request. The report is therefore limited to the extent described herein.

TECHNICAL MEMORANDUM

To	Cherry Villanueva, Environmental Specialist II City of Los Angeles Department of Public Works, Bureau of Engineering
Subject	Alameda Street Improvement Project Biological Resources Technical Memorandum - FINAL
From	Anthony Greco, Senior Biologist, AECOM
Date	March 15, 2023

1.0 INTRODUCTION

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed Project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the Project is approximately 5,400 feet, or 1.02 miles. The proposed Project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street.

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along eastern side of the street;
- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;
- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Ave at Harry Bridges Boulevard;
- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

This letter report has been prepared in support of an Initial Study/Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA). This letter report includes the methods used to assess existing biological resources, the results of vegetation, wildlife, and habitat evaluation, the list of potential special-status species

evaluated, and mitigation measures or project design features identified to minimize and avoid potential impacts to biological resources.

2.0 PROJECT DESCRIPTION

2.1 Background

The Port of Los Angeles (POLA) has delegated the design and construction of the Alameda Street widening improvements to BOE, which is required as mitigation for the POLA Berth 200 Rail Yard expansion project.

The proposed improvements will aid in the movement of goods both via trains and trucks to and from the POLA and Port of Long Beach. Although separate from the POLA Berth 200 Rail Yard expansion project, the proposed project would fulfill a required component and mitigation for the POLA project by improving traffic congestion, goods movement by train and truck, localized flooding, and public safety.

2.2 Project Location and Setting

The project site is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed project is shown in Figure 1 in Attachment A.

The project site is an approximately 1.02-mile segment of Alameda Street with a variable 70- to 100-foot right-of-way (ROW) and two lanes in each direction. The posted speed limit is 40 miles per hour and there is no on-street parking permitted within the project limits. At the northernmost portion of the project limits where Alameda Street intersects Anaheim Street, there is a sidewalk that runs on the east side of Alameda Street, terminates just south of the Alameda Street driveway into the International Longshoremen and Warehouse Union Local 13 Dispatch Hall (ILWU-13), then reconvenes, still on the east side of Alameda Street, just north of where Eubank Avenue intersects Alameda Street, and continues for the remainder of the project limits.

The area is a developed urban setting surrounded by both light and heavy industrial uses. There are existing aboveground and underground utilities within the Project location that include a Los Angeles Department of Water and Power (LADWP) water line, multiple buried oil and fuel lines, storm drains, streetlights, and LADWP overhead power lines and poles throughout the Project limits. At this location, Alameda Street is utilized for local traffic as well as trips to and from the Ports of Long Beach and Los Angeles, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the Project site. The project site location is shown in Figure 2 in Attachment A.

California State Route 47 (“North Henry Ford Avenue”) and California State Route 103 are located to the east, California State Freeway 47 (“Seaside Freeway”) is to the south, Harbor Freeway 110 is to the west, and Pacific Coast Highway is to the north. The Long Beach Transit lines 45, 191, and 192 serve the area east of the project site, on Anaheim Street at Santa Fe Avenue and the Metro 202 and 232 bus line travels on Anaheim Street to and from Los Angeles International Airport from Long Beach Boulevard.

2.3 Project Objectives

The primary objectives of the proposed project are to:

- Provide congestion relief,
- Improve goods movement and mobility by train and truck,
- Minimize roadway flooding for storms during low-tide conditions, and
- Enhance mobility for pedestrians and cyclists.

2.4 Description of Proposed Project

The proposed Project would: (1) widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width; (2) upgrade four existing railroad crossings at Anaheim Street, “E” Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; (3) modify two traffic signals on Alameda Street at Anaheim Street and at the ILWU-13 property driveway entrance, and install three new traffic signals on “E” Street at Alameda Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) at Alameda Street, and Quay Avenue at Harry Bridges Boulevard; (4) meet the requirements of the California Coast Trail, LA Harbor Waterfront Pedestrian Trail and the City of Los Angeles 2010 Bicycle Plan (Backbone Bikeway Network) by installing a Class I (off street) eight foot wide, two-way bike trail and shared pedestrian path, which would commence at the southernmost portion of the Project at Harry Bridges Boulevard and run along the eastern side of Alameda Street until Alameda Street intersects Anaheim Street; (5) upgrade Alameda Street to a Modified Major Highway Class II Street; (6) relocate, construct, and extend the City of Los Angeles and Los Angeles County Flood Control District storm drain systems; (7) construct a new sidewalk on the southern side of Anaheim Street, with all sidewalks constructed in compliance with the latest version of the BOE Plan Standards; and (8) street tree removal and replacement. Installation of new and relocation of existing utilities such as water, oil, gas, power poles, streetlight poles, and sewers would also be required along with right-of-way acquisition.

2.5 Construction Schedule and Procedures

Construction of the proposed project would begin in approximately December 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented.

The anticipated number of construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the project at the start of construction and would remain on site for most of the project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

An appropriate combination of monitoring and resource avoidance would be employed during all construction activities, including implementation of the following Best Management Practices (BMPs):

- Construction of the proposed project is anticipated to occur every day of the week from 7:00 a.m. to 4:00 p.m. Should construction be required outside of the anticipated hours, construction activity would comply with the allowable hours of construction as dictated in the *Los Angeles Municipal Code Section 41.40*, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or City holidays.

- The proposed project would implement Rule 403 fugitive dust control measures required by the South Coast Air Quality Management District (SCAQMD), which requires reasonable precautions to be taken to prevent visible particulate matter from being airborne, under normal wind conditions, beyond the property from which the emission originates. Reasonable precautions include, but are not limited to, the following:
    - Application of water on dirt roads, material stockpiles, and other surfaces that can give rise to airborne dusts; and
    - Maintenance of roadways in a clean condition
- The proposed project would implement erosion control where necessary that may include, but would not be limited to, the following:
    - Minimizing the extent of disturbed areas and duration of exposure;
    - Stabilizing and protecting disturbed areas;
    - Keeping runoff velocities low;
    - Retaining sediment within the construction area;
    - Use of silt fences or straw wattles;
    - Temporary soil stabilization;
    - Temporary drainage inlet protection;
    - Temporary water diversion around the immediate work area; and
    - Minimizing debris from construction vehicles on roads providing construction access
- The proposed project would implement Rule 402 measures required by the SCAQMD, which prohibits the discharge from any source whatsoever, such

quantities of air contaminants or other materials that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public or which endanger the comfort, repose, health, or safety of any such persons or the public or that cause or have a natural tendency to cause injury or damage to business or property.

- BOE would ensure that all construction crews have fire-suppression equipment (such as fire extinguishers) on site to respond to the accidental ignition of a fire.

- Spill kits will be available onsite for potential leaks or spills of hazardous materials.

- BOE or its contractor would minimize short-term construction noise through: (1) proper maintenance and tuning of all construction equipment engines to minimize noise emissions; and (2) proper maintenance and functioning of the mufflers on all internal combustion and equipment engines.

- BOE or its contractor would implement the recommendations for the protection, removal, and/or replacement of street trees detailed in the Arborist Report prepared for the project, as applicable and in consultation with the City's Urban Forestry Division and/or Board of Public Works.

3.0 METHODS FOR ASSESSING BIOLOGICAL RESOURCES

A search of relevant regional databases for special-status biological resources in the vicinity of the project area was conducted prior to conducting a field survey. The project runs north-south along Alameda Street and occurs almost entirely within the southwestern portion of the U.S. Geological Survey's Long Beach quadrangle. A search of this quad and the surrounding seven quadrangles, including San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance was made of the California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB) and of the California Native Plant Society's (CNPS) on-line Inventory of Rare and Endangered Plants of California. Additionally, the U.S. Fish and Wildlife Service's (USFWS) online Information for Planning and Consultation (IPaC) (USFWS 2022) database was queried for special-status species, sensitive natural communities, and protected areas known from the project vicinity.

The area evaluated for biological resources includes the proposed project limits and a 500-foot survey buffer, combined the Biological Survey Areas (BSA) (Figure 3, Attachment A). A buffer around the Project limits was evaluated in order to capture potential indirect effects to biological resources from implementation of the proposed project. Indirect effects could include elevated noise and dust levels and increased human activity within the BSA. A 500-foot survey buffer is appropriate for capturing potential indirect impacts from a project on biological resources. It is anticipated that indirect impacts beyond 500 feet for this proposed project are generally diffuse and would not significantly impact biological resources.

Prior to conducting a field survey, aerial imagery of the BSA was reviewed for the presence of areas that could potentially support special-status biological resources. Since most of the BSA is developed by hardscape features (i.e., roadways, rail tracks, buildings), the desktop review focused on identifying any significant green or otherwise open spaces in the vicinity of the proposed project. On September 10, 2021, a field survey of the proposed project limits and 500-foot survey buffer was conducted by AECOM biologists Art Popp and Brianna Quirarte to document existing biological resources that occur or have the potential to occur

within and adjacent to the BSA, and to evaluate the potential for special-status plant and wildlife species to occur within the BSA. Binoculars were utilized to scan for evidence of wildlife activity in the BSA. Seasonal, species-specific botanical or wildlife surveys were not conducted as part of this evaluation; however, based on the survey conducted and an assessment of habitat conditions in the BSA, it is apparent that special-status plant and wildlife species are not anticipated within the urbanized environment of the BSA.

4.0 EXISTING CONDITIONS

The entire BSA is urbanized or has otherwise been previously disturbed. It is composed primarily of paved roadways, railroad corridors on both sides of Alameda Street, and commercial and industrial buildings and associated parking lots. A significant amount of rail and truck traffic occurs through the BSA to and from the ports. No open spaces, parks, or similar areas occur within the BSA. Vegetation is sparse and consists primarily of non-native ornamental trees and ruderal herbaceous vegetation. Photographs depicting conditions within the BSA are provided in Attachment B.

4.1 Vegetation Communities and Plant Species

Vegetation communities are assemblages of plant species that commonly coexist. The classification of vegetation communities is based on the life form of the dominant species within that community and the associated species. No native plant communities occur within or adjacent to the BSA. Non-native ornamental tree species occur along the west side of Alameda Street and in landscaped areas associated with buildings and park lots within the BSA, and ruderal herbaceous vegetation occurs within unpaved, disturbed areas.

Many street trees line Alameda Street along the project alignment. Most of these are Mexican fan palm (*Washingtonia robusta*) and California fan palm (*W. filifera*) trees, with a few silk floss trees (*Chorisia speciosa*) also present. Other tree species observed within the BSA include cinnamon tree (*Cinnamomum verum*), camphor tree (*C. camphora*), Brisbane box (*Lophostemon confertus*), king palm (*Archontophoenix alexandrae*), and Norfolk Island pine (*Araucaria heterophylla*). Non-native, weedy herbaceous species that occur in disturbed areas of the BSA include Russian thistle (*Salsola tragus*), goosefoot (*Chenopodium* sp.), cudweed (*Pseudognaphalium californicum*), rip-gut brome (*Bromus diandrus*), and wild oat (*Avena* sp). One native plant species, California sunflower (*Helianthus californicus*) was observed within the BSA.

4.2 Wildlife

Wildlife species observed during the field survey included two bird and one reptile species that are common in and adapted to urban environments, including rock dove (*Columba livia*), house finch (*Haemorhous mexicanus*), and western fence lizard (Sceloporus occidentalis). It is expected that songbird and raptor species common in southern California urban areas, as well as gulls and other common shore birds that occur year-round in the ports, would have the greatest potential to occur in the BSA. A lack of vegetation within the BSA limits bird activity in the BSA; however, palm trees occurring along the west side of Alameda Street provide suitable cover, resting, and nesting habitat for some bird species. Additionally, the numerous ungroomed fan palm trees present in the BSA offer suitable

roosting habitat for bat species known to utilize dead palm fronds, such as western yellow bat (*Lasiurus xanthinus*).[1]

Although tidal waters of San Pedro Bay occur within close proximity of the eastern perimeter of the BSA, marine mammals such as sea lions (*Zalophus californianus*), which are known to haul-out on shorelines in the bay, are not anticipated to occur within the BSA. A large rail corridor and fence lines separate bay waters from the project alignment, limiting movement into the project area.

4.3 Wildlife Movement Corridor

Natural vegetation communities or waterways which provide opportunities for resting, cover, foraging, and nesting activities that support regional wildlife movement are not present in the BSA. Additionally, there are no wildlife movement corridors between the BSA and tidal waters of San Pedro Bay, located just outside the eastern perimeter of the BSA. Mature palm trees along the project alignment may provide resting, foraging, and nesting/roosting habitat that support localized bird and bat populations; however, the BSA does not serve as a regional wildlife corridor and direct impacts to regional wildlife movement would not occur.

5.0 SPECIAL-STATUS SPECIES

5.1 Special-Status Plant Species

Special-status plant species include those listed as Endangered, Threatened, Rare or those species proposed for listing by the US Fish and Wildlife Service (USFWS) under the federal Endangered Species Act (FESA), those listed by CDFW under the California Endangered Species Act (CESA), and the CNPS.[2,3,4] The CNPS inventory is sanctioned by the CDFW and essentially serves as the list of candidate plant species for state listing. CNPS's California Rare Plant Ranks (CRPR) 1B and 2 species are considered eligible for state listing as endangered or threatened.

A total of 46 plant species were identified from the CNDDB[5] and CNPS[6] database searches to have historically been recorded from the Long Beach and surrounding seven quadrangles, and from a search of IPaC[6] for the project vicinity, including the eight federal and/or State-listed species below:

---

1 Pierson, E.D. and Rainey, W.E. 1998. Western yellow bat, Lasiurus xanthinus. In Terrestrial Mammal Species of Special Concern in California. Betsy C. Bolster, Ed. Prepared for California Fish and Game. Available at: https://www.nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=2343#:~:text=The%20western%20yellow%20bat%20is,occurs%20year%2Dround%20in%20California.

2 Species listed or proposed for listing as threatened or endangered under the federal Endangered Species Act (Title 50 Code of Federal Regulations [CFR] 17.12 [listed plants], Title 50 CFR 17.11 [listed animals] and includes notices in the Federal Register for proposed species).

3 Species listed or proposed for listing by the State of California as threatened or endangered under the California Endangered Species Act (Title 14 California Code of Regulations 670.5).

4 Plants listed as rare under the California Native Plant Protection Act (California Fish and Game Code Section 1900 *et seq*.).

5 California Department of Fish and Wildlife. *California Natural Diversity Data Base (CNDDB).* Full condensed report for the Long Beach, San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance quadrangles. Generated November 1, 2022.

6 California Native Plant Society, Rare Plant Program. 2022. Inventory of Rare and Endangered Plants (online edition, v9-01 0.0). Available at: http://www.rareplants.cnps.org/. Accessed November 1, 2022.

- Ventura Marsh milk-vetch (*Astragalus pycnostachyus* var. *lanosissimus*; federally and State-listed Endangered)
- coastal dunes milk-vetch (*Astragalus tener var. titi*; federally and State-listed Endangered)
- salt marsh bird's-beak (*Chloropyron maritimum ssp. maritimum*; federally and State-listed Endangered)
- San Diego button-celery (*Eryngium aristulatum* var. *parishii;* federally and State-listed Endangered)
- Gambel's watercress (*Nasturtium gambellii;* federally-listed Endangered and State-listed Threatened)
- spreading navarretia (*Navarretia fossalis* federally-listed Threatened)
- California Orcutt grass (*Orcuttia californica*; federally and State-listed Endangered)
- Lyon's pentachaeta (*Pentachaeta lyonia*; federally and State-listed Endangered)

The 46 special-status plant species identified during the database reviews, their status, and habitat requirements are provided in Attachment C, Table A.

No special-status plant species were detected during the field survey. CNDDB records for two special-status plant species, prostrate vernal pool navarretia (*Navarretia prostrata* CRPR 1B.1) and Lyon's pentachaeta, coincided with the BSA. These records represent historical known occurrences of these species prior to development of the area and these species are anticipated to be extirpated from the BSA. No suitable habitats (described in Attachment C, Table A) for the regional special-status plant species identified during the database searches occurs within the BSA.

No USFWS-designated Critical Habitat for any special-status plant species coincides with the BSA.

5.2 Special Status Wildlife Species

Special-status wildlife species include those listed by USFWS under FESA and by CDFW under CESA. USFWS and CDFW officially list species as either threatened, endangered, or as candidates for listing. Additional species receive federal protection under the Bald Eagle Protection Act (e.g., bald eagle, golden eagle), the Migratory Bird Treaty Act (MBTA), and state protection under CEQA Section 15380(d).

All birds, except European starlings, English house sparrows, rock doves (pigeons), and non-migratory game birds such as quail, pheasant, and grouse are protected under the MBTA. However, non-migratory game birds are protected under California Fish and Game Code (CFGC) Section 3503. Many other species are considered by CDFW to be California Species of Special Concern (SSC) and others are on a CDFW Watch List (WL). The CNDDB tracks species within California for which there is conservation concern, including many that are not formally listed, and assigns them a CNDDB Rank.[7] Although CDFW SSC and WL species and species that are tracked by the CNDDB but not formally listed are afforded no official legal status, they may receive special consideration during the environmental review process. CDFW further classifies some species as "Fully Protected" (FP), indicating that the species may not be taken or possessed except for scientific purposes, under special permit from CDFW. Additionally, CFGC Sections 3503, 3505, and

[7] California Department of Fish and Wildlife. 2022. California Natural Diversity Database (CNDDB). Special Animals List. October.

3800 prohibit the take, destruction, or possession of any bird, nest, or egg of any bird except English house sparrows and European starlings unless authorization is obtained from CDFW.

A total of 46 wildlife species were identified from the CNDDB[8] search of the Long Beach and surrounding seven quadrangles and from a search of IPaC[9] for the project vicinity, including the 18 federal and/or State-listed wildlife species below:

- tricolored blackbird (*Agelaius tricolor*; State-listed Threatened)
- Swainson's hawk (*Buteo swainsoni*; State-listed Threatened)
- western snowy plover (*Charadrius nivosus nivosus;* federally-listed Threatened)
- western yellow-billed cuckoo (*Coccyzus americanus occidentalis*; federally-listed Threatened and State-listed Endangered)
- southwestern willow flycatcher (*Empidonax traillii extimus*; federally and State-listed Endangered)
- Belding's savannah sparrow (*Passerculus sandwichensis beldingi*; State-listed Endangered)
- coastal California gnatcatcher (*Polioptila californica californica*; federally-listed Threatened)
- light-footed Ridgway's rail (*Rallus obsoletus levipes;* federally and State-listed Endangered)
- bank swallow (*Riparia riparia*; State-listed Threatened)
- California least tern (*Sternula antillarum browni;* federally and State-listed Endangered)
- least Bell's vireo (*Vireo bellii pusillus*; federally and State-listed Endangered)
- green turtle (*Chelonia mydas;* federally-listed Threatened)
- Mohave tui chub (*Siphateles bicolor mohavensis;* federally and State-listed Endangered)
- Crotch bumble bee (*Bombus crotchii*; Candidate for State listing as Endangered)
- monarch- California overwintering population (*Danaus plexippus pop.* 1; Candidate for federal listing)
- Palos Verdes blue butterfly (*Glaucopsyche lygdamus palosverdesensis;* federally-listed Endangered)
- Riverside fairy shrimp (*Streptocephalus woottoni* federally-lsited Endangered)
- Pacific pocket mouse (*Perognathus longimembris pacificus;* federally-listed Endangered)

The 46 special-status wildlife species identified during the database reviews, their status, and habitat requirements are provided in Attachment C, Table B.

No special-status wildlife species were detected during the field survey. CNDDB records of three special-status wildlife species, Palos Verdes blue butterfly, Pacific pocket mouse, and western tidal-flat tiger beetle (*Habroscelimorpha gabii;* tracked by CDFW in the CNDDB) coincide with the BSA. These records represent historical occurrences prior to development of the area and these species are anticipated to be extirpated from the BSA due to a lack of suitable habitats. No suitable habitats (described in Attachment C, Table B) for the regional special-status wildlife species identified during the database searches occurs within the BSA.

---

8 California Department of Fish and Wildlife. *California Natural Diversity Data Base (CNDDB).* Full condensed report for the Long Beach, San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance quadrangles. Generated November 1, 2022.

9 Information for Planning and Consultation. 2022. U.S. Fish and Wildlife Service. Available at: https://ecos.fws.gov/ipac/. Accessed November 1, 2022.

Several federally and state-listed bird species have the potential to occur within the BSA as a migrating transient or while moving between areas within the ports. However, suitable nesting and foraging habitat for special status bird species is absent from the BSA.

As described in Section 4.2 of this memorandum, mature ungroomed palm trees that maintain their dead fronds, such as those occurring in the BSA, may provide roosting habitat for bat species, including western yellow bat, a CDFW SSC. No bats or indications of the presence of bats (i.e., urine staining, guano droppings) were observed during the field survey; however, a survey focused on bats was not conducted. With the presence of potentially suitable tree roosting habitat in the BSA, and a CNDDB record of western yellow bat from the region in 1990, as well as CNDDB records of other special-status bat species from the region (listed in Attachment C, Table B), there is a remote chance that an individual or small group of special-status bats could roost in the BSA.

No USFWS-designated critical habitat for any special-status wildlife species coincides with the BSA.

6.0 SENSITIVE NATURAL COMMUNITIES

Sensitive natural communities are those that are designated as rare in the region by the CNDDB, support special-status plant or wildlife species, or receive regulatory protection (i.e., Section 404 of the Clean Water Act (CWA) and/or Sections 1600 et seq. of the CFGC). Rare communities are given the highest inventory priority.[10,11] Based on a review of the CNDDB,[12] four sensitive vegetative communities have been recorded within the Long Beach and surrounding seven quadrangles, including Southern Coastal Bluff Scrub, Southern Coastal Salt Marsh, Southern Dune Scrub, and Southern Foredunes.

No sensitive natural vegetation communities occur within the BSA. Vegetation consists primarily of non-native ornamental trees and ruderal herbaceous species that are common in urban environments.

No aquatic features protected under the CWA and/or Section 1600 of the CFGC coincide with the BSA. Tidal waters in Consolidated Slip, located in the East Basin area of the POLA, are present just outside the eastern perimeter of the BSA (see Figure 3, Attachment A). All waters in San Pedro Bay, including Consolidated Slip, are considered Essential Fish Habitat (EFH),[13] a sensitive natural community falling under the jurisdiction of the National Oceanic and Atmospheric Association's National Marine Fisheries Service (NMFS).[14] However, the project alignment is separated from Consolidated Slip by a large railroad corridor and fence lines and impacts to biological resources in the form of EFH occurring in Consolidated Slip are not anticipated or discussed further in this memorandum.

7.0 APPLICABLE REGULATIONS AND STANDARDS

As referenced in prior sections, several regulations and standards have been established to protect and conserve biological resources. The project is not anticipated to conflict with federal, state, and local regulations and many are not applicable to the project due to a lack of sensitive species or habitat within the BSA. The project's compliance with several regulations is assessed below.

7.1 Federal Regulations

Federal Endangered Species Act (FESA)

Enacted in 1973, FESA provides for the conservation of threatened and endangered species and their ecosystems. The FESA prohibits the "take" of threatened and endangered species except under certain circumstances and only with authorization from USFWS through a permit under Section 4(d), 7 or 10(a) of the FESA. "Take" under the FESA is defined as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct."

Formal consultation with USFWS under Section 7 of the FESA would be required if the project had the potential to affect a federally listed species that has been detected within or adjacent to the project.

No federally listed species are expected to occur within the BSA due to a lack of suitable habitats. Federally-listed bird species could occur as migrating transients across the BSA; however, impacts to species protected under FESA are not anticipated and as a result, formal consultation is not anticipated.

Migratory Bird Treaty Act (MBTA)

Congress passed the MBTA in 1918 to prohibit the kill or transport of native migratory birds, or any part, nest, or egg of any such bird unless allowed by another regulation adopted in accordance with the MBTA. The prohibition applies to birds included in the respective international conventions between the United States and Great Britain, the United States and Mexico, the United States and Japan, and the United States and Russia.

No permit is issued under the MBTA; however, the project would employ regulatory control measures such as conducting preconstruction surveys for nesting birds and providing a biological monitor should an active nest be present during construction activities occurring within the bird breeding season (generally February 15 through August 31) to ensure that migratory birds protected under the MBTA are not impacted.

Clean Water Act (CWA)

Under Section 404 of the CWA, the United States Army Corps of Engineers (USACE) regulates the discharge of dredged or fill material into jurisdictional waters of the U.S., which includes those tidal and non-tidal waters listed in 33 CFR 328.3 (Definitions) (U.S.C. Title 33, Chapter 26, Sections 101–607). Section 401 of the CWA requires a water quality certification from the state for all permits issued by the USACE under Section 404 of the CWA. The Regional Water Quality Control Board (RWQCB) is the state agency in charge of issuing a CWA Section 401 water quality certification or waiver.

No wetlands or other waters under regulatory jurisdiction of USACE occur within the BSA.

Federal Coastal Zone Management Act – Federal Consistency Determinations

The Federal Coastal Zone Management Act (FCZMA) and the California Coastal Act (CCA) provide that any federal projects or activities, activities requiring a federal license or permit, or activities requiring any federal assistance to state or local governments be consistent to the maximum extent practicable with the California Coastal Zone Management Program (CCZMP). The Port of Long Beach Port Master Plan (PMP) constitutes such a management program for the port, and specifies the standards, criteria, and findings that must be made in order to make a consistency determination for any of the federal activities listed above.

The California Coastal Commission's (CCC) Federal Consistency Regulations specify procedures for determining consistency with the Coastal Zone Management Program. Those regulations require that the CCC conduct a public hearing within 45 days of receipt of a request for a consistency determination, with a 15-day extension permitted at the discretion of the Commission.

A small portion of the project in the vicinity of Quay Avenue at the southern terminus of Alameda Street coincides with the coastal zone. If required, the BOE would conduct activities and coordinate with the CCC in adherence to regulations and guidelines under the federal consistency determinations to ensure consistency with the FCZMA and CCA.

7.2 State Regulations

California Environmental Quality Act (CEQA)

CEQA requires that biological resources be considered when assessing the environmental impacts resulting from proposed actions. CEQA does not specifically define what constitutes an “adverse effect” on a biological resource. Instead, lead agencies are charged with determining what specifically should be considered an impact. This report has been prepared in support of a review of biological resource pursuant to CEQA.

California Fish and Game Code (CFGC)

CFGC regulates the taking or possession of birds, mammals, fish, amphibians, and reptiles, as well as impacts to natural resources such as wetlands and waters of the state. It includes CESA (Sections 2050–2115) and Lake and Streambed Alteration Agreement (LSAA) regulations (Section 1600 et seq.).

Wildlife “take” is defined by CDFW as “to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill.” Protection extends to the animals, dead or alive, and all their body parts. Section 2081 of CESA allows CDFW to issue an incidental take permit for state-listed threatened or endangered species, should the proposed project have the potential to “take” a state-listed species that has been detected within or adjacent to the project site. Certain criteria are required under CESA prior to the issuance of such a permit, including the requirement that impacts of the take are minimized and fully mitigated.

Additionally, CFGC Sections 3503, 3505, and 3800 mirror the MBTA, but also prohibit the take, destruction, or possession of any bird, nest, or egg of any bird species except English house sparrows and European starlings unless authorization is obtained from CDFW.

State-listed bird species could occur as migrating transients across the BSA; however, impacts to species protected under CESA are not anticipated, and as a result, an Incidental Take Permit pursuant to Section 2081 of CFGC is not anticipated.

No aquatic features under the jurisdiction of CDFW occur within the BSA. As a result, coordination with CDFW regard an LSAA pursuant to Section 1600 of CFGC is not anticipated for the project.

Porter-Cologne Water Quality Control Act

Under Section 13000 et seq., of the Porter- Cologne Water Quality Act (Porter-Cologne), the RWQCB is the agency that regulates discharges of waste and fill material within any region that could affect a water of the state (CWC 13260[a]), (including wetlands and isolated waters) as defined by CWC Section 13050(e).

Waters of the state are not present in the BSA and a Waste Discharge Requirement (WDR) pursuant to Porter-Cologne is not anticipated for the project.

7.3 Local Regulations

City of Los Angeles Native Tree Protection Ordinance

Protected Trees under the City's Native Tree Protection Ordinance (Ordinance No. 177404) include oak trees including valley oak (*Quercus iobata*) and California live oak (*Quercus agrifolia*) or any other tree of the oak genus indigenous to California but excluding the scrub oak (*Quercus dumosa*), southern California black walnut (*Juglans californica*), western sycamore (*Platanus racemosa*), and California bay (*Umbellularia californica*) (Section 17.02 of City Municipal Code). In December 2020, the City added two shrub species, Mexican elderberry (*Sambucus nigra*) and toyon (*Heteromeles arbutifolia*) to the list of protected species under the Native Tree Protection Ordinance. Trees and shrubs must be four inches or greater in diameter at 4.5 feet above ground (Diameter at breast height [DBH]) to be considered protected. The Board of Public Works must issue a permit before any alterations to protected trees are made that could cause them to be damaged, relocated or removed.

No tree species protected under the City's ordinance was detected within the BSA and as a result, a permit to remove a City-ordinance protected tree is not anticipated for the project

City of Los Angeles Street Tree Policy

The City of Los Angeles Department of Public Works, Bureau of Street Services, Urban Forestry Division (Urban Forestry) manages removal, replacement, and maintenance of the City's street trees and landscaped median islands. "Street trees" are those occurring in the public ROW, and a permit from Urban Forestry is required to remove a street tree. Under Los Angeles Municipal Code section 62.170, as a condition to the permit, the permittee may be required to plant another tree of the type and size specified in the permit. However, in accordance with Los Angeles Municipal Code Section 62.177, a payment of in-lieu fees for the purchase, installation, and maintenance of trees is possible when the required replacement trees cannot feasibly be planted onsite.

An Arborist Report (Part 1 and Part 2) was prepared for the project. Part 1 of the Arborist Report addresses trees on the south side of Harry Bridges Boulevard and on the easterly

side of Alameda Street within the Project site. Part 2 of the Arborist Report addresses trees on the north side of Harry Bridges Boulevard and the westerly side of Alameda Street within the project site. In total, the Arborist Report recorded 134 street trees occurring in the public ROW of the project site, and six private trees within the Biological Survey Area (BSA).[15] Inventory of tree species included; carrot wood (*Cupaniopsis anacardiodes*), Brisbane box (*Lophostemon confertus*), Mexican Fan palm (*Washingtonia robusta*), floss silk tree (*Cieba speciosa*), and lemon-scented gum (*Corymbia citriodoria*). Inventoried trees were located on both sides of Harry Bridges Boulevard and Alameda Street. In total, 104 street trees would be removed (not including dead trees, including street trees where natural grade within dripline is changed), 5 would be impacted by construction (within driplines), and 11 are not dead, not to be removed, and/or where natural grade is unchanged. The project would adhere to the City's 2015 Street Tree Removal and Replacement Policies regarding removal of street trees, which would occur in consultation with the Urban Forestry Division (UFD) and/or Board of Public Works (Board) if a Tree Removal Permit is required.[16]

8.0 IMPACTS ON BIOLOGICAL RESOURCES

Biological resources may be either directly or indirectly impacted by a project. Direct and indirect impacts may be either permanent or temporary in nature. These impact categories are defined below.

- **Direct**: Any alteration, physical disturbance, or destruction of biological resources that would result from project-related activities is considered a direct impact. Examples include clearing vegetation, encroaching into wetlands or a stream, and the loss of individual species and/or their habitats.

- **Indirect**: As a result of project-related activities, biological resources may also be affected in a manner that is ancillary to physical impacts. Examples include elevated noise and dust levels, soil compaction, increased human activity, decreased water quality, and the introduction of invasive wildlife (domestic cats and dogs) and plants.

- **Permanent**: All impacts that result in the long-term or irreversible removal of biological resources are considered permanent. Examples include constructing a building or permanent road on an area containing biological resources.

- **Temporary**: Any impacts considered to have reversible effects on biological resources can be viewed as temporary. Examples include the generation of fugitive dust during construction; or removing vegetation for the preparation of stream bank stabilization activities, and either allowing the natural vegetation to recolonize or actively revegetating the impact area. Surface disturbance that removes vegetation and disturbs the soil is considered a long-term temporary impact because of slow natural recovery in arid ecosystems.

8.1 Construction

The anticipated impacts of proposed project construction on protected biological resources are described below.

8.1.1 Special-Status Plant Species

Vegetation within the BSA consists of non-native ornamental trees and ruderal herbaceous species. No special-status plant species were detected within the BSA and habitats potentially suitable for special-status plant species are absent from the BSA. Implementation of the Project is not anticipated to result in direct or indirect impacts on special-status plant species.

8.1.2 Special-Status Wildlife Species

Because the BSA has been completely disturbed during urban development and consists primarily of roadways, rail tracks, and buildings, habitats potentially suitable for special-status wildlife species are absent and special-status wildlife species are not anticipated to occur within the BSA. However, two listed bird species known from the region, western snowy plover and California least tern, are coastal species occurring in shore and near-shore habitats that could incidentally occur within or fly cross the BSA. Nesting by these species in the BSA is not anticipated and these species are not anticipated to be directly or indirectly impacted by the project.

However, the numerous ungroomed, mature palm trees within the BSA may provide potentially suitable roosting habitat for individual and small groups of special-status bat species, such as western yellow bat. Additionally, palm trees within the BSA provide potential maternity roosting habitat for common bat species. As a result, the removal of mature palm trees during construction could result in direct impacts to special-status bats and also result in direct impacts to a wildlife nursery, in this instance a bat maternity roost, which are protected under CEQA. However, with implementation of Mitigation Measure BIO-1, which would require a field survey prior to construction to determine the potential presence of special-status bats and maternity roosting bats and tree removal under the supervision of a qualified bat biologist, potential direct impacts to special-status bats and maternity roosts would be less than significant.

Indirect impacts to special-status bats and maternity roosts during construction could occur as a result of noise, vibration, dust, and increased human presence, potentially leading to the failure of maternity roosts. Such impacts would be considered significant. The Project would implement the standard best management practices and related to the control of fugitive dust and noise outlined in Section 2.5 of this memorandum to reduce such indirect impacts. Additionally, by implementing the avoidance and minimization measures outlined in Mitigation Measure BIO-1, which require a pre-construction bat survey to determine whether special-status bats or maternity roosting is present within or directly adjacent to the construction zone, avoidance, and buffer areas, indirect impacts to maternity roosting would be reduced to less than significant.

8.1.3 Migratory Brid Treaty Act/California Fish and Game Code

Although no natural plant communities exist within the BSA, ornamental landscaping, particularly mature palm trees occurring in the BSA, provide foraging and nesting habitat for

bird species, including raptors, which are common in urban environments. As a result, birds protected by the MBTA and the CFGC have the potential to nest in the BSA. Mature palm trees would be removed during project construction. If tree removal occurs during the nesting bird season, the direct impact to birds protected by the MBTA would be significant. By avoiding vegetation removal during the nesting bird season or adhering to avoidance and minimization measures provided in Project Design Feature BIO-1, which requires a pre-construction nesting survey to determine whether active nests are present within or directly adjacent to the construction zone, avoidance, and buffer areas, the direct impacts of tree removal on nesting birds and their associated nesting habitat would be reduced to less than significant.

Indirect impacts to nesting birds in the BSA could occur during construction as a result of noise, vibration, dust, and increased human presence resulting from construction activities. Disturbances related to construction could result in increased nestling mortality due to nest abandonment or decreased feeding frequency. Therefore, indirect impacts would be considered significant. The Project would implement standard best management practices related to the control of fugitive dust and noise outlined in Section 2.5 of this report. Additionally, by implementing the avoidance and minimization measures outlined in PDF-1, which requires a pre-construction nesting survey to determine whether active nests are present within or directly adjacent to the construction zone, avoidance, and buffer areas, indirect impacts to nesting birds would be reduced to less than significant.

8.1.4 Wildlife Movement Corridors

Project construction activities (i.e., increased noise, vibration, dust, human presence) would likely result in bird and bat species avoiding areas where active construction is occurring. Such indirect effects would be temporary in nature and restricted to the construction duration. By implementing the standard construction practices related to the control of fugitive dust and noise outlined in Section 2.5 of this report and implementing the avoidance and minimization measures outlined in Mitigation Measure BIO-1 and Project Design Feature BIO-1, which require pre-construction surveys to determine whether active bat roosts or bird nests are present within or directly adjacent to the construction zone, avoidance, and buffer areas, indirect impacts to localized bat and bird movement and nesting would be less than significant.

8.1.5 Sensitive Natural Communities

As described in Section 6 of this memorandum, no protected or managed sensitive natural communities occur within the BSA. As a result, implementation of the project would not result in direct or indirect impacts to any such community.

8.1.6 Local Ordinances and Policies

No tree species protected under the City's Native Tree Protect Ordinance occur within the BSA; however, street trees located in the public ROW would be removed or disturbed during construction. Removal of street trees would occur in accordance with the policies of Urban Forestry Division. As described in Section 7.3 of this memorandum, 104 total street trees would be removed during construction (15 from the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street; and 89 from the north side of Harry Bridges Boulevard and the westerly side of Alameda Street). The City of Los Angeles Municipal Code requires that street trees removed for construction be replaced at a ratio of two 24-

inch box-size trees for each tree removed. Based on that ratio, approximately 208 24-inch box size trees would be included in project design to mitigate for the trees removed. Replacement tree species selection will consider existing overhead power lines that may be present. Several of the trees to be removed are dead or dying, thus the actual replacement number will be determined by UFD or the Board. As a result of project compliance with the City's street tree policy, no conflicts with an applicable local ordnance or policy are anticipated.

8.2 Operation

Impacts to biological resources during operation and maintenance of the Project are not anticipated as such activities would be conducted within previously disturbed and developed surfaces containing non-native vegetation and would generally not change biological conditions from those present prior to and after project construction. Special-status plant species are not expected to occur due to a lack of suitable habitat within the proposed Project site and surrounding BSA and impacts to special-status wildlife species and wildlife movement are not anticipated. As a result, operation and maintenance activities are not anticipated to have a significant impact on biological resources.

9.0 RECOMMENDED MITIGATION AND PROJECT DESIGN FEATURES

The following mitigation measure and project design feature are recommended to avoid, minimize, or reduce potentially significant impacts to biological resources during implementation of the Project. Measures are geared towards roosting bats and nesting birds and would reduce potential Project impacts to biological resources to a less than significant. The project design feature would be implemented as part of the Project as adhering to the MBTA and CFGC is required in accordance with regulations.

Mitigation Measure BIO-1

Avoid and minimize project related impacts to special-status and/or roosting bat species.

During the maternity season (April 15 through August 31) prior to construction, a field survey shall be conducted by a qualified biologist to determine the potential presence of colonial bat roosts within mature ungroomed palm trees along the west side of Alameda Street. A visual inspection and/or one-night emergence survey of trees these trees shall be completed utilizing acoustic recognition technology to determine what species of bats and if any maternity roosts are present.

To avoid any impacts on special-status species and roosting bats resulting from construction activities for Stadium Tower, the following shall be implemented:

- All palm trees to be removed as part of the Project should be evaluated by a qualified biologist for their potential to support roosting bat by conducting a one-night emergence survey during acceptable weather conditions, or if conditions permit, physically examine the trees for presence or absence of bats (such as with lift equipment) two weeks prior to the start of construction/tree removal.

- If active bat roosts are present during the maternity season (April 15 through August 31), the tree shall be avoided until after the maternity season when young are self-sufficient.

- If active bat roosts are present and tree removal is not possible outside the maternity season, a qualified bat biologist shall determine the species of bats present and the type of roost (i.e., day roost, night roost, maternity roost). If the biologist determines that the roosting bats are not a special-status species and the roost is not being used as a maternity roost, then the bats may be evicted from the roost by a qualified bat biologist experienced in developing and implementing bat mitigation and exclusion plans.

- If special-status bat species or a maternity roost of any bat species is present in trees slated for removal, a qualified bat biologist experienced in developing bat mitigation and exclusion plans shall develop a mitigation plan to compensate for the lost roost site. Removal of the roost shall only occur when the mitigation plan has been approved by BOE and only when bats are not present in the roost. The mitigation plan shall detail the methods of excluding bats from the roost and the plans for a replacement roost in the vicinity of the Project site.

- If the pre-construction survey determines that no special-status bat species or active roosts are present, then trees shall be removed within two weeks following the preconstruction survey, or additionally pre-construction surveys may be needed to confirm special-status bats or active roosts are absent.

- All potential roost trees shall be removed in a manner approved by a qualified bat biologist, which may include presence of a biological monitor.

- All construction activity in the vicinity of an active roost shall be limited to daylight hours.

- The results of bat surveys, evaluations, and monitoring efforts that are undertaken shall be documented in a report by the qualified biologist at the conclusion of all bat-related activities

Project Design Feature BIO-1

Avoid and minimize project related impacts to nesting birds.

To avoid impacts to nesting birds protected under the MBTA and CFGC resulting from construction activities that may occur during the nesting season, the following mitigation measure shall be implemented:

Construction activities, including tree removal shall occur outside of the nesting season (generally February 1 through September 30). If construction activities must occur within this time period, the following measures shall be employed:

- A pre-construction nesting survey shall be conducted by a qualified biologist within 3 days (72 hours) prior to the start of construction activities to determine whether active nests are present within or within 500 feet of the construction zone. All nests found shall be recorded.

- A minimum 300-foot no-work buffer shall be established around any active passerine bird nest. A minimum 500-foot no-work buffer shall be established

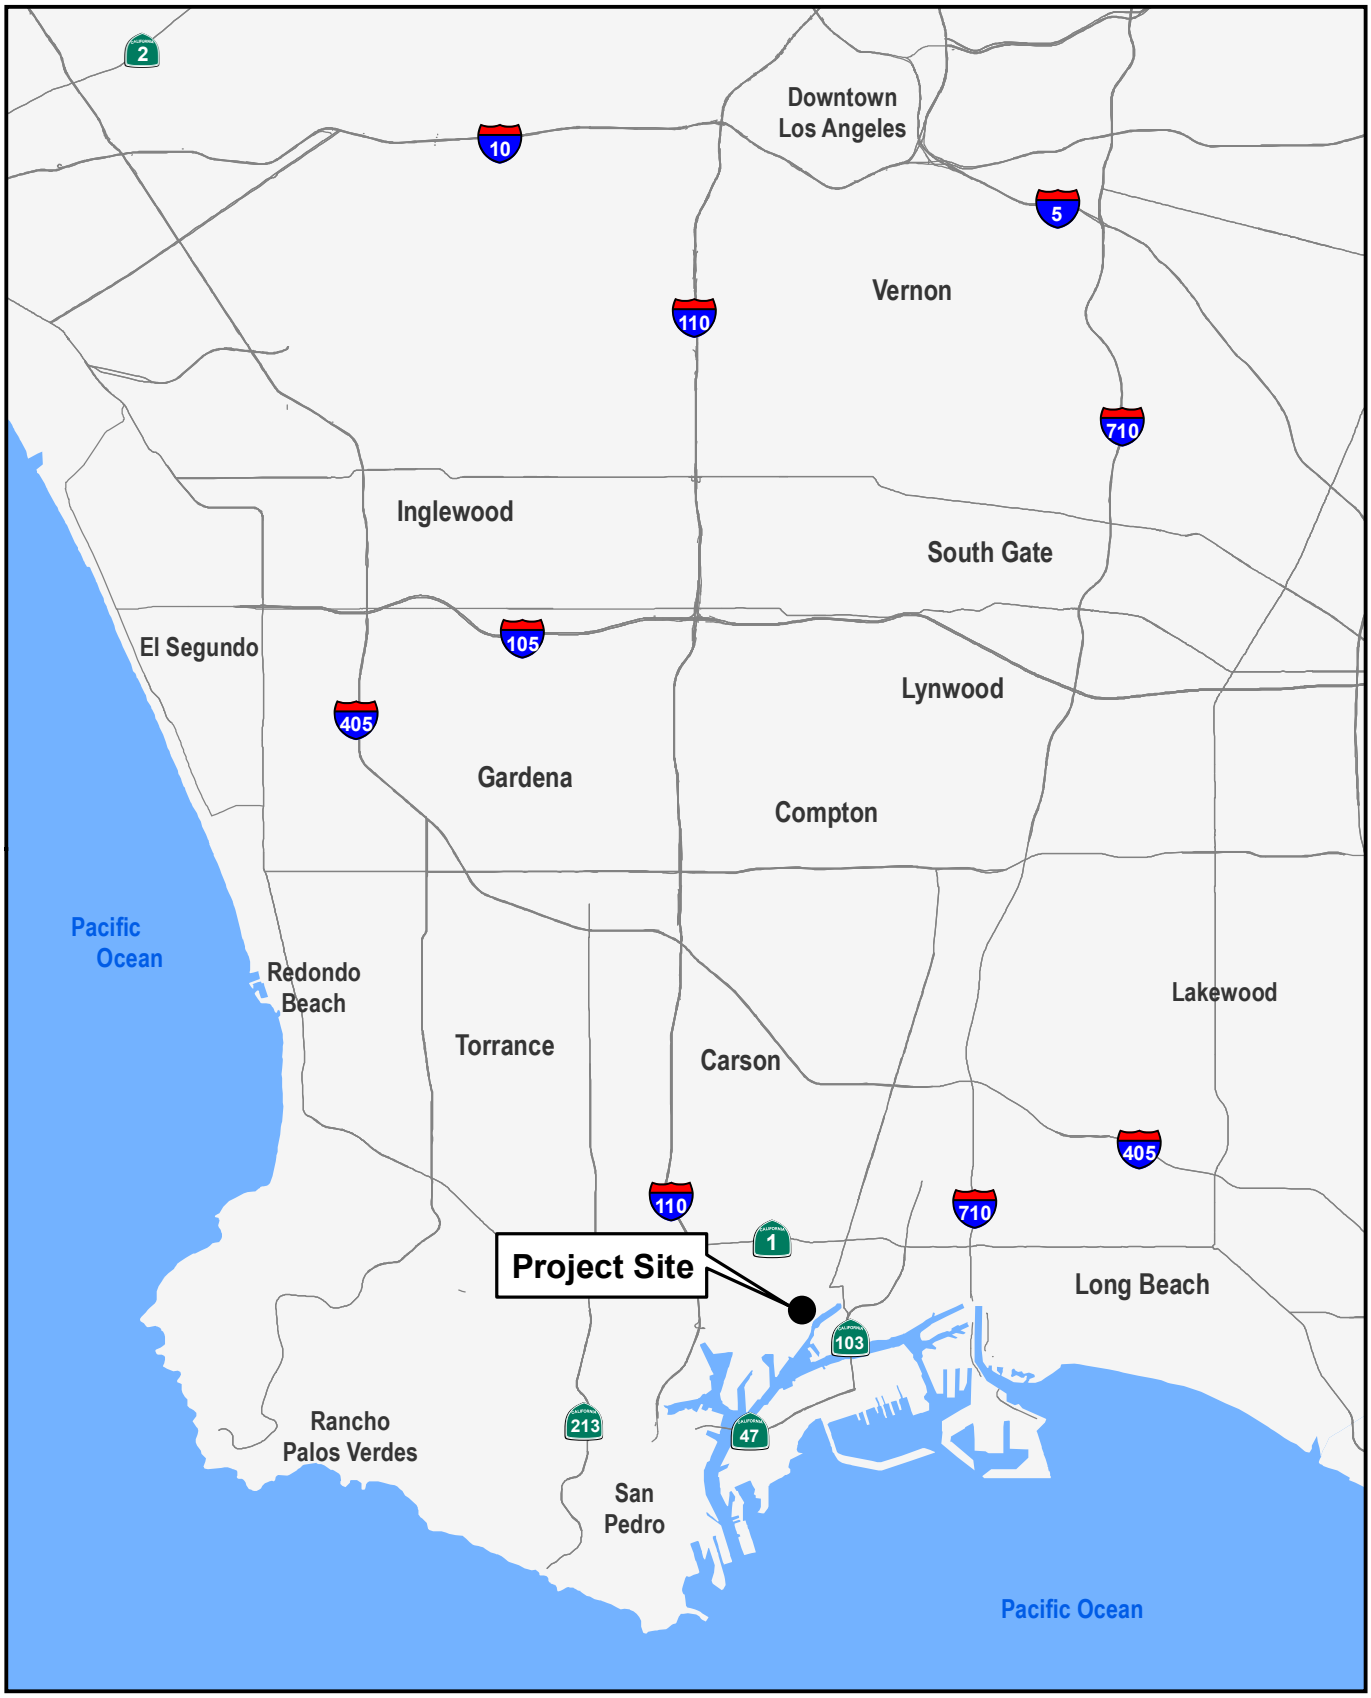
around any active raptor nest. The qualified biologist shall monitor the nest on a weekly basis, and construction activities within 300 feet of an active nest of any passerine bird or within 500 feet of an active nest of any raptor shall be postponed until the biologist determines that the nest is no longer active. However, the standard 300/500 foot no-disturbance buffer distance may be adjusted (including increases or reductions to the buffer) by a qualified biologist on a case-by-case basis taking into consideration the location, type, duration and timing, and severity of work, distance of nest from work area, surrounding vegetation and line-of-sight between the nest and work areas (also taking into account existing ambient conditions from human activity within the line of sight), the influence of other environmental factors, and species' site specific level of habituation to the disturbance. If the qualified biologist determines nesting activities may fail as a result of work activities, the biologist shall immediately inform the construction manager and all project work shall cease (except access along established roadways) within the recommended no-disturbance buffer until the biologist determines the adults and young are no longer reliant on the nest site.

- Buffers will be delineated on-site with bright flagging, for easy identification by project staff. The on-site construction supervisor and operator staff will be notified of the nest and the buffer limits and instructed of the sensitivity of the area to ensure the buffer is maintained.
- A summary of preconstruction surveys and methodologies employed, monitoring efforts, and any no-disturbance buffers that were installed shall be documented in a report by the qualified biologist at the conclusion of each nesting season.

10.0 CONCLUSIONS

Based on the analysis presented above regarding anticipated effects of the proposed Project, effects to nesting birds protected under the MBTA would not occur as the proposed Project would include applicable regulatory control measures. No effects to any other federally protected or managed biological resources are anticipated.

Should you have any questions or comments regarding this memorandum, or if additional information is required, please feel free to contact me.



Sincerely,

Anthony Greco
Senior Biologist

REGIONAL SPECIAL-STATUS PLANT SPECIES, SENSITIVE NATURAL COMMUNITIES, AND SPECIAL-STATUS WILDLIFE SPECIES

TABLE A. REGIONAL SPECIAL-STATUS PLANT SPECIES[1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
Plants		
red sand-verbena *Abronia maritima*	Federal: None State: None CRPR: 4.2	Found in coastal dunes habitat. Occurs between 0 and 100 meters (0 to 330 feet). Blooms February to November.
aphanisma *Aphanisma blitoides*	Federal: None State: None CRPR: 1B.2	Prefers sandy or gravelly soils in coastal bluff scrub, coastal dunes, and coastal scrub habitats. Occurs between 0 and 305 meters (0 to 1,000 feet). Blooms February to June.
Horn's milk-vetch *Astragalus hornii* var. *hornii*	Federal: None State: None CRPR: 1B.1	Prefers lake margins and alkaline areas in meadow and seep and playa habitats. Occurs between 60 and 850 meters (195 to 2,780 feet). Blooms May to October.
Ventura marsh milk-vetch *Astragalus pycnostachyus* var. *lanosissimus*	Federal: FE State: SE CRPR: 1B.1	Found in coastal dune, coastal scrub, and coastal salt or brackish marsh and swamp habitats. Occurs between 0 and 35 meters (0 to 115 feet). Blooms (June) August to October.
coastal dunes milk-vetch *Astragalus tener* var. *titi*	Federal: FE State: SE CRPR: 1B.1	Found in vernally mesic areas in coastal bluff scrub, coastal dune, and coastal prairie habitats. Occurs between 0-50 meters (0-165 feet). Blooms March-May.
Coulter's saltbush *Atriplex coulteri*	Federal: None State: None CRPR: 1B.2	Often in alkaline or clay habitats of coastal bluff scrub, coastal dunes, coastal scrub and valley and foothill grasslands. Occurs between 0 and 460 meters (0 to 1,510 feet). Blooms March to October.
south coast saltscale *Atriplex pacifica*	Federal: None State: None CRPR: 1B.2	Found in alkali sink, coastal sage scrub, wetland-riparian playas, and coastal habitats. Occurs between 0 and 140 meters (0 to 460 feet). Blooms March to October.
Parish's brittlescale *Atriplex parishii*	Federal: None State: None CRPR: 1B.1	Found in alkaline chenopod scrub, playas, and vernal pool habitats. Occurs between 25 and 1,900 meters (80 to 6,230 feet). Blooms June to October.
Davidson's saltscale *Atriplex serenana* var. *davidsonii*	Federal: None State: None CRPR: 1B.2	Found in coastal bluff scrub and coastal scrub habitats. Prefers alkaline soils. Occurs between 10 and 200 meters (30 to 660 feet). Blooms April to October.
Catalina mariposa lily *Calochortus catalinae*	Federal: None State: None CRPR: 4.2	Found in chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland habitats. Occurs between 15 and 700 meters (50 to 2,300 feet). Blooms February to June.
Plummer's mariposa lily *Calochortus plummerae*	Federal: None State: None CRPR: 4.2	Prefers granitic or rocky areas in chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, and valley and foothill grassland habitats. Occurs between 100 and 1,700 meters (330 to 5,580 feet). Blooms May to July.

TABLE A. REGIONAL SPECIAL-STATUS PLANT SPECIES[1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
intermediate mariposa lily *Calochortus weedii* var. *intermedius*	Federal: None State: None CRPR: 1B.2	Found in chaparral, chenopod scrub, cismontane woodland, coastal scrub, lower montane coniferous forest and valley and foothill grassland. Occurs between 30 and 1,500 meters (100 and 4,920 feet). Blooms April to June.
lucky morning glory *Calystegia felix*	Federal: None State: None CRPR: 1B.1	Usually found in wetland and marsh habitats, occasionally in drier habitats, including meadows and seeps and riparian scrub. May inhabit areas with silty loam and alkaline soils. Occurs between 30 and 215 meters (95 to 700 feet). Blooms March to September.
Peirson's morning glory *Calystegia peirsonii*	Federal: None State: None CRPR: 4.2	Found in chaparral, chenopod scrub, cismontane woodland, coastal scrub, lower montane coniferous forest, and valley and foothill grassland habitats. Occurs between 30-1,500 meters (95-4,925 feet). Blooms April-June.
Lewis' evening-primrose *Camissoniopsis lewisii*	Federal: None State: None CRPR: 3	Prefers sandy or clay soils in coastal bluff scrub, Cismontane woodland, coastal dunes, coastal scrub, and valley and foothill grassland habitats. Occurs between 0 and 300 meters (0 to 985 feet). Blooms March to June.
southern tarplant *Centromadia parryi* ssp. *australis*	Federal: None State: None CRPR: 1B.1	Found in margins of marshes and swamps, valley and foothill grassland, and vernal pool habitats. Occurs between 0 and 480 meters (0 to 1,570 feet). Blooms May to November.
smooth tarplant *Centromadia pungens ssp. laevis*	Federal: None State: None Other: 1B.1	Prefers alkaline areas in chenopod scrub, meadows and seeps, playas, riparian woodlands, and valley and foothill grasslands. Occurs between 0-640 meters (0-2100 feet). Blooms April-September.
salt marsh bird's beak *Chloropyron maritimum* ssp. *maritimum*	Federal: FE State: SE CRPR: 1B.2	Found in coastal dunes and coastal salt marshes and swamps. Occurs between 0 and 30 meters (0 to 100 feet). Blooms May to October.
seaside cistanthe *Cistanthe maritima*	Federal: None State: None CRPR: 4.2	Prefers sandy soils in coastal bluff scrub, coastal scrub, and valley and foothill grassland habitats. Occurs between 5-300 meters (15-985 feet). Blooms (February) March- June (August).
small-flowered morning-glory *Convolvulus simulans*	Federal: None State: None CRPR: 4.2	Prefers clay soils and serpentine seeps in chaparral, coastal scrub, and valley and foothill grassland habitats. Occurs between 30 and 700 meters (100 to 2,300 feet). Blooms March to July.
Catalina crossosoma *Crossosoma californicum*	Federal: None State: None Other:1B.2	Prefers rocky areas in chaparral and coastal scrub habitats. Occurs between 0-500 meters (0-1640 feet). Blooms February-May.

TABLE A. REGIONAL SPECIAL-STATUS PLANT SPECIES[1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
many-stemmed dudleya *Dudleya multicaulis*	Federal: None State: None CRPR: 1B.2	Found in chaparral, coastal scrub, and valley and foothill grassland habitats. Often found in clay soils. Occurs between 15 and 790 meters (50 to 2,520 feet). Blooms April to July.
island green dudleya *Dudleya virens ssp. insularis*	Federal: None State: None Other: 1B.2	Found in coastal bluff scrub and coastal scrub. Occurs between 5-300 meters (15-985 feet). Blooms April- June.
San Diego button-celery *Eryngium aristulatum* var. *parishii*	Federal: FE State: SE CRPR: 1B.1	Prefers mesic areas in coastal scrub, valley and foothill grassland, and vernal pool habitats. Occurs between 20 and 620 meters (65 to 2,035 feet). Blooms April to June.
suffrutescent wallflower *Erysimum suffrutescens*	Federal: None State: None CRPR:4.2	Found in coastal bluff scrub, maritime chaparral, coastal dunes, and coastal scrub. Occurs between 0-150 meters (0-490 feet). Blooms January- July (August).
Los Angeles sunflower *Helianthus nuttallii* ssp. *parishii*	Federal: None State: None CRPR: 1A	Found in coastal salt and freshwater marshes and swamps. Occurs between 9 and 1,525 meters (30 to 5,005 feet). Blooms August to October.
vernal barley *Hordeum intercedens*	Federal: None State: None CRPR: 3.2	Found in coastal dunes, coastal scrub, vernal pools, and in saline flats and depressions in valley and foothill grassland habitats. Occurs between 5 and 1,000 meters (15 to 3,280 feet). Blooms March to June.
decumbent goldenbush *Isocoma menziesii* var. *decumbens*	Federal: None State: None CRPR: 1B.2	Found in chaparral and coastal scrub habitats. Often found in sandy soils or disturbed areas. Occurs between 10 and 135 meters (30 to 445 feet). Blooms April to November.
Southern California black walnut *Juglans californica*	Federal: None State: None CRPR: 4.2	Found in alluvial sites in chaparral, cismontane woodland, coastal scrub, and riparian woodland habitats. Occurs between 50 and 900 meters (160 to 2,955 feet). Blooms March to August.
southwestern spiny rush *Juncus acutus* ssp. *leopoldii*	Federal: None State: None CRPR: 4.2	Found in mesic coastal dunes, alkaline meadows and seeps, and coastal salt marshes and swamps. Occurs between 0 and 900 meters (0 to 2,955 feet). Blooms (March) May to June.
Coulter's goldfields *Lasthenia glabrata ssp. coulteri*	Federal: None State: None CRPR: 1B.1	Found in coastal salt marshes, playas, and vernal pools. Occurs between 0 and 1,220 meters (0 to 4,000 feet). Blooms February to June.
Santa Catalina Island desert-thorn *Lycium brevipes* var. *hassei*	Federal: None State: None Other: 3.1	Found in coastal bluff scrub and coastal scrub. Occurs between 65-300 meters (215-985 feet). Blooms June (August).
California box-thorn *Lycium californicum*	Federal: None State: None CRPR:4.2	Found in coastal bluff scrub and coastal scrub. Occurs between 5-150 meters (15-490 feet). Blooms March- August (December).

TABLE A. REGIONAL SPECIAL-STATUS PLANT SPECIES[1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
mud nama *Nama stenocarpa*	Federal: None State: None CRPR: 2B.2	Found in marshes and swamps, lake margins, and riverbanks. Occurs between 5 and 500 meters (15 to 1,640 feet). Blooms January to July.
Gambel's water cress *Nasturtium gambellii*	Federal: FE State: ST CRPR: 1B.1	Found in freshwater or brackish marshes and swamps. Occurs between 5 and 330 meters (15 to 1,085 feet). Blooms April to October.
spreading navarretia *Navarretia fossalis*	Federal: FT State: None Other: 1B.1	Found in chenopod scrub, shallow freshwater marshes and swamps, playas, and vernal pool habitats. Occurs between 30-665 meters (95-2,185 feet). Blooms April-June.
prostrate vernal pool navarretia *Navarretia prostrata*	Federal: None State: None CRPR: 1B.1	Prefers mesic coastal scrub, meadows and seeps, alkaline valley and foothill grassland, and vernal pool habitats. Occurs between 15 and 1,210 meters (50 to 3,970 feet). Blooms April to July.
coast woolly-heads *Nemacaulis denudata* var. *denudata*	Federal: None State: None CRPR: 1B.2	Found in coastal dunes. Occurs between 0 and 100 meters (0 to 330 feet). Blooms April to September.
California Orcutt grass *Orcuttia californica*	Federal: FE State: SE CRPR: 1B.1	Found in vernal pools. Occurs between 15 and 660 meters (50 to 2,165 feet). Blooms April to August.
Lyon's pentachaeta *Pentachaeta lyonii*	Federal: FE State: SE CRPR: 1B.1	Prefers rocky, clay sites in chaparral, coastal scrub, and valley and foothill grassland habitats. Occurs between 30 and 690 meters (100 to 2,265 feet). Blooms February to August.
Brand's star phacelia *Phacelia stellaris*	Federal: None State: None CRPR: 1B.1	Occurs in coastal dune and coastal scrub habitats. Occurs between 0 and 400 meters (0 to 1,320 feet). Blooms March to June.
Sanford's arrowhead *Sagittaria sanfordii*	Federal: None State: None CRPR: 1B.2	Perennial rhizomatous herb found in marshes and swamp habitat. Believed to be extirpated from southern California. Blooms July to October.
salt spring checkerbloom *Sidalcea neomexicana*	Federal: None State: None CRPR: 2B.2	Prefers alkaline or mesic areas in chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub, and playa habitats. Occurs between 15 and 1,530 meters (45 to 5,020 feet). Blooms March to June.
estuary seablite *Suaeda esteroa*	Federal: None State: None CRPR: 1B.2	Found in coastal salt marshes and swamps. Occurs between 0 and 5 meters (0 to 20 feet). Blooms May to January.
woolly seablite *Suaeda taxifolia*	Federal: None State: None CRPR: 4.2	Found in coastal bluff scrub, coastal dunes, and marshes and swamps (coastal margins). Occurs between 0 and 50 meters (0-165 feet). Blooms January to December.

TABLE A. REGIONAL SPECIAL-STATUS PLANT SPECIES[1]		
Common Name ***Scientific Name***[2]	**Status**[3]	**General Habitat Description**
San Bernadino aster *Symphyotrichum defoliatum*	Federal: None State: None CRPR: 1B.2	Prefers sites near ditches, streams, and springs in coastal scrub, meadows and seeps, cismontane woodland, lower montane coniferous forest, and valley and foothill grassland habitats. Occurs between 0 and 2,040 meters (5 to 6,690 feet). Blooms July to November.

TABLE B. REGIONAL SPECIAL-STATUS WILDLIFE SPECIES [1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
Invertebrates		
Crotch bumble bee *Bombus crotchii*	Federal: None State: CE Other: CNDDB	Occurs at relatively warm and dry sites, including the inner Coast Range of California and the margins of the Mojave Desert.
Belkin's dune tabanid fly *Brennania belkini*	Federal: None State: None Other: CNDDB	Sand obligate species known from coastal dunes near Playa del Rey and El Segundo south to Ensenada, Mexico.
sandy beach tiger beetle *Cicindela hirticollis gravida*	Federal: None State: None Other: CNDDB	Inhabits areas adjacent to non-brackish water along the coast of California from San Francisco bay to northern Mexico. Inhabits clean, dry, light-colored sand in the upper zone. Subterranean larvae prefer moist sand not affected by wave action.
western beach tiger beetle *Cicindela latesignata latesignata*	Federal: None State: None Other: CNDDB	Prefers sandy areas in coastal habitats. Found in Los Angeles, Orange, and San Diego counties.
senile tiger beetle *Cicindela senilis frosti*	Federal: None State: None Other: CNDDB	Inhabits coastal mud flats, salt flats, salt marshes, and inland alkali mud flats.
Monarch – California overwintering population *Danaus plexippus* pop. 1	Federal: Candidate State: None Other: CNDDB	Winter roosts occur along California coast from Mendocino County south to Baja California, Mexico. Roosts in wind-protected tree groves (eucalyptus, Monterey pine, Monterey cypress) with nectar and water sources nearby.
Palos Verdes blue butterfly *Glaucopsyche lygdamus palosverdesensis*	Federal: FE State: None Other: CNDDB	Species is dependent on two larval hostplants, Santa Barbara milkvetch (*Astragalus trichopodus* var. *lonchus*) and deerweed (*Acmispon glaber*). Found in the Palos Verdes peninsula and seaward side of the Palos Verdes Hills.
San Gabriel chestnut *Glyptostoma gabrielense*	Federal: None State: None Other: CNDDB	Found in humid areas in rocky hills and mountains at low elevations.
western ridged mussel *Gonidea angulata*	Federal: None State: None Other: CNDDB	Found in streams, rivers, and lakes with substrates ranging from gravel to firm mud. Requires at least some silt, sand, or clay.
western tidal-flat tiger beetle *Habroscelimorpha gabbii*	Federal: None State: None Other: CNDDB	Found in salty coastal habitats including salt marshes, tidal flats and beaches. Range from Ventura, California to Baja California. Burrows into sand or soil.
wandering (=saltmarsh) skipper *Panoquina errans*	Federal: None State: None Other: CNDDB	Inhabits salt marshes and other wetland habitats; occasionally found in sand dunes. Requires saltgrass (*Distichlis spicata*) as larval food source.

TABLE B. REGIONAL SPECIAL-STATUS WILDLIFE SPECIES [1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
Riverside fairy shrimp *Streptocephalus woottoni*	Federal: FE State: None Other: CNDDB	Found in vernal pools of at least 30 centimeters in depth, from January through March. Found in Riverside and San Diego counties, as well as northern Baja California.
Dorothy's El Segundo Dune weevil *Trigonoscuta dorothea dorothea*	Federal: None State: None Other: CNDDB	Found in coastal sand dunes.
Western ridged mussel *Gonidea angulate*	Federal: None State: None Other: CNDDB	Found in aquatic habitat. Primarily creeks and rivers and less often lakes. Originally in most of state, now extirpated from Central and Southern California.
mimic tryonia (=California brackishwater snail) *Tryonia imitator*	Federal: None State: None Other: CNDDB	Prefers coarse brackish sediments at the mouths of creeks, streams and rivers of southern California.
Amphibians		
western spadefoot *Spea hammondii*	Federal: None State: None Other: SSC	Inhabits grassland, oak woodland, coastal sage scrub, and chaparral vegetation in washes, floodplains, alluvial fans, playas, and alkali flats.
Reptiles		
southern California legless lizard *Anniella stebbinsi*	Federal: None State: None Other: SSC	Occurs in moist warm loose soils in sparsely vegetated areas of beach dunes, chaparral, pine-oak woodlands, desert scrub, sandy washes, and stream terraces with sycamores, cottonwoods, or oaks. Often under leaf litter or other surface objects.
coastal whiptail *Aspidoscelis tigris stejnegeri*	Federal: None State: None Other: SSC	Occurs in coastal sage scrub, chaparral, riparian areas, woodlands, and rocky areas.
green turtle *Chelonia mydas*	Federal: FT State: None Other: CNDDB	Mostly aquatic, living in the ocean and rarely coming onto land, although more prone to bask onshore than other sea turtles. Often found far out at sea, especially during migration to and from breeding sites.
western pond turtle *Emys marmorata*	Federal: None State: None Other: SSC	Occurs in aquatic water bodies including flowing rivers and streams, permanent lakes, ponds, reservoirs, settling ponds, marshes and other wetlands. Semi- permanent water bodies such as stock ponds, vernal pools and seasonal wetlands can also be utilized on a temporary basis.
coast horned lizard *Phrynosoma blainvillii*	Federal: None State: None Other: SSC	Inhabits coastal sage scrub and chaparral in arid and semiarid climates. Prefers friable, rocky, or shallow sandy soils.
Fish		
Mohave tui chub *Siphateles bicolor mohavensis*	Federal: FE State: SE Other: FP	Formerly found in deep pools and slough-like areas of the Mojave River, this species now only occurs in highly modified refuge sites in San Bernardino County.

TABLE B. REGIONAL SPECIAL-STATUS WILDLIFE SPECIES [1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
Birds		
tricolored blackbird *Agelaius tricolor*	Federal: None State: ST Other: SSC	Inhabits annual grasslands, wet and dry vernal pools, seasonal wetlands. Frequently found in and around agricultural areas.
burrowing owl *Athene cunicularia*	Federal: None State: None Other: SSC	Occurs in expansive, nearly flat open areas, such as prairies, grasslands, agricultural fields, vacant lots. Small mammal burrows are required for roosting/nesting.
ferruginous hawk *Buteo regalis*	Federal: None State: None Other: WL	Inhabits arid grasslands and adjacent farmlands. Nests in isolated trees or on rock outcrops.
Swainson's hawk *Buteo swainsoni*	Federal: None State: ST Other: CNDDB	Nests in stands with few trees in juniper-sage flats and riparian areas. Utilizes adjacent grasslands, grain or alfalfa fields, or livestock pastures for foraging.
western snowy plover *Charadrius nivosus nivosus*	Federal: FT State: None Other: SSC	Inhabits coastal beaches, coastal dunes, beaches at creek and river mouths, and salt pans at lagoons and estuaries. Less common habitat includes dredged material disposal sites, salt pond levees, dry salt ponds, and river bars.
western yellow-billed cuckoo *Coccyzus americanus occidentalis*	Federal: FT State: SE Other: CNDDB	Breeds in low to moderate elevation native forests lining the rivers and streams of western United States. Prefers cottonwood-willow forests. Migrate to wintering grounds in South America.
southwestern willow flycatcher *Empidonax traillii extimus*	Federal: FE State: SE Other: CNDDB	Inhabits riparian woodlands in southern California. Nests in extensive thickets of low, dense willows on edge of wet meadows, ponds, or backwaters, between 600 and 1,220 meters (2,000 to 8,000 feet). Dense willow thickets are required for nesting and roosting. Low, exposed branches are used for singing posts/hunting perches.
Belding's savannah sparrow *Passerculus sandwichensis beldingi*	Federal: None State: SE Other: CNDDB	Inhabits southern coastal wetlands.
California brown pelican *Pelecanus occidentalis californicus*	Federal: Delisted State: Delisted Other: FP	Inhabits salt bays, beaches and oceans. Mostly over shallower waters, especially sheltered bays. May occasionally be found on inland freshwater lakes.
coastal California gnatcatcher *Polioptila californica californica*	Federal: FT State: None Other: SSC	Obligate, permanent resident of coastal sage scrub below 2.500 feet (760 meters) in southern California. Inhabits low, coastal sage scrub in arid washes, on mesas and slopes.

TABLE B. REGIONAL SPECIAL-STATUS WILDLIFE SPECIES [1]		
Common Name ***Scientific Name[2]***	**Status[3]**	**General Habitat Description**
light-footed Ridgway's rail *Rallus obsoletus levipes*	Federal: FE State: SE Other: FP	Resident of coastal wetlands in southern California.
bank swallow *Riparia riparia*	Federal: None State: ST Other: CNDDB	Nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, and ocean to dig nesting hole.
black skimmer *Rynchops niger*	Federal: None State: None Other: SSC	Often found near coastal estuaries and river mouths in southern California. Occasionally observed inland, including along the Colorado River and in Riverside County. Summer resident at the Salton Sea; one population resides year-round at the south end of San Diego Bay.
California least tern *Sternula antillarum browni*	Federal: FE State: SE Other: FP	Nests colonially on beaches that are undisturbed, sparsely vegetated, and in coastal flat areas with loose, sandy substrate.
least Bell's vireo *Vireo bellii pusillus*	Federal: FE State: SE Other: CNDDB	Summer resident of southern California in low riparian habitat in vicinity of water or in dry river bottoms, below 610 meters (2,000 feet).
Mammals		
western mastiff bat *Eumops perotis californicus*	Federal: None State: None Other: SSC, WBWG-H	Roosts in rock crevices, on cliff faces and also uses crevices in buildings and structures. Limited to roosts that allow at least 10 feet of free fall.
silver-haired bat *Lasionycteris noctivagans*	Federal: None State: None Other: CNDDB, WBWG-M	Occurs in coastal and montane coniferous forests, valley foothill woodlands, pinyon-juniper woodlands, and valley foothill and montane riparian habitats. Roosts in hollow trees, snags, buildings, rock crevices, caves, and under bark.
western yellow bat *Lasiurus xanthinus*	Federal: None State: None Other: SSC, WBWG-H	Occurs below 610 meters (2,000 feet) in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats. Roosts in trees and palms.
south coast marsh vole *Microtus californicus stephensi*	Federal: None State: None Other: SSC	Occurs in wetland habitats and associated grasslands along the coast.
San Diego desert woodrat *Neotoma lepida intermedia*	Federal: None State: None Other: SSC	Occurs in coastal scrub of southern California from San Diego County to San Luis Obispo County. Prefers moderate to dense canopies. Particularly abundant in rock outcrops and rocky cliffs and slopes.
pocketed free-tailed bat *Nyctinomops femorosaccus*	Federal: None State: None Other: SSC, WBWG-M	Occurs in desert scrub and arid lowlands, not far from riparian areas. Roosts in small groups in rock crevices, caves and buildings.

TABLE B. REGIONAL SPECIAL-STATUS WILDLIFE SPECIES [1]		
Common Name ***Scientific Name*[2]**	**Status**[3]	**General Habitat Description**
big free-tailed bat *Nyctinomops macrotis*	Federal: None State: None Other: SSC, WBWG-H	Occurs in low-lying arid hilly areas in Southern California to about 1,830 meters (6,000 feet). Roosts in crevices and cliffs, buildings, and cavities in trees.
Pacific pocket mouse *Perognathus longimembris pacificus*	Federal: FE State: None Other: SSC	Inhabits areas with fine-grained sandy substrates in coastal dunes, river alluvium, and coastal sage scrub habitats within 3 miles of the ocean.
southern California saltmarsh shrew *Sorex ornatus salicornicus*	Federal: None State: None Other: SSC	Occurs in coastal salt marshes, preferring those dominated by pickleweed and saltgrass.
American badger *Taxidea taxus*	Federal: None State: None Other: SSC	Occurs in dry, open stages of shrub, forest, and herbaceous habitats. Prefers areas with fine-textured or sandy soils for digging burrows.

[1] Special-status species known from the CNDDB to occur on the Long Beach, San Pedro, South Gate, Inglewood, Whittier, Los Alamitos, Seal Beach, and Torrance quadrangles, and from the IPac for the Project area.

[2] Nomenclature for special-status wildlife conforms to CNDDB.

[3] Sensitivity Status Codes

Federal **FT** - Federally Threatened under Federal Endangered Species Act (FESA)
FE - Federally Endangered under FESA
FC – A Federal Candidate for listing under FESA
State **SE** - State Endangered under California Endangered Species Act (CESA)
Other **BEGE** – Federal Bald Eagle and Golden Eagle Protection Act
FP – Designated Fully Protected by CDFW
SSC – Designated Species of Special Concern by CDFW
WL – Designated as a Watch List species by CDFW
CNDDB - Tracked by CDFW in the California Natural Diversity Data Base or considered locally sensitive
WBWG-H - Designated by the Western Bat Working Group (WBWG)[17] as High Priority species that is imperiled or are at high risk of imperilment
WBWG-M - Designated by the WBWG as Medium Priority – a level of concern that should warrant closer evaluation, more research, and conservation actions of both species and possible threats.

Introduction

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) retained AECOM to conduct a cultural resources assessment for the proposed Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (Project) in Los Angeles, California. AECOM performed this analysis to help inform the California Environmental Quality Act (CEQA) analysis required for the proposed use. The cultural resources investigation consisted of archival research and field survey of the proposed Project site to evaluate potential historical, archaeological, and paleontological resources. Results are summarized herein and supported by attached information.

Project Description

The proposed Project involves the improvement and widening of Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the Project is approximately 5,400 feet, or 1.02 miles. The proposed Project would also include a center turn lane, a painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, and drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street.

Project components include:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along the eastern side of the street;
- Traffic signal modifications at Anaheim Street and a driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;
- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue), and Quay Ave at Harry Bridges Boulevard;

- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue), and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

Description of Proposed Project

The proposed Project would:

1. Widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying right-of-way (ROW) width;
2. Upgrade four existing railroad crossings at Anaheim Street, "E" Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue), and Harry Bridges Boulevard;
3. Modify two traffic signals on Alameda Street at Anaheim Street and at the ILWU-13 site driveway entrance, and install three new traffic signals on "E" Street at Alameda Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) at Alameda Street, and Quay Avenue at Harry Bridges Boulevard;
4. Meet the requirements of the California Coast Trail, LA Harbor Waterfront Pedestrian Trail, and the City of Los Angeles 2010 Bicycle Plan (Backbone Bikeway Network) by installing a Class I (off-street) 8-foot-wide, two-way bike trail and shared pedestrian path, which would commence at the southernmost portion of the Project at Harry Bridges Boulevard and run along the eastern side of Alameda Street until Alameda Street intersects Anaheim Street;
5. Upgrade Alameda Street to a Modified Major Highway Class II Street;
6. Relocate, construct, and extend the City of Los Angeles and Los Angeles County Flood Control District storm drain systems;
7. Construct a new sidewalk on the southern side of Anaheim Street, with all sidewalks complying with the latest version of the BOE Plan Standards; and
8. Street tree removal and replacement.

Installation of new and relocation of existing utilities such as water, oil, gas, power poles, streetlight poles, and sewers would also be required along with right-of-way acquisition. Approximately 104 street trees would be removed during construction of the proposed Project, (15 from the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street; and 89 from the north side of Harry Bridges Boulevard and the westerly side of Alameda Street). The City of Los Angeles Municipal Code requires that street trees removed for construction be replaced at a ratio of two 24-inch box-size trees for each tree removed. Based on that ratio, approximately 208 24-inch box size trees would be included in Project design to mitigate for the trees removed.

The Port of Los Angeles (POLA) has delegated the design and construction of the Alameda Street widening improvements to BOE, which are identified as mitigation for the POLA Berth 200 Rail Yard expansion project.

Construction Schedule and Procedures

Construction of the proposed Project would begin on approximately December 30, 2023, and last for approximately 2.5 to 3 years. The objective would be to complete the proposed Project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented.

The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the Project site each day would be reduced by the permanent k-rail barriers proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most equipment would be mobilized to the Project at the start of construction and would remain onsite for most of the Project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate (I-) 405 Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to the I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the Project while others would occur for 1 to 7 days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

An appropriate combination of monitoring and resource avoidance would be employed during all construction activities, including implementation of the following Best Management Practices:

- Construction of the proposed Project is anticipated to occur daily from 7:00 a.m. to 4:00 p.m. Should construction be required outside of the anticipated hours, construction activity would comply with the allowable hours of construction as dictated in *Los Angeles Municipal Code Section 41.40*, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or City holidays.
- The proposed Project would implement Rule 403 fugitive dust control measures required by the South Coast Air Quality Management District (SCAQMD), which requires reasonable precautions to be taken to prevent visible particulate matter from being airborne, under normal wind conditions, beyond the property from which the emission originates. Reasonable precautions include, but are not limited to, the following:
    - application of water on dirt roads, material stockpiles, and other surfaces that can give

rise to airborne dusts; and
    - maintenance of roadways in a clean condition.
- The proposed Project would implement erosion control where necessary that may include, but would not be limited to, the following:
    - minimizing the extent of disturbed areas and duration of exposure;
    - stabilizing and protecting disturbed areas;
    - keeping runoff velocities low;
    - retaining sediment within the construction area;
    - use of silt fences or straw wattles;
    - temporary soil stabilization;
    - temporary drainage inlet protection;
    - temporary water diversion around the immediate work area; and
    - minimizing debris from construction vehicles on roads providing construction access.
- The proposed Project would implement Rule 402 measures required by the SCAQMD, which prohibits the discharge from any source whatsoever, such quantities of air contaminants or other materials that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public or which endanger the comfort, repose, health, or safety of any such persons or the public or that cause or have a natural tendency to cause injury or damage to business or property.
- BOE would ensure that all construction crews have fire-suppression equipment (such as fire extinguishers) onsite to respond to the accidental ignition of a fire.
- Spill kits will be available onsite for potential leaks or spills of hazardous materials.
- BOE or its contractor would minimize short-term construction noise through: (1) proper maintenance and tuning of all construction equipment engines to minimize noise emissions; and (2) proper maintenance and functioning of the mufflers on all internal combustion and equipment engines.
- BOE or its contractor would implement the recommendations for the protection, removal, and/or replacement of street trees detailed in the Arborist Report (see Appendix B of this IS/MND), as applicable and in consultation with the City's Urban Forestry Division and/or Board of Public Works.

Project Location

The Project location is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed Project is shown in Attachment 1, Figure 1.

The Project area is an approximately 1.02-mile segment of Alameda Street with a variable 70- to 100-foot right-of-way (ROW) and two lanes in each direction (Attachment 1, Figure 2). At the northernmost portion of the Project limits where Alameda Street intersects Anaheim Street, there is a sidewalk that runs along the east side of Alameda Street, then terminates just south of the Alameda Street driveway into the International Longshoremen and Warehouse Union Local 13 Dispatch Hall (ILWU-13), then reconvenes, still on the east side of Alameda Street, just north of where George De La Torre Jr Avenue (formerly known as (Eubank Avenue) intersects Alameda Street, and continues for the remainder of the Project limits.

CEQA Project Area

The CEQA Project Area includes the Project site, or area of direct impacts (ADI), which is limited to the roadways of Alameda Street and Anaheim Street and a variable 70- to 100-foot ROW where Project improvements would occur. The CEQA Project Area is mapped on the U.S. Geological Survey (USGS) Long Beach 7.5-minute quadrangle (see Attachment 1, Figure 3). The vertical extent of the ADI extends up to 11.2 feet below the existing ground surface at storm drain trenches and up to 2 feet within existing roadways. The Project would be restricted to roadway improvements within the existing roadways, railroad crossings, and within the ROW; therefore, there is no potential for direct or indirect impacts on aboveground historical resources outside of the ADI.

Regulatory Setting

The following summarizes the relevant regulations and policies for the CEQA-level assessment of the Project. Federal regulations are not included, such as Section 106 of the National Historic Preservation Act or the National Environmental Policy Act, because a federal nexus for the Project does not exist.

State Regulations

CEQA, Public Resources Code 21084.1, and CEQA Guidelines, California Code of Regulations (CCR) Title 14 Section 15064.5, define a "historical resource" as follows:

- Resource(s) listed or determined eligible by the State Historical Resources Commission for listing in the California Register of Historical Resources (CRHR) (14 CCR Section 15064.5[a][1])
- Resource(s) either listed in the National Register of Historic Places (NRHP) or in a "local register of historical resources" or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless "the preponderance of evidence demonstrates that it is not historically or culturally significant" (14 CCR Section 15064.5[a][2])
- Resources determined by the Lead Agency to meet the criteria for listing on the CRHR (14 CCR Section 15064.5[a][3])

California Register of Historical Resources

For listing in the CRHR, a historical resource must be significant at the local, state, or national level under one or more of the following four criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;

2. It is associated with the lives of persons important to local, California, or national history;

3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values;

4. It has yielded or has the potential to yield information important to the prehistory or history of the local area, California, or the nation.

Under 14 CCR Section 15064.5(a)(4), a resource may also be considered a "historical resource" at the discretion of the lead agency.

Integrity

All resources that are eligible for listing must have integrity, which is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Resources, therefore, must retain enough of their historic character or appearance to be recognizable as historical resources, and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. These are defined below:

- Location: the place where the historic property was constructed or the place where the historic event took place.
- Design: the combination of elements that create the form, plan, space, structure, and style of a property.
- Setting: the physical environment of a historic property. This can include the character of a resource and how it relates to adjacent features. The features can be either natural or manmade, such as buildings, vegetation, paths, fences, and rural surroundings.
- Materials: the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property.
- Workmanship: the physical evidence of crafts of a particular culture or people during any given period of history or prehistory. Workmanship can be assessed for the entire resource or to individual components.
- Feeling: a property's expression of the aesthetic or historic sense of a particular period of time.
- Association: the direct link between the important historic event or person and a historic property.

Local Regulations

City of Los Angeles Environmental Quality Act Guidelines
The City of Los Angeles Environmental Quality Act Guidelines (1981, amended July 31, 2002) contain three articles. Article I declares that, in 2002, the City adopted the State CEQA Guidelines,

codified in CCR, Title 14, Chapter 3, Sections 15000 et seq., and will incorporate all future amendments and additions to those guidelines as may be adopted by the State. Article II defines the activities by City agencies that are exempt from the requirements of CEQA. Article III defines the categorical exemptions, which are organized by classes of projects that have been determined not to have a significant effect on the environment and are therefore exempt from the provisions of CEQA.

City of Los Angeles, Administrative Code, Division 22, Chapter 9, Article 1 (Ordinance No. 178402), 1962
Ordinance No. 178402 established the Cultural Heritage Commission to identify and protect architectural, historical, and cultural buildings, structures, and sites that are important to the City of Los Angeles' history and cultural heritage. The Cultural Heritage Commission oversees the designation and protection of Los Angeles Historic-Cultural Monuments (LAHCMs).

City of Los Angeles, Administrative Code, Division 22, Chapter 9, Article 1 (Ordinance No. 185472), 2018
Ordinance No.185472 amended Section 22.171 of Article 1, Chapter 9, Division 22 of the Los Angeles Administrative Code to clarify LAHCM designation criteria, enhance due process and notification procedures affecting property owners, and provide for extensions of time limits.

Amended Section 22.171.7 Monument Designation Criteria states that an LACHM is any site (including significant trees or other plant life located thereon), building, or structure of particular historical or cultural significance to the City of Los Angeles, which meets at least one of the following criteria:

1. Is identified with important events of national, state, or local history, or exemplifies significant contributions to the broad cultural, economic or social history of the nation, state, city or community;
2. Is associated with the lives of historic personages important to national, state, city, or local history; or
3. Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder, or architect whose individual genius influenced his or her age.

City of Los Angeles, Municipal Code, Chapter I, Article 2, Section 12.20.3 (Ordinance No. 175891), 1979 (amended 2004)
This code contains procedures for the designation and protection of new Historic Preservation Overlay Zones (HPOZs) for any area of the City of Los Angeles with buildings, structures, landscaping, natural features, or lots having historic, architectural, cultural, or aesthetic significance. The ordinance describes the powers and duties of HPOZ boards and the review processes for projects within HPOZs. The City of Los Angeles Department of Planning establishes and administers HPOZs in concert with the city council.

City of Los Angeles General Plan, Conservation Element, 2001
The Conservation Element contains the following objectives pertaining to the protection of the archaeological, paleontological, cultural, and historic resources in the City of Los Angeles:

- Protect the City of Los Angeles' archaeological and paleontological resources for historical, cultural, research and/or educational purposes.
- Protect important cultural and historical sites and resources for historical, cultural, research, and community educational purposes.

The identification and protection of significant archaeological and paleontological sites and/or resources known to exist or identified during land development, demolition, or property modification activities is to be achieved through the establishment of permit processing, monitoring, enforcement, and periodic revision of regulations and procedures by the departments of Building and Safety, City Planning, and Cultural Affairs.

Wilmington-Harbor City Community Plan
The Wilmington-Harbor City Community Plan was adopted in 1970 and updated in 1999 and is intended to guide development for the Wilmington-Harbor City Community Plan Area. The plan includes the community history as well as goals, objectives, policies, and programs regarding the preservation of historic, archaeological, and cultural resources. The primary goal of the Community Plan pertaining to cultural resources is to provide "a community which preserves and restores the monuments, cultural resources, neighborhoods and landmarks which have historical and/or cultural significance."

Environmental and Cultural Setting

Ethnographic Setting

Prior to the establishment of the missions in southern California, the area in and around Los Angeles was primarily occupied by the Gabrieleño, named after the Mission San Gabriel. Pre-European contact population numbers are difficult to assess due to a lack of data. In 1852, Hugo Reid, a Scottish-born Los Angeleno who married a Gabrieleño woman, published a series of letters about the Gabrieleño. Reid believed there were as many as 68 villages, 28 of which were in Los Angeles County (Reid 1939 [1852]).

Gabrieleño territory was composed of coastal areas, islands, valleys, and foothills, with a patterning of larger settlements. Villages were placed where there was access to a variety of environments and resources, and a system of satellite camps stemming from main villages was then established for the specific procurement of resources. Subsistence strategies incorporated seasonal procurement of resources, both terrestrial and marine.

Throughout the year, familial groups would move to temporary encampments for hunting, harvesting, and collecting; depending on the season and resources that could be harvested in a seasonal round. In the interior, the primary location for summer habitation, deer and rabbit were significant resources amongst the Gabrieleño, who were expert hunters (McCawley 1996). In spring and summer, temporary camps would be established to gather roots, seeds, and bulbs; in the fall, acorns and other wild seeds were gathered as staples in the diet. Wintertime villages were in

coastal areas that were less exposed to the elements, and satellite or temporary campsites would be erected near the shore to collect shellfish and other marine resources (Bean and Smith 1978). The Village of Chaawvenga may be the closest ethnographically known village to the Project area (McCawley 1996: Map 8) and could have been located within a mile of the Project, although its exact location is unclear. Many village locations were reported in the Project vicinity (McCawley 1996).

By the late eighteenth century, most Gabrieleño lived at San Gabriel Mission where their numbers rapidly decreased as a result of introduced European diseases for which they had no immunity. After the missions were closed, many of the Gabrieleño worked on Mexican and Anglo-American ranches. By the early 1900s, much of their aboriginal culture had been lost (Bean and Smith 1978; McCawley 1996).

Chronology

The following cultural chronology is based largely on Byrd and Raab's updated synthesis of the Southern Bight cultures. The Southern Bight is a region that encompasses the California coast from Point Conception in the north to the border of the United States and Mexico in the south and includes the Project area (Byrd and Raab 2007).

The Early Holocene dates between 9600 B.C. and 5600 B.C. and describes the first groups to inhabit California (for which there is significant evidence). These people are described as hunters and gatherers with specialized bifacial projectile points, well-made scrapers, knives, and many other tools designed for subsistence-related tasks (food processing). They adapted to many environments and developed a variety of secondary subsistence strategies that enabled them to live in a changing environment (Pleistocene to Holocene).

At the start of the Middle Holocene, which dates from approximately 6000 B.C. to A.D. 500, millingstone cultures appeared throughout central and southern California. The Millingstone Horizon represents an adaptive subsistence shift indicated by the first occurrence of millingstones (mano and metate), which were used to process hard seeds like *Salvia* sp. (sages) and *Eriogonum fasciculatum* (wild buckwheat). Sites from this period are characterized by most of the artifacts being manos and metates, suggesting the importance of vegetal resources. Most of these sites are in grassland and sagebrush communities where these hard seeds could support small populations on a yearly basis. Late fall and winter were difficult seasons when vegetal foods were scarce, and diets had to be supplemented with deer and small mammal hunting and shellfish collecting (Tartaglia 1976). Middle Holocene cultures were quite diverse. Large middle Holocene sites have been well documented along the coast, as well as inland. By the Middle Holocene, evidence for extensive trade has been identified in the archaeological record in the Southern Bight.

Excavations on the southern Channel Islands indicate that a trade network for Olivella grooved rectangle beads, manufactured from a rare purple marine shell, was extant by 3000 B.C. The beads have been identified as far distant as Oregon (Byrd and Raab 2007). Temporary settlements for a few nuclear families (10 to 25 individuals) have been recorded that date to the Middle Holocene. The seasonal pattern has been documented as a regional variation in the Millingstone Horizon sites in southern California (King 1967). These sites are characterized by plant processing tools (scraper

planes, millingstones, and an absence of hunting implements). People intensively exploited their environment, with reliance on no particular food resource. Characteristic features of this period included crude chopping tools, large projectile points, manos and metates, Olivella shell beads, quartz crystals and cog stones, few ornaments, earth roasting pits, extended posture burials, reburials (secondary interment), and rock cairns (Wallace 1955:219–221). The first evidence of cemeteries is recorded during this period and, based on the relative absence of nonutilitarian artifacts, an egalitarian social system was likely to have been in operation (Tartaglia 1976).

The Late Holocene, which dates from A.D. 500 to historic contact, is characterized by a larger number of more specialized and diversified sites. Population increased substantially and is reflected in a greater number of sites recorded during this time. This period is characterized (Wallace 1955:223–226) by large village sites, tightly flexed burials, bow and arrow, arrowshaft straighteners, ollas (jars) and comals (cooking flats), personal ornaments, pottery vessels, circular shell fishhooks, an extensive trade network, a wide variety of ritual objects, and large stone bowls. Elaborate mortuary artifacts are recovered from sites of this period.

Historic Overview

Los Angeles

In 1781, El Pueblo de la Reina de Los Angeles was founded by the Spanish governor of California, Felipe de Neve, and was the origin of the present-day Los Angeles. The United States took control of California after the Mexican-American War in 1848. Under American control, Los Angeles started to grow as railway and transportation networks were formed, real estate prices soared, and residential and businesses were lured by economic change (Nicolaides and GPA Consulting 2015).

The American Civil War began in April 1861. California remained a part of the United States, but many Californians came from states that left to form the Confederacy and held secessionist sympathies. Fearing a secessionist uprising, a businessman named Phineas Banning wrote to President Abraham Lincoln and donated 60 acres of land in Wilmington for a military base. Camp Drum was established on the property, which was roughly bounded by today's Opp Street in the south, L Street in the north, Banning Boulevard in the west, and McFarland Avenue in the east. Camp Drum included officers' and troops' quarters, a hospital, stables, a guard house, a powder magazine, and various supporting services' buildings, as well as a cemetery. Camp Drum remained important throughout the Civil War and the following Indian Wars, when it was linked to Fort Mojave via the Mojave Road, but Camp Drum was deactivated and the troops moved to Yuma in 1870–1871 (McDowell 1993).

During the early twentieth century, the Los Angeles region underwent another period of significant growth due to population increase, changing water infrastructure needs, and economic growth. As the city grew into and throughout the twentieth century, Los Angeles' development patterns were shaped by the automobile and the freeway system leading to an expansive layout and footprint; however, it is also one of the most densely populated metropolitan areas in the United States (Monkkonen 1988).

Early History of San Pedro Bay

Portuguese explorer Juan Rodriguez Cabrillo recorded sighting San Pedro Bay in 1542. He described it as an "excellent harbor" and named it Bahia de los Fumos (Bay of Smokes) after seeing the smoke from hunting fires lit by the native Tongva-Gabrieliño people who occupied the area prior to European arrival. Sixty years later, Sebastian Vizcaino dropped anchor off the site and reported the bay as a cove "with shelter from the northwest, west and southwest winds with a small island in it." The small island, about a half-mile east of a promontory on the western shore, was later named Deadman's Island. To the north, a set of sand dunes called Rattlesnake Island were present; these sand dunes protected the small channels and sloughs of the inland harbor from ocean waves. Between the islands lay an 18-foot bar of sand and rock. Vizcaino renamed the bay "San Andres." In 1734, Spaniard Cabrera Bueno renamed the bay "San Pedro," the name that has persisted (Queenan 1983).

The first permanent European settlement of the region occurred in 1769, when Spanish soldiers and priests arrived to colonize California. Mission San Gabriel, about 40 miles inland from the bay, was established in 1771. The Spanish set up a system of large land grants, and the Nieto and Dominguez families controlled the waterfront lands at San Pedro (Queenan 1983).

Trade during the Spanish Period was forbidden except with Spanish ships. Driven by the need for more regular supplies and trade, residents developed a thriving cargo-smuggling industry, which was supported by the small town established at San Pedro. After Mexico declared independence from Spain in 1822, the new Mexican government lifted the trade restrictions and San Pedro became a robust commercial center. Lands along the bay remained in the possession of the Spanish land grantees (Board and City 2001; Queenan 1983).

California came under the control of the United States in 1848, during the Mexican-American War. Two years later, California became a state in the Union. Phineas Banning, who arrived in the region in 1851, saw the potential for improving the harbor and its facilities to accommodate the increasing cargo shipments arriving in the rapidly developing region. Banning eventually became known as the "Father of the Los Angeles Harbor" for his many ventures, which included the establishment of a freight and passenger transportation business that served five states, the founding of the small town of Wilmington, and the introduction of the first railroad bill to the California Legislature. Banning solicited Congress successfully for the first improvements to the harbor. This included the dredging of the main channel in 1871 to a depth of 10 feet and the construction of a breakwater between Rattlesnake Island (now Terminal Island) and Deadman's Island (no longer present). The railroad industry became the dominant transportation agent for the thousands of tons of cargo that moved through the port (Board and City 2001).

During the 1880s, the population of the City of Los Angeles increased from less than 15,000 to over 50,000, placing increasing strain on the small San Pedro harbor to handle the cargoes of lumber for construction, and coal for the railroads and building. Beginning in the early 1880s, the Southern Pacific Railroad Company (Southern Pacific) attempted to monopolize trade in the region by promoting a deep water harbor in Santa Monica. The Southern Pacific tried to capture the entire Senate Commerce Committee appropriation of $250,000 planned for improvements to San Pedro harbor. Despite Southern Pacific's attempts to orient state funds to Santa Monica, in 1896,

Congress granted the appropriation to San Pedro, thereby laying the foundation for the modern ports of Los Angeles and Long Beach (Queenan 1983).

Establishment of the Ports of Los Angeles and Long Beach

By the turn of the century, the population of Los Angeles had doubled to more than 100,000, resulting in increasing demands for building supplies and other cargo to support the growing metropolis. With that in mind, the City annexed a 16-mile strip of land on the outskirts of the communities of San Pedro and Wilmington in 1906 for a port (both towns became part of the City of Los Angeles 3 years later). A permanent Los Angeles Board of Harbor Commissioners was created in 1907 to oversee the port (Weinman and Stickel 1978; Corps of Engineers and the Ports of Los Angeles and Long Beach 1984). By 1911, the first 8,500-foot section of the harbor breakwater was completed and the main channel was widened to 80 feet and dredged to 30 feet (Queenan 1983).

Meanwhile, in 1909, the Los Angeles Dock and Terminal Company purchased 800 acres of sloughs and salt marshes at the mouth of the Los Angeles River adjacent to and south of the Port of Los Angeles to develop a port off of the City of Long Beach. The State of California officially granted the tideland areas to the City of Long Beach for port operations in 1910. After the Los Angeles Dock and Terminal Company declared bankruptcy in 1916, the City of Long Beach continued the company's dredging project (Port of Long Beach 2017).

The opening of the Panama Canal in 1914 sparked a boom in shipping to the Los Angeles and Long Beach ports. The need for deeper channels as well as extended breakwaters led to considerable dredging and land reclamation efforts in the ports during the twentieth century. During World War I, activity at the Port of Los Angeles directed toward military operations and shipbuilding. In 1917, Terminal Island was expanded by dredging the harbor channel and creating new landfills (Chasteen et al. 2014; Morlet et al. 2013).

Long-term Development of the Port of Los Angeles

Following World War I, development of the port increased. Although existing harbor facilities continued to be used for products such as oil, lumber, ships, and fish, new facilities were developed to handle products such as cotton, borax, citrus crops, and steel (Chasteen et al. 2014; Morlet et al. 2013).

During the 1920s, the development of the Port of Los Angeles was typified by the expansion of infrastructure to facilitate increased trade and the oil industry. New railroad lines, wharves, roads, bridges, and cargo and passenger terminal facilities were constructed. Just 15 years after its first development, Long Beach attained "deep water" port status, handling more than 1 million tons of cargo and 821 vessel calls in 1926 (Port of Long Beach 2017). During the 1920s, oil production in southern California, primarily in Los Angeles and Huntington Beach, spurred industrial and suburban development.

In 1936, oil was discovered in Long Beach's harbor (the oil field is known as Wilmington Field), which led to the construction of the first oil well there in 1938. By 1943, the oil drilling program was producing 17,000 barrels a day and generating $10 million a year in oil revenues. Unfortunately, as

early as 1939, the oil extraction appeared to be causing subsidence (Gettemy 1953). Dikes were built in 1945 for flood control at high tide; however, by 1957, a 16-square-mile area of the north harbor had sunk between 2 feet and 24 feet. The solution was a water injection program termed Operation "Big Squirt" that was undertaken in 1960 and seemed to halt the subsidence (Port of Long Beach 2017).

During World War II, the Port of Los Angeles became a pivotal shipping and manufacturing hub. During this period, every shipyard, large and small, shifted operations to construct and maintain ships for the war effort. Smaller yards produced auxiliary vessels, while larger yards constructed cargo ships, troop carriers, and destroyers. Between 1941 and 1945, the Port of Los Angeles shipyards employed over 90,000 workers (LSA Associates, Inc. 2011, revised 2018). As a result, facilities built or expanded to accommodate the increased workforce and wartime operations; this included the municipal ferry terminals between San Pedro and Terminal Island, enabling easy transport of people and vehicles between the shipyards. The Port of Los Angeles continued to operate as a shipping hub during the war; however, it experienced limited international trade. Instead, it moved millions of tons of war material and equipment (LSA Associates, Inc. 2011, revised 2018).

The detainment and relocation of Japanese Americans during the wartime era also shifted the face of the Port of Los Angeles. By 1940, the Japanese American population of Terminal Island equaled about 3,000 people. In 1941, the Federal Bureau of Investigation detained some Japanese men from Terminal Island and San Pedro. In 1942, the government forcibly removed all of the port's Japanese American population from their homes. The residents of Terminal Island became the first Japanese Americans on the west coast to be taken to internment camps; most taken to Manzanar in California's Owens Valley. The Navy bulldozed their homes and commercial businesses (LSA Associates, Inc. 2011, revised 2018).

In 1945, following the war, new methods in shipping and changes in commerce dramatically changed the port. This included extensive repairs and maintenance that had been deferred during the war, as well as expansion into the vacant land previously occupied by Japanese American homes and businesses. The Port of Los Angeles also experienced in an increase in labor and construction due to wartime workers, previously employed in the defense industry, who decided to remain after the war. The shipment of lumber, and other materials, also increased to meet the demand of the post-war era, and the Port of Los Angeles continued to build up and develop through the 1940s and 1950s (LSA Associates, Inc. 2011, revised 2018). Development included the import of automobiles from Japan. In 1959, voters approved a measure that authorized the Harbor Department to finance harbor improvements with revenue bonds. This led to a large-scale replacement of older terminals, as well as the renovation of additional terminals (LSA Associates, Inc. 2011, revised 2018).

During the 1960s and 1970s, containerization defined the physical development of the Port of Los Angeles. The adaptation of the maritime industry to containerization involved not only the creation of new ships, truck trailers, rail cars, and cargo cranes designed and built specifically to handle the standard cargo containers, but also the construction of new port facilities (Chasteen et al. 2014; Morlet et al. 2013). The use of large containers forced cargo ships to keep cargo on open decks, as well as the physical change of port infrastructure. This resulted in the construction of

large cranes and modified wharves to support the weight of containers, to store large amounts of cargo in the open, and to accommodate the newer cargo ships. In the 1960s, most of the wharves in the Port of Los Angeles were rebuilt with concrete to handle the increased cargo loads. In 1960, a development plan to modernize the existing facilities, as well as construct new ones, was approved by the Board of Harbor Commissioners (LSA Associates, Inc. 2011, revised 2018). By the late 1960s, the Port of Los Angeles completely adapted its infrastructure to accommodate containerization and solidly established itself as a modern industrial hub. Some of the Port of Los Angeles' most visible resources were constructed during the containerization period. For example, in 1961, Ports O'Call Village began with one restaurant that quickly grew into a complex of shops and restaurants that represented the seaside architecture of various nations. The complex quickly evolved into a tourist attraction and increased non-industrial businesses at the port. Ports O'Call Village remains as the only property at the Port of Los Angeles that was constructed to operate as a tourist attraction (LSA Associates, Inc. 2011, revised 2018). Furthermore, in 1963, the Vincent Bridge was constructed. This bridge connected Terminal Island to the mainland and replaced the municipal ferry service. The municipal ferry terminal currently operates as the Maritime Museum (LSA Associates, Inc. 2011, revised 2018).

The Port of Los Angeles also experienced the decline of the Fish Harbor canneries in the 1960s. For example, Van Camp and Star-Kist, the two largest operations, began to establish their canneries overseas. By 1975, most of the Port of Los Angeles' canneries were bought out by multinational corporations and, by the 1980s, relocated overseas. The last cannery in the Port of Los Angeles, Chicken of the Sea, closed in 2001 (LSA Associates, Inc. 2011, revised 2018).

After the 1970s, the Port of Los Angeles continued to dredge and widen the Main Channel to accommodate larger cargo ships, as well as create new landfill from the dredged sediments to increase storage space, construct new terminals, and provide general maintenance and upgrades. In the early 1980s, the Port of Los Angeles included Intermodal Container Transfer Facility to provide a harbor railhead closer to the port. In 2002, the Alameda Corridor was completed. This corridor, or cargo expressway, enabled a robust connection between the port and the mainland tracks located near the downtown area. The Alameda Corridor also reduced traffic congestion by eliminating grade crossings (LSA Associates, Inc. 2011, revised 2018).

Project Area History: Anaheim Street, Alameda Street, and Harry Bridges Boulevard

Long Beach land developer Charles H. Hoge organized the Dominguez Investment Company in the early 1900s to subdivide and develop the 200-acre Dominguez Harbor Tract located on the north side of Anaheim Road running from Long Beach to Wilmington (Guinn 1907). Anaheim Road was established during the 1880s and later renamed Anaheim Street at the turn of the century (CDE 1888). The Southern Pacific Railroad's Long Beach branch line was established in the 1870s, and the Pacific Electric Railroad line was established by 1925. Anaheim Street was first paved in 1915 with additional sections added in 1918, 1919, and 1941 (LADPW 2022a).

During the 1920s, in the present footprint of Alameda Street, was a minor line of the Pacific Electric Railway (Pontius 1927). The rail line was later replaced with the construction of Alameda Street. The segment of Alameda Street within the Project area was first paved in 1931 with sections added in 1935 and 1943 (LADPW 2022b). Alameda Street at the southwest end becomes Harry Bridges

Boulevard. Harry Bridges Boulevard, originally named B Street, was first paved in 1915 with sections added in 1919 (LADPW 2022c). B Street was renamed in 1994 after union leader Alfred Renton Bryant Bridges, "Harry Bridges," who founded the International Longshoremen's and Warehousemen's Union (*News-Pilot* 1994). The surrounding area was sparsely developed until the 1920s. In 1927–1928, Southern California Edison constructed the Long Beach-Laguna Bell Transmission Line east of the Project area. By the 1940s, numerous oil wells were established. The Dominguez Slough, to the southwest of the Project area, was completely channelized in the mid-1900s in an effort to provide flood protection to much of the South Bay area (LACPW 2017).

The current commercial and industrial properties along Alameda Street, Anaheim Street, and Harry Bridges Boulevard within the Project area were constructed between the 1940s and 1980s. Some of the earlier extant properties from the1940s include the former Victor Canning Company (1940) and Alameda Motel (1942) (Plate 1). The Victor Canning Company, at 1502 E. Opp Street, manufactured canned tomatoes and tomato paste during the 1940s and 1950s (*Long Beach Sun* 1943). The roadways within the Project area have periodically been repaved and widened since their original 1910s-1930s construction.

Archival Research

As part of this historical and archaeological resources assessment, an archival research program was conducted. Archival research included a records search at the South Central Coastal

Information Center (SCCIC) housed at California State University, Fullerton; a review of local resource registers; and review of local and regional historic maps. Supplemental research in published and unpublished sources was also conducted to provide prehistoric and historic contexts for the Project area.

Finally, the Native American Heritage Commission (NAHC) was contacted to request a Sacred Lands File (SLF) search of the Project area, and a Native American contact program was conducted to solicit input from regional Native American individuals and organizations. The research focused on the identification of previously recorded cultural resources within a 0.5-mile radius of the proposed Project footprint. The archival research included review of previously recorded archaeological site records and reports, historic site and property inventories, and historic maps. Inventories of the NRHP, CRHR, the Built Environment Resources Directory (BERD), California Historical Landmarks (CHLs) and Points of Interest, and the list LAHCMs was also reviewed to identify cultural resources within a 0.5-mile radius of the Project area.

California Historic Resources Inventory System Search

A records search at the SCCIC was conducted on November 9, 2021. The records search focused on the identification of previously recorded cultural resources within a 0.5-mile radius of the project area.

Previous Cultural Resources Investigation Reports

The records search at SCCIC revealed a total of 36 cultural resources investigations, both archaeological and built environment, previously conducted within a 0.5-mile radius of the Project area (Table 1). Nine of these studies are within the Project area.

**Study within Project Area*

Previously Recorded Cultural Resources

The records search at SCCIC identified 32 previously recorded cultural resources within a 0.5-mile radius of the Project area (Error! Reference source not found.Table 2). Of these 32 previously recorded cultural resources, two are within the Project area, including a historic archaeological site consisting of building foundations, refuse deposits, and railroad grade remnants (P-19-004325), and a historic road segment of the Mojave Road (P-19-187085) (Confidential Attachment 2).

Table 2. Previously Recorded Cultural Resource Sites within 0.5 Mile of the Project Area

Primary Number (P-19-)	Historic Name/Description	Time Period	Eligibility Evaluation/ NRHP Status Code
002850	Concrete box culvert	1946	Not Evaluated
004279	Refuse deposit	1940	Not Evaluated
004325*	Refuse deposits, building foundations, and railroad grade remnants associated with Consolidated Lumber Company	Historic (ca. 1880–post WWII)	Not Evaluated
180784	Tidelands Oil Production Facility	1937-1950	6Z
187016	309 Broad Avenue/One-story brick commercial building	1924	6Z
187017	200 Broad Avenue/Two-story commercial building	1923	6Z

192706	Catalina Freight Line	1982	7R
192756	Maritime Law Enforcement Training Center	1987-1993	7R
192757	Matson Passenger Terminal Remnants/Landscape features	1953	5S3

**Cultural Resource within Project Area*
3S=Appears eligible for NRHP individually through survey evaluation.
5S3=Appears to be individually eligible for local listing or designation through survey evaluation.
6Z=Found ineligible for NRHP, CRHR, or local designation through survey evaluation.
7R=Identified in Reconnaissance Level Survey or in an Area of Potential Effects (APE): Not evaluated.

Supplemental Research

Built Environment Resources Directory

The BERD is a compilation of properties maintained by the Office of Historic Preservation. This inventory contains many built resources that are not found on the SCCIC's maps. This study focused on properties within 0.5 mile of the Project area that face streets bordering the Project

area, including Alameda Street, Anaheim Street, and Harry Bridges Boulevard (Table 3). None of these properties are located within the Project area.

Los Angeles Historic Resources Inventory (HistoricPlacesLA)

As part of this investigation, a search of the Los Angeles Historic Resources Inventory (HistoricPlacesLA) was conducted. HistoricPlacesLA contains information about LAHCMs, HPOZs, and properties identified as eligible for designation for listing in NRHP, CRHR, LAHCM, or an HPOZ through the Los Angeles Historic Resources Survey, known as SurveyLA. One LAHCM was identified within the 0.5-mile radius of the Project area, the Mason Temple at 221-227 North Avalon Boulevard (LAHCM #342). The search identified no cultural resources within the Project area.

Table 3. BERD Results within 0.5 Mile of the Project Area

Address	Construction Date	NRHP Status Code
921 N. Southerland Ave.	1940	6Y
710 Henry Ford Ave.	1937	6Y
1555 E. L St.	1913	6Y
1525 E Young St.	1923	6Y
1315 Denni Ave.	1928	6Y
1035 N Watson Ave.	1931	6Y
1008 Sanford Ave.	1924	6Y
939 Sanford Ave.	1927	6Y
732 N Flint Ave.	1920	6Y
309 Broad Ave.	1924	6Y
200 Broad Ave.	1923	6Y

Historic Maps and Aerial Photographs

Historic map research was conducted to understand past land use and disturbance and to identify possible locations of archaeological sensitivity within the Project area. USGS, Sanborn Fire Insurance, and Baist Real Estate maps, among others, were consulted.

The Project area was outside of city limits in the late nineteenth to early twentieth centuries and is not shown in the 1885, 1888, 1891, 1900, and 1907 Wilmington Sanborn maps.

The earliest USGS topographic maps (1896, 1899, 1902 Downey, CA 1:62500 maps) show a predecessor to Alameda Street winding through the vicinity of the Project area, following a contour line to avoid wetlands to the east. The Southern Pacific Railroad follows its modern course, as does Anaheim Street. No buildings or structures were mapped in the Project area.

A rail line appears in the area of I Street on a 1911 map of the Pacific Electric streetcar system (Pacific Electric Railway System 1911). No tracks are shown in the 1921 Sanborn maps, but the south side of I Street is labeled "PACIFIC ELECTRIC RAILWAY CO'S RIGHT OF WAY" (Volume 19, Sheet 1999q). The 1921 Baist map does show an electric rail track extending east-west along I Street (Baist 1921).

The 1923 and 1925 Wilmington, CA 1:24000 maps show Anaheim Street, Henry Ford Street, and Grant Street in their modern locations. The Pacific Electric Railway is located along what is today I Street. The vicinity of the Project area remained mostly undeveloped.

A 1927 map entitled *Pacific Electric Railway in Southern California* shows a minor Pacific Electric line in the Project area (Pontius 1927). The railway is also visible in a 1928 aerial photograph that depicts the Project area prior to the paving of Alameda Street (Plate 2). The 1949 Long Beach, CA 1:24000 map shows more buildings in the neighborhood, and a 1962 aerial photograph depicts the vicinity as developed (Plate 3). In the 1964 Long Beach, CA 1:24000 map, the streets appear much as they do today, the Pacific Electric Railroad is no longer visible, and a number of buildings stand in the vicinity of the Project area.

Plate 2. Aerial Photograph of Project Area, 1928, Anaheim Street and Pacific Electric Rail Line (later Alameda Street) intersection identified (UCSB 1928)

Plate 3. Aerial Photograph of Project Area, 1962, Alameda Street identified (UCSB 1962)

Native American Contact Program

An SLF search was conducted by the NAHC to identify any Native American cultural resources that may be within the Project area (see Attachment 3).

A letter was prepared and mailed to the NAHC in September 2021, which described the Project, provided the Project location, and requested an SLF check for the Project area. The NAHC responded by email on October 19, 2021, with "negative results" for the Sacred Lands File search. The NAHC identified nine Native American representatives who may have knowledge of resources in or near the Project area.

BOE will conduct consultation under Assembly Bill 52 separately from this cultural resources study; AECOM did not initiate a Native American contact program with the representatives identified by the NAHC.

Field Survey

Archaeological Survey

An archaeological field survey of the Project area was conducted on September 20, 2021, by former AECOM archaeologist Marc A. Beherec, Ph.D., RPA. Dr. Beherec meets the Secretary of the Interior's Professional Qualification Standards in Archaeology. The purpose of the survey was to identify and record cultural resources that are at least 45 years old and evaluate any discovered resources for historical significance based on criteria for listing in the CRHR, as well as to identify the area's sensitivity for buried archaeological resources.

Usually, a pedestrian transect survey of 15 meters or less is performed; however, due to the lack of soil visibility because of pavement development and because much of the Project is within an active roadway, the methodology was modified to include one transect on each side of Alameda Street. All exposed soil within the Project area, which consisted of unpaved areas beside the street, was surveyed. From the sidewalk and street margin, the street was inspected for any evidence of historic resources including, but not limited to, contractors' pavement stamps, street furniture, etc.

The Project area west of Alameda Street consists of an unpaved area between the paved street surface and the Southern Pacific Railroad tracks. Visibility in this area overall was approximately 60 percent. The sediment primarily consisted of a loose light brown sediment, although patches of both powdery silt and more compact silt were also observed. Large amounts of recent trash left by illegal dumping was observed.

The Project area east of Alameda Street is more highly variable. From the merge with Henry Ford Street south to Denni Street, the area is a paved sidewalk. Between Denni Street and I Street, the east side of Alameda Street is mostly unpaved, but visibility is obscured by variable amounts of landscaping and recent trash.

Alameda Street itself is paved in asphalt, which is more recent at the north and south ends of the Project area. The Project area was examined for extant remnants of Mojave Road (P-19-187085), but no traces were observed. One historic resource, a set of railroad spurs, was observed in the Project area.

I Street Streetcar Tracks

Two short segments of the historic Pacific Electric streetcar tracks were observed embedded in the asphalt and partially paved over in the intersection of Alameda Street and I Street. Both sets of rails are cut at their east and west ends and the rails removed—the track segments survive only in the intersection of Alameda Street and I Street (Photograph 1). The intersection is slightly higher in elevation than the rest of I Street.

Photograph 1. Overview of the streetcar tracks, with the west end of each rail marked with a red arrow. View east.

The northernmost rail of the northern set of tracks is just south of the midline of I Street. This set of rails does not deviate from an east-west course along I Street and is almost completely covered in asphalt. A small segment of approximately 6 inches in length was visible beneath the asphalt. The path of the tracks was easily discernable beneath the irregular asphalt surface.

The southern set of tracks begins as an east-west track along I Street and then arcs slightly southward. Too little of the track remains to determine its final direction. Several feet of rail are visible showing through the asphalt surface and show a groove down the length of the track, which separated the train's wheels from the asphalt and is a typical feature of streetcar tracks. An octagonal traffic cone base has been set in asphalt to patch a pothole next to the track. Miscellaneous pieces of metal debris unassociated with the track are also seen embedded in the asphalt. No artifacts or features associated with the tracks are visible; the only features consist of the two sets of rails.

Although the tracks generally conform to the Pacific Electric Railroad tracks seen on historic maps, none of the maps described in the archival research section above show the southern tracks arched southward.

The resource is located in an active roadway, so no measurements could be safely made. However, the tracks appear to be the narrow gauge of the Los Angeles streetcar system (3 feet, 6 inches) rather than the standard gauge used by the nearby Southern Pacific Railroad (4 feet, 8½ inches).

Built Environment Field Survey

A desktop review of the built environment photographs was conducted by architectural historian Monica Wilson. Ms. Wilson meets the Secretary of the Interior's Professional Qualification Standards in Architectural History and History. Four buildings within the Project area were found to be over 50 years of age and required further evaluation (1050 Alameda Street, 1006 Alameda Street, 1502 E. Opp Street, and 940 Alameda Street).

1050 Alameda Street

This building at 1050 Alameda Street was built in 1942 as the Alameda Motel. The building is a modified vernacular-style motel building with Mediterranean style influences (Photograph 2). It occupies the side of the lot and has a south-facing orientation. It is one story with an L-shaped plan. The building features a medium-pitch cross-gable roof covered with asphalt shingles. The walls are clad with stucco. Decorative wall features include arched bays in relief. The building has replacement horizontal sliding vinyl-frame windows with simulated lights. The entrances are paneled fiberglass replacement doors.

Photograph 2. View of Hotel Portlight (former Alameda Hotel) at 1050 Alameda Street, view to northeast

1006 Alameda Street

The building at 1006 Alameda Street was built in 1951 and is a vernacular utilitarian-style garage (Photograph 3). It occupies the center of the lot and has a west-facing orientation. It is one story with a rectangular plan. The building features a medium-pitch front-gable roof, and the roof and exterior walls are both covered with corrugated metal. There is a sliding metal door along the west elevation. The property is enclosed by a metal fence and is fronted by machinery and automobiles. A blade sign along the roof reads "1006 – HYD. CYLS. REPAIRS." The rear section of the building has a painted wall sign that reads "Edwards Machine Co."

Photograph 3. View of 1006 Alameda Street, view to east

1502 E. Opp Street

The building at 1502 E. Opp Street was built in 1940 as the Victor Canning Company. The building is a monolithic, one-story vernacular utilitarian-style warehouse that occupies the center of the lot and has a south-facing orientation and an irregular plan (Photograph 4). The building features a medium-pitch bowstring roof, and both the roof and exterior walls are covered with corrugated metal. The property is enclosed by a metal fence.

940 Alameda Street

The building at 940 Alameda Street was built in 1940 and is a one-story vernacular utilitarian-style garage with a rectangular plan (Photograph 5). It occupies the center of the lot and has a west-facing orientation. The building features a low-pitch front-gable roof, and both the roof and

the exterior walls are covered with corrugated metal. There is a sliding metal door along the west elevation and two fixed windows. The property is enclosed by a metal fence.

Photograph 4. View of 1502 E. Opp Street, view to north

Photograph 5. View of 940 Alameda Street, view to east

Evaluations and Recommendations

The following section presents recommendations for further action regarding cultural resources within the Project area. These recommendations are based on information collected from archival research, which examined records kept at the SCCIC, local cultural resource listings, historic maps, contemporary archaeological literature, local prehistoric land use patterns and resource availability, and the results of the field survey. All of these investigations and resource documentation serve to inform the recommendations provided for cultural resources in the Project area.

Mojave Road (P-19-187085)

The Mojave Road (CHL #963) extends from the Drum Barracks near the Los Angeles Harbor to the Cajon Pass and across the Mojave Desert to the Nevada state line. The trail was once used by the Mohave Indians and was later used by the US Army in the 1860s as a supply route between Fort Mojave and Los Angeles. From 1866 to 1868 and from 1875 to 1883, the U.S. Postal Service used the road for carrying mail. The Mojave Road is listed in the CRHR and is considered a historical resource for the purposes of CEQA. No extant portion of the road was observed in the Project area during the pedestrian survey, and the proposed Project alterations would not directly or indirectly alter character-defining features of the Mojave Road or diminish its integrity. Therefore, the proposed Project will not constitute a substantial adverse change to the resource such that its significance would be materially impaired.

I Street Streetcar Tracks

Under CRHR Criterion 1, the I Street Pacific Electric streetcar tracks have no significant associations with important historic events. Although the property played an important role in transporting people during the twentieth-century development of the City and County of Los Angeles, this particular segment of tracks was not unusual among the many other streetcar track segments constructed in Los Angeles County. Completion of the resource itself does not demonstrate a significant achievement or reflect larger events, and these short track segments are limited in their ability to convey the former importance of the Los Angeles streetcar system. Overall, these tracks do not appear individually eligible for the CRHR under Criterion 1.

The I Street Pacific Electric streetcar tracks are not associated with any significant person in history. The Pacific Electric streetcar was a high-traffic, high-volume facility; therefore, numerous individuals have used the property. Research did not indicate that any individuals related to the development and use of this resource made demonstrably important contributions to history at the local, state, or national level. Therefore, the resource is not eligible for listing in the CRHR under Criterion 2.

Under CRHR Criterion 3, the I Street streetcar track segments are not significant as an example of a type, period, or method of construction. The short segments of surviving rails are typical engineering features of their time. They are not unusual in their construction, nor are the small surviving segments particularly good examples of these typical streetcar tracks that were once present throughout Los Angeles City and County. The construction of these utilitarian features did not require the skill of a master. The resource is not eligible for inclusion in the CRHR under Criterion 3.

The property has not yielded, nor is it likely to yield, information important in prehistory or history; moreover, what research potential existed for the resource is exhausted by this recordation. Therefore, it is ineligible for listing in the CRHR under Criterion 4.

The I Street streetcar tracks segments are not eligible for inclusion in the CRHR and therefore are not a historical resource. No further work is recommended for this resource.

1050 Alameda Street

Under CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1942 as the Alameda Motel, is associated with commercial development of Wilmington; however, research did not reveal that the building played a distinct or important role in the economic development of the area.

Under CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level.

Under CRHR Criterion 3, this building is not an important example of a type, period, or method of construction. Buildings constructed in vernacular styles proliferated commercial and industrial

areas throughout the nation during the late nineteenth and early twentieth centuries, and the motel building at 1050 Alameda Street is an unremarkable example reflecting the twentieth-century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing in the CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master.

Under CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

The motel building at 1050 Alameda Street is not eligible for inclusion in the CRHR and therefore is not considered a historical resource for the purposes of CEQA. No further work is recommended for this property.

1006 Alameda Street

Under CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1951, is associated with commercial development of Wilmington; however, research did not reveal that the building played a distinct or important role in the economic development of the area.

Under CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level.

Under CRHR Criterion 3, this building is not an important example of a type, period, or method of construction. Buildings constructed in vernacular styles proliferated commercial and industrial areas throughout the nation during the late nineteenth and early twentieth centuries, and the garage building at 1006 Alameda Street is an unremarkable example reflecting the twentieth-century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing in the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master.

Under CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

The garage building at 1006 Alameda Street is not eligible for inclusion in the CRHR and therefore is not considered a historical resource for the purposes of CEQA. No further work is recommended for this property.

1502 E. Opp Street

Under CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1940 for the Victor Canning Company, is associated with commercial development of Wilmington and early development along Alameda Street; however,

research did not reveal that the building played a distinct or important role in the economic development of the area.

Under CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level.

Under CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. Buildings constructed in vernacular styles proliferated commercial and industrial areas throughout the nation during the late nineteenth and early twentieth centuries, and the warehouse building at 1502 E. Opp Street is an unremarkable example reflecting the twentieth-century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing in the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master.

Under CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

The former Victor Canning Company warehouse building at 1502 E. Opp Street is not eligible for inclusion in the CRHR and therefore is not considered a historical resource for the purposes of CEQA. No further work is recommended for this property.

940 Alameda Street

Under CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1940, is associated with commercial development of Wilmington; however, research did not reveal that the building played a distinct or important role in the economic development of the area.

Under CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level.

Under CRHR Criterion 3, this building is not an important example of a type, period, or method of construction. Buildings constructed in vernacular styles proliferated commercial and industrial areas throughout the nation during the late nineteenth and early twentieth centuries, and the garage building at 940 Alameda Street is an unremarkable example reflecting the twentieth-century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing in the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master.

Under CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

The garage building at 940 Alameda Street is not eligible for inclusion in the CRHR and therefore is not considered a historical resource for the purposes of CEQA. No further work is recommended for this property.

Recommendations

Based on the results of the archival research and survey, it is possible, but unlikely, that significant archaeological resources will be encountered during ground-disturbing activities for the proposed Project. The Project area is within a heavily disturbed urban area that has been impacted to unknown depths by grading and the installation of utilities. Based on the results of the archival research and cultural resources survey, there is low potential that archaeological resources will be encountered during ground-disturbing activities at the shallow depths required for the proposed Project. Therefore, no further work is recommended at this time. If archaeological resources are encountered during ground-disturbing activities, BOE will contact a qualified archaeologist to evaluate and determine appropriate treatment for the resource in accordance with Public Resources Code Section 21083.2(i).

The sensitivity of the Project area for tribal cultural resources appears low. No potential tribal cultural resources were identified during the archival research or the field survey. However, if any Native American cultural material is encountered within the Project site, interested Native American parties established in the contact program or through consultation with the lead agency will be notified. BOE should determine during consultation if the resources constitute tribal cultural resources and solicit any comments the Native American parties may have regarding appropriate treatment and disposition of the resources.

If human remains are discovered, work in the immediate vicinity of the discovery will be suspended and the Los Angeles County Coroner contacted. If the remains are deemed Native American in origin, the Coroner will contact the NAHC and identify a Most Likely Descendant pursuant to Public Resources Code Section 5097.98 and CCR Section 15064.5. Work may be resumed at the landowner's discretion but will only commence after consultation and treatment have been concluded. Work may continue on other parts of the Project site while consultation and treatment are conducted.

Conclusion

In summary, no built environment resources or tribal cultural resources were identified in the Project area. One archaeological resource, a historic segment of the Mojave Road, which is listed in CRHR and is CHL #963, was identified within the Project area in the course of archival research. The Project design will avoid alterations to the Mojave Road segment. It may be concluded that the Project would have no impact on historical or archaeological resources under CEQA.

Re: Alameda Street Improvement Project, Los Angeles County

Dear Mr. Beherec:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

APPENDIX E
Energy Technical Memorandum

Technical Memorandum

TO: Shannon Ledet
AECOM

FROM: Terry A. Hayes Associates Inc.

DATE: March 15, 2023

RE: Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project – Energy Assessment for the California Environmental Quality Act (CEQA)

INTRODUCTION

Terry A. Hayes Associates Inc. (TAHA) has completed an Energy Assessment for the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project) in accordance with provisions of CEQA Statutes and Guidelines. This assessment is organized as follows:

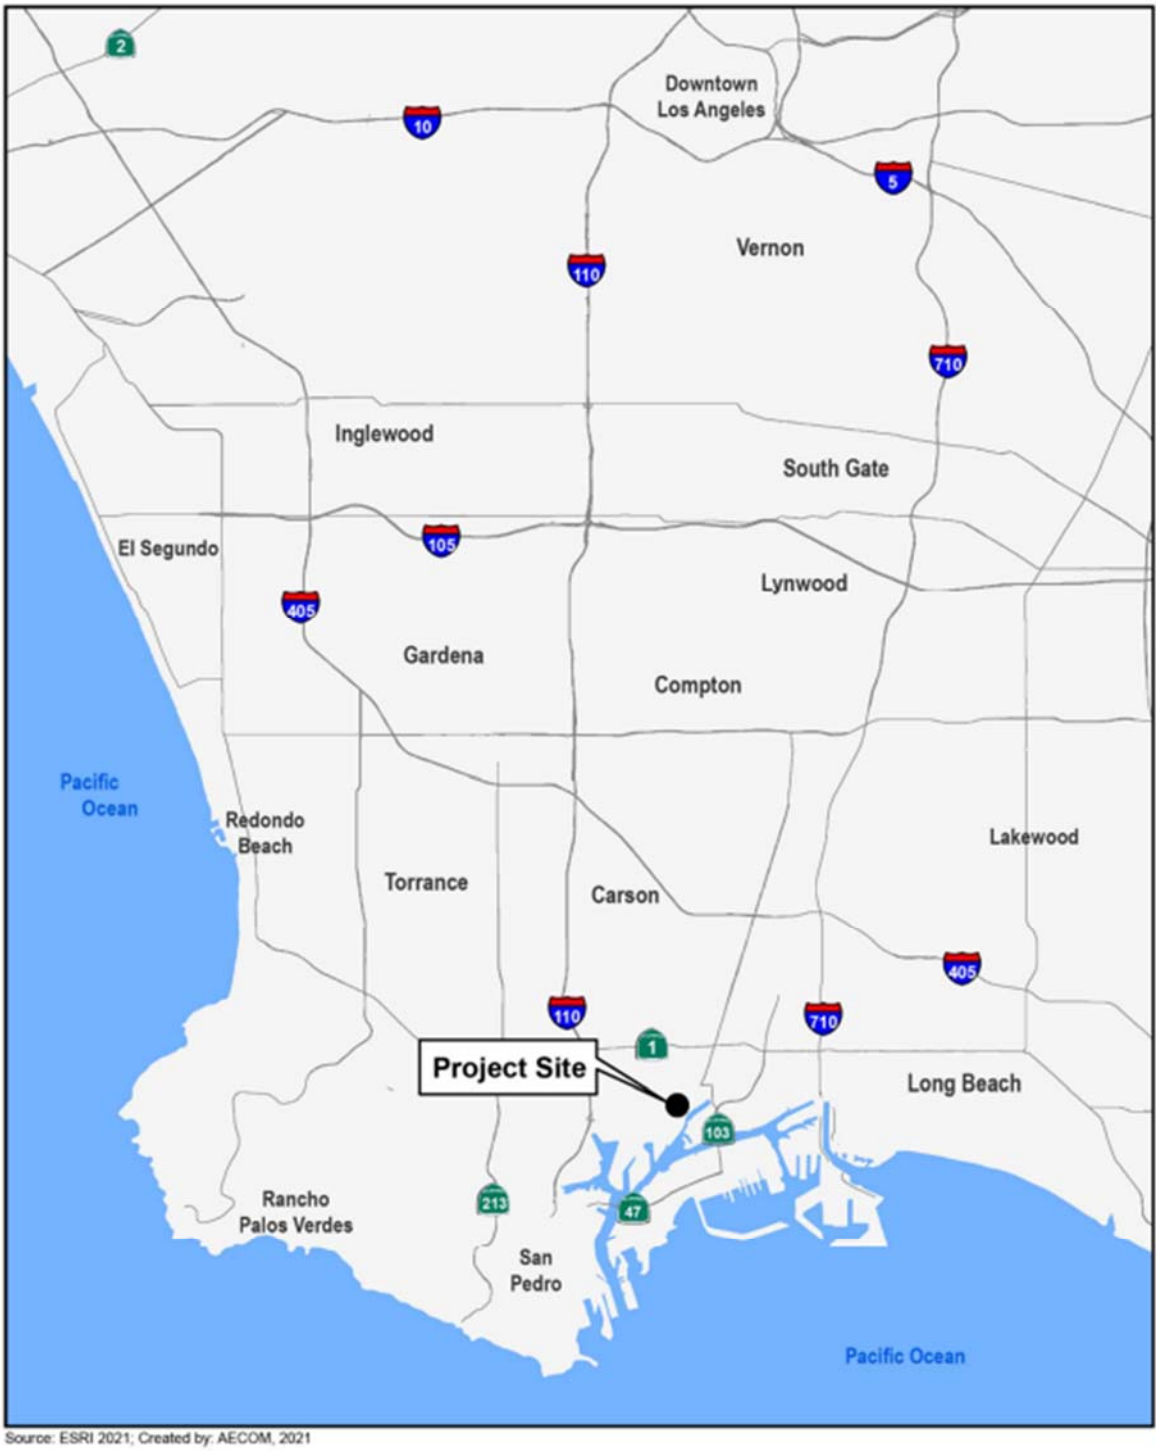
- Introduction
- Project Description
- Traffic Data
- Energy Topical Information
- Existing Setting
- Regulatory Framework
- Significance Thresholds
- Methodology
- Impact Assessment
- References

PROJECT DESCRIPTION

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the project is approximately 5,400 feet, or 1.02 miles. The proposed project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. Specifically, the project would provide:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along the eastern side of the street;
- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;

Terry A. Hayes Associates Inc.
3535 Hayden Avenue, Suite 350
Culver City, California 90232
310.839.4200 fax 310.839.4201



- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Ave at Harry Bridges Boulevard;
- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

The project location is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed project is shown in **Figure 1**. The area is a developed urban setting surrounded by both light and heavy industrial uses. There are existing aboveground and underground utilities within the project location that includes a Los Angeles Department of Water and Power (LADWP) water line, multiple buried oil and fuel lines, and storm drains, streetlights, and LADWP overhead power lines and poles throughout the project limits. At this location, Alameda Street is utilized for local traffic as well as trips to and from the Ports of Long Beach and Los Angeles, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the project site. The project site location is shown in **Figure 2.**

Construction of the proposed project would begin on December 30, 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented. The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the project at the start of construction and would remain on site for most of the project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

Figure 1
Regional Map

Figure 2
Project Location Map

TRAFFIC DATA

A traffic analysis was completed to examine the project effects on Alameda Street and effects to vehicle miles traveled (VMT). Existing traffic volumes on Alameda Street within the project limits range from 13,200 to 13,484 average daily trips. The heavy-duty truck percentage is between approximately 27 and 30 percent. The traffic analysis demonstrates that vehicle volumes on Alameda Street will grow by 92 percent between 2022 and 2026. However, the proposed project effect on vehicle miles traveled is only an increase of 0.043 percent. The rest of the traffic growth on Alameda Street is unrelated to the proposed project and occurs under future without project conditions.

ENERGY TOPICAL INFORMATION

Transportation Fuels

In California approximately 15.1 billion gallons of gasoline and 4.2 gallons of diesel, including off-road diesel were sold and consumed in 2015. Approximately 97 percent of all gasoline consumed in California is utilized by light-duty cars, pickup trucks, and sport utility vehicles. Nearly all heavy-duty trucks, delivery vehicles, buses, trains, ships, boats and barges, farm, construction, and heavy-duty military vehicles have diesel engines.[1]

Electricity Supply

Electricity in the project area is provided by the Los Angeles Department of Water and Power (LADWP). LADWP's power system supplies more than 26 million megawatt-hours (MWh) of electricity a year for the City of Los Angeles' 1.5 million residential and business customers, as well as over 5,000 customers in Owens Valley. Typical residential energy use per customer is approximately 500 kilowatt-hours (kWh) per month. Business and industry consume approximately 70 percent of the electricity in Los Angeles. LADWP has a generation capacity of 7,880 megawatts from a mix of energy sources. Approximately 29 percent of electricity is generated from renewable energy, 34 percent from natural gas, 9 percent from nuclear, 3 percent from hydroelectric, 19 percent from coal, and 6 percent from purchased power.[2]

Natural Gas

Natural gas is provided and distributed to residents and businesses in the City of Los Angeles by the Southern California Gas Company (SoCalGas). According to the 2022 California Gas Report, SoCalGas is expected to provide an average of 2,251 million cubic feet of gas per day by 2026. SoCalGas projects total gas demand to decline at an annual rate of 1.1 percent per year through 2035. The decline in throughput demand is due to more aggressive energy efficiency, fuel substitution, and less demand in major market segment areas of residential, electric generation, and commercial and wholesale markets.[3]

EXISTING SETTING

California contains abundant sources of nonrenewable and renewable energy. Nonrenewable resources include large crude oil and natural gas deposits that are located within six geological basins in the Central Valley and

[1]California Energy Commission, *Energy Almanac*, https://www.energy.ca.gov/data-reports/energy-almanac, accessed September 20, 2022.
[2]Los Angeles Department of Water and Power, *2017 Power Strategic Long-Term Resource Plan*, December 2017.
[3]California Gas and Electric Utilities, *2022 California Gas Report*, 2022.

along the coast. Much of these reserves are concentrated in the southern San Joaquin Basin. Regarding renewable resources, the State leads the nation in net electricity generation from solar, geothermal, and biomass. California has considerable solar potential, especially in the southeastern deserts and several of the world's largest solar thermal plants are located in California's Mojave Desert. Although California's wind power potential is widespread, especially along the eastern and southern mountain ranges, much of the State is excluded from development of this resource because it is in wilderness areas, parks, or urban areas. The transportation sector is responsible for the most energy consumption of any sector within the State. More motor vehicles are registered in California than in any other state, and commute times in California rank among some of the longest in the country.

In California approximately 15.1 billion gallons of gasoline and 4.2 gallons of diesel, including off-road diesel were sold and consumed in 2015. Approximately 97 percent of all gasoline consumed in California is utilized by light-duty cars, pickup trucks, and sport utility vehicles. Nearly all heavy-duty trucks, delivery vehicles, buses, trains, ships, boats and barges, farm, construction, and heavy-duty military vehicles have diesel engines.

Utilities within the project site include overhead power poles and underground utilities. Anaheim Street at this location is utilized for local traffic, as well as trips to and from the Port of Long Beach and the Port of Los Angeles, which are approximately 1.5 miles and four miles away, respectively.

REGULATORY FRAMEWORK

The following discussion includes relevant regulations, policies, and programs that have been adopted by federal, state, and local agencies related to energy resources. This is not an exhaustive discussion but supplies important framework for understanding regulations related to energy resources.

Federal

NEPA (42 United States Code [USC] Part 4332) requires the identification of all potentially significant impacts to the environment, including energy impacts. On August 8, 2005, President George W. Bush signed the Energy Policy Act of 2005 into law. This comprehensive energy legislation contains several electricity related provisions that aim to:

- Help ensure that consumers receive electricity over a dependable, modern infrastructure;
- Remove outdated obstacles to investment in electricity transmission lines;
- Make electric reliability standards mandatory instead of optional; and
- Give federal officials the authority to site new power lines in Department of Energy designated national corridors in certain circumstances.

State

CEQA Guidelines Appendix F provides a goal of conserving energy in the state of California. The appendix indicates the following methods to achieve this goal: (1) decreasing overall per capita energy consumption, (2) decreasing reliance on natural gas and oil, and (3) increasing reliance on renewable energy sources.

The California Renewables Portfolio Standard (RPS) Program, which was established in 2002 under Senate Bill (SB) 1078, accelerated in 2006 under SB 107, expanded in 2011 under SB 2, and further expanded in 2015 under SB 350, California’s RPS is one of the most ambitious renewable energy standards in the country. The

RPS program requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 33 percent of total procurement by 2020. On September 12, 2002, then-Governor Gray Davis signed SB 1078. SB 1078 (Chapter 516, Statutes of 2002) requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. SB 107 (Chapter 464, Statutes of 2006) changed the target date to 2010. In November 2008, then-Governor Arnold Schwarzenegger signed Executive Order S-14-08, which expands the state's RPS to 33 percent renewable power by 2020. In September 2009, Governor Schwarzenegger continued California's commitment to the RPS by signing Executive Order S-21-09, which directs the California Air Resources Board (CARB) under its AB 32 authority to enact regulations to help the state meet its RPS goal of 33 percent renewable energy by 2020. The 33 percent by 2020 goal was codified in April 2011 with SB X1-2, which was signed by Governor Edmund G. Brown, Jr. This RPS preempts the CARB 33 percent Renewable Electricity Standard and applies to all electricity retailers in the state, including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. These entities must adopt the new RPS goals of 20 percent of retail sales from renewables by the end of 2013 and 25 percent by the end of 2016, with the 33 percent requirement being met by the end of 2020.

The Clean Energy and Pollution Reduction Act of 2015, SB 350 (Chapter 547, Statutes of 2015) was approved by Governor Edmund G. Brown, Jr. on October 7, 2015. SB 350 does the following: (1) increases the standards of the RPS program by requiring that the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources be increased to 50 percent by December 31, 2030; (2) requires the State Energy Resources Conservation and Development Commission to establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas final end uses of retail customers by January 1, 2030; (3) provides for the evolution of the Independent System Operator into a regional organization; and (4) requires the state to reimburse local agencies and school districts for certain costs mandated by the state through procedures established by statutory provisions. Among other objectives, the legislature intends to double the energy efficiency savings in electricity and natural gas final end uses of retail customers through energy efficiency and conservation (SB 350, Clean Energy and Pollution Reduction Act 2015).

Title 24 of the California Code of Regulations comprises the State Building Standards Code. Part 6 of Title 24 is the California Energy Code that includes the building energy efficiency standards. The standards include provisions applicable to all buildings, residential and non-residential, and describe the requirements for documentation to certify that building designs meets the standards.

Executive Order S-06-06 establishes targets for the use and production of bio-fuels and bio-power and directs state agencies to work together to advance biomass programs in California while providing environmental protection and mitigation. The executive order establishes the following target to increase the production and use of bio-energy, including ethanol and biodiesel fuels made from renewable resources: produce a minimum of 20 percent of its bio-fuels within California by 2010, 40 percent by 2020, and 75 percent by 2050.

On April 29, 2015, Governor Edmund G. Brown Jr. signed Executive Order B-30-15, establishing a new statewide goal to reduce greenhouse gas emissions 40 percent below 1990 levels by 2030. Senate Bill 1389 requires the California Energy Commission to prepare a biennial integrated energy policy report that assesses major energy trends and issues facing the state's electricity, natural gas, and transportation fuel sectors and provides policy recommendations to conserve resources; protect the environment; ensure reliable, secure, and diverse energy supplies; enhance the state's economy; and protect public health and safety.

Local

On May 15, 2007, Los Angeles Mayor Antonio Villaraigosa released the "GREEN LA – An Action Plan to Lead the Nation in Fighting Global Warming" (GREEN LA Plan) that has an overall goal of reducing the City of Los Angeles' GHG emissions by 35 percent below 1990 levels by 2030. This goal exceeds the targets set by both California and the Kyoto Protocol, and is the greatest reduction target of any large United States city. The cornerstone of the GREEN LA Plan is increasing the City's use of renewable energy to 35 percent by 2020.

On April 8, 2015, Mayor Eric Garcetti released the pLAn, a roadmap to achieve back to basics short-term results while setting the path to strengthen and transform the city. The pLAn is made up of short-term (by 2017) and longer-term (by 2025 and 2035) targets in 14 categories to advance the City's environment, economy and equity. The pLAn provides strategies to create a more sustainable and livable city by: improving land use planning to promote neighborhood quality of life; conserving energy and water; mitigating and adapting to climate change; building transit options for an accessible future; promoting affordability and environmental justice; and restoring and reinventing the Los Angeles River. In 2019, Mayor Eric Garcetti released an update to the pLAn which accelerates previous sustainability targets.

The 2017 LADWP Power Strategic Long-Term Resource Plan (SLTRP) is a 20-year roadmap that guides the LADWP power system in its efforts to supply reliable electricity in an environmentally responsible and cost-effective manner. One of the main focuses of the SLTRP is to reduce greenhouse gas emissions, while maintaining cost competitive rates and reliable electric service. The SLTRP examines multiple strategies to reduce GHG emissions, including early coal replacement, accelerated renewable portfolio standard, energy efficiency, local solar, energy storage, and transportation electrification. As LADWP starts the process to investigate, study, and determine the investments needed for a 100 percent clean energy portfolio, the 2017 SLTRP provides a path towards this goal with a combination of GHG reduction strategies, including early coal replacement two years ahead of schedule by 2025, accelerating renewable portfolio standard to 50 percent by 2025, 55 percent by 2030, and 65 percent by 2036, doubling of energy efficiency from 2017 through 2027, repowering coastal in-basin generating units with new, highly efficient potential clean energy projects by 2029 to provide grid reliability and critical ramping capability, accelerating electric transportation to absorb GHG emissions from the transportation sector, and investing in the Power System Reliability Program to maintain a robust and reliable Power System.[4]

SIGNIFICANCE THRESHOLDS

This assessment was undertaken to determine whether construction or operation of the proposed project would have the potential to result in significant environmental impacts related to energy in the context of the Appendix G Environmental Checklist criteria of the CEQA Statute and Guidelines. Implementation of the proposed project may result in a significant environmental impact related to energy if the proposed project would:

a) Result in potentially significant environment impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation;
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

[4]Los Angeles Department of Water and Power, *2017 Power Strategic Long-Term Resource Plan*, December 31, 2017.

METHODOLOGY

For purposes of this analysis, the criteria identified in Appendix F of the CEQA Guidelines are used. As stated in Appendix F of the CEQA Guidelines, the goal of conserving energy implies the wise and efficient use of energy, by decreasing overall per capita energy consumption; decreasing reliance on natural gas and oil; and increasing reliance on renewable energy resources. To assure energy implications are considered in project decisions, CEQA requires a discussion of the potential energy impacts of proposed projects, with particular emphasis on avoiding or reducing inefficient, wasteful and unnecessary consumption of energy.

The Air Quality Technical Memorandum prepared for the proposed project includes a quantification of construction-related carbon dioxide equivalent (CO_2e) emissions using the Roadway Construction Emissions Model. These emissions were used to estimate construction energy from CO_2e emission factors derived for the California Air Resources Board greenhouse gas emissions inventory. For gasoline fuel, approximately 25.4 pounds of CO_2e are generated per gallon combusted, and for diesel fuel approximately 29.8 pounds of CO_2e are generated per gallon combusted. The fuel consumption was estimated from the equipment and vehicles that would be employed in construction activities. Diesel engines are installed in heavy-duty off-road construction equipment and on-road haul trucks. Gasoline engines are typically found in passenger vehicles that would be used for construction worker daily commutes.

IMPACT ASSESSMENT

a) Would the proposed project result in potentially significant environment impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation? (Less-than-Significant Impact)

Construction

Energy would be consumed during the demolition, excavation, and construction phases of the proposed project by heavy-duty equipment, which is usually diesel powered. Construction of the proposed project would generate an increased demand for electricity use related to the treatment and conveyance of water for dust suppression activities during the excavation and grading phase, and the consumption of gasoline and diesel fuels associated with haul trucks, deliveries, and worker commute trips. Construction activities typically do not require the consumption of natural gas to power equipment or heavy machinery. A one-time expenditure of approximately 243,232 gallons of diesel fuel and 14,919 gallons of gasoline would be needed to construct the proposed project. This represents a small demand on local and regional fuel supplies that would be easily accommodated, and this demand would cease once construction is complete. Moreover, construction-related energy consumption would be temporary and no permanent new source of energy demand would result from project construction activities. While construction would result in a short-term increase in energy use, construction-related fuel use would have no noticeable effect on peak or baseline demands for energy and construction design features would help conserve energy. Furthermore, construction activity would be required to comply with California Air Resources Board In-Use Off-Road Diesel Fueled Fleets Regulation, which prohibits excessive engine idling of vehicles when not in use, thereby reducing overall fuel consumption during construction. Therefore, construction of the proposed project would result in a less than significant impact related to the wasteful, inefficient or unnecessary consumption of energy resources.

Operations

The purpose of the project is to provide congestion relief and improve goods movement and mobility. Congestion relief and capacity-increasing projects improve the capability of a roadway facility to address existing and future traffic demand. This results in changes to direct energy consumption (i.e., fuel usage) from vehicles using the facility. Another important consideration is that for operation of a project over the long term, newer and more fuel-efficient vehicles would enter the fleet, resulting in an overall lower potential for an increase in energy consumption due to vehicle traffic. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street. As such, the proposed project would only increase vehicle miles traveled in the project area by approximately 0.043 percent. There would be minimal changes in daily fuel as a result of the congestion relief project. In addition, operation of the proposed project would not require the use of electricity or natural gas. Therefore, operation of the proposed project would result in a less than significant impact related to the wasteful, inefficient or unnecessary consumption of energy resources.

Mitigation Measures

No mitigation measures are required.

b) Would the proposed project conflict with or obstruct a State or local plan for renewable energy or energy efficiency? (No Impact)

The proposed project would widen a 1.02-mile roadway segment near the Ports of Los Angeles and Port of Long Beach. The project would reduce congestion on this segment thereby improving fuel efficiency, and would be designed to comply with all applicable State and local codes. There is no potential for the proposed project to obstruct a State or local plan for renewable energy or energy efficiency, including the Southern California Association of Governments 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy. Therefore, the proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

Mitigation Measures

No mitigation measures are required.

APPENDIX F
Greenhouse Gas Emissions Technical Memorandum

Technical Memorandum

TO: Shannon Ledet
AECOM

FROM: Terry A. Hayes Associates Inc.

DATE: March 15, 2023

RE: Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project – Greenhouse Gas (GHG) Emissions Assessment for the California Environmental Quality Act (CEQA)

INTRODUCTION

Terry A. Hayes Associates Inc. (TAHA) has completed an GHG Emissions Assessment for the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project) in accordance with provisions of CEQA Statue and Guidelines. This assessment is organized as follows:

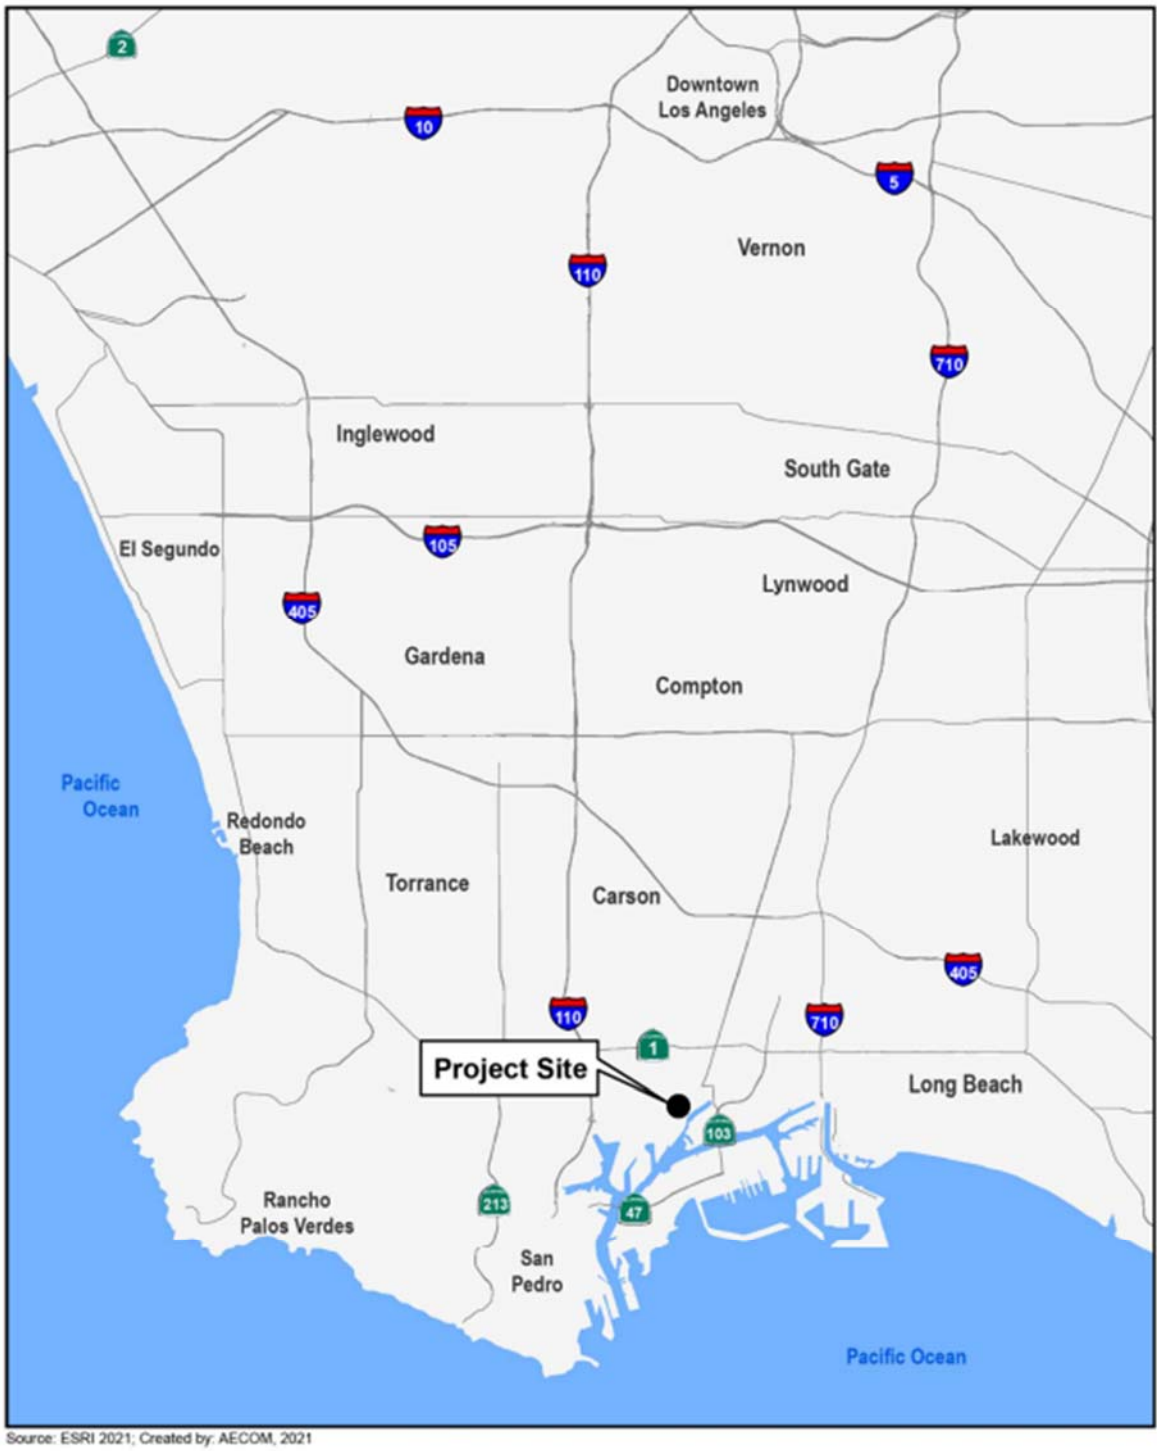
- Introduction
- Project Description
- Traffic Data
- GHG Topical Information
- Existing Setting
- Regulatory Framework
- Significance Thresholds
- Methodology
- Impact Assessment
- References

PROJECT DESCRIPTION

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the project is approximately 5,400 feet, or 1.02 miles. The proposed project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. Specifically, the project would provide:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along the eastern side of the street;

Terry A. Hayes Associates Inc.
3535 Hayden Avenue, Suite 350
Culver City, California 90232
310.839.4200 fax 310.839.4201



- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;
- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Avenue at Harry Bridges Boulevard;
- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

The project location is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed project is shown in **Figure 1**. The area is a developed urban setting surrounded by both light and heavy industrial uses. There are existing aboveground and underground utilities within the project location that includes a Los Angeles Department of Water and Power (LADWP) water line, multiple buried oil and fuel lines, and storm drains, streetlights, and LADWP overhead power lines and poles throughout the project limits. At this location, Alameda Street is utilized for local traffic as well as trips to and from the Ports of Long Beach and Los Angeles, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the project site. The project site location is shown in **Figure 2**.

Construction of the proposed project would begin on December 30, 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented. The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the project at the start of construction and would remain on site for most of the project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

TRAFFIC DATA

A traffic analysis was completed to examine the project effects on Alameda Street and effects to vehicle miles traveled (VMT). Existing traffic volumes on Alameda Street within the project limits range from 13,200 to 13,484 average daily trips. The heavy-duty truck percentage is between approximately 27 and 30 percent. The traffic analysis demonstrates that vehicle volumes on Alameda Street will grow by 92 percent between 2022 and 2026. However, the proposed project effect on vehicle miles traveled is only an increase of 0.043 percent. The rest of the traffic growth on Alameda Street is unrelated to the proposed project and occurs under future without project conditions.

GHG TOPICAL INFORMATION

GHG emissions refer to a group of emissions that are generally believed to affect global climate conditions. The greenhouse effect compares the Earth and the atmosphere surrounding it to a greenhouse with glass panes. The glass panes in a greenhouse let heat from sunlight in and reduce the amount of heat that escapes. GHGs, such as carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O), keep the average surface temperature of the Earth close to 60 degree Fahrenheit (°F). Without the natural greenhouse effect, the Earth's surface would be about 61°F cooler.[1]

In addition to CO_2, CH_4, and N_2O, GHGs include hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF_6), black carbon (black carbon is the most strongly light-absorbing component of particulate matter emitted from burning fuels such as coal, diesel, and biomass), and water vapor. CO_2 is the most abundant pollutant that contributes to climate change through fossil fuel combustion. The other GHGs are less abundant but have higher global warming potential than CO_2. To account for this higher potential, emissions of other GHGs are frequently expressed in the equivalent of CO_2, denoted as CO_2e. CO_2e is a measurement used to account for the fact that different GHGs have different potential to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential (GWP) of a GHG, is dependent on the lifetime, or persistence, of the gas molecule in the atmosphere. **Table 1 s**hows the global warming potential (GWP) for various GHGs.

TABLE 1: GLOBAL WARMING POTENTIAL FOR VARIOUS GREENHOUSE GASES

Pollutant	Lifetime (Years)	Global Warming Potential (20-Year)	Global Warming Potential (100-Year)
Carbon Dioxide (CO_2)	--	1	1
Methane (CH_4)	12	21	25
Nitrous Oxide (N_2O)	114	310	298
Nitrogen Trifluoride	740	Unknown	17,200
Sulfur Hexafluoride (SF_6)	3,200	23,900	22,800
Perfluorocarbons (PFCs)	2,600-50,000	6,500-9,200	7,390-12,200
Hydrofluorocarbons (HFCs)	1-270	140-11,700	124-14,800

SOURCE: CARB, *California Greenhouse Gas Emission Inventory - 2021 Edition*, July 28, 2021.

[1]California Environmental Protection Agency Climate Action Team, *Climate Action Report to Governor Schwarzenegger and the California Legislator*, March 2006.

EXISTING SETTING

GHGs are the result of both natural and human-influenced activities. Volcanic activity, forest fires, decomposition, industrial processes, landfills, consumption of fossil fuels for power generation, transportation, heating, and cooling are the primary sources of GHG emissions. Without human activity, the Earth would maintain an approximate, but varied, balance between the emission of GHGs into the atmosphere and the storage of GHG in oceans and terrestrial ecosystems. Increased combustion of fossil fuels (e.g., gasoline, diesel, coal, etc.) has contributed to a rapid increase in atmospheric levels of GHGs over the last 150 years.

Table 2 shows statewide GHG emissions from 2009 to 2020 that are tracked by the CARB. The transportation sector represents California's largest source of GHG emissions and contributed 37 percent of total annual emissions. Since 2013, emissions from the transportation sector have increased; however, the long-term direction of transportation related GHG emissions is declining, with a 11 percent drop over the past decade. Of note, between October 23, 2015 and February 18, 2016, an exceptional natural gas leak event occurred at the Aliso Canyon natural gas storage facility that resulted in unexpected GHG emissions of considerable magnitude. The exceptional incident released approximately 109,000 metric tons of CH_4, which equated to approximately 1.96 million metric tons of carbon dioxide equivalents ($MMTCO_2e$) of unanticipated emissions in 2015 and an additional 0.52 $MMTCO_2e$ in 2016. According to CARB, these emissions will be mitigated in the future through projects funded by the Southern California Gas Company based on legal settlement and are presented alongside but tracked separately from routine inventory emissions.[2,3]

TABLE 2: CALIFORNIA GREENHOUSE GAS EMISSIONS INVENTORY

Sector	Annual CO_2e Emissions (Million Metric Tons)										
	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020

REGULATORY FRAMEWORK

In response to growing scientific and political concern with global climate change, a series of federal, state, regional, and local laws have been adopted to reduce GHG emissions. The following provides a brief summary of GHG regulations and policies. This is a not an exhaustive list of all regulations and policies.

Federal

***Massachusetts vs. Environmental Protection Agency*, 127 S. Ct. 1438 (2007)**. A Supreme Court ruling that CO_2 and other GHGs are pollutants under the CAA.

Energy Independence and Security Act. This act set a Renewable Fuel Standard of 36 billion gallons of biofuel usage by 2022, increases Corporate Average Fuel Economy Standards of setting 35 miles per gallon of cars and light trucks by 2020 and sets new standards for lighting and residential and commercial appliance equipment.

National Fuel Efficiency Policy and Fuel Economy Standards. This 2009 policy was designed to increase fuel economy by more than five percent by 2016 starting with model year 2012 cars and trucks.

Heavy-Duty Vehicle Program. This 2011 program established the first fuel efficiency requirements for medium- and heavy-duty vehicles beginning with model year 2014.

State

Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24 of the California Code of Regulations). Title 24 standards contain energy and water efficiency requirements (and indoor air quality requirements) for newly constructed buildings, additions to existing buildings, and alterations to existing buildings.

California Green Building Code. Also referred to as CalGreen, lays out minimum requirements for newly constructed buildings in California, which will reduce GHG emissions through improved efficiency and process improvements.

Senate Bill 1078 (SB 1078), Senate Bill 107 (SB 107), and Executive Order (E.O.) S-14-08 (Renewables Portfolio Standard). Signed on September 12, 2002, SB 1078 required California to generate 20 percent of its electricity from renewable energy by 2017. SB 107, signed on September 26, 2006, changed the due date for this goal from 2017 to 2010, which was achieved by the state. On November 17, 2008, E.O. S-14-08, which established a Renewables Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020.

E.O. S-3-05. E.O. S-3-05 set the following GHG emission reduction targets: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; and by 2050, reduce GHG emissions to 80 percent below 1990 levels.

Assembly Bill 32. The California Global Warming Solutions Act of 2006, also known as Assembly Bill 32, was signed into law. Assembly Bill 32 focuses on reducing GHG emissions in California and requires the CARB to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020. The 2020 target reductions were estimated to be 174 million metric tons of CO_2e. In November 2017

CARB adopted the final 2017 Scoping Plan: The Strategy for Achieving California's 2030 GHG target (2017 Scoping Plan). The 2017 Scoping Plan incorporates, coordinates, and leverages many existing and ongoing efforts and identifies new policies and actions to accomplish the State's climate goals.

Senate Bill 375 (SB 375). Provides a means for achieving Assembly Bill 32 goals through the reduction in emissions by cars and light trucks. SB 375 requires Regional Transportation Plans (RTPs) prepared by Metropolitan Planning Organizations (MPOs) to include Sustainable Communities Strategies (SCSs).

Senate Bill 743 (SB 743). Encourages land use and transportation planning decisions and investments that reduce vehicle miles traveled (VMT), which contribute to GHG emissions, as required by Assembly Bill 32.

E.O. B-30-15. This policy set a goal to reduce GHG emissions 40 percent below their 1990 levels by 2030. The E.O. establishes GHG emissions reduction targets to reduce emissions to 80 percent below 1990 levels by 2050 and sets an interim target of emissions reductions for 2030 as being necessary to guide regulatory policy and investments in California and put California on the most cost-effective path for long-term emissions reductions.

Senate Bill 32 (SB 32). This bill required a commitment to reducing statewide GHG emissions by 2020 to 1990 levels and by 2030 to 40 percent less than 1990 levels.

Regional

Southern California Association of Governments (SCAG) 2020–2045 Regional Transportation Plan/ Sustainable Communities Strategy (RTP/SCS). SCAG is the MPO for the six-county region that includes Los Angeles, Orange, Riverside, Ventura, San Bernardino and Imperial counties. The 2020-2045 RTP/SCS includes commitments to reduce emissions from transportation sources to comply with SB 375. Goals and policies included in the 2020-2045 RTP/SCS to reduce air pollution consist of adding density in proximity to transit stations, mixed-use development and encouraging active transportation (i.e., non-motorized transportation such as bicycling).

Local

GreenLA Climate Action Plan. The City of Los Angeles has issued guidance promoting sustainable development to reduce GHG emissions citywide in the form of a Climate Action Plan. The objective of GreenLA is to reduce GHG emissions 35 percent below 1990 levels by 2030.

ClimateLA. In order to provide detailed information on action items discussed in GreenLA, the City published an implementation document titled ClimateLA. ClimateLA presents the existing GHG inventory for the City, describes enforceable GHG reduction requirements, provides mechanisms to monitor and evaluate progress, and includes mechanisms that allow the plan to be revised in order to meet targets. By 2030, the plan aims to reduce GHG emissions by 35 percent from 1990 levels which were estimated to be approximately 54.1 million metric tons.

Sustainable City pLAn. The pLAn is a roadmap to reducing GHG emissions by 45 percent by 2025, 60 percent by 2035, and 80 percent by 2050, all against a 1990 baseline.

Green Building Program. The purpose of the City's Green Building Program is to reduce the use of natural resources, create healthier living environments and minimize the negative impacts of development on local,

regional, and global ecosystems. The program consists of a Standard of Sustainability and Standard of Sustainable Excellence.

Los Angeles Green Building Code. The Green Building Code is applicable to new buildings and alterations with building valuations over $200,000 (residential and non-residential). The Green Building Code is based on CalGreen and developed to reduce energy use, water use, and waste.

Existing Buildings Energy and Water Efficiency Ordinance. This Ordinance is designed to facilitate the comparison of buildings' energy and water consumption, and reduce building operating costs, leading to reduced GHG emissions.

SIGNIFICANCE THRESHOLDS

This assessment was undertaken to determine whether construction or operation of the proposed project would have the potential to result in significant environmental impacts related to GHG emissions in the context of the Appendix G Environmental Checklist criteria of the CEQA Statute and Guidelines. Implementation of the proposed project may result in a significant environmental impact related to GHG emissions if the proposed project would:

a) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; and/or,
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions.

Section 15064.4 of the CEQA Guidelines states that a lead agency should make a good-faith effort to describe, calculate, or estimate the amount of GHG emissions resulting from a project, and that the lead agency should consider the following factors when assessing the significance of impacts from GHG emissions on the environment:

1. The extent to which the project may increase or reduce GHG emissions as compared to the existing environmental setting;
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and,
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

The CEQA Guidelines require lead agencies to adopt GHG thresholds of significance. When adopting these thresholds, the amended Guideline allows lead agencies to consider thresholds of significance adopted or recommended by other public agencies, or recommended by experts, provided that the thresholds are supported by substantial evidence, and/or to develop their own significance threshold. Neither the City nor the SCAQMD has officially adopted a quantitative threshold value for determining the significance of GHG emissions that will be generated by projects under CEQA. The SCAQMD published the *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold* in October 2008.[4]

[4]SCAQMD, Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, October 2008.

The SCAQMD convened a GHG CEQA Significance Threshold Stakeholder Working Group beginning in April of 2008 to examine alternatives for establishing quantitative GHG thresholds. The Working Group proposed a 10,000 metric tons of carbon dioxide equivalents ($MTCO_2e$) per year threshold for industrial projects and a 3,000 $MTCO_2e$ annual threshold for commercial and residential projects, including mixed-use. A roadway widening project is more similar to an industrial project than a commercial, residential, or mixed-use development project. Based on the available threshold concepts recommended by expert agencies, the assessment herein analyses operational emissions against SCAQMD's draft 10,000 $MTCO_2e$ bright-line threshold level. Per SCAQMD, projects below this bright-line significance criteria have a minimal contribution to cumulative global emissions and are considered to have less-than significant impacts.

METHODOLOGY

Construction emissions are estimated using the latest Sacramento Metropolitan Air Quality Management District's Roadway Construction Emissions Model. While the model was developed for Sacramento conditions in terms of fleet emission factors, silt loading, and other model assumptions, it is considered adequate for estimating road construction emissions by the SCAQMD (in its CEQA guidance) and is used for that purpose in this analysis. Construction emissions were estimated for the project using detailed equipment inventories and construction scheduling information provided by the engineering team combined with emissions factors from the EMFAC and OFFROAD models. Construction emissions modeling output is provided in the appendix to this memorandum. Operational emissions are qualitatively assessed due to the minimal increase of 0.043 percent in vehicle miles traveled associated with the proposed project.

IMPACT ASSESSMENT

a) Would the proposed project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment? (Less-than-Significant Impact)

The proposed project would generate GHG emissions primarily from construction activities. Construction of the proposed project would produce approximately 2,491 $MTCO_2e$, which includes construction electricity usage and construction off-road equipment and mobile trips. When amortized over a period of 30 years, the emission estimates for the proposed project become 83 $MTCO_2e$ annually. This is below the SCAQMD's 10,000 $MTCO_2e$ per year threshold.

Regarding operational activities, the traffic analysis completed for the proposed project determined that the approximately one-mile widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane, painted median, and bike lanes would not significantly increase vehicle miles traveled. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street, which would only increase vehicle miles traveled in the project area by approximately 0.043 percent. In terms of operational GHG emissions, the proposed project involves roadway improvements and does not propose a trip-generating land use. As such, the proposed project would not include the provision of new permanent stationary or mobile sources of emissions, and therefore, would not generate quantifiable operational GHG emissions. Therefore, implementation of the proposed project would result in a less than significant impact related to GHG emissions.

Mitigation Measure

No mitigation measures are required.

b) Would the proposed project conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs? (No Impact)

The primary objectives of the proposed project include providing congestion relief and enhancing mobility for pedestrians and cyclists. The purpose of a GHG reduction plan is to reduce emissions. Improving active transportation and congestion relief are common components of GHG reduction plans. It is estimated that there would be approximately 12 new daily vehicle trips on Alameda Street, which would only increase vehicle miles traveled in the project area by approximately 0.043 percent. As discussed above, the proposed project would not result in significant GHG emissions. As such, the proposed project would not conflict with an applicable plan, policy, or regulation to reduce GHG emissions because it would comply with all construction-related fuel regulations and would not generate or promote operational new permanent stationary or mobile sources of emissions. Therefore, the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions.

Mitigation Measures

No mitigation measures are required.

Notes:

Project Start Year ->	2023
Project Length (months) ->	36
Total Project Area (acres) ->	5
Maximum Area Disturbed/Day (acres) ->	1
Water Truck Used? ->	Yes

	Total Material Imported/Exported Volume (yd^3/day)		Daily VMT (miles/day)			
Phase	Soil	Asphalt	Soil Hauling	Asphalt Hauling	Worker Commute	Water Truck
Grubbing/Land Clearing	200	0	300	0	720	40
Grading/Excavation	1,046	0	1,590	0	720	40
Drainage/Utilities/Sub-Grade	200	0	300	0	720	40
Paving	0	400	0	600	720	40

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

Total Emission Estimates by Phase for -> Alameda Street Widening

Project Phases (Tons for all except CO2e. Maximum (tons/phase)	0.26	2.47	3.69	2.10	0.12	1.98	0.49	0.08	0.41	0.01	1520.63	0.16	0.16	1,425.54
Total (tons/construction project)	0.59	6.75	6.76	4.44	0.23	4.21	1.03	0.16	0.88	0.03	2671.34	0.32	0.22	2,490.66

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

The CO2e emissions are reported as metric tons per phase.

Road Construction Emissions Model **Version 9.0.1**
Data Entry Worksheet

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with a
yellow or blue background can be modified. Program defaults have a white background.
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project types.
Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new project.

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

Input Type

Project Name	Alameda Street Widening	
Construction Start Year	2023	Enter a Year between 2014 and 2040 (inclusive)
Project Type	2	1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway 2) Road Widening : Project to add a new lane to an existing roadway 3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane 4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee construction
Project Construction Time	36.00	months
Working Days per Month	22.00	days (assume 22 if unknown)
Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	1	1) Sand Gravel : Use for quaternary deposits (Delta/West County) 2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the Ione formation (Scott Road, Rancho Murieta) 3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)
Project Length	1.02	miles
Total Project Area	5.00	acres
Maximum Area Disturbed/Day	1.25	acres
Water Trucks Used?	1	1. Yes 2. No

Please note that the soil type instructions provided in cells E18 to E2 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County. NEW LINK 8-2-2022.

	Drainage/Utilities/Sub-Grade	20.00	0.00	0.00
	Paving	20.00	400.00	0.00

Mitigation Options

On-road Fleet Emissions Mitigation	2010 and Newer On-road Vehicles Fleet	Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer
Off-road Equipment Emissions Mitigation	20% NOx and 45% Exhaust PM reduction	Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAQMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure (http://www.airquality.org/Businesses/CEQA-Land-Use-Planning/Mitigation). Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standard

The remaining sections of this sheet contain areas that can be modified by the user, although those modifications are optional.

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F53.

Construction Periods	User Override of Construction Months	Program Calculated Months	User Override of Phase Starting Date	Program Default Phase Starting Date
Grubbing/Land Clearing		3.60	12/30/2023	1/1/2023

RE: Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project – Noise and Vibration Assessment for the California Environmental Quality Act (CEQA)

INTRODUCTION

Terry A. Hayes Associates Inc. (TAHA) has completed a Noise and Vibration Assessment for the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project) in accordance with the provisions of the CEQA Statutes and Guidelines. This assessment is organized as follows:

- Introduction
- Project Description
- Traffic Data
- Noise and Vibration Topical Information
- Regulatory Framework
- Existing Setting
- Significance Thresholds
- Methodology
- Impact Assessment
- References

PROJECT DESCRIPTION

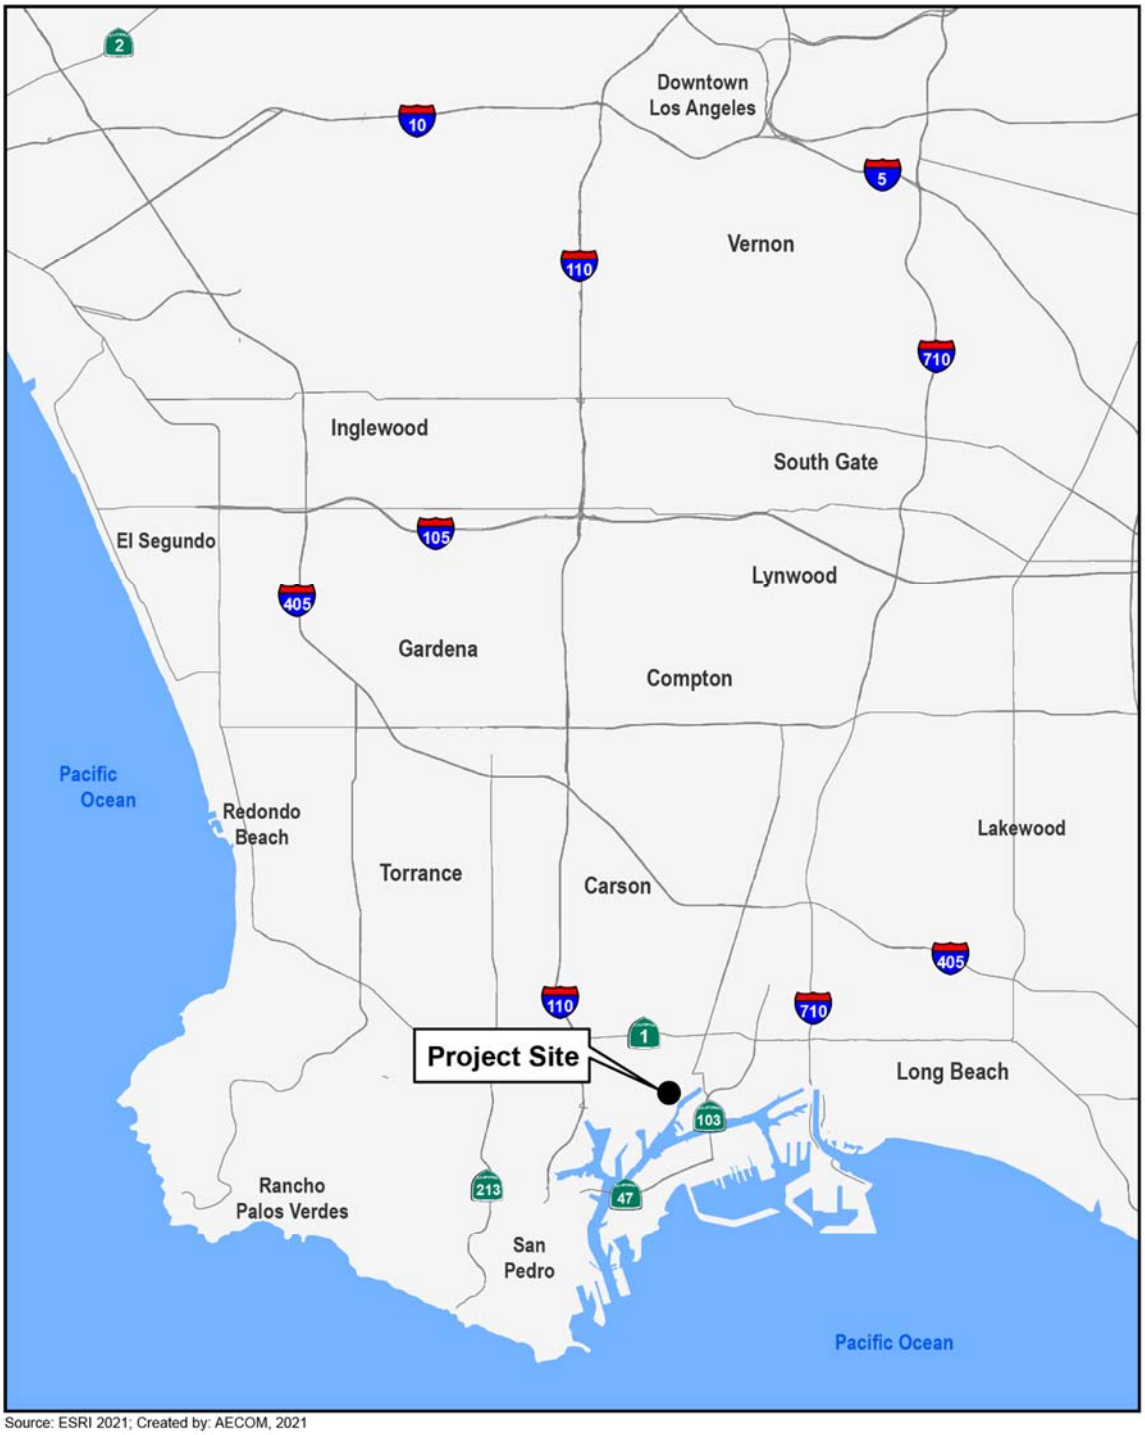
The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from Anaheim Street to Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the project is approximately 5,400 feet, or 1.02 miles. The proposed project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. Specifically, the project would provide:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along the eastern side of the street;
- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;

Terry A. Hayes Associates Inc.
3535 Hayden Avenue, Suite 350
Culver City, California 90232
310.839.4200 fax 310.839.4201

- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Avenue at Harry Bridges Boulevard;
- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

The project location is in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The regional location of the proposed project is shown in **Figure 1**.



The area is a developed urban setting surrounded by both light and heavy industrial uses. There are existing aboveground and underground utilities within the project location that includes a Los Angeles Department of Water and Power (LADWP) water line, multiple buried oil and fuel lines, and storm drains, streetlights, and LADWP overhead power lines and poles throughout the project limits. At this location, Alameda Street is utilized for local traffic as well as trips to and from the Port of Long Beach and Port of Los Angeles, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the project site. The project site location is shown in **Figure 2.**

Construction of the proposed project would begin on December 30, 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented.

The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the project at the start of construction and would remain on site for most of the project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be Harry Bridges Boulevard to I-110 Freeway (north or south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be onsite daily during construction hours.

Project Site

Figure 2
Project Location Map

An appropriate combination of monitoring and resource avoidance would be employed during all construction activities, including implementation of the following Best Management Practices (BMPs):

- Construction of the proposed project is anticipated to occur every day of the week from 7:00 a.m. to 4:00 p.m. Should construction be required outside of the anticipated hours, construction activity would comply with the allowable hours of construction as dictated in the *Los Angeles Municipal Code Section 41.40*, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or City holidays.

TRAFFIC DATA

A traffic analysis was completed to examine the project effects on vehicle and truck operations on Alameda Street. Project effects were analyzed at three roadway segments along Alameda Street. **Table 1** shows the AM peak hour traffic volumes and **Table 2** shows PM peak hour traffic volumes. AM peak hour traffic volumes were only utilized for the construction haul truck analysis, which would occur in the existing year.

NOISE AND VIBRATION TOPICAL INFORMATION

Noise

The following is a brief discussion of fundamental noise concepts. For a detailed discussion, please refer to Caltrans' Technical Noise Supplement.[1] Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium (e.g., air) to a hearing organ, such as a human ear. Noise is defined as loud, unexpected, or annoying sound. In the science of acoustics, the fundamental model consists of a sound (or noise) source, a receptor, and the propagation path between the two. The loudness of the noise source and obstructions or atmospheric factors affecting the propagation path to the receptor determine the sound level and characteristics of the noise perceived by the receptor. The field of acoustics deals primarily with the propagation and control of sound.

Continuous sound can be described by frequency (pitch) and amplitude (loudness). A low-frequency sound is perceived as low in pitch. Frequency is expressed in terms of cycles per second, or Hertz (Hz) (e.g., a frequency of 250 cycles per second is referred to as 250 Hz). High frequencies are sometimes more conveniently expressed in kilohertz (kHz), or thousands of Hz. The audible frequency range for humans is generally between 20 Hz and 20,000 Hz.

The amplitude of pressure waves generated by a sound source determines the loudness of that source. A logarithmic scale is used to describe sound pressure level (SPL) in terms of decibels (dB). The threshold of hearing for young people is about 0 dB. Because decibels are logarithmic units, SPL cannot be added or subtracted through ordinary arithmetic. Under the decibel scale, a doubling of sound energy corresponds to a 3 dB increase. In other words, when two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dB higher than one source under the same conditions.

The decibel scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Although the intensity (energy per unit area) of the sound is a purely physical quantity, the loudness or human response is determined by the characteristics of the human ear. Human hearing is limited in the range of audible frequencies as well as in the way it perceives the SPL in that range. In general, people are most sensitive to the frequency range of 1,000–8,000 Hz, and perceive sounds within that range better than sounds of the same amplitude in higher or lower frequencies. To approximate the response of the human ear, sound levels of individual frequency bands are weighted, depending on the human sensitivity to those frequencies. Then, an "A-weighted" sound level (expressed in units of dBA) can be computed based on this information. The A-weighting network approximates the frequency response of the average young ear when listening to most ordinary sounds. When people make judgments of the relative loudness or annoyance of a sound, their judgments correlate well with the A-scale sound levels of those sounds.

As discussed above, doubling sound energy results in a 3 dB increase in sound. However, given a sound level change measured with precise instrumentation, the subjective human perception of a doubling of loudness will usually be different than what is measured. Under controlled conditions in an acoustical laboratory, the trained, healthy human ear is able to discern 1 dB changes in sound levels, when exposed to steady, single-frequency ("pure-tone") signals in the midfrequency (1,000 Hz–8,000 Hz) range. In typical noisy environments, changes in noise of 1 to 2 dB are generally not perceptible. However, it is widely accepted that people are able to begin to detect sound level increases of 3 dB in typical noisy environments. Further, a 5 dB increase is generally

[1]California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013.

perceived as a distinctly noticeable increase, and a 10 dB increase is generally perceived as a doubling of loudness. Therefore, a doubling of sound energy (e.g., doubling the volume of traffic on a highway) that would result in a 3 dB increase in sound, would generally be perceived as barely detectable.

When sound propagates over a distance, it changes in level and frequency content. The manner in which noise reduces with distance depends on geometric spreading, ground absorption, atmospheric effects, and shielding by natural or human-made features. Sound from a localized source (i.e., a point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path, and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source.

The propagation path of noise from a highway to a receptor is usually very close to the ground. Noise attenuation from ground absorption and reflective-wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 feet. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receptor, such as a parking lot or body of water,), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receptor, such as soft dirt, grass, or scattered bushes and trees), an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance.

Receptors located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) from the highway due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects.

A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Natural terrain features (e.g., hills and dense woods) and human-made features (e.g., buildings and walls) can substantially reduce noise levels. Walls are often constructed between a source and a receptor specifically to reduce noise. A barrier that breaks the line-of-sight between a source and a receptor will typically result in at least 5 dB of noise reduction. Taller barriers provide increased noise reduction. Vegetation between the highway and receptor is rarely effective in reducing noise because it does not create a solid barrier.

Noise in our daily environment fluctuates over time. Some fluctuations are minor, but some are substantial. Some noise levels occur in regular patterns, but others are random. Some noise levels fluctuate rapidly, but others slowly. Various noise descriptors have been developed to describe time-varying noise levels. This Assessment uses Equivalent Sound Level (L_{eq}) and Community Noise Equivalent Level (CNEL).

- L_{eq} represents an average of the sound energy occurring over a specified period. In effect, L_{eq} is the steady-state sound level containing the same acoustical energy as the time-varying sound that actually occurs during the same period. The one-hour A-weighted equivalent sound level (L_{eq}[h]) is the energy

average of A-weighted sound levels occurring during a one-hour period, and is the basis for noise abatement criteria used by Caltrans and the Federal Highway Administration.

- CNEL is the time average A-weighted noise level during a 24-hour day that includes an addition of 5 dBA to measured noise levels between the hours of 7:00 p.m. and 10:00 p.m. and an addition of 10 dBA to noise levels between the hours of 10:00 p.m. and 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration.[2] Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some common sources of vibration are trains, buses on rough roads, and construction activities, such as rock blasting, pile driving, and heavy earth-moving equipment. High levels of vibration may cause physical personal injury or damage to buildings. However, vibration levels rarely affect human health. Instead, most people consider vibration to be an annoyance that may affect concentration or disturb sleep. In addition, high levels of vibration may damage fragile buildings or interfere with equipment that is highly sensitive to vibration (e.g., electron microscopes).

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings and is usually measured in inches per second. The root mean square (RMS) amplitude is most frequently used to describe the effect of vibration on the human body. The RMS amplitude is defined as the average of the squared amplitude of the signal. Decibel notation (VdB) is commonly used to measure RMS. The VdB acts to compress the range of numbers required to describe vibration.

REGULATORY FRAMEWORK

Noise

Federal. The Noise Control Act of 1972 established programs and guidelines to identify and address the effects of noise on public health, welfare, and the environment. In 1981, the United States Environmental Protection Agency (USEPA) determined that subjective issues such as noise would be better addressed at local levels of government, thereby allowing more individualized control for specific issues by designated federal, state, and local government agencies. Consequently, in 1982, responsibilities for regulating noise control policies were transferred to specific federal agencies, and state and local governments. However, noise control guidelines and regulations contained in the USEPA rulings in prior years remain in place.

State. The State of California has adopted noise standards in areas of regulation not preempted by the federal government. State standards regulate noise levels of motor vehicles, sound transmission through buildings, occupational noise control, and noise insulation. State regulations governing noise levels generated by individual motor vehicles and occupational noise control are not applicable to planning efforts, nor are these areas typically subject to CEQA analysis.

[2]Federal Transit Administration (FTA), *Transit Noise and Vibration Impact Assessment*, September 2018.

Local. The City of Los Angeles has established policies and regulations concerning the generation and control of noise that could adversely affect its citizens and noise-sensitive land uses. Regarding construction, the Los Angeles Municipal Code (LAMC) Section 41.40 (Noise Due to Construction, Excavation Work – When Prohibited) states that no construction or repair work shall be performed between the hours of 9:00 p.m. and 7:00 a.m. on Monday through Friday since such activities would generate loud noises and disturb persons occupying sleeping quarters in any adjacent dwelling, hotel, apartment, or other place of residence. Further, no person, other than an individual home owner engaged in the repair or construction of his/her single-family dwelling, shall perform any construction or repair work of any kind or perform such work within 500 feet of land so occupied before 8:00 a.m. or after 6:00 p.m. on any Saturday, nor at any time on any Sunday or on a federal holiday.

LAMC Section 112.05 (Maximum Noise Level of Powered Equipment or Powered Hand Tools) specifies the maximum noise level of powered equipment or powered hand tools. Any powered equipment or hand tool that produces a maximum noise level exceeding 75 dBA at a distance of 50 feet is prohibited. However, this noise limitation does not apply where compliance is technically infeasible. Technically infeasible means the above noise limitation cannot be met despite the use of mufflers, shields, sound barriers and/or any other noise-reduction device or techniques during the operation of equipment.

The Noise Element of the City's General Plan policies include the Community Noise Equivalent Level (CNEL) guidelines for land use compatibility as shown in **Table 3** and includes a number of goals, objectives, and policies for land use planning purposes. The overall purpose of the Noise Element is to guide policymakers in making land use determinations and in preparing noise ordinances that would limit exposure of citizens to excessive noise levels.[3]

[3]City of Los Angeles, *General Plan, Noise Element* adopted February 3, 1999, pages 1.1-2.4, https://planning.lacity.org/odocument/b49a8631-19b2-4477-8c7f-08b48093cddd/Noise_Element.pdf.

TABLE 3: GUIDELINES FOR NOISE COMPATIBLE LAND USE

	Community Noise Exposure : Day-Night Average Exterior Sound level (dBA, CNEL)						
Land Use Category	**50**	**55**	**60**	**65**	**70**	**75**	**80**
Residential Single-Family Duplex, Mobile Home	A	C	C	C	N	U	U
Residential Multi-Family	A	A	C	C	N	U	U
Transient Lodging, Motel, Hotel	A	A	C	C	N	U	U
Schools, Library, Church, Hospital, Nursing Home	A	A	C	C	N	N	U
Auditorium, Concert Hall, Amphitheater	C	C	C	C/N	U	U	U
Sports Arena, Outdoor Spectator Sports	C	C	C	C	C/U	U	U
Playground, Neighborhood Park	A	A	A	A/N	N	N/U	U
Golf Course, Riding Stable, Water Recreation, Cemetery	A	A	A	A	N	A/N	U
Office Building, Business, Commercial and Professional	A	A	A	A/C	C	C/N	N
Agriculture, Industrial, Manufacturing, Utilities	A	A	A	A	A/C	C/N	N

A = Normally Acceptable - Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.
C = Conditionally Acceptable - New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system or air conditioning will normally suffice.
N = Normally Unacceptable - New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
U = Clearly Unacceptable - New construction or development should generally not be undertaken.
SOURCE: City of Los Angeles General Plan, *Noise Element*, February 1999.

Vibration

Federal. There are no relevant vibration standards in the Code of Federal Regulations. Caltrans has provided regulatory guidance for assessing vibration, as shown in **Table 4**.[4] For damage, the impact criteria are established based on the structural foundation of the potentially impacted building. Site visits indicate that the buildings near the project site are constructed with engineer concrete or reinforced concrete and steel. Vibration levels that exceed a PPV of 0.3 inches per second could potentially damage these thresholds. The most stringent impact criteria related to annoyance is 65 VdB for buildings subject to frequent vibration events (e.g., multiple equipment passbys).

TABLE 4: CONSTRUCTION VIBRATION DAMAGE CRITERIA

Building Category	**Peak Particle Velocity (inches per second)**
I. Reinforced-concrete, steel or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

SOURCE: California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, September 2013.

State. There are no adopted State vibration standards.

Local. There are no adopted City of Los Angeles vibration standards.

[4]California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, September 2013.

EXISTING SETTING

The project site is located in a developed urban setting surrounded by light industrial and community commercial uses, such as automotive and tire shops, a refinery, equipment shops, and railroad tracks. Sensitive receptors are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. This typically includes residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas. Roadway, industrial, and noise from port activities are the primary source of noise in the project area. The nearest sensitive receptors are residences located approximately 300 feet to the west of Alameda Street along Flint Avenue, Pioneer Avenue, and Watson Avenue south of Anaheim Street. Sensitive receptor locations are shown in **Figure 3**.

To characterize the existing noise environment around the project site, ambient noise was monitored using a SoundPro DL Sound Level Meter on Wednesday, November 30, 2022 from 11:30 a.m. to 3:00 p.m. in 15-minute increments. This time of day represents a typical construction time without the added noise source of peak hour traffic. Monitored noise levels ranged from 64.5 to 76.2 dBA L_{eq}. Traffic was the primary source of noise at each site. The monitoring locations are shown in **Figure 3** and monitored noise levels are shown in **Table 6**.

TABLE 6: EXISTING AMBIENT NOISE LEVELS AT MONITORING LOCATIONS

Noise Monitoring Site (Figure 3)	Noise Monitoring Location	Noise Level (dBA, L_{eq})
1	Harry Bridges Blvd. and Broad St.	76.1
2	East E St. and Alameda St.	75.3
3	Residences along Flint Ave.	64.5
4	Watson Ave. and East G St.	65.6
5	Anaheim St.	75.3
6	East I St. and Alameda St.	76.2

Sensitive Receptors and Noise Monitoring Locations

SIGNIFICANCE THRESHOLDS

This assessment was undertaken to determine whether construction or operation of the proposed project would have the potential to result in significant environmental impacts related to noise or vibration in the context of the Appendix G Environmental Checklist criteria of the CEQA Statute and Guidelines. Implementation of the proposed project may result in a significant environmental impact related to noise and vibration if the proposed project would result in:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
b) Generation of excessive ground-borne vibration or ground-borne noise levels;
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

Noise

The proposed project would exceed the local standards and substantially increase temporary construction noise levels if construction activities would occur within 500 feet of a noise-sensitive use and outside the hours allowed in the LAMC. The allowable hours of construction in the LAMC are 7:00 a.m. to 9:00 p.m. Monday through Friday and 8:00 a.m. to 6:00 p.m. on Saturday. In addition, the LAMC states that equipment noise levels should not exceed 75 dBA L_{eq} unless technically infeasible.

The proposed project (on-site and off-site sources) would also have an impact if the project causes the ambient noise levels measured at the property line of affected noise-sensitive uses to increase by 3 dBA in CNEL to or within the "normally unacceptable" or "clearly unacceptable" category (see Table 3 for a description of these categories); Or a 5 dBA in CNEL or greater for noise levels within the "conditionally acceptable" or "normally acceptable" category.

Vibration

Because project operations would not create perceptible vibration and vibration-generating maintenance and repair activities would be reduced after project implementation, this assessment only considers construction vibration. The construction-related vibration analysis considers the potential for building damage and annoyance. Maximum vibration levels were assessed based on frequent vibration events happening more than 70 times in one day, which would be consistent with the movement of construction equipment. The proposed project would result in a significant construction vibration impact if:

- Vibration levels would exceed 0.12 inches per second at historic structures.
- Vibration levels would exceed 0.3 inches per second at non-historic structures constructed of engineered timber and masonry.

METHODOLOGY

Noise levels associated with typical construction equipment were obtained from the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM).[5] This model predicts noise from construction based on a compilation of empirical data and the application of acoustical propagation formulas. Maximum equipment noise levels were adjusted based on anticipated percent of use. Combined construction activity noise levels were estimated by combining anticipated equipment for each activity using RCNM. The projected noise level during the construction period at receptors was calculated by (1) making a distance adjustment to the construction source sound level and (2) logarithmically adding the adjusted construction noise source level to the ambient noise level. According to Caltrans guidance, air temperature and humidity affect molecular absorption differently depending on the frequency spectrum and can vary significantly over long distances in a complex manner. Molecular absorption in air also reduces noise levels with distance. According to Caltrans, this process only accounts for about 1 dBA per 1,000 feet, which is an inaudible and negligible difference in noise levels. Noise levels have been estimated using a decrease of 6 dBA over hard surfaces for each doubling of the distance. The methodology and formulas obtained from the Caltrans Technical Noise Supplement can be viewed below.

(1) *Noise Distance Attenuation Formula:* $dBA_2 = dBA_1 + 20 \times LOG_{10} (D_1/D_2)$

Where:

dBA_1 = *Noise level at the reference distance of 50 feet*
dBA_2 = *Noise level at the receptor*
D_1 = *Reference distance (50 feet)*
D_2 = *Distance from source to receptor (measured distance)*

(2) Logarithmic Noise Level Addition Formula: Nc = 10 x LOG10 ((10^(N1/10)) + (10^(N2/10)))

Where:

Nc = Combined noise level
N1 = Noise level one
N2 = Noise level two

Operational Noise

Permanent sources of noise include additional visitor activities on the expanded sidewalk, activities at the flexible event plaza, and changes to traffic patterns. The operational noise analysis considers pedestrian noise and amplified sound in the context of existing noise levels. Off-site mobile noise was analyzed utilizing the FHWA's Traffic Noise Model (TNM) Version 3.1. The off-site mobile noise analysis included an assessment of Existing (2022), Future No Project (2026), and Future Plus Project (2026) traffic conditions based on traffic data included in the Alameda Street Widening Traffic Study prepared by KOA in December 2022. Peak hour traffic noise levels (L_{eq}) were calculated in TNM. The peak hour noise levels were then converted to CNEL by formula (3) below obtained from the Caltrans Technical Noise Supplement.

[5]FHWA, *Roadway Construction Noise Model*, Version 1.1, August 2008.

(3) *Peak Hour L_{eq} to CNEL formula : $L_{eq}(h)_{pk}$ + 10 x LOG_{10} (4.17/P) + 10 x LOG_{10} (D + 4.77 x E + 10 x N)*

Where:

$L_{eq}(h)_{pk}$ = Peak Hour L_{eq} Noise Level
P = Peak Hour Volume Percentage of Average Daily Traffic
D = Daytime fraction of Average Daily Traffic
E = Evening fraction of Average Daily Traffic
N = Nighttime Fraction of Average Daily Traffic

It was assumed more traffic would occur at night that typical roadways because Alameda Street is a haul route for the port. The assumptions utilized for this formula are as follows:

P = 9.8
D = 0.75
E = 0.10
N = 0.15

Construction Vibration

Construction vibration was assessed for construction equipment and off-site haul trucks. Vibration levels were estimated using example vibration levels and propagation formulas provided by the Federal Transit Administration (FTA).[6] Vibration damage is assessed using Formula (4).

(4) *Vibration Damage Attenuation Formula: $PPV_{equip} = PPV_{ref}$ x $(25/D)^{1.5}$*

Where:

PPV_{equip} = Peak particles velocity in inches per second of the equipment adjusted for distance
PPV_{ref} = Reference vibration level in inches per second at 25 feet
D = Distance from the equipment to the receptor in feet

Operational Vibration

Operational vibration is qualitatively discussed as the project would not include significant sources of operational vibration.

IMPACT ASSESSMENT

a) Would the proposed project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (Less-than-Significant Impact)

Construction

Noise impacts from construction of the proposed project would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers. Construction activities typically require the use of numerous pieces of noise-generating equipment. **Table 7** summarizes noise levels produced by construction equipment that are expected

[6]FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

to be used during the construction. Construction equipment is expected to generate noise levels ranging from 63.2 to 82.5 dB at a distance of 50 feet, and noise produced by construction equipment would be reduced over distance at a rate of about 6 dB per doubling of distance.

TABLE 7: CONSTRUCTION NOISE LEVELS BY EQUIPMENT

Construction Equipment	Noise Level at 50 feet (dBA, L_{eq})
Air Compressor	73.7
Backhoe	73.6
Forklift	63.2
Generator	77.6
Haul Truck	72.5
Pavement Scarifier	82.5
Paver	74.2
Pickup Truck	71.0
Combined Noise Level from Multiple Equipment	**84.2**

SOURCE: FHWA, *Roadway Construction Noise Model (RCNM) Version 1.1.*

The impact analysis is based on the construction limits described in the LAMC. Construction activity would comply with the allowable hours of construction in the LAMC, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or federal holidays. The LAMC limits equipment noise levels to 75 dBA L_{eq} at 50 feet unless technically infeasible within 500 feet of any residential zone. The project area consists of primarily industrial and commercial uses with three areas of residences along Flint Avenue, Pioneer Avenue, and Watson Avenue. **Table 8** presents the estimated noise levels at sensitive receptors associated with construction. As shown below, construction noise would not exceed 75 dBA at sensitive receptors. Therefore, the proposed project would result in a less than significant impact related to noise generated by construction equipment.

TABLE 8: CONSTRUCTION NOISE LEVELS

Sensitive Receptor	Distance (feet)	Intervening Building /a/	Reference Noise Level (dBA)	Max Construction Noise (dBA, Leq)	Existing Ambient (dBA, Leq)	LA City Noise Threshold	Exceed Threshold?
Residences along Pioneer Avenue	270	4.5	84.2	65.1	65.6	75	No
Residences along Watson Ave.	340	4.5	84.2	63.0	65.6	75	No
Residences along Flint Avenue	360	4.5	84.2	62.6	64.5	75	No

SOURCE: TAHA, 2022.
/a/ -4.5 dB for on intervening row of buildings and -1.5 dB for each subsequent row

In addition to on-site construction activities, noise would be generated off-site by construction-related trucks. However, the amount of construction equipment traveling to and from the project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be transported to the project site at the start of construction and would remain on site for the majority of the construction duration, which would minimize daily travel to and from the site.

An estimated 16,577 total haul truck trips would be required for material export and import. The maximum number of haul truck trips would occur during the grading and excavation phase. It is anticipated that approximately 14 truck trips per hour would occur during this phase. A doubling of traffic volumes is typically needed to audibly increase noise levels along a roadway. An audible increase in noise would occur if haul truck noise resulted in an increase of 5 dBA L_{eq} or more. As shown in **Table 9**, the incremental increase in noise would be a maximum of 0.2 dBA L_{eq}. As such, the incremental increase in noise related to haul trucks would be less than the 5 dBA L_{eq} threshold. Therefore, the proposed project would result in a less than significant impact related to noise generated by construction trucks.

TABLE 9: HAUL TRUCK NOISE ANALYSIS

Roadway	Existing AM Peak Hour Noise Level (dBA, L_{eq})	Haul Truck Noise Level (dBA, L_{eq})	Increase (dBA, L_{eq})
Harry Bridges Blvd. between Quay Avenue and George De la Torre Jr Ave.	74.5	74.7	0.2
Alameda St. between East E St. and Anaheim St.	73.4	73.2	0.2
Alameda St. between George De la Torre Jr Ave. and East E St.	73.6	73.8	0.2

SOURCE: TAHA, 2022.

Operations

The proposed project would not include stationary sources of noise. Similar to the existing condition, vehicles passing along roadway would be the primary source of noise. The proposed project would include the addition of a single travel lane in each direction for a 1.02-mile segment of Alameda Street between Anaheim Street and Harry Bridges Boulevard. Existing noise levels at residences fall within the "conditionally acceptable" category (55 to 70 dBA CNEL), as shown in **Table 3** above.

The mobile noise analysis includes an analysis of Existing (2022), Future No Project (2026), and Future Plus Project (2026) traffic conditions. As shown in **Table 10**, Future Plus Project mobile noise levels would result in a maximum incremental increase of 3.1 dBA CNEL over existing conditions for residences on Pioneer Avenue. As such, the proposed project would not increase noise levels at residences by 5 dBA CNEL or more within the "conditionally acceptable" category. Therefore, impacts from off-site mobile noise due to the proposed project would be less than significant.

TABLE 10: MOBILE NOISE ANALYSIS					
	Noise Level (dBA, CNEL)				
Receptor	Existing (2022)	Future No Project (2026)	Future with Project (2026)	Future with Project Minus Future No Project	Future with Project Minus Existing
Residences on Flint Ave.	63.7	66.5	66.7	0.2	3.0
Residences on Pioneer Ave.	65.7	68.5	68.8	0.3	3.1
Residences on Watson Ave.	64.5	67.2	67.4	0.2	2.9
SOURCE: TAHA, 2022.					

Mitigation Measures

No significant impacts have been identified related to construction or operational noise. Therefore, no mitigation measures are required.

b) Would the proposed project result in generation of excessive ground-borne vibration or ground-borne noise levels? (Less-than-Significant Impact)

Construction

Construction activity can generate varying degrees of vibration, depending on the procedure and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, and to slight damage at the highest levels. In most cases, the primary concern regarding construction vibration relates to damage.

The FTA provides vibration levels for various types of construction equipment with an average source level reported in terms of velocity.[7] Typical equipment anticipated to be used during construction and their associated vibration levels are shown in **Table 11**. Equipment utilized during project construction would be most similar to a large bulldozer, which generates a vibration level of 0.089 inches per second. Construction would occur within the street right-of-way and structures would typically be located approximately 50 feet away. At this distance a large bulldozer would generate a vibration level of approximately 0.031 inches per second, which would be below the 0.3 inches per second building damage criterion. Therefore, construction of the proposed project would result in less than significant impacts due to the generation of excessive ground-borne vibration or ground-borne noise levels.

[7]Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, September 2018.

TABLE 11: VIBRATION LEVELS FOR CONSTRUCTION EQUIPMENT	
Equipment	**Vibration Level at 25 feet (Inches/Second)**
Loaded Trucks	0.076
Large Bulldozer	0.089
Small Bulldozer	0.003
SOURCE: FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.	

Operations

The proposed project would not include significant sources of vibration. Similar to the existing condition, vehicles passing along roadway would be the primary source of vibration. However, rubber-tired vehicles typically do not generate vibration that is perceptible. Therefore, operation of the proposed project would result in less than significant impacts related to excessive ground-borne vibration or ground-borne noise levels.

Mitigation Measures

No significant impacts have been identified related to construction or operational vibration. Therefore, no mitigation measures are required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the proposed project expose people residing or working in the project area to excessive noise levels? (No Impact)

The project site is not located within an airport land use plan nor is it located within two miles of a public airport or private airstrip. Therefore, no impact related to airport or airstrip noise would occur.

Mitigation Measures

No significant impacts have been identified related to the proposed project. Therefore, no mitigation measures are required.

Executive Summary

The City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (ESA) of the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project, which consists of a length of roadway along Alameda Street from East Anaheim Street to East Harry Bridges Boulevard, in the community of Wilmington within the City of Los Angeles, California (the "proposed Project"). This assessment was performed in support of California Environmental Quality Act (CEQA) documentation for the proposed Project. This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International (ASTM), Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13). Exceptions to, or deletions from, this practice are described in this report.

AECOM conducted a site visit of the proposed Project on November 3, 2022. The proposed Project includes approximately 5,400 feet, or 1.02 miles, of the Alameda Street right-of-way (ROW) from East Anaheim Street to East Harry Bridges Boulevard. BOE is proposing to widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound). The proposed Project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. The entire Project is located within the Alameda Street ROW and will not require the acquisition of privately owned land. A concrete-paved sidewalk is located along the southeastern side of Alameda Street, and the Port of Los Angeles Berth 200 Railyard is located adjacent to the southeast of the proposed Project. A vegetative buffer strip and railroad are located adjacent to the northwest of the Alameda Street ROW. The vegetative buffer strip is a shared corridor for several petroleum and gas pipelines. The railroad traverses across the Alameda Street ROW at the junction of Alameda Street and East Harry Bridges Boulevard. Alameda Street is asphalt- and concrete-paved. A crushed asphalt stockpile was observed along the northwestern side of Alameda Street, between East Harry Bridges Boulevard and George De La Torre Jr. Avenue. There are several existing utilities within the area of the proposed Project, including the above-mentioned buried petroleum and gas pipelines, several stormwater inlets, and overhead powerlines with pole-mounted transformers throughout the Project limits. During the site visit, no visual evidence of aboveground storage tanks (ASTs), underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable water or irrigation wells, dry wells, oil/gas wells, clarifiers, septic tanks, or leach fields was identified in the proposed Project. In addition, no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit.

The proposed Project is located in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. The surrounding area is a developed urban setting surrounded by both light and heavy industrial uses, including logistics, trucking, semi-truck repair, gasoline stations, recycling center, construction, cement manufacturing, auto body and paint, truck wash, automotive junkyard, and equipment supply companies. Several gasoline service stations were identified in the immediate vicinity (i.e., 500 feet) of the proposed Project, including Chevron at 1417 East Anaheim Street located adjacent to the northeast, Noil USA, Inc. at 710 East D Street located adjacent to the northwest, Speedy Fuel at 1222 East Anaheim Street located approximately 300 feet to the northwest, and Texaco at 1625 East Anaheim Street located approximately 500 feet to the east.

AECOM's historical research indicates that a road was present in the northern portion of the proposed Project and railroad tracks are depicted crossing the southern portion of the proposed Project and running adjacent to the northwest side of the proposed Project on the 1896 topographic map. By 1913, East Anaheim Street is depicted, but is named 7th Street and Alameda is not in place, although the rail line is still present to the west and rail spurs cross the proposed Project connecting to properties to the east. By this time, two lumber companies occupied the majority of the area east of the rail lines (Consolidated Lumber Company in the north and Pacific Lumber Company in the south), including the proposed Project. Lumber sheds and other structures associated with these operations appear to extend onto the proposed Project. The proposed Project also includes a portion of the smaller complex of buildings that, according to the previous Phase I ESAs (refer to Section 5.2), was used to burn wood shavings and refuse to generate power. The power was used to operate a monorail system for moving lumber to and from the wood stacks. A garage for monorail repairs and a 66,000-gallon cistern for storing water for emergency firefighting and making steam was depicted at this location. To the west of the rail line was primarily residential development. By 1921,

Alameda Street was still not in place and 7th Street had been renamed to East Anaheim Street. The Pacific Lumber Company, power station, monorail repair shed, and water cistern are not depicted on the 1921 Sanborn maps. The west side of the rail line remained in residential use, with the exception of a City of Los Angeles asphalt storage area at the northeast corner of East F Street and Flint Avenue, approximately 350 feet from the rail line. By 1923, the aerial photograph depicts the proposed Project as primarily vacant land with the rail lines running adjacent to the west. A large building is depicted extending onto the northern portion of the proposed Project, which was associated with the lumber operation to the east. By 1928, an additional smaller complex of buildings extended onto the central portion of the proposed Project, also associated with the lumber operations to the east. Stacks of lumber can also be seen to the east, extending into the area of the proposed Project. By 1947, Alameda Street appears in place and paved in the northern portion of the proposed Project (to East E Street). The large warehouse remained in the northern portion of the proposed Project, as well as the smaller complex of buildings in the central portion of the proposed Project. What appear to be 14 ASTs in three locations (northern and two central areas) are visible. Equipment and materials are depicted throughout the proposed Project. Additional ASTs area depicted in the vicinity of the proposed Project by this time. By 1950, Alameda Street is depicted in the northern portion of the proposed Project and in this area to the west of East Anaheim Street was an open yard labeled with “oil and gas” as wells as oil tanks and an oil well and derrick. A building labeled “autos” was depicted near the intersection of Anaheim and Alameda Streets and it is unclear whether this was a parking garage or used for auto repairs. Two oil derricks were depicted located in the proposed Project, approximately 200 and 860 feet from the southeast corner or Anaheim and Alameda Streets. Three tanks were depicted east of the northern well and nine oil tanks are located near the southern oil derrick (appear to be just off-Project). These wells and tanks correspond to locations of ASTs noted in the 1947 aerial photograph. There are also a significant number of wells and related sets of tanks located west of the rail line, two of which (and nine related tanks) appear to be within approximately 300 feet of the proposed Project. By 1952, Alameda Street appears fully in place. What appear to be seven additional tanks in three locations have also been added to the proposed Project by this time. The remainder of the proposed Project appears generally as it did at the time of the 1950 aerial photograph. By 1969, the Pacific Lumber Company is no longer depicted and the Consolidated Lumber Company had changed its name to the Consolidated Dock and Storage Company. In addition, the earlier labeled “auto” building had been removed. The oil and gas yard to the west of the northern portion of the proposed Project had been redeveloped with a commercial building. By 1970, the majority of the tanks are still depicted and the large warehouse is still in place, as is the small complex of buildings in the central portion of the proposed Project and two additional buildings in the northern-central portion of the Project. By 1977, the tanks all appear to have been removed and one of the central-northern buildings is no longer depicted. By 1983, only one building remains in the northern portion of the proposed Project and all other buildings have been removed. By 1983, the remaining building had been removed and the proposed Project appears to consist of Alameda Street, railroad spurs crossing to the east, and equipment and material storage to the east of Alameda Street. Equipment and material storage decreased through the 2000s and by 2009, the Project appeared generally in the current configuration. The historical use of the area of the proposed Project for oil exploration, production, and storage as well as these uses located adjacent to the proposed Project are considered a recognized environmental condition (REC), in AECOM’s opinion.

No database listings were identified associated with the proposed Project in the site-specific environmental database search report obtained for this Project from Environmental Data Resources, Inc. (EDR). Numerous sites (over 560) were identified in the environmental database search report in the area of the proposed Project. However, the majority of these sites were listed on non-contamination-related databases. Based on AECOM’s review and analysis of the database listings, none of the surrounding sites are expected to present a REC to the Project, based on their distance (generally greater than 500 feet), regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the proposed Project (i.e., down-gradient or cross-gradient). However, the historical oil exploration production activities in the surrounding area, which have resulted in impacts to the subsurface are considered a REC to the proposed Project.

Based on the above-described activities, the following RECs were identified in connection with the proposed Project.

- The proposed Project is located within the Wilmington Oil Field and the area was historically used for the exploration and production of crude oil. A subsurface investigation conducted in the southern segment of the proposed Project in 2014 revealed the presence of petroleum hydrocarbons in shallow soils, which would require the removal and proper disposal during construction of the proposed Project. The presence of petroleum impacted soil in the proposed Project is considered a REC.
- In addition, review of California Geologic Energy Management (CalGEM) Division records identified the presence of numerous abandoned oil wells along the proposed Project. It is possible that undocumented

well casings or underground piping associated with plugged and/or idle oil wells may be exposed during construction of the proposed Project. The presence of historical oil wells in and adjacent to the proposed Project is considered a REC.

- The proposed Project is in an area that has been designated by the City of Los Angeles as a Methane Zone due to its location in an oil field, which is considered a REC. These areas have developmental regulations that are required by the City and County of Los Angeles that should be adhered to during construction of the Project.
- Numerous petroleum pipelines are located beneath and adjacent to the proposed Project. The presence of these pipelines is considered to represent a REC to the proposed Project, as undocumented releases may have occurred which may have resulted in impacts to the subsurface.

No controlled RECs (CRECs) or historical RECs (HRECs) were identified in connection with the proposed Project. The following de minimis condition (DMC) was identified:

- Evidence of inappropriate disposal activities was identified during the site visit, including a large amount of litter and debris (e.g., paper, plastic, cardboard, Styrofoam, vagrant tarps, etc.) along Alameda Street. In addition, a tire pile was observed near the sidewalk along East E Street, to the northwest of Alameda Street. No chemicals, chemical containers, or significant staining were identified in these areas during the site visit and they are considered a de minimis condition.

AECOM completed a Tier 1 vapor encroachment screening (VES) following ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15). The following vapor encroachment condition (VEC) was identified:

- The potential exists for subsurface soil and groundwater to have been impacted by historical oil production activities on and in the area of the proposed Project. In addition, soil sampling and testing performed on the southern portion of the proposed Project in 2014 identified the semi-volatile organic compounds (SVOCs) fluoranthene and pyrene at concentrations above regulatory screening levels. Therefore, a VEC on the proposed Project cannot be ruled out. However, due to the proposed construction activities (road improvements with no buildings), mitigation measures associated with vapor intrusion are not recommended.

Based on the above-described activities, the following non-ASTM considerations were identified associated with the proposed Project.

- Buried utility lines within the Alameda Street ROW may be comprised of asbestos-containing materials (ACMs) associated with pipe insulation. Relocation of buried utility lines in the proposed Project ROW is not anticipated, but nonetheless, there is potential for ACMs to be disturbed. If ACMs are discovered during this work, they would be abated in compliance with all applicable local, state, and federal regulations.
- Suspect lead-based paint (LBP) associated with painted curbs, fire hydrants, and protective bollards were identified in the proposed Project. If LBP is discovered during construction, it would be handled and abated in compliance with all applicable local, state, and federal regulations.
- The existing yellow thermoplastic paint and pavement marking originally used for traffic striping may contain lead along Alameda Street. These materials would be removed, handled, and disposed of in accordance with all applicable local, state, and federal regulations.
- Treated wood waste (TWW) within the proposed Project could include wooden utility poles and old railroad ties. These features have historically been chemically treated and may require special waste handling. These materials would be removed, handled, and disposed of in accordance with all applicable local, state, and federal regulations.
- Alameda Street in the proposed Project is paved; therefore, the likelihood of aerially deposited lead (ADL) penetrating paved surfaces in these areas is low and ADL (if present) was most likely blown or rinsed away by the elements. However, ADL from vehicular emissions may be present in the unpaved/landscaped areas along Alameda Street.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) written proposal, dated July 14, 2022. This assessment was performed in support of California Environmental Quality Act (CEQA) documentation for the proposed Project. The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the proposed Project to determine if contamination may be encountered during construction.

Per ASTM International (ASTM), Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions (DMCs). A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. DMCs are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

In addition, a Tier 1 vapor encroachment screening (VES) is completed as part of this assessment. This screening is conducted in general accordance with the ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This assessment for the Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the Project and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, regulatory research, historical review, and a review and an environmental database analysis of the Project. In conducting the Phase I ESA, AECOM assessed the proposed Project for visible signs of possible contamination, researched public records for the proposed Project and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the proposed Project.

This assessment was performed in general accordance with ASTM E1527-13 and AECOM's written proposal, dated July 14, 2022. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the Project and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the Project. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the Project.

As specified in ASTM E1527-13, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No Phase I ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of ASTM E1527-13)
- Not Exhaustive - "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a Phase I ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-13)
- Comparison with Subsequent Inquiry – Phase I ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent Phase I ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-13)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-13 is employed. According to ASTM E2600-15, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. (Section 4.5.1 of ASTM E2600-15)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in

performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-15)

- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-15)

This report was prepared pursuant to an agreement between the City of Los Angeles Department of Public Works, Bureau of Engineering (BOE) (Client) and AECOM and is for the exclusive use of the Client. Any use of or reliance on the conclusions, observations, specifications, or data contained herein by any other person or entity without AECOM's express written consent shall be at the sole risk of the person or entity without any liability to AECOM.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

No site-specific limiting conditions were encountered during the course of this assessment.

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- As specified in the agreed upon scope of work, title searches and environmental lien searches were not conducted as part of this Phase I ESA. However, as the proposed Project is located entirely within public right-of-way (ROW) and based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- A limitation was encountered in determining the historical use of the area of the Project. The earliest sources of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was from a topographic map dated 1896. In the 1896 topographic map, portions of roadways and railroad tracks were depicted on and adjacent to portions of the proposed Project. Therefore, the ASTM E1527 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified land uses (roadway and railroad tracks), it is unlikely that there had been significant prior development; therefore, this data gap is not expected to impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM, were reviewed as part of this assessment. Building department records, recorded land tile records, property tax files, and zoning/land use records were not reviewed. Based on information provided from the remaining standard historical sources, additional historical information obtained from these historical sources, if any, would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to impact the results of this assessment.

- Per ASTM E1527-13, current and past owners, operators, and occupants of the proposed Project who are likely to have material information regarding the potential for contamination at the proposed Project shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview current and past owners and/or operators at the proposed Project. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- Per the agreed scope-of-work and ASTM E1527-13, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-13; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant limitation to this investigation given the use of the proposed Project.

2. Project Description

2.1 Overview of the Project

BOE proposes to implement the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project (proposed Project), which would widen and improve Alameda Street from two to three lanes in each direction (northbound and southbound) from East Anaheim Street to East Harry Bridges Boulevard in the community of Wilmington within the City of Los Angeles. The total length of the proposed Project is approximately 5,400 feet, or 1.02 miles. The proposed Project would also include a center turn lane, painted median, shared bike/pedestrian path along the eastern side of the street, traffic signal installations and modifications, upgrades to railroad crossings, drainage improvements, and would upgrade Alameda Street to a Modified Major Highway Class II Street. Specifically, the Project would provide:

- Widening and reconstruction of Alameda Street to provide three through lanes each way with a center turn lane/painted median and shared bike/pedestrian path along the eastern side of the street;
- Traffic signal modifications at Anaheim Street and the driveway entrance to the International Longshoremen and Warehouse Union Local 13 (ILWU-13) property;
- Traffic signal installations at E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Quay Avenue at Harry Bridges Boulevard;
- Upgraded railroad crossings at Anaheim Street, E Street, George De La Torre Jr Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; and
- Relocation, construction, and extension of Los Angeles City and Los Angeles County Flood Control District storm drain systems.

2.2 Project Background

The Port of Los Angeles (POLA) has delegated the design and construction of the Alameda Street widening improvements to BOE, which is required as mitigation for the POLA Berth 200 Rail Yard expansion project.

The proposed improvements will aid in the movement of goods both via trains and trucks to and from the POLA and Port of Long Beach (POLB). Although separate from the POLA Berth 200 Rail Yard expansion project, the proposed Project would fulfill a required component and mitigation for the POLA project by improving traffic congestion, goods movement by train and truck, localized flooding, and public safety.

2.3 Project Objectives

The primary objectives of the proposed Project are to:

- Provide congestion relief,
- Improve goods movement and mobility by train and truck,
- Minimize roadway flooding for storms during low-tide conditions, and

- Enhance mobility for pedestrians and cyclists.

2.4 Description of the Project

The proposed Project would: (1) widen and reconstruct Alameda Street, from Anaheim Street to Harry Bridges Boulevard at Quay Avenue, to provide three through lanes each way with a center turn lane/painted median (widening from four to six lanes) with a varying ROW width; (2) upgrade four existing railroad crossings at Anaheim Street, "E" Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) and Harry Bridges Boulevard; (3) modify two traffic signals on Alameda Street at Anaheim Street and at the ILWU-13 property driveway entrance, and install three new traffic signals on "E" Street at Alameda Street, George De La Torre Jr. Avenue (formerly known as Eubank Avenue) at Alameda Street, and Quay Avenue at Harry Bridges Boulevard; (4) meet the requirements of the California Coast Trail, LA Harbor Waterfront Pedestrian Trail and the City of Los Angeles 2010 Bicycle Plan (Backbone Bikeway Network) by installing a Class I (off street) eight foot wide, two-way bike trail and shared pedestrian path, which would commence at the southernmost portion of the Project at Harry Bridges Boulevard and run along the eastern side of Alameda Street until Alameda Street intersects Anaheim Street; (5) upgrade Alameda Street to a Modified Major Highway Class II Street; (6) relocate, construct, and extend the City of Los Angeles and Los Angeles County Flood Control District storm drain systems; (7) construct a new sidewalk on the southern side of Anaheim Street, with all sidewalks constructed in compliance with the latest version of the BOE Plan Standards; and (8) street tree removal and replacement. Installation of new and relocation of existing utilities such as water, oil, gas, power poles, streetlight poles, and sewers would also be required along with right-of-way acquisition. One hundred and four (104) total street trees would be removed during construction (15 from the south side of Harry Bridges Boulevard and on the easterly side of Alameda Street; and 89 from the north side of Harry Bridges Boulevard and the westerly side of Alameda Street). The City of Los Angeles Municipal Code requires that street trees removed for construction be replaced at a ratio of two 24-inch box-size trees for each tree removed. Based on that ratio, approximately 208 24-inch box size trees would be included in Project design to mitigate for the trees removed.

2.5 Project Construction Schedule and Procedures

Construction of the proposed Project would begin on approximately December 30, 2023 and last for approximately 2.5 to 3 years. The objective would be to complete the proposed Project in its entirety, with a phased plan for road closures and detours. If the necessary funds to complete construction in this manner are not allocated, then a phased construction schedule would be implemented.

The anticipated construction equipment is approximately 20 pieces and would include standard earth movers, hauling trucks, pavement placement equipment and haulers, pavement grinders, forklifts, heavy pickup trucks, air compressors, generators, and light towers. The amount of construction equipment traveling to and from the proposed Project site each day would be reduced by the permanent k-rail barriers that are proposed to be placed along the perimeter of the work areas, which would allow the storage of equipment overnight. It is expected that most of the equipment would be mobilized to the proposed Project at the start of construction and would remain on site for most of the proposed Project duration, which would minimize daily travel to and from the site.

The proposed haul routes to the north would be East Anaheim Street to Henry Ford Avenue to Alameda Street north to Pacific Coast Highway (PCH) (north or south) or to the Interstate 405 (I-405) Freeway (north or south). The proposed haul routes to the south would be East Harry Bridges Boulevard to I-110 Freeway (north or

south). Further confirmation regarding the use and location of a local concrete recycling site is pending. An estimated 16,577 total haul truck trips are anticipated. The estimated total excavation would be 100,245 cubic yards, with a maximum depth of 11.2 feet at storm drain trenches and 21 inches at the roadway.

Construction activities would occur Monday through Friday between 7:00 a.m. and 4:00 p.m., with some night and weekend construction also anticipated. Partial and full street closures are anticipated; some closures would occur for the duration of the proposed Project while others would occur for one to seven days. Detours for both vehicles and pedestrians would be provided. Approximately 18 construction workers would be expected to be on-site daily during construction hours.

An appropriate combination of monitoring and resource avoidance would be employed during all construction activities, including implementation of the following Best Management Practices (BMPs):

- Construction of the proposed Project is anticipated to occur every day of the week from 7:00 a.m. to 4:00 p.m. Should construction be required outside of the anticipated hours, construction activity would comply with the allowable hours of construction as dictated in the *Los Angeles Municipal Code Section 41.40*, including 7:00 a.m. to 9:00 p.m. Monday through Friday, 8:00 a.m. to 6:00 p.m. on Saturday, and no construction activity on Sundays or City holidays.
- The proposed Project would implement Rule 403 fugitive dust control measures required by the South Coast Air Quality Management District (SCAQMD), which requires reasonable precautions to be taken to prevent visible particulate matter from being airborne, under normal wind conditions, beyond the property from which the emission originates. Reasonable precautions include, but are not limited to, the following:
    - Application of water on dirt roads, material stockpiles, and other surfaces that can give rise to airborne dusts; and
    - Maintenance of roadways in a clean condition.
- The proposed Project would implement erosion control where necessary that may include, but would not be limited to, the following:
    - Minimizing the extent of disturbed areas and duration of exposure;
    - Stabilizing and protecting disturbed areas;
    - Keeping runoff velocities low;
    - Retaining sediment within the construction area;
    - Use of silt fences or straw wattles;
    - Temporary soil stabilization;
    - Temporary drainage inlet protection;
    - Temporary water diversion around the immediate work area; and
    - Minimizing debris from construction vehicles on roads providing construction access
- The proposed Project would implement Rule 402 measures required by the SCAQMD, which prohibits the discharge from any source whatsoever, such quantities of air contaminants or other materials that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public or which endanger the comfort, repose, health, or safety of any such persons or the public or that cause or have a natural tendency to cause injury or damage to business or property.

- BOE would ensure that all construction crews have fire-suppression equipment (such as fire extinguishers) on site to respond to the accidental ignition of a fire.
- Spill kits will be available on-site for potential leaks or spills of hazardous materials.
- BOE or its contractor would minimize short-term construction noise through: (1) proper maintenance and tuning of all construction equipment engines to minimize noise emissions; and (2) proper maintenance and functioning of the mufflers on all internal combustion and equipment engines.
- BOE or its contractor would implement the recommendations for the protection, removal, and/or replacement of street trees detailed in the Arborist Report prepared for the Project, as applicable and in consultation with the City's Urban Forestry Division and/or Board of Public Works.

2.6 Required Permits and Approvals

Several approvals and/or permits would be required to implement the proposed Project. The environmental documentation for the proposed Project would be used to facilitate compliance with federal and state laws and the granting of permits by various state and local agencies having jurisdiction over one or more aspects of the proposed Project. These approvals and permits may include, but may not be limited to, the following as listed in Table 1:

Table 1
Required Permits and Approvals

Agency	Permit/Requirement	Issue
Regional		
Los Angeles Flood Control / Los Angeles County Department of Public Works / BOE	Existing-Catch Basin Relocation Storm Drain Design and Connection Permit	Construct New and Relocate Existing Catch Basin
Los Angeles Flood Control / Los Angeles County Department of Public Works / BOE	New Catch Basin Connection Storm Drain Design and Connection Permit	New Catch Basins-Construct New Storm Drain Mainline, Lateral and Connector Pipes
City of Los Angeles/Port of Los Angeles	BOE-POLA Agreement for Courtesy Approval	Street Design and Construction Utility Coordination and Relocation Storm Drain Design and Construction
Metro	Approval	Bus stop modifications and construction detour coordination (Route 232 bus stop at SW corner of Alameda and Anaheim Streets) – Hold existing location.
Pacific Harbor Line	Approval	Railroad design criteria
Los Angeles Department of Transportation	Approval	Bike path design criteria; streetlight design criteria; traffic signal design criteria Traffic Striping and Signage
BOE	Approval	Roadway design criteria Street Design Storm Drain Design Retaining Wall
BOE	Utility Permit	Utility Potholing and Relocation

Agency	Permit/Requirement	Issue
Los Angeles Bureau of Street Services	Approval	Relocation and installation of streetlights and traffic signals-Urban Forestry-Street Trees
Los Angeles Department of Water & Power (Water Systems and Power Systems)	Approval and BOE Utility Permit	Design and relocation of power poles and above ground water facilities
Los Angeles Bureau of Street Lights	Approval	Street Light Design
State		
California Coastal Commission	Coastal Development Permit	Within California Coastal Zone
California Public Utilities Commission	Approval	Railroad design criteria

This page intentionally left blank.

3. Project Site Visit

AECOM performed a site visit of the proposed Project, adjacent properties, and public ROWs on November 3, 2022. The purpose of the site visit was to identify potential environmental concerns within the area of the proposed Project. AECOM was unaccompanied during the site visit; therefore, interviews were not conducted at that time. The site visit methodology consisted of walking accessible areas of the proposed Project and portions of the surrounding area. Observations of the proposed Project and surrounding area were made from existing ROWs and other publicly accessible areas. Where applicable, online resources and mapping tools were used to enhance AECOM's observations of current site conditions.

Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4. The following sections summarize the results of the site visit.

3.1 Project Location and Setting

The proposed Project is located in the community of Wilmington within the southern portion of the City of Los Angeles in Los Angeles County. It is bordered by the City of Carson to the north, the City of Long Beach to the east, Terminal Island and the Pacific Ocean to the south, and Harbor City to the west. California State Route 47 ("North Henry Ford Avenue") and California State Route 103 are located to the east, California State Freeway 47 ("Seaside Freeway") is located to the south, Harbor Freeway 110 is located to the west, and PCH is located to the north. The regional location of the proposed Project is shown in Figure 1-Project Location Map. Figure 2A-Site Plan (North) and Figure 2B-Site Plan (South) show the location of the proposed Project in a regional context.

3.1.1 General Plan Designation and Zoning

The parcels adjacent to the west of Alameda Street in the area of the proposed Project are zoned M2 (Light Industrial) and designated for Light Manufacturing uses in the City of Los Angeles General Plan (General Plan). The parcels to the east of Alameda Street are zoned M3 (Heavy Industrial) and designated for General/Bulk Cargo (Non-Hazardous Industrial and Commercial) uses in the General Plan. The parcels at the northeast portion of the proposed Project beginning at East Anaheim Street are zoned M3 (Heavy Industrial) and designated for Heavy Manufacturing in the General Plan. The parcels at the southernmost portion of the proposed Project, south of East Harry Bridges Boulevard are also zoned M3 (Heavy Industrial) and designated for Heavy Manufacturing in the General Plan. Additionally, those southern parcels are located within the California Coastal Zone, in an area identified as a dual permit jurisdiction area.

3.2 Site Ownership

The entire proposed Project is located within the existing public ROWs. The proposed Project will not require the acquisition of privately owned land.

3.3 Observations of the Project

The proposed Project is an approximately 1.02-miles segment of Alameda Street with a variable 70- to 100-foot ROW and two lanes in each direction. A concrete-paved sidewalk is located along the southeastern side of Alameda Street. A railroad and vegetative buffer strip are located along the northwestern half of the Alameda

Street ROW, and the Port of Los Angeles Berth 200 Railyard is located adjacent to the southeast of the proposed Project. The vegetative buffer strip is a shared corridor for several petroleum and gas pipelines, which are discussed in Section 4.3.2. The railroad traverses across the Alameda Street ROW at the junction of Alameda Street and East Harry Bridges Boulevard. Alameda Street is asphalt- and concrete-paved. A crushed asphalt stockpile was observed along the northwestern side of Alameda Street, between East Harry Bridges Boulevard and George De La Torre Jr. Avenue. There are several existing utilities within the area of the proposed Project including the above-mentioned buried petroleum and gas pipelines, several stormwater inlets, and overhead powerlines with pole-mounted transformers throughout the Project limits.

During the site visit, no visual evidence of aboveground storage tanks (ASTs), underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable water or irrigation wells, dry wells, oil/gas wells, clarifiers, septic tanks, or leach fields was identified in area of the proposed Project. In addition, no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. The general layout of the proposed Project is illustrated in Figure 2A – Site Plan (North) and Figure 2B – Site Plan (South), and Representative Site Photographs are provided in Appendix A.

3.3.1 Surrounding Properties

The proposed Project is located in the community of Wilmington and the surrounding area is a developed urban setting surrounded by both light and heavy industrial uses. At this location, Alameda Street is utilized for local traffic as well as trips to and from the POLB and the POLA, which are approximately 4 miles and 4.5 miles away, respectively. Both ports are generally south of the proposed Project.

The northern portion of the proposed Project (north of East Anaheim Street) is bordered by Waterman Supply Company (910 Mahar Avenue), J&D Transportation Inc. (1331 East Anaheim Street), a truck trailer storage yard (no business name, 1331 East Anaheim Street), United Bottle Gas Inc. (830 North Alameda Street), a Chevron gasoline station (1417 East Anaheim Street), George's Auto Body Parts (1431 East Anaheim Street), Manny's Auto Care (1441 East Anaheim Street), and Angel's Clutch and Transmissions (1443 East Anaheim Street). The proposed Project is bordered to the southeast by International Longshore and Warehouse Union (ILWU) Local 13 Dispatch Hall (1500 East Anaheim Street) and Burlington Northern Santa Fe (BNSF)/POLA Berth 200 Railyard. The proposed Project is bordered to the south by VP Express Logistics (320 East Harry Bridges Boulevard). The proposed Project is bordered to the northwest by a vegetative buffer strip of land and then railroad tracks followed by (from south to north) St. Louis Bearing Co. (333 East Harry Bridges Boulevard), JD and LA Trucking, Inc. (222 Quay Avenue), 505 Logistics (505 East Harry Bridges Boulevard), Pacific Green Trucking (512 East C Street), Tony's Truck and Lube (626 East C Street), Noil USA, Inc. gasoline station (710 East D Street), Potential Industries Recycling Center (922 East E Street), Leoness Express (505 North Flint Avenue), San Pedro Transport (522 North Flint Avenue), Pacific Trans Express Corp (PTEC)/Raul Martinez Diesel Services, Inc. (612 and 616 North Flint Avenue), Parking Concepts Inc. (690 North Pioneer Avenue), Industrial Maintenance Company (1231 East G Street), and Machine Tools (1306 East Anaheim Street). The adjacent and surrounding areas are comprised of several businesses occupying multiple contiguous parcels of land (and unique addresses). Further detail on the additional addresses occupied by adjacent and surrounding properties is provided in Figures 2A and 2B.

Adjacent and surrounding uses of land included logistics, trucking, semi-truck repair, gasoline stations, recycling center, construction, cement manufacturing, auto body and paint, truck wash, automotive junkyard, and equipment supply companies. A summary of database listings for adjacent properties is provided in Section 6.3.2.

Several gasoline service stations were identified in the immediate vicinity (i.e., 500 feet) of the proposed Project, including Chevron at 1417 East Anaheim Street located adjacent to the northeast, Noil USA, Inc. at

710 East D Street located adjacent to the northwest, Speedy Fuel at 1222 East Anaheim Street located approximately 300 feet to the northwest, and Texaco at 1625 East Anaheim Street located approximately 500 feet to the east. Dominguez Channel is the nearest water body, located approximately 600 feet to the southeast of the proposed Project. AECOM did not identify any other sensitive receptors (i.e., day care centers, schools, hospitals, surface water bodies) in the vicinity of the proposed Project.

3.3.2 Petroleum Products and Hazardous Materials

No on-site use or storage of hazardous materials was observed within the proposed Project at the time of the site visit. Based on the current use of the proposed Project as existing ROWs, the current use or storage of large quantities of hazardous substances is not expected.

Several petroleum and gas pipeline markers were observed along the vegetative buffer strip from the junction of East Harry Bridges Boulevard and Alameda Street to the intersection of Alameda Street and East E Street, as well as along the sidewalk along the southeastern proposed Project boundary. Pipeline markers observed included Tesoro Logistics petroleum (vegetative buffer strip), Valero highly volatile liquid (vegetative buffer strip), a natural gas pipeline (vegetative buffer strip), and Chevron petroleum pipeline (southeastern proposed Project Boundary). Although releases from these pipelines were not identified in the environmental database search report (Section 6.3.1), the presence of these pipelines is considered to represent a REC to the proposed Project, as undocumented releases may have occurred which may have resulted in impacts to the subsurface. These pipelines are further discussed in Section 4.4.1.

Construction activities associated with the proposed Project would be temporary in nature and would involve the limited transport, storage, use, and disposal of hazardous materials. Such hazardous materials could include on-site fueling/servicing of construction equipment, and the transport of fuels, lubricating fluids, and solvents. The transport, use, and disposal of construction-related hazardous materials would occur in accordance with applicable federal, State, and local regulations governing such activities.

3.3.3 Hazardous Waste

No evidence of current or historical on-site hazardous waste disposal activities was observed within the proposed Project during the site visit. The environmental database report did not identify other active hazardous waste generators in connection with the proposed Project.

The proposed Project will include the modification of two traffic signals on Alameda Street at East Anaheim Street and at the ILWU Local 13 Dispatch Hall driveway entrance, which may generate universal waste. No indications of hazardous or universal waste handling areas were observed on the adjacent areas of the properties at these intersections.

3.3.4 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the development within the area of the proposed Project (pre-1979), the potential exists for PCBs to be present within the area of the proposed Project. Several pole-mounted transformers were observed within the proposed Project along Alameda Street, with additional pole-mounted transformers identified on adjacent properties. No additional hydraulic or electrical equipment (e.g., pad-mounted transformers, compactors, elevators, lifts) was observed within the proposed Project during the site visit. No staining was observed at the base of the poles containing the pole-mounted transformers.

3.3.5 Aboveground Storage Tanks

No evidence of ASTs was observed within the proposed Project during the site visit. In addition, no ASTs were listed in connection with the proposed Project in the site-specific environmental database report reviewed by AECOM.

3.3.6 Underground Storage Tanks

No evidence of USTs was observed within the proposed Project during the site visit. In addition, no active or inactive USTs were listed in connection with the proposed Project in the environmental database report.

3.3.7 Solid Waste

No evidence of current or historical on-site solid waste disposal activities was observed within the proposed Project during the site visit. Evidence of inappropriate disposal activities was identified during the site visit, including a large amount of litter and debris (e.g., paper, plastic, cardboard, Styrofoam, vagrant tarps, etc.) along Alameda Street. In addition, a tire pile was observed near the sidewalk along East E Street, to the northwest of Alameda Street. No chemicals, chemical containers, or significant staining were identified in these areas during the site visit, which are considered a de minimis condition.

3.3.8 Water

The area of the proposed Project receives its water supply from the City of Los Angeles Department of Water and Power (LADWP). The primary source of water for LADWP's water supply is a mixture of groundwater pumped from the local area, treated State Water Project water, and water that is imported by the City of Los Angeles. Two sets of Pacific Harbor Line fire sprinkler valves were observed along the southeastern side of Alameda Street, one located near the intersection of Alameda Street and George De La Torre Jr. Avenue, and one located near the intersection of Alameda Street and East E Street. No visual evidence of potable or irrigation water wells was identified in the area of the proposed Project at the time of the site visit. The vegetative buffer strip located along the northwestern half of the Alameda Street ROW is irrigated via a sprinkler system twice per week, as indicated by posted signage.

3.3.9 Wastewater

No wastewater discharges were identified to be associated with the proposed Project.

3.3.10 Stormwater

Stormwater in the area of the proposed Project flows to several stormwater inlets, including grated storm drains located along the northwestern side of Alameda Street and curbside catch basins located along the southeastern side of Alameda Street, which are connected to the municipal stormwater system. No staining or other concerns were observed in the vicinity of the stormwater inlets.

3.3.11 Heating and Cooling

LADWP and Southern California Gas Company supply electricity and natural gas service, respectively, to the area of the proposed Project. No heating or cooling units were identified to be associated with the proposed Project.

3.3.12 Non-Scope Considerations

3.3.12.1 Asbestos-Containing Materials

Asbestos-containing materials (ACMs) are materials that contain asbestos, a naturally-occurring fibrous mineral that was historically used in building materials for its thermal properties and tensile strength. When left intact and undisturbed, these materials do not pose a health risk to building occupants. There is, however, potential for exposure when ACMs become damaged to the extent that asbestos fibers become airborne and are inhaled. These airborne fibers are carcinogenic and can cause lung disease. The age of a building is directly related to its potential for containing elevated levels of ACMs, and asbestos was used routinely in many building materials until 1978. Buried utility lines within the Alameda Street ROW may contain ACMs associated with pipe insulation. Relocation of buried utility lines in the proposed Project ROW is not anticipated, but nonetheless, there is potential for ACMs to be disturbed. If ACMs are discovered during this work, they would be abated in compliance with all applicable local, state, and federal regulations.

3.3.12.2 Lead-Based Paint

Lead-based paint (LBP), which can result in lead poisoning when consumed or inhaled, was widely used in the past to coat and decorate buildings. Lead poisoning can cause anemia and damage to the brain and nervous system, particularly in children. Like ACMs, LBP generally does not pose a health risk to building occupants when left undisturbed; however, deterioration, damage, or disturbance could result in hazardous exposure. In 1978, the use of LBP was federally banned by the Consumer Product Safety Commission. Therefore, structures built before 1978 are likely to contain LBP, as well as those built shortly thereafter, as the phase-out of LBP was gradual. Suspect LBP associated with painted curbs, fire hydrants, and protective bollards were identified in the proposed Project. If LBP is discovered during construction, it would be handled and abated in compliance with all applicable local, state, and federal regulations.

3.3.12.3 Thermoplastic Paint

Thermoplastic paint and yellow painted traffic stripes and pavement markings typically contains lead chromate. Residue produced when yellow thermoplastic and yellow paint are removed may contain heavy metals in concentrations that exceed established thresholds and may produce toxic fumes when heated. The existing yellow thermoplastic paint and pavement marking originally used for traffic striping may contain lead along Alameda Street. These materials would be removed, handled, and disposed of in accordance with all applicable local, state, and federal regulations.

3.3.12.4 Treated Wood Waste

Treated wood waste (TWW) comes from old wood that has been treated with chemical preservatives such as arsenic, chromium, copper, creosote, and pentachlorophenol, which help protect the wood from insect attack and fungal decay while it's being used. These hazardous chemicals are known to be toxic or carcinogenic and can pose a risk to human health and the environment. Harmful exposure to these chemicals may result from touching, inhaling, or ingesting TWW particulate (e.g., sawdust and smoke). TWW within the proposed Project

could include wooden utility poles and old railroad ties. These materials would be removed, handled, and disposed of in accordance with all applicable local, state, and federal regulations.

3.3.12.5 Aerially Deposited Lead

The potential for surficial impacts from Aerially Deposited Lead (ADL) resulting from the historical use of leaded gasoline exists in the proposed Project. Lead was an additive used in gasoline until the mid-1980s and is commonly found in shallow soils adjacent to high-traffic volume roadways. If ADL is present, impacts are generally shallow in nature, and typically decrease with depth. Alameda Street in the proposed Project is paved; therefore, the likelihood of ADL penetrating paved surfaces in these areas is low and ADL (if present) was most likely blown or rinsed away by the elements. However, ADL from vehicular emissions may be present in the unpaved/landscaped areas along Alameda Street.

This page intentionally left blank.

4. Environmental Setting

4.1 Topography

Topographic coverage of the area of the proposed Project is provided by the United States Geological Survey (USGS) 7.5-minute topographic map of the Torrance and Long Beach, California quadrangles (2012). Based on review of the topographic maps and the Google Earth application, the elevation of the proposed Project ranges from approximately one foot above mean sea level in the southern portion to approximately eight feet above mean sea level in the northern portion of the proposed Project. The area of the proposed Project is generally flat with a local topographic generally to the southeast.

4.2 Surface Water and Floodplains

The proposed Project is located within the Dominquez Channel/Los Angeles Harbor Watershed. No natural surface water bodies were observed in the proposed Project. The closest natural surface water is the Dominguez Channel located approximately 600 feet to the southeast of the proposed Project. The proposed Project is located within a 500-year Federal Emergency Management Agency (FEMA) designated flood hazard area (EDR, 2022).

4.3 Soil/Geology

The proposed Project is located in the southern portion of the Los Angeles Coastal Plain (California Department of Water Resources [CDWR], 1961) of the Peninsular Ranges geomorphic province of California (Norris and Webb, 1990). The Los Angeles Coastal Plain is a structural through filled with unconsolidated Miocene through Recent age sediments or alluvium that are underlain by earlier Cenozoic bedrock. These unconsolidated sediments and alluvium have been transported from local mountains by the Los Angeles River and smaller drainages. The Los Angeles Coastal Plain is bounded on the north by the Santa Monica Mountains; on the northeast by the low-lying Elysian, Repetto, Merced, and Puente Hills; on the east and southeast by the Santa Ana Mountains and San Joaquin Hills; on the south by the Palos Verdes Hills and the Pacific Ocean; and on the west by the Pacific Ocean (CDWR, 1961).

According to geologic information provided in the environmental database report (Appendix E), the bedrock geology of the area of the proposed Project is of the Cenozoic Era, Quaternary System, Quaternary Series and consists of a stratified sequence. According to the environmental database report, the area of the proposed Project is underlain with Urban land, which has been modified such that the original soil types cannot be identified. These soils are described as variable soil textures and drainage classes.

The proposed Project is located in a seismically active area, as is most of southern California. The California Department of Conservation, California Geological Survey's Seismic Hazard Zonation Program Map indicates that the proposed Project is not within an Alquist-Priolo Earthquake Fault Zone. The nearest fault zone to the proposed Project is the Palos Verdes Fault, which is located approximately 1.6 miles to the west and no active faults are known to cross the Project. The proposed Project is located within a city-designated liquefaction zone (ZIMAS, 2022).

4.4 Naturally Occurring Asbestos

Asbestos is a naturally occurring fibrous mineral found in many parts of California. It is commonly found in ultramafic rocks such as serpentine, and near fault zones. Naturally occurring asbestos (NOA) can be released from ultramafic rock when crushed or due to weathering and erosion processes and may become airborne and stay in the air for long periods of time. Review of geologic conditions of the area of the proposed Project did not identify the potential presence of NOA.

4.4.1 Oil/Gas Fields and Pipelines

The State of California, Department of Conservation, Geologic Energy Management Division (CalGEM) Well Finder website was reviewed for information regarding oil/gas wells located in and near the proposed Project. According to Well Finder, the proposed Project traverses the Wilmington Oil Field. No active oil/gas wells were depicted within or adjacent to the proposed Project; however, numerous abandoned wells were identified as shown in Figure 3 – Oil/Gas Wells Map. The presence of these abandoned oil wells and the historical use of the area of the proposed Project for oil exploration and production activities is considered to represent a REC.

In addition, based on its location in an active oil field, the proposed Project is located within an area identified by the City of Los Angeles as a "Methane Zone", which is an area that has a risk of methane intrusion emanating from geologic formations (ZIMAS, 2022). These areas have developmental regulations that are required by the City of Los Angeles pertaining to ventilation and methane gas detection systems depending on designation category. The presence of the proposed Project in a designated Methane Zone is considered a REC.

The U.S. Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA), Pipeline Information Management Mapping Application (PIMMA) public map viewer was reviewed for information regarding hazardous liquid and/or gas transmission pipelines in the area of the proposed Project. According to the PIMMA public map viewer, (natural) gas transmission and hazardous liquid (petroleum) pipelines are located beneath the proposed Project, including but not limited to the following: an active (filled) natural gas transmission pipeline operated by Southern California Gas Company; a former non-highly volatile liquid (HVL) product operated by Ultramar-GATX (sold, pending new operator); an abandoned empty liquid pipeline (former operator not reported); an active (filled) hydrogen gas pipeline operated by Air Products & Chemicals Inc.; an active (filled) liquified petroleum gas (butane) operated by Ultramar; an active (unfilled) non-HVL product pipeline operated by Ultramar; an active (unfilled) non-HVL product (naphtha) pipeline operated by Ultramar; an active (filled) non-HVL product pipeline operated by Phillips 66 Pipeline LLC; an active (filled) fuel grade ethanol pipeline and non-HVL product (multiple products) operated by Shell Pipeline Co. LP; an active (unfilled) crude oil pipeline operated by Paramount Pipeline LLC; an abandoned (empty) liquid pipeline (former operator not reported); an active (filled) crude oil pipeline operated by Vopak Terminal Los Angeles Inc.; an abandoned (empty) liquid pipeline formerly operated EMOC Abandoned Systems; and an active (filled) fuel grade ethanol operated by Shell Pipeline Co. LP. During the site visit, several petroleum and gas pipeline markers were observed along the vegetative buffer strip from the junction of East Harry Bridges Boulevard and Alameda Street to the intersection of Alameda Street and East E Street, as well as along the sidewalk along the southeastern proposed Project boundary. Relocation of these pipelines is not anticipated as part of the proposed Project. The presence of these pipelines is considered to represent a REC to the proposed Project as undocumented releases may have occurred which may have resulted in impacts to the subsurface. The location of the pipelines is shown in Figure 4.

4.5 Groundwater/Hydrology

The proposed Project is located in the southern portion of the West Coast Basin. This sub-basin is bounded on the east by the Newport-Inglewood fault zone, on the north by the Ballona Escarpment, and on the south and west by the Pacific Ocean. The local hydrogeologic setting includes the Dominguez Gap Barrier Project (Barrier Project). The Barrier Project consists of a series of groundwater injection and monitoring wells that were installed and are maintained by the Los Angeles County Department of Public Works (LACDPW, formerly the Los Angeles County Flood Control District). The LACDPW began operating the Barrier Project in 1971 and the purpose of the wells is to control salt-water intrusion into the freshwater aquifers of the West Coast Basin through the Dominguez Gap. The injection wells significantly influence groundwater gradients in the area of the proposed Project.

Site-specific hydrologic information was not identified during the course of this assessment. Based on information obtained from the SWRCB's online GeoTracker database, groundwater was measured in May 2022 at a site located adjacent to the southeast of the northern portion of the proposed Project (ILWU Headquarters, 1500 East Anaheim Street) at depths of approximately 7.5 to 10 feet below ground surface (bgs) with a calculated flow direction to the southwest, and in March 2012 at a site located adjacent to the south of the southern portion of the proposed Project (CP Transfer Yard, Alameda Street) at a depths of approximately 3 to 8.5 feet bgs with a calculated flow direction to the southeast. Groundwater flow direction may tidally be influenced in the area of the proposed Project. Groundwater in the area of the proposed Project does not have beneficial use (RWQCB, 2014).

5. Project and Area History

Historical information for the proposed Project and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Topographic maps dated 1896, 1899, 1902, 1923, 1925, 1942, 1943, 1947/1948, 1949/1951, 1964, 1972, 1981, and 2012;
- Sanborn Fire Insurance Maps dated 1913, 1921, 1950, and 1969;
- City directories for the years 1920 to 2015 at approximate 5-year intervals;
- Aerial photographs dated 1923, 1928, 1947, 1952, 1963, 1970, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, and 2016; and
- Google Earth Images dated 2016 to 2022.

These historical sources were obtained from EDR. It should be noted that the historical city directory search obtained from EDR did not identify addresses along the east side of Alameda Street, which would be regarded as within the proposed Project. It should also be noted that only portions of the proposed Project are depicted on the available Sanborn maps, and therefore only those areas are discussed. Copies of the historical aerial photographs and topographic maps are included in Appendix B, Sanborn Maps in Appendix C, and historical city directories in Appendix D.

5.1 Historical Summary of the Area of the Proposed Project

The 1896 topographic maps depict the proposed Project as developed with portions of a road in the northern portion. Southern Pacific Railroad tracks are depicted crossing the southern portion of the proposed Project and running adjacent to the northwest side of the proposed Project.

By 1913, East Anaheim Street is depicted, but is named 7th Street and Alameda is not in place, although the rail line is still present to the west and rail spurs cross the proposed Project connecting to properties to the east. By this time, two lumber companies occupied the majority of the area east of the rail lines (Consolidated Lumber Company in the north and Pacific Lumber Company in the south), including the proposed Project. Lumber sheds and other structures associated with these operations appear to extend onto the proposed Project. The proposed Project also includes a portion of the smaller complex of buildings, that according to the previous Phase I ESAs (refer to Section 5.2) was used to burn wood shavings and refuse to generate power. The power was used to operate a monorail system for moving lumber to and from the wood stacks. A garage for monorail repairs and a 66,000-gallon cistern for storing water for emergency firefighting and making steam was depicted at this location. To the west of the rail line was primarily residential development.

By 1921, Alameda Street was still not in place and 7th Street had been renamed to East Anaheim Street. The Pacific Lumber Company, power station, monorail repair shed, and water cistern are not depicted on the 1921 Sanborn maps. The west side of the rail line remained in residential use, with the exception of a City of Los Angeles asphalt storage area at the northeast corner of East F Street and Flint Avenue, approximately 350 feet from the rail line.

By 1923, the aerial photograph depicts the proposed Project as primarily vacant land with the rail lines running adjacent to the west. A large building is depicted extending onto the northern portion of the proposed Project, which was associated with the lumber operation to the east. By 1928, an additional smaller complex of buildings extended onto the central portion of the proposed Project, also associated with the lumber operations to the east. Stacks of lumber can also be seen to the east, extending into the area of the proposed Project.

By 1947, Alameda Street appears in place and paved in the northern portion of the proposed Project (to East E Street). The large warehouse remained in the northern portion of the proposed Project as well as the smaller complex of buildings in the central portion of the proposed Project. What appear to be 14 ASTs in three locations (northern and two central areas) are visible. Equipment and materials are depicted throughout the proposed Project. Additional ASTs area depicted in the vicinity of the proposed Project by this time.

By 1950, Alameda Street is depicted in the northern portion of the proposed Project and in this area to the west of East Anaheim Street was an open yard labeled with “oil and gas” as wells as oil tanks and an oil well and derrick. A building labeled “auto” was depicted near the intersection of Anaheim and Alameda Streets and it is unclear whether this was a parking garage or used for auto repairs. Two oil derricks were depicted located in the proposed Project, approximately 200 and 860 feet from the southeast corner or Anaheim and Alameda Streets. Three tanks were depicted east of the northern well and nine oil tanks are located near the southern oil derrick (appear to be just off-Project). These wells and tanks correspond to the locations of the ASTs note in the 1947 aerial photograph. There are also a significant number of wells and related sets of tanks located west of the rail line, two of which (and nine related tanks) appear to be within approximately 300 feet of the proposed Project.

By 1952, Alameda Street appears fully in place. What appear to be seven additional tanks in three locations have also been added to the proposed Project by this time. The remainder of the proposed Project appears generally as it did at the time of the 1950 aerial photograph.

By 1969, the Pacific Lumber Company is no longer depicted and the Consolidated Lumber Company had changed its name to the Consolidated Dock and Storage Company. In addition, the earlier labeled “auto” building had been removed. The oil and gas yard to the west of the northern portion of the proposed Project had been redeveloped with a commercial building.

By 1970, the majority of the tanks are still depicted and the large warehouse is still in place, as is the small complex of buildings in the central portion of the proposed Project and two additional buildings in the northern-central portion of the proposed Project. By 1977, the tanks all appear to have been removed and one of the central-northern buildings is no longer depicted. By 1983, only one building remains in the northern-central portion of the proposed Project and all other buildings have been removed. By 1983, the remaining building had been removed and the proposed Project appears to consist of Alameda Street, railroad spurs crossing to the east, and equipment and material storage to the east of Alameda Street. Equipment and material storage decreased through the 2000s and by 2009, the area of the proposed Project appeared generally in the current configuration.

The historical use of the proposed Project and surrounding area for oil exploration, production, and storage are considered a REC, in AECOM’s opinion.

5.2 Previously Prepared Environmental Reports

***Phase I Environmental Site Assessment, Alameda Street Widening Project, [East] Anaheim Street to [East] Harry Bridges Boulevard, Wilmington, California*, prepared by Pinnacle Environmental Technologies (Pinnacle) for the City of Los Angeles Bureau of Engineering, Geotechnical Engineering Group, dated April 2, 2014.**

The 2014 assessment was performed in general accordance with ASTM Standard E1527-05. The area assessed by Pinnacle included a strip of property that is 17 feet wide and approximately 1,500 feet long, which was reportedly intended to be used to widen Alameda Street. For purposes of the assessment, the property was divided into two sections: a northern section and a southern section. The northern section was approximately 30 feet wide on the west side of Alameda Street and extended south from at point located 300 feet south of PCH to East Anaheim Street. The southern section is approximately 17 feet wide on the east side of Alameda Street and extended from East Anaheim Street to East Harry Bridges Boulevard. The 2014 Phase I ESA Report presented results for the southern section of the alignment.

Pinnacle's review of historical documentation indicated that a rail line was present by 1913, accompanied near East Anaheim Street by a parallel main rail line to the east, and several rail spurs to two lumber companies occupying the majority of the property to the east of the rail lines. The alignment passed through the west margin of these lumber companies. The portion of the alignment north of East E Street was developed prior to 1947 into its current configuration as a paved four-lane highway, paralleling a single rail line to the west. Alameda Street was a dirt road south of East E Street until approximately 1950.

At the time of Pinnacle's site visit, the alignment was described as located in an industrial area, immediately north of the POLA. The first four to ten feet of property east of the curb line was a sidewalk that extended most of the alignment. It was described as concrete and asphalt paved. The alignment incorporated and was bounded to the east by an expanded Pacific Harbor Lines rail yard that extended from the southernmost point of the alignment to a point approximately 700 feet south from East Anaheim Street. The expanded rail yard was under construction. The northernmost 700 feet of the alignment was within and bounded by the construction zone for a new ILWU Dispatch Hall and a related parking area.

Alameda Street was located immediately west of the alignment. It had two asphalt-paved lanes in both north and south directions, separated by a single auxiliary lane. A concrete area near the southern end of the alignment, on the west side of Alameda Street, was used as a truck check area. There was no sidewalk on the east side of Alameda Street in the area of the alignment. Instead, there was a berm that was approximately 15 to 40 feet wide. It was covered with cut grass, low foliage and mature palm trees. A Union Pacific rail line was located west of the berm. It separated the berm from industrial properties farther to the west. The berm and rail line paralleled Alameda Street the length of the alignment. The rail line crossed Alameda Street at the southern end of the alignment.

According to Pinnacle, offsite pipelines carrying hazardous substances were sufficiently close to the alignment that they may have contributed to impacts to soil and groundwater. There was a larger concentration of these pipelines to the west of the southern portion of the alignment, south of McFarland Avenue. No current or historical USTs were identified within the boundaries of the alignment. According to Pinnacle, no known releases from offsite USTs containing hazardous substances have resulted in environmental impairments to the alignment or to groundwater below.

Pinnacle's assessment identified 13 historical oil wells that had been advanced within or immediately east of the alignment. At least five sets of oil collection tanks associated with the historical wells were located on or near the alignment.

Based on this information, Pinnacle identified the following RECs:

- The alignment was located in a Methane Buffer Zone as defined by City of Los Angeles Department of Building and Safety (LADBS), indicating it is within an area where methane is likely to be present at depth.
- Thirteen oil wells were drilled and abandoned within or immediately adjacent to the alignment. Pinnacle concluded that emissions and seeps from these oil wells may accompany impacted soils and groundwater produced from their earlier operation.
- Five sets of oil collection tanks were operated along the alignment. Pinnacle concluded that releases from the tanks, and pipelines from the tanks, may have produced surface impacts to soil.
- Buried petroleum transmission pipelines crossing and in the vicinity of the alignment may have contributed to known and unknown groundwater impacts near Alameda Street.
- Wood stacked along the alignment may have been treated at the lumber facilities located immediately east of the northern portion of the alignment. According to Pinnacle, soils impacted by arsenic, creosote and other polycyclic aromatic hydrocarbons (PAHs) may have resulted.

Based on the results of this Phase I ESA, Pinnacle recommended additional soil, soil vapor, and groundwater sampling along the alignment to verify the extent of known impacts. Pinnacle recommended that the assessment should evaluate: (1) the volumes and contaminant characteristics of impacted soil to be generated during street widening, (2) the presence and concentrations of subsurface gases that may be released during construction activities, (3) groundwater levels and impacted groundwater in the southern portion of the alignment to verify that they would not interfere with construction activities, and (4) the presence and characteristics of impacted groundwater along the alignment.

***Phase II Site Assessment, Alameda Street Widening Project, [East] Anaheim Street to [East] Harry Bridges Boulevard, South Segment, Wilmington, California*, prepared by Pinnacle Environmental Technologies for the City of Los Angeles Bureau of Engineering, Geotechnical Engineering Group, dated October 24, 2014.**

Pinnacle conducted this Phase II investigation to assess potential impacts to soil and groundwater (if encountered) along the alignment, as identified by the previously discussed Phase I ESA Report prepared by Pinnacle, dated April 2, 2014. The information produced by this investigation was intended to allow Geotechnical Engineering Group, Bureau of Engineering, Department of Public Works of the City of Los Angeles (GEO) to anticipate the presence of impacted soil along the alignment, for construction planning and budgetary purposes.

Based on the findings of the Phase I ESA, Pinnacle identified historical land uses of concern on or near the alignment, including:

- The widespread use of the alignment and adjacent property for past oil production indicated possible excavation of various pits for local containment and/or disposal of brines, cuttings, drilling mud and other wastes, as well as the potential release of crude oil during drilling, transport and storage. Aerial photographs reviewed by Pinnacle showed chaotic surfaces along the alignment and to the east, which suggested random dumping and piling of wastes.
- The clusters of tanks observed in the area of the historical wells were likely used for storage of produced oil. Brines produced during oil well pumping were typically not stored for removal. Instead, they were used to produce steam for injection, and for use in boilers to produce energy to power

equipment. Pinnacle reported that most of the brine pumped after the 1930s was injected into the subsurface, usually in a manner to control or enhance flow of oil, and releases of brine would not be unusual, especially prior to the time when environmental regulations became common. Furthermore, in addition to being high in salts, oil field brines are typically high in a variety of metals, such as barium, cadmium, chromium, lead, selenium, silver, and zinc. Releases of these brines into unlined pits or onto open ground may have resulted in elevated concentrations of metals in soils.

- The property east of the northern portion of the alignment was used to warehouse and ship lumber. It was not known if this lumber was also treated on the property prior to storage. None of the descriptions of structures on available Sanborn maps reviewed by Pinnacle indicated this type of purpose. However, Pinnacle concluded it was reasonable that creosote-preserved wood would have had a common local use as railroad ties and marine and foundation piling, and that it was preserved and warehoused at this location.

Pinnacle also noted that a previous investigation conducted along Alameda Street by the City of Los Angeles – Standards Division (no date or other reference information provided) included the advancement of nine geotechnical borings using a Geoprobe drill rig. They were located along the length of the alignment. Each boring was reportedly sampled continuously to a depth of 10 feet bgs. Groundwater was encountered at the five southernmost boreholes. One boring in the northern portion of the alignment encountered petroleum hydrocarbon-impacted soil that was confirmed by laboratory analysis. A second boring in the southern portion of the alignment had slight organic odors. No additional information regarding this previous investigation was provided and a copy of this report was not included as an attachment.

Pinnacle's 2014 Phase II ESA included the following activities:

- Advancement of 21 soil borings by hand auger to depths of 5 feet bgs. An additional boring encountered refusal after collecting a sample at 0.5-feet bgs, and one pit was advanced to a depth of three feet.

- Sixty-four soil samples were collected from the soil borings at depths of 0.5, 2.5 and 5.0 feet bgs. The samples at 2.5 feet were prepared for VOC analysis in accordance with U.S. Environmental Protection Agency (EPA) Method 5035. Two soil samples were collected from the pit.

- Selected samples were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) using EPA Method 418.1, Total Petroleum Hydrocarbons with carbon chain breakdown (TPH) using EPA Method 8105M, volatile organic compounds (VOCs) using EPA Method 8260B, semi-volatile organic compounds (SVOCs) using EPA Method 8270C, PCBs using EPA Method 8082, organochlorine pesticides (OCPs) using EPA Method 8081, herbicides using EPA Method 8158A, and California Assessment Metals (CAM Metals). The single sample with detectable volatile hydrocarbon vapors in a field screening sample was analyzed for VOCs and fuel oxygenates using EPA Method 8260B.

- Saturated conditions were not encountered in any of the boreholes, so no groundwater samples were able to be collected for analysis.

Pinnacle concluded that the soil sampling results indicated the following:

- VOCs, PCBs, OCPs, and herbicides were not detected in the analyzed soil samples. One sample contained two SVOCs analytes; fluoranthene at 13,154 micrograms per kilogram (µg/kg) and pyrene at 15,632 µg/kg were detected in one soil sample. This sample also had the fourth highest TRPH result, and a detectable concentration of TPH-oil. Pinnacle stated that the two SVOCs detected are typically associated with incomplete combustion of petroleum at low temperatures and their unique presence at this location indicated that there was some type of combustion occurring at this location

along the alignment, likely related to the nearby operation of an oil well and group of oil tanks paralleling Alameda Street.

- Petroleum hydrocarbons, as defined by EPA Method 418.1 analyses, were detected in soil samples collected from all 22 borings. These hydrocarbons were typically heavy-end hydrocarbons with no detectable SVOCs or VOCs. A total of 44 of the 64 soil boring samples had detectable concentrations of TRPH. The results ranged from 18 to 13,574 milligrams per kilograms (mg/kg). The shallowest samples had the highest frequency of detectable TRPH and the highest average TRPH.
- Petroleum hydrocarbon concentrations exceeded a typical action level of 1,000 mg/kg in soil samples collected from 13 of the 22 borings. The highest petroleum hydrocarbon concentrations and the highest frequency of petroleum hydrocarbon-impacted soil were at the 0.5-foot interval. Based on these results and at this action level, soils along approximately 60 percent of the alignment (4,100 cubic yards) exceed the action level and should be removed from the alignment during road construction.
- Soluble lead concentrations exceeding the State regulatory limit were identified at four non-contiguous locations. The lateral extent of these soils along the alignment, which were regarded as California hazardous waste based on these results, was not known. However, Pinnacle estimated that if a lateral distance on the alignment of 20 feet from each location was anticipated and an average depth of 2.5 feet was given, approximately 250 cubic yards of lead-impacted soil was present.

Based on the above-described findings, Pinnacle concluded the following:

- Groundwater was not encountered in the borings and was not expected to be reached during construction at depths of up to 5 feet bgs.
- Material to be uncovered at four non-continuous locations along the alignment contained a sufficient concentration of soluble lead to be regarded as hazardous. The volume of this material could not be determined since its lateral extent from the four locations was unknown.
- While petroleum hydrocarbons were detected in soil samples from each boring, Pinnacle concluded that not all of the hydrocarbons were above typical action levels requiring transport and disposal. Most of the hydrocarbons above action levels were confined to the upper 2.5 feet of material. The hydrocarbons were typically heavy-end, and did not contain VOCs or SVOCs. Due to the shallow location of these impacted soils, Pinnacle concluded they were likely the result of the release of crude oil or other oils used during the historical oil field operations and estimated 60 percent of the material to 2.5 feet would require transport and disposal due to petroleum hydrocarbons at an action level of 1,000 mg/kg.

***Initial Study/Mitigation Negative Declaration for Alameda Street Widening Project between [East] Harry Bridges Boulevard and [East] Anaheim Street,* prepared by City of Los Angeles Bureau of Engineering, Environmental Management Group, dated July 2, 2015.**

This report was prepared to determine whether there was substantial evidence that the Alameda Street widening from East Anaheim Street to East Harry Bridges Boulevard may have a significant effect on the environment. The report details the description of the proposed project, existing environmental conditions, potential environmental effects, mitigation measures, and provides a suggested determination based on this information. The project location was described as located on Alameda Street, between East Harry Bridges Boulevard and East Anaheim Street (at a point 165 feet southwest of the extension of Lecouveur Street) and on East Anaheim Street, to a point 500 feet east of its intersection with Alameda Street, in the Wilmington Community of Los Angeles. To the south and east of Alameda Street was the POLA. A majority of this area was

being developed as a rail yard and a new dispatch hall for the ILWU Local 13 Dispatch Hall was being constructed at the southeast corner of Alameda Street and East Anaheim Street. To the north and west of Alameda Street were the Pacific Harbor Rail Line and the industrialized area within the Community of Wilmington. The planned project consisted of the widening of Alameda Street from East Anaheim Street to 300 feet south of PCH adjacent to the Pacific Harbor Rail Line, in order to aid in goods movement from, to, and through the POLA and POLB.

The report identified environmental factors which may be impacted by the project including biological resources, greenhouse gas emissions, transportation/traffic, cultural resources, hazardous materials, utilities/service systems, air quality, geology/soils, hydrology/water quality, and noise. The study determined that the project would have less-than-significant impact in each of these areas, with mitigation measures in place.

The hazardous materials assessment included a summary of the Pinnacle Phase I and II reports discussed above as well as a review of the online EnviroStor and GeoTracker databases, oil field and oil well hazards, methane zones, and underground gas and petroleum lines. Based on this assessment, the following mitigation measures were identified:

- Recommendations based on the results of the Phase I and II Site Assessments should be included in the project's Construction Specifications.
- If an unmapped abandoned well was found or a mapped well was damaged during construction, both the City of Los Angeles Fire Department and District of the Division of Oil, Gas & Geothermal Resources of the California Department of Conservation (currently known as CalGEM) should be contacted.
- If any structure was to be located over or in the proximity of a previously plugged and abandoned well, the well may need to be to current Division specifications.
- If any plugged and abandoned or unrecorded wells were damaged or uncovered during excavation or grading, remedial plugging operations may be required.

During subsurface excavation activities, including borings, trenching, and grading, California Division of Occupational Safety and Health worker safety measures would be implemented as required to preclude any exposure to unsafe levels or soil gases, including but not limited to methane.

6. Database and Records Review

6.1 User Provided Information

Section 6 of ASTM E1527-13 states that certain tasks, which will help to determine the possibility of RECs associated with the Project, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the Project, or significant reduction in the purchase price of the Project. Per the agreed scope of work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-13; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

6.2 Title Records/Environmental Liens

Per the agreed upon scope of work, chain-of-title and environmental lien searches were not performed as part of this assessment.

6.3 Database Information

In accordance with the scope of work and ASTM E1527-13, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the proposed Project. The database abbreviations are provided in the site-specific environmental database report.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Additional sites were identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be any additional significant concerns associated with the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix E.

Based on AECOM's research, the proposed Project is not located on or within a one-mile radius of tribal lands.

6.3.1 Summary of EDR Listings for the Project

No database listings were identified associated with the proposed Project in the site-specific environmental database report.

6.3.2 Summary of EDR Listings for Adjacent Properties

According to the environmental database report, numerous database listings (over 560) were identified within their respective ASTM and/or EDR search distances from the proposed Project. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the proposed Project based on their distance from the proposed Project (i.e., greater than 500 feet), regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only), and/or topographical position from the proposed Project (i.e., down-gradient or cross-gradient), except as associated with historical oil and gas production in the surrounding area. Due to their proximity to the proposed Project, the following sites are discussed in detail.

- Wilmington Industrial Park (EDR map ID A1) at Alameda Street and East Anaheim Street is located adjacent to the northern portion of the proposed Project and is listed in the United States (US) Brownfields and Facility Index System/Facility Registry System (FINDS) databases. These databases indicate that this site was formerly used for industrial purposes. No additional information is reported. Based on the lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion
- Wilmington Town Lot #369, 371, 372 (EDR map ID A2) at East Anaheim Street is located adjacent to the northern portion of the proposed Project and is listed in the Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) and Waste Management Unit Database System/Solid Waste Assessment Test (WMDUS/SWAT) databases. The CPS-SLIC database lists the facility status as completed-case closed as of 1999. No additional information was available in the EDR database report or the online GeoTracker database. Based on the regulatory status (i.e., case closure), this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- United Bottle Gas Service (EDR map ID A3) at 830 East Anaheim Street is located adjacent to the east of the northern portion of the proposed Project and is listed in the City of Los Angeles Fire Department Active & Inactive Hazardous Materials Inventory (HAZMAT) database. The facility status is reported as active. This site appears to be occupied by a propane supplier. Based on the nature of the listing (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- 1401 East Anaheim Street (EDR map ID A4) is located adjacent to the northwest of the northern portion of the proposed Project and is listed in the UST database with a historical status. Based on the nature of the listing (i.e., compliance-related, historical) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- 1400 East Anaheim Street (EDR map ID A5) is located adjacent to the west of the northern portion of the proposed Project and is listed in the UST database with a historical status. This address was also identified as BFI Chem Serv Inc. (EDR map ID A7) in the Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG), FINDS, and Enforcement and Compliance History Online (ECHO) databases. No violations were reported. Based on the nature of the listings (i.e., compliance-related, historical) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Action Truck Electric (EDR map ID B6) at 1447 East Anaheim Street is located adjacent to the northeast of the northern portion of the proposed Project and is listed in the Facility and Manifest Data (HAZNET), HAZMAT, and Hazardous Waste Tracking System (HWTS) databases. The facility status is reported as inactive. Based on the nature of the listings (i.e., compliance-related) and lack

of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

- LA Harbor Berth 200 Railyard (EDR map ID C8) at 600 Alameda Street is located adjacent to the southeast of the proposed Project and is listed in the Leaking UST (LUST), Hazardous Waste & Substance Site List (Cortese), and California Environmental Reporting System (CERS) databases. This address was also identified as City of LA – Harbor Department (EDR map IDs C9 and C10) in the HAZMAT and UST databases with an inactive status. The LUST database indicates that a release of gasoline to groundwater was reported in 2014. Soil remedial excavation was conducted in 2013 and groundwater monitoring was conducted through 2017. The LUST cleanup status is reported as "Completed-Case Closed" as of 2017. According to closure documentation reviewed on the online GeoTracker database, during redevelopment in 2013 two USTs and impacted soils were removed. In 2016, low concentrations of TPH as diesel were detected in soil and groundwater below regulatory action levels; no other contaminants of concern were detected. The site was issued closure under the Low Threat UST Closure Policy in 2017 as the USTs had been removed and residual concentrations were not considered a threat to human health and the environment. In addition, the residual concentrations were expected to naturally attenuate. Based on the regulatory status (i.e., case closure), this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Exxon Co USA (EDR map ID D11) at 500 East Harry Bridges Boulevard is located adjacent to the south of the southern portion of the proposed Project and is listed in the HAZMAT database with an inactive status. Based on the nature of the listing (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Angel's Clutch & Transmission (EDR map ID B12) at 1443 East Anaheim is located adjacent to the northeast of the northern portion of the proposed Project and is listed in the RCRA Non-Generator / No Longer Regulated (NonGen / NLR) database with no violations reported. Based on the nature of the listing (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Peacock Boat Co., Inc. (EDR map ID E13) at 522 North Flint Avenue is located adjacent to the northwest of the proposed Project, across the railroad tracks, between East E Street and East F Street and is listed in the HAZMAT database with an inactive status. Based on the nature of the listing (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- J. Deluca Fish Company (EDR map ID D14) at 505 East Henry Bridges Street is located adjacent to the north of the southern portion of the proposed Project and is listed in the HAZMAT database with an active status. This address was also identified as Marina Mammal Control (EDR map ID D15) in the HAZMAT and CERS databases with an active status as a chemical storage facility. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- LA Port of Embarkment Women's Army Corps Housing (EMB WAC HSG) (EDR map IDs F16 and F28) is listed in the EnviroStor and Formerly Used Defense Sites (FUDS) databases. The EnviroStor database identifies the site type as "Military Evaluation" and status is reported as "Inactive-Needs Evaluation" as of 2005. The FUDS database indicates that this site was used as military housing during World War II. Based on the former use for housing only and lack of listing on contamination-

related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

- ILWU Local 13 Dispatch Hall (EDR map ID B17) at 1500 East Anaheim Street is located adjacent to the southeast of the proposed Project on the southeast corner of the intersection of East Anaheim Street and Alameda Street and is listed in the CPS-SLIC, California Integrated Water Quality System (CIWQS), and FINDS databases. The CPS-SLIC database lists the cleanup status as open with verification monitoring. Based on information reviewed on the online GeoTracker database, this site was historically used for crude oil exploration and production which resulted in petroleum hydrocarbon impacts to soil and groundwater. Impacted soils were excavated for redevelopment in 2012 to 2014 and in 2017 the Regional Water Quality Control Board (RWQCB) issued a no further action determination for site soils. The POLA is reportedly responsible for groundwater closure and monitoring groundwater quality to evaluate the effects of soil remediation. Groundwater monitoring has been ongoing since 2014. The most recent groundwater monitoring event was conducted in May 2022 and at that time VOCs and TPH were not detected above risk-based cleanup goals. Based on the regulatory status (i.e., closure for site soils), groundwater analytical results, and hydrological location relative to the proposed Project (cross-gradient), this site is not considered to represent a REC to the proposed Project, in AECOM's opinion. However, it should be noted sampling and testing or remedial activities within the proposed Project ROW was not identified. Historical oil exploration and production in the surrounding area is considered to be a REC to the proposed Project.
- Excel Trucking Storage Yard (EDR map IDs E18 and E19) at 505 North Flint Street is located adjacent to the northwest of the proposed Project, across the railroad tracks, and is listed in the AST and HAZMAT databases. The facility status is reported as active in the AST database and as inactive in the HAZMAT database. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- St. Louis Bearing Co. Inc. (EDR map ID G20) at 333 East Harry Bridges Boulevard is located adjacent to north of the southern portion of the proposed Project and is listed in the HAZMAT database with an inactive status. This address is also listed as Vacant Commercial Building (Former Machine Shop) (EDR map ID G21) in the RCRA-SQG database with no violations reported. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Buford T. Smith Family (EDR map ID A22) at 1417 East Anaheim Street is located adjacent to the northeast of the northern portion of the proposed Project on the northeast corner of East Anaheim Street and Alameda Street and is listed in the CERS HAZ WASTE, Statewide Environmental Evaluation and Planning System (SWEEPS) UST, CERS TANKS, State Facility Inventory Database (CA FID UST), HAZMAT, and CERS databases as a hazardous waste generator and chemical storage facility with active USTs. This address was also identified as United Bottle Gas & Service (EDR map ID A23) in the EDR Exclusive Historical Auto Stations (EDR Hist Auto) database as a gasoline service station since 1969; as Rocket Oil Chevron #2 (EDR map IDs A24 and A25) in the UST database with an active status; and as Garin Oil Company 8 (EDR map ID A26) in the HIST UST database with four former USTs. This site is an active gasoline fueling station. Violations are reported in the CERS database, which were reported to have returned to compliance in the year of issuance. No violations were reported at the time of the most recent inspection in 2022. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related

database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

- Manny's Auto Repair (EDR map IDs B27, B29, and B30) at 1441 East Anaheim Street is located adjacent to the northeast of the northern portion of the proposed Project and is listed in the CERS HAZ WASTE, CERS, EDR Hist Auto, and HAZMAT databases. The CERS database identifies this site as a hazardous waste generator and chemical storage facility. Violations were noted at the time of an inspection in 2021; several of which have not been returned to compliance. The EDR Hist Auto database identifies this site as an automotive repair shop since 1987. The HAZMAT database lists the facility status as active. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Sesco Cement (EDR map ID D31) at 320 East Harry Bridges Boulevard is located adjacent to the southern portion of the proposed Project and is listed in the RCRA NonGen / NLR database with no violations reported. Based on the nature of the listing (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Alina Slamar Property (EDR map ID H33) at 618 East C Street is located adjacent to the northwest of the proposed Project and is listed in the Superfund Enterprise Management System Archive (SEMS-ARCHIVE) and Listing of Former Lead Smelter Site Locations (LEAD SMELTERS) database. The SEMS-ARCHIVE indicates that no further remedial action was planned, and the site did not qualify for the National Priorities List (NPL; aka Superfund) based on existing information. The file for the site was archived by the EPA in 2003. The LEAD SMELTERS database indicates that this site was used for batteries/scrap metals/secondary smelting/precious metal recovery (recycling); waste/used oil (recycling) and had illegal disposal/open dump (waste management). No additional information was reported. Based on the lack of listing in a contamination-related database and/or a database requiring further regulatory action, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Moine & Ortega Trust Properties (EDR map ID H34) at 616 East C Street is located adjacent to the northwest of the proposed Project and is listed in the EnviroStor database with an "Evaluation" status. The potential contaminant of concern is listed as used oil and ethylene glycol. A site screening was completed in 2001 by the DTSC and the site was referred to the US EPA. Based on information reviewed on the online EnviroStor database, this site was determined "not appropriate for removal action" and the site was assigned a low priority. Based on the lack of listing in a contamination-related database and/or a database requiring further regulatory action, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Robert D. Whittington Inc. DBA Industrial Maint. Co. (EDR map IDs I35 and I36) at 1231 East G Street is located adjacent to the northwest of the proposed Project and is listed in the CERS HAZ WASTE, CERS, RCRA NonGen / NLR, FINDS, ECHO, HAZNET, and HWTS databases. These databases identify this facility as a hazardous waste generator and a chemical storage facility. Violations were noted in 2020 and were returned to compliance in the year of issuance. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Accu Chem Conversion, Inc. (EDR map ID I37) at 1220 East G Street is located adjacent to the northwest of the proposed Project and is listed in the HAZMAT database with an inactive status. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-

related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

- Port Lube Center LLC (EDR map ID B38) at 1501 East Anaheim Street is located adjacent to the northeast of the northern portion of the proposed Project and is listed in the HAZNET, HAZMAT, and HWTS databases. The facility status is listed as inactive. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- South Bay Heating and Air (EDR map ID J39) at 506 North Sanford Avenue is located adjacent to the northwest of the proposed Project and is listed in the HAZMAT and CERS databases with an active status as a chemical storage facility. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- City of LA – PW – East Wilmington Plant (EDR map ID K40) at 301 North MacFarland Avenue is located adjacent to the northwest of the proposed Project and is listed in the HAZMAT and CERS databases with an active status as a chemical storage facility. Violations were noted in 2016 which were returned to compliance the year of issuance. This address was also identified as LA Pumping Plant #76 (EDR map ID K41) in the RCRA-SQG, FINDS, and ECHO databases with no violations identified. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Potential Industries (EDR map ID L42) is identified adjacent to the northwest of the proposed Project and is listed in the Los Angeles County Methane Producing Landfills (Los Angeles Co. LF Methane) database. A google search of this business identified the facility at 922 East E Street (see Figure 2B) and appears to occupy several parcels. Potential Industries (EDR map IDs L64 to L70) is also listed in the Certified Processors Database (PROC), RCRA NonGen / NLR, CERS TANKS, HAZMAT, CERS, UST, Solid Waste Facilities/Landfills (SWF/LF), and AST databases. The address 815 East D Street (EDR map ID K60) also appears to be associated with this site, which was identified in the UST database. The PROC database indicates that operations began in 1990. The SWF/LF database reports that this site is an active large volume processing/transfer facility for household type wastes. The site is routinely inspected by the City of Los Angeles and no violations were noted at the time of the most recent inspection in 2022 related to facility USTs and ASTs or the large volume processing/transfer facility operations. The RCRA database indicates that the facility is a non-generator of hazardous wastes, and no violations are reported. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- FX Express Inc. (EDR map ID E43) at 531 Flint Avenue is located adjacent to the northwest of the proposed Project, across the railroad tracks, and is listed in the AST, HAZNET, HAZMAT, and HWTS databases with an inactive status. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Oryx Energy Company (EDR map ID M47) at 823 Mahar Avenue is located adjacent to the northwest of the northern portion of the proposed Project and is listed in the HAZMAT database with an inactive status. The address 825 Mahar Avenue also appears to be associated with this site, which was identified as Warren E & P Incorporated (EDR map ID M52) in the CPS-SLIC and CERS databases, and the address 1331 East Anaheim Street, which was identified as J&D Transportation (EDR map ID M62) in the HAZMAT database with an active status. The CPS-SLIC database lists

the facility status as “Completed-Case Closed” as of 2016 and indicates that this site was a former crude oil production location with six former wells, which had been abandoned in accordance with applicable regulations. According to information reviewed on the online GeoTracker database, elevated concentrations of TPH, benzene, and methyl tert-butyl ether (MTBE) were detected in an initial site investigation in 2015. Soil and groundwater remediation (soil excavation, groundwater bailing, and confirmation sampling) was completed to clean-up goal levels for the site. During soil excavation activities, groundwater was encountered at approximately 7.5 feet bgs. A No Further Action (NFA) determination was issued by the RWQCB in 2016. Based on the regulatory status (i.e., case closed, NFA determination) and remedial action completed, this site is not considered to represent a REC to the proposed Project, in AECOM’s opinion. As previously discussed, historical oil production in the area of the proposed Project is considered to be a REC.

- Quality Refrigeration (EDR map IDs G48 and G49) at 310 East Harry Bridges Boulevard is located adjacent to the west of the southern portion of the proposed Project and is listed in the RCRA NonGen / NLR, CERS HAZ WASTE, HAZNET, HAZMAT, CERS, and HWTS databases. No violations are reported. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM’s opinion.
- Waterman Supply Co. (EDR map IDs N53 to N56, and N58) at 910 Mahar Avenue is located adjacent to the west of the northern portion of the proposed Project and is listed in the LUST, Registered Waste Tire Haulers Listing (HAULERS), CERS HAZ WASTE, SWEEPS UST, HIST UST, Cortese, CERS, HAZMAT, UST, and RCRA NonGen / NLR databases. This address was also identified as Familian Pipe Supply Co./Familian South Bay (EDR map IDs N57 and N59) in the CA FID UST and HIST UST databases. The LUST database lists the facility status as “Completed-Case Closed” as of 2010. According to information reviewed on the online GeoTracker database, a diesel UST was removed from this site in 2004 and at that time low levels of fuel constituents were detected in soil below soil screening levels. Groundwater was not impacted. Based on the regulatory status (i.e., case closure), soil analytical results, and removal of the source (UST removal), this site is not considered to represent a REC to the proposed Project, in AECOM’s opinion.
- CP Transfer Yard (EDR map ID 61) at “NA Alameda Street” is located adjacent to the south of the southern portion of the proposed Project and is listed in the CPS-SLIC and CERS database. The CPS-SLIC database lists the facility status as “Open-Assessment & Interim Remedial Action” as of 2015. Based on information reviewed on the online GeoTracker database, this site is a railroad corridor leading from the POLA and is located within a former oil production area that included numerous pipelines. In 2011, soil and groundwater sampling was conducted to assess the vertical and lateral extent of contamination. In 2012, the railroad track was removed and replaced and at that time soil impacted with petroleum hydrocarbons, SVOCs, VOCs and metals were excavated. Confirmation soil sampling indicated that residual arsenic was present south of the former track at levels exceeding the soil removal screening criteria. Soil removal in some areas of the site was not feasible due to existing infrastructure. A post-construction Human Health Risk Assessment (HHRA) was approved in 2014. Additional site investigation was conducted in 2017 to 2018 in areas not previously assessed and the HHRA was revised at that time. The amended HHRA concluded that the residual contamination at the site did not create an undue health risk to rail workers at the site. Post-remediation groundwater sampling was completed in 2022 and low concentrations of TPH, VOCs, and SVOCs were detected in groundwater. Based on historical site operations, the primary chemicals of concern at the site were related to petroleum hydrocarbons; however, elevated concentrations of arsenic have also been detected in soil and groundwater, which were concluded not to be associated with former oil production activities, but potentially naturally occurring. In June 2022, a *Background Restoration Feasibility Evaluation* was prepared for the site, which

recommended continued natural attenuation of hydrocarbons at the site that would likely result in the subsurface soils returning to background concentrations. It is AECOM's opinion that the former oil exploration production activities at this site and in the surrounding area present a REC to the proposed Project.

- Wilmington Town Lot #498 (EDR map ID J63) at 510 Sanford Avenue is located adjacent to the northwest of the proposed Project, across the railroad tracks, and is listed in the CPS-SLIC and CERS databases. The CPS-SLIC database lists the facility status as "Completed-Case Closed" as of 2020 and no further action is required. No additional information was available in the EDR report or the online GeoTracker database. This site is currently occupied by a construction company office. Based on the regulatory status (i.e., case closed, NFA), this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- River Bank Bulk Water (EDR map ID O82) at 691 North Pioneer Avenue is located adjacent to the northwest of the proposed Project, across the railroad tracks and is listed in the HAZMAT database with an inactive status. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- LA Wilmington St. Maint Yard (EDR map ID O83) at 612 Flint Avenue is located adjacent to the northwest of the proposed Project, across the railroad tracks, and is listed in the RCRA-SQG, FINDS, and ECHO databases. No violations are reported. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Raul A Martinez Diesel Svc In. (EDR map ID Q87) at 616 Flint Avenue is located adjacent to the northwest of the proposed Project, across the railroad tracks, and is listed in the CERS HAZ WASTE, HAZNET, HAZMAT, CERS, and HWTS databases. This address is also identified as Road King Diesel Inc. (EDR map ID Q88) in the RCRA NonGen / NLR database and as Diesel Service (EDR map ID Q89) in the RCRA-SQG, FINDS, and ECHO databases. These databases identify this site as a hazardous waste generator and chemical storage facility. Violations were noted in the CERS database that were reported to have been returned to compliance in the year of issuance. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- So Cal Lube Center (EDR map IDs K98, K99, K106, and K111) at 710 East D Street is located adjacent to the northwest of the proposed Project and is listed in the HAZMAT, AST, and RCRA NonGen / NLR databases. This address was also identified as Wilmington Truck Stop Inc. (EDR map IDs K100, K102, and K104) in the EDR Hist Auto, HAZMAT, and UST databases; as Noil USA Inc. (EDR map IDs K101, K103, K105, K108, and K109) in the CERS HAZ WASTE, CERS TANKS, CERS, HAZMAT, UST, and RCRA NonGen / NLR databases; and as Lacy Tool Company (EDR map ID K107 and K110) in the SWEEPS UST, HIST UST, and CA FID UST databases. The address 704 East D Street (EDR map ID V121) also appeared to be associated with this site, which was identified in the UST database with a historical status. The EDR Hist Auto database indicates that this site has been occupied as a gasoline service station and an auto repair facility since at least 1974. These databases also indicate that this site was a hazardous waste generator and chemical storage facility with USTs and ASTs. Violations were noted in the CERS database; no return to compliance dates were reported. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

- Sun Pacific Trucking Inc. (EDR map ID T112) at 512 East C Street is located adjacent to the northwest of the proposed Project, across the railroad tracks, and is listed in the CERS HAZ WASTE database as a hazardous waste generator. This address was also identified as Pacific Green Trucking Inc. (EDR map ID T113) in the RCRA NonGen / NLR database with no violations reported. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

6.3.3 Summary of Regional EDR Listings of Potential Environmental Concern

The following sites were identified on a contamination-related database within close proximity (i.e., 500 feet) of the proposed Project and therefore are discussed further.

- TSM Recovery & Recycling (EDR map ID H77) at 317 Eubanks Avenue, Unit 2, is located approximately 225 feet northwest of the proposed Project and is listed in the Permitted Facilities with Inspections / Enforcements sites tracked in EnviroStor (ICE), EnviroStor Permitted Facilities Listing (HWP), and Medical Waste Management Program Listing (MWMP) databases. The ICE database lists the facility status as "No Action". Compliance inspections were conducted between 1999 and 2022. No violations were noted at the time of the 2022 inspection. The HWP database lists the facility type as "historical – non-operating" and indicates that this site formerly processed silver from photochemical wastes; the permit was terminated in 1999 when regulations changed, and silver recovery sites were no longer regulated. Based on the nature of the listings (i.e., compliance-related) and lack of listing in a contamination-related database indicating a release to soil and/or groundwater, this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.
- Former Texaco (EDR map ID R86) at 1222 to 1230 East Anaheim Street is located approximately 225 feet west of the northern portion of the proposed Project and is listed in the LUST and Cortese databases. The address 1222 East Anaheim Street was also identified as Apex Auto (EDR map ID R125) in the RCRA-SQG, FINDS, and ECHO databases with no violations reported; as Noil USA Inc. (EDR map ID R126) in the UST database with an active status; as Bay Auto Service (EDR map ID R127) in the EDR Hist Auto database as a gasoline station in 1969 to 2014; as PH Gasoline-Texaco Station (EDR map ID R128) in the HIST UST database with three former tanks; as Kosmo's Gas (EDR map ID R129) in the CERS HAZ WASTE, SWEEPS UST, CERS TANKS, CA FID UST, HAZMAT, and CERS databases as an active hazardous waste generator and chemical storage facility with USTs; as Luxavia Texaco (EDR map ID R130) in the UST database; as Noil USA Anaheim (EDR map ID R131) in the RCRA NonGen / NLR database with no violations reported. These databases indicate that this site has been a gasoline station and automotive repair facility since at least 1969. The facility is a hazardous waste generator and chemical storage facility with current and former USTs. The LUST cleanup status is reported as "Open-Remediation" as of 2010. Based on information reviewed on the online GeoTracker database, an unauthorized release was reported in May 1992 following a site assessment. Free product removal was initiated in November 1998 and conducted through May 2013. Four USTs (two gasoline, one diesel, and one waste oil) were removed in February 2001 and at that time impacted soil were excavated as well as contaminated groundwater that was pumped out from the UST excavation, both of which were disposed offsite. Groundwater and soil vapor extraction tests were conducted in December 2009. Soil vapor extraction was conducted between July 2011 and March 2013, groundwater extraction was conducted between February 2011 and August 2013, and multi-phase extraction was

conducted from April 2014 to April 2017. Active remediation has not been conducted at the site since April 2017. The depth to groundwater at this site has been measured at depths ranging from 9.7 to 11.0 feet bgs with the groundwater flow direction towards the west (away from the proposed Project). In 2018, 2020, and 2022, notices of violation were issued by the RWQCB to the responsible parties for failure to prepare and submit a remedial action plan, continue to implement a groundwater monitoring program, submit required groundwater monitoring reports, and submit remedial progress reports. According to groundwater data, water quality objectives (WQOs) have not been achieved at this site. The petroleum release is limited to the soil and shallow groundwater. The affected groundwater is not currently being used as a source of drinking water, and it is highly unlikely that the contaminated groundwater will be used as a source of drinking water in the foreseeable future. Based on the distance and location relative to the proposed Project (i.e., greater than 225 feet down-gradient), this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

- Texaco (EDR map ID P122) at 1625 East Anaheim Street is located approximately 500-feet east of the northern portion of the proposed Project and is listed in the LUST, Cortese, and CERS databases. This address was also identified as Hedge Shell Service (EDR map ID P170) in the EDR Hist Auto database as a gasoline service station in 1971 to 1996 and as automotive repair shop in 2000 to 2009; as Orrin B. Hege (EDR map ID P171) in the SWEEPS UST and CA FID UST databases with nine former USTs; as OB Hedge Texaco (EDR map ID P172) in the RCRA-SWG, HIST UST, FINDS, ECHO, and HWTS databases; and as OB Hedge Service (EDR map ID P173) in the UST database. This site is occupied by a self-service car wash and no USTs or dispensers are currently located onsite. The LUST cleanup status is reported as "Open-Remediation" as of 2004. According to information reviewed on the online GeoTracker database, an unauthorized release was reported in September 1992 following a site assessment. Groundwater monitoring began in 1996. Five USTs (four gasoline and one waste oil) were removed in January 1998. Impacted soils were over-excavated during street expansion in 2003 and free product was recovered between December 2004 and December 2017. Soil vapor extraction and air sparging was conducted between March 2003 and March 2004. Active remediation has not been conducted at the site since March 2004 and according to groundwater data, WQOs have not been achieved. The petroleum release is limited to the soil and shallow groundwater. The affected groundwater is not currently being used as a source of drinking water, and it is highly unlikely that the contaminated groundwater will be used as a source of drinking water in the foreseeable future. Ongoing groundwater monitoring began in 1996. The most recent monitoring event was conducted in December 2012 and at that time groundwater was measured between 5 and 7 feet bgs with a calculated flow direction to the south. Based on the distance and location relative to the proposed Project (i.e., approximately 500-feet cross to down-gradient), this site is not considered to represent a REC to the proposed Project, in AECOM's opinion.

It should be noted that the EDR database report identifies Montrose Chemical Co. (20201 South Normandie Avenue) within ⅛ mile of the proposed Project, which is listed as an NPL site; however, documentation reviewed online for this site revealed that this property is actually located greater than 5 miles to the northwest of the proposed Project and therefore is not considered to represent a REC to the proposed Project.

6.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-15. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

6.4.1 Proposed Project

The proposed Project is located in the Wilmington Oil Field in an area of historical oil exploration and production activities. As discussed in Section 5.2., in 2014, Pinnacle conducted a Phase II subsurface investigation in the southern segment of the proposed Project, which included the collection and analysis of soil samples. Groundwater was not encountered to the depth explored of 5 feet bgs. Although VOCs were not detected in the soil samples analyzed, two SVOCs, including fluoranthene and pyrene, were detected at concentrations above regulatory screening levels. Based on these results and historical use of the proposed Project for oil and gas exploration, a VEC on the proposed Project cannot be ruled out. No site-specific sampling data was available for the northern portion of the proposed Project.

6.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

- Off-site properties that are impacted by chlorinated VOCs (CVOCs) and/or SVOCs and are located within approximately 1,750 feet of the proposed Project, and
- Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the proposed Project.

The following paragraph summarizes the results of AECOM's VES of the nearby area:

A review of the site-specific environmental database indicates that 13 CVOC/SVOC and four petroleum hydrocarbon impacted sites are located with the above-described radii of the proposed Project, several of which are discussed in Sections 6.3.2 and 6.3.3. Based on their regulatory status (i.e., regulatory closure has been issued), media impacted (i.e., soil only), and/or distance and topographical position from the proposed Project (i.e., greater than 500-feet down-gradient or cross-gradient), a VEC on the proposed Project due to these off-site sources is not likely to exist. However, a VEC on the proposed Project due to historical oil and gas production activities cannot be ruled out.

6.5 Agency File Review

6.5.1 City and County

The City of Los Angeles maintains several online databases including the Bureau of Engineering, Department of Public Works, NavigateLA database and the Department of City Planning, Zoning Information and Map Access System (ZIMAS) database, which were searched for information on the area of the proposed Project. In addition, AECOM searched the Los Angeles County Office of the Assessor online Property Assessment Information System (PAIS) for information on the area of the proposed Project. Information obtained from these online databases has been incorporated throughout this report where appropriate.

6.5.2 State

AECOM searched DTSC's online EnviroStor database for California Cleanup Sites involving the DTSC. The EnviroStor database consists of federal NPL sites, state response sites, voluntary cleanup sites, and school cleanup sites. This database was searched to supplement the information provided in the EDR database report and was incorporated into Sections 6.3.2 and 6.3.3, where appropriate.

AECOM searched the California EPA's SWRCB online GeoTracker database, which consists of LUST Cleanup Sites, (non-petroleum) CPS, Military Cleanup Sites, and Permitted UST Sites located throughout California. This database was searched to supplement the information provided in the EDR database report and was incorporated into Sections 6.3.2 and 6.3.3, where appropriate.

AECOM searched the online California Environmental Protection Agency (Cal/EPA) Regulated Site Portal database, which combines information from the CERS, EnviroStor, GeoTracker, CIWQS, and federal Toxics Release Inventory (TRI) databases. This database was searched to supplement the information provided in the EDR database report and was incorporated into Sections 6.3.2 and 6.3.3, where appropriate.

6.5.3 Federal

AECOM searched the U.S. EPA's Envirofacts and SEMS online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potentially hazardous waste sites. The following listing was identified associated with the proposed Project in the Envirofacts database:

- Alameda Street Widening (East Harry Bridges Boulevard), EPA Registry ID: 110069992096, at 201 North Alameda Street was identified in the Assessment, Cleanup, and Redevelopment Exchange System (ACRES) as a Brownfields Property as of 2014. The Property Progress and Type is reported as "Assessment", which indicates that the City of Los Angeles Department of Public Works entered into an agreement (Cooperative Agreement #BF00T51701) with the EPA for regional funding (Grant ID: 69600600) for the proposed Project. The status is listed as "Closed".

No listings were identified associated with the proposed Project in the SEMS database.

7. Findings and Opinions

AECOM performed a Phase I ESA of the proposed Project in conformance with the scope and limitations of ASTM E1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA of the proposed Project.

7.1 Recognized Environmental Conditions

Based on the above-described activities, the following RECs were identified in connection with the proposed Project:

- The proposed Project is located within the Wilmington Oil Field and the area was historically used for the exploration and production of crude oil. A subsurface investigation conducted in the southern segment of the proposed Project in 2014 revealed the presence of petroleum hydrocarbons in shallow soils, which would require the removal and proper disposal during construction of the proposed Project. The presence of petroleum impacted soil in the proposed Project is considered a REC.
- In addition, review of California Geologic Energy Management (CalGEM) Division records identified the presence of numerous abandoned oil wells along the proposed Project. It is possible that undocumented well casings or underground piping associated with plugged and/or idle oil wells may be exposed during construction of the proposed Project. The presence of historical oil wells in and adjacent to the proposed Project is considered a REC.
- The proposed Project is in an area that has been designated by the City of Los Angeles as a Methane Zone due to its location in an oil field, which is considered a REC. These areas have developmental regulations that are required by the City and County of Los Angeles that should be adhered to during construction of the Project.
- Numerous petroleum pipelines are located beneath and adjacent to the proposed Project. The presence of these pipelines is considered to represent a REC to the proposed Project, as undocumented releases may have occurred which may have resulted in impacts to the subsurface.

7.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the proposed Project.

7.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the proposed Project.

7.4 Vapor Encroachment Conditions

Based on the above-described activities, the following VEC was identified in connection with the proposed Project:

- The potential exists for subsurface soil and groundwater to have been impacted by historical oil production activities on and in the area of the proposed Project. In addition, soil sampling and testing performed on the southern portion of the proposed Project in 2014 identified concentrations of SVOCs above regulatory screening levels. Therefore, a VEC on the proposed Project cannot be ruled out.

7.5 De Minimis Conditions

Based on the above-described activities, the following DMC was identified in connection with the proposed Project.

- Evidence of inappropriate disposal activities was identified during the site visit, including a large amount of litter and debris (e.g., paper, plastic, cardboard, Styrofoam, vagrant tarps, etc.) along Alameda Street. In addition, a tire pile was observed near the sidewalk along East E Street, to the northwest of Alameda Street. No chemicals, chemical containers, or significant staining were identified in these areas during the site visit and they are considered a de minimis condition.

7.6 Non-ASTM Considerations

Based on the above-described activities, the following non-ASTM considerations were identified associated with the proposed Project.

- Buried utility lines within the Alameda Street ROW may be comprised of ACMs associated with pipe insulation. Relocation of buried utility lines in the proposed Project ROW is not anticipated, but nonetheless, there is potential for ACMs to be disturbed. If ACMs are discovered during this work, they would be abated in compliance with all applicable local, state, and federal regulations.
- Suspect LBP associated with painted curbs, fire hydrants, and protective bollards were identified in the proposed Project. If LBP is discovered during construction, it would be handled and abated in compliance with all applicable local, state, and federal regulations.
- The existing yellow thermoplastic paint and pavement marking originally used for traffic striping may contain lead along Alameda Street. These materials would be removed, handled, and disposed of in accordance with all applicable local, state, and federal regulations.
- TWW within the proposed Project could include wooden utility poles and old railroad ties. These features have historically been chemically treated and may require special waste handling. These materials would be removed, handled, and disposed of in accordance with all applicable local, state, and federal regulations.
- Alameda Street in the proposed Project is paved; therefore, the likelihood of ADL penetrating paved surfaces in these areas is low and ADL (if present) was most likely blown or rinsed away by the elements. However, ADL from vehicular emissions may be present in the unpaved/landscaped areas along Alameda Street.

This page intentionally left blank.

8. Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 of the Alameda Street Widening from Anaheim Street to Harry Bridges Boulevard Project, which consists of a length of roadway along Alameda Street from East Anaheim Street to Harry Bridges Boulevard, in the community of Wilmington within the City of Los Angeles, California, the proposed Project. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed no evidence of RECs or CRECs in connection with the proposed Project, except for the following:

- The proposed Project is located within the Wilmington Oil Field and the area was historically used for the exploration and production of crude oil. A subsurface investigation conducted in the southern segment of the proposed Project in 2014 revealed the presence of petroleum hydrocarbons in shallow soils, which would require the removal and proper disposal during construction of the proposed Project. The presence of petroleum impacted soil in the proposed Project is considered a REC.
- In addition, review of CalGEM records identified the presence of numerous abandoned oil wells along the proposed Project. It is possible that undocumented well casings or underground piping associated with plugged and/or idle oil wells may be exposed during construction of the proposed Project. The presence of historical oil wells in and adjacent to the proposed Project is considered a REC.
- The proposed Project is in an area that has been designated by the City of Los Angeles as a Methane Zone due to its location in an oil field, which is considered a REC. These areas have developmental regulations that are required by the City and County of Los Angeles that should be adhered to during construction of the Project.
- According to the PIMMA public map viewer and site observations, numerous petroleum pipelines are located beneath and adjacent to the proposed Project. The potential for previously-unrecognized subsurface impacts due to releases from these pipelines is considered to represent a REC to the proposed Project.

9. Environmental Professional Statement

Ms. Jessica Himebauch was the Environmental Professional (EP) for this Project. Ms. Himebauch's EP statement is below, and her resume is provided in Appendix F:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Project. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature:

Date: December 14, 2022; Revised March 2023

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Contact: Kevin Theimer

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 60631277.2
Project: Alameda St ROW

Coordinates:

Latitude:	33.775488 33° 46' 32" North

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2015. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MONTROSE CHEMICAL CO Cerclis ID:: 900993 EPA Id: CAD008242711	***20201 S NORMANDIE AV***	***SE 0 - 1/8 (0.117 mi.)***	***0***	***9***

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/26/2022 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MONTROSE CHEMICAL CO Site ID: 0900993 EPA Id: CAD008242711	***20201 S NORMANDIE AV***	***SE 0 - 1/8 (0.117 mi.)***	***0***	***9***
YOUNG STREET MERCURY Site ID: 0908530 EPA Id: CAN000908530	YOUNG STREET AND BLI	NNE 1/4 - 1/2 (0.262 mi.)	455	1559

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/26/2022 has revealed that there are 11 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/20/2022 has revealed that there are 6 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: CAR000095125

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 30 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 08/15/2022 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there are 53 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there are 3 CA SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 13 CA LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 53 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 32 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 115 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA HWP: Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.

A review of the CA HWP list, as provided by EDR, and dated 08/11/2022 has revealed that there are 8 CA HWP sites within approximately 1 mile of the target property.

CA HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the CA HWT list, as provided by EDR, and dated 07/05/2022 has revealed that there are 3 CA HWT sites within approximately 0.25 miles of the target property.

CA LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the CA LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 01/10/2022 has revealed that there are 3 CA LOS ANGELES CO LF METHANE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Substance:	DDT
Pathway:	GROUND WATER PATHWAY

MONTROSE CHEMICAL CORP. (Continued) **1000420366**

Scoring: 3

NPL Status: Currently on the Final NPL
Substance ID: U061
CAS Number: 50-29-3
Substance: DDT
Pathway: SURFACE WATER PATHWAY
Scoring: 3

Summary Details:

Conditions at proposal October 15, 1984): Montrose Chemical Corp. manufactured DDT on a l3-acre site in a light industrial/residential area of Torrance, Los Angeles County, California, from 1947 until 1982. About 3,000 people live or work within 0.25 mile of the site. The company s operations included formulation, grinding, packaging, and distribution of DDT. According to analyses conducted by EPA, Montrose, and various State and local agencies, on- and off-site soils, surface water, and sediments are contaminated with DDT. The major transport mechanisms identified were storm water run-off and aerial emissions. On May 6, 1983, EPA issued an Administrative Order under CERCLA Section 106 requiring Montrose Chemical to cease all discharges of DDT and to initiate a study to determine the nature and extent of contamination. After a more detailed review of the Montrose site, EPA determined that further work was necessary to characteri e the site andevaluate alternatives. Therefore, EPA prepared a workplan for a remedial investigation/feasibility study RI/FS). This second phase of investigation will assess all areas of contamination, both on- and off-site, and any public health and environmental impacts. Status June 1986): In February 1985, Montrose installed a temporary asphalt cover over the site. EPA did not endorse this activity. In the summer of 1985, EPA conducted Part I of the RI. On-site sampling foundhigh levels of contamination at 77-foot depths in soil and in shallow ground water. In October 1985, Montrose and EPA signed an Administrative Order under CERCLA Section 106 requiring Montrose to conduct Part II of the RI, which includes on-site sampling of ground water and off-site sampling of soil, sediments, surface water, and ground water. Status November 1988): During July 1986, EPA sampled off-site dust and soil and verified that DDT migrated off-site via aerial dispersion.In November 1986, Montrose completed Phase I sampling under Part II of the RI. Results indicated that soils near the site are contaminated with high levels of DDT, and that the two shallower aquifers in the four-aquifer system underlying the site are contaminated with DDT and monochloroben ene. In October 1987, EPA and Montrose signed an amendment to the October 1985 Administrative Order, calling for both on- and off-site sampling of the two deeper aquifers in the four-aquifer system. Status October 4, 1989): In July 1989, EPA and Montrose signed a second amendment to the original order, under which Montrose will conduct the FS for the overall site and evaluate options for removing DDT-contaminated sediments in the sanitary sewer lines near the site. Sampling conducted under the first amended order indicates that ground water is contaminated with high levels of monochloroben ene 0.25 mile downgradient from the site. Deep wells and additional downgradient wells will be constructed and sampled.

NPL:

NPL Status: Currently on the Final NPL
Category Description: Depth To Aquifer-> 100 Feet
Category Value: 400

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D012
Waste Description: ENDRIN (1,2,3,4,10,10-HEXACHLORO-1,7-EPOXY-1,4,4A,5,6,7,8,8A-OCTAHYDRO-1,4-ENDO, ENDO-5,8-DIMETH-ANO-NAPHTHALENE)

Waste Code: D018
Waste Description: BENZENE

Waste Code: D019
Waste Description: CARBON TETRACHLORIDE

Waste Code: D021
Waste Description: CHLOROBENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D033
Waste Description: HEXACHLOROBUTADIENE

Waste Code: D034
Waste Description: HEXACHLOROETHANE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

MONTROSE CHEMICAL CORP. (Continued) **1000420366**

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
SUPERFUND NPL
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Case Worker:	PC
Local Agency:	Not reported
RB Case Number:	1257/A
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline, Other Petroleum
Site History:	The site was used for crude oil exploration and production. Soil and groundwater have been impacted with petroleum hydrocarbons released from the past industrial activities. Pacific Maritime Association (PMA), lessee of the site owned by the Port of Los Angeles (POLA), excavated impacted soil for redevelopment. On September 8, 2017, Regional Board granted a No Further Action determination for the sites soil. POLA is responsible for groundwater closure and monitor groundwater quality to evaluate effects of soil remediation. (edited September 2018)

Violation Date:	09-25-2019
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 10/30/2019. Observation: All Monthly DO reports back to 10/2018 were not signed by the Designated Operator. on the Monthly DO reports for 01/, 02, 06, 08 and 09/ 2019, the Designated Operator failed to document the alarms noted in the VR Alarm History. Also, no appropriate documentation for the alarms was attached to the reports. Beginning 10/2018, Designated Operators are required to: 1. Attach a copy of the alarm history. 2. List ANY alarms

BUFORD T. SMITH FAMILY (Continued) **S101584954**

or compliance issues in the comments section of each Monthly DO report. 3. Locate and attach written documentation of alarms and the appropriate services required to clear/address the alarm. 4. Sign every report (upper signature box) Beginning 10/2018, Owner-Operators are required to: 1. Review each Monthly DO report within 48 hours of receiving the report. 2. Sign every report (lower signature box) indicating that they reviewed the report - REGARDLESS of whether there were any alarms. 3. List on the report the actions taken [Truncated]

Violation Date: 09-25-2020
Citation: HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 09/25/2020. 7. OBSERVATION: Upon pressurizing the Turbines for Testing of the Veeder Root electronic Line Leak Detectors, the fitting on the testing hose attached to the Shear Valve testing port failed and gasoline began to atomize and release from the fitting towards the paved area west of the the southeast dispenser. CORRECTIVE ACTION: Contractor immediately activated the E.S.O. switch. Less than 2 gallons was released and did NOT reach any soil or drains. Product was contained to the pavement area adjacent to the southeast dispenser and was cleaned within 15 minutes using less than 2 lbs of absorbent litter. Observed the Owner complete the on site spill Log documenting the events and actions noted above. Directed owner and contractor to ensure that all equipment used to test leak detectors and shut off the Turbines is maintained in good working condition and to continue to maintain all materials necessary to contain a release in a readily accessible location prior to testing. Site Name:	Rocket Oil #2
Violation Date:	09-27-2017
Citation:	HSC 6.7 25290.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(e)
Violation Description:	Failure to maintain the interstitial space such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment, i.e., vapor, pressure, hydrostatic (VPH) monitoring.
Violation Notes:	Returned to compliance on 10/10/2018. OBSERVATION: DIESEL VR-420 ANNULAR SENSOR UNTESTABLE DUE TO DIESEL VAC SENSOR NOT COMMUNICATING PROPERLY WITH VEEDER ROOT MONITORING PANEL. CORRECTION: ENSURE DIESEL ANNULAR VR 420 AND VAC SENSORS ARE TESTED AND FUNCTIONING AS REQUIRED. PULL PERMITS (AS NEEDED) AND UPDATE INSPECTOR.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal

MANNY'S AUTO CARE (Continued) **S127595971**

within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. Following waste in violation: 1) 1 x 55 gal drum = oil filters 2) 2 x 55 gal drums = coolant 3) 1 x 55 gal drum = transmission fluid 4) 9 x 55 gal drums = used oil CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation (manifest) that the violation has been corrected.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Permission to inspect granted by, Nicholas Steffen, Shift Superintendent. As per our discussion on site, Mr. Steffen, was informed that State law mandates all regulated businesses electronically submit their Hazardous Materials Business Plan (HMBP) via the California Environmental Reporting System (CERS). Electronic submittal shall be completed within the next 30 days. In addition, HMBP s need to be reviewed and certified annually, between January 1st and March 1st, for complete and accurate information. It is also mandatory to submit any substantial change in operation within 30 days.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Inspector I, LAFD Environment Unit/CUPA, on site to verify your business' Hazardous Material Business Plan, Consolidated Permit and to conduct a routine visual inspection of your facility's Hazardous Material Inventory. As of today's inspection, your facility's Consolidated Permit and California Environmental Reporting System (CERS) entries are in compliance and have been accepted. Please remember to update our CERS business information annually between, January 1st and March 1st. In addition, you are required by law to notify our office in CERS of any substantial change in business ownership, address, name, operation and/or chemical inventory change greater than 100% within 30 days. Please thoroughly review your inspection report for violations, comments and instructions on how to comply. Following you CERS submittal, inform me via email, phone call or text message, so that I may review, inspect [Truncated]

Latitude: 33.78167
Longitude: -118.24612
Case Type: Cleanup Program Site
Case Worker: EPL
Local Agency: Not reported
RB Case Number: 1370
File Location: Regional Board
Potential Media Affected: Contaminated Surface / Structure, Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Crude Oil, Diesel, Gasoline, Total Petroleum Hydrocarbons (TPH)
Site History: The site is a former crude oil production location with six wells. These wells have been abandoned by DOGGR. Elevated concentrations of TPH, benzene, and MTBE were detected in an initial site investigation. Soil and groundwater remediation has been completed to clean-up goal levels for the site.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. Following waste in violation: 1) 4 x 55 gal drums = used oil 2) 1 x 25 gal drum = used oil filters 3) 2 x 55 gal drums = unknown liquid CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit

WATERMAN SUPPLY CO (Continued) **U001565678**

and provide documentation (manifest) that the violation has been corrected. CCR 66262.34 (b) The beginning of the 90 day period specified in subsections (a) and (c) of this section is determined as follows: (1) if the generator does not generate more than 100 kilograms of hazardous waste or one kilogram of acutely hazardous waste (listed in section 66261.33(e)) or one kilogram of extremely hazardous waste during any [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-20-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Permission to inspect granted by, Bonnie Vanderbaan, Bookkeeper. As per our discussion on site, Ms. Vanderbaan, was informed that State law mandates all regulated businesses electronically submit their Hazardous Materials Business Plan (HMBP) via the California Environmental Reporting System (CERS). Electronic submittal shall be completed within the next 30 days. In addition, HMBP s need to be reviewed and certified annually, between January 1st and March 1st, for complete and accurate information. It is also mandatory to submit any substantial change in operation within 30 days.

Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-14-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility ID#: FA0035659 / CERS ID#: 10622509 Brandi A. Pilato, Inspector I, LAFD Environment Unit/CUPA, on site to verify your business' Hazardous Material Business Plan, Consolidated Permit and to conduct a routine visual inspection of your facility's Hazardous Material Inventory. Consent to enter, inspect and take photographs was given by: Bonnie Vanderbaan, Bookkeeper. As of today's inspection, your facility's Consolidated Permit and California Environmental Reporting System (CERS) entries are in compliance and have been accepted. Please remember to update our CERS business information annually between, January 1st and March 1st. In addition, you are required by law to notify our office in CERS of any substantial change in business ownership, address, name, operation and/or chemical inventory change greater than 100% within 30 days. If nothing has changed, you can simply resubmit the previous year s information, as long as it has been accepted. If [Truncated]

Case Type:	Cleanup Program Site
Case Worker:	GAC
Local Agency:	Not reported
RB Case Number:	1204
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Benzene, Other Petroleum, Polynuclear aromatic hydrocarbons (PAHs)
Site History:	The Site is a railroad corridor leading from the Port of Los Angeles located within the limits of a former oil production area. Previously, a single railroad track transected the site from east to west. Numerous pipelines associated with the oil field, and newer pipelines crossing the Site were detected during previous site assessments. The site investigation, from August 30 through September 3, 2011, consisted of potholing adjacent to the areas of previously observed crude oil and black material encountered by ACTA followed by drilling soil borings to assess the vertical and lateral extent of contamination. A total of 44 samples (33 soil samples and 11 groundwater samples), were collected during the site investigation. Several metals were detected above their reporting limit (RL) in the soil sample collected from the soil stockpile. TPH-g was detected in 14 of 32 soil samples with concentrations ranging from 0.87 mg/kg to 1,340 mg/kg. TPH-motor oil was detected in 29 of 32 soil samples with concentrations ranging from 26 to 43,000 mg/kg. VOCs were detected in 6 of the 7 pothole soil samples and 21 of the 24 borehole soil samples at concentrations below screening criteria. Low concentrations of VOCs were detected in groundwater samples from 6 of 10 soil boring locations. Only benzene concentrations exceed the California maximum contaminant level (MCL) of 1 ug/L. No PAHs were detected in the soil samples. Low concentrations of PAHs were detected in the groundwater samples from 6 of the 10 borings. Only benzo(a)pyrene concentration exceed the California MCL of 0.2 ug/L. In 2012, the single railroad track was removed and replaced with three separate tracks located in the central portion of the Site. Approximately 10,393 tons of soil impacted with petroleum hydrocarbons, SVOCs, VOCs, and metals were excavated and replaced with clean fill soils south of the former single track railroad, prior to construction of the new existing rail yard. Confirmation soil samples collected from the excavations, outlined in the October 31, 2012, Soil Removal Action Report, indicated that residual arsenic (and to a lesser extent lead concentrations) were present south of the former tracks at levels exceeding the soil removal screening criteria. A Post-Construction HHRA was reviewed by OEHHA and approved by the LA Water Board on December 12, 2014. In 2017-2018, additional site investigation was conducted within areas not previously assessed, located north of the new railroad track alignment. In September 2018, a revised HHRA was performed that included the integrated soil and groundwater data set for the entire site. An Amended Human Health Risk Assessment was submitted December 12, 2018, concluded that the residual contamination at the site did not create an undue additional health risk to rail workers at the site. Post-remediation groundwater sampling is currently outstanding as of 2021 and should be completed in 2022, at which time an evaluation of remediation to background concentrations will be necessary prior to considering the site for No Further Action determination.

POTENTIAL INDUSTRIES, INC (Continued) **S123516088**

Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 07/24/2020. OBSERVATION: The Tank 1 Spill Bucket failed testing. Was leaking at bellow and unable to hold 5 gallons. CORRECTIVE ACTION: Obtain permit form LAFD Plan check to repair/replace 89 Spill bucket and retest for an LAFD Inspector.
Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 399779
Site Name: POTENTIAL INDUSTRIES, INC
Violation Date: 06-25-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 08/08/2019. OBSERVATION: The inspection of all required overfill prevention equipment listed in CERS was not completed and submitted to the CUPA by 10/13/2018. CERS states "Yes" to Fill Tube Shut-Off Valves only. Flapper in the Red Diesel Fill Sump was stuck and unable to be removed and inspected on this date by Fleming. CORRECTIVE ACTION: Immediately ensure that all forms of overfill listed in CERS are inspected FORTHWITH. Obtain permit from LAFD Plan Check if repair or replacement of Red Diesel Flapper is

POTENTIAL INDUSTRIES, INC (Continued) **S123516088**

	necessary to repair/ replace. Next overfill prevention equipment inspection must be completed by 10/2021.

Violation Program:	UST
Violation Source:	CERS,

Site ID:	399779
Site Name:	POTENTIAL INDUSTRIES, INC
Violation Date:	06-08-2020
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 06/08/2020. OBSERVATION: Monthly DO reports for 12/04/2019 failed to indicate the corrective actions taken by the Owner-Operator to address the L-3 Fuel Alarms on 11/30 & 11/28 and failed to attach a Work Order from Fleming Environmental to document their response to the Alarms. CORRECTIVE ACTION: Immediately indicate the corrective actions taken by the Owner-Operator to address the L-3 Fuel Alarms on 11/30 & 11/28 and attach a Work Order from Fleming Environmental to document their response to the Alarms. Documented Corrected on Site by Safety Coordinator Roberto Choi. Directed Mr Choi to ensure all future monthly Designated Operator reports are: signed by Owner-Operator, list the actions taken by Owner-Operator to address compliance issues and have written documentation attached that

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

DIESEL SERVICE (Continued) **1000818284**

corrective action activities required under RCRA.

Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	402574
Site Name:	American Integrated Services Inc
Violation Date:	05-27-2020
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. Observed two 55-gallon drums of used oil and one box of oily rags/absorbent accumulating for more than 180 days. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

AMERICAN INTEGRATED SERVICES INC (Continued) **S113177451**

Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	402574
Site Name:	American Integrated Services Inc
Violation Date:	05-27-2020
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	OBSERVATION: Used oil was observed accumulated on top of one 55-gallon used oil drum and in the secondary containment for the used oil drums located at the hazardous waste storage area. CORRECTIVE ACTION: Submit photos/documentation to the CUPA demonstrating the spill has been properly removed and managed.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	402574
Site Name:	American Integrated Services Inc
Violation Date:	09-21-2017
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 09/21/2017. OBSERVATION: 1 x 55 gallon drum of used oil and 1 x 55 gallon drum of oily rags located at the southwest portion of the business in the hazardous waste storage area, were observed with a label "Used Oil" but are missing the name and address of the generator and the words, "Hazardous Waste" and the accumulation start date. CORRECTIVE ACTION: Containers accumulating used oil must be labeled with the name and address of the generator and the words Used Oil and Hazardous Waste . In addition the container must be labeled with the initial date of accumulation. Add a label to the used oil and oily rag drums with the required information. Operator abated this violation prior to the end of this inspection.

SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirements: 1. Log in to http://cers.calepa.ca.gov, to create a user name and password. It will take approximately 2-3 days to receive approval before you can continue. After you are approved, you will receive an email confirmation sent to the email you provide. 2. Fill out the Owner/Operator and Business Activity information in CERS. Be sure to enter your EPA ID number if you have hazardous waste. 3. Complete your hazardous materials inventory and site map on CERS. Attached is a sample site [Truncated]
