I. INTRODUCTION AND PURPOSE

Background Summary

In accordance with the California Environmental Quality Act (CEQA) Guidelines Section 15063 (Initial Study), the City of Grass Valley (City) has prepared this Initial Study to assess the potential environmental impacts of the Wolf Creek Trail project. On the basis of the Initial Study, the City finds that the proposed project will not have a significant adverse effect on the environment and will not require the preparation of an Environmental Impact Report. Therefore, this Mitigated Negative Declaration has been prepared as the appropriate level of environmental review in accordance with CEQA and the CEQA Guidelines Sections 15063 and 15070 et. seq.

Public and Agency Review

This Initial Study/Mitigated Negative Declaration will be circulated for a **30-day** public and agency review commencing **April 20, 2023.** Copies of this Initial Study and cited references may be obtained at the City of Grass Valley at the address noted below. Written comments on this Initial Study/Mitigated Negative Declaration may also be addressed as noted below.

Project title: Wolf Creek Trail Project

Lead agency name and address

City of Grass Valley

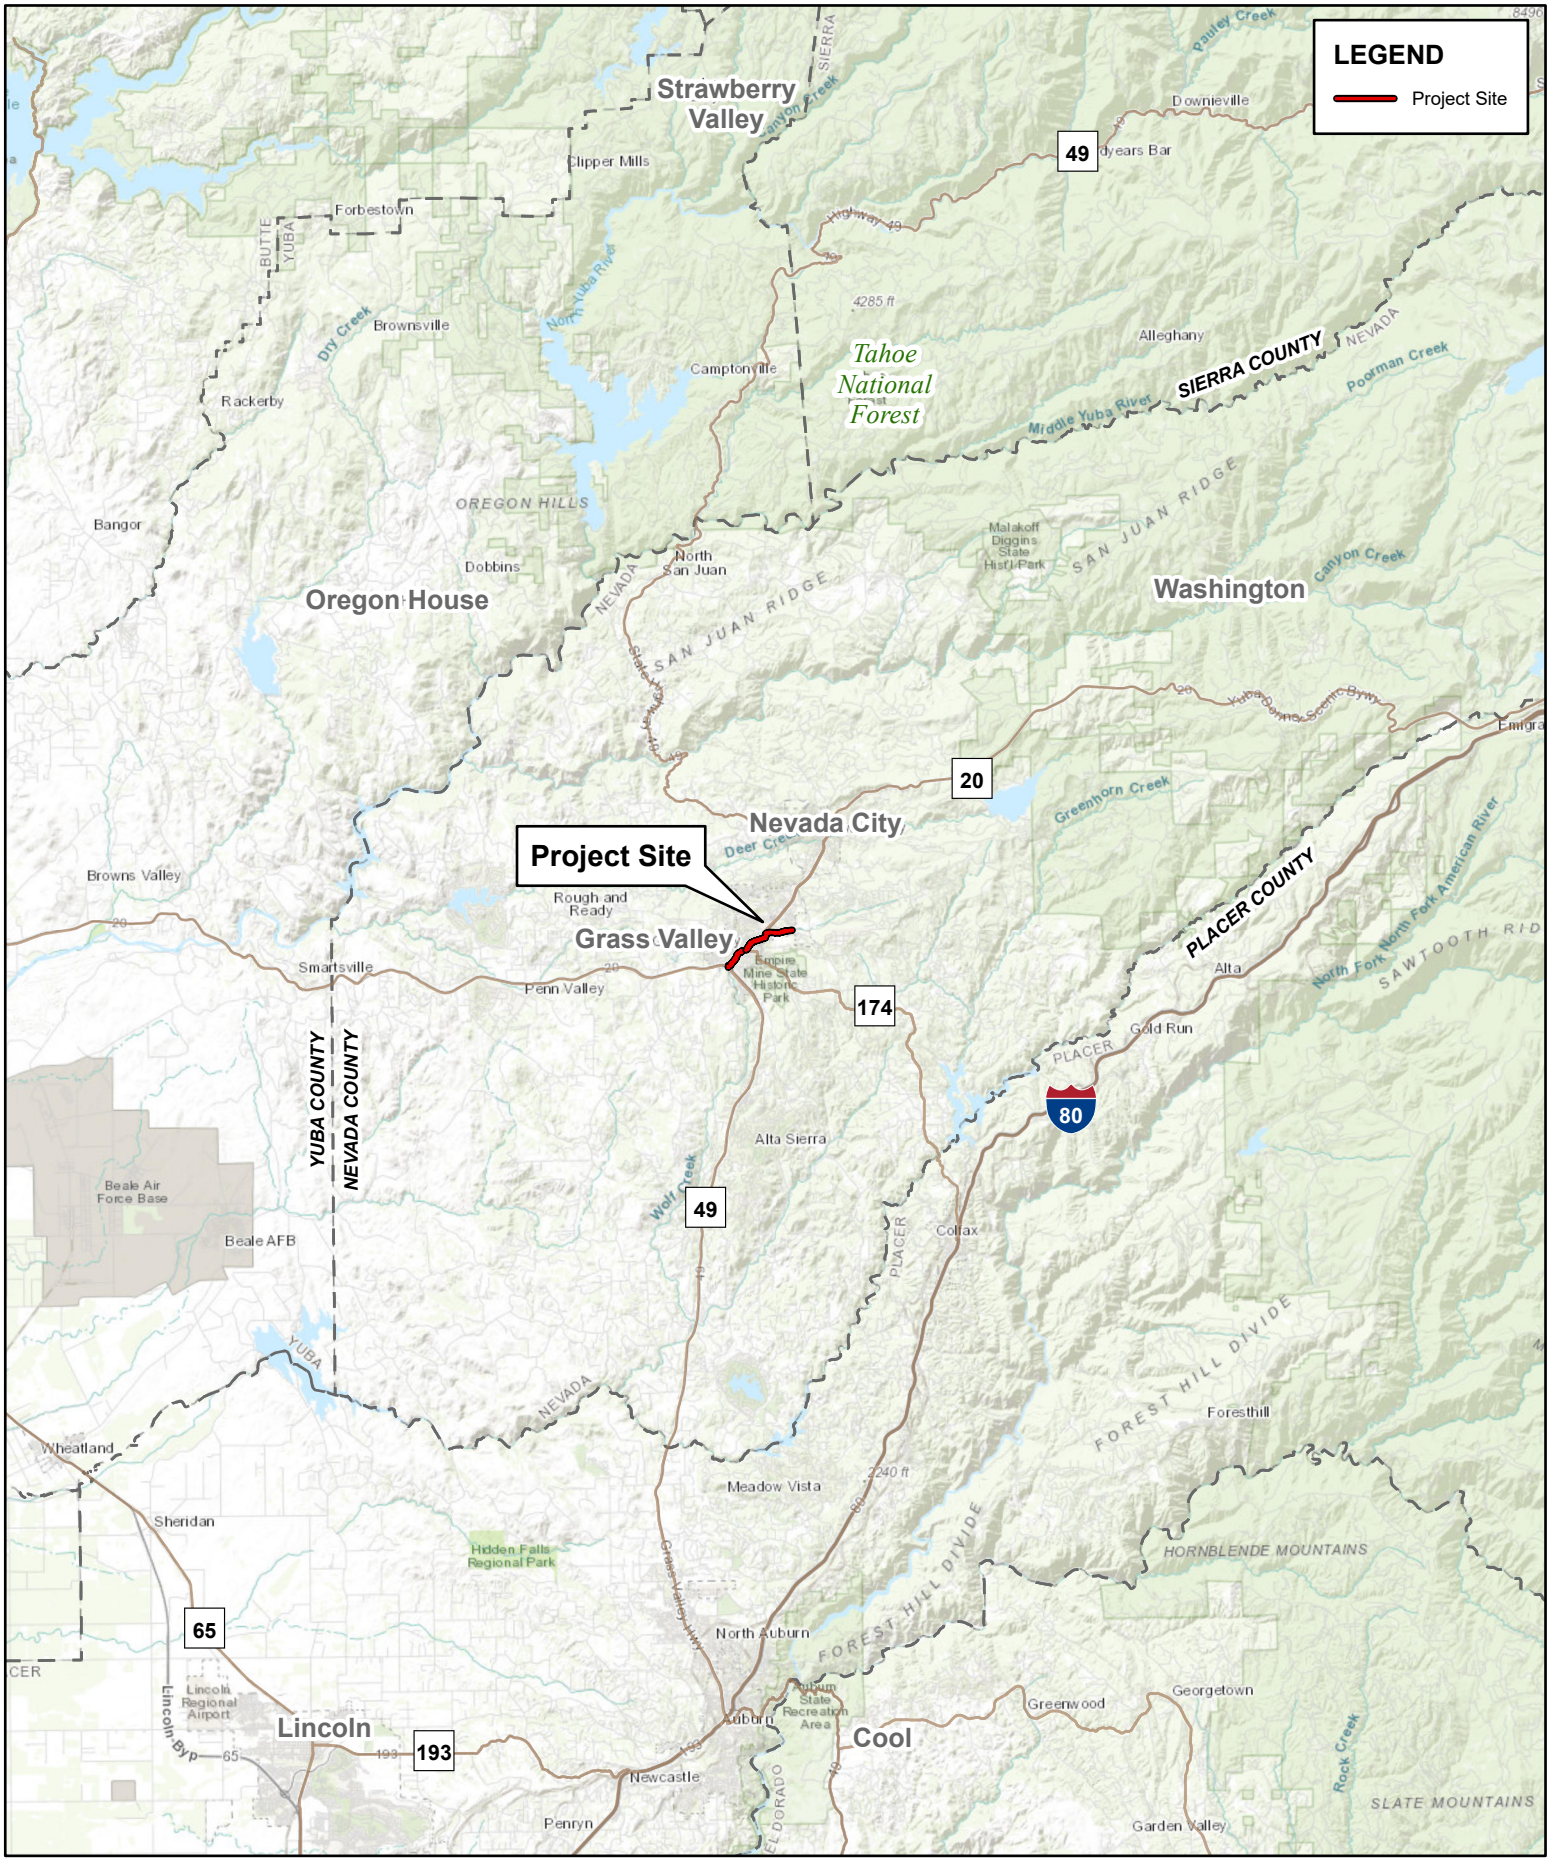
I.1 Project Location and Site Description



The Wolf Creek Trail ("proposed project") is an approximately 2.3-mile trail that roughly follows the alignment of Wolf Creek through the City of Grass Valley from its southern limits to the northeast corner of town. The trail, as currently proposed, is located entirely within existing public right of way, primarily in City right of way with portions of the trail situated in California Department of Transportation (Caltrans)

right of way. The project site is located in Section 26, Township 16N, Range 8E Mt. Diablo Base Meridian on City of Grass Valley 7.5-minute USA quadrangle (**Figure 1: Vicinity Map** and **Figure 2: Project Location Map**). Approximate coordinates at its center are 39° 13' 13" north and -121° 03' 15" west.

The general environmental setting of the site is indicative of the Grass Valley Foothill habitat, and includes Ponderosa Pine, Sierra Mixed Conifer, Riparian, Landscaped, and Developed habitat. The site slopes are generally minor, being less than 10% with some steeper slopes primarily where grading has occurred.

Surrounding Land Uses

The project is predominantly in areas of developed residential, commercial, and light industrial uses but also includes undeveloped habitat (Riparian, Ponderosa Pine, and Sierra Mixed Conifer habitat). The project area is located adjacent to and on the eastern side of SR 49.

Wolf Creek Trail

Project Objective

The community of Grass Valley is confined by the valley topography. Once one considers the historic narrow streets, the flow of Wolf Creek, foothill topography and the SR- 20/49 freeway alignment, it is easy to understand the challenges pedestrians and cyclists have with navigating through town conveniently and safely. The Wolf Creek trail looks to add the primary spine for pedestrians and cyclists to move through the valley using one of the nicest assets the valley has to offer: Wolf Creek.

Once in place, the community and visitors will have a convenient option for non-motorized travel through Grass Valley and along Wolf Creek. Today much of Wolf Creek is inaccessible and hidden. In the future, with the trail following the creek, Wolf Creek will become a much more prominent component for people that live and visit Grass Valley.

Additional benefits of the project include the increased use of multi-modal transportation methods stemming from trail use, which will serve to reduce vehicular traffic, Vehicle Miles Traveled, improve air quality, and reduce greenhouse gas emissions; recreational and associated health and well-being benefits from use of the trail; and additional focus on the restoration of degraded reaches of Wolf Creek.

I.2 Project Description

The Wolf Creek Trail is envisioned as a multi-use trail that roughly follows the alignment of Wolf Creek through the City of Grass Valley from its southern limits to the northeast corner of the City (**Figure 1**). The trail will be separated from vehicular traffic to the greatest extent feasible and extend an existing 1.2-mile section that currently ends at Freeman Lane and Allison Ranch Road (Segment 1). The Wolf Creek Trail ("proposed project") is an approximately 2.3-mile trail that would complete Segments 2-6 lengthening the trail up to Sutton Way (**Figure 2 & Figure 3A-3E: Proposed Project)** and is located entirely within City and Caltrans right of way (ROW).

As the proposed project trail will be traversed by all forms of non-motorized transportation users, each section of the trail will provide full access for cyclists and pedestrians alike. As a Class I Bikeway, typically called multi-use or shared use path, both bikes and pedestrians use a completely separated right of way to travel in both directions with cross flow minimized. Other facilities like sidewalks or bike lanes can only be utilized by one type of user and typically only in one direction. The goal would be that all types of users be able to use the trail, including not only pedestrians and cyclists, but joggers, roller-bladers, parents with strollers, scooters and skateboards and of course the disabled.

Additional improvements throughout the proposed trail include trail signage, benches, interpretive signage, murals, and fencing along the edge of some property lines. Safety improvements and signage would be installed at crossings to conform to applicable local, Caltrans, and California Manual on Uniform Traffic Control Devices (California MUTCD) standards.

The entire 3.5-mile trail, including the existing Segment 1 is described below in 6 segments:

Segment 1 – to Freeman Ln and Allison Ranch Rd

The first segment was constructed in 2018-19 and ends at Freeman Lane and Allison Ranch Road. It is the furthest downstream section and runs along the east side of the creek through City easements and City properties. Segment 1 is not a part of this analysis.

Segment 2 – Freeman Ln to south of Neal St Safeway parking lot

This segment extends the trail from the end of Segment 1 at Freeman Ln up to the south of Neal St. Safeway shopping center parking lot. The initial approximately 350-feet of Segment 2 along Mill St. includes installation of a new sidewalk and new curb and gutter, before turning east into a wooded area and toward Wolf Creek. The majority of Segment 2 is proposed along the east banks of Wolf Creek with significant portions within the Caltrans ROW. The proposed path would be 8-feet wide with 1-ft shoulders in most locations, narrowing to a lesser width in constrained locations. The trail would be an asphalt paved trail installed over aggregate base, with paved shoulders. Grading would occur beyond the shoulders to conform the trail to existing grade up to a maximum slope of 2:1 as dictated by geotechnical conditions. In the areas with significant slope, retaining walls will be installed as edge treatments.

Segment 3 – Colfax Ave/Hwy 174 to Bennett St along Hanson Way

At this point a short segment of the eventual completed trail passes through the complex intersection of South Auburn St./Neal St./Hanson Way/Tinloy St. This intersection is being rebuilt by the City under a separate CEQA analysis and therefore is excluded from this analysis. The third segment of the proposed project starts at Colfax Ave/Hwy 174 at Hanson Way and continues adjacent to the east side of Hanson Way and ends at Bennett St. This segment is entirely on City streets. The proposed bike path is an 8-foot wide hot mix asphalt (HMA) Bike path with colored paving separated from parking along Hanson way by an approximately 5-foot wide median with vertical curb planted with trees or river rock. The pedestrian path would be an 8-foot-wide new sidewalk separated from the bike path by a mountable rolled curb and gutter.

Segment 4 – Bennett St to Railroad Ave and Idaho Maryland Rd

This segment begins at Bennett Street and runs adjacent to the onramp to Highway 49 within Caltrans ROW in the hillside above the freeway before leaving the Caltrans ROW for Railroad Avenue where it remains a Class 1 bikeway within the City street ROW. Segment 4 ends at Idaho Maryland Rd. and Railroad Ave. The proposed trail between Bennett St. and Railroad Ave. would be 8 feet wide with 1-foot shoulders for a total width of 10 feet in most locations. The trail would be an asphalt paved trail installed over aggregate base, with paved shoulders. Grading would occur beyond the shoulders to conform the trail to existing grade up to a maximum slope of 2:1 as dictated by geotechnical conditions. In the areas with significant slope, a cut retaining wall will be installed on the east side (upslope side) of the trail as edge treatments. A small retaining

wall will also be installed along portions of the west side of the trail primarily near the Bennett St. side of Segment 4. The proposed trail adjacent to the north side of Railroad Ave. extending to Idaho Maryland Rd. would be a 10-foot wide concrete shared bicycle and pedestrian path separated from Railroad Ave. by curb and gutter.

Segment 5 – Railroad Ave to Centennial Dr along Idaho Maryland Rd

This segment runs adjacent to the south side of Idaho Maryland Rd. from Railroad Ave. to Centennial Ave. with the long-term goal of moving the trail to the south side of Wolf Creek and off Idaho Maryland Rd. as a Class 1 facility. The proposed trail would be a 10-foot wide concrete shared bicycle and pedestrian path separated from Idaho Maryland Rd. by curb and gutter. Minimal grading is needed beyond the back of path to conform to existing grades. This segment also requires removing and replacing traffic striping along Idaho Maryland Rd. that includes a 5-foot wide westbound bike lane along the north side of the roadway.

Segment 6 – Centennial Dr to Sutton Way along Idaho Maryland Rd

This segment continues adjacent to Idaho Maryland Rd, from Centennial Ave. up to the terminus of the Wolf Creek Trail at the northeast corner of the Sutton Way and Idaho Maryland Rd. A trailhead is proposed as part of the Loma Rica development at Sutton Way and Idaho Maryland Rd. and will connect to a planned trail system throughout the development. The pedestrian and eastbound bicycle portion of the proposed trail from Segment 5 adjacent to the south side of Idaho Maryland Rd. will continue with the 10-foot wide concrete shared bicycle and pedestrian path separated from Idaho Maryland Rd, by curb and gutter. The proposed trail in Segment 6 would also include removing and replacing the traffic striping to include a 5-foot-wide westbound bike lane adjacent to the north side of Idaho Maryland Rd.

Construction of the proposed project would include approximately 7,060 cubic yards of excavation. Total fill would be approximately 3,050 cubic yards. Material brought on to the site would be tested in accordance with local and state requirements to ensure contaminated material is not brought on site. Material that is not removed immediately from the project area once excavated would be stockpiled and stabilized as outlined in MM-BIO-15 until it could be off-hauled (approximately 5,370 cubic yards).

Vegetation and tree removal would be required to construct the trail and would include the removal of native trees, landscape trees, and non-native trees. It is estimated that approximately 176 trees would be removed in the project area. The trail has been sited to minimize tree removal to the extent possible, in particular riparian species, while also preserving large and healthy trees that will enhance the trail experience. Considering the Project Area or Biological Study Area (BSA) includes 764 trees, it would allow 588 trees to be preserved. Of the 176 trees proposed for removal, only 16 trees are "significant trees" as defined by Chapter 12.36 of the City Municipal Code Tree Preservation Ordinance as a tree having "*a trunk of twenty-four caliper inches in diameter or larger diameter at breast height (DBH*)" and 157 are native trees. Of the 157 native trees:

- 97 are incense cedar ranging in size from 6.5 to 27.8 diameter at breast height (DBH).
- 49 are ponderosa pine ranging in size from 6.2 to 34.1 DBH.
- 5 are native California black oak ranging in size from 7.7 to 12.8 DBH.
- 3 are Fremont Cottonwood ranging in size from 21.0 to 31.3 DBH.
- 1 Box Elder at 11.3 DBH, 1 Big-leaf Maple at 6.3 DBH, and 1 white alder at 6.0 DBH are also proposed for removal.
- Only 2 of the trees proposed for removal were in excellent condition, both ponderosa pines.
- 78 trees proposed for removal occur within Segment 2 of the trail, 2 within Segment 3, and 96 within the forested section of Segment 4 of the trail between Bennett and Railroad Ave.

Mitigation for native trees to be removed would be accomplished in accordance with the City's Tree Preservation Ordinance (Chapter 12.36) and California Department of Fish and Wildlife (CDFW) requirements. Mitigation measures for tree removal will include replanting trees on or off site at a ration consistent with the City Municipal Code. Additional details on tree species and removals are provided in **Appendix A**, Tree Survey Report.

Underground utilities would remain in place. The small number of distribution utility poles potentially in conflict with the trail would be relocated in coordination with utilities companies (namely PG&E) prior to construction as necessary. Utility relocation would be completed prior to project construction. Other utility adjustments would include relocating fire hydrant in a few locations.

Access to the construction site would occur from SR-20/49 and adjacent roads. While final staging areas would be decided by the contractor, staging would primarily occur near the trail alignment on City or Caltrans owned property, or within City or Caltrans ROW. These areas would be used to store and stage materials and equipment at different times throughout project construction. Staging areas would typically consist of previously disturbed areas with bare, gravel, or paved surfaces.

Following completion of the trail construction, the City of Grass Valley would maintain all portions of the

trail. A Maintenance Agreement, or other suitable means, would be established between the City of Grass Valley and Caltrans to ensure the maintenance of the portions of the trail within Caltrans' ROW by the City. Trail operation and maintenance would require occasional sweeping, litter pick-up, and vegetation and tree trimming to maintain adequate vertical clearance for trail users.

General Plan Land Use and Zoning Designation

The Project Area is entirely within public ROW (City and Caltrans) and the purpose of the project is exclusive to public infrastructure. Public ROW is excluded from General Plan and Zoning designations when the purpose of the project is exclusive to public infrastructure.

The public right of way is typically a strip of land 50 to 60 feet wide that contains the public street, sidewalks, and utilities. The edge of the right of way is also the property line for the abutting property. As per Municipal Code 12.48.0202 public “Right of Way” means land which by deed, conveyance, agreement, easement, dedication, usage or process of law is reserved for and dedicated to the general public for street, highway, alley, public utility, storm drainage, water, sanitary sewer, sidewalk, bikeway or pedestrian walkway purposes. "Encroachments" to the public ROW means going over, upon or under, or using a right-of-way or watercourse in such a manner as to prevent, obstruct, or interfere with its normal use.

Construction of the Wolf Creek Trail will require an encroachment permit from Caltrans.

I.3 Regulatory Setting and Required Agency Approvals

The following City of Grass Valley, Responsible and/or Trustee Agency permits are required prior to construction of the Wolf Creek Trail project:

- City of Grass Valley Department of Public Works - Improvement Plan, Grading Plan, Flood Development Permit, Encroachment Permit and Tree Permit approvals.
- City of Grass Valley Community Development Department - Site Plan and Building Plan Approvals and Conditions of Approval/Mitigation Measure compliance verification.
- A Storm Water Pollution Prevention Plan (SWPPP) shall be approved by the Regional Water Quality Control Board in accordance with the Clean Water Act.
- A Dust Mitigation Plan shall be approved by the Northern Sierra Air Quality Management District.
- Timber Harvest Permit Exemption (for less than 3-acre conversion) from the California Department of Forestry and Fire Protection.
- State Department of Fish and Wildlife - A Stream Alternation Agreement may be required for encroachment into the riparian corridor (as defined by vegetation type) of Wolf Creek.
- State Department of Transportation (Caltrans) – Encroachment Permits and Maintenance Agreement for trail maintenance.
- City of Grass Valley Building Department - Building, Plumbing, Mechanical, and Electrical Permits in accordance with the California Codes.
- City of Grass Valley Fire Department - Site Plan, Improvement Plan and Building Plan Approvals.

I.5 Evaluation of Environmental Impacts:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to a project like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) **"Potentially Significant Impact"** is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.

4) **"Less Than Significant With Mitigation Incorporated"** applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.

5) **"Less-Than-significant Impact:"** Any impact that is expected to occur with implementation of the project, but to a less than significant level because it would not violate existing standards.

6) **"No Impact:"** The project would not have an impact to the environment.

7) Earlier analyses may be used where, pursuant to Tiering, Program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration.

8) Lead agencies are encouraged to incorporate into the checklist reference to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

II. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- ☒ Aesthetics
- ☐ Agricultural and Forestry Resources
- ☐ Air Quality
- ☒ Biological Resources
- ☒ Cultural Resources
- ☐ Energy
- ☒ Geology/Soils
- ☐ Greenhouse Gas Emissions
- ☐ Hazards & Hazardous Materials
- ☒ Hydrology/Water Quality
- ☐ Land Use/Planning
- ☐ Mineral Resources
- ☒ Noise
- ☐ Population/Housing
- ☐ Public Services
- ☐ Recreation
- ☐ Transportation
- ☒ Tribal Cultural Resources
- ☐ Utilities/Service Systems
- ☐ Wildfire
- ☐ Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial evaluation (check one):

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures.

CERTIFICATION:

III. EVALUATION OF ENVIRONMENTAL IMPACTS

Section 3.0, Evaluation of Environmental Impacts, discusses the project's potential for impacts to various resources. The discussion follows the format of Appendix G of the currently adopted CEQA Guidelines (The Office of Planning and Research (OPR) publishes the latest guidelines online: http://opr.ca.gov/ceqa/updates/guidelines/), and identifies any potentially significant impacts that could result from project implementation. Mitigation measures are identified, where necessary, to reduce potentially significant impacts to less than significant levels. No significant and unavoidable impacts were identified.

III.1 Aesthetics

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?			X	
b) Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?		X		

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?		X		

SETTING

The aesthetic value of an area is a measure of its visual character and quality, combined with the viewer response to the area (Federal Highway Administration, 1983). The visual quality component can best be described as the overall impression that an individual viewer retains from residing in, driving through, walking through, or flying over an area. Viewer response is a combination of viewer exposure and viewer sensitivity. Viewer exposure is a function of the number of viewers, the number of views seen, the distance of the viewers, and the viewing duration. Viewer sensitivity relates to the extent of the public's concern for a particular view shed (U.S. Bureau of Land Management, 1980).

The City of Grass Valley 2020 General Plan notes that the City does not contain any designed scenic highways or vistas, but generally acknowledges the City and its surroundings as having a wide range of landscapes, scenic vistas and visual resources.

a) *Have a substantial adverse effect on a scenic vista?*

Less Than Significant Impact. Under CEQA, a scenic vista is defined as a viewpoint that provides expansive views of a highly valued landscape for the public's benefit.

Wolf Creek Trail construction would not substantially or permanently obstruct views of scenic vistas. Construction activities that would have the potential to temporarily alter views would consist of operation of construction equipment that could temporarily interrupt views of surrounding scenic vistas. Any obstruction to views of scenic vistas are expected to occur during construction and shall cease upon completion of the proposed project.

The majority of the Wolf Creek Trail would be a flat and flush with the ground surface. Vertical features associated with the project would be limited to signage and retaining walls. Retaining walls would be designed to have a consistent visual appearance with other retaining walls throughout the corridor. A majority of the retaining walls would not exceed a height of 4-feet, with a few locations requiring an up to 9-foot retaining wall. Where retaining walls are proposed, they would be used to conform the trail to existing grade and are not anticipated to obstruct views from sensitive viewpoints. Therefore, due to the limited vertical development and the harmonious design of the vertical features associated with the project, a less than significant impact would occur, and no mitigation is required.

b) *Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?*

No Impact. There are no officially designated scenic highways within or near the project site (CA Dept Transportation, 2023). Considering scenic vistas or scenic highways are not within the project vicinity, the project will not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway. No impact will occur.

c) *In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

Less Than Significant With Mitigation Incorporated. The proposed project contains non- urbanized areas. During the construction period, construction equipment storage, and earth- moving would temporarily alter the existing visual quality of the affected area for adjacent sensitive viewers (recreational users and residential neighbors). Temporary construction activities along the Wolf Creek Trail alignment could cause dust and material stockpiles that could create an untidy appearance, collectively degrading the visual quality of the site and surroundings.

Where temporary construction activities occur in residential and/or recreational areas, the activities could potentially temporarily degrade the existing visual quality**.** However, these potential temporary construction impacts would be reduced by storing construction material, stockpiled soil, and equipment in staging areas beyond direct view of residents and recreationists and in already disturbed shoulder areas, to the greatest extent practicable. Staging areas would be in areas where the removal of trees, native vegetation, or large non-native trees would not be required and in areas where the ability to impact trees and/or shrubs would not be present (e.g., within the dripline of trees or shrubs, especially native species). Areas of temporary disturbance for the trail would be re-vegetated or stabilized with erosion control measures implemented in accordance with National Pollutant Discharge Elimination System (NPDES) and environmental permit requirements. Following these requirements would reduce temporary visual impacts.

The proposed project could adversely affect the visual character at some non-urbanized locations by vegetation removal along the SR-20/49 corridor. Vegetation clearing would occur at a limited number of locations to construct the trail and proposed improvements. This would primarily consist of tree removal and tree trimming. Areas of temporary disturbance would be revegetated in accordance with environmental permit conditions and Caltrans requirements. Where applicable, a seed mix appropriate for the climate and location would be used to revegetate disturbed areas.

Currently, it is estimated that 176 trees would be removed to build the trail. Considering the BSA includes 764 trees, this means it would allow 588 trees or 77% of the trees to be preserved. However, only 16 of the 176 trees proposed for removal are "significant trees" as defined by Chapter 12.36 of the City Municipal Code as a tree having "*a trunk of twenty-four caliper inches in diameter or larger diameter at breast height (DBH).*" These 16 "significant trees" would have the most impact on the visual character or quality of public views of the site and its

surroundings.

Of the 176 trees proposed for removal, 157 are native, including all 16 "significant trees." Native trees would be replanted within the project area at a ratio consistent with local tree protection ordinances and California Department of Fish and Wildlife (CDFW) replanting requirements. Additional details on tree species and removals are provided in **Appendix A**, Tree Survey Report.

Implementation of mitigation measure Mitigation Measure (MM)-BIO-21 would require the replacement of protected trees consistent with local tree protection requirements for trees removed within local agency jurisdiction, applicable Caltrans requirements for trees removed within Caltrans ROW, and CDFW replanting requirements if any trees were to be removed within riparian areas under CDFW jurisdiction. With the maturation of replacement trees, impacts to the visual character from the loss of trees would be reduced to a less than significant level as mitigated.

Vertical features associated with the project would be limited to signage and retaining walls. Retaining walls would be designed to have a consistent visual appearance with other retaining walls throughout the corridor. A majority of the retaining walls would not exceed a height of 4-feet, with a few locations requiring an up to 9-foot retaining wall. Where retaining walls are proposed, they would be used to conform the trail to existing grade and are not anticipated to obstruct views from sensitive viewpoints. When considering if an impact is significant in a rural environment, the visibility of the Wolf Creek Trail alignment depends on the visibility of the project components considering the area's landform (topography), land cover (vegetation and structures), and atmospheric conditions (dust, fog, precipitation). Most of the Wolf Creek Trail alignment would be at grade with few components extending above grade (retaining walls and signage). The Wolf Creek Trail alignment would not significantly contrast with the existing environmental setting because most of the alignment would be constructed directly adjacent to and parallel to the SR-20/49 corridor or constructed over existing gravel and paved roads. The trail has been sited to minimize tree removal. Vegetation and tree removals would be subject to replanting requirements, as previously discussed.

Through carefully selected staging areas and trail alignment location and minimal vertical features, and implementation of MM-BIO-21 the proposed project would not significantly impact visual quality to sensitive viewer groups along the trail alignment and impacts would be less than significant as mitigated.

d) *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

Less Than Significant With Mitigation Incorporated. Existing sources of day and nighttime light within and around Grass Valley include those common to developed areas. Existing sources include motor vehicle lights along SR-20/49, streetlights, parking lot lighting, building lighting and commercial signage in the project vicinity.

Project construction would occur during daylight hours only and no impacts from nighttime construction lighting would occur. The installation of lights along the proposed trail alignment would only occur, if at all, along the forested portions of Segment 2 and Segment 4. The remainder and majority of the trail

is on existing roads and would be lit with existing or modified street lighting. Any lighting added to the forested portions of Segment 2 and 4 would be Dark Sky compliant and would be strictly focused on the trail. In addition to nuisance lighting for neighbors, lighting along a riparian corridor can impact wildlife if not thoughtfully designed. If lighting is to be included on these segments, the project will consider all of these factors.

Through implementation of the City's Development Standards and Community Design Guidelines for lighting, including: 1) Lighting levels shall be limited to the minimum levels necessary to provide public safety. Lighting fixtures should be thoughtfully placed to avoid light spillage and glare on adjacent properties. "Down shine" luminaire shall be utilized; 2) Lighting "spill over" shall not exceed 0.5 foot candles at any point adjacent to residential premises, churches and other sensitive uses; and, 3) All outdoor light fixtures shall be Dark Sky compliance, strategically located, and shall be deflected downward to focus illumination only on the trail, and not adjacent properties, the proposed project would not create a new source of substantial light or glare which would significantly adversely affect day or nighttime views in the area alignment and impacts would be less than significant.

III.2 Agriculture and Forestry Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?			X	
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				X

SETTING

The Project Area is entirely within public ROW (City and Caltrans) and the purpose of the project is exclusive to public infrastructure. Public ROW is excluded from General Plan and Zoning designations when the purpose of the project is exclusive to public infrastructure.

"Agricultural Land" is defined as prime farmland, farmland of statewide importance, or unique farmland, as defined by the United States Department of Agriculture land inventory and monitoring criteria, as modified for California.

No current agricultural operations or forestry lands exist within the BSA as defined according to the U.S. Department of Agriculture. Although the BSA contains trees, the area does not fall under the definition of forest lands as defined by Public Resources Code Section 12220(g).

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The California Resources Agency farmland mapping program does not identify the project site or vicinity as having Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. Considering no farmland as defined by CEQA exists within the project area, the proposed project will not involve conversion of farmland or zoning for agricultural use. No impact will occur.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The California Resources Agency farmland mapping program does not identify the project site or vicinity as having Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. Considering no farmland, as defined, exists within the project area, the proposed project will not involve conversion of farmland or zoning for agricultural use, including any farmlands under Williamson Act Contract. Therefore, no impact will occur.

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g) or conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

No impact. The project area is not zoned for forest land or timberland. The proposed project would not conflict with, or cause rezoning of, forest land zoning. The proposed project would extend an existing trail system that would open the site to a variety of users that may not otherwise be able to access the existing trails (e.g. physically disabled people). As noted in the project setting above, the project will not conflict with existing zoning or cause the rezoning of forest land (as defined in Public Resources Code Section 12220(g), timberland (as defined by Public Resources Code Section 4526), or timberland

zoned timberland Production (as defined by Government Code Section 51104(g)). There would be no conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zones. No impact will occur.

d) *Would the project involve or result in the loss of forest land or conversion of forest land to non-forest use?*

Less than Significant. As noted above, the project area is not zoned for forest land or timberland, nor would the proposed project conflict with, or cause rezoning of, forest land zoning. The proposed project requires the removal of trees, and other types of vegetation within forest habitat, but these areas are not Forest Lands as defined as defined in Public Resources Code section 12220(g). In addition, the project is entirely within public ROW (City and Caltrans), the purpose of public ROW designation is to build roads.

The entire region within, and surrounding the City of Grass Valley, can be characterized as forest land. However, the forest land is further defined by its mosaic of vegetative communities that make up the forested region. The majority of the project area is located within an urban area of the City where forest land no longer naturally occurs. However, within the BSA, there are portions that include the forest land habitat types of riparian, ponderosa pine, and Sierra mixed conifer habitat.

As summarized in **Table 1** and displayed in **Figure 4A-4E: Habitats within the Biological Study Area**, construction of the proposed project would impact approximately 0.78 acres of riparian habitat, 0.78 acres of ponderosa pine habitat, and 0.54 acres of Sierra mixed conifer habitat, for a total of approximately 2.10 acres of disturbance to forested lands. Of this 2.10 acres, 1.55 acres are permanent impacts (the trail footprint itself) and 0.55 acres are temporary impacts. New trees would be planted in the temporary impact areas, and these areas would be revegetated and over time and become unnoticeable to offsite viewers, which would reduce the impact to the extent feasible. As further detailed in the Biological Resources section of this Initial Study, the implementation of MM BIO-1 through MM-BIO-3, and MM-BIO-16 and MM-BIO-21 will mitigate impacts to these habitats.

III.2.1 Table 1: Estimated Amount of Project effects to Forest Habitat Communities

Vegetation Habitat Community	Biological Study Area Overlap (acres)	Project Impact Area Overlap (acres)	Permanent Impacts (acres)	Temporary Impacts (acres)
Riparian	5.26	0.78	0.52	0.26
Ponderosa Pine	2.30	0.78	0.63	0.15
Sierra Mixed Conifer	1.82	0.54	0.40	0.14
Total	**9.38**	**2.10**	**1.55**	**0.55**

The design of the trail is specifically tailored to minimize vegetation and tree removal to the extent possible. Numerous alternatives were evaluated to find the path that balanced the objective of building the trail system, with the overarching goal of minimizing the impacts to the natural open space. The

amount of forested land that would be impacted by the proposed project is minimized by design, in particular to riparian habitat. The project would include the removal of 176 trees, but only 4 trees within riparian habitat.

Although the project is slated to remove 176 trees from the site, the project will not result in the loss of forest land or conversion of forest land to non-forest uses as defined in Public Resources Code Section 12220(g). 53 of the 176 trees are less than 10-inch DBH and their removal can be classified as improving forest health and reduce fuel loads that increase the risk of wildfire. Only 16 of the 176 trees proposed for removal are "significant trees" as defined by Chapter 12.36 of the City of Grass Valley Municipal Code as a tree having "a trunk of twenty-four caliper inches in diameter or larger diameter at breast height (DBH)." Finally, mitigation re-planting will occur as per MM-BIO-22.

The California Department of Forestry and Fire Protection (CAL FIRE) must approve timber harvest plans and logging permits if any trees to be cut down are commercial timber harvest species (i.e. a Timber Harvest Permit would need to be obtained from CAL FIRE). However, standard conditions of approval require the applicant to obtain an exemption (for less than 3-acre conversion) of a Timber Harvest Permit from the California Department of Forestry and Fire Protection.

Due to the fact that the project area is not in designated forest lands, is entirely within public ROW, and will be implemented in compliance with the City's Tree Protection Ordinance as defined in Chapter 12.36 of the City of Grass Valley Municipal Code, the potential for the project to involve or result in the loss of forest land or conversion of forest land to non-forest use is less than significant.

e) *Would the project involve other changes in the existing environment, which due to their location or nature, could result in conversion of farmland, to non-agricultural use?*

No Impact. The proposed project will have no potential for impacting any agricultural properties or uses that exist within the City. Therefore, there is no potential for the proposed project resulting in the conversion of existing farmland to a non-agricultural use. No impact will occur.

III.3 Air Quality

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			X	
c) Expose sensitive receptors to substantial pollutant concentrations?			X	
d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?			X	

SETTING

The project is located within the Northern Sierra Air Quality Management District's (NSAQMD) jurisdiction. The overall air quality in Nevada County is good but two known air quality problems exist, Ozone and Suspended Particulate Matter (PM-10). Nevada County is a "non-attainment" for both pollutants. PM-10 in Grass Valley meets federal ambient ozone standards but exceeds the more stringent State standards in the winter, primarily due to smoke created from wood stoves and fireplaces. Violations in the summer months have been noted during forest fires or periods of open burning. PM-10 is usually associated with dust generated during construction. Western Nevada County is a non-attainment area for the federal 8-hour ozone standard and the entire county is non-attainment for the state one-hour ozone standard.

The NSAQMD has adopted standard regulations and conditions of approval for projects that exceed certain air quality threshold levels to address and mitigate both short-and long-term emissions. The Northern Sierra Air Quality Management District (NSAQMD) has established the below thresholds of significance for PM-10

and the precursors to ozone, which are reactive organic gases (ROG) and nitrogen oxides (NOx). The NSAQMD has developed a tiered approach to significance levels as noted in Table 2 below: A project with emissions meeting Level A thresholds will require the most basic mitigations; projects with projected emissions in the level B range will require more extensive mitigations; and those projects which exceed Level C thresholds, will require an Environmental Impact Report to be prepared, which may result in even more extensive mitigations.

a) *Would the project conflict with or obstruct implementation of the applicable air quality plan?*

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact. In consultation with NSAQMD, the project is required to comply with standard air quality measures for construction as noted below. These measures are consistent with the Northern Sierra Air Quality Management's Air Quality Plan for the district. From an operational perspective, the residential project is anticipated to generate negligible impacts as outlined in **Table 2** - *Project Construction and Operational Emissions Estimates.* The project does not conflict with or obstruct implementation of an air quality plan prepared by NSAQMD. These potential impacts are less than significant.

Adherence with standard Northern Sierra Air Quality Management (NSAQMD) standards will ensure that construction impacts will remain less than significant. Therefore, the project will not violate an air quality standard or contribute substantially to an existing or projected air quality violation. These potential impacts are less than significant.

III.3.1 Table 2: Project Construction and Operational Emissions Estimates

	ROG (lbs/day)	NOx (lbs/ day)	PM10 (lbs/ day)	CO (lbs/day
Project Construction Impacts	0.15	1.46	0.61	1.18
Level A Thresholds				
NSAQMD- Significance Thresholds	ROG (lbs/day)	NOx (lbs/day)	PM10 (lbs/ day)	N/A
	<24lbs/day	<24lbs/day	<79lbs/day	
Level B Thresholds				
Maximum Project Emissions	ROG (lbs/day)	NOx (lbs/day)	PM10 (lbs/ day)	N/A
	24-136 lbs/day	24/136 lbs/day	79-136 lbs/day	
Level C Thresholds				
Maximum Project Emissions	ROG (lbs/day)	NOx (lbs/day)	PM10 (lbs/ day)	N/A
	>136 lbs/day	>136 lbs/day	>136 lbs/day	

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Construction-related air pollutant emissions would originate from mobile and stationary sources including but not limited to: construction equipment exhaust, dust resulting from earth-disturbance, painting, and asphalt and/or concrete paving and striping. Construction related emissions vary substantially depending on the level of construction activity, length of the construction period, specific construction operations, types of equipment, number of personnel, wind, precipitation conditions, and soil moisture content.

According to the City's 2020 General Plan EIR, the site is not in an area of naturally occurring asbestos (NOA) as substantiated by Figure 3.1-1 of the General Plan EIR.

In review of the project, the California Emission Estimator Model (CalEEMod) Version 2020.4.0, emissions modeling program was used to estimate air pollutant emissions associated with the project. According to CalEEMod modeling results, air quality impacts for construction would be less than significant for all regulated air pollutants. There are no air quality impacts from project usage. In contrast, increased use of bicycle and pedestrian transport resulting from the trail will serve to reduce vehicular traffic, Vehicle Miles Traveled and improve air quality. These potential impacts are less than significant.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. Construction activities at the project site will require diesel-powered vehicles and equipment, which may result in localized odors. However, these odors would be temporary and would dissipate in the outdoor construction environment. Although in close proximity to sensitive receptors at a few specific locations (i.e. residential) the emissions associated with the project would be short-term and are not anticipated to result in a substantial elevation of pollutant concentrations in the area. The potential for the proposed project resulting in odor emissions adversely affecting a substantial number of people is less than significant.

III.4 Biological Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?		X		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?		X		
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X	
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		X		
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?		X		

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X

SETTING

The project area is located within the 78 square mile Wolf Creek watershed, which drains to the Bear River Watershed, the second largest tributary to the Feather River. The Feather River flows to the Sacramento-San Joaquin River Delta before entering the Pacific Ocean through the San Francisco Bay. The Wolf Creek watershed is almost exclusively in the lower montane zone, with altitudes along the creek's 25-mile length ranging from over 3,000 feet at the headwaters to approximately 1,200 feet at the confluence with the Bear River. Unlike most other west-slope Sierran streams and rivers (which flow east to west), Wolf Creek flows primarily along a north–south axis. In comparison to east–west streams, this geographic positioning gives much more of the land a southern or partially southern exposure and thus the ability to support the most productive and diverse ecosystems. The general environmental setting of the site is indicative of the Sierra Nevada foothill habitat, and includes ponderosa pine, Sierra mixed conifer, and riparian habitat. The site slopes are generally minor, being less than 10% with some steeper slopes primarily where grading has occurred.

a) *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

The following section is a summary of the preliminary special-status species analysis in the Biological Constraints Report prepared for the proposed project (**Appendix B**).

Less Than Significant With Mitigation Incorporated. A biological resources inventory of plant and wildlife species was conducted to identify the location and extent of candidate, sensitive, or special status species within and around the project area, known as the Biological Study Area (BSA). To complete an analysis of the potential impacts to environmental habitats and resources from the Project, the work area and surrounding habitat was evaluated (Biological Study Area). The BSA was determined based on the characteristics of the project site and its surrounding environment, such as the presence of sensitive habitats, special-status species, and other ecological features of interest. It was also determined early in the project development process, and in

collaboration with stakeholders to include all areas where the trail alignment could potentially pass through.

Biological resources near the project area were generated using a combination of databases including the United States Fish and Wildlife Service (USFWS) Critical Habitats, USFWS Information for Planning and Consultation (iPAC), California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB), CDFW Spotted Owl Data Viewer, and the USFWS National Wetlands Inventory (NWI). A search query with a 2-mile radius around the project area created a list of seven plant species, seven wildlife species, and several aquatic features. There was no USFWS designated critical habitat anywhere within the BSA nor 2 miles outside of the BSA.

Habitats within the BSA. Segments 2-6, the five segments that comprise the project area, are composed of the following natural and unnatural habitat types: aquatic (Wolf Creek), riparian, ponderosa pine, Sierra mixed conifer, developed (paved roads), and landscaped. Segments 3-6 are mostly made up of paved areas or adjacent landscaped areas. The proposed trail alignment in Segment 2 is adjacent to Wolf Creek and passes through riparian habitat and ponderosa pine habitat. The forested section of Segments 4 passes through Sierra mixed conifer habitat.

Dominant species in the riparian habitat are Himalayan blackberry (*Rubus armeniacus*), cottonwood (*Populus fremontii*), white alder (*Alnus rhombifolia*), and black locust (*Robinia pseudoacacia*). The ponderosa pine habitat is dominated by ponderosa pine (*Pinus ponderosa*) with a smaller representation of incense cedar (*Calocedrus decurrens*). The Sierra mixed conifer habitat is dominated by incense cedar (*Calocedrus decurrens*), ponderosa pine (*Pinus ponderosa*), and California black oak (*Quercus kelloggii*).

Although multiple wetland features came up on the 2-mile query, the only aquatic feature within the BSA was Wolf Creek. The proposed project will not have any direct impacts on Wolf Creek.

Special-Status Plants. Special-status plant species are those species that are legally protected under the Federal Endangered Species Act (FESA) and/or California Endangered Species Act (CESA) as listed or proposed for listing as threatened or endangered, as well as California Native Plant Society Rank 1, 2, or 3 California Rare Plant Ranks (CRPR) plants. The special-status species table within the Biological Constraints Report (BCR) (**Appendix B**) summarizes special-status plants and their potential to occur in the BSA. Of the seven plant species listed in the table, two species were discussed in more detail to fully evaluate whether there could be impacts from project activities: Scadden flat checkerbloom (*Sidalcea stipularis*) (SE, CRPR 1B.1) and Dubious pea (Lathyrus sulphureus var. argillaceus) (CRPR 3). The other five species [pine hill flannelbush (*Fremontodendron decumbens*), Stebbins' morning-glory (*Calystegia stebbinsii*), brownish beaked-rush (*Rhynchospora capitellata*), chapparal sedge (*Carex xerophila*, and finger rush (*Juncus digitatus*)] that came up on the query had no potential to be affected by the project due to a lack of suitable habitat in or near the proposed work areas. The other two species are discussed below:

Scadden flat checkerbloom (*Sidalcea stipularis*). This plant is endemic to Nevada County in eastern California. It is known from only two occurrences on Scadden Flat in the Sierra Nevada foothills, near Grass Valley. The plant grows in wet montane marshes[1] that are fed by local springs[2]. The only aquatic habitat within the BSA is Wolf Creek and the work areas within the BSA don't have any montane marsh habitat. As such, no impacts are anticipated to occur to this plant species from project activities.

Dubious pea (*Lathyrus sulphureus* var. *argillaceus*). This plant is a perennial herb found within cismontane woodland, and upper and lower montane coniferous forests from 150 to 930 meters in elevation[3]. The proposed work area does not contain quality suitable habitat for this species. Although there is a recorded observance of this species that overlaps the work area, the record encompasses a large area (much larger than the work area) with low accuracy of the exact location of where the plant was actually seen. The project areas may provide marginal, low quality habitat for this species, but there have been no recorded occurrences within the work areas. This species has a very low likelihood of being impacted by the work activities.

Impacts to special status plants from the proposed project are less than significant.

Special Status Animals. Special status animal species include those listed as threatened or endangered or candidates for listing under the FESA or CESA, California Species of Special Concern (as designated by the California Department of Fish and Wildlife); and other rare species, including those on the "Special Animals List" as maintained by CDFW. Plant and animal species were evaluated for their potential to occur within and near the project area and within a 2-mile radius for species observations from CNDDB. Seven wildlife species were identified as having the potential to occur in the project area. The special status species table within the BCR (**Appendix B**) summarizes the results and discusses species with potential habitat present within the vicinity of the project. Of the seven wildlife species evaluated, a total of four species has a low likelihood of occurring. The other three species (California red-legged frog, Townsend's big-eared bat, and coast horned lizard) have no potential to be affected by the project activities as there is no suitable habitat, or there is a lack of recent records for that species within 2 miles of the project work areas. The four with low potential to occur are listed and discussed below:

- California black rail
- California spotted owl
- Yellow breasted chat
- Foothill yellow-legged frog

California black rail. This species nests in marshes and wet meadows including riparian marshes,

[1] Calflora: Information on California plants for education, research and conservation, with data contributed by public and private institutions and individuals, including the Consortium of California Herbaria. [web application]. 2023. Berkeley, California: The Calflora Database [a non-profit organization

[2] Kelly Steele & Duane Isely 2012, Lathyrus sulphureus, in Jepson Flora Project (eds.) Jepson eFlora, https://ucjeps.berkeley.edu/eflora/eflora_display.php?tid=30340, accessed on January 31, 2023.

[3] Calflora: Information on California plants for education, research and conservation, with data contributed by public and private institutions and individuals, including the Consortium of California Herbaria. [web application]. 2023. Berkeley, California: The Calflora Database [a non-profit organization

coastal prairies, saltmarshes, and impounded wetlands. All habitats have stable shallow water, usually just 1-2 inches deep. Marsh nests are set on or close to the ground, at the base of taller vegetation. Specific plants correlated with black rail presence include Bolboschoenus acutus, B. californicus, B. acutus, Typha angustifolia, T. latifolia, and Phragmites australis.

The proposed work areas do not contain suitable nesting habitat for this species. There are recorded observances of this species in areas adjacent to the proposed work area. However, the records indicate the observations are only visual with no evidence of nests or nesting behavior. **This species has a low likelihood of being impacted by work activities.**

California spotted owl. The California subspecies of spotted owl lives in mature and old-growth forests in the Sierra Nevada and in the mountains of coastal and Southern California. The California spotted owl prefers forests with large-diameter trees and varied levels of vegetation. The closest record for spotted owl is 1.3 miles southeast of the work area in Empire Mine State Historic Park, which is heavily forested[4]. Portions of Segments 2 and 4 have forested riparian, ponderosa pine, or Sierra mixed conifer forest, however none of this habitat provides suitable old growth forest nesting trees for the spotted owl. In addition, the forested habitat is interspersed within developed and landscaped areas. It is possible that this species could potentially forage within the forested areas of the project site. The majority of the project is adjacent to main roads, thus the noise level from construction should not be much higher than the ambient noise levels from traffic. **This species has a low likelihood of being impacted by work activities.**

Yellow-breasted chat. Nesting yellow-breasted chats occupy early successional riparian habitats with a well-developed shrub layer and an open canopy. This species primarily nests in the narrow border of streams, creeks, sloughs, and rivers and seldom forms extensive tracts. Blackberry (*Rubus spp.*), wild grape (*Vitis spp*.), willow, and other plants that form dense thickets and tangles are frequently selected as nesting strata. The nest is typically placed within 1 meter of the ground but may range up to 2.4 meters[5].

Segment 2 and small portions of Segments 4 and 5 may contain suitable nesting habitat for this species, however, no recorded occurrences have been observed within or directly adjacent to work areas. **This species has a low likelihood of being impacted by work activities.**

Foothill yellow-legged frog. The foothill yellow-legged frog lives in foothill and mountain streams from the Pacific coast to the slopes of the Sierra Nevada and Cascade mountains, up to approximately 5,000 feet in elevation. Habitats for this species ranges from valley-foothill hardwood, mixed conifer, to valley-foothill riparian, ponderosa pine, mixed chapparal and wet meadows[6.] Unlike other ranid frogs in California, this species stays close to permanent water sources and does not venture far away. Breeding stream habitat is generally shallow and rocky

[5] Shuford, W. D., and Gardali, T., editors. 2008. California Bird Species of Special Concern: A ranked assessment of species, subspecies, and distinct populations of birds of immediate conservation concern in California. Studies of Western Birds 1. Western Field Ornithologists, Camarillo, California, and California Department of Fish and Game, Sacramento.
[6]USFWS https://www.fws.gov/species/foothill-yellow-legged-frog-rana-boylii

with some exposed sunlight. Tadpoles require water for a minimum of three to four months. There is suitable habitat within the some of the work areas where Wolf Creek occurs in the BSA. The closest record of this species is recorded 1.85 miles northeast of the eastern portion of the project site. There are no records within Wolf Creek. Since this species does not migrate very far from their permanent water sources and there are no documentations in Wolf Creek and there will be no direct impacts to Wolf Creek, **this species has a low likelihood of being impacted by work activities**.

The proposed project anticipates needing to remove 176 trees within the work areas. Trees slated for removal include incense cedar, ponderosa pine, California black oak, Fremont cottonwood, and 1 box elder, 1 big-leaf maple, and 1 white alder. This habitat modification could result in impacts to nesting bird species.

There is a low likelihood of potential impacts from the proposed work activities to the four special status species, however, mitigation measures (MM) will be implemented to protect these species and nesting birds to ensure impacts are avoided or minimized to the greatest extent possible. MM-BIO- 01 requires a worker environmental training to make sure all construction crews are aware of special status plants and wildlife in the area, the permits on the project, and the avoidance and mitigation measures that must be followed for the duration of the project. General measures MM-BIO-02 through MM-BIO-06 will be implemented to help avoid attracting wildlife, entrapment, or inadvertent impacts to special status species. MM-BIO-07 and MM-BIO-08 requires a nesting bird survey and wildlife survey prior to the commencement of work. MM-BIO-9 thru MM-BIO-16 include measures to protect Wolf Creek and help avoid impacts to aquatic species. MM-BIO-17 thru MM-BIO-21 help minimize impacts from vegetation removal and requires restoration and replanting to restore impacted habitats.

With the implementation of these mitigation measures, the impacts to special status plant and wildlife species will be reduced to less than significant impact.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less Than Significant With Mitigation Incorporated. The subject property is not located in or adjacent to an identified refuge, wildlife area, or ecological reserve area of either the U.S. Fish & Wildlife Service or the California Department of Fish and Wildlife.

Of the four vegetation habitat communities within the BSA, the proposed project would have potential direct effects on riparian, ponderosa pine, Sierra mixed-confer, and landscaping. These permanent impacts would result from construction of the project components. A total of 0.58 acres of habitat and would be temporarily impacted within the project site. These temporary impacts would occur in discrete areas and would occur for only one season. Temporary impacts include areas required to construct the trail. **Table 3** provides the estimated amount of project effect to

vegetation habitat communities, and **Figure 4A-4E** provides a map of these habitats with the permanent and temporary impacts overlayed.

III.4.1 Table 3: Estimated Amount of Project effects to Vegetation Habitat Communities

Vegetation Habitat Community	Biological Study Area Overlap (acres)	Project Impact Area Overlap (acres)	Permanent Impacts (acres)	Temporary Impacts (acres)
Aquatic (wetlands/waters)	2.58	0.00	0.00	0.00
Riparian	5.26	0.78	0.52	0.26
Ponderosa Pine	2.30	0.78	0.63	0.15
Sierra Mixed Conifer	1.82	0.54	0.40	0.14
Landscaping	0.36	0.16	0.14	0.03
Developed	6.26	2.07	1.85	0.22
Total (excludes developed)	**12.32**	**2.26**	**1.69**	**0.58**

The proposed project could also result in indirect impacts to sensitive natural communities, including disturbances from a change in bike and pedestrian volume, dust, and degradation of water quality from additional roadway surface. Impacts to riparian, ponderosa pine, Sierra mixed-confer, and landscaping habitats are primarily due to individual tree removals which would be replanted within the project vicinity in accordance with replanting ratios required by local tree protection ordinances and MM-BIO-21. No degradation to water quality will occur from the proposed project due to implementation of a SWPPP for the project (MM-BIO-16). Sediment and erosion control BMPs detailed in the SWPPP will minimize potential indirect effects to downstream resources from sedimentation that could result from construction activities in the project site. Implementation of MM-BIO-1 through MM-BIO-3 would reduce impacts to these vegetation communities to a less than significant level.

Riparian vegetation habitat. CDFW has jurisdiction authority over wetland resources associated with rivers, streams, and lakes under Fish and Game Code Section 1600-1616. CDFW has the authority to regulate all work under the jurisdiction of the State of California that would substantially divert, obstruct, or change the natural flow of a river, stream, or lake; substantially change the bed, channel, or bank of a river, stream, or lake; or use material from a stream bed. In practice, CDFW not only marks its jurisdictional limit at the top of the steam or lake bank, but at times includes within its jurisdictional limit the outer edge of the riparian vegetation (where present) and/or extends its jurisdiction to the edge of the 100-year floodplain. No element of the proposed project encroaches within the bed and bank of Wolf Creek. However, due to impacts to vegetation within the riparian corridor of Wolf Creek, a streambed alteration agreement from CDFW may be required at the discretion of CDFW. If required, the CDFW permitting requirements would serve as addition mitigation to reduce any impacts associated with Wolf Creek steam to a less than significant impact.

The riparian habitat as mapped in **Figure 4A-4E** was generated from a detailed tree survey of 764 trees within the BSA. Riparian habitat was determined by the presence of strongly riparian associated tree species such as white alder (*Alnus rhombifolia*), Fremont cottonwood (*Populus fremontii*), willow (*Salix spp.)* and Oregon ash (*Fraxinus latifolia*), characteristic physical features of an outer floodplain, and the FEMA mapped 100-year floodplain for Wolf Creek.

The City of Grass Valley Development Code requires a Resource Management Plan to be prepared for encroachment in the 30-foot stream setback and shall include measures which will minimize impacts to the watercourse and enhance runoff filtration. The majority of the proposed project will be located more than 30 feet from Wolf Creek; however, portions of Segments 2, 5 and 6 approach to within 10-15 feet of the edge of a drainage area. However, as defined in Chapter 17.50.040 of the City of Grass Valley Development Code a path or trail may be within a watercourse setback.

In addition to the SWPPP for the project required as a mitigation measure (MM-BIO-16), the following performance standards associated with a Resource Management Plan will also be implemented to augment the measures within the SWPPP:

- Water quality impacts would be minimized through a combination of BMPs for construction within the 30-foot stream setbacks, which would include erosion control devices such as coir or other fiber roles or logs, straw, straw bales, etc. to minimize any sediment runoff that could cause erosion into the steam.
- Long term minimization of sedimentation and run off would occur through the construction of vegetated swales in areas subject to storm runoff to pre-treat runoff before it enters the stream.
- Develop and implement site specific enhancement and/or restoration of the riparian vegetation area.
- Removal of non-native vegetation.

Through project design measures, compliance with applicable permits and City of Grass Valley Development Code, and implementation of MM-BIO-1 through MM-BIO-3, and MM-BIO-16 and MM-BIO-21, the potential for the project having a substantial adverse effect on any riparian habitat or other sensitive natural community is less than significant.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

The following section is a summary of the aquatic resources analysis in the Biological Constraints Report prepared for the proposed project (**Appendix B**).

Less Than Significant Impact. Aquatic resources within and around the project area were identified using the USFWS National Wetlands Inventory (NWI) and were confirmed with an aquatic resources survey conducted by a Surf to Snow, Environmental Resource Management, Inc. biologist on April 4, 2022. The aquatic resources survey was conducted to determine if any

aquatic features that are subject to U.S. Army Corps of Engineers Section 404, State Water Resource Control Board (SWRCB) Section 401, or CDFW Code 1600 jurisdiction might be impacted by project activities.

There were multiple wetlands identified within 2 miles of the project, but the only aquatic resource within the BSA is Wolf Creek. Wolf Creek is a 25-mile-long creek that occurs in a mostly lower montane zone between the elevations of 3,000 feet at the headwaters up to 1,200 feet at the confluence of Bear River[7]. Wolf Creek possesses a clearly defined bed, bank, and channel and Ordinary High-Water Mark (OHWM). However, the proposed project will not have any direct impacts (including fill, dewatering, direct removal, hydrological interruption or any other means) on Wolf Creek.

The creek only overlaps with Segment 2 of the of the five segments that comprise the BSA. Very small sections of Wolf Creek appear in Segment 4 and Segment 6 where the creek runs underneath a paved bridge. In total, approximately 2.58 acres of aquatic habitat was mapped within the BSA. However, the project impact area does not overlap with the aquatic habitat at all.

Although there will be no direct impacts to Wolf Creek from the proposed project activities, Mitigation Measures (MM) have been developed to protect the creek from indirect impacts such as construction site runoff or erosion. Mitigation measures MM-BIO-9 thru MM-BIO-16 will be implemented. These measures include installing BMPs to protect the creek and following the guidelines of the SWPPP. These measures are intended for inclusion into the project during and after construction to minimize direct and indirect impacts to water quality during and following construction.

Since there are no direct impacts (including fill, dewatering, direct removal, hydrological interruption or any other means) to wetlands from the proposed project, the impact is considered less than significant.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?

Less Than Significant With Mitigation Incorporated. Camp Far West Reservoir serves as an upstream migration barrier for anadromous species to enter Wolf Creek, eliminating their access to the Project Area. Wolf Creek is adjacent to the project footprint in Segment 2, a small section of Segment 4, and Segment's 5 and 6. However, there is no element of the proposed project that impacts the bed and bank of Wolf Creek or requires the direct removal, fill, or relocation of any portion of this watercourse.

[7] https://www.wolfcreekalliance.org/aboutcreek.html

The forest and riparian habitats in the project area provide potential nesting and foraging habitats for many species such as passerines, and roosting habitat for bats. Wolf Creek may provide movement corridors for aquatic and terrestrial wildlife. However, no work will occur within the creek to construct the project; therefore, no aquatic wildlife movement will be impacted. The proposed project alignment would be located at grade level, and therefore, would not substantially obstruct terrestrial wildlife movement within the riparian corridor.

The nests of all the native bird species are protected under the federal Migratory Bird Treaty Act (MBTA) and California Fish and Game Code. Impacts to nesting birds would be mitigated through implementation of MM-BIO-1 and MM-BIO-11. Lastly, No wildlife nursery sites were located anywhere in the project area during the biological survey or extensive tree survey.

Therefore, impacts as a result of the proposed project would be less than significant with mitigation incorporated.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant With Mitigation Incorporated.
Tree removal. Currently, it is estimated that 176 trees would be removed to build the trail (see Tree Survey Report, **Appendix A**). However, only 16 of the 176 trees proposed for removal are "significant trees" as defined by Chapter 12.36 of the City of Grass Valley Municipal Code as a tree having "a trunk of twenty-four caliper inches in diameter or larger diameter at breast height (DBH)." There are no trees within the BSA that are listed on the City of Grass Valley heritage tree list.

Implementation of mitigation measure (MM)-BIO-20 would require the replacement of protected trees consistent with local tree protection requirements for trees removed within local agency jurisdiction, applicable Caltrans requirements for trees removed within Caltrans ROW, and CDFW replanting requirements if any trees were to be removed within riparian areas under CDFW' jurisdiction.

The City of Grass Valley Development Code requires a Resource Management Plan to be prepared for encroachment in the 30-foot stream setback and shall include measures which will minimize impacts to the watercourse and enhance runoff filtration. The majority of the proposed project will be located more than 30 feet from Wolf Creek, but portions of Segments 2, 5 and 6 approach to within 10-15 feet of the edge of a drainage area. However, as defined in Chapter 17.50.040 of the City of Grass Valley Development Code a path or trail may be within a watercourse setback.

In addition to the SWPPP for the project required as a mitigation measure (MM-BIO-16), the following performance standards associated with a Resource Management Plan will also be implemented to augment the measures within the SWPPP:

- Water quality impacts would be minimized through a combination of BMPs for construction within the 30-foot stream setbacks, which would include erosion control devices such as

coir or other fiber roles or logs, straw, straw bales, etc. to minimize any sediment runoff that could cause erosion into the steam.

- Long term minimization of sedimentation and run off would occur through the construction of vegetated swales in areas subject to storm runoff to pre-treat runoff before it enters the stream.
- Develop and implement site specific enhancement and/or restoration of the riparian vegetation area.
- Removal of non-native vegetation.

Due to the encroachment within the 30-foot setback of Wolf Creek, the implementation of MM-BIO-9 through MM-BIO-22 will be implemented to reduce potential impacts. These measures are intended for inclusion into the project within the 30-foot drainage setback during and after construction to minimize direct and indirect impacts to water quality during and following construction. Therefore, impacts as a result of the proposed project would be less than significant with mitigation incorporated.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The proposed project is not located within any Natural Community Conservation Plan or Habitat Conservation Plan. Thus, the proposed project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Plan, or other approved local, regional, or State habitat conservation. No impact will occur.

Mitigation Measures

MM-BIO-1: Worker Training: Prior to the start of work, a qualified biologist will provide a worker environmental awareness training to the construction crew. The biologist will train all project staff regarding habitat sensitivity, identification of special status species with potential to occur, and minimization and avoidance measures that are being implemented for the project. All contractors must complete the training prior to beginning any project-related work.

MM-BIO-02: Parking: Park vehicles and equipment on pavement, existing roads, or other disturbed or designated areas (barren, gravel, compacted dirt).

MM-BIO-03: Access: Use existing access and ROW roads. Minimize the development of new access and ROW roads, including clearing and blading for temporary vehicle access in areas of natural vegetation.

MM-BIO-04: Equipment Inspection: Minimize potential for wildlife to seek refuge or shelter in pipes, culverts, hollow poles, or similar construction equipment by capping, covering, or elevating said structures when not in use.

MM-BIO-05: Trash: Prohibit trash dumping, , open fires (such as barbecues), and pets (except for safety in remote locations) at work sites.

MM-BIO-06: Escape Ramps: Fit open trenches or steep-walled holes with escape ramps of plywood boards or sloped earthen ramps at each end if left open overnight. Field crew will search open trenches or steep-walled holes every morning prior to initiating daily activities to ensure wildlife is not trapped.

MM-BIO-07: Nesting Birds: Pre-construction Survey: If feasible, work should be scheduled outside of the nesting bird season in the fall and winter. If not possible and work is scheduled during nesting bird season (March 1st through August 31st), a pre-construction nesting bird survey will be conducted by a qualified biologist within 10 days of construction commencement. The survey area should cover a radius of 250 feet for raptors and 50 feet for other non-raptor birds around all work areas.

If an active nest is observed within the survey area, the biologist will determine an appropriate exclusion buffer zone based on the type of species nesting, the distance from the work area, and the level of disturbance/noise levels in that area. The perimeter of the nest setback zone shall be fenced or adequately demarcated with stakes and flagging to ensure construction personnel and activities are restricted from the area. If needed, a qualified biologist will monitor construction activities occurring near the active nest site to ensure no inadvertent impacts on the nests occur.

MM-BIO-08: Special Status Wildlife: Prior to the start of work, a qualified biologist will perform a special status species survey of work areas that could provide suitable habitat for species with potential to occur in or near the project areas. The survey will focus on Segments 2 and 4, and the portion of suitable habitats in the other segments. Special attention will be made to look for foothill yellow-legged frog in areas where the train alignment is adjacent to Wolf Creek. Based on survey results, the qualified biologist will determine what other measures may need to be implemented to protect resources. This may include limiting work areas to walking access only, setting up protection buffers, or having a biological monitor onsite. If special status species are observed, then the agencies will be notified and provided a survey report of the findings.

MM-BIO-09: No Fill: No impacts (including fill, discharge or ground disturbance) to Wolf Creek are permitted.

MM-BIO-10: No Dewatering: No dewatering of Wolf Creek is permitted.

MM-BIO-11: Dry Season Work: If feasible, conduct work activities near Wolf Creek during the dry season (April 15 - October 15).

MM-BIO-12: Minimize Impacts: Minimize the number and size of work areas for equipment and spoil storage sites in the vicinity of Wolf Creek. Place staging areas and other work areas as far back from the creek as possible.

MM-BIO-13: Erosion Control: Utilize standard erosion and sediment control BMPs to prevent construction site runoff into Wolf Creek. All exposed/disturbed areas within the proposed project site

will be stabilized to the greatest extent possible. Erosion control measures such as straw wattles, straw mulch or silt fencing will be used to prevent runoff from entering the creek.

MM-BIO-14: Plates or Mats: If temporary plates or matting are needed to facilitate access, contact the Project Biologist or Environmental Lead prior to use.

MM-BIO-15: Stockpile: Stockpile soil within established work site boundaries and locate stockpiles so as not to enter Wolf Creek, stormwater inlets, or other standing bodies of water. Cover stockpiled soil prior to precipitation events.

MM-BIO-16: Storm Water Pollution Prevention Plan: A SWPPP will be prepared for the Project in accordance with Section 402 of the Clean Water Act (CWA) and Caltrans' Construction General Permit (Order 2009-009-DWQ). The SWPPP shall incorporate best management practices (BMPs) to control sedimentation and runoff and address water quality on site. Protective measures would include the following:

- No discharge of pollutants from vehicle and equipment cleaning into any storm drains or watercourses.
- Vehicle and equipment fueling and maintenance operations must be located away from watercourses, except at established commercial gas stations or established vehicle maintenance facility or staging areas with BMPs or secondary containment installed and maintained.
- Spill containment kits will always be maintained onsite during construction operations. Vehicles operating adjacent to wetlands and waterways must be inspected and maintained daily to prevent leaks.
- All food and food-related trash items will be enclosed in sealed trash containers and removed completely from the site at the end of each day.

MM-BIO-17: Timing of Veg Work: If feasible, vegetation work should be scheduled between September 1st and March 1st to avoid the nesting bird season.

MM-BIO-18: Tree Protection: Removal and trimming of vegetation should be the minimum amount necessary to support the work. All cut vegetation must be removed from the riparian area.

MM-BIO-19: Felling Trees: Directionally fall trees away from an exclusion zone, if an exclusion zone has been defined. If this is not practicable, remove the tree in sections. Avoid damage to adjacent trees to the extent practicable.

MM-BIO-20: Replanting: Vegetation and tree removal would be required to construct the trail. Trees shall be replanted within the project area at a ratio consistent with local tree protection requirements for trees removed within local agency jurisdiction, Caltrans requirements for trees removed within Caltrans ROW, and CDFW replanting requirements for trees removed within the riparian zone in CDFW's jurisdiction.

MM-BIO-21: Restoration: All slopes or unpaved areas temporarily disturbed by the construction activities will be reseeded with native grasses and shrubs to stabilize and prevent erosion. The temporarily disturbed areas will be restored to pre-construction conditions to the maximum extent practicable. Where disturbance includes tree removal, native species will be replanted at ratios as described above.

MM-BIO-22:

- Establishing the area around the active drainage channel as Environmentally Sensitive Area (ESA) where those areas will not be impacted by construction or thereafter;
- Minimize the number and size of work areas for equipment and spoil storage sites in the vicinity of the stream. Place staging areas and other work areas outside of the 30-foot drainage setback.
- The contractor shall exercise reasonable precaution to protect this drainage and adjacent 30-foot drainage setback, including potential wetlands, from pollution with fuels, oils, and other harmful materials. Construction by products and pollutants such as oil, cement, and wash water shall be prevented from discharging into or near these resources and shall be collected for removal from the site. All construction debris and associated materials and litter shall be removed from the work site immediately upon completion.
- No equipment for vehicle maintenance or refueling shall occur within the 30-foot drainage setback. The contractor shall immediately contain and clean up any petroleum or other chemical spills with absorbent materials such as sawdust or kitty litter. For other hazardous materials, follow the cleanup instruction on the label.

III.5 Cultural Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in § 15064.5?			X	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?		X		
c) Disturb any human remains, including those interred outside of dedicated cemeteries?		X		

The following section is summarized from the Phase 1 Archaeological Survey Report prepared for the proposed project (**Appendix C**).

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to California Environmental Quality Act Guidelines Section 15064.5?

Less Than Significant Impact. The Area of Potential Effect (APE) records search revealed that there are five previously recorded resources that overlap the APE. The pre-field research and Phase I intensive pedestrian survey identified 6 potential historic properties within the APE.

P-29-000839 – Nevada County Narrow Gauge Railroad: Though the historic alignment of this railroad crosses the APE, there are no visible features or other historic attributes visible within the APE.

P-29-001463 – Mine Shaft: This historic-era site was not relocated, and appears to have been altered, covered, and or destroyed during construction of buildings and parking lots in the mapped location of the mine.

P-29-001514 – Idaho-Maryland Road: The historic Idaho-Maryland Road is no longer observable within the APE. Significant development of the road, including widening, repaving, and sidewalk construction have altered the character-defining features of this resource to the extent that appears to retain no integrity within the APE.

P-29-001515 – South Auburn Street: The short section of South Auburn Street that crosses the APE (approximately 300 feet) retains none of the historic character of the resource as originally recorded. It currently displays as a modern road beneath the elevated Hwy 20, and surrounded by relatively modern commercial development.

P-29-003568 – Grass Valley Yard – Nevada County Narrow Gauge Railroad**:** Though a very small section of this large historic site overlaps the APE, there are no visible and associated historic features, artifacts, or other elements of this resource within the APE.

P-29-004634 – East Bennett Road: The road was first recorded in 2016 as a modern paved road displaying four historic features, including three culverts and one retaining wall feature thought to date from the 1935 to 1943 Works Project Administration (WPA) period. None of these four features are located within the APE.

Temp 001 – Historic Rock Walls**:** The current survey identified a series of historic rock walls constructed to channelize Wolf Creek near Segment 2 of the proposed trail as it passes through Grass Valley. The walls are constructed of stacked and dry-laid rock of 3 to 10 courses and were observed on both, but primarily southeast side of Wolf Creek, along a 0.5-mile stretch of the creek between Hwy 20 in the southwest to the Safeway shopping center in the northeast. Full delineation and description of this resource was not possible during this survey due to lack of private property access and significant blackberry overgrowth, obscuring visibility of the resource.

Though this resource has not yet been fully delineated or described, it appears unlikely to be impacted by the Project, as currently defined. The observed rock walls establish the margin of Wolf Creek; when developed, the Wolf Creek trail is designed to be set back from the creek and therefore not be in conflict with the rock walls. Should these plans change, resulting in potential impact to the resource, the rock walls would need to be fully recorded to address any impacts during planning, construction, or use of the trail.

Therefore, the potential for the project causing a substantial adverse change in the significance of a historical resource is less than significant, and no mitigation is required.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to California Environmental Quality Act Guidelines Section 15064.5?

Less Than Significant with Mitigation Incorporated. On February 22, 2022, Surf to Snow archaeologist James Mangold completed an intensive pedestrian Phase I archaeological inventory survey of the Project Area within Sections 25, 26, 27, 34 of the Grass Valley 7.5-minute United State geological survey (USGS) topographic map in Nevada County. The purpose of the archaeological survey was to identify any previously unrecorded cultural resources within the Project Area that may be affected by the proposed project. The survey yielded negative results for the presence of cultural resources.

The survey was completed by walking meandering transects along the proposed trail alignment, which travels through the City of Grass valley along Wolf Creek. The Project traverses terrain that varied from heavily vegetated to fully paved. The Project Area generally occupies creek-side terraces landform was generally flat and at the time of survey was predominantly covered by thick blackberry brambles. Ground visibility was accordingly poor for most of the survey, only varying from 0-10% throughout. Where possible, boot scrapes were employed at regular intervals to expose soils and ascertain if cultural constituents were present.

Construction activities for the project would include excavation and grading. Therefore, there is the potential for the project to affect previously unidentified archaeological resources during ground disturbing activities. MM-CUL-1 through MM-CUL-3 would ensure archaeological resources that may be found on the site are properly identified and protected. With inclusion of these mitigation measures, potential project impacts would be reduced to a less than significant level.

c) *Would the project disturb any human remains, including those interred outside of formal cemeteries?*

Less Than Significant with Mitigation Incorporated. No known human remains occur on site. In the event that previously unknown human remains are encountered during earth removal or disturbance activities, the project would be required to comply with California Health and Safety Code Section 7050.5 and public resource code (PRC) as set forth in MM-CUL-3. Potential impacts concerning human remains would be less than significant.

Mitigation Measures

MM-CUL-1: Prior to initiating ground disturbing activities within the project area, construction personnel should be alerted to the possibility of encountering buried prehistoric or historic period cultural remains. Personnel should be advised that upon discovery of buried archaeological deposits, work in the immediate vicinity of the find should cease and a qualified archaeologist should be contacted immediately. Once the find has been identified, plans for the treatment, evaluation, and mitigation of impacts to the find shall be developed if it is found to be eligible for the National Register of Historic Places or the California Register of Historical Resources.

MM-CUL-2: Archaeological resources unearthed by project construction activities shall be evaluated by a qualified archaeologist and Native American monitor. If the resources are Native American in origin, the tribe shall coordinate with the jurisdiction regarding treatment of these resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Section 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) shall be the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis; provided no data recovery will be permitted to tribal cultural resources without prior consultation and consent of relevant Tribes.

MM-CUL-3: California Health and Safety Code Section 7050.5, State CEQA Guidelines Section 15064.5, and PRC Section 5097.98 mandate the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. California Health and Safety Code Section 7050.5 requires that in the event that human remains are discovered, disturbance of the site shall be halted until the coroner has investigated the circumstances, manner and cause of death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in PRC Section 5097.98. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes or has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission.

III.6 Energy

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?				X
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				X

SETTING

Pacific Gas and Electric Company (PG&E) is the energy utility provider in Nevada County, furnishing both natural gas and electricity for residential, commercial, industrial, and municipal uses. PG&E generates or buys electricity from hydroelectric, nuclear, renewable, natural gas, and coal facilities.

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

No Impact. The Pacific Gas & Electric Company provides electricity and natural gas service to the project area and surrounding areas. The proposed project would enhance pedestrian and bicycle safety and increase connectivity and mobility. During construction, the project would result in a nominal increase in electricity and natural gas demand. This nominal increase represents an insignificant percent increase compared to overall demand in PG&E's service area. Therefore, projected electrical and natural gas demand would not significantly impact PG&E's level of service.

During construction, transportation energy use depends on the type and number of trips, vehicle miles traveled, fuel efficiency of vehicles, and travel mode. Transportation energy use during construction would come from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. The use of energy resources by these vehicles would fluctuate according to the phase of

construction and would be temporary. Most construction equipment during demolition and grading would be gas-powered or diesel-powered, and the later construction phases would require electrically powered equipment. Impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure.

During operations, energy consumption associated with the trail would be nominal. Furthermore, gasoline fuel facilities and infrastructure already exist in the surrounding area. Consequently, the proposed project would not result in a substantial demand for energy that would require expanded supplies or the construction of other infrastructure or expansion of existing facilities. The proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources. Therefore, there would be no impact.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

No Impact. The Grass Valley Energy Action Plan set goals to improve energy efficiency in buildings, facilities, and City operations, and to expand the utilization of renewable energy and resilience measures. It projected a decrease of annual grid supplied electricity use in 2035 by 36% and annual natural gas use by 29%. The Nevada County Energy Action Plan provides an analysis of the energy use within the unincorporated county limits by the community and County operated facilities as well as a roadmap for accelerating energy efficiency, water efficiency, and renewable energy efforts already underway in Nevada County. The goal of the plan is to reduce the projected annual grid supplied electricity use in 2035 by 51% and annual natural gas use by 30%.

The proposed project would enhance pedestrian and bicyclist safety and increase connectivity and mobility. The project would further promote alternative modes of transportation and reduce vehicle trips. The project is a trail extension and therefore would not generate any new automobile traffic or require energy use. Additionally, the proposed project would be consistent with the California Air Resources Board Scoping Plan measures, the Grass Valley Energy Action Plan, and the Nevada County Energy Action Plan. A reduction in greenhouse gas (GHG) emissions would occur by providing alternative transportation options, which reduces vehicle fuel consumption. The proposed project does not conflict with or obstruct either of these local plans, or a state plan for renewable energy or energy efficiency. Therefore, the proposed project would have no impact.

III.7 Geology and Soils

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:			X	
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?			X	
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			X	

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		X		

SETTING

The proposed project is located on the northern half of the Sierra Nevada Geomorphic Providence of California. The Sierra Nevada Geomorphic Province is bordered to the north by the Cascade and Basin and Ranges, to the west by the Great Valley, to the east by the Basin and Range, and to the south by the Transverse Ranges and the Mojave Desert. The Sierra Nevada is nearly 400 miles in length and averages about 50 miles wide. Formation of the Sierra Nevada occurred by tectonic shifting of the Sierran Block; the western side dropping to form the Great Valley and the eastern side being uplifted to form the Sierra Nevada.

The following sections are summarized from the Phase I/II Environmental Site Assessment Report prepared for the proposed project (**Appendix D**).

Geology. The trail is located within a region underlain by a complex assemblage of igneous and metamorphic rocks in the western foothills of the Sierra Nevada. The regional structure of the foothills is characterized by the north-northwest trending Foothills Fault System, a feature formed during the Mesozoic era (between approximately 65 million and 248 million years ago) in a compressional tectonic environment. A change to an extensional tectonic environment during the late Cenozoic (approximately within the last 30 million years), resulted in normal faulting which has occurred coincident with some segments of the older faults near the site. According to the Tuminas (1983), the southern segment of the trail segment crosses an area mapped as La Barr Meadows quartz diorite, and the northern segment crosses an area mapped as Lake Combie diabase, serpentine and gabbro.

Soils. According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey, the trail crosses land that is mapped as Alluvial land clayey (Ao), Placer diggings (Pr), Sites silt loam (SID), Sites very stony loam (SmC), and Rock outcrop-Dubakella (RrE).

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

ii) Strong seismic ground shaking?

iii) Seismic-related ground failure, including liquefaction?

iv) Landslides?

Less Than Significant Impact. Based on the *2010 Fault Activity Map of California prepared by the California Geological Survey,* the nearest faults are the Grass Valley Fault, Wolf Creek Fault Zone, Spenceville Deadman Fault, and Swan Ravine Fault located 2 miles east, 6 miles south, 12 miles west, and 14 miles northwest, respectively. The Grass Valley Fault is a Pre-Quaternary fault (i.e. no visible signs of movement within 1.6 million years). This fault is not necessarily inactive. The Wolf Creek and Spenceville Deadman Faults show geomorphic evidence of movement during the late Pleistocene epoch (700,000 to 11,000 years ago), and the Swan Ravine Fault shows geomorphic evidence of movement undifferentiated during the Quaternary period.

According to the 2008 Seismic Motion Interpolator prepared by the California Division of Mines and Geology, there is a 10 percent probability that the site will experience a horizontal ground acceleration of 0.16g in the next 50 years. This is a relatively low level of ground shaking for California. Earthquake faults, strong seismic ground shaking, seismic related ground failure and landslide impacts are considered less than significant.

Because the site is relatively flat, the potential for landslides and seismically inducted slope failures at or near the project site is low. Therefore, project implementation would result in less than significant impacts associated with the exposure of people or structures to potential substantial adverse effects involving strong seismic ground shaking, seismic-related ground failure including liquefaction, and landslides, and no mitigation is required.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. Grading would be required to construct segments of the trail. Grading and earthwork activities during construction would expose soils to potential short-term erosion by wind and water. Because the project would disturb more than one acre, a SWPPP would be developed in accordance with the NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (NPDES General Construction Permit) (Order No. 2009-0009-DWQ, NPDES No. CAS000002) (California State Water Resources Control Board (SWRCB) 2009). The SWPPP would identify BMPs that would be implemented to prevent soil erosion during construction and to stabilize the site at the end of

construction. These requirements would ensure that potential project impacts are less than significant.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less Than Significant Impact. The proposed project would be required to be in conformance with the latest version of the California Building Code and other applicable standards. Conformance with standard engineering practices and design criteria would reduce the effects of ground failure to a less than significant level.

As per the Phase I/II Environmental Site Assessment Report prepared for the proposed project (**Appendix D**), with the geology and soils summarized in this section above, the risk of lateral spreading from landslides and liquefaction is low. The site resides in a low seismic zone, and site geology consists of stiff/ dense native soils and decomposing rocks. These impacts are considered less than significant.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (2021), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. Expansive soils can change in volume depending on moisture content. When wet, these soils can expand; conversely, when dry, they can contract or shrink. Sources of moisture that can trigger this shrink-swell phenomenon can include seasonal rainfall, landscape irrigation, utility leakage, and/or perched groundwater. Expansive soil can exhibit wide cracks in the dry season, and changes in soil volume have the potential to damage concrete slabs, foundations, and pavement. Adherence to all construction and project design features would ensure impacts are less than significant.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The project does not propose the use of septic tanks. Therefore, no impact would occur and no mitigation is required.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant with Mitigation Incorporated. Paleontological resources are the fossilized remains of organisms from prehistoric environments found in geologic strata. These resources are valued for the information they yield about the history of the earth and its past ecological settings. The potential for fossil occurrence depends on the rock type exposed at the surface in a given area. Typically, paleontological resources are found within alluvium deposits.

Although not anticipated, the potential to encounter paleontological resources during subsurface construction activities associated with the project, such as grading and trenching, still exists. If the project were to encounter paleontological resources, the project could potentially result in a significant impact to paleontological resources. Accordingly, implementation of Mitigation Measure GEO-1 is recommended to reduce potential impacts to paleontological resources that may be discovered during project construction. With the incorporation of mitigation, impacts associated with paleontological resources would be less than significant.

Mitigation Measure

MM-GEO-1: In the event that paleontological resources are encountered during grading or other construction activities at the site, all construction, excavation, or grading activities within 100-feet of the find shall be temporarily halted until the City has been notified and a qualified paleontologist has had the opportunity to assess the significance of the find and provide proper management recommendations.

.

III.8 Greenhouse Gas Emissions

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			X	

SETTING

Unlike emissions of criteria and toxic air pollutants, which have local or regional impacts, emissions of greenhouse gases (GHGs) that contribute to global climate change have a broader global impact. Global climate change is a process whereby GHGs accumulating in the atmosphere contribute to an increase in the temperature of the earth's atmosphere. The principal GHGs contributing to global climate change are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated compounds. These gases allow visible and ultraviolet light from the sun to pass through the atmosphere, but they prevent heat from escaping back into space.

Among the potential implications of global climate change are rising sea levels, and adverse impacts to water supply, water quality, agriculture, forestry, and habitats. In addition, global climate change may increase electricity demand for cooling, decrease the availability of hydroelectric power, and affect regional air quality and public health. Like most criteria and toxic area pollutants, much of the GHG production comes from motor vehicles. GHG emissions can be reduced to some degree by improved coordination of land use and transportation planning on the city, county and sub regional level, and other measures to reduce automobile use. Energy conservation measures can also contribute to reductions in GHG emissions.

CEQA Guidelines Section 15064.4 provides direction to lead agencies in determining the significance of impacts from GHG emissions. Section 15064.4(a) calls on lead agencies to make a good faith effort, based upon available information, to describe, calculate or estimate the amount of GHG emissions resulting from a project. The lead agency has the discretion to determine, in the context of a particular project, how to quantify GHG emissions.

Senate Bill 97 requires an assessment of projects GHG emissions as part of the CEQA process. SB 97 also required the Office of Planning and Research to develop guidelines to analyze GHG emissions.

The NSAQMD has not adopted thresholds of significance for GHG emissions. Due to the nature of global climate change, it is not anticipated that a single project would have a substantial impact on global climate change. Although it is possible to estimate a project's CO2 emission, it is not possible to determine whether or how an individual project's relatively small incremental contribution might translate into physical effects on the environment.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. GHG emissions associated with implementation of the proposed project would occur over the short-term from construction activities, consisting primarily of emissions from equivalent exhaust. The proposed project would not result in significant, long-term, GHG emissions, as the proposed project consists of a trail for pedestrians and bicyclists that would not generate vehicle trips and/or source emissions.

The primary existing sources of human-caused GHGs in the project area are vehicle emissions from SR-20/49 and other major roads located adjacent to the proposed project.

Construction GHG emissions were estimated using CalEEMod. For the purpose of this environmental analysis, project construction is expected to occur over an approximately nine-month period. Construction activities would include grading, paving, and coating for striping and signage. Project construction would result in direct emissions of CO2, N2O, and CH4 from the operation of construction equipment and the transport of materials and construction workers to and from the project site. Construction of the project would result in a total of 223.89 CO2e.

The proposed project includes an approximately 2.3-mile trail extension which would not include any structures which would provide energy, waste, water, or wastewater emissions. Additionally, no vehicle trips are associated with the project. Therefore, no GHG emissions are expected to be generated from operation of the proposed project and impacts are less than significant.

b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact. The City of Grass Valley has not conducted a greenhouse gas emissions inventory or adopted a Climate Action Plan, performance standards, or a GHG efficiency metric. However, the City has adopted an Energy Action Plan and the Grass Valley 2020 General Plan includes numerous goals, policies, and programs which, if implemented, will reduce Grass Valley's impacts on global climate change and reduce the threats associated with global climate change to the City. The

proposed project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases and therefore the impact is less than significant.

III.9 Hazards and Hazardous Materials

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				X
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?			X	
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				X

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			X	

SETTING

A Phase I/II Environmental Site Assessment Report was prepared for the proposed project to identify and evaluate the level of risk to the project associated with hazardous materials, hazardous waste, and/or contamination. The trail alignment was assessed for the potential of encountering hazardous materials during proposed construction activities and/or operations (**Appendix D**). This assessment revealed no evidence of recognized environmental conditions (RECs) in connection with the proposed trail alignment.

In addition, a record search on the State's Geotracker, Envirostor and Department of Conservation websites and found no evidence of abandoned mine or hazardous waste sites within the project area.

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant. During operations of the proposed project, no routine transport or disposal of hazardous materials would be associated with the proposed project. The hazardous materials most likely to be used during construction include typical construction materials such as gasoline, diesel, motor oil, lubricants, solvents, and adhesives. Drips and small spills would be the most likely potential hazardous materials releases to occur, and any release that occurs in close proximity to a stream or drainage channel could have a significant impact on the environment, if not properly controlled. Given the project would disturb over one acre, a SWPPP would be developed and implemented in accordance with the NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (NPDES General Construction Permit)(Order No. 2009-0009-DWQ, NPDES No. CAS000002) (SWRCB 2009). Implementation of the SWPPP would reduce the potential for hazardous materials releases to occur during construction and would reduce the potential for spills to impact sensitive habitat or human health, to less than significant.

The middle segment of the proposed trail is aligned with Hansen Way, a frontage road along SR-49/20. Soil samples WCT-6 through WCT-8 were obtained from near the road shoulder to evaluate the potential for aerially deposited lead (ADL) from historical leaded fuel emissions from highway traffic. The detected soil lead concentrations ranged from 53 to 326 mg/kg, which are

below the DTSC-SL for commercial soil (320 mg/kg) and the TTLC for designating soil as hazardous waste (1,000 mg/kg) (**Appendix D**).

The proposed project does not involve an activity that may create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Therefore, the impact is considered less than significant.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?

Less Than Significant Impact. The proposed trail crosses through the historical Grass Valley Mining District, where hard rock (lode) gold mining was performed from the early 1850s to the mid 1950s. Mining waste (waste rock, gold-bearing ore and processed tailings) commonly contains elevated concentrations of heavy metals (such as arsenic and lead) from naturally mineralized ore materials, as well as other chemicals (such as mercury) that were used to extract gold from the ore. Heavy metals such as arsenic, gold and mercury have known toxic effects and can present a health risk in the case of routine contact. Based on the findings of the Phase I/II Environmental Site Assessment Report, the RECs encountered on adjacent sites are not considered likely to have a significant impact on the proposed trail alignment. These included an analysis of the five historical mining-era operations in the vicinity of the proposed trail alignment (historical workings of North Star Mine, Golden Center Mine, the historical Nevada County Narrow Gauge Railroad, historical Crown Point Mine. And the historical Idaho-Maryland Mine). However, the area could contain mine-related features since they are very common, and not an unusual circumstance, in the City.

The properties within the project area are not listed on the City's Hazardous Waste Site or Nevada County's Contaminated Sites lists.

While some localized soil and aerial contamination may be present, construction activities are not anticipated to involve any materials or conditions that would result in risk of upset or accident that would release hazardous materials into the environment. Examples of projects that may involve such risk could include refineries, fuel storage, or tanker transportation, where accidents could result in catastrophic environmental or human consequences. The construction activity for this project would not involve such risk or circumstances, and therefore is considered less than significant.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact. The proposed project does not involve an activity that will emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. No impact will occur.

d) Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. The project is not located on a site which is included on a list of hazardous materials sites. No impact will occur.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Less Than Significant Impact. The northeast edge of the project area is located approximately 1.2 miles (as the crow flies) from the Nevada County Airport. As required by the Public Utilities Code, the Airport Land Use Commission adopted the Nevada County Airport Land Use Compatibility Plan. The compatibility plan's function is to promote compatibility between the airport and surrounding land uses with respect to: height (e.g. height of structures), safety (e.g. number of persons per acre), and noise (e.g. noise sensitive land uses). According to the Nevada County Airport Land Use Compatibility Plan, the project site is located outside of the area of influence. The project site is not located within an airport land use plan. Therefore, the impact is less than significant.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

No Impact. The proposed trail is within the City of Grass Valley and Caltrans public ROW. During construction, road access may be disrupted temporarily. Streets and roads affected by trail construction would be appropriately signed with temporary traffic control measures. After completion of the proposed trail and associated intersection improvements, temporary signage and traffic control measures would be removed. Once operational, the Wolf Creek Trail would connect two existing trail segments, providing another route that could be used by bicyclists and pedestrians in an emergency. Therefore, the proposed project would not impair or interfere with an adopted emergency response plan or evacuation plan. No impact will occur.

g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less Than Significant Impact. Though the project site, as with most of the City, is designated as within a high fire hazard severity zone, the proposed access and water system will support adequate fire suppression activities. Development of the proposed project does not expose a greater risk from wildfire than in any other area in the City. The proposed project would not expose people or structures, either directly or indirectly, to significant loss, injury or death involving wildland fires. Thus, impacts would be less than significant.

III.10 Hydrology and Water Quality

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?		X		
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?		X		
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site?		X		
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?		X		
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
iv. Impede or redirect flood flows?			X	

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			X	
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?				X

SETTING

The project area is located within the 78 square mile Wolf Creek watershed, which drains to the Bear River Watershed, the second largest tributary to the Feather River. The Feather River flows to the Sacramento-San Joaquin River Delta before entering the Pacific Ocean through the San Francisco Bay. The Wolf Creek watershed is almost exclusively in the lower montane zone, with altitudes along the creek's 25-mile length ranging from over 3,000 feet at the headwaters to approximately 1,200 feet at the confluence with the Bear River. Because the trail alignment roughly follows Wolf Creek the whole project area drains a generally short distance to Wolf Creek. There are no other aquatic resources within the project area (**Appendix B**). Nevada Irrigation District (NID) uses the section of Wolf Creek that runs through Grass Valley for irrigation water conveyance. As a result, water levels in summer are higher than the natural hydrograph and temperatures are cooler.

The Wolf Creek Community Alliance (WCCA), a volunteer-run 501(c)(3) non-profit organization focused primarily on cleaning up and restoring Wolf Creek, operates a program launched in 2005 for regularly monitoring of the physical and chemical conditions of Wolf Creek at selected sites in order to help identify areas of concern for various pollutants. Representatives of the State Water Resources Control Board (SWRCB) oversee all WCCA monitoring quality assurance plans. Indicators of water quality measured include temperature, dissolved oxygen, nitrates, total dissolved solids, and pH. About 30 volunteer monitors take and test water samples at 20 different sites along Wolf Creek on a monthly basis.

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps, most of the proposed project is not within a mapped flood plain. However, there is a portion of Segment 2 of the trail that crosses into Zone AE and Zone X. Zone AE is the area of inundation due to the 100-year storm event (base flood), which has a 1% chance of occurring in any given year. Zone X is defined as an area with 0.2% annual chance flood, areas or 1% annual chance flood with average depths of less than 1-foot or with drainage areas less than 1-square mile, and areas protected by levees from 1% annual chance flood. Evaluation of flood zone areas requires a Flood Zone

Development permit in accordance with Chapter 15.52.050 et. Seq. of the City's Development Code.

The general NPDES stormwater permits for general construction activities require an applicant to file a notice of intent (NOI) with the applicable Regional Water Quality Control Board (RWQCB) to discharge stormwater and prepare and implement a SWPPP. The SWPPP would include a site map, description of stormwater discharge activities, and BMPs that would be employed to prevent water pollution. The SWPPP for general construction activity permits must describe Best Management Practices (BMPs) that would be used to control soil erosion and discharges of other construction-related pollutants that could contaminate nearby water resources.

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant with Mitigation Incorporated. While much of the proposed trail would occur on existing roadway and disturbed shoulder areas, the proposed project would result in an increase in the amount of impervious area as a result of new trail. This could result in a slight increase in flowrates and volumes of stormwater runoff, as compared to existing conditions. The path will generally drain its runoff to adjacent pervious, non-erodible surfaces.

Based upon the cut and fill quantities proposed, the proposed project will require a grading permit to be issued by the City of Grass Valley, Public Works Division pursuant to the City's Grading Ordinance. The City's Grading Ordinance requires specific measures to address erosion and the introduction of construction materials into surface waters. In addition, Section 402(p) of the Clean Water Act requires National Pollutant Discharge Elimination System (NPDES) storm water permitting to be approved by the Regional Water Quality Control Board for projects disturbing over 1 acre. Compliance with these regulations and the implementation of Mitigation Measures MM-HY/WQ 1 and MM-HY/WQ 2 requiring a NPDES permit from the RWQCB will reduce potential impacts to a less than significant impact.

If dewatering is necessary in areas where groundwater is encountered within the planned depth of excavation, depending on surface and groundwater levels at the time of construction, the dewatering shall be consistent with RWQCB requirements and as such would not result in a violation of water quality standards or waste discharge requirements. Therefore, impacts as a result of the proposed project would be less than significant.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant with Mitigation Incorporated. Groundwater depths were not determined. Wolf Creek flows adjacent to segments of the trail and influences local groundwater elevations. Shallow groundwater may be perched over relatively impermeable soil/rock layers, while deeper groundwater is typically encountered in bedrock fractures.

The proposed project would not result in the construction of large impervious surface areas that would prevent water from infiltrating into the groundwater nor would it result in direct additions or withdrawals to existing groundwater. A majority of the project will require excavation at depths of 1.5 to 3 feet. The maximum excavation depth of 15-feet occurs in Segment 4 for the construction of a retaining wall, and this section of the proposed trail is up a steep slope over 250-feet from Wolf Creek. The maximum excavation depth near a daylighted reach of Wolf Creek is 5-feet and occurs in Segment 2, but at a location where the trail is situated over 20-feet in elevation above the top of bank of Wolf Creek, reducing the likelihood of encountering groundwater during excavation.

The implementation of MM-HY/WQ 1 will require a drainage plan prepared for the project that shall consider the potential for near-surface groundwater in Segment 2 of the proposed trail. Low Impact Development (LID) and infiltration features shall be designed in consideration of groundwater levels that may rise to within 3-feet of the ground surface.

With the implementation of mitigation measure MM-HY/WQ 1, the proposed project is not anticipated to deplete groundwater supplies or interfere substantially with groundwater recharge. This impact is less than significant.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

Less Than Significant with Mitigation Incorporated. There is no element of the proposed project that will alter the course of Wolf Creek.

The project consists of constructing 1.68 acres of new impervious surface for the proposed trail, and thus triggers the requirement for completion and submittal of a SWPPP (MM-HY/WQ 2). The plan will identify self-treating areas, proposed retaining detention basins, and underground drainage infrastructure that will assist in the collection and treatment of stormwater generated at the site. Where needed, drainage improvements would be installed to capture stormwater and convey it into the existing storm drain systems and channels. These drainage improvements would remain after construction. Minimal alterations to the existing drainage system would result from the proposed project.

Implementation of the SWPPP (MM-HY/WQ 2) and compliance with the County's applicable drainage standards (MM-HY/WQ 3) will ensure that the potential for the project resulting in substantial erosion or siltation, flooding, exceeding the capacity of existing drainage systems, or impeding/redirecting flood flows is less than significant.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Less Than Significant with Mitigation Incorporated. No substantial change in either drainage patterns or flooding on-or off-site would occur as a result of the proposed project. Much of the proposed trail would occur on existing roadway rights of way; however, approximately half of the proposed trail would require new impervious surfaces to be constructed. The new impervious surface areas would increase surface runoff, but it would not be substantial enough to result in flooding as a majority of the trail runoff would be discharged to adjacent permeable areas with minimal potential for erosion.

During construction, BMPs identified in the SWPPP (MM-HY/WQ 2) would be implemented so that on-site and off-site erosion and sedimentation would be controlled to the extent practicable. Therefore, this impact would be less than significant.

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant. Please refer to the analysis and discussion in Subsection-i and ii above.

iv) Impede or redirect flood flows?

Less Than Significant. According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps, most of the proposed project is not within a mapped flood plain. However, there is a portion of Segment 2 of the trail that crosses into Zone AE and Zone X. Zone AE is defined as having a 1% chance of floods occurring in any given year. Zone X is defined as an area with minimal flood hazard. Neither Zone AE nor Zone X are considered to be high flood hazard areas. Since the proposed trail in Segment 2 is only 8-feet wide, and overall exiting grade would not substantially change along the proposed trail alignment in this section, flood waters would not be redirected as a result of the proposed project.

Retaining walls would not be installed in a location or manner that would impede or redirect flood flows. In a few locations where retaining walls are proposed, stormwater runoff would be collected at the base of a retaining wall and conveyed to a suitable discharge location. Evaluation of flood zone areas requires a Flood Zone Development permit in accordance with Chapter 15.52.050 et. Seq. of the City's Development Code.

Therefore, impacts as a result of the proposed project would be less than significant.

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

Less Than Significant. Seiches are caused when earthquake ground motions cause water to oscillate from one side to the other of a closed or partially closed body of water such as a lake, bay or channel. Since no such bodies of water are located in the vicinity of the project site, there is no risk of release of pollutants due to project inundation.

Tsunamis, or seismic tidal waves, are caused by off-shore earthquakes that can trigger large, destructive sea waves. The project site is located approximately 125 miles northeast of the Pacific Ocean. Therefore, no impact would occur as a result of tsunamis or seismic tidal waves.

Hazardous materials, solid waste, or other byproducts will not be stored in the project area and therefore there will be no risk for significant pollutant release as a result of inundation. Therefore, the potential for the proposed project resulting in significant pollution as a result of inundation is less than significant.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact. Water quality impacts other than those described in response (a) above are not anticipated with implementation of the proposed project. The proposed project would be required to comply with Nevada County and City of Grass Valley regulations related to stormwater runoff, including implementation of post-construction BMPs as requirements of the SWPPP and therefore there would be no impact.

Mitigation Measures

MM-HY/WQ 1 - The drainage plan prepared for the project shall consider the potential for near-surface groundwater in Segment 2 of the proposed trail. Low Impact Development (LID) and infiltration features shall be designed in consideration of groundwater levels that may rise to within 3 feet of the ground surface.

MM-HY/WQ 2 - Prior to the issuance of a grading permit, the applicant shall submit a Storm Water Pollution Prevention Plan (SWPPP) to the City for acceptance, file a Notice of Intent with the California Water Quality Control Board and comply with all provisions of the Clean Water Act. The applicant shall submit the Waste Discharge Identification (WDID) number, issued by the state, to the City of Grass Valley Engineering Division.

MM-HY/WQ 3 - Prior to the issuance of a grading permit, a detailed grading, permanent erosion control and landscaping plan shall be submitted for review and approval by the Engineering Division prior to commencing grading. Erosion control measures shall be implemented in accordance with the approved plans. Any expenses made by the City to enforce the required erosion control measures will be paid by deposit.

III.11 Land Use Planning

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?				X
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X	

SETTING

The proposed Wolf Creek Trail roughly follows the alignment of Wolf Creek through the City of Grass Valley from its southern limits to the northeast corner of town. The proposed project is entirely within public two jurisdictions: City of Grass Valley ROW and Caltrans ROW. The purpose of the project is exclusive to public infrastructure and public ROW is excluded from General Plan and Zoning designations when the purpose of the project is exclusive to public infrastructure.

a) Would the project physically divide an established community?

No Impact. The physical division of an established community typically refers to the construction of a physical feature (such as an interstate highway or railroad tracks) or removal of a mean of access (such as local road or bridge) that would impair the mobility within an existing community, or between a community and outlying areas. The proposed project would provide a new bicycle and pedestrian trail within Caltrans and public ROW. The proposed project would not physically divide an established community, and in fact would provide for better connectivity. No impact will occur.

b) Would the project cause a significant environmental impact due to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant. The plans, policies, and regulations applicable to the proposed project include the City of Grass Valley General Plan and Municipal Code, and the Nevada County General Plan. The proposed project would be consistent with County of Nevada and City of Grass Valley General Plan land use designation and zoning which allows for recreational and public uses that are compatible with surrounding land uses.

Generally, the proposed project is in direct support of many relevant plans and policies, which contain goals and policies in support of bicycle and pedestrian trails, and specific goals and policies in support of completion of the Wolf Creek Trail. Additional relevant policies relate to the protection of natural resources, water quality, cultural resources, visual resources, air quality, and public safety from natural and human-caused hazards, provision of public services, noise and traffic. Many of the project impacts related to these topics are less than significant or are limited to the short-term construction phase of the project as described in the relevant sections of this document. With implementation of the mitigation measures contained in this document, the proposed project is consistent with all of these policies with all the relevant regulations and policies contained in these documents. This impact would be less than significant.

III.12 Mineral Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

SETTING

The City of Grass Valley adopted a General Plan Mineral Management Element (MME) on August 24, 1993. The MME contains four resource areas defined as: Mineral Resource Zone (MRZ) - 1 though MRZ - 4. The designations are described as follows:

- MRZ - 1: Areas where adequate information indicates that no significant mineral deposits are present.
- MRZ - 2: Areas where adequate information indicates that significant mineral deposits are present or where it is judged that there is a high likelihood for their presence.
- MRZ - 3: Areas containing mineral deposits the significance if which cannot be evaluated from available data.
- MRZ - 4: Areas where available information is inadequate for assignment to any other MRZ zone.

a) *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

No Impact. The General Plan Mineral Management Element does not show the site as being near an area classified as having significant mineral deposits. The proposed project is not located near one of the two areas identified in the MME as being targeted for mining conservation. Should mining activities be proposed in the area, the MME includes a policy statement that requires a proposed mine project to address potential impacts on the urban uses based upon the nature of the mining activities. According to the MME, the proposed project is not anticipated to result in the

loss of availability of a known mineral resource or locally known minimal resource. No impact will occur.

b) Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. The proposed project is not located in an area that has been identified by the City of Grass Valley or the County of Nevada as a locally important mineral resource recovery site. Therefore, the proposed project would not result in the loss of the availability if any locally important mineral recovery site. Therefore, the proposed project would have no impact.

III.13 Noise

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?		X		
b) Generation of excessive groundborne vibration or groundborne noise levels?			X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

SETTING

Noise is generally defined as loud, unpleasant, unexpected, or undesired sound that disrupts or interferes with normal human activities. Although exposure to high noise levels over an extended period has been demonstrated to cause hearing loss, the principal response to noise is annoyance.

Sound intensity is measured in decibels (dB) using a logarithmic scale. For example, a sound level of 0 dB is approximately the threshold of human hearing, while normal speech has a sound level of approximately 60 dB. Sound levels of approximately 120 dB become uncomfortable sounds.

Two composite noise descriptors are in common use today: Ldn and CNEL. The Ldn (Day-Night Average Level) is based upon the average hourly noise level over a 24-hour day, with a +10-decibel weighting applied to nighttime (10:00 p.m. to 7:00 a.m.) noise values. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were subjectively twice as loud as daytime exposures. The CNEL (Community Noise Equivalent Level), like Ldn, is based upon the weighted average hourly noise over a 24-hour day, except that an additional +4.77 decibel penalty is applied to evening (7:00 p.m. to 10:00 p.m.) hours. The CNEL was developed for the

California Airport Noise Regulations and is normally applied to airport/aircraft noise assessment. The Ldn descriptor is a simplification of the CNEL concept, but the two will usually agree, for a given situation, within Ldn. Like the noise levels, these descriptors are also averaged and tend to disguise short-term variations in the noise environment. Because they presume increased evening or nighttime sensitivity, these descriptors are best applied as criteria for land uses where nighttime noise exposures are critical to the acceptability of the noise environment, such as residential developments.

The primary existing noise source in the project area is vehicular traffic, including cars, trucks, buses, and motorcycles on roadways near or in the project vicinity, especially along SR-20/49. The level of vehicular noise generally varies with traffic volume, the number of trucks or buses, the speed of traffic, and the distance from the roadway. Additional sources of potential noise in and around the project area include the Caltrans yard adjacent to Segment 2, concrete supply business adjacent to Segment 4 along Railroad Ave, other light industrial uses adjacent to Segment 4, 5 and 6, and commercial and residential uses in the vicinity.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less Than Significant With Mitigation Incorporated.

Construction Noise. Construction noise represents a short-term impact on ambient noise levels. The project would involve minimal construction activities which would be temporary and be short duration resulting in periodic increases in the ambient noise environment. Construction activities would primarily require the use of excavators, backhoes, pavers, and paving equipment.

Groundborne noise and other types of construction-related noise impacts typically occur during the initial earthwork phases. Operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be due to random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). It should be noted that as project construction would not use large heavy-duty pieces of construction equipment such as a pile driving, graders, or scrapers, noise levels would be less intense than typical construction projects. Additionally, due to the width of the trail, only one or two small pieces of equipment would be used simultaneously.

Since it is a trail project, equipment would move in a linear fashion as opposed to operating adjacent to any one sensitive receptor for an extended period of time. Segments of the trail are bordered by residential uses; with the nearest approximately 15 feet from of the project site adjacent to Segment 3 along Hansen Way. The majority of residences are 100 feet or more from the project site. In addition, construction activities would occur throughout the project site and would not be concentrated at a single point near sensitive receptors.

Noise levels typically attenuate (or drop off) at a rate of 6 dB per doubling of distance from point sources, such as industrial machinery. During construction, exterior noise levels could affect the

residential neighborhoods near the construction site. Construction activities would be relatively minor and would not produce excessive levels of noise (e.g., replacing construction machinery to be equipped with properly operating noise attenuation devices, designating haul routes away from sensitive receptors, locating staging areas away from receptors) would be required. Construction activities would be limited to daylight hours and equipment would be properly muffled.

III.13.1 Table 4: Equipment used for the project and the dBA for each type of equipment.

Equipment Type	dBA at 50 feet
Backhoe	84dBA
Excavator	81dBA
Generator	81dBA
Jackhammer	89dBA
Paver	77dBA
Pickup Truck	75dBA
Pneumatic Tools	85dBA

In accordance with the City's Municipal Code, construction activities will be temporary in nature and will occur between normal working hours of 7:00 a.m. to 6:00 p.m. Monday through Friday and not at all on Sunday and legal holidays.

Compliance with the applicable Nevada County and City of Grass Valley noise ordinances would ensure that construction noise does not disturb residents during the times they are most likely to be home or during hours when ambient noise levels are likely to be lower (e.g., at night). According to the State's General Plan Guidelines and City General Plan Noise Element, noises which are generally less than ±60 dB CNEL are normally acceptable for outdoor low- density residential uses taking into account that any building impacted would be of normal conventional construction without any special noise insulation requirements. The type of equipment used may intermittently exceed ±60 dB, during the working hours from 7:00 a.m. to 6:00 p.m. However, based upon the temporary and fluctuating nature of construction noise and the implementation of MM-NOI-1, construction noise impacts would be reduced on adjacent noise-sensitive land uses to a less than significant level.

Operational Noise. The proposed project would not introduce any new uses that would result in an increase of noise levels. The project would enhance pedestrian and bicyclist connectivity and safety. The project would serve existing pedestrians and bicyclists and no uses are proposed that would directly increase vehicular trips in the study area. Additionally, the project has been designed to be a pedestrian-oriented area and does not include any stationary noise sources. The project would include occasional path sweeping and landscape equipment for trail maintenance, however, this would be infrequent and temporary. The path sweeping and landscape equipment would not substantially alter the existing ambient noise levels. Therefore, no long-term noise impacts would result from implementation of the proposed project. Operational noise impacts would be less than significant.

b) Would the project result in generation of excessive ground borne vibration or ground borne noise levels?

Less Than Significant Impact. Project construction can generate varying degrees of groundborne vibrations, depending on the construction procedure and the construction equipment used. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located near a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver buildings. The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Groundborne vibrations from construction activities rarely reach levels that damage structures.

The Federal Transit Administration (FTA) has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.20 inch/second) appears to be conservative. The types of construction vibration impact include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Typical vibration levels produced by construction equipment is identified in **Table 5.**

III.13.2 Table 5: Typical Vibration Levels for Construction Equipment

Equipment	Approximate peak particle velocity at 25 feet (inches/second)[1]	Approximate peak particle velocity at 100 feet (inches/second)[1]
Loaded trucks	0.076	0.01
Small bulldozer	0.003	0.00
Large bulldozer	0.089	0.01
Jackhammer	0.035	0.00
Vibratory compactor/roller	0.210	0.03

Notes:

1. Peak particle ground velocity measured at 25 feet per Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018. Table 7-4.
2. Calculated using the following formula:

$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

where:

PPV (equip) = the peak particle velocity in in/sec of the equipment adjusted for the distance
PPV (ref) = the reference vibration level in in/sec from Table 7-4 of the FTA *Transit Noise and Vibration Impact Assessment Manual* (2018).
D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual,* September 2018.

Groundborne vibration decreases rapidly with distance. As indicated in Table 3.13.2, based on the FTA data, vibrational velocities from typical heavy construction equipment operations that would be used during project construction range from 0.003 to 0.21 inches per second peak particle velocity (PPV) at approximately 25 feet from the source of activity. The closest sensitive receptors

would be approximately 25 feet away from active construction zones. However, the nearest sensitive receptor structures are approximately 100 feet or more from the project site. Vibration from construction activities experienced at the nearest sensitive residential structures would range between 0.01 and 0.35 inch per second PPV, which is below the 0.20 inch-per- second PPV significance threshold. Therefore, a less than significant impact would occur.

Operational use of the project would not generate vibrational impacts. Use of the sidewalks and trails would not generate groundborne vibration that could be felt at surrounding uses. The proposed project would not involve railroads or substantial heavy truck operations, and therefore would not result in vibration impacts at surrounding uses. Impacts would be less than significant.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Less Than Significant Impact. As the crow files, the northeast extent of the project is located approximately 1.25 miles from the Nevada County Airport. Due to the distance from the Nevada County Airport and smaller nature of the aircraft associated with this airport, the impact of the project to expose people residing or working in the project area to excessive noise levels is considered less than significant.

Mitigation Measures

MM NOI-1: The following multipart measure shall be implemented to reduce construction noise impacts to a less-than-significant level:

- All equipment shall have sound-control devices that are no less effective than those provided on the original equipment. No equipment shall have unmuffled exhaust.
- All equipment shall be properly maintained and operated.
- The contractor shall implement appropriate additional measures to reduce noise when adjacent to receptor locations including but not limited to, changing the location of stationary construction equipment and using temporary noise barriers.
- Within 14 days of starting construction, the contractor shall notify adjacent residents in advance of construction of the work hours and scheduled work.
- The construction contractor's specifications shall stipulate that noise- generating construction activities not be allowed between the hours of 6:00p.m. and 7:00 a.m. daily for City of Grass Valley or at any time on Sunday or a legal holiday except when permitted by the governing Planning Director for an extreme situation.

III.14 Population and Housing

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				X
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X

a) *Would the project induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?*

No Impact. The proposed project would not involve the construction of new housing or new businesses. The project consists of the extension of a trail and would not induce substantial unplanned population growth in the area. Therefore, no impact would occur and no mitigation is required.

b) *Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

No Impact. The project site does not include any existing housing and no housing would be removed to accommodate the proposed project. Therefore, no impacts would occur and no mitigation is required.

III.15 Public Services

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?				X
ii) Police protection?				X
iii) Schools?				X
iv) Parks?				X
v) Other public facilities?				X

SETTING

The proposed project area is within the City of Grass Valley and is served by the following public services:

- *Fire Protection:* The City of Grass Valley Fire Department provides fire protection and emergency medical services within the City. The Ophir Hill Fire Protection District serves lands east of the City limits, and the Nevada County Consolidated Fire District (NCCFD) serves the area generally north, west, and south of the City limits. The Fire Department is part of the tri-agency Joint Operating Agreement that includes the Nevada City Fire Department and NCCFD. The Fire Department has three locations: Fire Station #1 (474 Brighton Street), Fire Station #2 (213 Sierra College Drive), and administrative offices at City Hall (125 East Main Street). Equipment includes three front line engines, one reserve engine, one Office of Emergency Services (OES) engine, a ladder truck, one air support unit, and five staff vehicles.

- *Police Protection:* The City of Grass Valley Police Department currently employs 27 Full Time Equivalent (FTE) sworn members and 3 FTE civilian staff. Based upon Grass Valley's population of 13,041 the department's ratio of police officers per 1,000 residents is 2.1.

- *Schools:* Throughout Grass Valley, the Grass Valley School District serves K-8 students and the Nevada Joint Union School District serves students in grades 9 - 12. In addition, through inter-district contracts (which can be retracted), 467 students from Grass Valley currently attend schools in other school districts.

- *Parks:* The Grass Valley public parks and recreation system is comprised of approximately 108 acres of City park lands, including seven developed parks (Dow Alexander, Elizabeth Daniels, Glenn Jones, Minnie, Memorial, DeVere Mautino, and Condon and one underdeveloped park Morgan Ranch) within the City limits.

a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*

i) Fire Protection?
ii) Police Protection?

No Impact. The project would not hinder the fire departments of the City of Grass Valley, the Ophir Hill Fire Protection District, or the Nevada County Consolidated Fire District (NCCFD) or the police departments of the City of Grass Valley from maintaining acceptable service ratios, levels of effort, response times or other performance objectives given the nature of the project. As identified in the project description, the project would be constructed adjacent to SR-20/49, Hansen Way, Railroad Ave., and Idaho Maryland Rd. However, no roadways would be completely closed during construction. Therefore, no significant impacts would occur during construction or operation of the project. Implementation of the proposed project would not cause an increase in population, and therefore, service ratios for fire and police services would not be affected. Therefore, there would be no impact to fire and police protection services.

i) Schools?
ii) Parks?
iii) Other public facilities?

No Impact. The project does not involve residential development or new employment- generating land uses and would therefore not generate an increase in the City's population. No major additional public services would be required to serve the proposed project. Therefore, no impacts to schools, parks, and other public facilities would occur.

III.16 Recreation

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				X
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X

SETTING

The City owns and maintains eight park/-recreation facilities. These include three parks currently classified as "community parks": Condon Park, Mautino Park, and Memorial Park. One of the eight parks, Morgan Ranch, is still undeveloped. In addition, the City contracts with Nevada County Historical Society to operate the North Star Mining Museum. An inventory of City owned/ operated parks and recreation facilities include: Memorial Park, 8.4 acres; Condon Park, 80 acres; North Star Mining Museum, 1.7 acres; Minnie Park, 1.6 acres; Elizabeth Daniels Park, 0.3 acres; Dow Alexander Park, 0.5 acres; Morgan Ranch Park, 4.08 acres; and Mautino Park, 12.5 acres.

Additional park/ recreational facilities within the City of Grass Valley that are owned and maintained by entities other than the City are: Nevada County Country Club, 58 acres; Sierra College Rotary fields, 7.95 acres; Grass Valley Charter School, 3 acres.

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The project's primary purpose is to help close a gap in the regional bicycle and pedestrian transportation network. The proposed project does not include a residential element that would directly induce a population increase within the County. In addition, the proposed land uses will not be of a type or scale that would create new employment opportunities within the County. Therefore, the project would not increase the use of existing neighborhoods or regional

parks or create a demand for construction of new or expansion of existing recreational facilities. No impacts would occur.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

No Impact. The project would not result in the need for construction or expansion of recreational facilities. The proposed project would not materially increase the use of existing neighborhood or regional parks or require the expansion of recreational facilities which may have an adverse effect on the environment. The added recreational opportunities and connectivity to existing recreational uses as a result of the project would be beneficial. Therefore, no impacts would occur.

III.17 Transportation

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			X	
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			X	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				X
d) Result in inadequate emergency access?			X	

SETTING

The responses to a) to d) below are informed by a Transportation Analysis and associated Technical Memorandum completed by LSC Transportation Consultants, Inc. (see **Appendix E** for more details).

a) Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Less Than Significant Impact. Implementation of the proposed project would result in the construction of a trail. Short-term construction trips would include the transfer of construction equipment, construction worker trips, and hauling trips for construction materials; however, impacts in this regard would be temporary in nature and would cease upon project completion. Long-term operation of the project would not generate vehicle trips that would adversely affect the circulation system; no impacts would occur. Project components that require reduction in vehicular lanes do not result in reduced capacity or affect transit service. Therefore, impacts would be less than significant.

b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3(b)?

Less Than Significant Impact. Implementation of the proposed project would enhance pedestrian and bicyclist safety and increase connectivity and mobility. The project would further promote alternative modes of transportation and reduce vehicle trips. The project is not a land use associated with the generation of traffic and no project components would require reduction of vehicle lanes such that capacity would be affected. Therefore, impacts are less than significant.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

No Impact. The proposed improvements consist of bicycle and pedestrian facility improvements, retaining walls, and signage. These improvements would provide bicyclists and pedestrians with a safe alternative to using City streets in their current condition.

Portions of the trail would be co-located on the existing roadway, which is utilized by vehicular traffic. Parts of the trail would be shared use with pedestrian and bicycle users and vehicles. However, pedestrians and bicyclists already utilize the roadways, and the project would not introduce a new use or geometry that would substantially increase a hazard.

Overall, the project would introduce safer routes of travel and reduce several roadway hazards and not include any incompatible uses. Therefore, no impact would occur.

d) Would the project result in inadequate emergency access?

Less Than Significant Impact. The proposed project includes pedestrian and bicyclist improvements and would not impact evacuation routes. No roadways would be completely closed during construction. Therefore, impacts to an emergency response plan would be less than significant.

III.18 Tribal and Cultural Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:		X		
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?		X		
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?		X		

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

ii) A resource determined by the lead agency, in its discretion and supported by substantial

evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Less Than Significant with Mitigation Incorporated. Chapter 532 Statutes of 2014 (i.e., Assembly Bill [AB] 52) requires that lead agencies evaluate a project's potential impact on "tribal cultural resources." Such resources include "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register of Historical Resources or included in a local register of historical resources." AB 52 also gives lead agencies the discretion to determine, based on substantial evidence, whether a resource qualifies as a "tribal cultural resource."

In compliance with PRC Section 21080.3.1(b), S2S provided formal notification to California Native American tribal representatives identified by the California Native American Heritage Commission (NAHC). Native American groups may have knowledge about cultural resources in the area and may have concerns about adverse effects from development on tribal cultural resources as defined in PRC Section 21074. S2S sent letters to tribal representatives on the NAHC contact list on February 10, 2023. The letters informed them about the project and provided them with location maps as well as a description of proposed construction activities. The individuals contacted were as follows:

- Grayson Coney, Cultural Director, Tsi Akim Maidu
- Clyde Prout, Chairperson, Colfax-Todds Valley Consolidated Tribe (Maidu/Miwok)
- Pamela Cubbler, Treasurer, Colfax-Todds Valley Consolidated Tribe (Maidu/Miwok)
- Gene Whitehouse, Chairperson, United Auburn Indian Community of the Auburn Rancheria (Maidu/Miwok)
- Darrel Cruz, Cultural Resources, Washoe Tribe of Nevada and California
- Shelly Covert, Tribal Secretary Nevada City Rancheria Nisenan Tribe
- Saxon Thomas, Tribal Council, Nevada City Rancheria Nisenan Tribe
- Richard Johnson, Chairman, Nevada City Rancheria Nisenan Tribe
- Jesus Tarango, Chairperson, Wilton Rancheria (Miwok)
- Dahlton Brown, Director of Administration, Wilton Rancheria (Miwok)
- Steve Hutchason,, Tribal Historic Preservation Officer (THPO), Wilton Rancheria (Miwok)

A response was received from the United Auburn Indian Community of the Auburn Rancheria (UAIC). In an email dated March 7, 2023, the UAIC Tribal Historic Preservation Department requested direct contact with the Lead Agency and more specific information on the potential project impact on cultural resources with significance to the tribe. They requested documentation regarding archaeological studies and other associated information for review. S2S shared the Phase I Archaeological Survey Report (**Appendix C**) with the UAIC on March 9, 2023. S2S answered specific questions the UAIC posed about the report and sent additional project maps on March 13, 2023. There was no further communication between the UAIC and S2S or the City at

the time of writing this report, and the 30-day period for responses to the February 10, 2023 NAHC contact list letters had elapsed at the time of writing.

There is the potential for ground disturbing activities associated with the project to inadvertently affect previously unidentified Native American tribal cultural resources. Due to the possibility of unearthing tribal cultural resources which include, but is not limited to, Native American human remains, funerary objects, items or artifacts, sites, features, places, landscapes or objects with cultural values during ground disturbance activities MM TCR-1 through MM TCR-3 have been identified to mitigate this potential impact to archaeological resources. Compliance with the mitigation measures would mitigate potential impacts to tribal cultural resources to a less than significant level.

Mitigation Measures

MM-TRC-1: Prior to initiating ground disturbing activities within the project area, construction personnel should be alerted to the possibility of encountering buried prehistoric or historic period cultural remains. Personnel should be advised that upon discovery of buried archaeological deposits, work in the immediate vicinity of the find should cease and a qualified archaeologist should be contacted immediately. Once the find has been identified, plans for the treatment, evaluation, and mitigation of impacts to the find shall be developed if it is found to be eligible for the National Register of Historic Places or the California Register of Historical Resources.

MM-TRC-2: Archaeological resources unearthed by project construction activities shall be evaluated by a qualified archaeologist and Native American monitor. If the resources are Native American in origin, the tribe shall coordinate with the jurisdiction regarding treatment of these resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Section 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) shall be the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis; provided no data recovery will be permitted to tribal cultural resources without prior consultation and consent of relevant Tribes.

MM-TRC-3: California Health and Safety Code Section 7050.5, State CEQA Guidelines Section 15064.5, and PRC Section 5097.98 mandate the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. California Health and Safety Code Section 7050.5 requires that in the event that human remains are discovered, disturbance of the site shall be halted until the coroner has investigated the circumstances, manner and cause of death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in PRC Section 5097.98. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes or has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission.

III.19 Utilities and Service Systems

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			X	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?				X
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				X
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			X	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?				X

SETTING

The project footprint area, including permanent and temporary impacts, includes 2.07 acres of already developed streets and sidewalks and 2.26 acres forest habitat and landscaped areas (**Figure 3A-3E and Figure 4A-4E**). The developed areas have slopes of no more than 5%. The forested areas have slopes of varying gradients ranging between 5% and 20%. The elevation of the project footprint ranges from approximately 2,366 to 2,533- or 167-feet grade change.

A variety of local and regional purveyors in this area provide and maintain utility and service system facilities associated with electricity, water, stormwater, wastewater, solid water, communications and natural gas. Existing routes of underground gas and water pipelines and underground fiber-optic cables would remain. Utility poles and overhead utility lines that are in conflict with the proposed trail alignment would be relocated in coordination with the affected utility provider prior to construction of the proposed project.

Drainage from and around the project site includes natural swales, ditches, and storm water infrastructure. Historical drainage from the project site likely followed natural topography and flowed toward Wolf Creek where it is daylighted, and towards stormwater infrastructure where Wolf Creek is within an underground culvert. The proposed trail alignment has been designed to conform to existing grade and provide minimal alteration to existing drainage conditions. Where constrained by property lines, easement or change in grade such that a built-up slope would not be feasible, short retaining structures would be built.

Solid waste within the project area is collected by Waste Management, a licensed private disposal company. Solid waste is transported to the company's transfer station located on McCourtney Road.

The City's water system serves approximately, sixty (60%) of the incorporated City of Grass Valley and is located at 808 Alta Vista Avenue. The City's service area is 1,357 acres, approximately 2.1 square miles, with a service area population of 5,855.

a) Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?

Less Than Significant Impact. Existing storm drain facilities would be maintained as part of the proposed project. As described above, inlets or other means would be provided, where needed, to convey stormwater into existing storm drainage system and channels with minimal alteration to existing drainage patterns. These drainage improvements would remain after completion of the proposed project. The proposed project would not require or result in the construction of new stormwater drainage facilities that could result in significant environmental effects. This impact would be less than significant.

The implementation of MM-HY/WQ 1 will require a drainage plan prepared for the project that shall consider the potential for near-surface groundwater in Segment 2 of the proposed trail. Low Impact Development (LID) and infiltration features shall be designed in consideration of groundwater levels that may rise to within 3-feet of the ground surface.

The proposed project would not require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities as no potable water and/or toilets would be provided as part of the proposed trail alignment. Therefore, the proposed project would have a less than significant impact.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

No Impact. See Section 19(a) above.

c) Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

No Impact. See Section 19(a) above.

d) Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. Project construction would generate waste including construction materials, trench spoils, and general refuse, and these wastes would need to be disposed of in local or regional facilities. Waste generated from construction would include: non-hazardous metal waste, non-hazardous non-metal waste (concrete rubble, organic waste [vegetation], boxes and crates, refuse from construction workers), and trenching spoils (rubble, soil, broken asphalt). Non-hazardous metal and non-metal waste would be hauled to local disposal centers for recycling or taken to landfills. Trenching and excavation spoils would be reused to the maximum extent possible. The disposal demand would be reasonable relative to the solid waste disposal capacities of area landfills. The project would not generate additional waste once completed. Impacts related to solid waste disposal would be considered less than significant.

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

No Impact. The proposed project would comply with all federal, State, and local statutes and regulations related to solid waste. Therefore, the proposed project would have no impact.

III.20 Wildfire

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				X
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			X	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

SETTING

The Grass Valley region has a generally high potential for wildland fires of devasting intensity. This is due to the presence, particularly in less urban settings, of heavier timber, woodland and brush, the occurrence of steep slopes, dry weather conditions, and human activity. Generally, vegetative areas of over 20% slope are considered as fire hazardous areas. The City limits have a distinct urban/wildland interface area. The greatest threat for wildfire hazards is from those that may originate outside the City in unincorporated Nevada County. Historical data on wildfires in or near Grass Valley is kept on the Firehouse Reporting Data System. Because of the extended urban/wildland interface area, the City has participated in regional efforts to reduce wildfire risks to the City. These efforts include participation in Nevada County's Local Hazard Mitigation Plan and the Fire Safe Council of Nevada County Community Wildfire Protection Plan. Nevada County OES and the Fire Safe Council also maintain historical fire records.

According to the California Department of Forestry and Fire Protection (CalFire) Fire Hazard Severity Zone maps, the project area falls entirely within a Local Responsibility Area. A State responsible "Very High Fire Hazard Safety Zone" is adjacent to the project area to the south of Idaho Maryland Rd. in the 0.25 miles west of Centennial Dr. (California Department of Forestry and Fire Protection. Very High Severity Fire Hazard Zone (VHFHSZ) in LRA. Available at: https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildfire-preparedness/fire-hazard-severity-zones. Accessed on March 19, 2023).

The City of Grass Valley prepared an Emergency Preparedness Guide in 2019 aimed at individual citizen preparedness in the event of an emergency, with primary focus on wildland fire. The County of Nevada Office of Emergency Services released a Wildfire Preparedness Plan in 2019 to provide a focal point for both strategic and tactical planning to address local wildfire hazard reduction and preparedness goals.

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. No element of the proposed project will adversely impact any regional-scale communication systems within the City or County that may be used as part of an emergency response or evacuation plan. The proposed project would not impair emergency response or evacuation plans identified in the City of Grass Valley Emergency Preparedness Guide because it would not affect any service ratios or evacuation routes. Rather, the project would increase multi-modal connectivity, thereby adding a potential benefit for emergency evacuations. Thus, no impact would occur.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby, expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less than Significant Impact. The proposed project would result in the construction of a trail within the developed public ROW along local streets and roads and would result in similar uses to the existing conditions, as a transportation corridor. The County of Nevada Wildfire Preparedness Plan has several mitigation measures in place to help reduce and address wildland fire risks. In addition, the City of Grass Valley and Nevada County General Plan have incorporated many policies that protect homes and business from fire and wildfire and minimize potential losses of life and property. Through consistency with the goals and policies of these Plans, the proposed project would not exacerbate wildfire risk. Thus, impacts would be less than significant.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less than Significant Impact. The proposed project would result in the construction of an additional transportation corridor and would have similar uses to the existing conditions. Underground utilities would remain in place. The small number of distribution utility poles potentially in conflict with the trail would be relocated in coordination with utilities companies (namely PG&E) prior to construction of the project and would be separate from this proposed project. No additional or expanded use of water or wastewater facilities are proposed as part of the proposed project.

The project will not require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or on-going impacts to the environment. All utilities serving the site shall be installed underground in accordance with City of Grass Valley Development Standards. These impacts are considered less than significant.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less than Significant Impact. As discussed above, there is no evidence in the record to suggest that the proposed project will increase wildfire risks or hazards within the County. In a few locations of the proposed project, new storm drain infrastructure may be installed to convey road and trail runoff to existing or extended culverts. With exception of the storm drain infrastructure mentioned above, stormwater runoff from the proposed project would be conveyed to adjacent permeable non- erodible areas. Therefore, the potential for the project increasing risks to people or structures as a result of increased post-fire runoff, slope instability, or drainage changes is less than significant.

III.21 Mandatory Findings of Significance

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?			X	
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			X	
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X	

a) *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?*

Less than Significant Impact. As discussed in Section IV, Biological Resources, of this IS/ Mitigated Negative Declaration (MND), implementation of the proposed project is not expected to have the potential to result in adverse effects to special- status plant and wildlife species.

Additionally, while unlikely, the project could result in impacts related to eliminating important examples of California History or Pre-history associated with undiscovered archeological and/ or paleontological resources during project construction. However, this IS/MND includes mitigation measures that would reduce any potential impacts to less than significant levels. With implementation of the mitigation measures outlined in this IS/MND, as well as compliance with General Plan policies these potential impacts are less than significant.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Less than Significant Impact. The impacts of the proposed project would be individually limited and not cumulatively considerable. The proposed project would be a multi-use trail and associated intersection improvements. All environmental impacts that could occur as a result of the proposed project would be reduced to a less-than-significant level through implementation of the mitigation measures recommended in this IS/MND.

c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant Impact. As identified throughout this IS/MND, the project would not have significant air quality, noise, traffic, or hazardous materials impacts that might directly or indirectly harm human beings. Therefore, the proposed project would not cause adverse effects on human beings.

Introduction and Overview

Surf to Snow Environmental Resource Management Inc. (S2S), Restoration Design Group (RDG) and Nevada City Engineering (NCE) are working with the City of Grass Valley (City) to design the Wolf Creek Trail. S2S certified Arborist Derek Hitchcock was asked to prepare a Tree Preservation Report for the project for review by the City.

This report provides the following information:

1. A survey of trees currently growing on the site.

2. An evaluation of each tree's suitability for preservation.

3. An assessment of the impacts of constructing the proposed project on the trees.

4. Guidelines for preserving selected trees during development.

Survey Methods

Trees were surveyed from April 2022 – December 2022. The survey included living trees greater than 6" in diameter. The survey procedure consisted of the following steps:

1. Identifying the tree as to species;
2. Tagging each tree with an identifying number and recording its location on a map;
3. Measuring the trunk diameter at a point 54" above grade;
4. Evaluating the health and structural condition using a scale of 1 – 5:
   - ***1*** - A healthy, vigorous tree, reasonably free of signs and symptoms of disease, with good structure and form typical of the species.
   - ***2*** - Tree with slight decline in vigor, small amount of twig dieback, minor structural defects that could be corrected.
   - ***3*** - Tree with moderate vigor, moderate twig and small branch dieback, thinning of crown, poor leaf color, moderate structural defects that might be mitigated with regular care.
   - ***4*** - Tree in decline, epicormic growth, extensive dieback of medium to large branches, significant structural defects that cannot be abated.
   - ***5*** - Tree in severe decline, dieback of scaffold branches and/or trunk; most of foliage from epicormics; extensive structural defects that cannot be abated.

Suitability for preservation considers the health, age, structural condition, and species of the tree, and its potential to remain an asset to the site for years to come.

Description of Trees

Seven hundred sixty-four (764) trees were evaluated. Descriptions of each tree are found in the ***Tree Survey.*** A summary is provided in Table 1.

Twenty-six tree species were present among the surveyed trees. The population is dominated by incense cedar with 204 trees (27% of the total), white alder with 138 trees (18% of the total), Fremont cottonwood with 126 trees (16% of the total) and ponderosa pine with 121 trees (16% of the total). There were also significant numbers of black locust with 63 trees (8% of total) and California black oak with 32 trees (4% of total). Except for the black locust, these trees that occurred with relative abundance are native to the area.

The overall condition of the trees was fair (42%) to good (36%). One hundred sixty-eight trees (22%) were in poor condition.

Table 1: Frequency of Occurrence and Condition Ratings of Trees.

Common Name	Scientific Name	No. of Trees	Condition Rating		
			Poor (4-5)	Fair (3)	Good (1-2)
American chestnut	*Castanea dentata*	3	2	0	1
American sycamore	*Platanus occidentalis*	1	0	1	0
Betula spp.	*Betula spp.*	4	0	3	1
Big-leaf maple	*Acer macrophyllum*	11	0	5	6
Black locust	*Robinia pseudoacacia*	63	31	25	7
Black walnut	*Juglans hindsii or spp.*	12	2	2	8
Box elder	*Acer negundo*	2	0	1	1
California black oak	*Quercus kellogii*	32	3	13	16
Coast redwood	*Sequoia sempervirens*	2	0	0	2
Deodar cedar	*Cedrus deodara*	1	0	0	1
Douglas fir	*Pseudotsuga menziesii*	1	0	0	1
Fraxinus spp.	*Fraxinus spp.*	2	1	0	1
Fremont cottonwood	*Populus fremontii*	126	11	50	65
Giant sequoia	*Sequoiadendron giganteum*	6	0	2	4
Incense cedar	*Calocedrus decurrens*	204	51	100	53
Japanese privet	*Ligustrum japonicum*	4	1	2	1
Mountain maple	*Acer spicatum*	1	0	0	1
Oregon ash	*Fraxinus latifolia*	2	0	2	0
Ponderosa pine	*Pinus ponderosa*	121	30	55	36
Prunus spp.	*Prunus spp.*	6	0	3	3
Silverleaf cotoneaster	*Cotoneaster pannosus*	2	0	0	2
Southern catalpa	*Catalpa bignonioides*	1	0	0	1
Sugar maple	*Acer saccharum*	1	0	0	1
Tree of heaven	*Ailanthus altissima*	11	5	3	3
White alder	*Alnus rhombifolia*	138	30	51	57
Willow (Salix spp.)	*Salix spp.*	7	1	3	3
TOTAL		**764**	**168**	**321**	**275**
		100%	22%	42%	36%

Evaluation of Impacts

Appropriate tree retention develops a practical match between the location and intensity of construction activities and the quality and health of trees. The tree survey was the reference point for tree condition and quality. Potential impacts from construction were evaluated using the Wolf Creek Trail Preliminary Improvement Design Plans Plan & Profile, prepared by RDG. Potential impacts from construction were estimated for each tree through GIS based desktop analysis and then ground-truthed in the field. The most significant impacts to the trees would occur as a result of the grading for construction of the path. The initial tree removal list was reduced in the ground-truthing process through the avoidance of certain healthy and large trees, reducing the environmental impacts of the project as well as enhancing the trail experience for users.

The analysis of the project design plans indicates that the project will require the removal of 176 trees that are in conflict with the plan (Table 2). Considering the Project Area includes 764 trees, this means it would allow 588 trees to be preserved. Preservation of the trees in the immediate vicinity of the graded areas is predicated on establishing a **Tree Protection Zone** and other preservation activities described in the Tree Preservation Guidelines that follow.

Table 2: Trees Requiring Removal

Tree No.	Species	Trunk Diameter (inches)	Condition 1=EXCELLENT 5=POOR	Reason for Removal	Trail Segment
17	Tree of heaven	7.8	2	Located within graded area	SEG 2
18	Ponderosa pine	13.6	4	Located within graded area	SEG 2
23	Ponderosa pine	11.2	4	Located within graded area	SEG 2
24	Ponderosa pine	16.8	3	Located within graded area	SEG 2

Tree Preservation Guidelines

Certain trees in the immediate vicinity of the graded areas will be designated for preservation based on their suitability for preservation and location relative to the development plan. Once those decisions have been made, the following recommendations will help reduce impacts to trees from development and maintain and improve their health and vitality through the clearing, grading and construction phases.

The goal of tree preservation is not merely tree survival during development but maintenance of tree health and beauty for many years. Trees retained on sites that are either subject to extensive injury during construction or are inadequately maintained become a liability rather than an asset. The response of individual trees will depend on the amount of excavation and grading, the care with which demolition is undertaken, and the construction methods. Coordinating any construction activity inside the Tree Protection Zone can minimize these impacts.

Pre-construction treatments and recommendations

1. The construction superintendent shall meet with the Consulting Arborist before beginning work to discuss work procedures and tree protection.

2. Fence trees to enclose the **TREE PROTECTION ZONE** prior to demolition, grubbing or grading. Fences are to remain until all grading and construction is completed.

Recommendations for tree protection during construction

1. No grading, construction, demolition or other work shall occur within the **TREE PROTECTION ZONE**. Any modifications must be approved and monitored by the Consulting Arborist.

2. Any root pruning required for construction purposes shall receive the prior approval of, and be supervised by, the Consulting Arborist.

3. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the Consulting Arborist so that appropriate treatments can be applied.

4. No excess soil, chemicals, debris, equipment or other materials shall be dumped or stored within the **TREE PROTECTION ZONE**.

5. Any additional tree pruning needed for clearance during construction must be performed by a Certified Arborist and not by construction personnel.

Derek Hitchcock
Certified Arborist #WE-14330A

Appendix B – Biological Constraints Review

Biological Constraints Review

Project Name: *Wolf Creek Trail*	***Date of Preparation:*** 3/10/2023
Project Location: *Grass Valley, CA* ***Lat/Long:*** 39.208929°, -121.069738° 39.224271°, -121.035306°	***Surf to Snow Environmental Resource Management (S2S) Biologist:*** Alex Bajakian

Project Description:

The Wolf Creek Trail Project (Project) is envisioned as a multi-use trail that roughly follows the alignment of Wolf Creek through the City of Grass Valley (City) from its southern limits to the northeast corner of town (**Figure 1**). The Wolf Creek Trail Project (Project), which currently consists of a 1.2-mile section that ends at Freeman Lane and Allison Ranch Road (Segment 1), will be extended 2.3 miles to Sutton Way to complete Segments 2-6 (**Figure 2**). The Project is located within Caltrans and City right of way (ROW) and will be separated from vehicular traffic to the greatest extent feasible.

The proposed path would be 8-feet wide with 1-ft shoulders in most locations, narrowing to a lessor width in constrained locations. The trail would be an asphalt paved trail installed over aggregate base, with paved shoulders. Grading would occur beyond the shoulders to conform the trail to existing grade up to a maximum slope of 2:1, as dictated by geotechnical conditions. In the areas with significant slope, retaining walls will be installed as edge treatments.

To complete an analysis of the potential impacts to environmental habitats and resources from the Project, the work area and surrounding habitat was evaluated (Biological Study Area). The Biological Study Area (BSA) was determined based on the characteristics of the project site and its surrounding environment, such as the presence of sensitive habitats, special-status species, and other ecological features of interest. It was also determined early in the project development process, and in collaboration with stakeholders to include all areas where the trail alignment could potentially pass through.

Constraints:

Biological Resources–

Biological resources near the Project area were generated using a combination of databases including the United States Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI), USFWS Critical Habitats, USFWS Information for Planning and Consultation (iPAC), and California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB). A search query using a radius of 2 miles around the BSA created a list of seven plant species, seven wildlife species, and several aquatic features. A list of these resources and a discussion on potential impacts are evaluated below. A map showing all CNDDB records within 2 miles of the BSA is displayed in **Figure 3**.

Plants:

- Pine Hill flannelbush (*Fremontodendron decumbens*)
- Scadden flat checkerbloom (*Sidalcea stipularis*)
- Stebbins' Morning-glory (*Calystegia stebbinsii*)
- Brownish beaked-rush (*Rhynchospora capitellata*)
- Chapparal sedge (*Carex xerophila*)

Project Name: *Wolf Creek Trail*	***Date of Preparation:*** 3/10/2023
Project Location: *Grass Valley, CA* ***Lat/Long:*** 39.208929°, -121.069738° 39.224271°, -121.035306°	***Surf to Snow Environmental Resource Management (S2S) Biologist:*** Alex Bajakian

- Dubious pea (*Lathyrus sulphureus* var. *argillaceus*)
- Finger rush (*Juncus digitatus*)

Wildlife:

- Townsend's big-eared bat (*Corynorhinus townsendii*)
- Coast horned lizard (*Phrynosoma blainvillii*)
- California red-legged frog (*Rana draytonii*)
- Foothill yellow-legged frog- north Sierra distinct population segment (DPS) (*Rana boylii*)
- California black rail (*Laterallus jamaicensis coturniculus*)
- California spotted owl (*Strix occidentalis occidentalis*)
- Yellow-breasted chat (*Icteria virens*)

Wetlands and Aquatic Features:

Several aquatic features were identified within the 2-mile search query. Wolf Creek is the only aquatic feature within the BSA and is the only aquatic feature evaluated in further detail below.

Site Visit Conducted:		**Site Photographs:**
☐No ☒Yes	If yes, provide date: April 4, 2022	☐No ☒Yes, attached at end of document

Notes: Constraints analysis based on desktop review and information from the site visit

Habitat Types (check all that apply):

☐Grassland	☐Lacustrine	☐Brackish/Saltmarsh	☐Chaparral
☐Mixed hardwood forest	☒Aquatic	☐Agricultural	☒Landscaped
☒Sierra mixed conifer	☒Riparian	☐Oak woodland	☒Ruderal/Developed
☐Redwood	☐Freshwater wetland	☒Ponderosa pine	☐Other (see notes)

Habitat, by segment, as displayed in **Figure 4**:

Each segment contains some of the following listed habitat. Dominant species within each habitat is further described below.

- Segment 2: Equally comprised of aquatic, riparian, and Ponderosa pine habitats.
- Segment 3: Entire area is developed roadways or adjacent landscaped habitat.
- Segment 4: Most of this segment contains Sierra mixed conifer or developed roadways.
- Segment 5: Most of this segment contains developed habitat consisting of paved roadways with a small sliver of Sierra mixed conifer and riparian habitat.

Biological Constraints Review

Project Name: *Wolf Creek Trail*	***Date of Preparation:*** 3/10/2023
Project Location: *Grass Valley, CA* ***Lat/Long:*** 39.208929°, -121.069738° 39.224271°, -121.035306°	***Surf to Snow Environmental Resource Management (S2S) Biologist:*** Alex Bajakian

- Segment 6: Most of this segment contains developed habitat consisting of paved roadways.

Dominant species in the riparian habitat are Himalayan blackberry (*Rubus armeniacus*), cottonwood (*Populus fremontii*), white alder (*Alnus rhombifolia*), and black locust (*Robinia pseudoacacia*) along Wolf Creek. The Ponderosa pine habitat is dominated by ponderosa pine (*Pinus ponderosa*) with a smaller representation of incense cedar (*Calocedrus decurrens*). The Sierra mixed conifer habitat is dominated by incense cedar (*Calocedrus decurrens*), ponderosa pine (*Pinus ponderosa*), and California black oak (*Quercus kelloggii*). Aquatic habitat refers to Wolf Creek which will be discussed in more detail in the Aquatic Resources section below.

[1]Special Status is defined as federal or state threatened, endangered, rare, proposed, candidate or fully protected; covered by Eagle Protection Act; or species of concern to land management agency. Abbreviations: Federally Endangered, Threatened, Proposed Endangered, Proposed Threatened, or Candidate (FE, FT, FPE, FPT, FC); State Endangered, Threatened, Candidate for Endangered, or Candidate for Threatened (SE, ST, SCE, SCT); Fully Protected (FP); CDFW Species of Special Concern (SSC); California Rare Plant Rank (CRPR) List 1.X, 2.X or 3.

Special-Status Species with Low Potential to be affected by the Project:

- **Scadden flat checkerbloom**
  - This plant is endemic to Nevada County in eastern California. It is known from only two occurrences on Scadden Flat in the Sierra Nevada foothills, near Grass Valley. It has a blooming period between July and August and grows in wet montane marshes that are fed by local springs.[1] [2]Segment 2 may contain suitable habitat for this species; however, no recorded occurrences have been observed within or directly adjacent to the work areas. This species has a low likelihood of being impacted by work activities.
- **Dubious pea**
  - This plant is a perennial herb found within cismontane woodland, and upper and lower montane coniferous forests from 150 to 930 meters in elevation.[3] [4]It has a blooming period between April and May. The proposed work area does not contain quality suitable habitat for this species, however, there are recorded observances of this species in areas adjacent to the proposed work area. This species has a low likelihood of being impacted by work activities.

- **California black rail**
  - Nesting Habitat: This species nests in marshes and wet meadows including riparian marshes, coastal prairies, saltmarshes, and impounded wetlands. All habitats have stable shallow water, usually just 1-2 inches deep. Marsh nests are set on or close to the ground, at the base of taller vegetation. Specific plants correlated with black rail presence include *Bolboschoenus acutus*, *B. californicus*, *B. acutus*, *Typha angustifolia*, *T. latifolia*, and *Phragmites australis*. Black rails nest in areas with high stem densities and canopy coverage in shallow water. Studies have shown that Black rails have a positive relationship with larger, undisturbed, quality wetlands.[5]
  - The proposed work areas do not contain suitable nesting habitat for this species. There are recorded observances of this species in areas adjacent to the proposed work area. However, the records indicate the observations are only visual with no evidence of nests or nesting behavior. This species has a low likelihood of being impacted by work activities.
- **California spotted owl**
  - The California subspecies of spotted owl lives in mature and old-growth forests in the Sierra Nevada and in the mountains of coastal and Southern California. The California spotted owl prefers forests with large-diameter trees and varied levels of vegetation. The closest record for spotted owl is 1.3 miles southeast of the work area in Empire Mine State Historic Park, which is heavily forested. Portions of Segments 2 and 4 have forested riparian, ponderosa pine, or Sierra mixed conifer forest, however none of this habitat provides suitable old growth forest nesting trees for the spotted owl. In addition, the forested habitat is interspersed within developed and landscaped areas. This species has a low likelihood of being impacted by work activities.
- **Yellow-breasted chat**
  - Nesting Habitat: Nesting Yellow-breasted chats occupy early successional riparian habitats with a well-developed shrub layer and an open canopy. This species primarily nests in the narrow border of streams, creeks, sloughs, and rivers and seldom forms extensive tracts. Blackberry (*Rubus spp*.), wild grape (*Vitis spp.),* willow, and other plants that form dense thickets and tangles are frequently selected as nesting strata. The nest is typically placed within 1 m of the ground but may range up to 2.4 m.[6]
  - Segments 2, 4, 5 and 6 may contain suitable nesting habitat for this species, however, no recorded occurrences have been observed within or directly adjacent to work areas. This species has a low likelihood of being impacted by work activities.
- **Foothill yellow-legged frog**
  - The foothill yellow-legged frog lives in foothill and mountain streams from the Pacific coast to the slopes of the Sierra Nevada and Cascade mountains, up to approximately 5,000 feet in elevation. Habitats for this species ranges from valley-foothill hardwood, mixed conifer, to valley-foothill riparian, ponderosa pine, mixed chapparal and wet meadows[7]. Unlike other ranid frogs in California, this species stays close to permanent water sources and does not venture far away. Breeding stream habitat is generally shallow and rocky with some exposed sunlight. Tadpoles require water for a minimum of three to four months. There is suitable habitat within some of the project area. The closest record of this species is recorded 1.85 miles northeast of the eastern portion of the project site. There are no

[6] Shuford, W. D., and Gardali, T., editors. 2008. California Bird Species of Special Concern: A ranked assessment of species, subspecies, and distinct populations of birds of immediate conservation concern in California. Studies of Western Birds 1. Western Field Ornithologists, Camarillo, California, and California Department of Fish and Game, Sacramento.

[7] USFWS https://www.fws.gov/species/foothill-yellow-legged-frog-rana-boylii

records within Wolf Creek. Since this species does not migrate very far from their permanent water sources and there are no documentations in Wolf Creek, this species has a low likelihood of being impacted by work activities.

Special-Status Species with No Potential to be affected by the Project:

- Species with no potential to be affected have no recorded occurrences within 2 miles and contain no suitable habitat within or directly adjacent to proposed work areas. Work activities are not expected to impact any of these species. Species within the 2-mile search query with no potential to be affected by the project are Stebbins' morning-glory, Pine Hill flannelbush, brownish beaked-rush, chapparal sedge, finger rush, Townsend's big-eared bat, California red-legged frog, and coast horned lizard.

Potential to Impact Nesting Avian Species:

	High	Moderate	Low	None
Nesting Birds	☒	☐	☐	☐

☐No ☒Yes	Notes: Work activity involves the removal and trimming of 176 trees along Wolf Creek in habitat that is suitable for nesting birds. Nesting birds may be present on the ground, or in shrubs and trees, from March 1 through August 31 (nesting bird season). To avoid and minimize impacts to nesting birds, trail construction activities within or adjacent to suitable nesting habitat should be conducted outside of nesting bird season. If construction activities must take place during nesting bird season, pre-construction nesting bird surveys would be required to identify active nests. If active nests are identified, additional avoidance and minimization measures will be implemented as necessary.

Potential to Impact Wetland and/or Aquatic Resources:

	High	Moderate	Low	None
Aquatic Resources	☐	☐	☐	☒

☐No ☒ Yes	Aquatic resources within the BSA were identified using the USFWS National Wetlands Inventory (NWI). Wolf Creek is the only aquatic resource identified within the BSA. The project area is located within the 78 square mile Wolf Creek watershed, which drains to the Bear River Watershed, the second largest tributary to the Feather River. The Feather River flows to the Sacramento-San Joaquin River Delta before entering the Pacific Ocean through the San Francisco Bay. The outer extents of Wolf Creek were mapped using the combination of high-resolution LIDAR data and an ordinary high-water mark (OHWM) field survey using a sub-meter accuracy Trimble GPS. Indicators that were used to determine the OHWM included geomorphic indicators (slope, undercut, shelving, general channel shape), sediment indicators (mudcracks, soil development), vegetation indicators (presence of forbes, trees) and ancillary indicators (presence of litter, woody debris, water lines) within the BSA. The results concluded that the edges of Wolf Creek possess multiple indicators of a clearly defined OHWM. All impacts

	(permanent and temporary) from work activities are outside of the documented OHWM. In addition, no impacts are anticipated to the bed, bank, or channel of Wolf Creek.
Critical Habitat:	
☒No ☐ Yes	There is no USFWS Critical Habitat within the BSA.

Recommended Avoidance and Minimization Measures (AMMs):

The following measures are recommended in order to avoid and minimize impacts to existing biological resources:

General AMMs:

AMM-01: Worker Training
Prior to the start of work, a qualified biologist will provide a worker environmental awareness training to the construction crew. The biologist will train all project staff regarding habitat sensitivity, identification of special status species with potential to occur, and minimization and avoidance measures that are being implemented for the project. All contractors must complete the training prior to beginning any project-related work.

AMM-02: Parking
Park vehicles and equipment on pavement, existing roads, or other disturbed or designated areas (barren, gravel, compacted dirt).

AMM-03: **Access**
Use existing access and ROW roads. Minimize the development of new access and ROW roads, including clearing and blading for temporary vehicle access in areas of natural vegetation.

AMM-04: Equipment Inspection
Minimize potential for wildlife to seek refuge or shelter in pipes, culverts, hollow poles, or similar construction equipment by capping, covering, or elevating said structures when not in use.

AMM-05: Trash
Prohibit trash dumping, firearms, open fires (such as barbecues), hunting, and pets (except for safety in remote locations) at work sites.

AMM-06: Escape Ramps
Fit open trenches or steep-walled holes with escape ramps of plywood boards or sloped earthen ramps at each end if left open overnight. Field crew will search open trenches or steep-walled holes every morning prior to initiating daily activities to ensure wildlife is not trapped.

Biological Resources Measures:

AMM-07: Nesting Birds

Pre-construction Survey: If feasible, work should be scheduled outside of the nesting bird season in the fall and winter. If not possible and work is scheduled during nesting bird season (March 1st through August 31st), a pre-construction nesting bird survey will be conducted by a qualified biologist within 10 days of construction commencement. The survey area should cover a radius of 250 feet for raptors and 50 feet for other non-raptor birds around all work areas.

If an active nest is observed within the survey area, the biologist will determine an appropriate exclusion buffer zone based on the type of species nesting, the distance from the work area, and the level of disturbance/noise levels in that area. The perimeter of the nest setback zone shall be fenced or adequately demarcated with stakes and flagging to ensure construction personnel and activities are restricted from the area. If needed, a qualified biologist will monitor construction activities occurring near the active nest site to ensure no inadvertent impacts on the nests occur.

AMM- 08: Special Status Wildlife

Prior to the start of work, a qualified biologist will perform a special status species survey of work areas that could provide suitable habitat for species with potential to occur in or near the project areas. The survey will focus on Segments 2 and 4, and the portion of suitable habitats in the other segments. Special attention will be made to look for foothill yellow-legged frog in areas where the train alignment is adjacent to Wolf Creek. Based on survey results, the qualified biologist will determine what other measures may need to be implemented to protect resources. This may include limiting work areas to walking access only, setting up protection buffers, or having a biological monitor onsite. If special status species are observed, then the agencies will be notified and provided a survey report of the findings.

AMM-09: Wildlife at the Project Site

If a special status species is found at the work site, halt work activities and contact the Project Biologist or Environmental Lead as soon as possible. No listed or candidate wildlife or plant species shall be handled and/or removed from the site by anyone. The animal shall be allowed to leave the site on its own volition and care shall be taken not to harm the species. If any listed species are found at or near the Project site, the appropriate agencies will be notified.

Aquatic Resources

AMM-10: No Fill

No impacts (including fill, discharge or ground disturbance) to Wolf Creek are permitted.

AMM-11: No Dewatering

No dewatering of Wolf Creek is permitted.

AMM-12: Dry Season Work

If feasible, conduct work activities near Wolf Creek during the dry season (April 15 - October 15).

AMM-13: Minimize Impacts

Minimize the number and size of work areas for equipment and spoil storage sites in the vicinity of

Wolf Creek. Place staging areas and other work areas as far back from the creek as possible.

AMM-14: Erosion Control

Utilize standard erosion and sediment control BMPs to prevent construction site runoff into Wolf Creek. All exposed/disturbed areas within the proposed project site will be stabilized to the greatest extent possible. Erosion control measures such as straw wattles, straw mulch or silt fencing will be used to prevent runoff from entering the creek.

AMM-15: Plates or Mats

If temporary plates or matting are needed to facilitate access, contact the Project Biologist or Environmental Lead prior to use.

AMM-16: Stockpile

Stockpile soil within established work site boundaries and locate stockpiles so as not to enter Wolf Creek, stormwater inlets, or other standing bodies of water. Cover stockpiled soil prior to precipitation events.

AMM 17: Storm Water Pollution Prevention Plan.

A SWPPP will be prepared for the Project in accordance with Section 402 of the CWA and Caltrans' Construction General Permit (Order 2009-009-DWQ). The SWPPP shall incorporate best management practices (BMPs) to control sedimentation and runoff and address water quality on site. Protective measures would include the following:

- No discharge of pollutants from vehicle and equipment cleaning into any storm drains or watercourses.
- Vehicle and equipment fueling and maintenance operations must be located away from watercourses, except at established commercial gas stations or established vehicle maintenance facility or staging areas with BMPs or secondary containment installed and maintained.
- Spill containment kits will always be maintained onsite during construction operations. Vehicles operating adjacent to wetlands and waterways must be inspected and maintained daily to prevent leaks.
- All food and food-related trash items will be enclosed in sealed trash containers and removed completely from the site at the end of each day.

<u>Vegetation Removal</u>

AMM-18: Timing of Veg Work

If feasible, vegetation work should be scheduled between September 1st and March 1st to avoid the nesting bird season.

AMM-19: Tree Protection

Removal and trimming of vegetation should be the minimum amount necessary to support the work. All cut vegetation must be removed from the riparian area.

AMM-20: Felling Trees

Directionally fall trees away from an exclusion zone, if an exclusion zone has been defined. If this is not practicable, remove the tree in sections. Avoid damage to adjacent trees to the extent

practicable.

AMM 21: Replanting

Vegetation and tree removal would be required to construct the trail. Trees shall be replanted within the project area at a ratio consistent with local tree protection requirements for trees removed within local agency jurisdiction, Caltrans requirements for trees removed within Caltrans ROW, and CDFW replanting requirements for trees removed within the riparian zone in CDFW's jurisdiction.

AMM-22: Restoration

All slopes or unpaved areas temporarily disturbed by the construction activities will be reseeded with native grasses and shrubs to stabilize and prevent erosion. The temporarily disturbed areas will be restored to pre-construction conditions to the maximum extent practicable. Where disturbance includes tree removal, native species will be replanted at ratios as described above.

CONFIDENTIAL INFORMATION

Archaeological remains and historic period-built environment resources can be damaged or destroyed through uncontrolled public disclosure of information regarding their location. This document contains sensitive information regarding the nature and location of cultural resources, which should not be disclosed to unauthorized persons.

Information regarding the location, character or ownership of certain historic properties may be exempt from public disclosure pursuant to the National Historic Preservation Act (54 USC 300101 et seq.) and the Archaeological Resources Protection Act (Public Law 96-95 and amendments). In addition, access to such information is restricted by law, pursuant to Section 6254.10 of the California State Government Code.

1 – SUMMARY OF FINDINGS

This report summarizes Phase I archaeological investigations completed for the Grass Valley Wolf Creek Trail project (Project). The city of Grass Valley proposes to develop a 2.3 mile-long pedestrian and bike path along the banks of Wolf Creek. This Phase I archaeological investigation was undertaken to support Grass Valley's compliance with CEQA, and acquisition of a permit(s) from Caltrans for this project. The archaeological investigation for the Project was carried out under contract with Surf to Snow Environmental Resource Management, Inc. (Surf to Snow). The purpose of the investigation was to identify prehistoric or historic period resources within the Project Area that could be affected by construction related activities.

Surf to Snow's Phase I investigation included a review of existing environmental, ethnographic, prehistoric, and historic period data for the Project Area, as well as an intensive pedestrian survey of the Project Area. A records search was conducted at the North Central Information Center (NCIC) of the California Historical Resources Information System (CHRIS), housed at Sacramento State University, Sacramento, California. The purpose of the search was to compile information pertaining to the locations of previously recorded cultural resources and prior cultural resources studies within the Area of Potential Effects (APE), and within a 0.25-mile radius of the APE. The record search revealed no previously recorded prehistoric or historic period cultural resources within the APE. A search of the Native American Heritage Commission's (NAHC) Sacred Land database was also conducted, the results of which were also negative.

On February 22, 2022, Surf to Snow personnel completed an intensive pedestrian survey of the Project Area. The survey identified one cultural resource within the APE.

Based on the results of the records search, contact with the NAHC, the pedestrian survey, and a review of archival and environmental data, the Project should have no effect on cultural resources or historic properties.

2 – INTRODUCTION

This report summarizes Phase I archaeological investigations completed for the Grass Valley Wolf Creek Trail project (Project). The city of Grass Valley proposes to develop a 2.3 mile-long pedestrian and bike path that roughly follows the alignment of Wolf Creek through the City of Grass Valley from its southern limits to the northeast corner of town. The Project is located in the city of Grass Valley, California (**Figure 1**). For the purposes of this study, the Project Area is defined as the preferred trail alignment, with a 25 foot buffer on each side (50ft total width).

To execute the scope of work discussed herein, the city of Grass Valley (City) will acquire a permit(s) from Caltrans. Caltrans' federal funding supporting this project constitutes an Undertaking, necessitating compliance with Section 106 of the National Historic Preservation Act (NHPA) of 1966, and its implementing regulations found at 36 CFR 800. This Phase I archaeological investigation also assists the City to comply with the requirements of the California Environmental Quality Act (CEQA). The current investigation was therefore undertaken to support compliance with these regulatory frameworks. The Area of Potential Effect (APE) for the Project is located on the Grass Valley, California United States Geological Survey (USGS) 7.5-minute quadrangle (Figure 2) The Phase I investigation included archival research, records search, contact with the NAHC and Native American tribal representatives, and a pedestrian inventory survey of the Project Area.

2.1 PROJECT LOCATION

The Project Area is located in the City of Grass Valley with western Nevada county. The project site is located in Section 34, Township 16N, Range SE on City of Grass Valley 7.5-minute USA quadrangle (**Figure 1 and Figure 2**). Approximate coordinates at its center are 39° 13' 13'' north and -121° 03' 15'' west.

The general environmental setting of the site is indicative of the Sierra Nevada foothill habitat, and includes Ponderosa Pine, Sierra Mixed Conifer, Riparian, Landscaped, and Developed habitat. The site slopes are generally minor, being less than 10% with some steeper slopes primarily where grading has occurred.

2.2 PROJECT DESCRIPTION

The Wolf Creek Trail is envisioned as a multi-use trail that roughly follows the alignment of Wolf Creek through the City of Grass Valley from its southern limits to the northeast corner of town. The trail will be separated from vehicular traffic to the greatest extent feasible and extend an existing 1.2-mile section that currently ends at Freeman Lane and Allison Ranch Road (Segment 1). The Wolf Creek Trail is an approximately 2.3-mile trail that would complete Segments 2-6 lengthening the trail up to Sutton Way and is located within Caltrans and City right of way (ROW). The proposed path would be 10-feet wide in most locations, narrowing to a lessor width in constrained locations. The trail would be an asphalt trail installed over aggregate base, with gravel shoulders. Grading would occur beyond the shoulders to conform the trail to existing grade up to a maximum slope of 2:1 as dictated by geotechnical conditions. In the areas with significant slope, short retaining walls will be installed as edge treatments.

2.3 PROJECT REGULATORY CONTEXT

2.3.0 Federal

This project must comply with Section 106 of the National Historic Preservation Act of 1966 (NHPA). Within the NHPA, Section 106 mandates that all federal agencies consider the potential effects on historic properties of any proposed projects. This must occur prior to any use of federal funds or the distribution of any federal permit, license, or lease. The framework for compliance with Section 106 is detailed in 36 CFR Part 800, Subpart B. This requires consultation with the State Historic Preservation Officer (SHPO). The purpose of the NHPA is to provide a framework of accountability for the management of any district, structure, site, building, or object that may be impacted by an undertaking. Established in 1966, the NHPA also created the National Register of Historic Places (NRHP) and the President's Advisory Council on Historic Preservation (ACHP), and opened the door for states to install their own State Historic Preservation Officer (SHPO), who in turn may implement some of the aspects of the NHPA. In practice, Section 106 of the NHPA sets forth guidelines for federal agencies responsible for managing effects to historic properties from federal undertaking. An undertaking is defined by the NHPA as "…a project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a Federal agency, including those carried out by or on behalf of a Federal agency; those carried out with Federal financial assistance; those requiring a Federal permit, license or approval; and those subject to State or local regulation administered pursuant to a delegation or approval by a Federal agency" (42 CFR § 137.289). Additionally, Section 106 requires the ACHP to comment on the undertakings (16 USC § 470(f)).

Section 106 of the NHPA was enacted through 36 Code of Federal Regulations, Part 800 (35 CFR Part 800). Within Section 106 there is a framework that sets forth the order of operations to identify historic properties, which includes cultural resources that are listed or are eligible to be listed on the NRHP. Section 106 also requires consultation with federally recognized Native American tribes to facilitate the identification of resources with important cultural significance, and to ascertain whether they may be adversely affected by the proposed undertaking. If there is the potential for adverse effects to resources, there is also a process for reducing, eliminating, or mitigating those potential adverse effects. The NHPA requires federal agencies to complete studies and consultations as laid out in Section 106 and the regulations found in 36 CFR Part 800. These studies and consultations are meant to identify cultural resources that may be affected by the undertaking, and to evaluate those cultural resources with a goal of determining if they are eligible for the National Register of Historic Properties (NRHP). As defined by the NRHP (36 CFR Part 800.16), historic properties are resources that are listed on or eligible for listing on the NRHP, with the criteria being located within the NRHP regulations (36 CFR § 60.4).
Historic properties are listed on the NRHP and determined to be significant if they are:

A. Associated with events that have made significant contributions to overarching patterns in California history;
B. Associated with the lives of significant historical figures;
C. Represent distinctive characteristics of a period, region, type, method of construction, or which represent the work of a master, possess artistic value, or represent a significant and distinguishable entity whose components may lack individual distinction; or
D. Yield, or has the potential to yield, information important in prehistory or history.

Privileged and Confidential - Attorney Work Product

Generally, historic-era resources must fit one of the criteria listed above as well as retain the seven aspects of integrity to be considered significant. The seven aspects of integrity include: materials, workmanship, feeling, location, design, setting, and association. A crucial step in the environmental review process is the resource inventory. Resources are required to be recorded as one of the five historical resource types defined by the Office of Historic Preservation if identified during this inventory (OHP) (1995). The OHP classifies historical resources as either buildings, structures, objects, sites, or districts. The OHP describes these classifications as follows:

1. Building: A building, such as a barn, church, hotel, house, or similar construction, is created principally to shelter any form of human activity. "Building" may also be used to refer to a historically and functionally related unit, such as a jail and courthouse or a barn and house (OHP 1995:3).
2. Structure: The term "structure" is used to denote functional constructions made for purposes other than creating shelter for human activity (OHP 1995:3).
3. Object: The term "object" is used to distinguish from structures and buildings those constructions that are relatively small in scale and simply constructed or are primarily artistic in nature. Although it may be, by nature or design, movable, an object is associated with a specific environment or setting (OHP 1995:3).
4. Site: A site is the location of a prehistoric or historic occupation or activity, a significant event, or a structure or building, whether ruined, standing, or vanished, where the location itself possesses historic, archaeological, or cultural value regardless of the value of any existing structure (OHP 1995:3).
5. District: A district possesses a significant linkage, concentration, or continuity of buildings, structures, objects, or sites united aesthetically or historically by plan or physical development (OHP 1995:3).

The criteria of aspects of integrity, significance, and resource classifications previously listed are often attributed to historic-era as well as prehistoric resources.

2.3.1 State

The Project is subject to CEQA, as codified at *PRC §21000 et seq*., which requires lead agencies to determine if a proposed Project would have a significant effect on archaeological resources. As defined in *PRC §21083.2*, a "unique" archaeological resource is an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type;
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

In addition, the CEQA Guidelines define historical resources as: (1) a resource in the California Register of Historical Resources (CRHR); (2) a resource included in a local register of historical resources, as defined in *PRC §5020.1(k)* or identified as significant in a historical resource survey meeting the requirements of *PRC §5024.1(g)*; or (3) any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided the Lead Agency's determination is supported by substantial evidence in light of the whole record.

If a Lead Agency determines that an archaeological site is a historical resource, the provisions of *PRC Section 21084.1* and *CEQA Guidelines Section 15064.5* would apply. If an archaeological site does not meet the CEQA Guidelines criteria for a historical resource, then the site is to be treated in accordance with the provisions of *PRC Section 21083* regarding unique archaeological resources. The CEQA Guidelines note that if a resource is neither a unique archaeological resource nor a historical resource, the effects of a Project on that resource shall not be considered a significant effect on the environment (*CEQA Guidelines Section 15064[c][4]*).

The CRHR**Error! Bookmark not defined.** is "an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change" (California Public Resources Code [PRC] *Section 5024.1[a]*). The eligibility criteria for inclusion on the CRHR are based on National Register of Historic Places (NRHP) criteria (*PRC Section 5024.1[b]*). Certain resources are determined by the statute to be automatically included in the California CRHR, including California properties formally determined eligible for, or listed in, the NRHP.

To be eligible for the CRHR, a prehistoric or historic period property must be significant at the local, state, and/or federal level under one or more of the following criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. It is associated with the lives of persons important in our past;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or,
4. It has yielded, or may be likely to yield, information important in prehistory or history.

For a resource to be eligible for the CRHR, it must also retain enough of its character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. An historic resource that does not retain sufficient integrity to meet the NRHP criteria may still be eligible for listing in the CRHR.

2.3.2 Local

In addition to the Federal and State regulatory contexts present above, Nevada County has also developed goals, objectives, and policies pertaining to historic and cultural resources within the County, as identified below in Table 1. The study reported herein has been designed to comply with Federal, State, and Nevada County Laws, regulations and codes pertaining the protection of important cultural resources.

Table 1. Nevada County Goals, Objectives, and Policies for Cultural and Historic Resources.

Goal 19.1	Identify and protect and, where economically feasible, restore significant archeological and historic resources.

Privileged and Confidential - Attorney Work Product

Objective 19.1	Encourage the inventory, protection, and interpretation of the cultural heritage of Nevada County, including historical and archaeological landscapes, sites, buildings, features, and artifacts.
Policy 19.3	Encourage and cooperate with the private sector in the implementation of innovative techniques intended to preserve archaeological and historic sites by gift, private conservancies and easements.
Policy 19.4	Incorporate cultural and historic resource management standards in the Comprehensive Site Development Standards, for use in project review of all discretionary project permits. These standards shall provide for the use of clustering and restricting building sites as techniques for the preservation of significant resources.
Policy 19.6	Require all applications for discretionary project permits, and all applications for ministerial project permits, except single family residents, on individual logs, shall be accompanied by a Site Sensitivity Literature Review, prepared by a qualified archaeologist or entity. Where review indicates significant archaeological or historical sites or artifacts are, or are likely, present, on-site field review shall be required. If a site or artifacts are discovered, the find shall be evaluated and potential significance determined. If significant cultural resources may be directly or indirectly impacted by proposed development, appropriate mitigation shall be developed and implemented in accordance with CEQA standards, including Appendix K, prior to onset of ground disturbance. Avoidance of significant cultural resources shall be considered the mitigation priority. Excavation of such resources shall be considered only as a last resort when sufficient planning flexibility does not permit avoidance. On-site field review, evaluation of significance, and development of mitigation measures, as identified above, shall be performed by a qualified professional archaeologist.
Objective 19.3	Include in the development review process consideration of historic, cultural, and Native American concerns and values.
Policy 19.7	Cooperate with local historical societies and the Native American Indian community to protect significant historical, cultural, and archaeological artifacts, improve access to and interpretation of unrestricted resources and archaeological history by involving them in the development review process.

2.4 PROJECT AREA

The Project Area includes those areas that may be affected by Project activities, namely the access, staging, lay-down, and construction areas needed to support construction of the Wolf Creek Trail. The Project Area includes the entirety of the area that was surveyed by Surf to Snow personnel. **Figure 1** presents the Project vicinity and area and **Figure 2** presents the archaeological survey area investigated by Surf to Snow for this Project.

2.5 DATES OF FIELDWORK AND PERSONNEL

February 22, 2022, Surf to Snow personnel completed an intensive pedestrian survey of the entire Project Area. The survey identified one potential cultural resource within the project area. Surf to Snow's cultural resources staff are professionally qualified in the field of prehistoric and historical archaeology. James Mangold, MA, RPA, served as Principal Investigator. Mr. Mangold has over 20 years

of experience in cultural resources management and California archaeology. Surf to Snow's senior staff meets the professional requirements of the Secretary of the Interior's *Standards and Guidelines for Archeology and Historic Preservation* (Federal Register, Vol. 48, No. 190).

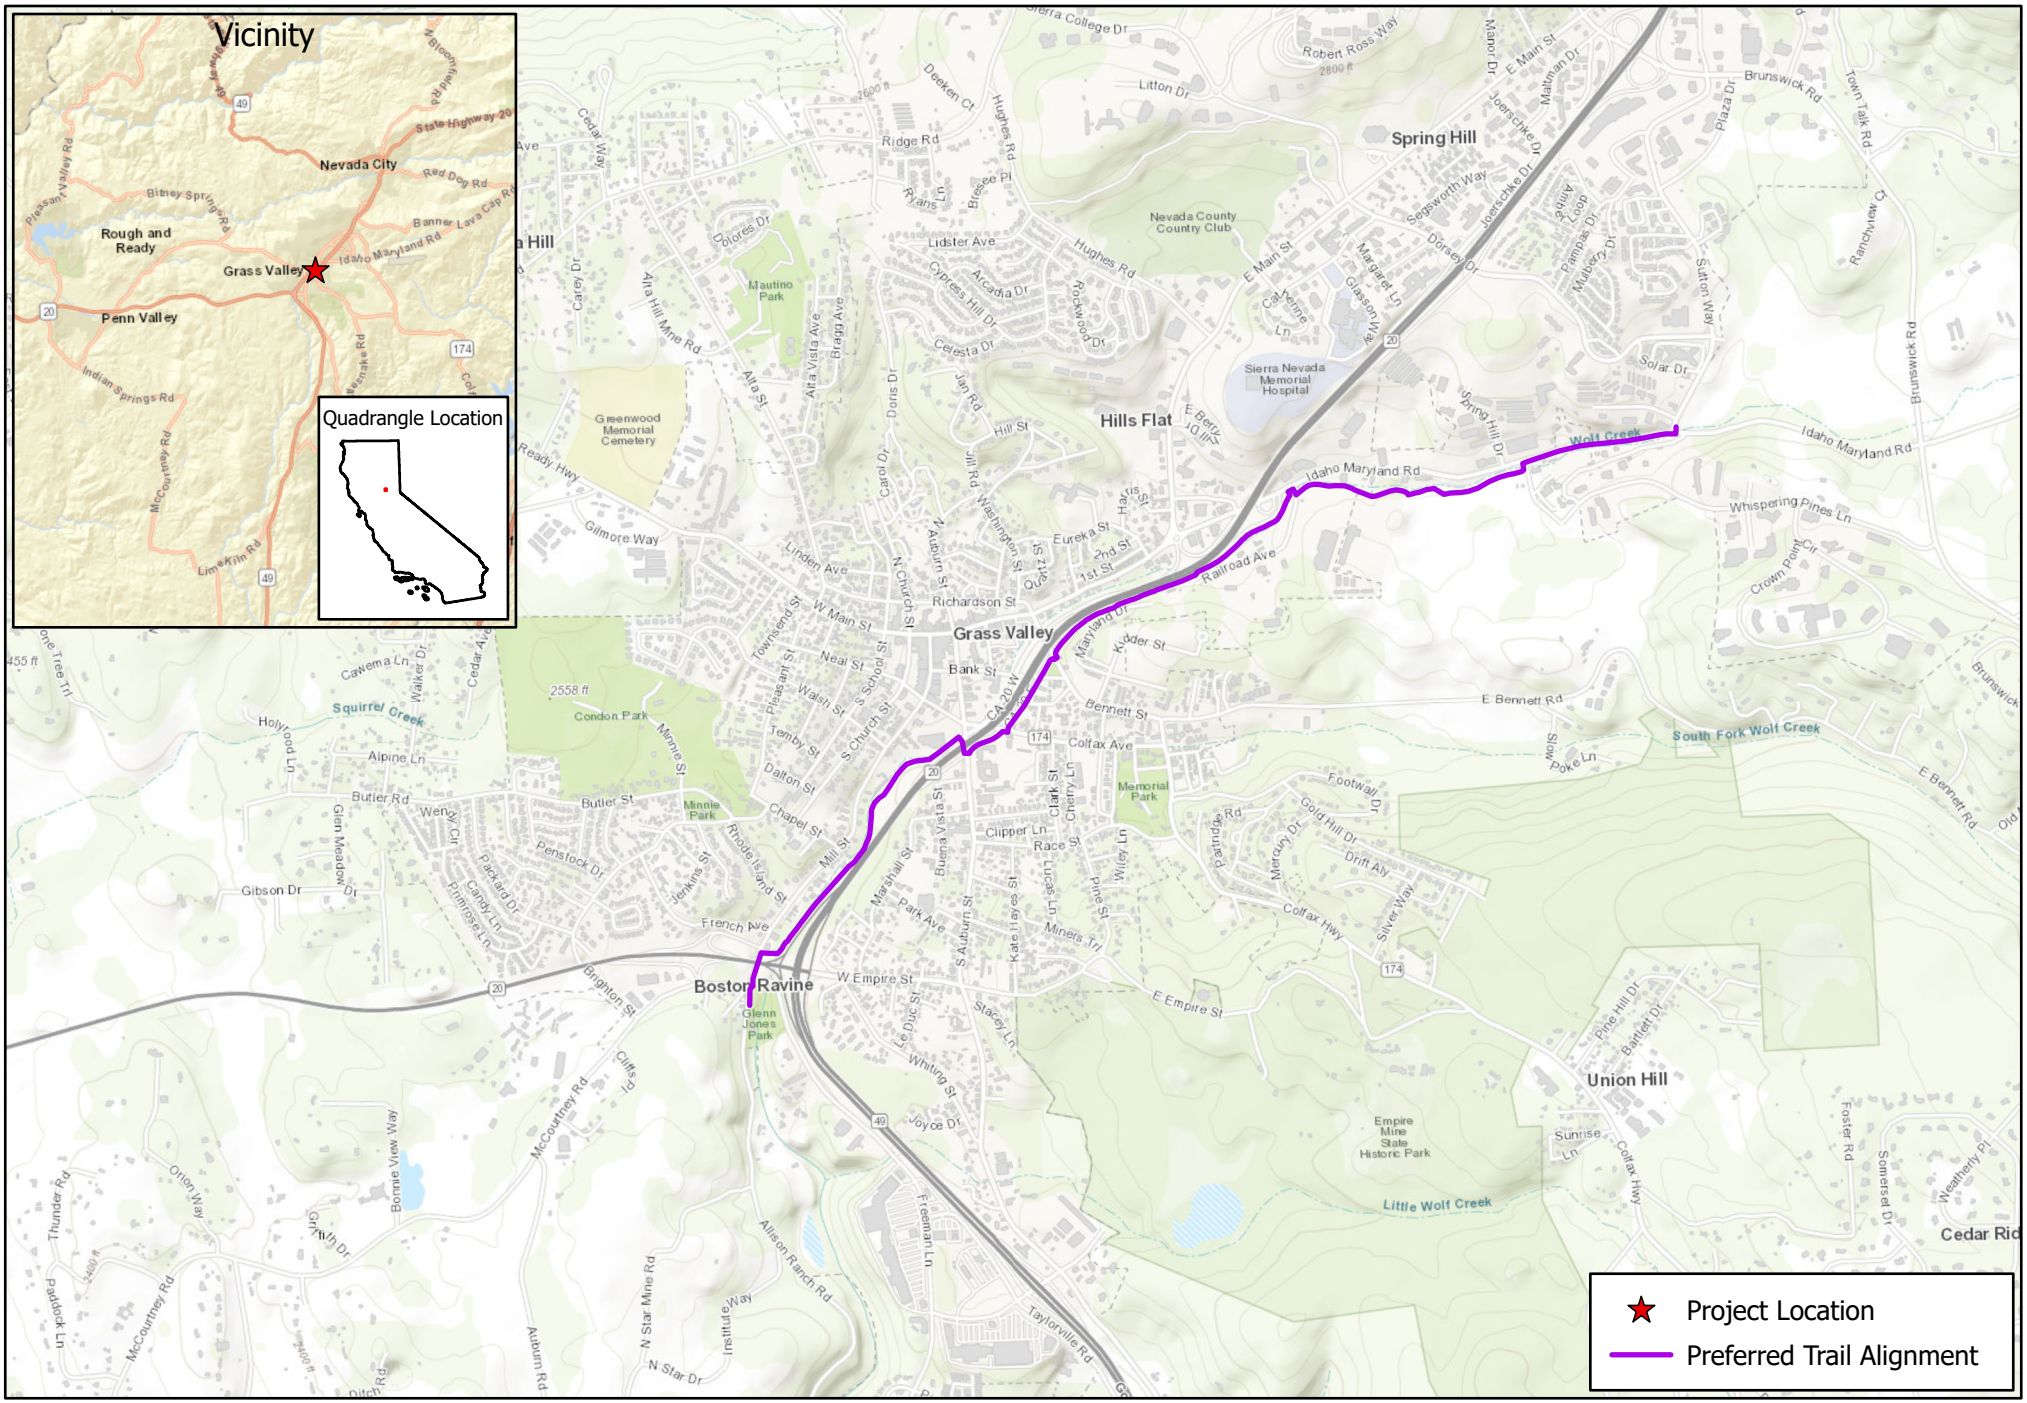
3 – PROJECT SETTING

3.1 PHYSICAL SETTING

Referencing the Grass Valley, California 7.5 Minute Topographic Quadrangle (United States Geological Survey [USGS], 1973) the proposed trail crosses the northwest corner of Section 34, southeast corner of Section 27, and northern half of Section 26, Township 16 North, Range 8 East, referencing the Mount Diablo geodetic datum. Trail elevations range from roughly 2,350 to 2,550 feet above mean sea level.

The underlying geology of the project area is a complex assemblage of igneous and metamorphic rocks in the western foothills of the Sierra Nevada. The regional structure of the foothills is characterized by the north-northwest trending Foothills Fault System, a feature formed during the Mesozoic era (between approximately 65 million and 248 million years ago) in a compressional tectonic environment. A change to an extensional tectonic environment during the late Cenozoic (approximately within the last 30 million years), resulted in normal faulting which has occurred coincident with some segments of the older faults near the site. According to the Tuminas (1983), the southern segment of the trail segment crosses an area mapped as La Barr Meadows quartz diorite, and the northern segment crosses an area mapped as Lake Combie diabase, serpentine and gabbro.

According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey, the trail crosses land that is mapped as Alluvial land clayey (Ao), Placer diggings (Pr), Sites silt loam (SID), Sites very stony loam (SmC), and Rock outcrop-Dubakella (RrE).



3.2 HYDROLOGY AND CLIMATE, FLORA AND FAUNA

3.2.0 Hydrology and Climate

The project area is located within the 78 square mile Wolf Creek watershed, which drains to the Bear River Watershed, the second largest tributary to the Feather River. The Feather River flows to the Sacramento-San Joaquin River Delta before entering the Pacific Ocean through the San Francisco Bay. The Wolf Creek watershed is almost exclusively in the lower montane zone, with altitudes along the creek's 25-mile length ranging from 3000 feet at the headwaters to approximately 1200 feet at the confluence with the Bear River. Unlike most other west-slope Sierran streams and rivers (which flow east to west), Wolf Creek flows primarily along a north–south axis. In comparison to east–west streams, this geographic positioning gives much more of the land a southern or partially southern exposure and thus the ability to support the most productive and diverse ecosystems.

This project is located in what is known as a hot-summer Mediterranean climate in the Koppen climate classification. This climatic pattern consists of warm to hot, dry summers and wet, cool, rainy winters, low humidity, and about 53 inches of rainfall annually.

3.2.1 Vegetation and Fauna

The flora of the area at this approximate elevation consists of forest habitat, including riparian woodlands, ponderosa pine, and Sierra mixed-conifer habitats. Tree types in the riparian woodlands include Freemont cottonwood (*Populus fremontii*), white alder (*Alnus rhombifolia*), willow (*Salix spp*), and Oregon ash (*Fraxinus latifolia*). The dominant tree species in the ponderosa pine habitat is of course ponderosa pine (*Pinus ponderosa*), but this habitat also typically includes incense cedar (*Calocedrus decurrens*), California black oak (*Quercus kellogii*), and the naturalized species black locust (*Robinia pseudoacacia*). The most common tree species in the Sierra Mixed-conifer habitat include incense cedar (*Calocedrus decurrens*), Douglas fir (*Pseudotsuga menziesii*), California black oak (*Quercus kellogii*), big-leaf maple (*Acer macrophyllum),* and ponderosa pine (*Pinus ponderosa*).

Regarding the fauna typically found in the project area, the gray fox (Urocyon cinereoargenteus), coyote (*Canis latrans*), racoon (*Procyon lotor*), striped skunk (*Mephitus mephitis*), mule deer (*Odocoileus hemionus*) and jackrabbits (*Lepus californicus*). Predators that roam the greater area include black bear (*Ursus americanus*) mountain lions (*Felis concolor*) and bobcat (*Lynx rufus*). Myriad passerine bird species are common to the area, and larger water birds such as great blue heron (*Ardea herodia*) are common in Wolf Creek.

4 – PREHISTORY AND HISTORY OF THE PROJECT AREA

4.0 PREHISTORY

The first evidence of human activity and occupation in the Sierra Nevada dates to the Terminal Pleistocene and Early Holocene (12,000–8,000 B.P.), although archaeological remains during this time period are sparse and broadly speaking poorly understood. Sites from this time suggest a semisedentary lifeway, small group size, and subsistence focused on large game hunting. Basalt was the primary tool stone from which Large-stemmed and corner-notched projectile points were made, though tools fashioned from both Great Basin and California Coast Ranges have also been identified. Early and middle Holocene (8,000–5,000 B.P.) timeframe archaeological sites also suggest a focus on hunting, with smaller semi-sedentary groups.

Middle to late Holocene (5,000–2,000 B.P) archaeological assemblages show growth in population numbers, primarily evidenced by an increase in settlement size. This time period also finds more reliance on small game and labor-intensive vegetal resources, such as seeds and nuts; use of food storage pits; adoption of bow and arrow technology; and increased trade of obsidian and shell beads with groups to the east and west.

Late Period (2,000–450 B.P.) archaeological patterns suggest a waning population along the western slope of the Sierra Nevada from 1,450 to 700 B.P, however this shift may be the result of a changing land use practices rather than a change population numbers. From700 B.P.to European arrival in the region, the population appears to increase again, and the Native groups present in the region appear to have subsisted primarily on a plant-based diet.

4.1 ETHNOGRAPHY

At European contact with native peoples in Northern California, the city of Grass Valley and surrounding areas lie within the ethnographic territory of the Nisenan (Wilson and Towne 1978). Nisenan peoples occupied the Yuba, Bear, and American River drainages, from the Sacramento River in the west to the

crest of the Sierra Nevada to the East. Northern boundaries are difficult to define given the linguistic and cultural similarities with Maiduan groups north of the Yuba River. The southern boundary remains strictly undefined but is generally accepted to be located between the American and Consumnes rivers. Within this geography, the Nisenan were organized into distinct hill and valley groups. The former travelled throughout the Sierran mountains and foothills, down to the Central Valley, while the latter remained in the Valley and focused on riverine resources. The Nisenan were organized by tribelets occupying the three river drainages and geographic subsets therein. These family-oriented groups occupying a village site or small group of settlements varied from 15-25 people to over 500. The nearest recorded ethnographic tribelet to the current project area was Hi'et, located southwest of Nevada City, while the nearest recorded ethnographic villages were Tsekankan and Usto-ma (Kroeber 1925; Wilson and Towne 1978).

Nisenan offered abundant food resources throughout the year. Diverse vegetal options included roots, tree nuts, onion, wild sweet potato, seeds, many varieties of native berries, and importantly, acorns. Game hunts focused on deer, antelope, elk, black bear, rabbits, birds and grasshoppers. Riverine resources included fish, clams, and mussels.

Nisenan trade networks primarily flowed east/west along rivers and streams of the region. Obsidian, salt and other resources were obtained from the Great Basin to the West. and obsidian from the Great Basin moved westward into Nisenan territory. Olivella and abalone shells from coastal areas were traded into Nisenan territory. Basketry was an important commodity and were traded in both east and westerly directions (Wilson and Towne 1978).

There are no previously recorded archaeological sites in the immediate vicinity of the project (Moratto 1984). This lack of recorded resources is likely attributable to the intensive intrusion of Euroamericans during the Gold Rush, and the associated displacement of Nisenan peoples and disruption of traditional Native practices.

4.2 HISTORY

Non-native people began immigrating to the Central Sierra with the discovery of gold in 1848. Gold was also discovered in Wolf Creek in 1848, driving an influx of miners who would in short order establish surrounding mining areas such as Badger Hill, Boston Ravine, and Gold Hill were established became famous for gold production (Clark 1970; Kinyon 1949). In 1849 a permanent settlement was established at the present location of Grass Valley. Shortly thereafter the initial focus on placer mining shifted to the hard rock mining for which the area became famous. Notable large quartz mines included the Northstar, the Empire, the Allison Ranch Mine, and the Pennsylvania. The shift from placer to hard-rock mining resulted in rapid development such that Grass Valley was transformed from a camp to an industrial town; by the 1860s Grass Valley was the richest gold producing area in California (Mann 1982). Hard-rock mining activities in the region lasted many decades, finally concluding when the Empire mine finally ceased operating in 1957. Nevada County was incorporated on April 25th, 1851, named after the mining town of Nevada City, which is the County Seat.

Privileged and Confidential - Attorney Work Product

5 – SOURCES CONSULTED

5.0 ARCHIVAL AND RECORDS SEARCH

An archival and records search of the CHRIS was conducted at the NCIC located at Sacramento State University on November 16, 2021 by NCICIC coordinator Paul Rendes (NCIC File No.: NEV-21-173). Records for known cultural resources as well as previous cultural resource studies within a 0.25-mile radius of the Project Area were examined. The search also included the examination of several references and databases on file at the NCIC. Those references included the following historic registers maintained by the State of California:

- NRHP Directory of Determinations of Eligibility (California Office of Historic Preservation, Volumes I and II 1990);
- California Inventory of Historic Resources (California Department of Parks and Recreation 1976);
- California Office of Historic Preservation's Built Environment Resources Directory User's Guide (California Office of Historic Preservation 2019).

The archival and records search revealed that 18 studies have been conducted within 0.25 miles of the Project Area; 6 of those studies overlap the project area directly (see Table 1 below). Collectively, these studies have identified 57 cultural resources within a 0.25-mile radius of the Project Area; 6 of which overlap the project area.

Table 1: Previous Studies Conducted within a 0.25-mile Radius of the Project Area.

Study Number	Author(s)	Date	Title	Study Positive (?)
Within Project Area				
198	M. Clark	1984	Archeological Reconnaissance of the Proposed Wolf Creek Plaza Project, Grass Valley, Nevada County, California.	No
2105	P. Jensen	1998	Archaeological Inventory Survey for Wolf Creek Interceptor Sewer Line, Phase 4, Grass Valley, California.	No
4678	J. Snyder	1980	Historic Property Survey Report for the Proposed Highway Construction on 03-NEV-20 P.M. R6.5/12.2	No
6718	P. Jensen	2004	Archaeological Survey, c. 1 acre DeMartini Bridge Replacement Project, Idaho-Maryland Road, Nevada County, CA	No
12502	S. Waechter, A. Whitaker, M. Darcangelo, and S. Bennett	2016	Archaeological Survey Report for the Bright Fiber Project, Nevada County, California	Yes
13344	T. Fernandez and L. Zickler-Martin	2020	Historic Properties Inventory and Finding of Effect for the Idaho-Maryland Mine Project, Nevada County, California	No

All studies are on file with the NCIC at Sacramento State University. Study results indicate positive (cultural resources present) or negative (no cultural resources present) findings within a 0.25-mile radius of the Project Area. The studies above are not listed in the References section.

5.1 NATIVE AMERICAN COMMUNICATION

Surf to Snow personnel submitted a Local Government Tribal Consultation List Request to the NAHC for a search of the Sacred Lands File as it encompasses the Project Area. Pricilla Torres-Fuentes, Cultural Resources Analyst with the NAHC, responded on June 25, 2022 to the request (see Attachment B) and noted that the search was negative and failed to reveal the presence of known Native American resources within the Project Area. The NAHC also provided a list of 11 tribal representatives or individuals with potential interest in and knowledge of Nevada County and the Project vicinity. Surf to Snow contacted Grayson Cooney, Cultural Director of the Tsi-Akim Maidu; Gene Whitehouse, Chairperson of the United Auburn Indian Community of the Auburn Rancheria; Clyde Prout, Chairperson of the Colfax-Todds Valley Consolidated Tribe; Pamela Cubbler, Treasurer of the Colfax-Todds Valley Consolidated Tribe; Darrel Cruz, Cultural Resources Department, Washoe Tribe of Nevada and California; Jesus Tarango, Chairperson of the Wilton Rancheria; Saxon Thomas, Tribal Council Nevada City Rancheria Nisenan Tribe; Dahlton Brown, Director of Administration, Wilton Rancheria; Richard Johnson, Chairman of the Nevada City Rancheria Nisenan Tribe; and Steven Hutchason, THPO Wilton Rancheria via certified letter on February 10, 2023 to request any information they might have regarding the Project Area or near vicinity (see Attachment B). Any response to these requests will be forwarded to the City upon receipt.

A response was received from the United Auburn Indian Community of the Auburn Rancheria (UAIC). In an email dated March 7, 2023, the UAIC Tribal Historic Preservation Department requested direct contact with the Lead Agency and more specific information on the potential project impact on cultural resources with significance to the tribe. They requested documentation regarding archaeological studies and other associated information for review. S2S shared the Phase I Archaeological Survey Report (Appendix C) with the UAIC on March 9, 2023. S2S answered specific questions the UAIC posed about the report, and sent additional project maps on March 13, 2023. There was no further communication between the UAIC and S2S or the City at the time of writing this report, and the 30-day period for responses to the February 10th 2023 NAHC contact list letters has elapsed.

6 – ARCHAEOLOGICAL SURVEY METHODS AND RESULTS

On February 22, 2022, Surf to Snow archaeologist James Mangold completed an intensive pedestrian Phase I archaeological inventory survey of the Project Area within Sections 25, 26, 27, 34 of the Grass Valley 7.5-minute USGS topographic map in Nevada County (Figure 2). The purpose of the archaeological survey was to identify any previously unrecorded cultural resources within the Project Area that may be affected by the proposed Project. The survey identified one potential historic property yielded negative results for the presence of cultural resources.

The survey was completed by walking meandering transects along the proposed trail alignment, which travels through the City of Grass valley along Wolf Creek. The Project traverses terrain that varied from heavily vegetated to fully paved.

The Project Area generally occupies creek-side terraces landform was generally flat and at the time of survey was predominantly covered by thick blackberry brambles. Ground visibility was accordingly poor for most of the survey, only varying from 0-10% throughout. Where possible, boot scrapes were employed at regular intervals to expose soils and ascertain if cultural constituents were present.

Privileged and Confidential - Attorney Work Product

6.0 CULTURAL RESOURCES WITHIN THE PROJECT AREA

6.0.0 P-29-000839 – Nevada County Narrow Gauge Railroad

The Nevada County Narrow Gauge Railroad (NCNGR) was first envisioned in the mid-1800s to connect the gold mining efforts surrounding Nevada City and Grass Valley to the commerce centers of Marysville and Sacramento to the West. Once completed in the 1876, it travelled 23 miles from Nevada City to its junction with the transcontinental railroad in Colfax.

The alignment of the NCNGR crosses and travels adjacent to the current Project Area in several places (Figure 3). However, at these locations there are no extant features of visible artifacts that would indicate the presence of an intact resource at these two locations.

6.0.1 P-29-001463 – Mine Shaft

This resource is described as a 6' x 6' rock-lined mine shaft of unknown depth, tailings pile, rock-lined channel and can scatter. The site is located north of the Idaho-Maryland Road in an area that has undergone significant development since recordation in 1981, and currently occupied by numerous structures and parking lots. The current survey did not relocate the mine shaft.

6.0.2 P-29-001514 – Idaho-Maryland Road

The Idaho-Maryland road was established in the 1880s to provide access to and from various mining operations east of Grass Valley. The Idaho-Maryland Road was first recorded in 1998 as a two–lane paved road extending east from Grass Valley to the Nevada County Air Park. The road underwent continual improvement throughout the subsequent century and was characterized as displaying little if any remaining integrity. The early 2000s saw significant additional work on the road to widen it and add a turn lane, sidewalks, and other appurtenant features. No historic features of the historic road were observed during the current study.

6.0.3 P-29-001515 – South Auburn Street

From downtown historic Grass Valley, South Auburn Street heads south along a route depicted as State Route 49 on the 1949 Grass Valley 15-minute quadrangle map. South Auburn Street crosses the proposed trail alignment as it passes beneath elevated Hwy 20. This resource was first recorded in 1998 and described as a two-lane paved road lined with a mix of historic commercial and residential structures. The current study finds the section of road passing through the project area to be a developed road, surrounded by a modern elevated highway, gas station, and grocery store. The current survey failed to identify any historic features associated with this road.

6.0.4 P-29-003568 – Grass Valley Yard – Nevada County Narrow Gauge Railroad

The Grass Valley Yard (Depot) of the Nevada County Narrow Gauge Railroad consisted of a massive machine shop, freight and passenger depot, blacksmith shop, storehouse, an engine turntable, and the "Kidder Mansion". A roughly 50' x 50' section of this property overlaps the current Project footprint. Within this project area, no features or artifacts associated with the Depot were identified.

6.0.5 P-29-004634 – East Bennett Road

The resource is a 2.6-mile historic road alignment that travels easterly from downtown Grass Valley. Historically, East Bennett Road was known as Union Hill Road. The road was first recorded in 2016 as a modern paved road displaying four historic features, including three culverts and one retaining wall feature thought to date from the 1935 to 1943 Works Project Administration (WPA) period, as evidenced by construction materials and methods, as well as the WPA concrete stamp in one of the

culverts. All these features were recorded well beyond the current Project area. Along the approximately 200-foot section of this road that crosses the Project footprint, no additional historic features or artifacts were identified.

6.0.6 Temp 001 – Historic Rock Walls

The current survey identified one potential historic property within the Project footprint, consisting of a what appear to be a series of historic rock walls constructed to channelize Wolf Creek as it passes through Grass Valley. Stacked and dry-laid rock walls of 3 to 10 courses were observed on both, but primarily southeast side of Wolf Creek, along a .5 mile stretch of the creek between Hwy 20 in the southwest to the Safeway shopping center in the northeast. Full delineation and description of this resource was not possible during this survey; access to private property on the northwest side of the creek to observe walls on the southeastern side was limited, and the entire section of creek side terrace is heavily covered by blackberry, which hangs down over the walls to the creek, providing minimal visibility.

7 – STUDY FINDINGS AND CONCLUSIONS

7.0 STUDY FINDINGS

The records search revealed that there are five previously recorded resources that overlap the APE. At the time of writing, the Native American Heritage Commission had responded to a request to query the Sacred Land database and to provide a list of tribal representatives with interest and expertise in the Project area, those Tribal representatives had been contacted, and the 30-day period for response had not yet expired. The pre-field research and Phase I intensive pedestrian survey identified 6 potential historic properties with the APE.

P-29-000839 – Nevada County Narrow Gauge Railroad: Though the historic alignment of this railroad crosses the APE, there are no visible features or other historic attributes visible within the APE.

P-29-001463 – Mine Shaft: This historic-era site was not relocated, and appears to have been altered, covered, and or destroyed during construction of buildings and parking lots in the mapped location of the mine.

P-29-001514 – Idaho-Maryland Road: The historic Idaho-Maryland Road is no longer observable within the APE. Significant development of the road, including widening, repaving, and sidewalk construction have altered the character-defining features of this resource to the extent that appears to retain no integrity within the APE.

P-29-001515 – South Auburn Street: The short section of South Auburn Street that crosses the APE (approximately 300 feet) retains none of the historic character of the resource as originally recorded. It currently displays as a modern road beneath the elevated Hwy 20, and surrounded by relatively modern commercial development.

P-29-003568 – Grass Valley Yard – Nevada County Narrow Gauge Railroad: Though a very small section of this large historic site overlaps the APE, there are no visible and associated historic features, artifacts, or other elements of this resource within the APE.

P-29-004634 – East Bennett Road: The road was first recorded in 2016 as a modern paved road displaying four historic features, including three culverts and one retaining wall feature thought to date from the 1935 to 1943 Works Project Administration (WPA) period. None of these four features are located within the APE.

Privileged and Confidential - Attorney Work Product

Temp 001 – Historic Rock Walls: The current survey identified a series of historic rock walls constructed to channelize Wolf Creek as it passes through Grass Valley. The walls are constructed of stacked and dry-laid rock of 3 to 10 courses and were observed on both, but primarily southeast side of Wolf Creek, along a .5 mile stretch of the creek between Hwy 20 in the southwest to the Safeway shopping center in the northeast. Full delineation and description of this resource was not possible during this survey due to lack of private property access and significant blackberry overgrowth, obscuring visibility of the resource.

Though this resource has not yet been fully delineated or described, it appears unlikely to be impacted by the Project, as currently defined. The observed rock walls establish the margin of Wolf Creek; when developed, the Wolf Creek trail is designed to be set back from the creek and therefore not be in conflict with the rock walls. Should these plans change, resulting in potential impact to the resource, the rock walls would need to be fully recorded to address any impacts during planning, construction, or use of the trail.

7.1 CONCLUSION

Based on the results of the records search, a review of archival and environmental data, and the pedestrian survey, the Project as currently defined should have no effect on cultural resources or historic period properties.

If project plans change to include work not currently identified in the project description or to include additional areas not identified in current project plans, then additional archaeological identification studies may be required. No pre-construction, construction, or post construction activities will occur outside the area that has been surveyed for archaeological resources. This includes staging, storage, and parking of equipment. Further investigations may be needed if the site[s] cannot be avoided by the project.

No historic period properties will be affected by the proposed undertaking, and no known prehistoric or historic period resources will be impacted by the Project. Additional survey will be required if the Project Area changes to include areas not previously surveyed. If cultural resources are identified during Project construction activities, the procedures detailed below should be followed.

7.2 UNANTICIPATED DISCOVERIES

If any confirmed or suspected cultural resources are located during Project activities, all work in the vicinity of the discovery must cease. The location of the discovery should be secured, and a qualified archaeologist should be notified immediately, if not already present, to assess the find. Archeological materials may include flaked stone tools (projectile point, biface, scraper, etc.) and debitage (flakes) made of chert, obsidian, or cryptocrystalline silicate; whole or fragmentary groundstone tools (mortars, pestles, handstones, milling slabs, etc.); faunal bones; fire-affected rock; dark, midden soil; house pit depressions; and human remains. Historic period resources may include, but are not limited to, small cemeteries or burial plots, cut (square) nails, containers or miscellaneous hardware, glass fragments, cans with soldered seams or tops, ceramic or stoneware objects or fragments, milled or split lumber, earthworks, feature or structure remains, debris deposits, and hollow-fill features such as pits or privies.

7.3 HUMAN REMAINS

Section 7050.5 of the California Health and Safety Code states that it is a misdemeanor to knowingly disturb human remains interred outside a dedicated cemetery. Public Resources Code Section 5097.98

more specifically addresses the discovery of Native American human remains. If human remains are encountered (or are suspected) during any Project-related activities, construction personnel should be advised to

- Stop all work within 25-feet of the discovery;
- Immediately contact a Surf to Snow Cultural Resource Specialist, if not already present, who will notify the county coroner;
- Secure the discovery location without touching or removing the remains or any associated artifacts;
- Secure any associated spoils and leave them undisturbed so that they can be examined;
- Record the location of the find and keep notes of all calls and events; and
- Treat the find as confidential and do not publicly disclose the location.

If the coroner determines that the human remains are Native American, the coroner must notify the NAHC within 24 hours per Public Resources Code Section 5097.98.

City of Grass Valley Wolf Creek Trail Project

CHRIS Data Request Form

ACCESS AND USE AGREEMENT NO.: 644.00 **IC FILE NO.:** _____

To: North Central Information Center

Print Name: James Mangold Date: 06/08/2021

Affiliation: Surf to Snow Environmental Resource Management

Address: 2246 Camino Ramon

City: San Ramon State: CA Zip: 94583

Phone: (530) 321-9307 Fax: _____ Email: james.mangold@s2serm.com

Billing Address (if different than above): _____

Billing Email: James.mangold@S2serm.com Billing Phone: (530) 321-9307

Project Name / Reference: Grass Valley Trail Project

Project Street Address: _____

County or Counties: Nevada

Township/Range/UTMs: T16N, R8E Sections 25, 26, 27, 34

USGS 7.5' Quad(s): Grass Valley

PRIORITY RESPONSE (Additional Fee): yes ☐ / no ☐

TOTAL FEE NOT TO EXCEED: $1,500.00
(If blank, the Information Center will contact you if the fee is expected to exceed $1,000.00)

Special Instructions:

Before proceeding, please call with an estimate of cost and time to complete the record search. We are interested in pdf copies of all sites in the Project Area and 0.25 mile buffer, as well as copies of positive reports within the project area. Attached is a project location map.

Information Center Use Only

Date of CHRIS Data Provided for this Request: _____

Confidential Data Included in Response: yes ☐ / no ☐

Notes: _____

CHRIS Data Request Form

Mark the request form as needed. Attach a PDF of your project area (with the radius if applicable) mapped on a 7.5' USGS topographic quadrangle to scale 1:24000 ratio 1:1 neither enlarged nor reduced and include a shapefile of your project area, if available. Shapefiles are the current CHRIS standard for submitting digital spatial data for your project area or radius. **Check with the appropriate IC for current availability of digital data products.**

- Documents will be provided in PDF format. Paper copies will only be provided if PDFs are not available at the time of the request or under specially arranged circumstances.
- Location information will be provided as a digital map product (Custom Maps or GIS data) unless the area has not yet been digitized. In such circumstances, the IC may provide hand drawn maps.
- In addition to the $150/hr. staff time fee, client will be charged the Custom Map fee when GIS is required to complete the request [e.g., a map printout or map image/PDF is requested and no GIS Data is requested, or an electronic product is requested (derived from GIS data) but no mapping is requested].

For product fees, see the CHRIS IC Fee Structure on the OHP website.

1. Map Format Choice:

Select One: Custom GIS Maps ☐ GIS Data ☐ Custom GIS Maps **and** GIS Data ☐ No Maps ☐

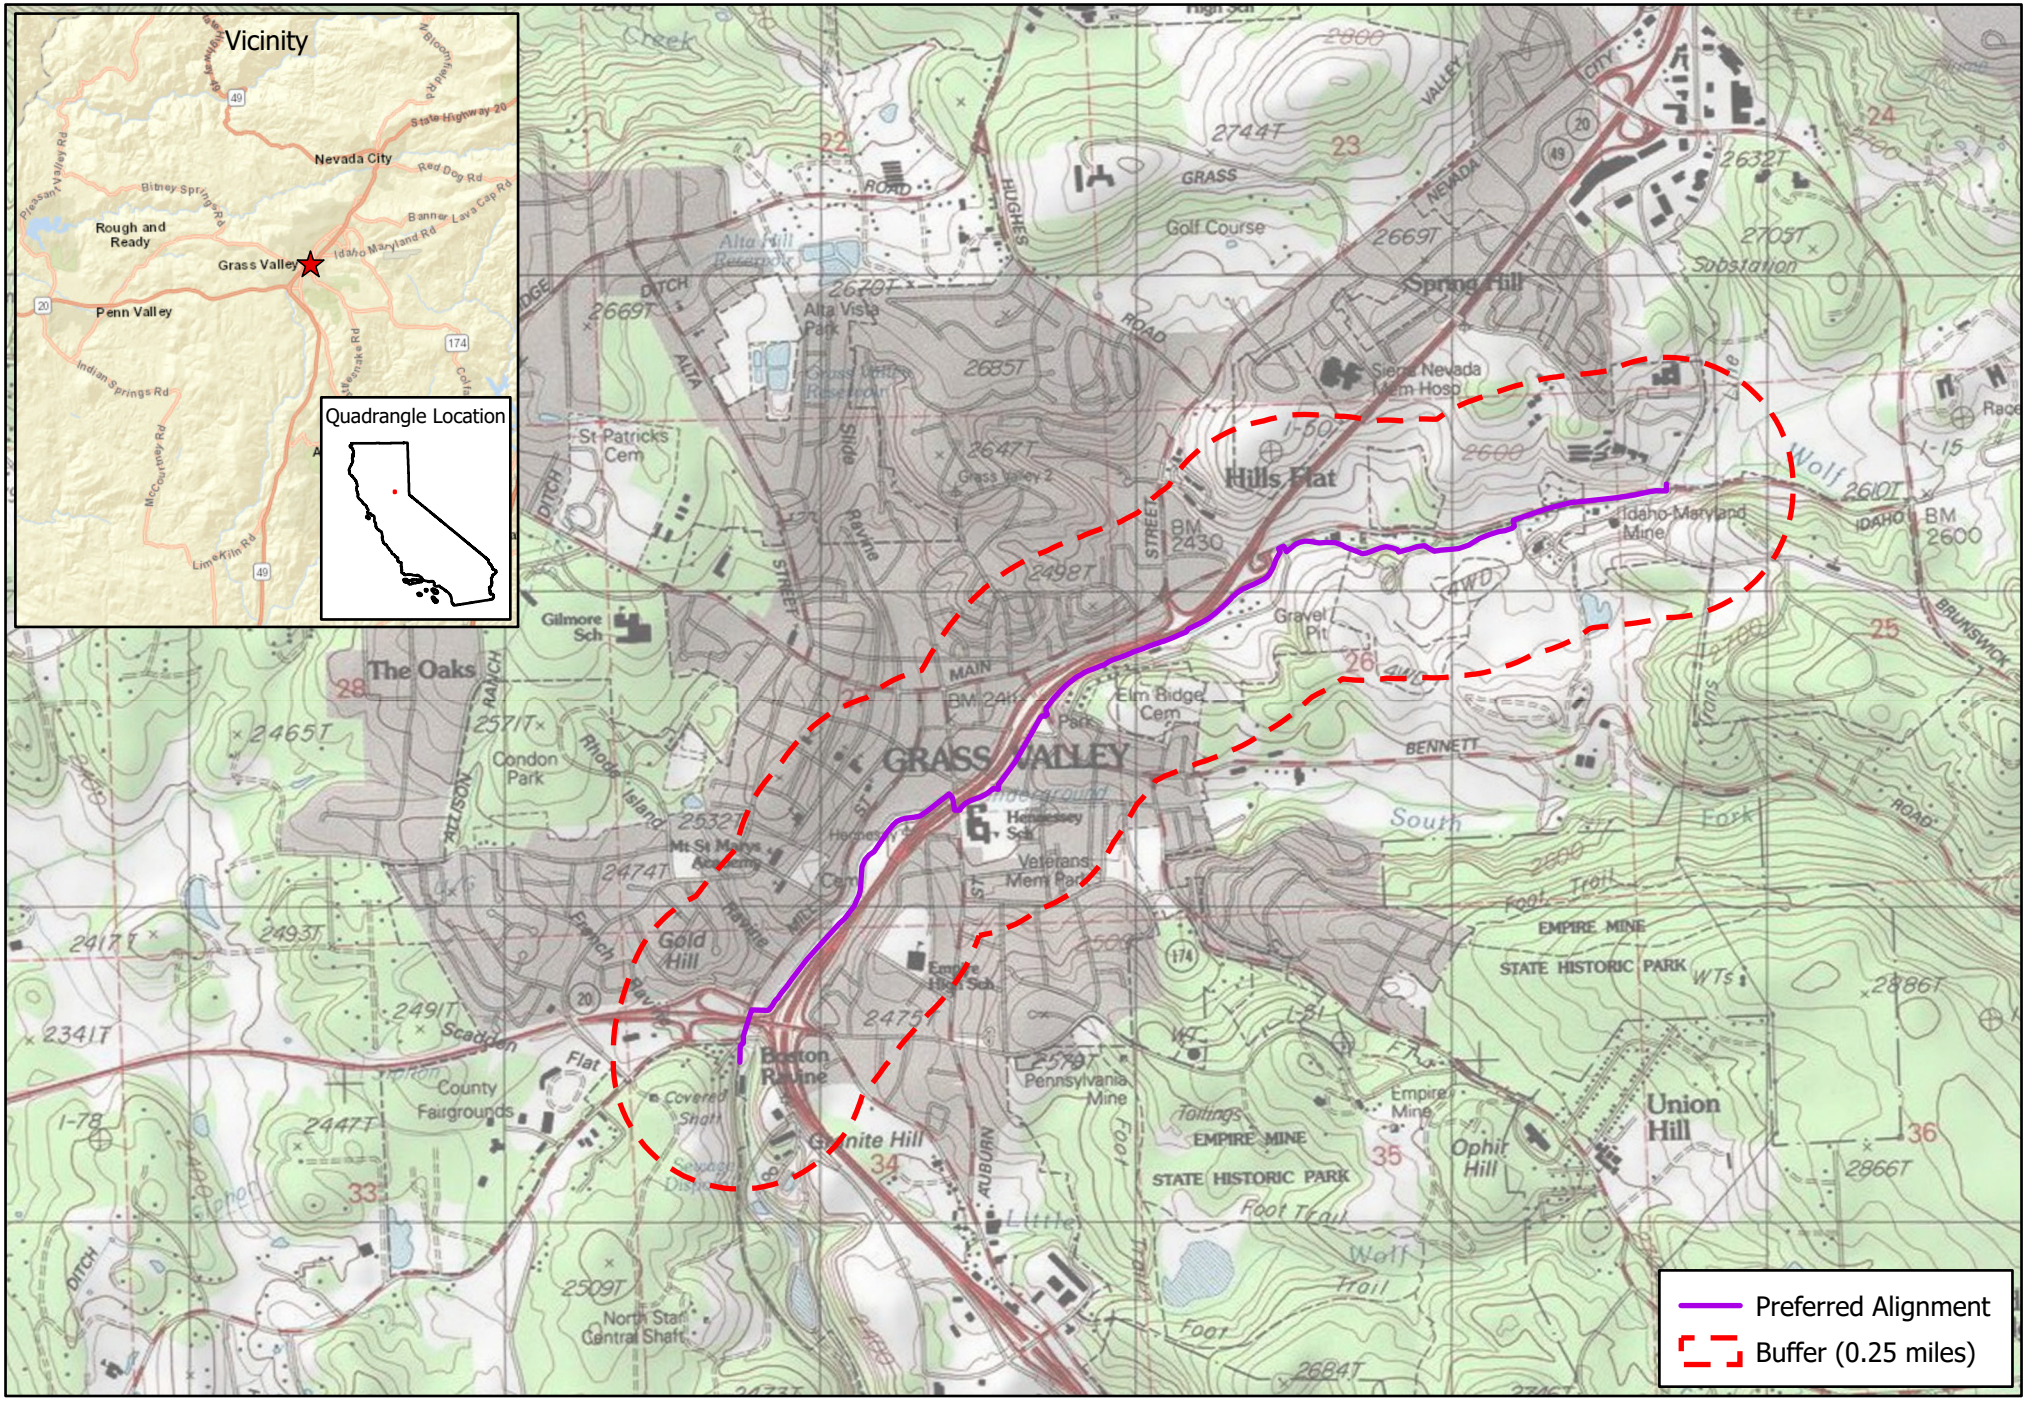
6. Additional Information:

The following sources of information may be available through the Information Center. However, several of these sources are now available on the OHP website and can be accessed directly. The Office of Historic Preservation makes no guarantees about the availability, completeness, or accuracy of the information provided through these sources. Indicate below if the Information Center should review and provide documentation (if available) of any of the following sources as part of this request.

Caltrans Bridge Survey	yes ☐ / no ☐
Ethnographic Information	yes ☐ / no ☐
Historical Literature	yes ☐ / no ☐
Historical Maps	yes ☐ / no ☐
Local Inventories	yes ☐ / no ☐
GLO and/or Rancho Plat Maps	yes ☐ / no ☐
Shipwreck Inventory	yes ☐ / no ☐
Soil Survey Maps	yes ☐ / no ☐

---



[1] In order to receive archaeological information, requestor must meet qualifications as specified in Section III of the current version of the California Historical Resources Information System Information Center Rules of Operation Manual and be identified as an Authorized User or Conditional User under an active CHRIS Access and Use Agreement.

[2] "Other" Reports GIS layer consists of report study areas for which the report content is almost entirely non-fieldwork related (e.g., local/regional history, or overview) and/or for which the presentation of the study area boundary may or may not add value to a record search.

[3] Provided as Excel spreadsheets with no cost for the rows; the only cost for this component is IC staff time. Includes, but not limited to, information regarding National Register of Historic Places, California Register of Historical Resources, California State Historical Landmarks, California State Points of Historical Interest, and historic building surveys. Previously known as the HRI and then as the HPD, it is now known as the Built Environment Resources Directory (BERD). The Office of Historic Preservation compiles this documentation and it is the source of the official status codes for evaluated resources.

[4] Associated documentation will vary by resource. Contact the IC for further details.

[5] Provided as Excel spreadsheets with no cost for the rows; the only cost for this component is IC staff time. Previously known as the Archaeological Determinations of Eligibility, now it is known as the Archaeological Resources Directory (ARD). The Office of Historic Preservation compiles this documentation and it is the source of the official status codes for evaluated resources.

Please forward a copy of any resulting reports and resource records from this project to NCIC as soon as possible. The lead agency/authority and cultural resources consultant should coordinate sending documentation to NCIC. Please note that local planning agencies rarely, if ever, send reports and resource records to our office. Digital materials are preferred and can be sent to our office through our file transfer system or on a CD by mail via USPS to the address on the top of the first page. Hard copies may also be mailed. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, it is possible that not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the California Historical Resources Information System (CHRIS) Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the records search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Sincerely,

Paul Rendes, Coordinator
North Central Information Center

Re: Grass Valley Trail Project, Nevada County

Dear Mr. Mangold:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

RE: City of Grass Valley Wolf Creek Trail Project

Dear Colfax-Todds Valley Consolidated Tribe,

Surf to Snow has been retained to assist with cultural resources regulatory compliance for the proposed City of Grass Valley Wolf Creek Trail Project (Project), in Nevada County, California. The City of Grass Valley is the CEQA lead agency and this is the City's Project. The Project proposes to build a 2.3-mile multi-use trail that that roughly follows the alignment of Wolf Creek through the City of Grass Valley, with approximately 0.5-miles along Wolf Creek where it appears above ground. The construction of the 8 to 10-foot-wide paved trail will require grading and some construction of retaining walls and bike railing, moderate tree removal, colored paving, and include themed interpretive signage and murals to enhance trail identity.

The proposed Project is located in Township 16 North, Range 8 East Sections 25, 26, 27, 34. The Project area is depicted in the attached figure on the Grass Valley, California, 7.5-minute USGS topographic map.

A request for a search of the Sacred Lands Inventory has been submitted to the Native American Heritage Commission (NAHC). Their review failed to indicate the presence of cultural resources in the immediate project area. The NAHC provided your name to us and indicated that you may have knowledge of or concerns about the current Project vicinity. If appropriate, please provide us with any information you may have regarding locations of concern to local Native American groups within the Project area. This information will be used for Project planning and will be kept confidential. If you do not feel it is appropriate to divulge the type of resource, it can be noted as an "environmentally sensitive area." At present, there is no fixed start date for construction. You may respond by mail, email, or phone. We look forward to receiving your reply within 30 days. If you have any questions, please contact me at derek.hitchcock@s2serm.com. Thank you for your kind attention to this matter.

Sincerely,

Derek Hitchcock

RE: City of Grass Valley Wolf Creek Trail Project

Dear Nevada City Rancheria Nisenan Tribe,

Surf to Snow has been retained to assist with cultural resources regulatory compliance for the proposed City of Grass Valley Wolf Creek Trail Project (Project), in Nevada County, California. The City of Grass Valley is the CEQA lead agency and this is the City's Project. The Project proposes to build a 2.3-mile multi-use trail that that roughly follows the alignment of Wolf Creek through the City of Grass Valley, with approximately 0.5-miles along Wolf Creek where it appears above ground. The construction of the 8 to 10-foot-wide paved trail will require grading and some construction of retaining walls and bike railing, moderate tree removal, colored paving, and include themed interpretive signage and murals to enhance trail identity.

The proposed Project is located in Township 16 North, Range 8 East Sections 25, 26, 27, 34. The Project area is depicted in the attached figure on the Grass Valley, California, 7.5-minute USGS topographic map.

A request for a search of the Sacred Lands Inventory has been submitted to the Native American Heritage Commission (NAHC). Their review failed to indicate the presence of cultural resources in the immediate project area. The NAHC provided your name to us and indicated that you may have knowledge of or concerns about the current Project vicinity. If appropriate, please provide us with any information you may have regarding locations of concern to local Native American groups within the Project area. This information will be used for Project planning and will be kept confidential. If you do not feel it is appropriate to divulge the type of resource, it can be noted as an "environmentally sensitive area." At present, there is no fixed start date for construction. You may respond by mail, email, or phone. We look forward to receiving your reply within 30 days. If you have any questions, please contact me at derek.hitchcock@s2serm.com. Thank you for your kind attention to this matter.

Sincerely,

Derek Hitchcock

City of Grass Valley Wolf Creek Trail Phase II - Figure 4 - Habitats within the Biological Study Area_v6.pdf

---

Hi Anna,

James Mangold is the report's author and it's the same James you know. Unfortunately for S2S, this was the last report he wrote for us before leaving for another firm. He assured me he'd remain available for questions, in particular for this project since he also thought it was a great project. True to his word, he responded to my inquiry over the weekend and agreed we can place his name in more prominence, and that he minimized it because of his professional transition. Attached is the new cover page we'll use moving forward inclusive of James' name. James also says to pass along his regards.

It's true, in his investigation he only found historic-era resources in the project alignment. As context, because of a freeway through Grass Valley built in the 1960's essentially in the Wolf Creek corridor through the majority of our project area, the creek has been straightened or outright moved in most of the locations near out proposed trail.

Since James performed the study we have further developed the designs and now have a much clearer picture of the project footprint. Attached are kmzs of the project footprint. Also attached is a map that gives a good indication since the footprint and temporary impacts are mapped as well as habitat. Aquatic Habitat is the surveyed OHWM of Wolf Creek so you can also see the proposed trail does not come near the creek at any point.

To provide further detail on the ground disturbance, this is from our project description: *The proposed path would be 8-feet wide with 1-ft shoulders in most locations, narrowing to a lessor width in constrained locations. The trail would be an asphalt paved trail installed over aggregate base, with paved shoulders. Grading would occur beyond the shoulders to conform the trail to existing grade up to a maximum slope of 2:1 as dictated by geotechnical conditions. In the areas with significant slope, retaining walls will be installed as edge treatments.* However, as you'll notice in the map, due to how physically constrained the creek is (largely because of the freeway and other development) and landowner constraints the initial segment of the trail (SEG 2, panels 1 & 2 in the map) is the only portion in the Wolf Creek corridor, and there is only one other segment in a forested area (panels 4 & 5). Therefore, much of the project is occurring on already developed areas (existing roads and sidewalks).

From my perspective as a restoration ecologist, tree removal has been the most painful impact to consider, and we've already gone to great lengths to minimize this impact, as it also could potentially impact the trail user's experience. I performed a tree survey for the whole project area (764 trees), and then we had a land surveying team locate precisely every tree in SEG 2 near Wolf Creek so we

could strategize and design to avoid trees, especially big and healthy ones. That's said, both forested corridors are quite overgrown with too many small diameter trees from a wildfire and forest health perspective, so tree removal isn't all bad. For the proposed trail, it is necessary to remove 176 trees. But only 16 of these are over 24" DBH and only 4 are riparian species. 53 of the trees slated for removal are less than 10" DBH (firmly in category of healthy thinning).

The CEQA timeline is that we are writing the IS/MND for the project right now and we plan to submit to the State Clearinghouse by the end of this month, initiating the comment period.

Please let me know if you have further comments/questions.

Subject: RE: Wolf Creek Trail project

Thank you for providing the cultural resources study. Much appreciated and I'm reviewing it now. Appears only historic- era resources were identified in the project alignment.

I've not heard of Surf to Snow and was trying to find who the author of the report/archaeologist who did the survey was, as it did not say in the report, only "personnel". I checked your website and did not see an archaeologist mentioned as staff. In the Survey section, James Mangold was mentioned as having surveyed. Is he the primary investigator/report author? If so, that helps with my confidence of the findings. I'm familiar with who he is, if it is the same person. IMO, it is helpful to have the report author's name and qualifications on the report title page or somewhere in the report. Especially when resources are being evaluated.

Can anyone please provide the GIS shape files or KMZ/KML file? Having this will greatly help with our analysis of potential impacts to tribal cultural resources. Also, what is the type and

extent of ground disturbance that is associated with the project? Will any large trees need to be removed? What is the CEQA timeline?

This seems like a great project and I'm looking forward to working with you to ensure TCRs are avoided and protected.

Kind regards,
Anna

Subject: RE: Wolf Creek Trail project

Dear Anna,

Thank you for reaching out about the Wolf Creek Trail project. I apologize for the delayed response. Living outside Nevada City working from a home office, I am just emerging from 8 days without power and am just now catching up.

The Lead Agency for the project is the City of Grass Valley. The lead contact for the project is City Engineer Bjorn Jones (cc'd here, ph# Ph: 530-274-4353). I have also included City of Grass Valley Principal Planner Lance Lowe.

We have conducted a cultural resource study for the project. As you are familiar, these are typically very large files and of course confidential. I'll follow this with a separate email with a link where you can download and review the report. Because my firm Surf to Snow completed the report on behalf of the City if you have questions it likely makes sense to email all three of us on this type of communication.

Subject: Wolf Creek Trail project

Dear Mr. Hitchcock,
Thank you for the information on the Wolf Creek Trail project. Could you please provide the contact information for CEQA lead agency so that UAIC can consult government to government pursuant to AB52? The project has the potential to impact tribal cultural resources. Have you conducted a cultural resources study yet? If so, may I please review the report? Typically I ask the lead agency for this, but I need their contact information first.

Thank you,
Anna

Describe the present and original (if known) physical appearance

The Site Context:
The Grass Valley Yard (Depot) of the Nevada County Narrow Gauge Railroad is located on the corner of Bennett Street and Kidder Avenue within the eastern city limits of Grass Valley, California. The area is directly accessible by taking the Bennett Street Offramp on the Golden Center Freeway, State Highway Route 49 (Refer to Appendix I, Maps 2 and 3). The site originally encompassed about four (4) acres in 1900, but has diminished to 2.31 acres due to the encroachment of the Golden Center Freeway in the 1960's. The yard is situated in a quiet residential area which used to be on the outskirts of the City; now urbanization surrounds the old depot although still non-commercial in character.

Structures:
The Grass Valley Yard at its maximum zenith in 1940, contained eight (8) buildings, one (1) engine turntable and a distinctive mortared rock entry stairway (Refer to Appendix I, Map 3). The buildings included a massive wood and metal structure machine shop, a wood structure freight and passenger depot, a mortared rock blacksmith shop, three smaller wooden structures including a storehouse and two engine houses and a classic Victorian structure called the 'Kidder Mansion' (See Appendix II, photographs 1-16). The distinctive mortared rock masonry included a large retaining wall along the westside of the yard and an entry stairway from Bennett Street (See Appendix II, photographs 15 and 16). A rail system of two incoming tracks and switching network was intergated along with the buildings onto a mild sloping southwest aspect hillside.

The remaining facilities include the Kidder Mansion, blacksmith shop, machine shop, and rock retaining wall and entry stairway. All of the rail system has been salvaged and train equipment sold or disposed of. The Kidder Mansion was originally a classic three story Victorian structure, but was modified after 1950 to two stories. Much of the original brickabrack and wrought iron remains, although vandalism is taking its toll.

The massive wood and iron machine shop retains its original character although it is deterioriating due to lack of proper maintenance and water proofing. The mortared rock blacksmith shop is in basically the same condition as the machine shop although some defacing of the indigenous rock is occurring due to vandalism. The architecture of these two buildings is typical of 1880 commercial type with the typical 'add-ons'. The retaining wall and main entry stairway retains its original masonry style. Appendix II, photographs 1-16 show the original and current conditions of the facilities discussed.

The original landscape and yard character has been altered several times since the N.C.N.G.R.R. inception in 1876. The most recent as previously mentioned was the razing of the northern end of the yard for the Golden Center Freeway; the turntable and engine house area was lost, as well as several small support buildings.

CONTINUATION SHEET 1 ITEM NUMBER 7 PAGE 1

Temporal Data:

On January 24, 1874, Judge Niles Searls called for a meeting, at the Courthouse, of 10 prominent citizens from each city of Grass Valley and Nevada City. These citizens would form a committee interested in building a railroad which would connect into the Central Pacific; the Central Pacific had been constructed some 10 years previously and provided a good terminal facility at Colfax, California. On June 20, 1874, Congress approved and granted an act providing right of way through any public domain the N.C.N.G.R.R. passed through. Stock subscriptions at the rate of one-hundred dollars per share were sold to raise the required $500,000 to build the railroad. The initial right of way was 23 miles long and by January, 1875, construction started. The last spike was driven at Nevada City on May 20, 1876, and the N.C.N.G.R.R. became a functioning enity (Best 1965: 9-13).

The railroad functioned for 66 years. It carried over a quarter of a billing dollars of gold bullion as well as many passengers, timber products, and perishable goods. During the early part of 1942, competition became more difficult. World War II curtailed shipments and the N.C.N.G.R.R. applied for permission to cease operations (Foley 1976: 5-7).

Statement of Significance (in one paragraph)

The Grass Valley Yard with its remaining buildings constructed in 1876, is significant for its historic association with the development of the Northern Mines, Mother Lode and particularly the Grass Valley-Nevada City area. Other areas of significance are engineering, economics, commerce, and transportation association with the railroad. The N.C.N.G.R.R. was a pioneer of its kind in California. Only four other common carrier railroads of 3-foot gauge were completed in the state before May 1876. It had been built without subsidy and outlasted all its many contemporaries except the Carson and Colorado (Best 1965: 144-145). Over the 66 year history of the railroad, it carried $250,000,000+ of gold bullion. It gave employment to hundreds through the years and made it possible for the gold mines to operate without interruption for over half a century.

Refer to Appendix III, Pages 15-20 for supplemental statement of 'effect and significance'.

GRASS VALLEY YARD-NEVADA COUNTY NARROW GAUGE RAILROAD

APPENDIX III
DETERMINATION OF EFFECT & EVALUATION OF SIGNIFICANCE

DETERMINATION OF EFFECT

Archaeological Reconnaissance Report Form

NAME OF UNDERTAKING:
GRASS VALLEY DEPOT: NEVADA COUNTY NARROW GAUGE RAILROAD
Pending property sale and commercial development.

Corner Kidder Avenue and Bennett St.	*Grass Valley, California*

Site is on private property.

1. There will [X], will not [ ], be an effect, either beneficial or adverse, by any condition of the undertaking (project) on cultural resources.

EXPLAIN RATIONALE:
The two lots (#2: Grass Valley Yard and #14: Kidder's Mansion) are prime property within the city limits of Grass Valley. The lots are zoned Commercial and could be conceivably sold to two separate buyers. The highest short term cost recovery value would be the razing of both lots and condominium construction/business offices.

2. Conditions of the undertaking (project) will cause a beneficial effect on cultural resources:
YES [ ] NO [X]

EXPLAIN RATIONALE:
The prudent development plan from the financial perspective would be to raze the property of all existing structures.

Only the current high prime interest rate is preventing the property from being developed.

There is an alternative suggested in #3 that would offer a beneficial effect.

3. Conditions of the undertaking (project) will cause an adverse effect on cultural resources:
YES [X] NO [ ] *IF "YES", ATTACH A DETERMINATION OF ADVERSE EFFECT FORM.*

EXPLAIN RATIONALE:
Refer to comments in #2.

Alternative
If the historic character were maintained and intergrated architecturally into a commercial business building design, an 'income property' strategy might be viable and thus protect the cultural resource.

DETERMINATION OF ADVERSE EFFECT

Archaeological Reconnaissance Report Form

NAME OF UNDERTAKING:
GRASS VALLEY DEPOT: NEVADA COUNTY NARROW GAUGE RAILROAD

Corner Kidder Avenue and Bennett St.	*Grass Valley, California*
Site is on private property.	
Report by: *Lee Jordan*	*Archeologist*

1. **Determination of adverse effect (36 CFR 800) on properties either eligible for or included on the National Register of Historic Places:**

A. The undertaking (project) will destroy or alter all or part of the following property(ies)

Lot 2. Machine shop, Blacksmith shop, and distinctive cemented rock stairway (See Exhibit II).

Lot 14. Kidder Mansion (See Exhibit II).

B. Indicate the nature of the destruction or alteration for each property identified in 1A, above:

It is possible that all of the deteriorated buildings on both lots could be destroyed and new buildings and parking lots constructed.

C. The undertaking (project) will isolate the property(ies) from or alter its (their) surrounding environment: YES ☒ NO ☐

D. Indicate the nature of the isolation or alternation for each property identified in 1C, above:

The commercial development of Lots 2 and 14 will alter the historic aura of the surrounding residential area circa 1880.

E. The undertaking will introduce one or more of the following elements that are out of character with the property(ies):

VISUAL [X] AUDIBLE [ ] ATMOSPHERIC [ ] NONE [ ]

F. Indicate the nature of the adverse effect identified in I-E for each property:

A complete characted conversion from rustic historic to modern business motif is possible depending upon the architectural design and degree of landscape modification.

G. Will an adverse effect occur to any or all properties as a result of neglect which will result in its (their) deterioration or destruction:

YES [X] NO [ ]

If "yes", indicate property(ies) effected:

The Machine Shop (steel structure) and the Blacksmith Shop (cemented rock) are continuing to deteriorate at a slow rate; however, the Kidder Mansion (wood structure) is in an advanced state of deterioration and would burn very quickly.

2. Will any of the potential adverse effects identified in 1A-G, above, involve cultural properties determined not to be eleigible for the National Register of Historic Places:

YES [ ] NO [X]

If "yes", indicate the nature of the adverse effect and the property by site no.:

N/A

3. Will the undertaking (project) cause an adverse effect not identified in 1A-G, above, on properties either on or eligible for inclusion in the National Register of Historic Places:

YES [X] NO [ ]

If "yes", indicate the nature of the adverse effect and the property by FS site no.:

Potential total destruction of the site depending upon the extent of the development.

EVALUATION OF SIGNIFICANCE

Archaeological Reconnaissance Report Form

1. Property:

NAME:
GRASS VALLEY DEPOT: NEVADA COUNTY NARROW GAUGE RAILROAD

UNDERTAKING:
Potential property sale and commercial development.

Kidder Avenue and Bennett Street | Grass Valley, California

2. National Register Criteria (36 CFR 800)

A. Property would be regarded as a:
DISTRICT ☐ SITE ☒ BUILDING ☐ STRUCTURE ☐ OBJECT ☐

B. Property has the following kind(s) of significance:
NONE ☐ STATE ☒ LOCAL ☒ GEN. SCIENTIFIC ☐ GEN. HIST. ☐

C. Explain rationale for answer in category 2B:
State Significance: The N.C.N.G.R.R. was connected into the Central Pacific R.R. and the statewide transportation system at Colfax, California. (See Continuation Sheet)

D. Does the property have "integrity of location, design, setting, material, workmanship, feeling and association" ?
GREAT INTEGRITY ☐ AVERAGE INTEGRITY ☒ POOR INTEGRITY ☐

E. Explain rationale for answer in category 2D:
The general integrity has been maintained with the remaining Machine and Blacksmith's Shops; these buildings are in the original locations with only minor exterior modification. (See Continuation Sheet)

F. IS THE PROPERTY:
(1) "Associated with events that have made a significant contribution to the broad patterns of our history ? YES ☒ NO ☐
Explain rationale for answer:
The N.C.N.G.R.R. was a major contributor to the expansion of the gold industry in Nevada City-Grass Valley or so-called (See Continuation Sheet)

(2) "Associated with the lives of persons significant in our past" ? YES ☒ NO ☐
Rationale for answer:
Among the most notable passengers and admirers of the railroad and the Mother Lode area were Presidents Theodore Roosevelt and Herbert Hoover. (See Continuation Sheet)

(3) An embodiment of the "distinctive characteristic of a type, period, or method of construction", or a representative of "the work of a master", or the possessor of "high artistic values" or a representative of "a significant and distinguishable entity whose components may lack individual distinction ?

YES ☒ NO ☐

If "yes", attach competent artistic or architectural appraisal.
(See Continuation Sheet)

(4) Demonstrated to "have yielded information important in prehistory":
YES ☐ NO ☒ If "yes", attach documentation.

(5) "Likely to yield information important in prehistory or history": YES ☒ NO ☐
Rationale for your answer:

Collaborative museological research into the function of the N.C.N.G.R.R. in the development of the gold mining industry would add another chapter in the History of the Mother Lode.

3. Other Criteria: Are there other factors that cause you to regard this property as significant ?
YES ☒ NO ☐

Specify:

The Grass Valley Depot is the last remaining structural vistage of the Nevada County Narrow Gauge Railroad.

ARCHAEOLOGICAL SITE SURVEY RECORD
(Continuation Sheet)

Item No.	CONTINUATION
2C.	Many millions of dollars in gold was carried over the
	N.C.N.G.R.R. and channeled into the state economy. State
	and Federal officials rode the train to the Mother Lode to
	appreciate the temporary opulence.
	Local Significance: The Mother Lode gold industry expan-
	sion, that is, from basic small operator to full scale
	mechanization, was due in part to the availability of
	imported technology provided by the N.C.N.G.R.R. The
	railroad was also an integral part of the Nevada City-
	Grass Valley communities and was totally locally owned.
	The timber and fruit export industries became an important
	factor in the later years (Foley, 1976).
2E.	Kidder Mansion is not only in a poor state of disrepair,
	but also the upper story (third) was removed several years
	ago. The overall yard layout was extensively modified by
	the Golden Center Freeway alignment in the 1960's.
2F(1)	'Heart of the Mother Lode'. It served all of California's
	northern mines (Best, 1965).
2F(2)	C.F. McGlashan, Donner Party fame, wrote in his Truckee
	Republican, 'Today I glided smoothly past the old claims
	and ditches in a railroad-car' (Best, 1965:38).
2F(3)	The Kidder Mansion was said to be the finest example of a
	classic Victorian home outside the City of San Francisco
	(Thompson, 1970).

***Resource Name or #:** Idaho-Maryland Road (UPDATE)

***Recorded By:** M. Darcangelo, Far Western Anthropological Research Group, Inc. ***Date:** 4/14/2016

The Idaho-Maryland Road was first formally recorded by E. H. Derr in 1998 as a two–lane paved road extending east from the town of Grass Valley to the Nevada County Air Park. A similar alignment is depicted on both the 1888 and 1895 Smartsville, 30-minute Quadrangles, and on the 1949 Grass Valley 15-minute Quadrangle map. The site was revisited during the 2016 Bright Fiber Optic Survey and appears as recorded. No changes have been made to Derr's original site record.

Report Citation:

Waechter, S.A., A. Whitaker, M. Darcangelo, and S. Bennett (2016). Archaeological Survey Report for Bright Fiber Optic Project, Nevada County, California.

Page 3 of 7 *Resource Name or # (Assigned by recorder) Map Reference # 1

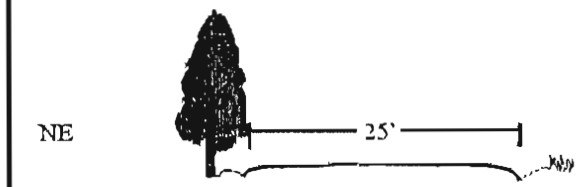
L1. Historic and/or Common Name: Lower Banner Road/Idaho-Maryland Road

L2a. Portion Described: ☐ Entire Resource Segment ☒ Point Observation **Designation:** Point 1

***b. Location of point or segment:** (Provide UTM coordinates, legal description, and any other useful locational data. Show the area that has been field inspected on a Location Map.)

This recordation point is located approximately 50 feet northeast of the intersection of Lee Lane and Idaho-Maryland Road.

L3. Description: (Describe construction details, materials, and artifacts found at this segment/point. Provide plans/sections as appropriate.)



This road is approximately 25 feet wide accommodating two lanes of traffic. It has no shoulders at this recordation point and is flanked by steep banks with dense vegetation on both sides. Residences are located along both sides of the road and are set back from the road.

L4. Dimensions: (in feet for historic features and meters for prehistoric features)

a. **Top Width** 25'
b. **Bottom Width** n/a
c. **Height or Depth** n/a
d. **Length of Segment** _

L5. Associated Resources:

L4e. Sketch of Cross-Section (Include scale) **Facing:**

L6. Setting: (Describe natural features, landscape characteristics, slope, etc., as appropriate.)

Vegetation is cleared within several feet of the road and only grasses grow adjacent vicinity but within 20 feet thick vegetation borders the road. Residences also are set back from the road and several driveways front this road.

L7. Integrity Considerations: Since its original construction in the late 19th century, this road has undergone continual improvements including grading, realignment, paving, and widening, as well as signing. It is now part of the system of Nevada County Roads, meets federal road standards and subject to routine maintenance. As a result, this road retains little integrity from its nineteenth century construction date.

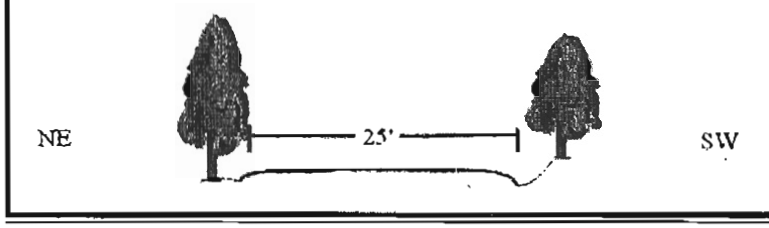
L2a. Portion Described: ☐ Entire Resource Segment ☒ Point Observation **Designation:** Point 2

***b. Location of point or segment:** (Provide UTM coordinates, legal description, and any other useful locational data. Show the area that has been field inspected on a Location Map.)

This recordation point is located southwest of the intersection of Idaho-Maryland Road and Banner Lava Cap Road.

L3. Description: (Describe construction details, materials, and artifacts found at this segment/point. Provide plans/sections as appropriate.)



This road is approximately 25 feet wide accommodating two lanes of traffic. The shoulders at this recordation point are no wider than one foot and surrounded by dense vegetation on both sides. Residences are located along both sides of the road and are setback from the road.

L4. Dimensions: (in feet for historic features and meters for prehistoric features)

- **e. Top Width** 30'
- **f. Bottom Width** n/a
- **g. Height or Depth** n/a
- **h. Length of Segment** _____

L5. Associated Resources:

L4e. Sketch of Cross-Section (include scale) **Facing:** Northwest

L6. Setting: (Describe natural features, landscape characteristics, slope, etc., as appropriate.)

Vegetation is cleared within several feet of the road and only grasses grow adjacent vicinity but within 20 feet thick vegetation borders the road. Residences also are set back from the road and several driveways front this road.

L7. Integrity Considerations: Since its original construction in the late 19th century, this road has undergone continual improvements including grading, realignment, paving, and widening, as well as signing. It is now part of the system of Nevada County Roads, meets federal road standards and subject to routine maintenance. As a result this road, retains little integrity from its nineteenth century construction date.

B10. Significance (continued):

The portion of the Idaho Maryland Road (from Lee Lane to the intersection of Banner Lava Cap Road) evaluated in this form was constructed during the mid 1880s, and was one of three roads built in the Banner Mountain vicinity during the late nineteenth century. It, like many of the roads constructed in Nevada County, was built by a mining company, specifically Central Consolidated Mines, to provide a means to move supplies in and out of the mines.[1] By 1884, Idaho Maryland Road also shows as one of two roads that connected the Idaho, Maryland and Washington mining claims to the Central Consolidated Mine.[2] This road was the southern portion a loop that ran through Section 19, 20 and 21 of T16N, R 9E that connected with Upper Banner Mountain Road, continuing on to Nevada City. Because there were so few homesteaders in the vicinity of Banner Mountain, these roads were primarily used for mining purposes and the large majority of travelers used the Nevada Narrow Gauge Railroad, in and out of Grass Valley and Nevada mining districts.

Lower Banner Road was continually improved, and later historic maps indicate that the road remained unpaved as well as private throughout the early and mid twentieth century. Although traffic and use continued to increase on along Idaho Maryland Road, it was not maintained by the county road department until the 1960s. Research in the Nevada County Transportation Department when it was incorporated into the county system but it seems likely that the road was part of a large group of roads adopted into the system in the 1955 by Resolution 62-87. ter USGS quad maps from 19549 show that the southwestern portion of Idaho Maryland Road was a two lane improved road and that the segment of the road recorded in this form remained dirt, although considered an improved road.[3]

Under Criterion A, this road does not appear to be associated with significant events or trends in local, state, or national history and appears to be typical of development of infrastructure in Nevada County. Instead, the construction of Idaho Maryland Road appears to be a common example of the pattern of development of mining infrastructure in Nevada County. Under Criterion B, it does not appear to be associated with any historically significant persons nor does it appear to be a significant example of a type, period, or method of construction under Criterion C. No special engineering or construction techniques were known to be used in the construction of this road, and road construction technology was well developed at the time of its construction and Central Consolidated Mines does not appear to have used any innovative designs or construction techniques. Additionally, this road lacks integrity because portions of it have been realigned since its original construction as well as maintained and repaved. Comparison of early Nevada County maps and the current assessor maps show that the alignment of Idaho Maryland Road has been continually realigned as needed to meet safety standards. In rare instances, buildings or structures themselves can serve as sources of important information about historic construction or engineering technologies (Criterion D); however, this road has been otherwise documented, and does not appear likely to be a principal source of important information in this regard.

***Recorded By:** M. Darcangelo and L/ Engbring, Far Western Anthropological Research Group, Inc. ***Date:** 4/4/2016

East Main Street was first formally recorded by E. H. Derr in 1998, as a narrow two–lane paved road that traveled between town of Grass Valley to the community of Town Talk, located south of Nevada City. In 2016, the site was revisited during the Bright Fiber Optic Survey. While East Main Street appears as recorded, the road alignment has been extended south. It now includes, South Auburn Street, Lar Bar Meadows Road, and Dog Bar Road. The alignment appears on the 1888 and 1895 Smartsville, 30-minute quadrangles, and on the 1949 Grass Valley 15-minute quadrangle maps. Segments of the alignment have been modified over the years, but it still follows its original route, as is evident from the historic buildings that line the sides. Below, segments are described by current name from north to south. Total length of the alignment is 12.33 miles. Survey coverage was limited to five feet either side of the road.

East Main Street, the northern-most segment, carries traffic from Nevada City south to Grass Valley. This is a two-way street with many historic buildings along its route. Modern commercial buildings and homes are also found on this route. The alignment is depicted as State Routes 49 and 20 on the 1949 Grass Valley 15-minute quadrangle map. This segment is 1.88 miles long.

South Auburn Street intersects with East Main Street in the historic area of downtown Grass Valley and continues south to a point south of Little Wolf Creek. This segment of road passes through historic commercial buildings in Grass Valley and then through historic residential neighborhoods with corner stores. South Auburn Street is depicted as State Route 49 on the 1949 Grass Valley 15-minute quadrangle map. This segment is 1.33 miles long.

La Bar Meadows Road picks up where South Auburn Street ends just south of Little Wolf Creek. La Bar Meadows Road is a two-way paved road through the rural countryside with some historic houses and modern commercial buildings. It is depicted as State Route 49 on the 1949 Grass Valley 15-minute quadrangle map. A concrete state route right-of-way marker, Feature A, was recorded along a fence on the west side of the road. This segment is 2.02 miles long.

Dog Bar Road is the longest segment, measuring 7.10 miles long. It crosses rural open farmland with ranches and country homes. Very little development has occurred along this road in Nevada County. During survey, two older Dog Bar road alignments, Features B and C, were recorded.

Feature B is an old paved alignment partially exposed west of the modern alignment. It is partially buried by fill of the modern alignment. Feature B is located just north of Wilder Ridge Court.

Feature C comprises two old road alignments located at the intersection of Dog Bar and Rattlesnake roads. The first alignment is located on top of the cut bank north of the intersection and southwest of Dog bar Road. The second alignment is on top of the road cut just south of the intersection. Both alignments consist of asphalt, which has been partially removed for the current alignment of Dog Bar Road. A deeper cut was made into the hillslope for the current alignment, which bisected the older alignment.

A section of the Nevada County Narrow Gauge Railroad was recorded within the current project APE by Windmiller (1995) and described simply as a grade without rails or ties. Since 1995, the grade has been leveled and replaced by extensive graveled areas used by a lumber mill in the 1950s.

Former footprint of the Nevada County Narrow Gauge Railroad, just south of an existing retention pond (background center, tree-lined); view south (photo 054).

***Recorded by:** P. Hanes, D. Boucher ***Date:** 9/18/2018 ☐ Continuation ☒ Update

This form is an update to a segment of site P-29-000839, the Nevada County Narrow Gage Railroad (NCNGR). The NCNGR was originally recorded in 1981 by E. Derr. The section within the current project area was updated by Douglas C. Ferrier in 1993. According to the 1993 update the NCNGR segment was recorded as an abandoned section of the mainline that has had all track, ties,and other hardware removed and exists only as the railroad bed. For the present survey the NCNGR was found to be in similar condition to the 1993 update. The railroad exists as a well traveled forest trail/road with no railroad infrastructure (photographs 1,2). The NCNGR segment measures between 6 and 9 feet wide, depending on vegetation coverage, and measures approximately 3,570-feet long between UTM's 10 668313mE 4342681mN and UTM's 10 669285mE 4342733mN. Due to infrastructure removal, natural weathering, and frequent foot, bicycle, and OHV traffic there is little physical evidence for the NCNGR. The mapped route and existing trail are all that remain of the resource within the current project.

***Resource Name or #:** Nevada County Narrow Gauge Railroad

***Map Name:** Grass Valley ***Scale:** 1:24,000 ***Date of Map:** 1998

*Recorded By: M. Darcangelo, L. Engbring, Far Western Anthropological Research Group, Inc. *Date: 4/20/2016

The Nevada County Narrow Gauge Railroad (NCNGR) was first recorded in 1981 by E. Derr and R. Derr, with subsequent site record updates filed by E. Derr in 1981, E. Decater in 1984, D. Ferrier in 1993, K. Napton and E. Greathouse in 1994, D. Ferrier in 1995, R. Windmiller 1995, D. Smith 1995, P. Jensen and S. Jensen in 2000, H. Meals in 2005, and S. Pappas in 2009. These previous site records document project-specific segments of the railroad, and to date the alignment has not been recorded in its entirety. In most cases the recorded segments are driveways or footpaths, or the alignment has been destroyed by modern development.

Eight segments of the NCNGR were recorded in 2016 during the Bright Fiber Optic Survey. Survey coverage was limited to the project APE (Area of Potential Effects), which encompassed project roads and a five-foot corridor either side of those roads. The 1895 Smartsville and the 1938 Colfax 30-minute California Quadrangle maps were used to identify the railroad alignment. This was then verified on the ground by identifying subgrades, foundations, and through cuts. All of the rails and wooden ties have been removed, though two ties were observed in a recent construction excavation along N Day road. The eight segments, designated A through H from north to south, and are described below.

Segment A, measuring 274 feet long, is located south-southwest of the modern interchange of State Route 20 and Idaho Maryland Road. The western end of is currently part of paved Railroad Avenue, while the eastern end passes through a light industrial area north of Railroad Avenue.

Segment B is located at the intersection of Rose Wood Way and Towle Lane, east of Brunswick Road. The southern half of Segment B is Towle Lane, a narrow, paved road and the northern half is a paved private driveway at 12980 Wood Rose Way. This segment is easily identified by its subgrade comprised of local soils, which elevates the modern road and driveway over drainages. It measures approximately 1,969 feet long and 12 feet wide and reaches heights of 15 feet.

Segment C, located north of State Route 174 (SR 174) in the community of Peardale, is now a maintained gravel road, N Day Road. The east end of this segment intersects SR 174 and the west end terminates at Forest Park Lane. This segment is easily identified by its foundation or subgrade comprised of local soils, which elevates the modern gravel road above the landscape. Segment C is approximately 2,297 feet long. At the eastern end, the foundation is 15 feet wide on top, 10 feet high, and 20 feet wide at the base.

Segment D, located south of State Route 174 (SR 174) in the community of Peardale, is now a paved road, Peardale Road. The west end of this segment terminates at Meadow View Drive and the east end terminates at the intersection of Sojourners Lane and Peardale Road. This segment is built on a slight subgrade, which is approximately 2,753 feet long and 17 feet wide.

Segment E, located adjacent to the northwest side of SR 174, is a maintained gravel road, Behr Mountain Road at the north end. The southern end consists of a subgrade comprised of local soil; it crosses a seasonal drainage then terminates at Jewett Lane at the base of the hillslope. This southern portion is overgrown with vegetation and appears as a check dam across a seasonal drainage. Segment E is approximately 1,644 feet long and varies in width from eight feet on the southern end to 20 feet along Behr Mountain Road.

Segment F, located adjacent to the west side of SR 174, travels southward from Scenic Drive to Talking Pines Road. Most of this segment is now overgrown with vegetation with a footpath. Several roads going west from SR 174 bisect this segment. The subgrade, constructed of local sediments, is most visible North of Talking Pines Road. It measures 12 feet across the top, 22 feet across the base, and three feet high.

Segment G is located west of SR 174 in the community of Chicago Park. It travels northward from Mt. Olive Road to a point just south of the large steel pole transmission line. This Segment incorporates much of the alignment recorded in 1995 by D. Ferrier. Most is now a dirt road used to access orchards owned by Bierwaden's Donner Trail Fruit. The southern end has mostly been destroyed by the realignment of the Lower Colfax/Mt. Olive Road intersection, and by modern development. The alignment is visible south of Mt. Olive Road as it heads to the south-southwest. Segment G measures 1, 115 feet long and, on average, is 10 feet wide.

Segment H, located east of SR 174, continues east as it mostly parallels to the north side of Arrowhead Lane, a maintained gravel road; it then it mergers into Arrowhead Lane. The west end is bisected by SR 174, while the east end continues eastward beyond the project boundary. The eastern half of this segment is cut and fill, while the western portion is a subgrade of local sediments covered with vegetation. Segment H is 672 feet long and 10 to 20 feet in wide.

P1. Resource Name: Site #1 Railroad Bed

P2. Location: X Confidential ____ Unrestricted
County Nevada:
USGS Quad: Grass Valley 7.5' Map Date: 1995
UTM Zone: Zone 10 4344120 mN 670380 mE to 4344020 mN 670580 mE
Legal Location: Portion Section 24 , T 16N, R8E, MDB&M
Directions: From Grass Valley travel 2 miles northeast on State Highway 49/20 to intersection of Brunswick Road. Travel East on Brunswick Road to 10844 Brunswick Road. The Site is located on the East side of Brunswick Road through a metal gate and then approximately 425 feet.. The site is located on a flat to gentle area that traverses the property in an northwest to southeast direction on a flat grade..

P3 a. Description: The site is a small segment of the abandoned railroad bed of the Nevada County Narrow Guage Railroad. (NCNGRR). It dates back to the period between 1876 to 1941. The NCNGRR was built by business man John Kidder and began operations in 1876. The 20.6 mile railroad linked the then recently completed Central Pacific's trans-continental railroad in Colfax California with the Gold rush towns of Grass Valley and Nevada City. During 66 years of operation, it hauled more than two-hundred million dollars worth of gold, along with passengers, mining machinery, rock, lumber, petroleum, merchandise, and a variety of produce, other goods, and livestock. It was able to haul 7 cars behind the steam engine initially fired by wood and later oil (starting 1908). These cars were a combination of passenger, box cars, gondola cars, flat cars, tankers and the caboose... .

The outbreak of World War II and closure of the gold mines, led to it's abandonment in 1942. At that time the entire track was demolished and salvaged for scrap metal and most of the ties and all metal and iron were removed..

The short portion of the NCNGRR railbed indicated as Site #1 is 600.feet long and still retains the prism of the railbed in most places, but there is no remains of any track, ties, or other hardware due to its earlier demolishment and salvage At present there is no indication of any railtrack or rail ties or hardware and all that remains is a flattened area or some slightly raised sections on the property going through the forestland or open areas with some younger trees and other vegetation growing in the old abandoned railbed.. The original railbed was 6 to 8 feet wide. It has been breached in several places by seasonal roads or trails..

The feature is located on the west (left) side of State Route (SR) 174 at postmile 2.00, partially within the highway right-of-way and four meters from the edge-of-pavement. From the intersection of Colfax Road and SR 174 within the town of Chicago Park, proceed 0.8 miles north on SR 174 to postmile paddle 2.0 (site datum) on the west side of the highway. The paddle marks the location of the feature.

Segment UTMs: 675532 mE 4336113 mN - 675523 mE 4336158 mN

***P3a. Description:**

This is a segment of the abandoned Nevada County Narrow Gauge Railroad (NCNGRR) grade near Chicago Park. It was updated as part of the Caltrans District 3 Rural Roads Survey, which was restricted to historic properties within the highway right-of-way.

The railroad grade recorded here was part of the line built by the NCNGRR in 1876 between Nevada City and Colfax. In 1908, the company moved their alignment west to shorten the route through Chicago Park and abandoned the original segment at this location. The Nevada County Narrow Gauge Railroad ceased to exist in 1942 (Ferrier 1995).

*A1. Dimensions: a. Length 360 (ft.) x b. Width 9 to 12 (ft.)
Method of Measurement: ☐ Paced ☒ Taped ☐ Visual estimate ☐ Other:
Method of Determination: ☐ Artifacts ☒ Features ☐ Soil ☐ Vegetation ☐ Topography
☐ Cut bank ☐ Animal burrow ☐ Excavation ☐ Property boundary ☐ Other (Explain
This site's northern boundary is determined by the property line. The railroad grade can be seen continuing northward past the parcel's northern border.
Reliability of Determination: ☒ High ☐ Low Explain:
Limitations: ☒ Restricted access ☐ Paved/built over ☐ Site limits incompletely defined
☐ Disturbances ☐ Vegetation ☐ Other (Explain):

A2. Depth: Surface ☐ None ☒ Unknown Method of Determination:

*A3. Human Remains: ☐ Present ☒ Absent ☐ Possible ☐ Unknown (Explain):

*A4. Features:
This is a north/south segment of the Nevada County Narrow Gauge Railroad grade. The grade is perpendicular to a slight slope and is raised on its east side. The height is about 4' above ground level at the northern boundary and continues diminishing until it reaches ground level, 360' to the south.

*A5. Cultural Constituents:
Between the railroad grade and Highway 174 is a wooden fence that borders the western edge of the parcel. The stringers of the fence are made from tongue and groove railroad car flooring.

*A6. Were Specimens Collected? ☒ No ☐ Yes

*A7. Site Condition: ☐ Good ☒ Fair ☐ Poor

*A8. Nearest Water: (Type, distance, and direction.)
There is a seasonal drainage in the south-central part of the project area.
Water for agricultural and pasture purposes is provided by a ditch and pond upslope to the east.

*A9. Elevation: 2400'

A10. Environmental Setting:
The site runs through a meadow surrounded by mixed conifers and black oak situated in a saddle. This general area has been used for agricultural purposes since 1850. Beginning in 1921 ditches were created to provide water to this area's farms, orchards and pastures

A11. Historical Information:
The railroad was built in 1876 to connect Grass Valley and Nevada City to the Central Pacific Railroad Depot in Colfax. By 1910 cars and trucks were beginning to take passenger and freight business from the railroad. This threat became a reality that, along with poor management practices, ended the Nevada County Narrow Gauge Railroad in 1942 when it was sold as scrap.

*A12. Age: ☒ 1848-1880 ☒ 1880-1914 ☒ 1914-1945

1876-1942

A13. Interpretations:

This small segment of railroad grade may provide information about grade construction techniques. According to Brian Blair, curator of the Nevada County Railroad Museum, "the narrow gauge" had a 20' to 40' easement, and the tracks were 36' wide (measured on the inside). Ties were 6' long. Photographs in Best's book show the grade top to be about 1' to 1 1/2' outside the ties (Best 1965:28,155,156). That would make the grade top about 8 to 9 feet wide.

On this segment the top of the grade averages 11' wide but varies. It is about 3 1/2' high on the downside (east), and defined on the upside (west) by a subtle trench (1'-2'wide). The railroad grade fades as it proceeds south.

A14. Remarks:

Highway 174 is within 50 feet of the railroad grade. The current road was originally constructed in 1932 and subsequently widened and resurfaced. There may have been some impacts to the site in these episodes of road-work.

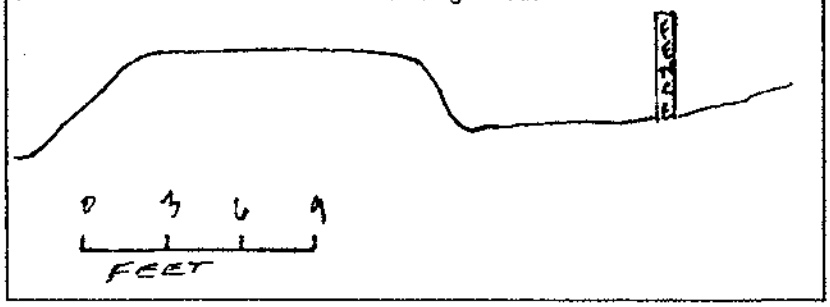
 Resource Name or #: Nevada County Narrow Gauge Railroad grade segment

L1. Historic and/or Common Name: Nevada County Narrow Gauge Railroad grade segment

L2a. Portion Described: ☐ Entire Resource ☐ Segment ☐ Point Observation **Designation:**



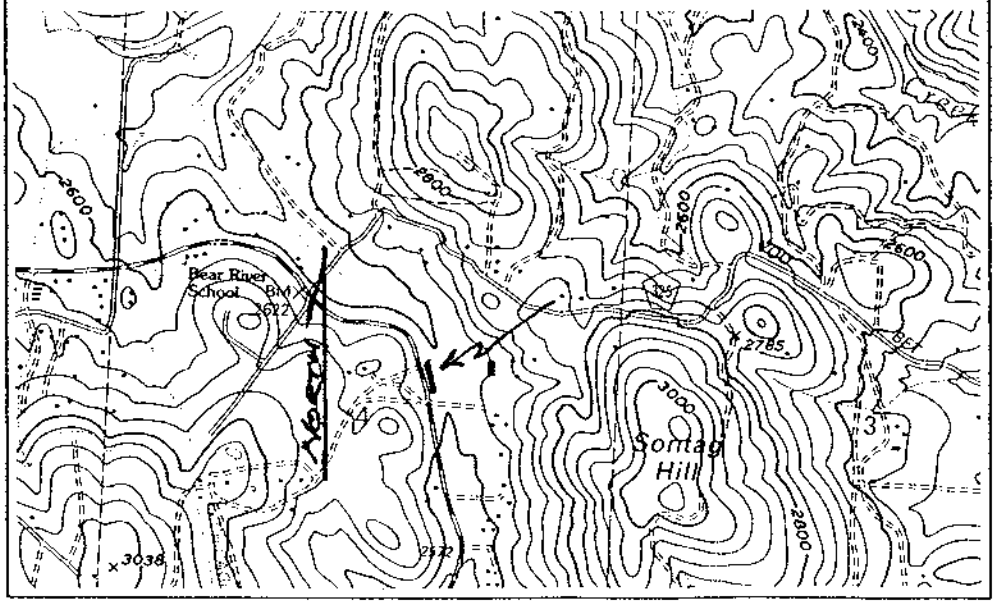
b. Location of point or segment:
NE ¼ of Section 4. T15N, R9E, MDMB.

UTMs:	Zone 10,	675280	mE/	4339420	mN	Northern boundary
		675300	mE	4339340	mN	Southern boundary

L3. Description:
An elevated rammed-earth grade. No ties, rails, tracks or any other artifacts were observed.

L4. Dimensions: (In feet for historic features and meters for prehistoric features)
a. Top Width: 9 to 12ft
b. Bottom Width: 11 to 14 ft.
c. Height or Depth: 4 ft. to ground level
d. Length of Segment: 360 ft.

L4e. Sketch of Cross-Section Facing: south



L5. Associated Resources:
None

L6. Setting:
Located in a meadow adjacent to Highway 174 on a slight slope to the east

L7. Integrity Considerations:
Former property owner, Tom Wilson, attempted planting ornamental trees near the road and on the grade but met with little success because of soil compaction (personal communication).

L8a. Map

L8b. Description of Map:
USGS Chicago Park Quadrangle 7.5'

L9. Remarks:
The construction and ongoing maintenance of nearby Highway 174 may have had some impact on this site

Review Code: Reviewer: Date :

P1. **Other Identifier:** Nevada City Narrow Gauge Rail Road (NCNGRR)

P2. **Location:** Unrestricted.
P2a. **County:** Nevada County.
P2b. **USGS 7.5' Quad:** Chicago Park, California.
Date: 1949 (1979).
T15N, R9E, portion of Section 4. MDM.
P2c. **Address:** Unknown.
P2d. **UTM:**

Zone 10:	Easting:	Northing:
North end:	675800	4338635
South end:	675000	4338420

P2e. **Location** From State Highway 174 at Peardale east of Grass Valley, proceed easterly along Highway to Bear River School, and then continue for approximately 1/2 mile to the Volz property and driveway, located adjacent to the west side of Highway 174. The site is located c. 25 feet westerly of the roadway, roughly parallels the roadway, and is dissected by the paved driveway into the Volz property. No physical evidence of the site exists by means of which to identify it within the 120-ft wide portion of Volz property intersecting State Highway 174.

P3a. **Description:** This site consists of the projected route of the historic-era Nevada City Narrow Gauge Rail Road (NCNGRR). The original historic route is believed to have proceeded through the eastern edge of the present project area for a distance of 120.7 feet. However, none of the original features, artifacts, or built environment remain, not even the elevated berm which is visible elsewhere (outside of the present project area). The original features, berm, etc., were removed from the project area in conjunction with modifications to the west margin of Highway 174, and developments on the privately owned Volz property (including grading and paving of a driveway into the private parcel).

The NCNGRR clearly represents an important historic theme in the Nevada City/Grass Valley areas in particular and California generally. Operations began in 1867 and continued, with interruptions, through1942, at which time virtually all of the hardware was salvaged in conjunction with the War War II effort. Unfortunately, the 120-ft segment of alignment within the Volz property is not significant because it does not retain or exhibit any of the attributes or values which render intact segments of the site significant.

P3b. **Resource Attributes:** AH7 – roads/trails/railroad grades.

P4. **Resources Present:** Site. Attributes include AH7 railroad grade.

P5: **Photo/Drawing:** Same as Site Location Map. No separate site map.

P6. Date Constructed, Age and Sources: Initial use ascribed to the year 1867, with more or less continuous operations through 1942, at which point the line was abandoned and much of the hardware salvaged (Wyckoff, Robert, "Never Come, Never Go.").

P7. Owner and Address: Various owners of fee parcels along the old alignment of the railroad.

P8. Recorded By: Peter M. Jensen and Sean M. Jensen. Jensen & Associates, 9726 Lott Road, Durham, CA 95938.

P9. Date Recorded: November 30, 2000.

P10. Survey Type: Complete coverage, variable-intensity pedestrian survey of 20-ac Volz Property, Nevada County, California.

P11. Report Citation: Archaeological Survey Letter Report dated June 26, 2000 and revised December 1, 2000, filed with the North Central Information Center of the California Historical Resources Information System, CSU-Sacramento.

To reach site, drive out Highway 174 toward Colfax from Grass Valley. The grade is located at the southeast corner of the THP parcel. This is located directly across the highway from a small road named Quail Pointe Ln.

Township	Range	Section	Acreage	County	Assessors Parcel No.
15N	9E	4	30.5	Nevada	12-250-04

P2. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, settings, and boundaries

An approximate 75 foot long segment of the long-abandoned Nevada City Narrow Gauge Railroad Grade passes through the southeast corner of the THP parcel. This now consists of nothing but level, flat land with no features present. Where it exits on the parcel to the south, it forms the housepad and in-the-ground pool of a neighbor. It then has been converted into a short access driveway named Behr Mtn. Road. It then crosses over the dam of a small pond and continues south until being wiped out by the Highway 174. Where it exits to the north, it ends at the abrupt cutbank of Highway 174. Across the Highway it continues through grassy meadowland as a 3 ft to 4 ft high berm averaging 7 ft wide. Due to the short length, only one set of East - North coordinates are given above. Excerpts in a publication titled "Never Come, Never Go" by XNGH Robt. Wyckoff, ECV 10 reveal Railroad began running in 1867 and was discontinued in 1942. Engine No. 5 is currently part of a running example of this

Page 2 of 3

L1. **Resource Identifier:** Chicago Park Narrow Gauge
L2. **Historic Name:** Nevada Narrow Gauge Right of Way (Railroad)
L3. **Common Name:** Abandoned Nevada County Narrow Gauge Railroad Right of Way
L4. **Detailed Record of:** ☐ Entire Resource ☒ Segment (Describe entire resource on Primary Record before recording a segment in detail.)
L5. **Length:** 600 feet **Method of Determination:** Map scale
L6: **Width:** 50 feet **Method of Determination:** Map scale
L7. **Depth/Height:** n/a **Method of Determination:**

L8. **Features** (Describe construction details, dimensions, and artifacts found with each feature. Provide plans/sections as appropriate.):
Abandoned right of way for this narrow gauge railroad has probably been widened for use as a driveway by the present owner. No residual parts of the railway (ties, iron, etc.) were observed.

L9. Natural Setting (Describe natural features, landscape characteristics, slope, etc. as appropriate.):
Area is heavily forested with mature trees that survived a fire about 35 years ago. Heavy reforestation in the form of seedlings, saplings and poles have vigorous growth

L10. **Historical Information:**
Information about the historical resource was sought from the landowner, Mr. Benton. Since this resource is only adjacent to his property, and no disturbance will occur on the abandoned right of way, no further research was done.

L11. **Resource Attributes** (List attributes and codes.): ~~HP37. Railroad right of way (abandoned)~~

L12. **Significance:** Theme Rail connection colfax/Gr. Vly Area .75 acre linear segment
Period of Significance Late 1800s Property Type Freight/Pass. RR Applicable Criteria None.
(Discuss importance of resource within a historic context as defined by theme, period of significance, and geographic scope when appropriate.)

L13. **Resource Integrity:** The segment of this linear resource that was examined is still recognizable as a railroad right of way, however it has been altered to serve as a driveway/use area by current owners. It is judged to be completely altered, with the exception of the flattened grade.

L14. **Associated Resources:** ~~None known~~

L15. **References:** Edward Benton 14781 Benton Place, Grass Valley, CA 95945

Legal Location: T 15N R 9E NE 1/4 of NE 1/4 of Section 16

Other Locational Data: Take Powerline Road west, off of Highway 174, approximately three-quarters of a mile north of the Chicago Park Store. Approximately 300' west of intersection, down Powerline Road, is a dirt road to the north. This is part of site.

P3. Description: Site is a single width roadbed of the Nevada County Narrow Gauge Railroad. Opened for railroad traffic between Nevada City and Colfax in 1876, original alignment is eastern most fork on the property. In 1908, the eastern most leg of the inverted "Y" was abandoned, replaced by a new alignment that took the western most leg of the inverted "Y". Alignment was changed to take advantage of a shorter route through Chicago Park, as well as to replace an original bridge across the Bear River. Railroad ceased to exist in 1942, with the rails and ties being removed sometime after that. Today, site is used as interior road on property. Eastern most leg of inverted "Y" is overgrown with brush, and is only used as a walking path. Surface of alignment used between 1908 and 1942 is covered with river rock ballast. Several narrow gauge railroad spikes can be seen impended in the gravel. No other railroad artifacts were seen during survey.

675680mE 4335140mN

Legal Location: T 15N R 9E S 1/2 of E 1/2 of Section 16

Other Locational Data: Take Mt. Olive road west at intersection of Highway 174 (Chicago Park store on southwest corner). Go approximately 200' and turn north onto Lower Colfax Road. Go approximately one-third mile, until just before road crosses unnamed watercourse. Turn northeast onto dirt road and go approximately 0.1 miles to where dirt road takes off to the north.

P3. Description: Site is single width roadbed of Nevada County Narrow Gauge Railroad. Railroad went out of existence in 1942, with the tracks and roadbed being torn up sometime after that. Today grade is used as a native surface, interior access road for working agricultural ranch. Although railroad ran between Nevada City and Colfax from 1876 and 1942, this segment of the railroad was used only from 1908 to 1942. Original route of railroad was changed to reduce mileage and replace original crossing of Bear River. No railroad artifacts, other than the old roadbed, noted during survey of property.

East end of grade remnant: Zone 10, 671240 Easting; 4341830 Northing

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

Remnant of the Nevada County Narrow Gauge Railroad grade. Grade follows approximately the 2730 foot contour for about 1300 feet from East Bennett Road to the New Brunswick Mine. While 150 feet of this linear historic site at the south side of Bennett Road is destroyed, the remainder of the grade remnant is in good condition. Average width of the grade is 14 feet, measured between a shallow 6 foot wide ditch cut into the uphill side and a 9 foot wide berm on the downhill side of the road bed.

On its 22 mile length, the Nevada County Narrow Gauge Railroad carried passengers and freight between Nevada City, Grass Valley and Colfax. Constructed in 1875, the railroad carried passengers until May, 1938. The line ceased operations in May, 1942. The coming of age of the automobile had rendered the line's passenger and freight services obsolete.

L1. **Resource Identifier:** Nevada County Narrow Gauge Railroad
L2. Historic Name: Nevada County Narrow Gauge Railroad
L3. Common Name:
L4. **Detailed Record of:** ☐Entire Resource ☒Segment (Describe entire resource on Primary Record before recording a segment in detail.)
L5. **Length:** 1300 Method of Determination: Measurement taken from USGS 7.5' map.
L6. **Width:** 14 feet Method of Determination: Hip Chain
L7. Depth/Height: N/A Method of Determination: N/A
L8. **Features** (Describe construction details, dimensions, and artifacts found with each feature. Provide plans/sections as appropriate.):

CROSS SECTION OF GRADE

Roadbed is overgrown with saplings and berry bushes. No artifacts were encountered. Rails and ties have been removed. No features other than the railroad grade itself.

L9. Natural Setting (Describe natural features, landscape characteristics, slope, etc., as appropriate.):
Grade segment is located on a south-facing slope within the South Fork Wolf Creek drainage. Site vicinity is forested.

L10. **Historical Information:**
On its 22 mile length, the Nevada County Narrow Gauge Railroad carried passengers and freight between Nevada City, Grass Valley and Colfax. Constructed in 1875, the railroad carried passengers until May, 1938. The line ceased operations in May, 1942. The coming of age of the automobile had rendered the line's services obsolete.

L11. **Resource Attributes** (List attributes and codes.): AH7--Railroad Grade

L12. Significance: Theme Transportation Systems Area Nevada County
Period of Significance 1874-1942 Property Type Railroad Grade Applicable Criteria A
(Discuss importance of resource within a historic context as defined by theme, period of significance, and geographic scope when appropriate.) The railroad is important for its association with the rise in prominence of Nevada County's gold mines, as well as its unique place in Nevada County's history of transportation. The period between the 1870s and World War II was a period of rapid growth in the county, spurred by the florescence of its gold quartz mines.

L13. **Resource Integrity:** The intact portion of the grade segment seems to retain many of its original aspects of integrity: the location of the segment next to the New Brunswick mine, its setting, and spatial relationships with the forested side hill on which it was constructed.
L14. **Associated Resources:** New Brunswick Mine (Trinomial pending).
L15. **References:** Cultural Resources of the Idaho Maryland Gold Mine Project, by Ric Windmiller. Report on file, North Central Information Center, California State University, Sacramento. February 1995.

7. LOCATION: Loma Rica Ranch: To conduct field inspection of the subject cultural resource, proceed as follows: From the City of Grass Valley, Nevada County, California, drive northeast on California Highway 49 to the Idaho-Maryland Road exit, and proceed northeast on the Idaho-Maryland Mine Road (identified on the referenced quadrangle as the "Lower Banner Road"), for approximately one and three-tenths miles to the four-way intersection with Brunswick Road. From this point, to reach the subject cultural resource, turn left (north) and proceed north on Brunswick Road for two-tenths of a mile, at which point Brunswick Road passes through a cut in a knoll, on the right (east) side of which at this writing is the

4430

(signed) Loma Rica Ranch main access road. Enter the [illegible]n property via ornate wrought-iron gate, proceed ca. one-[illegible]th mile east to caretakers house. From this point, proceed around the southeast corner of the large horse-barn, follow farm road northeast ca. one-tenth of a mile to a "T" intersection. From this point, the following Nevada County Narrow Gauge Railroad (NCNGRR) segments are accessed:

Segment One: To the left (north) of the "T" intersection is a gate, which is placed directly across the former NCNGRR alignment. The grade has been obliterated immediately north of the gate, but from the gate the grade alignment proceeds north 650 ft (198 m) and exits from the Loma Rica Ranch. Segment 1, a small remainder of the grade, is located near the north edge of the Loma Rica Ranch.

Segment Two: From the "T" intersection, to the south along the "T" is a gravel road constructed along the former grade of the abandoned NCNGRR. The grade runs from the intersection south, curving west to Wolf Creek. From the creek west the grade along Wolf Creek is covered with an extremely dense thicket of riparian vegetation, prominently berry vines, the impenetrably and intractability of which precludes effective inspection. A path has been cut through the berry thicket, leading to Segment 3.

Segment Three: Continuing along the route described from (Segment 2), the abandoned (and in this area locally virtually indiscernible) NCNGRR grade continues west to the Brunswick-Idaho-Maryland road intersection, at which point it exits from the Loma Rica Ranch.

8. PREHISTORIC HISTORIC X (Early American - Turn of the 19th Century - Early 20th Century)

9. SITE DESCRIPTION: Remnants of the grade of the Nevada County Narrow Gauge Railroad that fall within the Loma Rica Ranch property. There are three segments of the grade which are still discernible; all of the ties and rails have been removed (Best 1965; Browne 1987; Haas 1992; Railroad Commission of the State of California, Transportation Division 1926).

According to Haas (1992:5):

The Nevada County Narrow Gauge Railroad was built to fill several important needs: (1) to transport lumber and wood products within the county, (2) to ship gold, lumber, and agricultural products from outside of the county, (3) to supply local markets with goods from outside the county and (4) to provide passenger service between local stations and the transcontinental railroad at Colfax. Gold mines were in constant need of lumber and machinery in order to keep the mines operating. Hauling freight, passengers and commodities began in 1876 and continued until August 1942.

In the railroad's 66 year history of operation, approximately a quarter of a billion dollars in gold ingots was transported in locked combination cars.

Passengers traveling from Colfax to Grass Valley could see evidence of the gold mines from the Narrow Gauge. The mines that were observable were the New Brunswick, Idaho-Maryland and the Empire Mines.

The citizens of Nevada County delighted in every facet of the Narrow Gauge's construction and operation, and fondly referred to the little train as the "Never Come Never Go."

The tracks of the Narrow Gauge stretched from Colfax to Nevada City by way of Grass Valley. The tracks ran over rivers, through tunnels and negotiated difficult terrain. All in all, the rail tracks covered 22.64 miles.

The NCNGRR nearly went out of business in 1927, but local citizens bailed it out for a time. The demise of the Narrow Gauge was caused by the outbreak of World War II. The federal government's priority in 1942 was the intensive massing of the war industry, which included the desperately needed scrap metal and ore. When Federal Order L-208 closed the gold mines, the Narrow Gauge owners filed for and were granted permission to shut down operations.

The rails were taken up from the rail beds and sold for scrap in 1942.

10. AREA:

Segment 1: 20 feet/ 6.1 meters x 197 feet/ 60 meters
366 square meters (linear)
METHOD OF DETERMINATION: Taping

Segment 2: 20 feet/ 6.1 meters x 1000 feet/ 305 meters
1860 square meters (linear)
METHOD OF DETERMINATION: Taping

Segment 3: 20 feet/ 6.1 meters x 426 feet/ 130 meters
793 square meters (linear)
METHOD OF DETERMINATION: Taping

11. DEPTH: NA; **METHOD OF DETERMINATION:** NA

12. FEATURES: Three segments of the grade of the Nevada County Narrow Gauge Railroad within the Loma Rica Ranch property:

Segment 1: A small (197-foot long) segment of the grade located near the north edge of the Loma Rica Ranch.

Segment 2: A 1000-foot long segment of the grade runs from the Loma Rica Ranch "T" intersection south, curving west to Wolf Creek.

Segment 3: A 426-foot long segment of the grade that remains in a pasture east of the Brunswick-Idaho Maryland road intersection; the NCNGRR continues west and exits from the Loma Rica Ranch property at this intersection.

13. ARTIFACTS: None observed.

14. DATE RECORDED: 2/1-2/94
15. RECORDED BY: L. K. Napton & E. A. Greathouse
16. AFFILIATION AND ADDRESS: California State University, Stanislaus, Institute for Archaeological Research, 801 W. Monte Vista Ave., Turlock, CA 95382

17. HUMAN REMAINS: None observed.

18. SITE DISTURBANCES: Only the grade remains; no ties or rails are present.

---

19. NEAREST WATER: Segment 2 passes over Wolf Creek

20. VEGETATION COMMUNITY: cf., NDDB 84230, Sierran mixed-conifer forest (Holland 1986)

21. ON SITE VEGETATION: Grasses and forbs

22. SITE SOIL: Sites loam; Alluvial land, clayey

23. SURROUNDING SOIL: Same as 22.

24. GEOLOGY: Pleistocene: Mehrten Formation; Cretaceous: Basic Intrusive Rocks; Jura-Cretaceous: Amador Group; Permian: Calaveras Formation.

25. LANDFORM: Hillslope

26. SLOPE: 5% SW **27. EXPOSURE:** 25%-95% open

28. LANDOWNER(S)/ADDRESS: TMI, 6 Upper Newport Plaza, Newport Beach, CA 92660-2629

29. REMARKS: Site originally recorded in February, 1984 by personnel of the Archaeological Study Center, California State University, Sacramento (ASC/CSUS). The total length of the former railroad grade within the Loma Rica Ranch property is approximately 2600 feet (793 m). However, the identified grade consists of three discrete segments, total length 1625 feet (495 m).

Item No.	CONTINUATION
19	Culvert on west end approx. 300' from western edge of project. Protrudes on north side of berm. Is made of corrugated metal. A culvert also exists on the east end of the project where the larger creek flows, but Blackberry growth made inspection impossible.

P-29-839-H

NEVADA COUNTY NARROW GAUGE RAILROAD.

The advantages of railroad connection with Sacramento and San Francisco were early recognized by the business men of Nevada City and Grass Valley. The organization of the Sacramento, Auburn and Nevada Railroad Company, as detailed in the article on the C. P. R. R., shows the interest taken in this project. The question received considerable attention as soon as the Sacramento Valley road was completed from Sacramento to Folsom, in 1856. In common with all localities that hoped to become a business center, Nevada county desired the road extended to her two commercial towns. In 1859 the Sacramento, Placer and Nevada railroad was projected, and a survey was commenced from Folsom to Auburn, by Sherman Day. The intention was to eventually extend the line to Nevada City, and the merchants of this county subscribed a sum sufficient for a survey of a route from Auburn to Nevada City by the way of Grass Valley. A preliminary survey was made and was embodied in Mr. Day's report, showing that a line could be constructed thirty-six miles in length and with a grade of eighty feet to the mile. From this time the railroad question was never entirely laid aside; every year it was brought out, rubbed and polished and laid carefully away within easy reach. A road to Lincoln was at one time under discussion.

As soon as it became evident that the great trans-continental road would be built, great efforts were made to have the Henness Pass route adopted, but in this they suffered a disappointment. In 1870 a road to Marysville and Colusa was seriously considered, and a bill was presented to the Legislature to authorize the issuance of bonds to the Colusa, Marysville and Nevada Railroad Co., Colusa to give $100,000, Marysville $100,000, Yuba county $50,000 and Nevada county $150,000; this bill failed to find favor with the Legislature and died. A survey of the line from Nevada City to Marysville was made by Robert L. Harris, and the following report was presented to a committee of citizens.

Length of line in Nevada county, passing from Nevada City through Grass Valley and Pen Valley to the county line.....	26 23-100 miles
In Yuba county, passing through Smartsville, Timbuctoo and Swiss Bar to Marysville.....	23 47-100 miles
Cost of four foot eight and one-half inch gauge, Yuba county.....	$ 349,435
Cost of four foot eight and one-half inch gauge, Nevada county.....	552,968
Equipments and Buildings.....	104,100
Total Cost.....	$1,006,503
Cost of a three foot gauge in best manner, Yuba county.....	$ 323,741
Cost of a three foot gauge in best manner, Nevada county.....	504,777
Equipments and Buildings.....	86,900
Total Cost.....	$ 915,418
Three foot grade, low estimate, Yuba county.....	269,056
Three foot grade, low estimate, Nevada county.....	367,382
Equipments and Buildings.....	81,500
Total Cost.....	$ 717,938

The cheapest thing about a railroad is the preliminary survey, and it is always easier to make one and talk about the big things one is going to do than it is to build the road, and so the people found, for no money was at hand to construct the desired line, and the project was abandoned.

The next thing in order was to connect with the Central Pacific at some point along the line of that road, and Colfax was selected as the most desirable place. In 1872 there was considerable talk of a horse railroad from Nevada City and Grass Valley to Colfax, and the matter went so far as to be brought to the attention of the Legislature, where it was reported upon adversely by the Committee on Roads and Highways, and died from want of vitality. It was after the failure of this design that the idea of a narrow gauge road met with favorable consideration. Like leaven the idea spread and increased until it had thoroughly imbued every one with enthusiasm. A meeting of interested citizens was called at Nevada City January 25, 1874, by which a conference committee of ten each from Nevada City and Grass Valley was appointed. By them a sub-committee of six was appointed to prepare a bill for the Legislature. This was done and the bill finally passed March 11, 1874, the event being enthusiastically celebrated in Grass Valley and Nevada City; the Governor's approval was received nine days later, and the bill became a law. The company was incorporated without any subsidy, and was allowed to charge ten cents per mile for passengers and twenty cents per ton for freight, with additions for hazardous freights.

The gentlemen named in the bill as incorporators met March 24, and fixed the capital stock at $400,000, in forty thousand shares of ten dollars each, and a committee of seven was appointed to solicit subscriptions. Now was the time for the people to make a practical display of their good will towards the road; so long as they were only required to meet and pass resolutions or to shout and yell when powder was burned that some one else had paid for, they were equal to the occasion, but when they were asked to subscribe to the capital stock they began to crawl into their shells. The committee succeeded in getting $242,000 subscribed, and as this was not sufficient to build the road, the estimate for a three foot gauge being $500,000, the project was in imminent danger of dying as had its predecessors. The officers of the company were:—John C. Coleman, President; J. W. Sigourney, Vice-President; George Fletcher, Secretary; J. H. Bates, Chief Engineer; John C. Coleman, J. W. Sigourney, William Watt, Edward Coleman, J. M. Lakenan, Niles Searls and R. W. Tully, Directors. These gentlemen after many consultations decided to prosecute the work, and let the contract to M. F. Beatty December 4, 1874, who sublet it to Turton & Knox.

The work was commenced in February, 1875, and was completed from Colfax to Grass Valley in April, 1876, and regular trains began to run between those points. It was a great day

P-29-839-H

or Grass Valley that first saw the iron horse come rushing into the city with its burden of passengers and freight, and a season of jubilee and mutual congratulation was held. The road was entirely completed to Nevada City May 20, 1876, and the first train came up from Grass Valley loaded with people to participate in the ceremonies to take place. The old cannon was dragged to the summit of Sugar Loaf, and from the brow of that lofty hill roared forth its congratulations to the cheering crowd beneath. A large procession, headed by the military and band, marched to the depot to meet the incoming train. A highly decorated and properly inscribed tie was prepared and two polished spikes fastened it to the last rails. When the last spike was driven home the military fired a salute. Then was the gentle air affrighted with discordant sounds; the cannon from the lofty eminence of Sugar Loaf blazed forth in noisy hilarity, the shrill steam whistle and the resonant bell swelled the chorus, while responsive shouts went up from thousands of jubilant throats. Judge Searls delivered a congratulatory address from the pilot of the engine, and the crowd dispersed, some of them to their homes and some of them to "take suthin." The next day the first through train was run from Nevada City to Colfax, and the road was fairly inaugurated.

The total length of the road is 22 64-100 miles. There are two tunnels, one at the Town Talk four hundred and twenty feet in length, and one between Grass Valley and Colfax three hundred and eighty feet long. A How truss bridge one hundred and sixty feet long spans Bear river at a hight of ninety-five feet, and a similar structure crosses Greenhorn creek at a hight of eighty-seven feet; the trestles approaching these bridges are four hundred and forty and four hundred and eighty feet long respectively; besides these there are five other trestles, making a total length of trestlework of five thousand one hundred and seventy-six feet. The steepest grade is one hundred and twenty-one feet to the mile, one place approaching the summit between Grass Valley and Nevada and another between Grass Valley and Colfax at Cressy's summit. The shortest radius of curve is 302 94-100 feet, equal to a nineteen degree curve. The condition of the road was as follows January 1, 1880:—

Gross Earnings.....		$ 361,265.13
Operating and General Expenses.....	$186,296.72	
Interest on First Mortgage Bonds.....	72,237.78	
Interest on Floating Debt	22,843.67	281,378.17
Excess of Earnings over all Expenses.....		$ 79,886.96

Cost of Construction and Equipment.....	$582,651.22	
Value of Material.....	7,107.33	
Investment in Citizen's Bank Stock.....	935.64	
Excess of Cash Items over Audited Accounts	42.77	
		$590,736.96
Capital Stock Subscribed	$242,200.00	
Funded Debt.....	250,000.00	
Floating Debt (Secured)	16,000.00	
J. C. & E. Coleman Loan	500.00	
Profit and Loss (Profit)...	81,336.96	
		$590,736.96

Number of passenger cars, two; mail and baggage cars, two; box freight cars, sixteen; platform cars, twenty; other cars, six; locomotive engines, three.

For a year the town of North San Juan has been agitated over the question of an extention of the road to that place from either Nevada City or Grass Valley. The cost is estimated at about $500,000, and the people in that vicinity seem to think that they would like to buy the elephant at that price. Truckee also desires more railroad facilities, and in 1872 the question of a road to open up the Sierra valley received some attention, and is now in a fair way to be an accomplished fact. The following year a narrow gauge road from Oroville through the Sierra valley and Beckwith pass to terminate at Reno or Truckee was estimated to cost $2,000,000, the distance to Reno being one hundred and thirty-one miles. Nothing has ever resulted from the agitation. A railroad from Truckee to Tahoe City is also one of the things hoped for, and the Legislature passed an Act, approved March 29, 1878, incorporating A. J. Bayley, J. F. Moody, J. A. Huntington, J. P. Bayley, and H. M. Hollister as a company to construct the desired line.

comprised the Sacramento Valley Railroad is today a portion of the Southern Pacific's Placerville branch. Colonel Wilson's California Central to Lincoln was used as a start for their Oregon branch. But, it was the vision of Theodore Judah and the Sacramento Valley Railroad that was the snowball that started the avalanche in the Mother Lode and the greater West.

The Central Pacific giant grew and finally became transcontinental. With this complete, the big four focused their attention to expansion within California, moving north, south and west to San Francisco. Particular was the threat to their dominance of the Atcheson, Topeka and Santa Fe moving into California from the south and the Northern Pacific coming in from the north.

NEVADA COUNTY NARROW GAUGE

As small independent railroads were developing, one of the more unique ones was the Nevada County Narrow Gauge Railroad. The people of the twin cities, Grass Valley and Nevada City, were in the prime of their quartz gold bonanza by 1853. A number of mines were in full swing, mines such as the North Star, Empire, Massachusetts and New York Hills. But, they were some 45 miles east of Marysville and 55 miles northeast of Sacramento making freighting very expensive.

In 1855, a group of 26 men formed a railroad company to connect their city with the river cities, calling the company the Sacramento, Auburn and Nevada Railroad, and also hoping that perhaps a transcontinental line would use this route going over

the Sierras via Henness Pass. But this group failed and another group incorporated the Colusa, Marysville and Nevada Railroad Company. They failed also. Other companies were incorporated and failed and so it went through 1873. Especially depressing for the people of the twin cities was the choice of the big four to use the route surveyed by Judah over the Sierras by way of Auburn, Colfax and Donner, thus bypassing them by some 14 miles at Colfax. Still, the people feeling cut-off from the rest of California, not to mention the world, called for a railroad.

After much rétoric and many attempts, Edward Coleman, President and Superintendent of the Idaho quartz mine and his brother John, along with a large group of businessmen including Dan Halbrooke, Myles P. O'Connor, State Senator and Secretary of the Idaho quartz mine, Geo. Jacobs of the Quaker Hill mine to name a few, incorporated the Nevada Narrow Gauge. By March 20, 1874 the Governor granted right-of-way rights and frachises from Nevada City through Grass Valley to Colfax.

John Flint was hired to build the road. Kidder seemed to be and later proved to be a man of force with a great amount of ability. He had been associated with the Central Pacific, Sacramento, Placerville, Oregon and California, Northern Pacific along with the California Central Narrow Gauge and the Monterey and Salinas Valley three-foot gauge railroads.

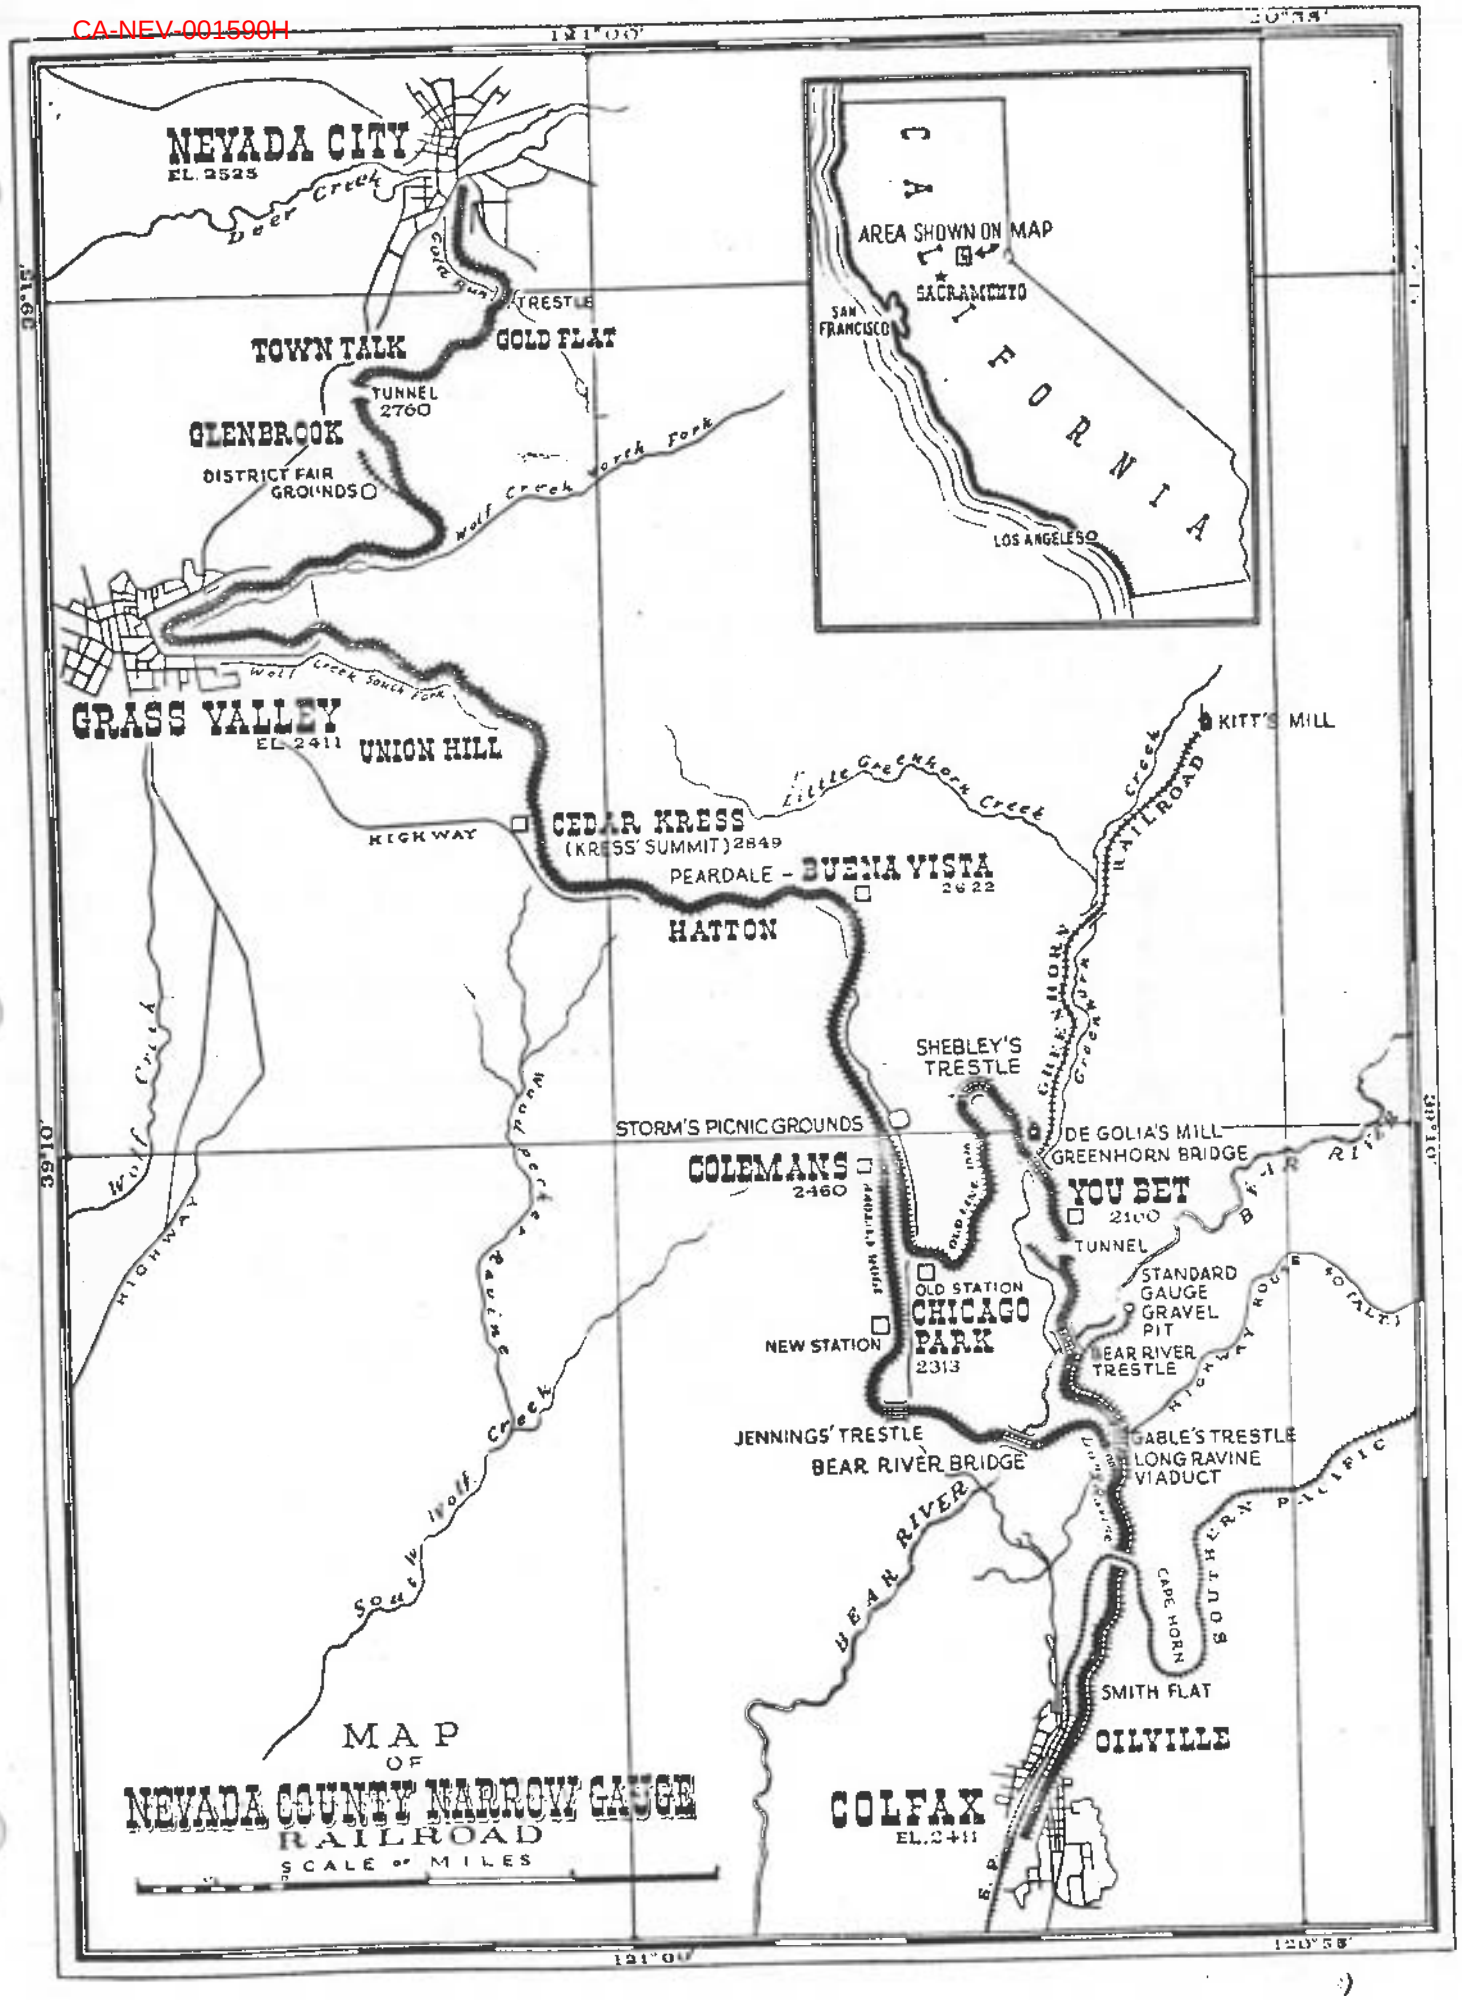
After some problem of financing and aquiring labor, all was ready on the morning of February 11 and work commenced at Colfax. As the weeks went by, crews were grading and blasting through solid

rock formations as other crews were building trestles and bridges over a number of rivers and ravines. The most notable was the Bear River trestle which incorporated a Howe Truss. This bridge, while looking straight, brought the line through an arc of 45 degrees and was the highest railroad bridge in California at that time. The bridge was destroyed by fire in 1896 and the new bridge which replaced was much like the first one, but capable of withstanding heavier loads.

Another great trestle was constructed over the Greenhorn at its junction with Butterfly Creek. This bridge, now gone, would be submerged behind Rollins Dam. With the completion of these and several other bridges and trestles, the laying of track continued in earnest. By January, 1876 the tracks were down, but the blasting wasn't complete until April. Nevada City was reached and the last spike installed on May 20, 1876.

Regular train service began with Coleman receiving the 22.64 mile railroad from the contractors May 24, 1876, with John Kidder as Superintendent. The Nevada City Narrow Gauge Railroad enjoyed a long history. Through the years, it is estimated that this railroad handled some $250,000,000 in gold shipments alone. It was also the only access line into the northern portion of the Mother Lode.

After a long and noble career, the line stopped operation on July 10, 1942, after receipt of their request for permission to abandon. The major cause being World War II, the Governments order



to close the gold mines in October, 1942, making the stock and rails of the line more valuable as scrap than continuance of service.

However, some of the rolling stock found its way to the Perot Harber R.R. and the White Pass and Yukon Railroad. Thus, the Nevada County Narrow Gauge was a pioneer. Only four other common carrier railroads of its kind were built in California before May, 1876. It had been built without subsidy and outlasted all its many contemporaries except the Carson and Colorado which became a branch of the Southern Pacific. A small portion of the line still runs, though. Engine number 5 was restored and has been seen in a number of movies, most notably the television series "The Virginian". The U.C.U.G.R.R. has been called "The Best Little Railroad in the World".

SIERRA RAILROAD

As the N.C.U.G.R.R. was the railroad of the northern portion of the Mother Lode, equally important was the Sierra Railway that served the southern portion. Gold and lumber were a great draw for investment in a railroad to the southern Mother Lode. But, years before 1885, F. Birdsall promoted a railroad from the San Joaquin Valley to Sperry's Resort at the Big Trees to primarily increase tourist travel along with the value of the lumber in the area. In fact, a narrow gauge line had been built from Lodi to Valley Springs. This line ceased operation with the death of Bird-

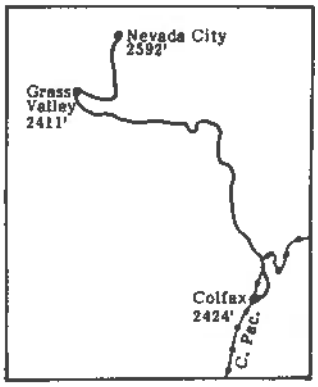
Freight traffic: common carrier, gold mining



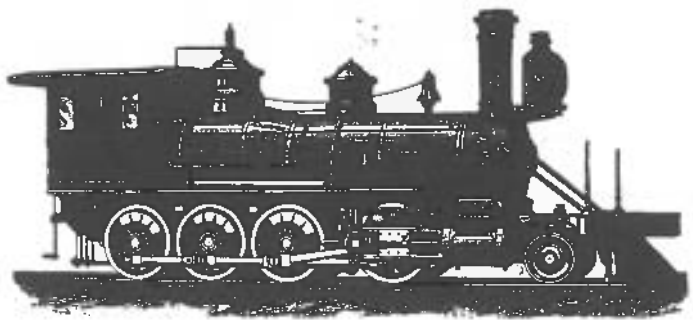
Rosters of 6/30/1876 - 12/31/1917:

locomotive engines	2	3
passenger cars	2	11
freight cars	30	73

First published timetable:

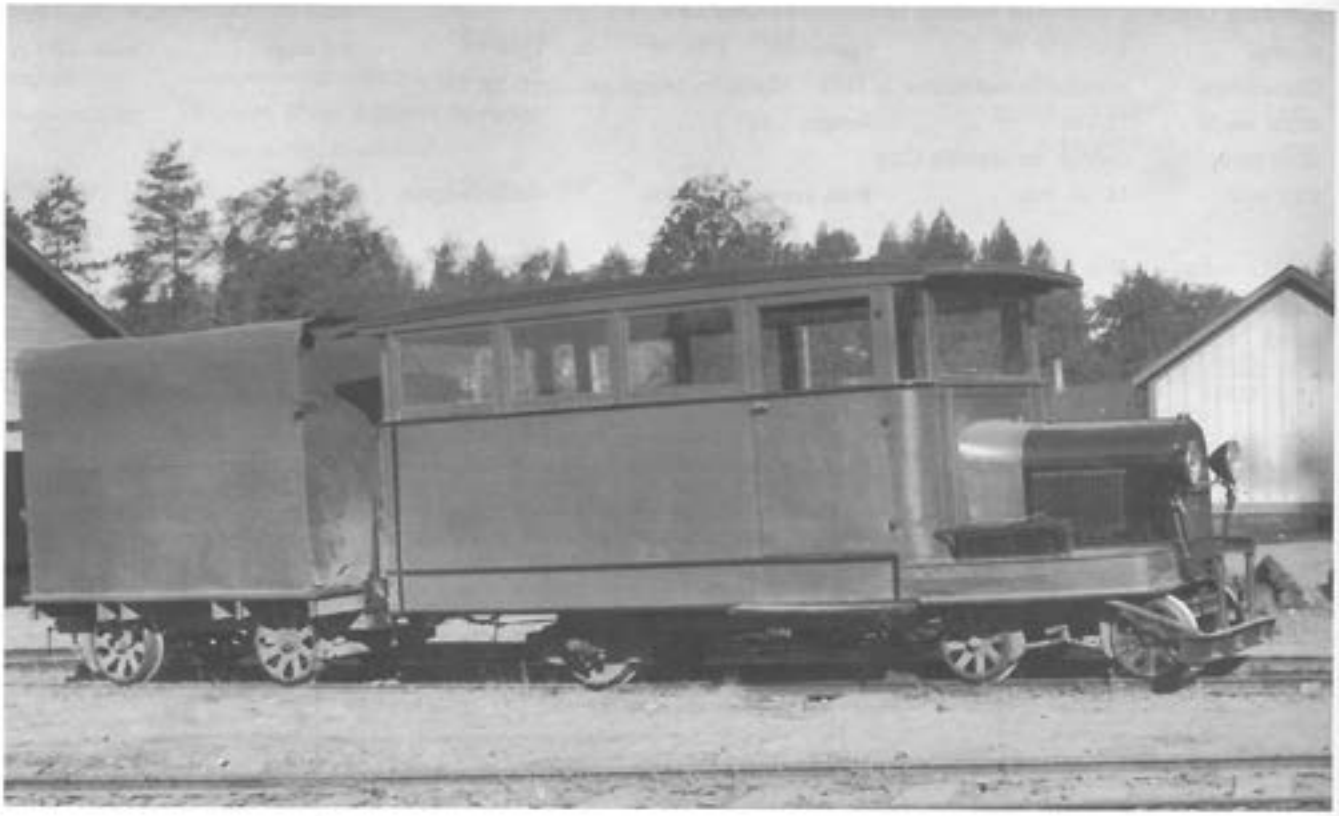
May 24, 1878 - daily

7:20 a.m.	Colfax	
	Buena Vista	mp 10
8:45	Grass Valley	17
9:20	Nevada City	23



The railroad was built without public funds except for the right-of-way. There was heavy grading for the first five miles, a 437-foot tunnel and a bridge across Bear River that was 200 feet high and 812 long.

The carrier was placed in operation to Grass Valley on April 17, 1876, and to Nevada May 24th, 22.64 miles. There was a 20° curve with 303-foot radius. Passenger trains, with air brakes, averaged 11.71 m.p.h.



The balance sheet for June 30, 1906, shows the cost of the road as $572,655 and equipment as $93,519. In 1908 it built a three-rail spur of 3.627 miles to a gravel pit near Colfax. Passenger service was discontinued April 4, 1938.

Listed in first ICC (6/30/88) as an operating independent with 22 miles owned and in use. Increased to 26 miles by 6/30/09, then to 20 miles by 6/30/10. This class III common carrier owned 21 miles at time of abandonment.

Map of the Nevada County Narrow Gauge

The NCNG route is highlighted, with many points of interest indicated with balloons. The blue highlight is the line after the 1908 realignment and the red line shows the original route.

Data is based on maps created by Herman Darr.

***Recorded by:** Bruno Texier and Allen Johnson, InContext ***Date**: 5/10/2019 ☐ Continuation ☑ Update

East Bennett Road is part of a historic route that is within the current APE. It was recorded in 2016 as a modern paved road with four features within the APE. These features consist of one concrete culvert/bridge stamped with "WPA" indicating it was constructed by the Works Progress Administration that existed from 1935 to 1943. The three other features consist of two rudimentary masonry culverts, and one locus with three separate short segments of dry-laid rock wall. During the survey of May 2019, the road was observed as modern and maintained; and each of the four features was relocated and observed in the same condition described in 2016.

In Grass Valley, California, between East Main Street and Brunswick Road

* P3a. Description:

The resource is a 2.6-mile historic road alignment depicted on the U.S. Geological Survey, 1949, USGS 1:62500-scale Quadrangle for Grass Valley, CA. It was recorded in conjunction with the Bright Fiber Optic project, a proposed installation of fiber optic cable along rural roads between Grass Valley and Colfax. Archaeological survey was limited to the project APE (Area of Potential Effects), which consisted of project roads and a five foot buffer either side of those roads. The road is currently maintained, two lanes, asphalt-paved, and measures 24 feet wide. The western portion of the route, known as Bennett Street, measures 1885 feet long, and the eastern portion, known as East Bennett Road, measures 11,956 feet long; total length is 13,841 feet (2.6 miles). Historically, East Bennett Road was known as Union Hill Road. Three culvert features and one retaining wall feature associated with the road were recorded within the project APE (see continuation sheet).

Feature A is a concrete culvert headwall embossed with the "WPA" logo at the top center, located 4 feet from the edge of East Bennett Road. Diamond Court is located directly across from the feature. The wall is oriented northwest-southeast, measures 30.5 feet long, at least 14 feet high, 1 foot 10 inches thick, and is poured in 12-foot sections. A concrete-lined spillway outlet with a 2-foot-diameter steel pipe is located at the base of the culvert wall. The northwest end of the wall is abutted by a rock retaining wall measuring 4 feet wide by 8 feet high.

Feature B consists of two culvert headwalls located on the north and south sides of the road. The headwalls are constucted from concrete and rock. The pipe on the north side is 12-inch-diameter concrete. The pipe on the south side is 16-inch-diameter corrugated metal.

Feature C consists of two culvert headwalls located on the north and south sides of the road. The headwalls are constucted from concrete and rock with metal culvert pipe.

Feature D consits of three segments of rock wall along the north side of the road within a 220 foot area between 12228 and 12108 East Bennett Road. The wall construction is dry stacked rock 3 to 5 courses high (up to 3 feet tall). The walls are between 3 to 7 feet from the highway and the base of the wall is on the same level as the road surface. Disturbances include buried utilities placement, U.S. Postal Service mail boxes, telephone poles, and driveways.

5. Cultural Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in § 15064.5?			X	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?		X		
c) Disturb any human remains, including those interred outside of dedicated cemeteries?		X		

Mitigation Measures

MM CUL-1 Prior to initiating ground disturbing activities within the project area, construction personnel should be alerted to the possibility of encountering buried prehistoric or historic period cultural remains. Personnel should be advised that upon discovery of buried archaeological deposits, work in the immediate vicinity of the find should cease and a qualified archaeologist should be contacted immediately. Once the find has been identified, plans for the treatment, evaluation, and mitigation of impacts to the find shall be developed if it is found to be eligible for the National Register of Historic Places or the California Register of Historical Resources.

MM CUL-2 Archaeological resources unearthed by project construction activities shall be evaluated by a qualified archaeologist and Native American monitor. If the resources are Native American in origin, the tribe shall coordinate with the jurisdiction regarding treatment of these resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Section 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) shall be the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis; provided no data recovery will be permitted to tribal cultural resources without prior consultation and consent of the Middletown.

MM CUL-3 California Health and Safety Code Section 7050.5, State CEQA Guidelines Section 15064.5, and PRC Section 5097.98 mandate the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. California Health and Safety Code Section 7050.5 requires that in the event that human remains are discovered, disturbance of the site shall be halted until the coroner has investigated the circumstances, manner and cause of death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in PRC Section 5097.98. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes or has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission.

18. Tribal and Cultural Resources

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:		X		
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?		X		
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?		X

Subject: **Phase I/II Environmental Site Assessment**

Dear Mr. Jones:

NV5 prepared this report to present the findings of a Phase I/II Environmental Site Assessment (ESA) of the preferred alignment of Phase 2 of the Wolf Creek Trail in Grass Valley, Nevada County, California. The approximately 2.2-mile trail segment is to be located adjacent to Wolf Creek and State Route 49.

The Phase I ESA included research and review of records, interviews and surface reconnaissance. Based on the findings of historical research performed as part of the Phase I ESA, NV5 performed soil sampling and laboratory analysis at selected locations to determine soil metals concentrations. This report presents the findings of the Phase I ESA and Phase II soil sampling and analysis, as well as NV5's opinions and conclusions regarding the presence of recognized environmental conditions associated with the proposed trail alignment.

NV5 appreciates the opportunity to participate in this important community project. If you have any questions regarding this report, please contact the undersigned.

Sincerely,

NV5

1 INTRODUCTION

NV5 prepared this report to present the findings of a Phase I Environmental Site Assessment (ESA) of the preferred alignment of the proposed Phase 2 of the Wolf Creek Trail, which is referred to as "the proposed trail alignment," "the subject trail alignment" or "the trail" in this report.

Based on the findings of historical research performed as part of the Phase I ESA, NV5 performed Phase II soil sampling and laboratory analysis at selected locations to determine soil metals concentrations.

This report presents the findings of the Phase I ESA and Phase II soil sampling and analysis, as well as NV5's opinions and conclusions regarding the presence of recognized environmental conditions (RECs) associated with the proposed trail alignment. NV5 understands that the findings of this report are to be used to support environmental review of the proposed trail.

1.1 PURPOSE

The purpose of the Phase I ESA is to evaluate whether there is evidence of RECs that may have impacted or could potentially impact the proposed trail alignment. The Phase I ESA was performed using the ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (designation E1527-21) as a guideline. The ASTM E1527 document has been identified in the U.S. Environmental Protection Agency (USEPA) publication entitled *Standards and Practices for All Appropriate Inquiries; Final Rule* (40 CFR Part 312) as an acceptable guidance document for performing Phase I ESAs that satisfies the federal requirements for the conduct of "all appropriate inquiries" ("AAIs") under section 101(35)(B) of the Comprehensive Environmental Response Compensation and Liability Act (CERCLA).

The term "recognized environmental condition" as defined by the ASTM E1527 document pertains to the presence or likely presence of hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. The term "recognized environmental condition" is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The term "historical recognized environmental condition" is defined by the ASTM E1527 document as a past release of any hazardous substances or petroleum products that has occurred in connection with the proposed subject trail and been addressed to the satisfaction of the applicable regulatory authority, or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property-use restrictions, activity-and-use limitations, institutional controls or engineering controls).

The term "controlled recognized environmental condition" is defined by the ASTM E1527 document as an REC resulting from a past release of hazardous substances or petroleum

products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no-further-action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property-use restrictions, activity-and-use limitations, institutional controls or engineering controls). For example, if a leaking underground storage tank (UST) has been cleaned up to a commercial-use standard, but does not meet unrestricted residential cleanup criteria, this would be considered a controlled recognized environmental condition (CREC). The "control" is represented by the restriction that the property use remain commercial. A condition identified as a CREC does not imply the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been or is intended to be implemented.

The information provided in this report is based on specific assessment tasks set forth in the ASTM guideline, and is not meant to be comprehensive, to identify all potential concerns, or to eliminate risks associated with environmental conditions. NV5 has used judgment and experience to arrive at the findings and conclusions presented in this report; therefore, the findings and conclusions are not scientific certainties. Environmental conditions may exist at the site that were not identified or encountered as a result of this Phase I ESA. Additional limitations of the Phase I ESA are discussed in the "Data Gaps" and "Limitations" sections of this report.

1.2 SCOPE OF SERVICES

The Phase I ESA included research of local records, review of information provided by an environmental database firm, surface reconnaissance and interviews as described below.

- We researched the history of the subject property and the area within the immediate vicinity (generally, within a half-mile radius of the proposed trail).
- We reviewed information provided by Environmental Data Resources, Inc. (EDR), an environmental database research firm. The EDR Corridor report (presented as Appendix A) provides federal and state information intended to meet ASTM E1527 guidelines for environmental site assessment.
- We observed surface conditions along the proposed trail alignment and reviewed current and historical aerial photographs, parcel maps and topographic maps of the area.
- We interviewed a representative of the City of Grass Valley, who is designated as the key site manager. The key site manager completed a questionnaire that is presented in Appendix B.

The Phase II soil sampling and analysis included:

- Collection of eight near-surface soil samples along the proposed trail alignment; and
- Analysis of the soil samples for total concentrations of heavy metals by a California-certified analytical laboratory.

1.3 GUIDING PRINCIPLES

The following principles are set forth in the ASTM E1527 guidance document and are an integral part of the Phase I ESA practice:

Uncertainty Not Eliminated — No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, and this practice recognizes reasonable limits of time and cost.

Not Exhaustive — The practice of "AAIs" does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information.

Level of Inquiry is Variable — Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry. Other than the four soil samples obtained from the former mechanic's pit, no subsurface investigation, sampling or laboratory analysis was performed as part of this ESA. Such additional investigation would tend to further reduce risks associated with environmental conditions, but at increased cost. An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in the ASTM guidance document. We rely on our client to assess business environmental risk, and to determine the level of assessment that is required, if any, beyond this Phase I ESA.

Comparison with Subsequent Inquiry — It should not be concluded or assumed that an inquiry was not "AAIs" merely because the inquiry did not identify RECs in connection with a property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors.

2 SITE DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

The proposed Phase 2 of the Wolf Creek Trail is an approximately 2.2-mile segment of paved, non-motorized trail extending northeast through the City of Grass Valley from the northern terminus of Phase 1 of the trail at the North Star Mining Museum to the intersection of Idaho Maryland Road and Sutton Way. The proposed trail alignment is relatively flat-lying and generally follows Wolf Creek and State Route 49. A location map and trail map are presented as Figures 1 and 2, respectively.

2.2 CURRENT SITE USES/OPERATIONS

The proposed trail segment includes undeveloped greenbelt, sidewalks and road shoulder.

2.3 CURRENT USES ON ADJACENT PROPERTIES

The trail crosses through areas of residential and commercial development and uses greenbelt areas as well as existing road frontage.

2.4 PREVIOUS INVESTIGATION

No previous hazardous materials investigation of the trail alignment is known, although many nearby properties have been investigated previously.

2.5 PHYSICAL SETTING

Referencing the Grass Valley, California 7.5 Minute Topographic Quadrangle (United States Geological Survey [USGS], 1973) the proposed trail crosses the northwest corner of Section 34, southeast corner of Section 27, and northern half of Section 26, Township 16 North, Range 8 East, referencing the Mount Diablo geodetic datum. Trail elevations range from roughly 2,350 to 2,550 feet above mean sea level.

2.5.1 Geology

The trail is located within a region underlain by a complex assemblage of igneous and metamorphic rocks in the western foothills of the Sierra Nevada. The regional structure of the foothills is characterized by the north-northwest trending Foothills Fault System, a feature formed during the Mesozoic era (between approximately 65 million and 248 million years ago) in a compressional tectonic environment. A change to an extensional tectonic environment during the late Cenozoic (approximately within the last 30 million years), resulted in normal faulting which has occurred coincident with some segments of the older faults near the site.

According to the Tuminas (1983), the southern segment of the trail segment crosses an area mapped as La Barr Meadows quartz diorite, and the northern segment crosses an area mapped as Lake Combie diabase, serpentine and gabbro.

2.5.2 Soil

According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey, the trail crosses land that is mapped as Alluvial land clayey (Ao), Placer diggings (Pr), Sites silt loam (SID), Sites very stony loam (SmC), and Rock outcrop-Dubakella (RrE).

2.5.3 Surface Water

The trail generally follows Wolf Creek.

2.5.4 Groundwater

Groundwater depths were not determined. Wolf Creek flows adjacent to segments of the trail and influences local groundwater elevations. Shallow groundwater may be perched over relatively impermeable soil/rock layers, while deeper groundwater is typically encountered in bedrock fractures.

3 USER PROVIDED INFORMATION

3.1 TITLE RECORDS

A chain-of-title report was not available for review. The proposed trail alignment crosses through properties that are both public and private. NV5 understands that the City of Grass Valley is obtaining easements for the trail.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

Research of environmental liens and Activity and Use Limitations (AULs) was not performed as part of this Phase I ESA. NV5 assumes that environmental liens and AULs will be researched by others during the trail easement acquisition process.

3.3 QUESTIONNAIRES

Information regarding current, controlled, or historically recognized environmental conditions associated with the subject property is presented in a questionnaires completed by Mr. Bjorn Jones of the City of Grass Valley. Because the proposed trail crosses through numerous private and public properties, and interview of the various property owners is not practicable within the framework of this Phase I ESA, Mr. Jones is serving as the key site manager as well as the Phase I ESA user. The completed questionnaires are presented in Appendix B.

3.4 OWNER/SITE MANAGER/OCCUPANT INFORMATION

The proposed trail crosses through numerous private and public properties. The City of Grass Valley will acquire easements for the trail.

3.5 REASON FOR PERFORMING PHASE I ESA

This Phase I ESA was performed to support environmental review of the proposed trail.

4 HISTORICAL USE INFORMATION

Historical site use information was obtained through a review of readily-available historical records such as aerial photographs, historical topographic maps, city directories, mining maps and regulatory agency files.

4.1 HISTORICAL SOURCES

Site use information was obtained through a review of the following list of historical sources. Copies of the historical sources are provided in Appendix A. The results of the review of these sources are summarized below.

- **Aerial Photographs:** Aerial photographs held at the NV5 library were reviewed from the following years: 1939, 1947, 1952, 1962, 1978, 1984, 1998, 2005, 2006, 2010, 2011, 2013, 2015, 2017 and 2021. The photographs are sourced from EDR, USGS and Google Earth.
- **Mining Maps:** Historical mining maps by Johnston (1939), Logan (1930), Lindgren (1896) and Englebright (1884) pertain to the proposed trail alignment.

- **Topographic Maps:** Historical topographic maps were reviewed for 1888, 1891, 1892, 1894, 1895, 1948, 1949, 1950, 1969, 1973, 1995, 1998, 2000, and 2012. The maps pertain to USGS maps for Smartsville, Grass Valley, and Nevada City. The maps were sourced from USGS Historical Topographic Map Explorer (https://livingatlas.arcgis.com/topoexplorer/index.html).
- **Previous Environmental Reports:** No previous environmental reports pertaining to the proposed trail alignment are known, although reports exist for nearby properties as reported by the State Water Resources Control Board (SWRCB) GeoTracker website and the California Department of Toxic Substances Control (DTSC) Envirostor website.
- **Interviews:** Interviews are summarized in the "Interviews" section of this report.

4.2 HISTORICAL REVIEW SUMMARY

Mining features are depicted on historical maps by Johnston (1939), Logan (1930), Lindgren (1896) and Englebright (1884). Historical features identified near the proposed trail alignment are described below, following the proposed trail alignment from southwest to northeast.

4.2.1 Grass Valley Mining District

The proposed trail crosses through the historical Grass Valley Mining District. Hard rock (lode) gold mining was performed in the historical mining district from the early 1850s to the mid 1950s. Mining waste (waste rock, gold-bearing ore and processed tailings) commonly contains elevated concentrations of heavy metals (such as arsenic and lead) from naturally mineralized ore materials, as well as other chemicals (such as mercury) that were used to extract gold from the ore. Heavy metals such as arsenic, gold and mercury have known toxic effects and can present a health risk.

4.2.2 North Star Mine

The proposed trail starts near the North Star Mining Museum, which is located north of the historical North Star mine. The North Star mine included at least 42 mines or mine claims, and the most extensive mining activities took place at the locations of the original North Star Mine inclined shaft, the Massachusetts Quartz Mine, the New York Hill Mine, the New Rocky Bar Mine, the North Star Central Shaft, and the Omaha Mine. The 1947 aerial photograph depicts large piles of mine waste and mine tailings near the historical location of the North Star Central Shaft and Rocky Bar Shaft, both located west of Wolf Creek and Allison Ranch Road. Englebright (1884) depicts the trailhead location within the Massachusetts Hill mining claim; however, the major historical mining features appear to be located south of the proposed trail alignment.

4.2.3 Golden Center Mine

Johnston (1939) depicts the Golden Center Mine approximately 3,000 feet northeast of the trailhead, near the location of the Caltrans material storage yard on the northwestern side of State Route 49, southwest of the Safeway shopping center in downtown Grass Valley. The 1947 aerial photograph depicts large piles of mine waste at the current location of State Route 49 and the Caltrans materials storage yard.

The proposed trail is to cross between the Caltrans storage yard (southeast of the trail) and Wolf Creek (northwest of the trail). Mine features were not identified in this area during the

site reconnaissance. Mine waste was likely disturbed by construction of State Route 49 in the 1960s. Mine waste previously located in this area may have contained elevated concentrations of heavy metals such as arsenic, lead and mercury. Soil sampling at this location is described in Section 8 of this report.

4.2.4 Narrow Gauge Railroad

Johnston (1939) depicts the historical Nevada County Narrow Gauge Railroad (NCNGRR) alignment roughly parallel to 7,000 feet of the northeastern-most end of the trail. The proposed trail alignment does not appear to cross through depots or maintenance facilities associated with the historical NCNGRR, where soil contamination would more likely be present.

4.2.5 Crown Point Mine

Johnston (1939) and Logan (1930) depict the historical Crown Point Mine at a location approximately 5,500 feet from the proposed northeastern trail terminus, beneath the present-day State Route 49 near the East Main Street interchange and East Main roundabout. The proposed trail alignment is located south of State Route 49 and up slope from the historically mapped mine location.

4.2.6 Idaho-Maryland Mine

Johnston (1939) depicts the historical Maryland Mine at a location approximately 1,000 feet from the proposed northeastern trail terminus. Logan (1930) depicts the Idaho Shaft at this location. Extensive historical gold mining and ore processing was performed in this area. The 1947 and 1952 aerial photographs depict mine tailings stored in tailings ponds located south of Wolf Creek.

The Idaho-Maryland mine has been the subject of hazardous materials site characterization and cleanup planning. Information pertaining to the historical mine tailings ponds is presented on the DTSC Envirostor website (https://www.envirostor.dtsc.ca.gov/public/map/?myaddress=grass+valley; Centennial M-1 Property, DTSC Site Code 102370).

Because the proposed trail is to run on paved streets in this location, significant exposure to mine waste from the Idaho-Maryland Mine or other historical mining operations in this area is considered unlikely. If the alternate trail alignment to the south of Idaho-Maryland Road within the Centennial M-1 Property is selected, then additional review should be performed to verify that the proposed trail alignment is outside of the area contaminated by mine tailings.

5 RECORDS REVIEW

5.1 STANDARD ENVIRONMENTAL RECORDS SOURCES

The discussion presented in this section is based on information obtained from environmental databases and review of regulatory agency records. The sites described below are discussed based on their proximity to the proposed subject trail and the nature of the environmental database records. An EDR database report (Appendix A) gives a complete list of approximately 392 sites identified by EDR within a one-mile radius selected pursuant to the ASTM E1527-21 guidelines. The listings are collected from computerized databases of federal, state and local

environmental records. Regulatory agency databases searched and reported in the EDR report include:

- U.S. Environmental Protection Agency (U.S. EPA) – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS)
- U.S. EPA – Comprehensive Environmental Response Compensation and Liability Act (CERCLA) National Priorities List (NPL)
- U.S. EPA – CERCLA Proposed NPL
- U.S. EPA – Federal Superfund Liens (NPL Liens)
- U.S. EPA – CERCLA No Further Remedial Action Planned Site (CERC-NFRAP)
- U.S. EPA – Resource Conservation and Recovery Information System (RCRAInfo), Treatment, Storage or Disposal (TSD) facilities, and Small Quantity, Large Quantity, Conditionally Exempt Small Quantity and Non Generators (SQG, LQG, CESQG, and NonGen) of hazardous waste
- U.S. EPA – RCRA Corrective Action Report (CORRACTS)
- U.S. EPA – Land Use Control Information System; Engineering Controls Site List, and Sites with Institutional Controls (LUCIS, ENG CONTROLS, and INST CONTROLS)
- U.S. EPA – Emergency Response Notification System (ERNS)
- U.S. EPA – CERCLA Records of Decision (ROD)
- U.S. EPA – Facility Index System (FINDS)
- U.S. Department of Transportation – Hazardous Materials Information Reporting System (HMIRS)
- Department of Toxic Substances Control (DTSC) – Voluntary Cleanup Program (VCP)
- DTSC – EnviroStor Database (ENVIROSTOR)
- DTSC –- Facility and Manifest Data (HAZNET)
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites, including Indian Land
- SWRCB – Solid Waste Facilities (SWF/LF)
- SWRCB – Aboveground and Underground Storage Tank (AST and UST) sites
- SWRCB – Cleanup Program Sites and Spills, Leaks, Investigations and Cleanups (CPS-SLIC)
- SWRCB – Voluntary Cleanup Sites (VCP)
- SWRCB – Waste Management Units (WMUDS/SWAT)
- SWRCB – California Integrated Water Quality System (CIWQS)
- CalEPA – California Environmental Reporting System Regulated Site Portal (CERS)
- CalEPA – CERS Hazardous Waste Generator and AST and UST sites (CERS HAZ WASTE and CERS TANKS)
- California Air Resources Board – Emissions Control Inventory (EMI)
- California Office of Emergency Services – California Hazardous Materials Incident Report System (CHMIRS).

Additionally, NV5 searched the databases below for environmental records related to the subject property:

- SWRCB GeoTracker website: https://geotracker.waterboards.ca.gov

- DTSC EnviroStor website: https://www.envirostor.dtsc.ca.gov/public/

5.2 SUBJECT PROPERTY ENVIRONMENTAL DATABASE LISTINGS

The subject property is a proposed trail, and the trail alignment is located near numerous sites listed on environmental databases, as described below under "Surrounding Area Environmental Database Listings."

5.3 SUBJECT PROPERTY REGULATORY RECORDS REVIEW

NV5 inquired with the Nevada County Community Development Agency (CDA) and the City of Grass Valley regarding records associated with the proposed trail alignment. Margie Castellanos with CDA did not identify available records. Brian Foss with the Nevada County Planning Department provided the "Wolf Creek Parkway Alignment Study and Conceptual Master Plan" (March 2006). Information from the City of Grass Valley is addressed in the "Interviews" section of this report.

5.4 SURROUNDING AREA ENVIRONMENTAL DATABASE LISTINGS

The proposed trail passes numerous sites with environmental database listings, including the following, from southwest to northeast:

- Sambold Property, 603 Mill Street. Former underground storage tank (UST) site on opposite side of Wolf Creek from proposed trail.
- 309 Mill Street. Trailhead property owned by Grass Valley. Soil management plan has been prepared to address soil lead impact related to past structure demolition on opposite side of Wolf Creek from proposed trail.
- Grass Valley Ready Mix, 258 Railroad Avenue. Petroleum products and hazardous materials storage.
- Gold-N-Green Rental, 302 Railroad Avenue. Petroleum products and hazardous materials storage.
- Rental Guys, 302 Railroad Avenue. Petroleum products and hazardous materials storage.
- A&A Concrete Supply, 270 Railroad Avenue. Petroleum products and hazardous materials storage.
- Toms Sierra Company, 325 Railroad Avenue. Petroleum product storage/release.
- Hunt & Sons, 335 Railroad Avenue. Petroleum product storage/release.
- Grass Valley Bulk Plant, 335 Railroad Avenue. Petroleum product storage/release.
- Weaver Auto and Truck, 400 Idaho Maryland Road. Hazardous materials storage.
- PG&E Manufactured Gas Plant, 403 Idaho Maryland Road. Former release site, paved.
- Celestial Valley Towing/Ventures 865 Idaho Maryland Road. Petroleum products.

Selected sites are discussed below.

1. Site Name: PG&E – Grass Valley MGP SV-DM-GRV-2
   Address: 403, 453, and 467 Idaho Maryland Road
   Proximity: 0.01 miles SSE
   Database: CPS-SLIC, DEED, CERS, ENVIROSTOR

According to PG&E, the Grass Valley Manufactured Gas Plant (MGP) was built in 1902 on 1.3 acres located at 403, 453, and 467 Idaho Maryland Road, APNs 009-220-01, -02, and -03. The

plant was designated as "SV-DM-GRV-2," and it replaced an older plant in Grass Valley located at Main, Auburn, Stewart, and Bank Streets (SV-DM-GRV-1).

The site manufactured propane by "cracking" bunker C oil in the presence of blue gas and steam. The process resulted in the formation of wastes including tar sludges that contain polynuclear aromatic hydrocarbons, ash and clinkers, lamp black, and petroleum sludges. Some of these materials remain buried at the site, capped under asphalt and concrete and separated from the adjacent Wolf Creek by a retaining wall. PG&E conducted investigations from 1989 to 1992 to assess the amount of contamination. Subsequent groundwater monitoring determined that the wastes, although toxic, did not readily move from the site through the groundwater. The buried wastes are reportedly to remain isolated from infiltrating precipitation and groundwater, and human exposure is to be prevented. A deed restriction/Covenant and Agreement to Restrict use of Property for APN 009-220-01, -02, and -03 was recorded October 19, 2001, which runs with the land and prevents excavation into the subsurface. Monitoring and Reporting Program (MRP) No. R5-2007-0805 was signed on October 3, 2007, and requires annual inspections of the cap and a retaining wall.

2. Site Name: Toms Sierra Company Bulk Plant; Hunt & Sons; Jerco Oil Inc
   Address: 335 Railroad Ave.
   Proximity: 0.04 miles SSE
   Database: UST, LUST, CHMIRS, Cortese, CUPA Listings, HAZNET, HIST CORTESE, CERS, HWTS

In January 1991, soil and groundwater contamination was identified during an environmental investigation. To date, 11 monitoring wells have been installed and monitored regularly for total petroleum hydrocarbons including gasoline (TPHg), benzene and methyl tertiary butyl ether (MtBE). In 18 years of monitoring the groundwater plume gradually shrunk in size and concentration. Analytical data indicate that WQOs had nearly been achieved in all site wells. The affected shallow groundwater is not used as a source of water supply nor is it likely to be used as a source of water supply in the foreseeable future. Water users in the vicinity of the site rely on a public water supply. Records state that based on facts in the record and hydrologic and geologic conditions at the site, the limited residual petroleum hydrocarbons that remain in soil and groundwater pose a low risk to human health, safety and the environment. E_2C Remediation destroyed groundwater monitoring wells, remediation wells, and soil vapor survey well under permit from the Nevada County Department of Environmental Health (NCDEH) in October 2014. In December 2014, the SWRCB issued closure/no further action letter titled “Underground Storage Tank (UST) Case, Remedial Action Completion Certification.”

3. Site Name: 309 Mill Street
   Address: 309 Mill Street
   Proximity: 0.03 miles NW
   Database: US BROWNFIELDS, FINDS

The property at 309 Mill Steet is owned by the City of Grass Valley and is a proposed trailhead for the subject trail. A Phase I/II ESA was performed on the property by H&K/NV5 in March of 2018, identifying elevated lead concentrations in soil. A work plan was prepared by NV5 in 2019 to describe procedures for management of lead-contaminated soil on the property. The Phase I/II ESA, addendum and work plan are listed in the references section of this report. The

property was a brewery from as early as 1891 to sometime prior to 1948. After 1948, an apartment complex was on the property until it burned down in 2005. The fire debris was removed from the property and was the likely source of soil lead contamination. The property has been vacant since 2005.

5.5 VAPOR INTRUSION EVALUATION

No evidence of significant volatile organic compound (VOC) release or storage in significant quantity has been identified in relation to the subject trail or adjacent properties. Past VOC releases associated with fuel releases or other releases listed on the database appear to be addressed by state regulatory agencies. No enclosed spaces are proposed in association with the trail. The available information suggests that there is a low potential for VOC migration from soil or groundwater beneath the trail in quantities that would significantly impact outdoor air.

6 SITE RECONNAISSANCE

NV5 walked the proposed trail alignment on January 11, 2022. Surface reconnaissance was performed on foot along the preferred trail route where possible, and some road segments were driven. Photographs are presented in Appendix C. Observations are summarized below.

6.1 OBSERVATIONS

The preferred alignment of the proposed trail was accessed from the existing Lower Wolf Creek Trail parking area along a narrow greenbelt between the Wolf Creek and SR 49/20. The greenbelt was densely vegetated, and apparently inert household debris was scattered throughout the vegetated greenbelt. Several drainage culverts were observed running from SR 49/20 and discharging into Wolf Creek. Two manhole covers and a large steel conveyance pipe (City sewer) were observed adjacent to the proposed trail between Highway 20 and South Auburn Street.

A Caltrans storage yard is located above the proposed trail alignment, and holds construction materials, aggregate materials, wood waste and green waste. Heavy equipment is used at the storage yard to move materials. The yard contains a storm water detention basin to temporarily detain runoff from the storage yard and SR 49/20. Sampling of this area (the former Golden Center Mine site) is described in Section 8.

Continuing northeast, the proposed trail alignment deviates from Wolf Creek, and the creek is undergrounded southwest of South Auburn Street. From South Auburn Street to Bennett Street the proposed trail alignment utilizes established infrastructure including sidewalks and the shoulder of a frontage road. Sampling of soil adjacent to the road is described in Section 8.

Southeast of Bennett Street to Idaho-Maryland Road the proposed trail alignment utilizes a greenbelt above SR 49/20. The greenbelt is densely vegetated, and apparently inert household debris was scattered throughout the greenbelt.

The proposed trail alignment from Idaho Maryland Road to Sutton Way utilizes existing infrastructure as the preferred alignment runs adjacent to Idaho Maryland Road and north of Wolf Creek until its termination at Sutton Way.

7 INTERVIEWS

7.1 INTERVIEW WITH SITE MANAGER

NV5 interviewed Bjorn Jones, the project manager for the proposed trail project and Assistant Engineer for City of Grass Valley, on February 4, 2022. Mr. Jones stated that he is not aware of evidence of recognized environmental conditions on the proposed trail alignment. A completed key site manager questionnaire is presented in Appendix B.

8 SOIL SAMPLING AND LABORATORY ANALYSIS

NV5 obtained eight shallow soil samples from the proposed trail alignment on January 11, 2022. Laboratory results are summarized in Table 1. Sample locations are depicted on Figure 3. Photographs are presented in Appendix C, and the laboratory report and chain of custody document are presented in Appendix D.

8.1 SOIL SAMPLING AND LABORATORY ANALYSIS

Eight soil samples were collected as grab samples (independent, discrete samples). Locations, depths and analysis are listed below. Sample locations are depicted on Figure 3.

Summary of Soil Sample Locations and Laboratory Analysis Methods

Sample Name	Location	Depth (feet bgs)	Analysis
WCT-1	West of Caltrans storage yard	0-1.0	CAM 17
WCT-2	Northwest of Caltrans storage yard	0-1.0	CAM 17
WCT-3	Northwest of Caltrans storage yard	0-1.0	CAM 17
WCT-4	North of Caltrans storage yard	0-1.0	CAM 17
WCT-5	Northeast of Caltrans storage yard	0-1.0	CAM 17
WCT-6	Southeast of Hansen Way	0-1.0	Lead
WCT-7	Southeast of Hansen Way	0-1.0	Lead
WCT-8	Southeast of Hansen Way	0-1.0	Lead

Notes:
bgs = below ground surface
CAM 17 = California Assessment Manual 17 Metals (Title 22 Metals), EPA Methods 6010B/7471A
Lead analyzed by EPA Method 6010B

Samples were obtained using decontaminated hand tools and single-use, disposable plastic scoops to transfer soil into a new, single-use, resealable plastic bag for homogenization by kneading and shaking. After homogenization, the samples were labeled and placed on ice in a thermally insulated shipping container. New nitrile gloves were used for each sample location.

Samples were shipped to Pace Analytical (Pace; Environmental Laboratory Accreditation Program [ELAP] certification number 2932). Sample handling and shipment were performed under chain-of-custody documentation. Test methods are summarized in the table above.

8.2 LABORATORY RESULTS

8.2.1 Screening Levels

The laboratory results are compared to soil screening levels established by the DTSC and USEPA. The DTSC has the responsibility of managing the state's hazardous waste program to protect public health and the environment. Screening levels related to protection of human health in the case of routine, long term exposure by direct pathways (i.e., ingestion, inhalation and dermal contact) commonly include DTSC Screening Levels (DTSC-SLs) and USEPA Regional Screening Levels (RSLs). For inorganics (e.g., metals), background concentrations are also used as a basis for comparison.

RSLs and DTSC-SLs include inorganic constituent concentrations that are based on the protection of public health. In California, DTSC-SLs are commonly used in lieu of RSLs when DTSC uses toxicity criteria that are different than the toxicity criteria used by the USEPA.

The RSLs and DTSC-SLs are considered conservative. Under most circumstances, the presence of a chemical in media at concentrations less than the corresponding RSL or DTSC-SL can be assumed not to pose a significant, long-term (chronic) threat to human health. The presence of a chemical or inorganic constituent at a concentration in excess of a screening level does not necessarily indicate that adverse impacts to human health are occurring or will occur; however, further evaluation of potential human health concerns are generally appropriate if screening values are exceeded.

8.2.2 Metals in Soil

Laboratory results are summarized in Table 1. Arsenic, cobalt, lead and mercury were detected in some samples above the corresponding screening levels, as discussed below.

Arsenic

Total arsenic in soil samples WCT-1 through WCT-5 ranged from 9.7 milligrams per kilogram (mg/kg), which can also be expressed as parts per million (ppm) to 34.8 mg/kg. These values are higher than the DTSC-SL for arsenic in residential soil (0.11 mg/kg) and higher than the DTSC-SL for arsenic in commercial soil (0.36 mg/kg). The values are lower than the Total Threshold Limit Concentration (TTLC) used for designating soil as hazardous waste (500 mg/kg).

Although the total arsenic concentrations detected in the soil samples exceed the screening levels and therefore may be of concern for residential land use, they are within the typical range of ambient soil arsenic concentrations for the region. Typical "non-mineralized" background arsenic concentrations often range up to 20 mg/kg, while more mineralized "ambient" arsenic concentrations are encountered at mineralized locations. Surfacing of the trail will tend to reduce exposure to soil dust. Arsenic values up to approximately 190 mg/kg were previously approved by the DTSC for trail use at the Empire Mine State Historic Park.

Cobalt

The total cobalt concentration detected in soil sample WCT-3 was 38.8 mg/kg. This value is higher than the DTSC-SL for cobalt in residential soil (23 mg/kg) and lower than the DTSC for cobalt in commercial soil (350 mg/kg). The value is also lower than the TTLC used for designating soil as hazardous waste (8,000 mg/kg).

Lead

The total lead concentration detected in soil sample WCT-5 was 259 mg/kg. This value is higher than the DTSC-SL for lead in residential soil (80 mg/kg) and lower than the DTSC for lead in commercial soil (320 mg/kg). The value is also lower than the Total Threshold Limit Concentration (TTLC) used for designating soil as hazardous waste (1,000 mg/kg).

Soil samples WCT-6 through WCT-8 were obtained from near the road shoulder to evaluate the potential for aerially deposited lead (ADL) from historical leaded fuel emissions from highway traffic. The detected soil lead concentrations ranged from 53 to 326 mg/kg, which are below the DTSC-SL for commercial soil (320 mg/kg) and the TTLC for designating soil as hazardous waste (1,000 mg/kg).

Mercury

The total mercury concentrations detected in soil samples WCT-1 through WCT-5 range from 1.05 mg/kg to 2.86 mg/kg. These values are higher than the DTSC-SL for mercury in residential soil (1.0 mg/kg) and lower than the DTSC-SL for mercury in commercial soil (4.4 mg/kg). These values are also lower than the TTLC used for designating soil as hazardous waste (20 mg/kg).

9 FINDINGS AND OPINION

The proposed 2.2-mile alignment of Phase 2 of the Wolf Creek Trail currently consists of undeveloped greenbelts, sidewalks and frontage road shoulder. The trail crosses through public and private property in the City of Grass Valley. This Phase I ESA did not encounter evidence of recognized environmental conditions (RECs) associated with the proposed trail alignment. Based on the findings of this assessment, the RECs encountered on adjacent sites are not considered likely to have a significant impact on the proposed trail alignment, as summarized below.

1. The proposed trail crosses through the historical Grass Valley Mining District, where hard rock (lode) gold mining was performed from the early 1850s to the mid 1950s. Mining waste (waste rock, gold-bearing ore and processed tailings) commonly contains elevated concentrations of heavy metals (such as arsenic and lead) from naturally mineralized ore materials, as well as other chemicals (such as mercury) that were used to extract gold from the ore. Heavy metals such as arsenic, gold and mercury have known toxic effects and can present a health risk in the case of routine contact. The following historical mining-era operations are notable in the vicinity of the proposed trail alignment and are further discussed in Section 4 of this report.
    a. The proposed trail is located to the north of the major historical workings of the North Star Mine.
    b. The trail crosses over land previously associated with the Golden Center Mine. The historical mine features were primarily located beneath the present-day SR 49/20 and the Caltrans storage yard above the proposed trail alignment that is accessible from SR 49/20. Soil sampling on the proposed trail alignment and laboratory analysis for heavy metals detected arsenic, lead and mercury at concentrations that exceed some screening levels for human health. The arsenic concentrations were within the local

ambient range and are within the range approved by DTSC for other trails in the area. The lead and mercury concentrations exceed residential screening levels but do not exceed commercial screening levels.

c. The northeast segment of the trail is roughly aligned with the historical Nevada County Narrow Gauge Railroad (NCNGRR) alignment but does not appear to cross through historical depot locations or historical maintenance facility locations associated with the railroad, where soil contamination would more likely be present.

d. The trail crosses near the historical Crown Point Mine, which is located beneath the present-day SR 49/20 near the East Main Street interchange and East Main Street roundabout. The proposed trail alignment is located south of SR 49/20 at this location, up slope from the historically mapped mine location.

e. The trail passes the historical Idaho-Maryland Mine location on the shoulder of Idaho Maryland Road. The former mine tailings ponds located on the opposite (southern) side of Wolf Creek have been the subject of hazardous materials site characterization and cleanup planning. Because the proposed trail is to run on paved streets in this location, significant exposure to legacy mine waste from the Idaho-Maryland Mine or other historical mining operations in this area is considered unlikely. If the alternate trail alignment to the south of Idaho-Maryland Road within the Centennial M-1 Property is selected, then additional review should be performed to verify that the proposed trail alignment is outside of the area contaminated by mine tailings.

2. The middle segment of the proposed trail is aligned with Hansen Way, a frontage road along SR 49/20. Soil samples WCT-6 through WCT-8 were obtained from near the road shoulder to evaluate the potential for aerially deposited lead (ADL) from historical leaded fuel emissions from highway traffic. The detected soil lead concentrations ranged from 53 to 326 mg/kg, which are below the DTSC-SL for commercial soil (320 mg/kg) and the TTLC for designating soil as hazardous waste (1,000 mg/kg).

3. Numerous records of environmental investigation and cleanup are available from federal and state databases for sites adjacent to the proposed trail alignment. These records are discussed in Section 5 of this report. Based on the information reviewed as part of this assessment and the nature of the proposed trail use, it is considered unlikely that these RECs will have a significant impact on the proposed trail project.

The following considerations are not unique to this assessment, but rather, are related to regional conditions.

- In the local region, radon is sometimes present in the subsurface at concentrations that may present a risk related to indoor air quality. No buildings are proposed as part of the trail project. Testing can be performed when needed to determine whether radon is present in buildings. Risks associated with radon were not assessed within the scope of this Phase I/II ESA.
- Based on review of published geologic maps, the bedrock underlying the northern segment of the proposed trail alignment may contain naturally-occurring asbestos (NOA). Because the trail will generally travel along paved surfaces in this area, NV5's opinion is

that NOA is not likely to be encountered in significant quantity during trail development. NOA was not evaluated as part of this Phase I/II ESA.

The information provided in this report is based on specific assessment tasks set forth in the ASTM guideline, and is not meant to be comprehensive, to identify all potential concerns, or to eliminate risks associated with environmental conditions. Additional limitations of the Phase I ESA are discussed in the Limitations section of this report.

10 DATA GAPS / DEVIATIONS

NV5 encountered the following data gaps during the Phase I ESA:

- Chain of title for all of the properties that the trail crosses was not available for review and is not practicably reviewable. Historical sources, including aerial photographs, mining maps, topographic maps and databases were reviewed.
- Research of environmental liens and AULs was not included in the scope of the Phase I ESA. NV5 assumes that reasonably ascertainable recorded land title records and lien records will be reviewed as trail easements are acquired.

The data gaps identified above are not expected to have a significant effect on ability to evaluate potential RECs associated with the proposed trail within the framework of the ASTM guidelines.

11 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the approximately 2.2-mile Phase 2 of the Wolf Creek Trail, located in Grass Valley, California. Any exceptions to, or deletions from this practice are described in the "Data Gaps/Deviations" and "Limitations" sections of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the proposed trail alignment. Details are presented in the "Findings and Opinions" section of this report.

12 LIMITATIONS

NV5 has presented the above information as it has been presented to us and cannot assume responsibility for the completeness or accuracy of the information reviewed or received. The information provided in this report is not meant to be comprehensive, to identify all potential concerns, or to eliminate the risk involved in property transactions.

The scope of this Phase I/II ESA did not include determining the presence of asbestos-containing building materials, radon, lead-based paint, drinking-water quality, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor-air quality, geologic hazards, biological agents and mold. This list of non-scope items is not intended to be all-inclusive.

NV5 has used judgment and experience to arrive at the findings and conclusions presented in this report. Therefore, the findings and conclusions are not scientific certainties. Environmental conditions may exist at the site that were not identified or encountered as a result of this

Phase I/II ESA. The recommendations provided herein are contingent upon NV5's review of future sampling results and any other pertinent information that becomes available.

Because research information is continually updated, the accounts presented in this report can become outdated with time. In addition, site conditions can change, potentially rendering our conclusions invalid or obsolete. Therefore, we do not recommend relying on the accuracy of this report after 180 days of the date issued. At that time, we recommend updating this report to reflect any new available information. We can assist in updating this report, should this process be necessary.

NV5 prepared and issued this report for the exclusive use of our client. The information, conclusions and recommendations presented apply only to the subject property. NV5 is not responsible for any other party's interpretations of the reported information.

NV5 performed this work in accordance with present, regional, generally accepted standards of care. This report does not represent a legal opinion. No warranty, express or implied, is intended. No environmental investigation can eliminate all uncertainty. Professional judgment and interpretation are inherent in the process and uncertainty is inevitable.

13 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the "all appropriate inquiries" in conformance with the standards and practices set forth in 40 CFR Part 312. A resume of the Environmental Professional signing this report is presented in Appendix E.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SUBJECT PROPERTY INFORMATION

ADDRESS

WOLF CREEK TRAIL
GRASS VALLEY, CA 95945

TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal registered storage tanks

AST: Aboveground Petroleum Storage Tank Facilities

A review of the AST list, as provided by EDR, has revealed that there is 1 AST site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
Not reported	400 IDAHO MARYLAND	B6 / 2	50
Database: AST, Date of Government Version: 07/06/2016			

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: CERS HAZ WASTE

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 07/15/2021 has revealed that there are 2 CERS HAZ WASTE sites within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page

Case Type:	Cleanup Program Site
Case Worker:	ACP
Local Agency:	Not reported
RB Case Number:	SL205513020
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Polynuclear aromatic hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPH)
Site History:	According to PG&E, the Grass Valley Manufactured Gas Plant was built in 1902 on 1.3 acres located at 10403 Idaho Maryland Road, Assessor's parcel no. 009-0220-002 and -003. The plant was designated as "GV-2", and it replaced an older plant in Grass Valley located at Main and Stewart Streets. The site manufactued propane by "cracking" bunker C oil in the presence of blue gas and steam. The process resulted in the formation of wastes including tar sludges that contain Polynuclear Aromatic Hydrocarbons, ash and clinkers, lamp black, and petroleum sludges. Some of these materials remain buried at the side, capped under asphalt and concrete and separated from the adjacent Wolf Creek by a retaining wall. PG&E conducted investigations from 1989 to 1992 to assess the amount of contamination. Subsequent groundwater monitoring determined that the wastes, although toxic, did not readily move from the site through the groundwater. As long as the wastes remain isolated from infiltrating precipitation and groundwater, and if human exposure is prevented, they are not expected to create environmental problems or health problems. PG&E signed a deed restriction, recorded 10/19/2001, that runs with the land and prevents digging into the subsurface. MRP NO. R5-2007-0805 was signed on 10/3/2007, and requires annual inspections of the cap and a retaining wall. The inspection must be done by a PE or PG after

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-26-2019
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	On 26 February 2019, Central Valley Water Board Staff inspected the Best Trailer construction project. The inspection was conducted during a rain event. During the inspection, Staff observed ponded storm water throughout the project. The stockpiles were covered with plastic and the drain inlets were covered with fabric. Staff observed that curb and gutter was complete, the pad was complete and base rock covered much of the project. Staff observed no significant storm water management issues.

BEST TRAILER (Continued) **S110994518**

Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	On 29 November 2018, Central Valley Water Board staff inspected the WVCLLC, Best Trailer construction project located at 500 Idaho Maryland Road in Grass Valley. The inspection was conducted during a rain event. During the inspection, staff observed effective erosion and sediment control BMPs throughout the project. The BMPs included paving on the front of the project and base rock in most other areas. Staff observed no significant storm water management issues.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/04/1994
Comments: PEA recommended medium priority. This facility is located at a former PG&E gas manufacturing plant site, approximately 1.3 acres. Water-gas was produced by cracking oil in the presence of blue gas and steam. The plant had a 100,000 cubic feet steel gas holder, 5 steel compression tanks, two 500 barrel fuel oil tanks encased in six foot concrete pits. Soil analyses indicated the presence of polynuclear aromatic compounds, PNAs, at .2 - 9,296 milligrams per kilogram. Ground water was analyzed from 3 monitoring wells, PNAs were detected in a monitoring well adjacent to Wolf Creek on the south border of the property.

Violation Source:	CERS
Site ID:	142792
Site Name:	Peters Drilling and Pump Service
Violation Date:	12-20-2017
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 03/13/2018. Drilling wastes and coolant stored beyond 180 days

elevated lead, arsenic, and mercury concentrations in soil. A Sampling and Analysis (SAP) was prepared following the Phase I & II ESA to further characterize environmental conditions identified during previous assessments, and to facilitate development of mitigation measures (if necessary) and development planning. A Work Plan was prepared to describe procedures for management of lead-containing soil at the property. Former Use: The property was used as a brewery from as early as 1891 to sometime prior to 1948. After 1948, an apartment complex was on the property until 2005. The apartment complex burned down in 2005, and the fire debris was removed from the property. The property has been vacant since 2005.

elevated lead, arsenic, and mercury concentrations in soil. A Sampling and Analysis (SAP) was prepared following the Phase I & II ESA to further characterize environmental conditions identified during previous assessments, and to facilitate development of mitigation measures (if necessary) and development planning. A Work Plan was prepared to describe procedures for management of lead-containing soil at the property. Former Use: The property was used as a brewery from as early as 1891 to sometime prior to 1948. After 1948, an apartment complex was on the property until 2005. The apartment complex burned down in 2005, and the fire debris was removed from the property. The property has been vacant since 2005.

Point of Reference:	-
Highlights:	Phase I & II ESA was performed for the property and identified elevated lead, arsenic, and mercury concentrations in soil. A Sampling and Analysis (SAP) was prepared following the Phase I & II ESA to further characterize environmental conditions identified during previous assessments, and to facilitate development of mitigation measures (if necessary) and development planning. A Work Plan was prepared to describe procedures for management of lead-containing soil at the property. Former Use: The property was used as a brewery from as early as 1891 to sometime prior to 1948. After 1948, an apartment complex was on the property until 2005. The apartment complex burned down in 2005, and the fire debris was removed from the property. The property has been vacant since 2005.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site ID:	148631
Site Name:	Robinson Enterprises, Inc. at Robinson Petroleum
Violation Date:	06-08-2020
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 06/08/2020. (Feb to March 2020 > 30 days)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS ID:	10158725
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	46721
Site Name:	Marks Cycle Store
Violation Date:	08-21-2018
Citation:	40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Description:	Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment,

MARKS CYCLE STORE (Continued) **S110994422**

and decontamination equipment to assure its proper operation in time of emergency.
Violation Notes: Returned to compliance on 11/02/2018. Interviewed in-person, Mark states that annually the fire extinguishers are certified. -CC
Violation Division: Nevada County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 46721
Site Name: Marks Cycle Store
Violation Date: 08-21-2018
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 11/02/2018. Assisted Mark in-person w/ eVQ, had to call DTSC for assistance. Not showing active in DTSC system but witnessed him completing the eVQ. Violation to be closed based on this. -CC
Violation Division: Nevada County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 46721
Site Name: Marks Cycle Store
Violation Date: 08-21-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 11/02/2018.

RB Case Number:	290076
Local Agency:	NEVADA COUNTY
File Location:	Regional Board
Local Case Number:	RO0000019
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

US BROWNFIELDS:

Name:	530 FREEMAN LANE
Address:	530 FREEMAN LANE
City,State,Zip:	GRASS VALLEY, CA 95949
Recipient Name:	City of Grass Valley
Grant Type:	Assessment
Property Number:	029-290-024-000
Parcel size:	4.88
Latitude:	39.20783459166757
Longitude:	-121.06850124205069
HCM Label:	-
Map Scale:	-
Point of Reference:	-
Highlights:	The Phase I and Phase II ESAs were performed concurrently. The assessments revealed no significant concentrations of petroleum hydrocarbons in areas of former undergrounds storage tanks (removed in 1995). Asbestos material and lead containing paint were identified at the primary structure on the property. Arsenic and cobalt were detected in soil samples, but appeared to be similar to naturally-occurring background concentrations in the region. Former Use: The property was occupied by AT&T, and includes an approximately 6,200-square-foot single-story building (constructed circa 1975), an approximately 1,200-square-foot covered bay, a lift, dumpster and recycling canopies, and storage areas. The property was vacant from at least 1888. Previous structures on the property included a transformer house and stone flume. In 1995 two underground storage tanks (8,000-gallon and 4,000-gallon) were removed from the property. Minor concentrations of hydrocarbons were detected in a soil sample obtained below one gasoline UST, and approximately 25 cubic yards of soil were removed from this for landfill disposal.

Map Scale:	-
Point of Reference:	-
Highlights:	The Phase I and Phase II ESAs were performed concurrently. The assessments revealed no significant concentrations of petroleum hydrocarbons in areas of former undergrounds storage tanks (removed in 1995). Asbestos material and lead containing paint were identified at the primary structure on the property. Arsenic and cobalt were detected in soil samples, but appeared to be similar to naturally-occurring background concentrations in the region. Former Use: The property was occupied by AT&T, and includes an approximately 6,200-square-foot single-story building (constructed circa 1975), an approximately 1,200-square-foot covered bay, a lift, dumpster and recycling canopies, and storage areas. The property was vacant from at least 1888. Previous structures on the property included a transformer house and stone flume. In 1995 two underground storage tanks (8,000-gallon and 4,000-gallon) were removed from the property. Minor concentrations of hydrocarbons were detected in a soil sample obtained below one gasoline UST, and approximately 25 cubic yards of soil were removed from this for landfill disposal.

Property Description:	The property was occupied by AT&T, and includes an approximately 6,200-square-foot single-story building (constructed circa 1975), an approximately 1,200-square-foot covered bay, a lift, dumpster and recycling canopies, and storage areas. The property was vacant from at least 1888. Previous structures on the property included a transformer house and stone flume. In 1995 two underground storage tanks (8,000-gallon and 4,000-gallon) were removed from the property. Minor concentrations of hydrocarbons were detected in a soil sample obtained below one gasoline UST, and approximately 25 cubic yards of soil were removed from this for landfill disposal.

Point of Reference:	-
Highlights:	The Phase I and Phase II ESAs were performed concurrently. The assessments revealed no significant concentrations of petroleum hydrocarbons in areas of former undergrounds storage tanks (removed in 1995). Asbestos material and lead containing paint were identified at the primary structure on the property. Arsenic and cobalt were detected in soil samples, but appeared to be similar to naturally-occurring background concentrations in the region. Former Use: The property was occupied by AT&T, and includes an approximately 6,200-square-foot single-story building (constructed circa 1975), an approximately 1,200-square-foot covered bay, a lift, dumpster and recycling canopies, and storage areas. The property was vacant from at least 1888. Previous structures on the property included a transformer house and stone flume. In 1995 two underground storage tanks (8,000-gallon and 4,000-gallon) were removed from the property. Minor concentrations of hydrocarbons were detected in a soil sample obtained below one gasoline UST, and approximately 25 cubic yards of soil were removed from this for landfill disposal.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PACIFIC BELL (Continued) **1000251544**

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
