# 1. SUMMARY

---

Leader Professional Services, Inc. (“Leader”) was retained by Radford Studio Center, LLC, Radford Studio Center, Inc, HCP Radford Studio Center 1, LLC and Square Mile Media Radford LLC (“Owner Entities”) to conduct a Phase I Environmental Site Assessment (“Phase I”) on the CBS Studio Center properties located at 4024 Radford Avenue, Studio City, California (collectively referred to as the “Site”), as shown in Figures 1 and 2.

The Phase I was conducted in general accordance with the American Society of Testing and Materials (“ASTM”) Standard Practice for Environmental Site Assessments, E 1527-13 and the United States Environmental Protection Agency’s (“USEPA”) requirements for All Appropriate Inquiry (“AAI”). Alec Minavio of Leader conducted the Phase I, including a Site Reconnaissance on December 1, 2021. Consistent with ASTM E 1527-13, a database service was used to perform a regulatory database search.

No on-Site Recognized Environmental Conditions (“REC”) were observed in connection with the Site.

No off-Site REC was observed in connection with the Site.

One (1) Historical RECs were observed in connection with the Site:

- The Site is listed as CalEPA Leaking Underground Storage Tank (“LUST”) Case No. 91604042. The LUST listing was opened in 1994 when gasoline contamination was encountered beneath five (5) 10,000-gallon USTs as a result of damage to the USTs and product lines from the 1994 Northridge Earthquake. The USTs were removed from the Site in February 1994 by A.E. Schmidt under a permit issued by the City of Los Angeles Fire Department. Impacted soils were removed from the Site for off-Site disposal and groundwater monitoring was required by the California Water Control Board in May 1994. Verification monitoring of soils and groundwater were conducted and CalEPA completed and closed the LUST file in January 1997.

No Controlled RECs were observed in connection with the Site.

Five (5) areas of concern were observed in connection with the Site:

- ViacomCBS operates fourteen (14) aboveground storage tanks (“ASTs”) registered with the City of Los Angeles Fire Department (“LAFD”) for the Site. The ASTs have a total capacity of 14,940 gallons and all contain diesel fuel.
- Four (4) electrical switches containing PCBs are located between Stages 5 and 9. The equipment is properly marked and logged in compliance with the USEPA PCB Regulations.

- Three (3) wastewater clarifying tanks were observed at the Site that discharge to the City of Los Angeles sanitary sewer system. The clarifiers are located near the main hazardous waste storage area, the transportation building and The Radford Broadcast Center building. The clarifiers collect and treat sanitary water that potentially contains contaminants, e.g, petroleum, paint-related material, etc. The clarifiers are operating under seven (7) Industrial Wastewater Permits issued by the City.
- An asbestos survey was conducted at the Site in December 1989 that identified ACM in buildings throughout the property. ACM abatement projects have been conducted in areas where ACM was present and renovations have occurred. The majority of ACM listed in the 1989 survey has been abated. A Limited Asbestos Survey Report prepared by Clark Seif Clark, Inc. in March 2021 for the Editorial 1 & Editorial 2 Buildings identifying ACM in areas of the buildings. Signage for the ACM was observed during the Site Reconnaissance.

## 2. INTRODUCTION

---

### 2.1 Purpose

Leader was retained by Owner Entities to conduct a Phase I for the Site. It is our understanding that this Phase I was performed at the request of Owner Entities as a part of required due diligence.

### 2.2 Detailed Scope of Services

The purpose of this Phase I is to evaluate the current and past operations of the Site and the uses of the immediately surrounding properties in order to identify the *recognized environmental conditions* in connection with the Site. Leader designed a scope of work to effectively accomplish the above-referenced objective with the understanding that access to the Site will be provided.

*Recognized Environmental Condition* is defined by ASTM as “the presence or likely presence of any *hazardous substances* or *petroleum products* on a property under conditions that indicate an existing release, a past release or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the property or into the ground, ground water or surface water of the property. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs.”

A *Historical Recognized Environmental Condition* is defined by ASTM as a “past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the *Site* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *Site* to any required controls.”

A *Controlled Recognized Environmental Condition* is defined as an “environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.”

A Phase I consists of a historical and regulatory records review, a Site Reconnaissance and interviews with current owners, if possible. State and federal regulatory agency database file records are reviewed to identify reported spills, hazardous activities, and adjacent properties of concern. The Site Reconnaissance consists of observing the Site and observing the surrounding properties from the public street or sidewalk.

Leader prepared a written report, summarizing the findings of the Phase I. Limitations are discussed further in Appendix A of this report.

### 2.3 Significant Assumptions

Leader assumes no liability for losses resulting from errors or omissions arising from the use of inaccurate/incomplete information or misrepresentations made by others during the performance of this Phase I.

## **2.4 Limitations and Exceptions**

As appropriate within the project schedule and budget, Leader reviewed readily available state and local environmental records and other public documents regarding the Site, adjacent properties, and as needed those found in the surrounding area. However, much of this information is provided to us by third parties, i.e. owners and regulatory agencies, and we cannot control or guarantee the accuracy or completeness of the information. As a result, our lack of knowledge of prior uses and conditions of the Site due to the inaccuracy or incompleteness of such information may therefore affect our ability to completely assess associated risks or hazards. Our Phase I review is limited to the potential for CERCLA (i.e. Superfund) environmental impact issues unless otherwise noted.

## **2.5 Special Terms and Conditions**

This Phase I was performed in general conformance with the Scope of Work, limitations and industry standards.

## **2.6 User Reliance**

- RCRA Hazardous Waste – Large Quantity Generator (“LQG”) and Small Quantity Generator (“SQG”).
  - The Site is registered with USEPA as a LQG (ID: CAD981686215) and a SQG (ID: CAP000092387) with active status. No compliance violations are listed in the last twelve quarters in connection with the registrations.
- CalEPA – Leaking Underground Storage Tanks (“LUST”), Hazardous Waste Manifest Data (“HAZNET”) and California Environmental Reporting System (“CERS”) programs.
  - The LUST listing was opened in 1994 when gasoline contamination was encountered beneath five (5) 10,000-gallon USTs as a result of damage to the USTs and product lines from the 1994 Northridge Earthquake. The USTs were removed from the Site in February 1994 by A.E. Schmidt under a permit issued by the City of Los Angeles Fire Department. Impacted soils were removed for off-Site disposal and groundwater monitoring was required by the California Water Control Board in May 1994. Verification monitoring of soils and groundwater were conducted and CalEPA completed and closed the LUST file in January 1997.

## 8. FINDINGS

---

### 8.1 Summary

Leader was retained by Owner Entities to conduct a Phase I on the Site located at 4024 Radford Avenue in Studio City, Los Angeles, California. Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

Alec Minavio of Leader completed the Phase I, including a Site Reconnaissance on December 1, 2021. Consistent with ASTM E 1527-13, a database service was used to perform a regulatory database search. FOIL requests were submitted to the CalEPA, Los Angeles County, and the City of Los Angeles.

### 8.2 Findings

*Recognized Environmental Conditions* are defined by ASTM as “the presence or likely presence of any *hazardous substances* or *petroleum products* on a property under conditions that indicate an existing release, a past release or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the property or into the ground, ground water or surface water of the property. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.”

*A Historical Recognized Environmental Condition* is defined by ASTM as a “past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *Site* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *Site* to any required controls.”

*A Controlled Recognized Environmental Condition* is defined by ASTM as an “environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

*An Area of Concern* is defined as a current or historical environmental, safety, health, facility or maintenance issue requiring attention but is not a significant environmental compliance or legacy issue. It is not a “recognized environmental condition” as defined above.

The significant findings associated with this Phase I are listed below:

#### **8.2.1 On-Site Recognized Environmental Conditions**

No on-site RECs were observed in connection with the Site.

#### **8.2.2 Off-Site Recognized Environmental Conditions**

No off-site RECs were observed in connection with the Site.

#### **8.2.3 Historical Recognized Environmental Conditions**

One (1) Historical RECs were observed in connection with the Site:

- The Site is listed as CalEPA Leaking Underground Storage Tank (“LUST”) Case No. 91604042. The LUST listing was opened in 1994 when gasoline contamination was encountered beneath five (5) 10,000-gallon USTs as a result of damage to the USTs and product lines from the 1994 Northridge Earthquake. The USTs were removed from the Site in February 1994 by A.E. Schmidt under a permit issued by the City of Los Angeles Fire Department. Impacted soils were removed from the Site for off-Site disposal and groundwater monitoring was required by the California Water Control Board in May 1994. Verification monitoring of soils and groundwater were conducted and CalEPA completed and closed the LUST file in January 1997.

#### **8.2.4 Controlled Recognized Environmental Conditions**

No Controlled RECs were observed in connection with the Site.

#### **8.2.5 Additional Areas of Concern**

Five (5) areas of concern were observed in connection with the Site:

- ViacomCBS operates fourteen (14) aboveground storage tanks (“ASTs”) registered with the City of Los Angeles Fire Department (“LAFD”) for the Site. The ASTs have a total capacity of 14,940 gallons and all contain diesel fuel.
- Four (4) electrical switches containing PCBs are located between Stages 5 and 9. The equipment is properly labeled and logged in accordance with USEA PCB Regulations will eventually require proper removal and disposal.
- Three (3) wastewater clarifying tanks were observed at the Site that discharge to the City of Los Angeles sanitary sewer system. The clarifiers are located near the main hazardous waste storage area, the transportation building and The Radford Broadcast Center building. The clarifiers collect and treat sanitary water that potentially contains contaminants, e.g, petroleum, paint-related material, etc. The clarifiers are operating under seven (7) Industrial Wastewater Permits issued by the City.
- An asbestos survey was conducted at the Site in December 1989 that identified ACM in buildings throughout the property. ACM abatement projects have been conducted in areas where ACM was present and renovations have occurred. The majority of ACM listed in the 1989 survey has been abated. A Limited Asbestos Survey Report prepared by Clark Seif Clark, Inc. in March 2021 for the Editorial 1 & Editorial 2 Buildings identifying ACM in areas of the buildings. Signage for the ACM was observed during the Site Reconnaissance.

## **9. OPINION**

---

Based on Leader's findings and the Site Reconnaissance conducted on December 1, 2021, additional environmental investigation is not recommended at this time.

Exceptions to, or deletions from, this practice are described in Section 2.4 of this report.

Based on Leader's findings and observations during the Site Reconnaissance conducted on December 1, 2021, no additional environmental investigation is recommended.

Leader recommends that the five areas of concern listed in the Phase I continue to be managed in accordance with their respective USEPA, CalEPA, and City of Los Angeles regulations and/or permits.

## **11. DEVIATIONS**

## **APPENDIX A**

### **PHASE I LIMITATIONS**

## **Phase I LIMITATIONS**

---

The services described in this report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, expressed or implied, is made. These services were performed consistent with our agreement with Owner Entities. This report is solely for the use and information of Owner Entities unless otherwise noted. Any reliance on this report by a third party is at such party's sole risk.

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for Owner Entities, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report.

The purpose of an environmental assessment is to reasonably evaluate the potential for or actual impact of past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. The following paragraphs discuss the assumptions and parameters under which such an opinion is rendered.

No investigation is thorough enough to exclude the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not therefore be construed as a guarantee of the absence of such materials on the site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the site that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

Except where there is express concern of Owner Entities, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

The Policy contains an arbitration clause. All arbitrable matters when the Proposed Policy Amount is \$2,000,000 or less shall be arbitrated at the option of either the Company or the Proposed Insured as the exclusive remedy of the parties. ## **NOTICE**

Section 12413.1 of the California insurance code, effective January 1, 1990, requires that any title insurance company, underwritten title company, or controlled escrow company handling funds in an escrow or sub-escrow capacity, wait a specified number of days after depositing funds, before recording any documents in connection with the transaction or disbursing funds. This statute allows for funds deposited by wire transfer to be disbursed the same day as deposit. In the case of cashier's checks or certified checks, funds may be disbursed the next day after deposit. In order to avoid unnecessary delays of three to seven days, or more please use wire transfer, cashier's checks, or certified checks whenever possible.

## **NOTICE**

In accordance with section 18662 of the revenue and taxation code, a buyer may be required to withhold an amount equal to three and one-third percent of the sales price in the case of the disposition of California real property interest by either:

1. A seller who is an individual with a last known street address outside of California or when the disbursement instructions authorize the proceeds be sent to a financial intermediary of the seller, or
2. A corporate seller which has no permanent place of business in California.

The buyer may become subject to penalty for failure to withhold an amount equal to the greater of 10 percent of the amount required to be withheld or five hundred dollars (\$500).

However, notwithstanding any other provision included in the California statutes referenced above, no buyer will be required to withhold any amount or be subject to penalty for failure to withhold if:

1. The sales price of the California real property conveyed does not exceed one hundred thousand dollars (\$100,000), or
2. The seller executes a written certificate, under the penalty of perjury, certifying that the seller is a resident of California, or if a corporation, has a permanent place of business in California, or
3. The seller, who is an individual, executes a written certificate, under the penalty of perjury, that the California real property being conveyed is the seller's principal residence (as defined in section 1034 of the internal revenue code).

The seller is subject to penalty for knowingly filing a fraudulent certificate for the purpose of avoiding the withholding requirement.

The California statutes referenced above include provisions which authorize the franchise tax board to grant reduced withholding and waivers from withholding on a case-by-case basis.

The parties to this transaction should seek an attorney's, accountants, or other tax specialist's opinion concerning the effect of this law on this transaction and should not act on any statements made or omitted by the escrow or closing officer.
