5.1 Property 1: 253 W. Valley Boulevard

Property Description

Property 1 is a nondescript, utilitarian warehouse with no discernable architectural style constructed circa 1964 per aerial photographs (NETR 2022; UCSB 2022). The property is simple with no ornamentation. It is oriented with its primary (north) elevation facing West Valley Road and is situated on a large, paved lot. Property 2 is located approximately 230 feet west and Property 3 is located approximately 100 feet east.

Property 1 is one-story with a rectangular plan and a front gable roof, clad in corrugated metal. The primary (north) elevation (Exhibit 6) features an asymmetrical arrangement of a garage bay with metal fold-down door, and a metal framed window with metal security bars added. Next to the window is a door that appears to be made of wood, obscured by a chain-link fence that runs on either side of the elevation. The rear (south) elevation has a loading dock with two loading bays with metal fold down doors, and a wood door. The side (east) elevation has two types of cladding: concrete brick and vertical concrete panels. The elevation is blank except for a wood-framed window cut out that has been boarded up. The side (west) elevation features an asymmetrical arrangement of six window openings; two metal framed multi-light windows with metal security bars, two double-hung metal framed windows with security bars, and two window openings covered with corrugated metal. A metal fence protrudes south along the west elevation (Exhibit 7).

Exhibit 6. Oblique view of the primary (north) and east elevations of Property 1, view to the southwest (Dudek IMG_1912)

Exhibit 7. Oblique view showing the west and rear (south) elevations of Property 1, view of the northeast (Dudek IMG_1885)

Identified Alterations

Building permits were on file at the City of Rialto Building Division for Property 1. Table 9 includes all known alterations to Property 1. This table was compiled through archival research of City of Rialto building permits provided to Dudek by the City's Building & Safety Division. Electrical, plumbing, mechanical permit as well as occupancy and inspection documents were also provided by the City, but are not included in the below table.

Table 9. Building Permits for Property 1: 253 West Valley Boulevard (APN 0132-171-05)

Date	Address	Permit Number	Description of Work	Owner	Architect (A)/ Contractor (C)	Valuation
10/20/1964	253 West Valley Boulevard	21095	Excavation, bond, and beam work	C.E. Swanson	Bruce Philips (A)	$4,914
10/6/1966	253 West Valley Boulevard	23589	Remodel office	C.E. Swanson	Roy Cutter (C)	$1,000
1/4/1984	253 West Valley Boulevard	51920	Interior alterations	Irvin O. Thompson	Carolyn Cellen (C)	$1,000

NRHP/CRHR Evaluation of Significance

Property 1: 253 West Valley Boulevard (APN: 0132-171-05) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 1: 253 West Valley Boulevard (APN: 0132-171-05) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 1 is a nondescript warehouse with no discernable architectural style constructed circa 1964. The area in which Property 1 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the development of Property 1.

At the time of Property 1's construction, the Project site had already been developed with structures that appear to have primarily served automotive and trucking businesses. Property 1 originally served as a warehouse for C&J Compressor Services, an auto repair business. While Property 1 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West

Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 1 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 1. Property 1 has been used as a warehouse to support various businesses, primarily automotive and trucking-related, that operated from the Project site throughout its history. The earliest ownership information identified that Property 1 was owned by John A. Swanson, who operated his business C&J Compressor Services out of Property 1 from its construction until Swanson's death in 1967. Subsequent owners include Irvine O. Thompson (1981-2000) who also owned Properties 2, 3, 4A, and 4B during this time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 1 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 1 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 1 is a nondescript warehouse with no discernable architectural style built circa 1968. Property 1 does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1960s nondescript commercial warehouse. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 1 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. Property 1 is also not a rare example of its type; there are similar warehouses from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 1. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 1 does not appear likely to contribute to a potential historic district. Therefore, Property 1 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 1 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 1: 253 West Valley Boulevard (APN 0132-171-05) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 1 is a nondescript utilitarian warehouse and garage constructed circa 1964. As discussed in NRHP/CRHR Criteria A/1, Property 1 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 1 appears ineligible under City of Rialto Criteria 1.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 1. Therefore, Property 1 appears ineligible under City of Rialto Criteria 2.

3. ***It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 1 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 1 appears ineligible under City of Rialto Criteria 3.

4. ***It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.***

   Property 1 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 1 is a nondescript warehouse with no discernable architectural style constructed circa 1964. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 1 appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 1 is a nondescript warehouse with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 1. As such, Property 1 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar warehouses in Rialto, California, and the nation. Therefore, Property 1 appears ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, Property 1 does not embody elements of architectural design detail, materials, or craftsmanship, It is a nondescript warehouse with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 1 appears ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 1 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 1 appears ineligible under City of Rialto Criteria 7.

8. It has unique design or detailing.

As discussed under NRHP/CRHR Criteria C/2, Property 1 is a nondescript warehouse with no discernable style. It does not have a unique design or detailing and there are many similar warehouses throughout Rialto, California, and the United States. Therefore, Property 1 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 1 is a nondescript warehouse with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 1 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 1 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 1 appears ineligible under City of Rialto Criteria 10.

5.2 Property 2: 285 S. Willow Avenue

Property Description

Property 2 is an office building with no discernable style constructed circa 1968-1977 per aerial photographs (NETR 2022; UCSB 2022). Property 2 is one-story with a rectangular plan and a front gable roof clad in composite shingles with slight overhanging eaves with visible rafter tails. The building is clad in horizontal lapped plyboard. The primary (south) elevation (Exhibit 8) has a replacement six-panel door with a replacement metal staircase of four steps and metal railings on a concrete slab that leads up to the entrance. Next to the door is a wood-framed fixed window underneath a metal awning. Beneath the window and door, cladding changes from horizontal metal panels to plyboard panels. The east (side) elevation has an irregular fenestration of a centrally located wood door under a gabled awing flanked by wood-framed multi-light windows. A matching metal staircase and metal railings lead up to the secondary entry. Next to the awning is a secondary gabled projection. Below the windows and door, the cladding changes from horizontal metal panels to plywood panels (Exhibit 9). The west (side) elevation features wood-framed fixed windows, a metal awing, and a gabled projection in the middle of the elevation's roof. Most of the elevation is obstructed by a covered chain link fence. The rear (north) elevation was hidden from the public right of way.

Exhibit 8. Overview of the primary (south) elevation, view to the north (Dudek IMG_1844)

Exhibit 9. Oblique view of the primary (south) and east (side) elevations, view to the northwest (Dudek IMG_1847)

Identified Alterations

There were no building permits on file with the City of Rialto Building Division for Property 2. The following list of alterations to Property 2 was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Replacement door, east elevation
- Replacement vinyl windows, all elevations
- Replacement door, south elevation
- Metal stairs and handrails, south and east elevations
- Replacement siding
- Replacement roof

NRHP/CRHR Evaluation of Significance

Property 2: 285 S. Willow Avenue (APN 0132-171-03) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 2: 285 S. Willow Avenue (APN 0132-171-03) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 2 is a nondescript office building with no discernable architectural style constructed circa 1968-1977 to serve as an administrative space for Caudill's Auto Service, an automotive services business. The area in which Property 2 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the eventual development of Property 2.

At the time of Property 2's construction, the Project site had already been developed with structures that appear to have primarily served automotive and trucking businesses. Property 2 originally served as an office for Caudill's Auto Service. While Property 2 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 2 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 2. Property 2 was constructed between 1968 and 1977 to serve as an office for Caudill's Auto Service, an automotive repair business that had operated from the Project site beginning in the early 1960s. Subsequent occupants include A-1 Autobody (1978-1981) and Irvine O. Thompson (1981-2000), who also owned Properties 1, 3, 4A, and 4B during this time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 1 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 2 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or

that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 2 is a nondescript office building with no discernable architectural style built circa 1968. Property 2 does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1960s nondescript small office building. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 2 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. The property is also not a rare example of its type; there are similar warehouses from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 2. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 2 does not appear likely to contribute to a potential historic district. Therefore, Property 2 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 2 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 2: 286 S. Willow Avenue (APN 0132-171-03) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 2 is a nondescript office building constructed circa 1968-1977. As discussed in NRHP/CRHR Criteria A/1, Property 1 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 2 appears ineligible under City of Rialto Criteria 1.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 1. Therefore, Property 2 appears ineligible under City of Rialto Criteria 2.

3. *It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.*

As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 2 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 2 appears ineligible under City of Rialto Criteria 3.

4. *It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.*

Property 2 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 2 is a nondescript office with no discernable architectural style constructed circa 1968. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 2 appears ineligible under City of Rialto Criteria 4.

5. *It is notable work of an architect or master builder.*

As discussed in NRHP/CRHR Criteria C/1, Property 2 is a nondescript office with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 2. As such, Property 2 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar buildings in Rialto, California, and the nation. Therefore, Property 2 appears ineligible under City of Rialto Criteria 5.

6. *It embodies elements of architectural design, detail, materials or craftsmanship.*

As discussed in NRHP/CRHR Criteria C/3, Property 2 does not embody elements of architectural design detail, materials, or craftsmanship. It is a nondescript office with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 2 appears ineligible under City of Rialto Criteria 6.

7. *It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.*

Property 2 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 2 appears ineligible under City of Rialto Criteria 7.

8. *It has unique design or detailing.*

As discussed under NRHP/CRHR Criteria C/2, Property 2 is a nondescript office building with no discernable style. It does not have a unique design or detailing and there are many similar buildings throughout Rialto, California, and the United States. Therefore, Property 2 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 2 is a nondescript office building with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 2 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 2 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 2 appears ineligible under City of Rialto Criteria 10.

5.3 Property 3: No address (APN 0132-171-01)

Property Description

Property 3 is a nondescript, utilitarian warehouse with no discernable architectural style constructed circa 1968 per aerial photographs (NETR 2022; UCSB 2022). The property is simple with no ornamentation. Property 3 is one-story with a rectangular plan and a front gable roof. The building is clad in corrugated metal. The primary (north) elevation (Exhibit 10) features an asymmetrical arrangement of two garage bays with metal sliding doors and a wood-framed multi-light window. The rear (south) elevation has a metal door and a wood-framed multi-light window. Most of the elevation is obscured from view by a truck trailer (Exhibit 11). The west elevation is blank, and the east elevation is hidden from view. A chain-link fence lines the west property line. Property 3 serves as a warehouse for storage on the Project site and is located on an unpaved lot.

Exhibit 10. Overview showing the primary (north) elevation of Property 3. View to the south (Dudek IMG_1588)

Exhibit 11. Oblique view showing the side (west) and rear (south) elevations of Property 3. View to the northeast (Dudek IMG_1868)

Identified Alterations

There were no building permits on file with the City of Rialto Building Division for Property 3. The following list of alterations to Property 3 was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Likely replacement sliding loading door, north elevation
- Small storage addition, east elevation
- Possible demolition at east (rear) elevation, based on aerial photographs showing the property's footprint from 1968 being larger than its present footprint (NETR 2022; UCSB 2022)

NRHP/CRHR Evaluation of Significance

The property at Property 3: No associated address (APN 0132-171-01) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 3: No associated address (APN 0132-171-01) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 3 is a nondescript warehouse with no discernable architectural style constructed circa 1968 to serve as a warehouse for Caudill's Auto Service, an automotive business. The area in which Property 3 sits began to be developed with light industrial

and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred throughout communities in Southern California. In Rialto, the population grew from 3,156 to 15,359 throughout the 1950s (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the eventual development of Property 3.

At the time of Property 3's construction, the Project site had already been developed with structures that appear to have primarily served automotive-related businesses. Property 3, along with Property 2, originally served as an warehouse for Caudill's Auto Service. While Property 3 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 3 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 3. Property 3 was constructed circa 1968 to serve as a warehouse for Caudill's Auto Service, an automotive repair business that had operated from the Project site beginning in the early 1960s. Subsequent occupants include A-1 Autobody (197801981) and Irvine O. Thompson (1981-2000), who also owned Properties 1, 4A, and 4B during this time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 1 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 3 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 3 is a nondescript warehouse with no discernable architectural style built circa 1968. Property 3 does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1960s nondescript commercial warehouse. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 3 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. Property 3 is also not a rare example of its type; there are similar warehouses from

this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 3. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 3 does not appear likely to contribute to a potential historic district. Therefore, Property 3 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 3 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 3: No associated address (APN 0132-171-01) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 3 is a nondescript utilitarian warehouse and garage constructed circa 1968. As discussed in NRHP/CRHR Criteria A/1, Property 3 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 1 appears ineligible under City of Rialto Criteria 3.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 3. Therefore, Property 3 appears ineligible under City of Rialto Criteria 2.

3. ***It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 3 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 3 appears ineligible under City of Rialto Criteria 3.

4. *It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.*

Property 3 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 3 is a nondescript warehouse with no discernable architectural style constructed circa 1960. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 3 appears ineligible under City of Rialto Criteria 4.

5. *It is notable work of an architect or master builder.*

As discussed in NRHP/CRHR Criteria C/1, Property 3 is a nondescript warehouse with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 3. As such, Property 3 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar warehouses in Rialto, California, and the nation. Therefore, Property 1 appears ineligible under City of Rialto Criteria 5.

6. *It embodies elements of architectural design, detail, materials or craftsmanship.*

As discussed in NRHP/CRHR Criteria C/3, Property 3 does not embody elements of architectural design detail, materials, or craftsmanship, It is a nondescript warehouse with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 3 appears ineligible under City of Rialto Criteria 6.

7. *It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.*

Property 3 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 3 appears ineligible under City of Rialto Criteria 7.

8. *It has unique design or detailing.*

As discussed under NRHP/CRHR Criteria C/2, Property 3 is a nondescript warehouse with no discernable style. It does not have a unique design or detailing and there are many similar warehouses throughout Rialto, California, and the United States. Therefore, Property 3 appears ineligible under City of Rialto Criteria 8.

9. *It is a particularly good example of a period or style.*

As discussed under NRHP/CRHR Criteria C/2, Property 3 is a nondescript warehouse with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 3 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 3 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 3 appears ineligible under City of Rialto Criteria 10.

5.4 Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01)

Property Descriptions

Property 4A

Property 4A is a nondescript office building with no discernable style constructed circa 1953 per aerial photographs (NETR 2022; UCSB 2022). The property is simple with no ornamentation. Property 4A is a one-story with a square plan and a gable roof clad in composite shingles with slight overhanging eaves with visible rafter tails. The primary (west) elevation (Exhibit 12) has a six-panel door at the center and is flanked by vinyl frame slider windows with bars on either side. The rear (east) elevation has another door, covered in security bars and a vinyl frame slider window. There is an identical window on the south elevation and a multi-light vinyl frame slider window on north elevation (Exhibit 13). Property 4A serves as an office for the trucking businesses on the Project site and is located on a large, paved lot approximately 45 feet west of Property 4B, a warehouse used for truck storage and repair.

Exhibit 12. Oblique view showing the primary (west) and north elevations of Property 4A. View to the east (Dudek IMG_1800)

Exhibit 13. Oblique view of the rear (east) and south elevations of Property 4A, view to the west (Dudek IMG_1810)

Property 4B

Property 4B is a nondescript, utilitarian warehouse with no discernable architectural style constructed circa 1953 per aerial photographs (NETR 2022; UCSB 2022). It is a one-story building with a front gable roof, clad with metal sheathing, and has a rectangular footprint (Exhibit 14). The property is clad in corrugated metal cladding, much of which appears to be replacement based on the site survey. There is no decoration, and fenestration is limited to a large loading bay on the primary (west) and rear (east) elevations, as well as a corrugated metal door on the south elevation. The north elevation is blank. It appears the whole elevation has been expanded with an enclosed extension that wraps around to the rear and primary elevations. The east (rear) elevation is open with exposed metal trusses (Exhibit 15). Property 4B is located on a large, paved lot directly north of the I-10 and approximately 45 feet east of Property 4A, an office used for the trucking businesses.

Exhibit 14. Oblique view showing the primary (west) and south elevations of Property 4B. View to the northeast (Dudek IMG_1815)

Exhibit 15. Oblique view of the rear (east) and north elevations of Property 4B, view to the southwest (Dudek IMG_1830)

Identified Alterations

Property 4A

While the City of Rialto Building Division did return permits for the address 1743 S. Willow Avenue, these documents included electrical permits and change of occupancy and did not include building permits. The following list of alterations to Property 4A was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Replacement vinyl windows, all elevations
- Replacement door, west (primary) elevation
- Security bars over windows, al elevations
- Replacement roof (likely)

Property 4B

The following list of alterations to Property 4B was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Replacement cladding, all elevations
- Replacement roofing
- Possible expansion on west elevation

NRHP/CRHR Evaluation of Significance

Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 4A and 4B: 743 S. Willow Avenue (APN 0254-111-01) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 4A is a nondescript office building with no discernable architectural style and Property 4B is a nondescript warehouse with no discernable architectural style. Both properties were constructed circa 1953. The area in which the properties sit began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the development of Property 4A and 4B.

At the time of Property 4A and 4B's construction, the Project site was in the process of being developed with structures that appear to have primarily served automotive-related businesses. Property 4A and 4B appear to have served the various trucking and automotive-related businesses occupying the Property 4A and 4B, including R. Thompson Trucking (c. 1970-1979). While Property 4A and 4B are examples of increased post-World War II

development that occurred in Rialto in the postwar decades, there is no indication that the construction of these specific buildings marked a pivotal point in the history of the neighborhood or city. They were neither the first nor the last of their type to be constructed in Rialto and were merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. Property 4A and 4B are not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 4A and 4B do not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 properties have to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 4A and 4B. Property 4A and 4B were constructed circa 1953 and appear to have served various automotive and trucking businesses. The earliest identified owner of the properties were Inez and Ronald Gerald Thompson who operated R. Thompson Trucking from the properties from circa 1970 to 1979. Subsequent occupants include Fairburn Transportation (1979), another trucking business, and Irvine O. Thompson (1981-2000), who also owned Properties 1, 2, and 3 the same time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 4A or 4B were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 4A and 4B do not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 4A is a nondescript office with no discernable architectural style and Property 4B is a nondescript warehouse with no discernable architectural style. Both properties were built circa 1953. The properties do not embody distinctive characteristics of a type, period or method of construction. They are both typical examples of 1950s nondescript commercial or warehouse buildings. There is nothing notable or unique about their designs; they do not possess the distinctive characteristics of any particular style and they are executed with common materials. Property 4A and Property 4B appear to have been constructed through already well-documented and common construction techniques and methods and do not appear to possess high artistic values by articulating a particular concept of design to the extent that they express an aesthetic ideal. Property 4A and Property 4B are also not a rare example of their type; there are similar warehouses and office buildings from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 4A or Property 4B. As these buildings represent common typologies and lack distinctive characteristics, it is unlikely that either property was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 4A and Property 4B do not appear likely to contribute to a potential historic district. Therefore, Property 4A and 4B do not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 4A is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 4A is a nondescript office and Property 4B is a nondescript warehouse constructed circa 1953. As discussed in NRHP/CRHR Criteria A/1, Property 4A does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 3.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 4A or 4B. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 2.

3. ***It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 4A and 4B and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 3.

4. ***It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.***

   Property 4A and 4B do not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Both properties are nondescript with no discernable architectural style constructed circa 1953. There are many similar buildings in Rialto,

San Bernardino County, California, and the nation. Therefore, Property 4A and 4B appear appears ineligible under City of Rialto Criteria 4.

5. *It is notable work of an architect or master builder.*

As discussed in NRHP/CRHR Criteria C/1, Property 4A and 4B are nondescript buildings with discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 4A or 4B. As such, Property 4A and 4B are not a notable work of an architect or master builder, nor are they a notable architectural type of specimen. There are many similar buildings in Rialto, California, and the nation. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 5.

6. *It embodies elements of architectural design, detail, materials or craftsmanship.*

As discussed in NRHP/CRHR Criteria C/3, Property 4A and 4B do not embody elements of architectural design detail, materials, or craftsmanship. Both buildings are nondescript with no particular architectural style and were constructed of common materials using already well-documented common construction techniques. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 6.

7. *It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.*

Property 4A and 4B are not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 7.

8. *It has unique design or detailing.*

As discussed under NRHP/CRHR Criteria C/2, Property 4A and 4B do not have unique designs or detailing and there are many similar buildings throughout Rialto, California, and the United States. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 8.

9. *It is a particularly good example of a period or style.*

As discussed under NRHP/CRHR Criteria C/2, Property 4A and 4B are nondescript buildings with no discernable style. They are not a particularly good example of a period or style. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 9.

10. *It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.*

Property 4A and 4B are not located within an existing historic district, nor are they located in an area with a concentration of historic-age buildings. They do not contribute to the overall feeling of a district. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 10.

5.5 Property 5: 213 W. Valley Boulevard

Property Description

Property 5 is a nondescript commercial building with no discernable style constructed circa 1978 per aerial photographs (NETR 2022; UCSB 2022). The property is simple with little ornamentation, clad in concrete brick. Property 5 is two-stories with a rectangular plan and a flat roof with a mansard parapet on the primary (north) elevation with red clay tiles. The primary (north) elevation (Exhibit 16) features metal-framed sliding windows on the first and second floors, a pair of fully glazed entrance doors, and four storefront fixed windows at the northwest corner of the elevation; two storefront windows on the first floor and two windows on the second floor to match. The east elevation is blank and obscured from view by a brick wall. The west elevation is obscured from view by trees. The rear (south) elevation has at least three loading bays but is obscured from view by semi-trucks (Exhibit 17). Property 5 serves as a commercial property on the Project site and is located on a large, paved lot east of Property 1.

Exhibit 16. Oblique view showing the primary (north) and east elevations of Property 5. View to the southwest (Dudek IMG_1919)

Exhibit 17. Oblique view of the rear (south) and side (east) elevations view to the northwest (Dudek IMG_1923)

Identified Alterations

While the City of Rialto Building Division did return permits for the address 213 W. Valley Boulevard, these documents included electrical permits and change of occupancy and did not include building permits. Observation of Property 5 during the course of the intensive survey on December 13, 2022 did not identify any apparent alterations to Property 5.

NRHP/CRHR Evaluation of Significance

The building at Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 5 is a nondescript commercial building/truck repair station with no discernable architectural style constructed circa 1977. The area in which Property 5 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start

of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the eventual development of Property 5.

At the time of Property 5's construction, the Project site had already been developed with structures that appear to have primarily served automotive and trucking businesses. Property 5 was originally built to serve as a truck service station and was operated by H.L Clemons Trucking for the majority of its history (1978-2013). While Property 5 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 5 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 5. Property 5 was constructed circa 1977 as a commercial building/truck repair stop. For the majority of its history, Property 5 housed H.L Clemons Trucking (1978-2013), which was operated by Harold and Gloria Clemons. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 5 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 5 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 5 is a nondescript commercial building with no discernable architectural style built circa 1977. The property does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1970s nondescript commercial building. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 5 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. Property 5 is also not a rare example of its type; there are similar commercial buildings from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 5. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 5 does not appear likely to contribute to a potential historic district. Therefore, Property 5 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 3 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 5 is a nondescript commercial truck service station with no discernable architectural style constructed circa 1978. As discussed in NRHP/CRHR Criteria A/1, Property 1 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 5 appears ineligible under City of Rialto Criteria 1.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 5. Therefore, Property 5 appears ineligible under City of Rialto Criteria 2.

3. ***It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 5 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 5 appears ineligible under City of Rialto Criteria 3.

4. ***It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.***

   Property 5 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 5 is a nondescript commercial truck service station with no discernable architectural style constructed circa 1978. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 5 appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 5 is a commercial truck service station with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 5. As such, Property 5 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar warehouses in Rialto, California, and the nation. Therefore, Property 5 appears ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, the Property 5 does not embody elements of architectural design detail, materials, or craftsmanship, It is a nondescript commercial truck service station with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 5 appears ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 5 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 5 appears ineligible under City of Rialto Criteria 7.

8. It has unique design or detailing.

As discussed under NRHP/CRHR Criteria C/2, Property 5 is a nondescript commercial truck service station with no discernable style. It does not have a unique design or detailing and there are many similar warehouses throughout Rialto, California, and the United States. Therefore, Property 5 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 5 is a nondescript truck service station with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 5 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 5 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 5 appears ineligible under City of Rialto Criteria 10.

5.6 Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or for local designation, properties must retain their physical integrity from the period in which they gained significance. In the case of architecturally significant properties, the period of significance is normally the date of construction. For historically significant properties, the length of the historic associations usually measures the period of significance. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states that the integrity of a property is based upon the historical significance and character-defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 1997: 45). Property 1, 2, 3, 4A, 4B, and 5 were not found significant under any NRHP, CRHR, or local criteria, and do not have a period of significance. Therefore, the integrity of these buildings does not require examination.

5.7 Summary of Evaluation Findings

In conclusion, none of the six evaluated buildings appear eligible for listing in the NRHP, CRHR, or as a City of Rialto historical resource due to a lack of important historical associations and lack of architectural merit, nor do they appear eligible as contributors to a historic district. As such, Property 1, Property 2, Property 3, Property 4A, Property 4B, and Property 5 are not considered historical resources for the purposes of CEQA. The recommended California Historical Resource Status Code for these properties is 6Z (found ineligible for the NRHP, CRHR, or local designation through survey evaluation).

Table 10. Historic Built Environment Findings

Address	Date Constructed	NRHP/ CRHR Significance Criteria	Previous CHRS code (if applicable)	Assigned California Historical Resource Status code	CEQA Finding
Property 1: 253 W. Valley Boulevard (APN 0132-171-05)	c. 1964	Not eligible	Not applicable	6Z: Found ineligible for NR or CR through survey evaluation	Not considered a historical resource for the purposes of CEQA
Property 2: 285 S. Willow Street (APN 0132-171-03)	c. 1968-1977	Not eligible	Not applicable	6Z: Found ineligible for NR or CR through survey evaluation	Not considered a historical resource for the purposes of CEQA
Property 3: No associated address (APN 0132-171-01);	c. 1968	Not eligible	Not applicable	6Z: Found ineligible for NR or CR through survey evaluation	Not considered a historical resource for the purposes of CEQA
Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01)	c. 1953	Not eligible	Not applicable	6Z: Found ineligible for NR or CR through survey evaluation	Not considered a historical resource for the purposes of CEQA

Table 10. Historic Built Environment Findings

Address	Date Constructed	NRHP/ CRHR Significance Criteria	Previous CHRS code (if applicable)	Assigned California Historical Resource Status code	CEQA Finding
Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13)	c. 1978	Not eligible	Not applicable	6Z: Found ineligible for NR or CR through survey evaluation	Not considered a historical resource for the purposes of CEQA

6 Findings and Conclusions

No historical resources were identified within or adjacent to the Project site as a result of the BERD records search, extensive archival research, field survey, and property evaluations of significance. Property 1, Property 2, Property 3, Property 4A, Property 4B, and Property 5 in the Project site are not currently designated or listed under any national, state, or local landmark programs. The buildings on these properties have not been identified as eligible for local designation by a recent historic resources survey.

Dudek evaluated all buildings on the Project site in accordance Section 15064.5 (a)(2)-(3) of California Environmental Quality Act (CEQA) Guidelines and using the criteria outline in Section 5024.1 of the California Public Resources Code. Dudek concludes that the buildings do not appear to be eligible for listing in the NRHP, CRHR, or as a City of Rialto historical resource due to a lack of significance and architectural merit. As such, no buildings on the Project site appear to be historical resources under CEQA. The recommended Status Code for Property 1, Property 2, Property 3, Property 4A, Property 4B, and Property 5 is 6Z. Further, no potential indirect impacts to historical resources were identified as the proposed Project has no potential to impact the built environment beyond the Project site.

The finding for built environment cultural resources for the proposed Project under CEQA is No Impact. As the proposed Project would have no impact on historic properties or historical resources, no further study is required.

Appendix A
Preparer's Qualifications

Allison Lyons, MSHP

SENIOR ARCHITECTURAL HISTORIAN

Education

Columbia University, M.S., Historic Preservation, 2010

Scripps College, B.A., European Studies, 2006

Allison Lyons (*AL-ih-suhn LYE-ons; she/her*) is an architectural historian with 12 years' experience throughout the western United States in all elements of cultural resources management. Her expertise includes the preparation of environmental compliance documents in accordance with the California Environmental Quality Act (CEQA) and Section 106 of the National Historic Preservation Act, focusing on the evaluation of historical resources and analysis of project impacts. As a historic preservation consultant, she has been involved in the preparation of numerous large-scale historic resources surveys, Historic American Buildings Survey/Historic American Engineering Record recordation, Federal Rehabilitation Tax Credit and Mills Act Historic Property Contract applications, local landmark nominations, and evaluations of eligibility for a wide variety of projects and property types throughout California. She is highly experienced in writing National Register of Historic Places (NRHP) nominations and historic context statements for local governments. Ms. Lyons meets the Secretary of the Interior's Professional Qualifications Standards for history and architectural history pursuant to Title 36, Part 61, of the Code of Federal Regulations, Appendix A.

Previous Experience

Los Angeles Department of Water and Power Century Trunk Line, Los Angeles Department of Water and Power, City of Los Angeles, California. Dudek was retained by Los Angeles Department of Water and Power to prepare an Avoidance and Protection Plan for Air Raid Siren No. 150. The resource is eligible for the NRHP and California Register of Historical Resources and as a City of Los Angeles Historic-Cultural Monument under Criteria A/1/1 and C/3/3 for its association with World War II and Cold War military infrastructure, and is a historical resource under CEQA. Ms. Lyons is serving as a senior architectural historian, providing quality assurance/quality control for the Post-Construction Monitoring Report. (2021–Present)

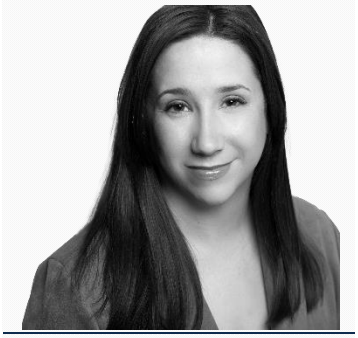
City of Coronado Historic Context Statement and Historic Resources Inventory, City of Coronado, California. Dudek is currently in the process of preparing a historic context statement and historic resources inventory survey for all properties at least 50 years old within City of Coronado limits. Following current professional methodology standards and procedures developed by the California Office of Historic Preservation and the National Park Service, Dudek developed a detailed historic context statement for the City that identifies and discusses the important themes, patterns of development, property types, and architectural styles prevalent throughout the City. Dudek also conducted a reconnaissance-level survey of all properties within City limits that are at least 50 years old to identify individual properties and groupings of properties (i.e., historic districts) with potential for historical significance under City Criterion C (properties that possess distinctive characteristics of an architectural style; are valuable for the study of a type, period, or method of construction; and have not been substantially altered). This document also developed registration requirements for resource evaluation that are specific to Coronado, in consideration of both historical significance and integrity requirements. Acting as senior architectural historian, reviewed and wrote sections of the historic context statement. (2019–Present)

City of West Hollywood Residential Properties in the R2, R3, and R4 Multiple-Family Zoning Districts Historic Context Statement, West Hollywood, California. In 2020, the City of West Hollywood began a phased project to

update the 2008 citywide survey of Residential Properties in the R2, R3, and R4 Multiple-Family Zoning Districts. Ms. Lyons co-authored the historic context statement prepared as the first part of the project. (2020–2021)

Downtown Buena Park Project, Historical Resources Technical Report and Impacts Analysis (for CEQA), Buena Park, Orange County, California. Merlone Geier is proposing to redevelop a vacant Stiles & Robert Clements-designed Sears building at the Buena Park Downtown Mall in the City of Buena Park. The redevelopment plans include residential units, amenity and lobby space, and parking. The Sears building, auto center, and surrounding parking lots that were historically connected to the Downtown Buena Park Mall. Following the initial construction of the Sears building in 1959, the Buena Park Downtown Mall was expanded in multiple stages throughout a 50-year development period. To determine if the project would have a significant impact on historical resources, Dudek evaluated the entire Buena Park Downtown Mall for historical significance and integrity in consideration of National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) designation criteria. Dudek determined that the Buena Park Downtown Mall, including the Sears building, did not appear eligible under any NRHP or CRHR designation criteria due to a lack of significant historical associations, architectural merit, and compromised integrity and the Project would result in a less than significant impact to historical resources under CEQA. Ms. Lyons served as a senior architectural historian, providing quality assurance/quality control for the Historical Resources Technical Report. (2021)

8730 Sunset Boulevard Billboard Project Historical Resource Assessment Report, City of West Hollywood, California. The 8730 Sunset Boulevard Billboard Project consists of installation and operation of a new billboard and associated façade improvements at the existing "Sunset Towers" building. The Sunset Towers building at 8730 Sunset Boulevard was constructed in the 1950s and 1960s over the course of two phases. A smaller building was constructed on the northern portion of the parcel between 1957 and 1959. Dudek was retained by the City of West Hollywood to complete this Historic Resource Assessment, an intensive-level evaluation, as part of the environmental review of the proposed project in compliance with CEQA. This study included an intensive survey of the exterior of the Sunset Towers building by a qualified architectural historian; building development and archival research; development of an appropriate historic context; and evaluation of the Sunset Towers building for historical significance and integrity in consideration of NRHP, CRHR, and City of West Hollywood Cultural Heritage Preservation Ordinance designation criteria. Ms. Lyons served as a senior architectural historian and main author of the Historic Resource Assessment of the Sunset Towers building. (2021)



Anne Banning Community House of the Assistance League of Southern California, 1370 St Andrews St. Historic-Cultural Monument Application, Los Angeles, California. Paul R. Williams designed a Community House for the Assistance League of Southern California, a leading Los Angeles philanthropy, in 1961. The two-story, American Colonial Revival-style Anne Banning Community House served the League's need for a business environment combined with gracious, elegant space for entertaining—teas, luncheons, and privately hosted events. Adaptive reuse of the building was proposed in 2017 and Ms. Lyons completed a City of Los Angeles Historic-Cultural Monument application for the building before construction, identifying the property as significant for its association with an important women's club and architecturally significant as a good example of the Late American Colonial Revival style designed by the master architect Paul R. Williams. (2018–2020)

Four Gables Apartment Building Historic Structure Report and Mills Act Contract Application, West Hollywood, California. The Four Gables apartment building was designed by Leland A. Bryant in a French Chateauesque style. The 16-unit apartment building was completed in 1927. Ms. Lyons prepared an Architectural Features and Treatment Recommendations report as part of an application for a Mills Act contract with the City of West Hollywood. (2019)

Claire Cancilla, MSHP

ARCHITECTURAL HISTORIAN

Claire Cancilla (KLAIR *Kan-sil-uh; she/her*) is an Architectural Historian with 5 years' professional and academic experience that encompasses a wide variety of project types in varied geographic locations, including Los Angeles, Laguna Beach, Agoura Hills, Baldwin Park, Glendale, Pasadena, South Pasadena, Poway, Riverside, San Diego, Rialto, Vista, Sequoia National Park, New York City, and Venice, Italy. She has completed historic significance evaluations and impacts analyses in consideration of the National Register of Historic Places (NRHP), California Register of Historic Resources (CRHR), and local designation criteria for single-family residences, commercial properties, educational institutions, warehouse and industrial properties, and municipal facilities. Additional project experience includes writing national register and local register nominations, conducting historic archival research, performing conditions assessments and reconnaissance surveys, conducting CEQA impacts analyses, preparing environmental impact report (EIR) sections, and conducting design reviews under the Secretary of the Interior's Standards. She meets the Secretary of the Interior's Professional Qualification Standards for Architectural History.

Education

Columbia University Graduate School of Architecture, Planning, and Preservation, MSHP, Historic Preservation, 2020

Occidental College BA, History, 2016

Dudek Project Experience

Skylight Replacement Project, Los Angeles Harbor Department (LAHD), San Pedro, California. Dudek is included on the Los Angeles Harbor Department's list of on-call historic consultants and was retained by the LAHD to conduct a Secretary of the Interior Standards conformance review for a skylight replacement project of four buildings located at the Port of Los Angles. This work involves updating previously completed Department of Parks and Recreation 523 forms for three properties and preparing new DPR forms for one property. This work further involves the review of schematics and plans for proposed skylight replacements for conformance with the Secretary of the Interior's Standards for Rehabilitation. Ms. Cancilla is the lead author of this ongoing work. (2023-present).

Berths 58-60 Secretary of the Interior Standards Conformance Review, Los Angeles Harbor Department (LAHD), San Pedro, California. Dudek was retained by the LAHD to conduct a Secretary of the Interior Standards conformance review for proposed alterations in anticipation of an adaptive reuse of Berths 58-60, a historical resource and former transit shed constructed in 1913 located on City Dock No. 1 at the Port of Los Angeles. Ms. Cancilla conducted the site visit with the property tenants, project architect, and LAHD representatives; reviewed plans and schematics; and conducted an analysis of all proposed alterations to ensure Rehabilitation. (2022).

Siemens Industrial Mixed Use Expansion Project, City of Pomona, Pomona, California. Dudek was retained by the City of Pomona to prepare a Built Environment Inventory and Evaluation Report for a proposed industrial expansion of a Siemens electrical manufacturing facility and warehouse. The existing warehouse and manufacturing facility was constructed in 1973. Ms. Cancilla was the lead author of the report and conducted the fieldwork; research; and evaluation of the property for significance at the national, state, and local level. (2022).

Vista Old Taylor Project, TTLC Management Inc., Vista, California. Dudek was retained by TTLC Management Inc. to prepare a Built Environment Inventory and Evaluation Report for a proposed residential development project. This work involved the recordation and evaluation of two single-family residential properties constructed in the 1940s and 1950s. Ms. Cancilla is the lead author of the BEIR, conducted fieldwork, and prepared the property significance evaluations under national, state, and local eligibility criteria (2022 – 2023).

Alice / Willow Avenue Warehouse Project, Patriot Development Partners, Rialto, California. Dudek was retained by Patriot Development Partners to conduct a Built Environment Inventory and Evaluation Report for a 6.19-acre site in the city of Rialto, California. Ms. Cancilla was the lead author of the BEIR, which involved research on and evaluation of six light industrial and commercial buildings over 45 years of age. (2022 – 2023).

Kaiser Baldwin Park Medical Center Project, Top Commercial Realty, Baldwin Park California. Dudek was retained to complete a Built Environment Inventory and Evaluation Report for a proposed project involving the development of the Kaiser Baldwin Park Medical Center. Ms. Cancilla was the lead author of the Built Environment Inventory and Evaluation Report for a 1970s vernacular commercial building. (2022).

Arlington Avenue Historic Resources Technical Report, Foulger Pratt, Riverside, California. Dudek was retained to complete a Historic Resources Technical Report on a Mid-Century Modern former Sears Department Store in the city of Riverside, California for a proposed redevelopment. Ms. Cancilla contributed to the significance evaluation and historic contexts for the technical report. (2022).

Oak Knoll Road, Poway, San Diego County, California. Dudek was retained to complete a historical resources evaluation for a residential development project in the City of Poway. The Project proposes the development of the 10.72-acre property into a residential development within an existing residential neighborhood. As an architectural historian, Ms. Cancilla contributed to the significance evaluation and historic contexts for the technical report. (2022)

2121 Orange Street Built Environment Inventory and Evaluation Report, Alhambra, California. Dudek was retained to complete a Built Environment Inventory and Evaluation Report for a proposed self-storage redevelopment in the City of Alhambra. The Project proposes the demolition of an existing office building and warehouse in 1974. As an architectural historian, Ms. Cancilla conducted the fieldwork, research, and evaluation for the property. (2022).

4235 State Street Historic Resources Technical Report, Santa Barbara County, California. Dudek was retained to prepare a Historic Resources Technical Report evaluating the significance of a prefabricated gas station constructed in 1953 in unincorporated Santa Barbara County for a proposed redevelopment. As an architectural historian, Ms. Cancilla conducted the fieldwork, research, and evaluation for the property. (2022).

Los Angeles County Metro Area Plan Project, Los Angeles County, California. Dudek was retained by the County of Los Angeles Department of Regional Planning to prepare a Historic Context Statement (HCS) in support of the Metro Area Plan (MAP) project. The goal of the HCS component of the project is to inform, enhance, and streamline the larger MAP project as it pertains to historical resources. The communities included within the MAP HCS include East Los Angeles, East Rancho Dominguez, Florence–Firestone, Walnut Park, West Athens–Westmont, West Rancho Dominguez–Victoria, and Willowbrook. The HCS documents the development history of the communities from the rancho period to the present; identifies important themes, events, and patterns of development; and describes the different property types, styles, builders, and architects associated with these important periods and themes. The document will also provide registration requirements and recommendations for future study/action by the County of Los Angeles to facilitate and streamline the historic preservation program. Responsibilities include report section preparation and archival research. (2022)

Caitlin Greeley

ARCHITECTURAL HISTORIAN

Caitlin Greeley (*she/her*) is an architectural historian with 3 years professional experience. As part of her cultural resources management work, Ms. Greeley has conducted archival research, performed fieldwork, and authored multiple historic context statements. She also has experience preparing and contributing to California Department of Parks and Recreation (DPR) 523 forms. She has experience with the Section 106 consultation of the National Historic Preservation Act, Area of Potential Effect maps, Historic Resource Evaluation Reports, Historical Resource Inventories, Historic American Building Survey photography, reconnaissance and intensive-level surveys, and archival research. Ms. Greeley meets the Secretary of the Interior's Professional Qualification Standards for both Architectural History and History. She has experience preparing environmental compliance documentation in support of projects that fall under the California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA) and Sections 106 and 110 of the National Historic Preservation Act.

Prior to joining Dudek, Ms. Greeley gained extensive experience working in multicultural and multilingual environments. She has experience writing conservation management statements for preservation, and proposals for adaptive reuse of historic buildings.

Education

The College of Saint Scholastica,
BA, Humanities, 2014

Specialized Training

Historic American Building Survey/Historic American Engineering Record/Historic American Landscapes Survey Photography Training

Dudek Project Experience

Historical Resources Technical Report for the Peppertree Park Villages 7 & 8 Project, Justus Enterprise, Fallbrook, San Diego County, California.
Dudek was retained by Justus Enterprise to complete a Built Environment Inventory and Evaluation Report for the Peppertree Park Villages 7 & 8 Project, which proposes to subdivide a 39.83-acre site into 51 lots, which will include 46 single-family residential units, two biological open space lots, and two common lots for biological retention basins. Two previously recorded resources and one new resource were within or adjacent to the project area. Ms. Greeley conducted historic aerial research and wrote building descriptions for each property, and prepared State of California Department of Parks and Recreation Series 523 Forms (DPR Forms) (2022 - ongoing).

Built Environment Inventory and Evaluation Report for World Logistics Center Master Plan Project, Highland Fairview, Moreno Valley, Riverside County, California.
Dudek was retained by Highland Fairview to complete a Built Environment Inventory and Evaluation Report in compliance with United States Army Corps of Engineers (USACE) Section 404 Clean Water Act (CWA) permitting process for the World Logistics Master Plan Project in the City of Moreno Valley. As there was a federal nexus, Ms. Greeley co-authored a NHPA Section 106-compliant built environment inventory and evaluation report to evaluate a historical ditch segment that is part of the 1893 Bear Valley Mutual Water Company system water conveyance system (2022 - ongoing).

Built Environment Inventory and Evaluation Report for the Chandler Grove Master Plan and Annexation Project, Tulare County, California.
Ms. Greeley was the architectural historian, researcher, and co-author of the Built Environment Inventory and Evaluation Report for the Chandler Grove Master Plan and Annexation Project. Toor Capital, LLA retained Dudek to complete the report in support of the proposed demolition of three properties and one irrigation ditch. The report included a California Historic Resources Information Systems (CHRIS) records search covering the Project site and a 0.5-mile buffer; a survey of built environment resources within the Study Area, property research and the development of an appropriate historic context for the evaluation of the buildings and structures over 45 years in age; recordation and evaluation of the three subject properties for the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and Tulare County Register designation criteria and integrity requirements in compliance with CEQA (2022).

Kaiser Baldwin Park Medical Center Project, Top Commercial Realty, Baldwin Park California.
Dudek was retained to complete a Built Environment Inventory and Evaluation Report for a proposed project involving the development of the Kaiser Baldwin Park Medical Center. Ms. Greeley Kaiser Baldwin Park Medical Center Project, Top Commercial Realty, Baldwin Park California. Dudek was retained to complete a Built Environment Inventory and Evaluation Report for a proposed project involving the development of the Kaiser Baldwin Park Medical Center. Ms. Greeley contributed to the Built Environment Inventory and Evaluation Report for a 1970s vernacular commercial building by conducting historic aerial research and writing and completed a State of California Department of Parks and Recreation Series 523 Form (DPR Form) for the building (2022).

Vista Foothill Residential Project, TTLC Vista Foothill, LLC, City of Vista, San Diego County, California.
Dudek was retained by TTLC Vista Foothill, LLC to complete a historical resources technical report to identify all historical resources (if any) on the Project site to determine whether the proposed Project would result in a significant impact to historical resources under CEQA. One of the five parcels that comprises the Project site contains buildings that are more than 45 years of age and required evaluation as a potential historical resource. As a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, no historical resources were identified within the Project site, nor were any adjacent cultural resources identified that could be indirectly impacted by proposed Project activities. Ms. Greeley co-authored the technical report (2022).

Vista Melrose Residential Project, Urban Advisory & Building Group LLC, City of Vista, San Diego County, California.
Dudek was retained by Urban Advisory & Building Group LLC to complete a historical resources technical report to identify all historical resources (if any) on the Project site to determine whether the proposed Project would result in a significant impact to historical resources under CEQA. The report included the results of a California Historical Resources Information System records search; an intensive survey of the Project site by a qualified architectural historian; building development and archival research; development of an appropriate historic context for the evaluation of the Project site; and recordation and evaluation of one church property and one single-family residential property over 45 years old for historical significance and integrity in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Vista designation criteria and integrity requirements. Acting as architectural historian, Ms. Greeley contributed to this report with historic research and writing segments (2022-Present).

Arlington Avenue Historic Resources Technical Report, Foulger Pratt, Riverside, California.
Dudek was retained to complete a Historic Resources Technical Report on a Mid-Century Modern former Sears Department Store in the city of Riverside, California for a proposed redevelopment. Ms. Greeley conducted intensive-level survey, and was the main author for the technical report (2022).

Erin Jones, MA

ARCHITECTURAL HISTORIAN

Erin Jones (*AIR-in JO-nes; she/her*) is a highly committed, well-qualified cultural resource manager with over 2 years of experience specializing in Washington, Oregon, and California history. Ms. Jones is an expert researcher that is adept at context writing and the evaluation of historic properties. She has experience authoring California Environmental Quality Act (CEQA) compliance documents, National Historic Preservation Act (NHPA) Section 106 compliance reports, Historic Resource Evaluation Reports (HRER), Cultural Resources Inventory and Evaluation Report (CRIER), Historical Resource Inventories (HRI), Cultural Resource Technical Reports (CRTR), Historical Resources Inventory and Evaluation Report (HRIER) and, Historic American Building Survey (HABS) level documentation. Ms. Jones meets the Secretary of the Interior's Professional Qualification Standards for architectural history.

Education

California State University, Sacramento
Master of Arts Public History with Distinguished Honors, Spring 2021

University of Oregon
Bachelor of Arts in History and Political Science, Fall 2017

Dudek Project Experience

650 North King Road, Santa Clara County, California.
Served as the architectural historian and author of the Standalone Department of Parks and Recreation (DPR) 523 form for the 650 North King Road Project. Ms. Jones conducted archival, map, aerial, property, and building development research; conducted an evaluation of property for the NRHP, CRHR, CHL, and local eligibility criteria and integrity requirements; an assessment of impacts on historical resources in compliance with CEQA (2021).

Historical Resources Inventory and Evaluation Report for the 1535-1575 Industrial Avenue Warehouse Project, San Jose, California.
Ms. Jones was the architectural historian and author of the HRIER for the 1535-1575 Industrial Avenue Warehouse Project. The project proposed the demolition of four existing buildings on the project site and the construction of a single-story 71,550 square-foot concrete tilt-up building with a loading dock and adjacent parking lot. Ms. Jones conducted the CHRS records search that covered the project area and a 0.50-mile buffer; an intensive pedestrian survey of the project area; building development, archival, and development research; recordation and evaluation of the buildings over 45 years of age for the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and local historic resource (local) eligibility criteria and integrity requirements in compliance with the CEQA; and the completion of the preparation of the report and the accompanying DPR 523 forms (2021).

1586 Industrial Avenue Warehouse Project, San Jose, California.
Ms. Jones was the architectural historian and author of the 1586 Industrial Avenue Warehouse Project. The project proposed the demolition of two existing buildings on the project site and the construction of a single-story square-foot concrete tilt-up building with a loading dock and adjacent parking lot. The 2022 Kings Row project is associated with the 2021 1535-1575 Industrial Avenue Warehouse Project, which is adjacent to this area. Ms. Jones conducted the CHRS records search that covered the project area and a 0.50-mile buffer; an intensive

pedestrian survey of the project area; building development, archival, and development research; recordation and evaluation of the buildings over 45 years of age for the NRHP, CRHR, and local historic resource (local) eligibility criteria and integrity requirements in compliance with CEQA; and the completion of the preparation of the report and the accompanying DPR 523 forms (2022).

Built Environment Inventory and Evaluation Report for Golden State Natural Resources Gould Site, Lassen County, California.

Ms. Jones was the architectural historian and co-author of the BEIER for the Golden State Natural Resources Gould Site Project. Dudek was retained by the Golden State Finance Authority (Client) to complete a BEIER for a proposed project that would redevelop a site in Nubieber, Lassen County, to facilitate the transport of forest material (such as trees or underbrush that have no lumber value). The project parcels comprised approximately 65 acres, a light-industrial site associated with regional logging, and an abandoned 1930s Great Northern and Western Pacific Railroad station. Ms. Jones conducted the CHRS records search; the pedestrian surface reconnaissance survey of the built environment Area of Potential Effects (APE); extensive archival and building development research; the development of an appropriate historic context for the Project area; recordation and evaluation of the buildings over 45 years of age for the NRHP, CRHR, and local historic resource eligibility criteria and integrity requirements in compliance with the CEQA; and report and accompanying DPR 523 form set preparation (2022).

1400 Thompson Avenue Project, Santa Cruz County, California.

Ms. Jones was the architectural historian, main researcher, and co-author of the HRER for the 1400 Thompson Avenue Project which proposed to demolish the existing buildings and subdivide the site into four new parcels slated for individual development. Dudek was retained by a private homeowner to produce a report in support of the proposed project by conducting a CHRS records search that covered the project location and a 0.25-mile buffer; archival and building development research; evaluation of property for the NRHP, California Register of Historic Resources (CRHR), CHL, and local eligibility criteria and integrity requirements; and an assessment of impacts to historical resources in compliance with CEQA (2021).

Built Environment Assessment of Buildings to be Demolished – World Logistics Center Project, City of Moreno Valley, Riverside County, California.

Ms. Jones was the architectural historian for the World Logistics Center (WLC) Specific Plan Project that was approved by the City of Moreno Valley in 2020. The overall project site is located on 2,610 acres in the Rancho Belago area at the eastern end of Moreno Valley, south of SR-60 east of Redlands Boulevard, west of Gilman Springs Road and north of the San Jacinto Wildlife Area. As part of the approved project, a number of existing rural residential buildings (i.e., residences barns, and utilitarian or ancillary agricultural structures) are proposed to be demolished prior to mass grading. Two parcels contain buildings that were formally evaluated under National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and other criteria to determine if the proposed demolition will impact resources considered significant. Ms. Jones evaluated the buildings to determine if they were historical resources and if the demolition of these buildings could result in a significant impact under applicable federal, state, and local regulations and policies. None of the buildings on these properties were found to be significant under any applicable criteria (2022).

Significance summary

As a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, Property 1: 253 W. Valley Boulevard appears ineligible as a historical resource at the local, state, or federal level. Therefore, the subject property is not considered a historical resource for the purposes of CEQA. The recommended status code for all evaluated properties is 6Z: Found ineligible for NR, CR, or Local designation through survey evaluation. [**See Continuation Sheet**]

***P3a. Description:**

Property 1 is a nondescript, utilitarian warehouse with no discernable architectural style constructed circa 1964 per aerial photographs (NETR 2022; UCSB 2022). The property is simple with no ornamentation. It is oriented with its primary (north) elevation facing West Valley Road and is situated on a large, paved lot. Property 2 is located approximately 230 feet west and Property 3 is located approximately 100 feet east.

Property 1 is one-story with a rectangular plan and a front gable roof, clad in corrugated metal. The primary (north) elevation (Exhibit 1) features an asymmetrical arrangement of a garage bay with metal fold-down door, and a metal framed window with metal security bars added. Next to the window is a door that appears to be made of wood, obscured by a chain-link fence that runs on either side of the elevation. The rear (south) elevation has a loading dock with two loading bays with metal fold down doors, and a wood door. The side (east) elevation has two types of cladding: concrete brick and vertical concrete panels. The elevation is blank except for a wood-framed window cut out that has been boarded up. The side (west) elevation features an asymmetrical arrangement of six window openings; two metal framed multi-light windows with metal security bars, two double-hung metal framed windows with security bars, and two window openings covered with corrugated metal. A metal fence protrudes south along the west elevation (Exhibit 2).

Exhibit 2. Oblique view showing the west and rear (south) elevations of Property 1, view of the northeast (Dudek IMG_1885)

*B6. Construction History *(continued from page 2):*

Building permits were on file at the City of Rialto Building Division for Property 1. Table 8 includes all known alterations to Property 1. This table was compiled through archival research of City of Rialto building permits provided to Dudek by the City's Building & Safety Division. Electrical, plumbing, mechanical permit as well as occupancy and inspection documents were also provided by the City, but are not included in the below table. Property 2 is located approximately 230 feet west and Property 3 is located approximately 100 feet east.

Table 1. Building Permits for Property 1: 253 West Valley Boulevard (APN 0132-171-05)

Date	Address	Permit Number	Description of Work	Owner	Architect (A)/ Contractor (C)	Valuation
10/20/1964	253 West Valley Boulevard	21095	Excavation, bond, and beam work	C.E. Swanson	Bruce Philips (A)	$4,914
10/6/1966	253 West Valley Boulevard	23589	Remodel office	C.E. Swanson	Roy Cutter (C)	$1,000

*B10. Significance *(continued from page 2):*

Historical Overview of the City of Rialto (1881-present)

In the 1880s, the expansion of the nation's railroad network facilitated travel westward. The small settlement of Hinkley (originally spelled Hinckley for an early setter's son), was founded in 1881 upon the arrival of the Southern Pacific Railroad (along the present-day path of CA SR 58). By 1883, the land that now makes up the City of Rialto was originally part of Rancho San Bernardino, which was established by the San Gabriel Mission in the early nineteenth century. The rancho encompassed much of present-day San Bernardino, Fontana, Rialto, Redlands, and Colton. After Mexico gained control of California, the missions were secularized, and what once was mission land was granted to private individuals. Jose del Carmen Lugo, a member of a wealthy family, petitioned Governor Alvarado for a grant of the San Bernardino Rancho, where his family had been farming and grazing (Beattie 1933). The land was granted to the Lugo family on June 21, 1842, who continued grazing livestock in the area and built several adobes.

By 1851, the Lugo family sold eight leagues of their rancho for $75,000 to Mormon settlers who were attempting to create a new colony of the Latter-Day Saints. The colonists gave rise to the City of San Bernardino, though the area encompassed parts of present-day Rialto as well. Although the colony boasted a high population and even created its own political institution separate from the City of Los Angeles, it was plagued by large debt, discontent among the settlers with the church, and a growing disdain by the public for Mormons, particularly after the Mormon Rebellion of the late 1850s (Lyman 1989; Masters 2015). Church leaders struggled to maintain religious fervor among many of the San Bernardino residents, and many settlers appeared to make the move to San Bernardino to facilitate their own separation from the church's strict policies (Lyman 1989). After the Mountain Meadows Massacre of 1857, during which Mormons settlers in Utah ambushed and murdered non-Mormon settlers, the Mormon colony of San Bernardino was completely alienated from non-Mormon communities of Southern California, and anti-Mormon hostility reached its peak. It was at this time that Brigham Young summoned the devout to return to Utah. In 1856, before the exodus of many Mormons, the area had 3,000 inhabitants, of which 84% were Mormon. However, 1,400 returned to Utah, while the remaining 1,600 decided to abandon the church and make a life for themselves in California. This return rate for the Mormon colony of San Bernardino was much lower than many other Mormon settlements outside of Utah, indicating the growing disillusionment and discontent that the San Bernardino residents felt with the church or their attachment to their settlement in San Bernardino (Adams 2004; Lyman 1989).

After the decline of the Mormon colony, the area developed slowly until 1887 when a new section of the Santa Fe Railroad was established through San Bernardino County. Like other parts of San Bernardino County, the construction of the railroad created a land speculation boom and a series of towns were established along the railroad's route. One such was Rialto, which was laid out by the Semi-Tropic Land and Water Development Company in 1887 at a cost of $670,000. While much of the early development efforts included brush clearing and town planning, a reliable water source was also a necessary component of the successful development of Rialto. To provide a reliable water source, the Semi-Tropic Land and Water Company built a concrete-lined canal that provided water from Lytle Creek Canyon to Riverside Avenue in Rialto. The Semi-Tropic Land and Water Company was formed by a group of associates, including Sam Merrill, a successful businessperson and banker from Iowa who came to the area and settled in Rialto once it was developed. Merrill's residence was one of the numerous grand homes in the area and was constructed at a cost of $15,000. Merrill continued to live in Rialto and eventually there was a street named in his honor (Adams 2004).

In the early years, Rialto was a small town that was largely rooted in an agricultural economic system based largely on citrus orchards that were located on the outskirts of the downtown core of the City. The earliest Sanborn map of Rialto dates to 1892 and shows a small town laid out in a grid pattern with a small collection of houses spaced throughout town. The town also included the following: blacksmith shop, school, cement pipe yard, lumberyard, drug store, merchandise store, railroad depot, and offices for the Semi-Tropic Land and Water Company. The largest building in town was identified on the Sanborn

Map as the Semi-Tropic Hotel located on Riverside Avenue (Sanborn 1892a, 1892b).

Growth and development of Rialto continued throughout the nineteenth century and into the twentieth century. By 1907, Rialto established a Chamber of Commerce to support the growing town and its businesses. The 1907 Sanborn map shows an increase in residential buildings throughout the town to support the growing population. In addition to residential development, more defined commercial development is indicated with new business types emerging along Riverside Avenue since 1892. New businesses included a bakery, livery, wagon shop, and barbershop. Other changes to the town seen on the 1907 Sanborn Map include the emergence of fruit packing houses that served to support the citrus industry that was prospering on the outskirts of the town (Sanborn 1907a, 1907b, 1907c). The growth and development continued over the next few years, and by the City's incorporation in 1911, there were 1,500 residents, 40 businesses, and a local newspaper (Adams 2004; City of Rialto 2016; Sanborn 1892a, 1892b, 1907a, 1907b, 1907c, 1911a, 1911b, 1911c, 1911d).

Rialto continued to grow throughout the 1910s with significant advances in transportation, including the transition of Foothill Boulevard to become part of the United States highway system as a section of Route 66 in 1913. Another advancement in transportation came the following year in 1914 when the San Bernardino Line of the Los Angeles Pacific Electric Railway was completed. However, disaster struck in the 1920s when a fire destroyed much of the downtown area (Adams 2004; City of Rialto 2016).

Like many other cities in California, World War II influenced Rialto's growth and development. During the war, a large ammunition dumpsite was put into operation in the City. Following the war, the ammunition dumpsite was taken over by a rocket-building subsidiary of B.F. Goodrich. Wartime and postwar industrial growth sparked the need for additional residential buildings to support workers and the general postwar population growth seen throughout Southern California. From the beginning of the 1950s to the end of the decade, the population of the City skyrocketed from 3,156 to 15,359. To manage this growth and development, residential subdivisions began to replace large agricultural parcels and citrus groves outside the downtown city core, and increased industrial and commercial development followed. The City continued to grow throughout the late twentieth century and continues to grow today with the most current population being reported at over 100,000 (City of Rialto 2016).

Property History

Property 1 is a nondescript warehouse with no discernable architectural style located at the northern boundary of the Project site. Property 1 was constructed circa 1964 and has served as a warehouse for a variety of businesses, primarily related to automotive and trucking repair and storage. An aerial photograph from 1966 shows Property 1 extant is its current configuration (Exhibit 2); however, a building permit was issued for the property's parcel in 1964, indicating that Property 1 may have been extant by that time (City of Rialto 1964: Building Permit 21095).

At the time of its construction, Property 1 was one of approximately three structures on its parcel (visible in previously referenced Exhibit 2). Building permits and newspaper articles indicate that these structures likely served as offices for the various businesses that occupied the site. In 1968, for example, the address at which Property 1 is located was advertised in the *San Bernardino County Sun* as a rental and described as "office and fenced yard space" (San Bernardino County Sun 1968: 27) and the following year it was advertised as "private office for rent with private bathroom. Ideal for construction company or building trade. Fenced storage lot available" (San Bernardino County Sun 1969: 30). Per aerial photographs, these other structures were no longer extant by 1980 (NETR 2022).

Exhibit 3. 1966 aerial photograph showing Property 1 extant (UCSB 2022) with additional structures (no longer extant) to its west.

Occupancy History

Table 2 below includes known owners and occupants of Property 1 since its construction circa 1964. Research did not reveal that these owners or occupants are persons important to our past.

John A. Swanson originally owned the property. Although Swanson died in 1967, ownership of the property remained under his name until 1981 according to the San Bernardino County PIMS. Research did not identify biographical or professional information on John A. Swanson or the company he operated out of Property 1, C. & J. Compressor Service. (County of San Bernardino PIMS; City of Rialto 1964: Building Permit 21095; San Bernardino County Sun 1967: 23; San Bernardino County Sun 1962: 9).

Irvin O. Thompson owned Property 1 from 1981 until 2000. From 1981 to circa 1992, Property 1 was occupied by Ability Truck Parts, Thompson's company. Thompson established his primary commercial enterprise, Ability Heavy (formerly House) Movers at 285 West Valley Boulevard (located approximately 2.5 miles east of Parcel 2) in the early 1960s. Ability Truck Parts appears to be an extension of the heavy-duty moving operation and Property 1 housed the company's automotive components. Although Thompson owned Property 1 until 2000, historic permits indicate that Ability Truck Parts ceased operating from the property circa 1992 (San Bernardino County PIMS; San Bernardino County Sun 1992: 24; San Bernardino County Sun 1969: 46).

Table 2. Ownership / Occupancy for Property 1: 253 W. Valley Boulevard (APN 0132-171-05)

Years	Owner/ Occupant	Name	Notes	Source
c. 1964 - 1978	Owner	John A. Swanson	Property 1 original owner and owner of C&J Compressor Service. Swanson died in 1967, but the property remained under his name until 1978 per PIMS.	UCSB 2022 City of Rialto 1964: Building Permit 21095 PIMS San Bernardino County Sun 1967: 23
c. 1964-1967	Owner and occupant	C&J Compressor Service	Automotive air compressor service	San Bernardino County Sun 1968: p. 27
1968 - 1978	N/A	Vacant / unknown	Property listed as being "For rent" in newspaper articles from 1968 and 1969. Unclear use of property post-1969.	San Bernardino County Sun 1968: p. 27
1978 - 1981	Owner	Roy Cutter	Research did not identify additional biographical or professional information.	PIMS
1981 - 2000	Owner	Irvin O. Thompson	Thompson owned the property until 2000. Thompson also owned Property 2, 3, 4A, and 4B at this time. Research did not identify additional biographical or professional information.	PIMS San Bernardino County Sun 1992: 24
1981-1992	Owner and occupant	Ability Truck Parts	Ability Truck Parts was owned by Thompson and was part of his moving business, Ability Moving, located approximately 2.5-miles east of Property 1.	San Bernardino County Sun 1992: 24
1993 – c. 1999	Occupant	John R. Holb /Concrete Tie MFG Company	Holb rented the property from Thompson	PIMS
1999	Owner and occupant	Israel Michael Shapi / $10 Shoes	Research did not identify biographical information or information on this business.	City of Rialto 1999: Change of Occupancy 99001108
2022	Unclear	Pacific Store Fixtures	Research did not identify information on this business.	Google

Architect

There is no original building permit on file for Property 1 and additional research did not identify the name of the property's original architect or builder. A building permit from 1964 for interior renovations listed Bruce Philips as the architect. Research, including through Newspapers.com, Ancestry.com, and through the historical directory of the American Institute of Architects (AIA), did not identify biographical or professional information on the architectural career of Bruce Philips.

NRHP/CRHR Statement of Significance

Property 1: 253 West Valley Boulevard (APN: 0132-171-05) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 1: 253 West Valley Boulevard (APN: 0132-171-05) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 1 is a nondescript warehouse with no discernable architectural style constructed circa 1964. The area in which Property 1 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the development of Property 1.

At the time of Property 1's construction, the Project site had already been developed with structures that appear to have primarily served automotive and trucking businesses. Property 1 originally served as a warehouse for C&J Compressor Services, an auto repair business. While Property 1 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 1 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 1. Property 1 has been used as a warehouse to support various businesses, primarily automotive and trucking-related, that operated from the Project site throughout its history. The earliest ownership information identified that Property 1 was owned by John A. Swanson, who operated his business C&J Compressor Services out of Property 1 from its construction until Swanson's death in 1967. Subsequent owners include Irvine O. Thompson (1981-2000) who also owned Properties 2, 3, 4A, and 4B during this time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 1 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 1 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 1 is a nondescript warehouse with no discernable architectural style built circa 1968. Property 1 does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1960s nondescript commercial warehouse. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 1 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. Property 1 is also not a rare example of its type; there are similar warehouses from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 1. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 1 does not appear likely to contribute to a potential historic district. Therefore, Property 1 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 1 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 1: 253 West Valley Boulevard (APN 0132-171-05) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 1 is a nondescript utilitarian warehouse and garage constructed circa 1964. As discussed in NRHP/CRHR Criteria A/1, Property 1 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 1 appears ineligible under City of Rialto Criteria 1.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 1. Therefore, Property 1 appears ineligible under City of Rialto Criteria 2.

3. It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.

As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 1 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 1 appears ineligible under City of Rialto Criteria 3.

4. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.

Property 1 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 1 is a nondescript warehouse with no discernable architectural style constructed circa 1964. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 1 appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 1 is a nondescript warehouse with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 1. As such, Property 1 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar warehouses in Rialto, California, and the nation. Therefore, Property 1 appears ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, Property 1 does not embody elements of architectural design detail, materials, or craftsmanship, It is a nondescript warehouse with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 1 appears ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 1 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 1 appears ineligible under City of Rialto Criteria 7.

8. It has unique design or detailing.

As discussed under NRHP/CRHR Criteria C/2, Property 1 is a nondescript warehouse with no discernable style. It does not have a unique design or detailing and there are many similar warehouses throughout Rialto, California, and the United States. Therefore, Property 1 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 1 is a nondescript warehouse with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 1 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 1 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 1 appears ineligible under City of Rialto Criteria 10.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or for local designation, properties must retain their physical integrity from the period in which they gained significance. In the case of architecturally significant properties, the period of significance is normally the date of construction. For historically significant properties, the length of the historic associations usually measures the period of significance. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states that the integrity of a property is based upon the historical significance and character-defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 1997: 45). Property 1 was not found significant under any NRHP, CRHR, or local criteria, and do not have a period of significance. Therefore, its integrity does not require examination.

Summary of Findings

As a result of Dudek's archival research, field survey, record search, and property significance evaluations, Property 1 is recommended ineligible for the NRHP, CRHR, or as a designated City of Rialto historical resource due to a lack of significant historical associations and architectural merit. Therefore, Property 1 is not considered a historical resource for the purposes of CEQA. The recommended status code is 6Z: Found ineligible for NR, CR or Local designation through survey evaluation.

***P3a. Description:**

Next to the door is a wood-framed fixed window underneath a metal awning. Beneath the window and door, cladding changes from horizontal metal panels to plyboard panels (Exhibit 1). The east (side) elevation has an irregular fenestration of a centrally located wood door under a gabled awing flanked by wood-framed multi-light windows. A matching metal staircase and metal railings lead up to the secondary entry. Next to the awning is a secondary gabled projection. Below the windows and door, the cladding changes from horizontal metal panels to plywood panels (Exhibit 2). The west (side) elevation features wood-framed fixed windows, a metal awning and a gabled projection in the middle of the elevation's roof. Most of the elevation is obstructed by a covered chain link fence. The rear (north) elevation was hidden from the public right of way.

Exhibit 1. Overview of the primary (south) elevation, view to the north (Dudek IMG_1844)

Exhibit 2. Oblique view of the primary (south) and east (side) elevations, view to the northwest (Dudek IMG_1847)

***B6. Construction History** *(continued from page 2):*

There were no building permits on file with the City of Rialto Building Division for Property 2. The following list of alterations to Property 2 was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Replacement door, east elevation
- Replacement vinyl windows, all elevations
- Replacement door, south elevation
- Metal stairs and handrails, south and east elevations
- Replacement siding
- Replacement roof

***B10. Significance** *(continued from page 2):*

Historical Overview of the City of Rialto (1881-present)

In the 1880s, the expansion of the nation's railroad network facilitated travel westward. The small settlement of Hinkley (originally spelled Hinckley for an early setter's son), was founded in 1881 upon the arrival of the Southern Pacific Railroad (along the present-day path of CA SR 58). By 1883, the land that now makes up the City of Rialto was originally part of Rancho San Bernardino, which was established by the San Gabriel Mission in the early nineteenth century. The rancho encompassed much of present-day San Bernardino, Fontana, Rialto, Redlands, and Colton. After Mexico gained control of California, the missions were secularized, and what once was mission land was granted to private individuals. Jose del Carmen Lugo, a member of a wealthy family, petitioned Governor Alvarado for a grant of the San Bernardino Rancho, where his family had been farming and grazing (Beattie 1933). The land was granted to the Lugo family on June 21, 1842, who continued grazing livestock in the area and built several adobes.

By 1851, the Lugo family sold eight leagues of their rancho for $75,000 to Mormon settlers who were attempting to create a new colony of the Latter-Day Saints. The colonists gave rise to the City of San Bernardino, though the area encompassed parts of present-day Rialto as well. Although the colony boasted a high population and even created its own political institution separate from the City of Los Angeles, it was plagued by large debt, discontent among the settlers with the church, and a growing disdain by the public for Mormons, particularly after the Mormon Rebellion of the late 1850s (Lyman 1989; Masters 2015). Church leaders struggled to maintain religious fervor among many of the San Bernardino residents, and many settlers appeared to make the move to San Bernardino to facilitate their own separation from the church's strict policies (Lyman 1989). After the Mountain Meadows Massacre of 1857, during which Mormons settlers in Utah ambushed and murdered non-Mormon settlers, the Mormon colony of San Bernardino was completely alienated from non-Mormon communities of Southern California, and anti-Mormon hostility reached its peak. It was at this time that Brigham Young summoned the devout to return to Utah. In 1856, before the exodus of many Mormons, the area had 3,000 inhabitants, of which 84% were Mormon. However, 1,400 returned to Utah, while the remaining 1,600 decided to abandon the church and make a life for themselves in California. This return rate for the Mormon colony of San Bernardino was much lower than many other Mormon settlements outside of Utah, indicating the growing disillusionment and discontent that the San Bernardino residents felt with the church or their attachment to their settlement in San Bernardino (Adams 2004; Lyman 1989).

After the decline of the Mormon colony, the area developed slowly until 1887 when a new section of the Santa Fe Railroad was established through San Bernardino County. Like other parts of San Bernardino County, the construction of the railroad created a land speculation boom and a series of towns were established along the railroad's route. One such was Rialto, which was laid out by the Semi-Tropic Land and Water Development Company in 1887 at a cost of $670,000. While much of the early development efforts included brush clearing and town planning, a reliable water source was also a necessary component of the successful development of Rialto. To provide a reliable water source, the Semi-Tropic Land and Water Company built a concrete-lined canal that provided water from Lytle Creek Canyon to Riverside Avenue in Rialto. The Semi-Tropic Land and Water Company was formed by a group of associates, including Sam Merrill, a successful businessperson and banker from Iowa who came to the area and settled in Rialto once it was developed. Merrill's residence was one of the numerous grand homes in the area and was constructed at a cost of $15,000. Merrill continued to live in Rialto and eventually there was a street named in his honor (Adams 2004).

In the early years, Rialto was a small town that was largely rooted in an agricultural economic system based largely on citrus orchards that were located on the outskirts of the downtown core of the City. The earliest Sanborn map of Rialto dates to 1892 and shows a small town laid out in a grid pattern with a small collection of houses spaced throughout town. The town also included the following: blacksmith shop, school, cement pipe yard, lumberyard, drug store, merchandise store, railroad depot, and offices for the Semi-Tropic Land and Water Company. The largest building in town was identified on the Sanborn Map as the Semi-Tropic Hotel located on Riverside Avenue (Sanborn 1892a, 1892b).

Growth and development of Rialto continued throughout the nineteenth century and into the twentieth century. By 1907, Rialto established a Chamber of Commerce to support the growing town and its businesses. The 1907 Sanborn map shows an increase in residential buildings throughout the town to support the growing population. In addition to residential development, more defined commercial development is indicated with new business types emerging along Riverside Avenue since 1892. New businesses included a bakery, livery, wagon shop, and barbershop. Other changes to the town seen on the 1907 Sanborn Map include the emergence of fruit packing houses that served to support the citrus industry that was prospering on the outskirts of the town (Sanborn 1907a, 1907b, 1907c). The growth and development continued over the next few years, and by the City's incorporation in 1911, there were 1,500 residents, 40 businesses, and a local newspaper (Adams 2004; City of Rialto 2016; Sanborn 1892a, 1892b, 1907a, 1907b, 1907c, 1911a, 1911b, 1911c, 1911d).

Rialto continued to grow throughout the 1910s with significant advances in transportation, including the transition of Foothill Boulevard to become part of the United States highway system as a section of Route 66 in 1913. Another advancement in transportation came the following year in 1914 when the San Bernardino Line of the Los Angeles Pacific Electric Railway was completed. However, disaster struck in the 1920s when a fire destroyed much of the downtown area (Adams 2004; City of Rialto 2016).

Like many other cities in California, World War II influenced Rialto's growth and development. During the war, a large ammunition dumpsite was put into operation in the City. Following the war, the ammunition dumpsite was taken over by a rocket-building subsidiary of B.F. Goodrich. Wartime and postwar industrial growth sparked the need for additional residential buildings to support workers and the general postwar population growth seen throughout Southern California. From the beginning of the 1950s to the end of the decade, the population of the City skyrocketed from 3,156 to 15,359. To manage this growth and development, residential subdivisions began to replace large agricultural parcels and citrus groves outside the downtown city core, and increased industrial and commercial development followed. The City continued to grow

throughout the late twentieth century and continues to grow today with the most current population being reported at over 100,000 (City of Rialto 2016).

Property History

Property 2 is a nondescript office building with no discernable architectural style originally constructed between 1968-1977 per aerial photographs (Exhibit 3; UCSB 2022). The property appears to have originally been constructed as an office for Caudill's Auto Service, which opened in the 1960s and was originally comprised of approximately ten buildings (Exhibit 3; San Bernardino County Sun 1966: 26). Only one other building from the ten buildings associated with Caudill's is still extant (located on Property 3 discussed in Section 3.3.3 below). Per aerial photographs, the majority of these structures were demolished by 1980 (NETR 2022; UCSB 2022).

Property 2 appears to have continued to serve automotive and trucking businesses, such as A-1 Auto Body (1979-1981) in subsequent years. From 1981 to 2021, Property 2 was owned by the same series of owners as Property 1, 3, 4A and 4B. While there appears to have been some overlap in businesses during this time period (Ability Truck Parts appears to have operated out of all of these buildings from 1981 until 1992), they also had different occupants over the years. Today, Property 2 serves as an office for the trucking service, repair, and driving school located on the Project site. (NETR 2022a; UCSB 2022; Google 2022).

Exhibit 3. 1966 aerial photograph (L) showing the buildings comprising Caudill's Auto Service; Property 2 (outlined in red) was not yet extant. 1977 aerial photograph (R) showing that Property 2 (outlined in red) was extant (NETR 2022; UCSB 2022)

Occupancy History

Table 1, below, lists the ownership history information available identified through research efforts from Property 2's circa 1968-1977 construction to the present day. There is no original building permit on file and research did not indicate an original owner of Property 2. Property 2 appears to have served as an office space for an automotive repair business and has continued to serve as an office space for the existing trucking business on the parcel today. Additional information on the

property's history and its various owners is provided in the "Notes" column of the below table. Research did not reveal that these owners or occupants are persons important to our past.

Table 1. Ownership / Occupancy for Property 2: 285 S. Willow Avenue (APN 0132-171-03)

Years	Owner/ Occupant	Name	Notes	Source
c. 1968 - 1979	Owner	Caudill's Auto Service	Auto repair business	San Bernardino County Sun 1966: 26 San Bernardino County Sun 1979b: 24
1979-1981	Owner	A-1 Auto Body	Auto repair business	San Bernardino County Sun 1979b: 24
1981 - 2000	Owner	Irvine O. Thompson / Ability Truck Parts	Thompson also owned Property 1 at this time and operated his business, Ability Truck Parts, out of the property. He likely operated Ability Truck Parts out of Property 2 as well. Thompson also owned Properties 3, 4A and 4B at this time.	PIMS San Bernardino County Sun 1992: 24 San Bernardino County Sun 1969: 46
2000-2003	Owners	James and Marcy O'Neil Shirley M. Tolleson Rodney and Caroline Collin	According to PIMS, several people owned Property 2 in this period. Research did not identify additional biographical or professional information on these individuals.	PIMS
2003-2018	Owner	Irvine O. Thompson Trust	Research did not identify information on this Trust. Owners also owned Property 4A and 4B at this time.	PIMS
2019	Owner	Long Family Trust	Research did not identify information on this Trust. Owners also owned Property 4A and 4B at this time.	PIMS
2019-2021	Owner	Newell Family Trust	Research did not identify information on this Trust. Owners also owned Property 4A and 4B at this time.	PIMS
2021-present	Owner	Stallion Realty LLC	Research did not identify information on this LLC. Owners also owned Property 4A and 4B at this time.	PIMS

Architect

There is no original building permit on file for Property 2 and additional research did not identify the name of the property's original architect or builder.

NRHP/CRHR Statement of Significance

Property 2: 285 S. Willow Avenue (APN: 0132-171-03) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 2: 285 S. Willow Avenue (APN 0132-171-03) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 2 is a nondescript office building with no discernable architectural style constructed circa 1968-1977 to serve as an administrative space for Caudill's Auto Service, an automotive services business. The area in which Property 2 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the eventual development of Property 2.

At the time of Property 2's construction, the Project site had already been developed with structures that appear to have primarily served automotive and trucking businesses. Property 2 originally served as an office for Caudill's Auto Service. While Property 2 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 2 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 2. Property 2 was constructed between 1968 and 1977 to serve as an office for Caudill's Auto Service, an automotive repair business that had operated from the Project site beginning in the early 1960s. Subsequent occupants include A-1 Autobody (1978-1981) and Irvine O. Thompson (1981-2000), who also owned Properties 1, 3, 4A, and 4B during this time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 1 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 2 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 2 is a nondescript office building with no discernable architectural style built circa 1968. Property 2 does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1960s nondescript small office building. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 2 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. The property is also not a rare example of its type; there are similar warehouses from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 2. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 2 does not appear likely to contribute to a potential historic district. Therefore, Property 2 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 2 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 2: 285 S. Willow Avenue (APN 0132-171-03) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.

Property 2 is a nondescript office building constructed circa 1968-1977. As discussed in NRHP/CRHR Criteria A/1, Property 1 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 2 appears ineligible under City of Rialto Criteria 1.

2. It is the site of a documented historic event.

As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 1. Therefore, Property 2 appears ineligible under City of Rialto Criteria 2.

3. It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.

As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 2 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 2 appears ineligible under City of Rialto Criteria 3.

4. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.

Property 2 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 2 is a nondescript office with no discernable architectural style constructed circa 1968. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 2 appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 2 is a nondescript office with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 2. As such, Property 2 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar buildings in Rialto, California, and the nation. Therefore, Property 2 appears ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, Property 2 does not embody elements of architectural design detail, materials, or craftsmanship. It is a nondescript office with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 2 appears ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 2 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 2 appears ineligible under City of Rialto Criteria 7.

As discussed under NRHP/CRHR Criteria C/2, Property 2 is a nondescript office building with no discernable style. It does not have a unique design or detailing and there are many similar buildings throughout Rialto, California, and the United States. Therefore, Property 2 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 2 is a nondescript office building with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 2 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 2 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 2 appears ineligible under City of Rialto Criteria 10.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or for local designation, properties must retain their physical integrity from the period in which they gained significance. In the case of architecturally significant properties, the period of significance is normally the date of construction. For historically significant properties, the length of the historic associations usually measures the period of significance. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states that the integrity of a property is based upon the historical significance and character-defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 1997: 45). Property 2 was not found significant under any NRHP, CRHR, or local criteria, and do not have a period of significance. Therefore, its integrity does not require examination.

Summary of Findings

As a result of Dudek's archival research, field survey, record search, and property significance evaluations, Property 2 is recommended ineligible for the NRHP, CRHR, or as a designated City of Rialto historical resource due to a lack of significant historical associations and architectural merit. Therefore, Property 2 is not considered a historical resource for the purposes of CEQA. The recommended status code is 6Z: Found ineligible for NR, CR or Local designation through survey evaluation.

Significance summary

As a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, Property 3: no associated address (APN 0132-171-01) appears ineligible as a historical resource at the local, state, or federal level. Therefore, the subject property is not considered a historical resource for the purposes of CEQA. The recommended status code for all evaluated properties is 6Z: Found ineligible for NR, CR, or Local designation through survey evaluation. [**See Continuation Sheet**]

***P3a. Description**:

Property 3's rear (south) elevation has a metal door and a wood-framed multi-light window. Most of the elevation is obscured from view by a truck trailer (Exhibit 11). The west elevation is blank, and the east elevation is hidden from view. A chain-link fence lines the west property line. Property 3 serves as a warehouse for storage on the Project site and is located on an unpaved lot.

Exhibit 1. Overview showing the primary (north) elevation of Property 3. View to the south (Dudek IMG_1588)

Exhibit 2. Oblique view showing the side (west) and rear (south) elevations of Property 3. View to the northeast (Dudek IMG_1868)

***B6. Construction History** *(continued from page 2):*

There were no building permits on file with the City of Rialto Building Division for Property 3. The following list of alterations to Property 3 was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Likely replacement sliding loading door, north elevation
- Small storage addition, east elevation
- Possible demolition at east (rear) elevation, based on aerial photographs showing the property's footprint from 1968 being larger than its present footprint (NETR 2022; UCSB 2022)

***B10. Significance** *(continued from page 2):*

Historical Overview of the City of Rialto (1881-present)

In the 1880s, the expansion of the nation's railroad network facilitated travel westward. The small settlement of Hinkley (originally spelled Hinckley for an early setter's son), was founded in 1881 upon the arrival of the Southern Pacific Railroad (along the present-day path of CA SR 58). By 1883, the land that now makes up the City of Rialto was originally part of Rancho San Bernardino, which was established by the San Gabriel Mission in the early nineteenth century. The rancho encompassed much of present-day San Bernardino, Fontana, Rialto, Redlands, and Colton. After Mexico gained control of California, the missions were secularized, and what once was mission land was granted to private individuals. Jose del Carmen Lugo, a member of a wealthy family, petitioned Governor Alvarado for a grant of the San Bernardino Rancho, where his family had been farming and grazing (Beattie 1933). The land was granted to the Lugo family on June 21, 1842, who continued grazing livestock in the area and built several adobes.

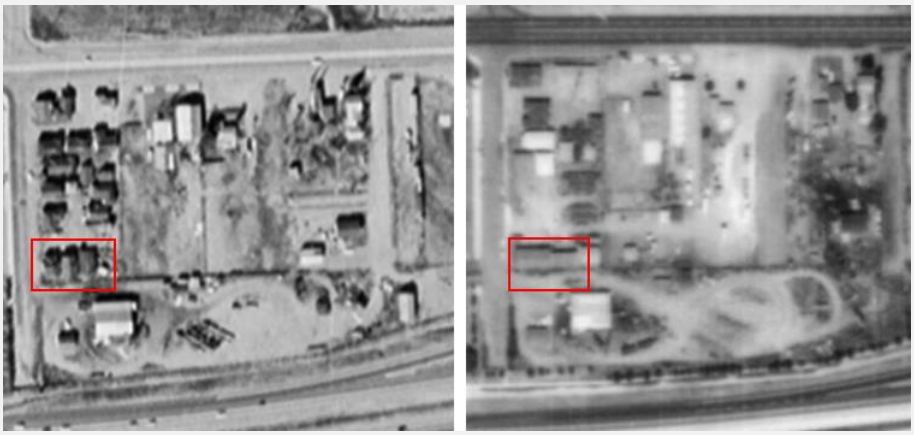
By 1851, the Lugo family sold eight leagues of their rancho for $75,000 to Mormon settlers who were attempting to create a new colony of the Latter-Day Saints. The colonists gave rise to the City of San Bernardino, though the area encompassed parts of present-day Rialto as well. Although the colony boasted a high population and even created its own political institution separate from the City of Los Angeles, it was plagued by large debt, discontent among the settlers with the church, and a growing disdain by the public for Mormons, particularly after the Mormon Rebellion of the late 1850s (Lyman 1989; Masters 2015). Church leaders struggled to maintain religious fervor among many of the San Bernardino residents, and many settlers appeared to make the move to San Bernardino to facilitate their own separation from the church's strict policies (Lyman 1989). After the Mountain Meadows Massacre of 1857, during which Mormons settlers in Utah ambushed and murdered non-Mormon settlers, the Mormon colony of San Bernardino was completely alienated from non-Mormon communities of Southern California, and anti-Mormon hostility reached its peak. It was at this time that Brigham Young summoned the devout to return to Utah. In 1856, before the exodus of many Mormons, the area had 3,000 inhabitants, of which 84% were Mormon. However, 1,400 returned to Utah, while the remaining 1,600 decided to abandon the church and make a life for themselves in California. This return rate for the Mormon colony of San Bernardino was much lower than many other Mormon settlements outside of Utah, indicating the growing disillusionment and discontent that the San Bernardino residents felt with the church or their attachment to their settlement in San Bernardino (Adams 2004; Lyman 1989).

After the decline of the Mormon colony, the area developed slowly until 1887 when a new section of the Santa Fe Railroad was established through San Bernardino County. Like other parts of San Bernardino County, the construction of the railroad

created a land speculation boom and a series of towns were established along the railroad's route. One such was Rialto, which was laid out by the Semi-Tropic Land and Water Development Company in 1887 at a cost of $670,000. While much of the early development efforts included brush clearing and town planning, a reliable water source was also a necessary component of the successful development of Rialto. To provide a reliable water source, the Semi-Tropic Land and Water Company built a concrete-lined canal that provided water from Lytle Creek Canyon to Riverside Avenue in Rialto. The Semi-Tropic Land and Water Company was formed by a group of associates, including Sam Merrill, a successful businessperson and banker from Iowa who came to the area and settled in Rialto once it was developed. Merrill's residence was one of the numerous grand homes in the area and was constructed at a cost of $15,000. Merrill continued to live in Rialto and eventually there was a street named in his honor (Adams 2004).

In the early years, Rialto was a small town that was largely rooted in an agricultural economic system based largely on citrus orchards that were located on the outskirts of the downtown core of the City. The earliest Sanborn map of Rialto dates to 1892 and shows a small town laid out in a grid pattern with a small collection of houses spaced throughout town. The town also included the following: blacksmith shop, school, cement pipe yard, lumberyard, drug store, merchandise store, railroad depot, and offices for the Semi-Tropic Land and Water Company. The largest building in town was identified on the Sanborn Map as the Semi-Tropic Hotel located on Riverside Avenue (Sanborn 1892a, 1892b).

Growth and development of Rialto continued throughout the nineteenth century and into the twentieth century. By 1907, Rialto established a Chamber of Commerce to support the growing town and its businesses. The 1907 Sanborn map shows an increase in residential buildings throughout the town to support the growing population. In addition to residential development, more defined commercial development is indicated with new business types emerging along Riverside Avenue since 1892. New businesses included a bakery, livery, wagon shop, and barbershop. Other changes to the town seen on the 1907 Sanborn Map include the emergence of fruit packing houses that served to support the citrus industry that was prospering on the outskirts of the town (Sanborn 1907a, 1907b, 1907c). The growth and development continued over the next few years, and by the City's incorporation in 1911, there were 1,500 residents, 40 businesses, and a local newspaper (Adams 2004; City of Rialto 2016; Sanborn 1892a, 1892b, 1907a, 1907b, 1907c, 1911a, 1911b, 1911c, 1911d).



Rialto continued to grow throughout the 1910s with significant advances in transportation, including the transition of Foothill Boulevard to become part of the United States highway system as a section of Route 66 in 1913. Another advancement in transportation came the following year in 1914 when the San Bernardino Line of the Los Angeles Pacific Electric Railway was completed. However, disaster struck in the 1920s when a fire destroyed much of the downtown area (Adams 2004; City of Rialto 2016).

Like many other cities in California, World War II influenced Rialto's growth and development. During the war, a large ammunition dumpsite was put into operation in the City. Following the war, the ammunition dumpsite was taken over by a rocket-building subsidiary of B.F. Goodrich. Wartime and postwar industrial growth sparked the need for additional residential buildings to support workers and the general postwar population growth seen throughout Southern California. From the beginning of the 1950s to the end of the decade, the population of the City skyrocketed from 3,156 to 15,359. To manage this growth and development, residential subdivisions began to replace large agricultural parcels and citrus groves outside the downtown city core, and increased industrial and commercial development followed. The City continued to grow throughout the late twentieth century and continues to grow today with the most current population being reported at over 100,000 (City of Rialto 2016).

Property History

Property 3 is a nondescript warehouse and garage with no discernable architectural style originally constructed circa 1968 per aerial photographs (Exhibit 3; UCSB 2022; NETR 2022). At the time of Property 3's construction, the parcel on which it sits had been improved with approximately ten structures (none of which are extant in 2022). It appears that Property 3 was constructed as one of the structures originally serving Caudill's Auto Service, which began operating at the Project site in the 1960s (San Bernardino County Sun 1966: 26). Property 2, described above in Section 3.3.3, was also constructed as part of Caudill's Auto Service. It appears that Property 3 continued to serve as a warehouse and garage for the various primarily automotive and trucking businesses that operated from the Project site in subsequent years. From 1981 to 2021, Property 3 was owned by the same series of owners as Property 1, 2, 4A and 4B, and while there appears to have been some overlap in businesses (Ability Truck Parts appear to have operated out of all of these buildings from 1981 until 1992), they also had different occupants over the years.

Exhibit 3. 1962 aerial photograph (L) before the construction of Property 3 and 1968 aerial photograph (R) showing the property extant (UCSB 2022; NETR 2022)

Occupancy History

There was no property ownership information for Property 3's APN in the San Bernardino County PIMS and additional research did not identify owners or occupants of Property 3. Property 3 and the property at 285 S. Willow Street (APN 0132-171-03) likely served the same businesses over time, based on their proximity. Today, both properties serve the trucking service, repair, and driving school that operates from the Project site.

Commented [CC1]: Allison - should I copy the occupancy history table for property 2 (285 willow) here?

Commented [AL2R1]: No - we don't need it here

Architect

There is no original building permit on file for Property 3 and additional research did not identify the name of the property's

original architect or builder.

NRHP/CRHR Statement of Significance

Property 3: No associated address (APN 0132-171-01) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 3: No associated address (APN 0132-171-01) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 3 is a nondescript warehouse with no discernable architectural style constructed circa 1968 to serve as a warehouse for Caudill's Auto Service, an automotive business. The area in which Property 3 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred throughout communities in Southern California. In Rialto, the population grew from 3,156 to 15,359 throughout the 1950s (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the eventual development of Property 3.

At the time of Property 3's construction, the Project site had already been developed with structures that appear to have primarily served automotive-related businesses. Property 3, along with Property 2, originally served as a warehouse for Caudill's Auto Service. While Property 3 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 3 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 3. Property 3 was constructed circa 1968 to serve as a warehouse for Caudill's Auto Service, an automotive repair business that had operated from the Project site beginning in the early 1960s. Subsequent occupants include A-1 Autobody (197801981) and Irvine O. Thompson (1981-2000), who also owned Properties 1, 4A, and 4B during this time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 1 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 3 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 3 is a nondescript warehouse with no discernable architectural style built circa 1968. Property 3 does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1960s nondescript commercial warehouse. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 3 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. Property 3 is also not a rare example of its type; there are similar warehouses from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 3. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 3 does not appear likely to contribute to a potential historic district. Therefore, Property 3 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 3 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 3: No associated address (APN 0132-171-01) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 3 is a nondescript utilitarian warehouse and garage constructed circa 1968. As discussed in NRHP/CRHR Criteria A/1, Property 3 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 1 appears ineligible under City of Rialto Criteria 3.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 3. Therefore, Property 3 appears ineligible under City of Rialto Criteria 2.

3. It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.

As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 3 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 3 appears ineligible under City of Rialto Criteria 3.

4. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.

Property 3 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 3 is a nondescript warehouse with no discernable architectural style constructed circa 1960. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 3 appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 3 is a nondescript warehouse with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 3. As such, Property 3 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar warehouses in Rialto, California, and the nation. Therefore, Property 1 appears ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, Property 3 does not embody elements of architectural design detail, materials, or craftsmanship, It is a nondescript warehouse with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 3 appears ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 3 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 3 appears ineligible under City of Rialto Criteria 7.

8. It has unique design or detailing.

As discussed under NRHP/CRHR Criteria C/2, Property 3 is a nondescript warehouse with no discernable style. It does not have a unique design or detailing and there are many similar warehouses throughout Rialto, California, and the United States. Therefore, Property 3 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 3 is a nondescript warehouse with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 3 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 3 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 3 appears ineligible under City of Rialto Criteria 10.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or for local designation, properties must retain their physical integrity from the period in which they gained significance. In the case of architecturally significant properties, the period of significance is normally the date of construction. For historically significant properties, the length of the historic associations usually measures the period of significance. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states that the integrity of a property is based upon the historical significance and character-defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 1997: 45). Property 3 was not found significant under any NRHP, CRHR, or local criteria, and do not have a period of significance. Therefore, its integrity does not require examination.

Summary of Findings

As a result of Dudek's archival research, field survey, record search, and property significance evaluations, Property 3 is recommended ineligible for the NRHP, CRHR, or as a designated City of Rialto historical resource due to a lack of significant historical associations and architectural merit. Therefore, Property 3 is not considered a historical resource for the purposes of CEQA. The recommended status code is 6Z: Found ineligible for NR, CR or Local designation through survey evaluation.

Significance summary

As a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01) appear ineligible as historical resources at the local, state, or federal level. Therefore, the subject properties are not considered a historical resource for the purposes of CEQA. The recommended status code for all evaluated properties is 6Z: Found ineligible for NR, CR, or Local designation through survey evaluation. [**See Continuation Sheet**]

***P3a. Description:**

Property 4A

Property 4A is a nondescript office building with no discernable style constructed circa 1953 per aerial photographs (NETR 2022; UCSB 2022). The property is simple with no ornamentation. Property 4A is a one-story with a square plan and a gable roof clad in composite shingles with slight overhanging eaves with visible rafter tails. The primary (west) elevation (Exhibit 1) has a six-panel door at the center and is flanked by vinyl frame slider windows with bars on either side. The rear (east) elevation has another door, covered in security bars and a vinyl frame slider window. There is an identical window on the south elevation and a multi-light vinyl frame slider window on north elevation. Property 4A serves as an office for the trucking businesses on the Project site and is located on a large, paved lot approximately 45-feet west of Property 4B, a warehouse used for truck storage and repair.

Exhibit 1. Oblique view showing the primary (west) and north elevations of Property 4A. View to the east (Dudek IMG_1800)

Property 4B

Property 4B is a nondescript, utilitarian warehouse with no discernable architectural style constructed circa 1953 per aerial photographs (NETR 2022; UCSB 2022). It is a one-story building with a front gable roof, clad with metal sheathing, and has a rectangular footprint (Exhibit 2). The property is clad in corrugated metal cladding, much of which appears to be replacement based on the site survey. There is no decoration, and fenestration is limited to a large loading bay on the primary (west) and rear (east) elevations, as well as a corrugated metal door on the south elevation. The north elevation is blank. It appears the whole elevation has been expanded with an enclosed extension that wraps around to the rear and primary elevations. The east (rear) elevation is open with exposed metal trusses. Property 4B is located on a large, paved lot directly north of the I-10 and approximately 45-feet east of Property 4A, an office used for the trucking businesses.

Exhibit 2. Oblique view showing the primary (west) and south elevations of Property 4B. View to the northeast (Dudek IMG_1815)

***B6. Construction History** *(continued from page 2):*

While the City of Rialto Building Division did return permits for the address 1743 S. Willow Avenue, these documents included electrical permits and change of occupancy and did not include building permits.

Property 4A

The following list of alterations to Property 4A was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Replacement vinyl windows, all elevations
- Replacement door, west (primary) elevation
- Security bars over windows, al elevations
- Replacement roof (likely)

Property 4B

The following list of alterations to Property 4B was compiled through observation during the course of the intensive survey. The date of these alterations is unknown:

- Replacement cladding, all elevations

- Replacement roofing
- Possible expansion on west elevation

***B10. Significance** *(continued from page 2):*

Historical Overview of the City of Rialto (1881-present)

In the 1880s, the expansion of the nation's railroad network facilitated travel westward. The small settlement of Hinkley (originally spelled Hinckley for an early setter's son), was founded in 1881 upon the arrival of the Southern Pacific Railroad (along the present-day path of CA SR 58). By 1883, the land that now makes up the City of Rialto was originally part of Rancho San Bernardino, which was established by the San Gabriel Mission in the early nineteenth century. The rancho encompassed much of present-day San Bernardino, Fontana, Rialto, Redlands, and Colton. After Mexico gained control of California, the missions were secularized, and what once was mission land was granted to private individuals. Jose del Carmen Lugo, a member of a wealthy family, petitioned Governor Alvarado for a grant of the San Bernardino Rancho, where his family had been farming and grazing (Beattie 1933). The land was granted to the Lugo family on June 21, 1842, who continued grazing livestock in the area and built several adobes.

By 1851, the Lugo family sold eight leagues of their rancho for $75,000 to Mormon settlers who were attempting to create a new colony of the Latter-Day Saints. The colonists gave rise to the City of San Bernardino, though the area encompassed parts of present-day Rialto as well. Although the colony boasted a high population and even created its own political institution separate from the City of Los Angeles, it was plagued by large debt, discontent among the settlers with the church, and a growing disdain by the public for Mormons, particularly after the Mormon Rebellion of the late 1850s (Lyman 1989; Masters 2015). Church leaders struggled to maintain religious fervor among many of the San Bernardino residents, and many settlers appeared to make the move to San Bernardino to facilitate their own separation from the church's strict policies (Lyman 1989). After the Mountain Meadows Massacre of 1857, during which Mormons settlers in Utah ambushed and murdered non-Mormon settlers, the Mormon colony of San Bernardino was completely alienated from non-Mormon communities of Southern California, and anti-Mormon hostility reached its peak. It was at this time that Brigham Young summoned the devout to return to Utah. In 1856, before the exodus of many Mormons, the area had 3,000 inhabitants, of which 84% were Mormon. However, 1,400 returned to Utah, while the remaining 1,600 decided to abandon the church and make a life for themselves in California. This return rate for the Mormon colony of San Bernardino was much lower than many other Mormon settlements outside of Utah, indicating the growing disillusionment and discontent that the San Bernardino residents felt with the church or their attachment to their settlement in San Bernardino (Adams 2004; Lyman 1989).

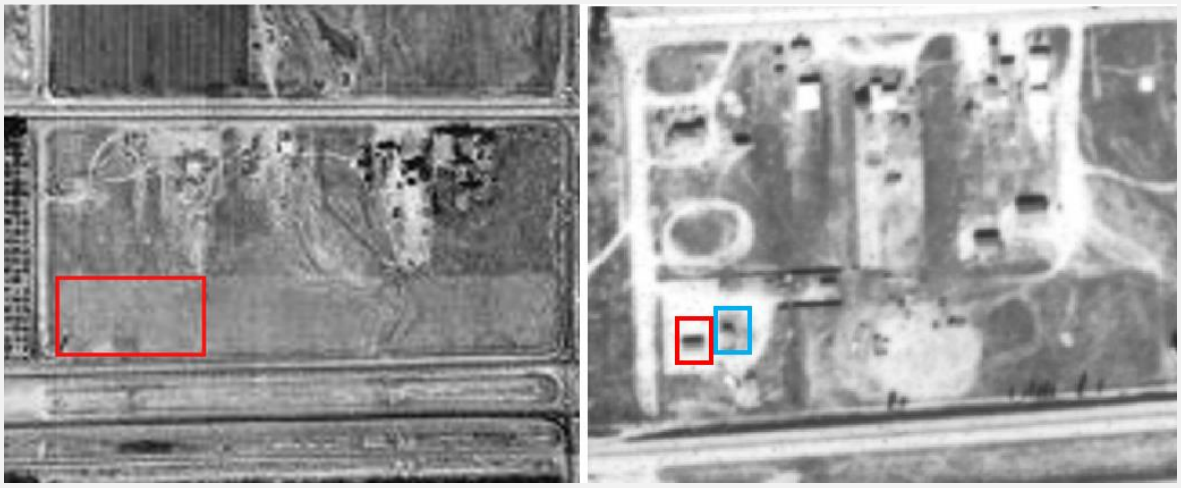
After the decline of the Mormon colony, the area developed slowly until 1887 when a new section of the Santa Fe Railroad was established through San Bernardino County. Like other parts of San Bernardino County, the construction of the railroad created a land speculation boom and a series of towns were established along the railroad's route. One such was Rialto, which was laid out by the Semi-Tropic Land and Water Development Company in 1887 at a cost of $670,000. While much of the early development efforts included brush clearing and town planning, a reliable water source was also a necessary component of the successful development of Rialto. To provide a reliable water source, the Semi-Tropic Land and Water Company built a concrete-lined canal that provided water from Lytle Creek Canyon to Riverside Avenue in Rialto. The Semi-Tropic Land and Water Company was formed by a group of associates, including Sam Merrill, a successful businessperson and banker from Iowa who came to the area and settled in Rialto once it was developed. Merrill's residence was one of the numerous grand homes in the area and was constructed at a cost of $15,000. Merrill continued to live in Rialto and eventually

there was a street named in his honor (Adams 2004).

In the early years, Rialto was a small town that was largely rooted in an agricultural economic system based largely on citrus orchards that were located on the outskirts of the downtown core of the City. The earliest Sanborn map of Rialto dates to 1892 and shows a small town laid out in a grid pattern with a small collection of houses spaced throughout town. The town also included the following: blacksmith shop, school, cement pipe yard, lumberyard, drug store, merchandise store, railroad depot, and offices for the Semi-Tropic Land and Water Company. The largest building in town was identified on the Sanborn Map as the Semi-Tropic Hotel located on Riverside Avenue (Sanborn 1892a, 1892b).

Growth and development of Rialto continued throughout the nineteenth century and into the twentieth century. By 1907, Rialto established a Chamber of Commerce to support the growing town and its businesses. The 1907 Sanborn map shows an increase in residential buildings throughout the town to support the growing population. In addition to residential development, more defined commercial development is indicated with new business types emerging along Riverside Avenue since 1892. New businesses included a bakery, livery, wagon shop, and barbershop. Other changes to the town seen on the 1907 Sanborn Map include the emergence of fruit packing houses that served to support the citrus industry that was prospering on the outskirts of the town (Sanborn 1907a, 1907b, 1907c). The growth and development continued over the next few years, and by the City's incorporation in 1911, there were 1,500 residents, 40 businesses, and a local newspaper (Adams 2004; City of Rialto 2016; Sanborn 1892a, 1892b, 1907a, 1907b, 1907c, 1911a, 1911b, 1911c, 1911d).

Rialto continued to grow throughout the 1910s with significant advances in transportation, including the transition of Foothill Boulevard to become part of the United States highway system as a section of Route 66 in 1913. Another advancement in transportation came the following year in 1914 when the San Bernardino Line of the Los Angeles Pacific Electric Railway was completed. However, disaster struck in the 1920s when a fire destroyed much of the downtown area (Adams 2004; City of Rialto 2016).



Like many other cities in California, World War II influenced Rialto's growth and development. During the war, a large ammunition dumpsite was put into operation in the City. Following the war, the ammunition dumpsite was taken over by a rocket-building subsidiary of B.F. Goodrich. Wartime and postwar industrial growth sparked the need for additional residential buildings to support workers and the general postwar population growth seen throughout Southern California. From the beginning of the 1950s to the end of the decade, the population of the City skyrocketed from 3,156 to 15,359. To manage this growth and development, residential subdivisions began to replace large agricultural parcels and citrus groves outside the downtown city core, and increased industrial and commercial development followed. The City continued to grow throughout the late twentieth century and continues to grow today with the most current population being reported at over 100,000 (City of Rialto 2016).

Property History

Aerial photographs indicate that Property 4A was extant by 1953 and property 4B was under construction by 1953 (Exhibit 3; UCSB 2022). Research did not identify an original owner or occupancy of Property 4A and 4B, however, it appears that both properties served various businesses, including R. Thompson Trucking in the 1970s and 1980s. From 1981 to 2021, Property 4A and Property 4B were owned by the same series of owners as Property 1, 2 and 3. While there appears to have been some overlap in businesses during this time period (Ability Truck Parts appear to have operated out of all of these buildings from 1981 until 1992), they also had different occupants over the years. Today, Property 4A and Property 4B

serve the trucking service, repair, and driving school that operate from the Project site.

Exhibit 3. 1948 aerial photograph showing the future location of Property 4A and 4B (outlined in red) and 1953 aerial showing that Property 4a (Office; red outline) is extant and Property 4B appears to be under construction (blue line). Both Property 4A and 4B are fully visible in a 1959 aerial photograph (UCSB 2022; NETR 2022).

Occupancy History

Table 1, below, lists the ownership history information available identified through research efforts from Property 4A and 4B's circa 1953 construction to the present day. There are no original building permits on file for Property 4A and 4B and research did not indicate an original owner of Property 4A or 4B. Additional information on the property's history and its various owners is provided in the "Notes" column of the below table. Research did not reveal that these owners or occupants are persons important to our past.

Table 1. Ownership / Occupancy for Property 4A and 4B: 1743 S. Willow Avenue (APN 0132-171-03)

Years	Owner/ Occupant	Name	Notes	Source
c. 1970-1979	Owner and occupant	Inez and Ronald Gerald Thompson / R. Thompson Trucking	Proprietors of R. Thompson Trucking.	San Bernardino County Sun 1973: 20. San Bernardino County Sun 1974: 24. San Bernardino County Sun 1979c: 11
1979	Occupant	Kenneth Charles Fairburn / Fairburn Transportation	Trucking business that was in operation for 35 years; research only identified its location as being at Property 4A/4B in 1979.	San Bernardino County Sun 1979a: 11 San Bernardino County Sun 1991: 18

Years	Owner/ Occupant	Name	Notes	Source
1981 - 2000	Owner	Jean and Irvine Thompson / Ability Truck Parts	Thompson also owned Property 1, 2, 4A and 4B at this time and operated his business, Ability Truck Parts, from Property 1 until circa 1992. It is likely Ability Truck Parts also operated out of Property 4A and 4B.	PIMS
2000-2007	Owner	Shirley and Forest G. Tolleson Marcy James E. O'Neil Carolyn and Rodney Collin	Research did not identify information on these owners. Owners also owned Properties 2 and 3 at this time.	PIMS
2004	Occupant	Terrill E Stewart / GWP	GWP was a golf cart retail sales company.	City of Rialto 2004: Building Permit 2004-1693
2007-2018	Owner	Irvine Thompson Trust	Research did not identify information on this Trust. Trust also owned Property 2 and 3 at this time.	PIMS
2018 - 2019	Owner	Long Family Trust	Research did not identify information on this Trust. Trust also owned Property 2 and 3 at this time.	PIMS
2019-2021	Owner	Newell Family Trust	Research did not identify information on this Trust. Trust also owned Property 2 and 3 at this time.	PIMS
2021	Owner	Stallion Realty LLC	Research did not identify information on this LLC. LLC also owned Property 2 and 3 at this time.	PIMS

Architect

There is no original building permit on file for Property 4A or Property 4B and additional research did not identify the name of the original architect or builder for either property.

NRHP/CRHR Statement of Significance

Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 4A and 4B: 743 S. Willow Avenue (APN 0254-111-01) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 4A is a nondescript office building with no discernable architectural style and Property 4B is a nondescript warehouse with no discernable architectural style. Both properties were constructed circa 1953. The area in which the properties sit began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure, the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the development of Property 4A and 4B.

At the time of Property 4A and 4B's construction, the Project site was in the process of being developed with structures that appear to have primarily served automotive-related businesses. Property 4A and 4B appear to have served the various trucking and automotive-related businesses occupying Property 4A and 4B, including R. Thompson Trucking (c. 1970-1979). While Property 4A and 4B are examples of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of these specific buildings marked a pivotal point in the history of the neighborhood or city. They were neither the first nor the last of their type to be constructed in Rialto and were merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. Property 4A and 4B are not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 4A and 4B do not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 properties have to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 4A and 4B. Property 4A and 4B were constructed circa 1953 and appear to have served various automotive and trucking businesses. The earliest identified owner of the properties were Inez and Ronald Gerald Thompson who operated R. Thompson Trucking from the properties from circa 1970 to 1979. Subsequent occupants include Fairburn Transportation (1979), another trucking business, and Irvine O. Thompson (1981-2000), who also owned Properties 1, 2, and 3 the same time. During Thompson's ownership of these properties, he operated Ability Truck Parts from the Project site. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 4A or 4B were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 4A and 4B do not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 4A is a nondescript office with no discernable architectural style and Property 4B is a nondescript warehouse with no discernable architectural style. Both properties were built circa 1953. The properties do not embody distinctive characteristics of a type, period or method of construction. They are both typical examples of 1950s nondescript commercial or warehouse buildings. There is nothing notable or unique about their designs; they do not possess the distinctive characteristics of any particular style and they are executed with common materials. Property 4A and Property 4B appear to have been constructed through already well-documented and common construction techniques and methods and do not appear to possess high artistic values by articulating a particular concept of design to the extent that they express an aesthetic ideal. Property 4A and Property 4B are also not a rare example of their type; there are similar warehouses and office buildings from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 4A or Property 4B. As these buildings represent common typologies and lack distinctive characteristics, it is unlikely that either property was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual distinction, is the most applicable to districts. Property 4A and Property 4B do not appear likely to contribute to a potential historic district. Therefore, Property 4A and 4B do not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 4A is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. ***It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.***

   Property 4A is a nondescript office and Property 4B is a nondescript warehouse constructed circa 1953. As discussed in NRHP/CRHR Criteria A/1, Property 4A does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 3.

2. ***It is the site of a documented historic event.***

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 4A or 4B. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 2.

3. It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.

As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 4A and 4B and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 3.

4. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.

Property 4A and 4B do not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Both properties are nondescript with no discernable architectural style constructed circa 1953. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 4A and 4B appear appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 4A and 4B are nondescript buildings with discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 4A or 4B. As such, Property 4A and 4B are not a notable work of an architect or master builder, nor are they a notable architectural type of specimen. There are many similar buildings in Rialto, California, and the nation. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, Property 4A and 4B do not embody elements of architectural design detail, materials, or craftsmanship. Both buildings are nondescript with no particular architectural style and were constructed of common materials using already well-documented common construction techniques. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 4A and 4B are not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 7.

8. It has unique design or detailing.

As discussed under NRHP/CRHR Criteria C/2, Property 4A and 4B do not have unique designs or detailing and there are many similar buildings throughout Rialto, California, and the United States. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 4A and 4B are nondescript buildings with no discernable style. They are not a particularly good example of a period or style. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 4A and 4B are not located within an existing historic district, nor are they located in an area with a concentration of historic-age buildings. They do not contribute to the overall feeling of a district. Therefore, Property 4A and 4B appear ineligible under City of Rialto Criteria 10.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or for local designation, properties must retain their physical integrity from the period in which they gained significance. In the case of architecturally significant properties, the period of significance is normally the date of construction. For historically significant properties, the length of the historic associations usually measures the period of significance. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states that the integrity of a property is based upon the historical significance and character-defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 1997: 45). Property 4A and Property 4B were not found significant under any NRHP, CRHR, or local criteria, and do not have a period of significance. Therefore, their integrity does not require examination.

Summary of Findings

As a result of Dudek's archival research, field survey, record search, and property significance evaluations, Property 4A and Property 4B is recommended ineligible for the NRHP, CRHR, or as a designated City of Rialto historical resource due to a lack of significant historical associations and architectural merit. Therefore, Property 4A and Property 4B are not considered historical resources for the purposes of CEQA. The recommended status code is 6Z: Found ineligible for NR, CR or Local designation through survey evaluation.

Significance summary

As a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) appears ineligible as a historical resource at the local, state, or federal level. Therefore, the subject property is not considered a historical resource for the purposes of CEQA. The recommended status code for all evaluated properties is 6Z: Found ineligible for NR, CR, or Local designation through survey evaluation. [**See Continuation Sheet**]

***B6. Construction History** *(continued from page 2):*

While the City of Rialto Building Division did return permits for the address 213 W. Valley Boulevard, these documents included electrical permits and change of occupancy and did not include building permits. Observation of Property 5 during the course of the intensive survey on December 13, 2022 did not identify any apparent alterations to Property 5.

***B10. Significance** *(continued from page 2):*

Historical Overview of the City of Rialto (1881-present)

In the 1880s, the expansion of the nation's railroad network facilitated travel westward. The small settlement of Hinkley (originally spelled Hinckley for an early setter's son), was founded in 1881 upon the arrival of the Southern Pacific Railroad (along the present-day path of CA SR 58). By 1883, the land that now makes up the City of Rialto was originally part of Rancho San Bernardino, which was established by the San Gabriel Mission in the early nineteenth century. The rancho encompassed much of present-day San Bernardino, Fontana, Rialto, Redlands, and Colton. After Mexico gained control of California, the missions were secularized, and what once was mission land was granted to private individuals. Jose del Carmen Lugo, a member of a wealthy family, petitioned Governor Alvarado for a grant of the San Bernardino Rancho, where his family had been farming and grazing (Beattie 1933). The land was granted to the Lugo family on June 21, 1842, who continued grazing livestock in the area and built several adobes.

By 1851, the Lugo family sold eight leagues of their rancho for $75,000 to Mormon settlers who were attempting to create a new colony of the Latter-Day Saints. The colonists gave rise to the City of San Bernardino, though the area encompassed parts of present-day Rialto as well. Although the colony boasted a high population and even created its own political institution separate from the City of Los Angeles, it was plagued by large debt, discontent among the settlers with the church, and a growing disdain by the public for Mormons, particularly after the Mormon Rebellion of the late 1850s (Lyman 1989; Masters 2015). Church leaders struggled to maintain religious fervor among many of the San Bernardino residents, and many settlers appeared to make the move to San Bernardino to facilitate their own separation from the church's strict policies (Lyman 1989). After the Mountain Meadows Massacre of 1857, during which Mormons settlers in Utah ambushed and murdered non-Mormon settlers, the Mormon colony of San Bernardino was completely alienated from non-Mormon communities of Southern California, and anti-Mormon hostility reached its peak. It was at this time that Brigham Young summoned the devout to return to Utah. In 1856, before the exodus of many Mormons, the area had 3,000 inhabitants, of which 84% were Mormon. However, 1,400 returned to Utah, while the remaining 1,600 decided to abandon the church and make a life for themselves in California. This return rate for the Mormon colony of San Bernardino was much lower than many other Mormon settlements outside of Utah, indicating the growing disillusionment and discontent that the San Bernardino residents felt with the church or their attachment to their settlement in San Bernardino (Adams 2004; Lyman 1989).

After the decline of the Mormon colony, the area developed slowly until 1887 when a new section of the Santa Fe Railroad was established through San Bernardino County. Like other parts of San Bernardino County, the construction of the railroad created a land speculation boom and a series of towns were established along the railroad's route. One such was Rialto, which was laid out by the Semi-Tropic Land and Water Development Company in 1887 at a cost of $670,000. While much of the early development efforts included brush clearing and town planning, a reliable water source was also a necessary component of the successful development of Rialto. To provide a reliable water source, the Semi-Tropic Land and Water Company built a concrete-lined canal that provided water from Lytle Creek Canyon to Riverside Avenue in Rialto. The Semi-

Tropic Land and Water Company was formed by a group of associates, including Sam Merrill, a successful businessperson and banker from Iowa who came to the area and settled in Rialto once it was developed. Merrill's residence was one of the numerous grand homes in the area and was constructed at a cost of $15,000. Merrill continued to live in Rialto and eventually there was a street named in his honor (Adams 2004).

In the early years, Rialto was a small town that was largely rooted in an agricultural economic system based largely on citrus orchards that were located on the outskirts of the downtown core of the City. The earliest Sanborn map of Rialto dates to 1892 and shows a small town laid out in a grid pattern with a small collection of houses spaced throughout town. The town also included the following: blacksmith shop, school, cement pipe yard, lumberyard, drug store, merchandise store, railroad depot, and offices for the Semi-Tropic Land and Water Company. The largest building in town was identified on the Sanborn Map as the Semi-Tropic Hotel located on Riverside Avenue (Sanborn 1892a, 1892b).

Growth and development of Rialto continued throughout the nineteenth century and into the twentieth century. By 1907, Rialto established a Chamber of Commerce to support the growing town and its businesses. The 1907 Sanborn map shows an increase in residential buildings throughout the town to support the growing population. In addition to residential development, more defined commercial development is indicated with new business types emerging along Riverside Avenue since 1892. New businesses included a bakery, livery, wagon shop, and barbershop. Other changes to the town seen on the 1907 Sanborn Map include the emergence of fruit packing houses that served to support the citrus industry that was prospering on the outskirts of the town (Sanborn 1907a, 1907b, 1907c). The growth and development continued over the next few years, and by the City's incorporation in 1911, there were 1,500 residents, 40 businesses, and a local newspaper (Adams 2004; City of Rialto 2016; Sanborn 1892a, 1892b, 1907a, 1907b, 1907c, 1911a, 1911b, 1911c, 1911d).

Rialto continued to grow throughout the 1910s with significant advances in transportation, including the transition of Foothill Boulevard to become part of the United States highway system as a section of Route 66 in 1913. Another advancement in transportation came the following year in 1914 when the San Bernardino Line of the Los Angeles Pacific Electric Railway was completed. However, disaster struck in the 1920s when a fire destroyed much of the downtown area (Adams 2004; City of Rialto 2016).

Like many other cities in California, World War II influenced Rialto's growth and development. During the war, a large ammunition dumpsite was put into operation in the City. Following the war, the ammunition dumpsite was taken over by a rocket-building subsidiary of B.F. Goodrich. Wartime and postwar industrial growth sparked the need for additional residential buildings to support workers and the general postwar population growth seen throughout Southern California. From the beginning of the 1950s to the end of the decade, the population of the City skyrocketed from 3,156 to 15,359. To manage this growth and development, residential subdivisions began to replace large agricultural parcels and citrus groves outside the downtown city core, and increased industrial and commercial development followed. The City continued to grow throughout the late twentieth century and continues to grow today with the most current population being reported at over 100,000 (City of Rialto 2016).

Property History

Property 5 is a single commercial building sitting on two parcels and was constructed in 1978 (San Bernardino County Assessor; San Bernardino County Sun 1978: 32). Property 5 was constructed in 1978 as a truck service station. Since its construction, Property 5 has served this function, primarily operating as HL Clements Trucking. Today, the property continues

to serve as an active truck service station.

Occupancy History

Table 1, below, lists the ownership history information available identified through research efforts from Property 5's circa 1978 construction to the present day. The original business operating out of Property 5 was H.L. Clemons Trucking. Additional information on the property's history and its various owners is provided in the "Notes" column of the below table. Research did not reveal that these owners or occupants are persons important to our past.

Table 1. Ownership / Occupancy for Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13)

Years	Owner/ Occupant	Name	Notes	Source
1978 - 2014	Owner	Harold and Gloria Clemons / Clemons Third Family LT / H.L Clemons Trucking	The LTD took over ownership beginning in 1992. The Clemons ran H.L. Clemons Trucking, a truck service business.	PIMS San Bernardino County Sun 1978: 32
2014 - 2019	Owner	Silvio and Djamila Arapovic	Research did not identify biographical or professional information.	PIMS
2019	Owner	Royal Anchor Group LLC	Research did not identify information on this LLC.	PIMS

Architect

There is no original building permit on file for Property 5 and additional research did not identify the name of the property's original architect or builder.

NRHP/CRHR Statement of Significance

Property 5: 213 W. Valley Boulevard (APN: 0132-171-10 and 0132-171-13) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) did not find any associations with events that have made a significant contribution to the broad patterns of history. Property 5 is a nondescript commercial building/truck repair station with no discernable architectural style constructed circa 1977. The area in which Property 5 sits began to be developed with light industrial and commercial properties beginning in the 1950s and continuing through the 1970s. This trend of development was part of a post-World War II population and development boom that occurred in communities throughout Southern California. From the start of the 1950s to the end of the decade, the population in Rialto grew from 3,156 to 15,359 (City of Rialto 2016). As a result of this population growth and associated development pressure,

the formerly agricultural nature of the area surrounding the Project site correspondingly changed in the postwar decades, including the eventual development of Property 5.

At the time of Property 5's construction, the Project site had already been developed with structures that appear to have primarily served automotive and trucking businesses. Property 5 was originally built to serve as a truck service station and was operated by H.L. Clemons Trucking for the majority of its history (1978-2013). While Property 5 is an example of increased post-World War II development that occurred in Rialto in the postwar decades, there is no indication that the construction of this specific property marked a pivotal point in the history of the neighborhood or city. It was neither the first nor the last of its type and was merely following a continuous pattern of light industrial and commercial development on West Valley Boulevard and around the I-10 that began in the 1950s and shifted the character of the area from primarily citrus type agriculture to light industrial and commercial. The property is not known to be directly associated with events that have made a significant contribution to the history of Rialto, California, or the United States and, therefore, Property 5 does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2 the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research did not identify any such direct association between individuals that are known to be historic figures at the national, state, or local level and Property 5. Property 5 was constructed circa 1977 as a commercial building/truck repair stop. For the majority of its history, Property 5 housed H.L Clemons Trucking (1978-2013), which was operated by Harold and Gloria Clemons. While automotive and trucking services are important industries, research did not indicate that any of the businesses associated with Property 5 were particularly innovative or notable.

Research did not uncover additional information that these or other listed owners of the property were important to the past. Due to a lack of identified significant associations with important persons in history, Property 5 does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Property 5 is a nondescript commercial building with no discernable architectural style built circa 1977. The property does not embody distinctive characteristics of a type, period or method of construction. It is a typical example of a late 1970s nondescript commercial building. There is nothing notable or unique about its design; it does not possess the distinctive characteristics of any particular style and is executed with common materials. Property 5 appears to have been constructed through already well-documented and common construction techniques and methods and does not appear to possess high artistic values by articulating a particular concept of design to the extent that it expresses an aesthetic ideal. Property 5 is also not a rare example of its type; there are similar commercial buildings from this time period throughout Rialto, Southern California, and the United States. Archival research did not identify an architect, designer, or builder of Property 5. As it is a common typology and lacks distinctive characteristics, it is unlikely that it was the work of a master architect or builder.

The last component of Criterion C, representing a significant and distinguishable entity whose components may lack individual

distinction, is the most applicable to districts. Property 5 does not appear likely to contribute to a potential historic district. Therefore, Property 5 does not appear eligible under NRHP Criterion C or CRHR Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archeological resources. Property 5 is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor do they appear likely to yield important information about historic construction methods, materials or technologies.

City of Rialto Statement of Significance

Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) does not meet any of the eligibility criteria for listing as a designated historical resource by the City of Rialto as demonstrated below.

1. *It has character, interest or value as part of the development, heritage, or cultural characteristics of the city, state of California or the United States.*

   Property 5 is a nondescript commercial truck service station with no discernable architectural style constructed circa 1978. As discussed in NRHP/CRHR Criteria A/1, Property 1 does not appear to have character, interest, or value as part of the development, heritage, or cultural characteristics of the City of Rialto, California, or the United States. Therefore, Property 5 appears ineligible under City of Rialto Criteria 1.

2. *It is the site of a documented historic event.*

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any documented historic events occurring at Property 5. Therefore, Property 5 appears ineligible under City of Rialto Criteria 2.

3. *It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.*

   As discussed in NRHP/CRHR Criteria A/1 and NRHP/CRHR Criteria B/2, archival research did not identify any strong identification between Property 5 and any person or persons who significantly contributed to the culture, history, or development of Rialto. Therefore, Property 5 appears ineligible under City of Rialto Criteria 3.

4. *It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.*

   Property 5 does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural type of specimen. Property 5 is a nondescript commercial truck service station with no discernable architectural style constructed circa 1978. There are many similar buildings in Rialto, San Bernardino County, California, and the nation. Therefore, Property 5 appears ineligible under City of Rialto Criteria 4.

5. It is notable work of an architect or master builder.

As discussed in NRHP/CRHR Criteria C/1, Property 5 is a commercial truck service station with no discernable architectural style. Archival research did not identify a builder or architect associated with the design of Property 5. As such, Property 5 is not a notable work of an architect or master builder, nor is it a notable architectural type of specimen. There are many similar warehouses in Rialto, California, and the nation. Therefore, Property 5 appears ineligible under City of Rialto Criteria 5.

6. It embodies elements of architectural design, detail, materials or craftsmanship.

As discussed in NRHP/CRHR Criteria C/3, Property 5 does not embody elements of architectural design detail, materials, or craftsmanship, It is a nondescript commercial truck service station with no discernable architectural style and is constructed of common materials using already well-documented common construction techniques. Therefore, Property 5 appears ineligible under City of Rialto Criteria 6.

7. It has a unique location or singular physical characteristics representing an established and familiar visual feature in the city.

Property 5 is not in a unique location nor does it have singular physical characteristics representing an established and familiar visual feature in the City of Rialto. Therefore, Property 5 appears ineligible under City of Rialto Criteria 7.

8. It has unique design or detailing.

As discussed under NRHP/CRHR Criteria C/2, Property 5 is a nondescript commercial truck service station with no discernable style. It does not have a unique design or detailing and there are many similar warehouses throughout Rialto, California, and the United States. Therefore, Property 5 appears ineligible under City of Rialto Criteria 8.

9. It is a particularly good example of a period or style.

As discussed under NRHP/CRHR Criteria C/2, Property 5 is a nondescript truck service station with no discernable style. It is not a particularly good example of a period or style. Therefore, Property 5 appears ineligible under City of Rialto Criteria 9.

10. It is located within a historic district, contributes to the overall feeling of the district, and which individually may lack significance.

Property 5 is not located within an existing historic district, nor is it located in an area with a concentration of historic-age buildings. It does not contribute to the overall feeling of a district. Therefore, Property 5 appears ineligible under City of Rialto Criteria 10.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or for local designation, properties must retain their physical integrity from the period in which they gained significance. In the case of architecturally significant properties, the period of significance is

normally the date of construction. For historically significant properties, the length of the historic associations usually measures the period of significance. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states that the integrity of a property is based upon the historical significance and character-defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 1997: 45). Property 5 was not found significant under any NRHP, CRHR, or local criteria, and do not have a period of significance. Therefore, its integrity does not require examination.

Summary of Findings

As a result of Dudek's archival research, field survey, record search, and property significance evaluations, Property 5 is recommended ineligible for the NRHP, CRHR, or as a designated City of Rialto historical resource due to a lack of significant historical associations and architectural merit. Therefore, Property 5 is not considered a historical resource for the purposes of CEQA. The recommended status code is 6Z: Found ineligible for NR, CR or Local designation through survey evaluation.

Kevin Rice
Patriot Development Partners
12126 W. Sunset Boulevard
Los Angeles, California 90049

Subject: **Archaeological Resources Assessment for the Alice and Willow Avenue Warehouse Project, City of Rialto, San Bernardino County, California**

Dear Kevin Rice:

Patriot Development Partners retained Dudek to provide an Archaeological Resources Assessment for the proposed Alice and Willow Avenue Warehouse Project (Project), located in the City of Rialto, San Bernardino County, California. The purpose of this report is to assist Patriot Development Partners in its evaluation of potential impacts to archaeological resources associated with the construction and operation of the Project. This letter report includes the following components: 1) an environmental setting including a review of soils; 2) a California Historical Resources Information System (CHRIS) records search; 3) a review of historical maps and aerial photographs; 4) results of the archaeological pedestrian survey; 5) an analysis of the sensitivity of the Project site to contain archaeological resources; and 6) management recommendations. This letter report was prepared in conformance with California Environmental Quality Act (CEQA) Guidelines Section 15064.5 for historical resources and 21083.2 for archaeological resources. The City of Rialto (City) is the lead agency responsible for compliance with CEQA.

Project Location

The Project is located in the central part of the City of Rialto in the southwestern portion of San Bernardino County. The Project site is mapped within public land survey system Section 23 of Township 1 South, Range 5 West on the *San Bernardino South,* California 7.5-minute United States Geological Survey (USGS) Quadrangle (Attachment A: Figure 1). The Project site is bounded to the north by West Valley Boulevard, to the east by South Alice Avenue and the Rialto Channel, to the south by Interstate (I) 10, and to the west by South Willow Avenue. The approximately 6.19-gross-acre Project site is composed of eleven (11) parcels (Assessor's Parcel Numbers [APNs] 0254-111-01, 0132-171-01, 0132-171-02, 0132-171-03, 0132-171-04, 0132-171-05, 0132-171-06, 0132-171-08, 0132-171-09, 0132-171-10, 0132-171-13, and 0132-171-14). Included within the Project site are five (5) properties with the following addresses: Property 1: 253 W. Valley Boulevard (APN 0132-171-05); Property 2: 285 S. Willow Street (APN 0132-171-03); Property 3: No associated address (APN 0132-171-01); Property 4A and 4B: 1743 S. Willow Avenue (APN 0254-111-01); and Property 5: 213 W. Valley Boulevard (APNs 0132-171-10 and 0132-171-13) (Attachment A: Figure 2).

Project Description

The Project would involve demolition of the existing onsite buildings and asphalt associated with commercial and industrial uses to allow for construction of an approximately 136,200 square foot (gross area, inclusive of office/mezzanine space) one-story industrial warehouse on the Project site. The building would be composed of approximately 130,200 square feet of warehouse space and 6,000 square feet of mezzanine and office space. The Project would also include approximately 62,174 square feet of landscaping, 91 passenger-vehicle parking spaces, and 14 high dock door parking stalls. The Project would not contain any cold storage space.

Current Project design indicates that the maximum depths of ground disturbance across the Project is 5 feet below the existing ground surface and up to 8 feet below existing ground surface for underground utilities.

On- and Off-Site Improvements

A variety of trees, shrubs, and groundcovers would be planted within the Project frontage's landscape setback area, within the landscape areas found around the warehouse building, and throughout the Project site. Fencing would be provided along the Project perimeter with automated gates at proposed driveways. The Project would also include frontage improvements along South Willow Avenue, West Valley Boulevard, and South Alice Avenue, including curb & gutter, sidewalk and parkway landscaping, right-of-way widening. and an offset cul-de-sac at the end of South Willow Avenue and South Alice Avenue.

Site Access and Parking

Access to the Project site would be provided by two driveways: one driveway on the western portion of the site on South Willow Avenue, and one driveway on the eastern portion of the site on South Alice Avenue. Automated gates at each driveway would include a pre-emption device installed for both directions of travel with a Knox key switch override.

The Project would include a total of 91 passenger parking stalls and 14 high dock door parking stalls.

Utility Improvements

The Project site is currently served by domestic water, sanitary sewer, electrical, natural gas, and telecommunication service. The Project would connect to the existing facilities located on and in the immediate vicinity of the Project site.

Storm Drainage

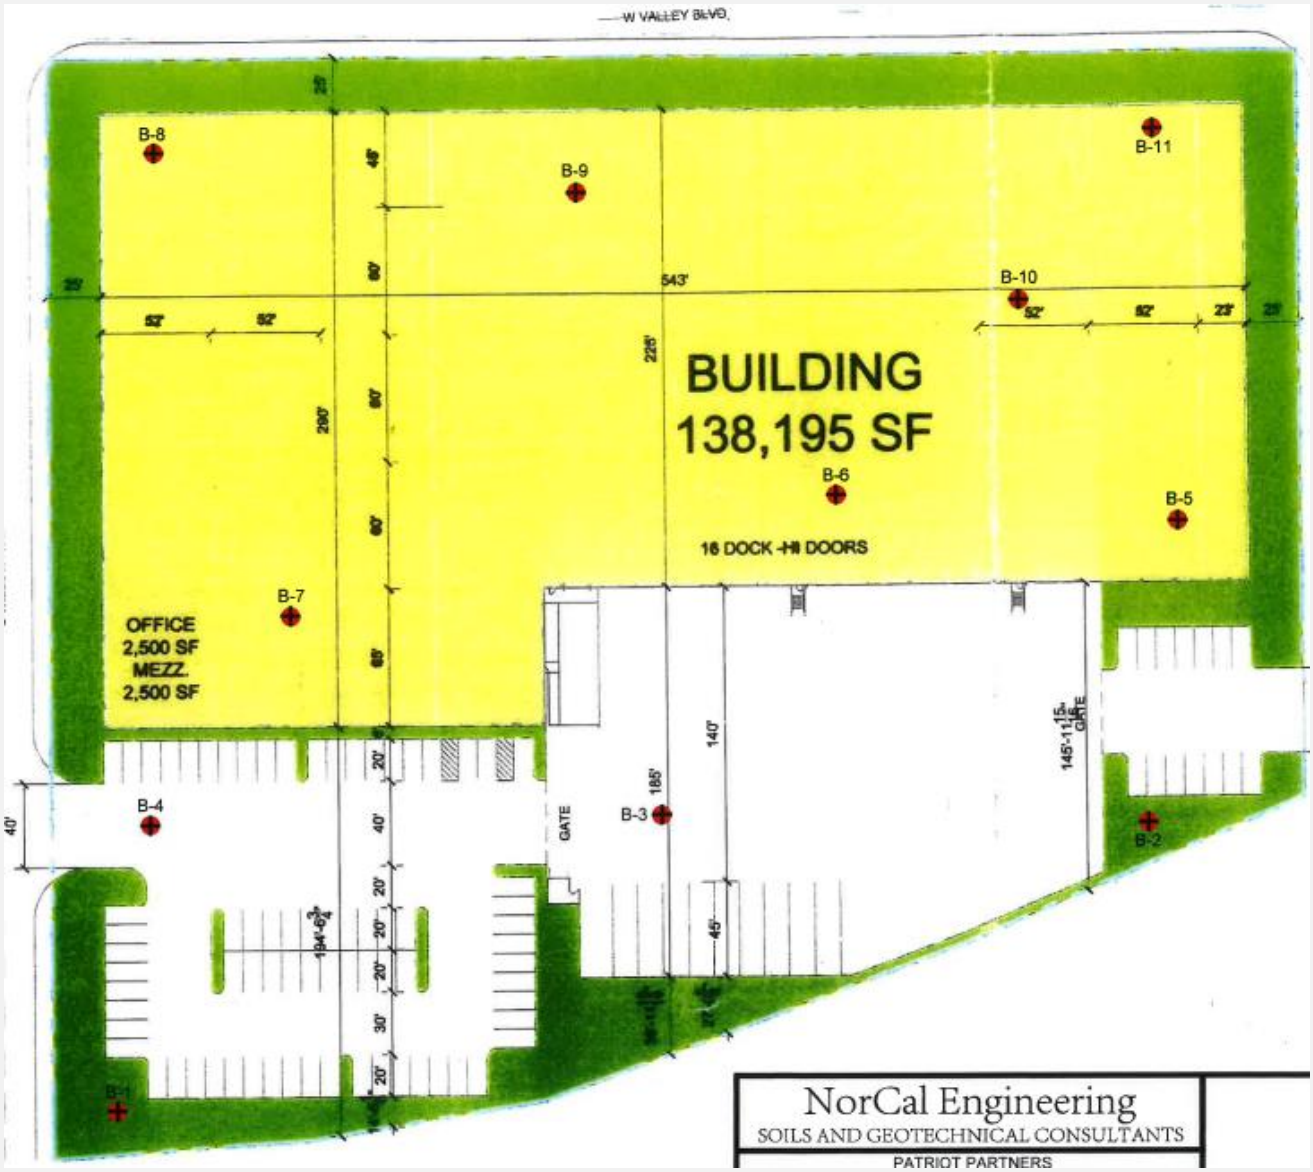
The Project proposes an internal storm drain system to collect runoff and route drainage into on-site basins on the southern portion of the Project site. Flows would generally be conveyed from the north to the south, ultimately entering an underground infiltration system along the southern edge on the Project site, north of I-10. The overflow from the underground infiltration system, which has the capacity to contain flows from 100-year storm events, would be allowed to overflow to a proposed parkway culvert onto Alice Avenue.

Environmental Setting

The Project site is within California's Transverse Range geomorphic province, which is a prominent natural region that extends east from Point Conception in Santa Barbara County to the San Bernardino Mountains (California Geological Survey 2002). More specifically, the Project site lays within the San Bernardino Valley in southwest San Bernardino County. This vast alluvial fan is bordered to the north by the San Gabriel Mountains and San Bernardino Mountains, to the east by the San Jacinto Mountains, and to the south by the Temescal Mountains and Santa Ana Mountains. Locally, the Project site is west of two major water courses: the Santa Ana River (approximately 2-miles east) and Lytle Creek Wash (approximately 3.5-miles northeast). The Project site is 2.5-miles northeast of the Jurupa Mountains and 2.3-miles southwest of the Rialto Bench, a long, relatively narrow bluff adjacent to Lytle Creek. Numerous prehistoric sites and resources documented to be of specific Native American origin are located along these topographical features. The City of Rialto General Plan designated these areas as "high sensitivity for prehistoric resources" (City of Rialto 2010). The natural vegetation within the Project vicinity prior to European colonization would have consisted of annual and perennial herbs, such as various species of sand verbena, thorn mint, and yarrow, as well as annual grasses, shrubs, and trees such as goldenhead, maple, broom, and fir (Calflora, 2022). The Project site is relatively flat with an average elevation of approximately 1,057 feet above mean sea level sloping gently to the southeast (Google 2023).

Under existing conditions, the Project site is located in a predominantly urbanized area of the City consisting of light industrial and commercial buildings. The Project site contains six buildings (Properties 1 through 5) associated with a truck driving school, diesel repair operation, and consignment shop. As such, the majority of the Project site is covered either by asphalt pavement or compacted dirt. Adjacent to the Project site are two concrete lined flood control channels. The Rialto Channel, which connects to the Santa Ana River approximately 2 miles downstream, traverses the eastern border of the Project site, and an unnamed channel runs along the southern perimeter. The Union Pacific railroad and rail depot is located approximately 0.15 miles south of the Project site.

Review of Soils



According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA 2022a), soils within the Project site are comprised primarily of Tujunga loamy sand with 0 to 9 percent slopes (85 percent) and minor components including Soboba (5 percent), Delhi (5 percent), and Unnamed (5 percent). The Tujunga series is characterized as very deep, somewhat excessively drained soils that formed in alluvium from granitic sources. This soils series is found on alluvial fans and floodplains, including urban areas, and consists of slopes ranging from 0 to 12 percent. A typical Tujunga series pedon extends approximately 6.5 feet below ground surface (bgs) (USDA 2022b).

A review of the USGS mineral resources (USGS 2022) online spatial data for geology indicates that existing development is underlain by Quaternary alluvium and marine deposits, generally dating between the Pleistocene and the Holocene geologic age. Terminal Pleistocene-era and Holocene-era alluvial formations do have the potential to support the presence of buried archaeological resources. These soils are associated with the period of prehistoric human use and represent ongoing processes of development that have the potential to preserve cultural material in context.

Geotechnical Report Review

NorCal Engineering prepared the geotechnical report *Geotechnical Engineering Investigation, Proposed Industrial Warehouse Development, SEC Valley Boulevard and Willow Avenue, Rialto, California* (2022), to evaluate the subsurface conditions of the Project site prior to construction. The report provides the results of eleven (11) subsurface exploratory borings (B-1 through B-11) dispersed evenly throughout the Project site (Exhibit 1). A truck mounted hollow stem auger and hand operated auger were used during the subsurface exploratory borings. The subsurface exploratory borings were terminated at depths ranging between 5 feet and 20.5 feet bgs.

Exhibit 1. Subsurface Exploratory Boring Locations (NorCal Engineering 2022)

Results of the subsurface exploratory borings revealed relatively uniform soil characteristics throughout the Project site. Subsurface investigations encountered two soils: fill and natural. Fill soil was encountered across the site to depths ranging from 1 foot to 2.5 feet bgs. Fill soils were characterized as brown, fine to coarse grained silty sand with gravel, rock, and occasional cobble. Underlying fill soils was natural undisturbed alluvium characterized as brown to light brown, fine to coarse grained silty sand with gravel, rock, and occasional cobbles that increase in size and quantity with depth. Groundwater was not encountered during the subsurface investigation. Table 1 below provides a summary of the individual subsurface exploratory borings.

Table 1. Summary of Subsurface Exploratory Borings – NorCal Engineering 2022

Boring Number	Asphaltic Concrete	Fill Soils (bgs)	Native Alluvium (bgs)
B-1	4.5 inch over 3 inch base	7.5 inch–**1.5 feet**	1.5 feet–**5 feet***
B-2	2.5 inch over 8 inch base	10.5 inch–**2 feet**	2 feet–**10 feet***
B-3	3.5 inch over 3.5 inch base	7 inch–**2 feet**	2 feet–**10 feet***
B-4	3.5 inch over 8 inch base	11.5 inch–**1.25 feet**	1.25 feet–**5 feet***
B-5	3.5 inch, no base	3.5 inch–**2 feet**	2 feet–**10 feet***
B-6	None	0 inch–**2 feet**	2 feet–**5 feet***
B-7	None	0 inch–**1.5 feet**	1.5 feet–**10 feet***
B-8	None	0 inch–**1 foot**	1 foot–**5 feet***
B-9	3 inch pulverized asphalt	3 inch–**2 feet**	2 feet–**10 feet***
B-10	3.5 inch, no base	3.5 inch–**2.5 feet**	2.5 feet–**20.5 feet***
B-11	None	0 inch–**2 feet**	2 feet–**5 feet***

*Denotes terminated depth of subsurface exploratory boring and not a change in soil designation

Regulatory Context

Work for this Project was conducted in compliance with the California Environmental Quality Act (CEQA). The regulatory framework as it pertains to cultural resources under CEQA is detailed below.

Under the provisions of CEQA, including the CEQA Statutes (PRC Sections 21083.2 and 21084.1), the CEQA Guidelines (14 CCR 15064.5), and California Public Resources Code (PRC) Section 5024.1 (14 CCR 4850 et seq.), properties expected to be directly or indirectly affected by a proposed project must be evaluated for California Register of Historical Resources (CRHR) eligibility (PRC Section 5024.1).

The purpose of the CRHR is to maintain listings of the state's historical resources and to indicate which properties are to be protected, to the extent prudent and feasible, from material impairment and substantial adverse change. The term historical resources includes a resource listed in or determined to be eligible for listing in the CRHR; a resource included in a local register of historical resources; and any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (14 CCR 15064.5[a]). The criteria for listing properties in the CRHR were developed in accordance with previously established criteria developed for listing in the National Register of Historic Places. The California Office of Historic Preservation regards "any physical evidence of human activities over 45 years old" as meriting recordation and evaluation (OHP 1995:2).

State

The California Register of Historical Resources

A cultural resource is considered "historically significant" under CEQA if the resource meets one or more of the criteria for listing on the CRHR. The CRHR was designed to be used by state and local agencies, private groups, and citizens to identify existing cultural resources within the state and to indicate which of those resources should be protected, to the extent prudent and feasible, from substantial adverse change. The following criteria have been established for the CRHR. A resource is considered significant if it:

1. is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. is associated with the lives of persons important in our past;
3. embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. has yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the above criteria, historical resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be able to convey the reasons for their significance. Such integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association.

Under CEQA, if an archeological site is not a historical resource but meets the definition of a "unique archeological resource" as defined in PRC Section 21083.2, then it should be treated in accordance with the provisions of that section. A unique archaeological resource is defined as follows:

- An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:
    - Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information
    - Has a special and particular quality, such as being the oldest of its type or the best available example of its type
    - Is directly associated with a scientifically recognized important prehistoric or historic event or person

Resources that neither meet any of these criteria for listing in the CRHR nor qualify as a "unique archaeological resource" under CEQA (PRC Section 21083.2) are viewed as not significant. Under CEQA, "A non-unique

archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects" (PRC Section 21083.2[h]).

Impacts that adversely alter the significance of a resource listed in or eligible for listing in the CRHR are considered a significant effect on the environment. Impacts to historical resources from a proposed project are thus considered significant if the project (1) physically destroys or damages all or part of a resource; (2) changes the character of the use of the resource or physical feature within the setting of the resource, which contributes to its significance; or (3) introduces visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource.

California Environmental Quality Act

As described further, the following CEQA statutes (PRC Section 21000 et seq.) and CEQA Guidelines (14 CCR 15000 et seq.) are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- PRC Section 21083.2(g) defines "unique archaeological resource."
- PRC Section 21084.1 and CEQA Guidelines Section 15064.5(a) defines "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource"; it also defines the circumstances when a project would materially impair the significance of a historical resource.
- PRC Section 21074(a) defines "tribal cultural resources."
- PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- PRC Sections 21083.2(b) and 21083.2(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures. Preservation in place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (PRC Section 21084.1; CEQA Guidelines Section 15064.5(b)). If a site is listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1(q)), it is an "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5(b)(1); PRC Section 5020.1(q)). In turn, the significance of a historical resource is materially impaired when a project does any of the following:

(1) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

(2) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(3) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA (CEQA Guidelines Section 15064.5(b)(2)).

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC Sections 21083.2(a)–(c)).

Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

(1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

(2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.

(3) Is directly associated with a scientifically recognized important prehistoric or historic event or person (PRC Section 21083.2(g)).

Impacts on nonunique archaeological resources are generally not considered a significant environmental impact (PRC Section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a nonunique archaeological resource qualifies as a tribal cultural resource (TCR) (PRC Sections 21074(c) and 21083.2(h)), further consideration of significant impacts is required.

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC Section 5097.98.

California State Assembly Bill 52

Assembly Bill (AB) 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 established that TCRs must be considered under

CEQA and also provided for additional Native American consultation requirements for the lead agency. Section 21074 describes a TCR as a site, feature, place, cultural landscape, sacred place, or object that is considered of cultural value to a California Native American Tribe and that is either:

- On or determined to be eligible for the California Register of Historical Resources or a local historic register; or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1.

AB 52 formalizes the lead agency–tribal consultation process, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with the project site, including tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report.

Section 1 (a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on TCRs should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to tribal cultural resources, the consultation shall include those topics (PRC Section 21080.3.2[a]). The environmental document and the mitigation monitoring and reporting program (where applicable) shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

California Health and Safety Code Section 7050.5

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the county coroner has examined the remains (Section 7050.5(b)). PRC Section 5097.98 also outlines the process to be followed in the event that remains are discovered. If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact NAHC within 24 hours (Section 7050.5(c)). NAHC will notify the "most likely descendant." With the permission of the landowner, the most likely descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the most likely descendant by NAHC. The most likely descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains, and items associated with Native Americans.

Local

City of Rialto General Plan

The City of Rialto has outlined goals and policies pertaining to the protection of historical and archaeological resources in its General Plan, adopted by the City in December 2010. The applicable goals and policies are reproduced below (City of Rialto 2010).

Historical Resources

Goal 7-1: Preserve Rialto's significant historical resources as a source of community identity, stability, aesthetic character, and social value.

Policy 7-1.1: Protect the architectural, historical, agricultural, open space, environmental, and archaeological resources in Rialto.

Policy 7-1.2: Identify, through appropriate research and surveys, the historical resources in Rialto through documentation and photography.

Policy 7-1.3: Explore and evaluate different approaches to protect and enhance historical resources throughout the community.

Policy 7-1.4: Encourage economically feasible preservation of historical structures through adaptive reuse.

Goal 7-2: Provide public understanding and involvement of the unique heritage of the City of Rialto.

Policy 7-2.1: Heighten the community awareness of Rialto's history and the City's physical development, and educate the public to the significance of historical areas, sites, and structures and the social events associated with them.

Policy 7-2.2: Establish, promote, and enhance a Rialto history collection centered on the archaeological, historic archaeological and historical texts, archives, and collections of value to Rialto.

Archaeological Resources

Goal 7-3: Identify, document, and protect significant archaeological resources in Rialto.

Policy 7-3.1: Require archaeological surveys during the development review process for all projects in archaeologically sensitive areas where no previous surveys are recorded.

Policy 7-3.2: Actively pursue a comprehensive survey program to identify, document, and protect prehistoric and historical archaeological sites and sites containing Native American human remains.

Policy 7-3.3: Avoid impacts to potentially significant prehistoric and historical archaeological resources and sites containing Native American human remains consistent with State law.

Policy 7-3.4: Reduce adverse impacts to significant archaeological resources that can not be protected in place through data recovery excavations.

BACKGROUND RESEARCH

CHRIS Records Search

On November 22, 2022, Dudek conducted a search of the CHRIS at the South Central Coastal Information Center (SCCIC), located at the California State University, Fullerton. The records search included previously recorded cultural resources and investigations conducted within a 0.5-mile radius of the Project site. The CHRIS search also included a review of the National Register of Historic Places (NRHP), the CRHR, the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. Dudek reviewed the SCCIC records to determine whether the implementation of the Project would have the potential to impact known and unknown cultural resources. Confidential Attachment B provides the complete records search results.

Previously Conducted Cultural Resources Studies

Results of the CHRIS records search indicate that fourteen (14) previous cultural resources studies have been conducted within 0.5-mile of the Project site. These studies were conducted between 1984 and 2008. Of these investigations, one (1) study, SB-01772, overlaps the Project site. Results of SB-01772 are discussed in the following paragraph. Table 2, below, provides reference information for all 14 previous cultural resources studies within 0.5-mile of the Project site.

SB-01772

Environmental Impact Evaluation: An Archaeological Assessment of the Rialto Gateway Project, San Bernardino County, California (Hallaran and Swope 1988), documents the results of a cultural resources assessment within the boundaries of the City's proposed Gateway Specific Plan area. The purpose of the Gateway Specific Plan was to provide mixed-use land development within approximately 350 acres of the City. The current Project site is included within the southern portion of the Plan area and comprises approximately two percent of the total Plan area.

Planning consultants retained the Archaeological Research Unit (ARU), University of California, Riverside, to determine to what extent cultural resources within the Plan area would be affected by the proposed development. The cultural resources assessment included a review of the California Archaeological Inventory, archaeological, ethnographic, and historical literature pertinent to the study area, and a pedestrian survey of undeveloped portions within the Plan area. The records search identified one (1) previously recorded cultural resource within the Plan area which consists of a north/south trending dirt road that traverses the eastern portion of the Plan area (resource designation P1074-61-H). No previously recorded prehistoric resources or resources of Native American origin were identified within the Plan area as a result of the records search. The pedestrian survey focused on undeveloped land within the Plan area and a visual check of historic-period structures identified on historic maps. Given that the current Project site was developed during these 1988 survey efforts, it is assumed that the current Project site was not included in this pedestrian survey. No significant cultural resources were discovered in the Plan area as a result of the pedestrian survey. Historic-period structures identified on historic maps were either razed or identified as lacking significant historical value. Additionally, there was no evidence of the previously recorded historic road

P1074-61-H. ARU determined that no further cultural resources investigations were required prior to implementation of the Specific Plan. ARU recommended that a qualified archaeologist be contacted should development result in the unanticipated discovery of cultural resources.

Table 2. Previously Conducted Cultural Resources Studies Within 0.5-Mile of the Project Site

Previously Recorded Cultural Resources

The CHRIS records indicate that no previously recorded cultural resources exist within or adjacent to the Project site. Four (4) resources have been recorded within the surrounding 0.5-mile records search area. The identified cultural resources include one (1) prehistoric archaeological site (P-36-001579/CA-SBR-1579); (1) historic-period archaeological site (P-36-006868/CA-SBR-6868H); and two (2) historic-period built environment resources (P-36-021603/CA-SBR-10330H and P-36-010330). The two (2) historic-period built environment resources include the Union Pacific Railroad (P-36-021603/CA-SBR-10330H) and a complex of industrial storage tanks (P-36-021603) built between 1955 and 1966. Neither of these resources are considered CRHR historical resources. The archaeological sites are discussed in the following paragraphs. Table 3, below, provides further details on the previously recorded cultural resources within the records search area.

P-36-001579/CA-SBR-1579

Smith recorded prehistoric site P-36-001579/CA-SBR-1579 in 1963. The site consists of a collection of projectile points and lithic flakes identified within a disturbed context. According to Smith, the artifacts were recovered in a road “blow out” (1963). Information within the site record is scant and limited to a brief discussion with a local informant regarding additional artifacts recovered in the area. Smith states the site is along a channel of Lytle Creek, and that he has found evidence of prehistoric Native American campsites along the banks of Lytle Creek from “Rialto to Santa Ana River” (1963). P-36-001579/CA-SBR-1579 has not been evaluated for listing on the CRHR or the NRHP

P-36-006868/CA-SBR-6868H

Schmidt et al. (1990) recorded P-36-001579/CA-SBR-1579 as a large diffuse scatter of historic-period artifacts identified within an undeveloped lot. Artifacts were described as highly fragmented and evenly distributed throughout the entirety of the lot through prior disking activities. The rectangular lot measures 125 meters (410 feet) by 150 meters (492 feet) and consists of vacant agricultural land. Artifacts consisted of domestic and building material refuse including the following: various colors of glass vessels and tableware fragments including temporally diagnostic sun-colored amethyst; glass windowpane; several types of diagnostic ceramic tableware fragments; ceramic sewer pipe; metal silverware with maker's marks; large mammal bone (*Bos* sp.); and shell (*Ostrea* sp., *Mytilus* sp. *Chione* sp., and *Tivela* sp.). Modern refuse was tilled with the cultural material. P-36-001579/CA-SBR-1579 has not been evaluated for listing on the CRHR or the NRHP.

Table 3. Previously Recorded Cultural Resources Within a 0.5-Mile Radius of the Project Site

Designation	Resource Description	Recording Events	NRHP/CRHR Status	Approximate Proximity to Project Site
P-36-001579 CA-SBR-1579	Prehistoric archaeological site: collection of projectile points and lithic flakes	1963 (Smith, G.)	7R: Identified in Survey; Not evaluated	497 meters (1631 feet) southeast
P-36-006868 CA-SBR-6868H	Historic-period archaeological site: scatter of domestic refuse and building material	1990 (Schmidt et al.)	7R: Identified in Survey; Not evaluated	804 meters (2638 feet) northwest
P-36-010330 CA-SBR-10330H	Built environment: Union Pacific Railroad	1999 (Ashkar, S.); 2002 (Goodwin, R.) 2008 (Harper, C.D.); 2010 (Tibbet, C.); 2012 (Paul, Daniel D.)	6Y: Determined ineligible for NRHP by consensus through Section 106 process	95 meters (312 feet) south
P-36-021603	Built environment: storage tanks	2008 (Hollins, J.)	6Z: Found ineligible for NRHP, CRHR or Local designation through survey evaluation	855 meters (2805 feet) southeast

Review of Historical Maps and Aerial Photographs

Dudek consulted historical topographic maps and aerial photographs through the Nationwide Environmental Title Research, LLC (NETR) to better understand any natural or human-made changes to the Project site and surrounding area over time.

Historical Topographic Maps

Topographic maps depict elevation of the study area as well as the areas surrounding it and illustrate the location of roads and some buildings. Although topographic maps are not comprehensive, they are another tool in determining whether a study area has been disturbed and at times to what approximate depth. A review of available topographic maps was conducted and includes the following years: 1896, 1898, 1901, 1905, 1909, 1913, 1926, 1929, 1938, 1943, 1946, 1955, 1959, 1963, 1965, 1969, 1974, 1977, 1981, 2012, 2015, and 2018 (NETR 2022a). Table 4, below, summarizes the results of the topographic maps review of the proposed Project site and surrounding properties for all available years

Table 4. Historical Topographic Map Review of the Project Site

Photograph Year	Observations and Findings
1896-1938	The Project site is within a vacant block of the developing City grid. The Southern Pacific Railroad is to the south.
1943-1946	The topographical relief has been enhanced on this map such that the Project site is shown adjacent to a vast drainage from Lytle Creek. The Ocean to Ocean Highway, present day Valley Boulevard, is depicted as a primary highway, running east to west, along the northern border of the Project site. Willow Street, present day Willow Avenue, borders the Project site to the west. There are no structures depicted within the Project site.
1955	Highway 70/99 is depicted between the Project site and railroad. Valley Boulevard is now a light duty, hard, or improved road, and is no longer a primary highway. There are seven structures within the Project site, clustered mostly in the north half.
1959-1965	There are no significant changes to the Project site as depicted on these maps
1969	The Project site appears to have been divided by a municipal boundary, east to west, in the southern half of the Project site. There are three (3) structures south of the dividing line, and nine (9) structures north of the dividing line: two long, possibly warehouse, structures mid-site, with a square structure to the east. There is a cluster of three (3) structures in the northeast corner. The other three (3) structures are spread out: one (1) along the east side, and (2) to the west. South Alice Avenue is evident, though yet unnamed. What had been Highway 70/99 has been expanded, and is now the San Bernardino Freeway/I-10.
1974	There are no significant changes to the Project site.
1981	Three new structures are depicted along the west side of the Project site.
2012-2018	An apparent drainage that likely represents the Rialto Channel is adjacent to the eastern border of the Project site. The maps during these years no longer plot buildings, though buildings and structures are still extant on the Project site. .

While topographic maps are informative, they do not illustrate the minute changes that can occur to a landscape overtime and at times, are inconsistent with what is depicted year to year. Most often, structures depicted in topographical maps are limited to those with community or social significance (e.g., Firehouses or Hospitals), including additions or changes to roads and/or waterways. Nonetheless, the information gathered contributes to the understanding of the chronological development of a study area.

Historical Aerial Photographs

A review of historical aerial photographs was conducted as part of the archival research effort from the following years: 1938, 1949, 1959, 1966, 1967,1968, 1980, 1984, 1985, 1994, 1995, 2002, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020 (NETR 2022b). Through careful comparative review of historical aerials, changes to the landscape of a study area may be revealed. Disturbance to the study area is specifically important as it helps determine if soils within the study area are capable of sustaining intact archaeological deposits. Additionally, historical aerials have the potential to reveal whether a study area was subjected to alluvial deposits by way of flooding, debris flows or mudslides, as well as placement of artificial or foreign fill soils that may have buried intact archaeological deposits. Table 5, below, summarizes the results of the aerial photograph review of the Project site and surrounding properties for all available years.

Table 5. Historical Aerial Photograph Review of the Project Site

Photograph Year	Observations and Findings
1938	The area surrounding the Project site is largely agricultural, developed with small residential farms and orchards, within a well-defined grid-system. The Project site is a large, open field that appears to be bound by ditches to the north and east, South Riverside Avenue (contemporary name) to the west, and a well-defined two-lane road to the south. A natural slough meanders (generally northwest/southeast) and skirts the east boundary of the Project site. The Union Pacific railroad is located south of the Project site, connecting the agricultural area to regional markets.
1948	The Project area has retained a rural setting and appears to still be one large parcel. A building (non-extant) has been constructed along the Project site's western boundary and three (non-extant) ancillary buildings are scattered behind (east) of the residence. Informal dirt roads connect the properties. The road south of the subject property has been expanded and widened.
1959	Suburban growth has continued, but the Project site's setting continues to be largely agricultural. The parcels on which Properties 2 and 3 sit have been developed with at least 9 (non-extant) buildings. The parcels all appear to show some evidence of grading. The Project site's southeast corner has been rounded by the expansion of I-10. The natural slough has been channelized and Alice Avenue now binds the Project site's east edge.
1966	There are more new structures in the north half of the Project site, including what appears to be a large shed or warehouse in the central north area. There is another long, rectangular structure immediately to its west side, and square structure to its east. A line of young trees is visible between the Project Area and I-10. Property 1 is extant. The structure in the southwest corner of the proposed Project site appears to have been remodeled or replaced.
1967	Valley Boulevard (contemporary name) bordering the north of the Project site has been improved and widened.
1968	At this time, the Project site is more visibly associated with the vehicular and trucking businesses. There is visible vehicular debris and what appears to be a figure-8-shaped track at the east side of the Project site.
1978	There have been significant changes to the Project area or the nature of the surrounding area. A building has been removed from the parcel on which Property 1 sits. Property 2 Property 3, and Property 5 are extant by this time,

Table 5. Historical Aerial Photograph Review of the Project Site

Photograph Year	Observations and Findings
1980	There have been significant changes to the Project site. By this time, the entirety of the Project site has been subject to ground disturbing activities. A building has been removed from the parcel on which Property 1 sits. Property 2, Property 3, and Property 5 are extant by this time. A line of mature trees continues to line the south border of Property 4A and 4B's parcel. It also appears that the other buildings located on Property 2's parcel have been demolished.
1984	All areas of the Project site have been subject to earth moving activities and grading.
1985	All ancillary buildings have been removed from the Project site. Most of the trees have been removed from the southern boundary of Property 4A and 4B's lot which has been reshaped and is no longer a rectangular property. The southern boundary now curves and meets the northeast corner at point.
1986-2020	There are minimal significant changes to the Project site during these years aside from the apparent demolition of the structure in the northeast corner of the Project site by 2012.

Historical Account of the Project Site

Dudek prepared a Built Environment Inventory and Evaluation Report (Cancilla et al. 2023) for the current Project that includes a detailed historical account of the five individual properties occupying the Project site (Attachment A: Figure 2). For purposes of this report, historical accounts demonstrate how land use and associated ground disturbance have altered the landscape. According to Cancilla et al. (2023), the Project site was agricultural until the mid-twentieth century, at which time it was subdivided into individual parcels. Provided below is a summary of development within each property as documented by Cancilla et al. (2023).

- **Property 1: 253 West Valley Boulevard (APN 0132-171-05)** Property 1 is a warehouse located at the northern central boundary of the Project site. Property 1 was constructed circa 1964 and has served as a warehouse for a variety of businesses primarily related to trucking repair and storage. At the time of its construction, Property 1 was one of approximately three structures on its parcel. These buildings likely served as offices for the various businesses. Per aerial photographs, these other structures were no longer extant by 1980 (NETR 2022)
- **Property 2: 285 South Willow Avenue (APN 0132-171-03)** Property 2 is an office building constructed between 1968-1977 (UCSB 2022). The property appears to have originally been constructed as an office for Caudill's Auto Service, which opened in the 1960s and was originally comprised of approximately 10 buildings. Only one other building from this complex, Property 3, is still extant. Per aerial photographs, the majority of these structures were demolished by 1980 (NETR 2022; UCSB 2022).
- **Property 3: No associated address (APN 0132-171-01)** Property 3 is a warehouse and garage originally constructed circa 1968 per aerial photographs (NETR 2022; UCSB 2022). At the time of Property 3's construction, the parcel on which it sits had been improved with approximately 10 structures (none of which are extant in 2022).
- **Property 4A and 4B: 1743 South Willow Avenue (APN 0254-111-01)** Property 4A is an office building and property 4B is a warehouse and garage. Aerial photographs indicate that Property 4A was extant by 1953

and property 4B was under construction by 1953 (UCSB 2022). Today, Property 4A and Property 4B serve the trucking service, repair, and driving school that operate from the Project site.

- **Property 5: 213 West Valley Boulevard (APN 0132-171-10; 0132-171-13)** Property 5 is a commercial building sitting on two parcels. The subject property was constructed in 1978 as a truck service station. Property 5 has served this same function since its construction.

1938 Kirkman-Harriman Historical Map

Dudek cultural resources specialists reviewed sources commonly identified though Tribal consultation, notably the 1938 Kirkman-Harriman Historical Map (Attachment A: Figure 3). Based on this map, the Project site is approximately 9 miles southwest of the San Bernardino Mountains and approximately 1 mile northeast of the Jurupa Hills. Roadways mapped in close proximity to the Project site include the "Old Salt Road", also identified as "Camino para Sal[1]", approximately 1.2 miles to the north and a Mission Road mapped approximately 3.5 miles to the south. Waterways mapped in the vicinity of the Project site include the confluence of Lytle Creek Wash and Cajon Wash approximately 6.5 miles to the north. The historical route of the Santa Ana River is mapped approximately 6.3 miles east and 7.1 miles south of the Project site. Roughly 7 miles to the northeast of the Project site is a location symbolized with a flag and labeled "Cp. San. Bdno. San Bernardino (1850)[2]". Well outside the Project footprint but within the general surrounding vicinity are two (2) unnamed Native American villages. The villages are mapped approximately 5.3 miles southeast and approximately 5.7 miles south of the Project site.

None of the features identified on the 1860-1938 Kirkman-Harriman Historical Map intersects, overlaps, or is in the immediate vicinity of the Project site. Furthermore, no archaeological evidence of the nearest villages on the Kirkman-Harriman Historical map was provided in the CHRIS records search results or review of other archaeological information. This is likely because the nearest mapped villages are located approximately 5-miles from the Project site, a distance that is outside the Project's records search radius.

It should be noted that this map is highly generalized due to scale and age and may be somewhat inaccurate with regards to distance and location of mapped features. Additionally, this map was prepared based on review of historic documents and notes more than 100 years following secularization of the missions (in 1833). Although the map contains no specific primary references, it matches with the details documented by the Portolá expedition (circa 1769–1770). The map is a valuable representation of post-colonization mission history; however, it is limited to a specific period of Native American history and substantiation of the specific location and uses of the represented individual features should be verified by archaeological records and/or other primary documentation.

Native American Coordination

Assembly Bill 52

The Project is subject to compliance with AB 52 (PRC 21074), which requires consideration of impacts to TCRs as part of the CEQA process, and that the lead agency notify California Native American Tribal representatives that have requested notification who are traditionally or culturally affiliated with the geographic area of the Project site.

[1] Mapped Point 9: Old Salt Road (Camino para Sal) "traversed once a year, [until] 1833, by armed caravan sent for year's supply of salt by Los Angeles, to salt beds at Salton" (Latker 2011).
[2] Mapped Point 34: "Camp San Bernardino, near San Bernardino, on three sites during Civil War" (Latker 2011).

All records of correspondence related to AB 52 notification and any subsequent consultation are on file with the City. A summary of the consultation record is provided and addressed in the Initial Study/Mitigated Negative Declaration document for the Project.

Field Survey

Methods

Dudek conducted an archaeological pedestrian survey of the Project site on December 22, 2022. Based on the existing Project site conditions, survey techniques were adjusted in accordance with the various levels of development and observable ground surface. An opportunistic survey approach was employed where visibility was obscured by either asphalt, extant buildings or structures, staged miscellaneous items, landscaping, or vegetation coverage. An intensive-level survey, which entailed walking parallel transects spaced no more than 10 meters apart (approximately 32 feet), was conducted in areas of available ground surface. The ground surface was inspected for prehistoric artifacts (e.g., flaked stone tools, tool-making debris, groundstone tools, ceramics, fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions, features indicative of structures and/or buildings (e.g., standing exterior walls, post holes, foundations), and historical artifacts (e.g., metal, glass, ceramics, building materials). Ground disturbances such as burrows, graded areas and bases of trees and bushes were also visually inspected for exposed subsurface materials.

All fieldwork was documented using field notes and an Apple Generation 6 iPad (iPad) equipped with ESRI Collector and Avenza PDF Maps software with close-scale georeferenced field maps of the Project site. Location-specific photographs were taken using the iPad's 8-mega-pixel resolution camera. All field notes, photographs, and records related to the current study are on file at Dudek's Pasadena, California office. All field practices met the Secretary of Interior's standards and guidelines for a cultural resources inventory.

Results

The Project site is comprised of eleven (11) parcels totaling approximately 6.19-gross acres of commercially developed land. The Project site is almost entirely covered in hardscape with the exception of the parkways along South Willow Avenue and South Alice Avenue and garden beds surrounding a few of the extant buildings (Exhibit 2; Exhibit 3; Exhibit 4; Exhibit 5). Given the extent of hardscape throughout the Project site, Dudek estimates that approximately 10 percent of the Project site was surveyed for archaeological resources. Table 5, below, outlines the archaeological survey limitations and results within each parcel. Areas that contained observable exposed ground surface showed heavily disturbed fill soils. Remains of a concrete slab foundation from a single-family residence was identified in the northeast corner of the Project site within APN 0132-171-14 (Exhibit 6). The property occupied the parcel from 1948 through the early 2000s when it was eventually demolished (NETR 2022b; ParcelQuest 2022). No further cultural resources considerations are required for this resource as it has been destroyed. No additional historic-period cultural material or material of Native American origin was identified during the survey.

Table 6. Results of the Archaeological Pedestrian Survey of the Project Site

APN(s)	Limitation	Findings
0132-171-01 0132-171-02 0132-171-03 0132-171-04 0132-171-05 0132-171-09	These parcels comprise the northwest quadrant of the Project site. Hardscape in this area consists of compacted fill, pulverized asphalt, and gravel that covers approximately 95 percent of the ground surface (Exhibit 2).	Approximately 5 percent of this area contained exposed ground surface suitable for a visual inspection. A small portion of exposed ground surface was observed along the western border of the Project site. Soils in this area consisted of highly disturbed alluvium and/or fill material. No cultural material was identified.
0132-171-08 0132-171-10 0132-171-13	These parcels comprise the northeast quadrant of the Project site. Hardscape in this area consists of asphalt pavement that covers approximately 100 percent of the ground surface (Exhibit 3).	Dudek did not conduct an archaeological pedestrian survey of these parcels given the lack of available exposed ground surface.
0254-111-01	This parcel comprises the southern portion of the Project site. Asphalt pavement covers the entire parcel except for a small garden bed surrounding Property 4A (Exhibit 4).	Soil within the garden bed consisted of non-native fill and/or gardening soil. No cultural material was identified. The remainder of this parcel was not surveyed due to the lack of available exposed ground surface.
0132-171-14	This parcel comprises the northeast corner of the Project site. There were no limitations in this area (Exhibit 5).	100 percent of this parcel was surveyed for archaeological resources. Observable ground surface consisted of heavily disturbed alluvium with evidence of prior grading and earth shaping activities. A portion of the parcel is currently used for informal parking. A square concrete slab foundation measuring 23 feet by 23 feet is within the northern half of the parcel. Archival research indicates that this foundation is from a single-family residence built in 1948 (ParcelQuest 2022). The property was razed circa 2000 (NETR 2022a)

Exhibit 2. Northwest quadrant of Project site showing various hardscapes unsuitable for archaeological survey; view facing west (Dudek IMG_1897)

Exhibit 3. Northwest quadrant of Project site showing lack of exposed ground surface; view facing southwest (Dudek IMG_1919)

Exhibit 4. Southern portion of Project site showing lack of exposed ground surface; view facing west (Dudek IMG_1823)

Exhibit 5. APN 0132-171-14 showing foundation remnants from 1948 single-family property; view facing southwest (Dudek IMG_2617)

Sensitivity Analysis

A search of the CHRIS database for the Project site and 0.5-mile records search area resulted in the identification of one (1) previously conducted investigation that overlaps the Project site (SB-01772). However, the Project site was not included in the pedestrian survey conducted for the investigation, suggesting that the Project site has not been subject to any previous archaeological investigations. As a result of this, no previously recorded archaeological resources were identified within the Project site during the CHRIS records search. Two (2) archaeological resources were identified within the 0.5-mile records search area, however. These resources consist of a prehistoric lithic scatter (P-36-001579/CA-SBR-1579) and a historic-period refuse scatter (P-36-001579/CA-SBR-1579).

According to the aerial photographs review, the proposed Project site has been subjected to consistent ground disturbance, shifting from undeveloped land in 1938 with the unchanneled wash to the east that overlapped the northeast corner of the Project site, and transforming steadily to include the development and removal of buildings/structures between the late 1940s to the early 2010s.

A review of the geotechnical report prepared for the Project site determined that fills soils were identified from surface to between 1 and 2.5 feet bgs within all exploratory boring locations (NorCal Engineering 2022). Current Project design indicates that the depths of ground disturbance across the Project site is 5 feet below the existing ground surface and up to 8 feet below the existing ground surface for underground utilities, suggesting that excavations will occur within native soils.

Results of the geotechnical study indicate that the Project site is predominately covered in asphalt and fill soils (NorCal Engineering 2022). As such, any exposed soils observed during the archaeological pedestrian survey were likely fill soils from an unknown origin. These soils do not represent the native soils present prior to ground disturbing activities associated with past development. Thus, the current surface expression of observable ground surface is considered an unreliable indicator of the cultural sensitivity of the Project site.

In consideration of all these factors, the potential to encounter intact cultural deposits containing archaeological and tribal cultural resources within soils from the current grade to approximately 2.5 feet bgs is unlikely. However, the potential for intact cultural deposits to exist within native soils (below 1 foot to 2.5 feet bgs) to the depths of proposed ground disturbance is unknown. Given that a historical wash was in close proximity to and/or overlapped the Project site, there is a potential for the Project site to be buried in alluvial and flood deposits. Additionally, both prehistoric and historic-period archaeological sites were previously recorded within the vicinity of the Project site. As such, the Project site is considered moderately sensitive for the potential to encounter buried archaeological resources.

In the event that unanticipated archaeological resources are encountered during Project implementation, impacts to these resources could be significant. As such, the following management recommendations are provided to ensure that impacts to unanticipated archaeological resources and human remains would be treated properly resulting in a less than significant impact.

Management Recommendations

Although the Project site has been disturbed over time as a result of development, it is possible that unknown intact archaeological resources could be encountered subsurface during ground disturbing activities within native soils. The following measures have been developed to ensure that any inadvertent discovery of archaeological resources will be treated appropriately and in accordance with CEQA regulations: preconstruction training, retention of an on-call archaeologist to address inadvertent discoveries, and inadvertent discovery clause implemented and included on all construction plans. Dudek further recommends monitoring be conducted during ground disturbing activities to approximately 2.5 feet below current grade and an additional survey be conducted once fill soils have been removed. If cultural materials are observed during the course of ground disturbing activities below fill soils, then subsurface testing may be required. These measures will ensure the potential Project impacts to archaeological resources and human remains would be less than significant.

Inadvertent Discovery of Archaeological Resources

All construction personnel and monitors who are not trained archaeologists shall be briefed regarding inadvertent discoveries prior to the start of construction activities. A basic presentation and handout or pamphlet shall be prepared in order to ensure proper identification and treatment of inadvertent discoveries. The purpose of the Workers Environmental Awareness Program (WEAP) training is to provide specific details on the kinds of archaeological materials that may be identified during construction of the Project and explain the importance of and legal basis for the protection of significant archaeological resources. Each worker shall also learn the proper procedures to follow in the event that cultural resources or human remains are uncovered during ground-disturbing activities. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor and archaeological monitor.

A qualified archaeologist shall be retained and on-call to respond and address any inadvertent discoveries identified for the duration of construction activities. Additionally, in consideration of the potential to encounter intact cultural deposits beneath fill soils, the qualified archaeologist shall monitor ground disturbing activities between 12-18 inches below current grade and shall survey the proposed Project site once fill soils have been removed to ensure no cultural deposits underly the fill layer. A qualified archaeological principal investigator, meeting the Secretary of the Interior's Professional Qualification Standards, should oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material. The archaeological monitor will be responsible for maintaining daily monitoring logs.

In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the Project, all construction work occurring within 100 feet of the find shall immediately stop and a qualified archaeologist is notified immediately to assess the significance of the find and determine whether or not additional study is warranted. Depending upon the significance of the find, the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work such as preparation of an archaeological treatment plan, testing, data recovery, or monitoring may be warranted.

Within 60 days following completion of ground disturbance, an archaeological monitoring report shall be prepared and submitted to the City for review. This report should document compliance with approved mitigation, document

the monitoring efforts, and include an appendix with daily monitoring logs. The final report shall be submitted to the SCCIC.

Inadvertent Discovery of Human Remains

In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the county coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the county coroner has determined the appropriate treatment and disposition of the human remains. If the county coroner determines that the remains are, or are believed to be, Native American, he or she shall follow all required protocols according to California Public Resources Code, Section 5097.98.

Should you have any questions relating to this report and its findings, please do not hesitate to contact me directly at lkry@dudek.com or Heather McDaniel McDevitt at hmcdevitt@dudek.com.

RE: **Geotechnical Engineering Investigation** - Proposed Industrial Warehouse Development - Located at the Southeast Corner of Valley Boulevard and Willow Avenue, in the City of Rialto, California

Dear Mr. Rice:

Pursuant to your request, this firm has performed a Geotechnical Engineering Investigation for the above referenced project in accordance with your approval of our proposal dated December 14, 2021. The purpose of this investigation is to evaluate the geotechnical conditions of the subject site and to provide recommendations for the construction of a proposed industrial warehouse development.

The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration and sampling; 3) laboratory testing; 4) soil infiltration testing; 5) engineering analysis of field and laboratory data; 6) preparation of a geotechnical engineering report. It is the opinion of this firm that the proposed development is feasible from a geotechnical standpoint provided that the recommendations presented in this report are followed in the design and construction of the project.

1.0 Project Description

It is proposed to construct an industrial warehouse development consisting of 138,195 square feet building on the 6.41-acre site as shown on the attached Site Plan (figure 1). The proposed concrete tilt-up building will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, hardscape and landscaping. It is assumed that the proposed grading for the development will include cut and fill procedures on the order of a few feet to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

2.0 Site Description

The 6.41-acre subject property is located at the southeast Corner of West Valley Boulevard and South Willow Avenue, bordered by South Alicia Avenue to the east and the I-10 Freeway to the south, in the City of Rialto. The generally rectangular shaped parcel is elongated in an east to west direction and is relatively level with topography of the property descending gradually from north to south on the order of a few feet. The northwest corner of the site is currently occupied by four small metal buildings with areas of asphaltic pavement currently being utilized for tractor/trailer storage. The northeast corner of the site is currently occupied by a single-story commercial building with asphaltic pavement and associated improvements. The south end of the site is currently occupied by an abandoned metal building and asphaltic pavement, a large billboard is situated on the southwest corner of the site with a small, single-story structure.

3.0 Site Exploration

The investigation consisted of the placement of eleven (11) subsurface exploratory borings by a truck mounted hollow stem auger and hand operated auger to depths ranging between 5 and 20 feet below current ground elevations. The explorations were visually classified and logged by a field engineer with locations of the subsurface explorations shown on the attached plan. The exploratory borings revealed the existing earth materials to consist of fill and natural soil.

Detailed descriptions of the subsurface conditions are listed on the boring logs in Appendix A. It should be noted that the transition from one soil type to another as shown on the trench logs is approximate and may in fact be a gradual transition. The soils encountered are described as follows:

Fill: A fill soil classifying as a brown, fine to coarse grained, silty SAND with gravel, rock and occasional cobble was encountered across the site to depths ranging from 1 to 2½ feet below ground surface. These soils were noted to be loose to medium dense and dry to damp.

Natural: A natural undisturbed soil classifying as a brown to light brown, fine to coarse grained silty SAND with gravel, rock and occasional cobble was encountered directly beneath the upper fill soils. The grain size and amount of rock and cobble varied with depth. The native soils as encountered were observed to be medium dense and dry to damp.

The overall engineering characteristics of the earth material were relatively uniform with each excavation. Groundwater was not encountered to the depth of our trenches and caving occurred in the deeper cohesionless soils.

4.0 Laboratory Tests

Relatively undisturbed samples of the subsurface soils were obtained to perform laboratory testing and analysis for direct shear, consolidation tests, and to determine in-place moisture/densities. These relatively undisturbed ring samples were obtained by driving a thin-walled steel sampler lined with one-inch-long brass rings with an inside diameter of 2.42 inches into the undisturbed soils. Bulk bag samples were obtained in the upper soils for expansion index tests and maximum density tests. All test results are included in Appendix B, unless otherwise noted.

4.1 **Field Moisture Content** (ASTM: D 2216) and the dry density of the ring samples were determined in the laboratory. This data is listed on the logs of explorations.

4.2 **Maximum Density tests** (ASTM: D 1557) were performed on typical samples of the upper soils. Results of these tests are shown on Table I.

4.3 **Expansion Index tests** (ASTM: D 4829) were performed on remolded samples of the upper soils to determine expansive characteristics. Results of these tests are provided on Table II.

4.4 **Corrosion tests** consisting of sulfate, pH, resistivity and chloride analysis to determine potential corrosive effects of soils on concrete and underground utilities. Test results are provided on Table III.

4.5 **R-Value test** per California Test Method 301 was performed on a representative sample, which may be anticipated to be near subgrade to determine pavement design. Results are provided within the pavement design section of the report.

4.6 **Direct Shear tests** (ASTM: D 3080) were performed on undisturbed and/or remolded samples of the subsurface soils. The test is performed under saturated conditions at loads of 1,000 lbs./sq.ft., 2,000 lbs./sq.ft., and 3,000 lbs./sq.ft. with results shown on Plate A to B.

4.7 **Consolidation tests** (ASTM: D 2435) were performed on undisturbed samples to determine the differential and total settlement which may be anticipated based upon the proposed loads. Water was added to the samples at a surcharge of one KSF and the settlement curves are plotted on Plates C to D.

5.0 Seismicity Evaluation

The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely. The Cucamonga Fault is located approximately 12 kilometers from the site and is capable of producing a Magnitude 7.0 earthquake. Ground shaking originating from earthquakes along other active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults.

The seismic design acceleration parameters for the project site are provided on the following page based on the ASCE/SEI 7-22 American Society of Civil Engineers (ASCE) website, https://asce7hazardtool.online/. The ASCE/SEI 7-22 report is attached is Appendix C

Seismic Design Acceleration Parameters

Latitude	34.070
Longitude	-117.374
Site Class	D
Risk Category	II
Peak Ground Acceleration	$PGA_M = 0.79$
Adjusted Maximum Acceleration	$S_{MS} = 2.27$ $S_{M1} = 2.2$
Design Spectral Response Acceleration Parameters	$S_{DS} = 1.52$ $S_{D1} = 1.46$
Mapped Spectral Response Acceleration	$S_S = 2.25$ $S_1 = 0.83$

Use of these values is dependent on the latest requirements of the ASCE, 11-4.8, Exception 2 that requires the value of the seismic response coefficient C_s be determined by Equation 12.8.2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either 12.8-3 for $T_L \geq T \geq 1.5T_s$ or Equation 12.8-4 for $T > T_L$. Computations and verification of these conditions is referred to the structural engineer.

6.0 Liquefaction Evaluation

The site is expected to experience ground shaking and earthquake activity that is typical of the Southern California area. It is during severe shaking that loose, granular soils below the groundwater table can liquefy. Based on review of the *County of San Bernardino County Land Use Plan – General Plan – Geologic Hazard Overlays (2009)*, the site lies outside a zone of "Suspected Liquefaction Susceptibility". Based on review of local groundwater maps, the depth of groundwater is in excess of 100 feet (Carson & Matti 1982). Thus, the design of the proposed construction in conformance with the latest Building Code provisions for earthquake design is expected to provide mitigation of ground shaking hazards that are typical to Southern California.

7.0 Infiltration Characteristics

Infiltration tests within the site were performed to provide preliminary infiltration rates for the purpose of planning and design of an on-site water disposal system. A truck mounted Simco 2800 Drill Rig equipped with a hollow stem auger was used to excavate the exploratory borings to depths of 5 and 10 below existing ground surface. The borings consisted of eight-inch diameter test holes. A three-inch diameter perforated PVC casing with solid end cap was installed in the borings and then surrounded with gravel materials to prevent caving.

The infiltration holes were carefully filled with clean water and refilled after two initial readings. Based upon the initial rates of infiltration at each location, test measurements were measured at selected maximum intervals thereafter. Measurements were obtained by using an electronic tape measure with 1/16-inch divisions and timed with a stopwatch. The field infiltration rate was computed using a reduction factor – R_f based on the field measurements with our calculations given in Appendix E. Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following infiltration rates.

Boring/Test No.	Depth	Soil Classification	Field Infiltration Rate
B-1	5'	Silty SAND	13.0 in/hr
B-2	10'	Slightly Silty SAND	11.1 in/hr

The correction factors CF_t, CF_v and CF_s are given below based on soils at 5 and 10 feet from our field tests.

a) $CF_t = Rf = 4.2$ and 6.8 for our two infiltration test holes.

b) $CF_v = 1.0$ based on uniform soils encountered in two borings for infiltration tests.

c) $CF_s = 2.0$ for long-term siltation, plugging and maintenance. The subsurface soils are likely to have some plugging and regular maintenance of storm water discharge devices is required.

Thus, the subsurface soils encountered in the proposed on-site drainage disposal system shall utilize the design infiltration rates based on a safety factor of 2.0 as required by the county standard. All systems must meet the latest county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements.

It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

8.0 Conclusions and Recommendations

Based upon our evaluations, the proposed development is acceptable from a geotechnical engineering standpoint. By following the recommendations and guidelines set forth in our report, the structures will be safe from excessive settlements under the anticipated design loadings and conditions. The proposed development shall meet all requirements of the City Building Ordinance and will not impose any adverse effect on existing adjacent structures.

The following recommendations are based upon soil conditions encountered in our field investigation; these near-surface soil conditions could vary across the site. Variations in the soil conditions may not become evident until the commencement of grading operations for the proposed development and revised recommendations from the soils engineer may be necessary based upon the conditions encountered.

It is recommended that site inspections be performed by a representative of this firm during all grading and construction of the development to verify the findings and recommendations documented in this report. Any unusual conditions which may be encountered in the course of the project development may require the need for additional study and revised recommendations.

8.1 Site Grading Recommendations

Any vegetation and/or demolition debris shall be removed and hauled from proposed grading areas prior to the start of grading operations. Existing vegetation shall not be mixed or disced into the soils. Any removed soils may be reutilized as compacted fill once any deleterious material or oversized materials (in excess of eight inches) is removed. Grading operations shall be performed in accordance with the attached *Specifications for Placement of Compacted Fill*.

8.1.1 Removal and Recompaction Recommendations

All disturbed soils and/or fill (about 1 to 2½ feet below ground surface) shall be removed to competent native material, the exposed surface scarified to a depth of 12 inches, brought to within 2% of optimum moisture content and compacted to a minimum of 90% of the laboratory standard (ASTM: D-1557) prior to placement of any additional compacted fill soils, foundations, slabs-on-grade and pavement. The upper 12 inches of soils beneath building pad and concrete paving shall be compacted to a minimum of 95% of the laboratory standard. Grading shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

The site is underlain by alluvium generally composed of gravels, cobbles and boulders in a silty sand matrix. Oversized materials are anticipated to be encountered during grading operations. The proposed building pad shall be graded with cobbles up to 6-inch minus blended uniformly with soils in the upper one foot beneath pad grade and within planned utility/foundation areas. Rock size up to 12 inches blended uniformly with soils shall be placed below two feet of more below grade. All fill will be required to be placed in suitable lifts, moisture conditioned and compacted to a minimum of 90% of the laboratory standard.

It is possible that isolated areas of undiscovered fill not described in this report are present on site; if found, these areas should be treated as discussed earlier. A diligent search shall also be conducted during grading operations in an effort to uncover any underground structures, irrigation or utility lines. If encountered, these structures and lines shall be either removed or properly abandoned prior to the proposed construction.

Any imported fill material should be preferably soil similar to the upper soils encountered at the subject site. All soils shall be approved by this firm prior to importing at the site and will be subjected to additional laboratory testing to assure concurrence with the recommendations stated in this report.

If placement of slabs-on-grade and pavement is not completed immediately upon completion of grading operations, additional testing and grading of the areas may be necessary prior to continuation of construction operations. Likewise, if adverse weather conditions occur which may damage the subgrade soils, additional assessment by the soils engineer as to the suitability of the supporting soils may be needed.

Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase. Adequate drainage away from the structures, pavement and slopes should be provided at all times.

8.1.2 **Fill Blanket Recommendations**

Due to the potential for differential settlement of foundations placed on compacted fill and native materials, it is recommended that all foundations including floor slab areas be underlain by a uniform compacted fill blanket at least two feet in thickness. This fill blanket shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

8.2 **Shrinkage and Subsidence**

The site is underlain by alluvium generally composed of gravels, cobbles and boulders blended with a sand matrix. It is our experience that a loss of volume from oversize rock will be anticipated. Results of our in-place density tests reveal that the soil shrinkage of the matrix will be on the order of 5 to 10% due to excavation and recompaction, based upon the assumption that the fill is compacted to 92% of the maximum dry density per ASTM standards. Subsidence should be 0.2 feet due to earthwork operations.

The volume change does not include any allowance for vegetation or organic stripping, removal of subsurface improvements, or topographic approximations. Although these values are only approximate, they represent our best estimate of lost yardage, which will likely occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field testing the actual equipment and grading techniques should be conducted.

8.3 **Temporary Excavations**

Temporary *unsurcharged* excavations in the existing site materials may be made at vertical inclinations up to 3 feet in height unless cohesionless soils are encountered. In areas where soils with little or no binder are encountered, where adverse geological conditions are exposed, or where excavations are adjacent to existing structures, shoring or flatter excavations may be required. The temporary cut slope gradients given above do not preclude local raveling and sloughing.

All excavations shall be made in accordance with the requirements of the soils engineer, CAL-OSHA and other public agencies having jurisdiction. Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase.

8.4 Foundation Design

All foundations may be designed utilizing the following allowable bearing capacities for an embedded depth of 18 inches into approved engineered fill with the corresponding widths:

Allowable Bearing Capacity (psf)		
Width (feet)	Continuous Foundation	Isolated Foundation
1.5	2000	2500
2.0	2075	2575
4.0	2375	2875
6.0	2500	3000

The bearing value may be increased by 500 psf for each additional foot of depth in excess of the 18-inch minimum depth, up to a maximum of 4,000 psf. A one-third increase may be used when considering short-term loading and seismic forces.

Any foundations located along property line may utilize an allowable bearing capacity of 1,500 psf and embedded into competent native soils. A modulus of subgrade reaction (k) of 200 pci may be used for design of slabs placed on engineered fill soils supporting sustained concentrated loads. A representative of this firm shall inspect all foundation excavations prior to pouring concrete.

8.5 Settlement Analysis

Resultant pressure curves for the consolidation tests are shown on Plates B to C. Computations utilizing these curves and the recommended allowable soil bearing capacities reveal that the foundations will experience settlements on the order of ¾ inch and differential settlements of less than ¼ inch.

8.6 **Lateral Resistance**

The following values may be utilized in resisting lateral loads imposed on the structure. Requirements of the California Building Code should be adhered to when the coefficient of friction and passive pressures are combined.

Coefficient of Friction - 0.40

Equivalent Passive Fluid Pressure = 250 lbs./cu.ft.

Maximum Passive Pressure = 2,500 lbs./cu.ft.

The passive pressure recommendations are valid only for approved compacted fill soils or competent native materials.

8.7 **Retaining Wall Design Parameters**

Active earth pressures against retaining walls will be equal to the pressures developed by the following fluid densities. These values are for **granular backfill material** placed behind the walls at various ground slopes above the walls.

Surface Slope of Retained Materials (Horizontal to Vertical	Equivalent Fluid Density (lb./cu.ft.)
Level	30
5 to 1	35
4 to 1	38
3 to 1	40
2 to 1	45

Any applicable short-term construction surcharges and seismic forces should be added to the above lateral pressure values. An equivalent fluid pressure of 45 pcf may be utilized for the restrained wall condition with a level grade behind the wall.

The seismic-induced lateral soil pressure for walls greater than 6 feet may be computed using a triangular pressure distribution with the maximum value at the top of the wall. The maximum lateral pressure of (20 pcf) H where H is the height of the retained soils above the wall footing should be used in final design of retaining walls. Sliding resistance values and passive fluid pressure values may be increased by 1/3 during short-term wind and seismic loading conditions.

All walls shall be waterproofed as needed and protected from hydrostatic pressure by a reliable permanent subdrain system. The granular backfill to be utilized immediately adjacent to retaining walls shall consist of an approved select granular soil with a sand equivalency greater than 30. This backfill zone of free draining material shall consist of a wedge beginning a minimum of one horizontal foot from the base of the wall extending upward at an inclination of no less than ¾ to 1 (horizontal to vertical).

8.8 Slab Design

All concrete slabs shall be a minimum of six inches in thickness in the proposed warehouse areas and four inches in office and hardscape and placed on approved subgrade soils compacted to a minimum of 95% of the laboratory standard in the upper 12 inches. Additional reinforcement requirements and an increase in thickness of the slabs-on-grade may be necessary based upon soils expansion potential and proposed loading conditions in the structures and should be evaluated further by the project engineers and/or architect.

A vapor retarder (10-mil minimum thickness) should be utilized in areas which would be sensitive to the infiltration of moisture. This retarder shall meet requirements of ASTM E 96, *Water Vapor Transmission of Materials* and ASTM E 1745, *Standard Specification for Water Vapor Retarders used in Contact with Soil or Granular Fill Under Concrete Slabs.* The vapor retarder shall be installed in accordance with procedures stated in ASTM E 1643, *Standard practice for Installation of Water Vapor Retarders used in Contact with Earth or Granular Fill Under Concrete Slabs.*

The moisture retarder may be placed directly upon compacted subgrade soils conditioned to near optimum moisture levels, although one to two inches of sand beneath the membrane is desirable. The subgrade upon which the retarder is placed shall be smooth and free of rocks, gravel or other protrusions which may damage the retarder. Use of sand above the retarder is under the purview of the structural engineer; if sand is used over the retarder, it should be placed in a dry condition.

8.9 **Pavement Section Design**

The table below provides a preliminary pavement design based upon an R-Value of 72 for the subgrade soils for the proposed pavement areas. Final pavement design may need to be based on R-Value testing of the subgrade soils near the conclusion of site grading to assure that these soils are consistent with those assumed in this preliminary design. *The recommendations are based upon estimated traffic loads. Client should submit any other anticipated traffic loadings to the geotechnical engineer, if necessary, so that pavement sections may be reviewed to determine adequacy to support the proposed loadings.*

Type of Traffic	Traffic Index	Asphalt (in.)	Base Material (in.)
Automobile Parking Stalls	4.0	3.0	3.0
Light Vehicle Circulation Areas	5.5	3.5	4.0
Heavy Truck Access Areas	7.0	4.0	8.0

Any concrete slab-on-grade in pavement areas shall be a minimum of six inches in thickness and may be placed on approved subgrade soils.

All pavement areas shall have positive drainage toward an approved outlet from the site. Drain lines behind curbs and/or adjacent to landscape areas should be considered by client and the appropriate design engineers to prevent water from infiltrating beneath pavement. If such infiltration occurs, damage to pavement, curbs and flow lines, especially on sites with expansive soils, may occur during the life of the project.

Any approved base material shall consist of a Class II aggregate or equivalent and should be compacted to a minimum of 95% relative compaction. All pavement materials shall conform to the requirements set forth by the City of Fontana. The base material; and asphaltic concrete should be tested prior to delivery to the site and during placement to determine conformance with the project specifications. A pavement engineer shall designate the specific asphalt mix design to meet the required project specifications.

8.10 **Utility Trench and Excavation Backfill**

Trenches from installation of utility lines and other excavations may be backfilled with on-site soils or approved imported soils compacted to a minimum of 90% relative compaction. All utility lines shall be properly bedded with clean sand having a sand equivalency rating of 30 or more. This bedding material shall be thoroughly water jetted around the pipe structure prior to placement of compacted backfill soils.

8.11 **Corrosion Design Criteria**

Representative samples of the surficial soils, typical of the subgrade soils expected to be encountered within foundation excavations and underground utilities were tested for corrosion potential. The minimum resistivity value obtained for the samples tested is representative of an environment that may be severely corrosive to metals. The soil pH value was considered neutral and may not have a significant effect on soil corrosivity. Consideration should be given to corrosion protection systems for buried metal such as protective coatings, wrappings or the use of PVC where permitted by local building codes.

According to Table 4.3.1 of ACI 318 Building Code and Commentary, these contents revealed negligible sulfate concentrations. Therefore, a Type II cement according to latest CBC specifications may be utilized for building foundations at this time. It is recommended that additional sulfate tests be performed at the completion of site grading to assure that the as graded conditions are consistent with the recommendations stated in this design. Corrosion test results may be found on the attached Table IV.

8.12 **Expansive Soil**

On-site soils are very low in expansion potential (EI 0-20). When soils have an expansion index (EI) of 20 or more, special attention should be given to the project design and maintenance. The attached *Expansive Soil Guidelines* should be reviewed by the engineers, architects, owner, maintenance personnel and other interested parties and considered during the design of the project and future property maintenance. Expansion test results may be found on the attached Table II.

9.0 Closure

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavations. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected to unfavorable conditions are encountered during construction phase. It is the responsibility of the owner to ensure that all information within this report is submitted to the Architect and appropriate Engineers for the project.

A preconstruction conference should be held between the developer, general contractor, grading contractor, city inspector, architect, and soil engineer to clarify any questions relating to the grading operations and subsequent construction. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,
NORCAL ENGINEERING

SPECIFICATIONS FOR PLACEMENT OF COMPACTED FILL

Excavation

Any existing low-density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Geotechnical Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557).

In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

Material for Fill

The on-site soils or approved import soils may be utilized for the compacted fill provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Geotechnical Engineering firm a minimum of 72 hours prior to importation of site.

Placement of Compacted Fill Soils

The approved fill soils shall be placed in layers not excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2% of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Geotechnical Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every 2 feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Geotechnical Engineering firm.

Grading Observations

The controlling governmental agencies should be notified prior to commencement of any grading operations. This firm recommends that the grading operations be conducted under the observation of a Soils Engineering firm as deemed necessary. A 24-hour notice must be provided to this firm prior to the time of our initial inspection.

Observation shall include the clearing and grubbing operations to assure that all unsuitable materials have been properly removed; approve the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished grade and designate areas of overexcavation; and perform field compaction tests to determine relative compaction achieved during fill placement. In addition, all foundation excavations shall be observed by the Soils Engineering firm to confirm that appropriate bearing materials are present at the design grades and recommend any modifications to construct footings.

EXPANSIVE SOIL GUIDELINES

The following expansive soil guidelines are provided for your project. The intent of these guidelines is to inform you, the client, of the importance of proper design and maintenance of projects supported on expansive soils. ***You, as the owner or other interested party, should be warned that you have a duty to provide the information contained in the soil report including these guidelines to your design engineers, architects, landscapers and other design parties in order to enable them to provide a design that takes into consideration expansive soils.***

In addition, you should provide the soil report with these guidelines to any property manager, lessee, property purchaser or other interested party that will have or assume the responsibility of maintaining the development in the future.

Expansive soils are fine-grained silts and clays which are subject to swelling and contracting. The amount of this swelling and contracting is subject to the amount of fine-grained clay materials present in the soils and the amount of moisture either introduced or extracted from the soils. Expansive soils are divided into five categories ranging from "very low" to "very high". Expansion indices are assigned to each classification and are included in the laboratory testing section of this report. *If the expansion index of the soils on your site, as stated in this report, is 21 or higher, you have expansive soils.* The classifications of expansive soils are as follows:

Classification of Expansive Soil*

Expansion Index	Potential Expansion
0-20	Very Low
21-50	Low
51-90	Medium
91-130	High
Above 130	Very High

*From Table 18A-I-B of California Building Code (1988)

When expansive soils are compacted during site grading operations, care is taken to place the materials at or slightly above optimum moisture levels and perform proper compaction operations. Any subsequent excessive wetting and/or drying of expansive soils will cause the soil materials to expand and/or contract. These actions are likely to cause distress of foundations, structures, slabs-on-grade, sidewalks and pavement over the life of the structure. ***It is therefore imperative that even after construction of improvements, the moisture contents are maintained at relatively constant levels, allowing neither excessive wetting or drying of soils.***

Evidence of excessive wetting of expansive soils may be seen in concrete slabs, both interior and exterior. Slabs may lift at construction joints producing a trip hazard or may crack from the pressure of soil expansion. Wet clays in foundation areas may result in lifting of the structure causing difficulty in the opening and closing of doors and windows, as well as cracking in exterior and interior wall surfaces. In extreme wetting of soils to depth, settlement of the structure may eventually result. Excessive wetting of soils in landscape areas adjacent to concrete or asphaltic pavement areas may also result in expansion of soils beneath pavement and resultant distress to the pavement surface.

Excessive drying of expansive soils is initially evidenced by cracking in the surface of the soils due to contraction. Settlement of structures and on-grade slabs may also eventually result along with problems in the operation of doors and windows.

Projects located in areas of expansive clay soils will be subject to more movement and "hairline" cracking of walls and slabs than similar projects situated on non-expansive sandy soils. There are, however, measures that developers and property owners may take to reduce the amount of movement over the life the development. The following guidelines are provided to assist you in both design and maintenance of projects on expansive soils:

- Drainage away from structures and pavement is essential to prevent excessive wetting of expansive soils. Grades should be designed to the latest building code and maintained to allow flow of irrigation and rain water to approved drainage devices or to the street. Any "ponding" of water adjacent to buildings, slabs and pavement after rains is evidence of poor drainage; the installation of drainage devices or regrading of the area may be required to assure proper drainage. Installation of rain gutters is also recommended to control the introduction of moisture next to buildings. Gutters should discharge into a drainage device or onto pavement which drains to roadways.

- Irrigation should be strictly controlled around building foundations, slabs and pavement and may need to be adjusted depending upon season. This control is essential to maintain a relatively uniform moisture content in the expansive soils and to prevent swelling and contracting. Over-watering adjacent to improvements may result in damage to those improvements. NorCal Engineering makes no specific recommendations regarding landscape irrigation schedules.

- Planting schemes for landscaping around structures and pavement should be analyzed carefully. Plants (including sod) requiring high amounts of water may result in excessive wetting of soils. Trees and large shrubs may actually extract moisture from the expansive soils, thus causing contraction of the fine-grained soils.

- Thickened edges on exterior slabs will assist in keeping excessive moisture from entering directly beneath the concrete. A six-inch thick or greater deepened edge on slabs may be considered. Underlying interior and exterior slabs with 6 to 12 inches or more of non-expansive soils and providing presaturation of the underlying clayey soils as recommended in the soil report will improve the overall performance of on-grade slabs.

- Increase the amount of steel reinforcing in concrete slabs, foundations and other structures to resist the forces of expansive soils. The precise amount of reinforcing should be determined by the appropriate design engineers and/or architects.

- Recommendations of the soil report should always be followed in the development of the project. Any recommendations regarding presaturation of the upper subgrade soils in slab areas should be performed in the field and verified by the Soil Engineer.

MAJOR DIVISION			GRAPHIC SYMBOL	LETTER SYMBOL	TYPICAL DESCRIPTIONS
COARSE GRAINED SOILS	GRAVEL AND GRAVELLY SOILS	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL, SAND MIXTURES, LITTLE OR NO FINES
				GP	POORLY-GRADED GRAVELS, GRAVEL-SAND MIXTURES, LITTLE OR NO FINES
	MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	GRAVELS WITH FINES (APPRECIABLE AMOUNT OF FINES)		GM	SILTY GRAVELS, GRAVEL-SAND-SILT MIXTURES
				GC	CLAYEY GRAVELS, GRAVEL-SAND-CLAY MIXTURES
MORE THAN 50% OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE	SAND AND SANDY SOILS	CLEAN SAND (LITTLE OR NO FINES)		SW	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
				SP	POORLY-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
	MORE THAN 50% OF COARSE FRACTION PASSING ON NO. 4 SIEVE	SANDS WITH FINE (APPRECIABLE AMOUNT OF FINES)		SM	SILTY SANDS, SAND-SILT MIXTURES
				SC	CLAYEY SANDS, SAND-CLAY MIXTURES
FINE GRAINED SOILS	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
				CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
MORE THAN 50% OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILTY SOILS
				CH	INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS
				OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOILS				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

NOTE: DUAL SYMBOLS ARE USED TO INDICATE BORDERLINE SOIL CLASSIFICATIONS

UNIFIED SOIL CLASSIFICATION SYSTEM

KEY:

 Indicates 2.5-inch Inside Diameter. Ring Sample.

 Indicates 2-inch OD Split Spoon Sample (SPT).

 Indicates Shelby Tube Sample.

 Indicates No Recovery.

 Indicates SPT with 140# Hammer 30 in. Drop.

 Indicates Bulk Sample.

 Indicates Small Bag Sample.

 Indicates Non-Standard

 Indicates Core Run.

COMPONENT PROPORTIONS

DESCRIPTIVE TERMS	RANGE OF PROPORTION
Trace	1 - 5%
Few	5 - 10%
Little	10 - 20%
Some	20 - 35%
And	35 - 50%

COMPONENT DEFINITIONS

COMPONENT	SIZE RANGE
Boulders	Larger than 12 in
Cobbles	3 in to 12 in
Gravel	3 in to No 4 (4.5mm)
Coarse gravel	3 in to 3/4 in
Fine gravel	3/4 in to No 4 (4.5mm)
Sand	No. 4 (4.5mm) to No. 200 (0.074mm)
Coarse sand	No. 4 (4.5 mm) to No. 10 (2.0 mm)
Medium sand	No. 10 (2.0 mm) to No. 40 (0.42 mm)
Fine sand	No. 40 (0.42 mm) to No. 200 (0.074 mm)
Silt and Clay	Smaller than No. 200 (0.074 mm)

MOISTURE CONTENT

DRY	Absence of moisture, dusty, dry to the touch.
DAMP	Some perceptible moisture; below optimum
MOIST	No visible water; near optimum moisture content
WET	Visible free water, usually soil is below water table.

RELATIVE DENSITY OR CONSISTENCY VERSUS SPT N -VALUE

COHESIONLESS SOILS		COHESIVE SOILS		
Density	N (blows/ft)	Consistency	N (blows/ft)	Approximate Undrained Shear Strength (psf)
Very Loose	0 to 4	Very Soft	0 to 2	< 250
Loose	4 to 10	Soft	2 to 4	250 - 500
Medium Dense	10 to 30	Medium Stiff	4 to 8	500 - 1000
Dense	30 to 50	Stiff	8 to 15	1000 - 2000
Very Dense	over 50	Very Stiff	15 to 30	2000 - 4000
		Hard	over 30	> 4000

Attn: Kevin Rice

RE: **Supplemental Soil Infiltration Study** - Proposed Industrial Warehouse Development - Located at the Southeast Corner of Valley Boulevard and Willow Avenue, in the City of Rialto, California

Dear Mr. Rice:

Pursuant to your request, this firm has performed a Supplemental Soil Infiltration Study for the above referenced project in accordance with your approval of our proposal dated April 22, 2022. The purpose of this study is to further evaluate the feasibility of an on-site water disposal system for the proposed industrial development. The test locations and depths were provided by Huitt-Zollars, Inc., as shown on the attached plan. The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration; 3) soil infiltration testing; 4) engineering analysis of field and laboratory data; and 5) preparation of a report.

The 6.19-acre subject property is located at the southeast Corner of West Valley Boulevard and South Willow Avenue, bordered by South Alicia Avenue to the east and the I-10 Freeway to the south, in the City of Rialto. The generally rectangular shaped parcel is elongated in an east to west direction and is relatively level with topography of the property descending gradually from north to south on the order of a few feet. The northwest corner of the site is currently occupied by four small metal buildings with areas of asphaltic pavement currently being utilized for tractor/trailer storage.

The northeast corner of the site is currently occupied by a single-story commercial building with asphaltic pavement and associated improvements. The south end of the site is currently occupied by an abandoned metal building and asphaltic pavement, a large billboard is situated on the southwest corner of the site with a small, single-story structure.

It is proposed to construct an industrial warehouse development consisting of 143,674 square feet building on the 6.19-acre site as shown on the attached Site Plan. The proposed concrete tilt-up building will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, hardscape and landscaping.

The proposed grading will consist of minor cuts and fill procedures to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

Field Exploration and Testing

The field exploration consisted of two (2) exploratory borings by a truckmounted hollow stem auger to depths of 10 and 15 feet below the ground surface (bgs) to determine the subsurface soil conditions. The site was found to be underlain by a fill and alluvial deposits consisting of a brown, fine to coarse grained, silty to slightly silty SAND with gravel and occasional cobble. The native soils were noted to be medium dense and dry to damp. No groundwater was encountered to the depth of our borings. The location of the exploratory borings are shown on the attached Site Plan. Detailed description of the subsurface soils is shown on the attached boring logs in Appendix A.

Results of Field Infiltration Tests

Infiltration tests within the site were performed to provide preliminary infiltration rates for the purpose of planning and design of an on-site water disposal system. A truck mounted Simco 2800 Drill Rig equipped with a hollow stem auger was used to excavate the exploratory borings to depths of 10 and 15 feet below existing ground surface. The borings consisted of eight-inch diameter test holes. A three-inch diameter perforated PVC casing with solid end cap was installed in the borings and then surrounded with gravel materials to prevent caving.

The infiltration holes were carefully filled with clean water and refilled after two initial readings. Based upon the initial rates of infiltration at each location, test measurements were measured at 10-minute maximum intervals thereafter. Measurements were obtained by using an electronic tape measure with 1/16-inch divisions and timed with a stopwatch.

The field infiltration rate was computed using a reduction factor – R_f based on the field measurements with our calculations given in Appendix B. Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following infiltration rates.

Boring/Test No.	Depth	Soil Classification	Field Infiltration Rate
B-1/TH-1	10'	Slightly Silty SAND	5.8 in/hr
B-2/TH-2	15'	Slightly Silty SAND	6.6 in/hr

The correction factors CF_t, CF_v and CF_s are given below based on soils from our field test.

a) CF_v = 1.0 based on uniform soils encountered for infiltration tests

b) CF_s = 2.0 for long-term siltation, plugging and maintenance. The subsurface soils are likely to have some plugging and regular maintenance of storm water discharge devices is required.

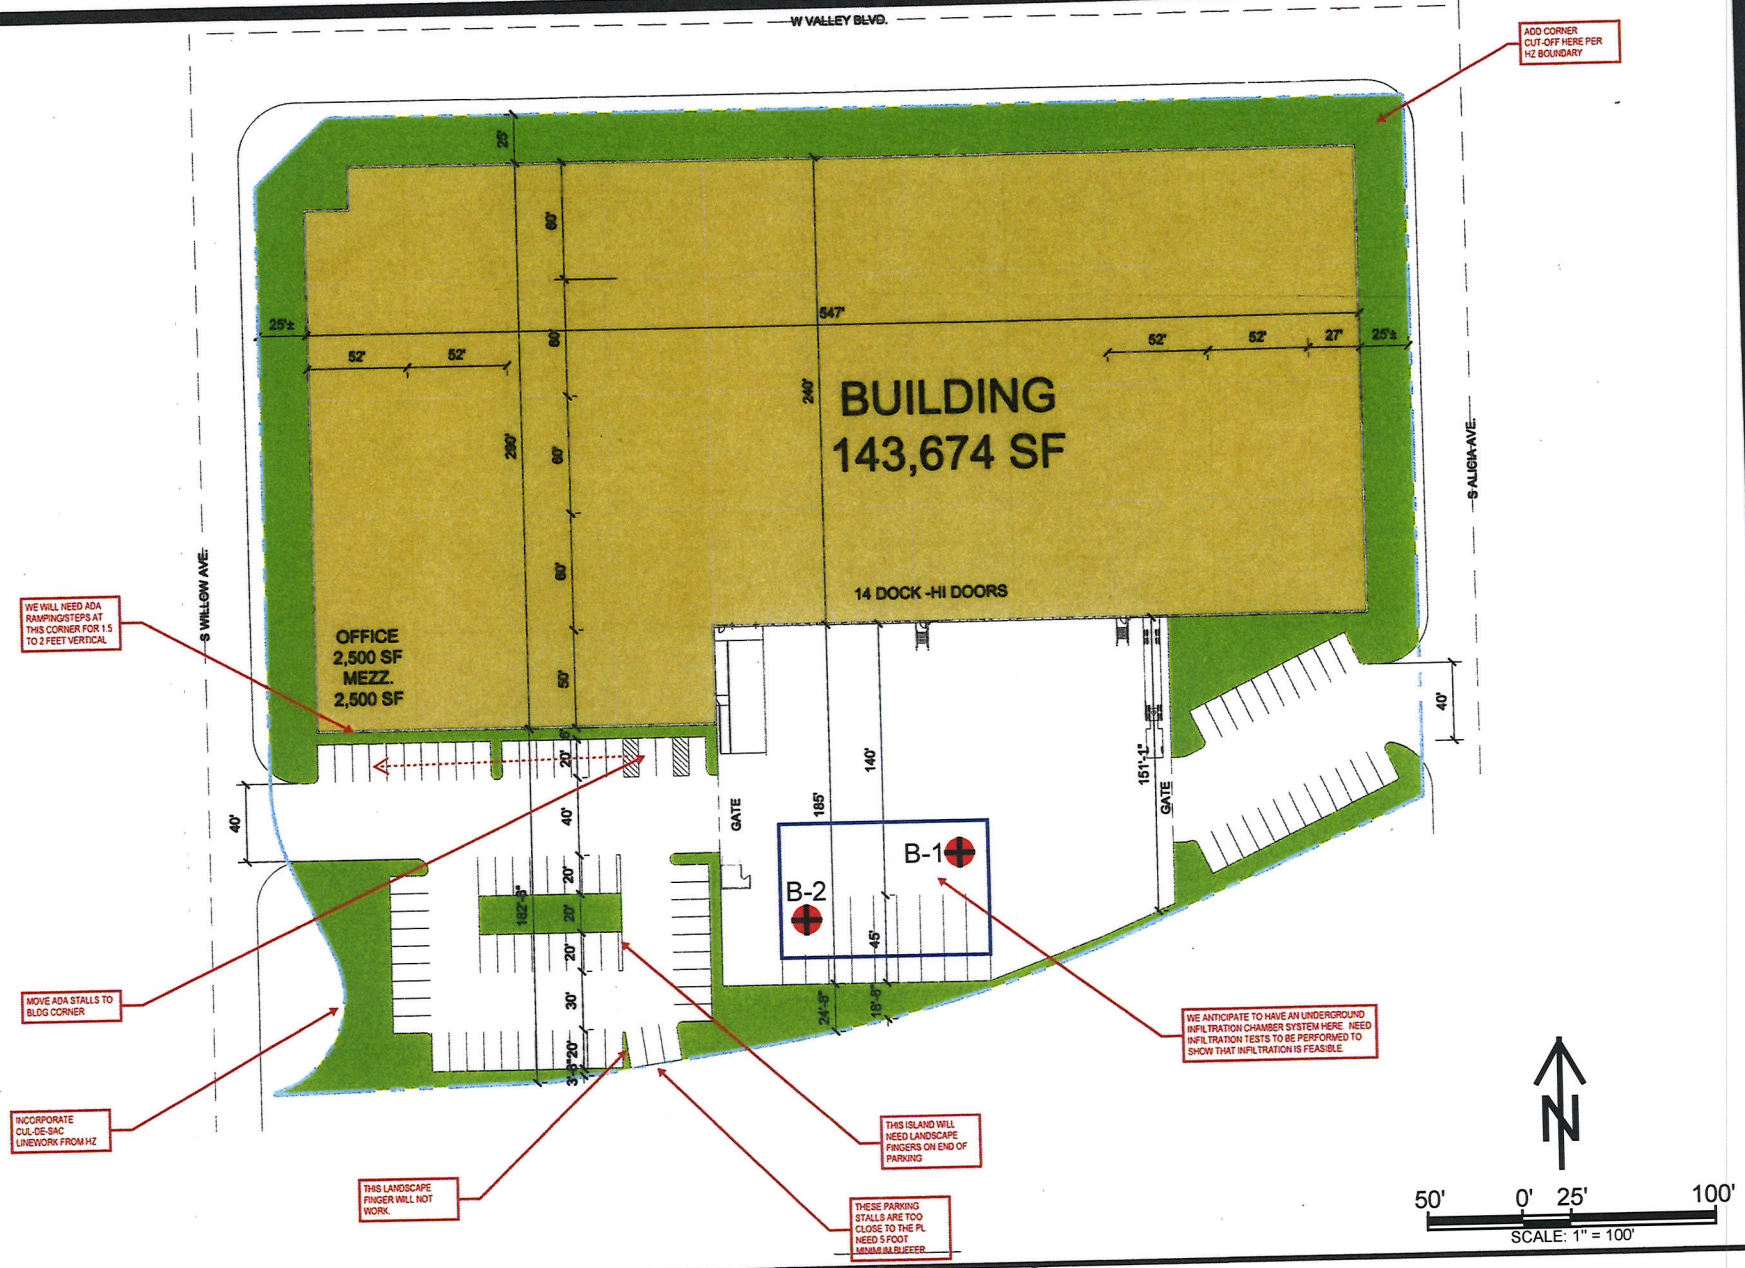
All systems must meet the latest city and/or county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements. It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

Closure

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavation. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected to unfavorable conditions are encountered during construction phase.

This firm should have the opportunity to review the final plans to verify that all our recommendations are incorporated. This report and all conclusions are subject to the review of the controlling authorities for the project. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.



We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,

Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Rialto, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your efforts to acquire the Site. The Site measures approximately 6.41-acres and is comprised of ten parcels containing an unoccupied parcel and two semi-truck staging and maintenance facilities.

The Site has historically been used by contractors such as electricians and concrete corers, autobody repair, freight hauling facilities, and a warehouse products supplier since at least 1971 according to city directory records. However, industrial uses were assessed from the review of aerial photographs since the late 1950's. Prior to these uses, the Site was noted with vacant land and residential uses.

The Site is relatively flat with an elevation of approximately 1,060 feet above mean sea level (msl) with a regional slope to the south southeast. The Site is located in the City of Rialto, San Bernardino County and is set in an industrial area on the southeast corner of West Valley Boulevard and South Willow Avenue.

The Site is bound:

- to the north by West Valley Boulevard across which is an aggregate equipment supplier and a self-storage facility;
- on the east by South Alicia Avenue and a concrete drainage channel across which is a Hometown Buffet and a gas station;
- to the south by the I-10 Freeway across which is a Union Pacific Rail Road yard; and,
- to the west by what appeared to be a vacant warehouse and JV Motorsports.

Key findings of this Phase I ESA are as follows:

- The Site was historically vacant in the earliest records reviewed. By the time of the 1949 aerial photograph, the Site appeared to be in residential use. The Site was

first noted with industrial uses by the time of the 1959 aerial photograph. Since this time, the Site has been developed with industrial structures and notable uses included trucking facilities, auto repair, and several contractors. Observations during this time reveled an area of what appeared to be dark staining on bare soil at what is now the 213 West Valley Boulevard property in the 1980's. The industrial history of the Site is considered an REC.

- The Site vicinity has historically been used as vacant and/or agricultural land since the earliest records. Over the years, the Site vicinity has been noted with industrial development first noted in 1949. Additional industrial development has been noted throughout the years.

- Automotive maintenance, poor housekeeping, moderate to heavy staining, and spills were observed at the Site during the Site reconnaissance. HMC considered these observations to be RECs;

- Records of up to five USTs were found for the Site in review of records for the Site. Three of the USTs are accounted for with records of removal. Two of these tanks were the subject of a leaking UST case closed with San Bernardino County in 2004. This former LUST case is considered a Historic REC. Removal records for up to two tanks have not been located and would be considered an REC;

- Based on the review of the available regulatory information, facilities in the Site vicinity were noted to use and store chemicals and generate associated wastes. Several upgradient facilities were noted with releases such as leaking UST cases that were subsequently cleaned up and closed with the relative oversight agency. There was no evidence the historic off Site releases affect the Site;

- The most notable upgradient facility, the WC Brown Welding, Inc./ WDLJ South Property, was noted with historic releases that included petroleum and other hydrocarbons. The county and the RWQCB oversaw the cleanup of the facility. The cleanup was closed under their authority in 2013. No evidence this historic facility has affected the Site was found;

- Given the findings of this Phase I ESA, there is a moderate potential for a vapor intrusion condition; and,

- Given the age of the structures at the Site, ACMs are likely present.

Conclusions

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 285 and 1743 South Willow Avenue; 213, 241, 253, and 261 West Valley Boulevard; and, Assessor's Parcel Number 013217102 in the City of Rialto, California. **HMC considers the industrial history of the Site, reported discharge of chemicals to soil, and current uses resulting in spills and staining and unaccounted for USTs to be RECs**.

The closed LUST case at the Site was considered an HREC. No CRECs were identified.

While not an REC by ASTM standards, ACMs are likely present at the Site, given the age of the structures.

Recommendations

Based on the findings of this ESA, we recommend the following:

- A Site-wide Phase II Site Investigation as well as a geophysical survey for unaccounted USTs should be conducted;
- Records review including research for the unaccounted for USTs and the facilities at 285 South Willow Avenue and 261 West Valley Boulevard should be conducted;
- The existing spills and releases should be remediated and all chemicals removed when the tenants leave the Site; and,
- An asbestos survey should be conducted prior to any activity that may disturb suspect ACM.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
285 and 1743 South Willow Avenue
213, 241, 253, and 261 West Valley Boulevard
Assessor's Parcel Number 013217102
Rialto, California 92376

1. INTRODUCTION

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Rialto, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your efforts to acquire the Site. The Site measures approximately 6.41-acres and is comprised of ten parcels containing an unoccupied parcel and two semi-truck staging and maintenance facilities.

The Site is relatively flat with an elevation of approximately 1,060 feet above mean sea level (msl) with a regional slope to the south southeast. The Site is located in the City of Rialto, San Bernardino County and is set in an industrial area on the southeast corner of West Valley Boulevard and South Willow Avenue.

1.1. Objective

In accordance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Site.

A Recognized Environmental Condition "means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM Standard Practice E1527-13). Performance of a Phase I ESA is intended to reduce, but not eliminate,

uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquires (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S. Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-13 is consistent with the Standards and Practices for AAI and is compliant with the statutory criteria for AAI.

1.2. Scope of Services, Methodology and Limitations

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-13.

The scope of work for this ESA included the following activities:

- A Site walk to document the current condition of the Site and neighboring facilities.
- Review of a regulatory database report.
- Review of previously prepared reports for the Site.
- Submittal of questionnaires to the current Owner and User of the report.
- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file review requests concerning the Site and suspect off site sources at the State of California Regional Water Quality Control Board (RWQCB) and Department of Toxic Substances Control (DTSC) websites.

- Review of records maintained by the San Bernardino County Fire Protection District.
- Review of records kept by the South Coast Air Quality Management District.
- Review of building records kept by the City of Rialto.
- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

2. SITE DESCRIPTION

2.1. Site Setting

The Site measures approximately 6.41-acres and is comprised of ten parcels containing an unoccupied parcel and two semi-truck staging and maintenance facilities. The Site is relatively flat with an elevation of approximately 1,060 feet above mean sea level (msl) with a regional slope to the south southeast. The Site is located in the City of Rialto, San Bernardino County and is set in an industrial area on the southeast corner of West valley Boulevard and South Willow Avenue.

The Site is bound:

- to the north by West Valley Boulevard across which is an aggregate equipment supplier and a self-storage facility;
- on the east by South Alicia Avenue and a concrete drainage channel across which is a Hometown Buffet and a gas station;
- to the south by the I-10 across which is a Union Pacific Rail Road yard; and,
- to the west by a what appeared to be a vacant warehouse and JV Motorsports.

Utilities at the Site are provided by:

- Electricity: Southern California Edison

- Natural Gas: Southern California Gas Company
- Water: Rialto Water Services
- Sewer: Rialto Water Services

2.2. Regional Geology and Hydrogeology

The Site lies within the Riverside-Arlington Subbasin which underlies part of the Santa Ana River Valley in northwest Riverside County and southwest San Bernardino County. This subbasin is bound by impermeable rocks of Box Springs Mountains on the southeast, Arlington Mountain on the south, La Sierra Heights and Mount Rubidoux on the northwest, and the Jurupa Mountains on the north. The northeast boundary is formed by the Rialto-Colton fault, and a portion of the northern boundary is a groundwater divide beneath the City of Bloomington. The Santa Ana River flows over the northern portion of the subbasin. Annual average precipitation is about 10 to 14 inches.

Groundwater in the subbasin is found chiefly in alluvial deposits. Quaternary age alluvial deposits in the subbasin consist of sand, gravel, silt, and clay deposited by the Santa Ana River and its tributaries. Near the City of Riverside, the upper 50 feet of deposits are principally clay; however, deposits near the City of Arlington have considerable sand and little clay. At the northern end of the subbasin, coarser gravels with cobbles 4 to 6 inches in diameter are common. Based on data from wells, a minimum specific yield of 15 percent was assigned to unweathered gravels at the extreme northern end of the subbasin. The specific yield increases sharply to 18 percent near the Santa Ana River, then increases gradually to a maximum of 20 percent near the City of Arlington.

A 2021 work plan for a voluntary clean-up at a nearby facility reported regional groundwater to be found at approximately 200 feet bgs and to generally flow southwest. Perched groundwater was also reported at approximately 130 feet in the Site vicinity.

2.3. Interviews and User Provided Information

The User of this report is Patriot Partners (Patriot) who is looking to acquire the Site and would be considered a “User” of the report per ASTM definitions. We requested all available information from the User.

2.4. Title Records

A Title Report was not provided to HMC for review.

2.5. User Knowledge

We interviewed Mr. Kevin Rice of Patriot who indicated that his firm has no previous knowledge or experience with the property and is unaware of any chemical spills or releases or ongoing environmental matters. He indicated that they are paying full market value for the Site.

2.6. Owner/Occupant Knowledge

The Owners or representatives of the individual properties at the Site were not available for interview with the exception of Mr. Sean Seylani of Lefoy International located at 213 West Valley Boulevard. Mr. Seylani stated that he was unaware of any adverse environmental conditions or suspect uses such as USTs.

HMC Owner Questionnaires for the individual properties were not returned to HMC for review.

2.7. Environmental Liens or Activity and Use Limitations

The best of HMC's knowledge, there are no environmental liens or AULs in relation to the Site.

3. SITE USE AND HISTORY

Past usage of the subject Site was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Sanborn maps were not generated for the Site.

3.1. Aerial Photograph Review

Aerial photographs covering the Site were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1938 through 2016. Copies of the aerial photographs are included in Appendix B.

1938	The Site was first observed to be vacant land. The Site vicinity was noted with vacant land, agricultural land, and sparse residential uses.
1949	The Site was noted with what appeared to be residential uses. Approximately five structures were noted. A parcel northwest of the Site, across what is now West Valley Boulevard, was

	noted to be in industrial use with what appeared to be a construction yard.
1953	No significant changes to the Site or the Site vicinity were noted with the exception of two additional residential structures at the Site.
1959	Several additional structures were noted at the Site. The structures and storage around them appeared to be for industrial purposes. The southern parcel at the Site was noted with outdoor storage yard for construction equipment/supplies. A significant amount of industrial development was noted in the Site vicinity.
1966	The 1966 aerial photograph was extremely grainy however a warehouse structure and increased storage of what appeared to be vehicles was able to be seen at the Site. No significant changes to the Site vicinity were noted with the exception of a warehouse first seen across what is now South Willow Avenue.
1968	Additional structures were noted at the Site in the southwest corner of the 285 Willow parcel. Around this time, the Site was reported with a construction company. Other uses reported at the Site included auto repair, contractors yards/offices, storage, and trucking. No significant changes to the Site vicinity were noted.
1975	Several structures previously observed in the northwest corner and the eastern most parcel at the Site were no longer observed at the Site. The UPRR yard was first observed south of the Site, across the Interstate 10.
1985	The Site was first seen in its current construction and orientation. The Site was seen with the current six main structures. The eastern most parcel appeared with what appeared to be a large dark stain south of the structure. The

	reported occupant of the Site at this time was Clem-Trans, a freight hauling company. The Site vicinity was noted with a small amount of industrial development with additional structures at several facilities.
1989	Increased storage of vehicles and semi-trucks and trailers were observed the Site. The dark area at the eastern property at the Site remained. Significant development was noted in the Site vicinity with warehousing and storage facilities.
1995	No significant changes to the Site or the Site vicinity were noted.
2002	The southern and eastern properties appeared to have been paved. No other significant changes to the Site or the Site vicinity were seen.
2006-16	No significant changes to the Site or the Site vicinity were noted.

3.2. Topographic Maps

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall Site history. Although, no specific observations were made from the review of these maps.

3.3. Sanborn Maps

Sanborn maps are maps that were created for the insurance industry to document site activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a site. While they were prepared for insurance underwriting and were not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a site. Sanborn maps were not generated for the Site.

3.4. EDR City Directory Review

EDR performed a search of the City Directory records for the Site addresses provided at the initiation of this Phase I ESA and nearby properties at approximately five-year intervals. Review of this report yielded the following findings:

1743 S. Willow Ave.	
Year	**Use**
2005-2017	General Warehouse Products
1992-2000	Tim's Mobile Truck Repair, Inc.
1986	Grumpy's Auto Body
	Thompson R Trucking
1971-1980	Thompson R Trucking

285 S. Willow Ave.	
Year	**Use**
1976-1980	XXXX
1971	ACME Rebuilding
	Southwestern CAT

261 W. Valley Blvd.	
Year	**Use**
1980	AD Station Maintenance
1976	Concrete Coring Co.

253 W. Valley Blvd.	
Year	**Use**
1995	Cement Carriers, Inc.
	Marketing & Management Calif.
1992	Ability Truck Parts
	Cement Carriers, Inc.
1986	Blue Diamond Truck
1976-1980	XXXX
1971	Hugo's Garage
	Rialto Framers

241 W. Valley Blvd.	
Year	**Use**
1986	XXXX
1976-1980	Cutter Electric Co.

1971	Cutter Electric Co.
	Rialto Storage

213 W. Valley Blvd.	
Year	**Use**
2014	JV Tires
1986-2010	Clem Trans, Inc.
1980	Clemons, HL
1976	XXXX
1971	Brothers Jack Contr.
	Leisure Products

3.5. Summary

The Site was historically vacant in the earliest record reviewed. By the time of the 1949 aerial photograph, the Site appeared to be in residential use. The Site was first noted with industrial uses by the time of the 1959 aerial photograph. Since this time, the Site has been developed with industrial structures and notable uses included trucking facilities, auto repair, and several contractors. Observations during this time revealed an area of what appeared to be dark staining on bare soil at what is now the 213 West Valley Boulevard property in the 1980's. The industrial history of the Site is considered an REC.

The Site vicinity has historically been used as vacant and/or agricultural land since the earliest records. Over the years, the Site vicinity has been noted with industrial development first noted in 1949. Additional industrial development has been noted throughout the years.

4. PRIOR INVESTIGATIONS

No prior investigations have been conducted at the Site to HMC's knowledge.

5. SITE RECONNAISSANCE

Mr. Troy Taylor of HMC conducted a Site and Site vicinity reconnaissance on December 21, 2021. The reconnaissance was conducted in order to identify visible evidence of REC's

at the Site and to assess possible conditions off Site that may impact the Site. Mr. Taylor was unaccompanied at Site.

The Site was noted to contain three properties. Lefoy Industries (213 West Valley Boulevard) was noted with a two story office structure and truck maintenance garage. Truck maintenance was also seen to be performed in the yard. The yard and maintenance bay were noted with poor housekeeping practices, staining, spills, liberal use of absorbents, and improper storage of chemicals and waste. A pit was located in the garage and was reported to be an oil change pit. The pit was sealed with wood and could not be further observed. Automotive chemicals were noted to be stored in ASTs, 55-gallon drums, five-gallon buckets, 1-gallon containers, and quart containers. Used tires were noted to be stored at the facility.

The 241, 253, 261 West Valley Boulevard and 285 South Willow Avenue properties were observed with a trucking and maintenance facility. Structures at this portion of the Site were used for storage and offices with the exception of the southwestern most building which was used for auto maintenance. An oil change pit was located in the maintenance area but was covered with a large steel plate and could not be further observed. The shop area was noted with moderate staining and small spills. Chemical use and storage included moderate amounts of automotive chemicals. Used tires were noted to be stored at the facility.

The 1743 South Willow Avenue property was noted to be unoccupied however contained two structures, a stormwater drainage feature, a billboard, and storage of metal containers and used tires. One poly tote of waste oil was stored within the center structure at the Site with some moderate staining around it in the center structure. Staining was also noted in one other location within the center structure. Used tires were noted to be stored at the facility.

Current uses at the Site resulting in spills and stains were considered RECs.

Given the age of the structures, it is likely that asbestos containing materials (ACMs) are present at the Site. Suspect ACMs include but are not limited to drywall/joint compound, acoustic ceiling, mastic, roofing materials, and insultation.

Selected photographs illustrating the Site and nearby off-Site conditions are included in Appendix A. Summaries of the Site and observations are detailed below.

Description and Use of Site:	The Site is currently used for trucking and maintenance.
Underground and Aboveground Storage Tanks:	No evidence of USTs or ASTs was observed at the Site.
Hazardous Materials, Hazardous Wastes or Petroleum Products:	Moderate amounts of automotive chemical storage, use, and wastes were observed at the Site.
Drains, Drain lines and Sumps:	Storm drains were seen at the Site.
Pits, Ponds, Lagoons:	These features were not seen at the Site.
Industrial Wastewater:	Wastewater was not being generated at the Site.
Stains:	Moderate to heavy staining was observed at the Site.
Wells:	No wells were observed at the Site.
Transformers:	One transformer was seen at the 1743 parcel.
Other Features:	ACMs are likely present at the Site.

5.1. Site Vicinity

The Site is bound:

- to the north by West Valley Boulevard across which is an aggregate equipment supplier and a self-storage facility;
- on the east by South Alicia Avenue and a concrete drainage channel across which is a Hometown Buffet and a gas station;
- to the south by the I-10 across which is a Union Pacific Rail Road yard; and,
- to the west by a what appeared to be a vacant warehouse and JV Motorsports.

6. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Site. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-13 standard. The database search includes over 70 federal, state, local, and proprietary records. A complete copy of this report is included in Appendix B.

6.1. Database Records Concerning the Target Property

The Site was listed on the following databases searched as part of the EDR research:

Location	Address	Lists	REC	RATIONALE
R. Thompson Trucking	1743 S. Willow	SWEEPS UST CA FID UST HWTS HAZNET	NO	This facility reportedly operated a UST at the Site. No evidence of a release was found and, as discussed below in Section 7.4, the UST was reported to have been removed in June 1990. One record of oil containing waste was reported for this facility.
Tim's Mobil Truck Repair	1743 S. Willow Ave.	HWTS	NO	This facility was noted to be a generator of waste. No information of specific wastes or releases were contained in the record.
JV Motorsports	1743 S. Willow Ave.	HAZNET HWTS	NO	This facility was noted to be a generator of waste. No information of specific wastes with the exception of off-specification, aged, or surplus organics nor releases were contained in the record.
Ability Heavy Movers, Inc.	285 W. Valley Blvd.	SWEEPS UST CA FID UST	NO	This facility was reported to have operated a UST in the 1980's. No records of releases were found however no records that the UST has been removed were found. The unknown status of this tank is considered an "issue of note".

Clem Trans, Inc.	213 W. Valley Blvd.	LUST REG 8 FINDS LUST HIST UST CORTESE SAN BERN CO PERMIT CERS RGA LUST SWEEPS UST CA FID UST	NO	This facility was noted with two USTs and a leaking UST case. Diesel was the chemical of concern and the release was reported to have been limited to soil. According to records, the tanks were removed and contaminated soil was removed as well. The tanks were reported to have been removed in 2000. The case was closed with San Bernardino County in 2004. This former LUST case is considered a Historical REC.

6.2. Database Records Concerning the Site Vicinity

We reviewed the database report for off-Site potential sources within the relevant search distance. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Site:

- Distance from the Site,
- Location from the Site with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed)

Groundwater was reported to flow to the southwest at a nearby facility, therefore facilities located adjacent to or to the northeast were further considered. Only those facilities judged using these factors are discussed below. The following presents a summary of our findings:

Location	Address	Dist.	Dir.	Lists	REC	RATIONALE
WC Brown Welding, Inc./ WDLJ South Property	1485 South Willow Street	1,515'	N	ENVIROSTOR CPS-SLIC SWEEPS UST CA FID UST SAN BERN CO PERMIT CERS HWTS	NO	This former facility was noted with contamination resulting from industrial uses that included petroleum and other non-solvent hydrocarbon contamination. The property was cleaned up with a Brownfield Cleanup Grant and was closed in

						2013 under the oversight of the county and the RWQCB.

Orphan Sites

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map the site. No orphan sites identified appear to be in the Site vicinity or of a nature and/or orientation to pose a potential environmental concern to the Site with the exception of a Chevron LUST case located at 101 East Valley Boulevard. This case was noted to be closed during the review of other record reviewed in in the EDR Radius research.

6.3. Summary of Off-Site Issues

Based on the review of the available regulatory information, facilities in the Site vicinity were noted to use and store chemicals and generate associated wastes. Several upgradient facilities were noted with releases such as leaking UST cases that were subsequently cleaned up and closed with the relative oversight agency. There was no evidence the historic off Site releases affect the Site.

The most notable upgradient facility, the WC Brown Welding, Inc./ WDLJ South Property, was noted with historic releases that included petroleum and other hydrocarbons. The county and the RWQCB oversaw the cleanup of the facility. The cleanup was closed under their authority in 2013. No evidence this historic facility has affected the Site was found.

7. LOCAL AGENCY AND OTHER RECORDS REVIEW

7.1. Tribal Records

The Site is not located in a tribal area therefore there were no tribal records to review.

7.2. Oil and Gas Wells

The State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources online mapping website was reviewed for the location of active, plugged, or abandoned oil and gas wells in the vicinity of the Site. No oil or gas wells were listed as having been drilled on or in the near vicinity of the Site.

7.3. State of California

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on or off-Site facilities that are being remediated under either RWQCB or DTSC oversight. No active cases were listed on these databases that were not listed in the EDR review.

HMC also submitted public records requests to the DTSC and RWQCB for the Site. Records searches for the Site yielded no responsive records found by either agency however the RWQCB forwarded a link to the 213 West Valley Boulevard LUST case previously discussed in Section 6.2.

7.4. San Bernardino County Fire Protection District

A public records request was submitted online to the SBC FPD. Records found for the Site included Clem Trans (213 W. Valley Blvd.), Grumpy's Autobody (1743 S. Willow Ave.), Tim's Mobil Truck Repair (1743 S. Willow Ave.), and General Warehouse Products (1743 S. Willow Ave.).

Records for Clem Trans included generator and handler permits, UST permits, UST removal records for two diesel USTs, complaints reports of diesel fuel and oily water being discharged onto soil, and LUST records. The record summary reported that contaminated soil was to be removed and new soil imported from the surface releases noted in a complaint from 1993. SBC closed this case. The LUST case for the Site was closed with the county in 2004. Residual contamination well below current screening levels was reported in soil.

Tim's Mobil Truck Repair was reported to have removed a UST from their facility in 1990. No record of a clean-up was included in the record summary.

The General Warehouse facility was reported with a complaint from an individual who claims they were order to discharge lacquer thinner and oil based paint onto bare soil in 2005. When SBC went to investigate, the facility was gone and a golf cart facility was located at this portion of the Site. The case was closed.

The record summary provided by SBC FPD was reviewed for this information. At the time of this report, the files have not been able to be reviewed at SBC offices. HMC recommends these files be reviewed and UST closure records obtained for the User's

records. Records for the status of the UST reported at 285 South Willow Avenue were not included in the record summary.

These reports of releases in conjunction with historic uses, observations of spills, staining, and poor housekeeping at the Site are cause to recommend additional investigation at the Site.

7.5. City of San Bernardino

HMC submitted a public record request to the City of San Bernardino. Records provided by the City generally consisted of general construction, electrical, and plumbing permits.

Two records indicating permits to install a UST and an electrical connection for the UST from 1972 were included in the records for 261 West Valley Boulevard. No other records from the City or any others reviewed during this investigation were found for a UST installed at this address. The UST may never have been installed however, as another unaccounted UST is reported at the Site, all grading and other excavation should proceed with caution as USTs may be encountered.

7.6. South Coast Air Quality Management District

A review of the SCAQMD Facility Information Detail website indicated that no records were found for the Site.

8. VAPOR INTRUSION, ASBESTOS, AND OTHER CONCERNS

8.1. Vapor Intrusion

Given the findings of this Phase I ESA, there is a moderate potential for a vapor intrusion condition.

8.2. Asbestos

Given the age of the structures at the Site, ACMs are likely present.

8.3. Radon

The Site is listed as being located in Zone 2 with regards to radon indicating that radon maybe present at concentrations less than 4 pico curies / liter.

8.4. Mold

No evidence of mold or water damage was observed at the Site.

9. SUMMARY OF FINDINGS

Key findings of this Phase I ESA are as follows:

- The Site was historically vacant in the earliest records reviewed. By the time of the 1949 aerial photograph, the Site appeared to be in residential use. The Site was first noted with industrial uses by the time of the 1959 aerial photograph. Since this time, the Site has been developed with industrial structures and notable uses included trucking facilities, auto repair, and several contractors. Observations during this time reveled an area of what appeared to be dark staining on bare soil at what is now the 213 West Valley Boulevard property in the 1980's. The industrial history of the Site is considered an REC.

- The Site vicinity has historically been used as vacant and/or agricultural land since the earliest records. Over the years, the Site vicinity has been noted with industrial development first noted in 1949. Additional industrial development has been noted throughout the years.

- Automotive maintenance, poor housekeeping, moderate to heavy staining, and spills were observed at the Site during the Site reconnaissance. HMC considered these observations to be RECs;

- Records of up to five USTs were found for the Site in review of records for the Site. Three of the USTs are accounted for with records of removal. Two of these tanks were the subject of a leaking UST case closed with San Bernardino County in 2004. This former LUST case is considered a Historic REC. Removal records for up to two tanks have not been located and would be considered an REC;

- Based on the review of the available regulatory information, facilities in the Site vicinity were noted to use and store chemicals and generate associated wastes. Several upgradient facilities were noted with releases such as leaking UST cases that were subsequently cleaned up and closed with the relative oversight agency. There was no evidence the historic off Site releases affect the Site;

- The most notable upgradient facility, the WC Brown Welding, Inc./ WDLJ South Property, was noted with historic releases that included petroleum and other

hydrocarbons. The county and the RWQCB oversaw the cleanup of the facility. The cleanup was closed under their authority in 2013. No evidence this historic facility has affected the Site was found;

- Given the findings of this Phase I ESA, there is a moderate potential for a vapor intrusion condition; and,

- Given the age of the structures at the Site, ACMs are likely present.

10. DATA GAPS

The following data gaps were identified during this investigation:

- With the exception of 213 West Valley Boulevard, a Site representative was not available for interview.
- HMC Owner Questionnaires were not returned to HMC for review.
- A Title Report was not provided to HMC for review.

11. CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 285 and 1743 South Willow Avenue; 213, 241, 253, and 261 West Valley Boulevard; and, Assessor's Parcel Number 013217102 in the City of Rialto, California. **HMC considers the industrial history of the Site, reported discharge of chemicals to soil, and current uses resulting in spills and staining and unaccounted for USTs to be RECs**.

The closed LUST case at the Site was considered an HREC. No CRECs were identified.

While not an REC by ASTM standards, ACMs are likely present at the Site, given the age of the structures.

12. RECOMMENDATIONS

Based on the findings of this ESA, we recommend the following:

- A Site-wide Phase II Site Investigation as well as a geophysical survey for unaccounted USTs should be conducted;
- Records review including research for the unaccounted for USTs and the facilities at 285 South Willow Avenue and 261 West Valley Boulevard should be conducted;
- The existing spills and releases should be remediated and all chemicals removed when the tenants leave the Site; and,
- An asbestos survey should be conducted prior to any activity that may disturb suspect ACM.

13. QUALIFICATIONS

Mark S. Cousineau, NREP

Mr. Mark S. Cousineau, principal with HMC, has a diverse professional background in environmental management, which includes working as a generator, regulator, consultant, and corporate advisor in hazardous waste and other environmental issues.

Mr. Cousineau's technical background is focused in the area of overseeing large-scale environmental investigations and regulatory compliance management related to site assessments, subsurface investigations, facility surveys, and site remediation. To projects such as these, Mr. Cousineau brings expertise in evaluating complex sites and developing solutions to solve the technical, operational, regulatory, financial and timing issues. In addition, Mr. Cousineau routinely assists clients in developing environmental business plans for single assets and multi-site real estate portfolios and has designed and implemented several tenant audit programs involving the proactive management of environmental risk caused by on-site commercial and industrial tenant activities.

Mr. Cousineau has provided litigation support and has served, as a court-appointed expert on environmental issues, is a Member of the National Registry of Environmental Professionals, holds a M.S. in Environmental Sciences from California State University Fullerton and a B.S. in Chemistry from University California San Diego.

As signatory to this report, I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess the property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Mark Cousineau, NREP
Principal

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hazard Management Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 5

RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 6 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 11 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 19 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 07/15/2021 has revealed that there is 1 CA CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site ID:	160441
Site Name:	SPEEDWAY No. 3975 (USA)
Violation Date:	04-20-2020
Citation:	HSC 6.7 25290.1(c),25290.2(c),25291(a)(2),2529.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c),25290.2(c),25291(a)(2),2529.1(e)
Violation Description:	Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes:	Returned to compliance on 05/21/2020. CORRECTIVE ACTION: Submit plans for permits to repair the areas noted as failure and re-test within sixty (60) days. OBSERVATION: Failures were noted in the Vent Box and UDCs 3/4 and 5/6 during the 4/7/2020 Secondary Containment Testing.
Violation Division:	San Bernardino County Fire Department
Violation Program:	UST
Violation Source:	CERS

Site ID:	160441
Site Name:	SPEEDWAY No. 3975 (USA)
Violation Date:	05-20-2014
Citation:	HSC 6.7 29291(b) - California Health and Safety Code, Chapter 6.7, Section(s) 29291(b)
Violation Description:	Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary containment.
Violation Notes:	Returned to compliance on 06/09/2014. OBSERVATION: A vinyl siphon line was observed connected to the 20k-87 turbine. The technician on site was unable to prove that the vinyl line is an approved component. All components used to construct the primary containment system, such as special accessories, fittings, coatings or linings, monitoring systems and level controls shall be approved by an independent testing organization. COMPLIANCE REQUIREMENT: Submit documentation showing that the vinyl line used on the siphon is an approved component or submit a copy of the work order showing that the vinyl component was replaced with an approved component. Note: The technician on site stated that vinyl line will be replaced that day on 05/20/2014, with an approved copper line.

CHEVRON 96969 (Continued) **S101591821**

Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 04/27/2020. CORRECTIVE ACTION: The VR 209 Sensor in the Diesel Fill sump was replaced and re-tested and passed. Violation was corrected on site OBSERVATION: The VR 209 in the Diesel Fill Sump did not shut down the system when tested.
Violation Division: San Bernardino County Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 18432
Site Name: CHEVRON STATION #96969/1479
Violation Date: 04-25-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 04/25/2019. OBSERVATION: The spill bucket for the Diesel tank failed when tested. CORRECTIVE ACTION: The Diesel spill bucket drain valve was replaced while on-site and passed testing. No further action required.

CHEVRON STATION NO 96969 (Continued) **1005904248**

Financial Assurance Required:	Not reported
Handler Date of Last Change:	20021007
Recognized Trader-Importer:	No
Recognized Trader-Exporter:	No
Importer of Spent Lead Acid Batteries:	No
Exporter of Spent Lead Acid Batteries:	No
Recycler Activity Without Storage:	No
Manifest Broker:	No
Sub-Part P Indicator:	No

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D018
Waste Description:	BENZENE

Handler - Owner Operator:

Owner/Operator Indicator:	Owner
Owner/Operator Name:	CHEVRON PRODUCTS CO
Legal Status:	Private
Date Became Current:	Not reported
Date Ended Current:	Not reported
Owner/Operator Address:	P O BOX 6004
Owner/Operator City,State,Zip:	SAN RAMON, CA 94583
Owner/Operator Telephone:	925-842-5931
Owner/Operator Telephone Ext:	Not reported
Owner/Operator Fax:	Not reported
Owner/Operator Email:	Not reported

Historic Generators:

Receive Date:	20020516
Handler Name:	CHEVRON STATION NO 96969
Federal Waste Generator Description:	Small Quantity Generator
State District Owner:	Not reported
Large Quantity Handler of Universal Waste:	No
Recognized Trader Importer:	No
Recognized Trader Exporter:	No
Spent Lead Acid Battery Importer:	No
Spent Lead Acid Battery Exporter:	No
Current Record:	Yes
Non Storage Recycler Activity:	Not reported
Electronic Manifest Broker:	Not reported

List of NAICS Codes and Descriptions:

NAICS Codes:	No NAICS Codes Found

Facility Has Received Notices of Violations:

Violations:	No Violations Found

Evaluation Action Summary:

Evaluations:	No Evaluations Found

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 383075
Site Name: STEEL UNLIMITED, INC.
Violation Date: 07-18-2016
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/13/2016. Failure to obtain a CUPA Hazardous Waste Generator Permit (SBCC 23.0602(b)(1))
Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 383075
Site Name: STEEL UNLIMITED, INC.
Violation Date: 07-18-2016
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 07/21/2016. Failure to retain Hazardous Waste Manifests for at least 3 years (CCR 66262.40(a)) No hazardous waste manifests available for review.
Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 383075
Site Name: STEEL UNLIMITED, INC.
Violation Date: 10-21-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 11/07/2019. OBSERVATION: Observed (4) 55-gallon drums of used oil listed on the hazardous materials inventory via CERS in a lesser quantity. CORRECTIVE ACTION: Update the hazardous materials inventory via CERS by updating the max daily quantity of used oil to reflect the (4) 55-gallon drums observed on site. Also observed (2) 55-gallon drums of waste coolant not listed on the hazardous materials inventory. Submit the completed certificate of compliance indicating that the hazardous materials inventory has been updated.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 03/22/2019. OBSERVATION: Tank #3 - Overfill Prevention Equipment was not installed according to manufacturerG s specification and did not pass testing (Red Tag # 2305). Tank #2 G Overfill Prevention Equipment verified that it was functional but missing bottom portion of drop tube (7 day notice). Tank # 1 G Overfill Prevention Equipment was functional but bottom portion of drop tube was loose. CORRECTIVE ACTION: Submit As-Built plans for installation of Overfill Prevention Equipment. Contact OFM office to schedule a witness inspection.

Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Other Solvent or Non-Petroleum Hydrocarbon, Other Metal, Other Petroleum
Site History:	The City of Rialto (City) Redevelopment Agency is applying for a $200,000 EPA Brownfield Cleanup Grant to mitigate contamination at a 4.76-acre site located at 1485 S. Willow Avenue, Rialto, California within the Rialto Redevelopment Agencys Gateway Redevelopment Project Area. The City acquired the property on September 15, 2008 after completing Phase I and Phase II Environmental Site Assessments on the property. The Citys goal is to remediate and prepare the Site for a redevelopment project that will involve the consolidation of the Site with the adjacent 13.5 acres of land, which is also under City ownership. The Phase I identified 11 Areas of Concern. The Phase II investigated these 11 areas and identified 3 areas that will require the removal of contaminated soils, additional remedial excavation of buried materials, and removal and disposal of asbestos construction materials and lead based paint. The Regional Water Quality Control Board encourages the City in its efforts to identify and remediate contaminated properties within redevelopment areas of the City. We also recognize the value of mitigating contamination to allow for redevelopment of blighted areas. Therefore, we support your EPA Brownfield Cleanup Grant application and will cooperate with the City to resolve potential contamination issues in order to facilitate the incorporation of the 4.76-acre site into the Rialto Gateway Redevelopment Project. The City of Rialto (City) Redevelopment Agency is applying for a $400,000 EPA Brownfield Assessment Grant to assist in the investigation of various brownfield sites that exist within the community. The City will use the grant funds to inventory, characterize, assess, and conduct cleanup planning on targeted

W C BROWN WELDING INC (Continued) **S101591121**

brownfield sites that are located within the historic rail transport center and the older downtown central business district, along Foothill Boulevard (Historic Route 66), as well as other sites in the community that may be identified and selected as a result of the community outreach and participation process. If the grant is awarded, the City will use the grant funds to hire certified environmental professionals to prepare Phase I and Phase II site investigations on previously developed brownfield sites within the community. Based upon the size of the grant, the City anticipates that it will be able to investigate between 10 to 20 brownfield sites in the community depending upon the size and scope of the investigations. The Regional Water Quality Control Board recognizes the need to identify historical sources of contamination in our Region that may have contributed to groundwater contamination. The Regional Water Quality Control Board encourages the City in its efforts to identify and remediate contaminated properties within redevelopment areas of the City. We, therefore, support your EPA Brownfield Assessment Grant application and will cooperate with the City to resolve potential contamination issues. In this manner, the City will be able to facilitate redevelopment of various sites in the community, including sites along historic Route 66.

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D005
Waste Description: BARIUM

Waste Code: D007

HAZMAT TSDF INC, FORMER FILTER RECYCLING SERVICES INC (Continued) **1000473043**

Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

HAZMAT TSDF INC, FORMER FILTER RECYCLING SERVICES INC (Continued) **1000473043**

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
