1 Introduction

1.1 Project Overview

The project proposes demolition of existing buildings and asphalt associated with commercial and industrial uses to allow for construction of an approximately 136,200 square foot (gross area, inclusive of office/mezzanine space) one-story industrial warehouse on a 6.19-acre (gross) property composed of eleven parcels (Assessor's Parcel Numbers [APNs] 0254-111-01, 0132-171-01, 0132-171-02, 0132-171-03, 0132-171-04, 0132-171-05, 0132-171-06, 0132-171-08, 0132-171-09, 0132-171-10, 0132-171-13, and 0132-171-14). In addition to the industrial/warehouse building, the project would include 14 high dock door parking stalls, 91 passenger-vehicle parking spaces, fencing along the project perimeter with automated gates at the driveways, and approximately 62,174 square feet of landscaping. Frontage improvements along South Willow Avenue, West Valley Boulevard, and South Alice Avenue would include curb and gutter, sidewalk and parkway landscaping, right-of-way widening. and an offset cul-de-sac at the end of South Willow Avenue and South Alice Avenue.

The proposed project will require discretionary approvals from the City of Rialto. Actions necessary to fully develop the site as proposed include the following:

- Adoption of Mitigated Negative Declaration (MND)
- General Plan Amendment No. 2022-0002 proposes to amend the City of Rialto Land Use Policy plan (General Plan Exhibit 2.2) to change the land use designation of the Project site from "General Commercial to "Business Park".
- Specific Plan Amendment No. 2022-0003 proposes to amend the Land Use Plan for the Gateway Specific Plan to change the land use designation of the Project site from "Freeway Commercial" to "Industrial Park".
- Conditional Development Permit No. 2022-0039 and Precise Plan of Design No. 2022-0065 provide a development plan, including site layout, architectural design, and landscape plan, for the development of an approximately 136,200 square foot industrial/warehouse building on the Project site. The project would also include approximately 62,174 square feet of landscaping, 91 passenger-vehicle parking spaces, and 14 high dock door parking stalls. Access to the project site would be provided by two driveways: one driveway on the western portion of the site on South Willow Avenue, and one driveway on the eastern portion of the site on South Alice Avenue. The project would also involve the widening of South Alice Avenue and the creation of a cul-de-sac.
- Approval of Tentative Parcel Map (TPM) No. 20662 and TPM 2022-0005

In addition to these discretionary actions, the project will require City review and approval of demolition, construction, grading, off-site improvements, drainage, and related permits to allow for redevelopment of the site.

1.2 California Environmental Quality Act Compliance

The City is the lead California Environmental Quality Act (CEQA) agency responsible for the review and approval of the proposed project. Based on the findings of the Initial Study (IS), the City has made the determination that a Mitigated Negative Declaration (MND) is the appropriate environmental document to be prepared in compliance with CEQA (California Public Resources Code, Section 21000 et seq.). As stated in CEQA Section 21064, an MND may be prepared for a project subject to CEQA when an IS has identified no potentially significant effects on the environment.

This draft Initial Study/Mitigated Negative Declaration (IS/MND) has been prepared by the City as lead agency and is in conformance with Section 15070(a) of the CEQA Guidelines (14 CCR 15000 et seq.). The purpose of the MND and the IS Checklist is to determine any potentially significant impacts associated with the proposed project and to incorporate mitigation measures into the project design, as necessary, to reduce or eliminate the significant or potentially significant effects of the project.

1.3 Public Review Process

In accordance with CEQA, a good faith effort has been made during the preparation of this IS/MND to contact affected agencies, organizations, and persons who may have an interest in this project.

In reviewing the IS/MND, affected public agencies and the interested public should focus on the sufficiency of the document in identifying and analyzing the project's possible impacts on the environment. The Draft IS/MND and related documents are available for review on City's website (https://www.yourrialto.com/314/Current-Projects).

Comments on the IS/MND may be made in writing before the end of the public review period. Following the close of the public comment period, the City will consider this IS/MND and comments thereto in determining whether to approve the proposed project.

Written comments on the IS/MND should be sent to the following address by Tuesday, May 16, 2023.

City of Rialto
Community Development Department
150 South Palm Avenue
Rialto, California 92376
Contact: Mr. Daniel Casey
Email: dcasey@rialtoca.gov

1.4 Initial Study Checklist

Dudek, under the City's guidance, prepared the project's Environmental Checklist (i.e., IS) per CEQA Guidelines Sections 15063–15065. The CEQA Guidelines include a suggested checklist to indicate whether a project would have an adverse impact on the environment. The checklist is found in Section 3 of this document. Following the Environmental Checklist, Sections 3.1 through 3.21 include an explanation and discussion of each significance determination made in the checklist for this project.

For this IS/MND, the following four possible responses to each individual environmental issue area are included in the checklist:

1. Potentially Significant Impact
2. Less-than-Significant Impact with Mitigation Incorporated
3. Less-than-Significant Impact
4. No Impact

The checklist and accompanying explanation of checklist responses provide the information and analysis necessary to assess relative environmental impacts of the project. In doing so, the City will determine the extent of additional environmental review, if any, for the project.

2 Project Description

2.1 Project Location

The project site is located in the central part of the City in the southwestern portion of San Bernardino County. Regionally, the City is bordered by unincorporated Riverside County and the Cajon Pass to the north, the Cities of San Bernardino and Colton to the east, unincorporated Riverside County and the City of Riverside to the south, and the City of Fontana to the west. Locally, the project site is bounded to the north by West Valley Boulevard and self-storage and manufacturing uses, to the east by South Alice Avenue and the Rialto Channel, to the south by Interstate (I) 10, and to the west by South Willow Avenue and manufacturing and commercial uses (Figure 2-1, Project Location). The project site is composed of eleven parcels ('APNs 0254-111-01, 0132-171-01, 0132-171-02, 0132-171-03, 0132-171-04, 0132-171-05, 0132-171-06, 0132-171-08, 0132-171-09, 0132-171-10, 0132-171-13, and 0132-171-14) (Figure 2-2, Aerial Overview). Regional access to the project area is provided by I-10 to the south, I-215 to the east, and State Route (SR) 66 to the north.

2.2 Environmental Setting

City of Rialto

The City's land use pattern is defined by nearly 100 years of historical growth. The historic downtown and surrounding older neighborhoods, with smaller residential lots and small central business district, provide a walkable urban core. Suburban tract homes from the 1950s and 1960s, away from downtown, have defined much of the City. Newer residential neighborhoods have filled in the northern areas.

Commercial uses are focused along Foothill Boulevard (Historic Route 66), Riverside Avenue, Valley Boulevard, and Baseline Road at Riverside Avenue. These corridors and intersections, along with downtown, constitute the City's major commercial areas.

Industrial and warehouse facilities are clustered along the City's rail lines, where access to shipping facilities was important through the mid-1900s, particularly for the citrus industry. Other industrial activities have clustered north of SR-210 and south of I-10. Other industrial areas include land adjacent to the Rialto Airport in the north and near SR-210, and I-10 and the Union Pacific railroad line in the south. Many of the industrial businesses take advantage of the City's location and access to this distribution network (City of Rialto 2010).

Gateway Specific Plan

The project site is located within the boundaries of the City's Gateway Specific Plan area. The Gateway Specific Plan is intended to revitalize and upgrade the Gateway area of the City. The Gateway Specific Plan proposes a mixed-use project with retail uses along Riverside Avenue, office and research and development parks fronting on San Bernardino Avenue, freeway commercial (hotels, eating establishments, and auto services) along Valley Boulevard, and light industrial parks in the western portion of the plan area (City of Rialto 1990).

Project Site

The approximately 6.19-gross-acre project site is south of West Valley Boulevard between South Willow Avenue and South Alice Avenue (Figure 2-2). Under existing conditions, the project site is paved and contains a truck driving school, diesel repair operation, and consignment shop.

The City's General Plan Existing Land Use Map designates the project site as General Commercial with a Specific Plan overlay (Figure 2-3, General Plan Land Use) (City of Rialto 2010). The City's Zoning Map designates the project site as Gateway Specific Plan (Figure 2-4, Zoning) (City of Rialto 2013). Specifically, the Gateway Specific Plan designates the project site as Freeway Commercial (F-C) (Figure 2-5, Gateway Specific Plan) (City of Rialto n.d.). Regional access to the project area is provided by I-10 south of the project site, I-15 west of the site, and I-215 east of the site.

Surrounding Land Uses

The project site is located in a predominantly urbanized area of the City. Specific land uses in the immediate project area consist of the following:

- **North:** West Valley Boulevard and self-storage and manufacturing uses
- **East:** South Alice Avenue and the Rialto Channel
- **South:** I-10
- **West:** South Willow Avenue and manufacturing and commercial uses

2.3 Project Characteristics

The project would involve demolition of the existing on-site buildings and asphalt associated with commercial and industrial uses to allow for construction of an approximately 136,200 square foot (gross area, inclusive of office/mezzanine space) one-story industrial warehouse on the project site (Figure 2-6, Conceptual Site Plan). The building would be composed of approximately 130,200 square feet of warehouse space and 6,000 square feet of mezzanine and office space. The project would also include approximately 62,174 square feet of landscaping, 91 passenger-vehicle parking spaces, and 14 high dock door parking stalls. The project would not contain any cold storage space. Figure 2-7 provides conceptual elevations of the project. Figure 2-8 provides a conceptual rendering of the Project.

On- and Off-Site Improvements

A variety of trees, shrubs, and groundcovers would be planted within the project frontage's landscape setback area, within the landscape areas found around the warehouse building, and throughout the project site. Figure 2-9 provides the project's conceptual landscape plan. Fencing would be provided along the project perimeter with automated gates at proposed driveways. The project would also include frontage improvements along South Willow Avenue, West Valley Boulevard, and South Alice Avenue, including curb and gutter, sidewalk and parkway landscaping, right-of-way widening. and an offset cul-de-sac at the end of South Willow Avenue and South Alice Avenue.

Site Access and Parking

Access to the project site would be provided by two driveways: one driveway on the western portion of the site on South Willow Avenue, and one driveway on the eastern portion of the site on South Alice Avenue. Automated gates at each driveway would include a pre-emption device installed for both directions of travel with a Knox key switch override.

The project would include a total of 91 passenger parking stalls and 14 high dock door parking stalls. A summary of proposed passenger vehicle parking is provided in Table 2-1.

Table 2-1. Summary of Passenger Parking Stalls

Passenger Parking Stall Type	Number of Stalls
Building 1	
Standard	73
Van ADA	1
Standard ADA	3
Van EV ADA	1
Standard EV ADA	1
EV	7
Clean Air	5
Total Passenger Parking Stalls	91
High Dock Door Stalls Provided	14
Passenger Parking Stalls Required	91
Total Stalls	**91**

Notes: ADA = Americans with Disability Act; EV = electric vehicle.

Utility Improvements

The project site is currently served by domestic water, sanitary sewer, electrical, natural gas, and telecommunication service. The project would connect to the existing facilities located on and in the immediate vicinity of the project site.

Domestic Water

Domestic water would be provided to the project site by the Rialto Public Works Department Water Division. Water service is provided for residential, commercial, industrial, governmental, and landscaping purposes. The project site is already served by existing water lines within West Valley Boulevard and South Willow Avenue.

Sanitary Sewer

Rialto's sewer system is maintained by the City. The sewage from Rialto is treated at the Rialto Wastewater Treatment Plant, which is currently under construction to expand the facility. The project site is currently served by existing sanitary sewer lines within West Valley Boulevard and South Willow Avenue. As part of the project, an existing 8" sewer main running east to west through the center of the project site would be removed and replaced with a new 8" sewer main that would run east to west on the project site and just south of the proposed warehouse.

Natural Gas, Electrical Service, and Telecommunications

The Southern California Gas Company would provide natural gas service to the project site. Southern California Edison would provide electric service. Telecommunication services are provided by AT&T. The project site is already served by these facilities on the southern portion of the project site.

Storm Drainage

The project proposes an internal storm drain system to collect runoff and route drainage into on-site basins on the southern portion of the project site. Flows would generally be conveyed from the north to the south, ultimately entering an underground infiltration system along the southern edge on the project site, north of I-10. The overflow from the underground infiltration system, which has the capacity to contain flows from 100-year storm events, would be allowed to overflow to a proposed parkway culvert onto Alice Avenue.

2.4 Project Approvals

The actions and/or approvals that the City needs to consider for the proposed project include, but are not limited to, the following. This list is preliminary, and may not be comprehensive:

Lead Agency Approvals

- Conditional Development Permit
- Tentative Parcel Map
- Precise Plan of Design
- General Plan Amendment
- Specific Plan Amendment

Subsequent non-discretionary approvals (which would require separate processing through the City) would include, but may not be limited to, a demolition permit, grading permit, building permits, and occupancy permits.

3 Initial Study Checklist

1. **Project title:**

   Alice and Willow Avenue Warehouse Project

2. **Lead agency name and address:**

   City of Rialto
   Community Development Department
   150 South Palm Avenue
   Rialto, California 92376

3. **Contact person and phone number:**

   Mr. Daniel Casey
   cdasey@rialtoca.gov
   909.820.2535

4. **Project location:**

   The project site is bounded to the north by West Valley Boulevard and self-storage and manufacturing uses, to the east by South Alice Avenue and the Rialto Channel, to the south by Interstate (I) 10, and to the west by South Willow Avenue and manufacturing and commercial uses. The project site is composed of eleven parcels (Assessor's Parcel Numbers 0254-111-01, 0132-171-01, 0132-171-02, 0132-171-03, 0132-171-04, 0132-171-05, 0132-171-06, 0132-171-08, 0132-171-09, 0132-171-10, 0132-171-13, and 0132-171-14).

5. **Project sponsor's name and address:**

   Patriot Development Partners
   12126 West Sunset Boulevard
   Los Angeles, California 90094

6. **General plan designation:**

   General Commercial with a Specific Plan overlay

7. **Zoning:**

   Gateway Specific Plan

8. **Description of project. (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary):**

The project includes demolition of existing buildings and asphalt associated with commercial and industrial uses and construction of an approximately 136,200 square foot industrial/warehouse building on an approximately 6.19-acre (gross) property. In addition to the industrial/warehouse building, the project would include landscaping, passenger vehicle parking spaces, high dock door parking stalls.

9. **Surrounding land uses and setting: Briefly describe the project's surroundings:**

The project site is located in a predominantly urbanized area of the City. Specific land uses in the immediate project area consist of the following:

- **North:** West Valley Boulevard and self-storage and manufacturing uses
- **East:** South Alice Avenue and the Rialto Channel
- **South:** I-10
- **West:** South Willow Avenue and manufacturing and commercial uses

10. **Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

No outside public agency approvals are required.

11. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

Refer to discussion in Section 3.18, Tribal Cultural Resources, below. In accordance with California Assembly Bill 52 requirements, the City initiated Tribal consultation on February 6, 2023, the results of which will be summarized in the Final MND.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology and Soils	☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☐ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

Determination (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Date

Evaluation of Environmental Impacts

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
    a. Earlier Analysis Used. Identify and state where they are available for review.
    b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
    a. the significance criteria or threshold, if any, used to evaluate each question; and
    b. the mitigation measure identified, if any, to reduce the impact to less than significance

3.1 Aesthetics

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS** – Except as provided in Public Resources Code Section 21099, would the project**:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) Would the project have a substantial adverse effect on a scenic vista?

Less-than-Significant Impact. Scenic vistas and other important visual resources are typically associated with natural landforms such as mountains, foothills, ridgelines, coastlines, and open space areas. The City of Rialto General Plan Open Space and Conservation Element states that "the views of the San Gabriel and San Bernardino Mountains and the foothills provide the perfect backdrop for creating scenic vistas throughout the City," and "the City should take great care in ensuring that building heights and scale of projects do not hinder or impede scenic view" (City of Rialto 2010).

The San Gabriel Mountains and the San Bernardino Mountains are located approximately 9 miles northwest and northeast of the project site and the Jurupa Mountains and foothills are located approximately 3 miles southwest of the project site. Based on these distances, as well as the presence of existing intervening natural topographical variations and built urban features, the project site is not located within the direct viewshed of these scenic vistas. In addition, the proposed building would be similar in height to existing industrial/warehouse buildings surrounding the project site. As such, the project is not expected to block views of or from these scenic resources; therefore, impacts associated with scenic vistas would be less than significant.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. According to the California Department of Transportation (Caltrans) California Scenic Highway Mapping System (Caltrans 2019), the only officially designated state scenic highway in San Bernardino County is a 16-mile portion of SR-38 from South Fork Campground to State Lane. This roadway segment is located more than 30 miles east of the project site. Based on the distance between this officially designated state scenic highway, and because of the intervening natural topography and urban improvements between this roadway segment and the project site, the project would not be located within the viewshed of this officially designated state scenic highway. In addition, the Rialto General Plan does not identify any designated scenic corridors (City of Rialto 2010); therefore, no impact associated with scenic highways or designated scenic corridors would occur.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Short-Term Construction Impacts

Less-than-Significant Impact. Consistent with standard construction practices, equipment, vehicles, and materials are expected to be staged within a designated area on the project site during project construction. Although equipment staging could potentially be viewed from adjacent properties, this would be temporary and would cease upon completion of construction; therefore, short-term construction impacts associated with the existing visual character and quality would be less than significant.

Long-Term Operational Impacts

Less-than-Significant Impact. The project site is located in an urbanized, industrial portion of the City, and is bound by existing development in all directions. The project site is currently composed of a truck driving school and a diesel repair operation. The project would have a similar land use and development intensity as the existing site and would not significantly alter the existing visual character of the project site compared with existing conditions.

However, as a warehouse building, the project would be visually consistent with the existing industrial development. The project building would be similar in height to other industrial/warehouse buildings surrounding the project site. In addition, the approximately 136,200-square-foot project would be of similar size and scale compared to existing surrounding development in the project area. Thus, development of the project would not represent an adverse or detrimental impact on existing on-site or off-site visual character.

Regarding visual quality, the project would incorporate similar architectural elements to existing development located in the project area, including a complementary neutral color palette and a variety of building materials. Setback landscape areas along the project's frontages would also soften views of the project site and enhance the visual quality of the project.

In addition, to ensure that both current and future development within the City is designed and constructed to conform to existing visual character and quality of the surrounding built environment, the City's Zoning

Code includes design standards related to building height, parking, landscaping requirements, and other visual considerations. The purpose is to regulate the uses of buildings and structures, and to encourage the most appropriate use of land. As a part of the City's development review process, project plans are reviewed with the intent of encouraging efficient, aesthetic, and desirable use of land. Therefore, long-term operational impacts associated with existing visual character and quality would be less than significant.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Short-Term Construction Impacts

No Impact. In compliance with the City's Noise Ordinance (Chapter 9.50 of the Rialto Municipal Code), from October 1 through April 30, construction activities of the project would be limited to between 7:00 a.m. and 5:30 p.m. on Monday through Friday, and between 8:00 a.m. and 5:00 p.m. on Saturday. No construction work is permissible on Sunday or state holidays. From May 1 through September 30, construction work would be limited to between 6:00 a.m. and 7:00 p.m. on Monday through Friday, and between 8:00 a.m. and 5:00 p.m. on Saturday. No construction work is permissible on Sundays or state holidays (City of Rialto 2022a). As such, project construction would be limited to the daytime hours, and nighttime lighting would not be required until the project is operational; therefore, no short-term construction impacts associated with light and glare would occur.

Long-Term Operational Impacts

Less-than-Significant Impact. Consistent with Section 18.61.140 of the City's Zoning Code, exterior lighting would be provided for security and safety purposes; however, the lighting would be designed to avoid spillover glare beyond the project site. Thus, all exterior lighting has been designed to be shielded/hooded to prevent light trespass onto nearby properties. In addition, the project would use a variety of non-reflective building materials, and although some new reflective materials (i.e., windows) would be introduced onto the project site, the project as a whole would not be a source of glare in the project area; therefore, long-term operational impacts associated with light and glare would be less than significant.

3.2 Agriculture and Forestry Resources

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
II.	**AGRICULTURE AND FORESTRY RESOURCES** – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d)	Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) ***Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?***

No Impact. The project site currently consists of developed land and is not used for agricultural purposes. According to the California Department of Conservation Important Farmland Finder (CDOC 2016), the project site is identified as "Urban and Built-Up Land." The project site does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (collectively, "Important Farmland"). The project would not occur within any farmland locations and would not result in the conversion of Prime or Unique

Farmland, or Farmland of Statewide Importance; therefore, no impacts associated with the conversion of Important Farmland would occur.

b) ***Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?***

No Impact. Refer to Section 3.2(a).

c) ***Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?***

No Impact. The project site is zoned as Gateway Specific Plan—Freeway Commercial and is located within a developed area. There are no areas zoned for forest land within the vicinity of the project site. Therefore, no impacts associated with forest land would occur.

d) ***Would the project result in the loss of forest land or conversion of forest land to non-forest use?***

No Impact. Refer to Section 3.2(c). The proposed project would not involve the conversion of forest land to non-forest use. Therefore, no impact with forest land would occur.

e) ***Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?***

No Impact. Refer to Section 3.2(a). The project site is zoned as Gateway Specific Plan—Freeway Commercial and is located within a developed area. Further, no off-site improvement associated with the project would result in changes to other properties designated as Farmland or forest land. There are no areas zoned for agricultural use or identified as forest land within the vicinity of the project site. Therefore, no impacts associated with forest land would occur.

3.3 Air Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less-than-Significant Impact. The project site is located within the South Coast Air Basin (SCAB), which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties and all of Orange County, and is within the jurisdictional boundaries of South Coast Air Quality Management District (SCAQMD).

The South Coast Air Quality Management District (SCAQMD) administers the Air Quality Management Plan (AQMP) for the South Coast Air Basin (SCAB), which is a comprehensive document outlining an air pollution control program for attaining all California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards. The AQMP is the regional path towards improving air quality and meeting federal standards for air pollutants, and each AQMP incorporates significant new scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes, and new air quality modeling tools. Currently, the most recent approved SCAQMD AQMP is the 2022 AQMP (SCAQMD 2022a), which was adopted by the SCAQMD Governing Board in December 2022. The SCAQMD 2022 AQMP was developed to address the attainment of the 2015 national 8-hour ozone (O_3) ambient air quality standard (70 parts per billion) for the SCAB and Coachella Valley. The 2022 AQMP provides actions, strategies, and steps needed to reduce air pollutant emissions and meet the O_3 standard by 2037.

The purpose of a consistency finding with regard to the AQMP is to determine if a project is consistent with the assumptions and objectives of the regional air quality plans, and if it would interfere with the region's ability to comply with federal and state air quality standards. SCAQMD has established criteria for determining consistency with the currently applicable AQMP in Chapter 12, Sections 12.2 and 12.3 of the SCAQMD CEQA Air Quality Handbook. These criteria are (SCAQMD 1993):

- Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.
- Whether the project would exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

To address the first criterion, project-generated criteria air pollutant emissions have been estimated and analyzed for significance and are addressed in Section 3.3(b) below. As presented in Section 3.3(b), construction and operation of the project would not generate criteria air pollutant emissions that exceed SCAQMD's thresholds.

The second criterion regarding the project's potential to exceed the assumptions in the AQMP or increments based on the year of project buildout and phase is primarily assessed by determining consistency between

the project's land use designations and its potential to generate population growth. In general, projects are considered consistent with, and not in conflict with or obstructing implementation of, the AQMP if the growth in socioeconomic factors is consistent with the underlying regional plans used to develop the AQMP (per Consistency Criterion No. 2 of the SCAQMD CEQA Air Quality Handbook). SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, employment by industry) developed by the Southern California Association of Governments (SCAG) for its Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (SCAG 2020a). This document, which is based on general plans for cities and counties in the SCAB, is used by SCAQMD to develop the AQMP emissions inventory (SCAQMD 2022a).[1] Connect SoCal 2020 and the associated Regional Growth Forecast are generally consistent with the local plans; therefore, the 2022 AQMP is generally consistent with local government plans.

The project site is designated General Commercial in the Rialto General Plan, and zoned Gateway Specific Plan – Freeway Commercial. While the project requires a land use designation change to Industrial Park (I-P), this change is already accounted for within the Gateway Specific Plan. Therefore, implementation of the project would not generate an increase in growth demographics that would conflict with existing projections within the region. Accordingly, the project is consistent with the SCAG RTP/SCS forecasts used in the SCAQMD AQMP development.

In summary, based on the considerations presented for the two criteria, impacts relating to the project's potential to conflict with or obstruct implementation of the applicable AQMP would be less than significant.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less-than-Significant Impact. Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are relevant in the determination of whether a project's individual emissions would have a cumulatively significant impact on air quality.

SCAQMD has adopted thresholds to address the significance of air quality impacts resulting from a project. A project would result in a substantial contribution to an existing air quality violation of the NAAQS or CAAQS for ozone (O_3), which is a nonattainment pollutant, if the project's construction emissions would exceed SCAQMD's volatile organic compound (VOC) or oxides of nitrogen (NO_x) significance thresholds shown in Table 3.3-1. These emission-based thresholds for O_3 precursors are intended to serve as a surrogate for an "ozone significance threshold" (i.e., the potential for adverse O_3 impacts to occur) because O_3 itself is not emitted directly, and the effects of an individual project's emissions of O_3 precursors (VOC and NO_x) on O_3 levels in ambient air cannot be determined through air quality models or other quantitative methods. The SCAB is also nonattainment for the state particulate matter with an aerodynamic diameter less than or equal to 10 microns

[1] Information necessary to produce the emissions inventory for the SCAB is obtained from SCAQMD and other governmental agencies, including the California Air Resources Board (CARB), California Department of Transportation (Caltrans), and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into its Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. SCAG's socioeconomic and transportation activities projections in their 2016 RTP/SCS are integrated in the 2016 AQMP (SCAQMD 2017).

in size (coarse particulate matter, or PM_{10}) and federal and state particulate matter with an aerodynamic diameter less than or equal to 2.5 microns in size (fine particulate matter, or $PM_{2.5}$) standards.

Table 3.3-1. SCAQMD Air Quality Significance Thresholds

Criteria Pollutants Mass Daily Thresholds		
Pollutant	**Construction (Pounds per Day)**	**Operation (Pounds per Day)**
VOCs	75	55
NO_x	100	55
CO	550	550
SO_x	150	150
PM_{10}	150	150
$PM_{2.5}$	55	55
Lead[a]	3	3
TACs and Odor Thresholds		
TACs[b]	Maximum incremental cancer risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic and acute hazard index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	
Ambient Air Quality Standards for Criteria Pollutants[c]		
NO_2 1-hour average NO_2 annual arithmetic mean	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (state) 0.030 ppm (state) and 0.0534 ppm (federal)	
CO 1-hour average CO 8-hour average	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20 ppm (state) and 35 ppm (federal) 9.0 ppm (state /federal)	
PM_{10} 24-hour average	10.4 μg/m³ (construction)[d]	
PM_{10} annual average	2.5 μg/m³ (operation) 1.0 μg/m³	
$PM_{2.5}$ 24-hour average	10.4 μg/m³ (construction)[d] 2.5 μg/m³ (operation)	

Source: SCAQMD 2019.

Notes: SCAQMD = South Coast Air Quality Management District; VOCs = volatile organic compounds; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; TAC = toxic air contaminant; NO_2 = nitrogen dioxide; ppm = parts per million; μg/m³ = micrograms per cubic meter.

[a] The phaseout of leaded gasoline started in 1976. Since gasoline no longer contains lead, the project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.

[b] TACs include carcinogens and non-carcinogens.

[c] Ambient air quality standards for criteria pollutants are based on SCAQMD Rule 1303, Table A-2, unless otherwise stated.

[d] Ambient air quality threshold are based on SCAQMD Rule 403.

Construction Emissions

Proposed construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and VOC off-gassing) and off-site sources (i.e., on-road vendor trucks, haul trucks, and worker vehicle trips). Construction emissions can vary substantially from day to day, depending on the level of activity; the specific type of operation; and, for particulate matter, the prevailing weather conditions. Therefore, such emission levels can only be approximately estimated.

The California Emissions Estimator Model (CalEEMod) Version 2020.4.0 was used to estimate emissions from construction of the project. Internal combustion engines used by construction equipment, trucks, and worker vehicles would result in emissions of VOCs, NO_x, carbon monoxide (CO), sulfur oxides (SO_x), PM_{10}, and $PM_{2.5}$. PM_{10} and $PM_{2.5}$ emissions would also be generated by entrained dust, which results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil. The project would be required to comply with SCAQMD Rule 403 to control dust emissions generated during any dust-generating activities. Standard construction practices that would be employed to reduce fugitive dust emissions include watering of the active dust areas two times per day, with additional watering depending on weather conditions. The CalEEMod default assumptions were used for estimating fugitive dust emissions from grading on site. The project would involve application of architectural coating (e.g., paint and other finishes) for painting the interior and exterior of the building as well as parking lot striping. In accordance with SCAQMD Rule 1113, Architectural Coatings, only low-VOC coatings (no more than 50 grams per liter VOC content) will be used for the building interiors and exteriors. Table 3.3-2 presents the estimated maximum daily construction emissions generated during construction of the project. Details of the emission calculations are provided in Appendix A-1.

Table 3.3-2. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

Year	VOC	NOx	CO	SOx	PM_{10}	$PM_{2.5}$
	pounds per day					
2024	2.73	27.37	20.72	0.05	10.30	5.74
2025	64.32	14.32	20.34	0.05	2.08	0.93
Maximum	**64.32**	**27.37**	**20.72**	**0.05**	**10.30**	**5.74**
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Threshold Exceeded?	No	No	No	No	No	No

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SCAQMD = South Coast Air Quality Management District.
Emissions include compliance with SCAQMD Rules 403 and use of low-VOC architectural coatings (i.e., no more than 50 grams per liter VOC content) for building interiors and exteriors.
See Appendix A-1 for complete results.

As shown in Table 3.3-2, project construction would not exceed SCAQMD's daily thresholds. Therefore, construction impacts associated with criteria air pollutant emissions would be less than significant.

Operational Emissions

Emissions from the operational phase of the project were estimated using CalEEMod. Table 3.3-3 presents the maximum daily area, energy, mobile, and off-road source emissions associated with operation of the

project in year 2025. The values shown are the maximum summer or winter daily emissions (i.e., worst-case) results from CalEEMod. Details of the emission calculations are provided in Appendix A-1.

Table 3.3-3. Estimated Maximum Daily Operation Criteria Air Pollutant Emissions

Emissions Source	VOC	NOx	CO	SOx	PM_{10}	$PM_{2.5}$
	Pounds per Day					
Area	3.08	<0.01	0.02	0.00	<0.01	<0.01
Energy	0.01	0.07	0.06	<0.01	0.01	0.01
Mobile	0.56	16.53	8.57	0.10	5.10	1.52
Off-Road (Forklifts/Yard Truck)	1.67	15.60	19.83	0.03	0.79	0.72
Total	**5.32**	**32.20**	**28.48**	**0.13**	**5.89**	**2.24**
SCAQMD Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Threshold Exceeded?	No	No	No	No	No	No

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; CNG = compressed natural gas; SCAQMD = South Coast Air Quality Management District.
See Appendix A-1 for complete results. Columns may not add due to rounding. Values of "<0.01" indicate that the estimated emissions are less than two decimals.

As shown in Table 3.3-3, the increase in criteria air pollutant emissions associated with project operations would not exceed SCAQMD's significance thresholds and, therefore, operational impacts associated with criteria air pollutant emissions would be less than significant.

In considering cumulative impacts from the project, the analysis must specifically evaluate a project's contribution to the cumulative increase in pollutants for which the SCAB is designated as nonattainment for the CAAQS and NAAQS. If a project's emissions would exceed SCAQMD's significance thresholds, it would be considered to have a cumulatively considerable contribution to nonattainment status in the SCAB. If a project does not exceed thresholds and is determined to have less than significant project-specific impacts, it may still contribute to a significant cumulative impact on air quality. The basis for analyzing the project's cumulatively considerable contribution is if the project's contribution accounts for a significant proportion of the cumulative total emissions (i.e., it represents a "cumulatively considerable contribution" to the cumulative air quality impact) and consistency with SCAQMD's 2022 AQMP, which addresses cumulative emissions in the SCAB.

The SCAB has been designated as a federal nonattainment area for O_3 and $PM_{2.5}$ and a state nonattainment area for O_3, PM_{10}, and $PM_{2.5}$. The nonattainment status is the result of cumulative emissions from various sources of air pollutants and their precursors within the SCAB, including motor vehicles, off-road equipment, and commercial and industrial facilities. Construction and operation of the project would generate VOC and NO_x emissions (which are precursors to O_3) and emissions of PM_{10} and $PM_{2.5}$. As indicated in Tables 3.3-2 and 3.3-3, project-generated construction and operational emissions would not exceed SCAQMD's emission-based significance thresholds for VOC, NO_x, PM_{10}, or $PM_{2.5}$ and therefore the project would not cause a cumulatively considerable net increase of a criteria pollutant for which the region is non-attainment.

Based on the previous considerations, the project would not result in a cumulatively considerable increase in emissions of nonattainment pollutants, and cumulative impacts would be less than significant.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less-than-Significant Impact.

Localized Significance Thresholds

In addition to the emission-based thresholds listed in Table 3.3-1, SCAQMD also recommends the evaluation of localized air quality impacts to sensitive receptors in the immediate vicinity of the project as a result of construction and operational activities. Sensitive receptors are those individuals more susceptible to the effects of air pollution than the population at large. People most likely to be affected by air pollution include children, the elderly, and people with cardiovascular and chronic respiratory diseases. According to SCAQMD, sensitive receptors include residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993). The nearest sensitive receptors are along West Valley Boulevard (Days Inn Hotel) and are located approximately 300 meters from the project site boundary. The nearest residence and school are located approximately 370 and 420 meters from the project boundary, respectively.

Such an evaluation is referred to as a localized significance threshold (LST) analysis. For project sites of 5 acres or less, the SCAQMD LST Methodology (SCAQMD 2009) includes lookup tables that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance criteria (i.e., the emissions would not cause an exceedance of the applicable concentration limits for nitrogen dioxide [NO_2], CO, PM_{10}, and $PM_{2.5}$) without performing project-specific dispersion modeling.

The LST significance thresholds for NO_2 and CO represent the allowable increase in concentrations above background levels in the vicinity of a project that would not cause or contribute to an exceedance of the relevant ambient air quality standards, while the threshold for PM_{10} represents compliance with Rule 403 (Fugitive Dust). The LST significance threshold for $PM_{2.5}$ is intended to ensure that construction emissions do not contribute substantially to existing exceedances of the $PM_{2.5}$ ambient air quality standards. The allowable emission rates depend on the following parameters:

- Source-receptor area (SRA) in which the project is located
- Size of the project site
- Distance between the project site and the nearest sensitive receptor (e.g., residences, schools, hospitals)

The project site is located in SRA 34 (Central San Bernardino Valley). LST pollutant screening level concentration data is currently published for 1-, 2-, and 5-acre sites for varying distances (25-, 50-, 100-, 200-, and 500-meters). The project site is a total of 6.11 acres. As mentioned above, the nearest sensitive receptors are located approximately 300 meters from the project site boundary. The SCAQMD CalEEMod LST guidance states that tractors, graders, and rubber-tired dozers can be assumed to disturb half an acre each over an 8-hour workday; during the site preparation phase, 7 dozers and tractors will be operated simultaneously, translating to an assumption of 3.5 disturbed acres (SCAQMD n.d.). Since the SCAQMD lookup tables do not have LSTs for the project-specific daily disturbed acreage or sensitive receptor distance, for construction, the LST values for a 5-acre disturbed area and a receptor distance of 200 meters were used for construction to be conservative. For operations, based on the total project site of 6.11-acres, LST values for a 5-acre project site and a receptor distance of 200 meters were used to be conservative. LSTs are more stringent for smaller areas (i.e., 1-acre is more stringent than 2-acre and 5-acre LSTs); therefore, the use of a 2-acre LST for construction and 5-acre LST for operations is conservative.

Construction activities associated with the project would result in temporary sources of on-site fugitive dust and construction equipment emissions. During operation, emissions from area sources (landscaping equipment), energy (natural gas combustion), on-site cars and trucks, and forklifts were included in the localized analysis. The passenger vehicle and truck trips during construction and operation were modeled using a 1,000-foot trip distance to capture on-site emissions. The maximum allowable daily emissions that would satisfy the SCAQMD localized significance criteria for SRA 34 are presented in Table 3.3-4 and compared to the maximum daily on-site construction and operational emissions.

Table 3.3-4. Localized Significance Thresholds Analysis for the Project

Pollutant	Project Emissions (Pounds per Day)	LST Criteria (Pounds per Day)	Exceeds LST?
Construction[a]			
NO_2	27.24	378	No
CO	19.94	6,346	No
PM_{10}	10.08	83	No
$PM_{2.5}$	5.68	26	No
Operations[b]			
NO_2	17.27	486	No
CO	21.92	8,532	No
PM_{10}	0.83	26	No
$PM_{2.5}$	0.74	9	No

Source: SCAQMD 2009.
Notes: LST = localized significance threshold; NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
See Appendix A-1 for detailed results.
These estimates reflect control of fugitive dust required by Rule 403 and represent the worst-case operating scenario during construction.
[a] For construction, localized significance thresholds were determined based on the values for a 2-acre disturbed area at a distance of 200 meters (656 feet) from the nearest sensitive receptor.
[b] For operations, localized significance thresholds were determined based on the values for a 5-acre site at a distance of 200 meters (656 feet) from the nearest sensitive receptor.

As shown in Table 3.3-4, the project LST would not exceed the established significance thresholds, and thus, would result in a less than significant localized impact to sensitive receptors during construction and operation.

CO Hotspots

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed CO "hotspots." CO transport is extremely limited and disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections operating at an unacceptable level of service (LOS) (LOS E or worse is unacceptable). Projects contributing to adverse traffic impacts may result in the formation of a CO hotspot. Additional analysis of CO hotspot impacts would be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots.

Title 40 of the Code of Federal Regulations, Section 93.123(c)(5), Procedures for Determining Localized CO, PM_{10}, and $PM_{2.5}$ Concentrations (Hot-Spot Analysis), states that "CO, PM_{10}, and $PM_{2.5}$ hot-spot analyses are not required to consider construction-related activities, which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established 'Guideline' methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site" (40 CFR 93.123). While project construction would involve on-road vehicle trips from trucks and workers during construction, construction activities would last approximately 15 months and would not require a project-level construction hotspot analysis.

For long-term operations, as provided in Section 3.17, Transportation, the project had a less than significant impact with regard to VMT, which supports that the project is not a large traffic generator. Based on these considerations, the proposed project would not generate traffic that would contribute to potential adverse traffic impacts that may result in the formation of CO hotspots. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SCAB is steadily decreasing. Overall, the proposed project would result in a less-than-significant impact to air quality with regard to potential CO hotspots.

Toxic Air Contaminants

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute (immediate) and/or chronic (cumulative) non-cancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

TACs are identified by federal and state agencies based on a review of available scientific evidence. In the state of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics "Hot Spots" Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs into the atmosphere.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources, such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources, such as automobiles; and area sources, such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

A health risk assessment (HRA) was performed to evaluate potential health risk associated with construction and operation of the project. The following discussion summarizes the dispersion modeling and HRA methodology; supporting HRA documentation, including detailed assumptions, is presented in Appendix A-2.

For risk assessment purposes, PM_{10} in diesel exhaust is considered diesel particulate matter (DPM), originating mainly from off-road equipment operating at a defined location for a given length of time at a given distance from sensitive receptors. Less-intensive, more-dispersed emissions result from on road vehicle exhaust (e.g., heavy-duty diesel trucks).

The air dispersion modeling methodology was based on SCAQMD's Modeling Guidance for American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD) (SCAQMD 2022b). Air dispersion modeling was performed using the EPA's American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD) Version 22112 modeling system (computer software) with the Lakes Environmental Software implementation/user interface, AERMOD View Version 11.2. The HRA followed the Office of Environmental Health Hazard Assessment (OEHHA) 2015 guidelines (OEHHA 2015) and SCAQMD guidance to calculate the health risk impacts at all proximate receptors as further discussed below. The dispersion modeling included the use of standard regulatory default options. AERMOD parameters were selected consistent with the SCAQMD and EPA guidance and identified as representative of the project site and project activities. Principal parameters of this modeling are presented in Table 3.3-5.

Table 3.3-5. American Meteorological Society/Environmental Protection Agency Regulatory Model Principal Parameters

Parameter	Details
Meteorological Data	AERMOD-specific meteorological data for the Fontana air monitoring station (FONT) was used for the dispersion modeling based on the recommendation of the SCAQMD.
Urban versus Rural Option	Urban areas typically have more surface roughness as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. According to SCAQMD guidelines, the urban dispersion option was selected.
Terrain Characteristics	Digital elevation data were imported into AERMOD and elevations were assigned to receptors and emission sources, as necessary. Digital elevation data were obtained through the AERMOD View in the U.S. Geological Survey's National Elevation Dataset format with a resolution of 1 arc-second resolution.
Source Release Characterizations	The following modeling parameters were based on the best information available at the time of analysis, for both construction and operational sources. <u>Construction:</u> ▪ Off-road equipment and on-site trucks were modeled as a line of adjacent volume sources across the project site with a release height of 5 meters, a plume height of 10 meters, and plume width of 10 meters. <u>Operations:</u> ▪ Diesel truck travel was modeled as a line of adjacent volume sources on Riverside Avenue, south of Valley Boulevard, and split between 60% westbound and 40% eastbound on I-10, with a release height of 3.4 meters, a plume height of 6.8 meters, and plume width of 9.7 meters. ▪ Truck idling was modeled as a line of adjacent volume sources along the loading docks, with a release height of 3.4 meters, a plume height of 6.8 meters, and plume width of 3.7 meters. ▪ Diesel yard trucks and forklifts were modeled as a line of adjacent volume sources along the loading docks, with a release height of 3.4 meters, a plume height of 6.8 meters, and plume width of 9.7 meters.

Table 3.3-5. American Meteorological Society/Environmental Protection Agency Regulatory Model Principal Parameters

Parameter	Details
Receptors	A 1.5-kilometer by 1.5-kilometer cartesian grid with receptor spacing of 25 meters was centered over the project site and converted to discrete receptors to include all receptors that could be impacted by project construction.

Notes: AERMOD = American Meteorological Society/Environmental Protection Agency Regulatory Model; SCAQMD = South Coast Air Quality Management District; DPM = diesel particular matter; CalEEMod = California Emissions Estimator Model.
See Appendix A-2.

The health risk calculations were performed using the Hotspots Analysis and Reporting Program Version 2 (HARP2) Air Dispersion and Risk Tool (ADMRT, Version 22118). AERMOD was run with all sources emitting unit emissions (1 gram per second) to obtain the necessary input values for HARP2. The line of volume sources was partitioned evenly based on the 1 gram per second emission rate. The ground-level concentration plot files were then used to estimate the long-term cancer health risk to an individual, and the non-cancer chronic health indices. There is no reference exposure level for acute health impacts from DPM, and, thus, acute risk was not evaluated.

Construction Health Risk Assessment

Results of the construction HRA are presented in Table 3.3-6. Detailed model outputs are presented in Appendix A-2.

Table 3.3-6. Construction Health Risk Assessment Results – Unmitigated

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk – Residential	Per Million	1.57	10	Less than Significant
Chronic Hazard Index – Residential	Index Value	0.0015	1.0	Less than Significant

Source: Appendix A-2.
Note: CEQA = California Environmental Quality Act.

As shown in Table 3.3-6, project construction activities would result in a Maximum Individual Cancer Risk of 1.57 in 1 million at the nearest residence, which is less than the significance threshold of 10 in 1 million. Project construction would result in a Chronic Hazard Index of 0.0015, which is below the 1.0 significance threshold. The project construction TAC health risk impacts would be less than significant.

Operational Heath Risk Assessment

For the operational health risk, the operation year 2025 was assumed consistent with completion of project construction. Emissions from the operation of the project include truck trips, truck idling emissions, and off-road diesel-fueled cargo handling equipment. Truck idling would be limited to 5 minutes in accordance with CARB's adopted Airborne Toxic Control Measure; however, truck idling was conservatively assumed to

idle for 15 minutes.[2] Also, all cargo handling equipment was assumed to be diesel, rather than compressed natural gas or electric. Therefore, the analysis likely overestimates DPM emissions and associated risk from idling and off-road equipment.

Results of the operational HRA are presented in Table 3.3-7. Detailed operational model outputs are presented in Appendix A-2.

Table 3.3-7. Operational Health Risk Assessment Results - Unmitigated

Impact Parameter	Units	Impact Level	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk – Residential	Per Million	6.37	10	Less than Significant
Chronic Hazard Index – Residential	Index Value	0.0017	1.0	Less than Significant

Source: Appendix A-2.
Notes: CEQA = California Environmental Quality Act

As shown in Table 3.3-7, the DPM emissions from operation of the project would result in a Maximum Individual Cancer Risk of 6.37 in 1 million and a Chronic Hazard Index of 0.0017. The project operational TAC health risk impacts would be less than significant.

Health Impacts of Criteria Air Pollutants

Construction of the project would generate criteria air pollutant emissions; however, the project would not exceed the SCAQMD mass-emission thresholds.

The SCAB is designated as nonattainment for O_3 for the NAAQS and CAAQS. Thus, existing O_3 levels in the SCAB are at unhealthy levels during certain periods. The health effects associated with O_3 generally relate to reduced lung function. Because the project would not involve construction activities that would result in O_3 precursor emissions (VOC or NO_x) that would exceed the SCAQMD thresholds, the project is not anticipated to substantially contribute to regional O_3 concentrations and associated health impacts. Similar to construction, no SCAQMD threshold would be exceeded during operation.

In addition to O_3, NO_x emissions contribute to potential exceedances of the NAAQS and CAAQS for NO_2 (since NO_2 is a constituent of NO_x). Exposure to NO_2 can cause lung irritation, bronchitis, and pneumonia, and lower resistance to respiratory infections. As depicted in Table 3.3-4, project construction and operation would not exceed the SCAQMD localized thresholds for NO_2. Thus, construction and operation of the project are not expected to exceed the NO_2 standards or contribute to associated health effects.

CO tends to be a localized impact associated with congested intersections. CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. CO

[2] Although the project is required to comply with CARB's idling limit of 5 minutes, on-site idling emissions was estimated for 15 minutes of truck idling, which would take into account on-site idling while the trucks are waiting to pull up to the loading dock, idling at the loading dock, and idling during check-in and check-out.

hotspots were discussed previously as a less than significant impact. Thus, the project's CO emissions would not contribute to the health effects associated with this pollutant.

The SCAB is designated as nonattainment for PM_{10} under the CAAQS and nonattainment for $PM_{2.5}$ under the NAAQS and CAAQS. Particulate matter contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing (EPA 2016). As with O_3 and NO_x, the project would not generate emissions of PM_{10} or $PM_{2.5}$ that would exceed SCAQMD's LSTs. Accordingly, the project's PM_{10} and $PM_{2.5}$ emissions are not expected to cause any increase in related regional health effects for these pollutants.

In summary, the project would not result in any potentially significant contribution to local or regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants. Impacts would be less than significant.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less-than-Significant Impact. The occurrence and severity of potential odor impacts depends on numerous factors. The nature, frequency, and intensity of the source; the wind speeds and direction; and the sensitivity of receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

Odors would be potentially generated from vehicles and equipment exhaust emissions during construction of the project. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application. Such odors would disperse rapidly from the project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be less than significant.

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities (SCAQMD 1993). The project would replace an existing warehouse with a new warehouse facility and would not create any new sources of odor during operation. Therefore, project operations would result in an odor impact that is less than significant.

3.4 Biological Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

The following analysis is based on a biological resources assessment conducted by Dudek biologists Tommy Molioo and Max Murray on November 29, 2022. This section summarizes the existing biological resources identified within the project site and a surrounding 100-foot buffer (Study Area). A description of the existing soils, vegetation communities, special-status species, jurisdictional waters and wetlands, and potential wildlife corridors are discussed below. Potential direct impacts were analyzed for the 6.82-acre project site, and indirect impacts within the surrounding buffer for a total study area of 12.53 acres.

During the biological reconnaissance survey, all plant and wildlife species observed were recorded in a field notebook and site photographs taken of representative vegetation communities. The vegetation communities and land use within the Study Area were mapped following CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFW 2018) and California Natural Community List (CDFW 2022d), also referred to as the Natural Communities List, based on the Manual of California Vegetation, second edition (Sawyer et al. 2009). These classification systems focus on a quantified, hierarchical approach that includes both floristic (plant species) and physiognomic (community structure and form) factors as currently observed (as opposed to predicting climax or successional stages). Vegetation communities and land covers were delineated to the vegetation alliance level and, where appropriate, the association level. Prior to the survey, Dudek biologists performed an extensive desktop review of literature, existing documentation, and geographic information system (GIS) data to evaluate the potential for special-status plant and wildlife species to occur within the Study area. Each special-status species was assigned a rating of "not expected," "low," "moderate," or "high" potential to occur based on relative location to known occurrences, vegetation community, soil, and elevation. Some modifications, such as the Preliminary Descriptions of the Terrestrial Natural Communities of California (Holland 1986; Oberbauer et al. 2008), were incorporated to accommodate the lack of conformity of the observed communities to those included in these references.

The Study Area's surface elevation ranges between approximately 1,060 and 1,040 feet above mean sea level and gently slopes from the northern boundary along Valley Boulevard to the southern boundary. No significant topographic features, including hills, valleys, or drainages occur on the site. No bodies of water or blue-line streams were noted other than the two flood control channels to the east and south of the project boundary (Figure 3.4-1). According to the USDA Natural Resources Conservation Service's Web Soil Survey (USDA 2022), the Study Area occurs within the San Bernardino County Southwestern Part, California. One soil type was mapped within the study area: Tujunga gravelly loamy sand, 0 to 9% slopes (Figure 3.4-2).

No native or naturalized vegetation communities were observed within the Study Area. The land use mapped within the Study Area is entirely urban/developed area. The vegetation communities and land use within the Study Area were mapped following CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFW 2018) and California Natural Community List (CDFW 2022d), also referred to as the Natural Communities List, based on the Manual of California Vegetation, second edition (Sawyer et al. 2009).

Dudek compiled a general inventory of plant and wildlife species detected by sight, calls, tracks, scat, or other field indicators, and determined the potential for special-status species to occur within the study area. A total of 18 species of native or naturalized plants, 0 native (0%) and 17 non-native (17%), were recorded within the Study Area. A full list of plant species observed is provided in Appendix B. Wildlife species diversity during the survey was low and is likely impacted by the amount of surrounding development, existing disturbances from commercial activities, and lack of native habitats within the study area. A total of 7 wildlife species, consisting of 5 native species (71%) and two non-native species (29%), were recorded within the Study Area (Appendix B). Birds detected on or in the immediate vicinity of the Study Area included: yellow-rumped warbler (*Setophaga coronata*), lesser goldfinch (*Spinus psaltria*), black phoebe (*Sayornis nigricans*), rock pigeon (*Columba livia*), common raven (*Corvus corax*), and red-tailed hawk (*Buteo jamaicensis*). One species of mammal, house cat (*Felis catus*), was detected within the Study Area.

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less-than-Significant with Mitigation Incorporated. The Project site is entirely developed and contains no natural or native habitat capable of supporting special-status plant of wildlife species known to occur in the region. The majority of the Project site contains pavement or is covered with compacted dirt and buildings associated with the mechanic and automobile storage. Of the 74 special-status plant species listed in the CNDDB (CDFW 2022c) and CNPS (CNPS 2022) databases as occurring in the vicinity of the study area, none are expected to occur within the study area due to a lack of suitable habitat. Additionally, all 63 special-status wildlife species that are documented in the region were determined to have no or low potential to occur within the study area based on an evaluation of elevation and vegetation communities known to occur within the study area. The only wildlife species that may occur within the Project site include common and migratory bird species protected by the Migratory Bird Treaty Act and California Fish and Game Code Section 3500. Bird species have the potential to nest within the ornamental landscaped trees on the project site, as well as on existing buildings and structures. Additionally, the project site is surrounded by development and the nearest naturalized area with native plant communities is approximately one mile from the project site, further reducing the potential for any special-status species from moving onto the project site. Therefore, the project will result in no impacts to special-status plants and wildlife.

The project site does provide suitable nesting habitat for a number of common and migratory bird species know to occur in the region. Specifically, bird species adapted to nesting in upland areas in urban settings have the potential to nest within the ornamental landscaped trees on site. Therefore, if project activities commence during the general avian nesting season of February through August, potential direct and indirect impacts may occur during vegetation removal and grading, which would be considered significant. Mitigation Measure (MM) BIO-1 would be implemented during the site preparation phase of the project to identify the presence of any nesting birds and set forth avoidance/minimization measures to reduce impacts to a less than significant level.

MM-BIO-1 The construction contractors contract specifications shall include the following requirements: “Construction activities should avoid the migratory bird nesting season (typically February 1 through August 31), to reduce any potential significant impact to birds that may be nesting on the study area. If construction activities must occur during the migratory bird nesting season, an avian nesting survey of the project site and contiguous habitat within 500 feet of all impact areas must be conducted for protected migratory birds and active nests. The avian nesting survey shall be performed by a qualified wildlife biologist within 72 hours prior to the start of construction in accordance with the Migratory Bird Treaty Act (16 USC 703–712) and California Fish and Game Code, Sections 3503, 3503.5, and 3513. If an active bird nest is found, the nest shall be flagged and mapped on the construction plans along with an appropriate no-disturbance buffer, which will be determined by the biologist based on the species’ sensitivity to disturbance (typically 300 feet for passerines and 500 feet for raptors and special-status species). The nest area shall be avoided until the nest is vacated and the juveniles have fledged. The nest area shall be demarcated in the field with flagging and stakes or construction fencing.”

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The Study Area is located in an entirely developed upland area that contains no natural or man-made drainages that could support riparian habitat. Additionally, the entire study area is developed with asphalt, concrete, hard-packed dirt or landscaped ornamental vegetation and does not support any native or natural habitats. There are no riparian or other hydrophytic vegetation communities on or immediately adjacent to the project site; nor are there any sensitive natural communities. Therefore, construction of the proposed project would have no impact on any riparian habitats or sensitive natural communities.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less-Than-Significant Impact. The Study Area is in an entirely developed upland area that contains no natural or man-made drainages that could support state and federally protected water ways, or topographical depressions that could support state and federally protected wetlands. Additionally, no NWI-mapped 'blue line' wetlands are mapped on the Study Area. There is no direct on-site connectivity currently or historically to the concrete-lined flood control channels to the east and south of the Study Area. The proposed impact area for the project site is restricted to the existing developed areas and no direct impacts will occur to off-site drainages. Therefore, the project would have no direct impacts to any state or federally protected waters or wetlands.

However, due to proximity of the Rialto channel and unnamed flood channel to the project site there is potential for indirect impacts to occur related to erosion, runoff, and dust. However, these potential impacts would be reduced to a less than significant level with the incorporations of Best Management Practices (BMPs) that the project would be required to adhere to as part of the Stormwater Pollution Prevention Plan (SWPPP) during all construction-related activities. Therefore, the Project would have less than significant impacts with to state- and federally protected waters and wetlands.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact. The project site is surrounded by development and does not function as a wildlife movement corridor. Two concrete lined flood control channels are located to the south and east of the project site. The Rialto Channel occurs approximately 110 feet east of the Project site and connects to the Santa Ana River approximately 2 miles downstream. However, the majority of the Rialto Channel is concrete lined until it reaches the City of San Bernardino RIX facility which would be unable to sustain the movement or nursery sites of any native fishes found in the downstream portions of the watershed. Additionally, the two flood control channels located near the project are bound by chain link fences that act as impediments for terrestrial wildlife entering the Project site and utilizing the site as a wildlife corridor. Lastly, the project site does not function as a corridor between two larger patches of native habitat. While there are natural habitat blocks within the greater project region (Cactus Basin and the Santa Ana River), the project site is separated from these features by approximately 2.5 to 3 miles of urban development, precluding the possibility for

wildlife occupying these natural areas to access the Project site. Therefore, the proposed project would have no impacts to wildlife movement or migratory corridors.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The project site does not contain any trees that could be governed by Chapter 11.08 of the City of Rialto's Municipal Code (City of Rialto 2022a). Additionally, the project site does not contain any open space, wildlife corridors, or conservation easements and Delhi Sands Flower-loving Fly is not expected to occur due to the lack of mapped Delhi sands and host plants (Appendix B) per Policies 2-39.2 and 2-39.3 of the City of Rialto General Plan (City of Rialto 2010). Therefore, the project would not conflict with any local policies or ordinances protecting biological resources.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The Project occurs within the City of Rialto in the County of San Bernardino and is not located within the limits of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan; therefore, there would be no impact.

3.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

The following analysis is based, in part, on the Built Environment Inventory and Evaluation Report prepared by Dudek in January 2023, included as Appendix C-1, and on the Archaeological Resources Assessment prepared by Dudek in January 2023, included as Appendix C-2.

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

No Impact. Appendix C-1, Built Environment Inventory and Evaluation Report, includes the results of a California Historical Resources Information System (CHRIS) records search; an intensive survey of the project site by a qualified architectural historian; building development and archival research; development of an

appropriate historic context for the evaluation of the Project site; and recordation and evaluation of six (6) commercial and light industrial buildings over 45 years old for historical significance and integrity in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Rialto designation criteria and integrity requirements. A CHRIS records search was completed by Dudek staff at the South Coastal Information Center on November 22, 2022. The records search results identified that 14 previous cultural resources studies have been conducted within 0.5 miles of the Project site. Of the 14 previous studies, one study overlaps the Project site. No historical resources were identified within the Project site as a result of the overlapping study and no historical resources were identified within 0.50 miles of the Project site.

As described above, the Project site currently consists of properties utilized for trucking and automotive services. The Project site contains six buildings over 45 years old that were identified as requiring recordation and evaluation for historical significance. These six buildings are:

- Property 1: 253 W. Valley Boulevard (APN 0132-171-05) - constructed circa 1964
- Property 2: 285 S. Willow Street (APN 0132-171-03) - constructed circa 1968-1977
- Property 3: No associated address (APN 0132-171-01) - constructed circa 1968
- Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01) - constructed circa 1953.
- Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) - constructed circa 1977

Dudek evaluated the Project site in accordance with Section 15064.5 (a)(2)-(3) of the CEQA Guidelines and using the criteria outlined in Section 5024.1 of the California Public Resources Code. Dudek concludes that the buildings on the Project site do not appear to be eligible for listing in the NRHP, CRHR, or as City of Rialto designated resources due to a lack of significance and architectural merit. As such, no buildings on the Project site appear to be historical resources under CEQA. Further, no potential indirect impacts to historical resources were identified as the proposed Project has no impact to the built environment beyond the Project site and no impact would occur.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less-than-Significant Impact with Mitigation Incorporated. A CHRIS database records search, background research, including a review of a geotechnical report, and an archaeological pedestrian survey were conducted as part of an Archaeological Resources Assessment that was prepared for the proposed Project (Appendix C-2).

A review of the CHRIS records search (completed November 22, 2022) indicates that 14 cultural resources studies have been conducted within 0.5-mile of the proposed Project site between 1984 and 2008. Of these, one previously conducted investigation overlaps the Project site. However, the Project site was not included in the pedestrian survey conducted for the investigation. This suggests that the proposed Project site has not been subject to any archaeological pedestrian surveys prior to the placement of fill soils or development of the Project site. As a result, there is no record of previously recorded historic-period or prehistoric archaeological resources are on file with the SCCIC as being present within proposed Project site. Two archaeological resources were identified within the 0.5-mile records search area. These resources consist of a prehistoric lithic scatter (P-36-001579/CA-SBR-1579) and a historic-period refuse scatter (P-36-001579/CA-SBR-1579).

A review of aerial photographs for all available years indicates that in general, the proposed Project site has been subjected to consistent ground disturbance, shifting from undeveloped land in the late 1930s with an unchanneled wash to the east that overlapped the northeast corner of the Project site, and transforming steadily to include the development and removal of buildings/structures between the late 1940s to the early 2010s.

A review of the geotechnical report (Appendix D-1) prepared for the proposed Project site determined that fills soils were identified from surface to between 1 and 2.5 feet below existing ground surface within all exploratory boring locations. Current Project design indicates that the depths of ground disturbance across the Project site is 5 feet below the existing ground surface and up to 8 feet below the existing ground surface for underground utilities, suggesting that excavations will occur within native soils.

An intensive-level archaeological survey of the proposed Project site was conducted December 22, 2022. The Project site is almost entirely covered in hardscape consisting of asphalt and compacted fill soils. As such, any exposed soils observed during the archaeological pedestrian survey were likely fill soils from an unknown origin. These soils do not represent the native soils present prior to ground disturbing activities associated with past development. Thus, the current surface expression of observable ground surface is not a good representation of the native soils present prior to development/ground disturbing activities. Given these Project site characteristics, approximately ten percent of the Project site was surveyed for archaeological resources. Remains of a concrete slab foundation from a single-family residence was identified in the northeast corner of the Project site. Archival review indicates that the property occupied this parcel from 1948 through the early 2000s when it was eventually demolished. No further cultural resources considerations are required for this resource as it has been destroyed. No additional historic-period cultural material or material of Native American origin was identified during the survey.

In consideration of all these factors, the potential to encounter intact cultural deposits containing archaeological resources within soils from the current grade to approximately 2.5 feet below existing ground surface is unlikely. However, the potential for intact cultural deposits to exist within native soils (from below 1 foot to 2.5 feet below ground surface [bgs]) to the depths of proposed ground disturbance is unknown. For these reasons, the proposed Project site should be treated as potentially sensitive for archaeological resources. In the event that unanticipated archaeological resources are encountered during project implementation, impacts to these resources would be potentially significant.

Thus, mitigation is required to address impacts related to the inadvertent discovery of archaeological resources during construction, as outlined in MM-CUL-1, MM-CUL-2, and MM-CUL-3. MM-CUL-1 requires that all project construction personnel participate in a Workers Environmental Awareness Program training for the proper identification and treatment of inadvertent discoveries. MM-CUL-2 requires the retention of an on-call qualified archaeologist and a survey of the proposed Project site after the removal of fill soils. MM-CUL-3 requires construction work occurring within 100 feet of a cultural resource discovery and 100 feet of a human remains discovery be immediately halted until the qualified archaeologist, meeting the Secretary of Interior's Professional Qualification Standards for Archaeology, can assess and evaluate the discovery pursuant to CEQA. Additionally, MM-CUL-3 requires the inadvertent discovery clause be included on all construction plans. With implementation of MM-CUL-1, MM-CUL-2, and MM-CUL-3, potentially significant impacts to unknown archaeological resources would be reduced to less than significant with mitigation incorporated.

MM-CUL-1 Workers Environmental Awareness Program. Prior to the start of construction activities, all construction personnel and monitors shall be trained regarding identification and treatment protocol for inadvertent discoveries of cultural resources (archaeological and tribal) and human remains. A basic presentation and handout or pamphlet shall be prepared in order to ensure proper identification and treatment of inadvertent discoveries of cultural resources and human remains. The purpose of the Workers Environmental Awareness Program (WEAP) training is to provide specific details on the kinds of materials that may be identified during ground disturbing activities and explain the importance of and legal basis for the protection of human remains and significant cultural resources. Each worker shall also be trained in the proper procedures to follow in the event that cultural resources or human remains are uncovered during ground disturbing activities. These procedures include but are not limited to work curtailment or redirection, and the immediate contact of the site supervisor and archaeological monitoring staff.

MM-CUL-2 Retention of an On-Call Qualified Archaeologist. A qualified archaeologist shall be retained and on-call to respond and address any inadvertent discoveries identified project implementation. Additionally, in consideration of the potential to encounter intact cultural deposits beneath fill soils, the qualified archaeologist shall survey the Project site once fill soils have been removed to ensure no cultural deposits underly the fill layer. If is determined, based on the aforementioned survey, that cultural resources are present or may be present and may be impacted during Project construction, monitoring may be warranted. Additionally, any identified cultural resources shall be assessed and evaluated pursuant to CEQA. If it is determined that monitoring is warranted, a qualified archaeological principal investigator, meeting the Secretary of the Interior's Professional Qualification Standards, shall oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material. The archaeological monitor will be responsible for maintaining daily monitoring logs.

MM-CUL-3 Inadvertent Discovery Clause. In the event that potential archaeological resources (sites, features, or artifacts) are exposed during ground disturbing, all construction work occurring not less than 100 feet of the find shall immediately stop and the qualified archaeologist that has been retained on call must be notified immediately to assess the significance of the find and determine whether or not additional study is warranted. Depending upon the significance of the find under the CEQA, the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work (e.g., preparation of an archaeological treatment plan, testing, data recovery, or monitoring) may be warranted if the resource cannot be feasibly avoided.

In the event that human remains are inadvertently encountered during construction activities, the remains and associated resources shall be treated in accordance with state and local regulations that provide requirements with regard to the discovery of human remains, including California Health and Safety Code Section 7050.5, California Public Resources Code Section 5097.98, and CEQA Guidelines Section 15064.5(e). In accordance with these regulations, if human remains are found, the County Coroner must be immediately notified of the discovery. No further excavation or disturbance of the

Project site or any nearby (no less than 100 feet) area reasonably suspected to overlie adjacent remains can occur until the County Coroner has determined if the remains are potentially human in origin. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she is required to notify the NAHC that shall notify those persons believed to be the most likely descendant. The most likely descendant shall determine, in consultation with the property owner, the disposition of the human remains.

c) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less-than-Significant Impact. No prehistoric or historic period burials, including those interred outside of formal cemeteries, were identified within the proposed Project site as a result of the CHRIS records search or pedestrian survey. In the event that human remains are inadvertently encountered during ground disturbing activities, they shall be treated consistent with state and local regulations including California Health and Safety Code Section 7050.5, California Public Resources Code Section 5097.98, and the California Code of Regulations Section 15064.5(e). In accordance with these regulations, if human remains are found, the County Coroner must be immediately notified of the discovery. No further excavation or disturbance of the Project site or any nearby (no less than 100 feet) area reasonably suspected to overlie adjacent remains can occur until the County Coroner has determined if the remains are potentially human in origin. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she is required to notify the NAHC that shall notify those persons believed to be the most likely descendant. The most likely descendant shall determine, in consultation with the property owner, the disposition of the human remains. Compliance with these regulations would ensure that impacts to human remains resulting from the proposed project would be less than significant.

3.6 Energy

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less-than-Significant Impact.

Construction

Electricity. Temporary electric power for as-necessary lighting and electronic equipment would be provided by Southern California Edison (SCE). The amount of electricity used during construction would be minimal because typical demand would be generated by electrically powered hand tools. The electricity used for construction activities would be temporary and minimal; therefore, project construction would not result in wasteful, inefficient, or unnecessary consumption of electricity.

Natural Gas. Natural gas is not anticipated to be required during construction of the project. Fuels used for construction would primarily consist of diesel and gasoline, which are discussed below. Any minor amounts of natural gas that may be consumed as a result of project construction would be temporary and negligible and would not have an adverse effect; therefore, project construction would not result in wasteful, inefficient, or unnecessary consumption of natural gas.

Petroleum. The primary energy consumed during construction would be associated with petroleum usage. Potential impacts were assessed for off-road equipment and on-road vehicle trips during construction, as provided by the CalEEMod outputs (see Appendix A-1). Fuel consumption from construction equipment and vehicle trips was estimated by converting the total carbon dioxide (CO_2) emissions anticipated to be generated by the construction of the proposed project to gallons using conversion factors for CO_2 to gallons of gasoline or diesel. The conversion factor for gasoline is 8.78 kilograms per metric ton (MT) CO_2 per gallon, and the conversion factor for diesel is 10.21 kilograms per MT CO_2 per gallon (The Climate Registry 2021). Heavy-duty construction equipment associated with construction activities, vendor trucks, and haul trucks are assumed to use diesel fuel. Worker vehicles are assumed to be gasoline fueled. All details for construction criteria air pollutant emissions modeling discussed in Appendix A-1 are also applicable for the estimation of construction-related energy consumption.

The estimated diesel fuel usage from construction equipment, haul trucks, and vendor trucks, as well as estimated gasoline fuel usage from worker vehicles is shown in Table 3.6-1.

Table 3.6-1. Project Construction Petroleum Demand

Phase	Off-Road Equipment (diesel)	Haul Trucks (diesel)	Vendor Trucks (diesel)	Worker Vehicles (gasoline)
	gallons			
Construction	35,846.59	1,545.64	8,805.88	12,741.57
			Total Petroleum Consumed	**46,198.11**

Notes: See Appendix A-1 for details.

As shown in Table 3.6-1, the project is estimated to consume approximately 46,198 gallons of petroleum during the construction phase.[3] Notably, the project will be subject to CARB's In-Use Off-Road Diesel Vehicle Regulation that applies to certain off-road diesel engines, vehicles, or equipment greater than 25 horsepower. The regulation: (1) imposes limits on idling, requires a written idling policy, and requires a disclosure when selling vehicles, (2) requires all vehicles to be reported to CARB (using the Diesel Off-Road Online Reporting System) and labeled, (3) restricts the adding of older vehicles into fleets starting on January 1, 2014, and (4) requires fleets to reduce their emissions by retiring, replacing, or repowering older engines, or installing Verified Diesel Emission Control Strategies (i.e., exhaust retrofits). The fleet must either show that its fleet average index was less than or equal to the calculated fleet average target rate, or that the fleet has met the Best Achievable Control Technology requirements. Overall, because the project would not be unusual as compared to overall local and regional demand for energy resources and would not involve characteristics that require equipment that would be less energy-efficient than at comparable construction sites in the region or state, the project construction would not result in wasteful, inefficient, or unnecessary consumption of petroleum.

Operations

Electricity. The operational phase would require electricity for multiple purposes including building heating and cooling, lighting, appliances, electronics, and for water and wastewater treatment and conveyance. The estimation of operational building energy and water and wastewater for the project was based on the CalEEMod assumptions for the respective land uses, which account for compliance with 2019 Title 24 standards. Table 3.6-2 presents the electricity demand for the project.

Table 3.6-2. Annual Electricity Demand

Scenario	kWh/Year
Buildings	339,644.00
Water/Wastewater	429,041.46
Total Project Demand	**768,685.46**

Source: Appendix A-1
Note: kWh = kilowatt-hour.

According to these estimations, the project would consume approximately 768,685 kilowatt-hours (kWh) per year. The project would be required to comply with the efficiency standards of the California Building Code (Title 24 Part 6 and Part 11), and the additional electricity demand for the proposed project would not be unusual or wasteful as compared to overall local and regional demand for energy resources.[4] For these reasons, electricity consumption of the project would not be considered inefficient or wasteful, and impacts would be less than significant.

Natural Gas. Natural gas consumption during operation would be required building heating and cooling. For building consumption, natural gas generation rates in CalEEMod for the project and climate zone were used. Table 3.6-3 presents the increase in natural gas demand for the project.

[3] For context, in 2019, California consumed about 662 million barrels of oil (EIA 2022). There are 42 U.S. gallons in a barrel, so California consumes approximately 76.2 million gallons of petroleum per day, adding up to an annual consumption of 7.8 billion gallons of petroleum.

[4] For context, in 2020, non-residential electricity demand in San Bernardino County was approximately 9.9 billion kWh (CEC 2022a).

Table 3.6-3. Annual Natural Gas Demand

Scenario	kBtu/Year
Project	
Buildings	273,762.00
Total Project Demand	**273,762.00**

Source: Appendix A-1
Notes: CNG = compressed natural gas; kBtu = thousand British thermal units.

According to these estimations, the project would consume approximately 273,762 kBtu per year. The project would be required to comply with the efficiency standards of the California Building Code (Title 24 Part 6 and Part 11), and the additional natural gas demand for the project would not be unusual or wasteful as compared to other warehouses and the overall local and regional demand for energy resources.[5] For these reasons, natural gas consumption of the project would not be considered inefficient or wasteful, and impacts would be less than significant.

Petroleum. During operations, the majority of fuel consumption resulting from the project would involve the use of motor vehicles traveling to and from the project site. Petroleum fuel consumption associated with motor vehicles is a function of the vehicle-miles traveled (VMT) as a result of project operation. The annual VMT attributable to the project is expected to be 2,143,951 VMT (Appendix A-1). Fuel estimates for the project are provided in Table 3.6-4.

Table 3.6-4. Annual Operational Petroleum Demand

Scenario	Vehicle MT CO2	Kg CO2/Gallon	Gallons
Gasoline	1,031.05	8.78	117,432.08
Diesel	687.37	10.21	67,323.12
		Total Project Petroleum Use	**184,755.20**

Sources: Trips and vehicle CO_2 (Appendix A-1); kg CO_2/Gallon (The Climate Registry 2021).
Notes: MT = metric ton; CO_2 = carbon dioxide; kg = kilogram.

As depicted in Table 3.6-4, the project would consume approximately 184,755 gallons of petroleum per year during operation.

Over the lifetime of the project, the fuel efficiency of the vehicles being used by the employees and trucks for the project is expected to increase. As such, the amount of petroleum consumed as a result of vehicular trips to and from the project site during operation would decrease over time. There are numerous regulations in place that require and encourage increased fuel efficiency. For example, CARB has adopted the Advanced Clean Cars and Advanced Clean Trucks programs to accelerate the market for zero-emission vehicles in both the passenger car and medium/heavy-duty truck sectors. As such, operation of the project is expected to use decreasing amounts of petroleum over time, due to advances in fuel economy.

In summary, although project implementation would result in an increase in petroleum use during operation, over time vehicles would use less petroleum due to advances in fuel economy and the additional natural gas demand for the project would not be unusual or wasteful as compared to other warehouses and the overall local and regional demand for petroleum resources. Given these considerations, the

[5] For context, in 2020, non-residential uses in San Bernardino County consumed about 26 billion kBtu of natural gas (CEC 2022b).

petroleum consumption associated with the proposed project would not be considered inefficient or wasteful, and impacts would be less than significant.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less-than-Significant Impact. The project would be subject to and would comply with, at a minimum, the California Building Energy Efficiency Standards (24 CCR, Part 6). Part 6 of Title 24 establishes energy efficiency standards for non-residential buildings constructed in California to reduce energy demand and consumption. As such, the project would comply with the California code requirements for energy efficiency.

Part 11 of Title 24 sets forth voluntary and mandatory energy measures that are applicable to the project under the California Green Building Standards, also known as CALGreen. CALGreen institutes mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential, high-rise residential, state-owned buildings, schools, and hospitals, as well as certain residential and non-residential additions and alterations. On this basis, the project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, impacts would be less than significant.

3.7 Geology and Soils

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No Impact. The nearest active Alquist-Priolo Fault Zone to the project site is the San Jacinto Fault, located approximately 5 miles north of the project site (City of Rialto 2010). According to the California Department of Conservation Fault Activity Map (CDOC 2015), the project site is not located in a designated earthquake fault zone. The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely (Appendix D-1, Geotechnical Engineering Investigation). In addition, according to the City's General Plan, although several earthquake faults exist within and in proximity to the City, no faults exist beneath the project site (City of Rialto 2010); therefore, no impacts associated with fault rupture would occur.

ii) Strong seismic ground shaking?

Less-than-Significant Impact. Similar to other areas located in the seismically active Southern California region, the City is susceptible to ground shaking caused by the several local fault systems. Historically, Rialto has experienced moderate to strong ground shaking. The San Jacinto, San Andreas, and Cucamonga Faults have the potential of generating earthquakes of maximum magnitudes ranging from 6.7 to 8.0 (City of Rialto 2010); however, the project site is not located within an active fault zone, and the project site would not be affected by ground shaking more than any other area in this seismic region. The project's geotechnical report provides specific design recommendations to ensure the structural integrity of the project in the event that seismic ground shaking is experienced at the project site (Appendix D-1). In addition, the project would be designed in accordance with all applicable provisions established in the current California Building Code, which sets forth specific engineering requirements to ensure structural integrity during a seismic event. Compliance with these requirements would reduce the potential risk to

people and structures with respect to strong seismic ground shaking; therefore, impacts associated with strong seismic ground shaking would be less than significant.

iii) Seismic-related ground failure, including liquefaction?

Less-than-Significant Impact. Liquefaction occurs when partially saturated soil loses its effective stress and enters a liquid state, which can result in the soil's inability to support structures above. Liquefaction can be induced by ground-shaking events and is dependent on soil saturation conditions. According to the Seismic and Geologic Hazards chapter of the City's General Plan, the nearest location with moderate liquefaction susceptibility is approximately 4.5 miles northeast of the project site (City of Rialto 2010), and according to the project's Geotechnical Report, liquefaction is not a concern for the project site (Appendix D-1).

The project would involve the installation of an infiltration basin to capture, treat, and infiltrate stormwater flows on the site. A detailed Infiltration Study (Appendix D-2) was prepared to evaluate the suitability of the site for such a system, taking into account the characteristics of on-site soils. The infiltration study determined that the site is suitable for stormwater infiltration without increasing the potential for settlement of both proposed and existing structures in the project area. Therefore, impacts associated with seismic-related ground failure, including liquefaction, would be less than significant.

iv) Landslides?

No Impact. The project site is not located adjacent to or near any geographical feature that would be susceptible to landslides. The project site is relatively flat, exhibiting only a slight southerly gradient (Appendix D-1). No other significant surface features are identified within the project limits. As a result, the probability of a landslide on or near the project site is low; therefore, no impacts associated with landslides would occur.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Short-Term Construction Impacts

Less-than-Significant Impact. Because the project would result in 1 acre or more of ground disturbance, the project would be subject to the National Pollutant Discharge Elimination System (NPDES) stormwater program, which requires obtaining coverage under the State Water Resources Control Board's General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit; Order 2009-0009-DWQ). Construction activities subject to the Construction General Permit include clearing, grading, and disturbances to the ground such as stockpiling and excavating. The Construction General Permit requires development and implementation of a Stormwater Pollution Prevention Plan (SWPPP). Among the required items that must be included within a SWPPP are project design features intended to protect against substantial soil erosion as a result of water and wind, commonly known as best management practices (BMPs). Typical BMPs include maintaining or creating drainages to convey and direct surface runoff from bare areas, and installing physical barriers such as berms, silt fencing, wattles, straw bales, and gabions. Implementation of a Construction General Permit, including preparation of a SWPPP and implementation of BMPs, would reduce both stormwater runoff and soil erosion impacts to acceptable levels; therefore, short-term construction impacts associated with soil erosion would be less than significant.

Long-Term Operational Impacts

Less-than-Significant Impact. Once developed, the project site would include a warehouse building and paved surfaces, all of which would stabilize and help retain on-site soils. The project site would also contain pervious landscape areas that would include a mix of trees, shrubs, plants, and groundcover, which would also help retain on-site soils while preventing wind and water erosion from occurring; therefore, long-term operational impacts associated with soil erosion would be less than significant.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less-than-Significant Impact**.** The project site is not susceptible to landslide or liquefaction. In addition, the project would be designed in accordance with all applicable provisions established in the current California Building Code, which sets forth engineering requirements to ensure structural integrity, regardless of the characteristics of underlying soils. The project would be designed consistent with the specific design recommendations of the project's geotechnical report (Appendix D-1). Compliance with the requirements of the California Building Code would further reduce the potential risk to people and structures with respect to a variety of geotechnical constraints; therefore, impacts associated with unstable geologic units/soils would be less than significant.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less-than-Significant Impact. Expansive soils are characterized by their potential shrink/swell behavior. Shrink/swell is the change in volume (expansion and contraction) that occurs in certain fine-grained clay sediments from the cycle of wetting and drying. The volume change is influenced by the amount of moisture and the amount of clay in the soil. The soils at the project site are very low (Expansion Index=0-20) in expansion potential (Appendix D-1). Further, compliance with California Building Code requirements would reduce the potential risk to people and structures due to unstable and expansive soils; therefore, impacts associated with expansive soils would be less than significant.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The project would connect directly to the municipal sewer system and would not require septic tanks or any other alternative wastewater disposal system; therefore, no impacts associated with the adequacy of soils and septic systems would occur.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less-than-Significant Impact with Mitigation Incorporated. Paleontological resources are the remains or traces of plants and animals that are preserved in the Earth's crust, and per the Society of Vertebrate Paleontology (SVP 2010) guidelines, are older than written history or older than approximately 5,000 years. They are limited, nonrenewable resources of scientific and educational value, which are afforded protection under state laws and regulations.

According to surficial geological mapping by Dibblee and Minch (2004) at a scale of 1:24,000, the proposed project site is underlain by Holocene (< 11,700 years ago) alluvium (map unit Qa). The geotechnical report indicated the project site is underlain by a layer of artificial fill ranging from 1 to 2.5 feet in thickness (Appendix D-1). The artificial fill is in turn underlain by coarse-grained alluvium with occasional cobbles. Holocene alluvium has low paleontological sensitivity on the surface due to the young age; however, the sensitivity increases with depth, where the Holocene alluvium transitions to Pleistocene alluvium.

Dudek submitted a paleontological records search request to the Natural History Museum of Los Angeles County (LACM) for the proposed project site and the surrounding vicinity on November 29, 2022, and the results were received on December 11, 2022. The LACM reported no vertebrate fossil localities from within or near the proposed project site; however, they did report fossil localities from Pleistocene sedimentary deposits in the region (LACM 2022). These localities include LACM VP (Vertebrate Paleontology) 4619, which produced a mammoth (*Mammuthus*) from 100 feet bgs along Wineville Avenue in Eastvale. LACM 7811 yielded a fossil whipsnake (*Masticophis*) from 9 to 11 feet bgs in Chino Valley. A Bovid (Bovidae) was recovered in Corona from an unknown depth bgs. LACM VP 1728 produced horse (*Equus*) and camel (*Camelops*) from 15 to 20 feet bgs in Chino. A fossil horse (*Equus*) (LACM VP 7268 and 7271) was recovered from an unknown depth bgs south of Los Serranos Golf Course in the City of Chino Hills. Also in Chino Hills, LACM VP 7508 yielded an elephant relative (Proboscidea) and horse (*Equus*) from an unknown depth bgs. Finally, an undetermined member of the horse family (Equidae) (LACM VP 4540) was recovered from an unknown depth bgs in San Jacinto Valley.

The coarse-grained Holocene alluvial sediments underlying the proposed project site have low paleontological sensitivity due to their young age and the high energy environment associated with their deposition. These deposits are likely underlain by older, Pleistocene alluvial sediments. Although unlikely, due to the limited ground disturbance required for the proposed project, there is a possibility of encountering previously undiscovered paleontological resources at subsurface levels during ground-disturbing activities associated with the proposed project. Implementation of mitigation measure MM-GEO-1 would ensure that potential impacts to paleontological resources during construction activities are reduced to below a level of significance. Impacts would therefore be less than significant with mitigation incorporated. No further mitigation is required.

MM-GEO-1 Inadvertent Discovery Clause**.** In the event that paleontological resources (e.g., fossils) are exposed during construction activities for the project, all construction work occurring within 100 feet of the find shall immediately stop until a qualified paleontologist meeting the professional standards of the Society of Vertebrate Paleontology can evaluate the significance of the find and determine whether or not additional study is warranted. If the discovery is clearly not significant, the paleontologist may document the find and allow work to continue. If the discovery proves potentially significant under CEQA, additional work such as preparation of a paleontological treatment plan and monitoring in the area of the find may be warranted.

3.8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less-than-Significant Impact. In October 2008, the SCAQMD proposed recommended numeric CEQA significance thresholds for GHG emissions for lead agencies to use in assessing GHG impacts of residential and commercial development projects as presented in its *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold* (SCAQMD 2008a). This guidance document explored various approaches for establishing a significance threshold for GHG emissions. The draft interim CEQA thresholds guidance document was not adopted or approved by the Governing Board. However, in December 2008, the SCAQMD adopted an interim 10,000 MT CO_2e per-year screening level threshold for stationary source/industrial projects for which the SCAQMD is the lead agency (SCAQMD 2008b). The 10,000 metric tons carbon dioxide-equivalent (MT CO_2e) per-year threshold, which was derived from GHG reduction targets established in Executive Order (EO) S-03-05, was based on the conclusion that the threshold was consistent with achieving an emissions capture rate of 90% of all new or modified stationary source projects.

SCAQMD formed a GHG CEQA Significance Threshold Working Group to work with SCAQMD staff on developing GHG CEQA significance thresholds until statewide significance thresholds or guidelines are established. From December 2008 to September 2010, SCAQMD hosted working group meetings and revised the draft threshold proposal several times, although it did not officially provide these proposals in a subsequent document. SCAQMD has continued to consider adoption of significance thresholds for residential and general land use development projects. The most recent proposal, issued in September 2010, uses the following tiered approach to evaluate potential GHG impacts from various uses (SCAQMD 2010):

Tier 1 Determine if CEQA categorical exemptions are applicable. If not, move to Tier 2.

Tier 2 Consider whether or not the project is consistent with a locally adopted GHG reduction plan that has gone through public hearing and CEQA review, that has an approved inventory, includes monitoring, etc. If not, move to Tier 3.

Tier 3 Consider whether the project generates GHG emissions in excess of screening thresholds for individual land uses. The 10,000 MT CO_2e per year threshold for industrial uses would

be recommended for use by all lead agencies. Under option 1, separate screening thresholds are proposed for residential projects (3,500 MT CO_2e per year), commercial projects (1,400 MT CO_2e per year), and mixed-use projects (3,000 MT CO_2e per year). Under option 2, a single numerical screening threshold of 3,000 MT CO_2e per year would be used for all non-stationary source projects. If the project generates emissions in excess of the applicable screening threshold, move to Tier 4.

Tier 4 Consider whether the project generates GHG emissions in excess of applicable performance standards for the project service population (population plus employment). The efficiency targets were established based on the goal of AB 32 to reduce statewide GHG emissions to 1990 levels by 2020. The 2020 efficiency targets are 4.8 MT CO_2e per service population for project level analyses and 6.6 MT CO_2e per service population for plan level analyses. If the project generates emissions in excess of the applicable efficiency targets, move to Tier 5.

Tier 5 Consider the implementation of CEQA mitigation (including the purchase of GHG offsets) to reduce the project efficiency target to Tier 4 levels.

The City has determined that the SCAQMD's draft threshold of 3,000 MT CO_2e per year is conservative and appropriate for industrial and warehouse land use development projects. Per the SCAQMD guidance, construction emissions should be amortized over the operational life of the project, which is assumed to be 30 years (SCAQMD 2008a). This impact analysis, therefore, adds amortized construction emissions to the estimated annual operational emissions and then compares operational emissions to the proposed SCAQMD threshold of 3,000 MT CO_2e per year.

Construction Emissions

Construction of the project would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road vendor trucks, and worker vehicles. CalEEMod was used to estimate GHG emissions during construction. Construction of the project is anticipated to last up to 15 months. Table 3.8-1 presents construction GHG emissions for the project.

Table 3.8-1. Estimated Annual Construction GHG Emissions

Year	CO_2	CH_4	N_2O	CO_2e
	Metric Tons			
2024	521.08	0.09	0.02	528.38
2025	62.48	0.01	<0.01	63.21
			Total	591.59
			Annualized emissions over 30 years (metric tons per year)	*19.72*

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent; GHG = greenhouse gas.
See Appendix A-1 for complete results. Values of "<0.01" indicate that the estimated emissions are less than two decimals.

As shown in Table 3.8-1, the estimated total GHG emissions during construction would be approximately 592 MT CO_2e. Estimated project-generated construction emissions amortized over 30 years would be approximately 20 MT CO_2e per year.

Operational Emissions

CalEEMod was used to estimate potential operational GHG emissions from energy sources (natural gas and electricity), mobile sources, solid waste, and water supply and wastewater treatment for the project. In addition, GHGs generated by forklifts and yard trucks were estimated for the project. Operational year 2025 was assumed as the first full year of operation for the project. Table 3.8-2 presents the increase in GHG emissions from the project.

Table 3.8-2. Estimated Annual Operation GHG Emissions

Emissions Source	CO_2	CH_4	N_2O	CO_2e
	Metric Tons per Year			
Area	0.01	<0.01	0.00	0.01
Energy	74.84	0.01	<0.01	75.24
Mobile	1,718.42	0.06	0.23	1,787.36
Off-Road (Forklifts)	357.78	0.12	0.00	360.67
Waste	26.01	1.54	0.00	64.45
Water	86.08	1.03	0.03	119.35
			Total	**2,407.08**
			Amortized Construction Emissions	*19.72*
			Total with Amortized Construction Emissions	**2,426.80**

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent.
See Appendix A-1 for complete results. Values of "<0.01" indicate that the estimated emissions are less than two decimals.

As shown in Table 3.8-2, the estimated GHG emissions from operation of the project would be approximately 2,427 MT CO_2e per year, including amortized construction emissions. Annual operational GHG emissions with amortized construction emissions would not exceed the SCAQMD recommended threshold of 3,000 MT CO_2e per year. This impact would be less than significant.

b) Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less-than-Significant Impact.

Project Consistency with State Reduction Targets and CARB's Scoping Plan

The California State Legislature passed the Global Warming Solutions Act of 2006 (Assembly Bill 32 [AB 32]) to provide initial direction to limit California's GHG emissions to 1990 levels by 2020 and initiate the state's long-range climate objectives. Since the passage of AB 32, the State has adopted GHG emissions reduction targets for future years beyond the initial 2020 horizon year. For the proposed project, the relevant GHG emissions reduction targets include those established by Senate Bill 32 (SB 32) and AB 1279, which require GHG emissions be reduced to 40% below 1990 levels by 2030, and 85% below 1990 levels by 2045, respectively. In addition, AB 1279 requires the state achieve net zero GHG emissions by no later than 2045 and achieve and maintain net negative GHG emissions thereafter.

As defined by AB 32, the California Air Resources Board (CARB) is required to develop The Scoping Plan, which provides the framework for actions to achieve the State's GHG emission targets. The Scoping Plan is

required to be updated every five years and requires CARB and other state agencies to adopt regulations and initiatives that will reduce GHG emissions statewide. The first Scoping Plan was adopted in 2008, and was updated in 2014, 2017, and most recently in 2022. While the Scoping Plan is not directly applicable to specific projects, nor is it intended to be used for project-level evaluations,[6] it is the official framework for the measures and regulations that will be implemented to reduce California's GHG emissions in alignment with the adopted targets. Therefore, a project would be found to not conflict with the statutes if it would meet the Scoping Plan policies and would not impede attainment of the goals therein.

CARB's 2017 Scoping Plan update was the first to address the state's strategy for achieving the 2030 GHG reduction target set forth in SB 32 (CARB 2017), and the most recent CARB 2022 Scoping Plan update outlines the state's plan to reduce emissions and achieve carbon neutrality by 2045 in alignment with AB 1279 and assesses progress is making toward the 2030 SB 32 target (CARB 2022). As such, given that SB 32 and AB 1279 are the relevant GHG emission targets, the 2017 and 2022 Scoping Plan updates that outline the strategy to achieve those targets, are the most applicable to the proposed project.

The 2017 *Climate Change Scoping Plan Update* (Second Update) included measures to promote renewable energy and energy efficiency (including the mandates of SB 350), increase stringency of the Low Carbon Fuel Standard (LCFS), measures identified in the Mobile Source and Freight Strategies, measures identified in the proposed Short-Lived Climate Pollutant Plan, and increase stringency of SB 375 targets. The *2022 Scoping Plan for Achieving Carbon Neutrality* (Third Update) builds upon and accelerates programs currently in place, including moving to zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high global warming potential; providing communities with sustainable options for walking, biking, and public transit; and displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines) (CARB 2022).

Many of the measures and programs included in the Scoping Plan would result in the reduction of project-related GHG emissions with no action required at the project-level, including GHG emission reductions through increased energy efficiency and renewable energy production (SB 350), reduction in carbon intensity of transportation fuels (LCFS), and the accelerated efficiency and electrification of the statewide vehicle fleet (Mobile Source Strategy). Given that the proposed project is also not anticipated to result in substantial increase in mobile trips (see Section 3.17, *Transportation)*, the project would also not conflict with the Second Update's goal of reducing GHG emissions through reductions in VMT statewide.

The 2045 carbon neutrality goal required CARB to expand proposed actions in the Third Update to include those that capture and store carbon in addition to those that reduce only anthropogenic sources of GHG emissions. The proposed project would support the state's carbon neutrality goals, as implementation includes addition of urban-tree and native plantings throughout the project site, which represent opportunities for potential carbon removal and sequestration over the project lifetime; the project would include approximately 1.43 acres of landscaped area. However, the Third Update emphasizes that reliance on carbon sequestration in the state's natural and working lands will not be sufficient to address residual GHG emissions, and achieving carbon neutrality will require research, development, and deployment of additional methods to capture atmospheric GHG emissions (e.g., mechanical direct air capture). Given that

6 The Final Statement of Reasons for the amendments to the CEQA Guidelines reiterates the statement in the Initial Statement of Reasons that "[t]he Scoping Plan may not be appropriate for use in determining the significance of individual projects because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan" (CNRA 2009).

the specific path to neutrality will require development of technologies and programs that are not currently known or available, the project's role in supporting the statewide goal would be speculative and cannot be wholly identified at this time.

Overall, the proposed project would comply will all regulations adopted in furtherance of the Scoping Plan to the extent applicable and required by law. As mentioned above, several Scoping Plan measures would result in reductions of project-related GHG emissions with no action required at the project-level, including those related to energy efficiency, reduced fossil fuel use, and renewable energy production. As demonstrated above, the proposed project would not conflict with CARB's 2017 or 2022 Scoping Plan updates and with the state's ability to achieve the 2030 and 2045 GHG reduction and carbon neutrality goals. Further, the proposed project's consistency with the applicable measures and programs would assist in meeting the City's contribution to GHG emission reduction targets in California.

Potential to Conflict with the Southern California Association of Governments 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy

The SCAG 2020–2045 RTP/SCS is a regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375 (SCAG 2020a). In addition to demonstrating the region's ability to attain the GHG emission-reduction targets set forth by CARB, the 2020-2045 RTP/SCS outlines a series of actions and strategies for integrating the transportation network with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. Thus, successful implementation of the 2020-2045 RTP/SCS would result in more complete communities with various transportation and housing choices while reducing automobile use.

The following strategies are intended to be supportive of implementing the 2020-2045 RTP/SCS and reducing GHGs: focus growth near destinations and mobility options; promote diverse housing choices; leverage technology innovations; support implementation of sustainability policies; and promote a green region (SCAG 2020a). The strategies that pertain to residential development and SCAG's support of local jurisdiction sustainability efforts would not apply to the project. The project's potential to conflict with the remaining applicable strategies is presented below.

- Focus Growth Near Destinations and Mobility Options. One of the strategies within the 2020-2045 RPT/SCS is to, among other aspects, expand job opportunities near transit and along center-focused main streets, as well as the promote the redevelopment of underperforming retail development and other outmoded non-residential uses. The project would not conflict with this strategy of the 2020-2045 RTP/SCS as the project is located within 0.5-mile of major roadways (San Bernardino Freeway, West Valley Boulevard, and South Riverside Avenue) and supports the redevelopment of an older office/warehouse building use, which will also expand job opportunities.
- Leverage Technology Innovations. One of the technology innovations identified in the 2020-2045 RTP/SCS that would apply to the project is the promotion and support of low emission technologies for transportation, such as alternative fueled vehicles to reduce per capita GHG emissions. The project would not conflict with SCAG's ability to implement this strategy.
- Promote a Green Region. The third applicable strategy within the 2020-2045 RTP/SCS, for individual developments, such as the project, involves promoting a green region through efforts such as supporting local policies for renewable energy production and promoting more resource

> efficient development (e.g., reducing energy consumption) to reduce GHG emissions. The project would support this measure by meeting all applicable green building standards, including Title 24 Part 6 (California Energy Efficiency Standards) and Part 11 (California Green Building Standards), that are in effect at the time of design and construction.

Based on the analysis above, the project would be consistent with the SCAG 2020-2045 RTP/SCS.

Potential to Conflict with Executive Order S-03-05 and Senate Bill 32

The project would not impede the attainment of the GHG reduction goals for 2030 or 2050 identified in EO S-03-05 and SB 32. EO S-03-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80% below 1990 levels by 2050. SB 32 establishes for a statewide GHG emissions reduction target whereby CARB, in adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions, shall ensure that statewide GHG emissions are reduced to at least 40% below 1990 levels by December 31, 2030. While there are no established protocols or thresholds of significance for that future year analysis, CARB forecasts that compliance with the current Scoping Plan puts the state on a trajectory toward meeting these long-term GHG goals, although the specific path to compliance is unknown (CARB 2014).

CARB has expressed optimism with regard to both the 2030 and 2050 goals. It states in the First Update to the Climate Change Scoping Plan that "California is on track to meet the near-term 2020 GHG emissions limit and is well positioned to maintain and continue reductions beyond 2020 as required by AB 32" (CARB 2014). With regard to the 2050 target for reducing GHG emissions to 80% below 1990 levels, the First Update to the Climate Change Scoping Plan states the following (CARB 2014):

> This level of reduction is achievable in California. In fact, if California realizes the expected benefits of existing policy goals (such as 12,000 megawatts of renewable distributed generation by 2020, net zero energy homes after 2020, existing building retrofits under AB 758, and others) it could reduce emissions by 2030 to levels squarely in line with those needed in the developed world and to stay on track to reduce emissions to 80% below 1990 levels by 2050. Additional measures, including locally driven measures and those necessary to meet federal air quality standards in 2032, could lead to even greater emission reductions.

In other words, CARB believes that the state is on a trajectory to meet the 2030 and 2050 GHG reduction targets set forth in AB 32, SB 32, and EO S-03-05. This is confirmed in the Second Update to the Scoping Plan, which states (CARB 2017):

> The Proposed Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while also identifying new, technologically feasibility and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Proposed Plan is developed to be consistent with requirements set forth in AB 32, SB 32, and AB 197.

As discussed previously, the project is consistent with the GHG emission reduction measures in the Scoping Plan and SCAG's 2020–2045 RTP/SCS and would not conflict with the state's trajectory toward future GHG reductions. In addition, since the specific path to compliance for the state in regard to the long-term goals will likely require development of technology or other changes that are not currently known or available, specific additional mitigation measures for the project would be speculative and cannot be identified at this time. With respect to future GHG targets under SB 32 and EO S-03-05, CARB has also made clear its legal interpretation is that it has the requisite authority to adopt whatever regulations are necessary, beyond the AB 32 horizon year of 2020, to meet SB 32's 40% reduction target by 2030 and EO S-03-05's 80% reduction target by 2050; this legal interpretation by an expert agency provides evidence that future regulations will be adopted to continue the state on its trajectory toward meeting these future GHG targets.

Based on the considerations previously outlined, the project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and no mitigation is required. Therefore, the project's impact associated with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs would be less than significant.

3.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

The following analysis is based, in part, on the Phase I Environmental Site Assessment (ESA) prepared by Hazard Management Consulting Inc. in January 2022 (Appendix E-1) and the Phase II Environmental Site Assessment prepared by Hazard Management Consulting Inc. in March 2022 (Appendix E-2).

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less-than-Significant Impact.

Short-Term Construction Impacts

In January 2022, a Phase I ESA (Appendix E-1) was prepared by Hazard Management Consulting Inc. in accordance with American Society of Testing and Materials Standards and Standards and Practices for All Appropriate Inquiries. The Phase I ESA covered the entirety of the project site. Based on the results of the research, available data, and a site survey, the Phase I ESA found that the industrial history of the site, reported discharge of chemicals to soil, existing uses resulting in spills and staining, and unaccounted for underground storage tanks (USTs) are all considered recognized environmental conditions (RECs). Additionally, the closed leaking underground storage tank (LUST) case at the site was considered a historical recognized environmental condition (HREC), and no controlled recognized environmental conditions (CREC) were identified on the site.

In addition, the Phase I ESA noted that due to the age of the on-site buildings and structures, it is likely that asbestos-containing materials (ACM) were used in their construction. Demolition of these buildings and structures can cause encapsulated ACM (if present) to become friable and, once airborne, would be considered a carcinogen. A carcinogen is a substance that causes cancer or helps cancer grow. Such releases could pose significant risks to persons living and working in and around the project area, as well as to project construction workers. Due to this likelihood of ACMs being present in existing on-site buildings, a pre-demolition ACM survey would be conducted prior to any disturbance of suspected ACMs.

Abatement of all ACM encountered during any future building demolition activities would be required to be conducted in accordance with all applicable laws and regulations, including those of the EPA (which regulates disposal), Occupational Safety and Health Administration (OSHA), U.S. Department of Housing and Urban Development, Cal/OSHA (which regulates employee exposure), and SCAQMD.

For example, the EPA requires that all asbestos work performed within regulated areas be supervised by a person who is trained as an asbestos supervisor (EPA Asbestos Hazard Emergency Response Act, 40 CFR 763). SCAQMD's Rule 1403 requires that buildings undergoing demolition or renovation be surveyed for ACM prior to any demolition or renovation activities. Should ACM be identified, Rule 1403 requires that ACM be safely removed and disposed of at a regulated disposal site, if possible. If it is not possible to safely remove ACM, Rule 1403 requires that safe procedures be used to demolish the building with asbestos in place without resulting in a significant release of asbestos to the environment. Additionally, during demolition, grading, and excavation, all construction workers would be required to comply with the requirements of Title 8 of the California Code of Regulations, Section 1529 (Asbestos), which provides the exposure limits, exposure monitoring, respiratory protection, and good working practices by workers exposed to asbestos.

Mandatory compliance with these regulatory requirements would ensure that construction workers and the public are not exposed to significant ACM health hazards during demolition and/or transport of demolition waste to an appropriate disposal facility and would ensure that impacts related to ACM are less than significant.

Based on the findings of the Phase I ESA, a Phase II ESA (Appendix E-2) was prepared to assess the potential for the release of hazardous substances at the project associated with the identified recognized environmental conditions. As part of this process, 12 soil samples were taken on the project site for soil testing and 14 vapor probe locations were utilized for soil vapor testing.

The results of the soil sample testing found that the project site did not have any concentrations above the regulatory screening criteria, with the exception of benzene. Benzene was observed at concentrations exceeding commercial/industrial screening levels, however, the presence of benzene in soil vapor is consistent with background ambient air benzene concentrations encountered in commercial/industrial areas. Therefore, the detected subsurface soil vapor benzene concentrations do not appear to be associated with a site release incident and no additional actions are recommended.

Potentially hazardous materials would likely be handled on the project site as part of project construction. These materials would include gasoline, diesel fuel, lubricants, and other petroleum-based products required to operate and maintain construction equipment. Handling of these potentially hazardous materials would be temporary and would coincide with the short-term construction phase of the project.

Although these materials would likely be stored on the project site, storage would be required to comply with the guidelines set forth by each product's manufacturer and with all applicable federal, state, and local regulations pertaining to the storage of hazardous materials. Consistent with federal, state, and local requirements, the transport of hazardous materials to and from the project site would be conducted by a licensed contractor. ALI handling, transport, use, or disposal of hazardous materials must comply with all relevant federal, state, and local agencies and regulations, including EPA, the California Department of Toxic Substances Control, OSHA, the California Department of Transportation (Caltrans), the Resource Conservation and Recovery Act, and the SCAQMD. Therefore, with compliance with applicable regulations,

short-term construction impacts related to the transport, use or disposal of hazardous materials would be less than significant.

Long-Term Operational Impacts

Potentially hazardous materials associated with project operations would include materials used during typical cleaning and maintenance activities. Although these potentially hazardous materials would vary, they would generally include household cleaning products, paints, fertilizers, and herbicides and pesticides. Many of these materials are considered household hazardous wastes, common wastes, and/or universal wastes by the EPA, which considers these types of wastes to be common to businesses and households and to pose a lower risk to people and the environment than other hazardous wastes when properly handled, transported, used, and disposed of (EPA 2022). Federal, state, and local regulations typically allow these types of wastes to be handled and disposed of with less stringent standards than other hazardous wastes, and many of these wastes do not have to be managed as hazardous waste. Additionally, any potentially hazardous material handled on the project site would be limited in both quantity and concentrations, consistent with other similar industrial uses located in the City, and any handling, transport, use, and disposal would be required to comply with applicable federal, state, and local agencies and regulations. Further, as mandated by OSHA (OSHA n.d.), all hazardous materials stored on the project site would be accompanied by a Material Safety Data Sheet, which would inform employees and first responders as to the necessary remediation procedures in the case of accidental release. Therefore, long-term operational impacts associated with hazardous materials would be less than significant.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less-than-Significant Impact. Refer to Section 3.9(a).

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact. The nearest school to the project site is Joe Baca Middle School (1640 S Lilac Ave.), which is located 0.27 miles west of the project site. Therefore, no impacts associated with emitting or handling hazardous materials within 0.25 miles of a school would occur.

d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. The project site is not included on any hazardous waste site lists, including the California Department of Toxic Substances Control's EnviroStor database, the State Water Resources Control Board's GeoTracker site, the Cortese list, or other lists compiled pursuant to Section 65962.5 of the Government Code (CalEPA 2022; DTSC 2022; SWRCB 2022). Therefore, no impacts associated with hazardous materials sites would occur.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The project site is located approximately 11.5 miles east of Ontario International Airport and approximately 9 miles northeast of the Riverside Municipal Airport. The project site is not located within the Airport Influence Area of the Ontario International Airport nor the Riverside Municipal Airport (City of Ontario 2011; County of Riverside 2005). Further, based on the relatively large distance between the project site and these public airports, the project would not result in a safety hazard for people working in the project area; therefore, no impacts associated with public airport hazards would occur.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less-than-Significant Impact. Typically, roadway facilities designated by the City of Rialto General Plan Circulation chapter (City of Rialto 2010) as major, modified, or secondary arterials, as well as other streets with regional access, are assumed to serve as evacuation routes in the event of a regional emergency. Vehicle access to the project site would be provided via S. Willow Avenue, S. Alice Avenue and W. Valley Boulevard. Valley Boulevard is classified as a major highway in the Gateway Specific Plan (City of Rialto 1990). Valley Boulevard, located to the north of the project site, provides direct regional access to I-10, located to the south of the project site; thus, this street would serve as an emergency evacuation route for the project area. None of the proposed frontage improvements along South Willow Avenue, West Valley Boulevard, and South Alice Avenue would impede response or evacuation activities in the event of an emergency; therefore, impacts associated with emergency response and evacuation routes would be less than significant.

g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. According to CAL FIRE's 2008 High Fire Hazard Severity Zones, the project site is not located in an area identified as being susceptible to wildland fire (CAL FIRE 2008). In addition, the City of Rialto General Plan, Exhibit 5.3, Fire Hazards, does not identify the project site as being located in a fire hazards severity zone (City of Rialto 2010). Further, the project site is located in a predominantly developed portion of the City, and no wildland/urban interfaces occur on or near the project site; therefore, no impacts associated with wildland fire would occur.

3.10 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☐	☒
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

The following analysis is based on the Water Quality Management Plan and the Preliminary Hydrology Report prepared for the project in July 2022 by Huitt-Zollars, Inc., and is included as Appendices F-1 and F-2, respectively.

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Short-Term Construction Impact

Less-than-Significant Impact. Construction of the project would include earthwork activities that could potentially result in erosion and sedimentation, which could subsequently degrade downstream receiving waters and violate water quality standards. Stormwater runoff during the construction phase may contain silt and debris, resulting in a short-term increase in the sediment load of the municipal storm drain system. Substances such as oils, fuels, paints, and solvents may be inadvertently spilled on the project site and subsequently conveyed via stormwater to nearby drainages, watersheds, and groundwater.

The project would be subject to the municipal NPDES permit, which requires measures to prohibit non-stormwater discharges into the storm sewer and to control the discharge of stormwater to the maximum extent practical. These measures include BMPs, control techniques, and system design methods. The Santa Ana Regional Water Quality Control Board (RWQCB) issues NPDES permits for construction activities that would involve 1 acre or more. The City falls within the jurisdiction of San Bernardino County and, thus, is subject to the municipal stormwater permit issued by the Santa Ana RWQCB.

The NPDES permit requires implementation of a stormwater quality management program that specifies guidelines to control, reduce, and monitor discharges of waste to storm drains. As such, through compliance with the water quality standards set forth in the NPDES permit, the wastewater generated during construction of the project would not adversely affect water quality; therefore, short-term construction impacts associated with water quality would be less than significant.

Long-Term Operational Impacts

Less-than-Significant Impact. The project would be subject to the Municipal Separate Storm Sewer System (MS4) Permit, issued to San Bernardino County and incorporated cities within San Bernardino County by the Santa Ana RWQCB. The MS4 Permit requires implementation of low-impact development BMPs to prevent pollutants from being discharged off site by mimicking pre-development site hydrology and feasible source control. The low-impact development ordinance is designed to reduce runoff from impervious surfaces through landscape design that promotes water retention, permeable surface design, natural drainage systems, and on-site retention where feasible. These project-specific designs would reduce impacts to water quality associated with redevelopment.

In addition, the project-specific water quality management plan (Appendix F-1) ensures appropriate BMPs for post-construction and operation of the project. The combination of low-impact development BMPs and source-control and treatment-control BMPs addressed within the water quality management plan would address identified pollutants and hydrologic concerns from new development that could result in impacts to water quality standards. Therefore, long-term impacts associated with water quality would be less than significant.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Groundwater Supplies

Less-than-Significant Impact. The project site is located within the Rialto Public Works Department Water Division service area. The City's Water Division's primary source of water is City-owned water wells. These wells draw water from four water basins—Lytle Creek Surface Water Basin, Rialto Ground Water Basin, Bunkerhill Ground Water Basin, and Chino Hill Ground Water Basin (City of Rialto 2010). The City has pumped an average of 7,252 acre-feet of water per year in the past five years from these basins (City of Rialto 2021).

Additionally, according to the geotechnical investigation (Appendix D-1), groundwater was not encountered during test excavations, which extended to a maximum depth of 20 feet. As such, the project's subsurface construction activities, which would only extend a few feet below grade, are highly unlikely to encounter groundwater, and dewatering activities are not anticipated to be necessary. Therefore, impacts associated with groundwater supplies would be less than significant.

Groundwater Recharge

Less-than-Significant Impact. Although not fully developed, the project site is highly disturbed and does not contain a groundwater recharge basin or other facilities that promote groundwater recharge. Thus, under the existing condition, the project site is not considered an important location for groundwater recharge.

Following construction, the project site would contain landscape areas and other pervious surfaces that would allow for a similar percentage of water to percolate into the subsurface soils compared to the existing conditions. In addition, the project would include a detention/infiltration basin on site to capture and infiltrate stormwater runoff; therefore, impacts associated with groundwater recharge would be less than significant.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

Less-than-Significant Impact. Under the existing condition, the majority of ground surface is covered with asphalt pavement or compacted soil on the project site. Implementation of the project would slightly increase the amount of impervious areas on site and would alter existing drainage patterns; however, the project site does not currently have infiltration basins or capture systems in place to control stormwater runoff. The project would be required to conform to all applicable federal, state, and local requirements, including the current MS4 Permit adopted by the Santa Ana RWQCB. Compliance with these requirements would ensure that the new drainage system is designed with adequate capacity to capture stormwater flow to prevent erosion and on-site and off-site flooding impacts.

As such, alteration of the on-site drainage pattern would be conducted in a manner consistent with all applicable standards related to the collection and treatment of stormwater; therefore, impacts associated with altering the existing drainage pattern of the project site would be less than significant.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site?

Less-than-Significant Impact. Refer to Section 3.10(c)(1).

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less-than-Significant Impact. Under the existing condition, the ground surface is covered with asphalt pavement associated with the existing building on the project site. The project site does not currently have infiltration basins or capture systems in place to control stormwater runoff. As described in Chapter 2, Project Description, above, the project proposes an internal storm drain system to collect runoff and route drainage into on-site basins on the southern portion of the project site. Flows would ultimately enter an underground infiltration system along the southern edge on the project site, north of I-10. The overflow from the underground infiltration system, which has the capacity to contain flows from 100-year storm events, would be allowed to overflow to a proposed parkway culvert onto Alice Avenue. Although the project would slightly increase the amount of impervious surfaces on the project site, the proposed drainage system would be designed to conform to all applicable federal, state, and local requirements, including the current MS4 Permit adopted by the Santa Ana RWQCB. Mandated compliance with these requirements would ensure the new drainage system is designed to have adequate capacity to capture stormwater flow to prevent the conveyance of sediment, debris, and other constituents potentially contained in on-site stormwater from leaving the project site and impacting off-site and downstream receiving waters. Therefore, impacts associated with water quality standards and runoff waters would be less than significant.

iv) Impede or redirect flood flows?

No Impact. According to the Federal Emergency Management Agency Flood Insurance Rate Map No. 06071C8678J, the project site is located in an area of minimal flood hazard (Zone X) (FEMA 2016). In addition, per the City's General Plan Flooding Hazards map, Exhibit 5.2, the project site is located outside of a 500-year floodplain (City of Rialto 2010); therefore, no impacts associated with flooding would occur.

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

No Impact. Because of the project's inland location, relatively flat topography, and lack of an adjacent perennial body of water, the project site would not be susceptible to flood, tsunami, or seiche; therefore, no impacts associated with these natural phenomena would occur.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less-than-Significant Impact. Refer to Sections 3.10(a) and 3.10(b).

3.11 Land Use and Planning

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

a) Would the project physically divide an established community?

No Impact. The physical division of an established community typically refers to the construction of a linear feature (e.g., a major highway or railroad tracks) or removal of a means of access (e.g., a local road or bridge) that would impair mobility within an existing community or between a community and outlying area.

Under the existing conditions, the project site is developed and contains a truck driving school and a diesel repair operation. As such, the project is not used as a connection between established communities. Instead, connectivity within the area surrounding the project site is facilitated via local roadways. As such, the project would not impede movement within an established community, or from one established community to another. Therefore, no impacts associated with physically dividing an established community would occur.

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less-than-Significant Impact. The City General Plan Existing Land Use Map designates the project site as General Commercial with a Specific Plan overlay. As stated in the General Plan the Specific Plan Overlay requires the implementation of a Specific Plan and defers a determination of land use designations to the corresponding specific plan. The project is proposing a general plan amendment to change the project site's general plan land use designation from General Commercial with a Specific Plan overlay to Business Park with Specific Plan overlay. This general plan designation is consistent with other existing uses located along the Rialto Channel within the Gateway Specific Plan area.

The project site is located within the boundaries of the City's Gateway Specific Plan area. The Gateway Specific Plan is intended to revitalize and upgrade the Gateway area of the City. The Gateway Specific Plan proposes a mixed-use project with retail uses along Riverside Avenue, office and research and development parks fronting on San Bernardino Avenue, freeway commercial (hotels, eating establishments, and auto services) along Valley Boulevard, and light industrial parks in the western portion of the plan area (City of Rialto 1990). Land use designations within the Gateway Specific Plan include Office Park (O-P), Retail

Commercial (R-C), Freeway Commercial (F-C), and Industrial Park (I-P). Additionally, the Gateway Specific Plan contains development standards that act as a customized set of zoning standards for the project site. This approach allows the City a greater degree of control over the location and design of development within the Specific Plan area, ensuring compliance with the Specific Plan's goals and objectives. Development Guidelines are provided in Section 5 of the Gateway Specific Plan (City of Rialto 1990) and include standards for lot size, landscape coverage, setbacks, and floor area ratio.

The Gateway Specific Plan designates the project site as Freeway Commercial (F-C) for uses such as eating/dining, lodging, auto services, and some office/retail uses. The project is proposing a specific plan amendment to change the project site's specific plan land use designation from Freeway Commercial to Industrial Park (I-P). These future uses would include those related to warehouse, distribution, and/or logistics, which is generally consistent with the permissible uses and activities allowed by the City in the Industrial Park zone. Additionally, the Industrial Park land use designation has already been accounted for within the Gateway Specific Plan, and this specific plan amendment would continue the existing pattern of industrial park uses along the Rialto Channel within the Gateway Specific Plan. It follows that the project's land use, activities, and development intensity were already assumed and evaluated in the Gateway Specific Plan and Gateway Specific Plan EIR (City of Rialto 1990), respectively, and that the project would then be consistent with the local plans, policies, and regulations governing land use decisions; therefore, impacts due to conflicts with associated applicable land use plans, policies, and regulations would be less than significant.

3.12 Mineral Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. The City contains aggregate mineral resources. According to the City's General Plan (City of Rialto 2010), the project site is not located in an area containing aggregate resource materials. Therefore, no impact associated with loss of availability of known mineral resources would occur.

b) Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. Refer to the response provided in Section 3.12(a).

3.13 Noise

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Noise and Vibration Characteristics

Noise is defined as unwanted sound. Sound may be described in terms of level or amplitude (measured in decibels [dB]), frequency or pitch (measured in hertz or cycles per second), and duration (measured in seconds or minutes). The standard unit of measurement of the amplitude of sound is the decibel. Because the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale is used to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against low and very high frequencies in a manner approximating the sensitivity of the human ear. Several descriptors of noise (noise metrics) exist to help predict average community reactions to the adverse effects of environmental noise, including traffic-generated noise, on a community. These descriptors include the equivalent noise level over a given period (L_{eq}), the statistical sound level, the day–night average noise level (L_{dn}), and the Community Noise Equivalent Level (CNEL). Each of these descriptors uses units of dBA. Table 3.13-1 provides examples of A-weighted noise levels from common sounds. In general, human sound perception is such that a change in sound level of 3 dBA is barely noticeable, a change of 5 dBA is clearly noticeable, and a change of 10 dBA is perceived as doubling or halving the sound level.

Table 3.13-1. Typical Sound Levels in the Environment and Industry

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
—	110	Rock band
Jet flyover at 300 meters (1,000 feet)	100	—
Gas lawn mower at 1 meter (3 feet)	90	—
Diesel truck at 15 meters (50 feet), at 80 kilometers per hour (50 mph)	80	Food blender at 1 meter (3 feet) Garbage disposal at 1 meter (3 feet)
Noisy urban area, daytime gas lawn mower at 30 meters (100 feet)	70	Vacuum cleaner at 3 meters (10 feet)
Commercial area Heavy traffic at 90 meters (300 feet)	60	Normal speech at 1 meter (3 feet)
Quiet urban daytime	50	Large business office Dishwasher, next room
Quiet urban nighttime	40	Theater, large conference room (background)
Quiet suburban nighttime	30	Library
Quiet rural night time	20	Bedroom at night, concert hall (background)
—	10	Broadcast/recording studio
Lowest threshold of human hearing	0	Lowest threshold of human hearing

Source: Caltrans 2013.
Note: dBA = A-weighted decibel.

L_{eq} is a sound energy level averaged over a specified period (typically no less than 15 minutes for environmental studies). L_{eq} is a single numerical value that represents the amount of variable sound energy received by a receptor during a time interval. For example, a 1-hour L_{eq} measurement would represent the average amount of energy contained in all the noise that occurred in that hour. L_{eq} is an effective noise descriptor because of its ability to assess the total time-varying effects of noise on sensitive receptors.

Unlike the L_{eq} metrics, L_{dn} and CNEL metrics always represent 24-hour periods, usually on an annualized basis. L_{dn} and CNEL also differ from L_{eq} because they apply a time-weighted factor designed to emphasize noise events that occur during the evening and nighttime hours (when speech and sleep disturbance is of more concern). "Time weighted" refers to the fact that L_{dn} and CNEL penalize noise that occurs during certain sensitive periods. In the case of CNEL, noise occurring during the daytime (7:00 a.m.–7:00 p.m.) receives no penalty. Noise during the evening (7:00 p.m.–10:00 p.m.) is penalized by adding 5 dB, while nighttime (10:00 p.m.–7:00 a.m.) noise is penalized by adding 10 dB. L_{dn} differs from CNEL in that the daytime period is defined as 7:00 a.m.–10:00 p.m., thus eliminating the evening period. L_{dn} and CNEL are the predominant criteria used to measure roadway noise affecting residential receptors. These two metrics generally differ from one another by no more than 0.5 dB to 1 dB and, as such, are often treated as equivalent to one another.

Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some

common sources of vibration are trains, buses on rough roads, and construction activities, such as blasting, pile driving, and heavy earthmoving equipment.

Several different methods are used to quantify vibration. Peak particle velocity is defined as the maximum instantaneous peak of the vibration signal. Peak particle velocity is most frequently used to describe vibration impacts to buildings and is usually measured in inches per second. The root mean square amplitude is most frequently used to describe the effect of vibration on the human body and is defined as the average of the squared amplitude of the signal. Decibel notation is commonly used to measure root mean square. The decibel notation acts to compress the range of numbers required to describe vibration.

High levels of vibration may cause physical personal injury or damage to buildings. However, vibration levels rarely affect human health. Instead, most people consider vibration to be an annoyance that can affect concentration or disturb sleep. In addition, high levels of vibration can damage fragile buildings or interfere with equipment that is highly sensitive to vibration (e.g., electron microscopes). Most perceptible indoor vibration is caused by sources within buildings, such as operation of mechanical equipment, movement of people, or slamming of doors. Typical outdoor sources of perceptible vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If the roadway is smooth, the vibration from traffic is rarely perceptible.

Sensitive Receptors

Noise- and vibration-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would be considered noise and vibration sensitive and may warrant unique measures for protection from intruding noise. Sensitive receptors in the vicinity of the project site include transient residential (a hotel) uses to the west, a school to the northwest, single-family residential uses to the northwest, and a nursing home to the northeast. These noise-sensitive receptors (all of which are located more than 1,000 feet from the project site) represent the nearest land uses with the potential to be impacted by construction and operation of the project. Additional sensitive receptors are located farther from the project site in the surrounding community and would be less impacted by noise and vibration levels than the above-listed sensitive receptors.

Existing Noise Conditions

Noise measurements were conducted in the vicinity of the project site on November 3, 2022, to characterize the existing noise levels. Table 3.13-2 provides the locations, dates, and times the noise measurements were taken. The noise measurements were taken using a Soft dB Piccolo sound level meter equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The sound level meter meets the current American National Standards Institute standard for a Type 2 (General Use) sound level meter. The accuracy of the sound level meter was verified using a field calibrator before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground.

Table 3.13-2. Measured Noise Levels

Receptor	Location	Date	Time	L_{eq} (dBA)	L_{max} (dBA)
ST1	West of project site, adjacent to a hotel at 475 West Valley Boulevard	11/03/22	1239 p.m.–12:54 p.m.	64.8	77.7
ST2	Northwest of project site, adjacent to single-family residence at 1659 South Lilac Avenue	11/03/22	11:58 a.m.–12:13 p.m.	62.0	78.4
ST3	Northwest of project site, adjacent to Joe Baca Middle School at 1640 South Lilac Avenue	11/03/22	12:18 p.m.–12:33 p.m.	65.5	77.8
ST4	Northeast of project site, adjacent to Rialto Post-Acute Care Center at 1471 South Riverside Avenue	11/03/22	205 p.m.–2:20 p.m.	65.3	77.0

Source: Appendix G-1.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; L_{max} = maximum sound level during the measurement interval.

Four short-term noise measurement locations (ST1–ST4) were conducted in the vicinity of the project site, as shown in Figure 3.13-1, Noise Measurement and Modeling Locations. The measured L_{eq} and maximum noise levels are provided in Table 3.13-2. The field noise measurement data sheets are provided in Appendix G-1, Field Data Noise Sheets. The primary noise sources at the sites identified in Table 3.13-2 consisted of traffic on local roadways; other, secondary noise sources included occasional distant conversation, distant train activity, and distant industrial noise. As shown in Table 3.13-2, the measured sound levels ranged from approximately 62 dBA L_{eq} at ST2 to approximately 66 dBA L_{eq} (when rounded to whole decibels) at ST3.

Regulatory Setting

Federal

There are no federal noise standards that would directly regulate environmental noise during construction and operation of the project. The following is provided because guidance summarized herein is used or pertains to the analysis.

Federal Transit Administration

In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (FTA 2018) when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project. Although this FTA guidance is not a binding regulation, it is provided here for comparison purposes in the absence of such limits at the state and local jurisdictional levels.

Federal Interagency Committee on Noise

Some guidance regarding the determination of a substantial permanent increase in ambient noise levels in the project vicinity above existing levels is provided by the 1992 findings of the Federal Interagency Committee on Noise (FICON) (FICON 1992), which assessed the annoyance effects of changes in ambient noise levels resulting from aircraft operations. The FICON recommendations are based upon studies that relate aircraft and traffic noise levels to the percentage of persons highly annoyed by the noise. Annoyance is a qualitative measure of the adverse

reaction of people to noise that generates speech interference, sleep disturbance, or interference with the desire for a tranquil environment.

The rationale for the FICON recommendations is that it is possible to consistently describe the annoyance of people exposed to transportation noise in terms of L_{dn}. The changes in noise exposure that are shown in Table 3.13-3 are expected to result in equal changes in annoyance at sensitive land uses. Although the FICON recommendations were specifically developed to address aircraft noise impacts, they are used in this analysis to define a substantial increase in community noise levels related to all transportation noise sources and permanent non-transportation noise sources.

Table 3.13-3. Measures of Substantial Increase for Community Noise Sources

Ambient Noise Level Without Project (Ldn)	Significant Impact Assumed to Occur if the Project Increases Ambient Noise Levels by:
<60 dBA	+ 5 dBA or more
60-65 dBA	+ 3 dBA or more
>65 dBA	+ 2 dBA or more

Source: FICON 1992.
Notes: L_{dn} = day–night average noise level; dBA = decibels.

State

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 dBA CNEL and "conditionally acceptable" up to 70 dBA CNEL.[7] Multiple-family residential uses are "normally acceptable" up to dBA 65 CNEL and "conditionally acceptable" up to dBA 70 CNEL. Schools, libraries, and places of worship are "normally acceptable" up to 70 dBA CNEL, as are office buildings and business, commercial, and professional uses.

Local

City of Rialto Municipal Code

Operational Noise Standards

Chapter 9.50 (Noise Control), Section 9.50.050 of the Rialto Code of Ordinances includes restrictions on certain activities including loading and unloading, the use of dollies, carts, forklifts, or wheeled equipment that causes unnecessary noise within 1,000 feet of a residence other than between the hours of 7:00 a.m. and 8:00 p.m. However, the Code of Ordinances does not have specific exterior noise level standards by which the proposed project's

[7] A "conditionally acceptable" designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a "normally acceptable" designation indicates that standard construction can occur with no special noise reduction requirements.

operational noise levels can be assessed. Therefore, the County of San Bernardino Development Code standards are used in this noise study to assess the potential impacts at nearby sensitive land uses. The San Bernardino County Code, Title 8 Development Code, Section 83.01.080(c) establishes the noise level standards for stationary noise sources (San Bernardino County 2014). As shown in Table 3.13-4, for residential land uses the stationary noise standard is 55 dBA L_{eq} between the hours of 7:00 a.m. to 10:00 p.m. and 45 dBA L_{eq} between the hours of 10:00 p.m. to 7:00 a.m.

Table 3.13-4. Noise Standards for Stationary Noise Sources

Affected Land Uses (Receiving Noise)	7:00 a.m. - 10:00 p.m. (dBA L_{eq})	10:00 p.m. - 7:00 a.m. (dBA L_{eq})
Residential	55	45
Professional Services	55	55
Other Commercial	60	60
Industrial	70	70

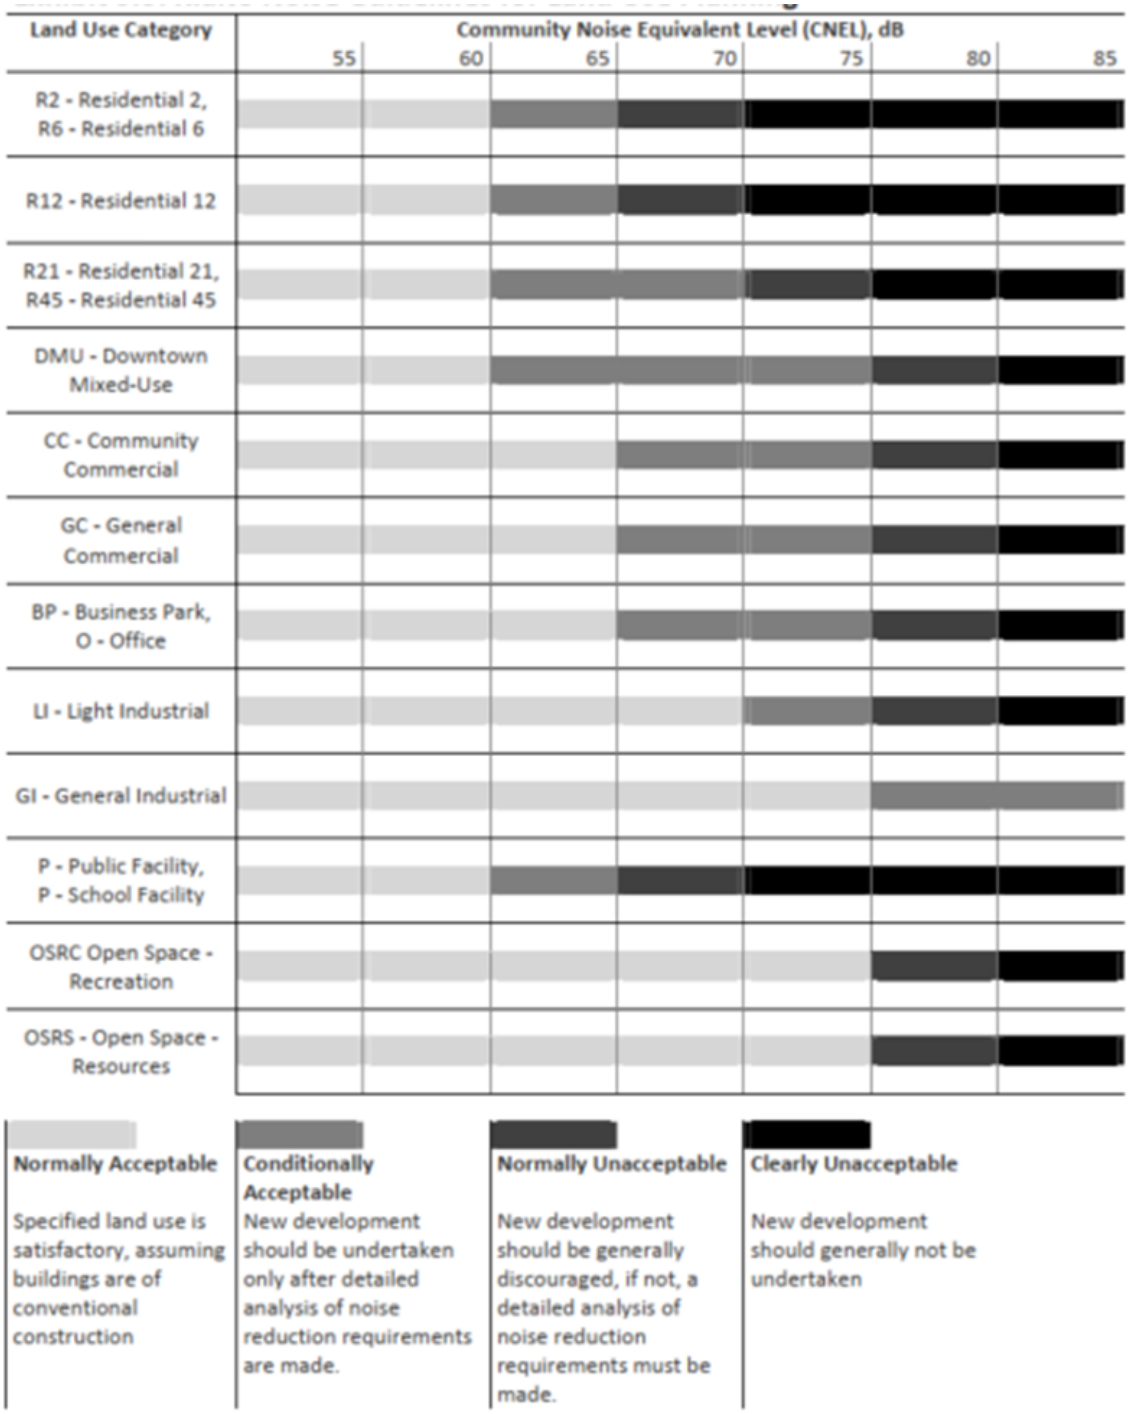
Source: San Bernardino County Code, Title 8 Development Code, Section 83.01.080(c) Table 83-2
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = decibels.

Construction Noise Standards

Section 9.50.050[F] of the Section 9.50.050 of the Rialto Code of Ordinances restricts the use of pile drivers, steam or gasoline shovels, pneumatic hammers, steam or electric hoists or other similar devices and Section 9.50.050[G] restricts the used electrically operated compressors, fans or other similar devices other than between the hours of 7:00 a.m. and 8:00 p.m. In addition, Section 9.50.070 of the Rialto Code of Ordinances states that construction activities are permitted between the hours of 7:00 a.m. to 5:30 p.m. Monday through Friday from October 1st to April 30th, 6:00 a.m. to 7:00 p.m. Monday through Friday from May 1st to September 30th, and 8:00 a.m. to 5:00 p.m. on Saturdays any time of year; with no activity allowed on Sundays or state holidays. While the City establishes limits on the hours during which construction activity may take place, neither the City of Rialto or County of San Bernardino establishes numeric construction standards at potentially affected receivers. Therefore, this analysis utilizes the FTA guidance for daytime construction noise level thresholds of 80 dBA L_{eq} over an 8-hour period as discussed above.

Construction Vibration Standards

The City of Rialto's Code of Ordinances does not identify specific vibration level standards; thus (similar to on-site operational noise standards), the County of San Bernardino Development Code vibration level standards are used in this analysis to assess potential impacts at nearby sensitive receiver locations. The County Development Code, Section 83.01.090(a) states that vibration shall be no greater than or equal to 0.2 inches per second measured at or beyond the lot line. Therefore, to determine if the vibration levels due to the operation and construction of the project, the peak particle velocity (PPV) vibration level standard of 0.2 inches per second (in/sec) is used.



City of Rialto General Plan

Rialto's General Plan Safety & Noise Element (Chapter 5) (City of Rialto 2010) establishes policies to guard against the creation of new noise and land use conflicts, and to minimize the impact of existing noise sources on the community. The Noise Element does not contain specific transportation-related noise standards; however, it does provide land use compatibility guidelines for future development and future noise contour boundaries for major roadways in the City of Rialto. The noise compatibility guidelines identified in the Safety & Noise Element, Exhibit 5.5, are guidelines to evaluate the land use compatibility of transportation-related noise. The compatibility criteria,

shown in Table 3.13-5, provides the City of Rialto with a planning tool to gauge the compatibility of land uses relative to existing and future exterior noise levels.

The Rialto Noise Guidelines for Land Use Planning matrix indicates that industrial land uses, such as the project site, are considered normally acceptable with exterior noise levels below 70 dBA CNEL, and conditionally acceptable with noise levels below 75 dBA CNEL. Noise-sensitive residential land uses are considered normally acceptable with exterior noise levels below 60 dBA CNEL, and conditionally acceptable with noise levels below 65 dBA CNEL. For conditionally acceptable land uses, new development should be undertaken only after detailed analysis of noise reduction requirements are made.

Table 3.13-5. Rialto Noise Guidelines for Land Use Planning

Source: City of Rialto General Plan Safety & Noise Element, Exhibit 5.5.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = decibels.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-Term Construction Noise

Less-than-Significant Impact. Construction noise is considered a short-term impact and would be considered significant if construction activities were to exceed the allowable hours of operation, as permitted by the City or if the construction noise levels exceed the advisory FTA guidance threshold of 80 dBA $L_{eq\ 8\text{-}hr}$. Noise-sensitive land uses in the vicinity of the project include transient residential (i.e., hotel) uses to the west (located approximately 1,050 feet from the construction boundary), residential uses to the northwest (approximately 1,300 feet away), a school to the northwest (approximately 1,600 feet away) and a nursing facility to the northeast (approximately 1,650 feet away). The construction noise assessment focused on noise levels that would occur at these nearest noise-sensitive land uses; construction noise levels at receptors further from the site would be lower. Modeling assumptions and output calculations are provided in Appendix G-2, Construction Noise Modeling Inputs and Outputs.

Project-generated construction noise will vary depending on the construction process, the type of equipment involved, the location of the construction site with respect to sensitive receptors, the schedule proposed to carry out each task (e.g., hours and days of the week), and the duration of the construction work. A likely worst-case construction noise scenario using information provided by the project applicant and equipment identified by CalEEMod (see Section 3.3, Air Quality) for this type and size of project was calculated using a spreadsheet model based the Federal Highway Administration's Roadway Construction Noise Model (FHWA 2008). Input variables for RCNM consist of the receiver/land use types, the equipment type (e.g., backhoe, grader, scraper), the number of equipment pieces, the duty cycle for each piece of equipment (i.e., percentage of time the equipment typically works in a given time period), and the distance from the noise-sensitive receiver to the construction zone. The RCNM has default duty cycle values for the various pieces of equipment, which were derived from an extensive study of typical construction activity patterns. Those default duty cycle values were utilized for this analysis. No topographical or structural shielding was assumed in the modeling. Appendix A-1 presents the equipment list used for the construction noise analysis. The results are summarized in Table 3.13-6 (see Appendix G-2 for model results).

As shown in Table 3.13-6, the noise levels from construction are predicted to range from approximately 47 dBA $L_{eq\ 8\text{-}hr}$ (during the architectural coating phase) to 59 dBA $L_{eq\ 8\text{-}hr}$ (during the demolition phase) at the nearest noise-sensitive receiver (R1 as shown in Figure 3.13-1 - the hotel located approximately 1,050 feet from the nearest construction work). Construction noise levels at the other noise-sensitive receivers would be lower. These noise levels would be less than measured ambient noise levels in the area and would be lower than the 80 dBA $L_{eq\ 8\text{-}hr}$ FTA construction noise standard. Therefore, noise from Project site construction would be less than significant.

Table 3.13-6. Construction Noise Summary of Results

Construction Phase	Construction Noise at Nearest Receiver Distances ($L_{eq\ 8\text{-}hr}$ [dBA])			
	R1 - Hotel to the West	R2 - Residence to the Northwest	R3 - School to the Northwest	R4 - Nursing Facility to the Northeast
	Nearest Source/ Receiver Distance (Approximately 1,050 feet)	Nearest Source/ Receiver Distance (Approximately 1,300 feet)	Nearest Source/ Receiver Distance (Approximately 1,600 feet)	Nearest Source/ Receiver Distance (Approximately 1,650 feet)
Demolition	59	57	56	56
Site Preparation	58	56	54	54
Grading	58	58	56	56
Building Construction	55	53	52	52
Paving	54	53	51	51
Architectural Coating	47	45	44	43

Source: Appendix G-2.
Notes: dBA = A-weighted decibels; $L_{eq\ 8\text{-}hour}$ = equivalent continuous sound level (time-averaged sound level) during an 8-hour construction work day.

Long-Term Operational Noise

Less-than-Significant Impact. Operation of the project would result in the generation of noise both on- and off-site. Consistent with similar warehouse and light industrial uses, business operations supported by the project would primarily be conducted within the enclosed building, except for traffic movement, parking, and loading and unloading of trucks at designated loading bays. As such, on-site operational noise sources are expected to include roof-top air conditioning units, parking lot activity, and truck loading dock activity. Off-site noise could be generated by vehicles, including heavy trucks accessing the project site and contributing to vehicular roadway noise. As detailed below, these operational project activities would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies.

On-Site Operational Noise

Implementation of the project would result in changes to existing noise levels on and around the project site by developing new stationary sources of noise, including introduction of outdoor HVAC equipment. These sources may affect noise-sensitive vicinity land uses off the project site.

The proposed warehouse space overall would not be served by heating or air conditioning equipment. However, the floor plan includes an office with an associated mezzanine space at the southwest building corner. For the analysis of noise from HVAC equipment operation, a York Model ZF-048 package HVAC unit was used as a reference. Based upon the square footage of the office and mezzanine spaces (6,000 square feet total), it was assumed that two such units would be required for the office/mezzanine areas. The York Model ZF-048 package HVAC unit has a sound power rating of 80 dBA (Johnson Controls 2015). Based on the warehouse roof design provided, there will be a 2.8-foot-high parapet extending along the perimeter of the roof, which would minimize sound from the HVAC unit at nearby noise-sensitive land uses.

Assuming all the HVAC equipment is operating simultaneously for a minimum period of 1 hour, the worst-case calculated noise level at each property line and at the nearby residences is presented in Table 3.13-7. The maximum hourly noise level for all the HVAC equipment operating at each of the nearest noise-sensitive uses would range from 13 to 19 dBA $L_{eq,}$ which is well below the City's noise standard for residences (55 dBA L_{eq} daytime, 45 dBA L_{eq} nighttime). The noise level calculation spreadsheets for the HVAC package units are included in Appendix G-3, Equipment Specifications and Noise Calculations.

Table 3.13-7. Mechanical Equipment Operation Noise Summary of Results

Equipment	Noise Level at Property Boundary	
	Receiver Location	Average Noise Level (dBA L_{eq})
HVAC	R1 (Hotel to the West)	19
HVAC	R2 (Residence to the Northwest)	17
HVAC	R3 (School the Northwest)	16
HVAC	R4 (Nursing Home to the Northeast)	13

Source: Appendix G-3.
Note: dBA = A-weighted decibels; L_{eq} = equivalent continuous sound level (time-averaged sound level);; HVAC = heating, ventilation, and air conditioning equipment.

The results of the mechanical equipment operations noise analysis indicate that the project would comply with City noise standards.

Parking Lot Activity

A comprehensive study of noise levels associated with surface parking lots was published in the Journal of Environmental Engineering and Landscape Management (Baltrënas et al. 2004). The study found that average noise levels during the peak period of use of the parking lot (generally in the morning with arrival of commuters and in the evening with the departure of commuters) were 47 dBA at 1 meter (3.3 feet) from the outside boundary of the parking lot. The parking area would function as an area source for noise, which means that noise would attenuate at a rate of 3 dBA with each doubling of distance. The employee parking lots are proposed to be situated on the south side of the warehouse, no closer than 1,150 feet from the nearest noise-sensitive use (the hotel to the west). At 1,150 feet, parking lot noise levels would be approximately 22 dBA L_{eq} at the nearest noise-sensitive use, not taking account for the noise reduction provided by the intervening buildings. Accounting for the noise reduction provided by the intervening buildings, parking lot noise levels would be approximately 14 dBA L_{eq} at the nearest noise-sensitive use. At the other noise-sensitive uses in the project vicinity, parking activity noise would be lower. Parking lot activity noise levels are summarized in Table 3.13-8.

Truck Loading Dock Activity

The parking lot study (Baltrënas et al. 2004) also examined noise levels associated with cargo truck delivery activity, including noise produced by backup alarms and forklift/yard hostler operations. The study concluded that average noise levels from truck loading/unloading areas were 96 dBA at 1 meter (3.3 feet) from the boundary of the truck activity area. The truck loading dock area (i.e., the truck court) would be located on the southern side of the proposed warehouse building, approximately 1,350 feet from the nearest noise-sensitive use (the hotel to the west). At other noise-sensitive uses in the vicinity, the truck loading dock area would be further away. Also, at all the noise-sensitive uses in the vicinity, the noise and

direct view of the loading docks would be entirely obstructed by the proposed warehouse building. Using the outdoor attenuation rate of 6 dBA with each doubling of distance and accounting for the noise reduction provided by the warehouse building, the noise from truck loading dock activity would range from approximately 16 dBA L_{eq} at the nursing home to the northeast to approximately 24 dBA L_{eq} at the hotel to the west. Truck loading dock activity noise levels are summarized in Table 3.13-8 and combined with the other on-site noise sources.

Table 3.13-8. Combined On-Site Noise Summary of Results – Noise Levels at Noise-Sensitive Land Uses

Receiver Location	Applicable Noise Standard (dBA L_{eq}) - Daytime (7 a.m. to 10 p.m.) / Nighttime (10 p.m. to 7 a.m.)	HVAC (dBA L_{eq})	Parking Lot Activity (dBA L_{eq})	Truck Loading Dock Activity (dBA L_{eq})	Combined HVAC, Parking Lot and Truck Loading Dock Activities Noise (dBA L_{eq})	Applicable Noise Standard Exceeded?	Combined HVAC, Parking Lot and Truck Loading Dock Activities Noise (dBA CNEL)
R1 (Hotel to the West)	55/45	19	14	24	26	No	32
R2 (Residence to the Northwest)	55/45	17	1	23	24	No	30
R3 (School the Northwest)	55/45	16	0	21	22	No	29
R4 (Nursing Home to the Northeast)	55/45	13	0	16	18	No	24

Source: Appendix G-3.

As shown in Table 3.13-8, on-site noise sources associated with the proposed project would not exceed applicable noise standards. Additionally, estimated on-site noise levels would be well below existing ambient noise levels, which ranged from approximately 62 to 66 dBA L_{eq}). Noise from on-site operations would not audibly or measurably increase ambient noise levels and would not result in a substantial noise increase. Furthermore, as shown in Table 3.13-8, if all on-site noise sources operated continuously over a 24-hour period, the resultant noise levels would range from approximately 24 dBA CNEL to 32 dBA CNEL. Noise levels from the proposed project would be well within the City of Rialto's range for "Normally Acceptable" noise /land use compatibility of 60 dBA CNEL for residential land uses (see Table 3.13-5). Thus, on-site operational noise would be less than significant.

Project-Generated Off-Site Traffic Noise

The project is expected to generate 237 net new daily trips to the roadway system; in terms of passenger car equivalent (PCE), which accounts for truck percentages, the project would generate 398 net new daily PCE trips. On an hourly basis, the project would result in a total of 24 AM and 25 PM additional peak-hour trips, consisting of 14 passenger vehicles and 10 trucks (ranging in size from 2-axle trucks to 4+ axle trucks) during the AM peak hour, and 15 passenger vehicles and 10 trucks during the PM peak

hour. In terms of PCE, the project would result in a total of 41 AM and 42 PM PCE additional peak-hour trips[8]. Vehicles entering and exiting the project site would use West Valley Boulevard, which has average daily traffic volumes of approximately 23,304[9]. This amounts to a small percentage (less than 2%) of the total daily volume on West Valley Boulevard. The project would not result in a doubling of trips on any particular road segment. Typically, a doubling of the energy of a noise source, such as a doubling of traffic volume, would increase noise levels by 3 dBA.[10] Given that it would result in only a modest increase in traffic on local and regional roadways, the project would not result in an increase of 3 dBA or greater on roadways in the study area. The change in noise level due to the project would not be audible. Furthermore, heavy trucks would be routed from the project site east on West Valley Boulevard to Riverside Avenue and then to the adjacent I-10 freeway; trucks would not be routed past noise-sensitive receivers along West Valley Boulevard to the west. Therefore, impacts associated with off-site project-generated traffic noise would be less than significant.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Less-than-Significant Impact. The main concern associated with groundborne vibration is annoyance; however, in extreme cases, vibration can cause damage to buildings, particularly those that are old or otherwise fragile. Some common sources of groundborne vibration are trains and construction activities such as blasting, pile-driving, and heavy earth-moving equipment. The primary source of groundborne vibration occurring as part of the proposed is construction activity. No major sources of groundborne vibration are associated with operation of the proposed project.

Groundborne vibration information related to construction/heavy equipment activities has been collected by Caltrans. Information from Caltrans indicates that transient vibrations (such as from construction activity) with approximately 0.035 inches per second peak particle velocity (PPV) may be characterized as barely perceptible, and vibration levels of 0.24 inches per second PPV may be characterized as distinctly perceptible (Caltrans 2020). The heavier pieces of construction equipment, such as large bulldozers or hoe rams, would register up to approximately 0.089 inches per second PPV at a distance of 25 feet, and a clam shovel drop would measure up to approximately 0.202 inches per second PPV at a distance of 25 feet (FTA 2018).

Groundborne vibration is typically attenuated over relatively short distances. At the nearest existing noise/vibration-sensitive use distance to the nearest construction area (approximately 1,050 feet – the hotel to the west) and with the anticipated construction equipment, the vibration level would be approximately 0.0003 inches per second PPV. This vibration level would be well below the threshold of "barely perceptible" of 0.035 inches per second PPV and would be lower than the threshold of "distinctly perceptible" of 0.24 inches per second PPV, as well as the County of San Bernardino's vibration threshold of 0.2 inches per second PPV.

The major concern with construction vibration is related to building damage. Construction vibration as a result of the proposed project would not result in structural building damage, which typically occurs at

8 Data from the proposed project's trip generation estimates (Section 3.17, Transportation).

9 Average Daily Traffic (year 2021) traffic volumes have been obtained from recent traffic studies in Rialto. A growth rate of 4% per year was used to estimate Opening Year 2025 traffic volumes, consistent with the traffic analysis conducted for the Birtcher Logistics Center Rialto, December 20, 2021.

10 Under normal circumstances (i.e., outside of a controlled setting such as a listening laboratory), a 3 dBA increase in noise levels is considered to be the smallest increase that is audible to the human ear; whereas a less than 3 dBA increase in noise levels is considered to be a barely or non-audible increase.

vibration levels of 0.5 inches per second PPV or greater for buildings of reinforced-concrete, steel, or timber construction. Therefore, impacts related to groundborne vibration would be less than significant.

c) ***For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?***

No Impact. The project site is located approximately 7 miles west of San Bernardino International Airport, 11.5 miles east of Ontario International Airport and approximately 9 miles northeast of the Riverside Municipal Airport. The project site is not located within an airport influence area for any of these airports (San Bernardino International Airport Authority 2010; City of Ontario 2011; County of Riverside 2005). Based on the relatively long distances between the project site and these public airports, the project would not expose people working in the project area to noise generated by either of these airports. Therefore, no impacts associated with public airport noise would occur.

3.14 Population and Housing

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) ***Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?***

Less-than-Significant Impact. The project would require a temporary construction workforce and a permanent operational workforce, both of which could potentially induce population growth in the project area. The temporary workforce would be needed to construct the proposed warehouse building and associated improvements. The number of construction workers needed during any given period would largely depend on the specific stage of construction but will likely average a few dozen workers at any given time throughout the workday. These short-term positions are anticipated to be filled primarily by workers who reside in the project area. Therefore, construction of the project would not be anticipated to generate a permanent increase in population within the project area.

In terms of operational employees, because the future tenant is not yet known, the number of jobs that the project would generate cannot be precisely determined, but it can be estimated. For purposes of analysis, employment estimates are calculated using average employment density factors reported by SCAG. SCAG reports that for every 1,195 square feet of warehouse space in San Bernardino County, the average numbers of jobs supported is one employee (SCAG 2001). The proposed warehouses would have a combined total of 136,200 square feet, and as such, the estimated number of employees required for operation would be approximately 114 people.

According to the SCAG Demographics and Growth Forecast, employment in the City is anticipated to grow from 25,500 employees in 2016 to 35,500 employees in 2045 (SCAG 2020b). The project-related increase in employment would be minimal in comparison to the anticipated increase in the SCAG Demographics and Growth Forecast.

Additionally, as of October 2022, the California Employment Development Department found that the unemployment rate for Riverside-San Bernardino-Ontario Metropolitan Statistical Area, including the City of Rialto, is at 3.9%, which is similar to the state average (4%) and slightly higher than the national average (3.7%) for the same period (EDD 2022). Therefore, the project's temporary and permanent employment requirements could likely be met by the City's existing labor force without the need for people to relocate to the project region. The project would not stimulate population growth or a population concentration above what is assumed in local and regional land use plans. Therefore, impacts associated with population growth would be less than significant.

b) Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The project site is currently developed with a truck driving school and a diesel repair operation. There are no existing residential uses on the project site and the project would not displace any existing housing or population. Therefore, no impact associated with displacing substantial numbers of existing people or housing would occur.

3.15 Public Services

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES – Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☒	☐
Schools?	☐	☐	☐	☒
Parks?	☐	☐	☐	☒
Other public facilities?	☐	☐	☐	☒

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

Fire protection?

Less-than-Significant Impact. The Rialto Fire Department (RFD) provides fire protection and emergency response services in the project area. The RFD deploys from four fire stations staffed 24 hours per day by career firefighters and administration. The RFD staffs one battalion chief, three engine companies, one truck company, and four paramedic ambulances each day. On-duty personnel also provide staffing for a Hazardous Materials unit and an Urban Search and Rescue unit (City of Rialto 2022b).

As described in the project description above, the automated gates on site will include pre-emption devices installed for both directions of travel and Knox key switch override to allow for emergency access. The closest fire station to the project area is Fire Station 205 (1485 S Willow Ave), located 0.2 miles north of the project site. Considering the proximity of the project site to the existing RFD facilities and given the fact that the project site is already located within RFD's service area, the project could be adequately served by the RFD without adversely affecting personnel-to-resident ratios, response times, or other performance objectives.

In addition, the project would not directly or indirectly induce population growth in the City. Although the project could potentially result in a slight, incremental increase in calls for service to the project site in comparison to existing conditions, this increase is expected to be nominal and would not result in the need for new fire protection facilities. Nonetheless, similar to other development projects in the City, the project applicant would be required to pay its fair share of development impact fees to help offset incremental impacts to fire protection services. Therefore, impacts associated with fire protection facilities and response times would be less than significant.

Police protection?

Less-than-Significant Impact. The Rialto Police Department (RPD) is headquartered at 128 North Willow Avenue, approximately 2 miles north from the project site. RPD has approximately 176 employees and serves 28.5 square miles with a population of over 100,000 people. It offers a variety of services and assignments, including patrol, K-9, school resource officer, Street Crime Attack Team, investigations, narcotics, training/backgrounds, community services, and the Re-Entry Support Team (RPD 2022).

The project would not directly or indirectly induce population growth in the City. Although the project would potentially result in a slight, incremental increase in calls for service to the project site compared to existing conditions, this increase is expected to be nominal and would not result in the need for new police protection facilities. In addition, the project site is already located within RPD's service area and would not require an expansion of the service area, which could result in longer response time. It is anticipated that the project would be adequately served by existing RPD facilities, equipment, and personnel. Nonetheless, similar to other development projects in the City, the project applicant would be required to pay its fair share of development impact fees to help offset incremental impacts to police protection services. Therefore, impacts associated with police protection facilities and response times would be less than significant.

Schools?

No Impact. The City is served by three school districts: the Rialto Unified School District, Fontana Unified School District, and Colton Joint Unified School District (City of Rialto 2010). The project site is within the Colton Joint Unified School District, which serves more than 23,000 students over 28 campuses, with 18 elementary schools, 4 middle schools, 3 comprehensive high schools, 2 alternative high school, and one preschool (CJUSD 2017).

Neither the construction nor the operation of the project would generate new permanent residents who would increase student populations. As such, the project would not directly or indirectly induce population growth in the City, and the project would have no effect on the Unified School District's service abilities.

Nonetheless, residential and non-residential development projects are subject to SB 50, which requires payment of mandatory impact fees to offset any impact to school services or facilities. The provisions of SB 50 are deemed to provide full and complete mitigation of school facilities impacts, notwithstanding any contrary provisions in CEQA or other state or local laws (California Government Code Section 65996). In accordance with SB 50, the project applicant would pay its fair share of impact fees based on project size. These impact fees are required of most residential, commercial, and industrial development projects in the City. Therefore, no impact associated with school facilities would occur.

Parks?

No Impact. The project would not directly or indirectly induce population growth in the City. As such, the project would not generate new permanent residents who would increase the use of existing parks such that substantial physical deterioration of facilities would occur or be accelerated. Regardless, the project would be subject to the state's Quimby Act, which requires development projects to set aside land, donate conservation easements, or pay in-lieu fees for park improvements. Pursuant to the Quimby Act, the applicant would pay its fair share of in-lieu fees based on the type and size of development. These impact fees are required of most residential, commercial, and industrial development projects in the City. Therefore, no impacts associated with park facilities would occur.

Other public facilities?

No Impact. Given the lack of directly or indirectly induced population growth anticipated as a result of the project, it is unlikely that the project would increase the use of libraries or other public facilities. Notwithstanding, the project applicant would be required to pay its fair share of development impact fees to help offset incremental impacts to libraries by helping fund capital improvements and expenditures. Therefore, no impacts associated with libraries or other public facilities would occur.

3.16 Recreation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The project would not directly or indirectly induce substantial population growth in the City. Neither construction nor operation of the project would generate new residents to the extent that use of existing parks and recreational facilities would increase and result in the physical deterioration of these facilities. Regardless, the project would be subject to the state's Quimby Act, which requires development projects to set aside land, donate conservation easements, or pay in-lieu fees for park improvements. Pursuant to the Quimby Act, the applicant would pay its fair share of in-lieu fees based on the type/size of development. These impact fees are required of most residential, commercial, and industrial development projects in the City. Therefore, no impacts associated with the increased use of existing recreational facilities would occur.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

No Impact. The project would construct a new warehouse building and associated improvements. The project does not propose any recreational facilities. As an industrial use, the project would not require the construction or expansion of recreational facilities. Therefore, no impacts associated with the construction or expansion of recreational facilities would occur.

3.17 Transportation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

The following analysis has been prepared consistent with the requirements of the City of Rialto's Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service (LOS) Assessment (Traffic Study Guidelines), (October 2021), as well as SB 743 and the current CEQA Guidelines for potential impacts to VMT. Appendix H-1 includes the project's Scoping Agreement for VMT and VMT Analysis prepared by Urban Crossroads, Inc. Appendix H-2 includes a Traffic Impact Analysis Scoping Form which provides level of service (LOS) screening for the project. Per the approved Traffic Impact Analysis Scoping (Appendix H-2), Dudek will be preparing a focused traffic analysis of the W. Valley Boulevard and S. Willow Avenue intersection.

Trip Generation Analysis

Trip generation estimates for the project are based on daily and AM and PM peak hour trip generation rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Handbook, 11th Edition (ITE 2021), using the warehousing land use (ITE Code 150). No trip credits for the existing land uses have been assumed in this analysis; therefore, the project's trip generation estimates are conservative.

PCE factors were also applied to the trip generation estimates to account for truck traffic. The City of Rialto indicates that projects with high truck percentages should convert project trips to PCE. A 1.5 PCE factor was applied to 2-axle trucks, 2.0 PCE for 3-axle trucks, and a 3.0 PCE factor was applied to 4-axle trucks per the Traffic Study Guidelines and San Bernardino County Congestion Management Program (CMP).

Table 3.17-1 presents the project's daily, and AM and PM peak hour trip generation estimates.

Table 3.17-1. Project Trip Generation Summary

Land Use	Daily Trip Rate/Unit		AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Trip Rates and Trip Generation

Project Trip Generation PCE								
PCE Factors[3] and PCE Trips (138.350 TSF)	Passenger Cars (1.0 PCE)	142	11	3	14	4	11	15
	2-axle Trucks (1.5 PCE)	3	0	0	0	0	0	0
	3-axle Trucks (2.0 PCE)	54	4	2	6	2	4	6
	4+axle Trucks (3.0 PCE)	199	18	3	21	6	15	21
	Total PCE Trips	**398**	**33**	**8**	**41**	**12**	**30**	**42**

Notes: TSF = thousand square feet, PCE = passenger car equivalent
Some of the totals may not match exactly due to rounding.

1 Trip rates from the Institute of Transportation Engineers, Trip Generation, 11th Edition, 2021. Land Use Code 150 – Warehousing.

2 Per City of Rialto's TIA Guidelines (October 2021), 40% of the daily trips are truck trips (per AQMD staff recommendation included in CalEEMod v. 2013.2 Appendix E Technical Source Documentation, Fleet Mix) for warehousing uses i.e., ITE Code 150. The vehicle mix for trucks i.e., 2-axle, 3-axle, and 4+ axle trucks are per current measured rates in the City and provided in the draft TIA guidelines.

3 Passenger Car Equivalent (PCE) factors are assumed to be 1.0 for passenger vehicles, 1.5 and 2.0 for 2-axle and 3-axle trucks, and 3.0 for 4-axle trucks per City of Rialto TIA Guidelines (October 2021)

As shown in Table 3.17-1, the proposed project would generate approximately 237 daily trips, with 24 trips (19 inbound and 5 outbound) in the AM peak hour, and 25 trips (7 inbound and 18 outbound) in the PM peak hour. Adjusting for PCE, the trip generation is approximately 398 daily PCE trips, 41 AM PCE peak hour trips (33 inbound and 8 outbound) and 42 PM PCE peak hour trips (12 inbound and 30 outbound).

City of Rialto Traffic Study Guidelines

The City's Traffic Study Guidelines require a Level of Service Impact Analysis if a project generates more than 50 AM or PM peak hour trips. Additionally, the City may require a focused traffic study for projects generating less than 49 AM or PM peak hour trips, if there are concerns regarding access, or level of service on intersection or roadway segments adjacent to the project. Trip generation estimates for the project are summarized above. Based on the project's trip generation estimates as described above, development of

the proposed project would not result in degradation of the intersections along Valley Boulevard, or other nearby intersections due to the low volume of vehicular traffic (less than 50 peak hour trips). A detailed LOS analysis would not be required. As the proposed project is forecast to generate 41 AM peak hour trips and 42 PM peak hour trips (PCE-adjusted), the proposed project would not exceed the trip threshold for the preparation of a TIA per the City's Traffic Study Guidelines. No other issues have been identified to warrant a focused traffic analysis. Therefore, a full or focused traffic study and LOS analysis would not be required.

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less-than-Significant Impact. As detailed in the following text, the project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

City of Rialto General Plan Circulation Element

The City of Rialto adopted its most recent version of the General Plan in 2010 and it includes the currently applicable Circulation Element. The Circulation Element chapter provides policy direction to create a system of Complete Streets. Complete Streets refers to a multi-modal transportation network designed and operated meet the needs of all users by adopting goals and policies that address the following:

- Identifying the hierarchy of travel corridors in the City
- Defining a Citywide Transit Plan
- Identifying a Citywide Bicycle Network
- Including provisions for bike lanes on many roadway types in the roadway design standards; and
- Includes policies and implementation actions to encourage the use of transit, bicycling, and walking.

The project site is bordered by Valley Boulevard to the north, which is designated as a Major Arterial and a truck route within the City. Project trucks will use the I-10/Riverside Avenue interchange via Valley Boulevard. Should trucks need to pass through local streets north of the project site, these trucks will utilize the City-designated truck route on Cedar Avenue west of the project site via its interchange on I-10. By remaining on the designated truck route and utilizing I-10, heavy trucks will avoid passing by the nearby public spaces of Ruth Grimes Elementary School, Rialto City Park, and Colton Golf Course. Therefore, the project would not conflict with the hierarchy of travel corridors established in the City. As shown below, the project would not program, plan, ordinance, or policy addressing the transit, roadway, bicycle, and pedestrian facilities.

Transit Facilities

Omnitrans provides public transportation throughout the San Bernardino Valley and would serve as the nearest transit service to the project site. The nearest Omnitrans bus stop serves Route 22, is located approximately 200 feet north of the intersection of Riverside Avenue/Valley Boulevard. Route 22 serves north and south Rialto via Riverside Avenue with a frequency of 60 minutes throughout the week. Development of the proposed project would not conflict with the existing bus routes or bus stops in its vicinity. Therefore, impacts to transit would **be less than significant**.

Roadway Facilities

The City of Rialto follows the roadway classification system included in General Plan Circulation chapter. Following roadways are in the vicinity of the project site:

Valley Boulevard is classified as a Major Arterial in the City of Rialto and in the vicinity of the proposed project. Arterial roadways link freeways with local streets to accommodate larger volumes of through traffic moving at higher speeds than local streets. They carry high traffic volumes and are primary thoroughfares that connects Rialto with adjacent cities of and the regional highway system such as, Interstate (I) -10. Valley Boulevard, between Alice Avenue and Willow Avenue, is constructed with two travel lanes in each direction with a center turn lane. Parking is not allowed along this roadway and there is no marked bike facility. There are paved sidewalks along the roadway.

Riverside Avenue is a generally a north-south Modified Arterial II and has three lanes of travel in each direction, near its interchange with I-10. Parking is not allowed along this roadway and there is no marked bike facility. There are paved sidewalks

Willow Avenue is a north-south Collector Street with one travel lane in each direction. Collector Streets serve as a transition between Local Streets and arterial roadways. On-street parking is allowed along Willow Avenue. The signalized intersection of Willow Avenue/Valley Boulevard would provide access to project traffic.

Alice Avenue is non-classified roadway between Valley Boulevard and the project site. The Alice Avenue/Valley Boulevard intersection would provide a right-in-right access to the project traffic.

The proposed project would not alter any roadway classification. It would make required frontage improvements to Willow Avenue and Alice Avenue and construct access driveways per City standards. Therefore, impacts to roadway facilities would be less than significant.

Pedestrian and Bicycle Facilities

Although the General Plan Circulation Element includes several bicycle classifications, the Rialto Active Transportation Plan, 2020, provides a more comprehensive and updated overview of the City's current and future recommendations to enhance multi-modal facilities:

Class I Multi-Use Paths: Class I multi-use paths (frequently referred to as "bicycle paths") are physically separated from motor vehicle travel routes, with exclusive rights-of-way for non-motorized users like bicyclists and pedestrians.

Class II Bicycle Lanes: Bicycle lanes are one-way route types that carry bicycle traffic in the same direction as the adjacent motor vehicle traffic. They are typically located along the right side of the street (although can be on the left side) and are between the adjacent travel lane and curb, road edge, or parking lane. They are not physically separated from motor vehicle traffic

Class III Bicycle Routes: A bicycle route is a suggested bicycle path of travel marked by signs designating a preferred path between destinations. They are recommended where traffic volumes and roadway speeds are fairly low (35 mph or less). They do not have pavement marking and are not separated from traffic, rather are a share the road facility.

Class IV Separated Bikeways: Separated bikeways, also known as cycle tracks, are bicycle-specific routes that combine the user experience of a multi-use path with the on-street infrastructure of a conventional bicycle lane. Separated bikeways are physically separated from motor vehicle traffic and designed to be distinct from any adjoining sidewalk.

There are no existing bicycle facilities adjacent to the project site along Valley Boulevard or Riverside Avenue. Per Rialto Active Transportation Plan (March 2020), the proposed facilities in the vicinity of the project include Class II/III facilities along Riverside Avenue and Class II Bike lanes along Valley Boulevard. As such, the project would not conflict with proposed bicycle facilities or preclude the City from implementing or constructing them, and impacts would be less than significant.

Site analysis of the project area does not indicate existing sidewalk and pedestrian facilities along the full extents of Willow Avenue or Alice Avenue in the vicinity of the project site. The project would be responsible for constructing frontage improvements, including sidewalks along those roadways. As such, development of the project would improve the existing pedestrian facilities, and impacts would be **less than significant**.

b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Less-than-Significant Impact. As shown in the analysis below, based on the City's adopted thresholds, the Project generated VMT would result in a less than significant impact.

On September 27, 2013, Senate Bill (SB) 743 was signed into law, which created a process to change the way that transportation impacts are analyzed under CEQA. SB 743 required the Governor's Office of Planning and Research (OPR) to amend the CEQA Guidelines to provide an alternative to LOS for evaluating transportation impacts. Under the transportation guidelines, LOS, or vehicle delay, will no longer be considered an environmental impact under CEQA. The updates to the CEQA Guidelines required under SB 743 were approved on December 28, 2018. These guidelines identify VMT as the most appropriate measure of transportation impacts under CEQA as of July 1, 2020.

VMT Screening

The following screening criteria were analyzed using the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool per direction from the City. The City Guidelines state Projects that meet certain VMT screening criteria may be presumed to result in a less than significant transportation impact. The City Guidelines lists the following VMT screening criteria:

- **Transit Priority Area (TPA) Screening:** Projects located within a TPA[11] as determined by the most recent RTP/SCS. The proposed Project is not located within a TPA. Therefore, it cannot be screened out using this criterion.
- **Low VMT Area Screening:** The SBCTA VMT Screening Tool (Screening Tool) was used to determine whether the proposed Project would be in a low VMT-generating area. The City's recommend guidance defines a low VMT generating area as one in which the proposed Project is located within a Traffic

[11] Per Public Resources Code section 21099(a)(7) a "Transit priority area" means an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations. For purposes of SB 743, a transit priority area also includes major transit stops that are scheduled to be completed within the planning horizon of the RTP/SCS.

Analysis Zone (TAZ) where the VMT per worker is lower than City's adopted threshold. TAZs are geographic polygons similar to Census block groups used to represent areas of homogenous travel behavior. Based on the Screening Tool results included in Traffic Scoping Form (Appendix X2), the Project is not located within a low VMT generating zone as compared to the City adopted threshold.

- **Project Type Screening:** The City Guidelines state that local serving retail projects less than 50,000 square feet may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition to local serving retail, the City Guidelines also provides a list of land use projects that may be presumed to cause a less than significant impact based on size or quantity. The proposed project does not meet the project type screening included in the City Guidelines.

As the proposed Project would not meet the City's recommended screening criteria, a Project level detailed VMT analysis is required.

VMT Analysis

The City requires the evaluation of project generated VMT to be analyzed in detail for projects that do not meet any of their screening criteria. The calculation of VMT for land use projects is based on the total number of trips generated and the average trip length of each vehicle. The City's Guidelines identify the San Bernardino Transportation Analysis Model (SBTAM) as the appropriate tool to conduct a detailed VMT analysis for land use projects. The technical memorandum describing the SBTAM model run for VMT by sub-consultant Urban Crossroads is included in Appendix H1.

VMT Impact Determination

Through consultation with City Staff and as noted in the Traffic Scoping Form, it was identified that the appropriate VMT metric for employment generating industrial land uses to be utilized for the purposes of this VMT Analysis is Production Attraction home-based work (HBW) VMT per employee or worker. As inferred from the City Guidelines, the Project would result in a significant project generated VMT impact if either of the following conditions is met for single use industrial projects:

- Baseline project generated VMT per employee exceeds the County of San Bernardino VMT per employee, or
- Cumulative project generated VMT per employee exceeds the County of San Bernardino VMT per employee.

As noted in the Low Area VMT screening step, the County of San Bernardino baseline average VMT per employee is 16.9.

Project VMT

The SBTAM is trip-based regional travel demand model that considers interaction between different land uses based on socio-economic data such as population, households, and employment. Project VMT has been calculated using the most current version of SBTAM. Adjustments in socio-economic data (i.e., employment) were made to the appropriate TAZ within the SBTAM model to reflect the Project's proposed warehousing land use. The Project socio-economic data is consistent with the employment density factors for San Bernardino County from the SCAG Employment Density Survey (October 31, 2001). Based on

number of employees estimated using Table II-B of the SCAG study (1 employee per 1,195 square feet), the Project was coded with 116 employees.

The Project generated VMT is defined as the VMT attributed to vehicle trips to and from the Project zone or zones. For single use industrial land uses such as the project, the efficiency metric of Home-based Work (HBW) VMT per employee can be used to evaluate Project VMT. The HBW VMT is obtained from the SBTAM model using the Production/Attraction (PA) method for calculating VMT, which sums all weekday VMT generated by trips with at least one trip end in the study area (i.e., Project's TAZ). Productions are land use types that generate trips (residences), and attractions are land use types that attract trips (employment). Productions and attractions are converted from person trips to vehicle trips for the purposes of calculating VMT and are then multiplied by the distance skims to calculate VMT. Table 2 presents Project generated PA HBW VMT from the SBTAM model, along with the estimated number of Project employees, and the resulting Work VMT per employee.

Project generated VMT was calculated for baseline (2022) and cumulative year model (2040) and is summarized in Table 3.17-2.

Table 3.17-2. Summary of Project VMT

	Baseline	Cumulative
Home Based Work (HBW) VMT	1,944	1,886
Number of Employees	116	116
HBW VMT/Employee	16.79	16.29
City's Adopted Threshold (HBW VMT/Employee)	16.90	16.90
Percent Below City's Threshold	-0.65%	-3.61%
Potentially Significant?	No	No

Note: VMT = vehicle miles traveled
Source: SBTAM Model Results; (Appendix H1)

As shown in the Table 3.17-2, the City adopted threshold is 16.90 VMT/employee. As shown, the Project's HBW VMT per employee is 16.79 under baseline conditions and 16.29 under cumulative conditions, which would be 0.65% below the City's impact threshold for baseline conditions and 3.61% below the City's impact threshold for cumulative conditions. Because the Project generated VMT per employee does not exceed the City's adopted threshold VMT per employee in either the baseline or cumulative conditions, the Project generated VMT impact would be **less than significant**.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less-than-Significant Impact. The signalized intersection of Valley Boulevard/Willow Avenue would provide access to the project traffic. Access to the project site would be provided by two driveways – a full access driveway for passenger cars and inbound trucks along Willow Avenue and an outbound driveway for passenger cars and trucks along Alice Avenue. Both driveways would be 40 feet wide. During site plan review, the internal roadway and driveway widths, curb radii to facilitate passenger car and truck turning and movement would be reviewed, designed, and constructed per City standards and applicable street design requirements.

During construction, if any activities or improvements are required within the public right-of-way, the proposed project would be required to comply with standards set forth by the City such as preparing a traffic control plan. Therefore, the project would not introduce an incompatible design feature that would impede traffic flow on roadway facilities. There would be no incompatible or hazardous uses associated with the proposed project and impacts would be **less than significant**.

d) Would the project result in inadequate emergency access?

Less-than-Significant Impact. Access to the project site would be provided by two driveways from Willow Avenue and Alice Avenue. Emergency vehicle access will be available at both driveways and facilitated such that the project is accessible to emergency responders during construction and operation of the project. The City's design review process will ensure that the site plan including layout of the proposed building, drive aisles, parking lots, and truck courts to ensure adequate travel path for emergency vehicles. The review of future developments will also ensure that other developments along Valley Boulevard and Willow Avenue have adequate emergency access. Therefore, impacts associated with an emergency response plan or emergency evacuation plan would be **less than significant.**

3.18 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☐	☒	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

The evaluation of potential impacts to Tribal Cultural Resources is based on the findings resulting from tribal consultation conducted by the City, as the lead agency, as well as the findings of the Archaeological Resources Assessment conducted by Dudek in 2023 (Appendix C-2).

Assembly Bill 52

AB 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 established that tribal cultural resources must be considered under CEQA and also provided for additional Native American consultation requirements for the lead agency. PRC Section 21074 describes a tribal cultural resource as a site, feature, place, cultural landscape, sacred place, or object that is considered of cultural value to a California Native American Tribe. A tribal cultural resource (TCR) is either:

- On the CRHR or a local historic register;
- Eligible for the CRHR or a local historic register; or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1.

AB 52 formalizes the lead agency–tribal consultation process, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with the project area, including tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report by contacting those tribal groups who have previously provided formal written request for notification of projects under the agency's jurisdiction.

Section 1 (a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on TCRs should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to TCRs, the consultation shall include those topics (PRC Section 21080.3.2[a]). Finally, the environmental document, for which the tribal consultation is focused, and the mitigation monitoring and reporting program (where applicable), developed in consideration of information provided by tribes during the formal consultation process, shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

Assembly Bill 52 Consultation

The project is subject to compliance with AB 52 (PRC 21074), which requires consideration of impacts to TCRs as part of the CEQA process, and that the lead agency notify California Native American Tribal representatives (that have requested notification) who are traditionally or culturally affiliated with the geographic area of the proposed project. All NAHC-listed California Native American Tribal representatives that have requested project notification pursuant to AB 52 were sent letters by the City on January 13, 2023, via certified mail. The notification letters contained a brief Project description, outline of AB 52 timing, an invitation to consult, a Project Location figure and contact information for the appropriate lead agency representative. Table 3.18-1 summarizes the current results of the AB 52 process for the Project.

Table 3.18-1. Assembly Bill 52 Native American Tribal Outreach Results

Native American Tribal Representatives	AB 52 Delivery Method and Date of Notification from City to Tribe	Response to City Notification Letters	Consultation Date and Notes
Andrew Salas, Chairperson Gabrieleño Band of Mission Indians – Kizh Nation	**January 31, 2023** via certified mail letter	**February 6, 2023**	**March 1, 2023:** Tribe requested consultation through email and stated they would send over "substantial evidence" and mitigation measures. **March 14, 2023:** Tribe provided Mitigation Measures to the City (no documentation to establish substantial evidence of the presence of a TCR within the Project site was provided by the Tribe)
Thomas Tortez, Chairperson Torres-Martinez Desert Cahuilla	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Isaiah Vivanco, Chairperson Soboba Band of Lusieño Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Lovina Redner, Tribal Chair Santa Rosa Band of Cahuilla Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Cheryl Madrigal, Tribal Historic Preservation Officer Rincon Band of Luiseño Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Joseph Hamilton, Chairperson Ramona Band of Cahuilla	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Jill McCormick, Historic Preservation Officer Quechan Tribe of the Fort Yuma Reservation	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Shasta Gaughen, Tribal Historic Preservation Officer Pala Band of Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Robert Martin, Chairperson Morongo Band of Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.

Table 3.18-1. Assembly Bill 52 Native American Tribal Outreach Results

Native American Tribal Representatives	AB 52 Delivery Method and Date of Notification from City to Tribe	Response to City Notification Letters	Consultation Date and Notes
Ray Chapparosa, Chairperson Los Coyotes Band of Cahuilla and Cupeño Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Charles Alvarez, Gabrieleño-Tongva Tribe	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Anthony Morales, Chairperson Gabrieleño-Tongva San Gabriel Band of Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Robert Dorame, Chairperson Gabrieleño Tongva Indians of California Tribal Council	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Christina Conley, Tribal Consultant and Administrator Gabrieleño Tongva Indians of California Tribal Council	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Sandonne Goad, Chairperson Gabrieleño-Tongva Nation	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Daniel Salgado, Chairperson Cahuilla Band of Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Doug Welmas, Chairperson Cabazon Band of Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Amanda Vance, Chairperson Augustine Band of Cahuilla Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Patricia Garcia-Plotkin, Director Agua Caliente Band of Cahuilla Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.

Table 3.18-1. Assembly Bill 52 Native American Tribal Outreach Results

Native American Tribal Representatives	AB 52 Delivery Method and Date of Notification from City to Tribe	Response to City Notification Letters	Consultation Date and Notes
Wayne Walker, Co-Chairperson Serrano Nation of Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Jessica Mauck, Director of Cultural Resources San Manuel Band of Mission Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.
Mark Macarro, Chairperson Pechanga Band of Indians	**January 31, 2023** via certified mail letter	None	As no response was received, consultation was concluded.

Notes: AB: Assembly Bill

To date, the City has received one response to the notification letters from the Gabrielino Band of Mission Indians – Kizh Nation. No tribal cultural resources have been identified within the project site as a result of consultation that has occurred thus far. Tribal consultation is still ongoing, and the results of consultation will be provided within the Final IS/MND.

The project site is disturbed and has been developed for several decades. The development and construction activities that have taken place over the years have heavily disturbed subsurface soils found on the project site. However, despite the previous disturbance on the project site, it is always possible that intact tribal cultural resources deposits are present at subsurface levels.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) ***Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?***

Less-than-significant Impact. As discussed in Section 3.5 above, the project site does not contain any resources that are either listed or eligible for listing in the CRHR or in a local register of historical resources as defined in California Public Resources Code, Section 5020.1(k). Therefore, impacts associated with historical resources would be less than significant.

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Less-than-Significant Impact with Mitigation Incorporated. The project is subject to compliance with AB 52 (California Public Resources Code, Section 21074), which requires consideration of impacts to Tribal Cultural Resources as part of the CEQA process. AB 52 requires the City, as the lead agency responsible for CEQA compliance for the project, to notify any groups (who have requested notification) of the project who are traditionally or culturally affiliated with the geographic area of the project. In addition to notifying those tribes as previously defined, it is the City's policy to provide notification to each tribal representative provided by the NAHC as traditionally or culturally affiliated with the geographic area of the project. Because AB 52 is a government-to-government process, all records of correspondence related to AB 52 notification and any subsequent consultation are on file with the City. On January 13, 2023, the City sent notification letters. To date, TCRs have not been identified through tribal consultation under AB 52, and the lead agency has not identified any TCRs within the proposed Project site that would warrant discretionary designation of a resource as a TCR. Tribal consultation is still ongoing and the results of consultation will be provided within the Final IS/MND.

In consideration of factors provided in Section 3.5, the potential to encounter intact cultural deposits containing tribal cultural resources within soils from the current grade to approximately 2.5 feet below existing ground surface is unlikely. However, the potential for intact cultural deposits to exist within native soils (from below 1 foot to 2.5 feet below ground surface [bgs]) to the depths of proposed ground disturbance is unknown. For these reasons, the proposed Project site should be treated as potentially sensitive for tribal cultural resources. In the event that unanticipated tribal cultural resources are encountered during project implementation, impacts to these resources would be potentially significant. Thus, in an abundance of caution, the City will require the implementation of MM-CUL-1 through MM-CUL-3 (see Section 3.5 above) as well as MM-TCR-1 through MM-TCR-3 to reduce potential impacts to a less-than-significant level during subsurface construction activities.

MM-TCR-1 Workers Environmental Awareness Program - All Consulting Tribes shall be notified by the applicant/owner/developer of the time and location of the Worker Environmental Awareness Program (WEAP) training no later than 72 hours prior to its scheduled occurrence. The applicant/owner/developer shall provide all Consulting Tribes access and opportunity to participate in the WEAP training. Further details and requirements pertaining to the WEAP training, please see MND Section 3.5 Cultural Resources mitigation measure CUL-1.

MM-TCR-2 Retention of a Native American Monitoring - Prior to any ground disturbance activities, the applicant/owner/developer shall contact all Consulting Tribes with notification of the approximate commencement of ground disturbing activities. The applicant/owner/developer shall make arrangements with the Consulting Tribes to enter into a Native American Monitoring Agreement with the intent of securing a total of one Native American monitor (from any Tribe under contract) to be present during initial ground disturbance occurring from 1 foot above native soils and below. Initial ground disturbance is defined as initial construction-related earthmoving of sediments from their place of deposition. As it pertains to cultural resource (archaeological or Native American) monitoring, this definition excludes movement of sediments after they have been initially disturbed or displaced by current

Project-related construction. The timing of when cultural resource monitoring (archaeological and Native American) shall be required shall be outlined in the Cultural Resource Monitoring and Inadvertent Discovery Plan pursuant to MM-CUL-1. The Plan shall be provided to each Consulting Tribe under contract prior to commencement of ground disturbing activities. More than one monitor may be required if multiple areas within the Project site are simultaneously exposed to initial ground disturbance causing monitoring to be hindered by the distance (more than 100 feet apart) of the simultaneous activities. If more than one of the Consulting Tribes would like to serve as a contracted monitoring entity, each Consulting Tribe shall be retained under contract with the applicant/owner/developer and monitoring shall occur on a nonsynchronous, rotational basis allowing each Consulting Tribe the opportunity to monitor as equally as possible based on the construction schedule and availability of each Consulting Tribe's monitors.

MM-TCR-3 Inadvertent Discovery Clause - In the event that potential prehistoric or historic-era Native American/Tribal resources (sites, features, or artifacts) are exposed during construction activities for the project, all construction work occurring not less than 50 feet of the find shall immediately stop and all Consulting Tribes must be notified immediately and be consulted with throughout the assessment of the find and determination of whether or not additional study is warranted. Depending upon the nature of the discovery, the archaeologist may simply record the find and allow work to continue. If the discovery proves potentially significant under CEQA, additional work such as subsurface testing may be warranted. If the discovery is determined significant under CEQA and avoidance is not feasible, data recovery shall be required.

In the event that human remains and associated funerary objects are inadvertently encountered during construction activities, the remains and funerary objects shall be treated in accordance with state and local regulations that provide requirements with regard to the accidental discovery of human remains, including California Health and Safety Code Section 7050.5, California Public Resources Code Section 5097.98, and CEQA Guidelines Section 15064.5(e). In accordance with these regulations, if human remains are found, the County Coroner must be immediately notified of the discovery. Additionally, all Consulting Tribes must be notified of the discovery immediately. No further excavation or disturbance within no less than 100 feet of the discovery or any area reasonably suspected to overlie adjacent remains can occur until the County Coroner has determined if the remains are human in origin. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she is required to notify the NAHC within 24 hours. The NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall then determine, in consultation with the property owner, the disposition and treatment of the human remains.

3.19 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, waste water treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the waste water treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) ***Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?***

Less-than-Significant Impact. The proposed project involves the demolition of existing buildings and asphalt on site and construction of an industrial/warehouse building, as well as paved parking areas and landscape areas. The project site currently consists of trucking and automotive services. As such, the proposed project would increase demand for water supply compared to existing land uses.

As part of the project, utility service lines, including those for water, wastewater, stormwater drainage, electric power, natural gas, and telecommunications services, would be extended from their current locations in the public right-of-way surrounding the project site for operation of the proposed warehouse building. The current uses on the site are connected to these utility service lines.

Given that the activity of connecting utilities from their current locations within the public right-of-way would require ground disturbance and the use of heavy machinery associated with trenching, the connection of these utility services to the proposed warehouse building could potentially result in environmental effects. However, the extension of these utility lines is part of the proposed project analyzed herein. As such, any potential environmental impacts related to these components of the project are already accounted for in this IS/MND as part of the impact assessment conducted for the entirety of the project. No adverse physical effects beyond those already disclosed in this IS/MND would occur as a result of implementation of the project's utility system connections. Additionally, the project would constitute a nominal increase in utility usage, which has already been accounted for in growth projections for the City and by each utility provider. No modifications to utility infrastructure would be necessary outside of the immediate project area. As such, impacts associated with the construction or expansion of utility line connections would be less than significant.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less-than-Significant Impact. Domestic water would be provided to the project site by Rialto Public Works Department Water Division. Water service is provided for single-family, multiple-family, commercial, light industrial, governmental, and landscaping purposes.

The primary water source for Rialto is groundwater from four different groundwater basins (City of Rialto 2021). The Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan contains existing and projected water supplies and demands for the region, including the Rialto Public Works Department Water Division. Table 3.19-1 shows projected water supplies during single- and multiple-dry year conditions, which represents "worst-case" conditions during extended periods of drought when supplies would be reduced.

Table 3.19-1. Projected Multiple Dry Year Supply and Demand Comparison (Acre-Feet)

Multiple Dry Year Scenario	2025	2030	2035	2040	2045
First Year					
Supply Totals	12,147	12,922	13,696	14,194	14,691
Demand Totals	10,563	11,236	11,910	12,342	12,775
Difference (supply minus demand)	**1,584**	**1,685**	**1,786**	**1,851**	**1,916**
Second Year					
Supply Totals	12,147	12,922	13,696	14,194	14,691
Demand Totals	10,563	11,236	11,910	12,342	12,775
Difference (supply minus demand)	**1,584**	**1,685**	**1,786**	**1,851**	**1,916**
Third Year					
Supply Totals	12,147	12,922	13,696	14,194	14,691
Demand Totals	10,563	11,236	11,910	12,342	12,775
Difference (supply minus demand)	**1,584**	**1,685**	**1,786**	**1,851**	**1,916**
Fourth Year					
Supply Totals	12,147	12,922	13,696	14,194	14,691

Table 3.19-1. Projected Multiple Dry Year Supply and Demand Comparison (Acre-Feet)

Multiple Dry Year Scenario	2025	2030	2035	2040	2045
Demand Totals	10,563	11,236	11,910	12,342	12,775
Difference (supply minus demand)	**1,584**	**1,685**	**1,786**	**1,851**	**1,916**
Fifth Year					
Supply Totals	12,147	12,922	13,696	14,194	14,691
Demand Totals	10,563	11,236	11,910	12,342	12,775
Difference (supply minus demand)	**1,584**	**1,685**	**1,786**	**1,851**	**1,916**

Source: City of Rialto 2021.

Table 3.19-1 demonstrates that the City anticipates adequate supplies for years 2025 to 2045 under multiple-dry year conditions based on current land use projections. However, in the event of a drought, the Rialto UWMP has prepared a water shortage contingency plan for the region (City of Rialto 2021). This plan provides specific actions that would be taken to ensure critical water needs of the region are met during a period in which water supplies are cut by 50%. Based on the future and existing capacity of water supplies and water management measures, it is anticipated there are sufficient water supplies to serve the proposed project. Therefore, impacts associated with available sufficient water supplies to serve the project site during normal, dray and multiple dry years would be less than significant.

c) Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less-than-Significant Impact. Under existing conditions, the project site is developed with existing buildings and asphalt associated with commercial and industrial uses and contributes to the overall wastewater generated within the City. As noted above in Section 3.11(b), the proposed project proposes development of a warehouse that is consistent with the existing zoning designation established by the City. As such, anticipated wastewater generation for an industrial use has already been accounted for in growth projections for the City. Existing infrastructure is adequate to convey wastewater without requiring the expansion of the facilities. In addition, the project site wastewater conveyance and treatment. Therefore, impacts associated with adequate wastewater capacity to serve the project's demand would be less than significant.

d) Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less-than-Significant Impact. Solid waste generated in the City is collected and transported by the City's contract waste hauler, Burrtec Waste Industries (City of Rialto 2022c). Once collected, solid waste is transported to sorting/disposal facilities permitted to accept residential and commercial solid waste, with each facility's operations routinely inspected by regional and state regulatory agencies for compliance with all applicable statutes and regulations. Burrtec operates five material recovery facilities in Southern California, which sort and process recyclables; the remaining waste is then taken to the nearby Mid-Valley Sanitary Landfill (Burrtec Waste Industries 2022).

The California Department of Resources Recycling and Recovery (CalRecycle) publishes solid waste generation rates based on land use types. According to CalRecycle, manufacturing/warehouse uses

generate 1.42 pounds per 100 square feet per day (CalRecycle 2019a). Based on these generation rates, construction of the proposed 136,200-square-foot warehouse facility could generate solid waste at a rate of approximately 1,934 pounds of solid waste, or 0.97 tons per day.[12]

The Mid-Valley Sanitary Landfill currently has a maximum permitted throughput of 7,500 tons per day and a remaining capacity of 61,219,377 cubic yards (CalRecycle 2019b). As a result, solid waste generated by the project would represent only a nominal percentage of the collective maximum daily throughput permitted for this landfill; therefore, impacts associated with permitted landfill capacity would be less than significant.

*e) **Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?***

Less-than-Significant Impact. All collection, transportation, and disposal of solid waste generated by the project would comply with all applicable federal, state, and local statutes and regulations. Under AB 939, the Integrated Waste Management Act of 1989, local jurisdictions are required to develop source reduction, reuse, recycling, and composting programs to reduce the amount of solid waste entering landfills. Local jurisdictions are mandated to divert at least 50% of their solid waste generation into recycling. The project would be required to submit plans to the Public Works Department for review and approval to ensure the plan would comply with AB 939.

In addition, the state has set a goal of 75% recycling, composting, and source reduction of solid waste by 2020. To help reach this goal, the state adopted AB 341 and AB 1826. AB 341 is a mandatory commercial recycling bill, and AB 1826 is mandatory organic recycling. Waste generated by the project would enter the City's waste stream but would not adversely affect the City's ability to meet AB 939, AB 341, or AB 1826, since the project's waste generation would represent a nominal percentage of the waste created within the City. Therefore, impacts associated with solid waste disposal regulations would be less than significant.

3.20 Wildfire

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒

[12] This estimate does not account for diversion of recyclables from the solid waste stream and, thus, should be considered a conservative projection.

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

a) Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Less-than-Significant Impact. Typically, roadway facilities designated by the City of Rialto General Plan Circulation chapter (City of Rialto 2010) as major, modified, or secondary arterials, as well as other streets with regional access, are assumed to serve as evacuation routes in the event of a regional emergency. Vehicle access to the project site would be provided via S Willow Avenue and S Alice Avenue. Valley Boulevard is classified as a major highway in the Gateway Specific Plan (City of Rialto 1990). Valley Boulevard, located to the north of the project site, provides direct regional access to I-10, located to the south of the project site; thus, this street could serve as emergency evacuation routes for the project area. The project would not include any project-adjacent, off-site improvements within these abutting roadways that would impede response or evacuation activities in the event of an emergency. In addition, the automated gates on site will include pre-emption devices installed for both directions of travel and Knox key switch override to allow for emergency access. Therefore, impacts associated with emergency response and evacuation routes would be less than significant.

b) Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. According to CAL FIRE's 2008 High Fire Hazard Severity Zones, the project site is not located in an area identified as being susceptible to wildland fire (CAL FIRE 2008). In addition, the City of Rialto General Plan, Exhibit 5.3, Fire Hazards, does not identify the project site as being located in a fire hazards severity zone (City of Rialto 2010). Further, the project site is relatively flat and contains only limited amounts of ornamental vegetation associated with existing landscaping and does not contain extensive amounts of vegetation or wildfire fuel. Therefore, it is not anticipated that the project, due to slope, prevailing winds, and other factors, would exacerbate wildfire risks or expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Thus, the project would not expose people or structures to significant risk involving wildfires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, no impacts associated with wildfire would occur.

c) Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. According to CAL FIRE's 2008 High Fire Hazard Severity Zones, the project site is not located in an area identified as being susceptible to wildland fire (CAL FIRE 2008). In addition, the City of Rialto General Plan, Exhibit 5.3, Fire Hazards, does not identify the project site as being located in a fire hazards severity zone (City of Rialto 2010). The project would construct surface parking lots, new internal circulation roadways, and infrastructure for the proposed development. It is not anticipated that installation or maintenance of internal driveways would exacerbate fire risk, as the driveways would be surrounded by developed land. Further, the project site is in a predominantly developed area and would connect to existing utilities. The project would not require installation or maintenance of other associated infrastructure such as fuel breaks, power lines, or other utilities that would exacerbate fire risk. As such, the project would not expose people or structures to significant risk involving wildland fires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, no impacts associated with wildfire would occur.

d) Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. According to CAL FIRE's 2008 High Fire Hazard Severity Zones, the project site is not located in an area identified as being susceptible to wildland fire (CAL FIRE 2008). In addition, the City of Rialto General Plan, Exhibit 5.3, Fire Hazards, does not identify the project site as being located in a fire hazards severity zone (City of Rialto 2010). As discussed in Section 3.7, Geology and Soils, and Section 3.10, Hydrology and Water Quality, the project would not result in significant risks associated with flooding, landslides, runoff, or drainage changes, and the project does not propose the use of fire (such as for a controlled vegetation burn) that would result in post-fire instability. Further, the project site is located within a developed portion of the City that is not susceptible to wildland fires, given its considerable distance from open, natural areas. Thus, the project would not expose people or structures to significant risk involving wildland fires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, no impacts with wildfire would occur.

3.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?***

Less-Than-Significant Impact With Mitigation Incorporated. As described throughout this IS/MND, with the incorporation of the identified mitigation measures (i.e., MM-BIO-1, MM CUL-1, MM CUL-2, MM CUL-3, MM GEO-1, MM TCR-1, MM TCR-2, and MM TCR-3), the project would not degrade the quality of the environment; would not substantially reduce the habitats of fish or wildlife species; would not cause a fish or wildlife population to drop below self-sustaining levels; would not threaten to eliminate a plant or animal; and would not eliminate important examples of major periods of California history or prehistory. Therefore, impacts would be less than significant with mitigation incorporated.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Less-Than-Significant Impact With Mitigation Incorporated. When evaluating cumulative impacts, it is important to remain consistent with Section 15064(h) of the CEQA Guidelines, which states that an EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

Alternatively, a lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable through mitigation measures set forth in an MND or if the project will comply with the requirements in a previously approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area in which the project is located.

The proposed project may potentially result in project related biological, cultural, paleontological, and tribal cultural resource impacts that could be potentially significant without the incorporation of mitigation. Thus, when coupled with biological, cultural and tribal cultural resource impacts related to the implementation of other related projects throughout the broader project area, the project would potentially result in cumulative-level impacts if these significant impacts are left unmitigated.

However, with the incorporation of mitigation identified herein, the project's impacts to biological resources (MM BIO-1), cultural and tribal cultural resources (MM CUL-1 thru CUL-3 and MM TCR-1 thru MM TCR-3), and paleontological resources (MM GEO-1) would be reduced to less-than-significant levels and would not considerably contribute to cumulative impacts in the greater project region. In addition, these other related projects would presumably be bound by their applicable lead agency to (1) comply with all applicable federal, state, and local regulatory requirements; and (2) incorporate all feasible mitigation measures, consistent with CEQA, to further ensure that their potentially cumulative impacts would be reduced to less-than-significant levels.

Although cumulative impacts are always possible, the project, by incorporating all mitigation measures outlined herein, would reduce its contribution to any such cumulative impacts to less than cumulatively considerable; therefore, the project would result in individually limited, but not cumulatively considerable, less-than-significant impacts with mitigation incorporated.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less-Than-Significant Impact With Mitigation Incorporated. As evaluated throughout this IS/MND, with incorporation of mitigation identified herein (i.e., MM-BIO-1, MM CUL-1, MM CUL-2, MM CUL-3, MM GEO-1, MM TCR-1, MM TCR-2, and MM TCR-3), all environmental impacts associated with the project would be reduced to less-than-significant levels. Thus, the project would not directly or indirectly cause substantial adverse effects on human beings. Impacts would be less than significant with mitigation incorporated.

4.2 List of Preparers

Dudek

Kristen Stoner – Project Manager
Hayley Ward – Deputy Project Manager
Shane Russett – Air Quality Specialist
Tommy Molioo – Senior Biologist
Max Murray – Biologist
Linda Kry – Cultural Resource Specialist
Heather McDevitt – Cultural Resource Specialist
Michael Williams, PhD – Paleontologist
Sarah Siren – Paleontologist
Michael Greene, INCE Bd. Cert. – Noise Specialist
Sabita Tewani, AICP, PTP – Transportation Specialist
Kelsey Bacon – GIS Analyst
Amy Seals, MA – Senior Technical Editor
Darlene Alilain-Horn – Publications Specialist

KEYNOTES

401 PAINTED CONCRETE TILT-UP WALL PANEL.
402 WALL REVEAL.
404 PANEL JOINT.

GLAZING LEGEND & NOTES

STOREFRONT FRAMING:
U.O.N @ VISION SYSTEM, MIN 2"x4 1/2" OFFSET SYSTEM. U.O.N. @ SPANDREL SYSTEM, 2"x1 3/4" OFFSET SYSTEM. STOREFRONT SYSTEM TO BE DESIGN BUILD BY THE GENERAL CONTRACTOR . DESIGN SHALL COMPLY WITH ALL RELEVANT CODE & WIND LOADING REQUIREMENTS.

VISION SYSTEM GLAZING:
FOR EXTERIOR VISION GLAZING USE 1" INSULATED GLASS CONSISTING OF AN OUTER LAYER OF 1/4" VISTACOOL AND AN INNER LAYER OF 1/4" SOLARBAN 60. FOR INTERIOR GLAZING USE 1/2" CLEAR GLASS

SPANDREL SYSTEM GLAZING:
FOR EXTERIOR SPANDREL GLAZING USE 1/4" VISTACOOL. BACK PAINTING OF GLASS NOT REQUIRED.

NOTES:

1. FOR GLASS AND MULLION COLORS, SEE EXTERIOR COLORS, LEGEND & NOTES, THIS SHEET.
2. PROVIDE TEMPERED GLASS @ THE FOLLOWING:
   A. ALL SPANDREL SYSTEM GLAZING IN FRONT OF CONCRETE WALL PANELS
   B. ALL GLAZING WITHIN 18" OF AN ADJACENT WALKING SURFACE.
   C. ALL GLAZING WITH 24" OF ANY PORTION OF A DOOR.
3. @ SPANDREL SYSTEM GLAZING IN FRONT OF CONCRETE WALL PANELS, PROVIDE 1" DIA. VENTILATION HOLES IN THE CONCRETE A MAX OF 5'-0" O.C. CONTRACTOR TO PROVIDE A SMOOTH FINISH ON THE GLASS FACING CONCRETE SURFACES AND TO PAINT THEM IN A COLOR SELECTED BY THE ARCHITECT.
4. @ SPANDREL SYSTEM GLAZING NOT IN FRONT OF A CONCRETE WALL PANEL, PROVIDE TENCATE MIRAFI 140N FILTER FABRIC SHADE CLOTH.

EXTERIOR WALL COLOR LEGEND & NOTES

(A) EXTERIOR PAINT
COLOR: SW 6995 SUPERWHITE

(B) EXTERIOR PAINT
COLOR: SW 7667 ZIRCON

(C) EXTERIOR PAINT
COLOR: SW 7674 PEPPERCORN

(D) CORTEN STEEL METAL FINISH

(E) STOREFRONT MEDIUM PERFORMANCE BLUE REFLECTED GLAZING BLACK ANODIZED MULLION

(F) CHARCOAL ANODIZED
STOREFRONT CAP EXTENSION

NOTES:

1. PAINT MAN DOORS, STAIR & RAMP GUARD WALLS, GUARD RAILS, DOWN SPOUTS, & LOUVERS TO MATCH ADJACENT BUILDING WALL COLOR, U.O.N.
2. U.O.N., EXTERIOR SIDE OF TRUCK DOORS TO BE PRE-FINISHED WITH MANUFACTURER'S WHITE. INTERIOR SIDE TO BE PRE-FINISHED WITH MANUFACTURER'S LIGHT GRAY.
3. POWER WASH EXTERIOR CONCRETE WALLS PRIOR TO PAINTING TO REMOVE ALL CHEMICALS AND DIRT THAT WILL IMPEDE THE PRIMER COAT FROM ADHERING TO THE WALLS.
4. PAINT EXTERIOR WALLS w/ 1- COAT SPRAYED AND BACK ROLLED ACRYLIC FLAT PRIMER AND 2-COATS SPRAYED-ON FLAT FINISH IN THE FINAL WALL COLOR. ALL PAINTS TO BE AS SPECIFIED BY THE MANUFACTURER FOR CONCRETE TILT UP WALL PANELS. FINISHED JOB SHALL BE SMOOTH AND FREE OF LAPPING AND OR STREAKING, REGARDLESS OF THE COLOR.
5. EXCEPT WHERE NOTED OTHERWISE ON THE PLANS ALL PANEL JOINTS SHALL BE CAULKED PER DETAIL 1/AD4.1.
6. PAINT CONCRETE BEHIND ANY OPEN TRELLIS WORK THE COLOR OF THE TRELLIS.
7. @ SOLID BROWS WITH GLAZING DIRECTLY ABOVE OR BELOW, PAINT THE EXPOSED WALL CHAMFER JUST ABOVE OR BELOW THE BROW TO MATCH THE BROW COLOR.

Emissions Calculations and CalEEMod Outputs

Alice Ave Warehouse Project - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Alice Ave Warehouse Project

San Bernardino-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	54.48	1000sqft	1.25	54,480.00	0
Unrefrigerated Warehouse-Rail	81.72	1000sqft	1.88	81,720.00	0
Parking Lot	67.60	1000sqft	1.55	67,600.00	0
City Park	1.43	Acre	1.43	62,173.19	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2025
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project-specific information.

Land Use - Paved space calculated by subtracting warehouse space and lanscaping from site total. Rail WH represents passenger vehicles, no rail WH represents trucks.

Construction Phase - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Trips and VMT - Assuming even worker trips and four haul trips per phase. All values are based on CalEEMod defaults.

On-road Fugitive Dust - CalEEMod default values.

Demolition - Project-specific information estimated using google earth. Need to ask about demolishing asphalt.

Grading - Net import calculated using cut and fill values on grading plan.

Architectural Coating - CalEEMod default values.

Vehicle Trips - Removed trips for "city park," which represents landscaping. Changed trip rate to the correct WH option. Assuming 40 mile trip length for trucks and 16.6 for passenger vehicles. Assuming 100% primary truck trips.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Road Dust - CalEEMod default values.

Woodstoves - CalEEMod default values.

Consumer Products - CalEEMod default values.

Area Coating - CalEEMod default values.

Landscape Equipment - CalEEMod default values.

Energy Use - CalEEMod default values.

Water And Wastewater - CalEEMod default values.

Solid Waste - CalEEMod default values.

Land Use Change - CalEEMod default values.

Alice Ave Warehouse Project - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Sequestration - CalEEMod default values.

Construction Off-road Equipment Mitigation - CalEEMod default values. Assuming site is watered twice per day.

Mobile Land Use Mitigation - CalEEMod default values.

Mobile Commute Mitigation - CalEEMod default values.

Area Mitigation - CalEEMod default values.

Energy Mitigation - CalEEMod default values.

Water Mitigation - CalEEMod default values.

Waste Mitigation - CalEEMod default values.

Operational Off-Road Equipment - Other Material Handling Equipment represents a yard truck. Forklift and yard truck volumes calculated in accompanying spreadsheet.

Fleet Mix - Adjusted to match excel sheet fleet mix calculations.

Stationary Sources - Emergency Generators and Fire Pumps - CalEEMod default values.

Stationary Sources - Process Boilers - CalEEMod default values.

Stationary Sources - User Defined - CalEEMod default values.

Stationary Sources - Emergency Generators and Fire Pumps EF - CalEEMod default values.

Stationary Sources - Process Boilers EF - CalEEMod default values.

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Alice Ave Warehouse Project

San Bernardino-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	54.48	1000sqft	1.25	54,480.00	0
Unrefrigerated Warehouse-Rail	81.72	1000sqft	1.88	81,720.00	0
Parking Lot	67.60	1000sqft	1.55	67,600.00	0
City Park	1.43	Acre	1.43	62,173.19	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2025
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project-specific information.

Land Use - Paved space calculated by subtracting warehouse space and lanscaping from site total. Rail WH represents passenger vehicles, no rail WH represents trucks.

Construction Phase - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Trips and VMT - Assuming even worker trips and four haul trips per phase. All values are based on CalEEMod defaults.

On-road Fugitive Dust - CalEEMod default values.

Demolition - Project-specific information estimated using google earth. Need to ask about demolishing asphalt.

Grading - Net import calculated using cut and fill values on grading plan.

Architectural Coating - CalEEMod default values.

Vehicle Trips - Removed trips for "city park," which represents landscaping. Changed trip rate to the correct WH option. Assuming 40 mile trip length for trucks and 16.6 for passenger vehicles. Assuming 100% primary truck trips.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Road Dust - CalEEMod default values.

Woodstoves - CalEEMod default values.

Consumer Products - CalEEMod default values.

Area Coating - CalEEMod default values.

Landscape Equipment - CalEEMod default values.

Energy Use - CalEEMod default values.

Water And Wastewater - CalEEMod default values.

Solid Waste - CalEEMod default values.

Land Use Change - CalEEMod default values.

Alice Ave Warehouse Project - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Sequestration - CalEEMod default values.

Construction Off-road Equipment Mitigation - CalEEMod default values. Assuming site is watered twice per day.

Mobile Land Use Mitigation - CalEEMod default values.

Mobile Commute Mitigation - CalEEMod default values.

Area Mitigation - CalEEMod default values.

Energy Mitigation - CalEEMod default values.

Water Mitigation - CalEEMod default values.

Waste Mitigation - CalEEMod default values.

Operational Off-Road Equipment - Other Material Handling Equipment represents a yard truck. Forklift and yard truck volumes calculated in accompanying spreadsheet.

Fleet Mix - Adjusted to match excel sheet fleet mix calculations.

Stationary Sources - Emergency Generators and Fire Pumps - CalEEMod default values.

Stationary Sources - Process Boilers - CalEEMod default values.

Alice Ave Warehouse Project - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Alice Ave Warehouse Project

San Bernardino-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	54.48	1000sqft	1.25	54,480.00	0
Unrefrigerated Warehouse-Rail	81.72	1000sqft	1.88	81,720.00	0
Parking Lot	67.60	1000sqft	1.55	67,600.00	0
City Park	1.43	Acre	1.43	62,173.19	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2025
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project-specific information.

Land Use - Paved space calculated by subtracting warehouse space and lanscaping from site total. Rail WH represents passenger vehicles, no rail WH represents trucks.

Construction Phase - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Alice Ave Warehouse Project - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Trips and VMT - Assuming even worker trips and four haul trips per phase. All values are based on CalEEMod defaults.

On-road Fugitive Dust - CalEEMod default values.

Demolition - Project-specific information estimated using google earth. Need to ask about demolishing asphalt.

Grading - Net import calculated using cut and fill values on grading plan.

Architectural Coating - CalEEMod default values.

Vehicle Trips - Removed trips for "city park," which represents landscaping. Changed trip rate to the correct WH option. Assuming 40 mile trip length for trucks and 16.6 for passenger vehicles. Assuming 100% primary truck trips.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Road Dust - CalEEMod default values.

Woodstoves - CalEEMod default values.

Consumer Products - CalEEMod default values.

Area Coating - CalEEMod default values.

Landscape Equipment - CalEEMod default values.

Energy Use - CalEEMod default values.

Water And Wastewater - CalEEMod default values.

Solid Waste - CalEEMod default values.

Land Use Change - CalEEMod default values.

Alice Ave Warehouse Project - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Sequestration - CalEEMod default values.

Construction Off-road Equipment Mitigation - CalEEMod default values. Assuming site is watered twice per day.

Mobile Land Use Mitigation - CalEEMod default values.

Mobile Commute Mitigation - CalEEMod default values.

Area Mitigation - CalEEMod default values.

Energy Mitigation - CalEEMod default values.

Water Mitigation - CalEEMod default values.

Waste Mitigation - CalEEMod default values.

Operational Off-Road Equipment - Other Material Handling Equipment represents a yard truck. Forklift and yard truck volumes calculated in accompanying spreadsheet.

Fleet Mix - Adjusted to match excel sheet fleet mix calculations.

Stationary Sources - Emergency Generators and Fire Pumps - CalEEMod default values.

Stationary Sources - Process Boilers - CalEEMod default values.

Stationary Sources - User Defined - CalEEMod default values.

Stationary Sources - Emergency Generators and Fire Pumps EF - CalEEMod default values.

Stationary Sources - Process Boilers EF - CalEEMod default values.

San Bernardino-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	54.48	1000sqft	1.25	54,480.00	0
Unrefrigerated Warehouse-Rail	81.72	1000sqft	1.88	81,720.00	0
Parking Lot	67.60	1000sqft	1.55	67,600.00	0
City Park	1.43	Acre	1.43	62,173.19	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2025
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project-specific information.

Land Use - Paved space calculated by subtracting warehouse space and lanscaping from site total. Rail WH represents passenger vehicles, no rail WH represents trucks.

Construction Phase - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Alice Ave Warehouse Project LST - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Trips and VMT - Assuming even worker trips and four haul trips per phase. All values are based on CalEEMod defaults. Assuming 1000 ft trip lengths for LST.

On-road Fugitive Dust - CalEEMod default values.

Demolition - Project-specific information estimated using google earth. Need to ask about demolishing asphalt.

Grading - Net import calculated using cut and fill values on grading plan.

Architectural Coating - CalEEMod default values.

Vehicle Trips - Removed trips for "city park," which represents landscaping. Changed trip rate to the correct WH option. Assuming 1000 foot trip lengths for LST. Assuming 100% primary truck trips.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Road Dust - CalEEMod default values.

Woodstoves - CalEEMod default values.

Consumer Products - CalEEMod default values.

Area Coating - CalEEMod default values.

Landscape Equipment - CalEEMod default values.

Energy Use - CalEEMod default values.

Water And Wastewater - CalEEMod default values.

Solid Waste - CalEEMod default values.

Land Use Change - CalEEMod default values.

Alice Ave Warehouse Project LST - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Sequestration - CalEEMod default values.

Construction Off-road Equipment Mitigation - CalEEMod default values. Assuming site is watered twice per day.

Mobile Land Use Mitigation - CalEEMod default values.

Mobile Commute Mitigation - CalEEMod default values.

Area Mitigation - CalEEMod default values.

Energy Mitigation - CalEEMod default values.

Water Mitigation - CalEEMod default values.

Waste Mitigation - CalEEMod default values.

Operational Off-Road Equipment - Other Material Handling Equipment represents a yard truck. Forklift and yard truck volumes calculated in accompanying spreadsheet.

Fleet Mix - Adjusted to match excel sheet fleet mix calculations.

Stationary Sources - Emergency Generators and Fire Pumps - CalEEMod default values.

Stationary Sources - Process Boilers - CalEEMod default values.

Stationary Sources - User Defined - CalEEMod default values.

Stationary Sources - Emergency Generators and Fire Pumps EF - CalEEMod default values.

Stationary Sources - Process Boilers EF - CalEEMod default values.

San Bernardino-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	54.48	1000sqft	1.25	54,480.00	0
Unrefrigerated Warehouse-Rail	81.72	1000sqft	1.88	81,720.00	0
Parking Lot	67.60	1000sqft	1.55	67,600.00	0
City Park	1.43	Acre	1.43	62,173.19	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2025
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project-specific information.

Land Use - Paved space calculated by subtracting warehouse space and lanscaping from site total. Rail WH represents passenger vehicles, no rail WH represents trucks.

Construction Phase - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Alice Ave Warehouse Project LST - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Off-road Equipment - CalEEMod default values.

Trips and VMT - Assuming even worker trips and four haul trips per phase. All values are based on CalEEMod defaults. Assuming 1000 ft trip lengths for LST.

On-road Fugitive Dust - CalEEMod default values.

Demolition - Project-specific information estimated using google earth. Need to ask about demolishing asphalt.

Grading - Net import calculated using cut and fill values on grading plan.

Architectural Coating - CalEEMod default values.

Vehicle Trips - Removed trips for "city park," which represents landscaping. Changed trip rate to the correct WH option. Assuming 1000 foot trip lengths for LST. Assuming 100% primary truck trips.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Vehicle Emission Factors - CalEEMod default values.

Road Dust - CalEEMod default values.

Woodstoves - CalEEMod default values.

Consumer Products - CalEEMod default values.

Area Coating - CalEEMod default values.

Landscape Equipment - CalEEMod default values.

Energy Use - CalEEMod default values.

Water And Wastewater - CalEEMod default values.

Solid Waste - CalEEMod default values.

Land Use Change - CalEEMod default values.

Alice Ave Warehouse Project LST - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Sequestration - CalEEMod default values.

Construction Off-road Equipment Mitigation - CalEEMod default values. Assuming site is watered twice per day.

Mobile Land Use Mitigation - CalEEMod default values.

Mobile Commute Mitigation - CalEEMod default values.

Area Mitigation - CalEEMod default values.

Energy Mitigation - CalEEMod default values.

Water Mitigation - CalEEMod default values.

Waste Mitigation - CalEEMod default values.

Operational Off-Road Equipment - Other Material Handling Equipment represents a yard truck. Forklift and yard truck volumes calculated in accompanying spreadsheet.

Fleet Mix - Adjusted to match excel sheet fleet mix calculations.

Stationary Sources - Emergency Generators and Fire Pumps - CalEEMod default values.

Stationary Sources - Process Boilers - CalEEMod default values.

Stationary Sources - User Defined - CalEEMod default values.

Stationary Sources - Emergency Generators and Fire Pumps EF - CalEEMod default values.

Stationary Sources - Process Boilers EF - CalEEMod default values.

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   208 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    208 Source(s);       1 Source Group(s); and     551 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                  and:    208 VOLUME source(s)
                  and:      0 AREA type source(s)
                  and:      0 LINE source(s)
                  and:      0 RLINE/RLINEXT source(s)
                  and:      0 OPENPIT source(s)
                  and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                  and:      0 SWPOINT source(s)
```

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
Model Outputs Tables of PERIOD Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   367.00 ; Decay Coef. =   0.000   ;
Rot. Angle =   0.0
Emission Units = GRAMS/SEC   ; Emission Rate Unit
Factor =   0.10000E+07
Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   3.7 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: Alice-Willow Const.err

**File for Summary of Results: Alice-Willow Const.sum

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for  1007 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:   1007 Source(s);       8 Source Group(s); and     551 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   1007 VOLUME source(s)
```

```
                and:      0 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   367.00 ;  Decay Coef. =    0.000     ;
 Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;  Emission Rate Unit
Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.2 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Alice-Willow Ops.err

 **File for Summary of Results:   Alice-Willow Ops.sum

Appendix B
Biological Attachments

Plant Species

Gymnosperms

PINACEAE – PINE FAMILY

* *Pinus* sp. – pine tree

Angiosperms (Dicots)

ANACARDIACEAE – SUMAC FAMILY

* *Schinus molle* – Peruvian pepper tree

AMARANTHACEAE – AMARANTH FAMILY

* *Kali tragus* – prickly Russian thistle

ASTERACEAE – SUNFLOWER FAMILY

* *Helianthus* spp. – sunflower
* *Taraxacum officinale* – dandelion

SIMAROUBACEAE

* *Ailanthus altissima* – tree of heaven

MORACEAE – FIG FAMILY

* *Ficus* spp. – fig tree

BRASSICACEAE – MUSTARD FAMILY

* *Hirschfeldia incana* – short-pod mustard

FABACEAE – LEGUME FAMILY

* *Melilotus officialis* – sweet yellow clover

ARECACEAE – PALM FAMILY

* *Washingtonia robusta* – Mexcican fan palm

MALVACEAE – MALLOW FAMILY

* *Malva parviflora* – cheeswweed

NYCTAGINACEAE – FOUR O' CLOCK FAMILY

* *Bougainvillea* sp. – Bougainvillea tree

CUPESSACEAE – CYPRESS FAMILY

* *Cupressus sempervirens* – Italian cypress

MYTACEAE – MYRTLE FAMILY

* *Eucalyptus* spp. – *Eucalyptus* tree

POACEAE – PERRENIAL GRASS FAMILY

* *Cynodon dactylon* – Bermuda grass
* *Schismus* spp. – Mediterranean grass
* *Stipa tenuissima* – Mexican feathergrass

Wildlife Species – Vertebrates

Birds

ACCIPITRIDAE – HAWKS

Buteo jamaicensis – red-tailed hawk

COLUMBIDAE – PIGEONS AND DOVES

* *Columbia livia* – rock pigeon

CORVIDAE – JAYS AND CROWS

Corvus corax – common raven

FRINGILLIDAE – FINCHES

Carduelis psaltria – lesser goldfinch

PARULIDAE – WOOD WARBLERS

Setophaga coronata – yellow-rumped warblers

TYRANNIDAE – TYRANT FLYCATCHERS

Sayornis nigricans – black phoebe

Mammals

FELIDAE – CATS

* *Felis catus*– house cat

* signifies introduced (non-native) species

INTENTIONALLY LEFT BLANK

Scientific Name	Common Name	Status (Federal/ State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Abronia villosa var. *aurita*	chaparral sand-verbena	None/None/1B.1	Chaparral, Coastal scrub, Desert dunes; Sandy/annual herb/(Jan)Mar–Sep/ 245–5,245	Not expected to occur. No suitable habitat present.
Allium howellii var. *clokeyi*	Mt. Pinos onion	None/None/1B.3	Great Basin scrub, Meadows and seeps, Pinyon and juniper woodland/perennial bulbiferous herb/Apr–June/4,265–6,065	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Ambrosia monogyra	singlewhorl burrobrush	None/None/2B.2	Chaparral, Sonoran desert scrub; Sandy/perennial shrub/Aug–Nov/35–1,640	Not expected to occur. No suitable habitat present.
Ambrosia pumila	San Diego ambrosia	FE/None/1B.1	Chaparral, Coastal scrub, Valley and foothill grassland, Vernal pools; Alkaline (sometimes), Clay (sometimes), Disturbed areas (often), Loam (sometimes), Sandy (sometimes)/perennial rhizomatous herb/Apr–Oct/65–1,360	Not expected to occur. No suitable habitat present.
Arenaria paludicola	marsh sandwort	FE/SE/1B.1	Marshes and swamps; Openings, Sandy/perennial stoloniferous herb/May–Aug/ 10–560	Not expected to occur. No suitable habitat present.
Astragalus hornii var. *hornii*	Horn's milk-vetch	None/None/1B.1	Meadows and seeps, Playas; Alkaline, Lake Margins/annual herb/May–Oct/ 195–2,785	Not expected to occur. No suitable habitat present.
Berberis nevinii	Nevin's barberry	FE/SE/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Riparian scrub; Gravelly (sometimes), Sandy (sometimes)/perennial evergreen shrub/(Feb)Mar–June/ 230–2,705	Not expected to occur. No suitable habitat present.
Brodiaea filifolia	thread-leaved brodiaea	FT/SE/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Playas, Valley and foothill grassland, Vernal pools; Clay (often)/perennial bulbiferous herb/Mar–June/ 80–3,670	Not expected to occur. No suitable habitat present.
Calochortus palmeri var. *palmeri*	Palmer's mariposa-lily	None/None/1B.2	Chaparral, Lower montane coniferous forest, Meadows and seeps; Mesic/perennial bulbiferous herb/Apr–July/2,325–7,840	Not expected to occur. The site is outside of the species' known elevation range.
Calochortus plummerae	Plummer's mariposa-lily	None/None/4.2	Chaparral, Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Valley and foothill grassland; Granitic, Rocky/perennial bulbiferous herb/May–July/ 330–5,575	Not expected to occur. No suitable habitat present.
Calochortus simulans	La Panza mariposa-lily	None/None/1B.3	Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland; Granitic (often), Sandy, Serpentinite (sometimes)/perennial bulbiferous herb/Apr–June/1,065–3,770	Not expected to occur. No suitable habitat present.
Carex comosa	bristly sedge	None/None/2B.1	Coastal prairie, Marshes and swamps, Valley and foothill grassland/perennial rhizomatous herb/May–Sep/0–2,050	Not expected to occur. No suitable habitat present.
Castilleja lasiorhyncha	San Bernardino Mountains owl's-clover	None/None/1B.2	Chaparral, Meadows and seeps, Pebble (Pavement) plain, Riparian woodland, Upper montane coniferous forest; Mesic/annual herb (hemiparasitic)/May–Aug/ 4,265–7,840	Not expected to occur. The site is outside of the species' known elevation range.
Caulanthus simulans	Payson's jewelflower	None/None/4.2	Chaparral, Coastal scrub; Granitic, Sandy/annual herb/(Feb)Mar–May(June)/ 295–7,215	Not expected to occur. No suitable habitat present.
Centromadia pungens ssp. *laevis*	smooth tarplant	None/None/1B.1	Chenopod scrub, Meadows and seeps, Playas, Riparian woodland, Valley and foothill grassland; Alkaline/annual herb/Apr–Sep/0–2,095	Not expected to occur. No suitable habitat present.
Chloropyron maritimum ssp. *maritimum*	salt marsh bird's-beak	FE/SE/1B.2	Coastal dunes, Marshes and swamps/annual herb (hemiparasitic)/May–Oct(Nov)/ 0–100	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Chorizanthe leptotheca	Peninsular spineflower	None/None/4.2	Chaparral, Coastal scrub, Lower montane coniferous forest; Granitic/annual herb/ May–Aug/985–6,230	Not expected to occur. No suitable habitat present.
Chorizanthe parryi var. *parryi*	Parry's spineflower	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; Openings, Rocky (sometimes), Sandy (sometimes)/annual herb/Apr–June/ 900–4,000	Not expected to occur. No suitable habitat present.
Chorizanthe xanti var. *leucotheca*	white-bracted spineflower	None/None/1B.2	Coastal scrub, Mojavean desert scrub, Pinyon and juniper woodland; Gravelly (sometimes), Sandy (sometimes)/annual herb/Apr–June/985–3,935	Not expected to occur. No suitable habitat present.
Convolvulus simulans	small-flowered morning-glory	None/None/4.2	Chaparral, Coastal scrub, Valley and foothill grassland; Clay, Seeps, Serpentinite/ annual herb/Mar–July/100–2,425	Not expected to occur. No suitable habitat present.

Scientific Name	Common Name	Status (Federal/ State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Cryptantha incana	Tulare cryptantha	None/None/1B.3	Lower montane coniferous forest/annual herb/June–Aug/4,690–7,050	Not expected to occur. The site is outside of the species' known elevation range.
Cuscuta obtusiflora var. *glandulosa*	Peruvian dodder	None/None/2B.2	Marshes and swamps/annual vine (parasitic)/July–Oct/50–920	Not expected to occur. No suitable habitat present.
Deinandra paniculata	paniculate tarplant	None/None/4.2	Coastal scrub, Valley and foothill grassland, Vernal pools; Sandy (sometimes), Vernally Mesic (usually)/annual herb/(Mar)Apr–Nov/80–3,080	Not expected to occur. No suitable habitat present.
Dodecahema leptoceras	slender-horned spineflower	FE/SE/1B.1	Chaparral, Cismontane woodland, Coastal scrub; Sandy/annual herb/Apr–June/ 655–2,490	Not expected to occur. No suitable habitat present.
Eriastrum densifolium ssp. *sanctorum*	Santa Ana River woollystar	FE/SE/1B.1	Chaparral, Coastal scrub; Gravelly (sometimes), Sandy (sometimes)/perennial herb/Apr–Sep/300–2,000	Not expected to occur. No suitable habitat present.
Eriophyllum lanatum var. *obovatum*	southern Sierra woolly sunflower	None/None/4.3	Lower montane coniferous forest, Upper montane coniferous forest; Loam, Sandy/perennial herb/June–July/3,650–8,200	Not expected to occur. The site is outside of the species' known elevation range.
Fimbristylis thermalis	hot springs fimbristylis	None/None/2B.2	Meadows and seeps/perennial rhizomatous herb/July–Sep/360–4,395	Not expected to occur. No suitable habitat present.
Frasera neglecta	pine green-gentian	None/None/4.3	Lower montane coniferous forest, Pinyon and juniper woodland, Upper montane coniferous forest/perennial herb/May–July/4,590–8,200	Not expected to occur. The site is outside of the species' known elevation range.
Fritillaria pinetorum	pine fritillary	None/None/4.3	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland, Subalpine coniferous forest, Upper montane coniferous forest; Granitic (sometimes),Metamorphic (sometimes)/perennial bulbiferous herb/ May–July(Sep)/5,690–10,825	Not expected to occur. The site is outside of the species' known elevation range.
Galium californicum ssp. *primum*	Alvin Meadow bedstraw	None/None/1B.2	Chaparral, Lower montane coniferous forest; Granitic, Sandy/perennial herb/ May–July/4,425–5,575	Not expected to occur. The site is outside of the species' known elevation range.
Galium jepsonii	Jepson's bedstraw	None/None/4.3	Lower montane coniferous forest, Upper montane coniferous forest; Granitic, Gravelly (sometimes), Rocky (sometimes)/perennial rhizomatous herb/July–Aug/ 5,050–8,200	Not expected to occur. The site is outside of the species' known elevation range.
Galium johnstonii	Johnston's bedstraw	None/None/4.3	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland, Riparian woodland/perennial herb/June–July/4,000–7,545	Not expected to occur. The site is outside of the species' known elevation range.
Helianthus nuttallii ssp. *parishii*	Los Angeles sunflower	None/None/1A	Marshes and swamps/perennial rhizomatous herb/Aug–Oct/35–5,000	Not expected to occur. No suitable habitat present.
Heuchera caespitosa	urn-flowered alumroot	None/None/4.3	Cismontane woodland, Lower montane coniferous forest, Riparian forest, Upper montane coniferous forest; Rocky/perennial rhizomatous herb/May–Aug/ 3,785–8,690	Not expected to occur. The site is outside of the species' known elevation range.
Heuchera parishii	Parish's alumroot	None/None/1B.3	Alpine boulder and rock field, Lower montane coniferous forest, Subalpine coniferous forest, Upper montane coniferous forest; Carbonate (sometimes), Rocky/perennial rhizomatous herb/June–Aug/4,920–12,465	Not expected to occur. The site is outside of the species' known elevation range.
Hordeum intercedens	vernal barley	None/None/3.2	Coastal dunes, Coastal scrub, Valley and foothill grassland, Vernal pools/annual herb/Mar–June/15–3,280	Not expected to occur. No suitable habitat present.
Horkelia cuneata var. *puberula*	mesa horkelia	None/None/1B.1	Chaparral, Cismontane woodland, Coastal scrub; Gravelly (sometimes), Sandy (sometimes)/perennial herb/Feb–July(Sep)/230–2,655	Not expected to occur. No suitable habitat present.
Hulsea vestita ssp. *parryi*	Parry's sunflower	None/None/4.3	Lower montane coniferous forest, Pinyon and juniper woodland, Upper montane coniferous forest; Carbonate (sometimes), Granitic (sometimes), Openings, Rocky/perennial herb/Apr–Aug/4,490–9,495	Not expected to occur. The site is outside of the species' known elevation range.
Imperata brevifolia	California satintail	None/None/2B.1	Chaparral, Coastal scrub, Meadows and seeps, Mojavean desert scrub, Riparian scrub; Mesic/perennial rhizomatous herb/Sep–May/0–3,985	Not expected to occur. No suitable habitat present.
Ivesia argyrocoma var. *argyrocoma*	silver-haired ivesia	None/None/1B.2	Meadows and seeps, Pebble (Pavement) plain, Upper montane coniferous forest/perennial herb/June–Aug/4,795–9,710	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Juglans californica	Southern California black walnut	None/None/4.2	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland/perennial deciduous tree/Mar–Aug/165–2,950	Not expected to occur. No suitable habitat present.

Scientific Name	Common Name	Status (Federal/ State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Juncus duranii	Duran's rush	None/None/4.3	Lower montane coniferous forest, Meadows and seeps, Upper montane coniferous forest; Mesic/perennial rhizomatous herb/July–Aug/5,800–9,195	Not expected to occur. The site is outside of the species' known elevation range.
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	None/None/1B.1	Marshes and swamps, Playas, Vernal pools/annual herb/Feb–June/5–4,000	Not expected to occur. No suitable vegetation present.
Lepidium virginicum var. *robinsonii*	Robinson's pepper-grass	None/None/4.3	Chaparral, Coastal scrub/annual herb/Jan–July/5–2,900	Not expected to occur. No suitable vegetation present.
Lilium humboldtii ssp. *ocellatum*	ocellated Humboldt lily	None/None/4.2	Chaparral, Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Riparian woodland; Openings/perennial bulbiferous herb/Mar–July(Aug)/ 100–5,905	Not expected to occur. No suitable vegetation present.
Lilium parryi	lemon lily	None/None/1B.2	Lower montane coniferous forest, Meadows and seeps, Riparian forest, Upper montane coniferous forest; Mesic/perennial bulbiferous herb/July–Aug/ 4,000–9,005	Not expected to occur. The site is outside of the species' known elevation range.
Lycium parishii	Parish's desert-thorn	None/None/2B.3	Coastal scrub, Sonoran desert scrub/perennial shrub/Mar–Apr/445–3,280	Not expected to occur. No suitable vegetation present.
Malacothamnus parishii	Parish's bush-mallow	None/None/1A	Chaparral, Coastal scrub/perennial deciduous shrub/June–July/1,000–1,490	Not expected to occur. No suitable vegetation present.
Monardella macrantha ssp. *hallii*	Hall's monardella	None/None/1B.3	Broadleafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland/perennial rhizomatous herb/ June–Oct/2,395–7,200	Not expected to occur. The site is outside of the species' known elevation range.
Monardella pringlei	Pringle's monardella	None/None/1A	Coastal scrub/annual herb/May–June/985–1,310	Not expected to occur. No suitable vegetation present.
Monardella saxicola	rock monardella	None/None/4.2	Chaparral, Closed-cone coniferous forest, Lower montane coniferous forest; Rocky, Serpentinite (usually)/perennial rhizomatous herb/June–Sep/1,640–5,905	Not expected to occur. The site is outside of the species' known elevation range.
Muhlenbergia californica	California muhly	None/None/4.3	Chaparral, Coastal scrub, Lower montane coniferous forest, Meadows and seeps; Mesic, Seeps, Streambanks/perennial rhizomatous herb/June–Sep/330–6,560	Not expected to occur. No suitable vegetation present.
Nasturtium gambelii	Gambel's water cress	FE/ST/1B.1	Marshes and swamps/perennial rhizomatous herb/ Apr–Oct/15–1,080	Not expected to occur. No suitable vegetation present.
Opuntia basilaris var. *brachyclada*	short-joint beavertail	None/None/1B.2	Chaparral, Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland/perennial stem/Apr–June(Aug)/1,390–5,905	Not expected to occur. No suitable vegetation present.
Pelazoneuron puberulum var. *sonorensis*	Sonoran maiden fern	None/None/2B.2	Meadows and seeps/perennial rhizomatous herb/Jan–Sep/165–2,000	Not expected to occur. No suitable vegetation present.
Perideridia parishii ssp. *parishii*	Parish's yampah	None/None/2B.2	Lower montane coniferous forest, Meadows and seeps, Upper montane coniferous forest/perennial herb/June–Aug/4,805–9,840	Not expected to occur. The site is outside of the species' known elevation range.
Phacelia mohavensis	Mojave phacelia	None/None/4.3	Cismontane woodland, Lower montane coniferous forest, Meadows and seeps, Pinyon and juniper woodland; Gravelly (sometimes), Sandy (sometimes)/annual herb/Apr–Aug/4,590–8,200	Not expected to occur. The site is outside of the species' known elevation range.
Phacelia stellaris	Brand's star phacelia	None/None/1B.1	Coastal dunes, Coastal scrub/annual herb/Mar–June/5–1,310	Not expected to occur. No suitable vegetation present.
Piperia leptopetala	narrow-petaled rein orchid	None/None/4.3	Cismontane woodland, Lower montane coniferous forest, Upper montane coniferous forest/perennial herb/May–July/1,245–7,295	Not expected to occur. No suitable vegetation present.
Pseudorontium cyathiferum	Deep Canyon snapdragon	None/None/2B.3	Sonoran desert scrub/annual herb/Feb–Apr/0–2,620	Not expected to occur. No suitable vegetation present.
Quercus durata var. *gabrielensis*	San Gabriel oak	None/None/4.2	Chaparral, Cismontane woodland/perennial evergreen shrub/Apr–May/ 1,475–3,280	Not expected to occur. No suitable vegetation present.
Ribes divaricatum var. *parishii*	Parish's gooseberry	None/None/1A	Riparian woodland/perennial deciduous shrub/ Feb–Apr/215–985	Not expected to occur. No suitable vegetation present.
Romneya coulteri	Coulter's matilija poppy	None/None/4.2	Chaparral, Coastal scrub; Burned areas (often)/perennial rhizomatous herb/ Mar–July(Aug)/65–3,935	Not expected to occur. No suitable vegetation present.
Schoenus nigricans	black bog-rush	None/None/2B.2	Marshes and swamps/perennial herb/Aug–Sep/490–6,560	Not expected to occur. No suitable vegetation present.
Senecio aphanactis	chaparral ragwort	None/None/2B.2	Chaparral, Cismontane woodland, Coastal scrub; Alkaline (sometimes)/annual herb/ Jan–Apr(May)/50–2,620	Not expected to occur. No suitable vegetation present.
Senecio astephanus	San Gabriel ragwort	None/None/4.3	Chaparral, Coastal bluff scrub; Rocky, Slopes/perennial herb/May–July/ 1,310–4,920	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/ State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Sidalcea malviflora ssp. *dolosa*	Bear Valley checkerbloom	None/None/1B.2	Lower montane coniferous forest, Meadows and seeps, Riparian woodland, Upper montane coniferous forest/perennial herb/May–Aug/4,900–8,805	Not expected to occur. The site is outside of the species' known elevation range.
Sidalcea neomexicana	salt spring checkerbloom	None/None/2B.2	Chaparral, Coastal scrub, Lower montane coniferous forest, Mojavean desert scrub, Playas; Alkaline, Mesic/perennial herb/Mar–June/50–5,015	Not expected to occur. No suitable vegetation present.
Sidotheca caryophylloides	chickweed oxytheca	None/None/4.3	Lower montane coniferous forest/annual herb/July–Sep(Oct)/3,650–8,530	Not expected to occur. The site is outside of the species' known elevation range.
Sphenopholis obtusata	prairie wedge grass	None/None/2B.2	Cismontane woodland, Meadows and seeps; Mesic/perennial herb/Apr–July/ 985–6,560	Not expected to occur. No suitable vegetation present.
Streptanthus bernardinus	Laguna Mountains jewelflower	None/None/4.3	Chaparral, Lower montane coniferous forest/perennial herb/May–Aug/ 2,195–8,200	Not expected to occur. The site is outside of the species' known elevation range.
Streptanthus campestris	southern jewelflower	None/None/1B.3	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland; Rocky/ perennial herb/(Apr)May–July/2,950–7,545	Not expected to occur. The site is outside of the species' known elevation range.
Symphyotrichum defoliatum	San Bernardino aster	None/None/1B.2	Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Marshes and swamps, Meadows and seeps, Valley and foothill grassland; Streambanks/ perennial rhizomatous herb/July–Nov/5–6,690	Not expected to occur. No suitable vegetation present.
Yucca brevifolia	western Joshua tree	None/SC/CBR	Great Basin grassland, Great Basin scrub, Joshua tree woodland, Mojavean desert scrub, Pinyon and juniper woodland, Sonoran desert scrub, Valley and foothill grassland/perennial leaf succulent/Apr–May/1,310–6,560	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Amphibians				
Batrachoseps gabrieli	San Gabriel slender salamander	None/None	Talus slopes in forested areas, often near streams	Not expected to occur. No suitable vegetation present.
Rana draytonii	California red-legged frog	FT/SSC	Lowland streams, wetlands, riparian woodlands, livestock ponds; dense, shrubby or emergent vegetation associated with deep, still or slow-moving water; uses adjacent uplands	Not expected to occur. No suitable vegetation present.
Rana muscosa	mountain yellow-legged frog	FE/SE, WL	Lakes, ponds, meadow streams, isolated pools, and open riverbanks; rocky canyons in narrow canyons and in chaparral	Not expected to occur. No suitable vegetation present.
Spea hammondii	western spadefoot	None/SSC	Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture	Not expected to occur. No suitable vegetation present.
Birds				
Accipiter cooperii (nesting)	Cooper's hawk	None/WL	Nests and forages in dense stands of live oak, riparian woodlands, or other woodland habitats often near water	Not expected to occur. No suitable vegetation present.
Agelaius tricolor (nesting colony)	tricolored blackbird	BCC/SSC, ST	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture	Not expected to occur. No suitable vegetation present.
Aimophila ruficeps canescens	Southern California rufous-crowned sparrow	None/WL	Nests and forages in open coastal scrub and chaparral with low cover of scattered scrub interspersed with rocky and grassy patches	Not expected to occur. No suitable vegetation present.
Artemisiospiza belli belli	Bell's sage sparrow	None/WL	Nests and forages in coastal scrub and dry chaparral; typically in large, unfragmented patches dominated by chamise; nests in more dense patches but uses more open habitat in winter	Not expected to occur. No suitable vegetation present.
Athene cunicularia (burrow sites and some wintering sites)	burrowing owl	BCC/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Not expected to occur. No suitable vegetation present.
Buteo regalis (wintering)	ferruginous hawk	None/WL	Winters and forages in open, dry country, grasslands, open fields, agriculture	Not expected to occur. No suitable vegetation present.
Buteo swainsoni (nesting)	Swainson's hawk	None/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture	Not expected to occur. No suitable vegetation present.
Coccyzus americanus occidentalis (nesting)	western yellow-billed cuckoo	FT/SE	Nests in dense, wide riparian woodlands and forest with well-developed understories	Not expected to occur. No suitable vegetation present.
Coturnicops noveboracensis	yellow rail	BCC/SSC	Nesting requires wet marsh/sedge meadows or coastal marshes with wet soil and shallow, standing water	Not expected to occur. No suitable vegetation present.
Empidonax traillii extimus (nesting)	southwestern willow flycatcher	FE/SE	Nests in dense riparian habitats along streams, reservoirs, or wetlands; uses variety of riparian and shrubland habitats during migration	Not expected to occur. No suitable vegetation present.
Eremophila alpestris actia	California horned lark	None/WL	This subspecies of horned lark occurs on the state's southern and central coastal slope and in the San Joaquin Valley. Nests and forages in grasslands, disturbed lands, agriculture, and beaches.	Not expected to occur. No suitable vegetation present.
Falco columbarius (wintering)	merlin	None/WL	Forages in semi-open areas, including coastline, grassland, agriculture, savanna, woodland, lakes, and wetlands	Not expected to occur. No suitable vegetation present.
Haliaeetus leucocephalus (nesting and wintering)	bald eagle	FPD/FP, SE	Nests in forested areas adjacent to large bodies of water, including seacoasts, rivers, swamps, large lakes; winters near large bodies of water in lowlands and mountains	Not expected to occur. No suitable vegetation present.
Icteria virens (nesting)	yellow-breasted chat	None/SSC	Nests and forages in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush	Not expected to occur. No suitable vegetation present.
Lanius ludovicianus (nesting)	loggerhead shrike	None/SSC	Nests and forages in open habitats with scattered shrubs, trees, or other perches	Not expected to occur. No suitable vegetation present.
Laterallus jamaicensis coturniculus	California black rail	None/FP, ST	Tidal marshes, shallow freshwater margins, wet meadows, and flooded grassy vegetation; suitable habitats are often supplied by canal leakage in Sierra Nevada foothill populations	Not expected to occur. No suitable vegetation present.
Polioptila californica californica	coastal California gnatcatcher	FT/SSC	Nests and forages in various sage scrub communities, often dominated by California sagebrush and buckwheat; generally avoids nesting in areas with a slope of greater than 40%; majority of nesting at less than 1,000 feet above mean sea level	Not expected to occur. No suitable vegetation present.
Setophaga petechia (nesting)	yellow warbler	None/SSC	Nests and forages in riparian and oak woodlands, montane chaparral, open ponderosa pine, and mixed-conifer habitats	Not expected to occur. No suitable vegetation present.
Spinus lawrencei (nesting)	Lawrence's goldfinch	BCC/None	Nests and forages in open oak, arid woodlands, and chaparral near water	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Vireo bellii pusillus (nesting)	least Bell's vireo	FE/SE	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season	Not expected to occur. No suitable vegetation present.
Fishes				
Catostomus santaanae	Santa Ana sucker	FT/None	Small, shallow, cool, clear streams less than 7 meters (23 feet) in width and a few centimeters to more than a meter (1.5 inches to more than 3 feet) in depth; substrates are generally coarse gravel, rubble, and boulder	Not expected to occur. No suitable vegetation present.
Gila orcuttii	arroyo chub	None/SSC	Warm, fluctuating streams with slow-moving or backwater sections of warm to cool streams at depths >40 centimeters (16 inches); substrates of sand or mud	Not expected to occur. No suitable vegetation present.
Oncorhynchus mykiss irideus pop. 10	southern steelhead - southern California DPS	FE/SCE	Clean, clear, cool, well-oxygenated streams; needs relatively deep pools in migration and gravelly substrate to spawn	Not expected to occur. No suitable vegetation present.
Rhinichthys osculus ssp. 8	Santa Ana speckled dace	None/SSC	Headwaters of the Santa Ana and San Gabriel Rivers; may be extirpated from the Los Angeles River system	Not expected to occur. No suitable vegetation present.
Invertebrates				
Bombus crotchii	Crotch bumble bee	None/None	Open grassland and scrub communities supporting suitable floral resources.	Not expected to occur. No suitable vegetation present.
Ceratochrysis longimala	Desert cuckoo wasp	None/None	(blank)	Not expected to occur. No suitable vegetation present.
Cicindela tranquebarica viridissima	greenest tiger beetle	None/None	Inhabits the woodlands adjacent to the Santa Ana River basin	Not expected to occur. No suitable vegetation present.
Euchloe hyantis andrewsi	Andrew's marble butterfly	None/None	Yellow pine forest; host plants are Laguna Mountains jewel-flower (Streptanthus bernardinus) and Holboell's rockcress (Boechera pinetorum (Arabis holboellii var. pinetorum))	Not expected to occur. No suitable vegetation present.
Euphydryas editha quino	quino checkerspot butterfly	FE/SCE	Annual forblands, grassland, open coastal scrub and chaparral; often soils with cryptogamic crusts and fine-textured clay; host plants include Plantago erecta, Antirrhinum coulterianum, and Plantago patagonica (Silverado Occurrence Complex)	Not expected to occur. No suitable vegetation present.
Neolarra alba	white cuckoo bee	None/None	Known only from 6 historical localities in Southern California; has not been collected since 1946	Not expected to occur. No suitable vegetation present.
Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	FE/None	Delhi fine sandy soils and dunes, scrub and ruderal vegetation in the sand verbena series with <50% cover	Not expected to occur. No suitable vegetation present.
Streptocephalus woottoni	Riverside fairy shrimp	FE/None	Vernal pools, non-vegetated ephemeral pools	Not expected to occur. No suitable vegetation present.
Mammals				
Antrozous pallidus	pallid bat	None/SSC	Grasslands, shrublands, woodlands, forests; most common in open, dry habitats with rocky outcrops for roosting, but also roosts in man-made structures and trees	Not expected to occur. No suitable vegetation present.
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None/SSC	Coastal scrub, mixed chaparral, sagebrush, desert wash, desert scrub, desert succulent shrub, pinyon–juniper, and annual grassland	Not expected to occur. No suitable vegetation present.
Chaetodipus fallax pallidus	pallid San Diego pocket mouse	None/SSC	Desert wash, desert scrub, desert succulent scrub, and pinyon–juniper woodland	Not expected to occur. No suitable vegetation present.
Dasypterus xanthinus	western yellow bat	None/SSC	Valley–foothill riparian, desert riparian, desert wash, and palm oasis habitats; below 2,000 feet above mean sea level; roosts in riparian and palms	Not expected to occur. No suitable vegetation present.
Dipodomys merriami parvus	San Bernardino kangaroo rat	FE/SSC, SCE	Sparse scrub habitat, alluvial scrub/coastal scrub habitats on gravelly and sandy soils near river and stream terraces	Not expected to occur. No suitable vegetation present.
Dipodomys stephensi	Stephens' kangaroo rat	FE/ST	Annual and perennial grassland habitats, coastal scrub or sagebrush with sparse canopy cover, or in disturbed areas	Not expected to occur. No suitable vegetation present.
Eumops perotis californicus	western mastiff bat	None/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	Not expected to occur. No suitable vegetation present.
Glaucomys oregonensis californicus	San Bernardino flying squirrel	None/SSC	Coniferous and deciduous forests, including riparian forests	Not expected to occur. No suitable vegetation present.
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None/None	Arid habitats with open ground; grasslands, coastal scrub, agriculture, disturbed areas, and rangelands	Not expected to occur. No suitable vegetation present.
Neotoma lepida intermedia	San Diego desert woodrat	None/SSC	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Nyctinomops femorosaccus	pocketed free-tailed bat	None/SSC	Pinyon–juniper woodlands, desert scrub, desert succulent shrub, desert riparian, desert wash, alkali desert scrub, Joshua tree, and palm oases; roosts in high cliffs or rock outcrops with drop-offs, caverns, and buildings	Not expected to occur. No suitable vegetation present.
Onychomys torridus ramona	southern grasshopper mouse	None/SSC	Grassland and sparse coastal scrub	Not expected to occur. No suitable vegetation present.
Perognathus alticola alticolus	white-eared pocket mouse	None/SSC	Arid ponderosa pine communities	Not expected to occur. No suitable vegetation present.
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None/SSC	Lower-elevation grassland, alluvial sage scrub, and coastal scrub	Not expected to occur. No suitable vegetation present.
Taxidea taxus	American badger	None/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils	Not expected to occur. No suitable vegetation present.
Reptiles				
Anniella stebbinsi	southern California legless lizard	None/SSC	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and moist sandy or loose, loamy soils	Not expected to occur. No suitable vegetation present.
Arizona elegans occidentalis	California glossy snake	None/SSC	Arid scrub, rocky washes, grasslands, chaparral, open areas with loose soil	Not expected to occur. No suitable vegetation present.
Aspidoscelis hyperythra	orange-throated whiptail	None/WL	Low-elevation coastal scrub, chaparral, and valley–foothill hardwood	Not expected to occur. No suitable vegetation present.
Aspidoscelis tigris stejnegeri	San Diegan tiger whiptail	None/SSC	Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas.	Not expected to occur. No suitable vegetation present.
Charina umbratica	southern rubber boa	None/ST	Montane oak–conifer and mixed-conifer forests, montane chaparral, wet meadows; usually in vicinity of streams or wet meadows	Not expected to occur. No suitable vegetation present.
Coleonyx variegatus abbotti	San Diego banded gecko	None/SSC	Rocky areas within coastal scrub and chaparral	Not expected to occur. No suitable vegetation present.
Crotalus ruber	red diamondback rattlesnake	None/SSC	Coastal scrub, chaparral, oak and pine woodlands, rocky grasslands, cultivated areas, and desert flats	Not expected to occur. No suitable vegetation present.
Diadophis punctatus modestus	San Bernardino ring-necked snake	None/None	Moist habitats including wet meadows, rocky hillsides, gardens, farmland grassland, chaparral, mixed-conifer forest, and woodland	Not expected to occur. No suitable vegetation present.
Emys marmorata	western pond turtle	None/SSC	Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter	Not expected to occur. No suitable vegetation present.
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Not expected to occur. No suitable vegetation present.
Salvadora hexalepis virgultea	coast patch-nosed snake	None/SSC	Brushy or shrubby vegetation; requires small mammal burrows for refuge and overwintering sites	Not expected to occur. No suitable vegetation present.
Thamnophis hammondii	two-striped gartersnake	None/SSC	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	Not expected to occur. No suitable vegetation present.

Executive Summary

The purpose of this report is to determine if the Alice/Willow Avenue Warehouse Project (proposed Project) in the City of Rialto, San Bernardino County, California would impact any historical resources pursuant to the California Environmental Quality Act (CEQA). The Project site is comprised of 11 parcels totaling approximately 6.19 acres (Project site). The proposed Project would demolish all extant buildings on the Project site to construct a single warehouse building equaling approximately 138,350 square feet (inclusive of 3,000 square feet of office mezzanine). Associated improvements include truck loading docks, vehicle parking stalls, and landscaped areas.

Patriot Development Partners retained Dudek to complete this built environment inventory and evaluation report to identify all historical resources on the Project site to determine whether or not the proposed Project would result in a significant impact to historical resources under CEQA. This report includes the results of a California Historical Resources Information System (CHRIS) records search; an intensive survey of the Project site by a qualified architectural historian; building development and archival research; development of an appropriate historic context for the evaluation of the Project site; and recordation and evaluation of five properties over 45 years old for historical significance and integrity in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Rialto designation criteria and integrity requirements. This report was prepared in conformance with California Environmental Quality Act (CEQA) Guidelines Section 15064.5 for historical resources and all applicable local guidelines and regulations.

Six (6) buildings (subject properties) shown in Table 1 below are over 45 years of age, located within the Project site, and were evaluated for historical and architectural significance in this report. None of the buildings on the Project site are currently listed under any national, state, or local landmark or historic district programs.

Table 1. Evaluated Properties

Property Number	Address	APN	Year Built	Property Type
Property 1	253 W. Valley Boulevard	0132-171-05	c. 1964	Garage/warehouse
Property 2	285 S. Willow Rialto Avenue	0132-171-03	c. 1968-1977	Office building
Property 3	No associated address	0132-171-01	c. 1968	Garage/warehouse
Property 4A	1743 S. Willow Avenue	0254-111-01	c. 1953	Garage/warehouse
Property 4B	1743 S. Willow Avenue	0254-111-01	c. 1953	Office building
Property 5	213 W Valley Boulevard	0132-171-10 0132-171-13	c. 1978	Commercial building

As a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, no built environment historical resources were identified within the Project site, nor were any adjacent historical resources identified that could be indirectly impacted by proposed Project activities. Therefore, none of the six evaluated properties are considered historical resources for the purposes of CEQA. The recommended status code for all evaluated properties is 6Z: Found ineligible for NR, CR, or Local designation through survey evaluation. The finding for built environment cultural resources for the proposed Project under CEQA is **No Impact.** As the proposed Project would have no impact on historical resources, no further study is required.

INTENTIONALLY LEFT BLANK

1 Introduction

Dudek was retained by Patriot Development Partners to complete a built environment inventory and evaluation report for the Alice/Willow Avenue Warehouse Project (Project) in the City of Rialto, California. This report includes the results of an intensive survey of the Project site by a qualified architectural historian; building development and archival research; development of an appropriate historic context for the Project site; and recordation and evaluation of six total properties over 45 years old for historical significance and integrity in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Rialto designation criteria and integrity requirements. This report was prepared in conformance with California Environmental Quality Act (CEQA) Guidelines Section 15064.5 for historical resources.

1.1 Project Location and Description

Project Location

The Project site occupies an approximately 6.19-acre city block in the City of Rialto, San Bernardino County California (Figure 1, Project Location). The Project site is composed of 11 total parcels with six (6) buildings 45 years of age or older (Figure 2, Project site Map). The Project site is bounded by West Valley Boulevard to the north, South Alice Avenue to the east, South Willow Avenue to the west, and the I-10 San Bernardino freeway to the south and is located approximately two miles south of downtown Rialto. The area in which the Project site sits primarily consists of light industrial and commercial buildings many of which provide automotive and trucking-related services. The nearest residential development is located approximately 0.33 miles to the northwest and the Union Pacific railroad and rail depot is located approximately 0.15 miles south of the Project site.

Project Description

The project proposes demolition of existing buildings and asphalt associated with commercial and industrial uses to allow for construction of an approximately 136,200 square foot (gross area, inclusive of office/mezzanine space) one-story industrial warehouse on a 6.19-acre (gross) property composed of eleven parcels (Assessor's Parcel Numbers 0254-111-01, 0132-171-01, 0132-171-02, 0132-171-03, 0132-171-04, 0132-171-05, 0132-171-06, 0132-171-08, 0132-171-09, 0132-171-10, 0132-171-13, and 0132-171-14). In addition to the industrial/warehouse building, the project would include 14 high dock door parking stalls, 91 passenger-vehicle parking spaces, fencing along the project perimeter with automated gates at the driveways, and approximately 62,174 square feet of landscaping. Frontage improvements along South Willow Avenue, West Valley Boulevard, and South Alice Avenue would include curb & gutter, sidewalk and parkway landscaping, right-of-way widening. and an offset cul-de-sac at the end of South Willow Avenue and South Alice Avenue.

1.2 Project Personnel

Dudek Architectural Historian Claire Cancilla, MSHP completed the property significance evaluation, preparation of the technical report, and State of California Department of Parks and Recreation Series 523 Forms (DPR forms) with contributions from Dudek Architectural Historians Erin Jones, MA, and Caitlin Greeley, MA. The intensive survey was completed by Dudek Architectural Historian, Claire Cancilla, MSHP on December 13, 2022. All work products were reviewed for quality assurance/quality control by Senior Architectural Historian Allison Lyons, MSHP. All authors meet the Secretary of the Interior's Professional Qualifications Standards (36 CFR Part 61) for architectural history. The preparer's qualifications are located in Appendix A.

1.3 Regulatory Setting

1.3.1 Federal

National Register of Historic Places

While there is no federal nexus for this project, the properties comprising the Project site were evaluated in consideration of NRHP designation criteria. The NRHP is the United States' official list of districts, sites, buildings, structures, and objects worthy of preservation. Overseen by the National Park Service, under the U.S. Department of the Interior, the NRHP was authorized under the National Historic Preservation Act, as amended. Its listings encompass all National Historic Landmarks, as well as historic areas administered by the National Park Service.

NRHP guidelines for the evaluation of historic significance were developed to be flexible and to recognize the accomplishments of all who have made significant contributions to the nation's history and heritage. Its criteria are designed to guide state and local governments, federal agencies, and others in evaluating potential entries in the NRHP. For a property to be listed in or determined eligible for listing, it must be demonstrated to possess integrity and to meet at least one of the following criteria:

> The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:
>
> A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
> B. That are associated with the lives of persons significant in our past; or
> C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
> D. That have yielded, or may be likely to yield, information important in prehistory or history.

In addition to these basic evaluation criteria, the NRHP outlines further criteria considerations for significance. Moved properties; birthplaces; cemeteries; reconstructed buildings, structures, or objects; commemorative properties; and properties that have achieved significance within the past 50 years are generally not eligible for the NRHP. The criteria considerations are exceptions to these rules, and they allow for the following types of resources to be NRHP eligible (NPS 1995, p. 25):

> A. a religious property deriving primary significance from architectural or artistic distinction or historical importance;
> B. a building or structure removed from its original location, but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event;
> C. a birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life;

D. a cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, from association with historic events;
E. a reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived;
F. a property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
G. a property achieving significance within the past 50 years if it is of exceptional importance.

Once the significance of a resource has been determined, the resource then must be assessed for integrity. Integrity is 1) the ability of a property to illustrate history and 2) possession of the physical features necessary to convey the aspect of history with which it is associated (NPS 1995, p. 44). The evaluation of integrity is grounded in an understanding of a property's physical features and how they relate to the property's significance. Historic properties either retain integrity (that is, convey their significance) or they do not. To retain integrity, a property will always possess several, and usually most, of the seven aspects of integrity (NPS 1997, pp. 44–45):

Location is the place where the historic property was constructed or the place where the historic event occurred.

Design is the combination of elements that create the form, plan, space, structure, and style of a property.

Setting is the physical environment of a historic property.

Materials are the physical elements that were combined or deposited during a particular period and in a particular pattern or configuration to form a historic property.

Workmanship is the physical evidence of crafts of a particular culture or people during any given period in history or prehistory.

Feeling is the property's expression of the aesthetic or historic sense of a particular period.

Association is the direct link between an important historic event or person and a historic property.

1.3.2 State

California Register of Historical Resources

In California, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code Section 5020.1(j)). In 1992, the California legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (California Public Resources Code Section 5024.1(a)). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP, enumerated

below. According to California Public Resources Code Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

1. Associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. Is associated with the lives of persons important in our past.
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4. Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 CCR 4852(d)(2)).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

California Environmental Quality Act

As described further below, the following CEQA statutes and CEQA Guidelines are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- California Public Resources Code Section 21083.2(g) defines "unique archaeological resource."
- California Public Resources Code Section 21084.1 and CEQA Guidelines Section 15064.5(a) define "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource." It also defines the circumstances when a project would materially impair the significance of an historical resource.
- California Public Resources Code Section 21074(a) defines "tribal cultural resources."
- California Public Resources Code Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- California Public Resources Code Sections 21083.2(b)-(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures; preservation-in-place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5(b).) If a site is either listed or eligible for listing in the CRHR, or if it is included in a local register of historic resources or identified as significant in a historical resources survey (meeting the requirements of California Public Resources Code Section 5024.1(q)), it is a "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5(b)(1); California Public Resources Code Section 5020.1(q)). In turn, CEQA Guidelines Section 15064.5(b)(2) states the significance of an historical resource is materially impaired when a project:

1. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
2. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
3. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a Project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (California Public Resources Code Section 21083.2[a], [b], and [c]).

California Public Resources Code Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Impacts to non-unique archaeological resources are generally not considered a significant environmental impact (California Public Resources Code section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a non-unique archaeological resource qualifies as tribal cultural resource (California Public Resources Code Section 21074(c), 21083.2(h)), further consideration of significant impacts is required. CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in California Public Resources Code Section 5097.98.

California State Assembly Bill 52

Assembly Bill (AB) 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 established that TCRs must be considered under CEQA and also provided for additional Native American consultation requirements for the lead agency. Section 21074 describes a TCR as a site, feature, place, cultural landscape, sacred place, or object that is considered of cultural value to a California Native American Tribe and that is either:

- On or determined to be eligible for the California Register of Historical Resources or a local historic register; or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1.

AB 52 formalizes the lead agency–tribal consultation process, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with the Project site, including tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report.

Section 1 (a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on TCRs should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to tribal cultural resources, the consultation shall include those topics (PRC Section 21080.3.2[a]). The environmental document and the mitigation monitoring and reporting program (where applicable) shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

1.3.3 Local

City of Rialto

The City of Rialto governs historical resources through Chapter 2.20 of its municipal code. Specifically, ordinance 1543 addresses historical resources and was adopted by the City in June 2014. The ordinance established the purpose, roles, and responsibilities of the Historic Preservation Commission, along with nomination and designation program for historic resources.

Historical Preservation Commission (Chapter 2.20)

2.20.010. Creation – Purpose and Intent

The city finds, determines and declares:

A. That the State Legislature of California, pursuant to Government Code Section 37361, has recognized the value of identifying protecting and preserving places buildings, structures and other objects of historical, aesthetic and cultural importance and has empowered cities to adopt regulations and incentives for the protection, enhancement, perpetuation and use of such places, buildings, structures and other objects.

B. That the city possesses many distinctive places, structures, neighborhoods, and urban design features (all herein referred to as "resources") that enhance its value as an attractive and delightful community in which to live and work.

C. That certain of these resources are of cultural, aesthetic or historical significance and value because of age, architectural style, aesthetic appeal or association with local history.

D. That by preserving these resources Rialto shall contribute to the livability and beauty of the community, stimulate economic revitalization, improve property values in the city, foster architectural creativity, increase neighborhood stability and conservation, foster public appreciation of and civic pride in the beauty of the city and the accomplishments of its past, reinforce the distinctive character of the community, add to the community's understanding of its history and connection with the life and values of the past, and ensure that Rialto's cultural, historical and architectural heritage will be imparted to future generations.

E. That shifts in population and in the economy changes in the way people live and changes in land use threaten to destroy these irreplaceable and desirable resources. Construction and alterations of inferior quality and appearance are also a threat to these resources.

F. That the adoption of reasonable and fair regulations is necessary as a means of recognition, documentation, preservation and maintenance of resources of cultural, aesthetic, or historical significance.

Such regulation serves as a means to integrate the preservation of resources and the extraction of relevant data from such resources into public and private land management and development process, and to identify as early as possible and resolve conflicts between the preservation of cultural resources and alternative land uses. This chapter is intended to carry out the goals and policies of the Rialto general plan ((City of Rialto Ord. No. 1545, § 3, 6-24-14).

2.20.060 - Nomination and Designation Program for Historic Resources

The commission shall undertake to establish and maintain a list of nominated resources that have been identified during the survey. An individual who presents documentation equal to that collected in the survey may request that a resource be placed on the list. This list may include single structures or site, portions of structures, urban design features, man-made or natural landscape elements, or works of art. Districts may not be placed on the list. A nominated resource may be designated a landmark and a district may be designated a historic district by the city council after public hearings and a recommendation by the historic preservation commission. Any one of the following findings may be used to determine a local landmark designation (Ord. No. 1545, § 3, 6-24-14).

1. It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.

2. It is the site of a documented historic event.
3. It is strongly identified with a person or person who significantly contributed to the culture, history or development of the city.
4. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.
5. It is notable work of an architect or master builder.
6. It embodies elements of architectural design, detail, materials or craftsmanship.
7. It has [a] unique location or singular physical characteristics representing an established and familiar visual feature in the city.
8. It has unique design or detailing.
9. It is a particularly good example of a period or style.
10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

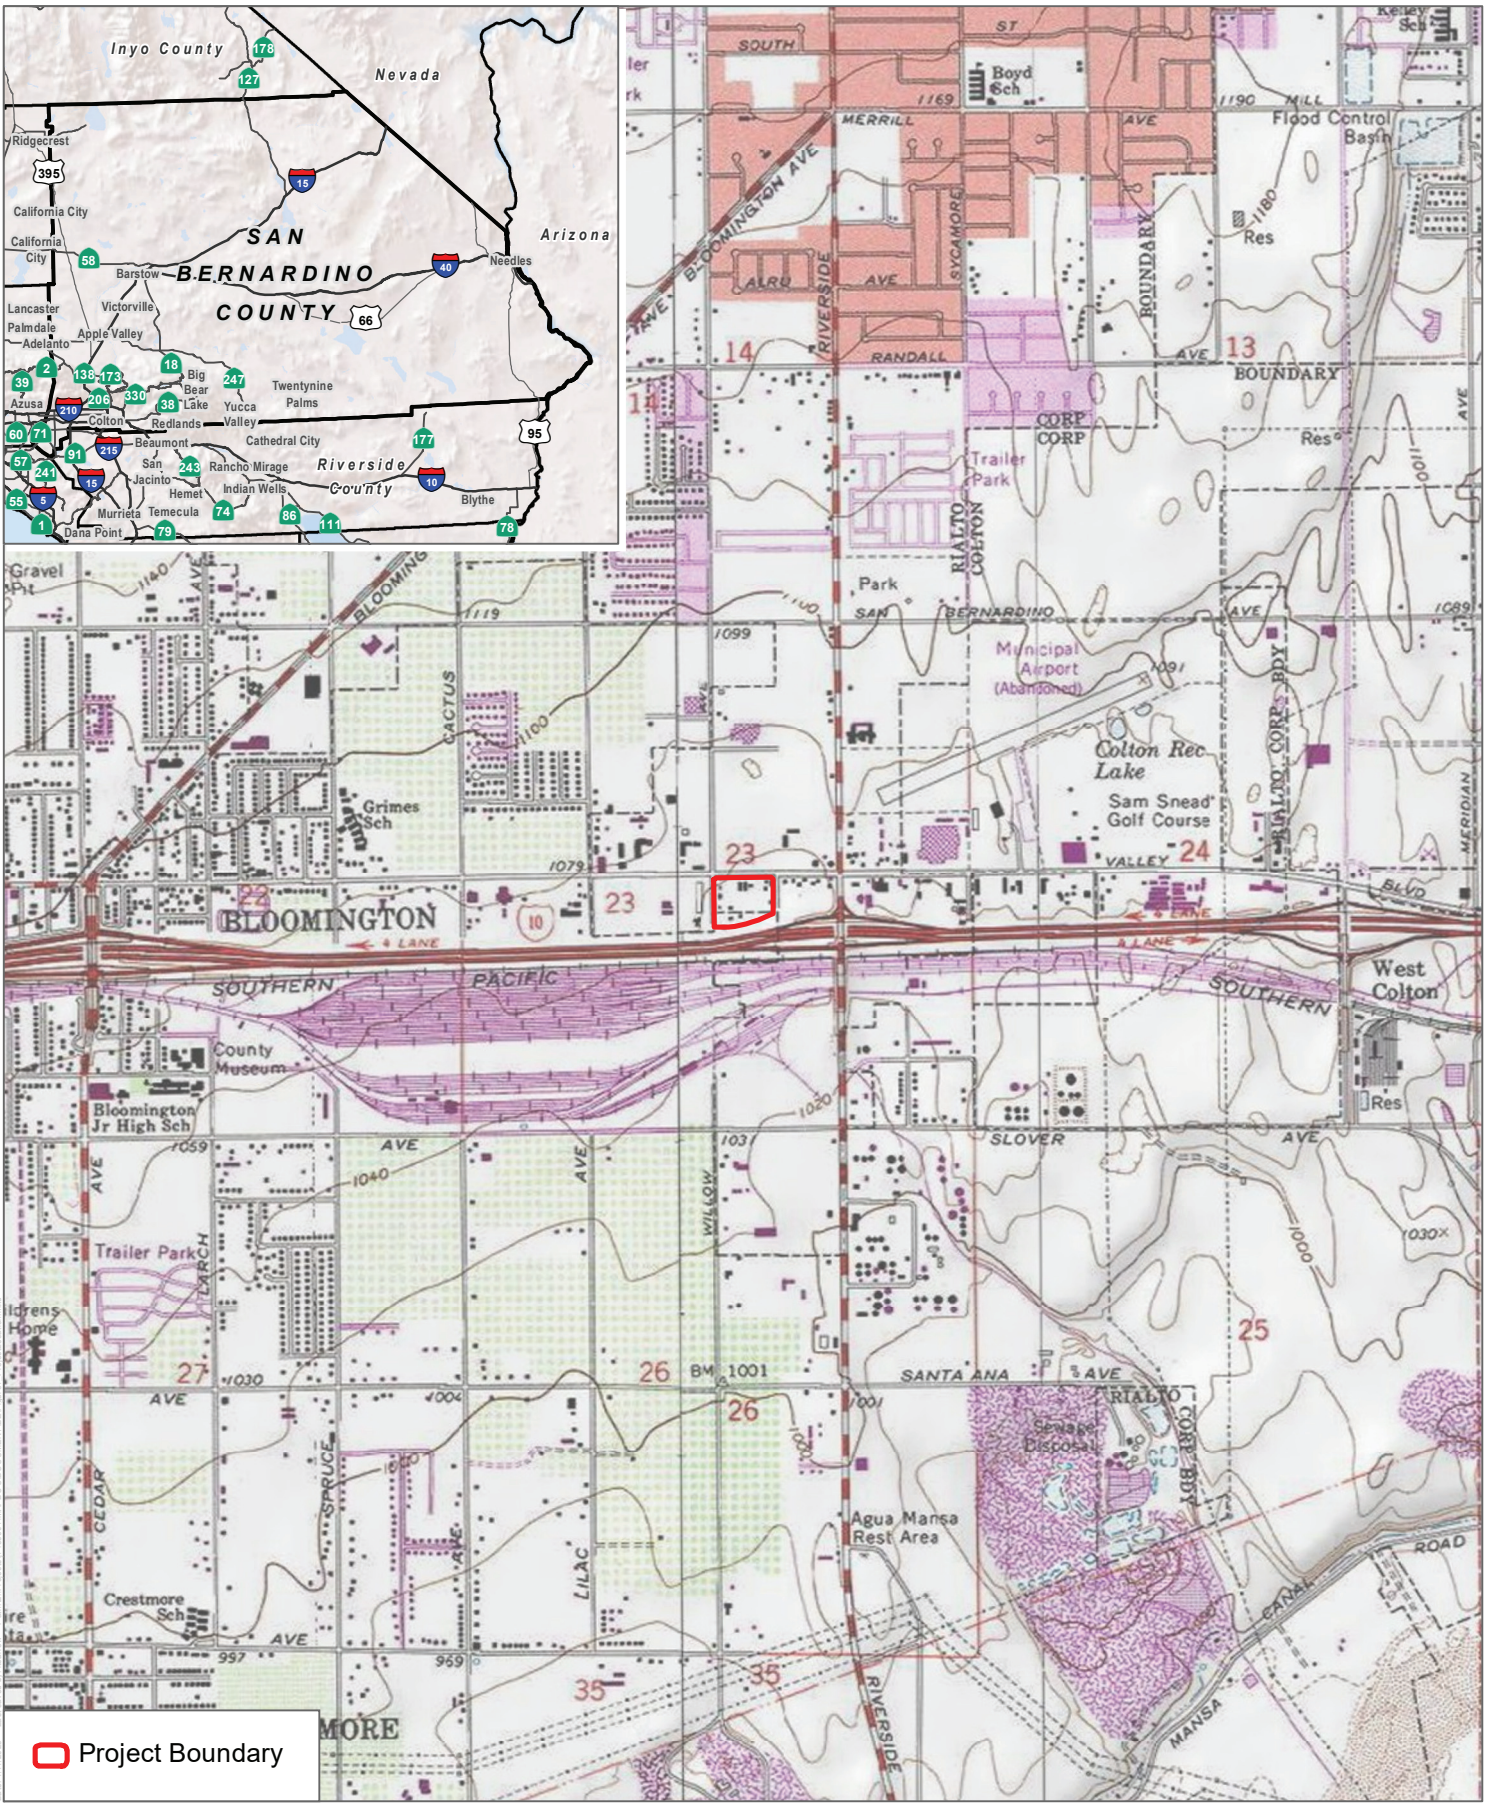
City of Rialto General Plan

In addition to its preservation ordinance described above, the City of Rialto has outlined goals and policies pertaining to historical resources in its General Plan, adopted by the City in December 2010. Relevant goals and policies are reproduced below (City of Rialto 2010: 7-7 and 7-8).

Goal 7-1: Preserve Rialto's significant historical resources as a source of community identity, stability, aesthetic character, and social value.

Policy 7-1.1: Protect the architectural, historical, agricultural, open space, environmental, and archaeological resources in Rialto.

Policy 7-1.2: Identify, through appropriate research and surveys, the historical resources in Rialto through documentation and photography.



Policy 7-1.3: Explore and evaluate different approaches to protect and enhance historical resources throughout the community.

Policy 7-1.4: Encourage economically feasible preservation of historical structures through adaptive reuse.

Goal 7-2: Provide public understanding and involvement of the unique heritage of the City of Rialto.

Policy 7-2.1: Heighten the community awareness of Rialto's history and the City's physical development, and educate the public to the significance of historical areas, sites, and structures and the social events associated with them.

Policy 7-2.2: Establish, promote, and enhance a Rialto history collection centered on the archaeological, historic archaeological and historical texts, archives, and collections of value to Rialto.

2 Background Research

2.1 CHRIS Records Search

On November 22, 2022, Dudek staff conducted a search of the CHRIS at the SCCIC, located on the campus of California State University, Fullerton. The search included any previously recorded cultural resources and investigations within a 0.5-mile radius of the proposed Project site. The CHRIS search also included a review of the NRHP, the CRHR, the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. The search included digitized mapped prehistoric and historic archaeological resources as well as historic built environment resources; Department of Parks and Recreation (DPR) site records; technical reports; archival resources; and the Office of Historic Preservation's Built Environment Resources Directory (BERD).

Previously Conducted Cultural Resources Studies

Results of the cultural resources records search indicate that 14 previous cultural resource studies have been conducted within the records search area of the proposed Project site between 1984 and 2008. One of these reports, SB-01772 (Hallaran et. al 1988) directly overlaps the Project site. Another report, SB-05628 (Bonner et. al 2008) is adjacent to the Project site. These reports did not identify any of the properties on the Project site as historical resources. Table 2, below, details all 14 previous cultural resources studies followed by a brief summary of the report adjacent to and the report overlapping the Project site.

Table 2. Previous Technical Studies Within a 0.5-Mile Radius of the Proposed Project Site

SCCIC Report No.	Authors	Year	Title	Proximity to Proposed Project site
SB-01468	Hammond, Stephen R.	1984	Negative Archaeological Survey Report: Colton/ San Bernardino Maintenance Station, City of Rialto, San Bernardino County	Outside

Report SB-01772

Environmental Impact Evaluation: An Archaeological Assessment of The Rialto Gateway Project, San Bernardino County, California (Hallaran, K.and K. Swope 1988) documents the results of an archaeological survey and cultural resources assessment consisting of an archival record search, literature review, and pedestrian survey. The area of study overlaps approximately 100% of the proposed Project site. The study was conducted to locate, record, and assess any archaeological and historical resources that may be affected by the Rialto Gateway Project. No cultural resources were identified within the current proposed Project site as a result of the investigation. Based on the study's findings of no new cultural resources, no mitigation measures were recommended beyond contacting a qualified archaeologist in case of accidental discovery of resources.

Report SB-05628

*Cultural Resource Records Search Results and Site Visit for T-Mobile Telecommunications Facility Candidate IE 04845C (Space Place Storage), 220 West Valley Boulevard, Rialto, San Bernardino County, California (*Bonner, W. and M. Aslin-Kay) documents the results of a cultural resources assessment consisting of an archival record search, literature review, and pedestrian survey. The area of study is adjacent to the proposed Project site. The study was conducted to assess any cultural resources within the T-Mobile facility candidate area. No cultural resources were identified within the proposed Project site as a result of the investigation. Based on the study's findings of no new cultural resources, no mitigation measures were recommended beyond contacting a qualified archaeologist in case of accidental discovery of human remains.

Previously Recorded Cultural Resources

The SCCIC records indicate that four (4) cultural resources have been previously recorded within a 0.5-mile radius of the Project site, none of which overlap or are directly adjacent to the Project site (Table 3). Two of these previously recorded resources are historic built environment resources: Union Pacific Railroad (P-36-010330), located approximately 0.15 mile south of the Project site, and a historic age site with in-use light industrial storage tanks (P-36-021603). Neither of these properties are eligible historical resources. P-36-010330 has a status code of 6Y meaning it was determined ineligible through Section 106 consensus, and P-36-021603 has a status code of 6Z, meaning it was found ineligible for the NRHP, CRHR, or for local designation through survey evaluation.

Table 3. Previously Recorded Cultural Resources within a 0.50-Mile Radius of the Project Site

Primary Number	Description	Recording Events	CHRIS Status Code	Proximity to Proposed Project site
P-36-001579	Prehistoric site consisting of a projectile point and flakes	1963 (Smith)	Unknown	Outside; ~0.25 mile south
P-36-006868	Historic site consisting of glass fragments, shell, ceramics, metal spoon and 50+ fragments of large mammal bone	1990 (Schmidt et al., Greenwood & Associates)	Unknown	Outside; ~0.50 mile east

Table 3. Previously Recorded Cultural Resources within a 0.50-Mile Radius of the Project Site

Primary Number	Description	Recording Events	CHRIS Status Code	Proximity to Proposed Project site
P-36-010330	Union Pacific Railroad	1999 (S. Ashkar, Jones & Stokes Associates, Inc.); 2002 (Goodwin, R., LSA Associates, Inc.); 2008 (Harper, C.D., SWCA); 2010 (Tibbet, C., LSA Associates, Inc.); 2012 (Paul, Daniel D., ICF International)	6Y: Determined ineligible for NR by consensus through Section 106 process	Outside; ~0.15 mile south
P-36-021603	Site consisting of three-story high, historic-period actively used storage tanks.	2008 (Jeremy Hollins, URS Corp)	6Z: Found ineligible for NR, CR or Local designation through survey evaluation.	Outside; ~0.50 mile southeast

2.2 Built Environment Resource Directory

The Built Environment Resource Directory (BERD) files provide information, organized by county, regarding non-archaeological resources in the Office of Historic Preservation's (OHP) inventory. The OHP inventory contains information only for built environment resources that have been processed through the office. This includes resources reviewed for eligibility for the NRHP and the California Historical Landmarks programs through federal and state environmental compliance laws, and resources nominated under federal and state registration programs. The BERD replaces the former Historic Properties Directory (HPD) that previously provided evaluation status information for resources processed through the OHP.

Dudek accessed the San Bernardino BERD from OHP on January 4, 2023. All properties within the Project site were searched in the online BERD. All properties within the Project site were searched in the online BERD. As a result, none of the properties located within the Project site are listed within BERD and therefore have not been previously evaluated.

2.3 Building Development and Archival Research

Building development and archival research were conducted for the Project site in an effort to establish a thorough and accurate historic context for the evaluations of significance, and to confirm the building development history of the Project site and associated properties thereon.

San Bernardino County Assessor

Dudek obtained the Property Information Management System (PIMS) report for parcels on the Project site containing historic age buildings on December 8, 2022, which provided information about construction dates and current owners for the properties discussed in this report. Using this information, Dudek was able to research the chain of ownership for Property 1: 253 W. Valley Boulevard (APN 0132-171-05); Property 2: 285 S. Willow Street (APN 0132-171-03); Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01); and Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13). There were no results for Property 3: No associated address (APN 0132-171-01);

City of Rialto Building and Safety

On November 16, 2022 and on December 12, 2022, the City of Rialto Building Division responded to Dudek's public records request for building permits for all six historic-age properties on the Project site. Building permits were available for Property 1: 253 W. Valley Boulevard (APN 0132-171-05) and Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13). The records search also provided electrical permits and occupancy permits for Property 4A/4B: 743 S. Willow Avenue (APN 0254-111-01). Permits were not located for the other properties.

ParcelQuest

On December 8, 2022, ParcelQuest was used to access San Bernardino County Assessor's information about the properties located within the Project site. Information regarding dates of construction and current owner name(s), if noted, was used in the preparation of the evaluations of significance and historic context.

San Bernardino County Digital Library

Dudek utilized the San Bernardino County Digital Library to identify relevant contextual information for the development of the City of Rialto. All available information obtained from the library was used in the preparation of the historic context and evaluations of significance for the subject properties.

Historical Newspaper Review

Dudek reviewed historical newspapers from Rialto and surrounding cities in an effort to understand the development of the City of Rialto, the Project site, and the subject properties discussed in this report. These documents were used in the preparation of the historic context, history of the Project site, and significance evaluations.

Sanborn Fire Insurance Maps

A review of historical Sanborn Map Company fire insurance maps covering the City of Rialto was conducted as part of the archival research effort for the Project site from the following years: 1892, 1907, 1911, and 1929. The subject properties do not fall within the mapped area of these maps, which also predate the construction of the subject properties. These Sanborn maps were, however, used in the development of Section 3.2 Historical Overview of the City of Rialto.

Historical Aerial Photographs

A review of historical aerial photographs was conducted as part of the archival research effort from the Nationwide Environmental Title Research LLC (NETR) from the years 1948, 1959, 1966, 1967, 1980, 1985, 1986-2009, 2010-2020, and UC Santa Barbara Library Aerial Photography Information FrameFinder (UCSB) from the years 1938, 1953, 1962, 1978. Table 4 in Section 2.4 discusses the development of the Project site and its environs based on this review (NETR 2022; UCSB 2022).

2.4 Aerial Photograph Review

To understand the development of the Project site, a review of all available historic aerial photographs, accessed via the Nationwide Environmental Title Research LLC (NETR) and the University of California, Santa Barbara (UCSB), was conducted. A discussion of the aerial photographs that documented the subject parcels, taken between 1938 and 2020, is included below (Table 4) (NETR 2022; UCSB 2022).

Table 4. Historical Aerial Photograph Review of the Project Site

Photograph Year	Observations and Findings
1938 (UCSB 2022)	The area surrounding the Project site is largely agricultural, developed with small residential farms and orchards, within a well-defined grid-system. The Project site is a large, open field that appears to be bound by ditches to the north and east, South Riverside Avenue (contemporary name) to the west, and a well-defined two-lane road to the south. A natural slough meanders (generally northwest/southeast) and skirts the east boundary of the Project site. The Union Pacific railroad is located south of the Project site, connecting the agricultural area to regional markets.
1948 (NETR 2022)	The Project site has retained a rural setting and appears to still be one large parcel. A building (non-extant) has been constructed along the Project site's western boundary and three (non-extant) ancillary buildings are scattered behind (east) of the residence. The road south of the Project site has been expanded and widened.
1953 (UCSB 2022)	Although the region continues to be dotted with orchards, many of the formerly agricultural properties have been subdivided into long, rectangular, residential parcels. West Valley Boulevard now fronts the Project site to the north, which has been subdivided into its contemporary parcels and developed with buildings. The Project site remains primarily undeveloped, albeit with some scattered development on the parcels of present-day Property 1 and Property 5 (not extant today). Property 4A is extant and Property 4B appears to be under construction.
1959 (NETR 2022)	Suburban growth has continued, but the Project site's setting continues to be largely agricultural. The parcels on which Properties 2 and 3 sit have been developed with at least nine (non-extant) buildings. The Project site's southeast corner has been rounded by the expansion of I-10. The natural slough has been channelized and Alice Avenue now binds the Project site's east edge.
1962 (UCSB 2022)	The I-10 has been further expanded which further reshaped the Project site's southern boundary. Additional development is visible on the lot of present-day Property 1 and Property 2. The parcels on which Properties 2 and 3 sit have been developed with additional structures. At this time, there were also two ancillary structures extant to the west of Property 1 (not extant today).
1966 (NETR 2022)	There have been no apparent changes to the Project site. A line of young trees is visible between the Project site and I-10. Property 1 is extant.

Table 4. Historical Aerial Photograph Review of the Project Site

Photograph Year	Observations and Findings
1968 (NETR 2022)	Orchards and agricultural fields still dot the region, but residential neighborhoods and light-industrial and commercial development expanded. At this time, the Project site is more visibly associated with the vehicular and trucking businesses. There is visible vehicular debris and what appears to be a figure-8-shaped track at the east side of the Project site.
1978 (UCSB 2022)	There have been significant changes to the Project site. A building has been removed from the parcel on which Property 1 sits. Property 2 Property 3, and Property 5 are extant by this time,
1980 (NETR 2022)	The region's orchards have been removed. The surrounding landscape is clearly subdivided, but undeveloped, lots; tightly packed residential communities; or light-industrial and/or commercial properties. The properties that line I-10, now an eight-lane highway, are predominantly developed with one to three-story commercial businesses, prefabricated light-industrial warehouses, or railroad facilities. There are, however, scattered residences as well. A row of mature trees continues to line the south border of Property 4A and 4B's parcel and appears to block the view of I-10. By this time, it appears that the other buildings located on Property 2's parcel have been demolished.
1985 (NETR 2022)	All ancillary buildings have been removed from the Project site. Most of the trees have been removed from the southern boundary of Property 4A and 4B's lots which has been reshaped and is no longer a rectangular property. The southern boundary now curves and meets the northeast corner at point.
1986-2020 (NETR 2022)	There are no apparent changes to the Project site.

INTENTIONALLY LEFT BLANK

3 Historic Context

3.1 Historic Period Overview

Post-contact history for the State of California is generally divided into three periods: the Spanish Period (1769–1822), Mexican Period (1822–1848), and American Period (1848–present). Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Spanish Period in California begins with the establishment in 1769 of a settlement at San Diego and the founding of Mission San Diego de Alcalá, the first of 21 missions constructed between 1769 and 1823. Independence from Spain in 1821 marks the beginning of the Mexican Period, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican–American War, signals the beginning of the American Period when California became a territory of the United States. This section is included to provide relevant context and allow for a better understanding of the development of the area surrounding the proposed Project site.

Spanish Period (1769–1822)

Spanish explorers conducted sailing expeditions along the coast of Southern California between the mid-1500s and mid-1700s. In search of the legendary Northwest Passage, Juan Rodríguez Cabrílllo stopped in 1542 at present-day San Diego Bay. With his crew, Cabrílllo explored the shorelines of present-day Catalina Island as well as San Pedro and Santa Monica Bays. Much of the present California and Oregon coastline was mapped and recorded in the next half-century by Spanish naval officer Sebastián Vizcaíno. Vizcaíno's crew also landed on Santa Catalina Island and at San Pedro and Santa Monica Bays, giving each location its long-standing name. The Spanish crown laid claim to California based on the surveys conducted by Cabrílllo and Vizcaíno (Bancroft 1885; Gumprecht 1999).

More than 200 years passed before Spain began the colonization and inland exploration of Alta California. The 1769 overland expedition by Captain Gaspar de Portolá marks the beginning of California's Historic period, occurring just after the king of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July of 1769, while Portolá was exploring Southern California, Franciscan Fr. Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823 (Bancroft 1885; Gumprecht 1999).

Mission San Gabriel Arcángel, in San Gabriel Valley (modern-day Alhambra), was established in 1771 as the fourth mission. Though the original 1771 mission was destroyed in a flash flood, a new mission was built in 1776 and El Pueblo de Nuestra Señora la Reina de Los Ángeles, further west, was established in 1781 to support this mission. The mission, like many other Spanish occupations, used Spanish military forces to compel the local Tongva population into the mission's service, baptizing them as neophytes and renaming them the Gabrieliños. The San Gabriel Mission lands extended from Los Angeles east as far as San Bernardino de Sena Estancia (1810), and the San Bernardino Valley. This includes present-day Rancho Cucamonga, which was one of the primary ranchos under Mission San Gabriel Arcángel's control (Mertz 1976: 8). The Tongva village at Kuukaamonga (Red Hill; purported to mean "sandy place" Mertz 1976: 7) persisted through this period and its name was first recorded in 1785 by the missionaries at Mission San Gabriel Arcángel. In the same mission baptismal register, the Tongva and Serrano village names of Cucamonga, Cucamobit, and Cucamabuit, etc., occurred 102 times for the period 1785-1813 (Chattel 2010; Heizer 1978).

Despite early European and Spanish contact in 1771, many Serrano remained relatively autonomous until the mid- to late-1800s. However, there is an indication that Serrano peoples closest to the missions of San Fernando and San Gabriel were more heavily missionized and removed from their villages en masse between the years 1819 and 1834 (Bean and Smith 1978a; Warren 1984; Jessica Mauck, personal communication 2019). Today, the San Manuel Band of Mission Indians is Serrano, while Morongo includes Serrano and Cahuilla peoples, and the Serrano Nation is comprised of Serrano peoples.

Mexican Period (1822–1848)

A major emphasis during the Spanish Period in California was the construction of missions and associated presidios to convert the Native American population to Christianity and integrated communal enterprise. Incentives were also provided to bring settlers to pueblos or towns, but just three pueblos were established during the Spanish Period, only two of which were successful and grew into California cities (San José and Los Angeles). Several factors kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion and warfare, New Spain (Mexico and the California territory) won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade and decreed California ports open to foreign merchants (Dallas 1955; Kyle et al 2002).

Extensive land grants were established in the interior during the Mexican period, in part to increase the population inland from the more settled coastal areas where the Spanish first concentrated their colonization efforts. The Project site, and the majority of the City of Highland fell within Rancho San Bernardino, an *asistencia* that had been created by Mission San Gabriel in 1819, just a few years before independence. After Mexico's Secularization Act of 1833, all Mission lands were secularized and removed from the control of the church and given to political figures, friends, and members of the military. In 1842, Governor Juan B. Alvarado awarded the 35,509 acres of San Bernardino and Yucaipa Valleys to Don Antonio Maria Lugo for his three sons: José del Carmen Lugo, José Maria Lugo, Vicente Lugo, and José del Carmen's friend, Diego Sepulveda. The Lugo sons grazed cattle extensively in the area, turning their family industry to beef and cattle hides (Bancroft 1885; Brown and Boyd 1922; Dallas 1955).

During the supremacy of the ranchos (1834–1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. Cattle hides became a primary Southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of non-native inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities (Dallas 1955).

American Period (1848–Present)

War in 1846 between Mexico and the United States precipitated the Battle of Chino, a clash between resident *Californios* and Americans in the Highland area. The Mexican–American War ended with the Treaty of Guadalupe Hidalgo in 1848, ushering California into its American period. California officially became a state in 1850. Horticulture and livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the Southern California economy through the 1850s. The Gold Rush began in 1848, and with the influx of people seeking gold, cattle were desired not just for their hides but also as a source of meat and other goods. During the 1850s cattle boom, rancho *vaqueros* drove large herds from Southern to Northern California to feed that region's burgeoning mining and commercial boom. The cattle boom ended for Southern California as

neighboring states and territories drove herds to Northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 2005).

3.2 Historical Overview of the City of Rialto (1881-present)

In the 1880s, the expansion of the nation's railroad network facilitated travel westward. The small settlement of Hinkley (originally spelled Hinckley for an early setter's son), was founded in 1881 upon the arrival of the Southern Pacific Railroad (along the present-day path of CA SR 58). By 1883, the land that now makes up the City of Rialto was originally part of Rancho San Bernardino, which was established by the San Gabriel Mission in the early nineteenth century. The rancho encompassed much of present-day San Bernardino, Fontana, Rialto, Redlands, and Colton. After Mexico gained control of California, the missions were secularized, and what once was mission land was granted to private individuals. Jose del Carmen Lugo, a member of a wealthy family, petitioned Governor Alvarado for a grant of the San Bernardino Rancho, where his family had been farming and grazing (Beattie 1933). The land was granted to the Lugo family on June 21, 1842, who continued grazing livestock in the area and built several adobes.

By 1851, the Lugo family sold eight leagues of their rancho for $75,000 to Mormon settlers who were attempting to create a new colony of the Latter-Day Saints. The colonists gave rise to the City of San Bernardino, though the area encompassed parts of present-day Rialto as well. Although the colony boasted a high population and even created its own political institution separate from the City of Los Angeles, it was plagued by large debt, discontent among the settlers with the church, and a growing disdain by the public for Mormons, particularly after the Mormon Rebellion of the late 1850s (Lyman 1989; Masters 2015). Church leaders struggled to maintain religious fervor among many of the San Bernardino residents, and many settlers appeared to make the move to San Bernardino to facilitate their own separation from the church's strict policies (Lyman 1989). After the Mountain Meadows Massacre of 1857, during which Mormons settlers in Utah ambushed and murdered non-Mormon settlers, the Mormon colony of San Bernardino was completely alienated from non-Mormon communities of Southern California, and anti-Mormon hostility reached its peak. It was at this time that Brigham Young summoned the devout to return to Utah. In 1856, before the exodus of many Mormons, the area had 3,000 inhabitants, of which 84% were Mormon. However, 1,400 returned to Utah, while the remaining 1,600 decided to abandon the church and make a life for themselves in California. This return rate for the Mormon colony of San Bernardino was much lower than many other Mormon settlements outside of Utah, indicating the growing disillusionment and discontent that the San Bernardino residents felt with the church or their attachment to their settlement in San Bernardino (Adams 2004; Lyman 1989).

After the decline of the Mormon colony, the area developed slowly until 1887 when a new section of the Santa Fe Railroad was established through San Bernardino County. Like other parts of San Bernardino County, the construction of the railroad created a land speculation boom and a series of towns were established along the railroad's route. One such was Rialto, which was laid out by the Semi-Tropic Land and Water Development Company in 1887 at a cost of $670,000. While much of the early development efforts included brush clearing and town planning, a reliable water source was also a necessary component of the successful development of Rialto. To provide a reliable water source, the Semi-Tropic Land and Water Company built a concrete-lined canal that provided water from Lytle Creek Canyon to Riverside Avenue in Rialto. The Semi-Tropic Land and Water Company was formed by a group of associates, including Sam Merrill, a successful businessperson and banker from Iowa who came to the area and settled in Rialto once it was developed. Merrill's residence was one of the numerous grand homes in

the area and was constructed at a cost of $15,000. Merrill continued to live in Rialto and eventually there was a street named in his honor (Adams 2004).

In the early years, Rialto was a small town that was largely rooted in an agricultural economic system based largely on citrus orchards that were located on the outskirts of the downtown core of the City. The earliest Sanborn map of Rialto dates to 1892 and shows a small town laid out in a grid pattern with a small collection of houses spaced throughout town. The town also included the following: blacksmith shop, school, cement pipe yard, lumberyard, drug store, merchandise store, railroad depot, and offices for the Semi-Tropic Land and Water Company. The largest building in town was identified on the Sanborn Map as the Semi-Tropic Hotel located on Riverside Avenue (Sanborn 1892a, 1892b).

Growth and development of Rialto continued throughout the nineteenth century and into the twentieth century. By 1907, Rialto established a Chamber of Commerce to support the growing town and its businesses. The 1907 Sanborn map shows an increase in residential buildings throughout the town to support the growing population. In addition to residential development, more defined commercial development is indicated with new business types emerging along Riverside Avenue since 1892. New businesses included a bakery, livery, wagon shop, and barbershop. Other changes to the town seen on the 1907 Sanborn Map include the emergence of fruit packing houses that served to support the citrus industry that was prospering on the outskirts of the town (Sanborn 1907a, 1907b, 1907c). The growth and development continued over the next few years, and by the City's incorporation in 1911, there were 1,500 residents, 40 businesses, and a local newspaper (Adams 2004; City of Rialto 2016; Sanborn 1892a, 1892b, 1907a, 1907b, 1907c, 1911a, 1911b, 1911c, 1911d).

Rialto continued to grow throughout the 1910s with significant advances in transportation, including the transition of Foothill Boulevard to become part of the United States highway system as a section of Route 66 in 1913. Another advancement in transportation came the following year in 1914 when the San Bernardino Line of the Los Angeles Pacific Electric Railway was completed. However, disaster struck in the 1920s when a fire destroyed much of the downtown area (Adams 2004; City of Rialto 2016).

Like many other cities in California, World War II influenced Rialto's growth and development. During the war, a large ammunition dumpsite was put into operation in the City. Following the war, the ammunition dumpsite was taken over by a rocket-building subsidiary of B.F. Goodrich. Wartime and postwar industrial growth sparked the need for additional residential buildings to support workers and the general postwar population growth seen throughout Southern California. From the beginning of the 1950s to the end of the decade, the population of the City skyrocketed from 3,156 to 15,359. To manage this growth and development, residential subdivisions began to replace large agricultural parcels and citrus groves outside the downtown city core, and increased industrial and commercial development followed. The City continued to grow throughout the late twentieth century and continues to grow today with the most current population being reported at over 100,000 (City of Rialto 2016).

3.3 History of the Project site

The Project site is located in the City of Rialto, approximately 80 feet north of the Interstate-10 San Bernardino (I-10). It consists of 11 total parcels and has six (6) buildings 45 years of age or older. Prior to the construction of the currently extant buildings, the Project site appears to have been agricultural. The Project site and surrounding area experienced extensive development between circa 1948 and 1959, at which time the Project site appears to have been subdivided into individual parcels and the formerly agricultural nature of the site transitioned into light industrial and commercial (Exhibit 1). Development on the Project site continued into the 1970s. This mirrored

larger trends in the City of Rialto in the post-World War II years as increased population led to increased residential, commercial, and industrial development. By 1980, the I-10 had been expanded to an 8-lane highway, forcing Property 4's southeast border to curve northward and connect to the parcel's northeast corner.

This increased light industrial development transformed the Project site, including through the eventual development of Properties 1, 2, 3, 4A, 4B, and 5. The businesses operating on the Project site appear to have primarily been related to automotive and trucking service, repair, and storage, uses that have continued to the present day. Today, all the buildings are part of a complex with a truck driving school and trucking repair and storage businesses.

Exhibit 1. 1948 aerial photograph of the Project site showing it undeveloped and surrounded by agricultural land (L) and 1959 aerial photograph of the Project site showing the development of the Project site (R) (NETR 2022)

3.3.1 Property 1: 253 W. Valley Boulevard (0132-171-05)

Property History

Property 1 is a nondescript warehouse with no discernable architectural style located at the northern boundary of the Project site. Property 1 was constructed circa 1964 and has served as a warehouse for a variety of businesses, primarily related to automotive and trucking repair and storage. An aerial photograph from 1966 shows Property 1 extant is its current configuration (Exhibit 2); however, a building permit was issued for the property's parcel in 1964, indicating that Property 1 may have been extant by that time (City of Rialto 1964: Building Permit 21095).

At the time of its construction, Property 1 was one of approximately three structures on its parcel (visible in previously referenced Exhibit 2). Building permits and newspaper articles indicate that these structures likely served as offices for the various businesses that occupied the site. In 1968, for example, the address at which Property 1 is located was advertised in the *San Bernardino County Sun* as a rental and described as "office and fenced yard space" (San Bernardino County Sun 1968: 27) and the following year it was advertised as "private office for rent with private bathroom. Ideal for construction company or building trade. Fenced storage lot available" (San Bernardino County Sun 1969: 30). Per aerial photographs, these other structures were no longer extant by 1980 (NETR 2022).

Exhibit 2. 1966 aerial photograph showing Property 1 extant (UCSB 2022) with additional structures (no longer extant) to its west.

Occupancy History

Table 5 below includes known owners and occupants of Property 1 since its construction circa 1964. Research did not reveal that these owners or occupants are persons important to our past.

John A. Swanson originally owned the property. Although Swanson died in 1967, ownership of the property remained under his name until 1981 according to the San Bernardino County PIMS. Research did not identify biographical or professional information on John A. Swanson or the company he operated out of Property 1, C. & J. Compressor Service. (County of San Bernardino PIMS; City of Rialto 1964: Building Permit 21095; San Bernardino County Sun 1967: 23; San Bernardino County Sun 1962: 9).

Irvin O. Thompson owned Property 1 from 1981 until 2000. Thompson also owned Property 2, 3, 4A, and 4B at the same time. From 1981 to circa 1992, Property 1 was occupied by Ability Truck Parts, Thompson's company. Thompson established his primary commercial enterprise, Ability Heavy (formerly House) Movers at 285 West Valley Boulevard (located approximately 2.5 miles east of Parcel 2) in the early 1960s. Ability Truck Parts appears to be an extension of the heavy-duty moving operation and Property 1 housed the company's automotive components. Although Thompson owned Property 1 until 2000, historic permits indicate that Ability Truck Parts ceased operating from the property circa 1992 (San Bernardino County PIMS; San Bernardino County Sun 1992: 24; San Bernardino County Sun 1969: 46).

Table 5. Ownership/Occupancy for Property 1: 253 W. Valley Boulevard (APN 0132-171-05)

Years	Owner/Occupant	Name	Notes	Source
c. 1964 - 1978	Owner	John A. Swanson	Property 1 original owner and owner of C&J Compressor Service. Swanson died in 1967, but the property remained under his name until 1978 per PIMS.	UCSB 2022 City of Rialto 1964: Building Permit 21095 PIMS San Bernardino County Sun 1967: 23
c. 1964-1967	Owner and occupant	C&J Compressor Service	Automotive air compressor service	San Bernardino County Sun 1968: p. 27
1968 - 1978	N/A	Vacant/unknown	Property listed as being "For rent" in newspaper articles from 1968 and 1969. Unclear use of property post-1969.	San Bernardino County Sun 1968: p. 27
1978 - 1981	Owner	Roy Cutter	Research did not identify additional biographical or professional information.	PIMS
1981 - 2000	Owner	Irvin O. Thompson	Thompson owned the property until 2000. Thompson also owned Property 2, 3, 4A, and 4B at this time. Research did not identify additional biographical or professional information.	PIMS San Bernardino County Sun 1992: 24
1981-1992	Owner and occupant	Ability Truck Parts	Ability Truck Parts was owned by Thompson and was part of his moving business, Ability Moving, located approximately 2.5 miles east of Property 1.	San Bernardino County Sun 1992: 24
1993 – c. 1999	Occupant	John R. Holb/ Concrete Tie MFG Company	Holb rented the property from Thompson	PIMS
1999	Owner and occupant	Israel Michael Shapi/$10 Shoes	Research did not identify biographical information or information on this business.	City of Rialto 1999: Change of Occupancy 99001108
2022	Unclear	Pacific Store Fixtures	Research did not identify information on this business.	Google

Architect / Builder

There is no original building permit on file for Property 1 and additional research did not identify the name of the property's original architect or builder. A building permit from 1964 for interior renovations listed Bruce Philips as the architect. Research, including through Newspapers.com, Ancestry.com, and through the historical directory of the American Institute of Architects (AIA), did not identify biographical or professional information on the architectural career of Bruce Philips.

3.3.2 Property 2: 285 S. Willow Avenue (APN 0132-171-03)

Property History

Property 2 is a nondescript office building with no discernable architectural style originally constructed between 1968-1977 per aerial photographs (Exhibit 3; UCSB 2022). The property appears to have originally been constructed as an office for Caudill's Auto Service, which opened in the 1960s and was originally comprised of approximately ten buildings (Exhibit 3; San Bernardino County Sun 1966: 26). Only one other building from the ten buildings associated with Caudill's is still extant (located on Property 3 discussed in Section 3.3.3 below). Per aerial photographs, the majority of these structures were demolished by 1980 (NETR 2022; UCSB 2022).

Property 2 appears to have continued to serve automotive and trucking businesses, such as A-1 Auto Body (1979-1981) in subsequent years. From 1981 to 2021, Property 2 was owned by the same series of owners as Property 1, 3, 4A and 4B. While there appears to have been some overlap in businesses during this time period (Ability Truck Parts appears to have operated out of all of these buildings from 1981 until 1992), they also had different occupants over the years. Today, Property 2 serves as an office for the trucking service, repair, and driving school located on the Project site. (NETR 2022a; UCSB 2022; Google 2022).

Exhibit 3. 1966 aerial photograph (L) showing the buildings comprising Caudill's Auto Service; Property 2 (outlined in red) was not yet extant. 1977 aerial photograph (R) showing that Property 2 (outlined in red) was extant (NETR 2022; UCSB 2022)

Ownership/Occupancy History

Table 6, below, lists the ownership history information available identified through research efforts from Property 2's circa 1968-1977 construction to the present day. There is no original building permit on file and research did not indicate an original owner of Property 2. Property 2 appears to have served as an office space for an automotive repair business and has continued to serve as an office space for the existing trucking business on the parcel today. Additional information on the property's history and its various owners is provided in the "Notes" column of the below table. Research did not reveal that these owners or occupants are persons important to our past.

Table 6. Ownership/Occupancy for Property 2: 285 S. Willow Avenue (APN 0132-171-03)

Years	Owner/Occupant	Name	Notes	Source
c. 1968 - 1979	Owner	Caudill's Auto Service	Auto repair business	San Bernardino County Sun 1966: 26 San Bernardino County Sun 1979b: 24
1979-1981	Owner	A-1 Auto Body	Auto repair business	San Bernardino County Sun 1979b: 24
1981 - 2000	Owner	Irvine O. Thompson/ Ability Truck Parts	Thompson also owned Property 1 at this time and operated his business, Ability Truck Parts, out of the property. He likely operated Ability Truck Parts out of Property 2 as well. Thompson also owned Properties 3, 4A and 4B at this time.	PIMS San Bernardino County Sun 1992: 24 San Bernardino County Sun 1969: 46
2000-2003	Owners	James and Marcy O'Neil Shirley M. Tolleson Rodney and Caroline Collin	According to PIMS, several people owned Property 2 in this period. Research did not identify additional biographical or professional information on these individuals.	PIMS
2003-2018	Owner	Irvine O. Thompson Trust	Research did not identify information on this Trust. Owners also owned Property 4A and 4B at this time.	PIMS

Table 6. Ownership/Occupancy for Property 2: 285 S. Willow Avenue (APN 0132-171-03)

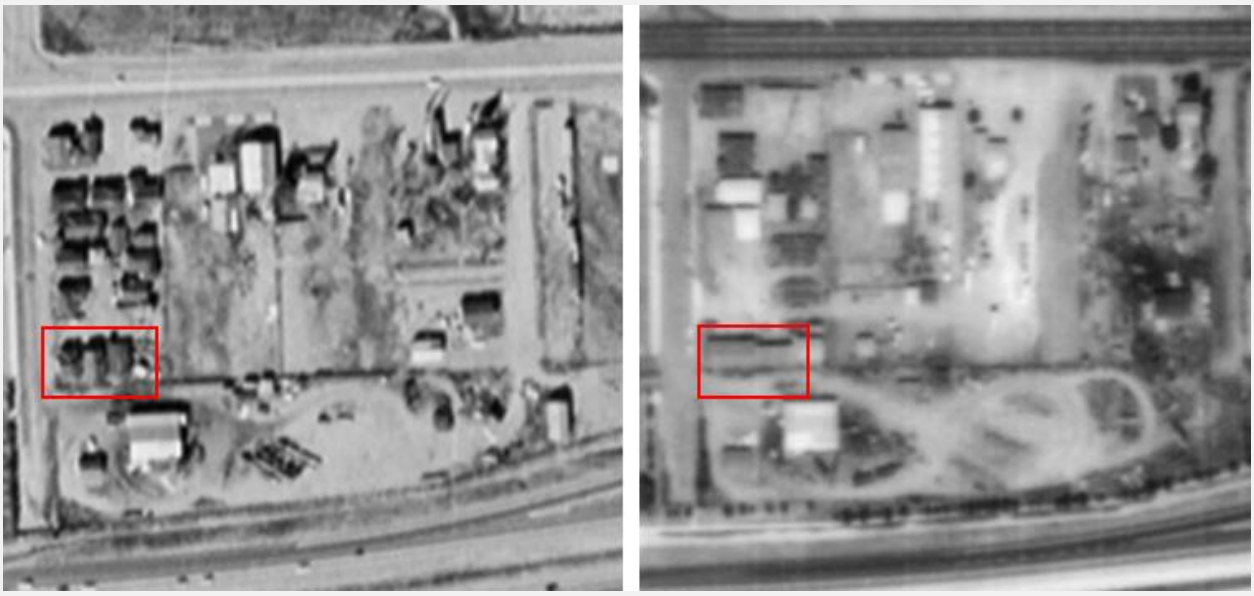
Architect / Builder



There is no original building permit on file for Property 2 and additional research did not identify the name of the property's original architect or builder.

3.3.3 Property 3: No associated address (APN 0132-171-01)

Property History

Property 3 is a nondescript warehouse and garage with no discernable architectural style originally constructed circa 1968 per aerial photographs (Exhibit 4; UCSB 2022; NETR 2022). At the time of Property 3's construction, the parcel on which it sits had been improved with approximately ten structures (none of which are extant in 2022). It appears that Property 3 was constructed as one of the structures originally serving Caudill's Auto Service, which began operating at the Project site in the 1960s (San Bernardino County Sun 1966: 26). Property 2, described above in Section 3.3.3, was also constructed as part of Caudill's Auto Service. It appears that Property 3 continued to serve as a warehouse and garage for the various primarily automotive and trucking businesses that operated from the Project site in subsequent years. From 1981 to 2021, Property 3 was owned by the same series of owners as Property 1, 2, 4A and 4B, and while there appears to have been some overlap in businesses (Ability Truck Parts appear to have operated out of all of these buildings from 1981 until 1992), they also had different occupants over the years.

Exhibit 4. 1962 aerial photograph (L) before the construction of Property 3 and 1968 aerial photograph (R) showing the property extant (UCSB 2022; NETR 2022)

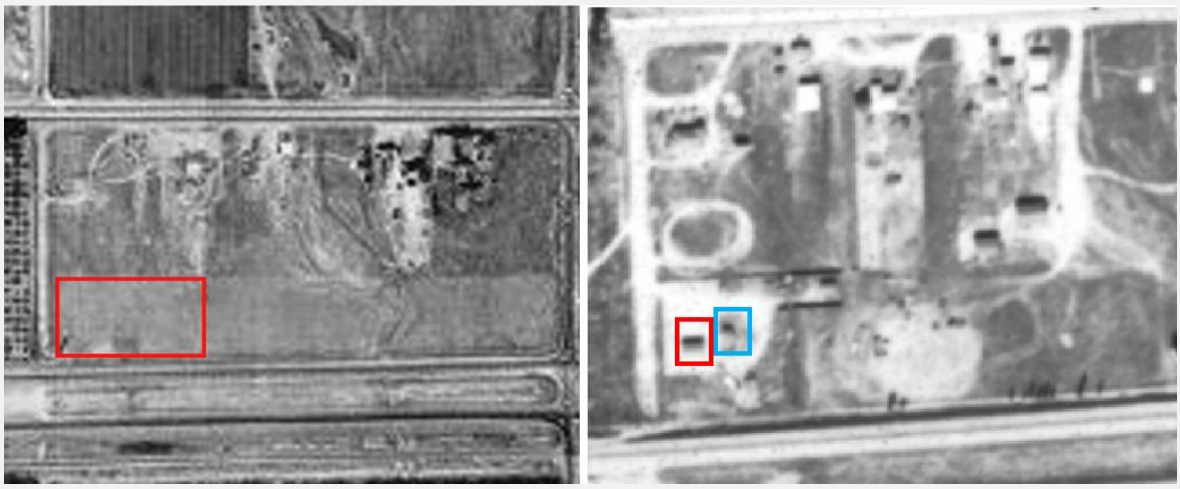
Ownership/Occupancy History

There was no property ownership information for Property 3's APN in the San Bernardino County PIMS and additional research did not identify owners or occupants of Property 3. Property 3 and Property 2 likely served the same businesses over time, based on their proximity. Today, both properties serve the trucking service, repair, and driving school that operates from the Project site. See Section 3.3.3 for additional detail on the businesses occupying these sites. Research did not reveal that these owners or occupants are persons important to our past.

Architect/Builder

There is no original building permit on file for Property 3 and additional research did not identify the name of the property's original architect or builder.

3.3.4 Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01)



Property 4A is a nondescript office building with no discernable style and property 4B is a nondescript warehouse and garage with no discernable style. The two buildings are located on the same parcel and have historically served the same businesses. Therefore, they are discussed together in the following section.

Property History

Aerial photographs indicate that Property 4A was extant by 1953 and property 4B was under construction by 1953 (Exhibit 5; UCSB 2022). Research did not identify an original owner or occupancy of Property 4A and 4B, however,

it appears that both properties served various businesses, including R. Thompson Trucking in the 1970s and 1980s. From 1981 to 2021, Property 4A and Property 4B were owned by the same series of owners as Property 1, 2 and 3. While there appears to have been some overlap in businesses during this time period (Ability Truck Parts appear to have operated out of all of these buildings from 1981 until 1992), they also had different occupants over the years. Today, Property 4A and Property 4B serve the trucking service, repair, and driving school that operate from the Project site.

Exhibit 5. 1948 aerial photograph showing the future location of Property 4A and 4B (outlined in red) and 1953 aerial showing that Property 4a (Office; red outline) is extant and Property 4B appears to be under construction (blue line). Both Property 4A and 4B are fully visible in a 1959 aerial photograph (UCSB 2022; NETR 2022).

Occupancy History

Table 7, below, lists the ownership history information available identified through research efforts from Property 4A and 4B's circa 1953 construction to the present day. There are no original building permits on file for Property 4A and 4B and research did not indicate an original owner of Property 4A or 4B. Additional information on the property's history and its various owners is provided in the "Notes" column of the below table. Research did not reveal that these owners or occupants are persons important to our past.

Table 7. Ownership/Occupancy for Property 4A and 4B: 1743 S. Willow Avenue (APN 0132-171-03)

Architect/Builder

There is no original building permit on file for Property 4A or 4B and additional research did not identify the name of the property's original architect or builder.

3.3.5 Property 5: 213 W Valley Blvd (APN 0132-171-10; 0132-171-13)

Property History

Property 5 is a single commercial building sitting on two parcels and constructed in 1978 (San Bernardino County Assessor; San Bernardino County Sun 1978: 32). Property 5 was constructed in 1978 as a truck service station. Since its construction, Property 5 has served this function, primarily operating as HL Clements Trucking. Today, the property continues to serve as an active truck service station.

Occupancy History

Table 8, below, lists the ownership history information available identified through research efforts from Property 5's circa 1978 construction to the present day. The original business operating out of Property 5 was H.L Clemons Trucking. Additional information on the property's history and its various owners is provided in the "Notes" column of the below table. Research did not reveal that these owners or occupants are persons important to our past.

Architect / Builder

There is no original building permit on file for Property 5 and additional research did not identify the name of the property's original architect or builder.

INTENTIONALLY LEFT BLANK

4 Field Survey

4.1 Methods

Dudek Architectural Historian Claire Cancilla, MSHP, conducted an intensive survey of the Project site on December 13, 2022. Ms. Cancilla meets the Secretary of the Interior's Professional Qualifications Standards for architectural history. The survey entailed walking around the building exteriors of each property, documenting each with notes and photographs, specifically noting character-defining features, spatial relationships, observed alterations, and examining any historic landscape features on the properties.

4.2 Results

Six (6) buildings over 45 years or older were surveyed for the 6.19-acre Alice/Willow Warehouse Project site. The six buildings consisted of Property 1: 253 W. Valley Boulevard (APN 0132-171-05); Property 2: 285 S. Willow Street (APN 0132-171-03); Property 3: No associated address (APN 0132-171-01); Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01); and Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13). All six buildings are over 45 years old and were identified as requiring recordation and evaluation for historical significance. They are described and evaluated for historical and architectural significance in Section 5. Evaluations of Significance.

INTENTIONALLY LEFT BLANK

5 Evaluations of Significance

In order to determine if the proposed Project will impact historical resources under CEQA, all buildings or structures over 45 years in age within the Project site were evaluated for historical significance and integrity in consideration of NRHP, CRHR, and City of Rialto designation criteria and integrity requirements. This includes Property 1: 253 W. Valley Boulevard (APN 0132-171-05); Property 2: 285 S. Willow Street (APN 0132-171-03); Property 3: No associated address (APN 0132-171-01); Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01); and Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13).
