FORMERLY NAMED SYWEST DEVELOPMENT COMMERCIAL BUILDING
907 SOUTH KELLOGG AVENUE
GOLETA, CALIFORNIA

SUBJECT: Results of Environmental Soils Analysis

CONTRACT
REF: Change Order No. 2, Goleta Business Center Building, Formerly Named SyWest Development Commercial Building, Environmental Soil Sampling and Analysis, 907 South Kellogg Avenue, Goleta, California, Doc. No. SM-2307-027.PRP, dated July 14, 2023

Dear Mr. LaTray:

Earth Systems Pacific (ESP) has prepared this report to summarize the sampling and laboratory analysis of the soil located at 907 South Kellogg Avenue in Goleta, California. We understand the project will include the construction of a one-story 71,600 square-foot commercial building and associated pavement, flatwork, and pavement. The intent of the work was to provide a preliminary evaluation of on-site soil for constituents of concern. The location of the project is presented on Figure 1, Site Vicinity Map.

To evaluate the on-site soils, ESP conducted a sampling and analysis program for potential chemical contaminants based on guidance published by the California Department of Toxic Substances Control (DTSC)[1]. Our scope of work included the following tasks:

- Collecting 8 samples of the on-site soil
- Screening of the soil samples with a photoionization detector (PID)
- Laboratory analysis of the samples for petroleum hydrocarbons, volatile organic compounds, semi-volatile compounds, organochlorine pesticides, polychlorinated biphenyls, and metals
- Report preparation and project management

[1] *Information Advisory, Clean Imported Fill Material*, California Department of Toxic Substances Control, October 2001.

Soil Sampling

An Earth Systems California licensed engineering geologist supervised field operations, logged the borings, collected soil samples, performed visual and olfactory assessments, performed field screening of samples with a PID, and prepared the samples for transport to the laboratory. Eight shallow soil samples (SS-1A,B through SS-4A,B) were collected from four locations across the site, using manual sampling equipment (manual soil auger). The "A" samples were collected at a depth of approximately 6 inches and the "B" samples collected from a depth of approximately 24 inches below ground surface (bgs) to provide a preliminary evaluation of chemical conditions. The approximate locations of the soil samples are presented on Figure 2, Sample Location Map. Sampling equipment was decontaminated between borings to reduce the potential for cross-contamination.

Field screening with the PID, which was calibrated to isobutylene indicated levels of volatile components in the soil. The results of the PID readings are presented below:

SS-1A – 145 ppm	SS-1B – 19.6 ppm
SS-2A – 10.9 ppm	SS-2B – 7.3 ppm
SS-3A – 11.6 ppm	SS-3B – 5.5 ppm
SS-4A – 8.8 ppm	SS-4B – 5.3 ppm

Laboratory Analysis

The eight soil samples collected, drive samples were collected in stainless steel sleeves and grab samples were placed into laboratory provided glass jars, packed on ice, and shipped overnight to Enviro-Chem, Inc., a State certified laboratory in Pomona, California. The samples were analyzed for the following compounds, using the test methods indicated:

- Total Petroleum Hydrocarbons (TPH) as gasoline, diesel, and motor oil, EPA 8015B
- Volatile Organic Compounds (VOCs) and BTEX, EPA 5030B/8260B
- Semi-Volatile Organic Compounds (SVOCs), EPA 8270C
- CAM 17 Metals, EPA 6010/7471A
- Organochlorine Pesticides (OCPs), EPA 8081A
- Polychlorinated Biphenyls (PCBs), EPA 8082

Results of Laboratory Analysis

Total Petroleum Hydrocarbons (TPH)

TPH as gasoline (TPHg) was not detected in the samples at or above practical quantitation limits (PQL) indicated in Table 1, Petroleum, VOCs, and SVOCs below. Diesel range hydrocarbons (TPHd) were detected in sample SS-4A at a concentration of 69.5 mg/kg. The lab flagged this analyte as present in the quantitation range but does not represent the pattern of the requested fuel; this may indicate that the detected compound was not diesel but kerosene or a similar weight

petroleum product or a result of the compound weathering. Motor oil-range hydrocarbons (TPHo) were also detected in sample SS-4A at a concentration of 441 mg/kg. Although the laboratory analysis for SS-1A and SS-1B did not detect hydrocarbons at or above the practical quantitation limit (PQL) the ground surface within the area of SS-1 was visibly stained, emitted a moderately strong chemical odor, and produced readings of 145 ppm and 19.6 ppm on the PID, for the SS-1A and SS-1B samples, respectively.

Volatile Organic Compounds (VOCs) and BTEX

None of the 65 VOCs evaluated were detected in the samples at or above PQL, which are generally 0.005 mg/kg, but are 0.02 mg/kg for acetone, MEK, 2-hexanone, and MIBK; and 0.01 mg/kg for carbon disulfide, methylene chloride, and M/P-xylene.

Semi-Volatile Organic Compounds (SVOCs)

None of the 68 SVOCs evaluated were detected in the samples at or above practical quantitation limits (PQL), which are generally 0.50 mg/kg, but are 2.50 mg/kg benzoic acid.

TABLE 1 – Petroleum, VOCs, and SVOCs

Compound/ Element	Sample Number				Regulatory Threshold
	SS-1A	**SS-2A**	**SS-3A**	**SS-4A**

ND – Not detected or below the practical quantitation limit (PQL) for the compound
<values - Not Detected at PQL shown, in mg/kg
*SF Bay Regional Water Quality Control Board Tier 1 Environmental Screening levels, not included in DTSC ESLs

Metals

Eleven of the 17 CAM metals were detected in the samples. The metals detected included arsenic, barium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc. All detected metals were below their respective Total Threshold Limit Concentration (TTLC), and less than 10-times the Soluble Limit Threshold Concentration (STLC) which would have triggered analyses to assess the soluble characteristics of the element.

TABLE 2 – CAM-17 Metals

Compound/ Element	Sample Number				Regulatory Threshold
	SS-1A	SS-2A	SS-3A	SS-4A	Commercial/Industrial
Antimony	<1.0	<1.0	<1.0	<1.0	160*

Zinc	20.8	37.7	13.9	21.8	350,000*

All units in mg/kg
<values - Not Detected at PQL shown, in mg/kg
*SF Bay Regional Water Quality Control Board Environmental Screening levels, not included in DTSC ESLs
**Concentrations detected as natural background levels may be up to 12 mg/kg

Organochlorine Pesticides (OCPs)

None of the 22 organochlorine pesticides evaluated were detected in the samples SS-1B, SS-2B, SS-3A, or SS-3B at or above practical quantitation limits (PQL), which are generally 0.001 mg/kg, but is 0.02 mg/kg for toxaphene and 0.005 for Total Chlordane (Technical). The pesticides 4,4'-DDE were detected in samples SS1-A, SS-2A, SS-4A, and SS-4B at concentrations that ranged from 0.004 mg/kg to 0.503 mg/kg.

Polychlorinated Biphenyls (PCBs)

None of the 7 PCBs targeted were detected in the samples at or above practical quantitation limits (PQL), which are 0.01 mg/kg.

TABLE 3 – Pesticides (OCPs) and Polychlorinated Biphenyls (PCBs)

Compound	Sample Number				Regulatory Threshold
	SS-1A	SS-2A	SS-3A	SS-4A	Commercial/Industrial
4,4'-DDE	0.503	0.004	<0.001	0.308	340
All other OCPs	<PQL	<PQL	<PQL	<PQL	Varies

Discussion of Analytical Results

The results of the laboratory analyses were compared to regulatory thresholds, or environmental screening levels (ESLs) for commercial/industrial land use. The primary reference for the ESLs is California Department of Toxic Substances Control (DTSC) Human Health Risk Assessment (HHRA) Note Number 3 (DTSC 2020). This agency has established environmental screening levels (ESLs) based on potential health effects that consider potential exposure levels during commercial/industrial land use. Alternatively, if the DTSC HHRA does not include ESLs for specific compounds or elements the regulatory threshold was taken from the San Francisco Bay Regional Water Quality Control Board (RWQCB) Summary of Soil ESLs Table S-1, Direct Exposure Human Health Risk Levels (RWQCB 2019). Regardless of the source of the regulatory threshold the limit expressed in the tables assumes non-cancer hazard for commercial/industrial exposure.

Petroleum hydrocarbons

The eight soil samples collected on the site were evaluated for total petroleum hydrocarbons (TPH) in the gasoline (TPHg), diesel (TPHd), and motor oil (TPHo) carbon-chain ranges. Our analyses indicate that diesel- and motor oil-range TPH (TPHd/o) were detected in sample SS-4A at concentrations that are below environmental screening levels for commercial/industrial land use.

The ground surface within the area of SS-1 was visibly stained, emitted a moderately strong hydrocarbon odor and produced a reading up to 145 ppm on the PID. Because the laboratory results for the sample collected at approximately 6 inches below the ground surface were non-detect for TPH, VOCs, and SVOCs the impacted soils at SS-1 are probably limited to the upper few inches in this area.

Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs)

VOCs and SVOCs were not detected in any of the soil samples collected and analyzed for the project.

Metals

Eleven of the 17 CAM metals were detected in the samples. The metals detected included arsenic, barium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc. All detected metals were below their respective Total Threshold Limit Concentration (TTLC). The results of these analyses indicate that the soils analyzed would be classified as a non-hazardous waste per California Code of Regulations Title 22.

Arsenic was detected in all samples at concentrations ranging from 1.55 to 4.23 mg/kg. The concentration of arsenic detected in sample SS-2B is above the DTSC arsenic ESL of 4.2 mg/kg for commercial/industrial land use; however, it is common for arsenic to exceed ESL in California soils, as has been noted by the California Department of Toxic Substances Control (DTSC, 2009). In a study of a large data set from sites throughout southern California, arsenic soil concentrations ranged from 0.15 to 19.6 mg/kg, with an upper-bound 95% confidence level concentration of 12 mg/kg; this concentration has been established by DTSC as an alternate screening level for background arsenic in soil. Because the detected concentrations of arsenic are below this alternate threshold, we conclude that the concentrations of arsenic at the site represent ambient conditions and does not constitute a contaminant of concern for on-site use. The concentrations of arsenic are less than the State TTLC of 500 mg/kg, and exported soils would therefore be classified as non-hazardous.

Organochlorine Pesticides (OCPs) and Polychlorinated Biphenyls (PCBs)

The pesticide 4,4'-DDE was detected in samples SS-1A, SS-2A, SS-4A, and SS-4B at concentrations that ranged from 0.004 mg/kg to 0.503 mg/kg. These concentrations are below the DTSC ESL for commercial/industrial land use of 340 mg/kg for DDE. These concentrations are also below California Title 22 hazardous waste criteria of 1.0 mg/kg.

Based upon the data collected during this assessment and laboratory analysis of soil samples, we are able to provide initial information regarding the distribution of constituents of concern at the site.

The intent of this assessment was to develop preliminary information on the types and potential distribution that constituents of concern may have an effect on the redevelopment of the site. Based on our findings, constituents of concern were not detected in our samples that exceed regulatory thresholds for on-site use as a commercial/industrial facility. Because ESLs for other use categories may be more conservative than the thresholds established for commercial/industrial land use additional evaluation may be needed to characterize soils selected for export to a site that is a different use category. Due to the limited nature of this assessment, the vertical and lateral extent of contamination was not fully assessed during this phase of work. We recommend that soils in the vicinity of SS-1 that indicate some level of surficial contamination be sequestered for further analysis or blended during grading to an extent that olfactory detection of hydrocarbons is not possible. The county of Santa Barbara considers the presence of volatile compounds at concentrations of 100 ppm (mg/kg) a nuisance and blending should dilute the affected soils to this concentration or below.

Limitation

This report has been prepared for the exclusive use of SyWest Development of San Rafael, California, regarding the property at 907 South Kellogg Avenue in Goleta, California. Use of, or reliance on the information and opinions contained in this report by other parties, without first consulting this office, is at those parties' own risk.

The findings presented in this document are based on the results of laboratory analysis of soil samples. It is possible that variations exist beyond or between points sampled during the course of the project. Changes in conditions could also occur due to contaminant migration, variations in climate, or other factors not apparent at the time of field work.

It should be noted that any level of assessment cannot ascertain that a property is completely free of chemical or toxic substances; therefore, Earth Systems Pacific cannot offer the certification of a "clean" property. We believe the scope of work performed is sufficient to allow an interested party to make an informed decision. The services performed by Earth Systems Pacific were conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the site vicinity.

We appreciate the opportunity to be of service. If you have any questions or comments regarding this report, please contact this office at your convenience.

Sincerely,

Earth Systems Pacific

Darrin Hasham, CEG 2423
Vice President, Associate Geologist

Zinc(Zn)	30.6	0.5	1	5,000	250	6010B

COMMENTS
DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = PQL X DF
ND = Below the Actual Detection Limit or non-detected
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
@ = Must meet both the STLC Limit at 560 and EPA-TCLP Limit at 5
* = STLC analysis for the metal is recommended (if marked)
** = Additional Analysis needed, please call to discuss (if marked)
*** = The concentration exceeds the TTLC Limit, and the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)
-- = Not analyzed/not requested
