Property History:	The shipyard site was originally constructed by the Los Angeles Shipbuilding and Drydock Corporation for US Naval use in 1917. In December of 1943, the Navy took possession of the shipyard by Executive Order and requested Todd Shipyard Corporation to operate and manage the plant. Although Board of Harbor Commissioners Order Number 1926 (approved 4 August 1943) indicated that the Navy Department was contemplating the execution of a contract that would provide for the ownership by the United States of certain facilities and improvements placed on the west side of the Los Angeles Shipbuilding and Drydock Corporation site, Navy documents (December 1993) appeared to indicate that the Navy took possession of the

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quarterly Update:	Roehl Corporation was issued a Hazardous Waste facility Permit in 1983 for the operation of a hazardous waste storage and recycling facility. The facility conducted resource recovery of perchloroethylene from wastes generated by dry cleaning establishments. The Korody-Colyer Corporation owned the property. The Port of Los Angeles purchased the property in 1985. The Roehl Corporation occupied the site under a Use and Occupancy arrangement with the Port of Los Angeles beginning in 1986. No action has been taken at the facility since June 27, 2001. UPDATE: Doug O'Neal contacted the facility and they have forwarded the most recent Corrective Action Consent Agreement with DTSC proposed changes to the City Attorney for review. Additionally, I asked the Port to update estimated clean-up costs which was the major outstanding requirement before we can proceed. June 16, 2004 Update - The City of LA?s attorney has reviewed the Consent Agreement and concurs with it. The facility?s environmental consultant is in the process of updating costs of clean-up. These items will be submitted to DTSC by end of June. A mid July meeting with DTSC and Port of LA personnel will be scheduled to discuss clean-up approaches, and a revised work schedule will be developed. September 29, 2004 Update - Met with the Port Of LA project officer, Ken Ragland and the environmental consultants. Toured the facility. Early July the facility had forwarded the proposed Consent Agreement to the City of LA?s attorney for review and had not heard back from him after repeated attempts to contact him. Finally in early September the Attorney contacted Ken Ragland and had two concerns regarding the Consent Agreement. I forwarded those concerns on to our attorney, Ramon Perez. I contacted Ramon this morning, September 29, and he assured me that he had gotten the phone number of the City?s attorney and that he would contact him. Once these two issues are resolved, we will finalize the Consent Agreement and proceed with clean-up/closure of the facility. November 1

Description:	RP states that a facility lost power causing the plant to shut down and processes to fail resulting in the release of 2000 gallons of a mixture of cooling tower water and reverse osmosis reject water onto the surface. The process that caused the overflow have been shut down, however, the release is still flowing. Caller states that they are taking steps to mitigate the residual overflow. No waterways have been impacted. Contractor has been hired to perform cleanup.

Property History:	The California Yacht Club(CYC)leased this 9.3875-acre site from the City of Los Angeles Harbor Commission on 13 April 1923. The CYC's improvements to the property included a clubhouse, lighthouse, and tennis courts. DOD acquired the unexpired leasehold to the site and CYC improvements through a Declaration of Taking filed 2 June 1942. The site was leased from the City of Los Angeles Harbor Commission by the Coast Guard under Lease Contract No. Tcg-36296 and Permit Orders Nos. 1918 and 1873. The site was used as a Receiving Station during World War II. The CYC clubhouse was used as the Coast Guard Receiving Station's administrative headquarters. The Coast Guard made many improvements to the site including a gatehouse and sentry box, a pump house and sentry box, an infirmary, and mess hall. A complete listing of improvements is provided in the Proceedings of a Board Survey, 46-48, dated 28 January 1948, when the Receiving Station was declared surplus to the needs of the Coast Guard. On 13 April 1948 the War Assets Administration authorized termination of the lease and disposal of improvements made by the Coast Guard according to the terms of the lease, which required any wharf improvements and underground utilities to be left in place. The CYC did not re-assume the lease, and established a club elsewhere. From photographs it appears that by 1964 no buildings remained on the site. ownership of the site remains with the City of Los Angeles. Other than the City of Los Angeles Fire Station No. 49 at Berth 194, there are no buildings on site. Berth 193 is leased to three individuals for marine storage.

CALIFORNIA YACHT CLUB (Continued) **1024904021**

On the site at Berth 193 there is metal and wooden debris and some stained areas of soil. Given that it is fifty years since the Coast Guard used the site, it is unlikely that any contamination is associated with DOD use.

Background Info:	Keelco Anodes Inc was a lead keels and anodes manufacturer from 1971 to 1990. Disposal practices consisted of disposing keeling operation by-products, which contain lead, in an onsite trench. In 1989, the Department inspected the facility and found lead concentrations ranging between 12,000 and 100,000 milligrams/kilograms (mg/kg) in the onsite soil and up to 39,000 mg/kg on an unpaved dirt road running parallel to the site. Approximately 200 to 300 cubic yards of contaminated soil onsite and 200 cubic yards of contaminated soil offsite on the unpaved road were discovered. In addition, approximately 100,000 pounds of lead scrap were found onsite.
	Not reported
	Possible receptors include workers on the site and approximately 40,000 people either working or living around the site. The site is located in the Long Beach Harbor area and may be a source of lead contamination in San Pedro Bay.
