## Database Descriptions

**NPL:** NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

**NPL Delisted:** Delisted NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Delisted NPL - National Priority List Deletions

**CERCLIS:** SEMS SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. SEMS - Superfund Enterprise Management System

**NFRAP:** SEMS-ARCHIVE SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site. SEMS-ARCHIVE - Superfund Enterprise Management System Archive

**RCRA COR ACT:** CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

**RCRA TSD:** RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

**RCRA GEN:** RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-VSQG - RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators).

**Federal IC / EC:** US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List  
US INST CONTROLS - Institutional Controls Sites List.

## Database Descriptions

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

State/Tribal NPL: RESPONSE Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. RESPONSE - State Response Sites

State/Tribal CERCLIS: ENVIROSTOR The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. ENVIROSTOR - EnviroStor Database

State/Tribal SWL: SWF/LF (SWIS) Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF (SWIS) - Solid Waste Information System

State/Tribal LTANKS: LUST REG 4 LUST REG 5 - Leaking Underground Storage Tank Database. SOLANO CO. LUST - Leaking Underground Storage Tanks. LUST REG 8 - Leaking Underground Storage Tanks. LUST REG 2 - Fuel Leak List. ORANGE CO. LUST - List of Underground Storage Tank Cleanups. SAN MATEO CO. LUST - Fuel Leak List. SONOMA CO. LUST - Leaking Underground Storage Tank Sites. LUST SANTA CLARA - LOP Listing. RIVERSIDE CO. LUST - Listing of Underground Tank Cleanup Sites. SAN DIEGO CO. SAM - Environmental Case Listing. LUST REG 1 - Active Toxic Site Investigation. LUST REG 9 - Leaking Underground Storage Tank Report. VENTURA CO. LUST - Listing of Underground Tank Cleanup Sites. LUST REG 6V - Leaking Underground Storage Tank Case Listing. LUST REG 7 - Leaking Underground Storage Tank Case Listing. LUST REG 6L - Leaking Underground Storage Tank Case Listing. SAN FRANCISCO CO. LUST - Local Oversight Facilities. NAPA CO. LUST - Sites With Reported Contamination. LUST - Leaking Underground Fuel Tank Report (GEOTRACKER). LUST REG 3 - Leaking Underground Storage Tank Database. Leaking Underground Storage Tank locations. Monterey, San Benito, San Luis Obispo, Santa Barbara, Santa Cruz counties. LUST REG 3 - Leaking Underground Storage Tank Database INDIAN LUST R1 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R9 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R8 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R5 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R6 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R7 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R10 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R4 - Leaking Underground Storage Tanks on Indian Land. CPS-SLIC - Statewide SLIC Cases (GEOTRACKER). SLIC REG 1 - Active Toxic Site Investigations. SLIC REG 2 - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing. SLIC REG 3 - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing. SLIC REG 4 - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing. SLIC REG 5 - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing. SLIC REG 6V - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing. SLIC REG 6L - SLIC Sites. SLIC REG 7 - SLIC List. SLIC REG 8 - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing. Sacramento Co. CS - Toxic Site Clean-Up List. SLIC REG 9 - Spills, Leaks, Investigation & Cleanup Cost Recovery Listing.

State/Tribal Tanks: MILITARY UST SITES UST - Active UST Facilities. UST CLOSURE - Proposed Closure of Underground Storage Tank (UST) Cases. UST cases that are being considered for closure by either the State Water Resources Control Board or the Executive Director have been posted for a 60-day public comment period. UST Case Closures being proposed for consideration by the State Water Resources Control Board. These are primarily UST cases that meet closure criteria under the decisional framework in State Water Board Resolution No. 92-49 and other Board orders. UST Case Closures proposed for consideration by the Executive Director pursuant to State Water Board Resolution No. 2012-0061. These are cases that meet the criteria of the Low-Threat UST Case Closure Policy. UST Case Closure Review Denials and Approved Orders. UST CLOSURE - Proposed Closure of Underground Storage Tank (UST) Cases AST - Aboveground Petroleum Storage Tank Facilities. INDIAN UST R1 - Underground Storage Tanks on Indian Land. INDIAN UST R6 - Underground Storage Tanks on Indian Land. INDIAN UST R7 - Underground Storage Tanks on Indian Land. INDIAN UST R4 - Underground Storage Tanks on Indian Land. INDIAN UST R9 - Underground Storage Tanks on Indian Land. INDIAN UST R5 - Underground Storage Tanks on Indian Land. INDIAN UST R10 - Underground Storage Tanks on Indian Land. INDIAN UST R8 - Underground Storage Tanks on Indian Land.

## Database Descriptions

State/Tribal VCP: VCP Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. VCP - Voluntary Cleanup Program Properties

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Other SWF: WMUDS/SWAT SAN DIEGO CO. LF - Solid Waste Facilities. CA LA LF - City of Los Angeles Landfills. LOS ANGELES CO. LF - List of Solid Waste Facilities. VENTURA CO. LF - Inventory of Illegal Abandoned and Inactive Sites. San Diego County Solid Waste Facilities. VENTURA CO. LF - Solid Waste Facilities

Other Haz Sites: SCH This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose. SCH - School Property Evaluation Program SAN DIEGO CO. HMMD - Hazardous Materials Management Division Database. CERS HAZ WASTE - CERS HAZ WASTE. US CDL - Clandestine Drug Labs. AQUEOUS FOAM - Former Fire Training Facility Assessments Listing. PFAS - PFAS Contamination Site Location Listing.

Other Tanks: SWEEPS UST Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list. SWEEPS UST - SWEEPS UST Listing ALAMEDA CO. UST - Underground Tanks. KERN CO. UST - Underground Storage Tank Sites & Tank Listing. MARIN CO. UST - Underground Storage Tank Sites. NAPA CO. UST - Closed and Operating Underground Storage Tank Sites. ORANGE CO. UST - List of Underground Storage Tank Facilities. RIVERSIDE CO. UST - Underground Storage Tank List. SAN FRANCISCO CO. UST - Underground Storage Tank Information. SOLANO CO. UST - Underground Storage Tanks. SUTTER CO. UST - Underground Storage Tanks. VENTURA CO. UST - Underground Tank Closed Sites List. YOLO CO. UST - Underground Storage Tank Comprehensive Facility Report. LOS ANGELES UST - Active & Inactive UST Inventory. EL SEGUNDO UST - City of El Segundo Underground Storage Tank. LONG BEACH UST - City of Long Beach Underground Storage Tank. UST SAN JOAQUIN - San Joaquin Co. UST. TORRANCE UST - City of Torrance Underground Storage Tank. UST MENDOCINO - Mendocino County UST Database. LOS ANGELES AST - Active & Inactive AST Inventory. SAN FRANCISCO AST - Aboveground Storage Tank Site Listing. CA FID UST - Facility Inventory Database. CERS TANKS - California Environmental Reporting System (CERS) Tanks.

Local Land Records: DEED Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners. DEED - Deed Restriction Listing

## Database Descriptions

Spills: HMIRS Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT. HMIRS - Hazardous Materials Information Reporting System CHMIRS - California Hazardous Material Incident Report System. Orange Co. Industrial Site - List of Industrial Site Cleanups. SPILLS 90 - SPILLS90 data from FirstSearch.

Other: RCRA NonGen / NLR RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. RCRA NonGen / NLR - RCRA - Non Generators / No Longer Regulated FEDLAND - Federal and Indian Lands. TSCA - Toxic Substances Control Act. TRIS - Toxic Chemical Release Inventory System. SSTS - Section 7 Tracking Systems. RAATS - RCRA Administrative Action Tracking System. PRP - Potentially Responsible Parties. PADS - PCB Activity Database System. ICIS - Integrated Compliance Information System. FTTS - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). FTTS INSP - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). MLTS - Material Licensing Tracking System. RADINFO - Radiation Information Database. BRS - Biennial Reporting System. INDIAN RESERV - Indian Reservations. US AIRS (AFS) - Aerometric Information Retrieval System Facility Subsystem (AFS). US AIRS MINOR - Air Facility System Data. FINDS - Facility Index System/Facility Registry System. CORTESE - "Cortese" Hazardous Waste & Substances Sites List. CUPA - CUPA Resources List. CUPA AMADOR - CUPA Facility List. CUPA BUTTE - CUPA Facility Listing. CUPA CALVERAS - CUPA Facility Listing. CUPA COLUSA - CUPA Facility List. CUPA DEL NORTE - CUPA Facility List. CUPA EL DORADO - CUPA Facility List. CUPA FRESNO - CUPA Resources List. CUPA HUMBOLDT - CUPA Facility List. CUPA GLENN - CUPA Facility List. CUPA STANISLAUS - CUPA Facility List. CUPA TRINITY - CUPA Facility List. CUPA LASSEN - CUPA Facility List. CUPA LIVERMORE-PLEASANTON - CUPA Facility Listing. CUPA SAN BENITO - CUPA Facility List. CUPA TEHAMA - CUPA Facility List. CUPA SAN FRANCISCO CO - CUPA Facility Listing. CUPA TULARE - CUPA Facility List. CUPA IMPERIAL - CUPA Facility List. CUPA PLUMAS - CUPA Facility List. CUPA INYO - CUPA Facility List. CUPA KINGS - CUPA Facility List. CUPA LAKE - CUPA Facility List. CUPA MADERA - CUPA Facility List. CUPA MERCED - CUPA Facility List. CUPA MONO - CUPA Facility List. CUPA MONTEREY - CUPA Facility Listing. CUPA NEVADA - CUPA Facility List. CUPA SAN LUIS OBISPO - CUPA Facility List. CUPA SANTA BARBARA - CUPA Facility Listing. CUPA SANTA CLARA - CUPA Facility List. CUPA SANTA CRUZ - CUPA Facility List. CUPA SHASTA - CUPA Facility List. CUPA SONOMA - CUPA Facility List. CUPA TUOLUMNE - CUPA Facility List. CUPA YUBA - CUPA Facility List. KERN CO CUPA - CUPA Facility List. HAZNET - Facility and Manifest Data. Sacramento Co. ML - Master Hazardous Materials Facility List. San Bern. Co. Permit - Hazardous Material Permits. LA Co. Site Mitigation - Site Mitigation List. UIC GEO - Underground Injection Control Sites (GEOTRACKER). WDS - Waste Discharge System. MILITARY PRIV SITES - Military Privatized Sites (GEOTRACKER). PROJECT - Project Sites (GEOTRACKER). WDR - Waste Discharge Requirements Listing. SAN DIEGO CO LOP - Local Oversight Program Listing. CIWQS - California Integrated Water Quality System. CERS - CalEPA Regulated Site Portal Data. NON-CASE INFO - Non-Case Information Sites (GEOTRACKER). OTHER OIL GAS - Other Oil & Gas Projects Sites (GEOTRACKER). PROD WATER PONDS - Produced Water Ponds Sites (GEOTRACKER). SAMPLING POINT - Sampling Point ? Public Sites (GEOTRACKER). WELL STIM PROJ - Well Stimulation Project (GEOTRACKER). PCS ENF - Enforcement data. HWTS - Hazardous Waste Tracking System. PCS - Permit Compliance System. LOS ANGELES CO LF METHANE - Methane Producing Landfills. PCS INACTIVE - Listing of Inactive PCS Permits. MINES MRDS - Mineral Resources Data System.

## **APPENDIX F**

### **SITE RECONNAISSANCE PHOTOGRAPHS**

Stormwater drains and studio buildings on the southern parcel.

Set Lighting and maintenance building on the southern parcel.

One of four electrical switches that are labeled as containing PCBs.

Stormwater drainage on the southern parcel that discharges to the Los Angeles River.

Drums of materials in the hazardous materials storage area- Paint Shop on the southern parcel.

Access manholes to a clarifying tank unit in the Paint Shop on the southern parcel.

Containers of flammables stored in hazardous materials area- Paint Shop on the southern parcel.

10,000 gallon AST on the northern parcel in a secondary containment dyke.

Sump pump units in the basement of the Broadcast building on the northern parcel.

Signage for ACM in the Editorial 2 building on the southern parcel.

Typical general refuse dumpster that are located in designated area around the Site.

An electrical generator unit on a concrete pad on the Site.

**ISSUANCE OF INDUSTRIAL WASTEWATER PERMIT FOR IU112053**  
**PERMIT: W-545912**

The Bureau of Sanitation has completed a review of the permit application, an inspection of the facility, and the determination of discharge standards and conditions for CBS Studio Center to discharge industrial wastewater to the City of Los Angeles sewer system. Enclosed, please find the Industrial Wastewater Permit covering wastewater discharged from this facility to the City of Los Angeles sewer system. CBS Studio Center is subject to the Los Angeles Municipal Code (L.A.M.C.) Section 64.30. All discharge from this facility and actions and reports relating thereto shall be in accordance with the terms and conditions of this permit.

CBS Studio Center shall immediately notify the Bureau of Sanitation of any changes to the facility, process, discharge flow, production, or pretreatment system that may change the characteristics which cause them to be different from those expressly allowed under the permit. In addition, CBS Studio Center shall notify the Bureau of its intent to close business, become a zero discharger or change ownership.

If there are any questions regarding these permit conditions, please contact Sunny Owairu, Chief Environmental Compliance Inspector I of my staff at (323) 342-6044.

Sincerely,

Enrique C. Zaldivar, Director  
LA Sanitation

## INDUSTRIAL WASTEWATER PERMIT

INDUSTRIAL USER NO: IU112053  
PERMIT NO: W-545912  
EFFECTIVE DATE: 01/12/2015  
AMENDED DATE: NA  
EXPIRATION DATE: NA

LEGAL BUSINESS NAME: ★ Radford Studio Center, Inc.

DOING BUSINESS AS: CBS Studio Center

MAILING ADDRESS: 4024 Radford Avenue  
Studio City, CA. 91604

LOCATION ADDRESS: 4200 Radford Avenue  
Studio City, CA. 91604

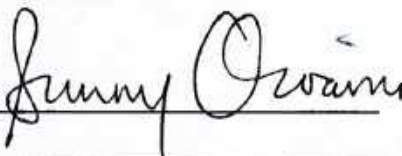

CATEGORY: LOCAL INDUSTRIAL USER

POINT OF DISCHARGE: Public Sewer

In accordance with the provisions of the Los Angeles Municipal Code (L.A.M.C.) Section 64.30, the above identified industrial user is hereby authorized to discharge industrial wastewater through the approved point of discharge identified herein in accordance with the discharge limitations, conditions, and requirements set forth in this permit and the L.A.M.C. Compliance with this permit does not relieve the industrial user of its obligation to comply with all pretreatment regulations, standards or requirements under local, State and Federal laws, including any such laws, regulations, standards or requirements that may become effective during the term of this permit.

The industrial user must comply with the provisions of L.A.M.C. Section 64.30 and all terms and conditions of this permit. Noncompliance with the terms and conditions of this permit shall constitute a violation of the L.A.M.C. Section 64.30 and may subject the industrial user to administrative actions or other legal proceedings. This permit becomes void upon any change of ownership or location whatsoever.

Enrique C. Zaldivar, Director  
LA Sanitation

BY: 

**PART 1 - DISCHARGE LIMITATIONS****CITY OF LOS ANGELES  
BUREAU OF SANITATION****LOCAL DISCHARGE LIMITATIONS**

In accordance with L.A.M.C. Section 64.30, wastewaters introduced into the City of Los Angeles sewer system or approved point of discharge shall not exceed the following limitations:

Constituent	Units	Instantaneous Maximum
Arsenic, Total	mg/l	3.00
Cadmium, Total	mg/l	15.00
Chromium, Total	mg/l	10.00
Copper, Total	mg/l	15.00
Cyanide (Free)	mg/l	2.00
Cyanide (Total)	mg/l	10.00
Dissolved Sulfides	mg/l	0.10
Lead, Total	mg/l	5.00
Nickel, Total	mg/l	12.00
Oil & Grease (Total)	mg/l	600.00
pH	SU	< 5.50
pH	SU	> 11.00
Silver, Total	mg/l	5.00
Temperature - Liquid	Deg F	140.00
Zinc, Total	mg/l	25.00

The above limitations shall not apply where more restrictive limitations are imposed by permit or other National Categorical Pretreatment Standards.

In accordance with L.A.M.C. Section 64.30 B.1. - Discharge Prohibitions, no person shall discharge specific prohibited pollutants or materials except as expressly allowed in an Industrial Wastewater Permit (See Part 6.A.1 of this permit - General Prohibitive Standards).

**PART 6- STANDARD CONDITIONS****A. Prohibitions****1. General Prohibitive Standards**

The industrial user shall comply with all the general prohibitive discharge standards in the General Pretreatment Regulations, 40 CFR 403, and the L.A.M.C. Section 64.30. Except as expressly allowed in this Industrial Wastewater Permit, the industrial user shall not discharge wastewater to the POTW that contains any of the following:

- a) Gasoline, mercury, total identifiable chlorinated hydrocarbons, kerosene, naphtha, benzene, toluene, xylene, ethers, alcohols, ketones, aldehydes, peroxides, chlorates, perchlorates, bromates, carbides, hydrides, solvents, pesticides or jet fuel;
- b) Petroleum oil, nonbiodegradable cutting oil or products of mineral oil origin in amounts that will cause interference or pass through.
- c) Liquids, solids or gases which by reason of their nature or quantity are flammable, reactive, explosive, corrosive or radioactive or by interaction with other materials could result in fire, explosion or injury. This includes, but is not limited to, wastestreams with a closed cup flash point of less than 140°F or 60°C using the test methods specified in 40 CFR 261.21.
- d) Solid or viscous materials which could cause obstruction to the flow or operation of the POTW;
- e) Toxic pollutants in sufficient quantity to injure or interfere with any wastewater treatment process, to constitute a hazard or cause injury to human, animal, plant or fish life or to exceed any limitation set forth in this Section;
- f) Noxious or malodorous liquids, gases or solids in sufficient quantity, either singly or by interaction with other materials, to create a public nuisance, hazard to life or to prevent entry of any person to the POTW;
- g) Pollutants which result in the presence of toxic gases, vapors or fumes within the POTW in a quantity that may cause acute worker health and safety problems;
- h) Material of sufficient quantity to interfere with any POTW treatment plant process or to render any product thereof unsuitable for reclamation and reuse;
- i) Material of sufficient quantity to cause the POTW to be in noncompliance with sludge use or disposal criteria, guidelines or regulations in connection with Section 405 of the Act, the Solid Waste Disposal Act, the Clean Air Act, the Toxic Substances Control Act, the Marine Protection, Research, and Sanctuaries Act or State criteria applicable to the sludge management method being used;
- j) Material which will cause the POTW to violate its NPDES Permit, applicable Federal and/or State statutes, rules or regulations;
- k) Pigment which is not removed in the treatment process;
- l) A heat content in such quantities that the temperature of the wastewater at the introduction into the POTW collection system exceeds 140°F or at the introduction into the POTW treatment plant exceeds 104°F;
- m) Pollutants, including oxygen demanding pollutants, released at a flow rate or pollutant concentration which will cause or contribute to interference;
- n) Storm water collected and discharged to the POTW;
- o) Single pass cooling water in excess of 200 gallons per day discharged to the POTW;
- p) Materials which constitute a hazard or causes injury to human, animal, plant or fish life or creates a public nuisance;

#### **5. Property Rights**

The issuance of this permit does not convey any property rights of any sort or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor does it authorize any violation of Federal, State or Local laws or regulations.

#### **6. Limitation of Permit Transfer**

An Industrial Wastewater Permit shall not be transferable by operation of law or otherwise, either from one location to another or from one person to another. Statutory mergers or name changes shall not constitute a transfer or a change in ownership.

#### **7. Duty to Reapply**

To continue an activity regulated by this permit after the expiration date, the industrial user must file an application for permit renewal at least 90 days before the expiration date of this permit.

#### **8. Dilution**

The industrial user shall not increase the use of potable or process water or, in any way, attempt to dilute an effluent as a partial or complete substitute for adequate treatment to achieve compliance with the limitations contained in this permit.

#### **9. Compliance with Applicable Pretreatment Standards and Requirements**

The industrial user shall comply at all times with any and all applicable Local, State and Federal pretreatment standards and requirements including any such standards or requirements that may become effective during the term of this permit. In addition, the industrial user may be required to prepare a pollution prevention plan.

#### **10. Confidentiality**

- a) Any information, except for discharge and effluent data, submitted to the City pursuant to this Section may be claimed by the discharger to be confidential. Any such claim must be asserted at the time of submission of the information or data to the City. The claim may be asserted by stamping the words "Confidential Business Information" on each page containing such information or by other means; however, if no claim is asserted at the time of submission, the City may make the information available to the public without further notice. If such a claim is asserted, the information will be treated in accordance with the procedures set forth in 40 CFR Part 2 (Public Information).
- b) Information and data provided to the City which is effluent data shall be available to the public without restriction.

### **C. Operation and Maintenance of Pollution Controls**

#### **1. Proper Operation and Maintenance**

The industrial user shall at all times properly operate and maintain all facilities and systems for treatment and control (and related appurtenances) which are installed or used by the industrial user to achieve compliance with the conditions of this permit. Proper operation and maintenance includes but is not limited to effective performance, adequate funding, adequate operator staffing and training and adequate laboratory and process controls including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

#### **2. Duty to Halt or Reduce Activity**

Upon reduction of efficiency of operation or loss or failure of all or part of the pretreatment facility, the industrial user shall, to the extent necessary to maintain compliance with its permit, control its production or discharge (or both) until operation of the pretreatment facility is restored or an alternative method of pretreatment is provided. This requirement applies, for example, when the primary source of power of the

- c) to inspect and copy any records, reports, test results or other information required to carry out the provisions of L.A.M.C. Section 64.30, the Industrial wastewater permit, or other applicable laws; and
- d) to photograph any waste, waste container, vehicle, waste treatment process, discharge location, or violation discovered during an inspection.

The applicant, by accepting any permit issued, does hereby consent and agree to entry upon the premises as described herein. Any person violating this authority shall be guilty of a misdemeanor.

3. Retention of Records

- a) The industrial user shall retain records of all monitoring information, including all calibration and maintenance records, all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit and records of all data used to complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report or application. This period may be extended by request of the City of Los Angeles at any time.
- b) All records that pertain to matters that are the subject of special orders or any other enforcement or litigation activities brought by the City of Los Angeles shall be retained and preserved by the industrial user until all enforcement activities have concluded and all periods of limitation with respect to any and all appeals have expired.

4. Record Contents

Records of sampling and analyses shall include the following:

- a) the date, exact place, time and methods of sampling or measurement, and sample preservation techniques or procedures;
- b) Who performed the sampling or measurements;
- c) The date(s) analyses were performed;
- d) Who performed the analyses;
- e) The analytical techniques or methods used; and
- f) The results of such analyses.

5. Falsifying Information

No person shall knowingly make any false statement, representation or certification in any application, record, report, plan or other document filed with the City of Los Angeles. In addition, no person shall tamper with or knowingly render inaccurate any monitoring device required under this permit.

The reports and other documents required to be submitted or maintained under this Industrial Wastewater Permit shall be subject to:

- a) The provisions of 18 U.S.C. Section 1001 relating to fraud and false statements;
- b) The provisions of Section 309 (c) (4) of the Clean Water Act (CWA), as amended, governing false statements, representation or certification; and
- c) The provisions of Section 309 (c) (8) of the Clean Water Act (CWA), as amended, regarding responsible corporate officers.

**E. Additional Reporting Requirements**

1. Notification of Planned Changes

The industrial user shall immediately notify the Director in advance of any substantial change to the industrial user's operations or system which might alter the nature, quality, or volume of its wastewater

shall contain detailed procedures to be followed by the industrial user in the event a slug discharge occurs. The Slug Discharge Control Plan must contain, at a minimum, the following:

- a) Description of sewer discharge practices, including nonroutine batch discharges;
  - b) Description of stored chemicals including type and characteristic, volume, and chemical hazard classification;
  - c) Procedures for promptly notifying the City of slug discharges, including any discharges that would violate a prohibition under 40 CFR 408.5(b), with procedures for follow-up written notification within five days;
  - d) Any necessary procedures to prevent adverse impact from accidental spills, including inspection and maintenance of storage areas, handling and transfer of materials, loading and unloading operation, control of plant site run-off and worker training;
  - e) Any necessary measures for building any containment structures or equipment; and/or
  - f) Any necessary measures for controlling toxic organics (including solvents);
  - g) Procedures and equipment for emergency response.
6. Notification of Hazardous Waste Discharged into POTW

Industrial users not exempt from the requirements under 40 CFR 403.12(p) shall notify the City of Los Angeles, Bureau of Sanitation; the EPA Region 9, Hazardous Waste Management Division; and the California Environmental Protection Agency, Department of Toxic Substances Control in writing of any discharge into the City of Los Angeles sewer system of a substance, which, if otherwise disposed of, would be a hazardous waste under 40 CFR part 261. The written notification shall be submitted to the City of Los Angeles Bureau of Sanitation, the EPA Region 9 and the California Environmental Protection Agency.

7. Signatory Requirements

All applications, reports or information submitted to the Director must contain the following certification statement and be signed by an authorized representative indicated below:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

An authorized representative shall mean the following:

A president, secretary, treasurer or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy or decision making functions for the corporation;

- a) The manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions that govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for control mechanism requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

Regulations (CCR), Titles 8 and 22. For information on federal and state hazardous waste regulations, contact the California Environmental Protection Agency, Department of Toxic Substances Control, Region III at (818) 531-2800.

#### F. Definitions

1. Best Management Practices (BMP) - Any activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce pollutants in discharges.
2. Bi-Monthly - Once every other month.
3. Bypass - The intentional diversion of wastes from any portion of an Industrial User's treatment facility.
4. Categorical Pretreatment Standards - Limitations on pollutant discharges to POTWs, promulgated by EPA in accordance with Section 307 of the Clean Water Act, that apply to specified process wastewaters of particular industrial categories.
5. Commercial Establishment - A private establishment such as a restaurant, hotel, laundry, store, filling station, or recreational facility. A nonprofit private or government entity such as a church, school, hospital, military facility, correctional institution recreational facility or a facility owned or operated by a charitable organization is considered a commercial establishment.
6. Commingled Load - A load of septage which includes septage generated both within and outside the City's boundaries.
7. Composite Sample - A sample that is collected over time, formed either by continuous sampling or by mixing discrete samples. The sample may be composited either as a flow proportional composite sample (collected either as a constant sample volume at time intervals proportional to stream flow or collected by increasing the volume of each aliquot as the flow increases while maintaining a constant time interval between the aliquot) or as a time composite sample (composed of discrete sample aliquot collected in one container at constant time intervals providing representative samples irrespective of stream flow).
8. Cooling Water
  - a) Uncontaminated - Water used only for cooling purposes which has no direct contact with any raw material, intermediate or final product and which does not contain a level of contaminants detectably higher than that of the intake water.
  - b) Contaminated - Water used only for cooling purposes which may become contaminated either through the use of water treatment chemicals used for corrosion inhibitors or biocides or by direct contact with process materials and/or wastewater.
9. Daily Maximum - The maximum allowable discharge of a pollutant during a calendar day. Where daily maximum limitations are expressed in units of mass, the daily discharge is the total mass discharged over the course of the day. Where daily maximum limitations are expressed in terms of a concentration, the daily discharge is the arithmetic average measurement of the pollutant concentration derived from all measurements taken that day.
10. Director - The Director of the Bureau of Sanitation of the Department of Public Works of the City of Los Angeles or the duly authorized representative thereof.
11. Domestic Septage - The liquid or solid material removed from a private sewage disposal system (PSDS), portable toilet or other holding device that receives only domestic sewage.
12. Domestic Wastewater (Domestic Sewage) - Sanitary wastewater and wastewater generated from household type operations.
13. Establishment - An economic unit, generally at a single physical location, where business is conducted or where services or industrial operations are performed.

27. Portable Toilet – Any portable or permanently installed sanitation apparatus or system which includes a tank for toilet waste retention. Portable Toilet includes sanitation holding devices from airplanes, trains, boats with type III marine sanitation devices, buses, movie dressing room trailers, recreational vehicles, or other similar transport vehicles.
28. Private Septage Disposal Facility (PSDF) – A disposal site, other than a City designated discharge location, with a direct connection to the City sewer, which accommodates the discharge of hauled septage.
29. Publicly Owned Treatment Works (POTW) - A treatment works as defined by Section 212 of the Clean Water Act which is owned by the State or municipality. This definition includes any devices and systems used in the storage, treatment, recycling and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes and other conveyances only if they convey wastewater to a POTW treatment plant.
30. Resource Conservation and Recovery Act (RCRA) - A Federal statute regulating the management of hazardous waste from its generation through ultimate disposal. The Act contains requirements for waste generators, transporters and owners and operators of treatment, storage and disposal facilities.
31. Sanitary Wastewater – Wastewater of human origin derived from toilets, urinals, showers, baths and restroom sinks.
32. Septage – The liquid or solid material removed from a private sewage disposal system (PSDS), portable toilet or other sanitation holding device that receives wastewater.
33. Septage Hauler – A person or an owner/operator of a business that holds Septage Disposal Permit(s) issued by the Director to discharge septage to the City's P.O.T.W.
34. Slug Discharge - Any discharge of a non-routine, episodic nature, including but not limited to an accidental spill or a non-customary batch discharge.
35. Total Toxic Organics (TTO) - The sum of the masses or concentrations greater than 0.01 mg/l of the specific toxic organic compounds regulated by specific categorical pretreatment regulations which is found in the discharge at specific quantifiable concentrations.
36. Type III Marine Sanitation Device – A device that is designed to prevent the overboard discharge of treated or untreated domestic sewage.
37. Upset - An exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the industrial user, excluding such factors as operational error, improperly designed or inadequate treatment facilities or improper operation and maintenance or lack thereof.

# Request #21-10230

 **OPEN**

As of November 12, 2021, 9:24am

## Details

---

Please send information/documents pertaining closure of underground storage tanks for the property located at 4024 N Radford Ave in Studio City, CA 91604. Listed as Facility ID FA0018712. Looking for closure info from USTs removed in September 2019 and February 1994. Thank you.

# 1. SUMMARY

---

Leader Professional Services, Inc. (“Leader”) was retained by ViacomCBS Inc. (“ViacomCBS”) to conduct a Phase I Environmental Site Assessment (“Phase I”) on the CBS Studio Center properties located at 4024 Radford Avenue, Studio City, California (collectively referred to as the “Site”), as shown in Figures 1 and 2.

The Phase I was conducted in general accordance with the American Society of Testing and Materials (“ASTM”) Standard Practice for Environmental Site Assessments, E 1527-13 and the United States Environmental Protection Agency’s (“USEPA”) requirements for All Appropriate Inquiry (“AAI”). Robert Murphy and James Staab of Leader conducted the Phase I, including a Site Reconnaissance on March 15 and March 16, 2021. Consistent with ASTM E 1527-13, a database service was used to perform a regulatory database search.

No on-Site Recognized Environmental Conditions (“REC”) were observed in connection with the Site.

No off-Site REC was observed in connection with the Site.

One (1) Historical RECs were observed in connection with the Site:

- The Site is listed as CalEPA Leaking Underground Storage Tank (“LUST”) Case No. 91604042. The LUST listing was opened in 1994 when gasoline contamination was encountered beneath five (5) 10,000-gallon USTs as a result of damage to the USTs and product lines from the 1994 Northridge Earthquake. The USTs were removed from the Site in February 1994 by A.E. Schmidt under a permit issued by the City of Los Angeles Fire Department. Impacted soils were removed from the Site for off-Site disposal and groundwater monitoring was required by the California Water Control Board in May 1994. Verification monitoring of soils and groundwater were conducted and CalEPA completed and closed the LUST file in January 1997.

No Controlled RECs were observed in connection with the Site.

Five (5) areas of concern were observed in connection with the Site:

- ViacomCBS operates fourteen (14) aboveground storage tanks (“ASTs”) registered with the City of Los Angeles Fire Department (“LAFD”) for the Site. The ASTs have a total capacity of 14,940 gallons and all contain diesel fuel.
- Three (3) electrical transformers and one (1) electrical switch containing PCBs are located between Stages 5 and 9. The equipment is properly labeled and will eventually require proper removal and disposal.

- Three (3) wastewater clarifying tanks were observed at the Site that discharge to the City of Los Angeles sanitary sewer system. The clarifiers are located near the main hazardous waste storage area, the transportation building and The Radford Broadcast Center building. The clarifiers collect and treat sanitary water that potentially contains contaminants, e.g., petroleum, paint-related material, etc. The clarifiers are operating under seven (7) Industrial Wastewater Permits issued by the City.
- The Site's hazardous waste generator status is a Large Quantity Generator (e.g.,  $\geq 2,200$  lbs. generated per month).
- An asbestos survey was conducted at the Site in December 1989 that identified ACM in buildings throughout the property. ACM abatement projects have been conducted in areas where ACM was present and renovations have occurred. The majority of ACM listed in the 1989 survey has been abated. A Limited Asbestos Survey Report prepared by Clark Seif Clark, Inc. in March 2021 for the Editorial 1 & Editorial 2 Buildings identifying ACM in areas of the buildings. Signage for the ACM was observed during the Site Reconnaissance.

## 2. INTRODUCTION

---

### 2.1 Purpose

Leader was retained by Jeffrey Groy, Esq. of ViacomCBS to conduct a Phase I for the Site. It is our understanding that this Phase I was performed at the request of ViacomCBS as a part of required due diligence.

### 2.2 Detailed Scope of Services

The purpose of this Phase I is to evaluate the current and past operations of the Site and the uses of the immediately surrounding properties in order to identify the *recognized environmental conditions* in connection with the Site. Leader designed a scope of work to effectively accomplish the above-referenced objective with the understanding that access to the Site will be provided.

*Recognized Environmental Condition* is defined by ASTM as “the presence or likely presence of any *hazardous substances* or *petroleum products* on a property under conditions that indicate an existing release, a past release or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the property or into the ground, ground water or surface water of the property. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs.”

A *Historical Recognized Environmental Condition* is defined by ASTM as a “past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *Site* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *Site* to any required controls.”

A *Controlled Recognized Environmental Condition* is defined as an “environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.”

A Phase I consists of a historical and regulatory records review, a Site Reconnaissance and interviews with current owners, if possible. State and federal regulatory agency database file records are reviewed to identify reported spills, hazardous activities, and adjacent properties of concern. The Site Reconnaissance consists of observing the Site and observing the surrounding properties from the public street or sidewalk.

Leader prepared a written report, summarizing the findings of the Phase I. Limitations are discussed further in Appendix A of this report.

### 2.3 Significant Assumptions

Leader assumes no liability for losses resulting from errors or omissions arising from the use of inaccurate/incomplete information or misrepresentations made by others during the performance of this Phase I.

## **2.4 Limitations and Exceptions**

As appropriate within the project schedule and budget, Leader reviewed readily available state and local environmental records and other public documents regarding the Site, adjacent properties, and as needed those found in the surrounding area. However, much of this information is provided to us by third parties, i.e. owners and regulatory agencies, and we cannot control or guarantee the accuracy or completeness of the information. As a result, our lack of knowledge of prior uses and conditions of the Site due to the inaccuracy or incompleteness of such information may therefore affect our ability to completely assess associated risks or hazards. Our Phase I review is limited to the potential for CERCLA (i.e. Superfund) environmental impact issues unless otherwise noted.

## **2.5 Special Terms and Conditions**

This Phase I was performed in general conformance with the Scope of Work, limitations and industry standards.

## **2.6 User Reliance**

There are no third-party rights or benefits conferred under this report, except for those conveyed to ViacomCBS. Any reliance on the contents of this report by a third party other than those prescribed in Leader's agreement with ViacomCBS is the sole responsibility of that party.

Further user reliance matters detailed in the Phase I Limitations are provided in Appendix A and incorporated by reference as an integral part of this Phase I Report.

### 3. SITE DESCRIPTION

---

#### 3.1 Location and Legal Description

The Site is located at 4024 Radford Avenue in Studio City, City of Los Angeles, Los Angeles County, California and consists of four (4) adjoining parcels that cover a total of 52.71 acres. The individual parcels of the Site are detailed in Table 1 below.

Table 1- Site Parcel Detail

Address	Description	Tax Parcel Number	Acres	Orientation
4024 Radford Avenue	Studio Center	2368005011	37.05	Southern
Unaddressed	Vacant	2368001029	1.12	Western
4100 Radford Avenue	Broadcast Center	2368001028	9.45	Northern
Unaddressed	Vacant	2368001030	5.09	Eastern

#### 3.2 Site and Vicinity General Characteristics

The Site is located in the Studio City neighborhood of the City of Los Angeles and can be accessed by vehicles via five (5) driveways/gates from Radford Avenue and Colfax Avenue. The neighboring properties to the west and south consist of residential and commercial properties. The Los Angeles River is immediately to the north and east of the Site.

#### 3.3 Current Uses of the Property

The Site is currently used as stages and studios for production and office space.

#### 3.4 Description of Structures and Other Improvements

The Site is improved with approximately one hundred and seventeen (117) structures that include office buildings, bungalows, stages, trailers, utility sheds and parking garages. A list of the structures on the Site is provided as Appendix H.

#### 3.5 Current Uses of Adjoining Property

Current land use directly adjoining the Site was evaluated by visual inspection and review of available information. The following is a description of adjoining properties:

North: The Los Angeles River and residential properties.

East: The Los Angeles River and residential properties.

West: Residential and light commercial properties.

South: Residential and light commercial properties.

## **4. USER PROVIDED INFORMATION**

---

### **4.1 Title Records**

Leader received and reviewed a Title Abstract for the Site that was provided by ViacomCBS. The Title Abstract lists the Site as owned by Radford Studio Center Inc. and comprised of four (4) parcels described on Table 1 and in Section 3.1. A copy of the Title Abstract is provided as Appendix B.

### **4.2 Environmental Liens or Activity and Use Limitations**

Leader is not aware of any environmental liens or use restrictions on the Site or use limitations other than those imposed by the State of California, Los Angeles County or the City of Los Angeles zoning requirements. No environmental liens or AULs are listed in the Title Abstract.

### **4.3 Specialized Knowledge**

Leader does not have any specialized knowledge of the Site.

### **4.4 Commonly Known or Reasonably Ascertainable Information**

None.

### **4.5 Valuation Reduction for Environmental Issues**

None.

### **4.6 Owner, Property Manager and Occupant Information**

The Site is listed by the Los Angeles County Assessor's Office as owned by Radford Studio Center Inc. The Site is occupied and managed by ViacomCBS.

### **4.7 Reason for Performing the Phase I**

It is our understanding that this Phase I was performed at the request of ViacomCBS as a part of required due diligence.

### **4.8 Other**

None.

## 5. RECORDS REVIEW

---

A summary of the regulatory information applicable to the Site found in the database report and available information from local government agencies is provided below. The database report is provided in Appendix C. Additional regulatory status information was obtained from the Los Angeles County, USEPA and CalEPA database sites. This information was incorporated into the pertinent sections of the report.

The Site is listed in the CalEPA and USEPA online databases and in the regulatory database report under a variety of environmental programs including:

- RCRA Hazardous Waste – Large Quantity Generator (“LQG”) and Small Quantity Generator (“SQG”).
  - The Site is registered with USEPA as a LQG (ID: CAD981686215) and a SQG (ID: CAP000092387) with active status. No compliance violations are listed in the last twelve quarters in connection with the registrations.
- CalEPA – Leaking Underground Storage Tanks (“LUST”), Hazardous Waste Manifest Data (“HAZNET”) and California Environmental Reporting System (“CERS”) programs.
  - The LUST listing was opened in 1994 when gasoline contamination was encountered beneath five (5) 10,000-gallon USTs as a result of damage to the USTs and product lines from the 1994 Northridge Earthquake. The USTs were removed from the Site in February 1994 by A.E. Schmidt under a permit issued by the City of Los Angeles Fire Department. Impacted soils were removed for off-Site disposal and groundwater monitoring was required by the California Water Control Board in May 1994. Verification monitoring of soils and groundwater were conducted and CalEPA completed and closed the LUST file in January 1997.
  - The HAZNET and CERS listing do not indicate any compliance violations for the Site.
- City of Los Angeles – Active Hazardous Materials Inventory, Underground Storage Tanks Inventory List, Historic Tanks and Aboveground Storage Tanks (“ASTs”) programs.
  - The Active Hazardous Materials Inventory include HAZNET and CERS listings that are shared and reported for the City. No compliance violations are listed for the Site.
  - The UST and Historic Tank lists include a total of six (6) USTs that were removed from the Site. Five (5) were removed in February 1994 and one (1) removed in September 2019. No other USTs are registered for the Site and no open LUSTs are listed in connection with the Site.
  - The AST listing includes a total of fourteen (14) ASTs that are registered with the City of Los Angeles Fire Department (“LAFD”) for the Site. The ASTs have a total capacity of 14,940 gallons and contain diesel fuel. No spills are listed. A Spill Prevention, Controls, and Countermeasure (“SPCC”) Plan prepared by Access Environmental Engineering was submitted to and approved by the LAFD in December 2020. A copy of the SPCC Plan is provided as Appendix I.

The LUST listing is considered a Historical REC for the Site.

## 5.1 Standard Environmental Record Source(s)

The following is a summary of the findings of the database review:

SUMMARY OF FEDERAL & STATE AGENCY DATABASE FINDINGS			
Federal or State List	Does Property Appear on List?	Surrounding Area Search Radius	Number of Sites Within Search Radius*
National Priorities List (NPL or Federal Superfund Listing)	No	1.0 mile	0
Delisted NPL Facilities	No	1.0 mile	0
Comprehensive Environmental Response, Compensation and Liability Information System ("CERCLIS")	No	0.5 mile	0
CERCLIS No Further Remedial Action Planned ("NFRAP")	No	0.5 mile	0
Resource Conservation and Recovery Act ("RCRA") Corrective Action Plan (CORRACTS)	No	1.0 mile	0
Resource Conservation and Recovery Information System – Treatment, Storage or Disposal Facilities (RCRIS-TSD, non-CORRACTS)	No	0.50 mile	0
RCRA Small and Large Quantity Generator of Hazardous Waste	Yes	0.25 mile	14
Federal Brownfield	No	0.25 mile	0
Emergency Response Notification System ("ERNS") List	No	0.125 mile	0
Tribal Lands (Federally recognized territory of where American Indian tribes have primary government authority)	No	1.0 mile	0
State or Tribal Hazardous Waste Site ("SHWS")	No	1.0 mile	0
State Spill Incidents	No	0.125 mile	0
State/Tribal Solid Waste Facilities/Landfill Site ("SWLF")	No	0.50 mile	0
State/Tribal Leaking USTs Database ("LUST")	Yes	0.50 mile	5
State/Tribal Registered Underground Storage Tanks ("UST")	Yes	0.25 mile	1
State/Tribal Engineering Controls	No	0.25 mile	0

SUMMARY OF FEDERAL & STATE AGENCY DATABASE FINDINGS			
Federal or State List	Does Property Appear on List?	Surrounding Area Search Radius	Number of Sites Within Search Radius*
State/Tribal Institutional Controls	No	0.25 mile	0
State/Tribal Voluntary Cleanup Site	No	0.50 mile	0
State/Tribal Brownfields	No	0.50 mile	0
Federal Institutional Controls/ Engineering Controls	No	0.50 mile	0
Other	Yes	0.25 mile	61
*The surrounding area search radius indicates the radial area (measured from the Site) for which the database review was performed.			

#### 5.1.1 Federal NPL Sites

There are no National Priority List (“NPL”) sites reported within a 1.0 mile radius of the Site.

#### 5.1.2 Federal De-Listed NPL Sites

There are no de-listed National Priority List (“NPL”) sites reported within a 1.0 mile radius of the Site.

#### 5.1.3 Federal CERCLIS Site List

There are no Federal Comprehensive Environmental Response, Compensation and Liability Information System (“CERCLIS”) facilities reported within a 0.50 mile radius of the Site.

#### 5.1.4 Federal CERCLIS/NFRAP Site List

There are no Federal Comprehensive Environmental Response, Compensation, and Liability Information System (“CERCLIS”)/No Further Remedial Action Planned (“NFRAP”) facilities reported within a 0.50 mile radius of the Site.

#### 5.1.5 Federal RCRA CORRACTS Facilities

There are no Corrective Action Plan (“CORRACTS”) facilities reported within a 1.0 mile radius of the Site.

#### 5.1.6 Federal RCRA non-CORRACTS TSD Sites

There are no Federal RCRA non-Corrective Action (“non-CORRACTS”) Treatment, Storage, or Disposal (“TSD”) Facilities reported within a 0.50 mile radius of the Site.

### 5.1.7 Federal RCRA Generators List

There are fourteen (14) Federal RCRA Generators of Hazardous Waste reported within a 0.25 mile radius of the Site. The listings for properties within one tenth of a mile are listed below:

SITE	DISTANCE FROM SUBJECT SITE	STATUS	ORIENTATION
CBS/MTM Studios 4024 Radford Avenue Studio City, CA	Site	The Site is registered with USEPA as a LQG. No compliance violations are listed in connection with the registration.	Site
Marchese Communication 4105 Radford Avenue Studio City, CA	0.01 of a mile northwest	Property is registered with USEPA as a SQG. No compliance violations are listed in connection with the registration.	Neutral Gradient
Signature Cleaners 11707 Ventura Boulevard Studio City, CA	0.04 of a mile southeast	Property is registered with USEPA as a SQG. No compliance violations are listed in connection with the registration.	Up Gradient
Laurelwood Cleaners LLC 11986 Ventura Boulevard Studio City, CA	0.04 if a mile southwest	Property is registered with USEPA as a SQG. No compliance violations are listed in connection with the registration.	Up Gradient
Studio City Shell 12007 Ventura Boulevard Studio City, CA	0.07 of a mile southwest	Property is registered with USEPA as a SQG. No compliance violations are listed in connection with the registration.	Up Gradient

The above listings are not considered off-Site RECs based on the respective registration status with USEPA and/or distance in relation to the Site. Facilities listed over a tenth of a mile from the Site are not considered off-Site RECs based on their distance in relation to the Site.

### 5.1.8 Federal Brownfield

There are no Federal Brownfield sites within a 0.25 mile radius of the Site.

### 5.1.9 Federal ERNS List

There are no incidents reported within a 0.125 mile radius of the Site that are included on the Federal Emergency Response Notification System (“ERNS”) list.

### 5.1.10 Tribal Lands

There are no Tribal Lands within a 1.0 mile radius of the Site.

### 5.1.11 State and Tribal Sites

There are no CalEPA Inactive Hazardous Waste Disposal Sites (“SHWS”) within a 1.0 mile radius of the Site.

### 5.1.12 State and Tribal Spills Sites

There are no locations within a 0.125 mile radius of the Site that are on the CalEPA Spill Incident List (“Spills”).

### 5.1.13 State and Tribal Landfill and/or Solid Waste Disposal Site Lists

There are no facilities within a 0.50 mile radius of the Site that are listed on CalEPA Landfill/Solid Waste Disposal Site (“SWLF”) databases.

### 5.1.14 State and Tribal Leaking Underground Storage Tanks

There are five (5) facilities on the CalEPA’s LUST List within a 0.50 mile radius of the Site:

SITE	DISTANCE FROM SUBJECT SITE	STATUS	ORIENTATION
CBS Studio Center 4024 Radford Avenue Studio City, CA	Site	Closed. LUST No. 916040425. See Section 5.0.	Site
Texaco Service Station 12007 Ventura Blvd Studio City, CA	0.07 of a mile southwest	Closed. LUST No. 916040325. A leak was detected from a fuel island and remediation was conducted. The file was closed by CalEPA in July 1996.	Up Gradient
Studio City Shell 12007 Ventura Blvd Studio City, CA	0.07 of a mile southwest	Closed. LUST No. 916040325A. A leak was reported in June 2005 and remediation and monitoring were conducted. The file was closed by CalEPA in March 2012.	Up Gradient
Former Unocal #3459 12080 Ventura Blvd Studio City, CA	0.12 of a mile southwest	Closed. LUST No. 916040307. A leaking product line was reported in April 1987. Remediation was conducted and file was closed by CalEPA in July 1996.	Up Gradient
Mobil #11-FF3 4359 Laurel Canyon Blvd Studio City, CA	0.28 of a mile northwest	Closed. LUST No. 916070325. A leak was reported in June 1992 and the file was closed by CalEPA in July 1996.	Up Gradient

The LUST listing for the Site is considered a historic REC. The LUSTs listed for off-Site properties are not considered off-Site RECs as all of the associated spill files have been closed by CalEPA and based on the respective distances in relation to the Site.

### 5.1.15 State and Tribal Registered Storage Tank Sites

There is one (1) location listed with an active status in the CalEPA UST Inventory within a 0.25 mile radius of the Site:

SITE	DISTANCE FROM SUBJECT SITE	STATUS	ORIENTATION
Studio City Shell 12007 Ventura Blvd Studio City, CA	0.07 of a mile southwest	This property has USTs registered with CalEPA and the LAFD for retail gas station operations.	Up Gradient

This listing is not considered an off-Site REC based on the facility’s registration status and distance in relation to the Site.

#### **5.1.16 State and Tribal Engineering Control Registry**

There are no facilities within a 0.25 mile radius of the Site that is listed on the State and/or Tribal databases for sites that have engineering controls in place.

#### **5.1.17 State and Tribal Institutional Control Registry**

There are no facilities within a 0.25 radius mile of the Site that are listed on the State and/or Tribal databases for sites that have institutional controls in place.

#### **5.1.18 State and Tribal Voluntary Cleanup Sites**

There are no facilities on CalEPA's Voluntary Cleanup Program ("VCP") listed within the 0.50 mile radius of the Site.

#### **5.1.19 State and Tribal Brownfields**

There are no Federal Brownfield sites within a 0.50 mile radius of the Site.

#### **5.1.20 Federal Institutional Controls/Engineering Controls**

There are no Federal sites with Institutional or Engineering Controls ("IC/EC") within a 0.50 mile radius of the Site.

#### **5.1.21 Others**

There are sixty-one (61) "Other" listings for Manifest and registrations within a 0.25 mile radius of the Site. The on-Site and off-Site "Other" listings are not considered RECs.

### **5.2 Additional Environmental Record Sources**

To supplement the standard environmental records reviewed, Leader also reviewed additional records made available through other sources.

#### **5.2.1 Local Land Records**

Leader reviewed information and records through the Los Angeles County Geographic Information System and Los Angeles County Clerk's Office.

#### **5.2.2 Local Electric Utility (Public Service)**

The Site is developed with electric service provided by the Los Angeles Department of Water and Power.

#### **5.2.3 Local/Regional Water Quality Agency**

The Los Angeles Regional Water Control Board is the local water quality agency responsible for the Site.

## 5.3 Physical Setting Source(s)

### 5.3.1 USGS – Current 7.5 Minute Topographic Map

The general area of the Site is shown on the USGS, Los Angeles Quadrangle. The southern Site parcel has a gradual downward slope of approximately fifteen feet from the southern property line to the Los Angeles River on the north side of the parcel. The northern Site parcel has a gradual downward slope from the north to southeast of approximately five feet. A topographic map of the Site area is displayed in Figure 3.

## 5.4 Historical Use Information on the Property

### 5.4.1 Historical Aerial Photographs

Leader obtained the aerial photographs from the database service and Google Earth. The maps include the years 1927, 1938, 1944, 1952, 1960, 1964, 1972, 1980, 1983, 1989, 1994, 2005, 2010, 2012, 2014, 2016, 2018 and 2020. Copies of the historical aerial photographs can be found in Appendix D. Our observations are provided in the table below.

Year	Observations
1927	On-site: The original two studio buildings appear on the southwest area of the Site. The northern area of the Site appears to be undeveloped land. Off-site: The neighboring properties appear to be used for agricultural purposes.
1938	On-site: Approximately ten structures have been built around the original studio buildings, with materials and equipment stored around the southern parcel. Off-site: Some residential and commercial development has occurred on the neighboring properties to the south and west.
1944	On-site: More buildings have been constructed on the southern parcel, including two other large studio buildings. Off-site: The neighboring properties to the south and west have been significantly developed for residential and commercial purpose.
1952	On-site: More buildings have been constructed on the southern parcel. Equipment and materials are stored around the Site. A parking lot appears on the northern parcel. Off-site: Engineering controls have been constructed to direct the flow of the Los Angeles River.
1960-1983	On-site: More buildings have been constructed on the southern parcel. The parking lot on the northern parcel has been expanded. Off-site: Properties to the north and east of the Site have been significantly developed for residential and commercial purpose.
1989	On-site: A large studio building has been built on the southeast area of the southern parcel. The northern parcel appears to be being cleared for development. Off-site: No significant changes appear since 1983.
1994	On-site: Additional land clearing has occurred on the northern parcel. Off-site: No significant changes appear since 1989.
2005	On-site: A bridge has been built over the Los Angeles River that connects the southern and northern parcels. Two large structure have been built on the west side of the northern parcel. A parking garage has been built on the northwest area of the southern parcel. Off-site: No significant changes appear since 1994.

Year	Observations
2010	On-site: The northern parcel has been developed with its current improvements. Off-site: Residential and commercial properties to the south and west have been redeveloped.
2016	On-site: A parking garage has been built on the northeast are of the southern parcel. Off-site: No significant changes have occurred since 2010.

The review of historical aerial photographs does not indicate any RECs.

#### 5.4.2 Fire Insurance Maps

Leader obtained the Sanborn Fire Insurance Maps for the Site that including the years 1950, 1955, 1956, 1958, 1960, 1961, 1966 and 1969. Copies of the historical aerial photographs are provided in Appendix E. Our observations of the maps are provided in the table below.

Year	Observations
1950	On-site: Approximately twenty structures are on the southern parcel labeled as “Republic Productions Inc. Motion Picture Studio.” A concrete underground tank is indicated in the south eastern area of the parcel. The northern parcel is undeveloped. Off-site: The neighboring properties to the west and south are developed as residential dwelling and light commercial purpose.
1955-1961	On-site: Approximately twenty additional buildings have been built on the southern parcel that are labeled as “Sound Stage” and “Prop Stage.” Off-site: Additional residential and commercial development has occurred on the properties to the south and west.
1966-1969	On-site: The southern parcel is labeled “C.B.S. Studio Center Motion Picture Studio.” Off-site: No significant changes since 1961.

The review of the Sanborn Fire Insurance Map did not indicate any RECs.

#### 5.4.3 Zoning/Land Use Records

The Los Angeles County Assessor’s office lists the Site’s land use as (3500) and (3290)- Industrial, Heavy Industrial and Movie, Television, Radio Industry.

#### 5.4.4 Prior Assessment Usage and Previous Environmental Reports

No prior Phase I reports were provided to Leader.

### 5.5 Historical Use Information on the Adjoining Properties

As part of our inquiry into the previous uses of the adjoining properties, Leader reviewed available historical aerial photographs for the Site and surrounding area. Information regarding our reviews of historical aerial photography is provided in Section 5.4.1. Leader requested Sanborn Maps for the Site however, they were not available.

## **6. SITE RECONNAISSANCE OBSERVATIONS**

---

On March 15 and March 16, 2021, Robert Murphy and James Staab of Leader performed a Site Reconnaissance. The observations provided are only applicable to those areas that were observed at the time of Leader's Site Reconnaissance.

### **6.1 Methodology and Limiting Conditions**

Leader's assessment activities included visual evaluations of the Site property and the neighboring properties from the public right-of-way. Photographs taken during the Site Reconnaissance are included as Appendix F. Additional information regarding the Site and the history were obtained from interviews with ViacomCBS personnel and research with various public agencies.

### **6.2 General Site Setting**

The Site is located in the Studio City neighborhood of Los Angeles and is accessed by vehicles via five (5) driveways/gates from Radford Avenue and Colfax Avenue. The neighboring properties to the west and south consist of residential and commercial properties. The Los Angeles River is immediately to the north and east of the Site.

#### **6.2.1 Current Use(s) of the Property**

The Site is currently used as stages and studios for production and office space.

#### **6.2.2 Past Use(s) of the Property**

The Site has been used as a motion picture, recording, and broadcast television studios since the 1920s.

#### **6.2.3 Current Use(s) of Adjoining Properties**

Current land use of the properties directly adjoining the Site was evaluated by visual inspection and review of available information. The following is a description of adjoining properties:

North: The Los Angeles River and residential properties.

East: The Los Angeles River and residential properties.

West: Residential and light commercial properties.

South: Residential and light commercial properties.

#### **6.2.4 Current or Past Uses in the Surrounding Area**

The surrounding properties to the south and west have been used for residential and light commercial purpose since late 1920s.

#### **6.2.5 Geologic and Hydrologic Conditions**

The unconsolidated (overburden) materials in the vicinity of the Site are classified by the United States Department of Agriculture Soil Survey Application as mainly Urban Land comprised of Grommet-Ballona and Tujunga-Typic Xerorthents sandy soil complexes.

The actual depths to bedrock and groundwater are not known but the groundwater table is believed to be less than 10 feet below the ground surface.

#### **6.2.6 Topographic Conditions**

The southern Site parcel has a gradual downward slope of approximately fifteen feet from the southern property line to the Los Angeles River on the north side of the parcel. The northern Site parcel has a gradual downward slope from the north to southeast of approximately five feet. A topographic map of the Site area is displayed in Figure 3.

#### **6.2.7 Vapor Encroachment Conditions**

There are no potential on-Site or nearby sources of contaminants which may cause Vapor Encroachment Conditions (“VECs”) for the Site.

#### **6.2.8 General Description of Structures**

The Site is improved with approximately one hundred and seventeen (117) structures that include office buildings, bungalows, stages, trailers, utility sheds and parking garages. A list of the structures on the Site is provided as Appendix H. All of the structures observed appeared to be in good condition.

#### **6.2.9 Site Utility Information**

The Site is developed and connected to electric and water service provided by the Los Angeles Department of Water and Power.

#### **6.2.10 Surface Water and Storm Water**

The Los Angeles River and West Tujunga Wash are adjoining to the north and east of the Site. Storm water generated by the Site is directed towards the Los Angeles River and West Tujunga Wash by the topography generated by the Site and by drainage piping.

### **6.3 Interior/Exterior Observations**

The observations discussed herein were made during Leader’s Site Reconnaissance on March 15 and March 16, 2021.

#### **6.3.1 Hazardous Substances in Connection with Identified Uses**

Approximately ten (55) gallon drums of hazardous substances were observed in two areas on the southern parcel, where the materials are collected for off-Site disposal by Crystal Clean, a ViacomCBS waste disposal vendor. The drums and materials observed were stored on secondary containment units and appeared to be properly managed and no spills or leaks observed.

#### **6.3.2 Storage Tanks**

Fourteen (14) ASTs containing diesel fuel are in operation and used to fuel emergency electric generator units. The ASTs appear to be in good condition and secondary containment systems are in place for the ASTs.

#### **6.3.3 Odors**

No odors were noticed.

#### **6.3.4 Pools of Liquid**

No pools of liquid were observed during the Site Reconnaissance.

#### **6.3.5 Drums**

Approximately ten (55) gallon containers of paints, flammable rags and other hazardous substances were observed in the Paint Shop building on the southern parcel. The materials are stored for eventual off-Site disposal by Crystal Clean. The containers were on secondary containment units and appeared to be properly managed and labeled and no spills or leaks observed.

#### **6.3.6 Hazardous Substances and Petroleum Products (Not Necessarily in Connection with Identified Uses)**

No hazardous substances or petroleum products in unlabeled containers were observed during the Site Reconnaissance.

#### **6.3.7 Polychlorinated Biphenyls (“PCBs”)**

Three electrical transformers and one electrical switch containing PCBs were observed on the Site. The location of the PCB containing equipment is shown in Figure 5. The PCB equipment are marked with the appropriate labels and the required record keeping is maintained.

#### **6.3.8 Heating and Cooling**

The Site’s heating and cooling is provided by a combination of a central chilled water plant and standalone HVAC units.

#### **6.3.9 Stains or Corrosion**

No significant stains or corrosion were observed at the Site.

#### **6.3.10 Drains and Sumps**

Storm sewer drains were observed in parking lots and driveways around the Site discharge to the Los Angeles River.

#### **6.3.11 Pits, Ponds or Lagoons**

No pits, ponds or lagoons were observed during the Site Reconnaissance.

#### **6.3.12 Stained Soil or Pavement**

No stained soil was observed at the Site.

#### **6.3.13 Stressed Vegetation**

No stressed vegetation was observed at the Site.

#### **6.3.14 Solid Waste**

Solid waste generated at the Site is placed in general refuse containers located around the Site and collected by Waste Management Corporation.

#### **6.3.15 Wells**

No wells were observed on the Site.

### **6.3.16 Wastewater**

Wastewater from the Site is discharged to the public sanitary sewer system under City of Los Angeles Industrial Wastewater Permits.

### **6.3.17 Septic Systems**

The Site does not have a septic system.

### **6.3.18 Unidentified Substance Containers**

No unidentified substance containers were observed on the Site.

## **6.4 Other Conditions or Concerns**

Certain Business Environmental Risks (“BER”) were evaluated at the Site. Leader’s observations regarding these BERs are outlined below.

### **6.4.1 Suspect Asbestos-Containing Materials (“SACM”)**

An asbestos survey was conducted at the property in December 1989 that identified ACM in buildings throughout the Site. ACM abatements have been conducted in areas where ACM was present and renovations have occurred. According to records provided by ViacomCBS, the majority of ACM listed in the 1989 survey has been abated. A Limited Asbestos Survey Report prepared by Clark Seif Clark, Inc. in March 2021 for the Editorial 1 & Editorial 2 Buildings, indicate ACM is present in areas of the buildings. Signage for areas with ACM were observed during the Site Reconnaissance.

### **6.4.2 Lead-Based Paint**

Based on the varied construction dates of the Site buildings, as early as 1920, lead-based paint may be present. The painted surfaces observed during the Site Reconnaissance were in good condition.

### **6.4.3 Radon**

According to information in the database report, the average radon level in the Los Angeles County area is 1.01 picoCuries per Liter (pCi/L) for indoor air. USEPA’s recommended action level for radon is 4.0 pc/l. No radon tests were completed during the Phase I. Radon testing is required to determine the actual levels.

### **6.4.4 Mold**

No mold (fungi) were observed at the Site.

## **7. INTERVIEWS**

---

### **7.1 Interview with Owner**

The owner of the Site was not available for interview.

### **7.2 Interview with Site Occupants**

Leader interviewed a number of ViacomCBS personnel that provided information on Site conditions and operations. Information provided by ViacomCBS personnel has been incorporated in this Report.

### **7.3 Interview with Previous Owner**

The previous owner was not contacted for an interview.

### **7.4 Interviews with Local Government Officials**

#### **7.4.1 United States Environmental Protection Agency**

Leader completed an online query of the USEPA Envirofacts database (<http://www.epa.gov/enviro/>) for the Site. The USEPA Envirofacts database lists the Site in the Facility Registration System and RCRA program. No compliance are listed in connection with their registrations.

#### **7.4.2 California Environmental Protection Agency**

A FOIL request was submitted to the CalEPA for the Site and correspondence between Leader and the CalEPA is provided as Appendix G.

#### **7.4.3 Los Angeles County**

A FOIL request was submitted to Los Angeles County for the Site. Correspondence between Leader and Los Angeles County is provided as Appendix G.

#### **7.4.4 The City of Los Angeles**

A FOIL request was submitted to the City of Los Angeles for the Site and Leader was given the reference number FOIL #21-1469. Correspondence between Leader and the City is provided as Appendix G.

## 8. FINDINGS

---

### 8.1 Summary

Leader was retained by ViacomCBS to conduct a Phase I on the Site located at 4024 Radford Avenue in Studio City, Los Angeles, California. Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

Robert Murphy of Leader completed the Phase I, including a Site Reconnaissance on March 15 and 16, 2021. Consistent with ASTM E 1527-13, a database service was used to perform a regulatory database search. FOIL requests were submitted to the CalEPA, Los Angeles County, and the City of Los Angeles.

### 8.2 Findings

*Recognized Environmental Conditions* are defined by ASTM as “the presence or likely presence of any *hazardous substances* or *petroleum products* on a property under conditions that indicate an existing release, a past release or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the property or into the ground, ground water or surface water of the property. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.”

*A Historical Recognized Environmental Condition* is defined by ASTM as a “past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *Site* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *Site* to any required controls.”

*A Controlled Recognized Environmental Condition* is defined by ASTM as an “environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

*An Area of Concern* is defined as a current or historical environmental, safety, health, facility or maintenance issue requiring attention but is not a significant environmental compliance or legacy issue. It is not a “recognized environmental condition” as defined above.

The significant findings associated with this Phase I are listed below:

#### **8.2.1 On-Site Recognized Environmental Conditions**

No on-site RECs were observed in connection with the Site.

#### **8.2.2 Off-Site Recognized Environmental Conditions**

No off-site RECs were observed in connection with the Site.

#### **8.2.3 Historical Recognized Environmental Conditions**

One (1) Historical RECs were observed in connection with the Site:

- The Site is listed as CalEPA Leaking Underground Storage Tank (“LUST”) Case No. 91604042. The LUST listing was opened in 1994 when gasoline contamination was encountered beneath five (5) 10,000-gallon USTs as a result of damage to the USTs and product lines from the 1994 Northridge Earthquake. The USTs were removed from the Site in February 1994 by A.E. Schmidt under a permit issued by the City of Los Angeles Fire Department. Impacted soils were removed from the Site for off-Site disposal and groundwater monitoring was required by the California Water Control Board in May 1994. Verification monitoring of soils and groundwater were conducted and CalEPA completed and closed the LUST file in January 1997.

#### **8.2.4 Controlled Recognized Environmental Conditions**

No Controlled RECs were observed in connection with the Site.

#### **8.2.5 Additional Areas of Concern**

Five (5) areas of concern were observed in connection with the Site:

- ViacomCBS operates fourteen (14) aboveground storage tanks (“ASTs”) registered with the City of Los Angeles Fire Department (“LAFD”) for the Site. The ASTs have a total capacity of 14,940 gallons and all contain diesel fuel.
- Three (3) electrical transformers and one (1) electrical switch containing PCBs are located between Stages 5 and 9. The equipment is properly labeled and will eventually require proper removal and disposal.
- Three (3) wastewater clarifying tanks were observed at the Site that discharge to the City of Los Angeles sanitary sewer system. The clarifiers are located near the main hazardous waste storage area, the transportation building and The Radford Broadcast Center building. The clarifiers collect and treat sanitary water that potentially contains contaminants, e.g, petroleum, paint-related material, etc. The clarifiers are operating under seven (7) Industrial Wastewater Permits issued by the City.
- The Site’s hazardous waste generator status is a Large Quantity Generator (e.g,  $\geq 2,200$  lbs. generated per month).

- An asbestos survey was conducted at the Site in December 1989 that identified ACM in buildings throughout the property. ACM abatement projects have been conducted in areas where ACM was present and renovations have occurred. The majority of ACM listed in the 1989 survey has been abated. A Limited Asbestos Survey Report prepared by Clark Seif Clark, Inc. in March 2021 for the Editorial 1 & Editorial 2 Buildings identifying ACM in areas of the buildings. Signage for the ACM was observed during the Site Reconnaissance.

## **9. OPINION**

---

Based on Leader's findings and the Site Reconnaissance conducted on March 15 and March 16, 2021, additional environmental investigation is not recommended at this time.

### **9.1 Data Gaps**

No data gaps were incurred during the completion of this Phase I.

## 10. CONCLUSIONS

---

Based on information provided or reasonably ascertained, interviews and the Site Reconnaissance, this Phase I was completed in general conformance with the scope and limitations of ASTM Practice E 1527-13 for the Site located at 4024 Radford Avenue in Studio City, City of Los Angeles, Los Angeles County, California. Exceptions to, or deletions from, this practice are described in Section 2.4 of this report.

Based on Leader's findings and observations during the Site Reconnaissance conducted on March 15 and March 16, 2021, no additional environmental investigation is recommended.

Leader recommends that the five areas of concern listed in the Phase I continue to be managed in accordance with their respective USEPA, CalEPA, and City of Los Angeles regulations and/or permits.

## **11. DEVIATIONS**

---

There were no deviations to the ASTM Standard Practice for Environmental Site Assessments, E 5127-13 for this Phase I.

## **12. ADDITIONAL SERVICES**

---

Under the Phase I Scope of Work, no additional services were provided to ViacomCBS other than those identified in Section 2.2.

## **14. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS**

---

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site.

In addition, we certify, under penalty of false statements, 18 USC 1001, all of the information contained in this report is true and correct to the best of our knowledge.

Below are the signatures of the Environmental Assessors who completed the Phase I for the Site.

### **SPCC PLAN**

**SPILL PREVENTION, CONTROL, AND COUNTERMEASURE PLAN**  
**SPCC – Rev. November 2020**

---

**CBS STUDIO CENTER**  
4024 Radford Avenue  
Studio City, CA 91604

Revised: December 2020

Prepared by

**A.C.C.E.S. INC.**  
2336 South Sepulveda Boulevard,  
Los Angeles, CA 90064  
Tel: 310-822-3800 Fax: 310-822-3803

### Professional Engineer Certification (40 CFR 112.3(d))

The undersigned Registered Professional Engineer is familiar with the requirements of Part 112 of Title 40 of the *Code of Federal Regulations* (40 CFR Part 112) and has visited and examined the facility, or has supervised examination of the facility by appropriately qualified personnel. The undersigned Registered Professional Engineer attests that this Spill Prevention, Control, and Countermeasure Plan has been prepared in accordance with good engineering practice, including consideration of applicable industry standards and the requirements of 40 CFR part 112; that procedures for required inspections and testing have been established; and that this Plan is adequate for the facility. [40 CFR 112.3(d)]

This certification in no way relieves the owner or operator of the facility of his/her duty to prepare and fully implement this SPCC Plan in accordance with the requirements of 40 CFR Part 112. This Plan is valid only to the extent that the facility owner or operator maintains, tests, and inspects equipment, containment, and other devices as prescribed in this Plan.

Hamid Assadi  
A.C.C.E.S., INC.

Registered Professional Civil Engineer  
Date December 16, 2020

### Plan Review Log

This log must be completed even if no amendment is made to the Plan as a result of the review. Unless a technical or administrative change prompts an earlier review of the plan, the next scheduled review of this Plan must occur by December 2025.

## INTRODUCTION

### Purpose (40 CFR 112.7 (a)(1))

The purpose of this Spill Prevention, Control, and Countermeasure (SPCC) Plan is to describe measures implemented by CBS Studio Center to prevent oil discharges from occurring, and to prepare CBS Studios to respond in a safe, effective, and timely manner to mitigate the impacts of a discharge.

This Plan has been prepared to meet the requirements of Title 40, *Code of Federal Regulations*, Part 112 (40 CFR part 112) including amendments finalized as of the date of this plan. This plan provides guidelines on key actions that CBS must perform to comply with the SPCC rule and applicable State of California Regulations:

- ☐ Maintain a complete copy of this SPCC plan readily available in the facility office building during all normal operating hours.
- ☐ Complete monthly and annual site inspections as outlined in the Inspection, Tests, and Records section of this Plan (Section 3.7) using the inspection checklists included in Appendix C.
- ☐ Perform preventive maintenance of equipment, secondary containment systems, and discharge prevention systems described in this Plan as needed to keep them in proper operating conditions.
- ☐ Conduct annual employee training as outlined in the Personnel, Training, and Spill Prevention Procedures section of this Plan (Section 3.8) and document them on the log included in Appendix D.
- ☐ If either of the following occurs, submit the SPCC Plan to EPA Region 9 Regional Administrator (RA), and California Office of Emergency Services (OES), along with other information as detailed in Section 5.4 of this Plan:
  - ☐ The facility discharges more than 1,000 gallons of oil into or upon the navigable waters of the U.S. or adjoining shorelines in a single spill event; or
  - ☐ The facility discharges oil in quantity greater than 42 gallons in each of two spill events within any 12-month period.
- ☐ Review the SPCC Plan at least once every five (5) years and amend it to include more effective prevention and control technology, if such technology will significantly reduce the likelihood of a spill event and has been proven effective in the field at the time of the review. Plan amendments, other than administrative changes discussed above, must be recertified by a Professional Engineer on the

certification page. The plan review log must be maintained to document any recertifications.

- Amend the SPCC Plan within six (6) months whenever there is a change in facility design, construction, operation, or maintenance that materially affects the facility's spill potential. The revised Plan must be recertified by a Professional Engineer (PE). The plan review log must be maintained to document any amendments.
- Review the Plan on an annual basis. Update the Plan to reflect any "administrative changes" that are applicable, such as personnel changes or revisions to contact information, such as phone numbers. Administrative changes must be documented in the Plan review log, but do not have to be certified by a PE.

## Part 1: Plan Administration

### 1.1 Management Approval and Designated Person (40 CFR 112.7)

CBS Studio Center is committed to preventing discharges of oil/petroleum products to navigable waters and the environment, and to maintaining spill prevention control and countermeasures through the implementation and regular review and amendment to the Plan. This SPCC Plan has the full approval of CBS Studios management. CBS Studio Center has committed the necessary resources to implement the measures described in this Plan and has determined that this facility does not pose a risk of substantial harm under 40 CFR part 112, as recorded in the "Substantial Harm Determination" included in Appendix B of this Plan.

The Facility Manager is the Designated Person Accountable for Oil Spill Prevention at the facility and has the authority to commit the necessary resources to implement this Plan.

Authorized Facility Representative (facility response coordinator): Emily Terranova

Signature:

Title:

Environmental, Health & Safety Manager

Date:

December 10, 2020

### 1.2 Location of SPCC Plan (40 CFR 112.3 (e))

In accordance with 40 CFR 112.3 (e), a complete copy of this SPCC plan is maintained at the office of Ms. Emily Terranova at CBS Studio Center, The Broadcast Center Building. The office of Ms. Emily Terranova is accessible 24 hours a day, 7 days a week.

### 1.3 Plan Review (40 CFR 112.3 and 112.5)

#### 1.3.1 Changes in Facility Configuration

In accordance with 40 CFR 112.5(a), CBS Studio Center periodically reviews and evaluates this SPCC Plan for any change in the facility design, construction, operation, or maintenance that materially affects the facility's potential for an oil discharge, including, but not limited to:

- commissioning of containers;
- reconstruction, replacement, or installation of piping and drainage systems;
- construction or demolition that might alter secondary containment structures; or
- changes of product or service, revisions to standard operation, modification of testing/inspection procedures, and use of new or modified industry standards or maintenance procedures.

Amendments to the Plan made to address changes of this nature are referred to as technical amendments, and must be certified by a PE. Non-technical amendments can be done by the facility owner and/or operator. Non-technical amendments include the following:

- change in the name or contact information (i.e., telephone numbers) of individuals responsible for the implementation of this Plan; or
- change in the name or contact information of spill response or cleanup contractors.

CBS Studio Center must make the needed revisions to the SPCC Plan as soon as possible, but not later than six months after the change occurs. The Plan must be implemented as soon as possible following any technical amendment, but *no later than six months* from the date of the amendment. The Safety Manager is responsible for initiating and coordinating revisions to the SPCC Plan.

#### **1.3.2 Scheduled Plan Reviews**

In accordance with 40 CFR 112.5(b), CBS Studio Center will review this SPCC Plan at least once every five years. Revisions to the Plan, if needed, are made within six months of the five-year review. A registered Professional Engineer certifies any technical amendment to the Plan, as described above. If the plan does not require technical changes, the plan review may be completed by Ms. Emily Terranova or other authorized personnel at CBS Studio Center.

This plan is dated December 2020. The next plan review must be scheduled on or prior to December 2025.

### 2.1 Facility Description (40 CFR 112.7(a)(3))

#### 2.1.1 Locations and Activities

CBS Studio Center is located at 4024 Radford Avenue, Studio City, CA 91604. The site is bordered to the west by Radford Avenue, to the north and east by the Tujunga Wash, and to the south by commercial and residential structures along Ventura Boulevard. The Los Angeles River cuts across the complex. The property consists of approximately 70 acres of land. A number of offices, studios, parking structures and office trailers are located at the facility. Several generators are located at different locations at the facility. Some of the generators use diesel fuel. The approximate locations of the diesel AST's are shown in Figure 2.

CBS Studio Center is a major television network and broadcasting company. There are twelve (12) diesel aboveground storage tanks (AST's) located at the facility:

- 1- AST located at Northside BC is a 10,000-gallon Fireguard type UL 2085 double-walled tank. The AST overfill devices include a 3" AST overfill prevention valve at 90% tank

capacity, an OMNTEC overfill alarm and acknowledgement at 85% tank capacity. The tank has a built in 110% secondary containment. The AST supplies fuel to day tanks at 2 emergency generators each with a capacity of 60 gallons.

The diesel AST is located inside a 2,400 ft<sup>2</sup> chain link-fenced area approximately 35 feet to the southwest of the Tujunga Wash. The diesel AST is located to the south of the fenced area. The AST is refilled through hoses that extend from a fuel delivery truck.

- 2- AST located adjacent to North Building T. This AST is a 2,000-gallon above ground storage tank (AST). The AST is a 2,000-gallon UL 142 double-walled belly tank. The tank has a built in 110% secondary containment. The AST supplies fuel to an emergency generator.
- 3- AST located at North Parking. This AST is a 1,000-gallon above ground storage tank (AST). The AST is a 1,000-gallon UL 142 double-walled tank. The tank has a built in 110% secondary containment. The AST is equipped with a tank mounted dispenser to fuel equipment.
- 4- AST located in the ET generator room. This AST is a 550-gallon above ground storage tank (AST). The AST is a 550-gallon UL 142 double-walled belly tank. The tank has a built in 110% secondary containment. The AST supplies fuel to an emergency generator.
- 5- AST located SE of Lagoon Building. This AST is a 300-gallon above ground storage tank (AST). The AST is a 300-gallon UL 142 double-walled belly tank. The tank has a built in 110% secondary containment. The AST supplies fuel to an emergency generator.
- 6- AST mounted on trailer near Gate-C. This AST has 250-gallons capacity. The AST is a UL 142 double-walled tank. The trailer mounted AST is equipped with trailer mounted dispensing hose on a reel.
- 7- AST located N of Admin Building. This AST is a 240-gallon above ground storage tank (AST). The AST is a 240-gallon UL 142 double-walled belly tank. The tank has a built in 110% secondary containment. The AST supplies fuel to an emergency generator.
- 8- AST located W of Stage Building 21. This AST is a 100-gallon UL 142 double-walled belly tank. The AST supplies fuel to an emergency generator.
- 9- AST located N of Stage Building 2. This AST is a 100-gallon UL 142 double-walled belly tank. The AST supplies fuel to an emergency generator.
- 10- AST located NW of Annex Building (W Annex 7). This AST is a 100-gallon UL 142 double-walled belly tank. The AST supplies fuel to an emergency generator.
- 11- AST located adjacent to Emergency Command Center Trailer. This AST is a 100-gallon UL 142 double-walled belly tank. The AST supplies fuel to an emergency generator.

- 12- AST located adjacent to Medical. This AST is an 80-gallon UL 142 double-walled belly tank. The AST supplies fuel to an emergency generator

There is no fixed hours of operation. Personnel at the facility include Office and maintenance personnel.

Figure 2 shows the layout of the facility, including the locations of the diesel ASTs.

Figure 3 shows the vicinity of the 10,000-Gallon AST (Broadcast Center) including the location of the diesel AST and the 2 generators, refilling area, bunk houses and drainages.

Figure 4 shows the vicinity of the 2,000-Gallon AST (Building T/ Generator) and the generator installed on top of the AST.

## **2.2 Evaluation of Discharge Potential**

### **2.2.1 Distance to Navigable Waters and Adjoining Shorelines and Flow Paths**

The facility is located on relatively level terrain. The largest diesel AST (10,000 gallon) at the Broadcast Center and 2 generators are located approximately 35 feet to the west of Tujunga Wash and approximately 500 feet to the north of the Los Angeles River. Contour lines in Figure 3 indicate the approximate directions of surface run-off in the area where the 10,000 gallon AST is located (flow may occur in two directions). The tank and

Surface run-off in the north and northeast part of the referred area will drain towards the northeast and into a drainage inlet located at the west bank of Tujunga Wash, and those from the south and parking area will flow towards the drainage inlets located to the south of the fenced area. The drainage inlets referred to, lead to a clarifier. The approximate flow direction for this AST is shown in Figure 5.

Approximately ninety percent of the area inside the chain link fence is covered with concrete. Most of the ground surface around the fenced area is paved with asphalt. The remainder consists of soil and low-lying vegetation. There is some potential for soils to receive spill from tanks, however, hydrocarbons move through the soil at slower rate. Topography of the area should direct the spilled product to the drainage inlets leading to the clarifier.

A 2,000 gallon diesel AST (belly tank) is located at Building T / Generator. The surface contour (please see Figure 6) indicate that the approximate flow direction is East South-East towards the storm drain inlet.

The flow directions for all ASTs is summarized in Table 3.1.

### **2.2.2 Discharge History**

The facility has no history of discharge to date.

## **PART 3: General SPCC Provisions**

The following measures are implemented to prevent oil discharges during the handling, use, or transfer of oil products at the facility. Oil-handling employees have received training in the proper implementation of these measures.

### **3.1 Compliance with Applicable Requirements (40 CFR 112.7(a)(2))**

The facility complies with the applicable requirements of a Spill Prevention Control & Countermeasures Plan, as they are outlined in 40 CFR 112.7 and 112.8. The following sections of the Plan summarize the features of the site which help reduce the potential for spills and contain any releases that could occur. The plan also details the procedures to be followed in everyday activities at the site which will reduce the potential for spills and appropriate responses, should a spill occur.

### **3.2 Facility Layout Description (40 CFR 112.7(a)(3))**

Figure 1 shows the general location of the facility on a U.S. Geological Survey topographic map. Figure 2 presents a layout of the facility, locations of storage tanks and drain inlets for the clarifier (oil/water separator). The facility diagrams indicate the locations and content of ASTs and associated piping.

The facility handles, stores and uses petroleum diesel fuel. The products stored are used to power emergency generators and fuel diesel powered equipment used on site. No fuel is or other maintenance products are sold or distributed from the site.

#### **— 3.2.1 Oil Storage (40 CFR 112.7(a)(3)(i))**

Bulk petroleum products are delivered to the site via tanker truck. The bulk products are stored in twelve (12) above ground storage tanks (ASTs). There are no underground storage tanks (USTs) at the facility. The design and construction of the bulk storage containers is compatible with the characteristics of the oil products they contain at ambient temperature and pressure conditions.

The capacities of the oil containers present at the site are listed in Table 3-1, below and are also indicated on Figure 2 (Facility Site Plan). All containers with capacity of 55 gallons or more are included. The capacities of oil/water separator is not included in the total storage capacity of the facility since it is an exempt flow through process tank, but it does serve as a means of secondary containment for the area of the facility near the 10,000 gallon diesel AST (near broadcast center) with potential for an oil discharge.

**Table 3-1 Oil Containers**

AST ID	Storage Capacity (Gallons)	Contents	Description	Flow Direction
1	10,000	Diesel Fuel	AST to the North of BC Supplying Fuel to 2 Generators (Day Tanks)	NE
1a	60	Diesel Fuel	Day tank at Generator North of BC	NE
1b	60	Diesel Fuel	Day tank at Generator North of BC	NE
2	2,000	Diesel Fuel	AST (belly tank) Beneath Emergency Backup Generator at North Building T	NE
3	1,000	Diesel Fuel	AST with Tank Mounted Dispenser near North Parking	SW
4	550	Diesel Fuel	AST (belly tank) Beneath Emergency Backup Generator at ET Generator Room	SE
5	300	Diesel Fuel	AST (belly tank) Beneath Emergency Backup Generator at Lagoon Building	N-NE
6	250	Diesel Fuel	Trailer Mounted Diesel Fuel Tank Near Gate C	S-SE
7	240	Diesel Fuel	AST Adjacent to Admin Building Supplying Fuel to Generator	W-NW
8	100	Diesel Fuel	Sater Building	NW
9	100	Diesel Fuel	Stage Building 21	S
10	100	Diesel Fuel	Annex Building 7	SE
11	100	Diesel Fuel	Emergency Command Center Trailer	SE
12	80	Diesel Fuel	Medical	S-SW
Total Maximum Oil Storage (Gallons):			14,940	

### 3.3 Discharge Prevention Measures (40 CFR 112.7(a)(3)(ii))

Proper routine oil handling procedures are the best measures to prevent spills and maintain a good working environment. Common oil handling operations at this facility include:

- Storage and supply of Diesel Fuel to Generators
- Filling the fuel tanks from tanker trucks
- Dispensing fuel from trailer mounted tank (6) and AST with tank mounted dispenser (3)

#### 3.3.1 Loading/Unloading Procedures (40 CFR 112.7(h)(2) and (3))

All suppliers must meet the minimum requirements and regulations for delivery truck unloading established by the U.S. Department of Transportation. CBS Studio Center ensures that the

vendor understands the site layout, knows the protocol for entering the facility and unloading product, and has the necessary equipment to respond to a discharge from the vehicle or fuel delivery hose.

The Safety Manager or his/her designee provides oversight for oil and diesel deliveries for all new suppliers, and periodically observes deliveries for existing, approved suppliers.

All unloading by delivery trucks take place in the designated refilling areas. Equipment filling operations are performed by facility personnel trained in proper discharge prevention procedures. The facility personnel will remain with the equipment at all times while fuel is being transferred. Transfer operations for the AS'Is are performed according to the minimum procedures outlined in Table 3-2. This table is also posted next to the refilling point.

**Table 3-2: Fuel Transfer Procedures**

Stage	Tasks
Prior to re-filling	<ul style="list-style-type: none"> <li><input type="checkbox"/> Visually check all hoses for leaks and wet spots.</li> <li><input type="checkbox"/> Verify that sufficient volume (ullage) is available in the storage tank.</li> <li><input type="checkbox"/> Lock in the closed position all drainage valves of the secondary containment structure.</li> <li><input type="checkbox"/> Secure the delivery vehicle with wheel chocks and interlocks.</li> <li><input type="checkbox"/> Ensure that the vehicle's parking brakes are set.</li> <li><input type="checkbox"/> Verify proper alignment of valves and proper functioning of the pumping system.</li> <li><input type="checkbox"/> Establish adequate bonding/grounding prior to connecting to the fuel transfer point.</li> <li><input type="checkbox"/> Turn off cell phone.</li> </ul>
During re-filling	<ul style="list-style-type: none"> <li><input type="checkbox"/> Driver must stay with the vehicle at all times during re-filling activities.</li> <li><input type="checkbox"/> Periodically inspect all systems, hoses and connections.</li> <li><input type="checkbox"/> When loading, keep internal and external valves on the receiving tank open along with the pressure relief valves.</li> <li><input type="checkbox"/> When making a connection, shut off the vehicle engine. When transferring Class 3 materials, shut off the vehicle engine unless it is used to operate a pump.</li> <li><input type="checkbox"/> Maintain communication with the pumping and receiving stations.</li> <li><input type="checkbox"/> Monitor the liquid level in the receiving tank to prevent overflow.</li> <li><input type="checkbox"/> Monitor flow meters to determine rate of flow.</li> <li><input type="checkbox"/> When topping off the tank, reduce flow rate to prevent overflow.</li> </ul>

After re-filling	<ul style="list-style-type: none"> <li><input type="checkbox"/> Make sure the transfer operation is completed.</li> <li><input type="checkbox"/> Close all tank and loading valves before disconnecting.</li> <li><input type="checkbox"/> Securely close all vehicle internal, external, and dome cover valves before disconnecting.</li> <li><input type="checkbox"/> Secure all hatches.</li> <li><input type="checkbox"/> Disconnect grounding/bonding wires.</li> <li><input type="checkbox"/> Make sure the hoses are drained to remove the remaining oil before moving them away from the connection. Use a drip pan.</li> <li><input type="checkbox"/> Cap the end of the hose and other connecting devices before moving them to prevent uncontrolled leakage.</li> <li><input type="checkbox"/> Pump any fuel in the spill containment device to the AST.</li> <li><input type="checkbox"/> Remove wheel chocks and interlocks.</li> <li><input type="checkbox"/> Inspect the lowermost drain and all outlets on delivery truck prior to departure. If necessary, tighten, adjust, or replace caps, valves, or other equipment to prevent oil leaking while in transit.</li> </ul>
------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

### 3.4 Discharge or Drainage Control Structures (40 CFR 112.7(a)(iii), 112.7(c)(1) & 112.8)

Methods of secondary containment at this facility include a combination of structures (e.g., built-in secondary containment (double-wall), drainage systems (e.g. oil/water separator, and land-based spill response (e.g. flexible portable berms, oil spill kits and sorbents) to prevent oil from reaching navigable waters and adjoining shorelines.

Spill containment structures include:

- **Double-wall tank construction.** The largest ASTs and 2 day tanks (Please see Table 3.1 (1), (1a), (1b), (2), (3) ASTs are UL 2085 or UL142 with 110% built in containment. The ASTs are 10,000, 2,000 and 1,000 gallons in capacities but operate at 90-95% capacity, contain diesel product and have a double-wall design. The 10,000-gallon UL 2085 AST has a ¼ inch inner tank, a 3/16 inch outer tank and 4 inches space (interstice). The outer tank is lined with lightweight fire-rated material designed to contain and protect the inner shell from fire and explosion from accident and projectile impact. Two (2) day tanks are UL 142 approved. Each day tank can contain 60 gallons diesel product and has double-wall design.

➤ **Drainage system controls include:**

- **Oil/Water Separator (Clarifier).** The facility surface drainage at the Broadcast center is engineered to direct oil that may be discharged into drainage inlets that lead to the oil/water separator (clarifier).

At the refilling area:

- **Drip pans.** Fill ports for the ASTs are equipped with a drip pan to contain small leaks from the piping/hose connections at the area of AST where diesel refilling occurs. These drip pans will be used during refilling.
- **Spill Cleanup Kits.** Spill cleanup kits that include absorbent material, personal protection gears, covers, booms, and other portable barriers are located inside the fenced area, as shown on the Facility Diagram in Figure 3. The spill kits are located within close proximity of the oil product storage and handling areas inside the fenced area for rapid deployment should a spill occur. The response equipment inventory for the facility is listed in Appendix I of this Plan. The inventory is checked monthly to ensure that used material is replenished.
- **Drainage system.** The facility surface drainage at BC is engineered to direct oil that may be discharged into drainage inlets. The drainage inlets at the Broadcast center leads to a clarifier.
- **Clarifier.** The AST at Broadcast Center is equipped with a system to collect wastewater or oil spilled from the AST. The effluent discharge is fed into drainage inlets and then the waste stream flows into a clarifier. Once the clarifier is full, the excess water and bottom sludge are pumped out and disposed and manifested either as hazardous or non-hazardous waste.
- **Best Management Practices** are used to minimize the amount of solids and oil that flow into the clarifier. Facility personnel are instructed to avoid and address small spills using sorbents to minimize runoff of oil. The systems (inclusive of clarifier) are inspected monthly as part of the monthly as part of the scheduled site inspection to check. The inspection includes level of water within the clarifier and measure the depth of bottom sludges and floating oils. Materials collected in the clarifier are removed by a licensed waste collector, Enviro Serv.

### 3.5 Countermeasures for Discharge Discovery, Response and Cleanup (40 CFR 112.7(a)(3)(iv))

Countermeasures for identifying and responding to spills include daily, monthly and annual inspections, as well as spill reporting requirements for all oil handling operations. Inspections are described in Section 4 of this Plan. Response and cleanup procedures are detailed in Section 5 of this Plan. These response plans are consistent with CBS policies for responding to any chemical spill, whether hazardous materials or not.

When a spill is discovered, immediate notification is required to ensure a rapid, safe and

effective response. The Environmental, Health & Safety Manager should be involved in all spill responses to ensure that all steps in the procedures are followed.

In general, the following steps are taken:

- **Containment** – When any spill is discovered, defensive measures must be taken to prevent the spill from migrating, but only if they can be conducted safely and without employee exposure.
  - If possible and safe to do so, identify and shut down source of the discharge to stop the flow;
  - Contain the discharge using sorbents, booms, berms, trenches, sandbags, or other material;
- **Notification** – Contact the Environmental, Health & Safety Manager or the alternate person; See the emergency contact list in Appendix G.
  - If there are injuries or the spill represents an immediate danger, contact local emergency responders. **Call 911.**
    - Report ALL spills to Environmental, Health & Safety Manager.
    - Environmental, Health & Safety Manager may need to report or call any state or federal agencies deemed necessary.
- **Cleanup** – Cleanup should proceed at the direction of Environmental, Health & Safety Manager, who will determine the best method of cleanup for each spill. If the spill requires an outside contractor one will be assigned by CBS. The local spill contractor's information is included in Appendix G.

If cleanup by CBS personnel is authorized, collect and dispose of recovered products according to regulations. Ensure that each recovery drum is properly labeled and that all relevant product information is noted.

### 3.6 Methods of Disposal of Recovered Materials (40 CFR 112.7(a)(3)(v))

Any oil recovered from a spill or discharge must be handled and disposed of properly, in accordance with Federal, State and local regulations and CBS policies. This includes sorbents, booms, protective clothing, or soil which may become saturated with oil in the event of a spill. Spill kits located in oil handling areas include containers capable of handling the volume expected from a minor discharge. Larger volume discharges should be managed by outside contractors who are capable of properly managing the quantity of waste that will be produced.

Once used, spill kit containers should be sealed and properly disposed as soon as possible. The Environmental, Health & Safety Manager will contact one of the approved spill contractors to manage proper disposal.

### 3.7 Release Reporting (40 CFR 112.7(a)(3)(vi) & 112.7(a)(4))

The Environmental, Health & Safety Manager has the discretion to contact local emergency responders if a discharge has an immediate safety or health risk: **If necessary, call 911.**

Other notifications may also be required, based on the size or extent of the release:

- Any size discharge (i.e., one that creates a sheen, emulsion, or sludge) that affects or threatens to affect waters or adjoining shorelines must be reported immediately to the National Response Center: (1-800-424-8802). The Center is staffed 24 hours a day.
- The California Office of Emergency Services (1-800-852-7550) must also be notified in the event of a release that exceeds one barrel of oil (42 gallons) or affects or threatens to affect waters of the state.

A summary sheet is included in Appendix H to facilitate reporting. The person reporting the discharge must provide the following information:

- ☐ Name, location, organization, and telephone number
- ☐ Name and address of the party responsible for the incident
- ☐ Date and time of the incident
- ☐ Location of the incident
- ☐ Source and cause of the release or discharge
- ☐ Types of material(s) released or discharged
- ☐ Quantity of materials released or discharged
- ☐ Danger or threat posed by the release or discharge
- ☐ Number and types of injuries (if any)
- ☐ Media affected or threatened by the discharge (i.e., water, land, air)
- ☐ Weather conditions at the incident location
- ☐ Any other information that may help emergency personnel respond to the incident

Contact information for reporting a discharge to the appropriate authorities is listed in Appendix G.

## PART 4: Discharge Prevention

### 4.1 Inspections, Tests, and Records (40 CFR 112.7I)

As required by the SPCC rule, CBS performs the inspections, tests, and evaluations listed in Table 4-1.

**Table 4-1: Inspection and Testing Program**

Facility Component	Action	Frequency / Circumstances
Aboveground Tanks	Visual inspection on exterior for signs of deterioration and discharges, Interstitial measurements to identify leaks between the double tank walls.  External inspection by certified inspector (as per STI Standard SP-001) at 20 year intervals.	Following a regular schedule (monthly, annual, and during scheduled inspections) and whenever material repairs are made.  Continuous interstitial monitoring with automated leak detection equipment on above ground fuel tanks and product lines.
Container supports and foundation	Inspect container's supports and foundations.	Following a regular schedule (monthly, annual, and during scheduled inspections) and whenever material repairs are made.
Liquid level sensing devices (overfill)	Test for proper operation.	Monthly
All aboveground valves, piping, and appurtenances	Assess general condition of items, such as flange joints, expansion joints, valve glands and bodies, catch pans, pipe supports and metal surfaces.	Monthly
Oil/Water separator	Check for oil accumulation. Check physical condition of system for problems that could cause a discharge.	Daily, monthly

#### 4.1.1 Daily Inspection

CBS employees complete daily visual inspection of the ASTs each day. Daily visual inspections involve: (1) looking for tank, dispenser or piping damage or leakage, stained or discolored concrete or soils, (2) checking oil/water separator and drainage system for proper operation and accumulations of oil. Visual inspections of ASTs by facility personnel are performed according to the procedure described in this SPCC Plan. Any leaks from tank seams, gaskets, rivets, and bolts are promptly corrected.

#### 4.1.2 Monthly Inspection

The checklist provided in Appendix C is used for monthly inspections by CBS personnel. The monthly inspections cover the following key elements:

- ☐ Observing the exterior of aboveground storage tanks, pipes, and other equipment for signs of deterioration, leaks, corrosion, and thinning.
- ☐ Observing tank foundations and supports for signs of instability or excessive settlement.
- ☐ Observing the tank fill and discharge pipes for signs of poor connection that could cause a discharge, and tank vent for obstructions and proper operation.
- ☐ Verifying the proper functioning of overfill prevention systems.
- ☐ Check the interstitial space between the walls of double walled tanks for accumulations of oil or condensate water that could lead to corrosion.
- ☐ Checking the proper management of drummed lubricants.
- ☐ Checking spill pallets for any accumulated oil beneath the actively used drums.
- ☐ Checking the inventory of discharge response equipment and restocking as needed.
- ☐ Observing the effluent and measuring the quantity of accumulated oil within the oil/water separators.

All problems regarding tanks, drums, piping, containment, or response equipment must immediately be reported to the Environmental, Health & Safety Manager. Visible oil leaks from tank walls, piping, or other components must be repaired as soon as possible to prevent a larger spill or a discharge to navigable waters or adjoining shorelines. Pooled oil is removed immediately upon discovery.

Written monthly inspection records are signed by the Environmental, Health & Safety Manager or a designated person, and maintained with this SPCC Plan for a period of at least three years.

#### 4.1.3 Annual Inspection

Facility personnel perform a more thorough inspection of facility equipment on an annual basis. This annual inspection complements the monthly inspection described above and is performed each year using the checklist provided in Appendix C of this Plan.

Written annual inspection records are signed by the Environmental, Health & Safety Manager and maintained with this SPCC Plan for a period of at least three years.

#### 4.1.4 Periodic Integrity Testing

In addition to the above monthly and annual inspections, tanks are to be periodically evaluated by an outside certified tank inspector following the Steel Tank Institute (STI) *Standard for the Inspection of Aboveground Storage Tanks*, SP-001.

Copies of any tank integrity testing reports are to be kept in Appendix F of this Plan. The need for this integrity testing is to be determined by the inspector on the basis of the observed conditions of the tank exterior, records of monthly and annual inspections, any repairs or modifications to the tanks, and STI recommendations are also to be kept in Appendix F.

#### **4.1.5 Annual Monitoring System Certification**

In addition to the above inspections, the ASTs that are equipped with electronic monitoring systems are to be tested and certified by a factory trained technician certified by the manufacturer on annual basis. The certification shall be conducted in accordance with the manufacturer's specifications and recommendations.

Copies of any testing and certification reports are to be kept for a period of three (3) years.

#### **4.2 Personnel, Training, and Discharge Prevention Procedures (40 CFR 112.7(f))**

The Environmental, Health & Safety Manager is the facility designee and is responsible for oil discharge prevention, control, and response preparedness activities at this facility.

CBS Studio Center management has instructed oil or diesel handling facility personnel in the operation and maintenance of oil/diesel pollution prevention equipment, discharge procedure protocols, applicable pollution control laws, rules and regulations, general facility operations, and the content of this SPCC Plan. Any new facility personnel with oil-handling responsibilities are provided with this same training prior to being involved in any oil/diesel operation.

Annual discharge prevention briefings are held by the Environmental, Health & Safety Manager for all facility personnel involved in oil operations. The briefings are aimed at ensuring continued understanding and adherence to the discharge prevention procedures presented in the SPCC Plan. The briefings also highlight and describe known discharge events or failures, malfunctioning components, and recently implemented precautionary measures and best practices. Facility operators and other personnel will have the opportunity during the briefings to share recommendations concerning health, safety, and environmental issues encountered during facility operations.

Records of the briefings and discharge prevention training are kept on the form shown in Appendix D and maintained with this SPCC Plan for a period of three years.

#### **4.3 Security (40 CFR 112.7(g))**

The facility is surrounded by security fencing and access to the public is limited. Access to the 10,000 gallon AST at BC where the 2 generators are located is surrounded by 8-ft tall fencing. The fence encircles the entire footprint of the facility. The facility is also protected by security personnel 24 hours per day.

#### **4.4 Tank Truck Loading/Unloading Rack Requirements (40 CFR 112.7(h))**

The facility does not have a loading rack for delivery of bulk fuels. Oil is delivered to each tank individual, by supplier-operated tanker trucks. The potential for discharges during refilling operations at this facility is of concern. CBS Studio Center is committed to ensuring the safe transfer of material to and from the storage tanks. The measures detailed in Section 3.2.2 are implemented to prevent oil discharges during refilling operations.

##### **4.4.1 Secondary Containment (40 CFR 112.7(h)(1))**

- a- Broadcast Center AST - The truck filling area is graded to direct the flow of oil or water away from the delivery truck and into drainage inlets that lead to a clarifier. If a delivery truck is parked for an extended period of time while it still contains fuel, it is surrounded by roll-over berms. To address the requirements of 40 CFR 112.7(h), the berm will provide sufficient containment capacity for the truck volume, plus sufficient freeboard for 6 inches of precipitation.
- b- Building T / Generator AST - The area is graded to direct the flow of oil / water towards the storm drain inlet. The truck operator shall be present during the delivery of oil to the AST. If a delivery truck is parked for an extended period of time while it still contains fuel, it shall be surrounded by roll-over berms. To address the requirements of 40 CFR 112.7(h), the berm will provide sufficient containment capacity for the truck volume, plus sufficient freeboard for 6 inches of precipitation.
- c- All ASTs - The truck operator shall be present during the entire delivery of oil to the AST. If a delivery truck is parked for an extended period of time while it still contains fuel, it shall be surrounded by roll-over berms. To address the requirements of 40 CFR 112.7(h), the berm will provide sufficient containment capacity for the truck volume, plus sufficient freeboard for 6 inches of precipitation.

#### **4.5 Brittle Fracture Evaluation (40 CFR 112.7(i))**

No field-constructed tanks are at the facility, so brittle fracture is not a concern at this facility.

#### **4.6 Conformance with State and Local Applicable Requirements (40 CFR 112.7(j))**

This facility does not pose a risk of substantial harm under 40 CFR part 112, as recorded in the "Substantial Harm Determination" included in Appendix B of this Plan. It does not require a facility response plan under the federal Oil Pollution Prevention regulations of 40 CFR 112 Subpart D. This SPCC Plan is suitable to meet the requirements of applicable state and federal oil management regulations.

## Part 5: Discharge Response (40 CFR 112.7(a)(5))

This section describes the response and cleanup procedures in the event of an oil discharge. CBS Studio Center has prepared a Fuel Release Action Checklist (Appendix K) and this section broadens the coverage of the response mechanism. The uncontrolled discharge of oil or diesel to groundwater, surface water, or soil is prohibited by state and federal laws. Immediate action must be taken to control, contain, and recover discharged product.

In all cases, the following steps are taken:

- Eliminate potential spark sources;
- If possible and safe to do so, identify and shut down source of the discharge to stop the flow;
- Contain the discharge using sorbents, berms, fences, trenches, sandbags, or other material;
- Contact the Environmental, Health & Safety Manager or his/her alternate;
- Contact regulatory authorities and the response organization; and
- Collect and dispose of recovered products according to regulation.

For the purpose of establishing appropriate response procedures, this SPCC Plan classifies discharges as either "minor" or "major," depending on the volume and characteristics of the material released.

A list of Emergency Contacts is provided in Appendix G. The list is also posted at prominent locations throughout the facility. A list of discharge response material kept at the facility is included in Appendix I.

### 5.1 Response to a Minor Discharge

A "minor" discharge is defined as one that can be readily managed by CBS personnel, posing no significant harm (or threat) to human health and safety or to the environment. Minor discharges are those where:

- The quantity of product discharged is small (e.g., involves less than 10 gallons of oil), but the manageable quantity may vary depending on other factors;
- Discharged material is easily stopped and controlled at the time of the discharge;
- Discharge is localized near the source;
- Discharged material is not likely to reach water;
- There is little risk to human health or safety; and
- There is little risk of fire or explosion.

Minor discharges can usually be cleaned up by CBS Studio Center personnel.

The following guidelines apply:

- Immediately notify the Environmental, Health & Safety Manager (or alternate).
- Under the direction of the Environmental, Health & Safety Manager, contain the discharge with spill response materials. Place discharge debris in properly labelled waste containers (e.g., 55-gallon drums that are properly labeled).
- Do not use soaps or surfactants to clean oily surfaces. Dissolved oil can cause more environmental damage than sheens.
- If the spill reaches the oil/water separator, the chambers should be inspected for floating oil, sheen or discoloration. If the water shows signs of oil, absorbent boom should be installed, or the separator should be pumped out by a cleanup contractor.
- **If the spill threatens or causes a release that can leave the property or enter the stormwater retention system (if any) or a municipal storm drain, it is not considered a minor discharge.**
- If the spill threatens or causes a release to off-site areas, it is not considered a minor discharge. Respond as detailed below.
- If the discharge involves a quantity of oil that is not readily manageable, it is considered a "major" discharge and response procedures in section 5.2 will be required.

## 5.2 Response to a Major Discharge

A "major" discharge is defined as one that cannot be safely controlled or cleaned up by facility personnel, such as when:

- The discharge is large enough to spread beyond the immediate discharge area;
- The discharged material enters the site stormwater drainage system;
- The discharge exceeds the holding capacity of the oil/water separator and threatens to discharge to the municipal drain;
- The discharge requires special equipment or training to clean up;
- The discharged material poses a hazard to human health or safety; or
- There is a danger of fire or explosion.

In the event of a major discharge, the following guidelines apply:

- The Environmental, Health & Safety Manager, or the senior on-site person if the Safety Manager is not present, must implement this SPCC Plan.
- If the Environmental, Health & Safety Manager is not present at the facility, the senior on-site person notifies the Safety Manager of the discharge and has authority to initiate notification and response. A discharge that threatens Tujunga Wash may require immediate notification to California Fish and Games Agency.
- The Environmental, Health & Safety Manager (or senior on-site person) must call for medical assistance if workers are injured.
- The Environmental, Health & Safety Manager (or senior on-site person) must notify the Fire Department or Police Department and 911 in the event of emergency.
- The Environmental, Health & Safety Manager (or senior on-site person) must call the spill response and cleanup contractors listed in the Emergency Contacts list in Appendix G.
- The Environmental, Health & Safety Manager (or senior on-site person) must immediately contact the Los Angeles County Environmental Health Division of (626-430-5420) and the National Response Center (800-424-8802).
- The Environmental, Health & Safety Manager (or senior on-site person) must record the call on the Discharge Notification form in Appendix H and attach a copy to this SPCC Plan.
- The Environmental, Health & Safety Manager (or senior on-site person) coordinates cleanup and obtains assistance from a cleanup contractor or other response organization as necessary.

If the Environmental, Health & Safety Manager is not available at the time of the discharge, then the next highest person in seniority assumes responsibility for coordinating response activities.

### **5.3 Waste Disposal**

Wastes resulting from a minor discharge response will be containerized in impervious bags, drums, or buckets. The facility manager will characterize the waste for proper disposal and ensure that it is removed from the facility by a licensed waste hauler within two weeks.

Wastes resulting from a major discharge response will be removed and disposed of by a licensed cleanup contractor. Enviro Serv, a California-licensed cleanup contractor, can be contacted at 562-427-7277.

## 5.4 Discharge Notification

Any size discharge (i.e., one that creates a sheen, emulsion, or sludge) that affects or threatens to affect navigable waters or adjoining shorelines must be reported immediately to the National Response Center (1-800-424-8802). The Center is staffed 24 hours a day.

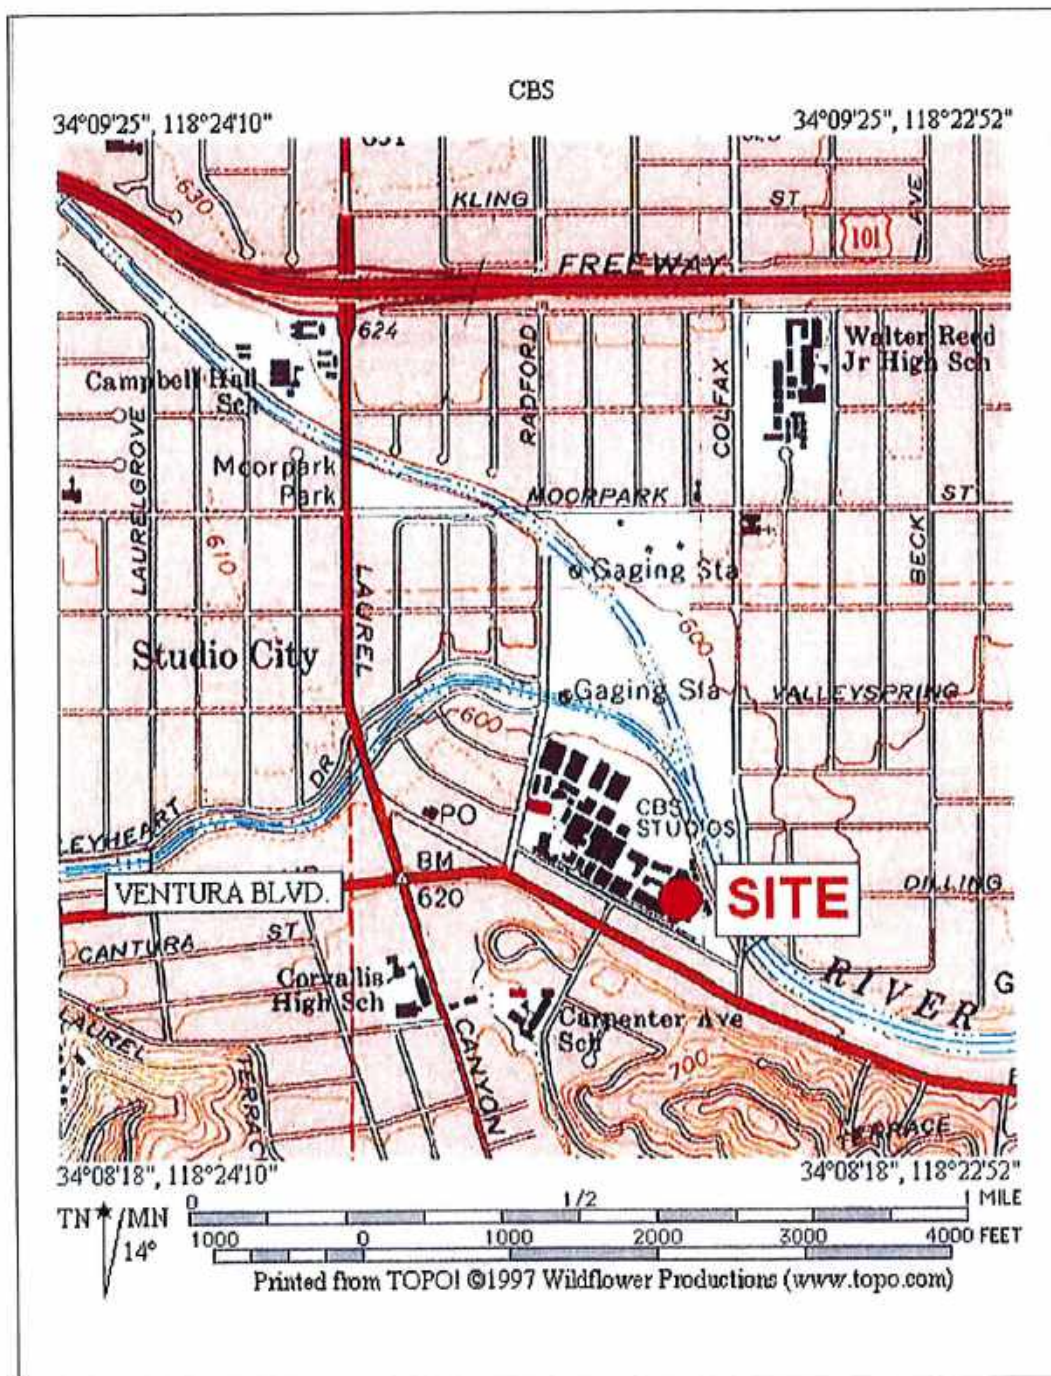

In addition to the above reporting, 40 CFR 112.4 requires that information be submitted to the United States Environmental Protection Agency (EPA) Regional Administrator and the California Office of Emergency Services (see contact information in Appendix G) whenever the facility discharges (as defined in 40 CFR 112.1(b)) more than 1,000 gallons of oil in a single event, or discharges (as defined in 40 CFR 112.1(b)) more than 42 gallons of oil in each of two discharge incidents within a 12-month period. The following information must be submitted to the EPA Regional Administrator and to OES within 60 days:

- Name of the facility;
  - Name of the owner/operator;
  - Location of the facility;
  - Maximum storage or handling capacity and normal daily throughput;
  - Corrective action and countermeasures taken, including a description of equipment repairs and replacements;
  - Description of facility, including maps, flow diagrams, and topographical maps;
  - Cause of the discharge(s) to navigable waters and adjoining shorelines, including a failure analysis of the system and subsystem in which the failure occurred;
  - Additional preventive measures taken or contemplated to minimize possibility of recurrence; and
  - Other pertinent information requested by the Regional Administrator.
- A standard report for submitting the information to the EPA Regional Administrator is included in Appendix J of this Plan.

## **Appendix B**

### **Substantial Harm Determination**

Facility Name: CBS STUDIO CENTER  
Facility Address: RADFORD BROADCAST CENTER & Building T / Generator, CBS  
STUDIO CITY, 4200 RADFORD AVENUE, STUDIO CITY, CA 91604

1. Does the facility transfer oil over water to or from vessels and does the facility have a total oil storage capacity greater than or equal to 42,000 gallons?

Yes ☐ No ☒

2. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and does the facility lack secondary containment that is sufficiently large to contain the capacity of the largest aboveground oil storage tank plus sufficient freeboard to allow for precipitation within any aboveground storage tank area?

Yes ☐ No ☒

3. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and is the facility located at a distance (as calculated using the appropriate formula in 40 CFR part 112 Appendix C, Attachment C-III or a comparable formula) such that a discharge from the facility could cause injury to fish and wildlife and sensitive environments?

Yes ☐ No ☒

4. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and is the facility located at a distance (as calculated using the appropriate formula in 40 CFR part 112 Appendix C, Attachment C-III or a comparable formula) such that a discharge from the facility would shut down a public drinking water intake?

Yes ☐ No ☒

5. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and has the facility experienced a reportable oil spill in an amount greater than or equal to 10,000 gallons within the last 5 years?

Yes ☐ No ☒

#### **Certification**

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document, and that based on my inquiry of those individuals responsible for obtaining this information, I believe that the submitted information is true, accurate, and complete.

## **APPENDIX C**

### **Facility Inspection Checklists**

The following checklists are to be used for monthly and annual facility-conducted inspections. Completed checklists must be signed by the inspector and maintained at the facility, with this SPCC Plan, for at least three years.

## Monthly Inspection Checklist

This inspection record must be completed *each month* except the month in which an annual inspection is performed. Provide further description and comments, if necessary, on a separate sheet of paper and attach to this sheet. \*Any item that receives "yes" as an answer must be described and addressed immediately.

	Y*	N	Description & Comments
<b>Storage tanks</b>			
Tank surfaces show signs of leakage			
Tanks are damaged, rusted or deteriorated			
Bolts, rivets, or seams are damaged			
Tank supports are deteriorated or buckled			
Tank foundations have eroded or settled			
Level gauges or alarms are inoperative			
Vents are obstructed			
Water/product in interstice of double-walled tank			
<b>Drummed Products</b>			
Drum surfaces show signs of leakage or overfill			
Drums are damaged, rusted or deteriorated			
Spill Pallets Contain Oil or Water			
Drums in Use are improperly connected to piping			
Concrete around drums in use is stained			
<b>Piping</b>			
Valve seals, gaskets, or other appurtenances are leaking			
Pipelines or supports are damaged or deteriorated			
Joints, valves and other appurtenances are leaking			
<b>Loading/unloading/dispersing, and transfer equipment</b>			
Loading/unloading rack is damaged or deteriorated			
Connections are not capped or blank-flanged			
Secondary containment is damaged or stained			
<b>Oil/water separator</b>			
Oil/water separator > 2 inches of accumulated oil			
Oil/water separator effluent has a sheen			
Drainage valve in wrong position or inoperable			
<b>Security</b>			
Fencing, gates, or lighting is non-functional			
Pumps and valves are locked if not in use			
<b>Response Equipment</b>			
Response equipment inventory is complete			

Date: \_\_\_\_\_

Signature: \_\_\_\_\_

## Annual Facility Inspection Checklist

This inspection record must be completed each year. If any response requires further elaboration, provide comments in Description & Comments space provided. Further description and comments, if necessary, must be provided on a separate sheet of paper and attached to this sheet. \*Any item that receives "yes" as an answer must be described and addressed immediately.

## APPENDIX D

### Record of Annual Discharge Prevention Briefings and Training

Briefings will be scheduled and conducted by the facility owner or operator for operating personnel at regular intervals to ensure adequate understanding of this SPCC Plan. The briefings will also highlight and describe known discharge events or failures, malfunctioning components, and recently implemented precautionary measures and best practices. Personnel will also be instructed in operation and maintenance of equipment to prevent the discharge of oil or diesel, and in applicable pollution laws, rules, and regulations. Facility operators and other personnel will have an opportunity during the briefings to share recommendations concerning health, safety, and environmental issues encountered during facility operations.

[illegible]

## APPENDIX E

### Calculation of Secondary Containment Capacity

The maximum 24-hour rainfall recorded in the last 25 years at this location is 6 inches.

This item is not applicable to this facility. Secondary containment is achieved through UL 2085 and UL 142 certified ASTs.

#### Bulk Storage Dike

Largest Container	Product	Proposed or Existing Containment, feet			Volume of Containment  Gallons	6 inches rain	Displacement Volume of tank	Sum of rain and displacement	Proposed Containment in gallons
		Width	Length	Height					

The above dike calculation provides sufficient storage capacity to contain both the largest compartment of tank trucks loading/unloading at the facility, and the volume of precipitation that enters the berm.

## **APPENDIX F**

### **Records of Tank Integrity and Pressure Tests**

Attach copies of official records of tank integrity and pressure tests.

## **APPENDIX G**

### **Emergency Contacts**

***Designated person responsible for spill prevention: TRACY SIMPSON, Facility Manager***  
***818-655-6080***

## APPENDIX H

### Discharge Notification Form

<b>Part A: Discharge Information</b>		
General information when reporting a spill to outside authorities:		
Name: <b>CBS STUDIO CENTER</b>		
Address: 4200 Radford Avenue, Studio City, CA 91604		
Telephone:		
Owner/Operator: CBS Studio Center 4200 Radford Avenue, Studio City, CA 91604		
Primary Contact: Emily Terranova Work: (818) 655-5253 Cell (24 hrs): (818) 821-4111		
Type of oil:	Discharge Date and Time:	
Quantity released:	Discovery Date and Time:	
Quantity released to a waterbody:	Discharge Duration:	
Location/Source:		
Actions taken to stop, remove, and mitigate impacts of the discharge:		
Affected media:		
<input type="checkbox"/> air	<input type="checkbox"/> storm water sewer/POTW	
<input type="checkbox"/> water	<input type="checkbox"/> dike/berm/oil-water skimmer	
<input type="checkbox"/> soil	<input type="checkbox"/> other: _____	
Notification person:	Telephone contact:	
	Business:	
	24-hr:	
Nature of discharges, environmental/health effects, and damages:		
Injuries, fatalities or evacuation required?		
<b>Part B: Notification Checklist</b>		
	Date and time	Name of person receiving call
<b>Discharge in any amount</b>		
Emily Terranova and Response Coordinator (818) 655-5253/ (818) 821-4111		
<b>Discharge in amount exceeding 10 gallons and not affecting a waterbody or groundwater</b>		
Local Fire Department 911		
<b>Discharge in any amount and affecting (or threatening to affect) a waterbody</b>		
Local Fire Department 911		

National Response Center (800) 852-7550		
City of Los Angeles POTW		
Los Angeles County Public Works 323-890-4317		
Enviro Services , Cleanup Contractor for disposal of waste and pumping 562-427-7277		

\* The POTW should be notified of a discharge only if oil has reached or threatens sewer drains that connect to the POTW collection system.

## APPENDIX I

### Discharge Response Equipment Inventory

The discharge response equipment inventory is verified during the monthly inspection and must be replenished as needed.

#### Tank Truck Loading/Unloading Area

□	Empty 55-gallons drums to hold contaminated material	4
□	Loose absorbent material	200 pounds
□	Absorbent pads	3 boxes
□	Nitrile gloves	6 pairs
□	Neoprene gloves	6 pairs
□	Vinyl/PVC pull-on overboots	6 pairs
□	Non-sparking shovels	3
□	Brooms	3
□	Drain seals or mats	2
□	Sand bags	12

#### Maintenance Building

□	Empty 55-gallons drums to hold contaminated material	1
□	Loose absorbent material	50 pounds
□	Absorbent pads	1 box
□	Nitrile gloves	2 pairs
□	Neoprene gloves	2 pairs
□	Vinyl/PVC pull-on overboots	2 pairs
□	Non-sparking shovels	1
□	Brooms	1
□	Drain seals or mats	1

## APPENDIX J

### Agency Notification Standard Report

Information contained in this report, and any supporting documentation, must be submitted to the EPA Region 1 Regional Administrator, and to MADEP, within 60 days of the qualifying discharge incident.

Facility:	CBS Studio Center
Owner/operator:	
Name of person filing report:	
Location:	
Maximum storage capacity:	
Daily throughput:	
Nature of qualifying incident(s):	
Description of facility (attach maps, flow diagrams, and topographical maps):	

Agency Notification Standard Report (cont'd)
Cause of the discharge(s), including a failure analysis of the system and subsystems in which the failure occurred:
Corrective actions and countermeasures taken, including a description of equipment repairs and replacements:
Additional preventive measures taken or contemplated to minimize possibility of recurrence:
Other pertinent information:

## **APPENDIX K**

### **QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS**

# Alec Minavio

## Environmental Technician

### Education

Bachelor of Arts in Geochemistry, Mathematics Minor  
State University of New York at Geneseo

### Fields of Competence

Phase I Environmental Site Assessments  
Transaction Screen Environmental Assessments  
Brownfield Investigations, Cleanup, Monitoring and Development.  
RSRA Reports  
Studied microplastics in local watersheds.  
Phase II Investigations involving contaminated soil, groundwater, and indoor air concerns.

### Certifications

OSHA 40 HAZWOPER Training and ESRI ArcGIS

### Key Projects

#### ***Brownfield Cleanup Program - 811 Jefferson Road, Henrietta, New York***

Monitor the exportation of contaminated soil using a PID. Performed Community air monitoring and managed dust suppression requirements during intrusive work and site development. Performed all post remediation groundwater monitoring and sampling. Assessed the effectiveness of in-situ chemical oxidant injected into the groundwater for the Project.

#### ***Brownfield Cleanup Program – Rochester, New York***

Lead Technician assisting with sampling and fieldwork in accordance with the requirements of the NYSDEC Brownfield Cleanup Program, including but not limited to the oversight of an extensive groundwater well installation program, remedial investigation of subsurface and surface soils, investigation derived waste characterization and sub-slab depressurization system monitoring.

#### ***Former Bausch & Lomb Site, Rochester, New York***

Collected and labeled low flow groundwater samples. Collected post remediation groundwater samples and natural attenuation parameters using low flow groundwater sampling techniques and instrumentation.

### Experience Summary

#### ***Labella Associates DPC, Rochester, New York***

Wrote Phase I Environmental Site Assessments, Transaction Screens and RSRA reports for residential, commercial, vacant, and industrial properties. Interfaced with local, county and state governments. Arranged and conducted environmental site inspections. Educated clientele about potential environmental concerns. Reviewed and comprehended remedial investigations. Assisted in ground water sampling at Brownfield Site.

#### ***Monroe County Department of Public Health, Rochester, New York***

Managed environmental health sanitarian database daily. Inspected restaurants to ensure they followed the New York State Health Code. Created and administered step by step remediation process to restaurant owners if they were in violation of code.

#### ***SUNY Geneseo, Geneseo, New York***

Completed “Searching for Micro-Plastics in the Genesee River” study. Designed a sampling device and analyzed water samples for micro-plastics.

#### ***Phase I/Phase II Site Assessments***

Conducted several Phase I and Phase II Environmental Site Assessments for residential and commercial properties throughout the United States. Phase I Assessments were conducted to evaluate property conditions in preparation for purchase or refinancing. Phase II Assessments were conducted to identify and evaluate potential impacts of recognized environmental conditions found during the Phase I.

#### ***Transaction Screens***

Assessed multiple residential and commercial properties throughout the United States for environmental concerns in order to satisfy due-diligence in preparation for refinancing. Tasks include analysis of regulatory information for report preparation and visual inspection of the property.

# MICHAEL P. RUMRILL

Principal/Senior Project Manager

## Certifications

OSHA 1910.120 Hazardous Waste Operations and  
Emergency Response- 40 hour  
Qualified Environmental Professional

## Education

BS, Environmental Science/Geology  
Allegheny College

## Fields of Competence

Facility EH&S Auditing/ISO 14001 EMS Auditing  
Phase I / Phase II Site Assessments  
Site Remediation and Decontamination  
Brownfields Cleanup and Development  
Hazardous Waste Management  
Environmental and Safety Management Training  
Alternative/Clean Energy Strategies

## Professional Affiliations

Air and Waste Management Association  
New York Water Environment Association  
National Federation of Independent Businesses  
The Association for Manufacturing Technology

## Experience Summary

Mr. Rumrill has 32 years of diverse experience in the broad spectrum of environmental, energy and safety management and compliance for manufacturing, institutional, banking, legal, government and property management clients including directing and managing environmental and safety staff, performing EH&S audits & assessments, preparing waste minimization plans, conducting environmental and safety training, performing archival/historical CERCLA research, PCB and hazardous waste site remediation, subsurface investigations, air emissions surveys, storm water and NPDES permitting, IAQ studies, workplace accident investigations, fungi assessments and negotiations with local, state and federal regulatory agencies. He has conducted or directed hundreds of environmental assessments of various properties and businesses in North America.

Mr. Rumrill has prepared and presented training courses on Hazardous Waste Management, PCB Management, Storm Water Compliance, OSHA HAZWOPER Refresher, RCRA Manifesting, Lockout/Tagout, Confined Space Entry, Clean Air Act Requirements, Basic Environmental Management, Phase I ESA and . While with Westinghouse Electric Corporation, Mr. Rumrill Chaired the Clean Air Act Implementation Committee and won a Quality Star award for his efforts.

## Key Projects

***NYSDEC BCP Site – TNT/Redstar Site Binghamton, - New York.*** Project Manager for this involving investigation and cleanup of a PCE spill at a trucking facility. Following the spill the spiller removed contaminated soil and constructed a vapor extraction system to begin remediation of the groundwater. The spiller went into bankruptcy and the company was purchased. The purchaser assumed responsibility for the cleanup. Cleanup involved remediation of the groundwater by introducing enhancements to stimulate the natural bacteria into metabolizing the PCE. The project received its Certificate of Completion.

***NYSDEC RCRA Site Facilities Investigation - Rochester, New York.*** Project Manager and principal hydrogeologist for the investigation of subsurface conditions at Eastman Kodak manufacturing plant. The project required the installation of monitoring wells and monitoring of groundwater quality in four geohydraulic zones including overburden and three bedrock zones, preparing an annual monitoring report and a project final report. Both reports required an analysis of the chemical and hydraulic interactions between bedrock groundwater zones and the facility's unlined industrial sewer tunnel.

***NYSDEC BCP Site – Vacuum Oil Refinery Site, Rochester, New York.*** Project Manager for BCP Vacuum Oil Refinery Site involving the investigation, design and construction of a vapor mitigation system on a former refinery/manufacturing property. The impacted buildings cover approximately 150,000 square feet of floor space with slab on-grade, crawl spaces and basements. The systems were completed as a design-build project where subsurface testing help evaluate different extraction systems depending on the site conditions. Work is still in-progress.

***NYSDEC BCP Site RI/RAAR – Green Island, New York.*** Project Manager for this NYSDEC Superfund at the Freedman & Son site which was operated as a rail yard, rail repair facility,

and junk yard for approximately 150 years. PCB and heavy metals contaminate the facility soils and offsite right of ways. An IRM is in progress to remove PCB and mercury contaminated soil.

***NYSDEC BCP Site RI/RAAR – Hornell Waste Site, Hornell, New York.*** Project Manager for BCP Hornell Waste site which was operated as a rail yard, oil distribution facility, and junk yard for approximately 150 years. PCB, heavy metals, BTEX compounds contaminate the facility soils. Heavy metals and PCB impact offsite residential properties. The delineation of the offsite contamination is in progress.

***NYSDEC BCP Site RI/RAAR – Rite Aid Site, Buffalo, New York.*** Project Manager for BCP Rite Aid site which was operated as a gasoline station and foundry, then as a strip mall with a dry cleaning shop, auto repair center, and paint store. The land was purchased and the entire property redeveloped as a retail drug store. The soil and groundwater is contaminated with BTEX and TCE. Contamination appears to have migrated offsite and the investigation is working on defining offsite migration.

***NYSDEC BCP Site RD/RC - J&S Conveyor Site, Honeoye, New York.*** Project Manager for BCP J&S Conveyor project involving the preparation of a remedial action plan for the removal of soil contaminated with solvents, petroleum products and metals. Excavation, although not the preferred method to address the contamination present, was selected by the NYSDEC to remediate the site. A small work area, utilities and sandy soil are obstacles to completing the soil removal. The removal was completed successfully and a Certificate of Completion was received.

***NYSDEC BCP Sites – Lighthouse Point Riverfront and Inland Sites, Rochester, New York.*** Project Manager for this project involving the sampling of groundwater monitoring wells and the preparation of a remedial investigation report and a remedial alternatives analysis report for the Lighthouse Point Property. Lighthouse Point is a mixed use development project on land on the east side of the Genesee River near Pattonwood Drive. The property has been contaminated by an inactive municipal landfill, decades of using the land as a rail yard and boat yards. To use the property at the turn of the century the lowland along the river was filled with a variety of waste and soil fill. The property has been divided into two brownfield site. RAAR has

been prepared for the “riverfront” property, which is hoping to start development in 2015.

***NYSDEC Spill Closure – Rochester, New York.*** During the investigation of a commercial property, historic mapping suggested the Wilson Hardware property on Monroe Avenue once was used as a gasoline station. Phase 2 sampling suggested a petroleum spill. Leader found the tank using GPR techniques and then completed the removal of a petroleum tank. Soil contamination was minor, but groundwater impacts were found. NYSDEC closed the spill on receipt of a Soil and Groundwater Management Plan.

***NYSDEC Spill Closure - Rochester, New York*** Management of the construction and operation of a groundwater collection and treatment system at the Wegmans Lyell Avenue store. The system involved the installation of seven groundwater extraction wells, 24 vapor extraction wells and the construction of pipelines and a central treatment system. Groundwater treatment included the separation of petroleum product from the groundwater and air stripping of dissolved phase contaminants. Product was skimmed and collected by an outside vendor.

***NYSDEC Spill Closure - Penfield, New York*** Managed the design of a system to remediate both soil and groundwater contaminated with oil and gasoline at the Goodyear Tire store on Penfield Avenue. The project also required negotiating the cleanup criteria and system operating procedures with NYSDEC. The remedial design used soil vapor extraction and air sparging techniques. The spill was closed.

***NYSDEC Spill Closure - Henrietta, New York*** Investigated the release of diesel fuel from dispenser leaks and overfill spills and developed a remediation plan for NYSDEC review to address soil and groundwater contamination at the New Penn truck terminal at 35 Transport Drive. Project is ongoing.

***NYSDEC Spill Closure – UPMC Mercy-St. James Hospital, Hornellsville, New York*** Former gas station/convenience store UST site. UST removal and air sparging were found ineffective to reduce groundwater contamination to close the spill. The new owner planned a major healthcare development. Leader coordinated removal of contaminated soil and implemented additional bioremediation treatment to former tank pit. Contaminated soil was

bioremediated with ORC injections and reused at the site.

***NYSDEC Spill Closure – Tonawanda, New York.*** A NYSDEC inspection found opened drums of suspected waste oil and reported a spill at the Tonawanda Self Storage facility on Military Road. The spill cleanup included removal of the oil and drums and cleaning the ground surface. The cleanup involved cleaning the stained pavement and soil removal. The spill was closed.

***NYSDEC Spill Closure - Long Island, New York*** Design and construction oversight for a bioremediation system used to remediate spilled fuel oil discovered when the client was completing their due diligence assessment. Less than one inch of free product was discovered on this tidally influenced groundwater. The design was accepted by New York State and implemented. Although the system was not completed as originally designed, it was implemented at a lower cost than anticipated and completed within the original schedule. The NYSDEC closed the spill.

***RI/FS – EMR Green Island, New York.*** Project Manager for this NYSDEC Superfund site which was operated as a rail yard, rail repair facility, and junk yard for approximately 150 years. PCB and heavy metals contaminate the facility soils and offsite right of ways. An IRM is in progress to remove PCB and mercury contaminated soil.

***Project Director, Environmental Assessment of the largest manufacturing complex in Northeastern U.S. –*** Responsible for directing staff, budget and resources to complete ESA report for 5,000 acre multi-faceted industrial facility. Interfaces with client executives, performs QA/QC of all work product

***Team Leader/Project Engineer, Corp. Audit Program*** Westinghouse Electric Corporation - North American Operations - Mr. Rumrill performed over 50 EH&S audits of manufacturing and commercial facilities for a Fortune 100 company, including pre-audit coordination, leading audit teams and audit follow-up. Facilities audited ranged from heavy manufacturing facilities to TV broadcast locations.

***Forging Company Facility Audits,*** Erie and Irvin, PA - Mr. Rumrill conducted audits of two large steel making heavy manufacturing facilities

which produced large forged components for the defense industry. The audits were in response to EPA/PADER citations re: PCBs and UST management. Mr. Rumrill prepared audit documentation under atty.-client privilege and performed audit follow-up to move company into compliance. Mr. Rumrill participated in negotiations w/ EPA TSCA staff to reduce fines.

***Director, Environmental and Safety, Gleason Corporation-*** Rochester, New York- Mr. Rumrill managed all environmental, health and safety issues for a \$100 million manufacturing corporation, including conducting audits, routine compliance, audits of TSDFs, negotiations with EPA and NYSDEC re: enforcement actions, environmental and safety issues for a coal and natural gas-fired power generation facility and conducting employee EH&S training.

***Heavy Metals and Petroleum-Contaminated Soils Project,*** Avon, New York - Project Manager for implementing Phase III remedial investigation and design for building surface contamination, contaminated soils and storm sewer sediments in the divestiture of a machining manufacturing facility.

***Environmental, Health and Safety Audit, Chemical Coatings Manufacturer,*** West Palm Beach, FL- Mr. Rumrill served as the Project Manager/Team Leader for a comprehensive EH&S due diligence review for purchaser of a chemical coatings company. Performed follow-up activities to move company into compliance after receiving a \$50,000 fine for RCRA violations.

***Project Director, Environmental Site Assessments/Security Division Divestiture, Westinghouse Electric Corporation –*** Directed and performed ESA's at over 70 locations distributed across 20 states in the United States.

## **1. INTRODUCTION**

Geosyntec Consultants, Inc. (Geosyntec) has prepared this Hazards and Hazardous Materials Assessment Report (Hazards Assessment Report) for the Radford Studio Center Project (Project) located at 4024, 4064, and 4200 N. Radford Avenue in Studio City (Los Angeles), California (Project Site). This Hazards Assessment Report analyzes the Project's potential impacts related to hazards and hazardous materials that could occur during Project construction and operation. The analysis is based on the Phase I Environmental Site Assessment (ESA) Report (Phase I ESA) prepared by Leader Professional Services, Inc. (Leader) [Leader, 2021] and the Environmental Subsurface Assessment Report prepared by Geosyntec [Geosyntec, 2024].

## **2. PROJECT DESCRIPTION**

### **2.1 Project Location**

The Project Site is located at 4024, 4064 and 4200 N. Radford Avenue in an urbanized area of Studio City, California (Figure 1). The Project Site consists of northern and southern parcels (the “North Lot” and “South Lot,” respectively) that together comprise approximately 55 acres (approximately 52.25 acres after dedications/mergers). The Project Site is currently developed with studio uses and surface/structured parking, including numerous ancillary buildings and structures.

As shown in Figure 1 (Site Vicinity), the Project Site is bisected, north-south, by the Los Angeles River. The Project Site is bounded by Radford Avenue to the west, an alley with commercial uses fronting Ventura Boulevard to the south, Colfax Avenue to the east, and the Los Angeles River and West Tujunga Wash to the north and east. Commercial buildings are located adjacent to the Project Site along the alley, with additional commercial buildings across Ventura Boulevard and Radford Avenue. Residential uses are located to the west across Radford Avenue and to the north and east across the West Tujunga Wash.

### **2.2 Project Overview**

The Project consists of the continuation of the existing studio use and the modernization and expansion of production facilities within Radford Studio Center, including the development of new sound stages, production support, production office, creative office, and retail, as well as parking (above and below grade) across the North and South Lots. These buildings will vary in height from approximately 60 feet (ft) up to approximately 135 ft.

Off-site improvements include the construction of the new Los Angeles River Connector (a vehicular and pedestrian bridge across the Tujunga Wash to connect Moorpark Street and Radford Avenue), a protected bikeway along Radford Avenue, and improving the alley south of the Project Site as a green alley. In addition, the Project would widen the existing Gilligan’s Island Bridge which links the North and South Lot over the Los Angeles River within the Project Site.

### **2.3 Topography**

Per the findings of the Project’s topographic survey, the majority of the North Lot slopes from its northwest corner to its southeast corner with approximately 15 ft of elevation change (from 600 to 585 ft above mean sea level [AMSL]). The access road on the north

side of the North Lot (south of the Tujunga Wash) also slopes from northwest to southeast from about 600 to 585 ft AMSL. The access road on the south side of the North Lot (north of the Los Angeles River) slopes from west to east from approximately 595 to 585 ft AMSL.

The majority of the South Lot generally slopes both from its southwest corner to its northwest corner with approximately 27 ft of elevation change (from 617 to 590 ft AMSL), and from its southwest corner to its southeast corner with approximately 17 ft of elevation change (from 617 to 600 ft AMSL). The access road on the north side of the South Lot slopes from northwest to southeast from approximately 595 to 585 ft AMSL before sloping back up to approximately 605 ft AMSL. From the edge of this access road on the southeast corner of the South Lot to the Los Angeles River, there is a steeper drop-off from approximately 600 to 583 ft AMSL.

The existing area to the north of the Los Angeles River generally slopes from northwest to southeast from approximately 600 to 581 ft AMSL.

### 3. ENVIRONMENTAL SETTING

This section describes the existing environmental conditions of the Project Site, as relevant to hazards and hazardous materials.

#### 3.1 Regional Geology and Hydrogeology

The Project Site is located at the northern end of Fryman Canyon of the Santa Monica Mountains within the Transverse Ranges geomorphic province. The Santa Monica Mountains are located south of the Project Site and are a structurally elevated block of the Transverse Ranges of regional faulting. Faults of the Transverse Ranges may be categorized as active, potentially active, or inactive. Faults in the region consist of buried thrust faults. The geology consists of alluvial gravel, sands, and silty clay derived from the Santa Monica Mountains underlain by the Miocene Monterey Formation.

Previous subsurface investigations at the Project Site have identified four distinct types of sediments [Geotechnologies, 2024; A.E. Schmidt Environmental, Inc. (A.E. Schmidt), 1996; Geosyntec, 2024]:

- Artificial fill is present throughout the Project Site. In the North Lot, the artificial fill is deeper near the Los Angeles River and a portion of the Tujunga Wash, at approximately 12.5 to 34 ft below ground surface (bgs), but relatively shallow, between approximately 1 and 8.5 ft bgs, throughout the rest of the North Lot. The artificial fill in the South Lot is generally thin across most of its area, deepening near the Los Angeles River. Fill depths range from approximately 3 to 8 ft below grade in most of the South Lot but increase to approximately 10 to 25.5 ft bgs near the Los Angeles River. The artificial fill is predominantly comprised of grayish-brown to black sandy silt.
- Construction debris was observed to be approximately 5 to 10 ft thick at depths ranging from approximately 15 to 30 ft bgs at certain locations. Debris was observed to consist of brick, concrete, glass, wire, nails, wood, and incinerated wood. The source of the debris is likely past construction activities.
- Native alluvial soils are present beneath the fill and debris at the Project Site. The alluvial soils generally consist of layers of gray to grayish brown sand, clay, and silt, with occasional gravel and cobbles.
- Bedrock, composed of Miocene Monterey Formation siltstone, was encountered at depths ranging from approximately 45 to 75 ft bgs in exploratory borings in the South Lot.

The Project Site is located within the San Fernando Valley Groundwater Basin [Department of Water Resources (DWR) Bulletin 118, 2004]. The San Fernando Valley Groundwater Basin is bounded to the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills. The valley is drained by the Los Angeles River and its tributaries.

### **3.2 Depth to Groundwater, Gradient, and Groundwater Flow Direction**

Investigations at the Project Site have indicated varying groundwater depths. Historically, the highest groundwater level for the entire North Lot was 0 ft bgs (existing ground surface) and 0 to 10 ft bgs within the central portion of the South Lot and to a depth of 20 ft within the southern portion of the South Lot [Geotechnologies, 2024]. Previous explorations conducted in 1993 and 2003 noted groundwater depths of approximately 58 to 73 ft bgs in the North Lot. In 2022, Geotechnologies' exploratory borings in the South Lot noted groundwater levels ranged from 30 to 42 ft bgs.

Geosyntec's May 2022 subsurface investigation [Geosyntec, 2024] found groundwater at depths ranging from approximately 38 to 42 ft bgs. Excluding the historically highest groundwater depth ranges of 0 and 20 ft bgs, groundwater across the Project Site ranges from approximately 30 to 73 ft, depending on the location. Fluctuations in groundwater level may occur due to variations in rainfall and/or the impact of the nearby Los Angeles River and Tujunga Wash. Groundwater flow was determined to flow N23°E with a hydraulic gradient of 0.0091 ft per foot (ft/ft).

### **3.3 Historical Site Development and Use**

The Project Site has operated as a studio for nearly 100 years. The first phase of development corresponded with the initial purchase and construction of the Mack Sennett Studio in 1927. Pioneer filmmaker Mack Sennett created the original nexus of the studio, situated in the southwestern region of the Project Site. Sennett continued to occupy the Project Site until 1935, although most buildings commissioned by him were completed within the first few years of owning the land. There are nine extant buildings from this period, which were constructed in 1928.

The second phase of development occurred from the mid-1930s to mid-1950s. During this phase the property was owned by Republic Pictures. This development generally expanded the Project Site north and east, with some infill between the earlier Sennett-era buildings. There are 15 extant buildings from this period, which were constructed from 1935 to 1941 and again from 1944 to 1957.

The third phase of development occurred after CBS began renting the property in 1963 and purchased it in 1967. This resulted in the expansion of the Project Site with the construction of additional sound stage and support buildings on the outer perimeter of the Project Site, extending north towards the Los Angeles River. There are nine extant buildings from this period, which were constructed from 1963 to 1969.

A fourth phase of development occurred with the construction of nine buildings from 1996 to 2005, mostly situated north of the Los Angeles River. In addition, there are four buildings, which were individually built between development programs in 1979, 1988, 1992, and 2014.

Current operations at the Project Site include motion picture, television, and broadcast studios and related incidental uses, including, but not limited to: production activities; indoor and outdoor stages; sets and façades; digital, film, video, audio, video game, eSports, and media production; recording and broadcasting; sound labs; film editing; film video and audio processing; sets and props production; computer design; computer graphics; animation; and ancillary facilities related to those activities. The following types of related uses and facilities also occur on-site: basecamps, communication facilities, conference facilities, modular/portable bungalows and trailers, studio support facilities, parking, catering facilities, a commissary, special events, audience and entertainment shows, exhibits, fitness facilities, emergency medical facilities to serve the on-site employees and visitors, fueling for emergency generators, above-ground and below-ground storage tanks, pads for utilities and transmission equipment, maintenance and storage facilities, mills/manufacturing, sleeping quarters for certain on-site personnel, outdoor amenities, bridges, security facilities, carports, solar panels, signs, storage and warehouses.

Presently, there are 14 aboveground storage tanks (ASTs) registered with Los Angeles Fire Department (LAFD) with a total diesel fuel capacity of approximately 14,940 gallons [Leader, 2021].

Four electrical switches containing polychlorinated biphenyls (PCBs) were observed on the Project Site [Leader, 2021]. The PCB electrical switches are centrally located within the South Lot (see Figure 2). The switches are marked with the appropriate labels and required record keeping is maintained in accordance with the United States Environmental Protection Agency (EPA) PCB Regulations [Leader, 2021].

Three wastewater clarifying tanks were observed on the Project Site [Leader, 2021]. The clarifiers are in the southern portion of the South Lot near the main hazardous materials storage area, the central portion of the South Lot, and the North Lot near the Broadcast

Building (Figure 2). The clarifiers, operating under Industrial Wastewater Permits issued by the City of Los Angeles, collect and treat sanitary water and discharge to the sanitary sewer system.

### **3.4 Previous Investigations and Remedial Activities**

In 1994, a leaking underground storage tank (LUST) case opened when gasoline contamination was encountered beneath five 10,000-gallon underground storage tanks (USTs) damaged by the 1994 Northridge Earthquake (collectively included in the southernmost UST symbol shown in Figure 2). The five USTs were removed in February 1994 under a permit issued by the LAFD. Impacted soil was removed for off-Site disposal and groundwater monitoring was required by the Los Angeles Regional Water Quality Control Board (LARWQCB) in May of 1994. Monitoring of soil vapor and groundwater was conducted and the LARWQCB closed the LUST file in January of 1997 [Leader, 2021].

In September of 2019, a 10,000-gallon gasoline UST was removed from near the southeast corner of the Project Site (approximately 100 ft northwest of the five former USTs described above, shown in Figure 2) under the oversight of LAFD. Results of the post-UST removal soil testing indicated low levels of gasoline compounds; however, the detected concentrations were below LAFD minimum action levels, and no further action was recommended [Access Environmental Engineering, 2019]. Residual soil concentrations from this location will be appropriately addressed as necessary during Project construction as discussed in the Project Soil Management Plan (Project SMP), included as Appendix A of the Environmental Subsurface Assessment Report [Geosyntec, 2024].

No other registered USTs have been identified at the Project Site and no open LUST cases are listed in connection with the Project Site [Leader, 2021].

### **3.5 Environmental Conditions**

#### **3.5.1 Summary of Phase I Environmental Site Assessment**

The Phase I ESA was conducted in December 2021 for the entire Project Site. No on-site or off-site Recognized Environmental Conditions (RECs) were identified. No Controlled RECs were identified. One Historical REC (HREC) was identified, the LUST case discussed below. Four areas of concern were identified in the Phase I ESA:

- Fourteen ASTs, as discussed above in Section 3.3;
- Four electrical switches, as discussed above in Section 3.3;
- Three wastewater clarifying tanks, as discussed above in Section 3.3; and
- Asbestos containing materials (ACM) abatements and renovations have been carried out in buildings throughout the Project Site. ViacomCBS records indicated that most asbestos identified in the 1989 survey has been removed [Leader, 2021]. A 2021 report by Clark Seif Clark, Inc. for Editorial 1 & Editorial 2 Buildings indicates the presence of ACM in certain areas, as observed during the site reconnaissance, with corresponding signage [Leader, 2021].

The following sections describe key findings from the Phase I ESA [Leader, 2021].

#### Areas Closed Under Regulatory Oversight

A LUST case was opened in 1994 when gasoline contamination was encountered beneath five 10,000-gallon USTs located near the southeast corner of the Project Site and damaged by the 1994 Northridge Earthquake (collectively labeled “UST1” in Figure 2). The five USTs were removed in 1994 under a permit by the LAFD. Impacted soil was removed for off-site disposal, and groundwater monitoring was required by the LARWQCB in May of 1994. Monitoring of soil vapor and groundwater was conducted, and the LARWQCB closed the LUST file in January of 1997 [Leader, 2021].

In September of 2019, a 10,000-gallon gasoline UST was removed from near the southeast corner of the Project Site (labeled “UST2” in Figure 2, approximately 100 ft northwest of the five former USTs described above) under the oversight of the LAFD. Results of the post-UST removal soil testing indicated low levels of gasoline compounds; however, the detected concentrations were below LAFD minimum action levels, and no further action was recommended [Access Environmental Engineering, 2019].

No other registered USTs have been identified at the Project Site, and no open LUST cases are listed in connection with the Site [Leader, 2021]. Any residual petroleum constituents in soil or groundwater from the former USTs will be appropriately managed using the Project SMP during Project excavation and grading operations, as necessary.

#### ASTs

AST listing includes a total of 14 ASTs (labeled “AST” and “Generator Belly Tanks” on Figure 2, excluding the propane AST in the southwest corner of the Project Site) that are registered with the LAFD for the Project Site (Figure 2). The ASTs have a total capacity of approximately 14,940 gallons and contain diesel fuel. No spills are listed for these

ASTs. A Spill Prevention, Controls, and Countermeasure (SPCC) Plan, prepared by Access Environmental Engineering, was submitted to and approved by the LAFD in December 2020. The Project will comply with the approved SPCC Plan.

#### Hazardous Materials Storage

Drums of hazardous substances (paint waste) were observed on the South Lot where the materials are collected for off-site disposal by Crystal Clean, a waste disposal vendor (Figure 2). The drums and materials observed were stored on secondary containment units, appeared to be properly managed, and no spills or leaks were observed.

#### PCBs

Four electrical switches containing PCBs were observed on the South Lot. The PCB electrical switches are centrally located within the South Lot (Figure 2). The electrical switches are marked with the appropriate labels and required recordkeeping is maintained in accordance with the EPA and PCB Regulations [Leader, 2021].

#### Lead-Based Paint

As described in Section 3.3, some of the buildings on the South Lot were constructed before lead-based paints were banned in 1978. Therefore, it is possible that these buildings could have been painted with lead-based paint.

#### ACM

In December 1989, an asbestos survey was conducted at the Project Site revealing the presence of ACM in various buildings. Over the years, asbestos abatement projects were carried out to remove ACM where it was found and renovations took place. Most of the asbestos identified in the 1989 survey has been successfully removed. However, a more recent Limited Asbestos Survey conducted in March 2021 by Clark Seif Clark, Inc. identified the presence of ACM in specific areas of the Editorial 1 & Editorial 2 Buildings. During a site reconnaissance, signs indicating the presence of ACM were observed [Leader, 2021].

#### Clarifiers

Three wastewater clarifying tanks were observed at the Project Site that discharge into the City of Los Angeles sanitary sewer system. One tank was observed in the North Lot, and two were observed in the South Lot (Figure 2). The clarifiers collect and treat sanitary water that potentially contains contaminants (e.g., petroleum, paint-related material, etc.)

#### Spray Booths

According to South Coast Air Quality Management District's (SCAQMD) Facility Information Detail (F.I.N.D.) database, the Project Site holds a permit issued by the SCAQMD for the use of spray booths, paints, and solvents. The spray booths are in the

Paint Shop at the southeast corner of the South Lot. The Paint Shop also stores ten 55-gallon drums used to store flammable rags and other hazardous materials. These drums are positioned on secondary containment units, properly managed, and appropriately labeled. No spills or leaks have been observed [Leader, 2021]. Periodically, ViacomCBS, a waste disposal vendor, removes these drums from the Project Site for proper disposal.

#### Emergency Electric Generators

Approximately 10 emergency electric generators are present at the Project Site (Figure 2), and they are operating under a permit issued by the SCAQMD. As shown in the Phase I ESA Photo Log, each electric generator is usually situated on a concrete pad. According to information in the SCAQMD F.I.N.D database, the electric generators at the Site fall into two categories: those with a horsepower (HP) rating between 50 and 500, and those with a rating exceeding 500 HP, both of which use diesel as fuel. The 14 ASTs that are present at the Project Site contain diesel fuel and are used to fuel the emergency electric generator units [Leader, 2021]. The ASTs are in good condition and have secondary containment systems in place.

### **3.5.2 Summary of Current Environmental Conditions**

The following is a summary of the key findings from environmental investigations conducted in May 2022 pertaining to total petroleum hydrocarbons (TPH) in soil, arsenic in soil, lead in soil, volatile organic compounds (VOCs) in soil and groundwater, and subsurface vapors at the Project Site [Geosyntec, 2024].

#### TPH in Soil

Based upon subsurface investigations completed to date, TPH detected in soil samples appears to be sporadic, confined to shallow soil, and mostly below regulatory screening levels. TPH as diesel (TPH-d) was detected above its commercial/industrial screening level of 100 milligrams per kilogram (mg/kg) in samples SB-18-0.5' (200 mg/kg) and SB-24-0.5' (120 mg/kg); and TPH as oil (TPH-o) was detected above its screening level of 1,000 mg/kg in samples SB-24-0.5' (1,200 mg/kg) and SB-34-3' (1,100 mg/kg). The specific areas with elevated TPH, shown on Figure 3, that will be excavated will follow the procedures described in the Project SMP and will comply with all applicable regulatory requirements including the SCAQMD Rule 1166.

#### Arsenic in Soil

Arsenic was detected at concentrations above the upper-bound background concentration (12 mg/kg) in 3 out of 89 soil samples at SB-11-5' (20.2 mg/kg), SB-28-0.5' (102 mg/kg), and SB-28-3' (92.2 mg/kg). The three sample locations with elevated arsenic, shown on

Figure 3, also appear to be sporadic and confined to shallow soils. The specific areas with elevated arsenic in soil that will be excavated will follow the procedures described in the Project SMP.

#### Lead in Soil

Lead was detected at concentrations above the regulatory screening level of 320 mg/kg at 1 out of 89 soil samples at SB-9-15' (2,530 mg/kg) (Figure 3). The one location with elevated lead that will be excavated will follow the procedures described in the Project SMP.

#### VOCs in Soil and Groundwater

VOCs were not detected in soil or were detected at concentrations below commercial/industrial screening levels. Trichloroethene (TCE) was not detected in soil.

TCE was detected in a groundwater sample at boring SB-11 at 42 ft bgs at a concentration of 14 micrograms per liter ( $\mu\text{g/L}$ ) which is above the Maximum Contaminant Level (MCL) of 5  $\mu\text{g/L}$ . SB-11 is shown on Figure 3. While MCLs are drinking water standards and are not directly applicable, the presence of elevated concentrations of VOCs in groundwater could affect groundwater disposal related to potential construction dewatering activities. Discharge of construction dewatering will require a National Pollutant Discharge Elimination System (NPDES) permit per 40 Code of Federal Regulations (CFR) 450.21, and constituents exceeding effluent limitations will require treatment if disposed to the storm drain. Treatment would most likely consist of pumping the water through granular activated carbon prior to discharge to the storm drain. VOCs in groundwater will be appropriately managed using the Project SMP during Project construction, as necessary.

Groundwater in the Project Site vicinity generally flows from south to north. The depths to groundwater encountered during the 2022 investigation are generally consistent with conditions observed during recent subsurface investigations (i.e., geotechnical borings in 2022) at the Project Site, with the depth to groundwater generally shallower in the South Lot and deeper towards the North Lot.

Because TCE was not detected in soil at the Site, it is assumed that the TCE detected in the one groundwater sample is from off-site. One of the two former dry cleaners identified upgradient from the Project Site in the Phase I ESA [Leader, 2021] may be the source of TCE (a degradation product of tetrachloroethene [PCE]) detected in groundwater at the Project Site.

### Subsurface Vapors

PCE was detected above the commercial screening level of 2,000 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) (using an attenuation factor of 0.001) in sample SB-07-5'-SV (3,210  $\mu\text{g}/\text{m}^3$ ). SB-07 is shown in Figure 3.

The detection of TCE in groundwater at boring SB-11, as discussed above, could raise the potential for vapor intrusion into buildings.

If soil vapor is found to be present at concentrations that pose a potential threat to human health, such conditions would be addressed, as necessary, by existing applicable regulatory control measures such as SCAQMD Rule 1166, the Final Guidance for Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air [Department of Toxic Substances Control (DTSC), 2011], the Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Final Draft [DTSC, 2023], and the Los Angeles Department of Building Code and Safety requirements.

## 4. REGULATORY FRAMEWORK

The section identifies the local, state, and federal statutes that govern the production, storage, and transport of hazardous materials. Appendix A includes a list of regulations applicable to the Project.

### 4.1 Federal

The Resource Conservation and Recovery Act (RCRA)<sup>1</sup> is the principal law that regulates the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA regulates the management of hazardous substances from the time of generation to the point of disposal.

The Emergency Planning and Community Right-to-Know Act (EPCRA) improved community access to information regarding chemical hazards and facilitated the development of business chemical inventories and Emergency Response Plans (ERPs). EPCRA also established reporting obligations for facilities that store or manage specified chemicals.

Under the Hazardous Materials Transportation Act,<sup>2</sup> the U.S. Department of Transportation, in conjunction with EPA, is responsible for enforcement and implementation of federal laws pertaining to safe storage and transportation of hazardous materials.

### 4.2 State

In California, the California Code of Regulations (CCR) Title 22 Section 66261.3, defines, categorizes, and lists hazardous materials and wastes. CCR Title 22 is a comprehensive set of regulations that pertain to various aspects of hazardous waste management and related environmental health and safety issues in the state of California. It includes regulations on the identification, handling, storage, and disposal of hazardous materials and hazardous waste. The regulations are primarily administered by the DTSC.

CCR Title 23 addresses public health and safety issues related to hazardous materials and wastes and specifies disposal options. The Hazardous Waste Control Law of 1972<sup>3</sup> established the California Hazardous Waste Control Program.

---

<sup>1</sup> 42 United States Code (USC) § 6901-6992(k).

<sup>2</sup> 49 USC 5101.

<sup>3</sup> California Health and Safety Code § 25100.

The Division of Occupational Safety and Health (DOSH), better known as the California Occupational Safety and Health Administration (Cal/OSHA), protects and improves the health and safety of workers as set forth in CCR, Title 8.

The California Environmental Protection Agency (CalEPA) adopted regulations implementing a “Unified Hazardous Waste and Hazardous Materials Management Regulatory Program” (Unified Program). The Unified Program addresses the following six programs:

- Hazardous Materials Release Response Plans and Inventories (Business Plan);
- California Accidental Release Prevention (CalARP) Program;
- UST Program;
- Aboveground Petroleum Storage Act Requirements for SPCC Plans;
- Hazardous Waste Generators and On-Site Hazardous Waste Treatment (tiered permitting) Programs; and
- California Uniform Fire Code (UFC): Hazardous Materials Management Plans and Hazardous Materials Inventory Statements.

The Unified Program is implemented at the local level by a local agency, referred to as the Certified Unified Program Agency (CUPA). The CUPA is responsible for consolidating the administration of the above six program elements within its jurisdiction. The Los Angeles County Fire Department (LACFD) is the CUPA for the Project Site.

In the state of California, hazardous materials sites are consolidated in the “CORTESE” list by various state agencies pursuant to Government Code Section 65962.5, which includes the following lists:

- List of Hazardous Waste and Substances sites from DTSC EnviroStor database;
- List of LUST sites by County and Fiscal Year from LARWQCB GeoTracker database;
- List of solid waste disposal sites identified by the LARWQCB with waste constituents above hazardous waste levels outside the waste management unit;
- List of “active” Cease and Desist Orders (CDOs) and Cleanup and Abatement Orders (CAOs) from LARWQB; and
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

The databases referenced above identify facilities with suspected and confirmed releases of hazardous materials into soil and/or groundwater.

### **4.3 Regional and Local**

Various regional agencies enforce federal and state regulations in the Project area, including the SCAQMD and LARWQCB. The SCAQMD regulates air quality and sets controls for the emission of VOCs in Rule 1166; Toxic Air Contaminants in Rule 1466; Nuisance in Rule 402; and Fugitive Dust in Rule 403. The LARWQCB regulates unauthorized releases that may result in pollution of regional water bodies. LACFD oversees tank monitoring, installation, removal, and site mitigation. The federal government and the state require all businesses that handle more than a specified number of hazardous materials or extremely hazardous materials to submit a Business Plan to their local CUPA. The LACFD requires preparation, submittal, and implementation of a Business Plan on a yearly basis if a business uses, stores, or manufactures hazardous materials in any amount. The Business Plan should require an inventory of the hazardous materials and set forth ERPs and procedures to be used in an event of significant or threatened significant release of a hazardous substance.

## 5. SIGNIFICANCE CRITERIA

Potential impacts of hazards and hazardous materials on the public and the environment were evaluated based on the known existing potentially hazardous materials used/stored at the Project Site or expected to be used/stored at the Project Site during construction and operation. Criteria for determining the significance of impacts related to the hazards and hazardous materials are based upon criteria listed in accordance with the Appendix G Checklist contained in the California Environmental Quality Act (CEQA) Guidelines [Title 14, Division 6, Chapter 3 of the CCR] and are as follows:

Would the project:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?
- Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?
- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

These criteria are discussed in the following sections.

## 6. POTENTIAL ENVIRONMENTAL IMPACTS

### 6.1 Routine Transport, Use, and Disposal of Hazardous Materials

*Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

The Project may involve the following activities and/or use of hazardous materials during construction that have the potential to adversely impact the environment, and/or construction workers and off-site receptors.

#### Hazardous Building Materials

Some of the existing buildings at the Project Site will be demolished as part of the Project. These buildings have the potential to contain hazardous materials such as ACM, lead-based paint, and other potentially hazardous building materials, such as PCBs in electrical switches. By complying with applicable regulations, including RCRA, Cal/OSHA, Toxic Substances Control Act (TSCA) 40 CFR 761, impacts related to the demolition of existing structures would be less than significant.

For example, an asbestos survey would be required prior to demolition of any buildings that are likely to contain ACM in accordance with SCAQMD Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities). Also, structures would be sampled for lead-based paint prior to demolition. In the event that ACM and/or lead-based paint is found within areas proposed for demolition, the suspect materials would be managed in accordance with applicable requirements and regulations for proper removal and disposal, in accordance with federal, state, and local regulations. A Hazardous Building Materials Demolition Assessment and Management Plan would be submitted to the SCAQMD and LAFD for review and approval, as required. Also, as noted previously, the four electrical switches containing PCBs observed on the South Lot are marked with the appropriate labels and will continue to be maintained in accordance with the applicable regulations. Therefore, with compliance with applicable regulations and requirements, demolition activities would not create a significant hazard to the public or the environment.

#### Soil

Soil impacted with petroleum hydrocarbons, arsenic, lead, or other contaminants may be encountered during excavation and construction activities at the Project Site. The volume of potentially contaminated soil at the Project Site is estimated to be up to a maximum of approximately 17,700 cubic yards [Geosyntec, 2023]. By complying with the Project

SMP and applicable regulations, impacts related to contaminated soil would be less than significant.

For example, the Project SMP provides protocols to be implemented by the General Contractor or designated subcontractor to maintain the protection of human health and the environment when Project construction involves soil disturbance. Implementation of the Project SMP applies to the construction of the Project, including demolition of existing structures, grading, excavations, and construction-phase operations. The protocols outlined in the Project SMP are to be followed during the design, construction, and post-construction of the Project. The Project SMP will be submitted to the Grading Division of the Los Angeles Department of Building and Safety (LADBS) for review and approval as part of the Grading Permit plan check review and approval. LADBS is the designated permitting organization for the Project and thus is the appropriate agency to receive the Project SMP. The LAFD is designated as the enforcement agency for the City that regulates hazardous materials and, thus, LADBS may designate LAFD to review the Project SMP. Where LAFD's authority or ability is exceeded, the review can be referred to another appropriate County or State regulatory agency. As described in the Environmental Subsurface Assessment Report [Geosyntec, 2024], the presence of on-site contamination has been adequately investigated. Should an update to the Project SMP be deemed necessary, it would be submitted to LADBS or its designee for review and approval.

The Project SMP provides a detailed description of the procedures required for soil testing, handling and proper disposal during the earthwork, grading, excavation, or other soil disturbance activities during Project construction. The Project SMP was prepared by Professional Geologists and Engineers licensed in the State of California, and will be implemented by a General Contractor and subcontractor(s) licensed to work in the State of California under the direct supervision of a State-licensed professional such as a Professional Engineer or Professional Geologist. The licensed professional is required to ensure the Project SMP is implemented by field personnel qualified and trained on the field procedures and monitoring instruments. A photoionization detector (PID) is a standard field screening instrument for VOCs that will be used during the excavation process. Daily field reports of observations and monitoring will be prepared and will be available for review. Pursuant to the Project SMP, any soil that is disturbed, excavated, or trenched due to on-site construction activities must be handled in accordance with SCAQMD Rule 1166 and Occupational Safety and Health Act of 1970 (OSHA) – Title 29 USC Ch. 15: Occupational Safety and Health. No soil disturbance or excavation activities will occur without a Project Site-specific Health and Safety Plan (HASP) prepared by the General Contractor in accordance with CCR, Title 8, Section 5192. The HASP will describe the potential hazards of the work site and controls and work practices

selected to minimize those hazards; designate required training to work at the site; and identify equipment to be used for protecting worker safety.

The Project SMP is intended to provide proper control and management of soils at the Project Site that are known or found to be impacted by chemicals of concern and to provide risk management measures designed to be protective of potentially exposed populations. Special precautions will be taken to manage soil in areas containing chemicals of concern above screening levels. Soil with residual contaminants above screening levels will either be excavated and properly disposed of off-site prior to commencing Project Site-wide excavation and grading operations or segregated and properly managed during construction in compliance with applicable regulations as discussed in detail in the Project SMP. To the extent that it is not practical or possible to live-load these soils for off-site disposal due to interruptions in the availability of trucking from weather or traffic, they will be temporarily stockpiled on-site in a location away from sensitive receptors prior to off-site disposal. The stockpiled soil will be placed on plastic sheeting and covered with plastic sheeting until it can be removed from the Project Site.

As detailed in the Project SMP, in the event VOC-contaminated soil is encountered during the Project Site excavation, a SCAQMD Rule 1166 permit must be obtained before resuming excavation. Rule 1166 defines VOC-contaminated soil as soil which registers a concentration of 50 parts per million (ppm) or greater of VOCs as measured before suppression materials have been applied and at a distance of no more than 3 inches from the surface of the excavated soil with a PID calibrated with hexane. Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil, is applicable to excavation and grading of soil containing VOC materials. Either a Various Locations permit and plan or a Project Site-specific permit and plan will be required, depending upon the volume of soil to be excavated per Rule 1166. Undisturbed soil is not included in the scope and jurisdiction of Rule 1166. Notifications, monitoring, and reporting related to the SCAQMD Rule 1166 permit will be the responsibility of the General Contractor.

As also detailed in the Project SMP, safety measures must be implemented by the General Contractor and subcontractors to protect human health and the environment during construction activities involving contact with soils at the Project Site. Safety measures will be implemented during construction to minimize the following:

- Implementation of dust control measures to minimize dust generation associated with excavation and/or loading activities, construction or transportation equipment traveling over soil, and wind traversing soil stockpiles.

- Decontaminating construction and transportation equipment to minimize tracking soil off the Project Site with construction or transportation equipment.
- Implementing storm water pollution controls and best management practices to minimize transporting soil or sediments from the Project Site any time there is surface water run-off, including, but not limited to, storm events, landscape irrigation, or watering for dust control.
- Implementing proper procedures for handling, storage, sampling, and transportation and disposal of waste and debris for managing construction waste, excess soil, and other waste generated or encountered during construction on the Project Site.

Therefore, with compliance with the Project SMP and applicable regulations and requirements, construction activities would not create a significant hazard to the public or the environment due to potentially contaminated soil.

#### Groundwater

Groundwater below the Project Site that is impacted with VOCs (i.e., TCE) from upgradient sources may be encountered in areas where deep excavations are planned. By complying with the Project SMP and applicable regulations, contaminated groundwater would be adequately addressed and impacts would be less than significant.

For example, in areas where deep excavations are planned and temporary dewatering is necessary during construction that would potentially extract groundwater impacted with VOCs from upgradient sources, the following procedures shall be implemented in accordance with the Project SMP. The General Contractor or designated subcontractor shall obtain a discharge permit from an applicable agency for groundwater extracted during dewatering operations and shall implement required treatment, if any. Notifications and reporting related to the applicable discharge permit will be the responsibility of the General Contractor. Any water accumulated in excavations (e.g., from rainfall) will be managed in accordance with the Storm Water Pollution Prevention Plan (SWPPP). The method of dewatering, if necessary, will be chosen considering the following variables, among others:

- Depth of intrusion that is required for each building foundation;
- Hydraulic properties of the soils in which the excavations occur;
- Potential to mobilize any existing groundwater contaminants;
- Potential for ground subsidence and/or liquefaction to occur;

- Proximity to any existing production wells; and
- Volume of water to be dewatered on a daily basis.

After evaluating each of these factors individually and collectively, a dewatering strategy will be developed and implemented in a manner that will minimize any impacts to neighboring properties (i.e., settlement) and regional water resource needs. All dewatering methods will be designed and submitted to the local jurisdiction, which includes the LADBS Grading Division, LARWQCB and/or the City of Los Angeles Sanitation Department (LASAN) for review and approval. Therefore, with compliance with the Project SMP and applicable regulations and requirements, construction activities would not create a significant hazard to the public or the environment due to potentially contaminated groundwater.

#### Construction Materials

Use of common construction materials such as fuels, paints, cleaners, and welding materials is also expected during construction. By complying with the applicable regulations, use of such materials would not create a significant hazard to the public or the environment, and impacts would be less than significant.

For example, hazardous materials used during construction that require off-Site disposal will follow appropriate regulatory protocols. Hazardous materials used during construction would be handled and disposed of in accordance with manufacturers' specifications and instructions. No hazardous waste disposal would occur on Site. An SPCC Plan consists of operating procedures and control measures to prevent a spill from reaching navigable waters, and countermeasures to contain, clean up, and mitigate the effect of a spill reaching navigable waters. The General Contractor shall develop an SPCC Plan in accordance with applicable local, state, and federal regulations to minimize the potential for, and effects from, spills of hazardous, toxic, or petroleum substances during construction activities. Therefore, if a release and/or spill occurs, it would be handled in accordance with applicable regulatory requirements and would not create a significant hazard to the public or the environment.

#### Hazardous Materials

The Project Site includes production facilities with routine use and storage of potentially hazardous materials typical of those used on studio campuses, including paints, adhesives, fuels, pesticides for landscaping, cleaning and maintenance supplies, materials for pyrotechnic special effects, and other general products related to studio operations. The Project would continue the existing studio use and would not introduce new sources

of hazardous materials. By complying with the applicable regulations, routine use and storage of potentially hazardous materials typical of studio campuses would not create a significant hazard to the public or the environment, and impacts would be less than significant.

For example, such materials are and would continue to be stored in appropriate containers (e.g., 55-gallon drums and ASTs located within berms) and handled in accordance with all applicable local, state, and federal regulations. These include, but are not limited to, the requirement of the Unified Program such as implementation of a Risk Management Plan (RMP), Hazardous Materials Business Plan (HMBP), and ERP. These plans are in place at the Project Site and will be periodically updated, as needed.

The Project Site is subject to applicable federal and state OSHA training and informational requirements, including hazardous materials training for on-site employees who handle potentially hazardous materials. Monitoring of the Project Site's hazardous materials management is and would continue to be conducted by LAFD and other applicable regulatory authorities, as appropriate. Additionally, the Project Site currently has and would continue to have staff designated and trained to respond to accidental releases of hazardous materials. The Project Site has and would continue to have professional hazardous materials response specialists on-call if a release cannot be handled internally. Therefore, the Project operations would result in a less than significant hazardous materials impact due to transport, use or disposal of hazardous materials with compliance with the applicable regulations and requirements.

## **6.2 Upset and Accident Conditions of Hazardous Materials**

***Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?***

The Project may involve the activities and/or use of hazardous materials during construction discussed in Section 6.1 (e.g., demolition of existing buildings, potentially contaminated soil and groundwater, handling and storage of potentially hazardous materials during construction and routine use) that have the potential to adversely impact the environment, and/or construction workers and off-site receptors. Temporary dewatering operations are expected to be necessary during construction and will be designed to minimize impacts to neighboring properties, including the potential for settlement or subsidence in the vicinity of the Project Site. If residual groundwater impacts are extracted during dewatering, a temporary dewatering treatment system consisting of pumps and filtration would be installed and operated in accordance with

permit requirements as described in the Project SMP. As discussed in Section 6.1, by complying with the Project SMP and applicable regulations, the potential hazards to the public or environment through reasonably foreseeable upset and accident conditions involving the release of such materials would be less than significant.

The Project Site is not located in a methane zone, and there are no methane systems in place currently on the Project Site.

### **6.3 Emissions Within One-Quarter Mile of a School**

*Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

One school, Carpenter Community Charter School, is located approximately 0.25 miles south of the Project Site. The Project may involve hazardous materials during construction discussed in Section 6.1 (e.g., demolition of existing buildings, potentially contaminated soil and groundwater, handling and storage of potentially hazardous materials during construction and routine use) that have the potential to adversely impact the environment, and/or construction workers and off-site receptors. As discussed in Section 6.1, by complying with the Project SMP and applicable regulations governing such activities and the storage and handling of such chemicals, impacts would be less than significant. Refer to Section IV.B, Air Quality, of the Draft Environmental Impact Report (EIR) regarding the less than significant localized air quality impacts associated with construction and operation of the Project.

### **6.4 Included on a List of Hazardous Materials**

*Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

There are currently no violations and no ongoing regulatory cases have been identified for the Project Site. The Project Site is recorded on the “HIST CORTESE” list of sites compiled pursuant to Government Code Section 65962.5 in reference to the LUST file closed by the LARWQCB in January of 1997. The LUST case opened in 1994 when gasoline contamination was encountered beneath five 10,000-gallon USTs damaged by the 1994 Northridge Earthquake that were located near the southeast corner of the Project Site. The five USTs were removed in 1994 under a permit by the LAFD. Impacted soil was removed for off-site disposal, and groundwater monitoring was required by the LARWQCB in May of 1994. Monitoring of soil vapor and groundwater was conducted,

and the LARWQCB closed the LUST file in January of 1997 [Leader, 2021]. Given that the case received regulatory closure and the considerable amount of time that has passed, it is unlikely that this historical release poses any environmental concerns. As discussed in Section 6.1, by complying with the Project SMP and applicable regulations, impacts related to hazardous materials sites would be less than significant.

#### **6.5 Safety Hazard or Excessive Noise Near an Airport**

*For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

The Project Site is not located within 2 miles of an airport or within an airport planning area. The closest airport is the Hollywood Burbank Airport, which is located approximately 4 miles northeast of the Project Site. Therefore, the proposed Project would not place structures or additional persons within an airport land use plan, runway clear zone, or other airport-related hazard area. Therefore, no impact related to safety hazards or excessive noise associated with public airports would occur with the Project. No further analysis is needed.

#### **6.6 Impair Implementation of Emergency Response or Evacuation Plan**

*Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

As demonstrated by the analysis within the Initial Study prepared for the Project in June 2023 and included in Appendix A of the Draft EIR, the Project would not result in potentially significant impacts associated with an adopted emergency response plan or emergency evacuation plan. As such, no further analysis is required.

#### **6.7 Expose People or Structures to Risk Involving Wildland Fires**

*Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

As demonstrated by the analysis within the Initial Study prepared for the Project in June 2023 and included in Appendix A of the Draft EIR, the Project would not result in potentially significant impacts associated wildland fires. As such, no further analysis is required.

## 7. LIMITATIONS

The professional opinions and recommendations expressed in this Hazards Assessment Report are made in accordance with generally accepted standards of practice and were based largely on source information provided by others. No other warranty is either expressed or implied. Geosyntec is responsible for the findings contained in this Hazards Assessment Report based on the information available at the time of document publication and information relating only to the specific Project and location discussed herein. If new data are collected or material changes in the proposed Project are developed in the future, the changes may affect Geosyntec's interpretations and/or conclusions. Geosyntec is not responsible for use of the information contained in this Hazards Assessment Report for purposes other than those expressly stated in this Hazards Assessment Report.

## 1. INTRODUCTION

### 1.1 Terms of Reference

Geosyntec Consultants, Inc. (Geosyntec) prepared this Environmental Subsurface Assessment Report (Report) for the Radford Studio Center Project (Project) located at 4024, 4064 and 4200 N. Radford Avenue in Studio City (Los Angeles), California (Project Site, Figure 1). This Report summarizes the findings of recent subsurface sampling, historical investigation and remediation activities conducted at the Project Site. This Report was prepared by Ms. Brittany Theilen, G.I.T., and Mr. Andy Simons, P.G., and reviewed by Ms. Lisa A. Hall, P.E., and Mr. Rich Kraft, P.G., C.Hg. C.E.G., all of Geosyntec, in accordance with Geosyntec's review policies.

The recent subsurface assessment consisted of soil, soil vapor, and groundwater sampling conducted at the Project Site from May through August 2022. The results of this assessment described herein serve to support the Project and Environmental Impact Report (EIR). This data will also inform development decisions and disposal options pertaining to excavated soil and temporary construction dewatering. The subsurface assessment work was performed based on the results presented in the Phase I Environmental Site Assessment (ESA) Report (Phase I ESA) by Leader Professional Services, Inc. (Leader) [Leader, 2021] and on Geosyntec's Site walk conducted on 10 February 2022.

### 1.2 Report Organization

The remainder of this Report is organized into the following sections:

- Section 2, *Project Site and Vicinity*, including a summary of setting, topography, geology, hydrogeology, and historical Site development and use.
- Section 3, *Previous Investigations and Remedial Activities*, provides a summary of previous environmental activities performed at the Project Site.
- Section 4; *Recent Subsurface Investigation*, provides of a summary the scope of work and fieldwork performed at the Project Site.
- Section 5, *Investigation Results*, provides a summary of investigation results pertaining to soil, soil vapor, and groundwater testing.
- Section 6, *Discussion*, provides a discussion summary of soil, soil vapor, and groundwater.

- Section 7, *Summary of Residual Contaminants*, including TPH, arsenic, lead, and VOCs in soil and VOCs in groundwater.

Tables, figures, and appendices are included at the end of this Report.

## **2. PROJECT SITE AND VICINITY DESCRIPTION**

### **2.1 Setting and Surrounding Properties**

The Project Site is located at 4024, 4064 and 4200 N. Radford Avenue in an urbanized area of Studio City, California (Figure 1). The Project Site consists of northern and southern parcels (the “North Lot” and “South Lot,” respectively) that together comprise approximately 55 acres (approximately 52.25 acres after dedications/mergers). The Project Site is currently developed with studio uses and surface/structured parking, including numerous ancillary buildings and structures.

The Project Site is bisected, north-south, by the Los Angeles River (Figure 1). The Project Site is bounded by Radford Avenue to the west, an alley with commercial uses fronting Ventura Boulevard to the south, Colfax Avenue to the east, and the Los Angeles River and West Tujunga Wash to the north and east. Commercial buildings are located adjacent to the Project Site along the alley, with additional commercial buildings across Ventura Boulevard and Radford Avenue. Residential uses are located to the west across Radford Avenue and to the north and east across the West Tujunga Wash.

### **2.2 Project Overview**

The Project consists of the continuation of the existing studio use and the modernization and expansion of production facilities within Radford Studio Center, including the development of new sound stages, production support, production office, creative office, and retail, as well as parking (above and below grade) across the North and South Lots. These buildings will vary in height from approximately 60 feet (ft) up to approximately 135 ft.

Off-site improvements include the construction of the new Los Angeles River Connector (a vehicular and pedestrian bridge across the Tujunga Wash to connect Moorpark Street and Radford Avenue), a protected bikeway along Radford Avenue, and improving the alley south of the Project Site as a green alley. In addition, the Project would widen the existing Gilligan’s Island Bridge which links the North and South Lot over the Los Angeles River within the Project Site.

### **2.3 Topography**

Per the findings of the Project’s topographic survey, the majority of the North Lot slopes from its northwest corner to its southeast corner with approximately 15 ft of elevation change (from 600 to 585 ft above mean sea level [AMSL]). The access road on the north side of the North Lot (south of the Tujunga Wash) also slopes from northwest to southeast from about 600 to 585 ft AMSL. The access road on the south side of the North Lot (north

of the Los Angeles River) slopes from west to east from approximately 595 to 585 ft AMSL.

The majority of the South Lot generally slopes both from its southwest corner to its northwest corner with approximately 27 ft of elevation change (from 617 to 590 ft AMSL), and from its southwest corner to its southeast corner with approximately 17 ft of elevation change (from 617 to 600 ft AMSL). The access road on the north side of the South Lot slopes from northwest to southeast from approximately 595 to 585 ft AMSL before sloping back up to approximately 605 ft AMSL. From the edge of this access road on the southeast corner of the South Lot to the Los Angeles River, there is a steeper drop-off from approximately 600 to 583 ft AMSL.

The existing area to the north of the Los Angeles River generally slopes from northwest to southeast from approximately 600 to 581 ft AMSL.

## **2.4 Regional Geology and Hydrogeology**

The Project Site is located at the northern end of Fryman Canyon of the Santa Monica Mountains within the Transverse Ranges geomorphic province. The Santa Monica Mountains are located south of the Project Site and are a structurally elevated block of the Transverse Ranges of regional faulting. Faults of the Transverse Ranges may be categorized as active, potentially active, or inactive. Faults in the region consist of buried thrust faults. The geology consists of alluvial sands and silty clay and gravel derived from the Santa Monica Mountains underlain by Miocene Monterey Formation.

Previous subsurface investigations at the Project Site have identified four distinct types of sediments [Geotechnologies, 2024; A.E. Schmidt Environmental Inc. (A.E. Schmidt), 1996, Geosyntec, 2023]:

- Artificial fill is present throughout the Project Site. In the North Lot, the artificial fill is deeper near the Los Angeles River and a portion of the Tujunga Wash, at approximately 12.5 to 34 ft below ground surface (bgs), but relatively shallow, between approximately 1 and 8.5 ft bgs, throughout the rest of the North Lot. The artificial fill in the South Lot is generally thin across most of its area, deepening near the Los Angeles River. Fill depths range from approximately 3 to 8 ft below grade in most of the South Lot but increase to approximately 10 to 25.5 ft bgs near the Los Angeles River. The artificial fill is predominantly comprised of grayish-brown to black sandy silt.
- Construction debris was observed to be approximately 5 to 10 ft thick at depths ranging from approximately 15 to 30 ft bgs at certain locations. Debris was

observed to consist of brick, concrete, glass, wire, nails, wood, and incinerated wood. The source of the debris is likely past construction activities.

- Native alluvial soils are present beneath the fill and debris at the Project Site. The alluvial soils generally consist of layers of gray to grayish brown sand, clay, and silt, with occasional gravel and cobbles.
- Bedrock, composed of Miocene Monterey Formation siltstone, was encountered at depths ranging from approximately 45 to 75 ft bgs in exploratory borings in the South Lot.

The Project Site is located within the San Fernando Valley Groundwater Basin [Department of Water Resources (DWR) Bulletin 118, 2004]. The San Fernando Valley Groundwater Basin is bounded to the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills. The valley is drained by the Los Angeles River and its tributaries.

## **2.5 Depth to Groundwater, Gradient, and Groundwater Flow Direction**

Investigations at the Project Site have indicated varying groundwater depths. Historically, the highest groundwater level for the entire North Lot was 0 ft bgs (existing ground surface) and 0 to 10 ft bgs within the central portion of the South Lot and to a depth of 20 ft within the southern portion of the South Lot [Geotechnologies, 2024]. Previous explorations conducted in 1993 and 2003 noted groundwater depths of approximately 58 to 73 ft bgs in the North Lot. In 2022, Geotechnologies' exploratory borings in the South Lot noted groundwater levels ranged from 30 to 42 ft bgs.

Geosyntec's May 2022 subsurface investigation found groundwater at depths ranging from approximately 38 to 42 ft bgs. Excluding the historically highest groundwater depth ranges of 0 and 20 ft bgs, groundwater across the Project Site ranges from approximately 30 to 73 ft, depending on the location. Fluctuations in groundwater level may occur due to variations in rainfall and/or the impact of the nearby Los Angeles River and Tujunga Wash. Groundwater flow was determined to flow N23°E with a hydraulic gradient of 0.0091 ft per foot (ft/ft).

## **2.6 Historical Project Site Development and Use**

The Project Site has operated as a studio for nearly 100 years. The first phase of development corresponded with the initial purchase and construction of the Mack Sennett

Studio in 1927. Pioneer filmmaker Mack Sennett created the original nexus of the studio, situated in the southwestern region of the Project Site. Sennett continued to occupy the Project Site until 1935, although most buildings commissioned by him were completed within the first few years of owning the land. There are nine extant buildings from this period, which were constructed in 1928.

The second phase of development occurred from the mid-1930s to mid-1950s. During this phase the property was owned by Republic Pictures. This development generally expanded the Project Site north and east, with some infill between the earlier Sennett-era buildings. There are 15 extant buildings from this period, which were constructed from 1935 to 1941 and again from 1944 to 1957.

The third phase of development occurred after CBS began renting the property in 1963 and purchased it in 1967. This resulted in the expansion of the Project Site with the construction of additional sound stage and support buildings on the outer perimeter of the Project Site, extending north towards the Los Angeles River. There are nine extant buildings from this period, which were constructed from 1963 to 1969.

A fourth phase of development occurred with the construction of nine buildings from 1996 to 2005, mostly situated north of the Los Angeles River. In addition, there are four buildings, which were individually built between development programs in 1979, 1988, 1992, and 2014.

Current operations at the Project Site include motion picture, television, and broadcast studios and related incidental uses, including, but not limited to: production activities; indoor and outdoor stages; sets and façades; digital, film, video, audio, video game, eSports, and media production; recording and broadcasting; sound labs; film editing; film video and audio processing; sets and props production; computer design; computer graphics; animation; and ancillary facilities related to those activities. The following types of related uses and facilities also occur on-site: basecamps, communication facilities, conference facilities, modular/portable bungalows and trailers, studio support facilities, parking, catering facilities, a commissary, special events, audience and entertainment shows, exhibits, fitness facilities, emergency medical facilities to serve the on-site employees and visitors, fueling for emergency generators, above-ground and below-ground storage tanks, pads for utilities and transmission equipment, maintenance and storage facilities, mills/manufacturing, sleeping quarters for certain on-site personnel, outdoor amenities, bridges, security facilities, carports, solar panels, signs, storage and warehouses.

Presently, there are 14 above-ground storage tanks (ASTs) registered with Los Angeles Fire Department (LAFD) with a total diesel fuel capacity of approximately 14,940 gallons [Leader, 2021].

Four electrical switches containing polychlorinated biphenyls (PCBs) were observed on the Project Site [Leader, 2021]. The PCB electrical switches are centrally located within the South Lot (see Figure 2). The switches are marked with the appropriate labels and required record keeping is maintained in accordance with the United States Environmental Protection Agency (EPA) PCB Regulations [Leader, 2021].

Three wastewater clarifying tanks were observed on the Project Site [Leader, 2021]. The clarifiers are in the southern portion of the South Lot near the main hazardous materials storage area, the central portion of the South Lot, and the North Lot near the Broadcast Building (Figure 2). The clarifiers, operating under Industrial Wastewater Permits issued by the City of Los Angeles, collect and treat sanitary water and discharge to the sanitary sewer system.

## **2.7 Previous Investigations and Remedial Activities**

In 1994, a leaking underground storage tank (LUST) case opened when gasoline contamination was encountered beneath five 10,000-gallon underground storage tanks (USTs) damaged by the 1994 Northridge Earthquake (collectively labeled “UST1” in Figure 2). The five USTs were removed in February 1994 under a permit issued by the LAFD. Impacted soil was removed for off-site disposal and groundwater monitoring was required by the Los Angeles Regional Water Quality Control Board (LARWQCB) in May of 1994. Monitoring of soil vapor and groundwater was conducted and the LARWQCB closed the LUST file in January of 1997 [Leader, 2021].

In September of 2019, a 10,000-gallon gasoline UST was removed from near the southeast corner of the Project Site (labeled “UST2” in Figure 2, approximately 100 ft northwest of the five former USTs described above) under the oversight of LAFD. Results of the post-UST removal soil testing indicated low levels of gasoline compounds; however, the detected concentrations were below LAFD minimum action levels, and no further action was recommended [Access Environmental Engineering, 2019]. Residual soil concentrations from this location will be appropriately addressed as necessary during Project construction as discussed in the Project Soil Management Plan (Project SMP), included as Appendix A.

No other registered USTs have been identified at the Project Site and no open LUST cases are listed in connection with the Project Site [Leader, 2021].

### **3. 2022 SUBSURFACE INVESTIGATION**

#### **3.1 Scope of Work**

Geosyntec conducted a subsurface assessment at the Project Site in May 2022 that included the following scope of work:

- Advanced 20 soil borings to approximately 3 ft bgs to sample shallow soil around the perimeter of existing buildings and features of interest (e.g., ASTs, electrical switches, etc.) generally in areas affected by the Project;
- Advanced eight soil borings to approximately 15 ft bgs, with two of the borings going to approximately 40 ft bgs, to sample soil in and around facilities of interest (e.g., paint shop, mill, etc.) and performing a sub-slab soil vapor study; and
- Advanced eight soil borings to approximately 50 ft bgs to sample soil from near surface fill, fill with debris (if encountered), and native soil below fill, and to sample groundwater (if encountered), in areas affected by the Project.

The following sections describe the investigation activities completed by Geosyntec.

#### **3.2 Field Work Preparation**

Geosyntec performed the following field work preparation:

- Prepared a Project Site-specific Health and Safety Plan (HASP) for investigation activities.
- Coordinated with the Project Site management and with drilling and laboratory subcontractors.
- Obtained a drilling permit from the County of Los Angeles Department of Public Health (Appendix B).

#### **3.3 Field Work**

##### **3.3.1 Utility Clearance**

Underground utilities were identified, and drilling locations were cleared by notifying Underground Service Alert and working with a geophysical subcontractor to perform a geophysical survey on 4, 5, and 13 May 2022 at each of the proposed boring locations to assess and clear for the potential presence of subsurface utilities and obstructions prior to commencing subsurface drilling.

### 3.3.2 Drilling and Soil Testing

Thirty-six soil borings were advanced up to 50 ft bgs by a combination of hand auger, direct push technology (DPT), and hollow-stem auger (HSA) drilling methods between 7 and 27 May 2022. Investigation locations SB-1 through SB-36 are shown on Figure 2. Soil properties were visually logged and soil vapors were screened with a photo-ionization detector (PID) in the field. The results of soil logging and field screening are presented on Table 1.

Soil samples were collected and submitted to Eurofins Environment Testing Southwest, LLC (Eurofins) analytical laboratory in Tustin, CA, a State-certified and National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory, under chain-of-custody protocols for the following analyses:

- Volatile organic compounds (VOCs) by EPA Method 8260B
- Total petroleum hydrocarbons (TPH) gas/diesel/oil range (TPH-g/d/o) by EPA Method 8015M
- Title 22 California Administrative Manual (CAM) metals by EPA Method 6010B/7471A
- Select soil samples collected near potentially PCB-containing electrical switches were also analyzed for PCBs by EPA Method 8082

The analysis results of the inorganic compounds (metals and PCBs) in soil are presented on Table 2, and the results of the analysis of organic compounds (VOCs and TPH) in soil are presented on Table 3. Laboratory reports can be found in Appendix C.

### 3.3.3 Soil Vapor Testing

Eight multi-depth soil vapor probes (depths of approximately 5 and 15 ft bgs) were installed at locations SB-04, SB-05, SB-06, SB-07, SB-08, SB-09, SB-10, and SB-16 on 9 and 10 May 2022.

Sixteen soil vapor samples were collected from these locations and analyzed for VOCs by EPA Method 8260B by Jones Environmental mobile laboratory on 17 May 2022.

The results for the analysis of VOCs in soil vapor are presented on Tables 4a and 4b. The laboratory report can be found in Appendix C.

### **3.3.4 Groundwater Testing**

Four grab-groundwater samples were collected and submitted to Eurofins for analysis of the following:

- VOCs by EPA Method 8260B,
- TPH-g/d/o by EPA Method 8015M, and
- Title 22 CAM metals by EPA Method 6010B/7471A,

In addition, groundwater samples were analyzed for construction dewatering discharge parameters including Biological Oxygen Demand (BOD), residual chlorine, copper, oil and grease, lead, methylene blue active substances (MBAS), phenols, selenium, sulfides, and zinc.

Uppermost groundwater was encountered at a depth of approximately 38 ft bgs at boring SB-03 near the southern boundary of the Project Site (Figure 2). Groundwater was also encountered at SB-11, SB-14, and SB-17 at depths of approximately 41 to 42 ft bgs.

The results for the analysis of grab-groundwater samples are presented on Table 5. Laboratory reports can be found in Appendix C.

### **3.3.5 Investigation Derived Waste Disposal**

Soil cuttings and decontamination liquids were placed into labeled 55-gallon drums for temporary on-site storage. Investigation-derived waste was classified and disposed of off-site in accordance with applicable regulations. The waste manifests are provided in Appendix D.

## 4. INVESTIGATION RESULTS

### 4.1 Soil Sampling

As shown on Table 1, soils at the Project Site primarily consisted of interbedded fine and coarse-grained soils including clays, silts, and sands. Minor amounts of fill debris (i.e., small brick, asphalt, and wood fragments) were identified in soil at certain locations, including SB-02, SB-11, SB-14, SB-17, SB-19, SB-20 SB-21, SB-22. Also, fill material consisting of pea gravel was encountered from approximately 6.5 to 21.5 ft bgs at SB-11. This appeared to be backfilled materials around the former USTs at this location.

Table 2 shows that detections of inorganic compounds in soil were below commercial/industrial screening levels, except for arsenic and lead. Arsenic was detected above the upper-bound of background arsenic in Southern California of 12 milligrams per kilogram (mg/kg) [Department of Toxic Substances Control, California Environmental Protection Agency (DTSC), 2008] in samples SB-11-5' (20.2 mg/kg), SB-28-0.5' (102 mg/kg), and SB-28-3' (92.2 mg/kg). Lead was detected above its commercial/industrial screening level of 500 mg/kg in sample SB-9-15' (2,530 mg/kg). PCBs were not detected in any soil samples.

Table 3 shows that detections of organic compounds in soil were below commercial/industrial screening levels, with the exception of TPH-d and TPH-o, TPH-d was detected above its commercial/industrial screening level of 100 mg/kg in samples SB-18-0.5' (200 mg/kg) and SB-24-0.5' (120 mg/kg); and TPH-o was detected above its screening level of 1,000 mg/kg in samples SB-24-0.5' (1,200 mg/kg) and SB-34-3' (1,100 mg/kg). VOCs were not detected in soil or were detected at concentrations below commercial/industrial screening levels.

### 4.2 Soil Vapor Sampling

Table 4a shows the soil vapor sampling results compared to commercial/industrial screening levels using an attenuation factor of 0.03 [DTSC, 2023]. Table 4b presents the soil vapor sampling results compared to commercial/industrial screening levels using an attenuation factor of 0.001 [DTSC, 2011]. The screening levels based on the DTSC attenuation factor of 0.03 is a conservative threshold calculation; some studies suggest the application of the 0.001 DTSC attenuation factor may be more representative of

conditions in California.<sup>1</sup> In its August 2022 Vapor Intrusion Update [DTSC, 2022], DTSC states that an attenuation factor of 0.03 can be used for initial evaluation of the potential for vapors to enter a building, but that soil vapor plume delineation should be conducted using site-specific screening criteria that incorporates either an attenuation factor of 0.001 or a site-specific attenuation factor that has been developed using “multiple lines of evidence.”

Table 4a shows that VOCs detected in soil vapor were below commercial/industrial screening levels using an attenuation factor of 0.03, except for tetrachloroethene (PCE). PCE was detected above the screening level of 66.7 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) in samples SB-04-5'-SV ( $91 \mu\text{g}/\text{m}^3$ ), SB-05-5'-SV ( $161 \mu\text{g}/\text{m}^3$ ), SB-05-15'-SV ( $134 \mu\text{g}/\text{m}^3$ ), SB-06-5'-SV ( $77 \mu\text{g}/\text{m}^3$ ), SB-06-15'-SV ( $74 \mu\text{g}/\text{m}^3$ ), SB-07-5'-SV ( $3,210 \mu\text{g}/\text{m}^3$ ), SB-07-15'-SV ( $1,650 \mu\text{g}/\text{m}^3$ ), SB-10-5'-SV ( $395 \mu\text{g}/\text{m}^3$ ), and SB-10-15'-SV ( $195 \mu\text{g}/\text{m}^3$ ).

Table 4b presents VOCs detected in soil vapor were below commercial/industrial screening levels using an attenuation factor of 0.001, except for PCE. PCE was detected above the commercial screening level of  $2,000 \mu\text{g}/\text{m}^3$  in sample SB-07-5'-SV ( $3,210 \mu\text{g}/\text{m}^3$ ).

### **4.3 Grab-Groundwater Sampling**

Table 5 shows that detections of compounds in groundwater were below commercial/industrial screening levels, except for trichloroethene (TCE), which was detected above the California State Water Resources Control Board - Division of Drinking Water (SWRCB-DDW) Primary Maximum Contaminant Level (MCL) of 5 micrograms per liter ( $\mu\text{g}/\text{L}$ ) in sample SB-11-42'-GW ( $14 \mu\text{g}/\text{L}$ ). TCE was also detected in sample SB-17-42'-GW, but below the MCL and the commercial/industrial screening level. Note, MCLs are drinking water standards and are not directly relevant given that groundwater at the Project Site is relatively shallow, making it unlikely to be used as a source for drinking water.<sup>2</sup>

---

<sup>1</sup> Recent research demonstrates that the EPA default attenuation factor of 0.03 is not representative of empirical vapor intrusion data collected for vapor intrusion sites in California [Lahvis and Ettinger, 2021].

<sup>2</sup> Water supply wells in the Los Angeles Basin are generally screened deeper since deeper aquifers are often less vulnerable to surface contaminants, pollutants, and human activities, which can affect shallow aquifers.

## **5. DISCUSSION**

### **5.1 Soil**

The results of the soil logging and field screening demonstrate that soil types encountered during the investigation discussed herein are generally consistent with the conditions observed during previous subsurface investigations (e.g., geotechnical) at the Project Site. The pea gravel fill encountered at SB-11 is likely from backfill associated with the former USTs removed at this location. Isolated detections of arsenic in soil (approximately 0.5-5 ft bgs) at SB-11 and SB-28, and TPH-d and/or TPH-o in soil at SB-18-0.5', SB-24-0.5', and SB-34-3' above commercial/industrial screening levels are generally sporadic and confined to shallow soil. Lead was only detected at one location above the commercial/industrial screening level in soil at SB-09 (approximately 15 ft bgs). The limited, sporadic residual concentrations of these compounds in soil at the Project Site (locations shown on Figure 3), likely due to historical Site use (e.g., vehicle use and fueling) and/or fill soils, will be appropriately addressed, as necessary, during Project construction as discussed in Section 7 and in the Project SMP (Appendix A).

### **5.2 Soil Vapor**

Concentrations of PCE detected in soil vapor were generally higher in the 5 ft bgs probes as compared to the 15 ft bgs probes, indicating a potential shallow source of PCE. The Phase I ESA [Leader, 2021] identified two former dry cleaners upgradient (south) of the Project Site that could potentially be a source of PCE detected in shallow soil vapor at the Project Site. VOCs in shallow soil vapor will be addressed by existing regulatory control measures, such as the Final Guidance for Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air [DTSC, 2011], the Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Final Draft [DTSC, 2023] and the Los Angeles Department of Building Code and Safety requirements, as applicable.

### **5.3 Groundwater**

The depths to groundwater encountered during the investigation discussed herein are generally consistent with conditions observed during recent subsurface investigations (i.e., geotechnical borings in 2022) at the Project Site, with the depth to groundwater generally shallower towards the southern portion of the Project Site and deeper towards the northern portion of the Project Site.

Groundwater in the Project Site vicinity generally flows from south to north. One of the two former dry cleaners identified upgradient from the Project Site in the Phase I ESA [Leader, 2021] may be the source of TCE (a degradation product of PCE) detected in

groundwater at the Project Site. Although the highest concentration of TCE in groundwater exceeded the commercial SL at one location within the planned excavation area of up to 50 ft bgs, the detected groundwater TCE concentration was within the same order of magnitude as the SL and therefore the impact is not significant. To be conservative, the one detection of TCE above the commercial/industrial screening level has been considered in the development of the Project SMP (Appendix A).

## **6. SUMMARY OF RESIDUAL CONTAMINANTS**

The following is a summary of the key findings from environmental investigations pertaining to the former USTs, TPH in soil, arsenic in soil, lead in soil, VOCs in groundwater, and subsurface vapors at the Project Site.

### **6.1 Area of Former USTs**

The areas of the former USTs are shown on Figure 3. Any residual petroleum constituents in soil or groundwater from the former USTs will be appropriately managed using the Project SMP (Appendix A) during Project excavation and grading operations, as necessary. The testing and proper disposal of all excavated soil for the Project Site will follow the procedures described in the Project SMP (Appendix A) and will comply with applicable regulatory requirements including the South Coast Air Quality Management District (SCAQMD) Rule 1166.

### **6.2 TPH in Soil**

Based upon subsurface investigations completed to date, TPH detected in soil samples has been found to be mostly below regulatory screening levels. TPH-d and TPH-o screening level exceedances in soil appear to be sporadic and confined to shallow soil. Specific areas with elevated TPH, shown on Figure 3, will be appropriately managed during excavation and grading operations in accordance with the Project SMP (Appendix A).

### **6.3 Arsenic in Soil**

Arsenic was detected at concentrations above the upper-bound background concentration (12 mg/kg) in 3 out of 89 soil samples. The three sample locations with elevated arsenic, shown on Figure 3, also appear to be sporadic and confined to shallow soils. Arsenic in soil will be appropriately managed during excavation and grading operations in accordance with the Project SMP (Appendix A).

### **6.4 Lead in Soil**

Lead was detected at concentrations above the regulatory screening level (320 mg/kg) at 1 out of 89 soil samples. The one location with elevated lead, shown on Figure 3, will be appropriately managed during excavation and grading operations in accordance with the Project SMP (Appendix A).

### **6.5 Volatile Organic Compounds in Groundwater**

TCE was detected in groundwater above its MCL of 5 µg/L at one location, boring SB-11. The specific area with elevated TCE greater than its MCL is shown on Figure 3. While

MCLs are drinking water standards and are not directly applicable, the presence of elevated concentrations of VOCs in groundwater raise the potential for vapor intrusion and could affect groundwater disposal related to potential construction dewatering activities.

Discharge of construction dewatering will require a permit, and constituents exceeding MCLs will require treatment if disposed to the storm drain. VOCs in groundwater will be appropriately managed using the Project SMP (Appendix A) during Project construction, as necessary.

## **6.6 Subsurface Vapors**

PCE was detected in soil vapor above the regulatory screening level at boring SB-07. The specific area with elevated PCE greater than its regulatory screening level is shown on Figure 3. If soil vapor is found to be present at concentrations that pose a potential threat to human health, such conditions would be addressed as necessary by existing applicable regulatory control measures such as SCAQMD Rule 1166, the Final Guidance for Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air [DTSC, 2011], the Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Final Draft [DTSC, 2023], and the Los Angeles Department of Building Code and Safety requirements.

## 7. LIMITATIONS AND SIGNATURES

This document was prepared by the staff of Geosyntec. The conclusions contained in this Report are based solely on the analysis of the conditions as observed by Geosyntec personnel and as reported by other named sources at the time the investigation was performed.

No warranty, expressed or implied, is made regarding the professional opinions expressed in this Report or concerning the completeness of the data presented to us. If actual conditions are found to differ from those described in this Report or if new information regarding the Project Site is obtained, Geosyntec should be notified and additional recommendations, if required, will be provided. Geosyntec is not liable for any use of the information contained in this Report by persons other than Radford Studio Center, LLC.

Andy Simons, P.G.  
Senior Geologist

**Notes:**  
ft bgs - feet below ground surface  
PCBs - polychlorinated biphenyls  
PID - photoionization detector  
ppm - parts per million  
TPH (d) - total petroleum hydrocarbons diesel range  
TPH (g) - total petroleum hydrocarbons gasoline range  
TPH (o) - total petroleum hydrocarbons oil range  
VOCs - volatile organic compounds

**Notes:**  
All units in milligrams per kilogram (mg/kg)  
**Bolded** indicates detected concentrations  
Indicates a concentration that exceeds the commercial/industrial screening level  
Polychlorinated biphenyls (PCBs) not detected in any samples analyzed  
Sample names indicate: SB(location)-(depth in feet below ground surface); samples were collected via Hand Auger, Direct Push Technology, and Hollow-Stem Auger  
Samples analyzed via EPA Method 6010B for Title 22 Metals and EPA Method 7471A for Mercury  
Screening Level Sources:  
1. Department Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Note 3, June 2020, Cancer Risk for commercial soil screening level  
2. DTSC HERO Note 3, Release Date: June 2020 - Revised May 2022, Non-Cancer Risk for commercial soil screening level  
3. DTSC HERO Note 3, Release Date: June 2020 - Revised May 2022, Cancer Risk for residential soil screening level  
4. DTSC HERO Note 3, Release Date: June 2020 - Revised May 2022, Non-Cancer Risk for residential soil screening level  
5. Environmental Protection Agency (EPA) Regional Screening Levels (RSLs), May 2022 commercial soil screening level  
6. EPA Regional Screening Levels, May 2022 residential soil screening level  
7. San Francisco Regional Water Quality Control Board (SF-RWQCB), 2019, Commercial Environmental Screening Level (ESL)  
8. SF-RWQCB, 2019, Residential ESL  
< - Not detected above the laboratory reporting limit shown  
\* Arsenic background concentration in Southern California is 12 mg/kg; DTSC, 2008. *Determination of a Southern California Regional Background Arsenic Concentration in Soil*.  
F1 - laboratory qualifier indicating matrix spike (MS) and/or matrix spike duplicate (MSD) recovery exceeds control limits.  
ft bgs - feet below ground surface  
NA - not available

Notes:

**Bolded** indicates detected concentrations

**Yellow** indicates a concentration that exceeds the commercial/industrial screening level

Sample names indicate: SB(location)-(depth in feet below ground surface); samples were collected via Hand Auger, Direct Push Technology, and Hollow-Stem Auger

Samples analyzed via EPA Method 8260B for volatile organic compounds and EPA Method 8015B for total petroleum hydrocarbons

Screening Level Sources:

1. Department Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Note 3, June 2020 - Revised May 2022, Cancer Risk for commercial soil screening level
2. DTSC HERO Note 3, Release Date: June 2020 - Revised May 2022, Non-Cancer Risk commercial soil screening level
3. DTSC HERO Note 3, Release Date: June 2020 - Revised May 2022, Cancer Risk for residential soil screening level
4. DTSC HERO Note 3, Release Date: June 2020 - Revised May 2022, Non-Cancer Risk for residential soil screening level
5. Environmental Protection Agency (EPA) Regional Screening Levels, May 2022 commercial soil screening level
6. EPA Regional Screening Levels, May 2022 residential soil screening level
7. California Regional Water Control Board, Los Angeles and Ventura Counties Region 4: Interim Site Assessment and Clean up Guidebook, Table 4-1, May 1996
8. San Francisco Regional Water Quality Control Board (SF-RWQCB), 2019, Commercial Environmental Screening Level (ESL)
9. SF-RWQCB, 2019, Residential ESL

< - not detected above the laboratory reporting limit shown

µg/kg - microgram per kilogram

E - estimated value; results exceeds calibration range

ft bgs - feet below ground surface

mg/kg - milligrams per kilogram

NA - not available

PCE- tetrachloroethene

TPH(d) - total petroleum hydrocarbons as diesel

TPH(g) - total petroleum hydrocarbons as gasoline

TPH(o) - total petroleum hydrocarbons as motor oil

Toluene	43,333	44	37	40	45	768	399	<20	65	<20	50	<20	<20	<20	52	28	167

Notes:

<sup>1</sup> VOC values reflect the most recent screening levels for indoor air quality, based on a  $1 \times 10^{-6}$  carcinogenic risk standard (the non-cancer endpoint is reported where a cancer endpoint has not been established), divided by the default subsurface to indoor air attenuation factor of 0.03 (California Environmental Protection Agency (CalEPA), 2020. Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Draft for Public Comments. February 2022). The source of the indoor air screening levels is the California Department of Toxic Substance Control Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint; Release Date: June 2020 - Revised May 2022) and/or the EPA Regional Screening Levels (RSLs; May 2022), whichever is most conservative.

<sup>2</sup> Jones Environmental uses a mixture of n-Pentane, n-Heptane and n-Hexane as a tracer gas. Detections indicate a leak in the sample set up. Only compounds detected at least once in air samples are shown.

Soil vapor samples were collected on 17 May 2022 and analyzed for Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Method 8260B.

**Bolded** indicates detected concentrations

Indicates a concentration that exceeds the commercial/industrial screening level

< - Not detected above the laboratory reporting limit shown

\* Duplicate samples were taken at SB-07-5'-SV and SB-08-5'-SV; highest concentration between parent and duplicate sample are reported

µg/m<sup>3</sup> - Micrograms per cubic meter

Table 4b

**Notes:**

Sample names indicate: SB-(location)-(depth in feet below ground surface)

Groundwater samples were collected via a 1.6-inch disposable bailer

**Bolded** indicates detected concentrations

Indicates a concentration that exceeds the commercial/industrial screening level

Screening Level Sources:

1. California State Water Resources Control Board Maximum Contaminant Levels (MCLs), detection limits for purposes of reporting (DLRs), and public health goals (PHGs) for Regulated Drinking Water Contaminants (Updated August 2023)

2. San Francisco Regional Water Quality Control Board (SF-RWQCB), 2019, Groundwater Screening Level, Direct Human Exposure

µg/L - micrograms per liter

1,1-DCE - 1,1-dichloroethene

EPA - Environmental Protection Agency

ft bgs - feet below ground surface

HEM - hexane extractable material

mg/L - milligrams per liter

NA - not available

TCE - trichloroethene

TPH(g) - total petroleum hydrocarbons as gasoline

LADBS	Los Angeles Department of Building and Safety
LAFD	Los Angeles Fire Department
LAMC	Los Angeles Municipal Code
LARWQCB	Los Angeles Regional Water Quality Control Board
LASAN	City of Los Angeles Sanitation Department
Leader	Leader Professional Services, Inc.
LUST	leaking underground storage tank
MCL	maximum contaminant level
mg/kg	milligrams per kilogram
µg/L	micrograms per liter
NPDES	National Pollutant Discharge Elimination System
PCB	polychlorinated biphenyl
PCE	tetrachloroethene
PID	photoionization detector
PPE	personal protective equipment
ppm	parts per million
Project	Radford Studio Center Project
REC	Recognized Environmental Condition

**LIST OF ACRONYMS AND ABBREVIATIONS (CONTINUED)**

SCAQMD	South Coast Air Quality Management District
Project Site	Radford Studio Center
SLs	Combination of the DTSC HHRA HERO Note 3 Screening Levels and the EPA Regional Screening Levels
SMARTS	California Storm Water Multiple Applications and Report Tracking System
SMP	Soil Management Plan
SSL	soil screening level
SWPPP	Storm Water Pollution Prevention Plan
RSL	regional screening level
TCE	trichloroethene
TPH-d	Total petroleum hydrocarbon diesel range organics
TPH-g	Total petroleum hydrocarbon gasoline range organics
TPH-o	Total petroleum hydrocarbon motor oil range organics
UST	underground storage tanks
VOC	volatile organic compound

## **1. INTRODUCTION**

This Soil Management Plan (SMP) is intended to support the Radford Studio Center Project (Project), located at 4024, 4064 and 4200 N. Radford Avenue, Studio City (Los Angeles), California (Project Site). This SMP was prepared on behalf of the property owner, Radford Studio Center, LLC, by Geosyntec Consultants, Inc. (Geosyntec).

### **1.1 Objective**

The objective of the SMP is to provide protocols to be implemented by the General Contractor or designated subcontractor to maintain the protection of human health and the environment when Project construction involves soil disturbance. Implementation of this SMP applies to the construction of the Project Site, including demolition of existing structures, grading, excavations, and construction-phase operations. The protocols outlined in this SMP are to be followed during the design, construction, and post-construction of the Project.

### **1.2 Regulatory Review of the SMP**

The SMP will be submitted to the Grading Division of the Los Angeles Department of Building and Safety (LADBS) for review and approval as part of the Grading Permit plan check's review and approval. LADBS is the designated permitting organization for the Project and thus is the appropriate agency to receive the SMP. The Los Angeles Fire Department (LAFD) is designated as the enforcement agency for the City that regulates hazardous materials and, thus, LADBS may designate LAFD to review the SMP. Where LAFD's authority or ability is exceeded, the review can be referred to another appropriate County or State regulatory agency. As described in the Environmental Subsurface Assessment Report [Geosyntec, 2024], the presence of on-site contamination has been adequately investigated.<sup>1</sup> Should an update to the SMP be deemed necessary, it would be submitted to LADBS or its designee for review and approval.

### **1.3 Implementation of the SMP**

The SMP provides a detailed description of the procedures required for soil testing, handling and proper disposal during the earthwork, grading, excavation, or other soil disturbance activities during Project construction. The SMP was prepared by Professional Geologists licensed in the State of California and will be implemented by a General

---

<sup>1</sup> Tetrachloroethene (PCE) impacts in soil vapor at the SB-07 location noted in the Environmental Subsurface Assessment Report and Section 3 below appear to be from an off-site source.

Contractor and subcontractor(s) licensed to work in the State of California under the direct supervision of a State-licensed professional such as a Professional Engineer or Professional Geologist. The licensed professional is required to ensure the SMP is implemented by field personnel qualified and trained on the field procedures and monitoring instruments.

A photoionization detector (PID) is a standard field screening instrument that will be used during the excavation process. Daily field reports of observations and monitoring will be prepared and will be available for review. Pursuant to the SMP, any soil that is disturbed, excavated, or trenched due to on-site construction activities must be handled in accordance with South Coast Rule Air Quality Management District (SCAQMD) Rule 1166 and Occupational Safety and Health Act (OSHA) of 1970 – Title 29 USC Ch. 15: Occupational Safety and Health.

No soil disturbance or excavation activities will occur without a Site-specific Health and Safety Plan (HASP) prepared by the General Contractor in accordance with California Code of Regulations, Title 8, Section 5192. The HASP will identify equipment to be used for protecting worker safety. This SMP is intended to provide proper control and management of soils at the Project Site that are known or found to be impacted by chemicals of concern and to provide risk management measures designed to be protective of potentially exposed populations. Special precautions will be taken to manage soil in areas containing chemicals of concern above screening levels. Soil with residual contaminants above screening levels will either be excavated and properly disposed of off-site prior to commencing Site-wide excavation and grading operations or segregated and properly managed during construction in compliance with applicable regulations as discussed in the following subsections. To the extent that it is not practical or possible to live-load these soils for off-site disposal due to interruptions in the availability of trucking from weather or traffic, they will be temporarily stockpiled on-site in a location away from sensitive receptors prior to off-site disposal.

#### **1.4 Soil Management Plan Organization**

This SMP includes the following:

- A description of the Project Site background, including a brief description of the known historical land use (Section 2).
- A summary of the results of environmental sampling on the Project Site and discussion of residual impacts (Section 3).
- A description of the proposed land uses and plans for the Project (Section 4).

- Soil management and construction risk management protocols to be implemented during Project construction, including soil reuse and waste disposal classification protocols (Sections 5 and 6).

The risk management protocols specified in this SMP are based on Geosyntec's current understanding of the Project Site's environmental conditions, current environmental policies, laws and regulations, and Project plans.

This SMP will be reviewed periodically and updated by the qualified professionals on behalf of the Project Site Owner as needed and appropriate, to reflect any pertinent changes in conditions on the Project Site, relevant technical practices and environmental criteria, or legal requirements impacting the proposed Project.

## **2. PROJECT SITE AND VICINITY DESCRIPTION**

### **2.1 Setting and Surrounding Properties**

The Project Site is located at 4024, 4064 and 4200 N. Radford Avenue in an urbanized area of Studio City, California (Figure 1). The Project Site consists of northern and southern parcels (the “North Lot” and “South Lot,” respectively) that together comprise approximately 55 acres (approximately 52.25 acres after dedications/mergers). The Project Site is currently developed with studio uses and surface/structured parking, including numerous ancillary buildings and structures.

The Project Site is bisected, north-south, by the Los Angeles River (Figure 1). The Project Site is bounded by Radford Avenue to the west, an alley with commercial uses fronting Ventura Boulevard to the south, Colfax Avenue to the east, and the Tujunga Wash and Los Angeles River to the north and east. Commercial buildings are located adjacent to the Project Site along the alley, with additional commercial buildings across Ventura Boulevard and Radford Avenue. Residential uses are located to the west across Radford Avenue and to the north and east across the Tujunga Wash.

### **2.2 Project Overview**

The Project consists of the continuation of the existing studio use and the modernization and expansion of production facilities within Radford Studio Center, including the development of new sound stages, production support, production office, creative office, and retail, as well as parking (above and below grade) across the North and South Lots. These buildings will vary in height from approximately 60 feet (ft) up to approximately 135 ft.

Off-site improvements include the construction of the new Los Angeles River Connector (a vehicular and pedestrian bridge across the Tujunga Wash to connect Moorpark Street and Radford Avenue), a protected bikeway along Radford Avenue, and improving the alley south of the Project Site as a green alley. In addition, the Project would widen the existing Gilligan’s Island Bridge which links the North and South Lot over the Los Angeles River within the Project Site.

### **2.3 Topography**

Per the findings of the Project’s topographic survey, the majority of the North Lot slopes from its northwest corner to its southeast corner with approximately 15 ft of elevation change (from 600 to 585 ft above mean sea level [AMSL]). The access road on the north side of the North Lot (south of the Tujunga Wash) also slopes from northwest to southeast

from about 600 to 585 ft AMSL. The access road on the south side of the North Lot (north of the Los Angeles River) slopes from west to east from approximately 595 to 585 ft AMSL.

The majority of the South Lot generally slopes both from its southwest corner to its northwest corner with approximately 27 ft of elevation change (from 617 to 590 ft AMSL), and from its southwest corner to its southeast corner with approximately 17 ft of elevation change (from 617 to 600 ft AMSL). The access road on the north side of the South Lot slopes from northwest to southeast from approximately 595 to 585 ft AMSL before sloping back up to approximately 605 ft AMSL. From the edge of this access road on the southeast corner of the South Lot to the Los Angeles River, there is a steeper drop-off from approximately 600 to 583 ft AMSL.

The existing area to the north of the Los Angeles River generally slopes from northwest to southeast from approximately 600 to 581 ft AMSL.

## **2.4 Regional Geology and Hydrogeology**

The Project Site is located at the northern end of Fryman Canyon of the Santa Monica Mountains within the Transverse Ranges geomorphic province. The Santa Monica Mountains are located south of the Project Site and are a structurally elevated block of the Transverse Ranges of regional faulting. Faults of the Transverse Ranges may be categorized as active, potentially active, or inactive. Faults in the region consist of buried thrust faults. The geology consists of alluvial sands and silty clay and gravel derived from the Santa Monica Mountains underlain by Miocene Monterey Formation.

Previous subsurface investigations at the Project Site have identified four distinct types of sediments [Geotechnologies, 2024; A.E. Schmidt Environmental Inc. (A.E. Schmidt), 1996; Geosyntec, 2024]:

- Artificial fill is present throughout the Project Site. In the North Lot, the artificial fill is deeper near the Los Angeles River and a portion of the Tujunga Wash, at approximately 12.5 to 34 ft below ground surface (bgs), but relatively shallow, between approximately 1 and 8.5 ft bgs, throughout the rest of the North Lot. The artificial fill in the South Lot is generally thin across most of its area, deepening near the Los Angeles River. Fill depths range from approximately 3 to 8 ft below grade in most of the South Lot but increase to approximately 10 to 25.5 ft bgs near the Los Angeles River. The artificial fill is predominantly comprised of grayish-brown to black sandy silt.

- Construction debris was observed to be approximately 5 to 10 ft thick at depths ranging from approximately 15 to 30 ft bgs at certain locations. Debris was observed to consist of brick, concrete, glass, wire, nails, wood, and incinerated wood. The source of debris is likely past construction activities.
- Native alluvial soils are present beneath the fill and debris at the Project Site. The alluvial soils generally consist of layers of gray to grayish brown sand, clay, and silt, with occasional gravel and cobbles.
- Bedrock, composed of Miocene Monterey Formation siltstone, was encountered at depths ranging from approximately 45 and 75 ft bgs in exploratory boring in the South Lot.

The Project Site is located within the San Fernando Valley Groundwater Basin [DWR Bulletin 118, 2004]. The San Fernando Valley Groundwater Basin is bounded to the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills. The valley is drained by the Los Angeles River and its tributaries.

## **2.5 Depth to Groundwater, Gradient, and Groundwater Flow Direction**

Investigations at the Project Site have indicated varying groundwater depths. Historically, the highest groundwater level for the entire North Lot was 0 ft bgs (existing ground surface) and 0 to 10 ft bgs within the central portion of the South Lot and to a depth of 20 ft within the southern portion of the South Lot [Geotechnologies, 2024]. Previous explorations conducted in 1993 and 2003 noted groundwater depths of approximately 58 to 73 ft bgs in the North Lot. In 2022, Geotechnologies' exploratory borings in the South Lot noted groundwater levels ranged from 30 to 42 ft bgs.

Geosyntec's May 2022 subsurface investigation [Geosyntec, 2024] found groundwater at depths ranging from approximately 38 to 42 ft bgs. Excluding the historically highest groundwater depth ranges of 0 and 20 ft bgs, groundwater across the Project Site ranges from approximately 30 to 73 ft, depending on the location. Fluctuations in groundwater level may occur due to variations in rainfall and/or the impact of the nearby Los Angeles River and Tujunga Wash. Groundwater flow was determined to flow N23°E with a hydraulic gradient of 0.0091 ft per foot (ft/ft) [A.E. Schmidt, 1996].

## **2.6 Historical Project Site Development and Use**

The Project Site has operated as a studio for nearly 100 years. The first phase of development corresponded with the initial purchase and construction of the Mack Sennett

Studio in 1927. Pioneer filmmaker Mack Sennett created the original nexus of the studio, situated in the southwestern region of the Project Site. Sennett continued to occupy the Project Site until 1935, although most buildings commissioned by him were completed within the first few years of owning the land. There are nine extant buildings from this period, which were constructed in 1928.

The second phase of development occurred from the mid-1930s to mid-1950s. During this phase the property was owned by Republic Pictures. This development generally expanded the Project Site north and east, with some infill between the earlier Sennett-era buildings. There are 15 extant buildings from this period, which were constructed from 1935 to 1941 and again from 1944 to 1957.

The third phase of development occurred after CBS began renting the property in 1963 and purchased it in 1967. This resulted in the expansion of the Project Site with the construction of additional sound stage and support buildings on the outer perimeter of the Project Site, extending north towards the Los Angeles River. There are nine extant buildings from this period, which were constructed from 1963 to 1969.

A fourth phase of development occurred with the construction of nine buildings from 1996 to 2005, mostly situated north of the Los Angeles River. In addition, there are four buildings, which were individually built between development programs in 1979, 1988, 1992, and 2014.

Current operations at the Project Site include motion picture, television, and broadcast studios and related incidental uses, including, but not limited to: production activities; indoor and outdoor stages; sets and façades; digital, film, video, audio, video game, eSports, and media production; recording and broadcasting; sound labs; film editing; film video and audio processing; sets and props production; computer design; computer graphics; animation; and ancillary facilities related to those activities. The following types of related uses and facilities also occur on-site: basecamps, communication facilities, conference facilities, modular/portable bungalows and trailers, studio support facilities, parking, catering facilities, a commissary, special events, audience and entertainment shows, exhibits, fitness facilities, emergency medical facilities to serve the on-site employees and visitors, fueling for emergency generators, above-ground and below-ground storage tanks, pads for utilities and transmission equipment, maintenance and storage facilities, mills/manufacturing, sleeping quarters for certain on-site personnel, outdoor amenities, bridges, security facilities, carports, solar panels, signs, storage and warehouses.

Presently, there are 14 aboveground storage tanks (ASTs) registered with the LAFD with a total diesel fuel capacity of approximately 14,940 gallons [Leader Professional Services, Inc. (Leader), 2021] (Figure 2).

Four electrical switches containing polychlorinated biphenyls (PCBs) were observed on the Project Site [Leader, 2021]. The PCB electrical switches are centrally located within the South Lot (Figure 2). The switches are marked with the appropriate labels and required record keeping is maintained in accordance with the United States Environmental Protection Agency (EPA) PCB Regulations [Leader, 2021].

Three wastewater clarifying tanks were observed on the Project Site [Leader, 2021]. The clarifiers are in the southern portion of the South Lot near the main hazardous materials storage area, the central portion of the South Lot, and the North Lot near the Broadcast Building (Figure 2). The clarifiers, operating under Industrial Wastewater Permits issued by the City of Los Angeles, collect and treat sanitary water and discharge to the sanitary sewer system.

## **2.7 Previous Investigations and Remedial Activities**

In 1994, a leaking underground storage tank (LUST) case opened when gasoline contamination was encountered beneath five 10,000-gallon underground storage tanks (USTs) damaged by the 1994 Northridge Earthquake (collectively included in the southernmost UST symbol shown in Figure 2). The five USTs were removed in February 1994 under a permit issued by the LAFD. Impacted soil was removed for off-site disposal and groundwater monitoring was required by the Los Angeles Regional Water Quality Control Board (LARWQCB) in May of 1994. Monitoring of soil vapor and groundwater was conducted and the LARWQCB closed the LUST file in January of 1997 [Leader, 2021].

In September of 2019, a 10,000-gallon gasoline UST was removed from near the southeast corner of the Project Site (approximately 100 ft northwest of the five former USTs described above, shown in Figure 2) under the oversight of LAFD. Results of the post-UST removal soil testing indicated low levels of gasoline compounds; however, the detected concentrations were below LAFD minimum action levels, and no further action was recommended [Access Environmental Engineering, 2019]. Residual soil concentrations from this location will be appropriately addressed as necessary during Project construction as discussed in the Project Soil Management Plan (Project SMP), included as Appendix A of the Environmental Subsurface Assessment Report [Geosyntec, 2024].

No other registered USTs have been identified at the Project Site and no open LUST cases are listed in connection with the Project Site [Leader, 2021].

### 3. SUMMARY OF KNOWN ENVIRONMENTAL CONDITIONS

Environmental issues shall be considered when planning and implementing the Project. The Phase I Environmental Site Assessment (ESA) Report (Phase I ESA) [Leader, 2021] and Environmental Subsurface Assessment Report [Geosyntec, 2024] provides a description of the environmental investigations and remediation previously conducted at the Project Site. The Phase I ESA was conducted in December 2021 for the entire Project Site. No on-site or off-site Recognized Environmental Conditions (RECs) were identified. No Controlled RECs were identified. One Historical REC was identified, the leaking underground storage tank (LUST) case discussed in Section 3.2 below. Four areas of concern were identified:

- Fourteen ASTs, as discussed above in Section 2.2;
- Four electrical switches, as discussed above in Section 2.2;
- Three wastewater clarifying tanks, as discussed above in Section 2.2; and
- Asbestos containing materials (ACM) abatements and renovations have been carried out in buildings throughout the Project Site. ViacomCBS records indicated that most asbestos identified in the 1989 survey has been removed [Leader, 2021]. A 2021 report by Clark Seif Clark, Inc. for Editorial 1 & Editorial 2 Buildings indicates the presence of ACM in certain areas, as observed during the site reconnaissance, with corresponding signage [Leader, 2021].

#### 3.1 Screening Levels for Soil and Soil Vapor

This section identifies screening levels for evaluation of areas of potential concern and environmental conditions at the Project Site to be considered.

Screening levels represent the concentrations of chemicals in the relevant environmental media (e.g., soil and soil vapor) that would be considered safe (i.e., below thresholds of concern for potential risks to human health) for certain land uses under health-protective exposure conditions.

The published environmental screening levels discussed below were used to identify areas of potential concern at the Project Site, based on protection of human health for planned conditions and potential future populations. The lowest numerical goal available (most conservative) for each constituent from the below-listed sources for the particular media (soil and soil vapor) and planned land use (commercial) was selected. If a childcare

use is constructed, residential screening levels will be used for that specific area of the Project Site.

A combination of the Department of Toxic Substances Control (DTSC) Human Health Risk Assessment (HHRA) Human and Ecological Risk Office (HERO) Note 3 Screening Levels [DTSC, 2022] and the EPA Regional Screening Levels [EPA, 2022] (collectively SLs) were used to evaluate chemical impacts to soil and soil vapor at the Project Site (Table 1). Additionally, soil screening levels (SSLs) for the protection of groundwater from the LARWQCB SSLs were used to evaluate potential impacts of total petroleum hydrocarbons (TPH) as gasoline (TPH-g), diesel (TPH-d) and oil (TPH-o) in soil [LARWQCB, 2004].

Exposure routes considered in the development of the SLs included incidental ingestion of soil, dermal contact with soil, and inhalation of outdoor fugitive dust and vapors from soil. SLs are not available for soil vapor (sub-slab or otherwise) from LARWQCB but can be derived using indoor air screening levels from DTSC or EPA and attenuation factors for the soil vapor-to-indoor air pathway.

In the absence of information about the competency of a building floor slab, commercial/industrial indoor air DTSC-SLs and Regional Screening Levels (RSLs) are divided by a reference attenuation factor to calculate screening levels for sub-slab soil vapor [DTSC, 2011]. Two attenuation factors, 0.03 and 0.001, were calculated for the Project Site. The screening levels based on the DTSC attenuation factor of 0.03 is a conservative threshold calculation; some studies suggest the application of the 0.001 DTSC attenuation factor may be more representative of conditions in California.<sup>2</sup> In its August 2022 Vapor Intrusion Update [DTSC, 2022], DTSC states that an attenuation factor of 0.03 can be used for initial evaluation of the potential for vapors to enter a building, but that soil vapor plume delineation should be conducted using site-specific screening criteria that incorporates either an attenuation factor of 0.001 or a site-specific attenuation factor that has been developed using “multiple lines of evidence.”

### **3.2 Areas Closed Under Regulatory Oversight**

A LUST case was opened in 1994 when gasoline contamination was encountered beneath five 10,000-gallon USTs located near the southeast corner of the Project Site and damaged by the 1994 Northridge Earthquake (collectively labeled “UST1” in Figure 2). The five USTs were removed in February 1994 under a permit issued by LAFD. Impacted

---

<sup>2</sup> Recent research demonstrates that the EPA default attenuation factor of 0.03 is not representative of empirical vapor intrusion data collected for vapor intrusion sites in California [Lahvis and Ettinger, 2021].

soil was removed for off-site disposal and groundwater monitoring was required by the LARWQCB in May of 1994. Monitoring of soil vapor and groundwater was conducted and the LARWQCB closed the LUST file in January of 1997 [Leader, 2021].

In September of 2019, a 10,000-gallon gasoline UST was removed from near the southeast corner of the Project Site (labeled “UST2” in Figure 2, approximately 100 ft northwest of the five former USTs described above) under the oversight of LAFD. Results of the post-UST removal soil testing indicated low levels of gasoline compounds; however, the detected concentration were below LAFD minimum action levels and no further action was recommended [Access Environmental Engineering, 2019].

No other registered USTs have been identified at the Project Site and no open LUST cases are listed in connection with the Project Site [Leader, 2021].

### **3.3 Summary of Residual Contaminants**

The following is a summary of the key findings from environmental investigations pertaining to the former USTs, TPH in soil, arsenic in soil, lead in soil, volatile organic compounds (VOCs) in groundwater, and subsurface vapors at the Project Site [Geosyntec, 2024].

#### **3.3.1 Area of Former USTs**

The areas of the former USTs are shown on Figure 2. Any residual petroleum constituents in soil or groundwater from the former USTs will be appropriately managed using the SMP (Appendix A) during Project excavation and grading operations, as necessary. The testing and proper disposal of all excavated soil for the Project Site will follow the procedures described in this SMP and will comply with all applicable regulatory requirements including the SCAQMD Rule 1166.

#### **3.3.2 TPH in Soil**

Based upon subsurface investigations completed to date, TPH detected in soil samples has been found to be mostly below regulatory screening levels. TPH-d and TPH-o screening level exceedances in soil appear to be sporadic and confined to shallow soil. Specific areas with elevated TPH, shown on Figure 2, will be appropriately managed during excavation and grading operations in accordance with this SMP.

### **3.3.3 Arsenic in Soil**

Arsenic was detected at concentrations above the upper-bound background concentration (12 milligrams per kilogram [mg/kg]) in 3 out of 89 soil samples. The three sample locations with elevated arsenic, shown on Figure 2, also appear to be sporadic and confined to shallow soils. Arsenic in soil will be appropriately managed during excavation and grading operations in accordance with this SMP.

### **3.3.4 Lead in Soil**

Lead was detected at concentrations above the regulatory screening level (320 mg/kg) at 1 out of 89 soil samples. The one location with elevated lead, shown on Figure 2, will be appropriately managed during excavation and grading operations in accordance with this SMP.

### **3.3.5 Volatile Organic Compounds in Groundwater**

Trichloroethene (TCE) was detected in groundwater above its MCL of 5 micrograms per liter (µg/L) at one location, boring SB-11. The specific area with elevated TCE greater than its MCL is shown on Figure 2. While MCLs are drinking water standards and are not directly applicable, the presence of elevated concentrations of VOCs in groundwater raise the potential for vapor intrusion and could affect groundwater disposal related to potential construction dewatering activities.

Discharge of construction dewatering will require a permit, and constituents exceeding MCLs will require treatment if disposed to the storm drain. VOCs in groundwater will be appropriately managed using this SMP during Project construction, as necessary.

### **3.3.6 Subsurface Vapors**

Tetrachloroethene (PCE) was detected in soil vapor above the regulatory screening level at boring SB-07. The specific area with elevated PCE greater than its regulatory screening level is shown on Figure 2. If soil vapor is found to be present at concentrations that pose a potential threat to human health, such conditions would be addressed as necessary by existing applicable regulatory control measures such as SCAQMD Rule 1166, the Final Guidance for Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air [DTSC, 2011], the Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Final Draft [DTSC, 2023], and the Los Angeles Department of Building Code and Safety requirements.

## **4. PROPOSED PROJECT AND PRELIMINARY GRADING PLAN**

### **4.1 Proposed Project**

The Project proposes new sound stages, production support, production office, creative office and retail uses, as well as below- and above-grade parking structures. The construction of the below-grade parking structures will require excavations up to a maximum of approximately 50 ft bgs (see Figure 3). This SMP was prepared to address known areas of residual impacts as well as unknown impacts that may be discovered during earthwork, grading, excavation, or other soil disturbance activities. This Section will be updated, if necessary, as the plans for individual buildings are developed and completed during the City's regulatory building permit process.

### **4.2 Identification of Uses of the Site**

Current operations at the Project Site generally include studio and related uses such as office administration, filming, set construction, painting, wood working, garment washing/drying, media maintenance, and lighting maintenance, among other studio-related uses and activities. Section 2.6 identifies all the specific uses of the Project Site. The Project will continue these studio uses.

### **4.3 Project Excavation Plans**

The excavation areas for development of the Project are shown on Figure 3. Figure 3 identifies areas where grading and excavation operations intercept residual contaminants in soil, soil vapor, and groundwater.

## 5. SOIL MANAGEMENT DURING PROJECT CONSTRUCTION

The soil management approach to be implemented during Project construction consists of two main efforts:

- Specific and planned actions for previously investigated areas where chemicals of concern (COCs) were detected in soil at concentrations above SLs. These areas include the areas of the former USTs and other identified areas of the Project Site with elevated TPH, arsenic, and lead in soil and elevated PCE in soil vapor (Figure 2).
- In addition, the entire Project Site will be subject to the general protocols described in this SMP regarding prudent precautions (as discussed in Section 5.3) and general observations and evaluations of soil conditions to be implemented throughout earthwork, grading, excavation, or other soil disturbance activities on the Project Site. To avoid potential stoppage of work when impacted soil is encountered, this SMP requires the General Contractor and earthwork and grading contractors to be prepared to respond to encountered potentially contaminated materials, in the event any are discovered during excavation and grading operations.

These two core elements of the SMP are intended to provide proper control and management of soils at the Project Site that are known or found to be impacted by COCs and to provide risk management measures that are designed to be protective of on- and off-site populations.

### 5.1 Planned Actions for Areas Containing COCs above Screening Levels

Special precautions will be taken to manage soil in areas containing COCs above SLs. These areas include the former USTs and other areas of the Project Site with elevated TPH, arsenic, and lead in soil and PCE in soil vapor (Figures 2 and 3). Soil in these areas of the Project Site with residual COCs above SLs will either be excavated prior to commencing Site-wide excavation and grading operations or segregated and temporarily stockpiled prior to off-site disposal.

### 5.2 Soil Management Protocols for Soil Suspected or Determined to Contain COCs

The following requirements and precautionary actions shall be implemented when disturbing soil at the Project Site other than imported backfill. No soil disturbance or excavation activities shall occur without a Site-specific HASP. Any soil that is disturbed,

excavated, or trenched due to on-site construction activities must be handled in accordance with applicable local, state, and/or federal regulations, as discussed in the subsections below. Prior to either re-use of the excavated soil or disposal of any soil from the Project Site, the requirements, and guidelines in this SMP shall be implemented.

The General Contractor shall conduct, or have its designated subcontractor conduct, visual screening of soil during activities that include disturbance of soil. If the General Contractor or subcontractor(s) encounter any soil that is stained or odorous (“Suspect Soil”), the General Contractor and subcontractor(s) shall immediately stop work and take measures to not further disturb the Suspect Soils (e.g., cover suspect soil with plastic sheeting), and inform the property owner’s representative and the environmental monitor. The environmental monitor, an experienced professional trained in the practice of the evaluation and screening of soil for potential impacts working under the direction of a licensed Geologist or Engineer, will be identified by the property owner prior to the beginning of earthwork, grading, excavation, or other soil disturbance activities on the Project Site.

The handling and disposition of the Suspect Soil shall be properly managed, as described below.

### **5.2.1 Soil Sampling and Analysis Protocols**

If Suspect Soil is encountered on the Project Site, the environmental monitor will collect samples for analysis to characterize the soil for potential on-site re-use or off-site disposal.

Soil sampling and analysis of excavated Suspect Soil shall include the following test methods at a minimum:

- VOCs using EPA Method 8260B;
- Title 22 Metals using EPA Method 6010B/7471A; and
- TPH (-g, -d, and -o) using EPA Method 8015M.

At a minimum, sampling of Suspect Soil for off-site disposal shall include five soil samples per 1,000 cubic yards of stockpiled soil, and one additional sample for each additional 500 cubic yards greater than 1,000 cubic yards of stockpiled soil. The sampling frequency and analyses described above for Suspect Soil may change based on the protocols of the selected disposal facility.

Sampling and analytical results shall be used for proper characterization of the soil for potential on-site re-use or off-site disposal. Based on the results of the analysis, the General Contractor or designated subcontractor shall select and utilize an appropriate

facility licensed to accept such soil. Concentrations exceeding the applicable regulatory screening levels (Table 1) shall be the basis for the development of appropriate worker protection, handling, and disposition of the Suspect Soil.

### **5.2.2 Excavation and Stockpiling of Excess Soil**

Prior to excavation activities, the General Contractor or designated subcontractor shall establish specific areas for temporarily stockpiling Suspect Soil on-site, should it be encountered, to control contact by Site workers and dispersal into the environment. Stockpiles shall be constructed with perimeter berms for run-on and run-off control. Plastic sheeting is required for stockpiling on non-paved areas and recommended for paved areas. If plastic sheeting is not utilized when stockpiling on paved surfaces, then the area under the stockpile and adjacent areas where soil has dispersed shall be swept clean after removal of the stockpile. If the stockpiles are to remain on-site for an extended period of time (e.g., greater than 48 hours) or if a storm event is predicted, the material shall be covered with plastic sheeting or another generally accepted appropriate soil erosion storm water control practice and in accordance with the Storm Water Pollution Prevention Plan (SWPPP) discussed in Section 6.2.3.

### **5.2.3 Soil Re-Use and Imported Fill**

Suspect Soil that has been excavated may not be re-used at the Project Site until it is sampled and chemically analyzed in accordance with Section 5.3. A California Department of Health Services certified testing laboratory shall be contracted by the property owner to perform testing of imported and exported fill materials, and soil intended for on-site re-use. Excavated soil should be re-used on-site to the extent it is safe and practicable, provided that residual chemical concentrations do not exceed screening levels (Table 1).

If soil will be imported to the Project Site, such soil must be screened and evaluated in accordance with the DTSC advisory regarding clean imported fill material [DTSC, 2001]. The General Contractor or designated subcontractor shall require that the source of the imported soil provide documentation of such evaluation.

## **5.3 Soil Disposal Procedures**

Impacted soils will be disposed of at any of the many facilities available to accept such soils; any facility that accepts impacted soil must be permitted by the State of California and has specific soil disposal criteria to protect human health and the environment. The chosen facility will be dependent on the facility capacity, soil acceptance criteria and

projected volume. Hauling will take place only within the hours approved by the Los Angeles Department of Transportation and the Bureau of Engineering.

## **6. CONSTRUCTION RISK MANAGEMENT MEASURES**

### **6.1 Work Protection Requirements**

The General Contractor shall ensure that on-site construction personnel comply with all applicable federal, state, and local regulations, as well as the State of California Construction Safety Orders (Title 8). Additionally, if Suspect Soil is expected to be encountered, personnel working in that area must comply with California Occupational Safety and Health Administration (Cal/OSHA) regulations specified in California Code of Regulations (CCR) Title 8, Section 5192.

The General Contractor will prepare a Project-specific HASP. It is the responsibility of the General Contractor to review information available regarding Site conditions and potential health and safety concerns in the planned area of work, including this SMP. The HASP shall specify COC action levels for construction workers and appropriate levels of personal protective equipment (PPE), as well as monitoring criteria for increasing the level of PPE. The General Contractor and each subcontractor must require its employees who may directly contact Suspect Soil to perform all activities in accordance with the General Contractor and subcontractor's HASP.

To minimize the exposure of other Site workers to potential contaminants on the Project Site, if Suspect Soil is encountered, the General Contractor or designated subcontractor may erect temporary fencing around excavation areas with appropriate signage as necessary to restrict access and to warn unauthorized on-site personnel not to enter the fenced area.

### **6.2 Construction Safety Measures**

This section outlines minimum safety measures that must be implemented by the General Contractor and subcontractors to protect human health and the environment during construction activities involving contact with soils at the Project Site. Measures will be implemented during construction to minimize the following:

- Dust generation associated with excavation and/or loading activities, construction or transportation equipment traveling over soil, and wind traversing Suspect Soil stockpiles;
- Tracking Suspect Soil off the Project Site with construction or transportation equipment;

- Transporting Suspect Soil or sediments from the Project Site any time there is surface water run-off, including, but not limited to, storm events, landscape irrigation, or watering for dust control; and
- Managing construction waste, excess soil, and other waste generated or encountered during construction on the Project Site.

The safety measures to be implemented will include, but are not limited to, the following:

- Decontaminating construction and transportation equipment;
- Implementing dust control measures;
- Implementing storm water pollution controls and best management practices; and
- Implementing proper procedures for handling, storage sampling, and transportation and disposal of waste and debris.

The requirements for planning of these safety measures are discussed generally below. The General Contractor or designated subcontractors may be required to prepare more detailed, task-appropriate written plans, as necessary.

### **6.2.1 Decontamination**

To prevent transfer of potentially contaminated materials off-site, the General Contractor or designated subcontractor shall develop a Site-specific construction decontamination plan for the Project, which will be documented in the Project Site-specific HASP.

Soil sampling equipment that is exposed to Suspect Soil shall be decontaminated consistently to ensure the quality of soil samples collected and reduce or prevent the spread of potential on-site contaminants. Decontamination shall occur prior to and after each use of a piece of equipment. Sampling devices shall be decontaminated using the following procedures:

1. Non-phosphate detergent and tap water wash, using a brush if necessary.
2. Tap water rinse.
3. Initial deionized/distilled water rinse.
4. Final de-ionized/distilled water rinse.

The soil sampling containers used to collect the soil samples will be provided by the laboratory or an environmental supply store and will be new and unused. Disposable equipment intended for one-time use shall not be decontaminated but will be packaged for appropriate disposal.

## 6.2.2 Dust Control

During any soil disturbance, such as excavation or grading activities, the General Contractor and designated subcontractors shall implement the best available engineering controls and generally accepted commercial practice to manage dust emissions. The General Contractor and subcontractors shall comply with the applicable South Coast Air Quality Management District (SCAQMD) regulations regarding dust, including implementation of dust control measures and ambient air monitoring for dust generated at the Project Site. The SCAQMD Rules 402, *Nuisance*, and 403, *Fugitive Dust*, [SCAQMD, 1976 and 2005, respectively] are the applicable regulations governing dust. Any disturbance of soil at the Project Site shall comply with Rules 402 and 403, at a minimum. If soil disturbance is to exceed 5 acres or daily import and export of 100 cubic yards of bulk material, specific criteria in Rule 403 must be implemented to control the generation of dust.

The following table summarizes SCAQMD-mandated dust control measures for different potential soil handling activities, regardless of size or volume.

DUST CONTROL MEASURES		
Activity	Control Measure	SCAQMD Regulation (Rule 402, Nuisance, and Rule 403, Fugitive Dust)
Excavation	<ul style="list-style-type: none"> <li>- Apply water as necessary to maintain soil in a damp condition to ensure that visible emissions do not exceed 20 ft in any direction.</li> <li>- Stabilize soil once earth-moving activities are completed.</li> </ul>	<ul style="list-style-type: none"> <li>- Apply water to prevent generation of visible dust plumes.</li> <li>- Set-up fences upwind, as needed.</li> </ul>
Exporting of Excavated Material	<ul style="list-style-type: none"> <li>- Pre-water material prior to loading into the hauling trucks.</li> <li>- Vehicle speed will be limited on-site.</li> <li>- Stabilize material while loading into the hauling trucks.</li> </ul>	<ul style="list-style-type: none"> <li>- Use tarps or other suitable enclosures on the haul trucks.</li> <li>- Remove any trapped material from the haul trucks (dry decontamination) including wheels.</li> </ul>

DUST CONTROL MEASURES		
Activity	Control Measure	SCAQMD Regulation (Rule 402, Nuisance, and Rule 403, Fugitive Dust)
	<ul style="list-style-type: none"> <li>- Maintain at least 6 inches of freeboard on the hauling trucks.</li> <li>- Stabilize material while transporting.</li> </ul>	
Stockpiles	<ul style="list-style-type: none"> <li>- Stabilize stockpiled material.</li> <li>- Stockpiles must not be greater than 12 ft in height to allow proper water irrigation.</li> </ul>	<ul style="list-style-type: none"> <li>- Add or remove material from the downwind portion of the stockpile.</li> </ul>
Off-Site Perimeter (controlling track-out)	<ul style="list-style-type: none"> <li>- Keep materials from accumulating immediately outside the Site.</li> </ul>	<ul style="list-style-type: none"> <li>- Use shaker plates and stabilized construction entrance.</li> <li>- Sweep the immediate surroundings (street) continuously or on an as-needed basis.</li> <li>- Apply water as required.</li> </ul>

### 6.2.3 Odor Control

The potential for odors to be produced by excavation activities will be monitored and controlled pursuant to SCAQMD Rule 402, *Nuisance*, [SCAQMD, 1976] and an odor monitoring plan.

### 6.2.4 Storm Water Management

Construction activities that result in land disturbance of 1 acre or greater are regulated by the National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction Activity (Construction General Permit) issued by the State Water Resources Control Board and enforced by the RWQCBs. As indicated in the Construction General Permit, prior to initiating excavation or other land disturbing activities, a Qualified SWPPP Developer will prepare an SWPPP for the General Contractor to implement. The SWPPP specifies Best Management Practices (BMPs) to be used during construction to manage storm water and non-storm water discharges. BMPs could include, but would not be limited to, erosion control, sediment control, non-storm water management, and materials management BMPs. In addition,

Project construction activities would occur in accordance with City Grading Permit regulations (Los Angeles Municipal Code [LAMC] Chapter IX, Division 70), which require the preparation and implementation of an erosion control plan to reduce the effects of sedimentation and erosion. Erosion control BMPs may include slope drains that can be used to intercept and direct surface runoff or groundwater into a stabilized area or compost socks and berms that act as three-dimensional biodegradable filtering structures to intercept runoff where sheet flow occurs. In addition, in accordance with the Los Angeles Department of Public Works Permit Plan Check Manual, a Wet Weather Erosion Control Plan would be implemented should grading activities occur during the rainy season. Notifications and reporting related to the Construction General Permit will be completed by the General Contractor through the California Storm Water Multiple Applications and Report Tracking System (SMARTS).

### **6.2.5 Dewatering**

In areas where deep excavations are planned and temporary dewatering is necessary during construction, the following procedures shall be implemented. The General Contractor or designated subcontractor shall obtain a discharge permit from an applicable agency for groundwater extracted during dewatering operations and shall implement required treatment, if any. Notifications and reporting related to the applicable discharge permit will be the responsibility of the General Contractor. Any water accumulated in excavations (e.g., from rainfall) will be managed in accordance with the SWPPP.

The method of dewatering, if necessary, will be chosen considering the following variables, among others: depth of intrusion that is required for each building foundation, the hydraulic properties of the soils in which the excavations occur, the potential to mobilize any existing groundwater contaminants, the potential for ground subsidence and/or liquefaction to occur, proximity to any existing production wells, and the volume of water to be dewatered on a daily basis. After evaluating each of these factors individually and collectively, a dewatering strategy will be developed and implemented in a manner that will minimize any impacts to neighboring properties (i.e., settlement) and regional water resource needs. All dewatering methods will be designed and submitted to the local jurisdiction, which includes the LADBS Grading Division, LARWQCB and/or the City of Los Angeles Sanitation Department (LASAN) for review and approval.

This section of the SMP should be updated as the plans for individual buildings are further developed during the City's regulatory building permit process.

### **6.3 SCAQMD Rule 1166 Monitoring**

In the event VOC-contaminated soil is encountered during the Project Site excavation, a SCAQMD Rule 1166 permit must be obtained before resuming excavation. Rule 1166 defines VOC-contaminated soil as soil which registers a concentration of 50 parts per million (ppm) or greater of VOCs as measured before suppression materials have been applied and at a distance of no more than 3 inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane. Rule 1166, *Volatile Organic Compound Emissions from Decontamination of Soil*, is applicable to excavation and grading of soil containing VOC materials. Either a Various Locations permit and plan, or a Site-specific permit and plan will be required, depending upon the volume of soil to be excavated per Rule 1166. Undisturbed soil is not included in the scope and jurisdiction of Rule 1166. Notifications, monitoring, and reporting related to the SCAQMD Rule 1166 permit will be the responsibility of the General Contractor.

Requirements under Rule 1166 are briefly summarized below. The list below is a general, not comprehensive list of Rule 1166 requirements for VOC-contaminated soil handling, stockpiling, and off-site disposal. In addition, Rule 1166 requirements vary depending upon concentrations of VOC encountered.

- VOC-contaminated soil is determined at the time of excavation by measurement of VOCs emitted from the soil cut face with a PID, equipped with a 10.6 electron volt (eV) lamp, calibrated with hexane. The ambient air in all areas of soil impact (e.g., excavation) will be measured and recorded every 15 minutes.
- Stockpiles are required to be managed in accordance with specific criteria stipulated in Rule 1166 and Rule 1166 permit. At a minimum, stockpiles of VOC contaminated soil must be segregated from non-VOC-contaminated soil. Water suppressant and/or plastic sheet covering with sand-bag anchors may be required for VOC-contaminated soil stockpiles.
- No on-site or off-site spreading, grading, or screening of excavated VOC-contaminated soil is permitted.
- VOC-contaminated soil must either be shipped off-site for appropriate disposal or on-site treatment must be initiated within 30 days of excavation. If total VOCs are 1,000 ppm or greater (by PID), then the soil must be placed into sealed containers or directly loaded into haul trucks moistened with water, covered, and immediately transported off-site the same day to an appropriate disposal facility.

If a Rule 1166 permit is required, an air monitoring plan may be required by the SCAQMD. Air monitoring plans are intended to protect the surrounding community from

harmful exposure to VOCs from the Project Site and typically entail stationary monitoring stations for sample collection for laboratory analysis. Protection of on-site construction workers shall be accomplished by development and implementation of a HASP.

#### **6.4 Management of Below-Grade Structures**

Known below-grade structures at the Project Site (e.g., storm water infrastructure) will be removed from the ground or cleaned, backfilled, and left in place as appropriate during Project Site grading and excavation.

If unknown below-grade structures are encountered during Site grading and excavation, the General Contractor shall promptly notify the property owner's representative the same day the structure is discovered. Based upon an evaluation of the unknown below-grade structure by the appropriate professional (e.g., environmental monitor, geotechnical engineer), the property owner shall address the below-grade structure in accordance with applicable laws and regulations. For example, if unknown USTs are encountered, applicable permits would be obtained from Los Angeles Fire Department (LAFD) prior to removal.

## TABLE

Table 1  
Summary of Screening Levels for Detected Compounds  
Radford Studio Center, LLC

Soil Screening Levels for Detected Compounds (milligrams per kilogram)																						
Metals	Arsenic	Barium	Beryllium	Cadmium	Chromium	Cobalt	Copper	Lead	Mercury	Molybdenum	Nickel	Vanadium	Zinc									
Most Conservative Commercial/Industrial Regulatory Standard	12*	220,000	230	780	1,800,000	350	47,000	320	4.4	5,800	11,000	5,800	350,000									
Screening Level Source	5	3	1	1	3	3	3	1	1	3	1	3	3									
															Total Petroleum Hydrocarbons	Diesel Range Organics	Oil Range Organics	Gasoline Range Organics				
															Most Conservative Commercial/Industrial Regulatory Standard	100	1,000	100				
															Screening Level Source	4	4	4				
															Volatile Organic Compounds	Acetone	Benzene	Ethylbenzene	m,p-xylene	o-Xylene	Tetrachloroethene	Toluene
															Most Conservative Commercial/Industrial Regulatory Standard	670,000	1.4	25	2,400	2,400	2,700	5,300
															Screening Level Source	3	2	3	3	3	1	1

- Notes:
- 1. DTSC Hero Note 3, May 2022, Cancer commercial soil screening level
  - 2. DTSC Hero Note 3, May 2022, Non-cancer commercial soil screening level
  - 3. EPA Regional Screening Levels, May 2022, commercial soil screening level
  - 4. Protection of Groundwater Soil Screening Levels, Los Angeles Regional Water Quality Control Board
  - 5. \* Arsenic has a regional background concentration of 12 mg/kg per (DTSC, 2008. Determination of a Southern California Regional Background Concentration in Soil.)

Soil Vapor Screening Levels for Detected Compounds (micrograms per cubic meter)			
Detected Compounds	Methylene Chloride	Tetrachloro ethene	Toluene
Commercial/Industrial Regulatory Standard (AF=0.03) <sup>1</sup>	400	67	43,333
Commercial/Industrial Regulatory Standard (AF=0.001) <sup>2</sup>	12000	2,000	1,300,000

Notes:

<sup>1</sup> VOC values reflect the most recent screening levels for indoor air quality, based on a 1 x 10-6 carcinogenic risk standard (the non-cancer endpoint is reported where a cancer endpoint has not been established), divided by the default subsurface to indoor air attenuation factor of 0.03 (California Environmental Protection Agency (CalEPA), 2020. Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Draft for Public Comments. February 2022). The source of the indoor air screening levels is the DTSC Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint; Release Date: June 2020 - Revised May 2022) and/or the EPA Regional Screening Levels (RSLs; May 2022), whichever is most conservative.

<sup>2</sup> VOC values reflect the most recent screening levels for indoor air quality, based on a 1 x 10-6 carcinogenic risk standard (the non-cancer endpoint is reported where a cancer endpoint has not been established), divided by the default subsurface to indoor air attenuation factor of 0.001 (Final Guidance for Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air. October 2011). The source of the indoor air screening levels is the DTSC Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint; Release Date: June 2020 - Revised May 2022) and/or the EPA Regional Screening Levels (RSLs; May 2022), whichever is most conservative.

Recent research demonstrates that the USEPA default AF of 0.03 is not representative of empirical vapor intrusion data collected for vapor intrusion sites in California [Lahvis and Ettinger, 2021]; therefore, default Soil Vapor Screening Levels were derived using published commercial/industrial air screening levels and the DTSC default sub-slab to indoor air AF of 0.001 [DTSC, 2011].

4024 Radford Avenue	Studio City	91604	<a href="mailto:asimons@geosyntec.com">asimons@geosyntec.com</a>

#### NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- **ONCE APPROVED NOTIFY INSPECTOR AT [ytaye@ph.lacounty.gov](mailto:ytaye@ph.lacounty.gov) PREFERABLY 3 BUSINESS DAYS BEFORE WORK IS SCHEDULED TO BEGIN.**

**WORK PLAN APPROVED (8 soil borings)**

**DATE: May 4, 2022**

#### ADDITIONAL APPROVAL CONDITIONS:

- Work plan approval is issued for scope of work submitted to the Drinking Water Program. Any modifications to the scope of work will require additional work plan review.
- Ensure to backfill using a tremie pipe or equivalent, proceeding upward from the bottom of the boring.
- Sealing material must be mixed in accordance with the [California Well Standards \(Bulletins 74-81 and 74-90\)](#).
  - Cement grout mix ratio of 5-6 gallons of water per 94-pound bag of Portland cement.
  - Up to 6% of Bentonite may be added to the cement-based mix. The water demand of bentonite shall be considered when water is added to the mix.
  - Bentonite alone shall not be used as a sealing material.
- Exploration holes must comply with all applicable requirements published in the [California Well Standards \(Bulletins 74-81 and 74-90\)](#), [Los Angeles County Code](#) and all other applicable laws.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
me	LCS Recovery is within Marginal Exceedance (ME) control limit range ( $\pm 4$ SD from the mean).

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: Geosyntec Consultants, Inc.  
Project/Site: Radford LB1048/04

Job ID: 570-95415-1

## Job ID: 570-95415-1

### Laboratory: Eurofins Calscience

#### Narrative

#### Job Narrative 570-95415-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 5/9/2022 7:25 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0° C.

#### GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-233612. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The following analyte(s) recovered outside control limits for the LCS/LCSD associated with analytical batch 570-233612: Bromoform. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-233610. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-233951. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The initial calibration curve analyzed in batch 570-233951 was outside method criteria for the following analyte: Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte is considered an estimated concentration.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC VOA

Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with analytical batch 570-234139.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Metals

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 570-233432 and analytical batch 570-233830 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 570-233500 and analytical batch 570-234218 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Geosyntec Consultants, Inc.

Job Number: 570-95415-1

Login Number: 95415

List Number: 1

Creator: Rodriguez, Estevan

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

## ANALYTICAL REPORT

Eurofins Calscience  
2841 Dow Avenue, Suite 100  
Tustin, CA 92780  
Tel: (714)895-5494

Laboratory Job ID: 570-95501-1  
Client Project/Site: Radford LB1048/04

For:  
Geosyntec Consultants, Inc.  
211 E Ocean Blvd

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
me	LCS Recovery is within Marginal Exceedance (ME) control limit range ( $\pm 4$ SD from the mean).
S1-	Surrogate recovery exceeds control limits, low biased.

### GC VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
$\alpha$	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: Geosyntec Consultants, Inc.  
Project/Site: Radford LB1048/04

Job ID: 570-95501-1

## Job ID: 570-95501-1

### Laboratory: Eurofins Calscience

#### Narrative

#### Job Narrative 570-95501-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 5/10/2022 7:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.4° C.

#### GC/MS VOA

Method 8260B: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 570-234351: Carbon tetrachloride and Dibromochloromethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-234351. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The initial calibration curve analyzed in batch 570-234351 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method 8260B: Surrogate recovery for 4-Bromofluorobenzene (Surr) for the following sample was outside control limits: SB-09-15' (570-95501-6). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

Method 8260B: Internal standard (ISTD) response for Chlorobenzene-d5 and 1,4-Dichlorobenzene-d4 for the following sample was outside control limits: SB-09-15' (570-95501-6). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-235358. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The initial calibration curve analyzed in batch 570-235358 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC VOA

Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-233660. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8015B: Surrogate recovery for the following sample was outside control limits: SB-09-15' (570-95501-6). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-234004. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

## Case Narrative

Client: Geosyntec Consultants, Inc.  
Project/Site: Radford LB1048/04

Job ID: 570-95501-1

### Job ID: 570-95501-1 (Continued)

#### Laboratory: Eurofins Calscience (Continued)

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

##### Metals

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 570-233500 and analytical batch 570-234218 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Selenium for preparation batch 570-233806 and analytical batch 570-235048 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Silver, Arsenic, Cadmium, Copper, Molybdenum, Lead, Antimony, Thallium and Zinc for preparation batch 570-236024 and analytical batch 570-236320 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

##### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

## Login Sample Receipt Checklist

Client: Geosyntec Consultants, Inc.

Job Number: 570-95501-1

Login Number: 95501

List Number: 1

Creator: Lagunas, Jorge L

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

## ANALYTICAL REPORT

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

## Narrative

### Job Narrative 570-95836-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 5/12/2022 6:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.3° C.

#### GC/MS VOA

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-235329. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-235498. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The following sample was analyzed via a low-level analysis and a high-level (i.e., methanol extract) analysis. The low-level analysis resulted in a value for Acetone above the upper calibration range. The high-level analysis resulted in a non-detect for this analyte in the lowest possible dilution utilized. The results from the low-level analysis are provided and have been flagged as estimated. SB-18-0.5' (570-95836-12)

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-235917. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Internal standard (ISTD) response for 1,4-Dichlorobenzene-d4 for the following sample was outside control limits: SB-12-0.5' (570-95836-22). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260B: Surrogate recovery for 4-Bromofluorobenzene for the following sample was outside control limits: SB-12-0.5' (570-95836-22). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC VOA

Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-235853. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Metals

Method 6010B: The serial dilution performed for the following sample associated with batch 570-235959 was outside control limits for Barium, Chromium and Vanadium: (570-95836-G-1-B SD ^25)

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Barium and Antimony for preparation batch 570-234530 and analytical batch 570-235959 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Case Narrative

## Login Sample Receipt Checklist

Client: Geosyntec Consultants, Inc.

Job Number: 570-95836-1

Login Number: 95836

List Number: 1

Creator: Lagunas, Jorge L

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

## ANALYTICAL REPORT

Eurofins Calscience  
2841 Dow Avenue, Suite 100  
Tustin, CA 92780  
Tel: (714)895-5494

Laboratory Job ID: 570-95873-1  
Client Project/Site: Radford / LB1048/04

For:  
Geosyntec Consultants, Inc.  
211 E Ocean Blvd  
Suite 300  
Long Beach, California 90802

Attn: Brittany Theilen

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
me	LCS Recovery is within Marginal Exceedance (ME) control limit range ( $\pm 4$ SD from the mean).
S1-	Surrogate recovery exceeds control limits, low biased.

### GC VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
$\alpha$	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

Client: Geosyntec Consultants, Inc.  
Project/Site: Radford / LB1048/04

Job ID: 570-95873-1

## Job ID: 570-95873-1

### Laboratory: Eurofins Calscience

#### Narrative

#### Job Narrative 570-95873-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 5/11/2022 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.1° C.

#### GC/MS VOA

Method 8260B: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 570-234186: Vinyl acetate. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-234186. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-234356. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 570-234351: Carbon tetrachloride and Dibromochloromethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-234351. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Internal standard (ISTD) response for the following samples were outside control limits: SB-35-0.5' (570-95873-8) and SB-24-0.5' (570-95873-22). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260B: Surrogate recovery for the following sample was outside control limits: SB-24-0.5' (570-95873-22). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

Method 8260B: The initial calibration curve analyzed in batch 570-234351 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC VOA

Method 8015B: Surrogate recovery for the following sample was outside control limits: SB-35-3' (570-95873-9). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 234547.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Case Narrative

Client: Geosyntec Consultants, Inc.  
Project/Site: Radford / LB1048/04

Job ID: 570-95873-1

### Job ID: 570-95873-1 (Continued)

#### Laboratory: Eurofins Calscience (Continued)

##### Metals

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of multiple analytes for preparation batch 570-233904 and analytical batch 570-234597 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Lead and Antimony for preparation batch 570-234531 and analytical batch 570-235627 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Selenium for preparation batch 570-233806 and analytical batch 570-235048 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Silver, Arsenic, Cadmium, Copper, Molybdenum, Lead, Antimony, Thallium and Zinc for preparation batch 570-236024 and analytical batch 570-236320 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

##### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

# Client Sample Results

Client: Geosyntec Consultants, Inc.  
Project/Site: Radford / LB1048/04

Job ID: 570-95873-1

## Method: 6010B - Metals (ICP)

Client Sample ID: SB-34-0.5'  
Date Collected: 05/11/22 07:55  
Date Received: 05/11/22 19:00

Lab Sample ID: 570-95873-4  
Matrix: Solid

Analyte	Result	Qualifier	RL	Unit	D	Prepared	Analyzed	Dil Fac
Antimony	ND		9.90	mg/Kg		05/21/22 12:45	05/23/22 15:02	5
