Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.6	annual days of extreme heat
Extreme Precipitation	5.85	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth

Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	22.2
AQ-PM	14.8
AQ-DPM	62.5
Drinking Water	22.7
Lead Risk Housing	21.0
Pesticides	0.00
Toxic Releases	29.7
Traffic	75.0

Effect Indicators	—
CleanUp Sites	38.5
Groundwater	92.3
Haz Waste Facilities/Generators	91.1
Impaired Water Bodies	23.9
Solid Waste	0.00
Sensitive Population	—
Asthma	10.0
Cardio-vascular	5.75
Low Birth Weights	26.6
Socioeconomic Factor Indicators	—
Education	12.0
Housing	20.6
Linguistic	49.6
Poverty	7.24
Unemployment	14.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	79.16078532
Employed	64.53227255
Median HI	79.73822661
Education	—
Bachelor's or higher	80.25150776
High school enrollment	100

Preschool enrollment	64.96856153
Transportation	—
Auto Access	46.0284871

Climate Change Adaptive Capacity	—
Impervious Surface Cover	36.2
Traffic Density	82.8

Traffic Access	65.9
Other Indices	—
Hardship	21.2
Other Decision Support	—
2016 Voting	84.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	9.00
Healthy Places Index Score for Project Location (b)	79.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Includes both KSF and Parking space data for garage. Hospital Building "C" is being constructed with partial demolition of Building "A" and total demolition of the Day Care.

Construction: Construction Phases	Data provided by excel sheet, updating Construction Phases to reflect excel doc.
Construction: Dust From Material Movement	Based on provided construction assumptions and site plan.
Construction: Demolition	Based on provided construction assumptions and site plan.
Construction: Off-Road Equipment	Plate compactor is meant to represent the use of pile driving equipment necessary for the CUP.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Good Sam Phase 2 - Construction
Construction Start Date	1/21/2032
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	12.8
Location	2425 Samaritan Dr, San Jose, CA 95124, USA
County	Santa Clara
City	San Jose
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1917
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.20

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Parking Lot	421	Space	3.79	0.00	0.00	—	—	Parking Lot

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.6	annual days of extreme heat
Extreme Precipitation	5.85	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A

Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	22.2
AQ-PM	14.8
AQ-DPM	62.5
Drinking Water	22.7
Lead Risk Housing	21.0
Pesticides	0.00
Toxic Releases	29.7
Traffic	75.0
Effect Indicators	—
CleanUp Sites	38.5
Groundwater	92.3
Haz Waste Facilities/Generators	91.1
Impaired Water Bodies	23.9
Solid Waste	0.00
Sensitive Population	—
Asthma	10.0
Cardio-vascular	5.75
Low Birth Weights	26.6
Socioeconomic Factor Indicators	—
Education	12.0
Housing	20.6
Linguistic	49.6
Poverty	7.24
Unemployment	14.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	79.16078532
Employed	64.53227255
Median HI	79.73822661
Education	—
Bachelor's or higher	80.25150776
High school enrollment	100
Preschool enrollment	64.96856153
Transportation	—
Auto Access	46.0284871
Active commuting	48.69754908
Social	—
2-parent households	79.75105864
Voting	87.07814706
Neighborhood	—
Alcohol availability	33.76106762
Park access	81.35506224
Retail density	67.23983062
Supermarket access	40.4465546
Tree canopy	74.84922366
Housing	—
Homeownership	65.75131528
Housing habitability	59.01450019
Low-inc homeowner severe housing cost burden	47.13204158

Low-inc renter severe housing cost burden	52.66264596
Uncrowded housing	59.34813294
Health Outcomes	—
Insured adults	73.50186064
Arthritis	36.9
Asthma ER Admissions	91.8
High Blood Pressure	39.5
Cancer (excluding skin)	21.2
Asthma	65.7
Coronary Heart Disease	47.4
Chronic Obstructive Pulmonary Disease	59.8
Diagnosed Diabetes	70.5
Life Expectancy at Birth	70.0
Cognitively Disabled	60.3
Physically Disabled	83.0
Heart Attack ER Admissions	91.0
Mental Health Not Good	77.2
Chronic Kidney Disease	64.9
Obesity	76.5
Pedestrian Injuries	19.6
Physical Health Not Good	71.4
Stroke	58.2
Health Risk Behaviors	—
Binge Drinking	73.8
Current Smoker	79.5
No Leisure Time for Physical Activity	71.9
Climate Change Exposures	—

Wildfire Risk	0.0

Other Decision Support	—
2016 Voting	84.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	9.00
Healthy Places Index Score for Project Location (b)	79.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Have excel spreadsheet with specific land use data for project. This reflects information provided within spreadsheet.
Construction: Construction Phases	Reflects construction schedule given in excel spreadsheet.
Construction: Dust From Material Movement	Based on provided grading material movement
Construction: Demolition	Site preparation is based on provided pavement material demolition.

Good Sam Phase 3 Construction Detailed Report

Table of Contents

1. Basic Project Information

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Good Sam Phase 3 Construction
Construction Start Date	1/21/2032
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	12.8
Location	2425 Samaritan Dr, San Jose, CA 95124, USA
County	Santa Clara
City	San Jose
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1917
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.20

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Hospital	202	1000sqft	4.64	201,936	51,200	—	—	Building D

Medical Office Building	200	1000sqft	4.59	200,000	0.00	—	—	Building E
Enclosed Parking with Elevator	1,154	Space	10.4	425,208	0.00	—	—	Garage West
Other Asphalt Surfaces	4.56	1000sqft	0.10	0.00	0.00	—	—	Offsite Improvements

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.6	annual days of extreme heat
Extreme Precipitation	5.85	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	22.2

AQ-PM	14.8
AQ-DPM	62.5
Drinking Water	22.7
Lead Risk Housing	21.0
Pesticides	0.00
Toxic Releases	29.7
Traffic	75.0
Effect Indicators	—
CleanUp Sites	38.5
Groundwater	92.3
Haz Waste Facilities/Generators	91.1
Impaired Water Bodies	23.9
Solid Waste	0.00
Sensitive Population	—
Asthma	10.0
Cardio-vascular	5.75
Low Birth Weights	26.6
Socioeconomic Factor Indicators	—
Education	12.0
Housing	20.6
Linguistic	49.6
Poverty	7.24
Unemployment	14.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Economic	—
Above Poverty	79.16078532
Employed	64.53227255
Median HI	79.73822661
Education	—
Bachelor's or higher	80.25150776

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	9.00
Healthy Places Index Score for Project Location (b)	79.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on specific land use data for project. This reflects information provided within spreadsheet. Offsite improvements were estimated at 4.558 ksf from aerial imagery of the overlaid site plan.
Construction: Construction Phases	Reflects construction schedule give by Client
Construction: Dust From Material Movement	Based on provided soil movement
Construction: Demolition	Based on estimated pavement material movement.

Appendix B

2030 Greenhouse Gas Reduction Strategy Checklist

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

DEPARTMENT OF PLANNING, BUILDING AND CODE ENFORCEMENT

Purpose of the Compliance Checklist

In 2020, the City adopted a Greenhouse Gas Reduction Strategy (GHGRS) that outlines the actions the City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions for the interim target year 2030. The purpose of the Greenhouse Gas Reduction Strategy Compliance Checklist (Checklist) is to:

- Implement GHG reduction strategies from the 2030 GHGRS to new development projects.
- Provide a streamlined review process for proposed new development projects that are subject to discretionary review and trigger environmental review pursuant to the California Environmental Quality Act (CEQA).

The 2030 GHGRS presents the City's comprehensive path to reduce GHG emissions to achieve the 2030 reduction target, based on SB 32, BAAQMD, and OPR. Additionally, the 2030 GHGRS leverages other important City plans and policies; including the General Plan, Climate Smart San José, and the City Municipal Code in identifying reductions strategies that achieve the City's target. CEQA Guidelines Section 15183.5 allows for public agencies to analyze and mitigate GHG emissions as part of a larger plan for the reduction of greenhouse gases. Accordingly, the City of San José's 2030 GHGRS represents San José's qualified climate action plan in compliance with CEQA.

As described in the 2030 GHGRS, these GHG reductions will occur through a combination of City initiatives in various plans and policies and will provide reductions from both existing and new developments. This Compliance Checklist specifically applies to proposed discretionary projects that require environmental review pursuant to CEQA. Therefore, the Checklist is a critical implementation tool in the City's overall strategy to reduce GHG emissions. Implementation of applicable reduction actions in new development projects will help the City achieve incremental reductions toward its target. Per the 2030 GHGRS, the City will monitor strategy implementation and make updates, as necessary, to maintain an appropriate trajectory to the 2030 GHG target.

Pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b), a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of the GHGRS.

Figure 0-1

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

DEPARTMENT OF PLANNING, BUILDING AND CODE ENFORCEMENT

Purpose of the Compliance Checklist

In 2020, the City adopted a Greenhouse Gas Reduction Strategy (GHGRS) that outlines the actions the City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions for the interim target year 2030. The purpose of the Greenhouse Gas Reduction Strategy Compliance Checklist (Checklist) is to:

- Implement GHG reduction strategies from the 2030 GHGRS to new development projects.
- Provide a streamlined review process for proposed new development projects that are subject to discretionary review and trigger environmental review pursuant to the California Environmental Quality Act (CEQA).

The 2030 GHGRS presents the City's comprehensive path to reduce GHG emissions to achieve the 2030 reduction target, based on SB 32, BAAQMD, and OPR. Additionally, the 2030 GHGRS leverages other important City plans and policies; including the General Plan, Climate Smart San José, and the City Municipal Code in identifying reductions strategies that achieve the City's target. CEQA Guidelines Section 15183.5 allows for public agencies to analyze and mitigate GHG emissions as part of a larger plan for the reduction of greenhouse gases. Accordingly, the City of San José's 2030 GHGRS represents San José's qualified climate action plan in compliance with CEQA.

As described in the 2030 GHGRS, these GHG reductions will occur through a combination of City initiatives in various plans and policies and will provide reductions from both existing and new developments. This Compliance Checklist specifically applies to proposed discretionary projects that require environmental review pursuant to CEQA. Therefore, the Checklist is a critical implementation tool in the City's overall strategy to reduce GHG emissions. Implementation of applicable reduction actions in new development projects will help the City achieve incremental reductions toward its target. Per the 2030 GHGRS, the City will monitor strategy implementation and make updates, as necessary, to maintain an appropriate trajectory to the 2030 GHG target.

Pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b), a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of the GHGRS.

Instructions for Compliance Checklist

Applicants shall complete the following sections to demonstrate conformance with the City of San José 2030 Greenhouse Gas Reduction Strategy for the proposed project. All projects must complete Section A. General Plan Policy Conformance and Section B. Greenhouse Gas Reduction Strategies. Projects that propose alternative GHG mitigation measures must also complete Section C. Alternative Project Measures and Additional GHG Reductions.

A. General Plan Policy Compliance

Projects need to demonstrate consistency with the Envision San José 2040 General Plan's relevant policies for Land Use & Design, Transportation, Green Building, and Water Conservation, enumerated in Table A. All applicants shall complete the following steps.

1. Complete Table A, Item #1 to demonstrate the project's consistency with the General Plan Land Use and Circulation Diagram.

2. Complete Table A, Items #2 through #4 to demonstrate the project's consistency with General Plan policies[1] related to green building; pedestrian, bicycle and transit site design; and water conservation and urban forestry, as applicable. For each policy listed, mark the relevant yes/no check boxes to indicate project consistency, and provide a qualitative description of how the policy is implemented in the proposed project or why the policy is not applicable to the proposed project. Qualitative descriptions can be included in Table A or provided as separate attachments. This explanation will provide the basis for analysis in the CEQA document.

B. Greenhouse Gas Reduction Strategies

Table B identifies the GHGRS strategies and recommended consistency options. Projects need to demonstrate consistency with the GHGRS reduction strategies listed in Table B or document why the strategies are not applicable or are infeasible. The corresponding GHGRS strategies are indicated in the table to provide additional context, with the full text of the strategies preceding Table B.

Residential projects must complete Table B, Part 1 and 2; Non-residential projects must complete Table B, Part 2 only. All applicants shall complete the following steps for Table B.

1. Review the project consistency options described in the column titled 'GHGRS Strategy and Consistency Options'.
2. Use the check boxes in the column titled "Project Conformance" to indicate if the strategy is 'Proposed', 'Not Applicable', 'Not Feasible', or if there is an 'Alternative Measure Proposed'.

[1]The lists in items # 2-4 do not represent all General Plan policies but allow projects to demonstrate consistency and achievement of policies that are related to quantified reduction estimates in the 2030 GHGRS.

3. Provide a qualitative analysis of the proposed project's compliance with the GHGRS strategies in the column titled "Description of Project Measure". This will be the basis for CEQA analysis to demonstrate compliance with the 2030 GHGRS and by extension, with SB 32. The qualitative analysis should provide:

    a. A description of which consistency options are included as part of the proposed project, or

    b. A description of why the strategy is not applicable to the proposed project, or

    c. A description of why the consistency options are infeasible. If applicants select 'Not Feasible' or 'Alternative Measure Proposed', they must complete Table C to document what alternative project measures will be implemented to achieve a similar level of greenhouse gas reduction and how those reduction estimates were calculated.

C. Alternative Project Measures and Additional GHG Reductions

Projects that propose alternative GHG mitigation measures to those identified in Table B or propose to include additional GHG mitigation measures beyond those described in Tables A and B, shall provide a summary explanation of the proposed measures and demonstrate efficiency or greenhouse gas reductions achievable though the proposed measures. Documentation for these alternative or additional project measures shall be documented in Table C. Any applicants who select 'Not Feasible' or 'Alternative Measure Proposed' in Table B must complete the following steps for Table C.

1. In the column titled "Description of Proposed Measure" provide a qualitative description of what measure will be implemented, why it is proposed, and how it will reduce GHG emissions.

2. In the column titled "Description of GHG Reduction Estimate" demonstrate how the alternative project measure would achieve the same or greater level of greenhouse gas reductions as the GHGRS strategy it replaces. Documentation or calculation files can be attached separately.

3. In the column titled "Proposed Measure Implementation" identify how the measure will be implemented: incorporated as part of the project design or as an additional measure that is not part of the project (e.g., purchase of carbon offsets).

Compliance Checklist

Evaluation of Project Conformance with the 2030 Greenhouse Gas Reduction Strategy

Table A: General Plan Consistency

Development Type: ☐ Commercial ☐ Residential ☐ Office ☒ Other: [*Hospital*]

1) Consistency with the Land Use/Transportation Diagram (Land Use and Density)	Yes	No
Is the proposed Project consistent with the Land Use/Transportation Diagram?	☒	☐
If not, and the proposed project includes a General Plan Amendment, does the proposed amendment decrease GHG emissions (in absolute terms or per capita, per employee, per service population) below the level assumed in the GHGRS based on the existing planned land use? (The project could have a higher density, mix of uses, or other features that would reduce GHG emissions compared to the planned land use).[2]	☐	☐
If not, would the proposed project and the General Plan Amendment increase GHG emissions (in absolute terms or per capita, per employee, per service population)? Project is not consistent with GHGRS and further modeling will be required to determine if additional mitigation measures are necessary.	☐	☐

Response documentation:

The Project site has a General Plan land use designation of Neighborhood Community Commercial (NCC). The NCC designation allows for commercial uses serving communities in neighboring areas, including general office and hospitals. The Project would maintain the hospital use and introduce a medical office use and is therefore consistent with the General Plan land use designation. Therefore, the proposed project is consistent with the Land Use/Transportation Diagram.

[2] For example, a General Plan Amendment to change use from single-family residential to multi-family residential or a General Plan Amendment to change the use from regional-serving commercial to mixed-use urban in a transit-served area might reduce travel demand, and therefore GHG emissions from mobile sources.

2) Implementation of Green Building Measures	Yes	No
***MS-2.2**: Encourage maximized use of on-site generation of renewable energy for all new and existing buildings.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would be solar-ready by including building roof space and conduit infrastructure for a "Future PV Array" per California Code. The proposed project would be enrolled in SJCE TotalGreen program (approx. 100 percent renewable energy).*		
***MS-2.3**: Encourage consideration of solar orientation, including building placement, landscaping, design and construction techniques for new construction to minimize energy consumption.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would comply with the latest energy efficiency standards. The State goal is to increase the use of green building practices to decrease energy consumption. The project would implement the green building strategies required by existing State and local regulations, including complying with all applicable CALGreen requirements. This includes installing water-efficient fixtures, recycled water irrigation systems, and landscaping that follows the CALGreen Code and minimizes on-site energy consumption.*		
***MS-2.7**: Encourage the installation of solar panels or other clean energy power generation sources over parking areas.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would comply with the latest energy efficiency standards. The State goal is to increase the use of green building practices. The project would implement required green building strategies through existing regulation that requires the project to comply with various CalGreen requirements. Additionally, the proposed project would be enrolled in SJCE TotalGreen program (approx. 100 percent renewable energy).*		
***MS-2.11**: Require new development to incorporate green building practices, including those required by the Green Building Ordinance. Specifically, target reduced energy use through construction techniques (e.g., design of building envelopes and systems to maximize energy performance), through architectural design (e.g., design to maximize cross ventilation and interior daylight) and through site design techniques (e.g., orienting buildings on sites to maximize the effectiveness of passive solar design).*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would implement green building strategies required by existing regulation, including CalGreen and the City's Green Building Ordinance. The project would also adhere to the 2022 Energy Code (or later, if applicable) requirements for healthcare facilities, which include standards related to decreasing the energy requirements of a building through building envelope assemblies, HVAC, water heating, indoor lighting, outdoor lighting, electrical power distribution, ventilation, and signs.*		
***MS-16.2**: Promote neighborhood-based distributed clean/renewable energy generation to improve local energy security and to reduce the amount of energy wasted in transmitting electricity over long distances.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would be solar-ready by ensuring roof space and conduit infrastructure for "Future PV Array" per the California Building Code (Title 24). Additionally, the project would be enrolled in SJCE TotalGreen program.*		

3) Pedestrian, Bicycle & Transit Site Design Measures	**Yes**	**No**
***CD-2.1**: Promote the Circulation Goals and Policies in the Envision San José 2040 General Plan. Create streets that promote pedestrian and bicycle transportation by following applicable goals and policies in the Circulation section of the Envision San José 2040 General Plan.*	☒	☐
a) Design the street network for its safe shared use by pedestrians, bicyclists, and vehicles. Include elements that increase driver awareness.	☒	☐
b) Create a comfortable and safe pedestrian environment by implementing wider sidewalks, shade structures, attractive street furniture, street trees, reduced traffic speeds, pedestrian-oriented lighting, mid-block pedestrian crossings, pedestrian-activated crossing lights, bulb-outs and curb extensions at intersections, and on-street parking that buffers pedestrians from vehicles.	☒	☐
c) Consider support for reduced parking requirements, alternative parking arrangements, and Transportation Demand Management strategies to reduce area dedicated to parking and increase area dedicated to employment, housing, parks, public art, or other amenities. Encourage de-coupled parking to ensure that the value and cost of parking are considered in real estate and business transactions.	☐	☒
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *There are existing Class II bike lanes on both sides of Samaritan Drive that will remain. The project would not alter existing street, pedestrian walkways, or bike lanes. In accordance with CALGreen Code, the Project will include the installation of bike parking. Improvements would include new curb cuts for the proposed driveway access points, as well as rehabilitation of the existing pedestrian sidewalks. The proposed project would include 67 bicycle parking spaces as well as bicycle and pedestrian access on the driveways. Additionally, the Project would include a number of travel demand measures (TDM) such as a road diet along Samaritan Drive and roundabout improvements at the Samaritan Drive and Samaritan Place intersection, bike parking facilities, right-size parking supply, and ride-share programs. These TDM Programs would help reduce vehicle miles traveled (VMT) and mobile greenhouse gas emissions.*		
***CD-2.5**: Integrate Green Building Goals and Policies of the Envision San José 2040 General Plan into site design to create healthful environments. Consider factors such as shaded parking areas, pedestrian connections, minimization of impervious surfaces, incorporation of stormwater treatment measures, appropriate building orientations, etc.*	☐	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The proposed project would include shaded parking areas, landscaping, and shading of the parking areas and walkways. A primary objective of the Project is to enhance landscaping to create natural environments for patients, visitors, and employees. On-site landscaping would meet State water-efficient landscape standards and stage 2 drought restrictions. Improvements would include rehabilitation of the existing pedestrian sidewalks. Additionally, approximately 25 percent of the site would be pervious. The Project would have a total of 10 different drainage management areas throughout the site, each containing bioretention unlined basins with underdrains for treatment. The Project would treat onsite flows prior to discharging them into the City's storm drain system and further comply with all applicable stormwater regulations.*		
***CD-2.11**: Within the Downtown and Urban Village Overlay areas, consistent with the minimum density requirements of the pertaining Land Use/Transportation Diagram designation, avoid the construction of surface parking lots except as an interim use, so that long-term development of the site will result in a cohesive urban form. In these areas, whenever possible, use structured parking, rather than surface parking, to fulfill parking requirements. Encourage the incorporation of alternative uses, such as parks, above parking structures.*	☐	☐
Not Applicable	☒	☐

Describe how the project is consistent or why the measure is not applicable. *The proposed project is not located within the Downtown or Urban Village Overlay areas.*		
***CD-3.2**: Prioritize pedestrian and bicycle connections to transit, community facilities (including schools), commercial areas, and other areas serving daily needs. Ensure that the design of new facilities can accommodate significant anticipated future increases in bicycle and pedestrian activity.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project includes installation of bike parking in accordance with CALGreen Code. According to San Jose Better Bike Plan 2025, there will be a class 3B bike boulevard along Samaritan Place, and a protected Class IV bike lane along Samaritan Drive. The proposed project would include 67 bicycle parking spaces as well as bicycle and pedestrian access on the driveways.*		
***CD-3.4**: Encourage pedestrian cross-access connections between adjacent properties and require pedestrian and bicycle connections to streets and other public spaces, with particular attention and priority given to providing convenient access to transit facilities. Provide pedestrian and vehicular connections with cross-access easements within and between new and existing developments to encourage walking and minimize interruptions by parking areas and curb cuts.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *As discussed above, the project includes installation of bike parking in accordance with CALGreen Code. The proposed project would include 67 bicycle parking spaces as well as access for bicyclists and pedestrian to access the site. This would promote safety and encourage employees to use alternative sources of transportation.*		
***LU-3.5**: Balance the need for parking to support a thriving Downtown with the need to minimize the impacts of parking upon a vibrant pedestrian and transit oriented urban environment. Provide for the needs of bicyclists and pedestrians, including adequate bicycle parking areas and design measures to promote bicyclist and pedestrian safety.*	☐	☐
Not applicable	☒	☐
Describe how the project is consistent or why the measure is not applicable. *The project is not located in the Downtown area. The project's bicycle facilities and pedestrian pathways are described above.*		
***TR-2.8:** Require new development to provide on-site facilities such as bicycle storage and showers, provide connections to existing and planned facilities, dedicate land to expand existing facilities or provide new facilities such as sidewalks and/or bicycle lanes/paths, or share in the cost of improvements.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project includes connections to existing bicycle lane facilities and bicycle parking.*		
***TR-7.1:** Require large employers to develop TDM programs to reduce the vehicle trips and vehicle miles generated by their employees through the use of shuttles, provision for car-sharing, bicycle sharing, carpool, parking strategies, transit incentives and other measures.*	☒	☐
Not applicable	☒	☐
The Project would include a number of travel demand measures (TDM) such as a road diet along Samaritan Drive and roundabout improvements at the Samaritan Drive and Samaritan Place intersection, bike parking facilities, right-size parking supply, and ride-share programs. These TDM Programs would help reduce vehicle miles traveled (VMT) and mobile greenhouse gas emissions.		
***TR-8.5:** Promote participation in car share programs to minimize the need for parking spaces in new and existing development.*	☐	☐

Not applicable	☒	☐

Describe how the project is consistent or why the measure is not applicable.

The project is a hospital and medical office use which has a unique employee and visitor situation. Car share programs for patients would not be possible for hospital patients or visitors since there is no regular schedule of patients visiting the office. There are two bus stops along the project site's frontage which would provide alternative transportation for those who can take advantage; however, it is not anticipated that all employees or visitors would be able to utilize this option.

4) Water Conservation and Urban Forestry Measures	**Yes**	**No**
***MS-3.1**: Require water-efficient landscaping, which conforms to the State's Model Water Efficient Landscape Ordinance, for all new commercial, institutional, industrial and developer-installed residential development unless for recreation needs or other area functions.*	☐	☐
Not applicable	☐	☐

Describe how the project is consistent or why the measure is not applicable.

The proposed Project would include water-efficient landscaping that conforms to the State's Model Water Efficient Landscape Ordinance and the City's Water-Efficient Landscape Ordinance (Chapter 15.11 of the San José Municipal Code). The Project would meet the City of San José's Water Efficient Landscape Requirements. Proposed features include a low-flow, point source irrigation system equipped with a weather-based smart controller. On-site landscaping would meet State water-efficient landscape standards and stage 2 drought restrictions.

***MS-3.2**: Promote the use of green building technology or techniques that can help reduce the depletion of the City's potable water supply, as building codes permit. For example, promote the use of captured rainwater, graywater, or recycled water as the preferred source for non-potable water needs such as irrigation and building cooling, consistent with Building Codes or other regulations.*	☒	☐
Not applicable	☐	☐

Describe how the project is consistent or why the measure is not applicable.

The project would include low-flow fixtures and appliances, which are required by City Code 15.11. The project would comply with measures to increase water efficiency and green building techniques per building codes. Sustainable features within the project includes installation of water-efficient fixtures and appliances, where possible. The installation of recycled water irrigation systems will also occur in the Project.

***MS-19.4**: Require the use of recycled water wherever feasible and cost-effective to serve existing and new development.*	☒	☐
Not applicable	☐	☐

Describe how the project is consistent or why the measure is not applicable.

Per the South Bay Water Recycling (SBWR) system map, the City does not provide recycled water in the vicinity of the project site. The project would utilize recycled water from the proposed recycled water irrigation systems for the outdoor landscaping based on availability.

***MS-21.3**: Ensure that San José's Community Forest is comprised of species that have low water requirements and are well adapted to its Mediterranean climate. Select and plant diverse species to prevent monocultures that are vulnerable to pest invasions. Furthermore, consider the appropriate placement of tree species and their lifespan to ensure the perpetuation of the Community Forest.*	☐	☐
Not applicable	☐	☐

Describe how the project is consistent or why the measure is not applicable.

Project implementation plant 530 24-inch box trees that will increase overall shading on the site compared to existing conditions. Additional landscaping is proposed throughout the Project site and would include a mix of grasses, shrubs, and ground cover.

***MS-26.1**: As a condition of new development, require the planting and maintenance of both street trees and trees on private property to achieve a level of tree coverage in compliance with and that implements City laws, policies or guidelines.*	☒	☐

Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would comply with City landscaping requirements and criteria to incorporate existing trees with new landscaping. The Project would enhance the existing landscaping and a majority of the existing perimeter and parking lot landscaping would be removed as part of Project implementation. There are 370 existing trees throughout the Project site, including 161 ordinance-size trees. The Project would be required to plant a total of 530 24-inch box trees or pay equivalent Tree Replacement Fees to the City. The Project proposes to plant 530 new 24-inch box trees on-site and along the Project site street frontages.*		
***ER-8.7**: Encourage stormwater reuse for beneficial uses in existing infrastructure and future development through the installation of rain barrels, cisterns, or other water storage and reuse facilities.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The Municipal Regional Permit (MRP) allows development projects to use infiltration, evapotranspiration, harvesting and use, or biotreatment to treat full water quality design flow or volume of stormwater runoff, as specified in MRP Provision C.3.d. The City of San José's Environmental Services Department is responsible for stormwater management within the City. The Project would have a total of 10 different drainage management areas throughout the site, each containing bioretention unlined basins with underdrains for treatment. Project applicants are no longer required to evaluate the feasibility of rainwater harvesting and use before proceeding to biotreatment. Appendix I from SCVURPPP provides guidance on how to estimate the required landscaping or toilet flushing demand to meet C.3.d requirements. The Project would treat onsite flows prior to discharging them into the City's storm drain system. There is an existing utility access (water and sewer, stormwater management, dry utilities, and solid waste management) to the Project site.*		

GHGRS Strategies

GHGRS #1: The City will implement the San José Clean Energy program to provide residents and businesses access to cleaner energy at competitive rates.

GHGRS #2: The City will implement its building reach code ordinance (adopted September 2019) and its prohibition of natural gas infrastructure ordinance (adopted October 2019) to guide the city's new construction toward zero net carbon (ZNC) buildings.

GHGRS #3: The City will expand development of rooftop solar energy through the provision of technical assistance and supportive financial incentives to make progress toward the Climate Smart San José goal of becoming a one-gigawatt solar city.

GHGRS #4: The City will support a transition to building decarbonization through increased efficiency improvements in the existing building stock and reduced use of natural gas appliances and equipment.

GHGRS #5: As an expansion to Climate Smart San José, the City will update its Zero Waste Strategic Plan and reassess zero waste strategies. Throughout the development of the update, the City will continue to divert 90 percent of waste away from landfills through source reduction, recycling, food recovery and composting, and other strategies.

GHGRS #6: The City will continue to be a partner in the Caltrain Modernization Project to enhance local transit opportunities while simultaneously improving the city's air quality.

GHGRS #7: The City will expand its water conservation efforts to achieve and sustain long-term per capita reductions that ensure a reliable water supply with a changing climate, through regional partnerships, sustainable landscape designs, green infrastructure, and water-efficient technology and systems.

Table B: 2030 Greenhouse Gas Reduction Strategy Compliance

GHGRS Strategy and Consistency Options	Description of Project Measure	Project Conformance
PART 1: RESIDENTIAL PROJECTS ONLY – (Not applicable; Project is not residential)		
Zero Net Carbon Residential Construction 1. Achieve/exceed the City's Reach Code, and 2. Exclude natural gas infrastructure in new construction, or 3. Install on-site renewable energy systems or participate in a community solar program to offset 100% of the project's estimated energy demand, or 4. Participate in San José Clean Energy at the Total Green level (i.e., 100% carbon-free electricity) for electricity accounts associated with the project until which time SJCE achieves 100% carbon-free electricity for all accounts. **Supports Strategies:** GHGRS #1, GHGRS #2, GHGRS #3	**Not Applicable. The project would not include residential uses.**	☐Proposed ☒Not Applicable ☐Not Feasible* ☐Alternative Measure Proposed **The 2030 GHGRS assumed this strategy would be feasible for 50% of residential units constructed between 2020 and 2030.*
PART 2: RESIDENTIAL AND NON-RESIDENTIAL PROJECTS		
Renewable Energy Development 1. Install solar panels, solar hot water, or other clean energy power generation sources on development sites, or 2. Participate in community solar programs to support development of renewable energy in the community, or 3. Participate in San José Clean Energy at the Total Green level (i.e., 100% carbon-free electricity) for electricity accounts associated with the project. **Supports Strategies**: GHGRS #1, GHGRS #3	**Consistent.** The project would be enrolled in SJCE TotalGreen program (approx. 100 percent renewable energy).	☐See Part 1 (Residential projects only) ☒Proposed ☐Not Applicable ☐Not Feasible ☐Alternative Measure Proposed

Building Retrofits – Natural Gas[3] This strategy only applies to projects that include a retrofit of an existing building. If the proposed project does not include a retrofit, select "Not Applicable" in the Project Conformance column. 1. Replace an existing natural gas appliance with an electric alternative (e.g., space heater, water heater, clothes dryer), or 2. Replace an existing natural gas appliance with a high-efficiency model **Supports Strategies:** GHGRS #4	**Not Applicable.** The project does not include a retrofit. Therefore, this strategy is not applicable to the project.	☐Proposed ☒Not Applicable ☐Not Feasible ☐Alternative Measure Proposed
Zero Waste Goal 1. Provide space for organic waste (e.g., food scraps, yard waste) collection containers, and/or 2. Exceed the City's construction & demolition waste diversion requirement. **Supports Strategies:** GHGRS #5	**Consistent.** The proposed development includes an exterior trash enclosure with space for recycling and organic waste collection. Additionally, construction and demolition waste would be diverted to meet City requirements. Per Assembly Bill 341, provided recycling services would divert at least 50 percent of solid waste generation.	☒Proposed ☐Not Applicable ☐Not Feasible ☐Alternative Measure Proposed
Caltrain Modernization 1. For projects located within ½ mile of a Caltrain station, establish a program through which to provide project tenants and/or residents with free or reduced Caltrain passes or 2. Develop a program that provides project tenants and/or residents with options to reduce their vehicle miles traveled (e.g., a TDM program), which could include transit passes, bike lockers and showers, or other strategies to reduce project related VMT. **Supports Strategies:** GHGRS #6	**Not Applicable.** The proposed project is not located within ½ mile of a Caltrain station. Therefore, this strategy is not applicable to the project. The project would include a TDM program.	☐Proposed ☒Not Applicable ☐Not Feasible ☐Alterative Measure Proposed

[3] GHGRS Strategy #4 applies to existing building retrofits and not to new construction; Strategy #2 applies to new construction to reduce natural gas related GHG emissions.

Water Conservation 1. Install high-efficiency appliances/fixtures to reduce water use, and/or include water-sensitive landscape design, and/or 2. Provide access to reclaimed water for outdoor water use on the project site. **Supports Strategies:** GHGRS #7	**Proposed**. The proposed project would comply with water conservation per the California Green Building Standards Code, which requires a 20 percent reduction in indoor water use. The project would include low flow appliances and fixtures. The project would also comply with the City's Water-Efficient Landscape Ordinance (Chapter 15.11 of the San José Municipal Code). Proposed features include a low-flow, point source irrigation system equipped with a weather-based smart controller. On-site landscaping would meet State water-efficient landscape standards and stage 2 drought restrictions.	☒Proposed ☐Not Applicable ☐Not Feasible ☐Alternative Measure Proposed

APPENDIX I

GREENHOUSE GAS REDUCTION STRATEGY CHECKLIST

DEPARTMENT OF PLANNING, BUILDING AND CODE ENFORCEMENT

Purpose of the Compliance Checklist

In 2020, the City adopted a Greenhouse Gas Reduction Strategy (GHGRS) that outlines the actions the City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions for the interim target year 2030. The purpose of the Greenhouse Gas Reduction Strategy Compliance Checklist (Checklist) is to:

- Implement GHG reduction strategies from the 2030 GHGRS to new development projects.
- Provide a streamlined review process for proposed new development projects that are subject to discretionary review and trigger environmental review pursuant to the California Environmental Quality Act (CEQA).

The 2030 GHGRS presents the City's comprehensive path to reduce GHG emissions to achieve the 2030 reduction target, based on SB 32, BAAQMD, and OPR. Additionally, the 2030 GHGRS leverages other important City plans and policies; including the General Plan, Climate Smart San José, and the City Municipal Code in identifying reductions strategies that achieve the City's target. CEQA Guidelines Section 15183.5 allows for public agencies to analyze and mitigate GHG emissions as part of a larger plan for the reduction of greenhouse gases. Accordingly, the City of San José's 2030 GHGRS represents San José's qualified climate action plan in compliance with CEQA.

As described in the 2030 GHGRS, these GHG reductions will occur through a combination of City initiatives in various plans and policies and will provide reductions from both existing and new developments. This Compliance Checklist specifically applies to proposed discretionary projects that require environmental review pursuant to CEQA. Therefore, the Checklist is a critical implementation tool in the City's overall strategy to reduce GHG emissions. Implementation of applicable reduction actions in new development projects will help the City achieve incremental reductions toward its target. Per the 2030 GHGRS, the City will monitor strategy implementation and make updates, as necessary, to maintain an appropriate trajectory to the 2030 GHG target.

Pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b), a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of the GHGRS.

Figure 0-1

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

DEPARTMENT OF PLANNING, BUILDING AND CODE ENFORCEMENT

Purpose of the Compliance Checklist

In 2020, the City adopted a Greenhouse Gas Reduction Strategy (GHGRS) that outlines the actions the City will undertake to achieve its proportional share of State greenhouse gas (GHG) emission reductions for the interim target year 2030. The purpose of the Greenhouse Gas Reduction Strategy Compliance Checklist (Checklist) is to:

- Implement GHG reduction strategies from the 2030 GHGRS to new development projects.
- Provide a streamlined review process for proposed new development projects that are subject to discretionary review and trigger environmental review pursuant to the California Environmental Quality Act (CEQA).

The 2030 GHGRS presents the City's comprehensive path to reduce GHG emissions to achieve the 2030 reduction target, based on SB 32, BAAQMD, and OPR. Additionally, the 2030 GHGRS leverages other important City plans and policies; including the General Plan, Climate Smart San José, and the City Municipal Code in identifying reductions strategies that achieve the City's target. CEQA Guidelines Section 15183.5 allows for public agencies to analyze and mitigate GHG emissions as part of a larger plan for the reduction of greenhouse gases. Accordingly, the City of San José's 2030 GHGRS represents San José's qualified climate action plan in compliance with CEQA.

As described in the 2030 GHGRS, these GHG reductions will occur through a combination of City initiatives in various plans and policies and will provide reductions from both existing and new developments. This Compliance Checklist specifically applies to proposed discretionary projects that require environmental review pursuant to CEQA. Therefore, the Checklist is a critical implementation tool in the City's overall strategy to reduce GHG emissions. Implementation of applicable reduction actions in new development projects will help the City achieve incremental reductions toward its target. Per the 2030 GHGRS, the City will monitor strategy implementation and make updates, as necessary, to maintain an appropriate trajectory to the 2030 GHG target.

Pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b), a project's incremental contribution to a cumulative GHG emissions effect may be determined not to be cumulatively considerable if it complies with the requirements of the GHGRS.

Instructions for Compliance Checklist

Applicants shall complete the following sections to demonstrate conformance with the City of San José 2030 Greenhouse Gas Reduction Strategy for the proposed project. All projects must complete Section A. General Plan Policy Conformance and Section B. Greenhouse Gas Reduction Strategies. Projects that propose alternative GHG mitigation measures must also complete Section C. Alternative Project Measures and Additional GHG Reductions.

A. General Plan Policy Compliance

Projects need to demonstrate consistency with the Envision San José 2040 General Plan's relevant policies for Land Use & Design, Transportation, Green Building, and Water Conservation, enumerated in Table A. All applicants shall complete the following steps.

1. Complete Table A, Item #1 to demonstrate the project's consistency with the General Plan Land Use and Circulation Diagram.

2. Complete Table A, Items #2 through #4 to demonstrate the project's consistency with General Plan policies[1] related to green building; pedestrian, bicycle and transit site design; and water conservation and urban forestry, as applicable. For each policy listed, mark the relevant yes/no check boxes to indicate project consistency, and provide a qualitative description of how the policy is implemented in the proposed project or why the policy is not applicable to the proposed project. Qualitative descriptions can be included in Table A or provided as separate attachments. This explanation will provide the basis for analysis in the CEQA document.

B. Greenhouse Gas Reduction Strategies

Table B identifies the GHGRS strategies and recommended consistency options. Projects need to demonstrate consistency with the GHGRS reduction strategies listed in Table B or document why the strategies are not applicable or are infeasible. The corresponding GHGRS strategies are indicated in the table to provide additional context, with the full text of the strategies preceding Table B.

Residential projects must complete Table B, Part 1 and 2; Non-residential projects must complete Table B, Part 2 only. All applicants shall complete the following steps for Table B.

1. Review the project consistency options described in the column titled 'GHGRS Strategy and Consistency Options'.
2. Use the check boxes in the column titled "Project Conformance" to indicate if the strategy is 'Proposed', 'Not Applicable', 'Not Feasible', or if there is an 'Alternative Measure Proposed'.

[1]The lists in items # 2-4 do not represent all General Plan policies but allow projects to demonstrate consistency and achievement of policies that are related to quantified reduction estimates in the 2030 GHGRS.

3. Provide a qualitative analysis of the proposed project's compliance with the GHGRS strategies in the column titled "Description of Project Measure". This will be the basis for CEQA analysis to demonstrate compliance with the 2030 GHGRS and by extension, with SB 32. The qualitative analysis should provide:

    a. A description of which consistency options are included as part of the proposed project, or

    b. A description of why the strategy is not applicable to the proposed project, or

    c. A description of why the consistency options are infeasible. If applicants select 'Not Feasible' or 'Alternative Measure Proposed', they must complete Table C to document what alternative project measures will be implemented to achieve a similar level of greenhouse gas reduction and how those reduction estimates were calculated.

C. Alternative Project Measures and Additional GHG Reductions

Projects that propose alternative GHG mitigation measures to those identified in Table B or propose to include additional GHG mitigation measures beyond those described in Tables A and B, shall provide a summary explanation of the proposed measures and demonstrate efficiency or greenhouse gas reductions achievable though the proposed measures. Documentation for these alternative or additional project measures shall be documented in Table C. Any applicants who select 'Not Feasible' or 'Alternative Measure Proposed' in Table B must complete the following steps for Table C.

1. In the column titled "Description of Proposed Measure" provide a qualitative description of what measure will be implemented, why it is proposed, and how it will reduce GHG emissions.

2. In the column titled "Description of GHG Reduction Estimate" demonstrate how the alternative project measure would achieve the same or greater level of greenhouse gas reductions as the GHGRS strategy it replaces. Documentation or calculation files can be attached separately.

3. In the column titled "Proposed Measure Implementation" identify how the measure will be implemented: incorporated as part of the project design or as an additional measure that is not part of the project (e.g., purchase of carbon offsets).

Compliance Checklist

Evaluation of Project Conformance with the 2030 Greenhouse Gas Reduction Strategy

Table A: General Plan Consistency

Development Type: ☐ Commercial ☐ Residential ☐ Office ☒ Other: [*Hospital*]

1) Consistency with the Land Use/Transportation Diagram (Land Use and Density)	Yes	No
Is the proposed Project consistent with the Land Use/Transportation Diagram?	☒	☐
If not, and the proposed project includes a General Plan Amendment, does the proposed amendment decrease GHG emissions (in absolute terms or per capita, per employee, per service population) below the level assumed in the GHGRS based on the existing planned land use? (The project could have a higher density, mix of uses, or other features that would reduce GHG emissions compared to the planned land use).[2]	☐	☐
If not, would the proposed project and the General Plan Amendment increase GHG emissions (in absolute terms or per capita, per employee, per service population)? Project is not consistent with GHGRS and further modeling will be required to determine if additional mitigation measures are necessary.	☐	☐

Response documentation:

The Project site has a General Plan land use designation of Neighborhood Community Commercial (NCC). The NCC designation allows for commercial uses serving communities in neighboring areas, including general office and hospitals. The Project would maintain the hospital use and introduce a medical office use and is therefore consistent with the General Plan land use designation. Therefore, the proposed project is consistent with the Land Use/Transportation Diagram.

[2] For example, a General Plan Amendment to change use from single-family residential to multi-family residential or a General Plan Amendment to change the use from regional-serving commercial to mixed-use urban in a transit-served area might reduce travel demand, and therefore GHG emissions from mobile sources.

2) Implementation of Green Building Measures	Yes	No
***MS-2.2**: Encourage maximized use of on-site generation of renewable energy for all new and existing buildings.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would be solar-ready by including building roof space and conduit infrastructure for a "Future PV Array" as required per California Code. The proposed project enroll in SJCE TotalGreen program.*		
***MS-2.3**: Encourage consideration of solar orientation, including building placement, landscaping, design and construction techniques for new construction to minimize energy consumption.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would comply with the latest energy efficiency standards. The State goal is to increase the use of green building practices to decrease energy consumption. The project would implement the green building strategies required by existing State and local regulations, including complying with all applicable CALGreen requirements. This includes (as applicable) installing water-efficient fixtures, recycled water irrigation systems (if available), and landscaping that follows the CALGreen Code and minimizes on-site energy consumption.*		
***MS-2.7**: Encourage the installation of solar panels or other clean energy power generation sources over parking areas.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would comply with the latest energy efficiency standards. The State goal is to increase the use of green building practices. The project would implement required green building strategies through existing regulation that requires the project to comply with various applicable CALGreen requirements. Additionally, the proposed project would enroll in SJCE TotalGreen program.*		
***MS-2.11**: Require new development to incorporate green building practices, including those required by the Green Building Ordinance. Specifically, target reduced energy use through construction techniques (e.g., design of building envelopes and systems to maximize energy performance), through architectural design (e.g., design to maximize cross ventilation and interior daylight) and through site design techniques (e.g., orienting buildings on sites to maximize the effectiveness of passive solar design).*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would implement green building strategies required by existing regulation, including CALGreen and the City's Green Building Ordinance, as applicable. The project would also adhere to applicable 2022 Energy Code (or later, if applicable) requirements for healthcare facilities, which include standards related to decreasing the energy requirements of a building through building envelope assemblies, HVAC, water heating, indoor lighting, outdoor lighting, electrical power distribution, ventilation, and signs.*		
***MS-16.2**: Promote neighborhood-based distributed clean/renewable energy generation to improve local energy security and to reduce the amount of energy wasted in transmitting electricity over long distances.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would be solar-ready by ensuring roof space and conduit infrastructure for "Future PV Array" as required by the California Building Code (Title 24). Additionally, the project would be enrolled in SJCE TotalGreen program.*		

3) Pedestrian, Bicycle & Transit Site Design Measures	**Yes**	**No**
***CD-2.1**: Promote the Circulation Goals and Policies in the Envision San José 2040 General Plan. Create streets that promote pedestrian and bicycle transportation by following applicable goals and policies in the Circulation section of the Envision San José 2040 General Plan.*	☒	☐
a) Design the street network for its safe shared use by pedestrians, bicyclists, and vehicles. Include elements that increase driver awareness.	☒	☐
b) Create a comfortable and safe pedestrian environment by implementing wider sidewalks, shade structures, attractive street furniture, street trees, reduced traffic speeds, pedestrian-oriented lighting, mid-block pedestrian crossings, pedestrian-activated crossing lights, bulb-outs and curb extensions at intersections, and on-street parking that buffers pedestrians from vehicles.	☒	☐
c) Consider support for reduced parking requirements, alternative parking arrangements, and Transportation Demand Management strategies to reduce area dedicated to parking and increase area dedicated to employment, housing, parks, public art, or other amenities. Encourage de-coupled parking to ensure that the value and cost of parking are considered in real estate and business transactions.	☐	☒
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *There are existing Class II bike lanes on both sides of Samaritan Drive that will remain. In accordance with CALGreen Code, the Project will include the installation of bike parking. Improvements would include new curb cuts for the proposed driveway access points, as well as rehabilitation of the existing pedestrian sidewalks. The Project would include a number of travel demand measures (TDM) in each phase. In Phase 1, TDM measures would include right-size parking supply, shared bikes or a dedicated fleet onsite including for cargo, a marketing campaign for alternative transit options, alternative work schedules or telecommuting options, and a ride-matching program to encourage carpooling. Phase 2 TDM measures include a road diet and traffic calming features to reduce the number of vehicle travel lanes, curb extensions, ADA compliant ramps, an on-street parking protected bike lane, a new bus shelter at the transit stop, and crosswalk improvements along Samaritan Drive. Phase 3 TDM measures include additional bicycle parking and installation of a roundabout at the intersection of Samaritan Place and Samaritan Drive with bike lane transitions, enhanced crosswalks and bus mobility, and shorter pedestrian crossings with refuge medians.*		
***CD-2.5**: Integrate Green Building Goals and Policies of the Envision San José 2040 General Plan into site design to create healthful environments. Consider factors such as shaded parking areas, pedestrian connections, minimization of impervious surfaces, incorporation of stormwater treatment measures, appropriate building orientations, etc.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The proposed project would include shaded parking areas, landscaping, and shading of the parking areas and walkways. A primary objective of the project is to enhance landscaping to create natural environments for patients, visitors, and employees. On-site landscaping would meet State water-efficient landscape standards and stage two drought restrictions. Improvements would include rehabilitation of the existing pedestrian sidewalks. The project is anticipated to have a total of 10 different drainage management areas throughout the site, each containing bioretention unlined basins with underdrains for treatment. The project would treat onsite flows prior to discharging them into the City's storm drain system and further comply with all applicable stormwater regulations.*		
***CD-2.11**: Within the Downtown and Urban Village Overlay areas, consistent with the minimum density requirements of the pertaining Land Use/Transportation Diagram designation, avoid the construction of surface parking lots except as an interim use, so that long-term development of the site will result in a cohesive urban form. In these areas, whenever possible, use structured parking, rather than surface parking, to fulfill parking requirements. Encourage the incorporation of alternative uses, such as parks, above parking structures.*	☐	☐

Not Applicable	☒	☐
Describe how the project is consistent or why the measure is not applicable. *The proposed project is not located within the Downtown or Urban Village Overlay areas.*		
***CD-3.2**: Prioritize pedestrian and bicycle connections to transit, community facilities (including schools), commercial areas, and other areas serving daily needs. Ensure that the design of new facilities can accommodate significant anticipated future increases in bicycle and pedestrian activity.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *There are existing Class II bike lanes on both sides of Samaritan Drive that will remain. In accordance with CALGreen Code, the Project will include the installation of bike parking. Improvements would include new curb cuts for the proposed driveway access points, as well as rehabilitation of the existing pedestrian sidewalks. The Project would include a number of travel demand measures (TDM) in each phase. In Phase 1, TDM measures would include right-size parking supply, shared bikes or a dedicated fleet onsite including for cargo, a marketing campaign for alternative transit options, alternative work schedules or telecommuting options, and a ride-matching program to encourage carpooling. Phase 2 TDM measures include a road diet and traffic calming features to reduce the number of vehicle travel lanes, curb extensions, ADA compliant ramps, an on-street parking protected bike lane, a new bus shelter at the transit stop, and crosswalk improvements along Samaritan Drive. Phase 3 TDM measures include additional bicycle parking and installation of a roundabout at the intersection of Samaritan Place and Samaritan Drive with bike lane transitions, enhanced crosswalks and bus mobility, and shorter pedestrian crossings with refuge medians.*		
***CD-3.4**: Encourage pedestrian cross-access connections between adjacent properties and require pedestrian and bicycle connections to streets and other public spaces, with particular attention and priority given to providing convenient access to transit facilities. Provide pedestrian and vehicular connections with cross-access easements within and between new and existing developments to encourage walking and minimize interruptions by parking areas and curb cuts.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *As discussed above, the project includes a TDP Plan that would promote safety and encourage employees to use alternative sources of transportation.*		
***LU-3.5**: Balance the need for parking to support a thriving Downtown with the need to minimize the impacts of parking upon a vibrant pedestrian and transit oriented urban environment. Provide for the needs of bicyclists and pedestrians, including adequate bicycle parking areas and design measures to promote bicyclist and pedestrian safety.*	☐	☐
Not applicable	☒	☐
Describe how the project is consistent or why the measure is not applicable. *The project is not located in the Downtown area. The project's bicycle facilities and pedestrian pathways are described above.*		
***TR-2.8:** Require new development to provide on-site facilities such as bicycle storage and showers, provide connections to existing and planned facilities, dedicate land to expand existing facilities or provide new facilities such as sidewalks and/or bicycle lanes/paths, or share in the cost of improvements.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project's TDM plan requires on-site facilities such as bicycle storage and showers, and various bicycle/pedestrian improvements.*		

TR-7.1: *Require large employers to develop TDM programs to reduce the vehicle trips and vehicle miles generated by their employees through the use of shuttles, provision for car-sharing, bicycle sharing, carpool, parking strategies, transit incentives and other measures.*	☒	☐
Not applicable	☐	☐
The project would include a TDM Plan, which includes measures such as a road diet along Samaritan Drive and roundabout improvements at the Samaritan Drive and Samaritan Place intersection, bike parking facilities, right-size parking supply, and ride-share programs. These TDM Programs would help reduce vehicle miles traveled (VMT) and mobile greenhouse gas emissions.		
TR-8.5: *Promote participation in car share programs to minimize the need for parking spaces in new and existing development.*	☐	☐
Not applicable	☒	☐
Describe how the project is consistent or why the measure is not applicable. *The project is a hospital and medical office use which has a unique employee and visitor situation. Car share programs for patients would not be possible for hospital patients or visitors since there is no regular schedule of patients visiting the office. There are two bus stops along the project site's frontage which would provide alternative transportation for those who can take advantage; however, it is not anticipated that all employees or visitors would be able to utilize this option.*		
4) Water Conservation and Urban Forestry Measures	**Yes**	**No**
MS-3.1*: Require water-efficient landscaping, which conforms to the State's Model Water Efficient Landscape Ordinance, for all new commercial, institutional, industrial and developer-installed residential development unless for recreation needs or other area functions.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The proposed project would include water-efficient landscaping that conforms to the State's Model Water Efficient Landscape Ordinance and the City's Water-Efficient Landscape Ordinance (Chapter 15.11 of the San José Municipal Code). The Project would meet the City of San José's Water Efficient Landscape Requirements. Proposed features include a low-flow, point source irrigation system equipped with a weather-based smart controller, as required. On-site landscaping would meet State water-efficient landscape standards and stage 2 drought restrictions, as requried.*		
MS-3.2*: Promote the use of green building technology or techniques that can help reduce the depletion of the City's potable water supply, as building codes permit. For example, promote the use of captured rainwater, graywater, or recycled water as the preferred source for non-potable water needs such as irrigation and building cooling, consistent with Building Codes or other regulations.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would include low-flow fixtures and appliances as required by City Municipal Code Chapter 15.11. The project would comply with measures to increase water efficiency and green building techniques per applicable building codes. Sustainable features within the project includes installation of water-efficient fixtures and appliances, where possible. The installation of recycled water irrigation systems will also occur in the project if available (note: currently the City does not provide recycled water in the vicinity of the project site).*		
MS-19.4*: Require the use of recycled water wherever feasible and cost-effective to serve existing and new development.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *Per the South Bay Water Recycling (SBWR) system map, the City does not provide recycled water in the vicinity of the project site. The project would utilize recycled water from the proposed recycled water irrigation systems for the outdoor landscaping based on availability.*		

***MS-21.3**: Ensure that San José's Community Forest is comprised of species that have low water requirements and are well adapted to its Mediterranean climate. Select and plant diverse species to prevent monocultures that are vulnerable to pest invasions. Furthermore, consider the appropriate placement of tree species and their lifespan to ensure the perpetuation of the Community Forest.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project is anticipated to plant 530 (24-inch box) trees that will increase overall shading on the site compared to existing conditions. Additional landscaping is proposed throughout the project site and would include a mix of grasses, shrubs, and ground cover. See landscape plans for additional details.*		
***MS-26.1**: As a condition of new development, require the planting and maintenance of both street trees and trees on private property to achieve a level of tree coverage in compliance with and that implements City laws, policies or guidelines.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The project would comply with City landscaping requirements and criteria to incorporate existing trees with new landscaping. The project would enhance the existing landscaping and a majority of the existing perimeter and parking lot landscaping would be removed as part of Project implementation. Of the 414 existing trees, 44 would remain. Project implementation would remove 370 trees, including 41 street trees, and 143 ordinance-sized trees. The remaining 186 trees to be removed are unprotected and are not subject to Municipal Code Section 13.32 provisions. Tree removals would be in accordance with Municipal Code Section 13.32 which requires project applicants to obtain a Tree Removal Permit prior to removing trees on private property. Based on the City's Tree Replacement ratios, the project would be required to plant a total of 920, 15-gallon replacement trees or 460 24-inch box trees or pay equivalent Tree Replacement Fees to the City. The Project proposes to plant 530 new 24-inch box trees on-site and along the Project site street frontages and is in compliance with City laws, policies, and guidelines related to trees.*		
***ER-8.7**: Encourage stormwater reuse for beneficial uses in existing infrastructure and future development through the installation of rain barrels, cisterns, or other water storage and reuse facilities.*	☒	☐
Not applicable	☐	☐
Describe how the project is consistent or why the measure is not applicable. *The Municipal Regional Permit (MRP) allows development projects to use infiltration, evapotranspiration, harvesting and use, or biotreatment to treat full water quality design flow or volume of stormwater runoff, as specified in MRP Provision C.3.d. The City of San José's Environmental Services Department is responsible for stormwater management within the City. The project is anticipated to have a total of 10 different drainage management areas throughout the site, each containing bioretention unlined basins with underdrains for treatment. Project applicants are no longer required to evaluate the feasibility of rainwater harvesting and use before proceeding to biotreatment. Appendix I from SCVURPPP provides guidance on how to estimate the required landscaping or toilet flushing demand to meet C.3.d requirements. The project would treat onsite flows prior to discharging them into the City's storm drain system. There is an existing utility access (water and sewer, stormwater management, dry utilities, and solid waste management) to the project site.*		

GHGRS Strategies

GHGRS #1: The City will implement the San José Clean Energy program to provide residents and businesses access to cleaner energy at competitive rates.

GHGRS #2: The City will implement its building reach code ordinance (adopted September 2019) and its prohibition of natural gas infrastructure ordinance (adopted October 2019) to guide the city's new construction toward zero net carbon (ZNC) buildings.

GHGRS #3: The City will expand development of rooftop solar energy through the provision of technical assistance and supportive financial incentives to make progress toward the Climate Smart San José goal of becoming a one-gigawatt solar city.

GHGRS #4: The City will support a transition to building decarbonization through increased efficiency improvements in the existing building stock and reduced use of natural gas appliances and equipment.

GHGRS #5: As an expansion to Climate Smart San José, the City will update its Zero Waste Strategic Plan and reassess zero waste strategies. Throughout the development of the update, the City will continue to divert 90 percent of waste away from landfills through source reduction, recycling, food recovery and composting, and other strategies.

GHGRS #6: The City will continue to be a partner in the Caltrain Modernization Project to enhance local transit opportunities while simultaneously improving the city's air quality.

GHGRS #7: The City will expand its water conservation efforts to achieve and sustain long-term per capita reductions that ensure a reliable water supply with a changing climate, through regional partnerships, sustainable landscape designs, green infrastructure, and water-efficient technology and systems.

Table B: 2030 Greenhouse Gas Reduction Strategy Compliance

GHGRS Strategy and Consistency Options	Description of Project Measure	Project Conformance
PART 1: RESIDENTIAL PROJECTS ONLY – (Not applicable; Project is not residential)		
Zero Net Carbon Residential Construction 1. Achieve/exceed the City's Reach Code, and 2. Exclude natural gas infrastructure in new construction, or 3. Install on-site renewable energy systems or participate in a community solar program to offset 100% of the project's estimated energy demand, or 4. Participate in San José Clean Energy at the Total Green level (i.e., 100% carbon-free electricity) for electricity accounts associated with the project until which time SJCE achieves 100% carbon-free electricity for all accounts. **Supports Strategies:** GHGRS #1, GHGRS #2, GHGRS #3	**Not Applicable. The project would not include residential uses.**	☐Proposed ☒Not Applicable ☐Not Feasible* ☐Alternative Measure Proposed **The 2030 GHGRS assumed this strategy would be feasible for 50% of residential units constructed between 2020 and 2030.*
PART 2: RESIDENTIAL AND NON-RESIDENTIAL PROJECTS		
Renewable Energy Development 1. Install solar panels, solar hot water, or other clean energy power generation sources on development sites, or 2. Participate in community solar programs to support development of renewable energy in the community, or 3. Participate in San José Clean Energy at the Total Green level (i.e., 100% carbon-free electricity) for electricity accounts associated with the project. **Supports Strategies**: GHGRS #1, GHGRS #3	**Consistent.** The project would be enrolled in SJCE TotalGreen program (approx. 100 percent renewable energy).	☐See Part 1 (Residential projects only) ☒Proposed ☐Not Applicable ☐Not Feasible ☐Alternative Measure Proposed

Building Retrofits – Natural Gas[3] This strategy only applies to projects that include a retrofit of an existing building. If the proposed project does not include a retrofit, select "Not Applicable" in the Project Conformance column. 1. Replace an existing natural gas appliance with an electric alternative (e.g., space heater, water heater, clothes dryer), or 2. Replace an existing natural gas appliance with a high-efficiency model **Supports Strategies:** GHGRS #4	**Not Applicable.** The project does not include a retrofit. Therefore, this strategy is not applicable to the project.	☐Proposed ☒Not Applicable ☐Not Feasible ☐Alternative Measure Proposed
Zero Waste Goal 1. Provide space for organic waste (e.g., food scraps, yard waste) collection containers, and/or 2. Exceed the City's construction & demolition waste diversion requirement. **Supports Strategies:** GHGRS #5	**Consistent.** The proposed development includes an exterior trash enclosure with space for recycling and organic waste collection. Additionally, construction and demolition waste would be diverted to meet City requirements. Per Assembly Bill 341, provided recycling services would divert at least 50 percent of solid waste generation.	☒Proposed ☐Not Applicable ☐Not Feasible ☐Alternative Measure Proposed
Caltrain Modernization 1. For projects located within ½ mile of a Caltrain station, establish a program through which to provide project tenants and/or residents with free or reduced Caltrain passes or 2. Develop a program that provides project tenants and/or residents with options to reduce their vehicle miles traveled (e.g., a TDM program), which could include transit passes, bike lockers and showers, or other strategies to reduce project related VMT. **Supports Strategies:** GHGRS #6	**Not Applicable.** The proposed project is not located within ½ mile of a Caltrain station. Therefore, this strategy is not applicable to the project. The project would include a TDM program.	☐Proposed ☒Not Applicable ☐Not Feasible ☐Alterative Measure Proposed

[3] GHGRS Strategy #4 applies to existing building retrofits and not to new construction; Strategy #2 applies to new construction to reduce natural gas related GHG emissions.

Water Conservation 1. Install high-efficiency appliances/fixtures to reduce water use, and/or include water-sensitive landscape design, and/or 2. Provide access to reclaimed water for outdoor water use on the project site. **Supports Strategies:** GHGRS #7	**Proposed**. The proposed project would comply with water conservation per the California Green Building Standards Code, which requires a 20 percent reduction in indoor water use. The project would include low flow appliances and fixtures. The project would also comply with the City's Water-Efficient Landscape Ordinance (Chapter 15.11 of the San José Municipal Code). Proposed features include a low-flow, point source irrigation system equipped with a weather-based smart controller. On-site landscaping would meet State water-efficient landscape standards and stage 2 drought restrictions.	☒Proposed ☐Not Applicable ☐Not Feasible ☐Alternative Measure Proposed

VSQG	Very Small Quantity Generators

1. EXECUTIVE SUMMARY

Kimley-Horn and Associates, Inc. (Kimley-Horn) was retained by Good Samaritan Hospital (the "Client" or "User") to conduct a Phase I Environmental Site Assessment (ESA) for approximately 19-acres at 2425 and 2333 Samaritan Drive, San Jose, Santa Clara County, California (referred to herein as the "subject property"). This Phase I ESA was performed in accordance with (1) the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI), 40 CFR Part 312 and (2) guidelines established by the American Society for Testing and Materials (ASTM) in the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process/Designation E 152721* (ASTM Standard Practice E 1527-21). The ESA was conducted under the supervision or responsible charge of Cassie Bretschger, Environmental Professional.

The Phase I ESA summary is provided below. Specific details were not included or fully developed in this section, and the Phase I ESA must be reviewed in its entirety for a comprehensive understanding of the results. This report represents our services as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the subject property's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after property renovation or development). Further, these services are not to be construed as legal interpretation or advice.

Viability of this report is subject to ASTM E1527-21 Sections 4.6 and 4.8. This Phase I ESA is presumed viable for up to 180 days from the first date the component listed in Section 4.6 of the ASTM Standard Practice E1527-21 were conducted, which is May 30, 2023.

Table 1.1 Summary Phase I ESA Component Dates

Component	Date
Interviews	June 12, 2023
Review of Government Records	May 30, 2023
Visual Inspection	June 12, 2023
Declaration by Environmental Professional	August 31, 2023

Site Background:

The subject property is located at the address of 2425 and 2333 Samaritan Drive in San Jose, California and is currently operating as a 404-bed acute care hospital. The property was maintained as agricultural from 1935 to 1956. Between 1956 and 1963, development activity began onsite with the construction of Good Samaritan hospital on the western portion of the site (APN 421-36-009). Expansion of the hospital occurred between 1963 and 1968. The eastern portion of the site (APN 421-36-011) was maintained as agricultural land until 1974 when it was developed as surface parking lots and athletic fields. The eastern portion of the site was redeveloped into parking and a day care facility between 1982 and 1993. The subject property is currently developed as a hospital campus comprising of four multi-story towers. Ancillary childcare services, parking, and physical plant facilities are also onsite.

Table 1.2: Property Use Summary	
Item	**Comments**
Number of Parcels and Acreage	Two parcels: 421-36-009 and 421-36-011 Approximately 19 acres in total
Number of Building(s) and Square Footage	The hospital campus consists of four buildings, associated pavement, and native soil surfaces present onsite.
Current Property Use	Hospital campus consisting of four multi-story towers, as well as ancillary childcare services, parking, and physical plant facilities.

Kimley-Horn has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-21 of the Subject Property located at 5192 Bayou Way in Sacramento, Sacramento County, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

Recognized Environmental Conditions

A recognized environmental condition (REC) is defined in the ASTM Standard as the presence or likely presence of a hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. Kimley-Horn did not identify any RECs in association with the Subject Property.

Historical Recognized Environmental Conditions

A historical REC (HREC), as defined in the ASTM Standard, is a past release of any hazardous substance and/or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria. This assessment has revealed no evidence of historical recognized environmental conditions connected with the subject property except the following:

> HREC 1: The subject property is listed as a LUST case with a Site Case Closure dated January 21, 2000, from the Regional Water Quality Control Board (RWQCB) in association with a piping leak from former USTs operations on site. Three USTs formerly operated within the Site, consisting of two 10,000-gallon and one 5,000-gallon diesel tanks, which were removed on June 8, 1999. Soil samples were taken at 3.8-feet below ground surface (bgs) adjacent to the piping and reported low levels of Total Petroleum Hydrocarbon- Diesel range (TPH-D) at 38.0 ppm (mg/kg) in the vicinity of the UST piping. The detection reported is below current RWQCB-San Francisco Region Environmental Screening Levels (ESLs) for TPH-D in commercial/industrial soil, which is 1,200 mg/kg. All USTs were intact upon removal and properly disposed of offsite. The RWQCB issued a “no further action” determination concerning the former USTs on January 21, 2000. The former LUST case with regulatory closure is considered a HREC. Based on the results of confirmation soil sampling, which identified only low concentrations of TPH-D, and the closed regulatory status of the UST case, the former USTs are not an environmental concern to the subject property and Kimley-Horn recommends no further investigation.

Controlled Recognized Environmental Conditions

A controlled REC (CREC), as defined in the ASTM Standard, is a REC resulting from a past release of hazardous substances and/or petroleum products in which the regulatory agency has allowed contamination to remain in place at the property which is subject to the implementation of required controls and/or restrictive use. Kimley-Horn has not identified any evidence of CRECs in association with the Subject Property.

De minimis Condition

De minimis conditions are defined as conditions that generally do not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs nor CRECs.

DMC 1: A 55-gallon drum of a Class 3 hazard (hazard constituents included acetic acid, acetone, chloroform, ethyl alcohol, hydrochloric acid, and isopropanol) was observed. The 55-gallon drum was not housed within secondary containment at the time of the inspection. All materials within the hazardous materials storage area should have secondary containment.

DMC 2: Three 5-gallon and 15-gallon containers of refrigerant were observed stored outside behind a pad-mounted transformer on top of a gravel base. One drum contained fluid. No staining was visible in the vicinity of the drums. The unlabeled containers are considered a *de minimis* condition and should be properly disposed of from the property.

Business Environmental Risks

A Business Environmental Risk (BER), as defined in the ASTM Standard, is a risk which can have a material environmental or environmentally-driven impact on the business associated with the use of a commercial site, and which does not require further investigation to the same degree as a REC. Kimley-Horn did not identify areas of potential concern associated with business environmental risks in connection with the Subject Property during the completion of this Phase I ESA with the exception of the following.

BER 1: Previous agricultural use of the subject property identified during the review of historical aerial photography is a BER. The legal and routine application of herbicides, pesticides, and fertilizers while the subject property was used for agricultural purposes may have resulted in localized impacts to shallow site soils. Given the length of time since agricultural operations have occurred, and the absence of any documentation suggesting pesticides and herbicides were stored or mixed on the subject property, the presence of pesticides and herbicides are not a REC. However, since the property is developed with asphalt or building structures covering the surface of the subject property, there is not a direct exposure pathway imposing risk for human health. Per the ASTM standard, the standard application of herbicides, pesticides, and fertilizers does not constitute a release or materially threat of release, therefore, this is a BER.

BER 2: Currently, two USTs containing diesel fuel are located within the subject property and actively used as back-up fuel for generators. Both tanks were installed after 2000, and 20,000-gallon in size. See Section 4.2 for additional review of the USTs. Based on Figure 3 Proposed Project Build Out Conceptual Site Plan dated September 2023, current redevelopment includes construction of an additional building within the footprint of the current USTs. The USTs should be removed after approval from Santa Clara County Hazardous Materials Compliance Divisions (HMCD) and completion of an UST System Closure Permit Application. Closure will consist of

tank removal, and ancillary piping along with soil sampling to ensure no residual leaks from operating the tank system. Tank and sump removal and sampling activities must be witnessed by a representative from HMCD.

2. INTRODUCTION

The following is a concise summary of the subject property as well as the purpose, methodology, user reliance, significant assumptions, and limitations of this Phase I ESA.

2.1 SUBJECT PROPERTY OVERVIEW

The subject property location is depicted on **Figure 1** and **Figure 2**. The Proposed Project Build Out Conceptual Site Plan are depicted on **Figure 3**. Figures are included in **Appendix A**. Photographs of the subject property are included in **Appendix B**.

Table 2.1 Subject Property Overview

Site Name	Good Samaritan Hospital
Site Location/Address	2425 Samaritan Drive, San Jose, CA 95124
Owner	19 acres
Land Area	The subject property consists of an approximately 13-acre parcel (APN 421-36-009) and an approximately 6- acre parcel (APN 421-36-011) totaling 19 acres.
Legal Description	Historically agricultural and hospital use. Currently occupied by Good Samaritan Hospital (Planned Development zone).
Existing Use/Condition	Good Samaritan Hospital

2.2 PURPOSE AND SCOPE OF SERVICES

This Phase I ESA was performed in accordance with (1) the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries {(AAI), 40 CFR Part 312} and (2) guidelines established by the American Society for Testing and Materials (ASTM) in the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process/Designation E 1527-21* (ASTM Standard Practice E 1527-21).

The purpose of this Phase I ESA was to evaluate the current and historical conditions of the Subject Property in an effort to identify *recognized environmental conditions* (RECs), *controlled recognized environmental conditions* (CRECs) and *historical recognized environmental conditions* (HRECs) in connection with the Subject Property. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs, CRECs and HRECs in connection with the Subject Property.

Additionally, this Phase I ESA was designed to assist the client in developing information to identify RECs in connection with the Subject Property as reflected by the scope of this report. This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews, including local government inquiries, as applicable, and a visual, noninvasive reconnaissance of the Subject Property and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

ASTM E1527-21 contains a new definition of "migrate/migration," which refers to “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” By including this explicit reference to migration in ASTM E1527-21, the Standard clarifies that the potential for vapor migration should be addressed as part of a Phase I ESA. This Phase I ESA has considered vapor migration in evaluation of RECs associated with the Subject Property.

2.3 USER RELIANCE

This Phase I ESA report represents the product of Kimley-Horn’s expertise and judgment in the environmental consulting industry. This report is certified to, can be relied upon by, and has been prepared for the exclusive use of the following entities: Kimley-Horn and Associates, Inc. (Kimley-Horn); and Good Samaritan Hospital, and their respective successors, assigns, affiliates, and subsidiaries. Kimley-Horn acknowledges that these parties may rely on the contents and conclusions presented in this report. Unless stated otherwise in writing, Kimley-Horn makes no other warranty, representation, or extension of reliance upon the findings of this report to any other entity or third party.

Reliance on the Phase I ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal with Kimley-Horn and Associates, Inc. Standard Provisions and the Phase I ESA report. The limitation of liability defined in the Standard Provisions is the aggregate limit of Kimley-Horn’s liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-21 Sections 4.6 and 4.8. If the Phase I ESA will be used by a different user (third party) than the user for whom the Phase I ESA was originally prepared, the third party must also satisfy the user’s responsibilities in Section 6 of ASTM E1527-21.

2.4 SIGNIFICANT ASSUMPTIONS

Pursuant to ASTM Standard Practice E 1527-21, Kimley-Horn assumes that the information provided by all sources and parties, including the User as Good Samaritan Hospital, is accurate and complete, except where obvious inconsistencies or inaccuracies were identified.

2.5 LIMITATIONS, DEVIATIONS, AND SPECIAL TERMS AND CONDITIONS

There were no deviations from the ASTM Standard during the preparation of this report. Any physical limitations identified during the completion of this report are referenced in Section 4.0.

This Phase I ESA is viable for up to 180 days from the first date the component listed in Section 4.6 of the ASTM Standard Practice E1527-21 were conducted, which is November 26, 2023.

Based upon the agreed-on scope of services, this Phase I ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e., evaluation of the presence of vapors within a building structure), or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several

sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources is not warranted hereunder. This ESA was further limited by the following:

- Title records were not provided during this investigation.

Based on other available resources, these data gaps are not likely to affect the conclusions of this report and are not significant.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

3. USER PROVIDED INFORMATION

The ASTM Standard defines a User as "the party seeking to use Practice E 1527-21 to complete an environmental site assessment of the Subject Property. A User may include, without limitation, a potential purchaser of Subject Property, a potential tenant of Subject Property, an owner of the Subject Property, a lender, or a property manager." The User has specific obligations for completing a successful application of this practice as outlined in Section 6 of the ASTM Standard Practice E 1527-21.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "Brownfield's Amendments"), the User must provide certain information (if available) identified in the User Questionnaire to the Environmental Professional (EP). Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. The County of Sacramento owns the Subject Property. The County has elected to complete a Phase I ESA in association with the proposed development of the property. Failure to provide a completed User Questionnaire constitutes a data failure, which is a type of data gap. However, the data gap is not considered significant because there is no pending real estate transaction, and other information and/or personal experience did not raise reasonable concerns involving the data gap.

3.1 USER QUESTIONNAIRE

The following table summarizes the responses to the User Questionnaire completed by completed by Justin Wilchynski the Construction Project Manager with Good Samaritan. A copy of the User Questionnaire is attached in **Appendix C**.

Table 3.1 Summary of User Questionnaire Responses

Client Questionnaire Item	Client's Response	
	Yes	No
Do you know the past uses of the Subject Property?	X This land was previously used for agricultural purposes.	
Do you know of specific chemicals that are present or once were present at the Subject Property?	X List of hazardous materials within the site provided.	
Do you know of any past or present underground storage tanks or above ground storage tanks?	X Current and past tanks	

Do you know of spills or other chemical releases that have taken place at the Subject Property?		X
Are you aware of any environmental liens filed or recorded against the subject property under federal, tribal, state, or local law?		X
Do you have any specialized knowledge or experience related to the subject property or nearby properties? Has a Phase I ESA ever been performed on the site? If so, was the site found to be contaminated with hazardous materials and/or petroleum substances? Was further assessment recommended?		X
Based on your knowledge and experience related to the Subject Property, are there any obvious indicators that point to the presence or likely presence of releases at the Subject Property?		X
Other Information per X3.1		
Reason why the Phase I ESA is being performed:	Property redevelopment for CEQA	
Type of property and transaction being performed:	N/A	
Any other knowledge or experience with the Subject Property that may be pertinent to the environmental professional (any available prior environmental site assessment reports, documents, correspondence, etc., concerning the Subject Property and its environmental condition):	No	

3.2 RECORDED LAND TITLE RECORDS

A 50-year chain of title search was not conducted for the Subject Property by Kimley-Horn. Furthermore, the User did not provide Kimley-Horn with a 50-year chain of title. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report. As such, this is considered a limiting condition; however, based on the other data reviewed for the Subject Property, it is not considered a significant data gap.

3.3 ENVIRONMENTAL LIENS, ACTIVITY AND USE LIMITATIONS, AND GOVERNMENT INSTITUTIONAL AND ENGINEERING CONTROLS

An Environmental Lien and AUL Search Report for the two parcels within the Subject Property was produced by EDR and was reviewed as part of this Phase I ESA (**Appendix D**). No liens or use limitations were identified. The deed for the parcels is vested to Good Samaritan Hospital, L.P.

4. SITE RECONNAISSANCE

Information contained in this section is based on a visual reconnaissance conducted while walking through the Subject Property and the accessible interior areas of structures, if any, located on the Subject Property. The Subject Property and adjoining properties are depicted on the Site Plan, which is included in **Figure 2** of **Appendix A**. Photo documentation of the Subject Property at the time of the visual reconnaissance is provided in **Appendix B**.

Table 4 Summary of General Site Information

Site Reconnaissance				
Field Personnel	Cassie Bretschger, Damian Arnaiz			
Date	June 15, 2023			
Weather Conditions	Sunny			
Subject Property Contact/Title	Justin Wilchynski			
Building Description				
Building/ Improvement Id	Building Use	Year Built	Number of Stories	Approx Sq FT
Building 1	Main Hospital	Mid 1990s	4	Unknown
Building 2	Helipad	Late- 1990s	2	Unknown
Building 3	Temporary offices (3x)	Late-2010s	1	Unknown
Building 4	CT/PET scan	Mid-2000s	1	Unknown

4.1 SITE OBSERVATIONS

The following table summarizes the Subject Property observations. Affirmative responses are discussed in more detail following the table.

Table 4.1 Summary of Site Observations

Category	Item or Feature	Observed or Identified
Site Operations, Processes, and Equipment	Emergency generators	Yes- observed. Two emergency generators are maintained on the east side of the hospital. Generators are new but

		exact installation date in unknown.
	Elevators	Yes- observed. Multiple elevators located throughout hospital facility. Maintained by Otis Worldwide Corporation monthly. No spills/ongoing maintenance issues reported.
	Air compressors	Yes- observed. Air compressors are located within the basement.
	Hydraulic lifts	Yes- observed. Hydraulic lifts were observed within the basement.
	Dry cleaning	No
	Photo processing	No
	Ventilation hoods and/or incinerators	Yes- observed. Ventilation hoods were observed in the refurbished kitchen.
	Waste treatment systems and/or water treatment systems	No
	Heating and/or cooling systems	Yes- observed. The property is currently connected to a HVAC system.
	Paint booths	No
	Sub-grade mechanic pits	No
	Wash-down areas or carwashes	No
	Pesticide/herbicide production or storage	No
	Printing operations	No
	Metal finishing (e.g., electroplating, chrome plating, galvanizing, etc.)	No

	Salvage operations	No
	Oil, gas or mineral production	No
	Other processes or equipment	No
Aboveground Chemical or Waste Storage	Aboveground storage tanks	Yes- observed. Portable office building's black water is served by above ground storage tank. Additionally, two- liquid oxygen ASTs are observed within the property.
	Drums, barrels and/or containers ≥ 5 gal	Yes- observed. Hazardous and non-hazardous drums, barrels and containers observed throughout the site. Hazardous waste was observed in the designated hazardous waste storage area. Staining observed in hazardous waste storage area. Hazardous waste was observed outside of hazardous waste storage area as well.
	MSDS or SDS	Yes- identified. SDS reported by Owner's representative but not observed.
Underground Chemical or Waste Storage, Drainage or Collection Systems	USTs or ancillary UST equipment	Yes- identified. Manholes of USTs observed during site reconnaissance. Two 20,000- gallon USTs are located within the subject property.
	Sumps, cisterns, French drains, catch basins and/or dry wells	Yes- observed. Three sewer sumps and one stormwater sump were observed.
	Grease traps	Yes- observed. Grease trap located in new and existing kitchens.

	Septic tanks and/or leach fields	Yes- observed. Above ground septic tank services black water from portable office building.
	Oil/water separators, clarifiers, sand traps, triple traps, interceptors	No
	Pipeline markers	No
	Interior floor drains	Yes- observed. Multiple interior floor drains located throughout the facility. No staining observed near interior floor drains.
Electrical Transformers/ PCBs	Transformers and/or capacitors	Yes, observed. Multiple pad mounted transformers were located within the property.
	Other equipment	No
Releases or Potential Releases	Stressed vegetation	No
	Stained soil	No
	Stained pavement or similar surface	Yes observed. Stained pavement observed in several locations. Refer to photo log, for photos of stained pavement. The staining was not indicative a s major spill or release.
	Leachate and/or waste seeps	Yes- observed. Waste seep Observed at drain near loading dock/disposal.
	Trash, debris and/or other waste materials	Yes- observed. Trash, debris, and waste materials observed onsite in the vicinity of the loading dock
	Dumping or disposal areas	Yes- observed. Controlled disposal areas located throughout the site. Centralized collection facility is located in the vicinity of the loading dock.

	Construction/demolition debris and/or dumped fill dirt	Yes- observed. CONEXs Housing construction materials located in north parking lot. Construction Debris located near CONEXs.
	Surface water discoloration, odor, sheen, and/or free-floating product	No
	Strong, pungent or noxious odors	No
	Exterior pipe discharges and/or other effluent discharges	No
Other Notable Site Features	Surface water bodies	No
	Quarries or pits	No
	Wastewater lagoons	No
	Wells	Yes- identified. Three active wells are identified onsite through the Santa Clara Valley Water District. Well, 08S01W11E001 is identified as an active, 24-inch water production well with a depth of 472 feet under Permit. Number 91W1944). The remaining two wells are in association, with the E and W Elevator, likely associated with the elevator sumps under Permit numbers 03W00418, 03W00419. Additionally, two unregistered wells are identified as destroyed (Permit numbers 98D00770 and 98D00768).

4.2 CURRENT OPERATIONS

The subject property is currently operating as an acute care hospital. There are also ancillary childcare services, parking, and physical plant facilities onsite.

At the time of site reconnaissance, the subject property was developed with multiple medical office buildings and operating as an acute care hospital with ancillary childcare services, parking, heliport, and supporting medical offices.

A basement was present beneath one of the main hospital buildings, which was occupied by facility maintenance personnel for storage of building maintenance supplies and equipment, hazardous materials storage area, and multiple sanitary sewer and storm drain sumps observed within the concrete floor slab of the basement. The three sumps appeared to discharge to the sanitary sewer system with the intent to limit flooding of the basement. Common maintenance supplies such as lubricants, adhesives and cleaning products were observed along with the bio-hazardous storage room. Additionally, a mechanical room with a natural gas fueled boiler was observed. The boilers had been replaced within the last decade and appeared in good condition.

During site reconnaissance above ground septic systems, welding gas, hazards materials storage areas, sump associated with sanitary operations, USTs and ASTs were observed.

Both hazardous, bio-hazardous and common building maintenance supplies are used and stored on-Site for facility maintenance purposes. Diesel fuel for a means of back-up fueling material along with hydraulic oil also is present within elevator equipment. A list of hazardous materials outside of the above-described is included in **Appendix F**. Wastes were stored in appropriately labeled containers with the exception of the following:

- One 55-gallon drum of a Class 3 hazard (hazard constituents included acetic acid, acetone, chloroform, ethyl alcohol, hydrochloric acid, and isopropanol) was observed. The 55-gallon drum was not housed within secondary containment at the time of the inspection. All materials within the hazardous materials storage area should have secondary containment.

- Three 5-gallon and 15-gallon containers of refrigerant were observed stored outside behind a pad-mounted transformer on top of a gravel base. One drum contained fluid. No staining was visible in the vicinity of the drums. The unlabeled containers are considered a *de minimis* condition and should be properly disposed of from the property.

During site inspection no evidence of hazardous materials spills was observed on the Subject Property and general housekeeping and record keeping appeared orderly; the potential for these hazardous materials to have significantly impacted the Site appears low.

Two underground storage tanks are located within the subject property and actively used as back-up fuel for generators. Both tanks were installed after 2000, and are 20,000-gallon in size, constructed of double walled steel material with jacketed secondary containment, registered with the State of California with record of regular tank integrity testing, and no leaks reported. The presence of the petroleum products stored properly stored in doubled walled UST with secondary containment at the property is not the result of a release. Furthermore, a new tank in good condition, with no evidence of leaks, spills, etc. does not constitute a material threat of a release. Evidence of UST condition reviewed included Operating Permit, Monitoring Plans of the tanks, associated piping, and secondary containment, and Response Plans are located in **Appendix F**.

The location of the USTs are within the area planned for redevelopment Building C as depicted in **Figure 3** – Phase I Conceptual Site Plan. Prior to redevelopment and grading, the USTs should be removed under the oversight of the Santa Clara County Hazardous Materials Compliance Divisions (HMCD) and after completion of an UST System Closure Permit Application. Closure will consist of tank removal, and ancillary piping along with soil sampling to ensure no residual leaks from operating the tank system. Tank and sump removal and sampling activities must be witnessed by a representative from HMCD.

Additionally, two aboveground storage tanks (ASTs) are located within the Subject Property and actively used to store liquid oxygen. As liquid oxygen is not considered a hazardous material by the ASTM

standard, the contents of the onsite ASTs are not considered a REC at this time. Provisions should be taken around the liquid oxygen ASTs due to the quantity of the material stored onsite and Material Safety Data sheets (MSDS) followed.

4.3 ADJOINING PROPERTIES

The following section provides information about the adjoining properties obtained during the Subject Property reconnaissance and through review of reasonably ascertainable information. Visual observations of adjoining properties (from Subject Property boundaries) are summarized below.

Table 4.3 Summary of Adjoining Properties

Direction	Description	REC/BER
North	Highway 85	No outstanding violation identified. Not a REC/ BER.
East	Samaritan Place followed by Cambrian Center (a retirement home)	No outstanding violation identified. Not a REC/ BER.
South	Samaritan Drive, followed by medical offices (San Jose Sports Medicine & Orthopedics, VIP Fibroid Center, Group Orthopedics)	No violations without return to compliance were identified. Not a REC/BER.
West	Parking lot, Medical offices (Spectrum Eye Physicians, Samaritan Apothecary Pharmacy, private medical practices)	No outstanding violation identified. Not a REC/ BER.

5. RECORDS REVIEW

5.1 PHYSICAL SETTING

The following is a summary of the physical setting of the Subject Property.

Table 5.1 Summary of Physical Setting of the Subject Property

Physical Setting Information		Source
Topography		
Site Elevation	Approximately 285 feet above sea level	United States Geological Survey Division (U.S.G.S.) 7.5-Minute Topographic Map San Jose West, Quadrangle, California, 2021.
Topographic Gradient/ Surface Water Runoff	Generally, to the north-northeast	
Closest Surface Water	Los Gatos Creek, approximately 1,500 meters to the west.	
Soil Characteristics		
Soil Type; Description	.140- Urban land- Flaskan complex, 0 to 2 percent slopes, characterized by alluvium derived from metamorphic and sedimentary rock and/or alluvium derived from metavolcanics. The soil's depth to restrictive feature and depth to water table is more than 80 inches. There is no frequency of ponding and a hydric soil rating of "no" for hydric soil rating and hydrologic soil group C.	U.S. Department of Agriculture: Natural Resources Conservation Service (NRCS) Web Soil Survey (**Appendix F**) http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx,
Geology/Hydrogeology		
Geologic Formation	The Subject Property is located within the Older Surficial Sediments (Qoa/Qt) – late Pleistocene	Dibblee, T.W., and Minch, J.A, 2007, *Geologic map of the Cupertino and San Jose West quadrangles, Santa Clara and Santa Cruz Counties, California*
Hydrogeology	Groundwater in the area is estimated to be approximately 150 feet below ground surface.	R.T. Hanson, Zhen Li, and C.C. Faunt, 2004, *Documentation of the Santa Clara Valley Regional Groundwater/Surface-Water Flow Model, Santa Clara Valley, California*
Oil and Gas Wells		

Current Oil and Gas Wells on Subject Property	No records for active wells associated with the Subject Property were found.	State of California Department of Conservation Division of Geologic Energy Management (CalGEM) online mapping application (maps.conservation.ca.gov), accessed June 15, 2023.
Historical Oil and Gas Wells on Subject Property	No records for active wells associated with the Subject Property were found.	

5.2 HISTORICAL RECORDS REVIEW

Kimley-Horn reviewed reasonably ascertainable records to identify obvious uses of the Subject Property from the present, back to the property's obvious first developed use, or back to 1935, whichever is earlier. Reasonably ascertainable records reviewed as part of this Phase I ESA documented the use of the property back to at least 1935.

Readily available historical selected historical aerial photographs, USGS topographic maps, city directories, and historical fire insurance maps produced by the Sanborn Map Company were requested from Environmental Data Resources (EDR) to evaluate past uses and relevant characteristics of the Subject Property and surrounding properties.

Previous agricultural use of the Subject Property identified during the review of historical aerial photography is considered a BER. The legal and routine application of herbicides, pesticides, and fertilizers while the Subject Property was used for agricultural purposes may have resulted in localized impacts to the site soils. Given the length of time since agricultural operations have occurred, and the absence of any documentation suggesting pesticides and herbicides were stored or mixed on the Subject Property, the presence of pesticides and herbicides are not a REC.

Reviewed historical topographic maps, city directories, and aerial photographs are summarized below. The sources and years reviewed are identified below.

Table 4: Aerial Photograph Summary

Year and Source	Summary of Information
1939 EDR	The site and surrounding properties appear to be used for agriculture, specifically orchards. There are no structures visible at the Site. There is a single-family home to the south of the Site.
1948 EDR	No significant changes to the Site were observed.
1950 EDR	No significant changes to the Site were observed.
1956 EDR	No significant changes to the Site were observed.
1963 EDR	Signs of grading operations and temporary structures are observed on the west side of the site. The east side of the site is still an agricultural use. Single family subdivisions have been constructed to the south and west of the site.

1968 EDR	A multiple story structure was constructed that appears to be Good Samaritan hospital. There is surface parking throughout. The eastern portion of the site is still an agricultural use. Properties to the west are developed into a commercial use.
1974 EDR	Further structural additions have been made to the hospital. The eastern portion of the site has been developed to an institutional use (athletic fields). Properties to the west are further developed.
1982 EDR	No significant changes to the Site were observed. Development offsite continues to expand. Grading for Highway 85 begins.
1993 EDR	The institutional use onsite has been converted to a commercial (office) use. The properties to the west are further developed. The properties to the east are developed as a residential use.
1998 EDR	No significant changes to the Site were observed. Surrounding properties continue to increase in density.

Kimley-Horn attempted to review reasonably ascertainable Sanborn Fire Insurance Maps for the Subject Property. EDR searched for available Sanborn Fire Insurance and stated that no coverage was available for the Subject Property. The no coverage letter is included in **Appendix D**.

Table 5.2-2 Historical City Directories Summary

Direction	Description
Subject Property	The address appears beginning in 1975. Listings associated with the Subject Property address include Good Samaritan Hospital (multiple departments), Athletic Rehabilitation Associates, Parenting & Breastfeeding Services, Bright Horizon Family Center, Columbia Rehabilitative Services. In 2020, individual doctor's names begin appearing with building permits.
North	There were no addresses east of the Subject Property listed in the historical city directories.
East	There were no addresses east of the Subject Property listed in the historical city directories.
South	Listed addresses to the south of the Subject Property include individuals, Arthroscopy and Sports Medicine, Samaritan Medical Lab, Radiological Associates Medical Group, Samaritan Ear, Nose and Throat Associates, California Skin Institute, Teen Therapy Center.
West	There were no addresses east of the Subject Property listed in the historical city directories.

5.3 REGULATORY RECORDS REVIEW

An environmental database search for the Subject Property and the surrounding area was performed by EDR, a contract information services company, using ASTM E1527-21 standard radii. The purpose of the records review was to identify RECs in connection with the Subject Property. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated, and the scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases. A copy of the EDR Database Report is attached in its entirety in **Appendix E**.

In some of the following subsections, the words up-gradient, cross-gradient and down-gradient refer to the topographic gradient in relation to the Subject Property. The groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the Subject Property cannot be directly ascertained.

5.3.1 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate subject property boundaries (**Table 5.3-1**). Database definition, descriptions, and the database search report are included in **Appendix E**.

Table 5.3-1 Summary of Federal and State Database Results

Regulatory Agency Database	Search Distance (Miles)	Number of Sites
Federal Databases		
National Priority List (NPL)	1	4
Proposed NPL	1	0
NPL Liens	1	0
Delisted NPL	1	0
Federal Facility	0.5	0
Superfund Enterprise Management System (SEMS)	0.5	0
SEMS-ARCHIVE	0.5	0
Corrective Action Report (CORRACTS)	1	0
RCRA - Treatment, Storage and Disposal (RCRA-TSDF)	0.5	0
RCRA - Large Quantity Generators (RCRA-LQG)	0.25	1
RCRA - Small Quantity Generators (RCRA-SQG)	0.25	4
RCRA - Very Small Quantity Generators (RCRA-VSQG)	0.25	0

Land Use Control Information System (LUCIS)	0.5	0
Engineering Controls Sites List (US ENG CONTROLS)	0.5	0
Institutional Controls Sites List (US INST CONTROLS)	0.5	0
Emergency Response Notification System (ERNS)	Subject Property	0
State Databases		
Solid Waste Facilities/Landfill Sites (SWF/LF)	0.5	0
Leaking Underground Storage Tank Sites (LUST)	0.5	3
Leaking Petroleum Storage Tanks (LTANKS)	0.5	0
FEMA Underground Storage Tank Listing (UST)	0.25	0
UST	0.25	3
Registered Petroleum Storage Tanks (AST)	0.25	0
Engineering Controls Sites Listing (ENG CONTROLS)	0.5	0
Voluntary Remediation Program (INST CONTROL)	0.5	0
Voluntary Cleanup Program (VCP)	0.5	0
Brownfields Site Specific Assessments (Brownfields)	0.5	0

In addition to the above ASTM-required listings, Kimley-Horn reviewed other federal, state, local, and proprietary databases provided by the database firm. A list of the additional reviewed databases is included in the regulatory database report included in **Appendix E**.

Kimley-Horn's review of the referenced databases also considered the potential or likelihood of contamination from adjoining and nearby facilities. To evaluate which of the adjoining and nearby facilities identified in the regulatory database report present an environmental risk to the Subject Property, Kimley-Horn considered the following criteria:

- The type of database on which the adjoining/nearby property is identified.
- The topographic position of the property relative to the Subject Property.
- The direction and distance of the identified facility from the Subject Property.
- Local soil conditions in the Subject Property area.
- The known and/or inferred groundwater flow direction in the Subject Property area.
- The status of the respective regulatory agency-required investigations and/or cleanup associated with the identified facility.

- Surface and subsurface obstructions and diversions (e.g., buildings, roads, sewer systems, utility service lines, rivers, lakes, and ditches) located between the identified facility and the Subject Property.

Only those facilities that are judged to present a potential environmental risk to the Subject Property and/or warrant additional clarification are further evaluated.

Table 5.3-2 Summary of Listed Facilities

Facility Name and Location	Estimated Distance / Direction/Gradient	Database Listings	Is a REC, CREC, or HREC to the Subject Property
Stanford Health Care	0.12 miles (WNW)	RCRA-LQG CERS HAZ WASTE CUPA SANTA CLARA HAZMAT	The identified listings are typical for medical uses, as they are related to typical materials used at an acute medical care facility. No violations were found associated with Stanford Health Care.
Santa Clara Valley MRI	0.12 miles (WNW)	RCRA-SQC	The identified listings are typical for medical uses, as they are related to typical materials used at an MRI facility. No violations were found associated with Santa Clara Valley MRI.
Northern California Heart Center	0.12 miles (WNW)	RCRA-SQC	The identified listings are typical for medical uses, as they are related to typical materials used at a medical care facility. No violations were found associated with the Northern California Heart Center.
Los Gatos Foot and Ankle Center	0.22 miles (NW)	RCRA-SQC	The identified listings are typical for medical uses, as they are related to typical materials used at a medical care facility. No violations were found associated with the Los Gatos Foot and Ankle Center.
Specialty Services- Los Gatos	0.22 miles (NW)	RCRA-SQC	The identified listings are typical for medical uses, as they are

			related to typical materials used at a medical care facility. No violations were found associated with the Specialty Services- Los Gatos.
Los Gatos Nissan	0.466 miles (WSW)	LUST	The identified listings are typical for auto service uses. No violations were found associated with Los Gatos Nissan. The case associated with the site was closed on January 17, 1992 with a No Further Action letter from the RWQCB documenting satisfactory site cleanup. The closed case is not considered a concern for the subject property.
Exxon	0.454 miles (N)	LUST	The identified listings are typical for gas stations uses. No violations were found associated with Exxon. The case associated with the site was closed on September 27, 2000 with a No Further Action letter from the RWQCB documenting satisfactory site cleanup. The closed case is not considered a concern for the subject property.

5.4 OTHER ENVIRONMENTAL RECORDS

Kimley-Horn reviewed information from the following agencies:

- EPA's Enforcement & Compliance History Online (ECHO)
- EPA's NEPAssist Database
- California State Water Resource Control Board (SWRCB) Geotracker

- California Department of Toxic Substance Control (DTSC) Envirostor
- USGS National Water Information System Database (NWIS)

Kimley-Horn reviewed the U.S. EPA's Environmental Compliance History Online (ECHO) and NEPAssist database for records of regulated facilities on and surrounding the subject property. The subject property was not identified in the ECHO as a regulated facility. No violations were issued associated with this listing. There were no regulated facilities noted with significant violations in the vicinity of the subject property.

Kimley-Horn reviewed the USGS NWIS database for records of well construction permit (WCP) on the subject property. Review of the available documentation did not identify public supply wells on the subject property. Review of the Santa Clark Valley Water District's database did show three active wells operating onsite. One well was identified for water production; the other two support the hospital's east and west elevators. Two additional wells were identified as destroyed.

5.5 VAPOR EVALUATION

The ASTM E 1527-21 document standardizes the terms release and migration consistent with those used in CERCLA and AAI. As such, potentially harmful vapors must be evaluated during the completion of a Phase I ESA.

Kimley-Horn performed a Tier 1 Vapor Encroachment Screening (VES) in accordance with E2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* (2015) with the purpose of identifying if a Vapor Encroachment Condition (VEC) exists in association with the subject property. A VEC is defined as the presence or likely presence of contaminants of concern (COC) vapors in the subsurface of the subject property caused by a release of hazardous substances and/or petroleum compounds into soil and groundwater. Current and historical uses were evaluated within the Area of Concern (AOC) during the completion of the Tier 1 VES. As indicated in ASTM 2600-15, the radial distance of the AOC for non-petroleum hydrocarbon COCs (i.e., chlorinated VOCs) is 1/3-mile (1,760 ft.) and 1/10 mile (528 ft.) for petroleum hydrocarbons.

According to the reasonably ascertainable information reviewed during this screening process, Kimley-Horn has determined that a VEC does not exist within the specific radial distance. No vapor sampling was conducted in association with this VES and the subject property.

Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions

5.6 BUILDING DEPARTMENT/PROPERTY APPRAISER INFORMATION

Kimley-Horn did not obtain building records from the City of San Jose; however, Building Permit data was researched by EDR. EDR reported that accessed building permits from the City of San Jose. The report included building permit records from 1998 to 2023 ranging from electrical and mechanical upgrades to structural additions to the hospital campus.

Kimley-Horn reviewed reasonably ascertainable assessment information provided by the Santa Clara County Assessor's office. The Assessor's office valued the total real property across both parcels at $123,972,773 ($53,025,677 for land and $70,947,096 for improvements).

5.7 PRIOR REPORTS

Kimley-Horn was not provided any previous environmental reports for review; however, multiple reports were identified from agency review. The Subject Property is listed as a LUST case with a Site Case Closure dated January 21, 2000, from the Regional Water Quality Control Board (RWQCB). The following details records from the Case Closure Summary:

- Three USTs formerly operated within the Site including two 10,000-gallon and one 5,000-gallon diesel tanks, which were removed from the Site on June 8, 1999. The ancillary piping associated with the tanks was removed, and during excavation, the onsite inspector indicated a potential leak from the piping. Soil samples were taken at 3.8-feet below ground surface (bgs) and reported low concentrations of Total Petroleum Hydrocarbon- Diesel range (TPH-D) at 38.0 ppm (mg/kg) in with the vicinity of the UST piping. All USTs were intact upon removal.

- The Santa Clara Valley Water District did not indicate there was substantial evidence of a significant release and no corrective action was required for the former USTs or leaking pipe and indicated there was a low severity of contamination detected beneath the USTs. The site closure documentation was in concurrence with RWQCB, and San Jose Fire Department (CUPA).

6. INTERVIEWS

The objective of completing interviews with knowledgeable Subject Property contacts is to obtain information about the uses and physical characteristics of the property. The following individuals were interviewed regarding the current and historical use of the Subject Property.

Interviews

The subject property is owned by Good Samaritan Hospital of Santa Clara Valley. Kimley-Horn has discussed the property with Mr. Justin Wilchynski, Chief of Construction of Good Samaritan Hospital.

During the inspection, interviews were conducted with both Mr. Wilchynski and Mr. Robby Sayoya. Mr. Sayoya is the Plant Operations Engineer of Good Samaritan Hospital and provided knowledge of the Subject Property for over 10 years and considered the Key Site Manager. Key items discussed during the interview included:

- Location, storage and recycling processing for both hazardous and biohazardous materials associated with hospital operations.
- History of UST removal and installation along with reports from the RWQCB described in Section 5.7

6.1 STATE AND/OR LOCAL AGENCY INQUIRES

Table 6.1 Summary of State and/or Local Agency Inquires

Agency Contacted/	Contact Method/Date	Response
San Jose Building Department	Emailed 06/2023	Kimley-Horn submitted a Request to the San Jose Buildingdepartment. At the time of reporting a response was not received to the request for information. If Kimley-Horn does receive a response, and it changes the findings of the report, the client will be notified.
County of Santa Clara, Department of Planning and Development	Emailed 05/30/2023	Santa ClaraCounty providedseveral documents in response to the inquiry on 5/4/2023, responding to a request for records information. TheCounty provide official Notice of Inspection, California Environmental Reporting System (CERS) reports, and Business Documents from 2005 to 2023, which are included in **Appendix F**.
Department of Toxic Substance Control	Emailed 05/30/2023	The Department of Toxic Substance Control provided a report on May 2, 2023, responding to a request for records information on other DTSC unit's and State agencies to contact. If Kimley-Horn does receive a response, and it changes the findings of the report, the client will be notified. The online database system, Envirostor, was reviewed and information pertaining to the Site. No cleanup sites were identified within 1000 feet of the property.

California Regional Water Quality Control Board (RWQCB) – San Francisco Bay Region	Emailed 5/30/2023 and Online records search	Kimley- Horn submitted a Request to the RWQCB and did not respond to the request for information. If Kimley-Horn does receive a response, and it changes the findings of the report, the client will be notified. The RWQCB's online database system, Geotracker, was reviewed and information pertaining to the Site is documented within Section 5.3.1. of this report. .
County of Santa Clara Fire Department (CUPA)	Online records request 9/4/2023	Kimley-Horn submitted a Public Records Act Request to the County of Santa Clara Fire Department. The County CUPA returned records for the current USTs, Notice of Inspections, which are filed within Appendix F
Department of Toxic Substances Control (DTSC)	Emailed 05/30/2023	The Department of Toxic Substance Control provided a report on May 2, 2023, responding to a request for records information on other DTSC unit's and State agencies to contact with no records. The online database system, Envirostor, was reviewed and information pertaining to the Site. No cleanup sites were identified within 1000 feet of the property
Santa Clara County Department of Environmental Health	Emailed 05/2023	Kimley Horn submitted a Request to Santa Clara Department of Environmental Health. At the time of reporting a response was not received.
Well Finder (Well Star)	Online search	Kimley-Horn reviewed the online WellStar website, and no oil or gas wells were observed within the Subject Property.

7. FINDINGS AND OPINIONS

The logic and reasoning used by the environmental professional in evaluating information collected during the course of the assessment related to findings shall be discussed. The opinions shall specifically include the environmental professional's rationale for concluding that a finding is or is not a recognized environmental condition, controlled recognized environmental condition, historical recognized environmental condition, or de minimis condition insofar as the findings pertain to each of these conditions.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-21 for the 9.0-acre property located at 2333 and 2425 Samaritan Drive, San Jose, California (subject property). Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

7.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

A recognized environmental condition (REC) is defined in the ASTM Standard as the presence or likely presence of a hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. This assessment has not revealed evidence of recognized environmental conditions connected with the Subject Property.

7.2 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

A CREC is a recognized environmental condition that is being appropriately characterized and remediated in accord with, and under the supervision of, authorized governmental agency charged with oversight of such recognized environmental condition. This assessment has not revealed evidence of controlled recognized environmental conditions connected with the Subject Property.

7.3 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

A historical REC (HREC), as defined in the ASTM Standard, is a past release of any hazardous substance and/or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria. This assessment has not revealed evidence of historical recognized environmental conditions connected with the Subject Property except the following:

> HREC 1: The subject property is listed as a LUST case with a Site Case Closure dated January 21, 2000, from the Regional Water Quality Control Board (RWQCB) in association with a piping leak from former USTs operations on site. Three USTs formerly operated within the Site, consisting of two 10,000-gallon and one 5,000-gallon diesel tanks, which were removed on June 8, 1999. Soil samples were taken at 3.8-feet below ground surface (bgs) adjacent to the piping and reported low levels of Total Petroleum Hydrocarbon- Diesel range (TPH-D) at 38.0 ppm (mg/kg) in the vicinity of the UST piping. The detection reported is below current RWQCB-San Francisco Region Environmental Screening Levels (ESLs) for TPH-D in commercial/industrial soil, which is 1,200 mg/kg. All USTs were intact upon removal and properly disposed of offsite. The RWQCB issued a "no further action" determination concerning the former USTs on January 21, 2000. The former LUST case with regulatory closure is considered a HREC. Based on the results of confirmation soil sampling, which identified only low concentrations of TPH-D, and the

closed regulatory status of the UST case, the former USTs are not an environmental concern to the subject property and Kimley-Horn recommends no further investigation.

7.4 *De minimis* Condition

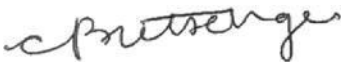
De minimis conditions are defined as conditions that generally do not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs nor CRECs.

DMC 1: A 55-gallon drum of a Class 3 hazard (hazard constituents included acetic acid, acetone, chloroform, ethyl alcohol, hydrochloric acid, and isopropanol) was observed. The 55-gallon drum was not housed within secondary containment at the time of the inspection. All materials within the hazardous materials storage area should have secondary containment.

DMC 2: Three 5-gallon and 15-gallon containers of refrigerant were observed stored outside behind a pad-mounted transformer on top of a gravel base. One drum contained fluid. No staining was visible in the vicinity of the drums. The unlabeled containers are considered a *de minimis* condition and should be properly disposed of from the property.

7.5 BUSINESS ENVIRONMENTAL RISK

A Business Environmental Risk (BER), as defined in the ASTM Standard, is a risk which can have a material environmental or environmentally-driven impact on the business associated with the use of a commercial site, and which does not require further investigation to the same degree as a REC. Kimley-Horn did not identify areas of potential concern associated with business environmental risks in connection with the Subject Property during the completion of this Phase I ESA with the exception of the following:



BER 1: Previous agricultural use of the subject property identified during the review of historical aerial photography is a BER. The legal and routine application of herbicides, pesticides, and fertilizers while the subject property was used for agricultural purposes may have resulted in localized impacts to shallow site soils. Given the length of time since agricultural operations have occurred, and the absence of any documentation suggesting pesticides and herbicides were stored or mixed on the subject property, the presence of pesticides and herbicides are not a REC. However, since the property is developed with asphalt or building structures covering the surface of the subject property, there is not a direct exposure pathway imposing risk for human health. Per the ASTM standard, the standard application of herbicides, pesticides, and fertilizers does not constitute a release or materially threat of release, therefore, this is a BER.

BER 2: Currently, two USTs containing diesel fuel are located within the subject property and actively used as back-up fuel for generators. Both tanks were installed after 2000, and 20,000-gallon in size. See Section 4.2 for additional review of the USTs. Based on Figure 3 Proposed Project Build Out Conceptual Site Plan dated September 2023, current redevelopment includes construction of additional building within the footprint of the current USTs. The USTs should be removed after approval from Santa Clara County Hazardous Materials Compliance Divisions (HMCD) and completion of an UST System Closure Permit Application. Closure will consist of tank removal, and ancillary piping along with soil sampling to ensure no residual leaks from operating the tank system. Tank and sump removal and sampling activities must be witnessed by a representative from HMCD.

8. DECLARATION

8.1 STATEMENT OF COMPLIANCE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. Environmental Professional resume(s) are included in **Appendix G**.

Summary 20

Established in 1866, San Jose Water (SJW) is one of the largest privately owned water systems in the United States, providing high-quality water and exceptional service to approximately one million residents of Santa Clara County.

Background & Purpose

This Water Supply Assessment (WSA) was requested on June 9, 2023 by City of San José (City) and is associated with the proposed Good Samaritan Hospital Project (Project). The approximately 20-acre project site is located on two parcels, 2425 Samaritan Drive and 2333 Samaritan Place, in San José, Santa Clara County. The project proposes to rezone the project site to a Commercial General Planned Development Zoning District to allow for the expansion of the existing Good Samaritan Hospital. Seismic compliance for acute hospital requirements under Senate Bill (SB) 1953 is the Project's primary purpose.

Existing Conditions

The existing hospital is approximately 444,000 square feet and is licensed for 404 beds, separated into two wings: the main building with emergency operations totaling approximately 359,000 square feet (Building A) and a women's and children's services wing totaling approximately 85,000 square feet (Building B). There is also a 6,700 square foot daycare center and a heliport on site.

Phase 1

Phase 1 would demolish 5,200 square feet of the existing hospital main building (Building A) to construct a new SPC 5 rated 260,000 square foot hospital wing (Building C) and demolish the existing 6,700 square foot day care center to partially construct four of the six stories of a parking garage (Garage East).

Phase 2

Phase 2 would construct an approximately 455,000 square foot hospital wing (Building D), an approximately 200,000 square foot medical office building (Building E), a five-story garage structure (Garage West) and construct the remaining two levels of Garage East. The Emergency Room and Heliport would also be moved to Building D, and an additional heliport would be constructed.

Phase 3 (Optional)

If Phase 3 is undertaken, Building A would be demolished and replaced with approximately 355 surface and one level of subterranean parking stalls (Subterranean Garage). This WSA assumes Building A remains.

This WSA describes the relationship between existing and future water supplies and presents SJW's ability to provide a diverse water supply to match build-out water demands under both normal and dry years. This supply consists of treated surface water from Valley Water's local and imported supplies, groundwater, local surface water from Saratoga Creek and Los Gatos Creek watersheds, and non-potable

recycled water. Based on water supply projections reported in Valley Water's 2020 Urban Water Management Plan,[1] conservation methods currently employed, and SJW's active commitment to these methods, SJW expects to be able to meet the needs of the service area through at least 2045 for average and single-dry years without a call for mandatory water use reductions.[2] This assumes reserves are at healthy levels at the beginning of the year and that projects and programs identified in Valley Water's Water Supply Master Plan 2040 (WSMP 2040)[3] are implemented.

In multiple-dry year periods, there may be up to a 20 percent mandatory call for conservation to meet supply deficits. Valley Water has established a level of service goal to provide 100 percent of annual water demand during non-drought years and 80 percent during drought years, to minimize shortages and mandatory water use reductions during droughts while preventing overinvestment in water supply projects. SJW is committed to actively working with Valley Water in the development of water supply projects and programs. Projects and programs may include additional long-term water conservation savings, water recycling, recharge capacity, stormwater runoff capture, reuse, out of area water banking, and storage.

This WSA is written in response to California Senate Bill 610 (SB 610) and Senate Bill 221 (SB 221); legislation which requires water retailers to demonstrate whether their water supplies are sufficient for certain proposed subdivisions and large development projects subject to the California Environmental Quality Act. SB 610 includes the requirements for detailed water supply assessments and SB 221 includes the requirement for written verification of sufficient water supply based on substantial evidence. SB 610 requires that a WSA be prepared by the local water retailer and submitted within 90 days to the requesting agency. SJW's adoption and submittal of this assessment does not create a right or entitlement to water service or impose or expand SJW's obligation to provide water service. The City of San José has an independent obligation to assess the sufficiency of water supply for this project. SB 610 provides that the City of San José is to determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the proposed project, in addition to existing and planned future uses.

Service Area & Population

SJW's service area spans 139 square miles, including most of the cities of San José and Cupertino, the entire cities of Campbell, Monte Sereno, Saratoga, the Town of Los Gatos, and parts of unincorporated Santa Clara County.

[2] San Jose Water 2020 Urban Water Management Plan
[3] https://www.valleywater.org/your-water/water-supply-planning/water-supply-master-plan

The population of SJW's service area, including growth associated with this Plan Area, is shown in the following table. These projections are based on the Association of Bay Area Governments (ABAG) population projections and were included in SJW's 2020 Urban Water Management Plan.

Table 1. Current and Projected SJW Service Area Population

2020	2025	2030	2035	2040	2045
997,817	1,069,633	1,127,593	1,191,337	1,261,145	1,335,044

Climate

Santa Clara County experiences cool, wet winters and warm, dry summers. From 1950-2020, the county received an annual average precipitation total of 23.2 inches. Most precipitation in the region occurs between the months of November and April. Temperature is typically moderate. Maximum monthly average temperatures range from 55.7°F to 83.4°F. Minimum monthly average temperatures range from 37.9°F to 56.6°F. The annual average evapotranspiration rate is 49.6 inches.[4] Summarized temperature and precipitation data is presented in Chart 1.

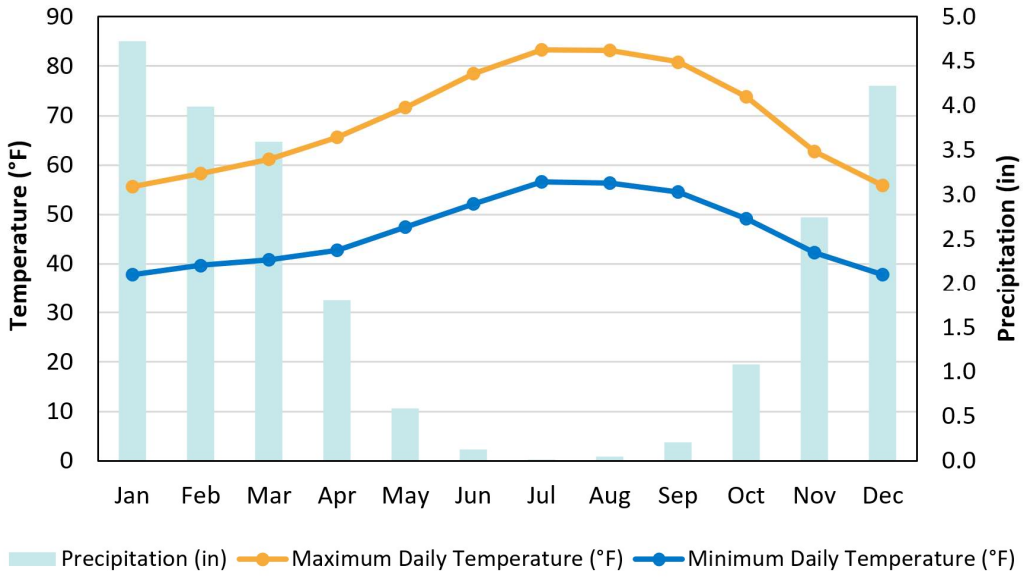

Chart 1. Historical Average Monthly Temperature and Precipitation (1950-2020)

[4] Rainfall and temperature data provided by National Oceanic and Atmospheric Administration. Evapotranspiration data comes from California Irrigation Management Information System (Archived San José Station).

Past, Current, and Future System Water Use

The majority of connections to SJW's distribution system are either residential or commercial. SJW also provides water to industrial, institutional, landscape, and governmental connections. Projections from ABAG analyzing the share of single-family versus multi-family development units within SJW's service were used to determine single- and multi-family demand split within the residential sector. The resale category represents the small mutual water companies, in which SJW provides a master water service and where the mutual water company is responsible for distributing the water.

SJW has developed demand projections from 2025 to 2045 based on population and per capita usage projections. ABAG census tract population projections were used to estimate population growth. Daily per capita water usage for SJW's service area in 2020 was 108 gallons per capita per day (gpcd). It was assumed that all developments after 2020 would require high water efficiency fixtures. Therefore, a lower daily per capita water use of 75 gpcd across all water sectors was applied to new population growth after 2020. For the existing 2020 population, it was assumed that the 108 gpcd from 2020 to 2025 would increase slightly by 1 percent per year, based on the rebounds in demand that have been observed following the past drought. Following the start of compliance with State conservation mandates (SB 606 and Assembly Bill 1668) in 2025, per capita water use is expected to decrease. It was assumed that the per capita water use for the existing population would experience a decline of 0.8 percent per year from 2025 to 2045.

SJW's total demand includes water losses, which are separated into two categories: apparent losses and real losses. Apparent losses include all types of inaccuracies associated with customer metering as well as data handling errors. Real losses are physical water losses from the pressurized system and the utility's storage tanks, up to the customer meter. These can include lost water through leaks, breaks, and overflows.

Across the last five water loss audits that have been validated and submitted to Department of Water Resources (DWR), SJW water loss is, on average, 7.5 percent of potable water supplied. SJW's distribution system has had consistently low water losses due to SJW's proactive approach to reducing leaks, including investments in acoustic leak detection technology and a water main replacement program that prioritizes pipelines for replacement based on their propensity to leak.

Table 2. Demands for Potable and Non-Potable Water (excluding Recycled Water) (AF/yr)

Customer Type	2020	2025	2030	2035	2040	2045
Single Family	59,497	53,877	53,877	54,187	54,411	54,550
Multi Family	24,744	35,255	35,255	35,308	36,161	36,959
Commercial	14,255	18,073	18,073	18,146	18,364	18,551
Industrial	528	718	718	721	730	737
Institutional/ Governmental	5,183	6,607	6,607	6,635	6,715	6,785
Landscape	7,353	7,964	7,964	7,994	8,093	8,176
Sales / Transfers / Exchanges	522	568	568	571	580	586
Other Potable[(a)]	344	417	417	417	420	424
Water Losses	9,078	9,296	9,296	9,332	9,443	9,541
Total	**121,504**	**132,776**	**132,776**	**133,312**	**134,918**	**136,308**

[(a)]Other potable includes portable meter and unbilled unmetered use. Unbilled unmetered use includes use for construction activities, tank/reservoir cleaning, irrigation at SJW stations, hydrant testing, meter testing, etc.

Estimated Project Water Use

Total water usage for the Project is estimated at 288,000 gallons per day (gpd), which is equivalent to an annual usage of about 322 acre-feet of water. The sites have an existing water usage of 106 acre-feet per year. Therefore, the annual net demand increase in water usage associated with this project is 216 acre-feet and represents a 0.18 percent increase over the system wide 2020 water production of 121,504 acre-feet. The projected water demand for the Project is within normal growth projections for water demand in SJW's system.

Table 3. Total Water Demand Estimated for the Project

Average Annual Demand 2019-2022 (gpd)	Total Existing Square Footage (SF)	Project Demand (gpd/SF) [(a)]	Total Proposed Square Footage (SF)	Net Project Demand (AF/yr)
94,920	444,000	0.214	1,347,100	216

[(a)]Billing data from 2019 to 2022 was analyzed to develop a project demand factor of 0.214 gpd/sf for the existing hospital square footage.

System Supplies

This section describes and quantifies the current and projected sources of water available to SJW. A description and quantification of recycled water supplies is also included.

Imported Treated Surface Water – On average, purchased water from Valley Water makes up over half of SJW's total water supply. This water originates from several sources including Valley Water's local reservoirs, the State Water Project and the federally funded Central Valley Project San Felipe Division. Water is piped into SJW's system at various turnouts after it is treated at one of three Valley Water-operated water treatment plants. In 1981, SJW entered into a 70-year master contract with Valley Water for the purchase of treated water. The contract provides for rolling three-year delivery schedules establishing fixed quantities of treated water to be delivered during each period. SJW and Valley Water currently have a three-year treated water contract for fiscal years 2020/2021 – 2022/2023, with contract supplies of 70,723 AF in 2020/2021, 70,723 AF in 2021/2022, and 71,858 AF in 2022/2023. The actual amount of water delivered depends on considerations including hydrologic variability, interruptions in Valley Water facility operations, and water quality.

Groundwater – SJW draws water from the Santa Clara Subbasin, which is part of the larger Santa Clara Valley Basin. The Santa Clara Subbasin consists of unconsolidated alluvial sediments and covers a surface area of 297 square miles in the northern part of Santa Clara County. The subbasin is not adjudicated. Valley Water is responsible for maintaining the subbasin and ensuring the subbasin does not become overdrafted. Aquifers in the subbasin are recharged naturally by rainfall and streams and artificially mainly by recharge ponds operated by Valley Water. Due to different land use and management characteristics, Valley Water further delineates the Santa Clara Subbasin into two groundwater management areas: the Santa Clara Plain and Coyote Valley. SJW draws groundwater from the Santa Clara Plain portion, which covers a surface area of 280 square miles and has an operational storage capacity estimated to be 350,000 AF.

Chart 2 shows groundwater elevation in the Santa Clara Plain since the mid 1930's using well surface elevation as the datum. Although groundwater levels declined during the recent 2012-2016 drought,

groundwater levels in the Santa Clara Subbasin quickly recovered after the drought due largely to Valley Water's proactive response and comprehensive water management activities.

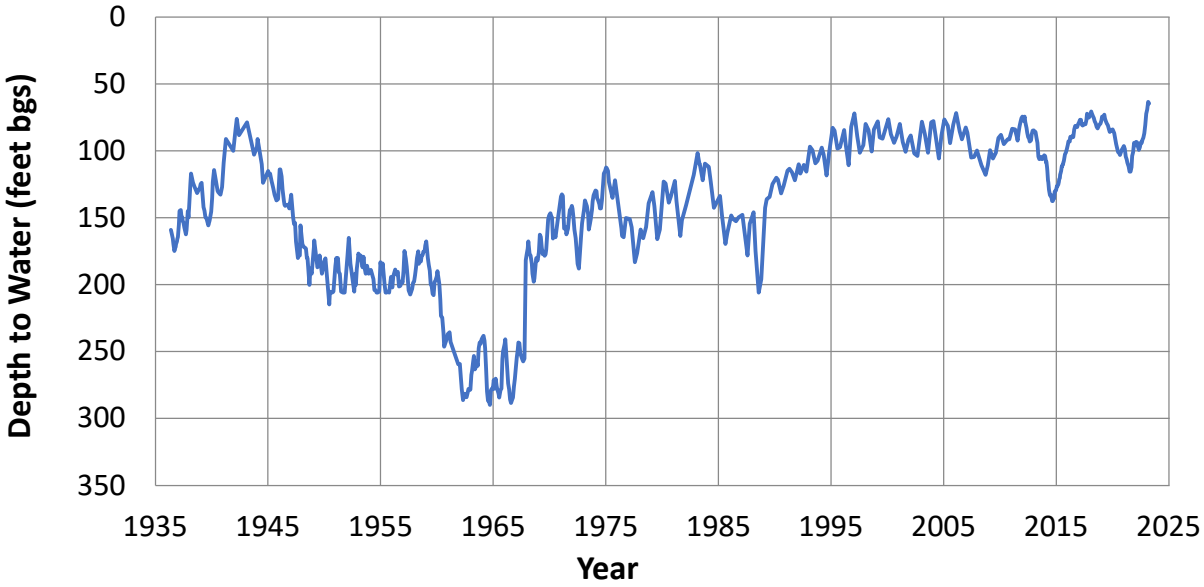

Chart 2. Groundwater Elevation in Santa Clara Subbasin (Well ID: 07S01W25L001)

On average, groundwater from the subbasin accounts for 30 to 40 percent of SJW's total water supply. The following table shows the groundwater SJW pumped from 2016 to 2020.

Table 4. Amount of Groundwater Pumped by SJW (AF/yr)

Basin Name	2016	2017	2018	2019	2020
Santa Clara Subbasin	32,644	42,194	36,075	32,825	53,276
Groundwater as a percent of total potable water supply	31%	37%	31%	28%	43%

Surface Water – SJW has "pre-1914 water rights" to surface water in Saratoga Creek, Los Gatos Creek, and associated watersheds, totaling approximately 72 million gallons per day, based on capacity of diversion works from Initial Statements of Water Diversion and Use. SJW also filed for licenses in 1947 and was granted license number 4247 in 1956 by SWRCB to draw 1419 AF/year (462 MG/year) from

Saratoga Creek, and license number 10933 in 1979 to draw 6,240 AF/year (2,033 MG/year) from Los Gatos Creek.

Recycled Water – South Bay Water Recycling (SBWR) has been serving Silicon Valley communities since 1993 with a sustainable, high-quality recycled water supply. SBWR was created to reduce the environmental impact of freshwater effluent discharge into the salt marshes located at the south end of the San Francisco Bay, and to help protect the California clapper rail and the salt marsh harvest mouse.

In 1997, SJW entered into a Wholesaler-Retailer Agreement with the City of San José to provide recycled water to SJW's existing and new customers nearby SBWR recycled water distribution facilities; whereas, the City of San José is the wholesaler and SJW is the retailer. At the time, the involvement of SJW was largely to assist the City in meeting its wastewater regulatory obligations. In accordance with the terms of this agreement, SJW allowed SBWR to construct recycled water pipelines in its service area, SJW would only own the recycled water meters, while SBWR would own, operate, and maintain the recycled water distribution system.

In 2010, this Wholesaler-Retailer Agreement was amended to allow SJW to construct recycled water infrastructure that would be owned, operated, and maintained by SJW. Then in 2012, this Wholesaler-Retailer Agreement was again amended to allow SJW to construct additional recycled water infrastructure.

Summary of Existing and Planned Sources of Water – SJW and Valley Water have worked to develop a variety of local and imported water supplies to meet demands. As demands increase with the region's growth, and imported water supplies potentially become more restricted, these planned supplies will increase in importance. In particular, groundwater, which has historically been a vital source of supply for SJW, was all the more critical during the recent drought. The following table shows the actual amount of water supplied to SJW's distribution system from each source in 2020 as well as projected amounts until 2045.

Table 5. Current and Projected Water Supplies[(a)] (AF/yr)

	2020	2025	2030	2035	2040	2045
Valley Water Treated Water	64,290	76,799	76,713	77,041	78,023	78,877
SJW Groundwater	53,276	48,623	48,568	48,777	49,400	49,937
SJW Surface Water	3,937	7,494	7,494	7,494	7,494	7,494
Recycled Water	2,449	2,731	3,100	3,649	3,661	3,649
Total System Supply	**123,952**	**135,648**	**135,875**	**136,961**	**138,579**	**139,957**

[(a)]Projected surface water supply volume held constant at the 10-year production average (2011-2020). Remaining potable demands made up by purchased water and groundwater, based on the 10-year historical average (2011-2020) of distribution between these two sources of supply. Projected recycled water supplies are based on projected recycled water demands.

Water Supply Vulnerability

SJW has identified multiple sources of water for the Project, which would provide a high quality, diverse and redundant source of supply. For added backup, SJW incorporates diesel-fueled generators into its facilities system, which will operate wells and pumps in the event of power outages. Since Valley Water influences on average about 90 percent of SJW's annual water supply, SJW will continue to work with Valley Water to ensure its water supply is reliable, while the impact to the existing Santa Clara Subbasin is minimal.

Transfer and Exchange Opportunities

SJW's distribution system has interties with the following retailers: California Water Service Company (Los Altos District), City of San José Municipal Water, City of Santa Clara, City of Sunnyvale, City of Milpitas, and Great Oaks Water. SJW currently has no plans to use these interties for normal system operation as they are exclusively used for potential emergencies.

Water Supply Reliability

SJW has three sources of potable water supply: purchased water, groundwater, and local surface water. These three sources of supply are constrained in one or more ways, driven by legal, environmental, water quality, climatic, and mechanical conditions. Additionally, there is a potential for interruption of supply caused by catastrophic events.

Purchased Water Supply Reliability – SJW relies on Valley Water for purchased water supplies, which make up over half of SJW's total water supplies. Constraints to purchased water supplies from Valley Water include climate change impacts, reductions in imported water supplies, and threats to infrastructure, as detailed below.

- *Climate Change* – Climate change is anticipated to result in warming temperatures, shrinking snowpack, increasing weather extremes, and prolonged droughts. Valley Water's water supply vulnerabilities to climate change include decreases in the quantity of Delta-conveyed imported water supplies, decreases in the ability to capture and use local surface water supplies due to shifts in the timing and intensity of rainfall and runoff, increases in irrigation and cooling water demands, decreases in water quality, and increases in the severity and duration of droughts.
- *Reductions in Imported Water Supplies* – Valley Water's State Water Project and Central Valley Project water supplies are also subject to a number of additional constraints, including conveyance limitations and regulatory requirements to protect fisheries and water quality in the Delta. Delta-conveyed supplies are also at risk from Delta levee failures due to seismic threats and flooding, sea level rise and climate change, declining populations of protected fish species, and water quality variations (including algal blooms). Many water quality variations are addressed by blending sources and/or switching sources to Valley Water's three water treatment plants. Algae and disinfection byproduct precursors have been especially challenging during recent drought conditions.
- *Threats to Infrastructure* – Valley Water's imported supply infrastructure must travel large distances to reach turnouts. As California is a seismically active state, infrastructure could be damaged and the result would be a disruption to water supply availability. California's water supply infrastructure is also potentially a target for acts of terrorism.

SJW actively worked with Valley Water during the development of their WSMP 2040 to ensure the following principles were considered:

- Promotion of additional sources of local water supply, such as indirect potable reuse, direct potable reuse, desalination, additional conservation, and an expanded recycled water distribution system
- Coordination of operations with all retailers and municipalities to ensure as much surplus water as possible is available for use in dry years
- Pursuit of innovative transfer and banking programs to secure more imported water for use in dry years

Valley Water's previous call for a 30 percent reduction during the 2012-2016 drought highlights that more investments in local water sources are necessary to ensure a reliable source of supply during multiple-dry water years. Valley Water plans short- and long-term investments with the goal of requiring no more than a 20 percent water use reduction from the community during a multi-year drought as outlined in its 2040

Water Supply Master Plan. Valley Water has sources of backup supply outside the County and has always relied on multiple supply sources, such as imported water contracts, to supplement existing long-term resources when necessary.

Groundwater Supply Reliability – Groundwater supplies are often a reliable supply during normal and short-term drought conditions because supplies are local and large aquifer storage capacity means that groundwater supplies will still be available when surface flows become limited. However, groundwater supply availability can become threatened when overdraft occurs and when recharge and inflow decrease. Water quality is another potential constraint of this source of supply. Threats to groundwater supplies are detailed below.

- *Overdraft* – Under extended supply pressures, groundwater basins can enter overdraft conditions, which can have a series of consequences including land subsidence. Threat of overdraft conditions were witnessed in the recent 2012-2016 drought when groundwater levels declined. However, groundwater levels in the Santa Clara Subbasin quickly recovered after the drought due to Valley Water's proactive response.
- *Climate Change* – Climate change could increase the potential for overdraft by increasing demand, reducing other sources of supply, and reducing natural recharge and inflows from surface water and precipitation.
- *Regional Growth* – Population growth could increase demands on groundwater supplies, potentially creating risk of overdraft. Regional growth could also increase the amount of contaminants entering groundwater basins as a result of increased urban runoff or industrial or other activities. Growth can also impact recharge areas by expanding impervious surfaces into areas that would otherwise represent entry points for surface water recharging local aquifers.
- *Aging Infrastructure and High Land Costs* – In 2020, SJW prepared a Groundwater Well Asset Management Plan. Findings from the plan showed that SJW's groundwater well system is vulnerable due to the age of the well infrastructure. Two-thirds of the wells are 50 years or older and were installed with low carbon steel casing using a cable tool drilling method. A low carbon steel casing is susceptible to corrosion and damage in the event of an earthquake. Furthermore, many of SJW's older cable tool drilled wells were installed without sanitary seals as newer wells are, and as such, are more vulnerable to acting as conduits for downward migration of surface contaminants into the aquifer. Space for replacement wells at SJW's existing groundwater stations is limited, and thus, the majority of future wells will need to be located on new properties. However, favorable sites are limited, as they must meet certain production yield and water quality requirements. Furthermore, land prices in the Bay Area are high and present another challenge for SJW to address its aging well infrastructure.
- *Water Quality* – The presence of per- and polyfluoroalkyl substances (PFAS) in groundwater supplies is prompting interest and concern nationwide. Out of an abundance of caution, SJW has been proactively notifying customers and, when possible, removing wells from service where

PFAS has been detected above the State-defined Notification Levels. SJW recently completed a study to evaluate PFAS treatment at one of its largest wellfields. This project has now moved into the detailed design phase. In addition, because SJW depends on multiple sources of supply that use different disinfectants, maintaining a stable disinfectant residual is problematic when system operations require the blending of chlorinated water with chloraminated water to meet demands. Blending sources, depending on each source's volume and residual concentration, can result in the loss or significant decrease in disinfectant residual levels.

The Santa Clara Subbasin is able to store the largest amount of local reserves and Valley Water, as the groundwater management agency for Santa Clara County, is tasked with maintaining adequate storage in this basin to optimize reliability during extended dry periods. As groundwater is pumped by SJW and other retailers and municipalities in Santa Clara County, Valley Water influences groundwater pumping reductions and thus reliability through financial and management practices to protect groundwater storage and minimize the risk of land subsidence.

Local Surface Water Supply Reliability – Local surface supplies are highly variable depending on hydrologic conditions. In years of limited local surface water supplies, SJW relies more heavily on groundwater. Threats to local surface water supplies are detailed below.

- *Climate Change* – SJW's local surface water supplies are subject to the same climate change impacts as Delta-conveyed supplies and Valley Water's local surface water supplies, which can result in decreased surface water supplies. During heavy rain events, the quantity of surface water that can be conveyed and treated may be limited by the raw water system hydraulics, high turbidity levels, and WTP capacity. Increased weather extremes and changing precipitation patterns as a result of climate change may prevent surface water supplies from being fully utilized during heavy rain events, and may result in lower surface water supplies during other times of the year.
- *Environmental Regulations* – SJW has bypass flow requirements at its surface water reservoirs and intakes. These requirements establish flow rates that must be released past diversion points to preserve downstream habitat. SJW also maintains minimum levels in reservoirs for habitat preservation. These environmental regulations limit the amount of surface water that SJW is able to divert for water supply.
- *Water Quality* – SJW owns approximately 6,000 acres of land in the watersheds and manages these watershed lands to protect water supplies**.** Contamination of surface water supplies from upstream activities (animal grazing, residential septic systems, stormwater runoff) is a potential threat, although a low one as there is limited development in the watershed.
- *Aging Infrastructure* – Some of SJW's raw water infrastructure was constructed in the late 1800s or early 1900s and is in need of renewal to ensure reliability of surface water supplies.

Supply Reliability by Type of Water Year – Valley Water's Urban Water Management Plan identified average, single-dry, and multiple-dry years for water supply reliability planning. According to Valley Water, these years correspond to:

- Average Year (1922-2015): Average supply over the 94 years of 1922-2015.
- Single-Dry Year (1977): Within the historic hydrological record, this was the single driest year.
- Multiple-Dry Years (1988-1992): The 2012-2016 drought was the most recent multiple dry year period that put severe strain on Valley Water's supplies. However, because imported water allocations are not currently available for the 2012-2016 drought from DWR's modeling, Valley Water used the 1988-1992 drought, another severe multiple year drought in the historic hydrological record.

Water supplies presented below are based on Valley Water's Water Evaluation and Planning system model. According to Valley Water, this model simulates their water supply system comprised of facilities to recharge the county's groundwater basins, local water systems including the operation of reservoirs and creeks, treatment and distribution facilities, and raw water conveyance systems. The model also accounts for non-Valley Water sources and distribution of water in Santa Clara County such as imported water from San Francisco Public Utilities Commission, recycled water, and local water developed by other agencies.

Table 6. Basis of Water Year Data

Year Type	Base Year	% of Average Supply
Average Year	1922-2015	100%
Single-Dry Year	1977	80%
Multiple-Dry Years 1st Year	1988	78%
Multiple-Dry Years 2nd Year	1989	83%
Multiple-Dry Years 3rd Year	1990	77%
Multiple-Dry Years 4th Year	1991	78%
Multiple-Dry Years 5th Year	1992	77%

Average Water Year – The average water year represents average supply over the hydrologic sequence of 1922 through 2015. SJW anticipates adequate supplies for years 2025 to 2045 to meet system demand under average year conditions.

Table 7. Supply and Demand Comparison – Average Water Year (AF/yr) [(a)]

	2025	2030	2035	2040	2045
Demand	135,648	135,875	136,961	138,579	139,957
Demand Met by Water Supply	135,648	135,875	136,961	138,579	139,957
Demand Met by Conservation	0	0	0	0	0

[(a)]Includes demands associated with the Project.

Single-Dry Water Year – The single-dry year was the year with the lowest amount of total supply. Table 10 shows that supplies, with the use of reserves, can meet demands during a single-dry year through 2045, assuming reserves are at healthy levels at the start of a year and projects and programs identified in Valley Water's WSMP 2040 are implemented. If reserves are low at the beginning of a single-dry year, Valley Water may call for water use reductions in combination with using reserves. As later discussed within the Water Demand Management Measures section, SJW has filed with the California Public Utilities Commission (CPUC) water-waste provisions promoting conservation that would go into effect during a drought. These provisions would result in a reduction in anticipated demand due to conservation such that demand equals available water supplies.

Table 8. Supply and Demand Comparison – Single-Dry Water Year (AF/yr) [(a)]

	2025	2030	2035	2040	2045
Demand	135,648	135,875	136,961	138,579	139,957
Demand Met by Water Supply	135,648	135,875	136,961	138,579	139,957
Demand Met by Conservation	0	0	0	0	0

[(a)]Includes demands associated with the Project.

Multiple-Dry Water Years – The multiple-dry year period used in this analysis assumes a repetition of the hydrology that occurred in 1988 to 1992. During multiple-dry year droughts, a call for up to mandatory 20 percent conservation may be needed. Valley Water will continue to work on reducing multiple-dry year deficits by securing more reliable and/or diverse water supplies.

Valley Water has established a level of service goal of 100 percent during non-drought years and 80 percent during drought years to minimize water rates, and thus there can be up to a 20 percent call for mandatory conservation to meet this deficit (or more short-term conservation until additional water supplies are secured). Over the next 20 – 30 years, Valley Water is pursuing over $1 billion in water supply projects to meet the 80 percent level of service goal for all drought years.

Table 9: Supply and Demand Comparison – Multiple-Dry Water Years (AF/yr)[(a)(b)]

		2025	2030	2035	2040	2045
First Year	Demand	135,648	135,875	136,961	138,579	139,957
	Demand Met by Water Supply	135,648	135,875	136,961	138,579	139,957
	Demand Met by Conservation	0	0	0	0	0
Second Year	Demand	135,648	135,875	136,961	138,579	139,957
	Demand Met by Water Supply	135,648	135,875	136,961	138,579	139,957
	Demand Met by Conservation	0	0	0	0	0
Third Year	Demand	135,648	135,875	136,961	138,579	139,957

	Demand Met by Conservation	0	0	0	0	0
Fourth Year	Demand	135,648	135,875	136,961	138,579	139,957
	Demand Met by Water Supply	135,648	135,875	136,961	138,579	139,957
	Demand Met by Conservation	0	0	0	0	0
Fifth Year	Demand	135,648	135,875	136,961	138,579	139,957
	Demand Met by Water Supply	135,648	135,875	136,961	138,579	139,957
	Demand Met by Conservation	0	0	0	0	0

[(a)]Includes demands associated with the Project.

[(b)]Table 9 is solely based on SJW's Urban Water Management Plan, which follows State requirements and utilizes Valley Water estimates, which may not reflect actual water supply and demand conditions.

Regional Supply Reliability – Valley Water's Ensure Sustainability water supply strategy has three key elements:

1. Secure existing supplies and facilities
2. Optimize the use of existing supplies and facilities
3. Expand water use efficiency efforts

As part of this strategy, Valley Water's WSMP 2040 includes developing at least 24,000 AF/yr of additional recycled water (above and beyond the current target of 33,000 AF/yr of non-potable reuse) by 2040. Developing these local sources and managing demands reduces reliance on imported water supplies. In addition, Valley Water is working with multiple water agencies to investigate regional opportunities for collaboration to enhance water supply reliability, leverage existing infrastructure investments, facilitate water transfers during critical shortages, and improve climate change resiliency. Projects to be considered will include interagency interties and pipelines; treatment plant improvements and expansion; groundwater management and recharge; potable reuse; desalination; and water transfers. This program may result in the addition of future supplies for Valley Water.

Water Demand Management Measures

SJW is a signatory of the California Urban Water Conservation Council (CUWCC) and signed the CUWCC Memorandum of Understanding (MOU) in February 2006. The CUWCC is a partnership of water suppliers, environmental groups, and others interested in California water supply who have come together to agree on a set of Best Management Practices (BMPs) for water conservation in the state. Additionally, SJW has its own water-waste provisions that come into effect when there is a water shortage. The CPUC has set forth the rules regarding water waste and water shortages governing investor owned utilities such as SJW. The CPUC rule relating to this is Rule 14.1.[5] This rule states that when there is a low-level water shortage that prompts a call for voluntary conservation by customers, a list of water-waste provisions goes into effect. Rule 14.1 also has provisions for high-level water shortages when mandatory conservation measures are deemed necessary.

SJW provides a full range of water conservation services to customers. The cornerstone of SJW's conservation programs is the CATCH program. The CATCH program empowers customers to understand and optimize their water use. With this free program, a water efficiency expert will check for customer leaks and recommend critical water and money-saving improvements.

Valley Water offers conservation programs, such as rebates for high efficiency toilets and washing machines. SJW takes advantage of all regional rebate programs and all of Valley Water's rebate programs are offered to SJW customers. Typically, customers are directed to specific rebate programs during the

[5] https://www.sjwater.com/customer-care/help-information/tariff-book

course of a water audit based on a customer's need. Customers can also access rebates directly from retail outlets when purchasing equipment such as high efficiency washing machines. SJW collaborates with Valley Water on public outreach and education including such items as customer bill inserts and conservation campaign advertising.

SJW has also increased the outreach and educational programs on outdoor water use. SJW constructed a water-smart demonstration garden that is open to the public. Customers can visit the garden in person or take a virtual tour on SJW's website. SJW also developed a dedicated water wise landscaping website where customers can access a plant information database that includes hundreds of low water use plants as well as a photographic database of water wise gardens in the San José-Santa Clara County area. The landscaping website and demonstration garden tour is accessible from SJW's homepage.

In addition to these programs, SJW engages in other activities that contribute to the overall goal of reducing water waste, but are not specifically designated as conservation or water management programs. These include SJW's meter calibration and replacement program, corrosion control program, valve exercising program and metering all service connections.

Summary

This Water Supply Assessment represents a comprehensive water supply outlook for the Good Samaritan Hospital Project. In summary:

1. Total net potable water demand for the Project is estimated at 216 acre-feet per year and represents a 0.18 percent increase in total system usage when compared to SJW's 2020 potable water production. The increased demand is consistent with forecasted demands represented in SJW's 2020 Urban Water Management Plan, which projected a 12.2 percent increase in total system demand between 2020 demand and projected 2045 demand.
2. SJW currently has contracts or owns rights to receive water from the following sources:
    a. Groundwater – from the Santa Clara Subbasin
    b. Imported and local surface water – from Valley Water
    c. Local surface water – from Los Gatos Creek, Saratoga Creek, and local watersheds
    d. Recycled water – from South Bay Water Recycling
3. SJW works closely with Valley Water to manage its demands and imported water needs. The projected water demand for this development is within previously determined growth projections for water demand in SJW's system.

As described in this WSA and based on Valley Water's water supply plans and Urban Water Management Plan projections, SJW expects to be able to meet the needs of the service area through at least 2045 for average and single-dry years without a call for water use reductions. The impact of this project is not consequential and SJW has the capacity to serve this project through buildout based on current water supply capacity and Valley Water's proposed water supply projects. Valley Water is pursuing water supply solutions to meet the established level of service goal to provide 80 percent of annual water demand for drought years. SJW is committed to working with Valley Water to meet future demands and mitigate shortages. After comparing estimated demand associated with this project to water supplies, based on both the SJW and Valley Water Urban Water Management Plans, SJW has determined that the water quantity needed is within normal growth projections and expects for there to be sufficient water available to serve the Project. However, due to factors that affect water supply and demand projections including climate change, there is no guarantee that the projections provided in Valley Water's Urban Water Management Plan will be met, nor is there a guarantee that the water supply projects and programs identified by Valley Water will be implemented.

APPENDIX L

STORMWATER EVALUATION FORMS

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY
Planning, Building and Code Enforcement

Stormwater Evaluation Form PHASE 1

INSTRUCTIONS: At minimum, **ALL projects must complete Sections 1, 2, and 3** of this form and submit it with all Planning Permit applications.

If you answer "yes" to one or both questions below, you must complete the entire form and the Stormwater Submittal Checklist, as required by Provision C.3 of the Municipal Regional Stormwater Permit (MRP):

- Does your project create or replace 5,000 sq. ft. or more of impervious surface on the project site?
- Does your project involve a Single-Family Home that creates or replaces 10,000 sq. ft. or more of impervious surface on a project site?

What is an impervious surface? An impervious surface is pavement or other surface covering that prevents land from absorbing and infiltrating rainfall and stormwater. Impervious surfaces include buildings, structures, driveways, walkways, parking lots, rooftops, and any other continuous watertight covering. Please note, gravel is considered impervious, except when it is constructed as part of an appropriately designed pervious pavement system. Pervious pavement underlain with pervious soil or material, e.g., drain rock, that infiltrates rainfall at a rate equal to or greater than surrounding unpaved areas OR that stores and infiltrates the water quality design volume specified in Provision C.3.d of the MRP, is not considered an impervious surface.

Please refer to the City Council Policy 6-29, City Council Policy 8-14, and Municipal Codes in Title 20 for reference.

Housing project applications dated on or before June 30, 2023 that are compliant with the MRP 2.0 C.3 requirements will not be affected by the new MRP 3.0 requirements (per Government Code Section 65589.5). All other projects are subject to the following new C.3 requirements if they are not yet approved by July 1, 2023.

1. PROJECT LOCATION AND USES

1.a Project File #: PDC22-132

1.b Project Name: Good Samaritan Hospital Expansion Phase 1

1.c Project Address: 2425 Samaritan Dr, San Jose, CA 95124

1.d Project Cross Streets: Samaritan Dr. & Samaritan Pl.

1.e Project APN(s) (include all that apply): 421-36-009, 421-36-011

1.f Applicant/Developer Name: HCA Healthcare

1.g Estimated Project Completion Date: Phase 1 - Dec 2029

1.h Are any of these land uses included in your project?

Check all that apply.

- ☐ Commercial
- ☐ Industrial
- ☐ Public Street
- ☐ Residential
- ☐ Mixed Use
- ☐ Single-Family Home
- ☑ Other Hospital

continued>

\pbce-communications\COLLATERAL PLANNING\APPLICATIONS

1.i Check the watershed in which your project is located.
See the **Watershed Maps** webpage

☐ Baylands
☐ Calabazas
☐ Coyote (including Lower Penitencia)
☑ Guadalupe
☐ San Tomas

1.j Old Industrial Area
Is your project in an Old Industrial Area?
See the **Old Industrial Area Map** webpage to confirm if your project is in an Old Industrial Area.
☐ Yes (at future stages sediment sampling may be conditioned at your property)
☑ No

1.k Special Project Status
Use the online **Special Project Worksheet** and the **Affordable Housing calculator** to determine if your project qualifies as aSpecial Project. Does your project qualify?

☐ Yes, but it is feasible for the project to incorporate 100% LID.

☐ Yes, and it is infeasible for the project to incorporate 100% LID. Attach the following to this application: Special ProjectWorksheet, Affordable Housing Calculator (if applicable), and Feasibility/Infeasibility Narrative justifying the use of non-LID.

☑ No

2. AREA DATA

2.a Enter the Project Phase Number (1, 2, 3, etc. or N/A if Not Applicable):	Phase 1	
2.b Total area of site:	20.07	acres
2.c Total area of site that will be disturbed[1]:	9.84	acres

COMPARISON OF IMPERVIOUS AND PERVIOUS AREAS AT PROJECT SITE:

2.d IMPERVIOUS AREAS - IA[2]	Pre-Project Existing IA sq. ft.	Existing IA Retained As-Is[3] sq. ft.	Existing IA Replaced with IA[4] sq. ft.	New IA Created[4] sq. ft.	Total Post Project IA sq. ft.
Site Totals					
Total onsite IA	d.1 703,336	d.2 384,667	d.3 318,669	d.4 14,708	d.5 (d.2+d.3+d.4) 718,044
Total off-site IA[2]	d.6 0	d.7 0	d.8 0	d.9 0	d.10 (d.7+d8+d.9) 0
Total project IA	d.11 (d.1+d.6) 703,336	d.12 (d.2 +d.7) 384,667	d.13 (d.3 +d.8) 318,669	d.14 (d.4 +d.9) 14,708	d.15 (d.5 +d.10) 718,044
Total New and Replaced IA			d.16 (d.13+d.14) 333,377		
Percent Replacement of onsite IA in Redevelopment Projects (d.3÷d.1) x 100:					d.17 45 %

2.e PERVIOUS AREAS - PA[5]	Pre-Project Existing PA sq. ft.	Total Post Project PA sq. ft.
Total on-site PA	e.1 170,847	e.2 156,139
Total off-site PA	e.3 0	e.4 0
Total PA[5]	e.5 (e.1+e.3) 170,846	e.6 (e.2+e.4) 156,139
2.f Total Area (IA + PA)	f.1 (d.11 + e.5) 874,183	f.2 (d.15 + e.6) 874,183

continued>

FOOTNOTES

1. Per the State Construction General Permit, construction activity that includes, but is not limited to, clearing, grading, excavation, stockpiling, and demolition activities that expose or disturb soil.
2. Include sidewalks and other parts of the public Right-of-Way (e.g., roads, bike lanes, curbs, ramps, etc.) included in the project footprint for all cells in this row. Note that gravel is considered an impervious surface.
3. "Retained" in box 2.d.2 means to leave existing IA in place. An IA that goes through maintenance (e.g., pavement resurfacing/slurryseal/ grind that doesn't disturb down to top of base) is considered "retained."
4. The "replaced" and "new" IA in boxes 2.d.3. and 2.d.4 are based on the total area of the site and not specific locations on site. For example, impervious parking created over a pervious area is not "new" IA if an equal amount of pervious area replaces IA somewhere else on the site. Constructed IA on a site that does not exceed the Total Pre-Project IA in box 2.d.1. will be considered "replaced" IA. **A site will have "new" IA only if the Total Post-Project IA in box 2.d.15. exceeds the Total Pre-Project IA (2.d.15 - 2.d.11 = 2.d.14).**
5. Include bioretention areas, infiltration areas, green roofs, and pervious pavement in PA calculations.

3.APPLICABILITY OF THE CGP, PROVISION C.3, PROVISION C.10

3.a Is 2.c. equal to 1 acre or more?

☑ Yes. Applicant must obtain coverage under the State Construction General Permit.
☐ No. Applicant does not need coverage under the State Construction General Permit.

3.b Is 2.c. equal to 1 acre or more and the project is a utility trenching project that is on average - over the entire length of the project – greater than or equal to eight feet wide?

☑ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area, including sidewalksand other parts of the public Right-of-way included in the project footprint (see section 3.f. below).
☐ No. Site Design and Source Control requirements may apply; check with the City Department of Public Works.

3.c Is box 2.d.16 equal to 5,000 sq. ft. or more for any type of project, or 10,000 sq. ft. or more for a Single-Family Home project?

☑ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area, including sidewalksand other parts of the public Right-of-way included in the project footprint (see section 3.g. below).
☐ No. Site Design and Source Control requirements may apply; check with the City Department of Public Works. *If the number in 2.d.16 is between 2,500 sq. ft. and 5,000 sq. ft. for any type of project, or 2,500 sq. ft. and 10,000 sq. ft. for Single-Family Home projects, one or more Site Design Measures will need to be implemented on your project (see section 3.g. below).

3.d Is box 2.d.17 equal to or greater than 50%?

☐ Yes. Site Design, Source Control, and Treatment System requirements all apply to the entire site, including sidewalks andother parts of the public Right-of-way included in the project footprint.
☑ No. Site Design, Source Control, and Treatment System requirements only apply to the area of site that is disturbed.

3.e Is your project connected or proposing to be connected to the City of San Jose's stormwater pipe system?

☑ Yes. There are storm drains on the property that are connected to the stormwater pipe system. Complete the following question (3.f).
☐ No. Your parcel is exempt from full trash capture requirements.

3.f Is the project area located within the green areas on this Trash Management Area map?

☑ Yes. Your project is exempt from full trash capture requirements.
☐ No. Your project must install full trash capture devices approved by the Water Board (see section 3.g. below).

continued>

3.g Indicate which of the following Provision C.3 and C.10 measures will be applied to your project. Check all that apply.

SITE DESIGN MEASURES

PROTECTION MEASURES

- ❑ Protect existing trees, vegetation, and soil.
- ❑ Protect riparian and wetland areas/ buffers (Riparian setback _____ ft.)[1]
- ❑ Preserve open space and natural drainage patterns: _____ sq. ft.
- ❑ Rainwater harvesting and use (e.g., rain barrel, cistern connected to roof drains) [2]

LANDSCAPE DESIGN MEASURES

- ☑ Direct runoff from roofs, sidewalks, patios to landscaped areas.
- ☑ Plant trees adjacent to and in parking areas and adjacent to other impervious areas.

DESIGN MEASURES TO MINIMIZE IMPERVIOUS SURFACE AREA

- ❑ Reduce existing impervious surfaces.
- ❑ Cluster structures/pavement.
- ☑ Create new pervious areas:
  - ✓ Landscaping
  - ❍ Parking stalls
  - ❍ Walkways and patios
  - ❍ Emergency vehicle access
  - ❍ Private streets and sidewalks
- ❑ Install a Green Roof on all or a portion of the roof.
- ❑ Parking:
  - ❍ On top of or under buildings
  - ❍ Not provided in excess of Code
- ❑ Other:

SOURCE CONTROL MEASURES

- ☑ Beneficial landscaping [3]
- ☑ Use water efficient irrigation systems.
- ☑ Good housekeeping, e.g., sweep pavement and clean catch basin.
- ☑ Label storm drains.
- ☑ Connect to the sanitary sewer: [4]
  - ✓ Covered trash/recycling enclosures
  - ✓ Interior parking structures
  - ❍ Wash area/racks
  - ❍ Pools, spas, fountains
  - ✓ Covered loading docks and maintenance bays
  - ❍ Pumped groundwater
- ❑ Fueling areas must (all required):
  - Be graded to prevent ponding.
  - Use a concrete surface.
  - Be separated from the site by a grade break to prevent run-on.
  - Have a canopy cover extending at least 10 feet from each pump.
- ☑ Industrial, outdoor material storage, and recycling facilities must (all required):
  - Stockpile material on an impervious surface or under a permanent roof or covering.
  - Direct ponded water to the sanitary sewer,[4] an on-site treatment system, or off-site disposal.
  - Install berms or curbs to prevent runoff from the storage/processing areas.
  - Segregate pollutant-generating activities into a distinct drainage management area and provide treatment.
- ❑ Other:

TREATMENT SYSTEMS

NONE

- ❑ Impervious surfaces drain to one or more self-retaining areas that are sized per the design criteria listed in the C.3 Stormwater Handbook.

C.3 TREATMENT METHODS

LID TREATMENT

- ☑ Bioretention area
- ❑ Flow-through planter
- ❑ Tree well filter or trench with bioretention soils[5]
- ❑ Rainwater harvest and use (e.g., cistern or rain barrel sized for C.3.d treatment)
- ❑ Pervious pavement, sized for C.3.d treatment
- ❑ Infiltration well/dry well
- ❑ Infiltration trench
- ❑ Subsurface Infiltration System (e.g., vault or large diameter pipe over drain rock)
- ❑ Other:

OTHER C.3 TREATMENT METHODS

SPECIAL PROJECTS ONLY [6]

- ❑ Proprietary tree box filter
- ❑ Media filter (sand, compost, or proprietary media)

MULTI-STEP PROCESS ONLY [7]

- ❑ Vegetated filter strip
- ❑ Extended Detention Basin
- ❑ Vegetated Swale

C.10 FULL TRASH CAPTURE METHODS

- ❑ Bioretention area[8]
- ❑ Approved High flow capacity trash Device(s)
- ❑ Approved catch basin insert(s) orother device(s)

FOOTNOTES

1. Per Council Policy 6-34, setback is measured from the outside dripline of the Riparian Corridor vegetation or top-of-bank, whichever is greater(verify by Biological Report).
2. As a site design measure, it does not have to be sized to comply with Provision C.3.d treatment requirements.

continued>

3. Landscaping that minimizes irrigation and runoff, promotes surface infiltration where possible, and minimizes the use of pesticides and fertilizers.
4. Subject to the requirements of the sanitary sewer authority.
5. Bioretention soils shall infiltrate runoff at a minimum of 5 inches per hour during the life of the facility and sustain healthy, vigorous plant growth.
6. These treatment measures are only allowed if the project qualifies as a Special Project.
7. These treatment measures are only allowed as part of a multi-step treatment process (i.e., pretreatment).
8. Bioretention areas can count towards both C.3 LID treatment and C.10 full trash capture requirements.

4.TREATMENT SYSTEM SIZING FOR PROJECTS WITH TREATMENT REQUIREMENTS

For each treatment system component, indicate the hydraulic sizing criteria using the codes in the far right column, and provide the calculated design flow or volume to be treated:

Treatment Control Measure (TCM)	Hydraulic Sizing Criteria Enter Code	Design Flow or Volume cfs or cu.ft.	Codes For Hydraulic Sizing Criteria
Bioretention lined w/ underdrain	2c	6,354	CODE 1a - Volume–WEF Method 1b - Volume–CASQA BMP Handbook Method 2a - Flow–Factored Flood Flow Method 2b - Flow–CASQA BMP Handbook Method 2c - Flow–Uniform Intensity Method 3 - Combination Flow/Volume Design Basis
Bioretention unlined w/ underdrain	2c	8,900	

Note: Bioretention with Underdrain has been sized for surface area in square feet. For this application, 1 foot depth was assumed.

5.HYDROMODIFICATION MANAGEMENT (HM) APPLICABILITY

5.a Does the project create and/or replace one acre or more of impervious surface AND create an increase in total impervious surface from the pre-project condition (from page 2, is 2.d.5 > 2.d.1 AND 2.d.16 is > one acre)?

☐ Yes. Continue to Question 5.b.
☑ No. Project is exempt from Hydromodification Management.

5.b Is the project located in the green "Subwatersheds less than 65% Impervious" area on the HM Applicability Map?

☑ Yes. Project must implement HM requirements. Continue to Question 5.c.
☐ No. Project is exempt from Hydromodification Management.

5.c If Yes to 5.b, select the specific flow duration controls for Hydromodification Management.

Check all that apply:

☐ Extended Detention Basin
☐ Underground tank or vault
☑ Bioretention with outlet control
☐ Other: _____

6. OPERATION & MAINTENANCE (O&M) CONTACT INFORMATION

Please enter the contact information of the Responsible Party for Stormwater Treatment/Hydromodification Control O&M:

NAME	MAILING ADDRESS	EMAIL/PHONE
RESPONSIBLE PARTY IN CHARGE OF O&M	STREET: 2425 Samaritan Dr.	EMAIL:

7. FORM COMPLETED BY

Wendy Ha 12/20/2023

PRINT NAME DATE

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY
Planning, Building and Code Enforcement

Stormwater Evaluation Form PHASE 2

INSTRUCTIONS: At minimum, **ALL projects must complete Sections 1, 2, and 3** of this form and submit it with all Planning Permit applications.

If you answer "yes" to one or both questions below, you must complete the entire form and the Stormwater Submittal Checklist, as required by Provision C.3 of the Municipal Regional Stormwater Permit (MRP):

- Does your project create or replace 5,000 sq. ft. or more of impervious surface on the project site?
- Does your project involve a Single-Family Home that creates or replaces 10,000 sq. ft. or more of impervious surface on a project site?

What is an impervious surface? An impervious surface is pavement or other surface covering that prevents land from absorbing and infiltrating rainfall and stormwater. Impervious surfaces include buildings, structures, driveways, walkways, parking lots, rooftops, and any other continuous watertight covering. Please note, gravel is considered impervious, except when it is constructed as part of an appropriately designed pervious pavement system. Pervious pavement underlain with pervious soil or material, e.g., drain rock, that infiltrates rainfall at a rate equal to or greater than surrounding unpaved areas OR that stores and infiltrates the water quality design volume specified in Provision C.3.d of the MRP, is not considered an impervious surface.

Please refer to the City Council Policy 6-29, City Council Policy 8-14, and Municipal Codes in Title 20 for reference.

Housing project applications dated on or before June 30, 2023 that are compliant with the MRP 2.0 C.3 requirements will not be affected by the new MRP 3.0 requirements (per Government Code Section 65589.5). All other projects are subject to the following new C.3 requirements if they are not yet approved by July 1, 2023.

1. PROJECT LOCATION AND USES

1.a Project File #: PDC22-132

1.b Project Name: Good Samaritan Hospital Expansion Phase 1

FOOTNOTES

1. Per the State Construction General Permit, construction activity that includes, but is not limited to, clearing, grading, excavation, stockpiling, and demolition activities that expose or disturb soil.
2. Include sidewalks and other parts of the public Right-of-Way (e.g., roads, bike lanes, curbs, ramps, etc.) included in the project footprint for all cells in this row. Note that gravel is considered an impervious surface.
3. "Retained" in box 2.d.2 means to leave existing IA in place. An IA that goes through maintenance (e.g., pavement resurfacing/slurryseal/ grind that doesn't disturb down to top of base) is considered "retained."
4. The "replaced" and "new" IA in boxes 2.d.3. and 2.d.4 are based on the total area of the site and not specific locations on site. For example, impervious parking created over a pervious area is not "new" IA if an equal amount of pervious area replaces IA somewhere else on the site. Constructed IA on a site that does not exceed the Total Pre-Project IA in box 2.d.1. will be considered "replaced" IA. **A site will have "new" IA only if the Total Post-Project IA in box 2.d.15. exceeds the Total Pre-Project IA (2.d.15 - 2.d.11 = 2.d.14).**
5. Include bioretention areas, infiltration areas, green roofs, and pervious pavement in PA calculations.

3.APPLICABILITY OF THE CGP, PROVISION C.3, PROVISION C.10

3.a Is 2.c. equal to 1 acre or more?

☑ Yes. Applicant must obtain coverage under the State Construction General Permit.
☐ No. Applicant does not need coverage under the State Construction General Permit.

3.b Is 2.c. equal to 1 acre or more and the project is a utility trenching project that is on average - over the entire length of the project – greater than or equal to eight feet wide?

☑ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area, including sidewalksand other parts of the public Right-of-way included in the project footprint (see section 3.f. below).
☐ No. Site Design and Source Control requirements may apply; check with the City Department of Public Works.

3.c Is box 2.d.16 equal to 5,000 sq. ft. or more for any type of project, or 10,000 sq. ft. or more for a Single-Family Home project?

☑ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area, including sidewalksand other parts of the public Right-of-way included in the project footprint (see section 3.g. below).
☐ No. Site Design and Source Control requirements may apply; check with the City Department of Public Works. *If the number in 2.d.16 is between 2,500 sq. ft. and 5,000 sq. ft. for any type of project, or 2,500 sq. ft. and 10,000 sq. ft. for Single-Family Home projects, one or more Site Design Measures will need to be implemented on your project (see section 3.g. below).

3.d Is box 2.d.17 equal to or greater than 50%?

☐ Yes. Site Design, Source Control, and Treatment System requirements all apply to the entire site, including sidewalks andother parts of the public Right-of-way included in the project footprint.
☐ No. Site Design, Source Control, and Treatment System requirements only apply to the area of site that is disturbed.

3.e Is your project connected or proposing to be connected to the City of San Jose's stormwater pipe system?

☑ Yes. There are storm drains on the property that are connected to the stormwater pipe system. Complete the following question (3.f).
☐ No. Your parcel is exempt from full trash capture requirements.

3.f Is the project area located within the green areas on this Trash Management Area map?

☑ Yes. Your project is exempt from full trash capture requirements.
☐ No. Your project must install full trash capture devices approved by the Water Board (see section 3.g. below).

continued>

3.g Indicate which of the following Provision C.3 and C.10 measures will be applied to your project. Check all that apply.

SITE DESIGN MEASURES

PROTECTION MEASURES

- ❑ Protect existing trees, vegetation, and soil.
- ❑ Protect riparian and wetland areas/ buffers (Riparian setback _____ ft.)[1]
- ❑ Preserve open space and natural drainage patterns: _____ sq. ft.
- ❑ Rainwater harvesting and use (e.g., rain barrel, cistern connected to roof drains) [2]

LANDSCAPE DESIGN MEASURES

- ☑ Direct runoff from roofs, sidewalks, patios to landscaped areas.
- ☑ Plant trees adjacent to and in parking areas and adjacent to other impervious areas.

DESIGN MEASURES TO MINIMIZE IMPERVIOUS SURFACE AREA

- ❑ Reduce existing impervious surfaces.
- ❑ Cluster structures/pavement.
- ☑ Create new pervious areas:
  - ✓ Landscaping
  - ❍ Parking stalls
  - ❍ Walkways and patios
  - ❍ Emergency vehicle access
  - ❍ Private streets and sidewalks
- ❑ Install a Green Roof on all or a portion of the roof.
- ❑ Parking:
  - ❍ On top of or under buildings
  - ❍ Not provided in excess of Code
- ❑ Other:

SOURCE CONTROL MEASURES

- ☑ Beneficial landscaping [3]
- ☑ Use water efficient irrigation systems.
- ☑ Good housekeeping, e.g., sweep pavement and clean catch basin.
- ☑ Label storm drains.
- ☑ Connect to the sanitary sewer: [4]
  - ✓ Covered trash/recycling enclosures
  - ✓ Interior parking structures
  - ❍ Wash area/racks
  - ❍ Pools, spas, fountains
  - ✓ Covered loading docks and maintenance bays
  - ❍ Pumped groundwater
- ❑ Fueling areas must (all required):
  - Be graded to prevent ponding.
  - Use a concrete surface.
  - Be separated from the site by a grade break to prevent run-on.
  - Have a canopy cover extending at least 10 feet from each pump.
- ☑ Industrial, outdoor material storage, and recycling facilities must (all required):
  - Stockpile material on an impervious surface or under a permanent roof or covering.
  - Direct ponded water to the sanitary sewer,[4] an on-site treatment system, or off-site disposal.
  - Install berms or curbs to prevent runoff from the storage/processing areas.
  - Segregate pollutant-generating activities into a distinct drainage management area and provide treatment.
- ❑ Other:

TREATMENT SYSTEMS

NONE

- ❑ Impervious surfaces drain to one or more self-retaining areas that are sized per the design criteria listed in the C.3 Stormwater Handbook.

C.3 TREATMENT METHODS

LID TREATMENT

- ☑ Bioretention area
- ❑ Flow-through planter
- ❑ Tree well filter or trench with bioretention soils[5]
- ❑ Rainwater harvest and use (e.g., cistern or rain barrel sized for C.3.d treatment)
- ❑ Pervious pavement, sized for C.3.d treatment
- ❑ Infiltration well/dry well
- ❑ Infiltration trench
- ❑ Subsurface Infiltration System (e.g., vault or large diameter pipe over drain rock)
- ❑ Other:

OTHER C.3 TREATMENT METHODS

SPECIAL PROJECTS ONLY [6]

- ❑ Proprietary tree box filter
- ❑ Media filter (sand, compost, or proprietary media)

MULTI-STEP PROCESS ONLY [7]

- ❑ Vegetated filter strip
- ❑ Extended Detention Basin
- ❑ Vegetated Swale

C.10 FULL TRASH CAPTURE METHODS

- ❑ Bioretention area[8]
- ❑ Approved High flow capacity trash Device(s)
- ❑ Approved catch basin insert(s) orother device(s)

FOOTNOTES

1. Per Council Policy 6-34, setback is measured from the outside dripline of the Riparian Corridor vegetation or top-of-bank, whichever is greater(verify by Biological Report).
2. As a site design measure, it does not have to be sized to comply with Provision C.3.d treatment requirements.

continued>

3. Landscaping that minimizes irrigation and runoff, promotes surface infiltration where possible, and minimizes the use of pesticides and fertilizers.
4. Subject to the requirements of the sanitary sewer authority.
5. Bioretention soils shall infiltrate runoff at a minimum of 5 inches per hour during the life of the facility and sustain healthy, vigorous plant growth.
6. These treatment measures are only allowed if the project qualifies as a Special Project.
7. These treatment measures are only allowed as part of a multi-step treatment process (i.e., pretreatment).
8. Bioretention areas can count towards both C.3 LID treatment and C.10 full trash capture requirements.

4.TREATMENT SYSTEM SIZING FOR PROJECTS WITH TREATMENT REQUIREMENTS

For each treatment system component, indicate the hydraulic sizing criteria using the codes in the far right column, and provide the calculated design flow or volume to be treated:

Treatment Control Measure (TCM)	**Hydraulic Sizing Criteria** Enter Code	**Design Flow or Volume** cfs or cu.ft.	**Codes For Hydraulic Sizing Criteria**
Bioretention lined w/ underdrain	2c	6,354	CODE 1a - Volume–WEF Method 1b - Volume–CASQA BMP Handbook Method 2a - Flow–Factored Flood Flow Method 2b - Flow–CASQA BMP Handbook Method 2c - Flow–Uniform Intensity Method 3 - Combination Flow/Volume Design Basis
Bioretention unlined w/ underdrain	2c	8,900	

Note: Bioretention with Underdrain has been sized for surface area in square feet. For this application, 1 foot depth was assumed.

5.HYDROMODIFICATION MANAGEMENT (HM) APPLICABILITY

5.a Does the project create and/or replace one acre or more of impervious surface AND create an increase in total impervious surface from the pre-project condition (from page 2, is 2.d.5 > 2.d.1 AND 2.d.16 is > one acre)?

☐ Yes. Continue to Question 5.b.
☑ No. Project is exempt from Hydromodification Management.

5.b Is the project located in the green "Subwatersheds less than 65% Impervious" area on the HM Applicability Map?

☑ Yes. Project must implement HM requirements. Continue to Question 5.c.
☐ No. Project is exempt from Hydromodification Management.

5.c If Yes to 5.b, select the specific flow duration controls for Hydromodification Management.

Check all that apply:

☐ Extended Detention Basin
☐ Underground tank or vault
☑ Bioretention with outlet control
☐ Other: _____

6. OPERATION & MAINTENANCE (O&M) CONTACT INFORMATION

Please enter the contact information of the Responsible Party for Stormwater Treatment/Hydromodification Control O&M:

Planning, Building and Code Enforcement

Stormwater Evaluation Form PHASE 3

INSTRUCTIONS: At minimum, **ALL projects must complete Sections 1, 2, and 3** of this form and submit it with all Planning Permit applications.

If you answer "yes" to one or both questions below, you must complete the entire form and the Stormwater Submittal Checklist, as required by Provision C.3 of the Municipal Regional Stormwater Permit (MRP):

- Does your project create or replace 5,000 sq. ft. or more of impervious surface on the project site?
- Does your project involve a Single-Family Home that creates or replaces 10,000 sq. ft. or more of impervious surface on a project site?

What is an impervious surface? An impervious surface is pavement or other surface covering that prevents land from absorbing and infiltrating rainfall and stormwater. Impervious surfaces include buildings, structures, driveways, walkways, parking lots, rooftops, and any other continuous watertight covering. Please note, gravel is considered impervious, except when it is constructed as part of an appropriately designed pervious pavement system. Pervious pavement underlain with pervious soil or material, e.g., drain rock, that infiltrates rainfall at a rate equal to or greater than surrounding unpaved areas OR that stores and infiltrates the water quality design volume specified in Provision C.3.d of the MRP, is not considered an impervious surface.

Please refer to the City Council Policy 6-29, City Council Policy 8-14, and Municipal Codes in Title 20 for reference.

Housing project applications dated on or before June 30, 2023 that are compliant with the MRP 2.0 C.3 requirements will not be affected by the new MRP 3.0 requirements (per Government Code Section 65589.5). All other projects are subject to the following new C.3 requirements if they are not yet approved by July 1, 2023.

1. PROJECT LOCATION AND USES

1.a Project File #: PDC22-132

1.b Project Name: Good Samaritan Hospital Expansion Phase 1

1.c Project Address: 2425 Samaritan Dr, San Jose, CA 95124

1.d Project Cross Streets: Samaritan Dr. & Samaritan Pl.

1.e Project APN(s) (include all that apply): 421-36-009, 421-36-011

1.f Applicant/Developer Name: HCA Healthcare

1.g Estimated Project Completion Date: Phase 1 - Dec 2029

1.h Are any of these land uses included in your project?

Check all that apply.

- ☐ Commercial
- ☐ Industrial
- ☐ Public Street
- ☐ Residential
- ☐ Mixed Use
- ☐ Single-Family Home
- ☑ Other Hospital

continued>

\pbce-communications\COLLATERAL PLANNING\APPLICATIONS

1.i Check the watershed in which your project is located.
See the **Watershed Maps** webpage

☐ Baylands
☐ Calabazas
☐ Coyote (including Lower Penitencia)
☑ Guadalupe
☐ San Tomas

1.j Old Industrial Area
Is your project in an Old Industrial Area?
See the **Old Industrial Area Map** webpage to confirm if your project is in an Old Industrial Area.
☐ Yes (at future stages sediment sampling may be conditioned at your property)
☑ No

1.k Special Project Status
Use the online **Special Project Worksheet** and the **Affordable Housing calculator** to determine if your project qualifies as aSpecial Project. Does your project qualify?

☐ Yes, but it is feasible for the project to incorporate 100% LID.

☐ Yes, and it is infeasible for the project to incorporate 100% LID. Attach the following to this application: Special ProjectWorksheet, Affordable Housing Calculator (if applicable), and Feasibility/Infeasibility Narrative justifying the use of non-LID.

☑ No

2. AREA DATA

2.a Enter the Project Phase Number (1, 2, 3, etc. or N/A if Not Applicable):	Phase 1	
2.b Total area of site:	20.07	acres
2.c Total area of site that will be disturbed[1]:	9.84	acres

COMPARISON OF IMPERVIOUS AND PERVIOUS AREAS AT PROJECT SITE:

2.d IMPERVIOUS AREAS - IA[2]	Pre-Project Existing IA sq. ft.	Existing IA Retained As-Is[3] sq. ft.	Existing IA Replaced with IA[4] sq. ft.	New IA Created[4] sq. ft.	Total Post Project IA sq. ft.
Site Totals					
Total onsite IA	d.1 703,336	d.2 384,667	d.3 318,669	d.4 14,708	d.5 (d.2+d.3+d.4) 718,044
Total off-site IA[2]	d.6 0	d.7 0	d.8 0	d.9 0	d.10 (d.7+d8+d.9) 0
Total project IA	d.11 (d.1+d.6) 703,336	d.12 (d.2 +d.7) 384,667	d.13 (d.3 +d.8) 318,669	d.14 (d.4 +d.9) 14,708	d.15 (d.5 +d.10) 718,044
Total New and Replaced IA			d.16 (d.13+d.14) 333,377		
Percent Replacement of onsite IA in Redevelopment Projects (d.3÷d.1) x 100:					d.17 45 %

2.e PERVIOUS AREAS - PA[5]	Pre-Project Existing PA sq. ft.	Total Post Project PA sq. ft.
Total on-site PA	e.1 170,847	e.2 156,139
Total off-site PA	e.3 0	e.4 0

2.f Total Area (IA + PA)	f.1 (d.11 + e.5) 874,183	f.2 (d.15 + e.6) 874,183

continued>

FOOTNOTES

1. Per the State Construction General Permit, construction activity that includes, but is not limited to, clearing, grading, excavation, stockpiling, and demolition activities that expose or disturb soil.
2. Include sidewalks and other parts of the public Right-of-Way (e.g., roads, bike lanes, curbs, ramps, etc.) included in the project footprint for all cells in this row. Note that gravel is considered an impervious surface.
3. "Retained" in box 2.d.2 means to leave existing IA in place. An IA that goes through maintenance (e.g., pavement resurfacing/slurryseal/ grind that doesn't disturb down to top of base) is considered "retained."
4. The "replaced" and "new" IA in boxes 2.d.3. and 2.d.4 are based on the total area of the site and not specific locations on site. For example, impervious parking created over a pervious area is not "new" IA if an equal amount of pervious area replaces IA somewhere else on the site. Constructed IA on a site that does not exceed the Total Pre-Project IA in box 2.d.1. will be considered "replaced" IA. **A site will have "new" IA only if the Total Post-Project IA in box 2.d.15. exceeds the Total Pre-Project IA (2.d.15 - 2.d.11 = 2.d.14).**
5. Include bioretention areas, infiltration areas, green roofs, and pervious pavement in PA calculations.

3.APPLICABILITY OF THE CGP, PROVISION C.3, PROVISION C.10

3.a Is 2.c. equal to 1 acre or more?

☑ Yes. Applicant must obtain coverage under the State Construction General Permit.
☐ No. Applicant does not need coverage under the State Construction General Permit.

3.b Is 2.c. equal to 1 acre or more and the project is a utility trenching project that is on average - over the entire length of the project – greater than or equal to eight feet wide?

☑ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area, including sidewalksand other parts of the public Right-of-way included in the project footprint (see section 3.f. below).
☐ No. Site Design and Source Control requirements may apply; check with the City Department of Public Works.

3.c Is box 2.d.16 equal to 5,000 sq. ft. or more for any type of project, or 10,000 sq. ft. or more for a Single-Family Home project?

☑ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area, including sidewalksand other parts of the public Right-of-way included in the project footprint (see section 3.g. below).
☐ No. Site Design and Source Control requirements may apply; check with the City Department of Public Works. *If the number in 2.d.16 is between 2,500 sq. ft. and 5,000 sq. ft. for any type of project, or 2,500 sq. ft. and 10,000 sq. ft. for Single-Family Home projects, one or more Site Design Measures will need to be implemented on your project (see section 3.g. below).

3.d Is box 2.d.17 equal to or greater than 50%?

☐ Yes. Site Design, Source Control, and Treatment System requirements all apply to the entire site, including sidewalks andother parts of the public Right-of-way included in the project footprint.
☐ No. Site Design, Source Control, and Treatment System requirements only apply to the area of site that is disturbed.

3.e Is your project connected or proposing to be connected to the City of San Jose's stormwater pipe system?

☑ Yes. There are storm drains on the property that are connected to the stormwater pipe system. Complete the following question (3.f).
☐ No. Your parcel is exempt from full trash capture requirements.

3.f Is the project area located within the green areas on this Trash Management Area map?

☑ Yes. Your project is exempt from full trash capture requirements.
☐ No. Your project must install full trash capture devices approved by the Water Board (see section 3.g. below).

continued>

3.g Indicate which of the following Provision C.3 and C.10 measures will be applied to your project. Check all that apply.

SITE DESIGN MEASURES

PROTECTION MEASURES

- ❑ Protect existing trees, vegetation, and soil.
- ❑ Protect riparian and wetland areas/ buffers (Riparian setback _____ ft.)[1]
- ❑ Preserve open space and natural drainage patterns: _____ sq. ft.
- ❑ Rainwater harvesting and use (e.g., rain barrel, cistern connected to roof drains) [2]

LANDSCAPE DESIGN MEASURES

- ☑ Direct runoff from roofs, sidewalks, patios to landscaped areas.
- ☑ Plant trees adjacent to and in parking areas and adjacent to other impervious areas.

DESIGN MEASURES TO MINIMIZE IMPERVIOUS SURFACE AREA

- ❑ Reduce existing impervious surfaces.
- ❑ Cluster structures/pavement.
- ☑ Create new pervious areas:
  - ✓ Landscaping
  - ❍ Parking stalls
  - ❍ Walkways and patios
  - ❍ Emergency vehicle access
  - ❍ Private streets and sidewalks
- ❑ Install a Green Roof on all or a portion of the roof.
- ❑ Parking:
  - ❍ On top of or under buildings
  - ❍ Not provided in excess of Code
- ❑ Other:

SOURCE CONTROL MEASURES

- ☑ Beneficial landscaping [3]
- ☑ Use water efficient irrigation systems.
- ☑ Good housekeeping, e.g., sweep pavement and clean catch basin.
- ☑ Label storm drains.
- ☑ Connect to the sanitary sewer: [4]
  - ✓ Covered trash/recycling enclosures
  - ✓ Interior parking structures
  - ❍ Wash area/racks
  - ❍ Pools, spas, fountains
  - ✓ Covered loading docks and maintenance bays
  - ❍ Pumped groundwater
- ❑ Fueling areas must (all required):
  - Be graded to prevent ponding.
  - Use a concrete surface.
  - Be separated from the site by a grade break to prevent run-on.
  - Have a canopy cover extending at least 10 feet from each pump.
- ☑ Industrial, outdoor material storage, and recycling facilities must (all required):
  - Stockpile material on an impervious surface or under a permanent roof or covering.
  - Direct ponded water to the sanitary sewer,[4] an on-site treatment system, or off-site disposal.
  - Install berms or curbs to prevent runoff from the storage/processing areas.
  - Segregate pollutant-generating activities into a distinct drainage management area and provide treatment.
- ❑ Other:

TREATMENT SYSTEMS

NONE

- ❑ Impervious surfaces drain to one or more self-retaining areas that are sized per the design criteria listed in the C.3 Stormwater Handbook.

C.3 TREATMENT METHODS

LID TREATMENT

- ☑ Bioretention area
- ❑ Flow-through planter
- ❑ Tree well filter or trench with bioretention soils[5]
- ❑ Rainwater harvest and use (e.g., cistern or rain barrel sized for C.3.d treatment)
- ❑ Pervious pavement, sized for C.3.d treatment
- ❑ Infiltration well/dry well
- ❑ Infiltration trench
- ❑ Subsurface Infiltration System (e.g., vault or large diameter pipe over drain rock)
- ❑ Other:

OTHER C.3 TREATMENT METHODS

SPECIAL PROJECTS ONLY [6]

- ❑ Proprietary tree box filter
- ❑ Media filter (sand, compost, or proprietary media)

MULTI-STEP PROCESS ONLY [7]

- ❑ Vegetated filter strip
- ❑ Extended Detention Basin
- ❑ Vegetated Swale

C.10 FULL TRASH CAPTURE METHODS

- ❑ Bioretention area[8]
- ❑ Approved High flow capacity trash Device(s)
- ❑ Approved catch basin insert(s) orother device(s)

FOOTNOTES

1. Per Council Policy 6-34, setback is measured from the outside dripline of the Riparian Corridor vegetation or top-of-bank, whichever is greater(verify by Biological Report).
2. As a site design measure, it does not have to be sized to comply with Provision C.3.d treatment requirements.

continued>

3. Landscaping that minimizes irrigation and runoff, promotes surface infiltration where possible, and minimizes the use of pesticides and fertilizers.
4. Subject to the requirements of the sanitary sewer authority.
5. Bioretention soils shall infiltrate runoff at a minimum of 5 inches per hour during the life of the facility and sustain healthy, vigorous plant growth.
6. These treatment measures are only allowed if the project qualifies as a Special Project.
7. These treatment measures are only allowed as part of a multi-step treatment process (i.e., pretreatment).
8. Bioretention areas can count towards both C.3 LID treatment and C.10 full trash capture requirements.

4.TREATMENT SYSTEM SIZING FOR PROJECTS WITH TREATMENT REQUIREMENTS

For each treatment system component, indicate the hydraulic sizing criteria using the codes in the far right column, and provide the calculated design flow or volume to be treated:

Treatment Control Measure (TCM)	Hydraulic Sizing Criteria Enter Code	Design Flow or Volume cfs or cu.ft.	Codes For Hydraulic Sizing Criteria
Bioretention lined w/ underdrain	2c	6,354	CODE 1a - Volume–WEF Method 1b - Volume–CASQA BMP Handbook Method 2a - Flow–Factored Flood Flow Method 2b - Flow–CASQA BMP Handbook Method 2c - Flow–Uniform Intensity Method 3 - Combination Flow/Volume Design Basis
Bioretention unlined w/ underdrain	2c	8,900	

Note: Bioretention with Underdrain has been sized for surface area in square feet. For this application, 1 foot depth was assumed.

5.HYDROMODIFICATION MANAGEMENT (HM) APPLICABILITY

5.a Does the project create and/or replace one acre or more of impervious surface AND create an increase in total impervious surface from the pre-project condition (from page 2, is 2.d.5 > 2.d.1 AND 2.d.16 is > one acre)?

☐ Yes. Continue to Question 5.b.
☑ No. Project is exempt from Hydromodification Management.

5.b Is the project located in the green "Subwatersheds less than 65% Impervious" area on the HM Applicability Map?

☑ Yes. Project must implement HM requirements. Continue to Question 5.c.
☐ No. Project is exempt from Hydromodification Management.

5.c If Yes to 5.b, select the specific flow duration controls for Hydromodification Management.

Check all that apply:

☐ Extended Detention Basin
☐ Underground tank or vault
☑ Bioretention with outlet control
☐ Other: _____

VdB	vibration velocity level

1 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for the Good Samaritan Hospital Project. The purpose of this Acoustical Assessment is to evaluate the Project's potential construction and operational noise and vibration levels associated with the Project and determine the level of impact the Project would have on the environment.

1.1 PROJECT LOCATION

The approximately 20-acre Project site is located at 2425 Samaritan Drive and 2333 Samaritan Place (Assessor's Parcel Numbers [APNs]: 421-36-009 and 421-36-011). Regionally, Good Samaritan Hospital is in the southwestern region of San José within an urban area that contains a mix of medical offices and clinics as well as single and multi-family residential developments. The northern boundary of the Project site abuts the eastbound on-ramp to SR-65. Along the eastern boundary of the Project site is the Cambrian Center, a multi-family residential complex, and single-family residences. To the south of the Project site are various medical office buildings. Along the western boundary of the Project site is the Samaritan Medical Center, a medical office complex with surface parking Figure 1: Regional Vicinity and Figure 2: Site Vicinity, depict the Project site in a regional and local context.

1.2 PROJECT DESCRIPTION

Located in an urban area with a mix of commercial uses, single-family, and multi-family residential developments, the Project site is currently the Good Samaritan Hospital campus. The campus contains a day care center, the hospital building (Building A and Building B), a helipad in the northwest corner of the site, landscaping, and surface parking. The existing hospital building is divided into two different wings. Building A is the main building with emergency operations totaling approximately 359,000 square feet (sf), and Building B operates as a women's and children's services wing totaling approximately 85,000 sf. With the day care center totaling approximately 6,700 sf, the existing hospital campus is approximately 450,700 sf. Figure 3: Existing Conditions depict the Project site along with the current existing uses.

The proposed Project's existing land use designation is Neighborhood/Community Commercial (NCC), and the existing zoning designation is Planned Development (Agriculture Base District) (A(PD)). Project implementation would require a new Planned Development District to authorize the Project's new uses and, therefore a zone change would be required. The Project proposes a rezone (File No. PDC22-132) from the existing (A(PD)) Planned Development Zoning District to the Commercial General Planned Development (CG(PD)) Zoning District. The new (CG(PD)) Planned Development Zoning District would authorize the new hospital wing components and additional uses (i.e., cafeterias and retail shops), as well as updated standards to address the modernization of the hospital's healthcare system and operations. In addition, a new planned development permit(s) would be required to implement the new PD Zoning.

Although the Project would be constructed in phases, the hospital would plan and stage operations throughout the expansion in order to allow for continuous uninterrupted operation of the hospital. Construction for all phases would follow a conventional construction sequence of demolition, site preparation, grading/earthwork, paving, building construction, and architectural coating. See Figure 4: Project Site Plan for more details.

Phase 1

Phase 1 would include demolition of 20,946 square feet in Building A and demolition of the 6,700 sf daycare center to construct a new 253,000-square –foot, five-story parking garage (Garage East), a 23,750-square-foot detached central utility plant and underground water and sewer tanks, and an approximately 548,444-square-foot, eight-story hospital building (Building C).

Garage East would be in the northeastern region of the Project site and would provide 653 parking spaces. Additionally, a new loading dock and accompanying dock canopy is proposed at grade-level on the west side of Building C, north of the existing four-story Women's and Children Center hospital wing (existing Building B). The loading area would be accessed from an internal drive aisle from Samaritan Drive, and the northern perimeter drive aisle.

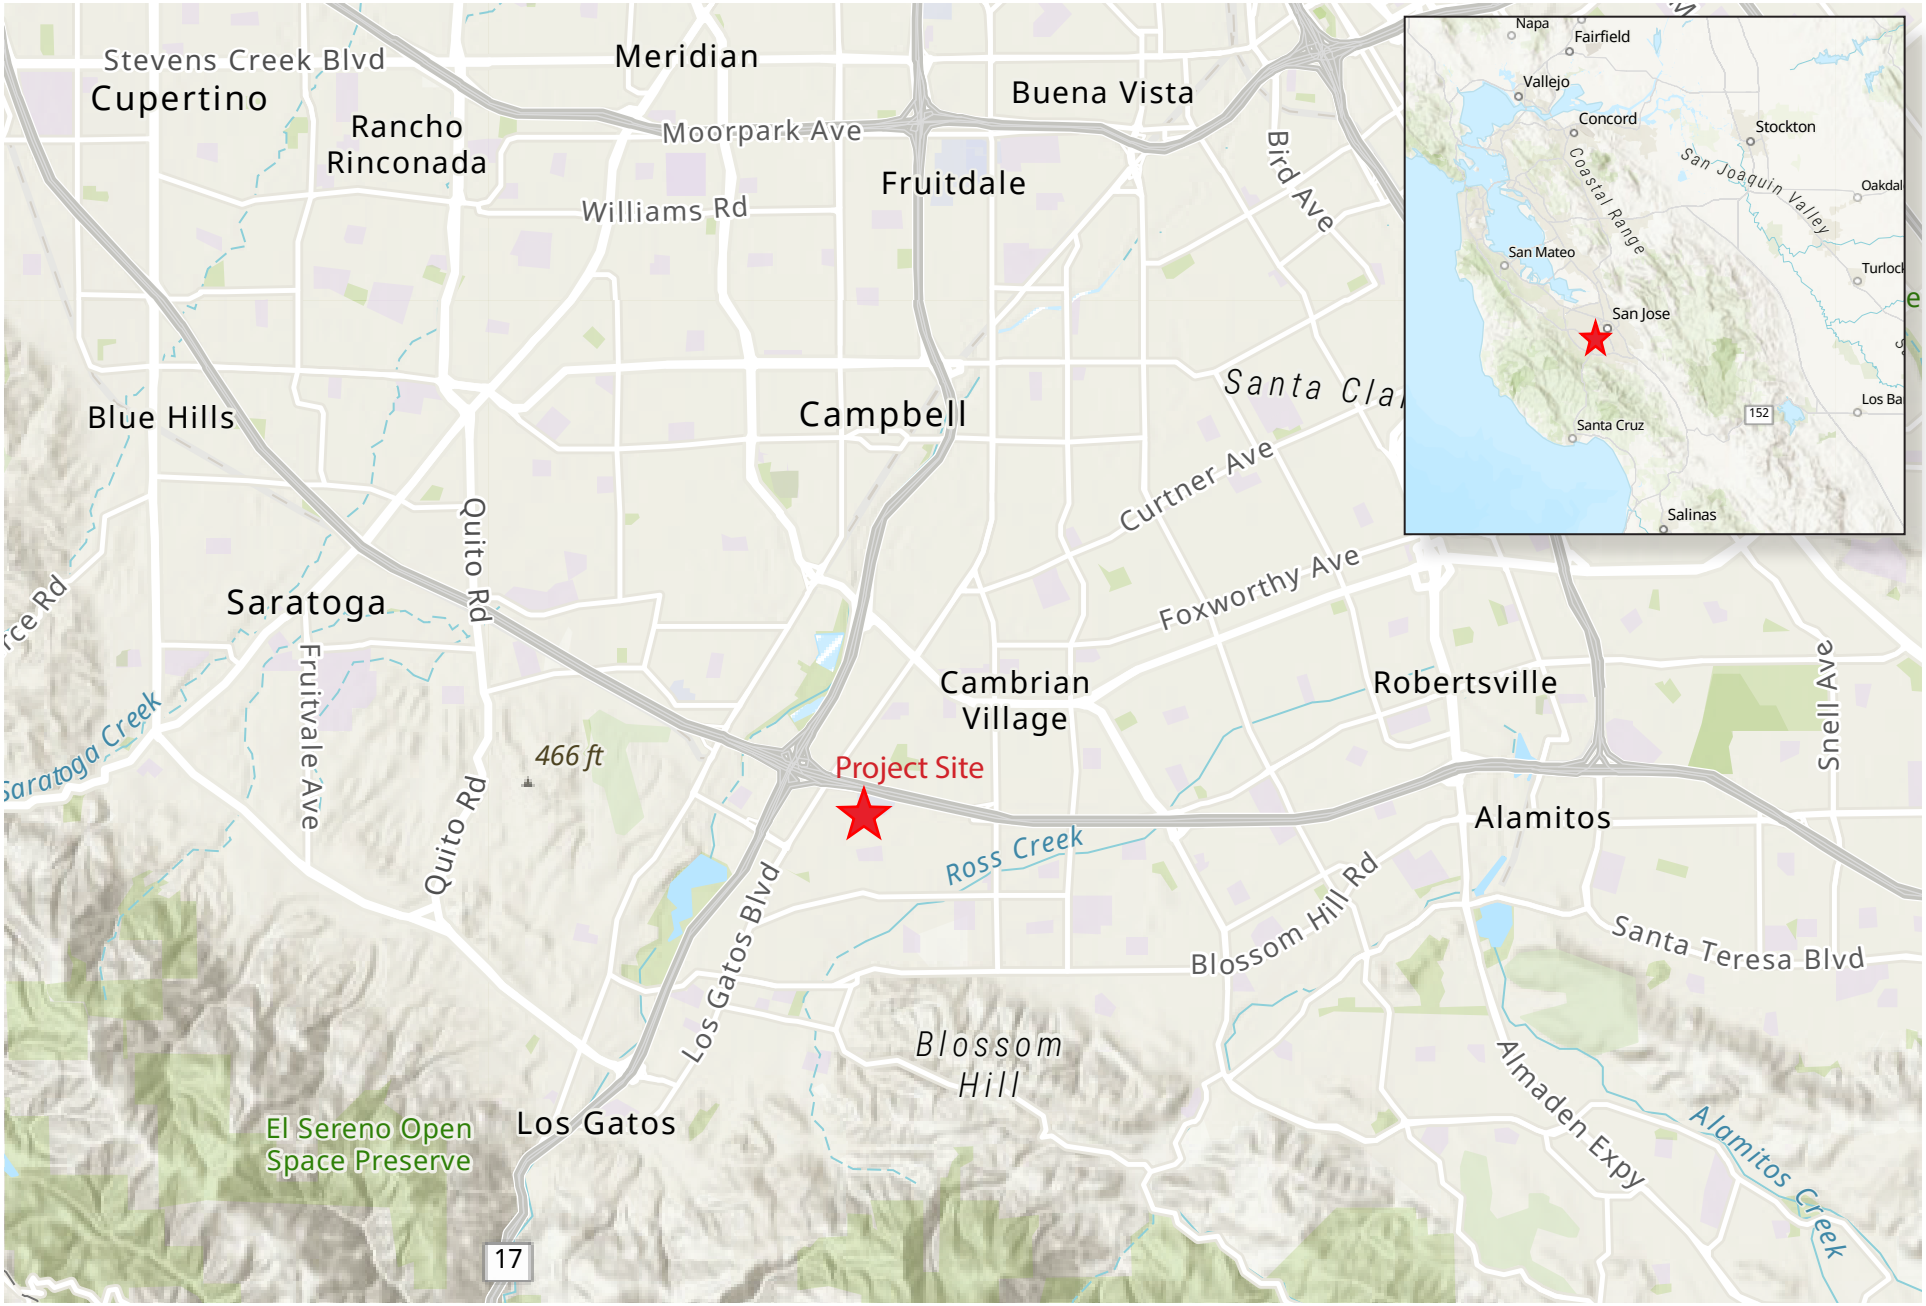
In Phase 1, a Health Care Access and Information (HCAI) compliant two-story approximately 23,750 sf Central Utility Plant, Mechanical Yard, and Oxygen (O2) Yard is proposed to the east of proposed Building C and west of Garage East to provide power and utility infrastructure to support the hospital operations.

Phase 1 would result in approximately 40,000 cubic yards (cy) of soil export from the Project site and approximately 10,000 cy of soil import. Construction Phase 1 would occur over approximately 5.8 years (i.e., 69 months), anticipated to begin in March 2024. See Figure 5: Proposed Project Phase 1 Conceptual Site Plan for more details.

Phase 2

In Phase 2, the existing non-seismically-compliant hospital building (Building A) would be demolished, totaling approximately 338,054 sf of demolition. The basement of the demolished hospital would be infilled with approximately 16 feet of fill and then approximately 421 surface parking stalls would be constructed.

Phase 2 would result in approximately 1,000 cy of soil export and 70,000 cy of soil import. Phase 2 is anticipated to begin in 2029 and occur over approximately two years. See Figure 6: Proposed Project Phase 2 Conceptual Site Plan for more details.



Phase 3

Phase 3 would construct an approximately 202,000 sf hospital wing (Building D), an approximately 200,000 sf medical office building (Building E), and an approximately 425,208 sf six-story garage structure (Garage West) with up to 1,154 parking stalls.

Building E is proposed to be constructed at the southern edge of the Project site, near the intersection of Samaritan Drive at Samaritan Place and would be eight stories tall and have approximately 25,000 sf of office space per floor, for a total of approximately 200,000 sf.

Additional patient, staff, and visitor parking would be provided in a new free-standing parking structure (Garage West) located on the western edge of the site. Garage West would be fully constructed in Phase 3 and would have approximately 1,154 parking spaces with five levels of parking, including basement. At Phase 3 completion, the Good Samaritan Hospital would have up to 2,179 parking spaces. See Figure 7: Proposed Buildout Conceptual Site Plan for more details.

Phase 3 would result in approximately 21,000 CY of soil export and 5,000 CY of soil import. Phase 3 would be constructed over approximately 2.8 years (i.e., 34 months) starting in 2032. The schedule for construction in all phases would typically occur six days a week (Monday through Saturday) from 7:00 a.m. to 7:00 p.m.

2 ACOUSTIC FUNDAMENTALS

2.1 SOUND AND ENVIRONMENTAL NOISE

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g. air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. The fundamental acoustics model consists of a noise source, receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of ambient noise that is the sum of many distant and indistinguishable noise sources. The sound from individual local sources is superimposed on this background noise. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. Table 1: Typical Noise Levels provides typical noise levels.

Table 1: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –	
Gas lawnmower at 3 feet		
	– 90 –	
Diesel truck at 50 feet at 50 miles per hour		Food blender at 3 feet
	– 80 –	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawnmower, 100 feet	– 70 –	Vacuum cleaner at 10 feet
Commercial area		Normal Speech at 3 feet
Heavy traffic at 300 feet	– 60 –	
		Large business office
Quiet urban daytime	– 50 –	Dishwasher in next room
Quiet urban nighttime	– 40 –	Theater, large conference room (background)
Quiet suburban nighttime		
	– 30 –	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	– 20 –	
		Broadcast/recording studio
	– 10 –	
Lowest threshold of human hearing	– 0 –	Lowest threshold of human hearing

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Most commonly, environmental sounds are described in terms of L_{eq} that has the same acoustical energy as the summation of all the time-varying events. While the equivalent noise level (L_{eq}) represents the continuous sound pressure level over a given time period, the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period. Each is applicable to this analysis and defined Table 2: Definitions of Acoustical Terms.

Table 2: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g. 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.

Term	Definitions
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Exceeded Noise Levels (L_1, L_{10}, L_{50}, L_{90})	The dBA values that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average L_{eq} with a 5 dBA weighting during the hours of 7:00 a.m. to 10:00 a.m. and a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound (L_{eq}) or the statistical behavior of the variations (L_{XX}) must be used. The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on various factors, such as the distance between the receptor and the noise source, the character of the ground surface (e.g., hard or soft), and the presence or absence of structures (e.g., walls or buildings) or topography and how well model inputs reflect these conditions present in the local setting.

A-Weighted Decibels

The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10.[1] When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness.[2] For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions. Under the dB scale, three sources of equal loudness together would produce an increase of 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source.[3] Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics.[4] No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed when soft ground conditions exist between the source and receptor locations.[5] For line sources, an overall attenuation rate of 3 dB per doubling of distance is assumed in this report.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the noise receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm can reduce noise levels by 5 to 15 dBA.[6] The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA.[7] Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-

commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most would accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted:[8]

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss. While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.[9]

Annoyance. Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 65 dBA L_{dn} is the threshold at which a 12 percent of people begin to report annoyance which is considered significant.[10]

2.2 GROUNDBORNE VIBRATION

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g. factory machinery) or transient (e.g. explosions). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave and is expressed in terms of inches-per-second (in/sec). The RMS velocity is defined as the average of the squared amplitude of the signal and is

8 Compiled from California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013, and Federal Highway Administration, *Noise Fundamentals,* 2017.

9 U.S. Department of Labor, Occupational Safety and Health Standards, *29 CFR 1910* (Occupational Noise Exposure).

10 Federal Interagency Committee on Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

expressed in terms of velocity decibels (VdB). The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 3: Human Reaction and Damage to Buildings, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the individual's sensitivity. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibration

Maximum PPV (in/sec)	Vibration Annoyance Potential Criteria	Vibration Damage Potential Threshold Criteria	FTA Vibration Damage Criteria
0.008	-	Extremely fragile historic buildings, ruins, ancient monuments	-
0.01	Barely Perceptible	-	-
0.04	Distinctly Perceptible	-	-
0.1	Strongly Perceptible	Fragile buildings	-
0.12	-	-	Buildings extremely susceptible to vibration damage
0.2	-	-	Non-engineered timber and masonry buildings
0.25	-	Historic and some old buildings	-
0.3	-	Older residential structures	Engineered concrete and masonry (no plaster)
0.4	Severe	-	-
0.5	-	New residential structures, Modern industrial/commercial buildings	Reinforced-concrete, steel, or timber (no plaster)
PPV = peak particle velocity; in/sec = inches per second; FTA = Federal Transit Administration			
Source: California Department of Transportation, Transportation and Construction Vibration Guidance Manual, 2020 and Federal Transit Administration; Transit Noise and Vibration Assessment Manual, 2018.			

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the Federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise.

3.1 FEDERAL

No federal laws, regulations, or policies for construction-related noise and vibration directly apply to the proposed project. However, the Federal Transit Administration (FTA) has developed general assessment criteria for analyzing construction noise. Although FTA standards are intended for federally funded mass transit projects, the impact assessment procedures and criteria included in the FTA's Transit Noise and Vibration Impact Assessment Manual (FTA 2018) routinely are used to evaluate a variety of projects proposed by local jurisdictions (i.e., not exclusively used for transit projects). The FTA construction guidelines state that each A-weighted sound level increase of 10 dB corresponds to an approximate doubling of subjective loudness. As a result, a 10-dB increase in the ambient noise level is often used as the threshold to determine if an increase in ambient noise levels because of construction would be considered substantial.

3.2 STATE OF CALIFORNIA

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

Title 24 – Building Code

The State's noise insulation standards are codified in the California Code of Regulations, Title 24: Part 1, Building Standards Administrative Code, and Part 2, California Building Code. These noise standards are applied to new construction in California for interior noise compatibility from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, or hospitals, are located near major transportation noise sources, and where such noise sources create an exterior noise level of 65 dBA CNEL or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to 45 dBA CNEL. Compliance with Title 24 interior noise standards occurs during the permit review process and generally protects a proposed project's users from existing ambient outdoor noise levels.

California Department of Transportation

Caltrans provides guidelines regarding vibration associated with construction and operation of transportation infrastructure. Table 3 provides Caltrans' vibration guidelines for potential damage to different types of structures. Generally, people are more sensitive to vibration during nighttime hours, when sleeping, rather than daytime hours. Numerous studies have been conducted to characterize the human response to vibration. Table 3 also provides Caltrans' guidelines regarding vibration annoyance potential (expressed as PPV).

3.3 LOCAL

City of San José

The San José General Plan identifies goals, policies, and implementations in the Noise Element. The Noise Element provides a basis for comprehensive local programs to regulate environmental noise and protect citizens from excessive exposure. Table 4: Land-Use Compatibility Guidelines for Community Noise in San José highlights five land-use categories and the outdoor noise compatibility guidelines.

Table 4: Land-Use Compatibility Guidelines for Community Noise in San José

Land-Use Category	Exterior Noise Exposure (DNL), in dBA		
	Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]
Residential, Hotels and Motels, Hospitals, and Residential Care	Up to 60	>60 to 75	>75
Outdoor Sports and Recreation, Neighborhood Parks and Playgrounds	Up to 65	>65 to 80	>80
Schools, Libraries, Museums, Meeting Halls, Churches	Up to 60	>60 to 75	>75
Office Buildings, Business Commercial, and Professional Offices	Up to 70	>70 to 80	>75
Sports Area, Outdoor Spectator Sports	Up to 70	>70 to 80	>65
Public and Quasi-Public Auditoriums, Concert Halls, Amphitheaters	-	>55 to 70	>70

1. Normally Acceptable – Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.
2. Conditionally Acceptable – Specified land use may be permitted only after detailed analysis of the noise reduction requirements and noise mitigation features included in the design.
3. Unacceptable – New construction or development should generally not be undertaken because mitigation is usually not feasible to comply with noise element policies. Development will only be considered when technically feasibly mitigation is identified that is also compatible with relevant design guidelines.

Source: City of San José General Plan, 2023

The following lists applicable noise goals and targets that apply to the Project obtained from the Envision San José 2040 General Plan:

Goal EC – 1: Minimize the impact of noise on people through noise reduction and suppression techniques, and through appropriate land use policies.

Policy EC – 1.1: Locate new development in areas where noise levels are appropriate for the proposed uses. Consider federal, state and City noise standards and guidelines as a part of new

development review. Applicable standards and guidelines for land uses in San José include:

Interior Noise Levels

The City's standard for interior noise Levels in residences, hotels, motels, residential care facilities, and hospitals is 45 dBA Day/Night Average Sound Level (DNL). Include appropriate site and building design, building construction and noise attenuation techniques in new development to meet this standard. For sites with exterior noise levels of 60 dBA DNL or more, an acoustical analysis following protocols in the City-adopted California Building Code is required to demonstrate that development projects can meet this standard. The acoustical analysis shall base required noise attenuation techniques on expected Envision San José 2040 General Plan traffic volumes to ensure land use compatibility and consistency over the life of this plan.

Exterior Noise Levels

The City's acceptable exterior noise level objective is 60 dBA DNL or less for residential and most institutional land uses (Table 4 above). The acceptable exterior noise level objective is established for the City, except in the environs of the Mineta San José International Airport and the Downtown, as described below:

For new multi-family residential projects and for the residential component of mixed-use development, use a standard of 60 dBA DNL in usable outdoor activity areas, excluding balconies and residential stoops and porches facing existing roadways. Some common use areas that meet the 60 dBA DNL exterior standard will be available to all residents. Use noise attenuation techniques such as shielding by buildings and structures for outdoor common use areas. On sites subject to aircraft overflights or adjacent to elevated roadways, use noise attenuation techniques to achieve the 60 dBA DNL standards for noise from sources other than aircraft and elevated roadway segments.

Policy EC – 1.2: Minimize the noise impacts of new development on land uses sensitive to increased noise levels (Categories 1, 2, 3 and 6) by limiting noise generation and by requiring use of noise attenuation measures such as acoustical enclosures and sound barriers, where feasible. The City considers significant noise impacts to occur if a project would:

- Cause the DNL at noise sensitive receptors to increase by five dBA DNL or more where the noise levels would remain "Normally Acceptable"; or
- Cause the DNL at noise sensitive receptors to increase by three dBA DNL or more where noise levels would equal or exceed the "Normally Acceptable" level.

Policy EC – 1.3: Mitigate noise generation of new nonresidential land uses to 55 dBA DNL at the property line when located adjacent to existing or planned noise sensitive residential and public/quasi-public land uses.

Policy EC – 1.6: Regulate the effects of operational noise from existing and new industrial and commercial development on adjacent uses through noise standards in the City's Municipal Code.

Policy EC – 1.7: Require construction operations within San José to use best available noise suppression devices and techniques and limit construction hours near residential uses per the City's Municipal Code. The City considers significant construction noise impacts to occur if a project located within 500 feet of residential uses or 200 feet of commercial or office uses would:

- Involve substantial noise generating activities (such as building demolition, grading, excavation, pile driving, use of impact equipment, or building framing) continuing for more than 12 months.

For such large or complex projects, a construction noise logistics plan that specifies hours of construction, noise and vibration minimization measures, posting or notification of construction schedules, and designation of a noise disturbance coordinator who would respond to neighborhood complaints will be required to be in place prior to the start of construction and implemented during construction to reduce noise impacts on neighboring residents and other uses.

Policy EC – 1.13: Update noise limits and acoustical descriptors in the Zoning Code to clarify noise standards that apply to land uses throughout the City.

Policy EC – 1.14: Require acoustical analyses for proposed sensitive land uses in areas with exterior noise levels exceeding the City's noise and land use compatibility standards to base noise attenuation techniques on expected Envision General Plan traffic volumes to ensure land use compatibility and General Plan consistency.

Goal EC – 2: Minimize vibration impacts on people, residences, and business operations.

Policy EC – 2.3: Require new development to minimize continuous vibration impacts to adjacent uses during demolition and construction. For sensitive historic structures, including ruins and ancient monuments or building that are documented to be structurally weakened, a continuous vibration limit of 0.08 in/sec PPV will be used to minimize the potential for cosmetic damage to a building. A continuous vibration limit of 0.20 in/sec PPV will be used to minimize the potential for cosmetic damage at buildings of normal conventional construction. Equipment or activities typical of generating continuous vibration include but are not limited to: excavation equipment; static compaction equipment; vibratory pile drivers; pile-extraction equipment; and vibratory compaction equipment. Avoid use of impact pile drivers within 125 feet of any buildings, and within 300 feet of historical buildings, or buildings in poor condition. On a project-specific basis, this distance of 300 feet may be reduced where warranted by a technical study by a qualified professional that verifies that there will be virtually no risk of cosmetic damage to sensitive buildings from the new development during demolition and construction. Transient vibration impacts may exceed a vibration limit of 0.08 in/sec PPV only when and where warranted by a technical study by a qualified professional that verifies that there will be virtually

no risk of cosmetic damage to sensitive buildings from the new development during demolition and construction.

City of San José Municipal Code

According to San José Municipal Code, Section 20.100.450, construction hours within 500 feet of a residential unit are limited to the hours of 7:00 a.m. to 7:00 p.m. on Monday through Friday, unless otherwise allowed in a Development Permit or other planning approval. The Municipal Code does not establish quantitative noise limits for construction activities in the City. Table 5: City of San José Zoning Ordinance Noise Standards shows the San José standards for maximum noise level at the property line.

Table 5: City of San José Zoning Ordinance Noise Standards

Land Use Types	Maximum Noise Level in Decibels at Property Line
Commercial use adjacent to a property used or zoned for residential purposes	55
Commercial use adjacent to a property used or zoned for commercial purposes or use other than commercial or residential purposes	60

Town of Los Gatos

Because the Project site is 990 feet east from the Town of Los Gatos boundary line, the pertinent noise standards and regulations for the City of Los Gatos are provided below and discussed in the analysis for informational purposes. The Environment and Sustainability Element of the Los Gatos General Plan contains land use compatibility guidelines which are summarized in Table 6: Los Gatos Land Use Noise Compatibility Criteria.

Table 6: Los Gatos Land Use Noise Compatibility Criteria

Land Use Category	Community Noise Exposure (L_{dn} or CNEL, dBA)			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Residential-Low Density Single-Family, Duplex, Mobile Homes	<60	55 – 70	70 – 75	75<
Residential Multi-Family	<65	60 – 70	70 – 75	75<
Commercial-Motels, Hotels, Transient Lodging	<65	60 – 70	70 – 80	80<
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60 – 70	70 – 80	80<
Amphitheaters, Concert Hall, Auditorium, Meeting Hall	-	50 – 70	-	65<
Sports Arenas, Outdoor Spectator Sports	-	50 – 75	-	70<
Playgrounds, Neighborhood Parks	<70	-	67.5 – 75	72.5<
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75	-	70 – 80	80<
Office Buildings, Business Commercial, Professional, and Mixed-Use Developments	<70	67.5 – 77.5	75 – 90<	90<
Industrial, Manufacturing, Utilities, Agriculture	<75	70 – 80	75– 90<	90<
CNEL = Community Noise Equivalent Level; L_{dn} = Day/Night Average; NA = Not Applicable				
Normally Acceptable: Specified Land Use is satisfactory, based on the assumption that any buildings involved are of normal conventional construction, without any special insulation requirements.				

Conditionally Acceptable: Specified land use may be permitted only after detailed analysis of the noise reduction requirements and needed noise insulation features are included in the design. Normally Unacceptable: New construction or development should generally be discouraged. A detailed analysis of noise reduction requirements must be made and needed noise insulation features included in design. Clearly Unacceptable: New construction or development should generally not be undertaken because mitigation is usually not feasible to comply with noise element policies.

Town of Los Gatos Municipal Code

Standards established under the Los Gatos Municipal Code are discussed for informational purposes. The City's Noise Ordinance (Chapter 16) purpose is to maintain or reduce noise levels in the City to avoid exposure to unacceptable or harmful noise generated by equipment and/or amplified sound that is subject to regulation and control by the City; placing noise limits for residential, commercial, and industrial zones; maintain appropriate noise level standards for construction-related activities; and identify applicable exemptions. Los Gatos noise limits from Chapter 16 of the Los Gatos Municipal Code is dependent on the location of sensitive receptors within the Los Gatos Noise Zone Maps. The ambient noise levels are based on the location of sensitive receptors in Los Gatos relevant to the Good Samaritan Hospital Project site. The ambient noise levels for the location of Los Gatos sensitive receptors in the Noise Zone Map are 55 dBA (6:00 a.m. to 1:00 p.m.), 59 dBA (1:00 p.m. to 10:00 p.m.), and 51 dBA (10:00 p.m. to 6:00 a.m.). For residential land uses, Section 16.20.015 of the Los Gatos Municipal Code states that a noise level more than 6 dB above the noise level specified for that noise zone shown in the Noise Zone Map exceeds the exterior noise level threshold. For commercial and industrial land uses, Section 16.20.025 of the Los Gatos municipal code states a noise level more than 8 dB above the noise level specified for that noise zone shown in the noise zone map exceeds the exterior noise level threshold. For public space land uses, Section 16.20.030 of the Los Gatos municipal code states a noise level more than 15 dB above the noise level specified for that noise zone shown in the noise zone map exceeds the exterior noise level threshold.

Section 16.20.036 limits construction to between the hours of 8:00 a.m. and 6:00 p.m. Monday through Friday and between 9:00 a.m. and 4:00 p.m. on Saturdays. Section 16.20.035 also prohibits construction noise exceeding 85 dBA at any point twenty-five feet or more from the source of noise. Construction is not allowed on Sundays or weekday holidays unless it is a homeowner or tenant personally performing construction, alteration, or repair activities on their own property between the hours of 9:00 a.m. and 4:00 p.m. on Sundays and holidays. Construction activities are allowed on Sundays and holidays if the Town manager or designee finds evidence of an emergency that imperils the public safety and the immediate health of the occupants. The chief building official may also modify the permitted hours of construction upon twenty-four (24) hours written notice to the contractor, applicant, developer, or owner. This construction is able to occur between 9:00 a.m. and 5:00 p.m. on Sundays and weekday holidays.

City of Campbell

Because the Project site is 1,100 feet southeast from the City of Campbell boundary line, the pertinent noise standards and regulations for the City of Campbell are provided below and discussed in the analysis below for informational purposes. The Noise Element of the Campbell General Plan contains land use compatibility guidelines which are summarized in Table 7: Campbell Land Use Compatibility for Community Noise Environment.

Table 7: Campbell Land Use Compatibility for Community Noise Environment

Land Use Category	Community Noise Exposure (L_{dn} or CNEL, dBA)			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Single-Family Residential	<60	60 – 70	-	70<
Multi-Family Residential[1], Hotels, and Motels	<65	65 – 75	-	75<
Schools, Libraries, Museums, Hospitals, Personal Care, Public Assembly	<65	65 – 75	-	75<
Outdoor Sports and Recreation, Playgrounds, Neighborhood Parks	<65	65 – 80	-	80<
Office Buildings, Business Commercial, and Professional	<67.5	67.5 – 77.5	-	77.5<
Industrial	<70	70 – 80	-	80<

CNEL = Community Noise Equivalent Level; L_{dn} = Day/Night Average; NA = Not Applicable

Normally Acceptable: Specified Land Use is satisfactory, based on the assumption that any buildings involved are of normal conventional construction, without any special insulation requirements.
Conditionally Acceptable: Specified land use may be permitted only after detailed analysis of the noise reduction requirements and needed noise insulation features are included in the design.
Normally Unacceptable: New construction or development should generally be discouraged. A detailed analysis of noise reduction requirements must be made and needed noise insulation features included in design.
Clearly Unacceptable: New construction or development should generally not be undertaken because mitigation is usually not feasible to comply with noise element policies.

1. Residential components of Mixed-Use developments are subject to the Multi-Family Residential Noise Standards unless otherwise allowed in conjunction with Policy N-2.2.

Source: City of Campbell, *General Plan Noise Element Table N-1,* 2022.

City of Campbell Municipal Code

Standards established under the Campbell Municipal Code are discussed for informational purposes. The City's Noise Control Ordinance (Section 21.16.070) purpose is to prohibit unnecessary, excessive, and annoying sound levels from all sources. The City of Campbell is designated a quiet city, and at certain levels, sounds are detrimental to the welfare and health to the citizens of Campbell. Section 21.16.070 prescribes standards for and to provide effective and readily available standards and penalties for violations within this chapter. Section 18.04.052 further discusses time and noise standards and limitations as it relates to construction activities within Campbell. Campbell's noise standards are shown in Table 8: City of Campbell Stationary (Non-Transportation) Noise Source Standards.

Table 8: City of Campbell Stationary (Non-Transportation) Noise Source Standards

Land Use	Daytime (6:00 a.m. to 11:00 p.m.)		Nighttime (11:00 p.m. to 6:00 a.m.)	
	Average L_{eq}	**Maximum L_{max}**	**Average L_{eq}**	**Maximum L_{max}**
Residential	55	70	45	65

1. The residential standards apply to all properties that are zoned for residential use. The exterior noise level standard is to be applied at the property line of the receiving land use or at a designated outdoor activity area. For mixed-use projects, the exterior noise level standard may be waived (at the discretion of the decision-making body) if the residential portion of the project does not include a designated activity area and mitigation of property line noise is not practical.
2. Each of the noise levels specified above shall be lowered by 5 dBA for tonal noises characterized by a whine, screech, or hum, noises consisting primarily of speech or music, or recurring impulsive noises. In no case shall mitigation be required to a level that is less than existing ambient noise levels, as determined through measurements conducted during the same operational period as the subject noise source.
3. In situations where the existing noise level exceeds the noise levels indicated in the above table, any new noise source must include mitigation that reduces the noise level of the noise source to the existing level plus 3 dB

Source: City of Campbell, *General Plan Noise Element Table N-2, 2022*

Section 18.04.052 limits construction to between the hours of 8:00 a.m. and 5:00 p.m. Monday through Friday and between 9:00 a.m. and 4:00 p.m. on Saturdays. Section 18.04.052 also prohibits environmentally disruptive noise over 50 dB such as air compressors without mufflers, continuously running motors or generators, loud playing music or radios during the authorized hours of construction. Construction is not allowed on Sundays or weekday holidays unless it is a residential construction permitted for homeowner permits, when the work is being performed by only the owner of the property, provided no construction activity or loud noises are conducted prior to 6:00 a.m. or after 7:00 p.m. Monday through Saturday, and prior to 8:00 a.m. or after 6:00 p.m. on Sundays or holidays. Construction activities may be permitted at any hour or day of the week where emergency conditions exist as determined by the building official. An exception to the time of work activity may be granted to the general contractor if the building official determines that construction activity and/or noises will not be detrimental to adjacent neighbors. Hours of operation would be determined by the building official on a case-by-case basis. An exception for construction activity outside of the standard construction hours shall be permitted when under contracts awarded by the City for public improvements with working hours specified by the City engineer.

4 EXISTING CONDITIONS

4.1 EXISTING NOISE SOURCES

The City of San José is impacted by various noise sources. Mobile sources of noise, especially cars and trucks, are the most common and significant sources of noise in most communities. Other sources of noise are the various land uses (i.e., residential, commercial, institutional, and recreational and parks activities) throughout the City that generate stationary-source noise.

Noise Measurements

To determine the ambient noise levels in the Project area, five short-term (10-minute) noise measurements and one long-term (24-hour) noise measurement were taken using a Larson Davis SoundExpert LxT Type I integrating sound level meter on February 17, 2023; refer to Appendix A for existing noise measurement data and Figure 8: Noise Measurement Locations.

Short-Term measurement 1 (ST-1) and ST-4 were taken to represent the ambient noise level at residences to the east of the Project site; ST-1 was located in the parking lot of the Cambrian Center parking lot and ST-4 was positioned near the east parking lot entrance. ST-2 and ST-3 were taken to represent existing parking lot noise levels at the Project site; and ST-5 was taken to represent existing traffic noise levels along Samaritan Drive. Long-Term measurement 1 (LT-1) was taken to represent existing traffic, parking lot, siren, and pedestrian activity noise levels at the Project site. Table 9: Noise Measurements, provides the ambient noise levels measured at these locations.

Table 9: Noise Measurements

Site No.	Location	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	L_{dn} (dBA)	Time
ST-1	2360 Samaritan Place	58.1	52.8	75.2	-	9:27 a.m. –9:37 a.m.
ST-2	Parking lot south of the hospital across Samaritan Drive	58.6	50.1	69.3	-	9:48 a.m. –9:58 a.m.
ST-3	West of the hospital in the parking lot	56.7	53.4	68.3	-	10:33 a.m. – 10:43 a.m.
ST-4	Samaritan Drive near the east parking lot entrance	63.0	54.5	73.2	-	10:58 a.m. – 11:08 a.m.
ST-5	Intersection between Samaritan Court and Samaritan Drive	61.5	53.9	71.1	-	10:05 a.m. – 10:15 a.m.
LT-1	Samaritan Drive near the east parking lot entrance	62.8	42.6	97.4	67.5	11:23 a.m. – 11:23 a.m.

Source: Noise Measurements taken by Kimley-Horn on February 17, 2023.

Existing Mobile Noise

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes from the Project Traffic Impact Analysis (Kimley-Horn 2023). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by the California Department of Transportation (Caltrans). The Caltrans data

indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments in proximity to the Project site are included in Table 10: Existing Traffic Noise.

Table 10: Existing Traffic Noise

Roadway Segment	ADT	dBA L_{dn}[1]
Bascom Avenue		
North of East Mozart Avenue	36,130	67.2
South of East Mozart Avenue	36,110	67.3
South of Samaritan Drive	33,820	66.8
South of White Oaks Avenue	33,900	67.0
North of SR-85 North Ramp	34,680	67.1
South of 85 North Ramp	37,070	67.4

South of Walker Street	33,970	65.5
North of Lark Avenue	27,020	64.6
South of Lark Avenue	31,870	65.4
Lark Avenue		
West of Los Gatos Boulevard	26,190	63.6
East of SR-17 East Ramp	49,980	66.5

ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise level
1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.
Source: Based on traffic data provided by Kimley-Horn, 2023. Refer to Appendix A for traffic noise modeling assumptions and results.

The Project site is primarily surrounded by medical office buildings, apartments, and single-family residential neighborhoods. Residential uses exist east of the Project site. The existing mobile noise in the Project's immediate area are generated along Bascom Drive, which is west of the Project site, Samaritan Drive which is south of the Project site, and Samaritan Place which is east of the Project site.

Existing Stationary Noise

The primary sources of stationary noise in the Project vicinity are those associated with the operations of the existing hospital building on-site, nearby residential uses to the east of the site, and existing mixed-used commercial west of the Project site. The noise associated with these sources may represent a single-event noise occurrence, short-term noise, or long-term/continuous noise.

4.2 SENSITIVE RECEPTORS

Noise exposure standards and guidelines for various types of land uses reflect the varying noise sensitivities associated with each of these uses. Residences, hospitals, schools, guest lodging, libraries, and churches are treated as the most sensitive to noise intrusion and therefore have more stringent noise exposure targets than do other uses, such as manufacturing or agricultural uses that are not subject to impacts such as sleep disturbance.

City of San José Sensitive Receptors

As shown in Table 11: City of San José Sensitive Receptors and Figure 9: Sensitive Receptors, the nearest sensitive receptors include apartments approximately 45 feet southeast to the Project site across Samaritan Place, the Cambrian Center Retirement Home approximately 50 feet southeast of the Project site, and single family residences along Lost Oaks Drive approximately 200 feet south of the Project site. These distances are measured from the Project site to the sensitive receptor property line.

Table 11: City of San José Sensitive Receptors

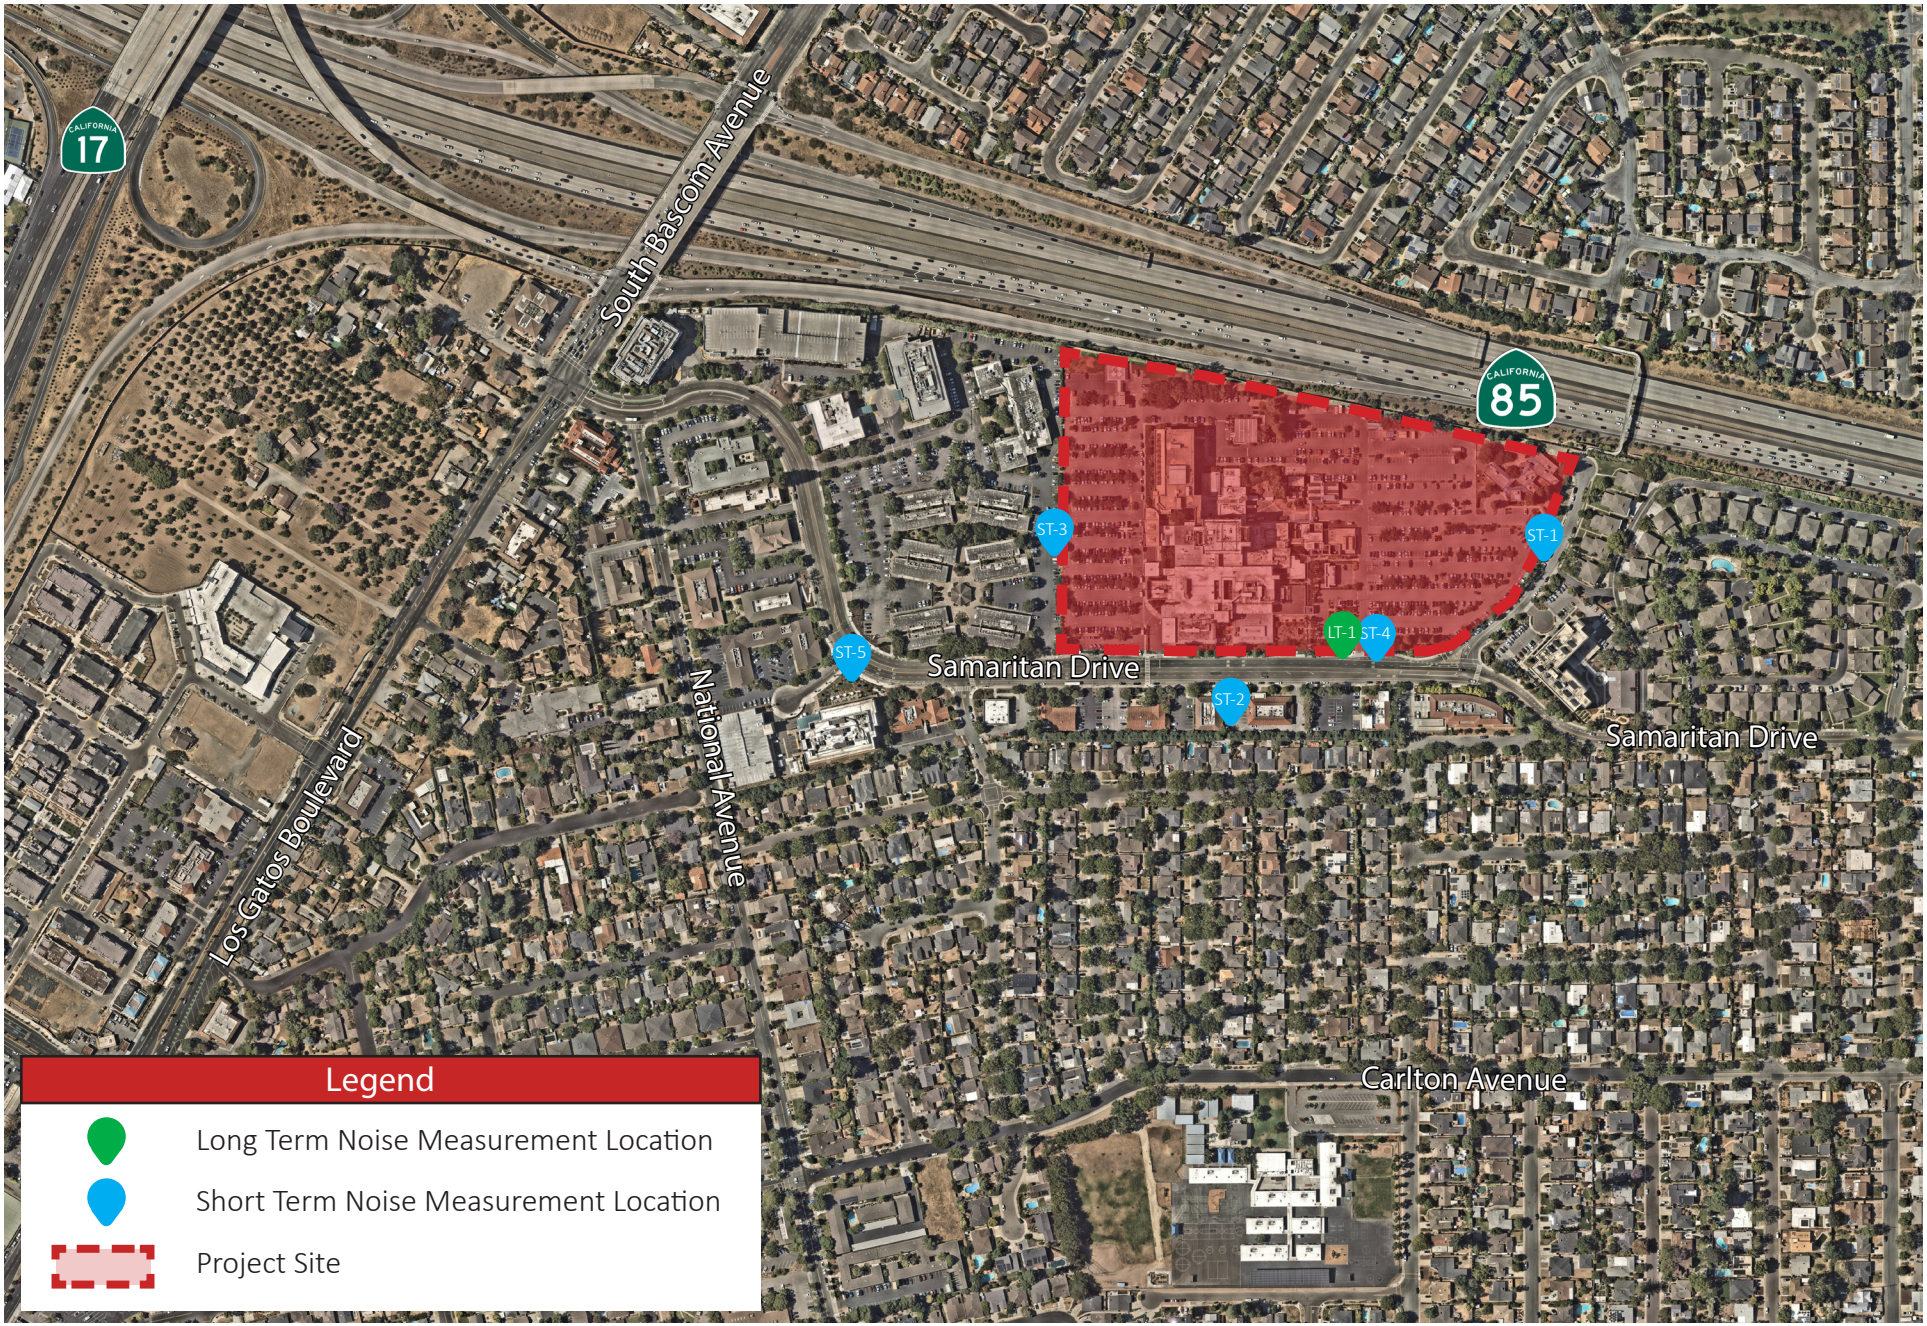
Receptor Description	Distance and Direction from the Project Site[1]
Apartments along Samaritan Place	45 feet east
Cambrian Center Retirement Home	50 feet southeast
Residences along Lost Oaks Drive	200 feet south
Residences along Elester Court	230 feet southeast
Residences along Samaritan Drive	480 feet southeast
1. Distances are measured from the Project site boundary to the receptor property line.	
Source: Google Earth, 2023.	

Town of Los Gatos Sensitive Receptors

The Lost Gatos City boundary line is located along National Avenue, approximately 1,000 feet west of the Project site. As shown in Table 12: Town of Los Gatos Sensitive Receptors and Figure 9: Sensitive Receptors, nearest sensitive receptors include single-family residences along National Avenue approximately 990 feet west of the Project site, single-family residences along Cam Del Sol approximately

1,020 feet southwest, and single-family residences along Penn Way approximately 1,130 feet southwest. These distances are measured from the Project site to the nearest sensitive receptor property line.

Table 12: Town of Los Gatos Sensitive Receptors



Receptor Description	Distance and Direction from the Project Site[1]
Single family residences along National Avenue	990 feet west
Single family residences along Cam Del Sol	1,020 feet southwest
Single family residences along Penn Way	1,130 feet southwest
1. Distances are measured from the Project site boundary to the receptor property line.	
Source: Google Earth, 2023.	

City of Campbell Sensitive Receptors

The Campbell City boundary line is located along South Bascom Avenue, approximately 1,100 feet northwest of the Project site. As shown in Table 13: City of Campbell Sensitive Receptors and Figure 9: Sensitive Receptors, nearest sensitive receptors include a single-family residence along East Mozart Avenue approximately 1,220 feet northwest, and multifamily residences along South Bascom Avenue approximately 1,250 feet northwest. These distances are measured from the Project site to the nearest sensitive receptor property line.

Table 13: City of Campbell Sensitive Receptors

Receptor Description	Distance and Direction from the Project Site[1]
Single-family Residence along East Mozart Avenue	1,220 feet northwest
Single-family residences along South Bascom Avenue	1,250 feet northwest

5 SIGNIFICANCE CRITERIA AND METHODOLOGY

5.1 CEQA THRESHOLDS

State Environmental Quality Act (CEQA) Guidelines Appendix G contains analysis guidelines related to noise impacts. These guidelines have been used by the City to develop thresholds of significance for this analysis. A project would create a significant environmental impact if it would:

NOI-1 Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

NOI-2 Generate excessive groundborne vibration or groundborne noise levels; and

NOI-3 For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

5.2 METHODOLOGY

Construction

Construction noise estimates are based upon typical noise levels generated by construction equipment published by the Federal Transit Administration (FTA) and FHWA. Construction noise is assessed in dBA L_{eq}. This unit is appropriate because L_{eq} can be used to describe noise level from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period. The FTA Transit Noise and Vibration Impact Assessment Manual (2018) (FTA Noise and Vibration Manual) identifies a maximum 8-hour noise level standard of 80 dBA L_{eq} at residential uses, 85 dBA L_{eq} at commercial, and 90 dBA L_{eq} at industrial uses for short-term construction activities. Noise generated by short-term construction activities below the FTA's maximum 8-hour noise level standard would have a less than significant impact.

Reference noise levels are used to estimate noise levels at nearby noise-sensitive receptors based on a standard noise attenuation rate of 6 dB per doubling of distance (line-of-sight method of sound attenuation for point sources of noise). Construction noise is analyzed at a distance from the property line of the nearest receptor to the main construction activity at the Project site to provide an average, representative construction noise level for the various phases. Construction noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise.

Operations

The analysis of the existing and future noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the Project operational noise impacts from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the Project's stationary sources. The reference noise levels are used to represent a worst-case noise

environment as noise level from stationary sources can vary throughout the day. On-site operational noise levels from the proposed Project were evaluated using SoundPLAN. This program computes predicted noise levels at noise-sensitive areas through a series of adjustments to reference sound levels. SoundPLAN also accounts for topography, groundcover type, and intervening structures. Reference noise level data are used to estimate the Project operational noise impacts from stationary sources. The Existing Year and With Project traffic noise levels in the Project vicinity were calculated using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108).

Vibration

Groundborne vibration levels associated with Project construction-related activities were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria for structural damage and human annoyance.

For a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec PPV is considered safe and would not result in any vibration damage. Human annoyance is evaluated in vibration decibels (VdB) (the vibration velocity level in decibel scale) and occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. The FTA Transit Noise and Vibration Manual identifies 80 VdB as the threshold for buildings where people normally sleep.

5.3 SIGNIFICANCE CRITERIA

This report relies on the following standards and significance criteria to evaluate potential noise and vibration impacts from the proposed Project in accordance with the CEQA thresholds of significance outlined above in Section 5.1: CEQA Thresholds.

Construction Noise

Per General Plan Policy EC-1.7, the City of San José considers projects involving substantial noise-generating activities (such as building demolition, grading, excavation, pile driving, use of impact equipment, or building framing) continuing for more than 12 months within 500 feet of residential land uses or within 200 feet of commercial land uses or offices to be significant and require the mitigation stated in Policy EC-1.7. The construction noise analysis also quantifies construction noise and compares the construction-related noise levels to the FTA's 8-hour average construction noise standards of 80 dBA L_{eq} at residential uses, 85 dBA L_{eq} at commercial uses, and 90 dBA L_{eq} at industrial uses.[11] The construction analysis compares construction noise to FTA thresholds for informational purposes.

Operational Noise

Per General Plan Policy EC-1.2, a significant permanent noise level increase would occur if the Project would result in: a) a noise level increase of 5 dBA L_{dn} or greater, with a future noise level of less than 60 dBA L_{dn}, or b) a noise level increase of 3 dBA L_{dn} or greater, with a future noise level of 60 dBA L_{dn} or

[11] Federal Transit Administration; Transit Noise and Vibration Assessment Manual, 2018.

greater. Additionally, a significant noise impact would be identified if the Project would expose persons to or generate noise levels that would exceed applicable noise standards presented in the General Plan.

Section 20.30.700 of the City's Municipal Code establishes a limit of 55 dBA for commercial areas adjacent to residential areas and 60 dBA for commercial uses adjacent to commercial areas, when measured at the property line. The analysis below compares generated noise levels to the Municipal Code standards, however, the Municipal Code is not used as a criterion to determine the significance of project impacts under CEQA.

Vibration

General Plan Policy EC-2.3 relies on guidance developed by Caltrans to address vibration impacts from development projects in San José. A vibration limit of 12.7 millimeters per second (mm/sec; 0.5 inch/sec) PPV is used for buildings that are structurally sound and designed to modern engineering standards. A conservative vibration limit of five mm/sec (0.2 inches/sec) PPV has been used for buildings that are found to be structurally sound but where structural damage is a major concern. For historic buildings or buildings that are documented to be structurally weakened, a conservative limit of two mm/sec (0.08 inches/sec) PPV is used to provide the highest level of protection.

6 POTENTIAL IMPACTS AND MITIGATION

6.1 ACOUSTICAL IMPACTS

Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction Noise

Project construction would last about 11.6 years, but result in only approximately 30 months of substantial noise generating activities. Construction activities would include demolition, grading, foundation work, and building framing. Excavation, cut and fill, and soil hauling also would be required as a part of construction. According to the applicant, pile-driving would also be required for the construction of the central utility plant.

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods surrounding the construction site. Project construction would occur approximately 45 feet from the nearest sensitive receptor to the east. However, construction activities would occur throughout the Project site and would not be concentrated at a single point near sensitive receptors. Noise levels typically attenuate (or drop off) at a rate of 6 dB per doubling of distance from point sources, such as industrial machinery.

Construction equipment could include but not limited to concrete/industrial saws, excavators, and dozers during demolition; dozers and tractors/loaders/ backhoes during site preparation; graders, dozers, and tractors during grading; cranes, forklifts, generators, pile drivers, tractors, and welders during building construction; pavers, rollers, mixers, tractors, and paving equipment during paving; and air compressors during architectural coating. Grading and excavation phases of Project construction tend to be the shortest in duration and create the highest construction noise levels due to the operation of heavy equipment required to complete these activities. It shall be noted that only a limited amount of equipment can operate near a given location at a particular time. Equipment typically used during this stage includes heavy-duty trucks, backhoes, bulldozers, excavators, front-end loaders, and scrapers. Operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. Other primary sources of noise would be shorter-duration incidents, such as dropping large pieces of equipment or the hydraulic movement of machinery lifts, which would last less than one minute. Typical noise levels associated with individual construction equipment at a distance of 50 feet are listed in Table 14: Typical Construction Noise Levels.

Table 14: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA) at 50 feet from Source
Air Compressor	80.0
Backhoe	80.0
Compactor	82.0
Concrete Mixer	85.0
Concrete Pump	82.0
Concrete Vibrator	76.0
Crane, Derrick	88.0
Crane, Mobile	83.0
Dozer	85.0
Generator	82.0
Grader	85.0
Impact Wrench	85.0
Jack Hammer	88.0
Loader	80.0
Paver	85.0
Impact Pile Driver	101.0
Pneumatic Tool	85.0
Pump	77.0
Roller	85.0
Saw	83.0
Scraper	85.0
Shovel	82.0
Truck	84.0
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.	

The FHWA Roadway Construction Noise Model (RCNM) was used to calculate noise levels during construction activities; refer to Appendix A. RCNM is a computer program used to assess construction noise impacts and allows for user-defined construction equipment and user-defined noise limit criteria. Noise levels were calculated for each construction phase and are based on the equipment used, distance to the nearest property/receptor, and acoustical use factor for equipment. In accordance with FTA methodologies, distances were measured from the property line of the receptor to the main construction activity area for each construction phase. Noise levels discussed below assume equipment would operate continuously.

Table 15: Project Construction Noise Levels shows the Project's exterior construction noise levels would range from approximately 54 dBA L_{eq} to 75 dBA L_{eq} at the nearest sensitive receptors and from approximately 58 dBA L_{eq} to 75 dBA L_{eq} at the nearest commercial receptors. Construction noise would not exceed the FTA's 8-hour construction noise standards of 80 dBA L_{eq} for residential uses and/or 85 dBA L_{eq} at commercial uses. General Plan Policy EC-1.7 requires the Project to use best available noise suppression devices and techniques, and limit construction hours in accordance with Municipal Code Section 20.100.450 to reduce construction noise levels at nearby noise-sensitive uses.

Table 15: Project Construction Noise Levels

Construction Phase	Nearest Receptor Location				Modeled Exterior Noise Level (dBA L_{eq}) [2,3]	Noise Threshold (dBA L_{eq}) [4]	Exceeded?
	Project Phase	Land Use	Direction	Distance (feet) [1]			
Demolition	1	Residential	East	510	66.3	80	No
	2	Residential	South	390	68.6	80	No
	3	Residential	South	450	67.4	80	No
	3	Medical Office Building	South	300	70.9	85	No
Site Preparation	1	Residential	East	510	67.5	80	No
	2	Residential	South	390	69.8	80	No
	3	Residential	South	450	68.5	80	No
	3	Medical Office Building	South	300	72.1	85	No
Grading	1	Residential	East	510	68.0	80	No
	2	Residential	South	390	69.4	80	No
	3	Residential	South	450	69.1	80	No
	3	Medical Office Building	South	300	72.7	85	No
Building Construction	1	Residential	East	510	74.7	80	No
	2	Residential	South	390	68.2	80	No
	3	Residential	South	450	67.0	80	No
	1	Medical Office Building	South	300	74.9	85	No
Paving	1	Residential	East	510	66.4	80	No
	2	Residential	South	390	69.7	80	No
	3	Residential	South	450	67.4	80	No
	2	Medical Office Building	South	300	71.9	85	No
Architectural Coating	1	Residential	East	510	53.5	80	No
	2	Residential	South	390	55.9	80	No
	3	Residential	South	450	54.6	80	No
	3	Medical Office Building	South	300	58.2	85	No

1. Distance is measured from the property line of the nearest receptor to the construction activity area at the Project site. This provides an average, representative construction noise level for the various phases.
2. Modeled noise levels conservatively assume the simultaneous operation of all pieces of equipment. Pile-driving equipment is included during the building construction phase.
3. The FTA Noise and Vibration Manual establishes construction noise standards of 80 dBA $L_{eq(8\text{-}hour)}$ for residential uses and 85 dBA $L_{eq(8\text{-}hour)}$ for commercial uses.

Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to Appendix A for noise modeling results.

As shown in Table 15: Project Construction Noise Levels the loudest noise levels would be approximately 75 dBA L_{eq} at the nearest sensitive receptors, which would not exceed the FTA's construction noise standards of 80 dBA L_{eq}. The nearest commercial uses to the Project site are 100 feet south along Samaritan Drive. The loudest noise levels would be approximately 75 dBA L_{eq} during Phase 1 Building

Construction at these commercial uses, which would not exceed the FTA's construction noise standards of 85 dBA L_{eq}.

The City of San José does not have a quantitative construction noise standard. However, the City of San José Municipal Code Section 20.100.450 limits construction to the hours between 7:00 a.m. and 7:00 p.m., Monday through Friday, for projects within 500 feet of residential uses unless permission is granted with a development permit or other planning approval. Note the Project is anticipated to request Saturday construction with its development permit. Furthermore, the Project would need to comply with the requirements listed in City's General Policy EC-1.7 referenced in Section 3.2.

Project construction would result in substantial noise-generating activities for more than 12 months within 500 feet of residential uses and 200 feet of commercial uses, which the City considers to be a potentially significant construction noise impact in accordance with General Plan Policy EC-1.7. As such, in compliance with General Plan Policy EC-1.7, Mitigation Measure NOI-1 (MM NOI-1) would require the Project applicant to prepare a Construction Noise Logistics Plan to minimize potential construction noise effects to the adjacent residential and commercial uses.

As noted in General Plan Policy EC-1.7, implementation of a Construction Noise Logistics Plan would "…reduce noise impacts on neighboring residents and other uses" through the Construction Noise Logistics Plan measures described under MM NOI-1 below. Therefore, with implementation of the required MM NOI-1, the Project would comply with General Plan Policy EC-1.7. Therefore, construction noise impacts would be considered less than significant with the implementation of MM NOI-1.

Nighttime Construction

The Project proposes nighttime construction during Phase 1 and Phase 3, which would include 24-hour concrete pouring, however the exact numbers of pours are unknown. As discussed in Section 2.1: Sound and Environmental Noise, noise levels above 45 dBA would affect sleep. Standard construction, which assumes windows to be shut, would result in an exterior-to-interior reduction of approximately 25 dBA.[12] With this reduction, exterior noise level of 70 dBA would not affect sleep.

Nighttime construction activities would require concrete trucks accessing and pouring within the Project site. Based on the nature of concrete pouring and the type of equipment to be used, it is assumed that all noise-generating activities from the equipment would occur on the ground level during the nighttime construction work. The FHWA RCNM modeling software was used to calculate the hourly average noise levels for nighttime concrete pouring. Assuming five pouring trucks and five idling trucks would represent the worst-case noise condition, an hourly average noise level of 82 dBA L_{eq} at 50 feet would be generated during nighttime work.

As proposed, concrete trucks actively pouring during nighttime construction could be positioned as close as 110 feet from the nearest residences to the east during construction of Garage East. As such, concrete trucks were modeled at 110 feet from the nearest residences to the east. At these distances and assuming five pouring trucks and five idling trucks would operate simultaneously at the same location, hourly

[12] United States Department of Housing and Urban Development, *Noise Guidebook*, 2009.

average noise levels would be approximately 75 dBA L_{eq} at the residences to the east and would exceed the nighttime noise limit of 45 dBA indoors and 70 dBA outdoors by approximately 5 dBA.[13]

Nighttime construction activities, including concrete pours, would result in a potentially significant impact at the residences east of the Project site. LT-1 measured nighttime noise as 60.3 dBA L_{dn} between 10:00 p.m. and 7:00 a.m. Based on the noise modeling done for the Project, it was determined that nighttime construction activities, including concrete pours, must be at least 120 feet from the Project's eastern boundary to result in noise levels below the 70 dBA outdoor and 45 dBA indoor noise levels instead of the 110 feet modeled originally. Therefore, Mitigation Measure NOI-3 (MM NOI-3) limits active construction equipment, including concrete pouring equipment, between 10:00 p.m. and 7:00 a.m. to five or fewer pieces of equipment and requires all equipment to be at least 120 feet from the eastern Project site boundary. This would reduce outdoor noise levels to 69.8 dBA, which is below the 70 dBA noise level. In addition, MM NOI-3 prohibits concrete trucks from traveling and idling along Samaritan Place between 7:00 p.m. and 7:00 a.m. to further reduce nighttime noise impacts. With the MM NOI-3 incorporated, impacts associated with nighttime construction activities would be less than significant with mitigation.

Construction Traffic Noise

Construction is estimated to last approximately 11.6 years. Construction noise may be generated by large trucks moving materials to and from the Project site. Large trucks would be necessary to deliver building materials as well as remove dump materials. Excavation and cut and fill would be required. Based on the California Emissions Estimator Model (CalEEMod) default assumptions for this Project, the Project would generate the highest number of daily trips during building construction in Phase 1 and 3 and grading in Phase 2. The model estimates that the Project would generate up to 333 worker trips and 151 vendor trips for building construction in Phase 1 for a total of approximately 484 daily vehicle trips. Grading during Phase 2 would have approximately 15 worker trips and 15 hauling trips (370 hauling trips over 24 days) for a total of 30 daily vehicle trips. Building construction of Phase 3 would have approximately 307 worker trips and 136 vendor trips for a total of approximately 443 daily trips. Because of the logarithmic nature of noise levels, a doubling of the traffic volume would result in a noise level increase of 3 dBA.[14] Samaritan Drive between Union Avenue and the SR-85 Off Ramps has an average daily trip volume of approximately 18,700 vehicles, and Samaritan Place (north of Samaritan Drive) has an average daily trip volume of 870 vehicles. Therefore, a maximum of 484 daily Project construction trips would not double the existing traffic volume per day on any local roadways. Construction related traffic noise would not be noticeable and would not create a significant noise impact.

Town of Los Gatos Construction Noise Analysis

The City of San José does not require use of the Town's noise standards to determine the level of significance of Project impacts, but it is provided in this analysis for informational purposes to help decision makers in their consideration of the proposed Project.

For sensitive receptors located in the Town of Los Gatos (i.e., residential uses along National Avenue to the southwest of the Project site), this report utilizes the FTA construction noise standards identified above and Los Gatos Municipal Code Section 16.20.035 (prohibiting construction noise levels of 85 dBA at 25 feet or more from the source) to evaluate construction noise impacts. The nearest residential use

[13] Assuming an exterior-to-interior reduction of approximately 25 dBA.
[14] Per General Plan Policy EC-1.2.

to the Project site in the Town of Los Gatos is approximately 990 feet away. The loudest noise level from construction would be approximately 69 dBA L_{eq}, which would be below the FTA's construction noise standards of 80 dBA L_{eq} for residential receivers and Los Gatos Municipal Code Section 16.20.035.[15]

City of Campbell Construction Noise Analysis

The City of San José does not require use of the City of Campbell's noise standards to determine the level of significance of Project impacts, but is provided in this analysis for informational purposes to help decision makers in their consideration of the proposed Project.

For sensitive receptors located in the City of Campbell (i.e., residential uses to the northwest of the Project site), this report utilizes the FTA construction noise standards identified above to evaluate construction noise impacts. The nearest residential use to the Project site in the City of Campbell is approximately 1,370 feet away. The loudest noise level from construction would be approximately 66 dBA L_{eq} without accounting for any noise attenuating structures, which would be below the FTA's construction noise standards of 80 dBA L_{eq} for residential uses. Noise levels discussed above represent worst case scenarios and assume equipment would operate continuously at the closest point to sensitive receptors.

Standard Permit Conditions

i. Limit construction to the hours of 7:00 a.m. to 7:00 p.m. Monday through Friday for any on-site or off-site work within 500 feet of any residential unit. Construction outside of these hours may be approved through a development permit based on a site-specific "construction noise mitigation plan" and a finding by the Director of Planning, Building and Code Enforcement that the construction noise mitigation plan is adequate to prevent noise disturbance of affected residential use.

ii. Construct solid plywood fences around ground level construction sites adjacent to operational businesses, residences, or other noise-sensitive land uses.

iii. Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment.

iv. Prohibit unnecessary idling of internal combustion engines.

v. Locate stationary noise-generating equipment such as air compressors or portable power generators as far as possible from sensitive receptors. Construct temporary noise barriers to screen stationary noise-generating equipment when located near adjoining sensitive land uses.

vi. Utilize "quiet" air compressors and other stationary noise sources where applicable.

vii. Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the Project site.

[15] Federal Highway Administration, Roadway Construction Noise Model, 2006. Refer to Appendix A for noise modeling results.

viii. Notify all adjacent business, residences, and other noise-sensitive land uses of the construction schedule, in writing, and provide a written schedule of "noisy" construction activities to the adjacent land uses and nearby residences.

ix. If complaints are received or excessive noise levels cannot be reduced using the measures above, erect a temporary noise control blanket barrier along surrounding building facades that face the construction sites.

x. Designate a "disturbance coordinator" who shall be responsible for responding to any complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., bad muffler, etc.) and shall require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include it in the notice sent to neighbors regarding the construction schedule.

Mitigation Measures:

MM NOI-1 Construction Noise Logistics Plan

Prior to the issuance of any City-issued grading or building demolition permits for Phase 1, Phase 2, and Phase 3 of the Project, the Project applicant shall submit and implement a construction noise logistics plan for that construction phase that specifies hours of construction, noise and vibration minimization measures, posting and notification of construction schedules, equipment to be used, and designation of a noise disturbance coordinator. The noise disturbance coordinator shall respond to neighborhood complaints and shall be in place prior to the start of construction and implemented during construction to reduce noise impacts on neighboring residents and other uses. The noise logistic plan shall be submitted to the Director of Planning, Building and Code Enforcement or Director's designee prior to the issuance of any grading or demolition permits. As a part of the construction noise logistics plan, construction activities for the Project shall include, at a minimum, the following best management practices:

- Prohibit unnecessary idling of internal combustion engines. Post signs at gates and other places where vehicles may congregate reminding operators of the State's Airborne Toxic Control Measure (ATCM) limiting idling to no more than 5 minutes.
- Construction contracts for each construction phase specify that all construction equipment, fixed or mobile, shall be equipped with State required noise attenuation devices such as properly operating and maintained mufflers.
- For each construction phase, property owners and occupants located within 300 feet of the Project boundary shall be sent a notice, at least 15 days prior to commencement of construction activities (whichever comes first), regarding the construction schedule of the proposed Project. A sign, legible at 50 feet shall also be posted at the Project construction site during each construction phase. All notices and signs shall be reviewed and approved by the Director of Planning, Building and Code Enforcement or Director's designee, prior to mailing or posting and shall indicate the dates and duration of construction activities, as well as provide a contact name and a telephone number for the Noise Disturbance

Coordinator where residents can inquire about the construction process and register complaints.

- Prior to issuance of any City-issued, grading or building permit for Phase 1, Phase 2, and Phase 3 construction, the Contractor shall provide evidence that at all times during construction activities and on-site construction staff member shall be designated as a Noise Disturbance Coordinator. The Noise Disturbance Coordinator is responsible for responding to complaints about construction noise. When a complaint is received, the Noise Disturbance Coordinator shall determine the cause (e.g., starting too early, bad muffler, etc.), implement reasonable measures to resolve the complaint, and document actions taken. All notices sent to residential units within 300 feet of the construction site and all signs posted at the construction site, shall include the contact name and the telephone number for the Noise Disturbance Coordinator.

MM NOI-2 Noise Barriers

In addition to MM NOI-1, the following measure shall be implemented prior to the start of Phase 3 construction only:

To reduce noise levels for work during Phase 3 construction occurring adjacent to residences, or other noise-sensitive land uses, a noise barrier(s) shall be constructed on the south, southeastern, and eastern edge of the work site facing the receptor(s). Barriers shall be constructed either with two layers of 0.5-inch-thick plywood (joints staggered) and K-rail or other support, or with a limp mass barrier material weighing 2 pounds per square foot. If commercial barriers are employed, such barriers shall be constructed of materials with a Sound Transmission Class rating of 25 or greater. The project Applicant shall construct a temporary sound wall or other noise attenuating feature with a demonstrated ability to achieve the City's land use compatibility noise level of 75 dBA L_{dn} for residential uses as measured at the property line of the existing residences. The applicant shall submit a plan showing the location and specifications of the noise barrier walls and the noise levels achieved to the Director of Planning, Building and Code Enforcement or Director's designee.

MM NOI-3 Nighttime Construction

Prior to the issuance of any demolition or grading permit issuance (whichever comes first) for Phase 1 and Phase 3 construction, the Project shall submit a construction plan for concrete pours to the Director of Planning, Building and Code Enforcement or Director's designee, for review and approval. The construction plan shall include, but is not limited to, the following measures:

- Limit the active equipment during nighttime (10:00 p.m. to 7:00 a.m.) to five or fewer pieces of equipment and at least 120 feet from the eastern Project boundary (this shall be demonstrated by providing a site plan identifying a 110 feet buffer with no truck zone identified or similar method).
- To the extent consistent with applicable regulations and safety considerations, operation of back-up beepers shall be avoided near sensitive receptors between 7:00 p.m. and 7:00 a.m., and/or the work sites shall be arranged in a way that avoids the need for any reverse motions of trucks or the sounding of any reverse motion alarms

during nighttime work. If these measures are not feasible, equipment and trucks operating during the nighttime hours with reverse motion alarms must be outfitted with SAE J994 Class D alarms (ambient-adjusting, or "smart alarms" that automatically adjust the alarm to 5 dBA above the ambient near the operating equipment).

- Prohibit concrete trucks from traveling and idling along Samaritan Place during all nighttime activities.
- Residences or other noise-sensitive land uses within 500 feet of construction sites should be notified of the nighttime construction schedule occurring between 7:00 p.m. and 7:00 a.m. and on weekends ("off hours construction"), in writing, at least 15 days prior to the beginning of off hours construction. This notification shall specify the anticipated dates for all off hour construction and provide the contact information for the Noise Disturbance Coordinator.
- Designate a Noise Disturbance Coordinator o be responsible for responding within 48 hours to any local complaints including about off hour construction noise. Any nuisance complaint reported during nighttime operations (7:00 p.m. and 7:00 a.m.) shall be deemed an urgent issue and shall be responded to immediately. The Coordinator would determine the cause of the noise complaints (e.g., starting too early, bad muffler, etc.) and institute reasonable measures to correct the problem. Conspicuously post a telephone number for the Coordinator at the construction site. Additionally, a log of noise complaints and responses shall be maintained and made available to the City upon request.

Operational Noise

As mentioned previously, the Project site is currently occupied by an existing hospital building, central utility plant (CUP), surface parking lot, and emergency vehicle access area that generates traffic on the surrounding roadway segments, and a helicopter pad that generates overflights in the surrounding areas. Therefore, operational noise associated with the Project's land use are already experienced at receptors close to the Project site. However, implementation of the Project would change the location of the operational noise sources and would add new noise sources to the Project's vicinity. The major noise sources associated with the Project that would potentially impact existing and future nearby residences include the following:

- Off-site traffic and ambulance noise;
- Helicopter noise;
- Mechanical equipment (i.e., CUP, air conditioners, etc.);
- Parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by)

As discussed above, the closest sensitive receptors are located approximately 45 feet to the east of the Project site. Since the Project's use is not a new non-residential land use, General Plan Policy EC-1.3, which states that noise generated by new nonresidential land uses shall not exceed 55 dBA L_{dn} at the property lines of adjacent existing or planned noise-sensitive uses, would not be applicable. However, the City of San José General Plan Policy EC-1.2, which establishes incremental noise standards of 5 dBA where noise levels would remain "Normally Acceptable" and 3 dBA where noise levels would equal or exceed the "Normally Acceptable" level for land uses sensitive to increased noise levels, would be applicable. Further, the General Plan lists the Normally acceptable levels are for residential uses as 60 dBA L_{dn}.

Section 20.30.700 of the City's Municipal Code establishes a limit of 55 dBA for commercial areas adjacent to residential areas and 60 dBA for commercial uses adjacent to commercial areas. Although the Municipal Code is not used as a criterion to determine the significance of Project impacts under CEQA, the operational noise for the proposed Project shall be addressed with respect to the City's Municipal Code threshold of 55 dBA to minimize disturbance to the existing and future residences surrounding the Project site. Impacts associated with each major noise source are discussed in more detail below.

Traffic Noise

Implementation of the Project would generate increased traffic volumes along study roadway intersections and access points. As noted in the Transportation Analysis (Kimley-Horn, 2023), primary trips were assigned to study intersections and access points using the proposed trip distribution and typical routes to and from the site. The Project is expected to generate 9,861 net new ADT, which would result in noise increases on Project area roadways. The net ADT for the Project is the average number of trips per day to the Project based on the land use with a reduction taken for the existing vehicle trips to the Project site associated with the existing hospital use.

In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5 dBA increase is readily noticeable[16]. Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant, and therefore, traffic volume increases that are less than double do not result in a noise impact.

As shown in **Table 16: Existing and Project Traffic Noise**, the existing traffic-generated noise levels on Project area roadways is between 47 dBA L_{dn} and 68 dBA L_{dn} at 100 feet from the centerline. As previously described, L_{dn} is 24-hour average noise level with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions with and without the Project, based on traffic volumes provided (Kimley-Horn, 2023). As noted in Table 16, Existing Plus Project noise levels 100 feet from the centerline would range from 49.5 dBA L_{dn} to 68.4 dBA L_{dn}. The Project would have the highest increase of 2.1 dBA on Samaritan Place, north of Samaritan Drive, which is below the perceptible 3.0 dBA noise level increase. Therefore, the Project would result in a less than significant impact on existing traffic noise levels.

Table 16: Existing and Project Traffic Noise

Roadway Segment	Existing Year		With Project		Project Change from Existing Conditions	Significant Impact?
	ADT	dBA L_{dn}[1]	ADT	dBA L_{dn}[1]

ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise level

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: Based on traffic data provided by Kimley-Horn, 2023. Refer to Appendix A for traffic noise modeling assumptions and results.

Table 17: Background and Background Plus Project Traffic Noise shows the background conditions or background year traffic. Background ADT is the average traffic volumes per day based on the existing Project site conditions added with the traffic volumes of approved but not yet constructed developments in the vicinity of the Project area. Background plus Project ADT is the Background ADT added with the net vehicle trips from the proposed Project. As shown in **Table 17**, Background Year Plus Project roadway noise levels with the Project would range from 49.5 dBA to 69.3 dBA. Project traffic would traverse and disperse over Project area roadways, where existing ambient noise levels already exist. Future development associated with the Project would result in additional traffic on adjacent roadways, thereby increasing vehicular noise near existing and proposed land uses. The Project would have the highest increase of 2.1 dBA on Samaritan Place north of Samaritan Drive. However, the 2.1 dBA increase in under the perceptible 3.0 dBA noise level increase per GP Policy EC-1.1. Therefore, impacts are less than significant.

ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise level						
1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.						
Source: Based on traffic data provided by Kimley-Horn, 2023. Refer to Appendix A for traffic noise modeling assumptions and results.						

Helicopter Noise

During Phase 1 of the Project, the existing helipad would remain in its current location in the Project site's northwest corner and an additional helipad would be constructed in the center of the Project site on the roof of the newly constructed hospital building. This new helipad would be located closer to sensitive receptors to the east and south. However, this is not a trauma hospital therefore the helicopter activity would be infrequent. Additionally, the purpose of the second helipad is for more flexibility in emergency situations and not to increase capacity. Helicopter trips are not anticipated to increase due to the additional helipad so operational noise would not increase in the surrounding area. Furthermore, the preferred approach for helicopter trips is along SR-85. As such, the flight path into the hospital avoids flying over residences north of the Project site. Noise generated by helicopters and the additional helipad would not result in an increase over existing conditions and helicopter noise would be less than significant.

Emergency Vehicle Noise

Currently, emergency vehicles noise exists by the Project site due to the existing hospital land use. With the existing hospital building, emergency vehicles enter through a driveway located on Samaritan Drive approximately 690 feet west of the Samaritan Drive and Samaritan Place intersection and generate siren noise infrequently along Samaritan Drive. After the construction of Phase 1, emergency vehicles would enter through a new driveway located at the Samaritan Place Cul-De-Sac approximately 660 feet northeast of the Samaritan Drive and Samaritan Place intersection. This new path for emergency vehicles would result in an increased exposure to siren noise for residences along Samaritan Drive due to change in location; emergency vehicle trips would remain similar to current trip counts. However, emergency vehicle noise exists in the current ambient conditions, is very short in duration, and occur infrequently. Therefore, emergency vehicle noise would not result in a new or significant noise level in the surrounding area and would be less than significant.

Stationary Noise Sources

Project implementation would create new sources of noise in the Project vicinity from mechanical equipment, parking lot noise, on-site vehicle circulation, and landscape maintenance activities. Each noise source is discussed in more detail below.

Mechanical Equipment

Potential stationary noise sources related to long-term operation of the Project would include mechanical equipment such as rooftop heating, ventilation, and air conditioning (HVAC) units, emergency generators, chillers, boilers, pumps, air compressors, water heaters, and cooling towers. The reference noise levels and location of mechanical equipment to be used at the Project site are provided below:

- *Rooftop HVAC:* 52 dBA at 50 feet[17], located on the rooftop level above the hospital and medical office building. This equipment would run continuously to regulate the temperature of the hospital building.

- *Generators*: 82 dBA at 50 feet[18], located within the CUP. This equipment would be for emergency usage, but was conservatively modeled to run continuously and simultaneously with all other equipment.

- *Chillers:* 69 dBA at 50 feet[19], located within the CUP. This equipment was conservatively modeled to run continuously and simultaneously with all other equipment.

- *Boilers*: 90 dBA at 5 feet [20], located within the CUP. This equipment was conservatively modeled to run continuously and simultaneously with all other equipment.

- *Pumps*: 77 dBA at 50 feet[21], located within the CUP and the mechanical yard. This equipment was conservatively modeled to run continuously and simultaneously with all other equipment.

- *Air Compressors*: 80 dBA at 50 feet[22], located within the CUP. This equipment was conservatively modeled to run continuously and simultaneously with all other equipment.

- *Water Heaters*: 66 dBA at 3 feet[23], located within the CUP. This equipment was conservatively modeled to run continuously and simultaneously with all other equipment.

- *Cooling Towers*: 79 dBA at 5 feet[24], located within the mechanical yard. This equipment was conservatively modeled to run continuously and simultaneously with all other equipment.

Each of the stationary noise sources discussed above were modeled in SoundPLAN and conservatively assumed to operate simultaneously for 24 hours.

Parking Areas

The Project would provide approximately 2,179 vehicle parking spaces through the east and west garages and surface parking located south of the proposed hospital building. Traffic associated with parking lots

is typically not of sufficient volume to exceed community noise standards, which are usually based on a time-averaged scale such as the CNEL scale. The maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA[25] and may be an annoyance to adjacent noise-sensitive receptors. However, parking noise events would be instantaneous and short-term in duration. Additionally, parking noise already occurs at the Project site and adjacent properties to the east, south, and west under existing conditions. However, parking, driveway, and noise from on-site vehicle circulation would be consistent with existing noise in the vicinity and would be partially masked by background traffic noise from motor vehicles traveling along Samaritan Drive to the south of the Project site and Samaritan Place to the east of the Project site. Noise from on-site parking lot movements were modeled in SoundPLAN and were assumed to occur throughout the Project site.

Combined On-Site Noise Levels

The noise levels associated with buildout of the Project were modeled with the SoundPLAN software. SoundPLAN allows computer simulations of noise situations, and creates noise contour maps using reference noise levels, topography, point and area noise sources, mobile noise sources, and intervening structures. Inputs to the SoundPLAN model included ground topography and ground type, existing and proposed intervening structures, noise source locations and heights, receiver locations, and sound power level data. The SoundPLAN run for Project operations conservatively assumes the simultaneous operation of all on-site noise sources by time period. The roadway noise from SR-85 was not modeled in SoundPLAN, but would provide attenuation of the on-site noise sources at the sensitive receptors located across the highway.

Utilizing the reference noise level data described above, SoundPLAN was used to calculate noise levels at the nearest sensitive receptors surrounding the Project site. It should be noted that predicted noise levels are conservative estimates since it was assumed that all equipment and operational activity at the Project site would occur in a simultaneous manner during the daytime and nighttime hours. In reality, it is anticipated that most of these noise sources would occur intermittently throughout the day and night (except for rooftop HVAC and some CUP equipment which would operate in a steady-state manner). The modeled noise levels also account for noise attenuation from the existing perimeter wall on the northern property boundary, as well as existing buildings, structures, and walls surrounding the Project site. The modeled Project noise levels are provided in Table 18: Project Operational Noise Levels, Table 19: Project Operational Noise Levels at the Cambrian Center, and

Section 20.30.700 of the City's Municipal Code establishes a limit of 55 dBA for commercial areas adjacent to residential areas and 60 dBA for commercial uses adjacent to commercial areas. As shown in Table 18, Project-generated noise levels at the nearest residential uses would range from 31.1 dBA L_{eq} to 60.5 dBA L_{eq} and would exceed the City's Municipal Code noise limit of 55 dBA for residential areas. However, measured existing ambient noise levels at the nearest sensitive receptors already exceed the 55 dBA L_{eq} noise standard. The measured noise at ST-1 (sensitive receptor) was 58.1 dBA L_{eq}. Project-generated noise levels at the nearest commercial uses would remain below 60 dBA as shown in

Figure 10: Project Noise Contours and would not exceed the City's Municipal Code noise limit of 60 dBA for commercial uses adjacent to commercial areas.

Table 20: Composite Project Operational Noise shows Project noise levels from all sources combined with existing ambient levels at the nearest sensitive receptors. It is noted that the Project would not be considered a new hospital land use since hospital uses currently occupy the Project site (in a similar location to the proposed Project) but introduces other new uses, such as medical offices, and alters some of the existing operational parameters. As discussed in Section 5.3: Significance Criteria, a 5 dBA L_{dn} increase where noise levels would remain "Normally Acceptable", and 3 dBA L_{dn} increase where noise levels would equal or exceed the "Normally Acceptable" is considered a significant impact in accordance with General Plan Policy EC-1.2.

As shown in Table 20, the maximum increase in 24-hour ambient noise levels from the Project would not exceed the incremental noise standards established in General Plan Policy EC-1.2 and EC-1.3. The highest noise level increase would be 2.5 dBA L_{dn} at the second floor of Receptor 49 (a residence to the north of the Project site across SR-85). The Project would not exceed the incremental noise standards from General Plan Policy EC-1.2 at any residential uses in the Project vicinity; see Table 20. Further, daytime and nighttime noise levels would increase by less than 5 dBA when ambient noise levels are normally acceptable and 3 dBA when ambient noise levels are above normally acceptable levels for all nearby receptors, except for a 3.1 dBA L_{eq} nighttime noise increase at the second floor of Receptor 49. However, as mentioned previously, nighttime noise generated by the Project represents a worst-case scenario with continuously operating mechanical equipment. In reality, mechanical equipment would not run continuously for 24 hours. Further, with nearby topography and attenuating features such as the existing walls and the nearby roadways to the north, the increase in nighttime noise at the second floor of Receptor 49 may be less than 3 dBA L_{eq}. Additionally, operational noise levels would be further masked by background traffic noise from motor vehicles traveling along SR-85 and by interfering landscaping to the south of the residential uses. Thus, noise levels at the receptors to the north across SR-85 would be lower than the modeled noise levels shown below. Therefore, the Project's operational noise levels would not result in a significant increase over existing ambient noise levels at the nearest noise-sensitive uses. Impacts would be less than significant in this regard.

1.See Table 9 for ambient noise level data.
2. Incremental noise threshold per City of San José General Plan Policy EC-1.2, which establishes incremental noise standards of 5 dBA L_{dn} where noise levels would remain "Normally Acceptable" and 3 dBA L_{dn} where noise levels would equal or exceed the "Normally Acceptable" level for land uses sensitive to increased noise levels. Normally acceptable levels are 60 dBA L_{dn} for residential uses. Although the normally acceptable standard for industrial and commercial office uses is 70 dBA L_{dn}, it is not considered a land use sensitive to increased noise levels per Policy EC-1.2.
Source: SoundPLAN version 5.1. See Appendix A for noise modeling data and results.

Landscape Maintenance Activities

Development and operation of the Project would also include landscaping that would require periodic maintenance. However, landscape maintenance activities would operate during daytime hours for brief periods of time as allowed by the City's Municipal Code and would not permanently increase ambient noise levels in the Project vicinity. The landscaping activities would be consistent with activities that currently occur on-site and would be in locations similar to the existing site. Due to the infrequent and intermittent nature of landscaping activities, this noise source was not included in the SoundPLAN model which is used to evaluate the Project's operational noise impacts in this analysis in compliance with General Plan Policy EC – 1.2. Because landscaping noise would not increase over existing conditions, the Project would result in a less than significant noise impact with regard to landscape maintenance activities.

Trash/Recycling/Delivery Truck Noise

The proposed Project would involve weekly trash/recycling pickups and equipment deliveries from slow-moving trucks during normal daytime hours (i.e., from 7:00 a.m. to 10:00 p.m.). Trash/recycling pickup equipment deliveries would occur in the northeastern portion of the Project site at the proposed dock drive area. Low speed truck noise results from a combination of engine, exhaust, and tire noise as well as the intermittent sound from releases of compressed air associated with truck air brakes. It is noted that trash/recycling/delivery operations would be short-term and irregular. The closest sensitive receptor to the loading dock area is approximately 500 feet northeast across SR-85. At this distance, loading dock noise would reach 44 dBA L_{eq} without accounting for attenuating structures and would not result in any noise level increases at the sensitive receptor.[26] Therefore, this noise source was not included in the SoundPLAN model which is used to evaluate the Project's operation noise impacts in compliance with General Plan Policy EC – 1.2. The Project would result in a less than significant noise impact with regard to truck loading activity.

Town of Los Gatos Operational Noise Analysis

The City of San José does not require the following information to determine the level of significance of Project impacts, but is provided in this analysis for informational purposes to help decision makers in their consideration of the proposed Project.

For sensitive receptors located in the Town of Los Gatos (i.e., residences to the west of the Project site along National Avenue), this report utilizes the noise standards in Los Gatos Municipal Code Section 16.20.015 to assess on-site operational noise impacts from the proposed Project. As indicated in Table 14, the Project's on-site operational noise levels would not be greater than 36 dBA L_{eq} at the nearest residential uses to the west located within the Town of Los Gatos. As such, noise levels from on-site operations at the Project site would not exceed the Town of Los Gatos most stringent nighttime noise standards of 51 dBA L_{eq} for residential uses in that area. The closest residential uses within in the Town of Los Gatos are located approximately 990 feet to the west of the Project site. On-site operational noise levels from the Project would range between 32 dBA L_{eq} and 36 dBA L_{eq} during the daytime, and between 31 dBA L_{eq} and 35 dBA L_{eq} during the nighttime hours at the nearest Town of Los Gatos residential uses.

[26] Loading dock reference noise level measurements conducted by Kimley-Horn on December 18, 2018 and were measured at 64 dBA L_{eq} at 50 feet.

As such, the Project's on-site operational noise levels would not exceed the Town of Los Gatos' 55 dBA L_{eq} the standards listed in Municipal Code Section 16.20.015.

City of Campbell Operational Noise Analysis

The City of San José does not require the following information to determine the level of significance of Project impacts, but is provided in this analysis for informational purposes to help decision makers in their consideration of the proposed Project.

For sensitive receptors located in the City of Campbell (i.e., residences northwest of the Project across Bascom Avenue), this report utilizes the noise standards in Table 8 to assess on-site operational noise impacts from the proposed Project. As indicated in Table 14, the Project's on-site operational noise levels would reach approximately 39 dBA L_{eq} at the closest residences in the City of Campbell. As such, noise levels from on-site operations at the Project site would not exceed the City of Campbell's nighttime noise standards of 45 dBA L_{eq} for residential uses.

Overlapping Construction and Operation Phasing

The Project would be constructed in Phases which would result in overlaps between the construction and operation of portions of the Project. There are two overlaps that that would generate substantial noise in the surrounding environment (Phase 1 operation with Phase 2 construction and Phase 1 and 2 operations with Phase 3 construction) and are discussed further below.

Phase 1 Operation and Phase 2 Construction

Proceeding the completion of construction for Phase 1 of the Project, construction would begin on Phase 2. Construction of Phase 2 includes the demolition of the existing hospital building and the construction of surface parking to the south of the new hospital building. At the same time, operation of Phase 1 would commence and would include operational noise sources from the CUP, mechanical yard, parking garage east, and existing surface parking that is on the east and west portions of the Project site.

SoundPLAN was used to calculate the combined noise levels at the nearest sensitive receptors surrounding the Project site from Phase 1 operations and Phase 2 construction activities. It should be noted that predicted noise levels are conservative estimates since it was assumed that all equipment, operational activity, and construction activity at the Project site would occur in a simultaneous manner during the daytime hours. In reality, it is anticipated that most of these noise sources would occur intermittently throughout the day and night (except for rooftop HVAC and some CUP equipment which would operate in a steady-state manner). The loudest modeled noise levels from Phase 1 operations and Phase 2 construction would be approximately 69.5 dBA L_{dn} over a 24-hour period. The modeled noise level plus the ambient noise level of 67.5 dBA L_{dn}, would result in a combined noise level of 71.6 dBA L_{dn}. The Project would be required to implement a Noise Logistics Plan in accordance with MM NOI-1 which would reduce construction noise levels to the extent feasible. Phase 2 construction noise would be reduced through various noise reduction measures, which may include the prohibition of internal combustion engine idling and the installation of mufflers on all construction equipment, among others. With these noise reductions, combined Phase 1 operations and Phase 2 construction noise levels would be lower than the levels discussed above. Further, combined operational and construction noise levels would remain below the FTA's construction noise standards of 80 dBA L_{eq} at residential uses and 85 dBA L_{eq} at commercial uses.

Conservatively, the combined noise impact of Phase 1 operation and Phase 2 construction is evaluated to the General Plan Policy EC-1.1 or the land use compatibility guidelines. According to **Table 4**, residential, hospitals, and residential care facilities can be exposed to exterior noise levels of 75 dBA L_{dn} after detailed analysis of the noise reduction requirements and needed noise insultation features included in the design. As discussed above, the combined noise level of Phase 1 operations and Phase 2 construction would be 71.6 dBA L_{dn}. While EC-1.1 is not typically used to analyze construction noise, in this scenario the thresholds were used to evaluate the overlap of operational and construction phases. Once construction ends, the noise levels would be in the normally acceptable range.

Phase 1 Operation, Phase 2 Operation, and Phase 3 Construction

Construction would begin on Phase 3 once Phase 2 has completed construction. Construction of Phase 3 includes the demolition of the existing parking lot to the west and the construction of surface parking to the south of the new hospital building, parking garage west, a medical office building, and hospital building extensions. During Phase 3 construction, operation of Phase 1 would continue, and operation of Phase 2 would commence. Operational noise sources from the Project during this period would from the HVAC from the new hospital building, the CUP, mechanical yard, parking garage east, and the existing surface parking that is south and east of the new hospital building.

SoundPLAN was used to calculate the combined noise levels at the nearest sensitive receptors surrounding the Project site from Phase 1 and 2 operations and Phase 3 construction activities. As mentioned previously, it should be noted that predicted noise levels are conservative estimates since it was assumed that all equipment, operational activity, and construction activity at the Project site would occur in a simultaneous manner during the daytime hours. In reality, it is anticipated that most of these noise sources would occur intermittently throughout the day and night (except for rooftop HVAC and some CUP equipment which would operate in a steady-state manner). The loudest modeled noise level from Phase 1 and 2 operation and Phase 3 construction would be approximately 76.6 dBA L_{dn} over a 24-hour period during Phase 3 construction paving. The modeled noise level plus the ambient noise level of 67.5 dBA L_{dn} would result in a combined noise level of 77.1 dBA L_{dn}. Thus, the combined noise impact of Phase 1 and 2 operations and Phase 3 construction would result in a noise level increase above the conditionally acceptable exterior noise exposure level of 75 dBA L_{dn} per **Table 4** and EC-1.1.

As mentioned above, the Project would be required to implement a construction noise logistics plan prior to each construction phase in accordance with MM NOI-1 which would reduce construction noise levels to the extent feasible. Further, to reduce noise levels for work during Phase 3 construction occurring adjacent to residences, or other noise-sensitive land uses, MM NOI-2 requires a noise barrier(s) on the south, southeastern, and eastern edge of the work site facing the receptor(s). Following implementation of MM NOI-1 and MM NOI-2, the combined noise levels from Phase 1 and 2 operations and Phase 3 construction would reduce to 74.0 dBA L_{dn}. This would result in noise levels below the conditionally acceptable exterior noise exposure level of 75 dBA L_{dn} per **Table 4** and EC-1.1. Therefore, the combined noise impact from Phase 1 and 2 operations and Phase 3 construction would be less than significant with implementation of MM NOI-1 and MM NOI-2.

Mitigation Measures:

MM NOI-1 **Construction Noise Logistics Plan** (See description above)

MM NOI-2 **Noise Barriers** (See description above)

MM NOI-3 **Nighttime Construction** (See description above)

Level of Significance: Project construction noise would be less than significant with mitigation. Project operations noise would be less than significant. Overlapping combined noise would be less than significant with mitigation.

Threshold 6.2 Would the Project generate excessive groundborne vibration or groundborne noise levels?

Construction Vibration

Increases in groundborne vibration levels attributable to the Project would be primarily associated with construction-related activities. Construction on the Project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. The effect on buildings located in the vicinity of the construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Groundborne vibrations from construction activities rarely reach levels that damage structures.

The FTA has published standard vibration velocities for construction equipment operations. In general, depending on the building category of the nearest buildings adjacent to the potential pile driving area, the potential construction vibration damage criteria vary. For example, for a building constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.50 in/sec PPV is considered safe and would not result in any construction vibration damage. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on soil composition and underground geological layer between vibration source and receiver.

Table 21: Typical Construction Equipment Vibration Noise Levels, lists vibration levels at 25 feet, 50 feet, and 100 feet for typical construction equipment. Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in Table 21, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.0008 to 0.0239 in/sec PPV at 45 feet from the source of activity. The nearest sensitive receptor is approximately 45 feet from the active construction zone and would not experience perceptible vibration levels. Impact pile driving would be required during construction of the CUP in Phase 1 of the Project. The closest sensitive receptor to the CUP is located approximately 300 feet away.

Table 21: Typical Construction Equipment Vibration Noise Levels

Equipment	Peak Particle Velocity At 25 feet (in/sec)	Peak Particle Velocity At 45 feet (in/sec)[1]	Peak Particle Velocity At 300 feet (in/sec)[1]
Impact Pile Driving	-	-	0.037
Large Bulldozer	0.089	0.037	0.002
Loaded Trucks	0.076	0.032	0.002
Rock Breaker	0.059	0.024	0.001
Jackhammer	0.035	0.015	0.001
Small Bulldozer/Tractors	0.003	0.001	0.000

1. Calculated using the following formula: PPVequip = PPVref x (25/D)1.5, where: PPVequip = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPVref = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

As shown in Table 21, the highest vibration levels are achieved with the large bulldozer operations at the receptors located 45 feet away and pile driving at receptors 300 feet away. This construction activity is expected to take place during grading and Phase 1 building construction respectively. Additionally, per General Plan Policy EC-2.3, continuous vibration limits shall not exceed 0.08 PPV for sensitive historical structures and 0.20 PPV for normal conventional construction.[27] In general, other construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with the construction of the Project would be less than significant.

Operational Vibration

Once operational, the Project would not be a significant source of groundborne vibration. Groundborne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g., refuse trucks, heavy duty trucks, delivery trucks, and transit buses) on the nearby local roadways. Operations of the proposed Project would include activities associated with a hospital (i.e., parking, trash/recycling pickup, etc.) that typically would not cause excessive ground-borne vibrations. Due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity. According to the FTA's Transit Noise and Vibration Impact Assessment, trucks rarely create vibration levels that exceed 70 VdB (equivalent to 0.012 in/sec PPV) when they are on roadways. Therefore, trucks operating at the Project site or along surrounding roadways would not exceed FTA thresholds or General Plan Policy EC-2.3 for building damage or annoyance. Impacts would be less than significant in this regard.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Threshold 6.3 For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

[27] It should be noted that there are no historical structures in the Project area and therefore the City's 0.08 PPV continuous vibration standard does not apply.

The nearest airport to the Project site is the Norman Y. Mineta San José International Airport located approximately 5.6 miles northeast of the Project site. The Project site lies outside of the 65 dBA CNEL noise contours shown in the Norman Y. Mineta San José International Airport Master Plan Update Project report published in October 2019.[28] Although aircraft-related noise would occasionally be audible at the Project site, noise from aircraft would not substantially increase ambient noise levels. Exterior noise levels resulting from aircraft would be compatible with the proposed Project. By ensuring compliance with the building code requirements for window assemblies, interior noise levels would also be considered acceptable with aircraft noise. Therefore, the Project would not expose people residing or working in the Project area to excessive airport- or airstrip-related noise levels and no mitigation is required.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

6.2 CUMULATIVE NOISE IMPACTS

Noise by definition is a localized phenomenon, and drastically reduces as distance from the source increases. Cumulative noise impacts involve development of the Project in combination with ambient growth and other related development projects. As noise levels decrease as distance from the source increases, only projects in the nearby area could combine with the Project to potentially result in cumulative noise impacts. The geographic context for cumulative noise and vibration construction impacts encompasses sensitive receptors within approximately 1,000 feet of the project site. Beyond 1,000 feet, the construction noise from cumulative projects would be greatly attenuated by both distance and intervening structures.

Cumulative Construction Noise

Per San José Municipal Code Section 20.100.450, the City permits construction hours within 500 feet of a residential unit when limited to the hours of 7:00 a.m. to 7:00 p.m. on Monday through Friday, unless otherwise allowed in a Development Permit or other planning approval. The Project would receive a development permit that allows for construction to occur within 500 feet of residences, occur 6 days a week, and have nighttime construction. The Project would potentially contribute to other proximate construction noise impacts if construction activities were conducted concurrently. Samaritan Medical Campus Development Plan would be within the geographic scope for noise and vibration impacts. However, based on the environmental document prepared, no more than two buildings would undergo heavy construction simultaneously and mitigation measures are included to reduce construction noise (MM NOI-1.1 through MM NOI-1.3 in the 2016 Original and subsequent two Addendum EIRs for the Samaritan Medical Center Master Plan EIR). While the environmental document found a significant and unavoidable construction impact, it concluded a less than significant cumulative impact. Based on the proposed Project's noise analysis above, the Project's construction-related noise impacts would be less than significant when overlapping with Project operations, when following implementation of best management practices, mitigation measures, compliance with General Plan Policy EC-1.7 and Municipal Code. Therefore, there may be a cumulative impact in construction noise levels if the two projects were constructed concurrently. As stated in the CEQA Guidelines section 15064(h)(4), "The mere existence of cumulative impacts caused by other projects alone shall not constitute substantial evidence that the

[28] City of San José, *Norman Y. Mineta San José International Airport Master Plan Update*, *Noise Assessment for the Master Plan Environmental Impact Report,* October 2019.

proposed project's incremental effects are cumulatively considerable." Therefore, the cumulative impacts analysis in an EIR should not discuss impacts which do not result in part from the project evaluated in the EIR. Therefore, the proposed Project's incremental effects would not result in a cumulatively considerable contribution.

The Samaritan Medical Campus Development Plan EIR (2016) identified a maximum construction noise level of 76 dBA L_{eq} at the closest receptor to the south along Lost Oaks Drive. Noise Levels from the proposed Project would be approximately 67.6 dBA at this receptor with MM NOI-1. As the Project's construction noise levels are more than 8 dBA lower than the cumulative project noise levels, it would increase noise levels at this receptor by 1 dBA.[29] Less than 3 dBA is considered not perceptible to humans. Therefore, the Project construction noise would not cumulatively contribute to the related cumulative project's noise levels. In addition, construction activities at other planned and approved projects would be required to take place during daytime hours unless an exemption was approved, and the City and project applicants would be required to evaluate construction noise impacts and implement mitigation, if necessary, to minimize noise impacts. Each project in the City would be required to comply with the applicable City of San José Municipal Code limitations on allowable hours of construction.

Due to such requirements and the distance between cumulative projects, construction noise from the Project and other projects would not create a significant cumulative noise impact.

Cumulative Operational Noise

Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the Project and other past, present, and foreseeable projects. Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the Project and other projects in the vicinity. However, noise from generators and other stationary sources could also generate cumulative noise levels.

Stationary Noise

As discussed above, impacts from the Project's operations would be less than significant. Due to site distance, intervening land uses, and the fact that noise dissipates as it travels away from its source, noise impacts from on-site activities and other stationary sources would be limited to the Project vicinity which would not change significantly over existing conditions. There is Samaritan Medical Center Master Plan development that was planned west of the Project site that would generate stationary noise that would compound with the operational noise levels generated by the Project.[30] However, due to the distance between the commercial development and the sensitive receptors, the presence of noise attenuating structures in the surrounding area, and that existing medical uses already exist on-site, cumulative noise would not reach levels that exceed the City's Land Use Compatibility Guidelines at nearby sensitive receptors. Furthermore, each project would comply with applicable San José General Plan noise regulations and would maintain their generated stationary noise levels at an acceptable level for nearby uses. Thus, cumulative operational noise impacts from related projects, in conjunction with Project-specific noise impacts, would not be cumulatively significant.

[29] Per the California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol (2013), adding two noise levels that differ by 4-9 dB result in a 1 dBA (less than barely noticeable increase).

[30] City of San José, *Samaritan Medical Center Master Plan Draft EIR*, May 2016. Accessed at https://www.sanjoseca.gov/home/showpublisheddocument/87814/637932439397900000

Traffic Noise

Cumulative traffic accounts for 20 planned, proposed, and approved projects in the surrounding area. A project's contribution to a cumulative traffic noise increase would be considered significant when the combined effect exceeds perception level (i.e., auditory level increase) threshold. Cumulative increases in traffic noise levels were estimated by comparing the Existing Plus Project and Cumulative scenarios to Existing Conditions.

The following criteria is used to evaluate the combined effect of the cumulative noise increase.

- Combined Effect. The cumulative with Project noise level ("Cumulative Year With Project") would cause a significant cumulative impact if a 3.0 dB increase over "Existing" conditions occurs and the resulting noise level exceeds the applicable exterior standard at a sensitive use. Although there may be a significant noise increase due to the Project in combination with other related projects (combined effects), it must also be demonstrated that the Project has an incremental effect. In other words, a cumulatively significant portion of the noise increase must be due to the Project.

The following criteria have been used to evaluate the incremental effect of the cumulative noise increase.

- Incremental Effects. The "Cumulative Year With Project" causes a 1.0 dBA increase in noise over the "Cumulative Without Project" noise level.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded. Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 22: Cumulative Plus Project Conditions Predicted Traffic Noise Levels identifies the traffic noise effects along roadway segments in the vicinity of the Project site for "Existing," "Cumulative Year Without Project," and "Cumulative Year With Project," conditions, including incremental and net cumulative impacts.

First, it must be determined whether the "Cumulative Year With Project" increase above existing conditions (Combined Effects) is exceeded. As indicated in Table 22, the Project has no street segments that exceed both the Combined Effects criteria and the Incremental Effects criteria for any roadway segment analyzed.

Table 22: Cumulative Plus Project Conditions Predicted Traffic Noise Levels

ADT = average daily trips; dBA = A-weighted decibels; L_{dn} = day-night noise level

1. Traffic noise levels are at 100 feet from the roadway centerline.
2. The noise level is 2.96 dBA L_{dn} but is shown as 3 dBA L_{dn} due to rounding. The segment would have a traffic noise increase below 3 dBA L_{dn}. Further, uses surrounding the roadway segment are medical office buildings and the resulting noise level would be below the 70 dBA L_{dn} normally acceptable level for office buildings.

Source: Based on traffic data provided by Kimley-Horn, 2023. Refer to Appendix A for traffic noise modeling assumptions and results.

As indicated in the table, one segment would exceed the combined effects criterion (Samaritan Drive west of Bascom Avenue). However, this segment would not exceed the 1 dB incremental effects criterion. Additionally, multiple roadway segments exceed the incremental effects criteria. However, none of the roadway segments exceed both the Combined and Incremental Effects Criterion. The Project would not result in long-term mobile noise impacts based on Project-generated traffic as well as cumulative and incremental noise levels. Therefore, the Project, in combination with cumulative background traffic noise levels, would result in a less than significant cumulative impact. The Project's contribution to noise levels would not be cumulatively considerable.

EXECUTIVE SUMMARY

This transportation study evaluates transportation operations and site circulation conditions for the Planned Development Rezoning of an approximately 20-gross- acre site from the A(PD) Planned Development Zoning District (File No. PDC01-063) to the CG(PD) Planned Development District (File No. PDC22-132) for the Good Samaritan Hospital campus to allow the phased demolition of a hospital building and day care center for the construction of two hospital buildings, a medical office building; a central utility plant; and two parking structures ("Project"). The Project is located at 2425 Samaritan Drive and 2333 Samaritan Place, in the City of San José.

The Project site is currently developed as a hospital, currently licensed for 404 beds within an approximately 444,000-square-foot building. Specifically, the existing hospital building is divided into two different wings: a main building with emergency operations totaling approximately 359,000 square feet (Building A), and a women's and children's services wing center totaling approximately 85,000 square feet (Building B). The hospital campus also contains a daycare center at 2333 Samaritan Place of 6,700 square feet that is currently vacated. In total, the existing hospital campus is approximately 450,700 square feet.

The Project proposes to remove the existing hospital (Building A) and the daycare center, which is currently licensed for 404 beds and construct a new hospital campus consisting of a 750,000 square foot hospital facility with 419 licensed beds and a 200,000 square foot medical office business (MOB) in three phases.

- Phase 1
  - Demolish approximately 20,946 square feet of existing hospital main building and the 6,700 square foot daycare center. The remaining building will remain during Phase 1 and existing beds within the building will be transferred to the new Building C.
  - Construct a new approximately 548,000 (Building C) square foot hospital wing.
  - Construct a new five-story 253,000 square foot parking garage (Garage East) with 653 parking spaces and a central utility plant totaling approximately 23,750 square feet.
  - Increase the number of Licensed Beds from 404 to 413.

- Phase 2
  - Demolish remaining portion (i.e., 338,054) existing hospital main building to allow for access to the new hospital and replace it with surface parking.

- Phase 3 (Buildout)
  - Increase the number of Licensed Beds from 413 to 419.
  - Construct an approximately 202,000 square foot hospital wing and an approximately 200,000 square foot Medical Office Building (MOB), and a new five-story garage structure (Garage West) with 1,154 parking spaces.

Access to the site is currently provided by three stop-controlled driveways for vehicular traffic and one restricted-access driveway for ambulances on Samaritan Drive. The Project proposes to keep the existing three driveways, add an additional stop-controlled driveway along Samaritan Dr., and add three new driveways along Samaritan Place. The existing ambulance only driveway will be relocated in Phase 3 to accommodate relocation of the emergency facilities to the new hospital building C. The location of

drives facilitates access and circulation to the two proposed parking garages, one located on the east side of the property and the other on the west side of the property.

The potential impacts of the Project were evaluated in accordance with the standards and methodologies set forth by the City of San José. Pursuant to the City of San José's Transportation Analysis Policy (Policy 5-1) and the 2023 Transportation Analysis Handbook, this transportation analysis report includes a CEQA transportation analysis (TA) and a local transportation analysis (LTA). The CEQA transportation analysis in the report provides an evaluation of Vehicle Miles Traveled (VMT). VMT is defined in Chapter 1. The LTA supplements the CEQA transportation analysis by identifying transportation operational issues via an evaluation of weekday AM and PM peak-hour traffic conditions for twenty-five (25) study intersections and eight (8) freeway ramps near the Project site. The LTA also includes an analysis of site access, on-site circulation, parking, vehicle queuing, and effects to transit, bicycle, and pedestrian access.

The effects of the Project on nearby freeway segments were evaluated in accordance with the methodologies described in the Santa Clara Valley Transportation Authority's (VTA) Transportation Impact Analysis Guidelines (2014). The VTA administers the Santa Clara County Congestion Management Program (CMP). The Project freeway analysis is presented for informational purposes.

CEQA Transportation Analysis

As discussed earlier, Phase 1 includes the construction of a new 548,444 square foot 413 bed hospital. Phase 2 of the project demolishes the remaining portion of the existing hospital building and replace it with surface parking. Phase 3 incudes the construction of a 201,936 square foot hospital expansion with a total of 419 beds and the addition of a 200,000 square foot MOB.

The CEQA transportation analysis which provides an evaluation of VMT, looked at a conservative scenario for Phase 1 by assuming all 419 licensed beds are operational by end of Phase 1. Phase 3 (Buildout) includes VMT evaluation of 419 licensed beds and 200 KSF of MOB. No VMT analysis was conducted for Phase 2 as no traffic is generated.

The total increase in daily VMT caused by Phase 1 would be 0.05% (i.e., 143 daily trips) and by the Phase 3 (Buildout) would be 0.81% (i.e.,2,537 daily trips). The Project will be required to implement a series of TDM measures to mitigate the VMT impacts discussed above. The Project will fully mitigate its Phase 1 and Phase 3 (Buildout) VMT impacts.

Phase 1 – Hospital (419 Beds)

Because of the nature of the land use, and consistent with the City Handbook, the transportation metric for CEQA is a net change in VMT. The VMT analysis shows that the Project's Phase 1 would increase the daily VMT for employees by 47 daily trips from 240,569 to 240,616 (or 0.02%) and for patients/visitors by 96 daily trips from 73,798 to 73,894 (or 0.13%). The total increase in daily VMT caused by Phase 1 would be 143 daily trips from 314,367 to 314,510 (or 0.05%). Since Phase 1 would result in a net increase in daily VMT, a potentially significant impact would occur. Mitigation measures are required to reduce the VMT impact to a less than significant level.

Percent (%) VMT Reductions - Phase 1 – Hospital (419 Beds)

With implementation of the TDM measures for Phase 1 Conditions outlined in Section 4, a potential reduction of 503 employee daily trips will be achieved (which is 456 employee daily trips more than the

required mitigation) and a reduction of 96 patients/visitors' daily trips is achieved (which would equal the required mitigation). Therefore, the Project's Phase 1 VMT impact would be reduced to a less than significant level with mitigation incorporated. See Section 4 for further details.

Phase 3 (Buildout) – Hospital (419 Beds) + MOB (200 KSF)

The VMT analysis shows that Phase 3 (Buildout) would increase the daily VMT for employees by 1,611 daily trips from 240,569 to 242,180 (or 0.67%) and for patients/visitors by 926 daily trips from 73,798 to 74,724 (or 1.25%). The total increase in daily VMT caused by the proposed Project would be 2,537 daily trips from 314,367 to 316, 904 (or 0.81%). Since Phase 3 would result in a net increase in daily VMT, a potentially significant impact would occur. Mitigation measures are required to reduce the VMT impact to a less than significant level.

Percent (%) VMT Reductions – - Phase 3 (Buildout) - Hospital (419 Beds) + MOB (200 KSF)

With implementation of the TDM measures for Phase 3 (Buildout) Conditions outlined in Section 4, a potential reduction of 2,269 employee daily trips will be achieved (which is 658 employee daily trips more than the required mitigation) and a reduction of 562 patients/visitors' daily trips is achieved (which would be 362 patients/visitor's daily trips less than the required mitigation). The overall reduction of 2,537 daily trips required to mitigate the Project's Phase 3 (Buildout) VMT impact is achieved by combining the daily trips reduction for employees and patients/visitors. Therefore, the Phase 3 (Buildout) VMT impact would be reduced to less than significant level with mitigation incorporated.

Transportation Demand Management (TDM) Plan

The City's 2023 Transportation Analysis Handbook defines a Project's TDM requirement as a TDM Point Target to be met by committing to a package of TDM measures. San José Municipal Code Section 20.90.060 categorizes land uses into four categories: 'Home-End Uses,' 'Commute-End Uses,' 'Visit-End Uses,' and 'Other Uses.'

Phase 1, Phase 2, and Phase 3 (Buildout)) falls under the 'Commute-End Uses' land use category for the jobs generated. The Phase 1 Project which includes the Hospital (419 Beds), satisfies the TDM Point Target with 25 points. The Phase 2 Project which includes the demolition of the existing Hospital, does not satisfy the TDM Point Target with 21 points. To meet the 25-point minimum requirement, the following Phase 2 TDM measures are required:

- [MI01] Provide Bike and Micro-mobility Network Improvements
  - This measure will achieve a potential point value of 2 points.
- [MI03] Provide Transit Network Improvements
  - This measure will achieve a potential point value of 1 point.
- [MI05] Provide Pedestrian Network Improvements (2 points)
  - This measure will achieve a potential point value of 2 points.

However, if the Project reduces the number of parking spaces provided during Phase 2 to a parking ratio of 2.0 or less, then the Project meets the 25-point minimum requirement and TDM measure MI01, MI03, and MI05 would not be required under Phase 2.

The Phase 3 (Buildout) Project which includes the Hospital and Medical Office Building (MOB), satisfies the TDM Point Target with 31 points.

Projects including a TDM plan as a Condition of Approval are required to implement the proposed TDM measures for the life of the Project and fulfill ongoing compliance and monitoring requirements. As per the 2023 Transportation Analysis Handbook, the Project is classified as Level 2 (large Project) and would be subject to annual monitoring. The proposed Project will submit a completed TDM Compliance Form, a completed TDM Monitoring Report, and associated administrative fees to the City Department of Transportation every year.

Proposed Mitigation Plan Measures

The following TDM measures involving improvements related to alternative transportation modes are proposed:

- **Samaritan Drive Road Diet:** A road diet will be implemented with Phase 3 (Buildout), along the Project frontage and beyond along Samaritan Drive from Samaritan Ct. to the intersection of Samaritan Dr/ Samaritan Pl. The road diet will reduce the number of travel lanes from five lanes (i.e., two lanes in each direction and one central left turn lane) to three lanes (i.e., one lane in each direction and one central left turn lane). The project will be required to provide an on-street Class IV Protected Bike Path along the Project's frontage and non-frontage along Samaritan Drive and along Samaritan Pl.

  The proposed improvements involving Road Diet is in line with City's 'Better Bike Plan 2025', which proposes a Class IV Protected Bike Lane in each direction along Samaritan Drive from Los Gatos Blvd. to Union Avenue and a Class III Bike Route along Samaritan Pl. providing connection to the existing pedestrian bridge over SR-85.

- **Samaritan Drive / Samaritan Place Roundabout:** A roundabout at the existing unsignalized intersection of Samaritan Drive. / Samaritan Place. will also be implemented with Phase 3 (Buildout). The proposed roundabout will tie in with the Road Diet and will have a single lane in each direction. The proposed roundabout will provide the opportunity for existing VTA bus routes to make a U-turn along Samaritan Drive.

The project will take credit for some of the previously discussed VMT mitigation as TDM points for the TDM Ordinance. Refer to Section 5 of the report for additional information.

Local Transportation Analysis

Project Trip Generation

Trip generation for the proposed Project land uses was calculated using trip generation rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition*. Per the 2023 *Transportation Analysis Handbook*, trip generation reduction credits were applied to the Project including location-based mode-share and removal of existing driveway counts.

During Phase 1, the Project will increase the number of currently licensed 404 Beds to 413 Beds. For conservative scenario, no credits were taken for the existing hospital demolition. During Phase 2, the Project will demolish the remaining portion existing hospital main building to allow for access to the new hospital and replace it with surface parking (552 spaces). While there will be a redistribution of the

trips internally within the site, no additional trips will be added during Phase 2 of the Project. Phase 3 (Buildout) of the Project includes the 419 beds and the addition of a 200,000 square foot MOB.

For a conservative scenario, all 419 beds were assumed to be operational by end of Phase 1. Baseline vehicle trips for Phase 1 Project (excluding trip adjustments) are anticipated to generate a gross total of 9,352 daily trips, 750 AM peak hour trips, and 708 PM peak hour trips. With all applicable trip reductions (location-based adjustment of 9%, VMT reductions, and existing driveway trip credits), the Phase 1 Project is anticipated to generate a total of 3,266 daily trips, 196 AM peak hour trips (165 In / 31 Out), and 197 PM peak hour trips (25 In / 172 Out).

During Phase 3 (Buildout), baseline vehicle trips for the Project (excluding trip adjustments) are anticipated to generate a gross total of 15,724 daily trips, 1,286 AM peak hour trips, and 1,276 PM peak hour vehicle trips. Development of the Project with all applicable trip reductions (location-based adjustment of 9%, VMT reduction, and existing driveway counts) is anticipated to generate a net total of 6,762 additional daily trips, 489 AM peak hour trips (409 In / 80 Out), and 516 PM peak hour trips (95 In / 421 Out) to the roadway network.

Intersection Traffic Operations

Weekday AM and PM peak hour intersection turning movement counts were collected for all study intersections during May 2022, except for the study intersection of S. Bascom Avenue / East Mozart Avenue, which was collected during November 2022. Traffic conditions for each study intersection were analyzed during the 7:00 – 9:00 AM and 4:00 – 6:00 PM peak hours of traffic which represent the most heavily congested traffic on a typical weekday. The study intersections were assessed under Existing, Background, Background Plus Phase 1 Project, Background Plus Phase 3 (Buildout) Project, Cumulative, Cumulative Plus Phase 3 (Buildout) Project Condition scenarios. The City of San José, the City of Campbell, the Town of Los Gatos, and the Valley Transportation Authority Congestion Management Program intersection level of service standards and significance thresholds were used to determine adverse effects caused by the Project.

Adverse Effects and Improvements

The Project is not anticipated to generate an adverse effect on the study intersections during the Phase 1 and Phase 3 (Buildout) scenarios.

The addition of Phase 3 (Buildout) Project trips increases the capacity of mixed flow lane and HOV lane at two freeway segments which are already operating at LOS F, causing a significant adverse effect. No improvements involving freeway widening to increase vehicle capacity are identified as it is not feasible for the proposed Project to bear the cost of implementing the improvements due to constraints related to right-of-way (ROW) and land acquisition costs.

The Project will implement the following geometric improvements as part of the TDM measures during Phase 3 (Buildout) to mitigate the VMT impact:

- **Samaritan Drive Road Diet:** A road diet will be implemented with Phase 3 (Buildout), along the Project frontage and beyond along Samaritan Drive from Samaritan Ct. to the intersection of Samaritan Dr/ Samaritan Pl. The road diet will reduce the number of travel lanes from five lanes (i.e., two lanes in each direction and one central left turn lane) to three lanes (i.e., one lane in each direction and one central left turn lane). The project will be required to provide an on-

street Class IV Protected Bike Path along the Project's frontage and non-frontage along Samaritan Drive and along Samaritan Pl. The proposed improvements involving the Road Diet are in line with City's 'Better Bike Plan 2025', which proposes a Class IV Protected Bike Lane in each direction along Samaritan Drive from Los Gatos Blvd. to Union Avenue and a Class III Bike Route along Samaritan Place. Providing connection to the existing pedestrian bridge over SR-85.

- **Samarian Drive and Samaritan Place Roundabout:** A roundabout at the existing unsignalized intersection of Samaritan Drive / Samaritan Place will also be implemented with Phase 3 (Buildout). The proposed roundabout will tie in with the Road Diet and will have a single lane in each direction. The proposed roundabout will provide the opportunity for existing VTA bus routes to make a U-turn along Samaritan Drive.

The Project will also include off-site right-of-way improvements at the Project site's access points on Samaritan Drive and Samaritan Place. These improvements would include new curb cuts for the proposed driveway access points, as well as rehabilitation of the existing pedestrian sidewalks.

Vehicle Site Access and Circulation

In Phase 1, the Project would keep the existing four driveways and add three new driveways (Driveway 5, Driveway 6, and Driveway 7) along Samaritan Pl. Driveway 5 and Driveway 6 would provide access to Garage East and Driveway 7 would lead to the relocated ambulance entry to the east of Building C**.** During Phase 2, no additional driveways would be constructed and during Phase 3 (Buildout), Driveway 3 will be relocated to provide better spacing between driveways and access to surface parking.

Per City guidance, all driveways to the Project site are at a minimum of 150 feet from any intersection. All proposed driveways are as per City standards and these driveway locations optimize sight distance and spacing for the proposed site plan. Passenger vehicles, delivery trucks, refuse, and emergency vehicles are able to circulate within the Project site without conflict.

Signal Warrant Analysis

- Under Cumulative Conditions, the intersection of Kingshurst Drive & Samaritan Drive does not meet the Peak Hour Warrant #3 requirements during both AM and PM peak hours. Under Cumulative Plus Phase 3 (Buildout) Project Conditions, the intersection meets the Peak Hour Warrant #3 requirements during both the AM and PM peak hours with the proposed road diet on Samaritan Drive with one vehicle travel lane for both approaches; however, the intersection of Samaritan Ct & Samaritan Drive (Int. # 7) was recently signalized (2022) as part of improvement measures identified in the 'Samaritan Medical Campus Development Plan' transportation analysis report dated May 2016. The Samaritan Ct & Samaritan Dr intersection is approximately 225 feet west of the Kingshurst Dr & Samaritan Dr intersection, and due to this proximity, signalization of the Kingshurst & Samaritan intersection is not recommended.

- The intersection of Samaritan Place & Samaritan Drive does not meet the Peak Hour Warrant #3 requirements under Cumulative Conditions. In addition the intersection does not meet the Peak Hour Warrant #3 under Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours. During the Phase 3 (Buildout) project condition, the Samaritan Pl & Samaritan Dr intersection would be converted into a roundabout.

- The intersection of Bascom Avenue & East Mozart Avenue does not meet the Peak Hour Warrant #3 requirements under Cumulative Conditions. In addition, the intersection does not meet the Peak Hour Warrant #3 under Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours.

Pedestrian, Bicycle, and Transit Site Access

The Project will provide on-site pedestrian and bicycle improvements, which include marked crosswalks and short-term/long-term bicycle parking facilities. To mitigate the Project's VMT impact, off-site pedestrian and bicycle improvements along Project frontage and beyond will be implemented during Project Phase 3 (Buildout) Conditions. These improvements include a Road Diet along Samaritan Drive, pedestrian improvements along Samaritan Place, and a roundabout at the intersection of Samaritan Drive / Samaritan Place. The Project improves pedestrian and bicycle connectivity and would not create an adverse effect concerning existing pedestrian and bicycle operations.

The existing bus stop in the westbound direction (between Driveway 1 and Driveway 2) will be improved to accommodate the proposed Road Diet along Samaritan Dr. The improvements to the westbound direction bus stop will include a bus turnout per the VTA standards, a relocated bus shelter in the middle of the bus turnout with floating island transit refuge with bike ramps at grade to existing sidewalk. The City staff prefers the existing bus stop in the westbound direction is relocated east between Driveway 3 and Driveway 4. The final location of the bus stop in the westbound direction will be discussed and finalized in coordination with City and VTA staff during the Plan Development Permits phase. The eastbound direction bus stop will be retained and green bike marking in driveways and transit conflict zone will be painted. The existing old bus shelters at the eastbound and westbound bus stops will be replaced with VTA's new standard shelters. It is recommended that the existing non-sheltered eastbound bus stop is removed and the existing eastbound bus stop with shelter retained. The proposed Project improves the transit facilities and connectivity and would not create an adverse effect concerning transit operations.

On-Site Vehicle and Bicycle Parking

Based on Section 5: Transportation Demand Management (TDM) Plan of the TA Report, the project is adhering to the current TDM ordinance and achieving the TDM Points Target for Phase 1 and 3.

The number of proposed vehicle and bicycle spaces provided for Phase 1, Phase 2, and Phase 3 are summarized below:

- Phase 1 – 1,205 vehicle spaces and 17 bicycle spaces
- Phase 2 – 1,494 vehicle spaces and 17 bicycle spaces
- Phase 3 – 2,179 vehicle spaces and 52 bicycle spaces

The San José City Council voted unanimously on December 6, 2022, to update its parking ordinance to no longer have minimum parking requirements for development proposals and to favor other modes of transportation. The new ordinance is in effect as of April 10, 2023. However, the proposed amounts of vehicle, bicycle, and motorcycle parking are analyzed against Table 20-190 of the San José Municipal Code (SJMC) in effect when the PD Zoning application was deemed complete in March 2023. Per the City's parking standard, the Project site is anticipated to provide sufficient on-site vehicle and bicycle parking.

Neighborhood Interface

The Project's on-site parking would satisfy the City's vehicle parking standard, and the Project is not anticipated to create an adverse effect concerning the existing parking condition in the surrounding area. The Project is not anticipated to create an adverse effect concerning the existing pedestrian and bicycle facilities in the surrounding area.

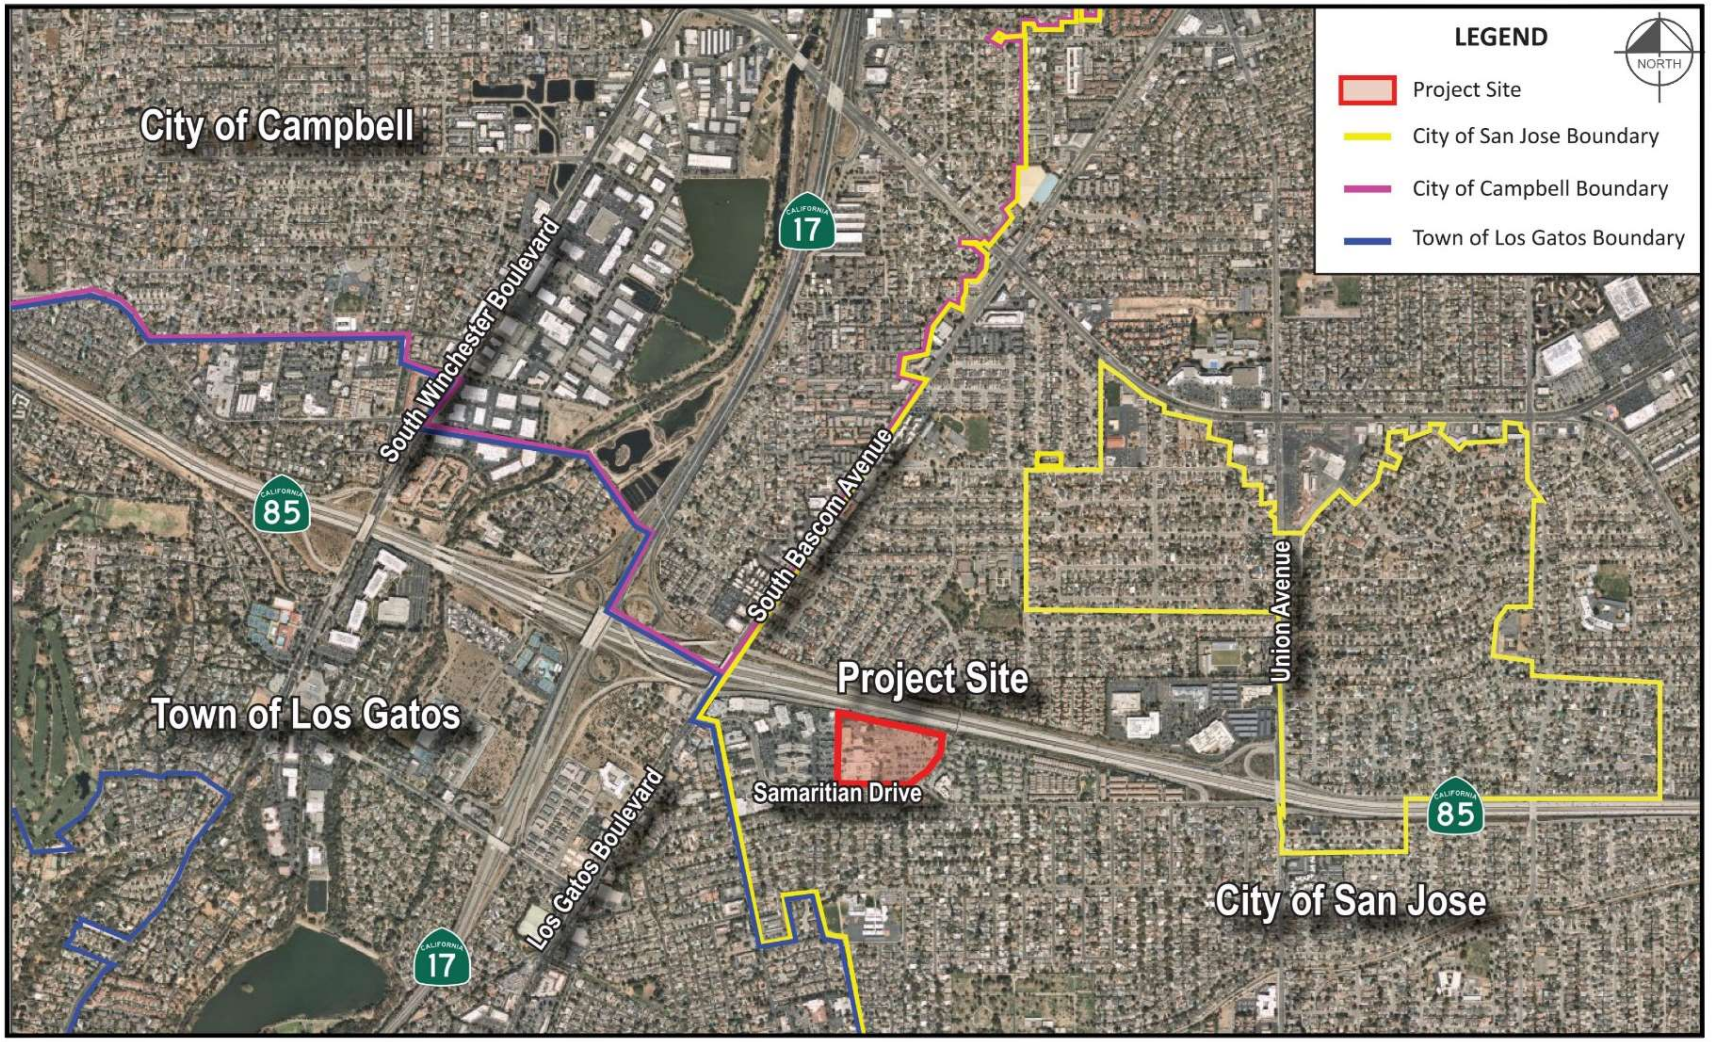
1. INTRODUCTION

1.1 Project Description

This transportation analysis (TA) report evaluates transportation operations and site circulation conditions for the proposed development located at 2425 Samaritan Drive and 2333 Samaritan Place, in the City of San José. Kimley-Horn was retained by Perkins and Will to provide a traffic operation analysis for the proposed Project based on the scope of work approved by the City of San José. The Project would result in an expansion of the existing Good Samaritan Hospital at 2425 Samaritan Drive and 2333 Samaritan Place in the City of San José. The Project consists of the phased construction of an eight-story building (basement plus eight floors), a central utility plant, two new parking garages, a medical office building, underground water and sewer tanks, and the demolition of the existing hospital building, and daycare center associated with the existing Good Samaritan Hospital Campus.

Under existing conditions, the hospital has 323 operational beds[1], and the hospital is currently licensed for 404 beds within an approximately 444,000 square foot building. The existing hospital building is divided into two different wings: a main building with emergency operations totaling approximately 359,000 square feet (Building A), and a women's and children's services wing center totaling approximately 85,000 square feet (Building B). The hospital campus also contains a daycare center at 2333 Samaritan Place totaling approximately 6,700 square feet. In total, the existing hospital campus is approximately 450,700 square feet. Project location is showing in **Figure 1** and an overview map locating the existing Project site is shown in **Figure 2.**

It is anticipated that the Project's full buildout would result in the construction of two new hospital wings (Building C and Building D) with 419 Licensed Beds (totaling approximately 750,000 square feet), an approximately 200,000 square foot medical office building (Building E), and two new parking garage structures (Garage East and Garage West totaling approximately 679,000 square feet). Detailed Project description by Phase is summarized in **Section 4** of this report. An overview map locating the proposed Project site at buildout is shown in **Figure 3**.



Access to the site is currently provided by three stop-controlled driveways for vehicular traffic and one restricted-access driveway for ambulances on Samaritan Drive. The Project proposes to keep the existing three driveways, add an additional stop-controlled driveway along Samaritan Dr., and add three new driveways along Samaritan Place. The existing ambulance only driveway will be relocated in Phase 3 to accommodate relocation of the emergency facilities to the new hospital building C. The location of drives facilitates access and circulation to the two proposed parking garages, one located on the east side of the property and the other on the west side of the property.

Based on the recently adopted Transportation Impact Council Policy 5-1, the Project will require preparation of a comprehensive transportation analysis per the 2023 San José Transportation Analysis Handbook. This report includes a California Environmental Quality Act (CEQA) transportation analysis (TA) and a local transportation analysis (LTA) which evaluates Project and transportation criteria including vehicle miles traveled (VMT), intersection and freeway segment operations, Project trip

[1] Operational Beds references the beds that the Hospital has "operational" based on staffing capacity and other conditions as determined appropriate by the Hospital administration. Operational Beds is a stabilized estimate based on existing typical operations. "Licensed Beds" are the maximum permitted beds under the state Licensing and Certification Program. Per bed trips under existing conditions rely on Operational Beds. For Projecting future conditions, Licensed Beds will be used as the worst-case condition.

generation and distribution, vehicle site access and circulation, Project parking, and bicycle, pedestrian, and transit facilities.

1.2 CEQA Transportation Analysis Scope

The California Environmental Quality Act (CEQA) was enacted in 1970 to ensure environmental protection through a review of discretionary actions approved by all public agencies. For the City of San José, a CEQA transportation analysis requires an evaluation of a Project's potential impacts related to VMT and other significance criteria per CEQA and Senate Bill 743.

VMT is defined as the total miles of travel by personal motorized vehicle a Project is expected to generate in a day. VMT is calculated using the Origin-Destination VMT method which measures the full distance of personal motorized vehicle trips with one end within the Project. A Project's VMT is compared to the appropriate thresholds of significance based on the Project location and type of development. For a residential Project, the Project's VMT is divided by the number of residents expected to occupy the Project to determine the VMT per capita. For an office or industrial Project, the Project's VMT is divided by the number of employees to determine the VMT per employee. The Project's VMT is then compared to the VMT thresholds of significance established based on the average area VMT. A Project located in a downtown area is expected to have a Project VMT lower than the average area VMT, while a Project located in a suburban area is expected to generate a Project VMT higher than the average area VMT.

Screening Criteria

The Transportation Analysis Handbook 2023 includes screening criteria for Projects that are expected to result in less-than-significant VMT impacts. Projects that meet the screening criteria do not require a CEQA transportation analysis but may be required to provide a Local Transportation Analysis (LTA).

The proposed Project, which consists of a hospital and medical office building, does not meet the screening criteria set forth in the City's Transportation Analysis Handbook. When assessing a hospital Project, the Project's total VMT, as opposed to a per-employee VMT metric is measured. Since the proposed Project would expand its existing facilities and operating capacity, the Project would result in a net increase in total VMT. Therefore, a detailed CEQA transportation analysis is required.

VMT Analysis Methodology

The City has developed the San José VMT Evaluation Tool to streamline the analysis for residential, office, and industrial Projects with local traffic to determine whether a Project would result in CEQA transportation impacts related to VMT. The City's Travel Demand Model can also be used to determine Project VMT for non-residential or non-office Projects, very large Projects, or Projects that can potentially shift travel patterns.

For this Project, the CEQA transportation analysis was assessed using the San José Travel Demand Model to determine the potential VMT impact from the Project's description, location, and land use attributes.

The Project's VMT was compared to the City's existing level VMT and VMT thresholds of significance as established in Council Policy 5.1. Project VMT that exceeds the thresholds of significance will need to mitigate its CEQA transportation impact by implementing various VMT reduction strategies described below.

1. Project characteristics (e.g., density, diversity of uses, design, and affordability of housing) that encourage walking, biking, and transit uses.

2. Multimodal network improvements that increase accessibility for transit users, bicyclists, and pedestrians,
3. Parking measures that discourage personal motorized vehicle trips, and
4. Transportation demand management (TDM) measures that provide incentives and services to encourage alternatives to personal motorized vehicle trips.

Land use characteristics, multimodal network improvements, and parking are physical design strategies that can be incorporated into the Project design. TDM includes programmatic measures that aim to reduce VMT by decreasing personal motorized vehicle mode share and by encouraging more walking, biking, and riding transit. TDM measures should be enforced through annual trip monitoring to assess the Project's status in meeting the VMT reduction goals.

City of San José VMT Threshold

The thresholds of significance for development Projects, as established in the Transportation Analysis Policy are based on the existing citywide average VMT level for residential uses and the existing regional average VMT level for employment uses. **Table 1** summarizes the City VMT thresholds of significance for development Projects. For residential developments, Project generated VMT that exceeds the existing citywide average VMT per capita minus fifteen (15) percent will create a significant impact. For office developments, Project-generated VMT that exceeds the existing regional average VMT per employee minus fifteen (15) percent will also create a significant impact. **Figure 4** and **Figure 5** show San José heat maps identifying existing level VMT per capita for residential uses and VMT per employee for office in the city. Developments in green-colored areas are estimated to have VMT levels below the City's threshold of significance while orange and pink-colored areas are estimated to have VMT levels above the threshold of significance.

Table 1: City of San José VMT Thresholds of Significance

Project Type	Significance Criteria	Current Level	Threshold
Residential	Project VMT per capita greater than (1) 15 percent below the existing citywide average VMT per capita OR (2) 15 percent below the existing regional average VMT per capita, whichever is lower	13.40 VMT per capita (Citywide Average)	11.39 VMT per capita
Office, Research & Development, Assisted Living	Project VMT per employee greater than 15 percent below existing regional average VMT per employee	16.53 VMT per employee (Regional Average)	14.05 VMT per employee
Industrial, Mini Storage	Project VMT per employee greater than existing regional average VMT per employee	16.53 VMT per employee (Regional Average)	16.53 VMT per employee
Retail, Lodging, Education	Net increase in existing regional total VMT	Regional Total VMT	Net Increase
Public/Quasi-Public	In accordance with the most appropriate type(s) as determined by Public Works Director	Appropriate levels listed above	Appropriate thresholds listed above
Mixed Uses	Evaluate each land use component of a mixed-use project independently and apply the threshold of significance for each land use type included	Appropriate levels listed above	Appropriate thresholds listed above
Change of Use/Additions to Existing Development	Evaluate the full site with the change of use or additions to existing development and apply the threshold of significance for each project type included	Appropriate levels listed above	Appropriate thresholds listed above
Urban Village Plans, Station Area Plans, Specific Plans, Development Policies, Other Area Plans	Evaluate each land use component of the area plan independently and apply the threshold of significance for each land use type included	Appropriate levels listed above	Appropriate thresholds listed above

VMT Cumulative Analysis

Projects must demonstrate consistency with the Envision San José 2040 General Plan to address cumulative impacts. If a Project is determined to be consistent with the General Plan, the Project will be considered part of the cumulative solution to meet the General Plan's long-range goals, and it will result

in a less-than-significant cumulative impact. Factors that contribute to a determination of consistency with the General Plan include a Project's density, design, and conformance to the goals and policies set forth in the General Plan. If a Project is determined to be inconsistent with the General Plan, a cumulative impact analysis will be required to determine the Project's cumulative effect on the regional air quality and greenhouse gas emissions targets and general plan consistency.

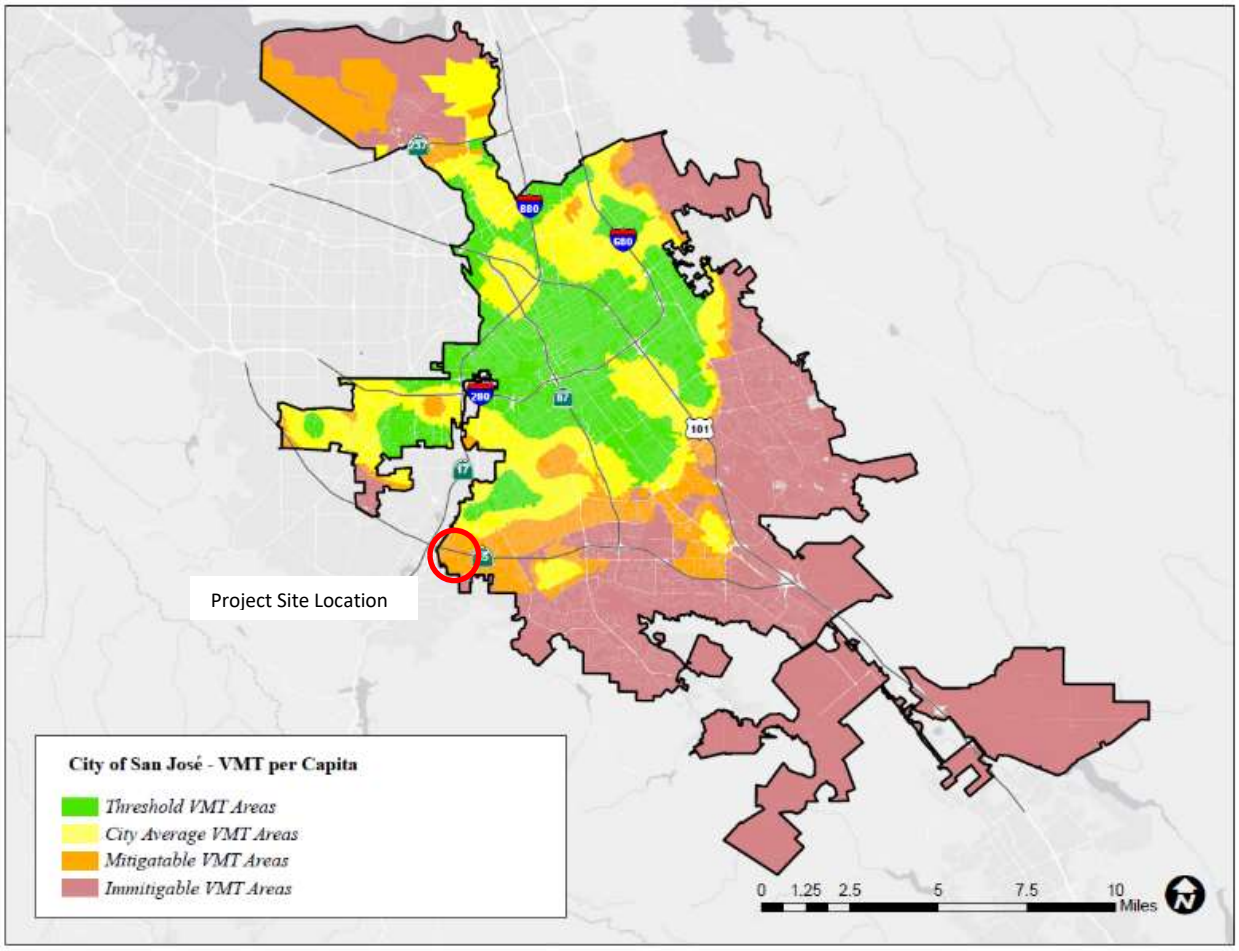

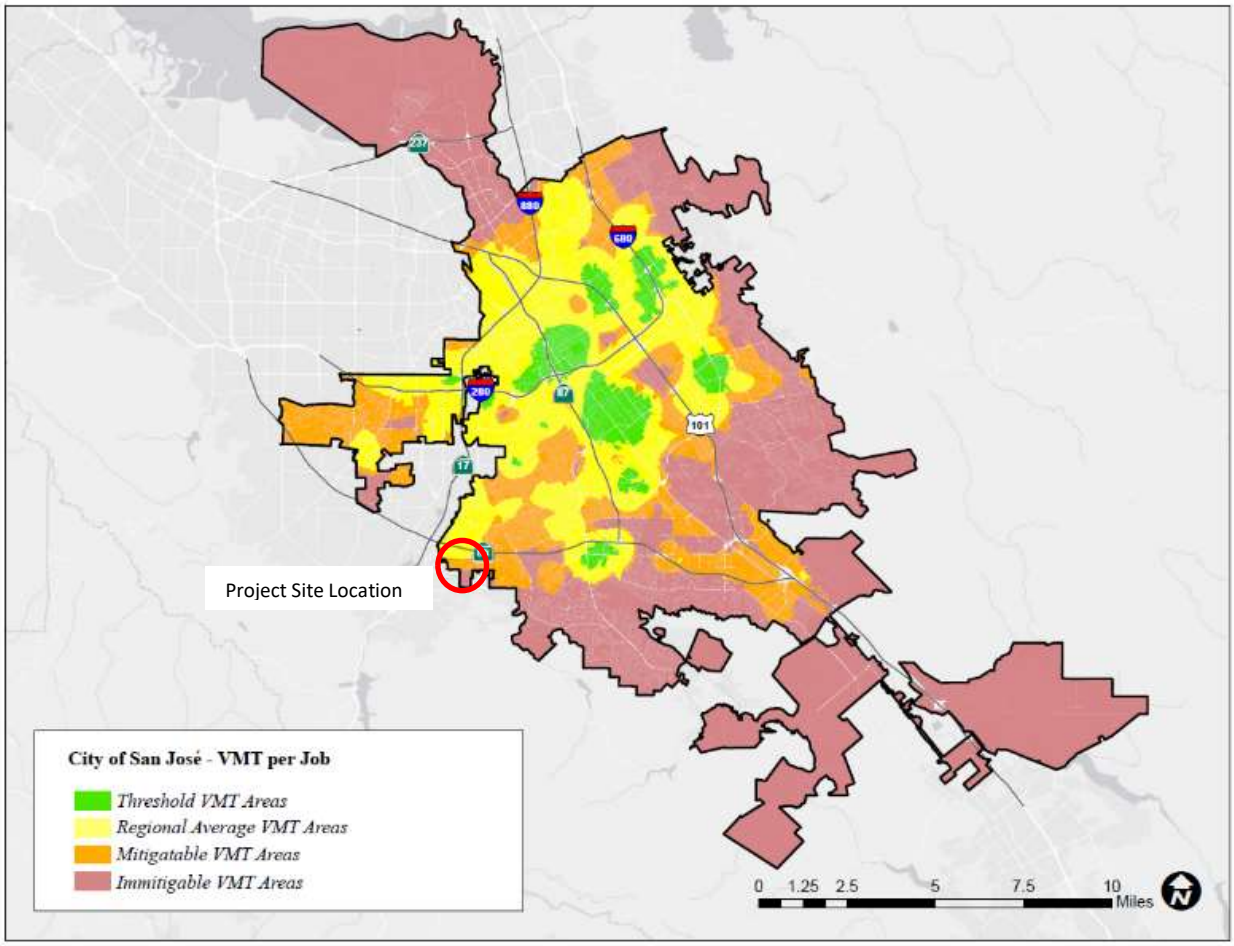

Figure 5: VMT Heat Map for Office Projects in San José

1.3 Local Transportation Analysis Scope

A Local Transportation Analysis (LTA) evaluates the effects of a development Project on transportation, access, circulation, and related safety elements in the proximate area of the Project. An LTA also establishes consistency with the General Plan policies and goals through the following three objectives:

1. Ensures that a local transportation system is appropriate for serving the types, characters, and intensity of the surrounding land uses;
2. Encourages Projects to reduce personal motorized vehicle-trips and increase alternative transportation mode share;
3. Addresses issues related to operation and safety for all transportation modes, with trade-offs guided by the General Plan street typology.

For this Project, the LTA was assessed per the guidelines established in the 2023 San José Transportation Analysis Handbook and Transportation Analysis Workscope for Good Samaritan Hospital dated September 2022. The LTA study to identify potential traffic adverse effect was evaluated per the standards and guidelines set forth by the City of San José and the Santa Clara Valley Transportation Authority (VTA) which administers the County Congestion Management Program (CMP). A Project is required to conduct an intersection operations analysis if the Project is expected to add ten (10) or more vehicle trips per peak hour per lane to a signalized intersection that is located within half a mile of the

Project site. Study intersections for the Project were selected in consultation with City staff and in accordance with the VTA's TIA Guidelines. A total of twenty-five (25) intersections within the City of San José, City of Campbell, and Town of Los Gatos were studied as part of this TA. These study intersections are shown in **Figure 6** and are listed below:

Study Intersections

1. Bascom Avenue and Camden Avenue (San José - CMP)
2. Bascom Avenue and White Oaks Avenue (San José)
3. Bascom Avenue and SR 85 North Ramps (San José - CMP)
4. Los Gatos Blvd and SR 85 South Ramps (San José - CMP)
5. Los Gatos Blvd / Bascom Avenue and Samaritan Drive (San José - CMP)
6. National Avenue and Samaritan Drive (San José - unsignalized)
7. Samaritan Ct and Samaritan Drive (San José)
8. Kinghurst Drive and Samaritan Drive (San José - unsignalized)
9. Samaritan Place and Samaritan Drive (San José - unsignalized)
10. SR 85 South Off-Ramp and Samaritan Drive (San José)
11. Union Avenue and Camden Avenue (San José - CMP)
12. Union Avenue and SR 85 North (San José)
13. Union Avenue and SR 85 South / Samaritan Drive (San José)
14. Union Avenue and Los Gatos-Almaden Rd (San José)
15. SR 17 Southbound Ramps and San Tomas Expressway (City of Campbell - CMP)
16. SR 17 Northbound Ramps and Camden Avenue (City of Campbell - CMP)
17. Winchester Blvd and Lark Avenue (Town of Los Gatos)
18. SR 17 South Ramps and Garden Hill Drive / Lark Avenue (Town of Los Gatos)
19. SR 17 North Ramps and Lark Avenue (Town of Los Gatos)
20. Los Gatos Blvd and Lark Avenue (Town of Los Gatos - CMP)
21. Los Gatos Blvd and Los Gatos-Almaden Rd-Chirco Drive (Town of Los Gatos)
22. National Avenue and Los Gatos-Almaden Rd (Town of Los Gatos)
23. Los Gatos Blvd and Gateway / Garden Ln (Town of Los Gatos)
24. Los Gatos Blvd and Walker St (Town of Los Gatos)
25. Bascom Avenue and East Mozart Avenue (City of Campbell - unsignalized)

The Project is also expected to add more than 100 net new peak-hour vehicle trips to the roadway network. Therefore, a CMP freeway analysis was also prepared to be consistent with the methodologies established in the VTA's TIA Guidelines. The follow eight (8) freeway segments evaluated in this TA are listed below.

Study Freeway Segments

1. SR 17, between Saratoga Avenue and Lark Avenue
2. SR 17, between Lark Avenue and SR 85
3. SR 17, between SR 85 and San Tomas Expwy/Camden Avenue
4. SR 17, between San Tomas Expwy/Camden Avenue and Hamilton Avenue
5. SR 85, between Camden Avenue and Union Avenue
6. SR 85, between Union Avenue and South Bascom Avenue
7. SR 85, between South Bascom Avenue and SR 17
8. SR 85, between SR 17 and Winchester Blvd

Expect More. Experience Better.

Study Scenarios

Traffic conditions for each study intersection was analyzed during the 7:00 – 9:00 AM and 4:00 – 6:00 PM peak hours of traffic which represent the most heavily congested traffic on a typical weekday. The study intersections and freeway segments were assessed under the following study scenarios.

- **Existing Conditions**: Existing AM and PM peak-hour traffic volumes, intersection geometry, and traffic control obtained from the City of San José 2018 CMP Annual Monitoring Report, field conditions, and supplemented with new turning movement counts conducted during the month of May 2022.

- **Background Conditions**: Peak-hour traffic volumes based on Existing conditions and adding City Approved Trip Inventory (ATI) traffic volumes from City of San José database to the Existing roadway geometry and traffic control. The ATI volumes represent approved but not yet constructed developments in the vicinity of the Project study area.

- **Project Conditions**: Peak-hour traffic volumes based on Background conditions and adding the net vehicle trips from the proposed Good Samaritan Project to the Background roadway geometry and traffic control. The Project scenario is compared to the Background conditions for determining Project traffic adverse effects.

- **Cumulative Conditions:** Peak-hour traffic volumes, intersection geometry, and traffic control based on forecasted traffic growth from approved Projects and other proposed but pending developments in the Project study area determined by City staff and staff of other City jurisdictions.

- **Cumulative Plus Project Conditions:** Peak-hour traffic volumes based on Cumulative conditions and adding the net vehicle trips from the proposed Good Samaritan Project to the Cumulative roadway geometry and traffic control. The Cumulative Plus Project scenario is compared to the Cumulative conditions for determining Project traffic adverse effects.

1.4 Methodology

This section of the report documents the analysis methodologies and the level of service standards used to determine the traffic conditions for the scenarios discussed above.

Intersection Level-of-Service Criteria and Thresholds

Signalized Intersections

Analysis of potential adverse effects at roadway intersections is based on the concept of level-of-service (LOS). The LOS of an intersection is a qualitative measure used to describe operational conditions. LOS A (best) represents minimal delay, while LOS F (worst) represents heavy delay and a facility that is operating at or near its functional capacity. LOS for this study was based on the Highway Capacity Manual (HCM) 2000 methodology with TRAFFIX software. This methodology is used by the City of San José for CMP-designated intersections and determining average intersection vehicle delay measured in seconds. The standards used by the City of San José to measure signalized and unsignalized intersection operations are summarized below in **Table 2**.

Table 2:Intersection Operation Standards at Signalized Intersections

Operations Standard	Descriptions	Average Control Delay (seconds/vehicle)
A	Operations with very low delay occurring with favorable progress and/or short cycle lengths.	10.0 or less
B	Operations with low delay occurring with good progression and/or short cycle lengths.	Between 10.1 and 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	Between 20.1 and 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	Between 35.1 and 55.0
E	Operations with high delays indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences.	Between 55.1 and 80.0
F	Operations with delays unacceptable to most drivers occurring due to over-saturation, poor progression, or very long cycle lengths.	Higher than 80.0

Project adverse effects are determined by comparing baseline conditions to those scenarios with the proposed Project. Significant adverse effects for intersection are created when traffic from the proposed Project causes the LOS to fall below the maintaining agency's LOS threshold or causes deficient intersection to deteriorate further, per the criteria indicated below.

City of San José LOS Threshold

The City's acceptable intersection operations standard is LOS "D" unless superseded by an Area Development Policy. An adverse effect on intersection operations occurs when the analysis demonstrates that a Project would cause the operations standard at a study intersection to fall below LOS "D" with the addition of Project vehicle-trips to baseline conditions.

For intersections already operating at LOS "E" or LOS "F" under the baseline conditions, an adverse effect is defined as:

- An increase in average critical delay by 4.0 seconds or more AND an increase in the critical volume-to-capacity (V/C) ratio of 0.010 or more; OR
- A decrease in average critical delay AND an increase in the critical V/C ratio of 0.010 or more.

Unsignalized Intersections

For unsignalized intersections, Peak-Hour Signal Warrant 3 as per 'California Manual on Uniform Traffic Control Devices (MUTCD)' was used to assess the need for signalization. Intersection LOS is not reported for unsignalized intersections.

Intersection Queuing Analysis

The LOS analysis for signalized intersections was supplemented with vehicle queueing analysis for study intersections, where the Project would add substantial number of trips to the left turning movements. The 95th percentile vehicle queues are converted into queue length assuming 25 feet per vehicle, and the estimated queues were compared against existing or planned storage capacity for left turn

movements to determine whether the storage capacity is sufficient to accommodate the left turn movement.

CMP Intersection LOS Threshold
The County's operations standard for a CMP identified intersection is LOS "E." A Project is anticipated to create a significant adverse effects on traffic conditions at a CMP signal if:

- LOS at the intersection degrades from and acceptable LOS "E" or better under baseline conditions to an unacceptable LOS F under baseline plus Project conditions; OR
- LOS at the intersection is an unacceptable LOS "F" under baseline conditions and the addition of Project trips causes both the critical-movement delay at the intersection to increase by four (4) or more seconds AND the volume-to-capacity ratio (V/C) to increase by one percent (0.01) or more.

City of Los Gatos LOS Threshold
The City's acceptable intersection operations standard is LOS "D" and follows the same criteria as the City of San José.

City of Campbell LOS Threshold
A total of 3 study intersections are within the City of Campbell, out of which 2 study intersections (Int. 15: SR 17 Southbound Ramps/San Tomas Expressway & Int.16: SR 17 Northbound Ramps and Camden Ave) are CMP intersections and are subject to CMP LOS Thresholds. The other intersection is an unsignalized intersection (Int. 25: Bascom Avenue and East Mozart Avenue) and the City of Campbell does not have adopted minimum LOS thresholds for unsignalized intersections.

For signalized intersections which are not on the CMP network, a Project is anticipated to create a significant adverse effect on traffic conditions if:

- The addition of Project trips causes operation of an intersection to degrade from an acceptable LOS (LOS D or better) to LOS E or LOS F, or
- For intersections where LOS E is established, the addition of Project trips causes operation of an intersection to degrade from LOS E to LOS F.

Freeway Level-of-Service Criteria and Threshold
As per CMP guidelines, an analysis of freeway segments levels of service is required if the proposed development Project is expected to add traffic equal to or greater than one percent of the freeway segment's capacity. The proposed Project is expected to add more than one percent and therefore, a detailed analysis of the freeway segment levels of service was conducted.

Per the VTA CMP technical guidelines, the level-of-service for freeway segments is estimated based on vehicle density (vehicles/mile/lane) and is calculated by dividing the peak hour volume by the average travel speed and number of travel lanes. The standards used by the County of Santa Clara to measure freeway segment operations are summarized below in **Table 3**.

The County's operations standard for a CMP freeway segment is LOS "E." Freeway segments that operated at LOS F when monitoring began in 1991 are exempt from meeting the LOS E standards. A significant adverse effect on traffic conditions on a freeway segment occurs if for either peak hour:

- The level of service on the freeway segment degrades from an acceptable LOS E or better to an unacceptable LOS F with the addition of Project trips, or
- The level of service on the freeway segment is already operating at an unacceptable LOS F **and** the number of Project trips added to the segment constitutes at least one percent of capacity of the segment.

Table 3: Freeway Segment Operation Standards

Level of Service	Description	Density (passenger cars/mile/lane)
A	Free Flow. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. The effects of minor incidents are easily absorbed.	≤ 11
B	Reasonably Free Flow. The ability to maneuver within the traffic stream is only slightly restricted, and the general level of physical and psychological comfort provided to drivers is still high. The effects of minor incidents are easily absorbed.	11 < density ≤ 18
C	Stable Flow. Flows are approaching the range where small increases in traffic flows will cause substantial deterioration in service. Freedom to maneuver within the traffic stream is noticeably restricted, and lane changes require additional care and vigilance by the driver. Minor incidents may still be absorbed, but the local deterioration in service will be substantial. Queues may be expected to form behind any significant blockage.	18 < density ≤ 26
D	Unstable Flow. Small increases in traffic flows cause substantial deterioration in service. Freedom to maneuver within the traffic stream is severely limited, and the driver experiences drastically reduced physical and psychological comfort levels. Even minor incidents can be expected to create substantial queuing because the traffic stream has little space to absorb disruptions.	26 < density ≤ 46
E	Capacity Flow. Operations are extremely unstable, because there are virtually no usable gaps in the traffic stream. Any incident can be expected to produce a serious breakdown with extensive queuing.	46 < density ≤ 58
F	Forced Flow. Level of service F describes forced or breakdown flow. Such conditions generally exist within queues forming behind breakdown points. Such breakdowns occur for a number of reasons: a temporary reduction in capacity caused by a traffic incident, or a recurring point of congestion caused by a merge, a weave segment, or lane drop.	> 58
Notes: Level of Service Definitions based on 2018 CMP Monitoring & Conformance Report, Table 4.1.		

1.4 Report Organization

This report has a total of nine (9) chapters. Chapter 1 provides introduction, including CEQA and LTA analysis scope and methodology. Chapter 2 describes existing transportation conditions including, the existing roadway network, site access, transit service, bicycle and pedestrian facilities. Chapter 3 discusses Project Site Plan, Project Trip Generation, Project Trip Distribution, and Project Trip Assignment. Chapter 4 describes the CEQA transportation analysis, including the Project VMT impact analysis and percent VMT reductions with the proposed TDM measures to mitigate the VMT impact. Chapter 5 describes the TDM Plan (i.e., TDM measures. Chapters 6, and 7 describes the local transportation analysis including operations of study intersections under analyzed scenarios, the Project's effects on the transportation system, and an analysis of other transportation issues including site access and circulation, parking, transit services, bicycle and pedestrian facilities, and neighborhood intrusion. Chapter 8 describes the existing and future operations of the freeway segments in the study area and Chapter 9 summarizes the conclusions and recommendations.

2. EXISTING TRANSPORTATION CONDITIONS

This chapter describes the existing conditions of the transportation system within the study area of the Project. It presents the existing land uses in the proximity of the Project and describes transportation facilities near the Project site, including the roadway network, transit service, and pedestrian and bicycle facilities. The analysis of existing intersection operations is included as part of the Local Transportation Analysis.

2.1 Existing Roadway Network

The following local and regional roadways provide access to the Project site:

Samaritan Drive is an east-west major collector road that serves as the southern boundary of the Project site with direct driveway access. The roadway is a four-lane road west of Samaritan Pl with a posted speed limit of 30 mph. It is a two-lane road east of Samaritan Pl with a posted speed limit of 35 mph. Class II bike lanes in both directions are provided along Samaritan Drive within the vicinity of the Project site. As per the Envision San José 2040 General Plan, Samaritan Drive is classified as City Connector Street.

Samaritan Place is a north-south, two-lane residential street with on-street parking that serves as the eastern boundary of the Project Site. The roadway has a posted speed limit of 25 miles per hour and connects to the existing pedestrian bridge over SR-85. As per the Envision San José 2040 General Plan, Samaritan Pl. is classified as Residential Street.

National Avenue is a north-south, two-lane major collector road with on-street parking. The roadway has a speed limit of 25 mph and provides access to Samaritan Drive. As per the Envision San José 2040 General Plan, National Avenue is classified as Residential Street.

Kinghurst Drive is a north-south, two-lane residential road with on-street parking. The roadway has a speed limit of 25 mph and provides access to Samaritan Drive. As per the Envision San José 2040 General Plan, Kinghurst Drive is classified as Residential Street

Bascom Avenue is a north-south, six-lane principal arterial road that provides access to Samaritan Drive, State Route 17, and State Route 85. The roadway has a posted speed limit of 40 mph. Bascom Avenue merges into Los Gatos Boulevard south of SR 85. Class II bike lanes in both directions are provided along Bascom Avenue. As per the Envision San José 2040 General Plan, Bascom Ave. is classified as City Connector Street.

Los Gatos Boulevard is a north-south, six-lane principal arterial road that provides access to Samaritan Dr, State Route 17, and State Route 85. The roadway has a posted speed limit of 40 mph. Los Gatos Boulevard merges into Bascom Avenue north of SR 85. As per the Envision San José 2040 General Plan, Los Gatos Blvd. is classified as City Connector Street.

Union Avenue is a north-south, four-lane minor arterial road that provides Class II bike lanes in both directions and access to Samaritan Drive and State Route 85. The roadway has a posted speed limit of 35 mph. Class II bike lanes in both directions are provided along Union Avenue. As per the Envision San José 2040 General Plan, Union Ave. is classified as City Connector Street

Camden Avenue is a six-lane principal arterial road that provides access to State Route 17 and State Route 85. The roadway is north-south, west of Union Avenue, and east-west between Union Avenue and Hillsdale Avenue. The posted speed limit is 40 mph. Camden Avenue merges into San Tomas Expressway just west of State Route 17. As per the Envision San José 2040 General Plan, Camden Ave. is classified as Grand Boulevard.

San Tomas Expressway is an east-west, six-lane principal arterial road that provides access to State Route 17. The posted speed limit is 45 mph. San Tomas Expressway merges into Camden Avenue just east of State Route 17. As per the Envision San José 2040 General Plan, San Thomas Expressway is classified as an Expressway.

Los Gatos Almaden Road is an east-west, two-lane minor arterial road with Class II bike lanes (east of Los Gatos Blvd.). The road is located south of the Project site and provides access to Bascom Avenue, National Avenue, and Union Avenue. The posted speed limit is 35 mph. As per the Envision San José 2040 General Plan, Los Gatos Almaden Rd. is classified as Local Connector Street.

Lark Avenue is an east-west, four-lane minor arterial road with Class II bike lanes. The roadway extends from Winchester Boulevard to Los Gatos Boulevard and provides access to State Route 17. The posted speed limit is 30 mph.

State Route 17 (SR 17) is a north-south freeway that varies from a six-lane to eight-lane freeway north of State Route 85. Access to the Project site to and from SR 17 is provided by nearby ramps at Lark Avenue, Los Gatos Boulevard, and Camden Avenue. As per the Envision San José 2040 General Plan, State Route 17 is classified as a Freeway.

State Route 85 (SR 85) is a six-lane freeway that is aligned in an east-west orientation between State Route 17 and Highway 101. Access to the Project site to and from SR 85 is provided by nearby ramps at Bascom Avenue, Samaritan Drive/Union Avenue, and Winchester Boulevard. As per the Envision San José 2040 General Plan, State Route 85 is classified as a Freeway.

2.3 Existing Pedestrian and Bicycle Facilities

Pedestrian activity along the Samaritan Drive corridor is anticipated to be moderate. Sidewalks at least six feet wide are available on both the north and south sides of Samaritan Drive, with good lighting and signing. Marked crosswalks and ADA standard curb ramps provide improved pedestrian visibility and safety.

The Los Gatos Creek Trail system provides north-south access for bicyclists and pedestrians. The 10-mile Class I pathway extends from Lexington Reservoir above Los Gatos to Meridian Avenue in San José. Access from the Los Gatos Creek Trail is provided off Bascom Avenue and Lark Avenue, located north-west and south-west respectively, of the Project site.

At the Project site frontage, pedestrian features including fluorescent pedestrian warning signs, ADA curb ramps, and marked crosswalks are provided at the Samaritan Drive / Samaritan Place and at Samaritan Drive on the south-west corner (existing entrance driveway) of the Project site. At the intersection of Samaritan Drive / Kinghurst Drive, fluorescent pedestrian warning signs with overhead pedestrian crossing signal, marked crosswalk, ADA curb ramps, and pedestrian push button are provided

as pedestrian features. The Samaritan Crossing over SR-85 connects White Oaks Avenue with Samaritan Place providing connections between neighborhoods for both pedestrians and bicyclists. Overall, the existing sidewalks and pedestrian facilities adjacent to the Project have good connectivity and provide pedestrians with safe routes to the surrounding land uses.

Bicycle facilities within 1 mile of the Project site include Class II bike lanes on Samaritan Dr, Union Avenue, Los Gatos Almaden Road, and Lark Avenue. These bike facilities are marked with appropriate signs and pavement markings. Existing bicycle facilities within the Project site is shown in **Figure 7.**

According to the 2025 San José Bike Plan, the City is planning the following bicycle facilities within the vicinity of the Project site:

- Class IV protected bike lanes along Bascom Avenue, Samaritan Drive, Camden Avenue, Union Avenue, and Los Gatos Almaden Road.
- Class III bike boulevard along Samaritan Place cul-de-sac located on the eastern boundary of the Project site. Class III bike boulevard along Samaritan Place connects existing SR-85 pedestrian overcrossing and extends along White Oaks Ave to Bascom Avenue, on Browning Avenue, and on Kilmer Avenue connecting SR-17 pedestrian overcrossing.
- Class I shared use path through the Houge Park and connecting to Class III bike boulevard on Charmeran Avenue.

2.4 Existing Transit Facilities and Services

Transit services in the study area include bus, light rail, and passenger train service. These transit services are provided by the Santa Clara Valley Transportation Authority (VTA), Caltrain, Altamont Commuter Express (ACE), and Amtrak.

VTA Bus Service

San José is served by many local bus routes. Most regular bus routes run weekdays from early in the morning (5:00 AM to 6:00 AM) until late in the evening (10:00 PM to midnight) and weekends from early morning (5:00 AM to 6:00 AM) until mid-evening (8:00 PM to 10:00 PM). Bus headways during peak commute periods vary between 15 to 30 minutes. The study area is served by several bus routes in the VTA system. Within 1/3 mile near the Project site, Route 27 and 61 provides local and regional bus service for commuters in Santa Clara County.

- Route 27: Weekday service is every 30 minutes and first stop at Good Samaritan Hospital is at 6:10 AM and the last stop is at 8:33 PM in the eastbound direction. In the westbound direction, service is every 30 minutes with first stop at Good Samaritan Hospital at 5:51 AM and the last stop is at 8:47 PM.
- Route 61: Weekday service is every 30 minutes and first stop at Good Samaritan Hospital is at 5:14 AM and the last stop is at 10:01 PM in the northbound direction. In the southbound direction, service is every 30 minutes with first stop at Good Samaritan Hospital at 6:26 AM and the last stop is at 10:56 PM.

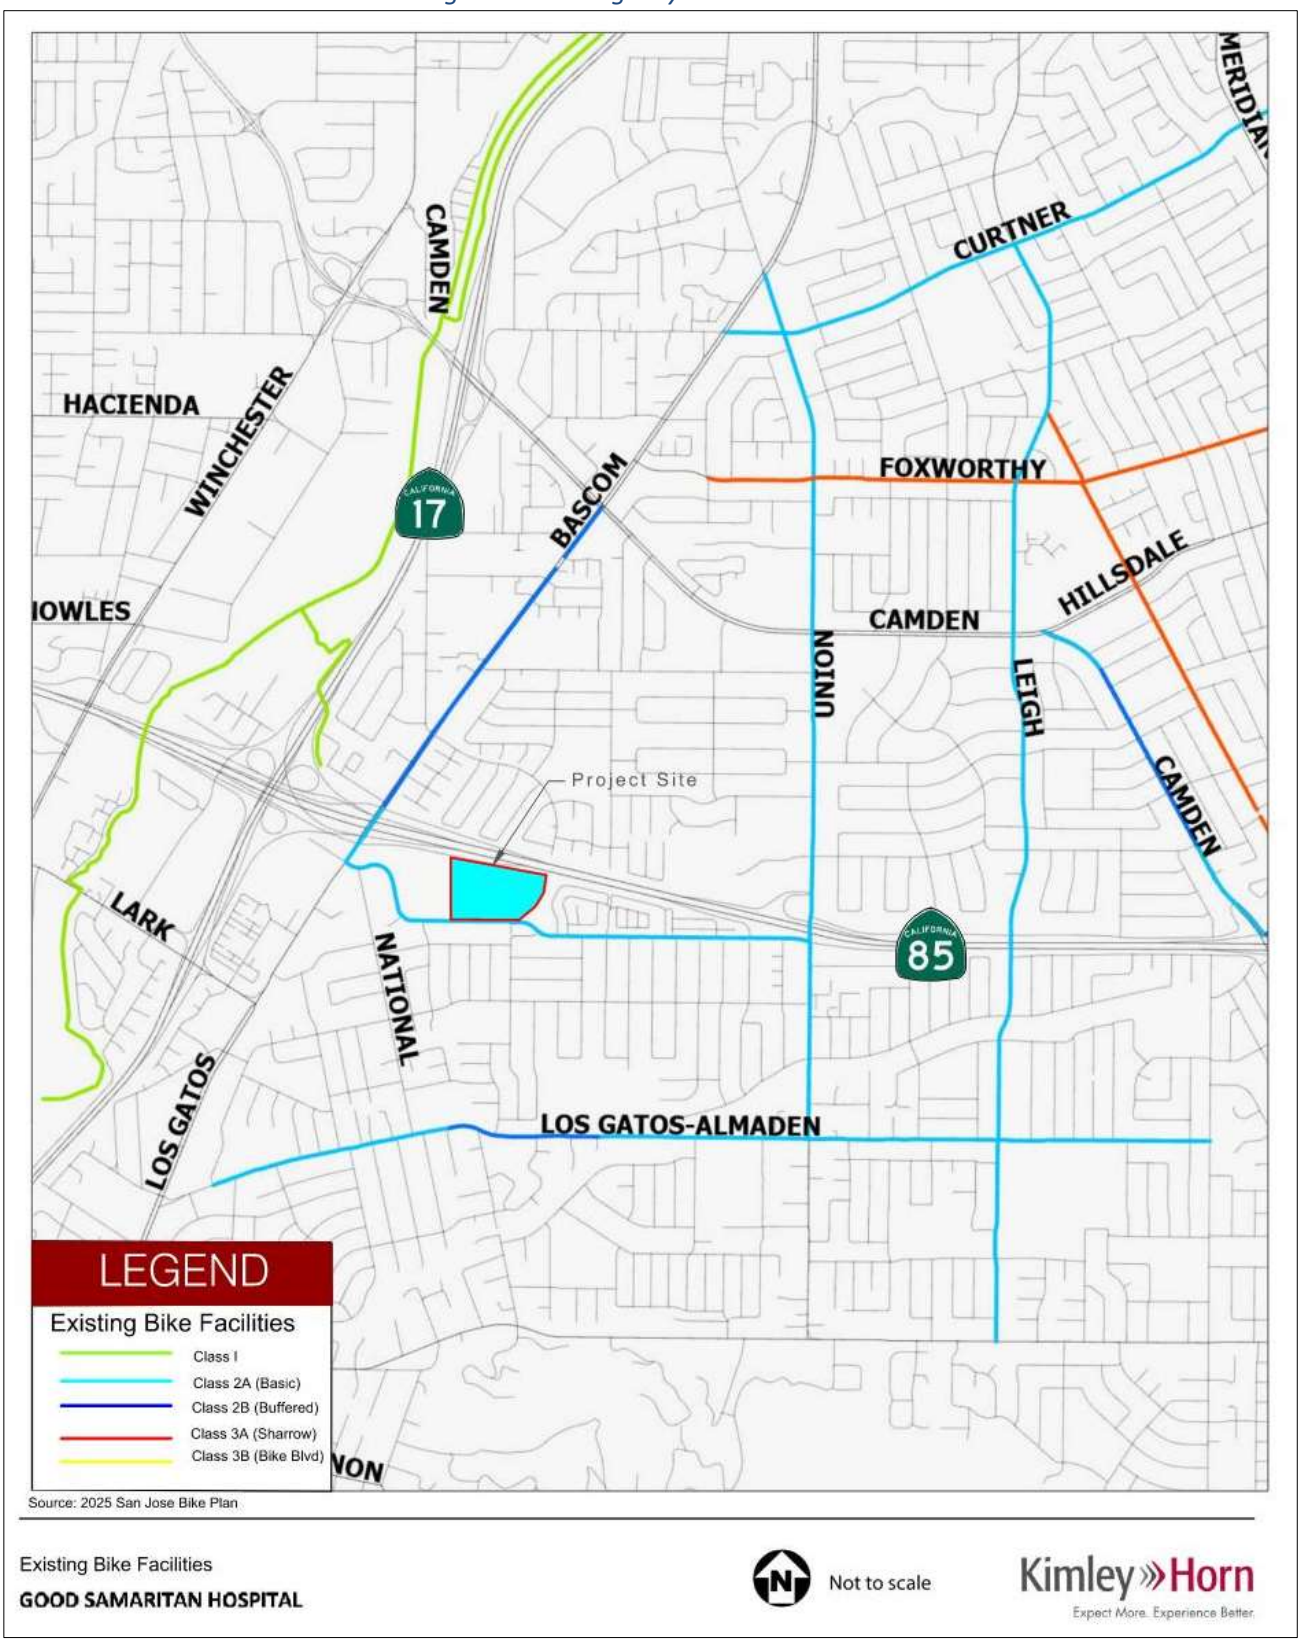
Bus stops with benches, shelters, and bus pullout amenities are provided within 1/3 mile from the Project site. The closest transit stops by the Project are located just south of the existing Good Samaritan Hospital along Samaritan Drive in both eastbound and westbound direction. The bus stop in the westbound direction includes a bus-bay, shelter, and a bench. In the eastbound direction, two bus

stops exists, a non-sheltered bus stop and a sheltered bus stop with a bench. Access to transit stops is provided through existing sidewalks and marked crosswalk across Samaritan Dr. Existing transit services within Project vicinity is shown in **Figure 8**.

VTA Light Rail Transit (LRT) Service

VTA currently operates the 42.2-mile light rail line system from south San José, downtown, and through the northern areas of San José, Santa Clara, Milpitas, Mountain View, and Sunnyvale. The closest LRT station is at the Winchester Station in Campbell, which is located 2 miles north of the Project site. the Mountain View – Winchester LRT lines at this station operate daily with 15-30 minute LRT headways between each schedule. The Winchester Station can be accessed by taking Local Bus Routes to reach the Project site.

Figure 7: Existing Bicycle Facilities



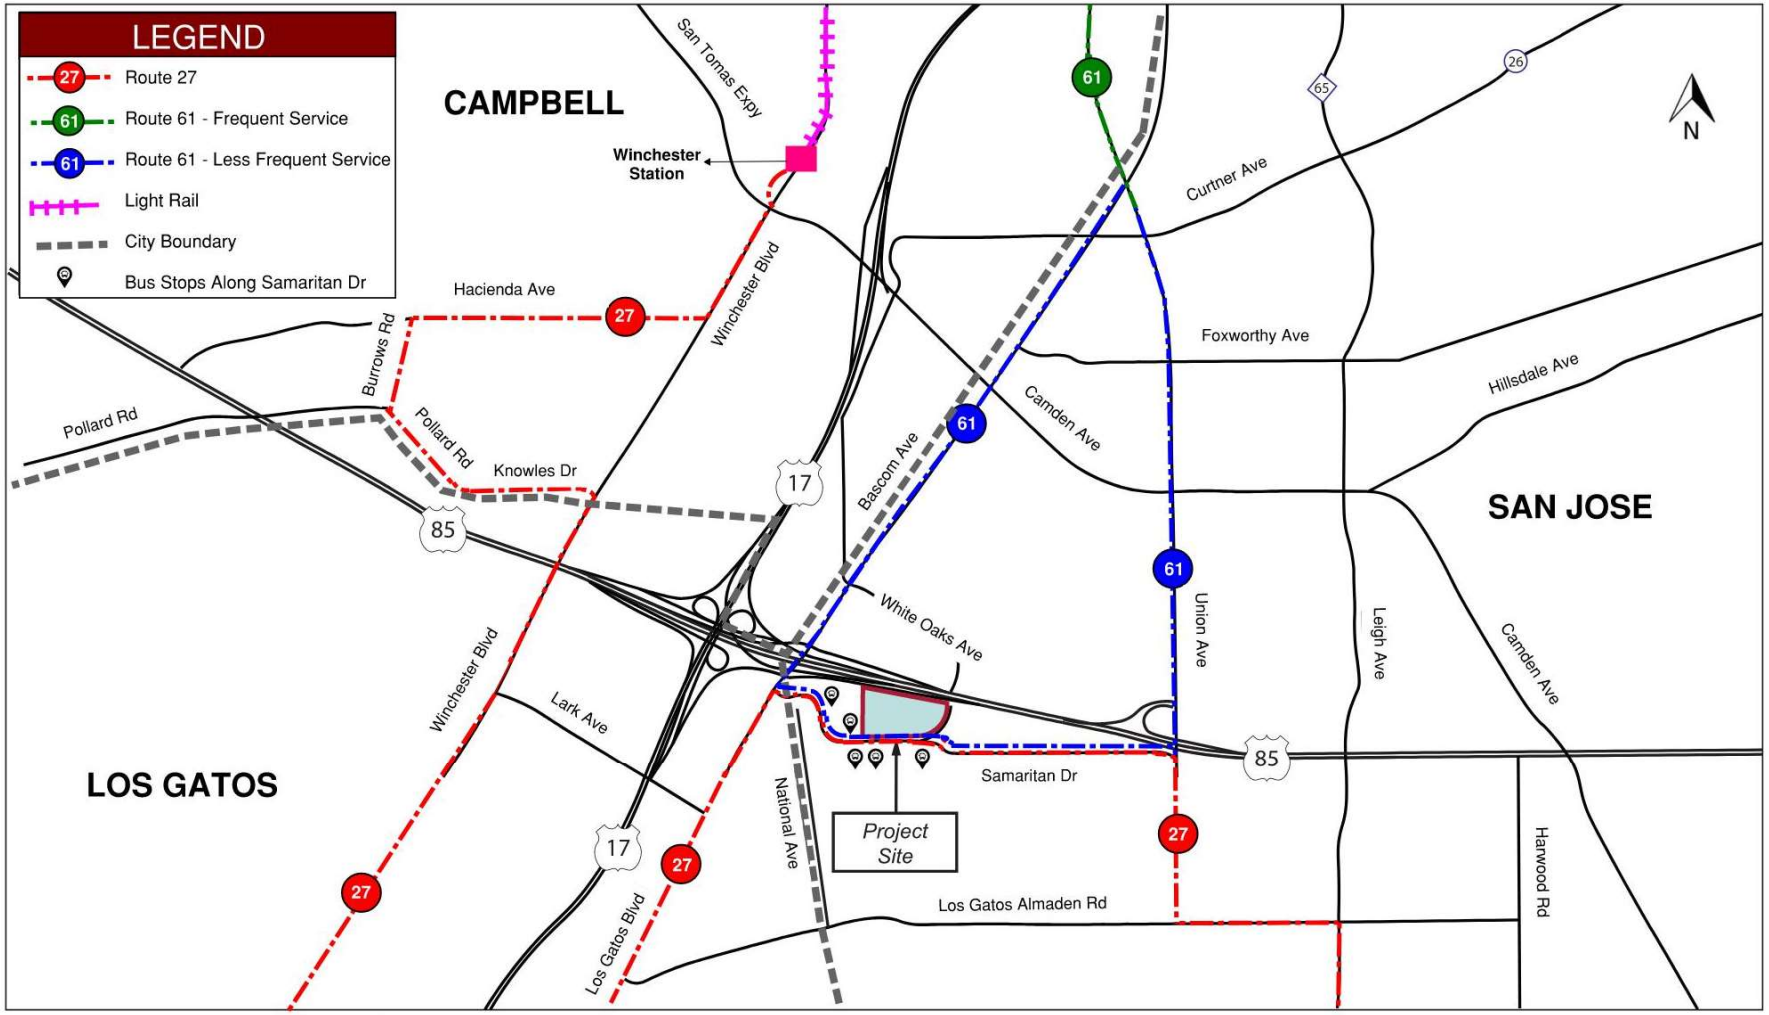


Figure 8: Existing Transit Services

Kimley»Horn
NOVEMBER 2023

Existing Transit Services
GOOD SAMARITAN HOSPITAL

Caltrain Service

Commuter rail service between San Francisco and Gilroy is provided by Caltrain. The Tamien Station is approximately 5 miles away from the Project site and has 275 parking spaces, 18 bike racks and 10 on-demand electronic lockers. Trains stop frequently at the Tamien Station between 4:20 AM and 11:05 PM in the northbound direction, and between 7:22 AM to 1:43 AM in the southbound direction. Caltrain provides passenger train service seven days a week and provides extended service to Morgan Hill and Gilroy during commute hours. The Tamien Station can be accessed by taking the VTA LRT Service utilizing the Alum Rock – Santa Teresa LRT line and then transferring to the Mountain View – Winchester LRT line.

Altamont Commuter Express (ACE) Service

Commuter passenger train service across the Altamont between Stockton and San José is provided by ACE which stops at the San José Diridon Station during both the morning and evening weekday commute hours. ACE trains stop at the Diridon Station between 6:22 AM and 9:44 AM in the westbound direction and between 3:35 PM and 6:38 PM in the eastbound direction. The Diridon Station is approximately 6 miles from the Project site which can be accessed by taking the VTA LRT Service utilizing the Mountain View – Winchester LRT line.

Amtrak Service

Amtrak provides daily commuter passenger train service along the 170-mile Capitol Corridor between the Sacramento region and the Bay Area, with stops in San José, Santa Clara, Fremont, Hayward, Oakland, Emeryville, Berkeley, Richmond, Martinez, Suisun City, Davis, Sacramento, Roseville, Rocklin, and Auburn. The Capitol Corridor trains stop at the San José Diridon station six times on weekdays between 7:15 AM and 8:16 PM in the westbound direction. In the eastbound direction, Amtrak stops at the Diridon station six times on weekdays between 6:18 AM and 6:05 PM. The Diridon Station is approximately 6 miles from the Project site which can be accessed by taking the VTA LRT Service utilizing the Mountain View – Winchester LRT line.

2.5 Study Intersections

The traffic study to identify potential traffic impacts was evaluated per the standards and guidelines set forth by the City of San José and the Santa Clara Valley Transportation Authority (VTA) which administers the County Congestion Management Program (CMP). Study intersections for the Project were selected in consultation with City staff and in accordance with the VTA's TIA Guidelines. The following twenty-five (25) intersections studied in this report are listed and described below.

1. Bascom Avenue and Camden Avenue (CMP)
2. Bascom Avenue and White Oaks Avenue
3. Bascom Avenue and SR 85 North Ramps (CMP)
4. Los Gatos Blvd and SR 85 South Ramps (CMP)
5. Los Gatos Blvd / Bascom Avenue and Samaritan Drive (CMP)
6. National Avenue and Samaritan Drive (unsignalized)
7. Samaritan Ct and Samaritan Drive
8. Kinghurst Drive and Samaritan Drive (unsignalized)
9. Samaritan Place and Samaritan Drive (unsignalized)
10. SR 85 South Off-Ramp and Samaritan Drive
11. Union Avenue and Camden Avenue (CMP)
12. Union Avenue and SR 85 North

13. Union Avenue and SR 85 South / Samaritan Drive
14. Union Avenue and Los Gatos-Almaden Rd
15. SR 17 Southbound Ramps and San Tomas Expressway (CMP)
16. SR 17 Northbound Ramps and Camden Avenue (CMP)
17. Winchester Blvd and Lark Avenue
18. SR 17 South Ramps and Garden Hill Drive / Lark Avenue
19. SR 17 North Ramps and Lark Avenue
20. Los Gatos Blvd and Lark Avenue (CMP)
21. Los Gatos Blvd and Los Gatos-Almaden Rd-Chirco Dr
22. National Avenue and Los Gatos-Almaden Rd
23. Los Gatos Blvd and Gateway / Garden Ln
24. Los Gatos Blvd and Walker St
25. Bascom Avenue and East Mozart Avenue (unsignalized)

1. Bascom Avenue and Camden Avenue (CMP) is a signalized intersection located north of the Project site, east of SR 17, and north of SR 85 in the City of San José. The Camden Avenue southbound approach consists of a raised median, one left-turn, three through, and one right-turn lane while the northbound approach consists of a raised median, one left-turn, two through, and one through-right lane. The Bascom eastbound and westbound approaches have a raised median, two left-turn, two through, and one through-right lane.

2. Bascom Avenue and White Oaks Avenue is a signalized intersection located north of the Project site, east of SR 17, and north of SR 85 in the City of San José. The White Oaks southbound approach consists of one left-turn, one through, and one right-turn lane while the northbound approaches consists of a raised median, one left-turn, one through, and one right-turn lane. The Bascom Avenue eastbound and westbound approaches consist of a raised median, one left-turn, two through, and one through-right lane.

3. Bascom Avenue and SR 85 North Ramps (CMP) is a signalized intersection located north-west of the Project site and just east of SR 17 in the City of San José. The southbound approach consists of a raised median, two through, and one through-right lane while the Bascom Avenue northbound approach consists of two left-turn and three through lanes. The SR 85 North off-ramp has one left-turn, one through-left, and one right-turn lane.

4. Los Gatos Boulevard and SR 85 South Ramps (CMP) is a signalized intersection located north-west of the Project site and just east of SR 17 in the City of San José. The Bascom Avenue southbound approach consists of a raised median, two left-turn, and three through lanes while the northbound approach consists of two through and one through-right lane. The east-west oriented SR 85 South off-ramp has one left-turn and one left-through-right-turn lane.

5. Los Gatos Boulevard and Samaritan Drive (CMP) is a signalized intersection located west of the Project site, east of SR 17, and south of SR 85 in the City of San José. The Los Gatos Boulevard southbound approach consists of two left-turn, two through, and one right-turn lane while the northbound approach consists of one left-turn, two through, and one right-turn lane. The Burton Road eastbound approach contains one left-through-right lane. The Samaritan Drive westbound approach contains one left-turn, one left-through, and one right-turn lane.

6. National Avenue and Samaritan Drive (unsignalized) is a side street stop controlled south T-intersection located west of the Project site. The National Avenue northbound approach contains one right-turn lane. The Samaritan Drive eastbound approach contains one through and one through-right lane while the westbound approach contains one left-turn, one left-through and one right turn lane.

7. Samaritan Court and Samaritan Drive (Signalized) is a signalized T-intersection located west of the Project site. Samaritan Drive is oriented north-south north of Samaritan Court and east-west south of Samaritan Court. The Samaritan Drive southbound approach contains one through and one through-right lane while the westbound approach contains one left lane and two through lanes. Samaritan Ct. approach contains one-left-right turn lane.

8. Kinghurst Drive and Samaritan Drive (unsignalized) is a side street stop controlled south T-intersection located just west of the Project site. The Kinghurst Drive northbound approach contains one left-right turn lane. Samaritan Drive has a two way left turn lane throughout this segment of the road. The Samaritan Drive eastbound approach contains one through and one through-right lane while the westbound approach contains two through lanes.

9. Samaritan Pl and Samaritan Drive (unsignalized) is a side street stop controlled north T-intersection located just east of the Project site. The Samaritan Pl southbound approach contains raised islands, one left-turn, and one right-turn lane. The Samaritan Drive eastbound approach contains one left-turn and one through lane while the westbound approach contains a raised median, one through, and one right-turn lane.

10. SR 85 Southbound Off-Ramp and Samaritan Drive is a signalized north T-intersection located east of the Project site. The SR 85 South off-ramp approach contains two left-turn and one right-turn lane. The Samaritan Drive eastbound approach contains two through lanes while the westbound approach contains one through lane.

11. Union Avenue and Camden Avenue (CMP) is a signalized intersection located north-east of the Project site. The Union Avenue southbound approach contains two left-turn, two through, and one right-turn lane while the northbound approach contains one left-turn, one through, and one through-right lane. The Camden Avenue eastbound and westbound approaches have raised medians, one left-turn, two through, and one through-right lane.

12. Union Avenue and SR 85 (N) is a signalized west T-intersection located east of the Project site. The Union Avenue southbound approach contains a raised median, two through, and one right-turn lane while the northbound approach contains two left-turn lanes and two through lanes. The SR 85 North off-ramp contains two left-turn and one right-turn lane.

13. Union Avenue and SR 85 (S) – Samaritan Drive. is a signalized intersection located east of the Project site. The Union Avenue southbound approach contains a raised median, two left-turn, two through, and one right-turn lane while the northbound approach contains one left-turn, two through, and one right-turn lane. The SR 85 South off-ramp leads to Samaritan Dr. Samaritan Drive eastbound approach contains one left-turn, one left-through, and one right-turn lane.

14. Union Avenue and Los Gatos-Almaden Road is a signalized intersection located south-east of the Project site. The Union Avenue southbound approach contains one left-turn, one through, and one right-turn lane while the northbound approach contains raised islands, one left-turn, one through, and

one right-turn lane. The Los Gatos Almaden Road eastbound and westbound approaches contain one left-turn and one through-right lane.

15. SR 17 Southbound Ramps and San Tomas Expressway (CMP) is a signalized intersection located north of the Project site. The SR 17 South off-ramp contains raised islands, two left-turn, one left-through, and one right-turn lane. The San Tomas Expressway eastbound approach contains raised islands, four through and one right-turn lane while the westbound approach contains a raised median, raised islands, two left-turn and three through lanes.

16. SR 17 Northbound Ramps and Camden Avenue (CMP) is a signalized intersection located north of the Project site. The SR 17 North off-ramp leads to White Oaks Road. The White Oaks Road northbound approach contains a raised median, raised islands, two left-turn and one through-right lane. The Curtner Avenue southbound approach contains one left-through lane and one right-turn lane. The Camden Avenue eastbound approach contains a raised median, raised islands, one left-turn, three through, and one right-turn lane while the westbound approach contains a raised median, one left-turn, four through, and one through-right lane.

17. Winchester Boulevard and Lark Avenue is a signalized east T-intersection located west of the Project site. The Winchester Boulevard southbound approach contains a raised median, two left-turn, and one through while the northbound approach contains a raised median, a raised island, one through and one right-turn lane. The Lark Avenue westbound approach has raised islands, one left-turn, and one right-turn lane.

18. SR 17 (W) and Lark Avenue is a signalized intersection located south-west of the Project site. The SR 17 South off-ramp contains raised islands, one left-turn, one left-through, and one right-turn lane. The Garden Hill Drive northbound approach contains one left-through-right turn lane. The Lark Avenue eastbound approach contains a raised median, one left-turn, one through, and one through-right lane while the westbound approach contains a raised median, one left-turn, one through, and one through-right lane.

19. SR 17 (E) and Lark Avenue is a signalized intersection located south-west of the Project site. The SR 17 North off-ramp contains raised islands, one left-through and one right-turn lane. The Lark Avenue eastbound approach contains a raised median, two left-turn and two through lanes while the westbound approach contains a raised median, raised islands, two through and two right-turn lanes.

20. Los Gatos Boulevard and Lark Avenue (CMP) is a signalized intersection located south-west of the Project site. The Los Gatos Boulevard southbound approach contains a raised median, raised islands, one left-turn, two through, and one right-turn lane while the northbound approach contains a raised median, three left-turn, one through, and one through-right lane. The Lark Avenue eastbound approach has a raised median, raised islands, two left-turn lanes, one left-through, and one right-turn lane while the westbound approach contains one-left-through-right lane.

21. Los Gatos Boulevard and Los Gatos-Almaden Road-Chirco Drive is a signalized intersection located south-west of the Project site. The Los Gatos Boulevard southbound and northbound approaches contain a raised median, one left-turn, two through, and one through-right lane. The Chirco Drive eastbound approach contains a raised median, raised islands, and one left-through-right lane. The Los Gatos Almaden Road westbound approach contains a raised median, raised islands, one left-through, and one right-turn lane.

22. National Avenue and Los Gatos-Almaden Road is a signalized north T-intersection located south of the Project site. The National Avenue southbound approach contains one left-turn and one right-turn lane. The Los Gatos Almaden Road eastbound approach contains one left-turn and one through lane while the westbound approach contains one through-right lane.

23. Los Gatos Boulevard and Gateway / Garden Lane is a signalized intersection located south-west of the Project site. The Los Gatos Boulevard southbound and northbound approaches contain a raised median, one left-turn, two through, and one through-right lane. The Garden Lane eastbound approach contains one left-through lane and one right-turn lane.

24. Los Gatos Boulevard and Walker Street is a signalized intersection located south-west of the Project site. The Los Gatos Boulevard southbound and northbound approaches contain a raised median, one left-turn and one through lane. The Walker Street eastbound approach contains one left-through lane and one right-turn lane. The Gateway Drive westbound approach contains a raised median, one left-through lane, and one right-turn lane.

25. Bascom Avenue and East Mozart Avenue is a side street stop controlled east T-intersection located just north-west of the Project site. The Bascom Avenue southbound approach contains two through, and one through-right turn lane and the northbound approaches contain a raised median and three through lanes. The East Mozart Lane eastbound approach contains one right-turn lane.

2.6 Existing Field Observations and Transportation Conditions

Field visits to the Project site and its vicinity were conducted during the months of May 2022, October 2022, and September 2023 to observe biking, walking, transit, and roadway operations during peak commute periods. The existing field observations are documented in Section 2.1 to 2.5.

The following key observations were made during the field visit conducted during the month of September 2023 at the Bascom Avenue / SR-85 Ramps and Union Avenue / SR-85 Ramps:

- **Bascom Avenue / SR-85 Ramps (Northbound and Southbound)** – The ramp meters for both the northbound and southbound on-ramp were not working during both AM and PM peak periods. For the southbound on-ramp, vehicle queues were contained within the on-ramp and did not extend at any point to Bascom Avenue. For the northbound on-ramp, queues were observed during the AM peak period, however, the queues were contained within the on-ramp and at not point extended to Bascom Avenue.

- **Union Avenue / SR-85 Ramps (Northbound and Southbound)** – The ramp meters for both the northbound and southbound on-ramp were operational during both AM and PM peak periods. For the southbound on-ramp, vehicle queues were observed to extend up to Union Avenue during the PM peak period. The Southbound SR-85 was congested with stop and go conditions during the PM peak period causing queues to extend up to Union Avenue. For the northbound on-ramp, queues were observed during the AM peak period, however, the queues were contained within the on-ramp and at not point extended to Union Avenue.

The following field observations were made at these on-ramps:

AM Peak Period

- The maximum queue observed along the northbound on-ramp from Bascom Avenue was in the range of 300 ft. to 400 ft. approximately.
- The maximum queue observed along the northbound on-ramp from Union Avenue was in the range of 200 ft. to 500 ft. approximately.
- At no point during the AM peak period, vehicle queues along the on-ramp reached the City Streets (i.e., Bascom Avenue and Union Avenue)
- The northbound traffic along SR 85 was congested with stop and go conditions.

PM Peak Period

- The maximum queue observed along the southbound on-ramp from Bascom Avenue was in the range of 300 ft. to 400 ft. approximately.
- The maximum queue observed along the southbound on-ramp from Union Avenue was in the range of 400 ft. to 500 ft. approximately.
- At no point during the PM peak period, vehicle queues along the on-ramp reached the City Streets (i.e., Bascom Avenue and Union Avenue). The on-ramp queues at Union Avenue were closest to intersection.

2.7 Existing Site Access

There are currently three driveways on Samaritan Drive to the Project site, although one driveway is restricted to ambulances only. An overview map locating the existing Project site is shown in **Figure 1, Figure 2** and **Table 4** provides additional details about existing access to the Project site.

Table 4: Existing Driveways

Driveway	Location	Width	Movement	Use
1	Approximately 925 feet west of Samaritan Drive /Samaritan Place intersection	24 feet	Restricted – Egress only	Public
2	Approximately 700 feet west of Samaritan Drive /Samaritan Place intersection	30 feet	Restricted- Ingress only	Public – leads to the hospital's main entrance
3	Approximately 690 feet west of Samaritan Drive /Samaritan Place intersection	24 feet	Restricted- Ingress only	Ambulance Use, Only for ER
4	Approximately 160 feet west of Samaritan Drive /Samaritan Place intersection	34 feet	Full Access (Unrestricted Turn Movements)	Public – leads to the hospital's east entrance

Source: Perkins & Will, 2022.

Driveway 1 is restricted to egress movements only. Drivers can make full movements to either westbound or eastbound Samaritan Dr. Driveway 2 is restricted to ingress movements only and provides access to the main hospital entrance, valet parking, and surface parking lot. The drive aisle continues north toward the site boundary and existing heliport. Driveway 3 is immediately east of Driveway 2 and is restricted to ambulances accessing the Emergency Room (ER). Driveway 4 provides unrestricted full-access movements and leads to the hospital's eastern entrance and additional surface parking. Service and deliveries use Driveway 4 to access the loading docks along the northeastern portion of the hospital.

3. LTA PROJECT DESCRIPTION

This chapter describes the local transportation analysis including the method by which Project traffic is estimated through trip generation, trip distribution, and volume assignment.

3.1 Project Site Plan

Based on the site plans provided by Perkins and Will, it is anticipated that the Project's full buildout would result in the construction of two new hospital wings with 419 Licensed Beds (totaling approximately 750,000 square feet), an approximately 200,000 square foot medical office building, and two new parking garage structures (totaling approximately 679,000 square feet). The Project would be developed in three phases:

- Phase 1
  - Demolish approximately 20,946 square feet of existing hospital main building (Building A) and the 6,700 square foot daycare center. The remaining building will remain during Phase 1 and existing beds within the building will be transferred to the new Building C.
  - Construct a new approximately 548,000 (Building C) square foot hospital wing.
  - Construct a new five-story 253,000 square foot parking garage (Garage East) with 653 parking spaces and a central utility plant totaling approximately 23,750 square feet.
  - Increase the number of Licensed Beds from 404 to 413.

- Phase 2
  - Demolish remaining portion (i.e., 338,054) existing hospital main building to allow for access to the new hospital and replace it with surface parking.

- Phase 3 (Buildout)
  - Increase the number of Licensed Beds from 413 to 419.
  - Construct an approximately 202,000 square foot hospital wing (Building D) and an approximately 200,000 square foot medical office building (Building E), and a new five-story garage structure (Garage West) with 1,154 parking spaces.

The Project site plan for Phase 1, Phase 2 and Phase 3 is presented in **Figure 9, Figure 10,** and **Figure 11** respectively. A conceptual landscape plan for the project is attached in **Appendix M**.

Figure 9: Project Site Plan – Phase 1 Conditions

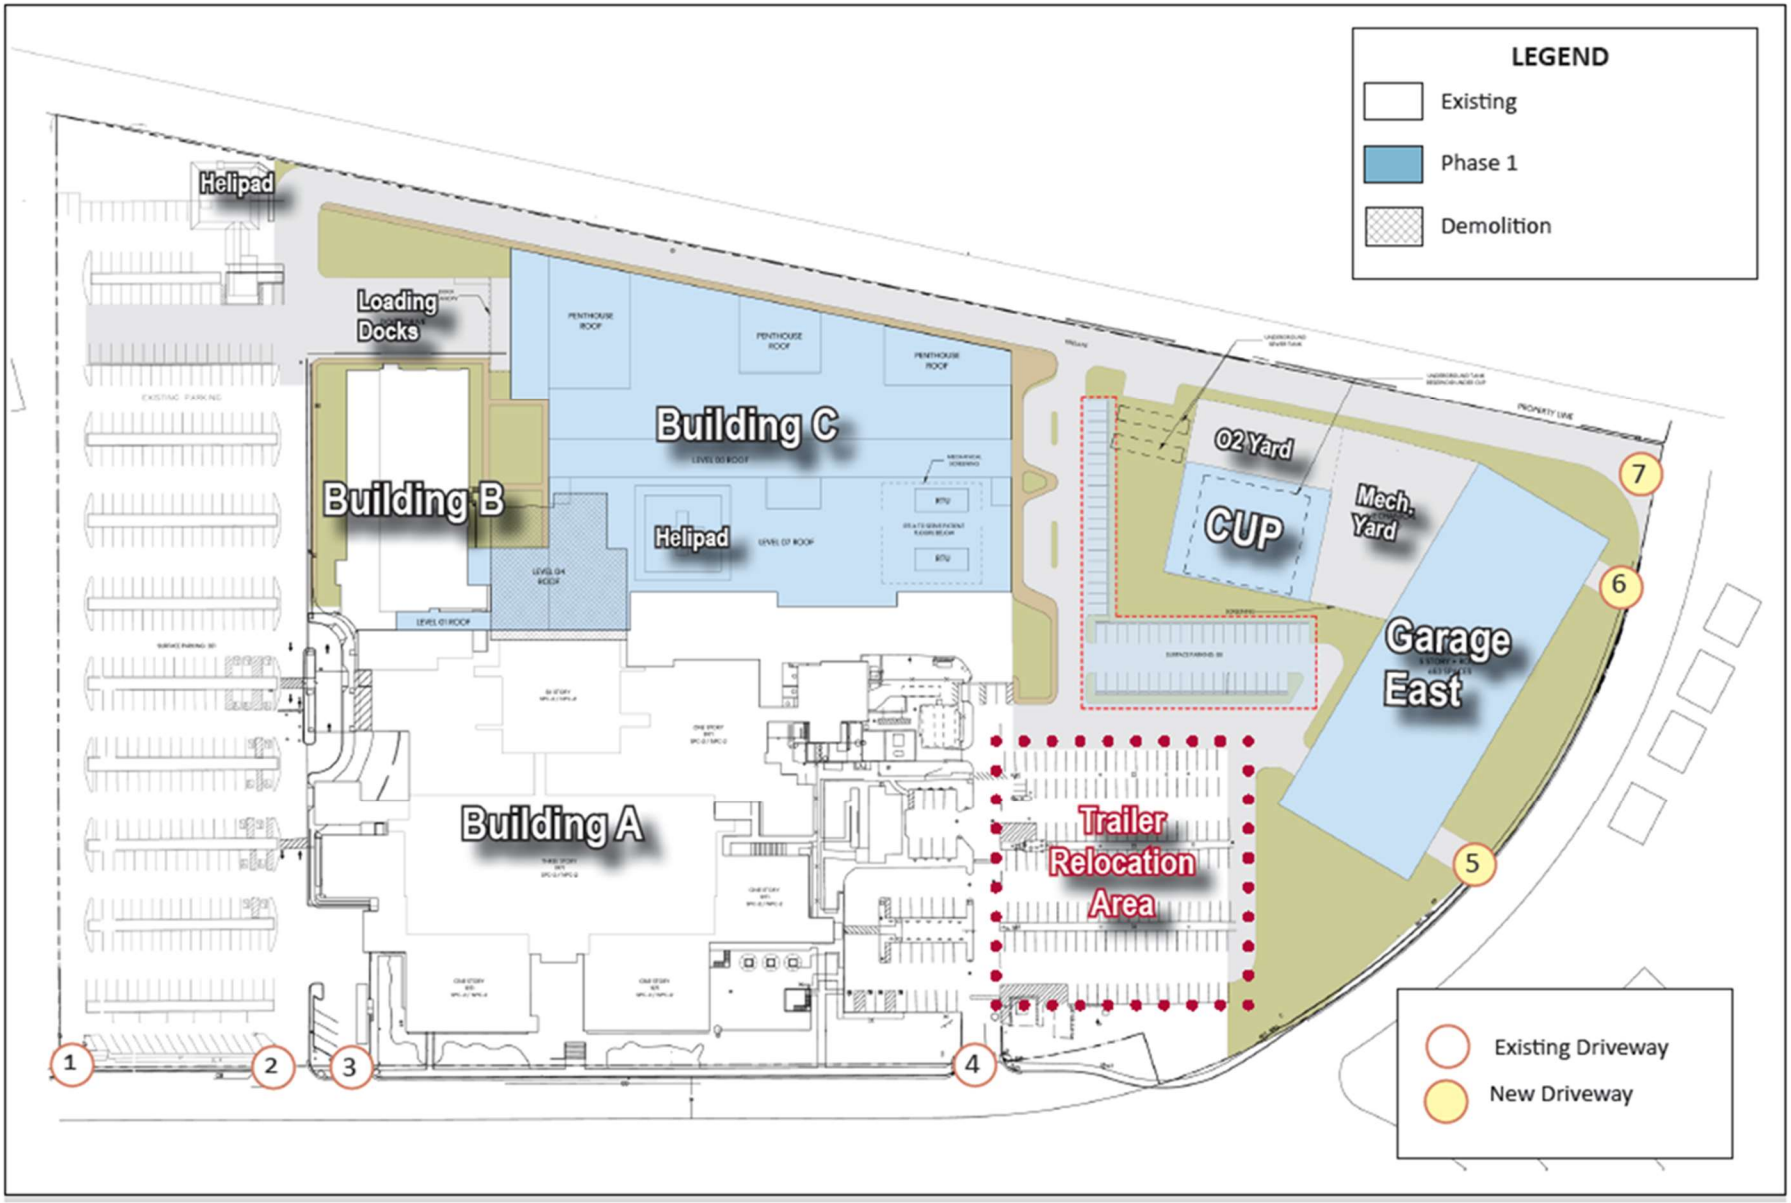

Figure 10: Project Site Plan – Phase 2 Conditions

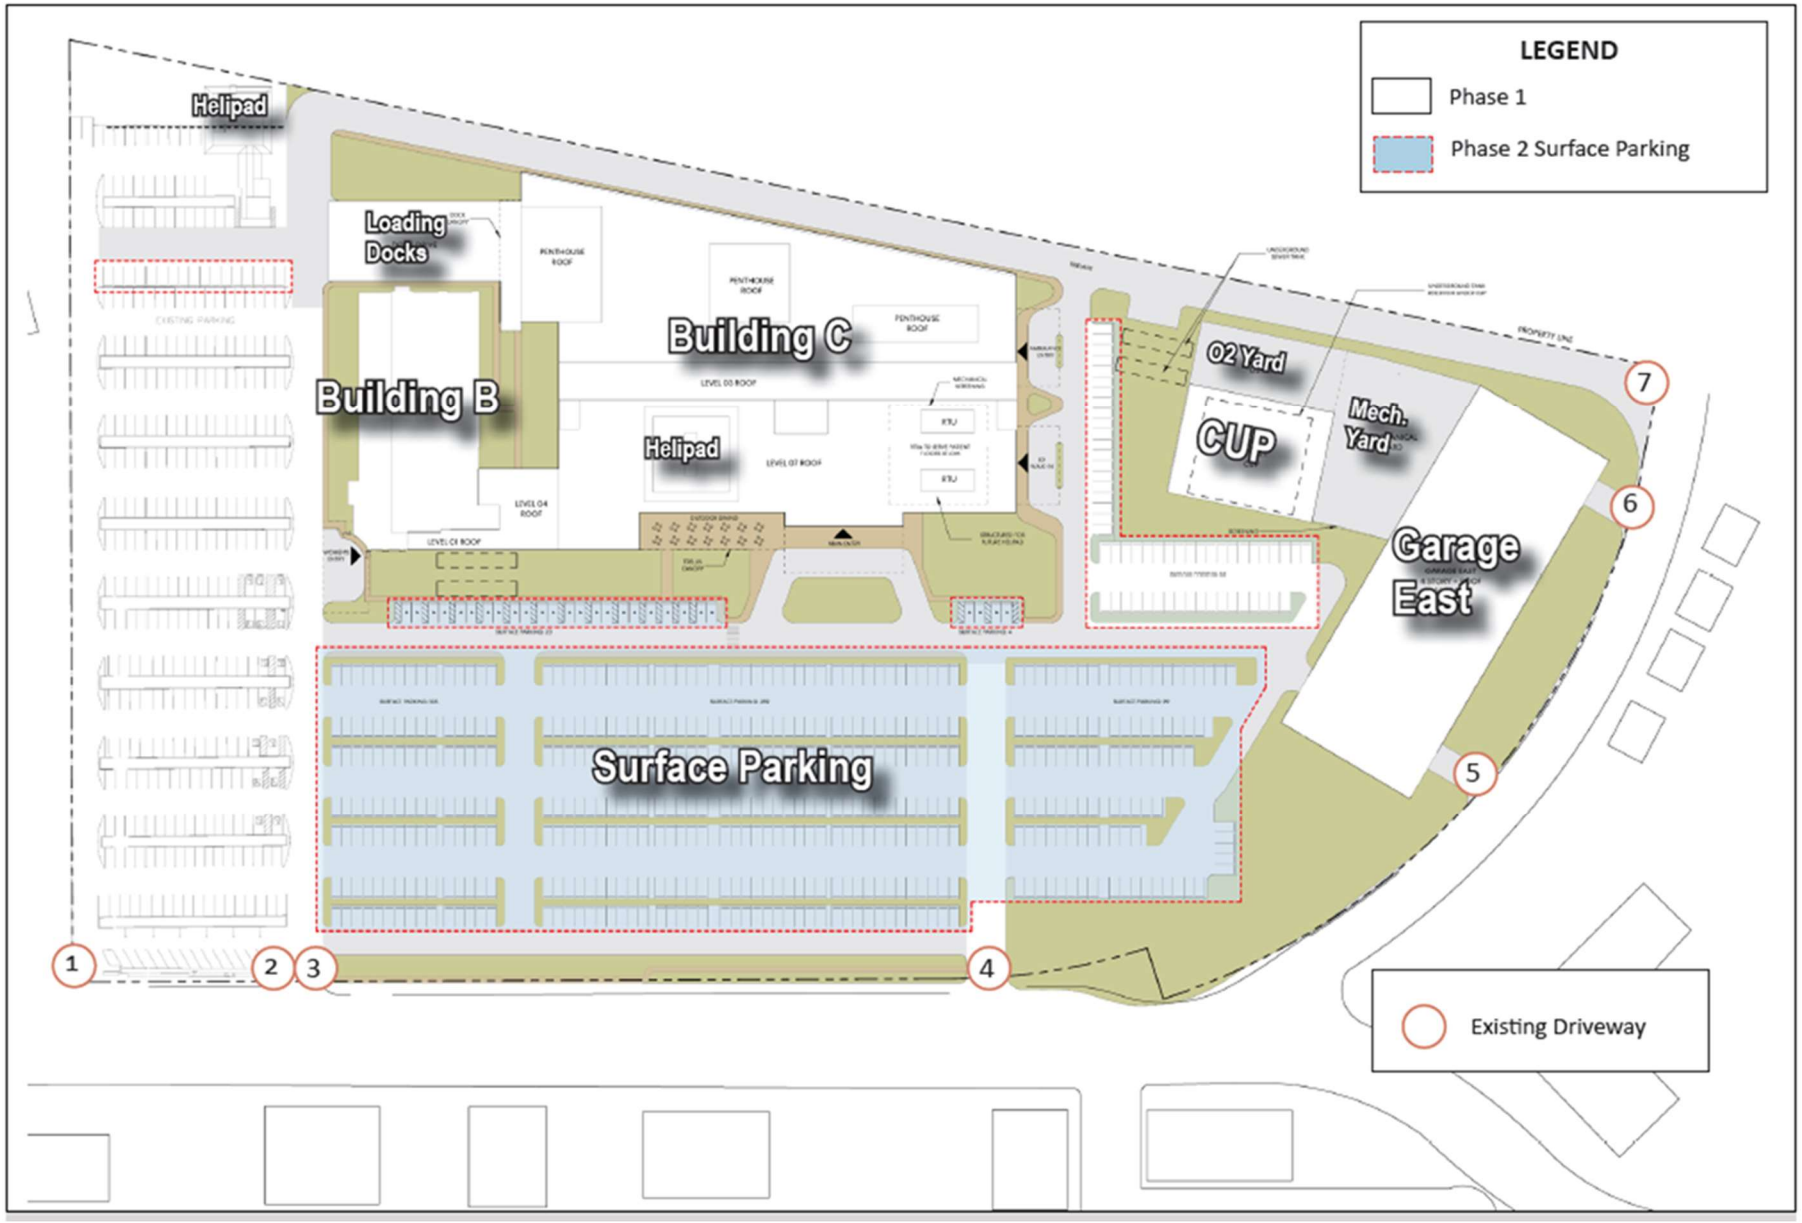

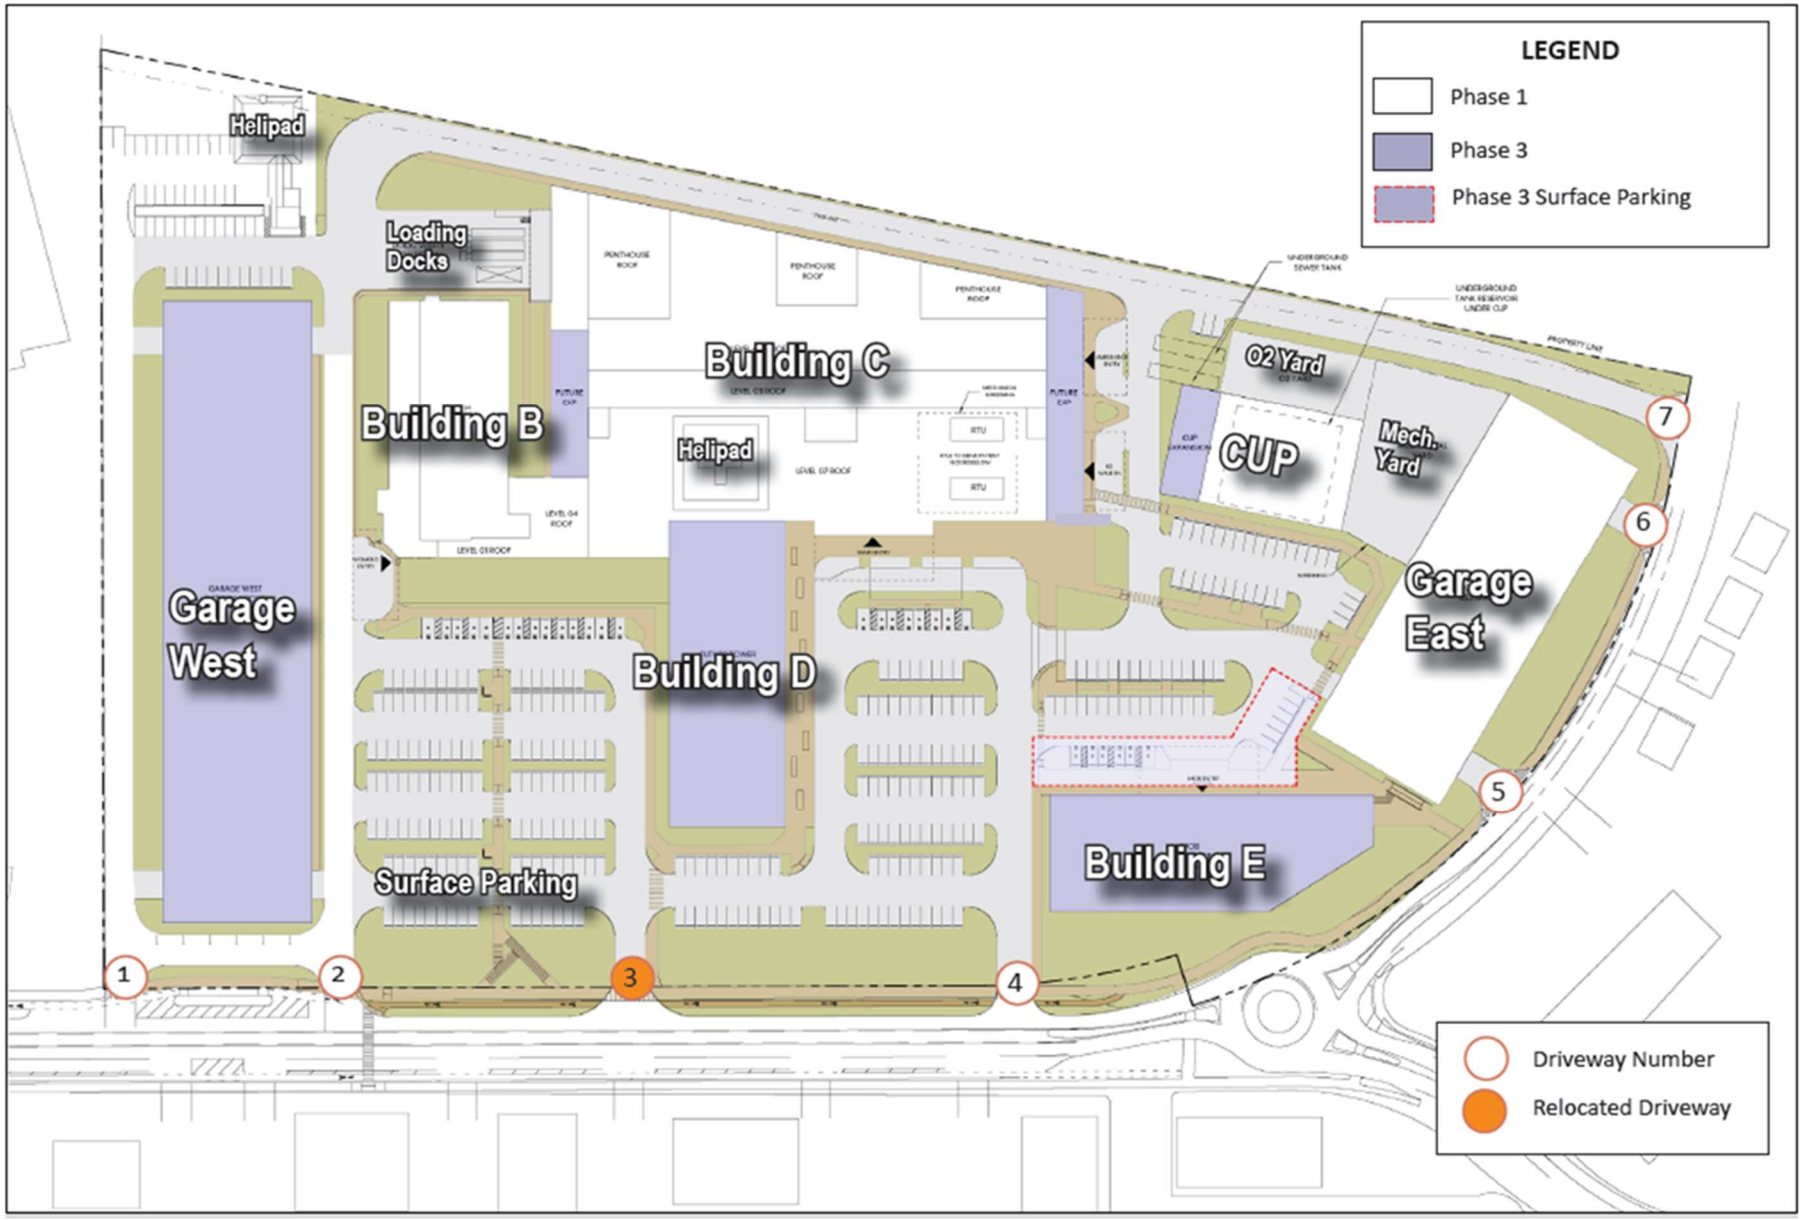

Figure 11: Project Site Plan – Phase 3 (Buildout) Conditions

3.2 Project Trip Generation

A trip is defined as a single or one-directional vehicle movement in either the origin or destination at the Project site. In other words, a trip can be either "to" or "from" the site. In addition, a single customer visit to a site is counted as two trips (i.e., one to and one from the site). Daily, AM, and PM peak hour trips for the Project were calculated with average trip rates. The following Institute of Transportation Engineers (ITE), 11th Edition land uses were conservatively applied to the proposed Good Samaritan Hospital development:

- ITE 610 Hospital – 419 Beds
- ITE 720 Medical-Dental Office Building – 200,000 square feet medical office building

Per the per the 2023 Transportation Analysis Handbook, trip generation reduction credits can be applied to the Project. An internal capture reduction was not applied for a conservative scenario. A location-based mode share trip reduction credit was applied. This adjustment is a function of multimodal connectivity and accounts for greater mode share for Projects located in urban or transit developed areas. From Table 16 and Table 17 of the 2023 Transportation Analysis Handbook, the Project location is designated as an "Urban Low-Transit" place with a vehicle mode share of 91 percent for office/industrial land uses. A 9% mode share trip reduction credit was applied to the Project.

It should be noted that even though the Project's square footage increases during Phase 1 and Phase 3 (Buildout) conditions, it does not directly relate to increase in number of hospital beds, as the proposed Project increases the number of square feet per bed to the existing square feet per bed. The main reason for this is because Department of Health Care Access and Information (HCAI) requirements for hospitals changed for patient treatment and experience. The following is a short summary of these changes.

- Hospital design standards governed by HCAI have changed, requiring increased areas for services.
- The current hospital has multi-patient rooms; the Project would create single-patient rooms within the expansion areas.
- There is an increase in room-size square feet per patient bed to accommodate mobile equipment and monitoring stations.
- Additional area requirements for equipment use, laboratories, physical therapy, accommodations for visiting families.

In coordination with the City Staff (refer to *Trip Generation Assumptions Memo* submitted to the City on April 12, 2023), hospital bed was approved as a variable unit for ITE 610 Hospital land use to estimate Project trips for project conditions.

Phase 1 Trip Generation Estimates

During Phase 1, the Project will demolish approximately 220,946 square feet of existing hospital main building (Building A) and construct a new approximately 548,000 square foot hospital wing (Building C). The existing 6,700 square foot daycare center will also be demolished and a new five-story parking garage (Garage East) with 653 parking spaces will be constructed. During Phase 1, the Project will increase the number of currently licensed 404 Beds to 413 Beds. For conservative scenario, no credits were taken for the existing hospital demolition.

For a conservative scenario, all 419 beds were assumed to be operational by end of Phase 1. Baseline vehicle trips for Phase 1 Project (excluding trip adjustments) are anticipated to generate a gross total of 9,352 daily trips, 750 AM peak hour trips, and 708 PM peak hour trips. With all applicable trip reductions (location-based adjustment of 9%, VMT reductions, and existing driveway trip credits), the Phase 1 Project is anticipated to generate a total of 3,266 daily trips, 196 AM peak hour trips (165 In / 31 Out), and 197 PM peak hour trips (25 In / 172 Out). Trip generation estimates for Phase 1 are shown in **Table 5** below.

Table 5: Phase 1 Trip Generation Estimates

LAND USE / DESCRIPTION	PROJECT SIZE	TOTAL DAILY TRIPS	AM PEAK TRIPS			PM PEAK TRIPS		
			TOTAL	IN	/ OUT	TOTAL	IN	/ OUT
Trip Generation Rates (ITE 11th Edition)								
Hospital [ITE 610]	Per Beds	22.32	1.79	72%	/ 28%	1.69	33%	/ 67%
Medical-Dental Office Building [ITE 720]	Per KSF	31.86	2.68	81%	/ 19%	2.84	25%	/ 75%
Development: Campus Expansion (Good Samaritan) - Interim (Phase 1 and Phase 2)								
Hospital Campus (including CUP)	419.00 Beds	9,352	750	540	/ 210	708	234	/ 474
Driveway Counts (Operational Beds)	323.00 Beds	(5,104)	(477)	(317)	/ (160)	(438)	(185)	/ (253)

Project Trip Adjustments								
VMT Vehicle-Trip Reduction (Hospital Employee and Patients/Visitors)		(599)	(52)	(38)	/ (14)	(48)	(19)	/ (29)
Net Project Vehicle Trips		**3,266**	**196**	**165**	**/ 31**	**197**	**25**	**/ 172**

Notes:

Land Uses assumed based on revised project description as per latest site plan (Dated 16 March 2023)

Daily, AM, and PM trips based on average land use rates from the Institute of Traffic Engineers Trip Generation 11th Edition

A 9% Mode Share Reduction from San Jose Transportation Analysis Handbook 2023 was applied since the project is located in an "Urban Low-Transit" area. Mode share reduction was applied to Medical Office Building only.

Existing driveway count data was collected on 8 November 2022. It should be noted that the existing driveway counts corresponds to 323 Operational Beds and the Hospotal is currently entitled to 404 Licensed Beds. For a conservative trip estimate, no adjustments were made to existing driveway count data to reflect the current entitlement.

The Project VMT reductions are taken from Table 13 and Table 14 of the Good Samaritan TA report.

Phase 2 Trip Generation Estimates

During Phase 2, the Project will demolish remaining portion existing hospital main building (Building A) to allow for access to the new hospital (Building C) and replace it with surface parking. While there will be redistribution of the trips internally within the site, no additional trips will be added during Phase 2 of the Project.

Phase 3 (Buildout) Trip Generation Estimates

During Phase 3 (Buildout), the Project will construct an approximately 202,000 square foot hospital wing (Building D), an approximately 200,000 square foot medical office building (Building E), and a new five-story garage structure (Garage West) with 1,154 parking spaces. The construction of the approximately 202,000 square foot hospital wing corresponds to an additional 6 licensed beds for a total of 419 licensed beds.

During Phase 3 (Buildout), baseline vehicle trips for the Project (excluding trip adjustments) are anticipated to generate a gross total of 15,724 daily trips, 1,286 AM peak hour trips, and 1,276 PM peak hour vehicle trips. Development of the Project with all applicable trip reductions (location-based adjustment of 9%, VMT reduction, and existing driveway counts) is anticipated to generate a net total of 6,762 additional daily trips, 489 AM peak hour trips (409 In / 80 Out), and 516 PM peak hour trips (95 In / 421 Out) to the roadway network. Trip generation estimates for Phase 3 (Buildout) are shown in **Table 6** below.

Table 6: Phase 3 (Buildout) Trip Generation Estimates

LAND USE / DESCRIPTION	PROJECT SIZE	TOTAL DAILY TRIPS	AM PEAK TRIPS			PM PEAK TRIPS		
			TOTAL	IN	/ OUT	TOTAL	IN	/ OUT
Trip Generation Rates (ITE 11th Edition)								
Hospital [ITE 610]	Per Beds	22.32	1.79	72%	/ 28%	1.69	33%	/ 67%
Medical-Dental Office Building [ITE 720]	Per KSF	31.86	2.68	81%	/ 19%	2.84	25%	/ 75%
Development: Campus Expansion(Good Samaritan) + MOB - Phase 3 (Buildout)								
Hospital Campus (including CUP)	419.00 Beds	9,352	750	540	/ 210	708	234	/ 474
Driveway Counts (Operational Beds)	323.00 Beds	(5,104)	(477)	(317)	/ (160)	(438)	(185)	/ (253)

Project Trip Adjustments								
VMT Vehicle-Trip Reduction (Hospital Employee and Patients/Visitors)		(2,902)	(247)	(188)	/ (59)	(246)	(78)	/ (168)
Net Project Vehicle Trips		**6,762**	**489**	**409**	**/ 80**	**516**	**95**	**/ 421**

Notes:

Land Uses assumed based on revised project description as per latest site plan (Dated 16 March 2023)

Daily, AM, and PM trips based on average land use rates from the Institute of Traffic Engineers Trip Generation 11th Edition

A 9% Mode Share Reduction from San Jose Transportation Analysis Handbook 2023 was applied since the project is located in an "Urban Low-Transit" area.

Existing driveway count data was collected on 8 November 2022. It should be noted that the existing driveway counts corresponds to 323 Operational Beds and the Hospotal is currently entitled to 404 Licensed Beds. For a conservative trip estimate, no adjustments were made to existing driveway count data to reflect the current entitlement.

The Project VMT trip adjustments are from Table 13 and Table 14 of the Good Samaritan TA report.

3.3 Project Trip Distribution and Assignment

Regional access to the Project site will be via SR-85 and SR-17. Trip distribution and assignment for the Project was assumed based on the Project driveway location, the freeway ramp locations, community characteristics, existing traffic counts, and professional engineering judgement. Project trips to and from the site are anticipated to access the following regional facilities and destinations with the estimated trip distribution percentages are shown in **Figure 12** and in **Table 7** below.

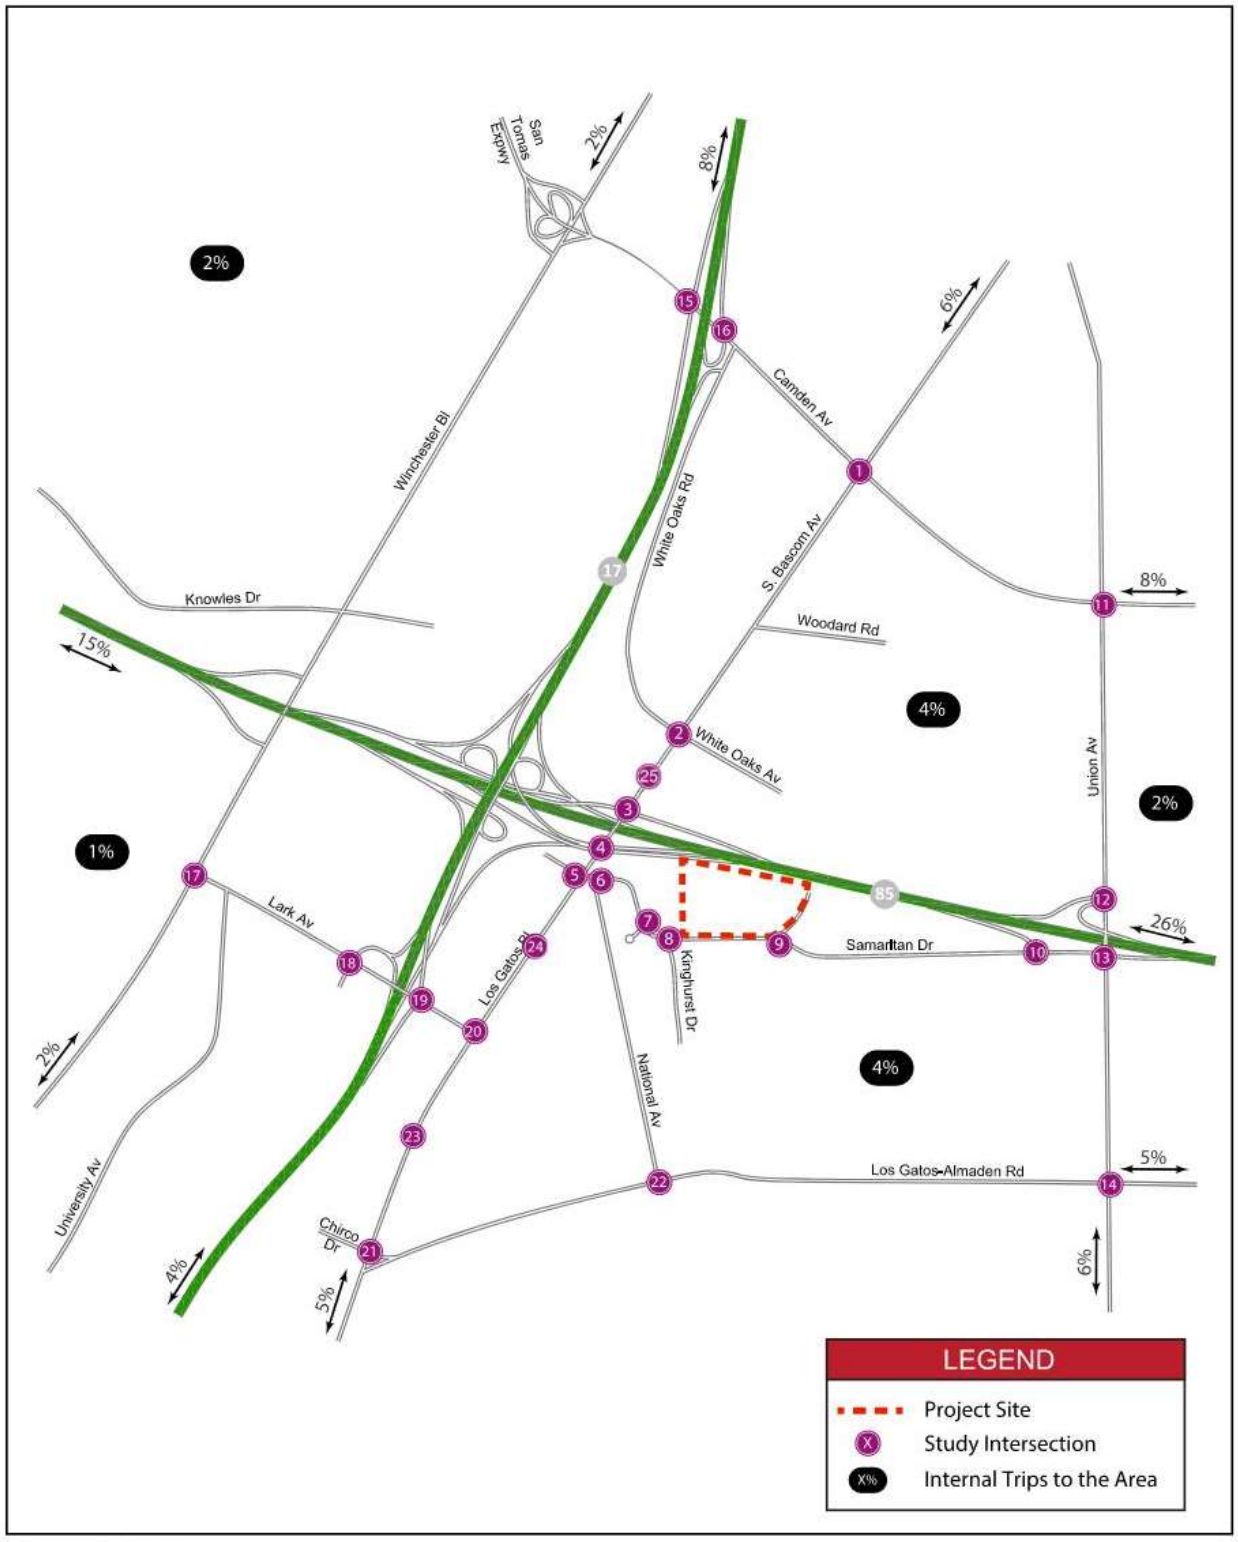

Table 7: Project Trip Distribution

Location	Roadway Origin / Destination	Inbound Trip Distribution (%)	Outbound Trip Distribution (%)
A	SR-17 North	8%	8%
B	SR-17 South	4%	4%
C	SR-85 North	15%	15%

Location	Roadway Origin / Destination	Inbound Trip Distribution (%)	Outbound Trip Distribution (%)
D	SR-85 South	26%	26%
E	Winchester Blvd. North	2%	2%
F	Winchester Blvd. South	2%	2%
G	Bascom Ave. North	6%	6%
H	Los Gatos Blvd. South	5%	5%
I	Los Gatos – Almaden Rd. East	5%	5%
J	Union Ave. South	6%	6%
K	Camden Ave. East	8%	8%
L	Carlton Neighborhood	4%	4%
M	Ponderosa/Parker/Farnham Neighborhood	4%	4%
N	Cambrian Park / Oster Neighborhood	2%	2%
O	Monte Sereno / Austin Neighborhood	1%	1%
P	San Thomas Neighborhood	2%	2%

The net Project trip assignments for Phase 1 and Phase 3 (Buildout) are shown in **Figure 13** and **Figure 14**. The trip assignment shown represents the shortest paths to and from the Project site under ideal traffic conditions.

4. CEQA TRANSPORTATION ANALYSIS

This chapter describes the CEQA transportation analysis, including the VMT threshold of significance, the Project-level VMT impact analysis results, mitigation measures to reduce a VMT impact, and the cumulative transportation impact analysis used to determine consistency with the City's General Plan.

The City of San José has adopted the San José VMT Evaluation Tool ("VMT tool") to assess a Project's potential VMT based on the Project's description, location, and attributes. For most residential, office, and industrial Projects, the VMT tool is the approved method to calculate Project VMT. For non-residential or non-office Projects, very large Projects, or Projects that can potentially shift travel patterns, such as the proposed hospital expansion, the VMT tool would not be appropriate or adequate for the CEQA transportation analysis. In such cases, the San José Travel Demand Model ("CSJ model") should be used. In coordination with the City Staff, it was agreed that the CSJ model would be used to calculate the change in VMT resulting from the proposed hospital expansion, using the methodology described below.

4.1 Methodology

The purpose of this analysis of the proposed hospital expansion is to determine if adding these medical services at 2425 Samaritan Drive and 2333 Samaritan Place would reduce or increase VMT. The premise is that the hospital expansion would not cause an *increase* in the number of trips but instead result in a change in trip-making because adding hospital beds and a medical office building does not mean that more people will be seeking medical care. Therefore, it is assumed that some employees would leave their jobs at other hospitals and find employment at the hospital expansion. Likewise, patients are assumed to find treatment at the proposed Project instead of going to other hospitals in the region, as such shifts occur by hospital visitors and patients of the new medical office building.

As discussed earlier, Phase 1 includes the construction of a new 548,444 square foot 413 bed hospital. Phase 2 of the project demolishes the remaining portion of the existing hospital building and replace it with surface parking. Phase 3 incudes the construction of a 201,936 square foot hospital expansion with a total of 419 beds and the addition of a 200,000 square foot MOB.

The CEQA transportation analysis which provides an evaluation of VMT, looked at a conservative scenario for Phase 1 by assuming all 419 licensed beds are operational by end of Phase 1. Phase 3 (Buildout) includes VMT evaluation of 419 licensed beds and 200 KSF of MOB. No VMT analysis was conducted for Phase 2 at no traffic is generated.

The CSJ model uses employment to estimate trip-making associated with the proposed Project. Therefore, the 15 hospital beds (for a total of 419 Licensed Beds) and the 200,000 square feet of medical office building were converted to jobs using data contained in the Institute of Transportation Engineers Trip Generation Manual. It should be noted that the current Good Samaritan Hospital is licensed for 404 beds, which increases to 419 beds with Project Buildout (i.e., an increase of 15 hospital. Based on trip generation estimates of a Hospital [ITE Code 610], 15 hospital beds would generate the same number of trips as 89 hospital employees. Similarly, traffic generation of the 200,000 square feet of medical office [ITE Code 720] is equivalent to traffic generated by 869 medical office jobs. To model the changes in VMT for Phase 1, the 15 additional hospital beds would increase the jobs at 2425 Samaritan Drive by 89. As identified earlier, Phase 2 of the Project involves the demolition of the remaining existing hospital building and does not add any additional hospital beds. Therefore, no VMT analysis was conducted for

Phase 2 conditions. Phase 3 (Buildout) of the Project would add 200,000 square feet of medical office to the site, which generates the same number of daily vehicles as 869 medical office workers. Phase 3 (Buildout) would increase the jobs at the site by 89+869=958.

Since it is assumed that the total number of trips would not change, City staff provided five hospitals with medical office facilities in Santa Clara County from which jobs should be shifted to the proposed Project site:

- Kaiser Permanente Medical Offices (Traffic Analysis Zone (TAZ) 926)
- Santa Clara Valley Medical Center (TAZs 795, 3033, and 3034)
- O'Connor Hospital (TAZ 775)
- Kaiser Permanente Santa Clara (TAZ 95)
- El Camino Health Los Gatos Hospital (TAZ 7)

4.2 Phase 1 VMT Analysis

Hospital trips are estimated in the model using service employment as the trip generator. For the VMT analysis of Phase 1, the 89 service jobs reflecting the hospital expansion were added to the Project TAZ 623 and removed from the TAZs where the five hospitals are located, directly proportional to their size and inversely proportional to the distance squared from the Project site. **Table 8** presents the calculations of the shifts in service jobs between the TAZs.

Table 8: Service Employment Reduction [89 Jobs] At Other Hospitals

TAZ	Distance to TAZ 623 (mls)	1 / Distance^2	Normalized [A]	No Project Service Employment	Normalized [B]	Factor [A]*[B]	Normalized [C]	Service Employment Reduction [C]*89
7	3.95	0.06	0.34	1,317	0.18	0.06	0.37	-33
95	9.29	0.01	0.06	212	0.03	0.00	0.01	-1
775	8.03	0.02	0.08	1,154	0.16	0.01	0.08	-7
795	5.93	0.03	0.15	551	0.08	0.01	0.07	-6
926	8.62	0.01	0.07	116	0.02	0.00	0.01	-1
3033	5.88	0.03	0.15	69	0.01	0.00	0.01	-1
3034	5.92	0.03	0.15	3,741	0.52	0.08	0.46	-41

The CSJ model was run without (No Project scenario) and with (Project Phase I scenario) these employment shifts. Daily work VMT for the employees, with and without the Project, was calculated for the hospital personnel. Trips made by hospital visitors are reflected in the model as "other" trips. Daily VMT for those trips for both scenarios were calculated for the other (non-work) trips. These data are presented in **Table 9**.

Table 9: No Project and Phase 1 Project VMT Characteristics and Estimates

VMT Characteristics	No Project	Project Phase 1	Project-No Project	
			Absolute Change	Percent Change
Daily Work (Employees) VMT	240,569	240,616	47	0.02%
Daily Other (Patients and Visitors) VMT	73,798	73,894	96	0.13%
Total Daily VMT	314,367	314,510	143	0.05%
Number of Jobs	15,567	15,567	0	0.00%
Daily Work VMT/Job	15.45	15.46	0.01	0.02%
Daily Other VMT/Job	4.74	4.75	0.01	0.13%
Daily VMT/Job	20.19	20.20	0.01	0.05%

The VMT analysis shows that Phase 1 of the proposed Project would increase the daily VMT for employees by 47 daily trips from 240,569 to 240,616 (or 0.02%) and patients/visitors by 96 daily trips from 73,798 to 73,894 (or 0.13%). The total increase in daily VMT caused by Phase 1 of the proposed Project would be 143 (or 0.05%). The total increase in daily VMT caused by Phase 1 would be 143 daily trips from 314,367 to 314,510 (or 0.05%). Since Phase 1 would result in a net increase in daily VMT, a potentially significant impact would occur. Mitigation measures are required to reduce the VMT impact to a less than significant level.

4.3 Phase 3 (Buildout) VMT Analysis

Hospital and medical office trips are estimated in the model using service employment as the trip generator. The 958 service jobs reflecting the hospital (bed) expansion and the added medical office building were added to Project TAZ 623 and removed from the TAZs where the five hospitals and medical office buildings are located, directly proportional to their size and inversely proportional to the distance squared from the Project site. **Table 10** presents the calculations of the shifts in service jobs between the TAZs.

Table 10: Service Employment Reduction [958 Jobs] At Other Hospitals and Medical Office Buildings

TAZ	Distance to TAZ 623 (mls)	1 / Ditance^2	Normalized [A]	No Project Service Employment	Normalized [B]	Factor [A]*[B]	Normalized [C]	Service Employment Reduction [C]*958
7	3.95	0.06	0.34	1,317	0.18	0.06	0.37	-350
95	9.29	0.01	0.06	212	0.03	0.00	0.01	-10
775	8.03	0.02	0.08	1,154	0.16	0.01	0.08	-74
795	5.93	0.03	0.15	551	0.08	0.01	0.07	-65
926	8.62	0.01	0.07	116	0.02	0.00	0.01	-6
3033	5.88	0.03	0.15	69	0.01	0.00	0.01	-8
3034	5.92	0.03	0.15	3,741	0.52	0.08	0.46	-443

The CSJ model was run without (No Project scenario) and with (Phase 3 Buildout Project scenario) these employment shifts. Daily work VMT for the employees, with and without the Project, was calculated for

the hospital and medical office personnel. Trips made by hospital visitors and patients of the medical offices are reflected in the model as "other" trips. Daily VMT for those trips for both scenarios were calculated for the other (non-work) trips. These data are presented in **Table 11**.

Table 11: No Project and Phase 3 (Buildout) Project VMT Characteristics and Estimates

VMT Characteristics	No Project	Project (Phase 3-Buildout)	Project-No Project	
			Absolute Change	Percent Change
Daily Work (Employees) VMT	240,569	242,180	1,611	0.67%
Daily Other (Patients and Visitors) VMT	73,798	74,724	926	1.25%
Total Daily VMT	314,367	316,904	2,537	0.81%
Number of Jobs	15,567	15,567	0	0.00%
Daily Work VMT/Job	15.45	15.56	0.1	0.67%
Daily Other VMT/Job	4.74	4.80	0.06	1.25%
Daily VMT/Job	20.19	20.36	0.16	0.81%

The VMT analysis shows that Phase 3 (Buildout) would increase the daily VMT for employees by 1,611 daily trips from 240,569 to 242,180 (or 0.67%) and for patients/visitors by 926 daily trips from 73,798 to 74,724 (or 1.25%). The total increase in daily VMT caused by the proposed Project would be 2,537 daily trips from 314,367 to 316, 904 (or 0.81%). Since Phase 3 would result in a net increase in daily VMT, a potentially significant impact would occur. Mitigation measures are required to reduce the VMT impact to a less than significant level. See Section 5: Transportation Demand Management (TDM) Plan for additional details.

The VMT analysis memo prepared by Hexagon Transportation Consultants is attached in **Appendix A**.

Based on the Hexagon VMT analysis memo, the proportion of project employee and patient/visitor VMT can be estimated from the total daily VMT results in Table 11. The daily work (employee) VMT accounts for approximately 76.4% of the total daily project VMT while the daily other (patients and visitors) VMT accounts for approximately 23.6% of the total daily project VMT. These proportions were used to determine the VMT reductions and mitigation plans for the employee and patient/visitor groups.

4.4 VMT Reduction and Mitigation Measures

Projects must propose measures to reduce project VMT or mitigate a CEQA transportation impact if identified. Projects may select a combination of measures from the four VMT reduction strategies described in the Transportation Analysis Handbook which include project characteristics, multimodal improvements, parking, and TDM. When project VMT exceeds the thresholds of significance, the project will need to mitigate its CEQA transportation impact.

The San José VMT Evaluation Tool was used to estimate the VMT reduction percentages for the employee and patient/visitor groups the project will generate. The project's proposed hospital and medical office land uses were converted into an equivalent office square footage (ITE Land Use 710 General Office Building) to determine the VMT mitigation plan within the San José VMT Evaluation Tool. Using trip generation rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual,*

11th Edition, an equivalency table was prepared by converting vehicle trips between the following land uses:

- ITE Land Use 610 – Hospital
- ITE Land Use 720 – Medical-Dental Office Building
- ITE Land Use 710 – General Office Building

Table 12 provides the equivalency analysis between these land uses which is predicated on the number of daily trips from hospital and MOB land use to general office land use.

Table 12: VMT Equivalency Between Hospital and Office Land Uses

LAND USE / DESCRIPTION	PROJECT SIZE		TOTAL DAILY TRIPS
Trip Generation Rates (ITE 11th Edition)			
Hospital [ITE 610]	Per	Beds	22.32
Medical-Dental Office Building [ITE 720]	Per	KSF	31.86
General Office Building [ITE 710]	Per	KSF	10.84
Hospital Only Equivalency Comparison			
Hospital Campus (including CUP)	419.00	Beds	9,352
Driveway Counts from Existing Beds (November 2023)	323.00	Beds	(5,104)
Net Additional Hospital Trips			4,248
Equivalent Trip Conversion General Office Building For VMT	391.86	KSF	4,248
Trip Delta			**0**
Medical Office Building Only Equivalency Comparison			
Medical Office Building	200.00	KSF	6,372
Net Additional MOB Trips			**6,372**
Equivalent Trip Conversion General Office Building For VMT	587.8	KSF	6,372
Trip Delta			**0**
Phase 3 (Buildout) Hospital + MOB Equivalency Comparison			
Hospital Campus (including CUP)	419.00	Beds	9,352
Driveway Counts from Existing Beds (November 2023)	323.00	Beds	(5,104)
Net Additional Hospital Trips			4,248
Medical Office Building	200.00	KSF	6,372
Buildout Project Vehicle Trips			**10,620**
Equivalent Trip Conversion General Office Building For VMT	979.66	KSF	10,620
Trip Delta			**0**

Outputs of the VMT analysis, VMT mitigation measures, and VMT reduction estimates for the project is provided in **Appendix B**.

4.5 Employee VMT Reductions for Daily Work VMT

The employee daily work VMT reduction percentages as per the San José VMT Evaluation Tool and the 2023 Transportation Analysis Handbook for the proposed Project (i.e., Phase 1 and Phase 3 – Buildout), for the measures identified above are shown in **Table 13**.

The following calculations were conducted to determine the employee daily, AM, and PM trip reductions from the VMT reduction strategies shown in Table 13.

- Phase 1 (Hospital Campus 419 Beds)
    - Applied VMT reduction percentages to the entire hospital campus (419 total beds which include existing and project beds). This trip reduction represents Employees, Patients, and Visitors.
    - Converted the trip reduction into Employees only trip reduction using the mode split developed in the Hexagon VMT analysis memo (Employee commute trips represent 76.4% of the total daily project VMT)
- Phase 3 (Hospital Campus 419 Beds plus MOB 200 KSF)
    - Applied VMT reduction percentages to the hospital campus (419 total beds which include existing and project beds) and the MOB. This trip reduction represents Employees, Patients, and Visitors.
    - Converted the trip reduction into Employees only trip reduction using the mode split developed in the Hexagon VMT analysis memo (Employee commute trips represent 76.4% of the total daily project VMT)

Table 13: Employee Net Trip Generation Estimates – With VMT Reductions

LAND USE / DESCRIPTION	PROJECT SIZE	TOTAL DAILY TRIPS	AM PEAK TRIPS			PM PEAK TRIPS		
			TOTAL	IN	/ OUT	TOTAL	IN	/ OUT
Trip Generation Rates (ITE 11th Edition)								
Hospital [ITE 610]	Per Beds	22.32	1.79	72%	/ 28%	1.69	33%	/ 67%
Medical-Dental Office Building [ITE 720]	Per KSF	31.86	2.68	81%	/ 19%	2.84	25%	/ 75%
Development: Campus Expansion(Good Samaritan) + MOB - Phase 3 (Buildout)								
Hospital Campus (including CUP)	419.00 Beds	9,352	750	540	/ 210	708	234	/ 474

Notes:

Land Uses assumed based on revised project description as per latest site plan.

Daily, AM, and PM trips based on average land use rates from the Institute of Traffic Engineers Trip Generation 11th Edition

ITE trip generation rates include employee and patient/visitor trips. The number employee only trips (commute end-use) for VMT analysis was determined by the proportion of Daily Work VMT/Job from Table 4 of the VMT Analysis Samaritan Hospital Expansion Memo by Hexagon (December 2023). Assumed 76.4% of Hospital Campus and Medical Office Building trips are generated from Commute-End Uses.

A 9% Mode Share Reduction from San Jose Transportation Analysis Handbook 2023 was applied since the project is located in an "Urban Low-Transit" area. Mode share reduction was applied to both Hospital and Medical Office Building.

VMT Reduction percentages were determined from the San Jose VMT Evaluation Tool and Transportation Analysis Handbook 2023. It should be noted that the VMT reduction percentages in the VMT Tool are an estimation and there is a range (overestimation/underestimaton) of how effective a TDM measure can reduce VMT.

Existing driveway count data was collected on 8 November 2022. Peak hour inbound and outbound volumes from driveway counts from all existing driveways are shown in the table above. Driveway Counts reflect 323 Existing Beds

Hospital – Phase 1

[PC04] Increase Employment Density

The corresponding VMT percent reduction for this measure is 0.8% based on the location, land use type, and size of the project. This VMT percent reduction was applied to the proposed Project (Hospital trips).

[PK01] Right-Size Parking Supply

The corresponding VMT percent reduction for this measure is 2.3% based on the number of parking spaces provided. This VMT percent reduction was applied to the proposed Project (Hospital trips).

[TP04] Provide Education, Marketing, and Outreach

The corresponding VMT percent reduction for this measure is 2.0%. Fifty-percent (50%) employee participation (administrative/office staff) was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital trips).

[TP08] Provide Flexible Work Schedule

The corresponding VMT percent reduction for this measure is approximately 0.8%. A 4-day/40-hour/1 week work schedule with 5% participation of total hospital staff (only Admin staff could participate) was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital trips).

[TP13] Provide Ride-Share Program

The corresponding VMT percent reduction for this measure is approximately 1.1%. A 2% minimum employee participation was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital trips).

Total Phase 1 Employee VMT Reduction

As identified earlier in **Section 4.2** & **4.3**, the total increase in Daily Work (Employee) VMT caused by the Phase 1 Project would be 0.02%, which corresponds to 47 employee daily trips. This is a potentially significant transportation impact, which will be fully mitigated through implementation of the measures above. As shown in **Figure 13**Error! Reference source not found. above, with implementation of the measures for Phase 1 Conditions, a potential VMT trip reduction of 7% or 503 employee daily trips will be achieved, which is 456 employee daily trips more than the required mitigation.

Hospital + MOB – Phase 3 (Buildout)

[PC04] Increase Employment Density

The corresponding VMT percent reduction for this measure is 1.9% based on the location, land use type, and size of the project. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI01] Provide Bike and Micro-mobility Network Improvements:

In coordination with City staff, the Project will construct a road diet and traffic calming features along Samaritan Drive between Samaritan Court to Samaritan Place to enhance multi-modal access and safety. This improvement would reduce the number of vehicle travel lanes from 5-lanes to 3-lanes, provide curb extensions, ADA compliant ramps, and protected Class VI bikeways beyond the Project frontage.

The corresponding VMT percent reduction for this measure is approximately 0.02%. A 20% bike access improvement is assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI02] Provide Network Connectivity Design Improvements

The corresponding VMT percent reduction for this measure is approximately 3%. The project will be increasing multimodal connectivity by providing an additional bike and pedestrian crossing across Samaritan Drive with the proposed intersection and roadway improvements along the project frontage. An increase from four (4) to five (5) pedestrian crossings within ¼ mile of the project along Samaritan Drive was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI03] Provide Transit Network Improvements

In coordination with City and VTA staff, the Project will construct new bus shelters at the transit stop along Samaritan Dr.

The corresponding VMT percent reduction for this measure is approximately 1.6%. A 20% increase in transit accessibility was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI04] Provide Residential Street Improvements

In coordination with City and VTA staff, the Project will install a roundabout at the Samaritan Pl / Samaritan Drive intersection. This improvement would consist of new striping, bike lane transitions, RRFB crosswalks, shorter pedestrian crossings with refuge medians, and enhanced bus mobility beyond the Project frontage.

The corresponding VMT percent reduction for this measure is approximately 2.0%, as per Table 3.1 of '*Moving Cooler. An Analysis of Transportation Strategies for Reducing Greenhouse Gas Emissions' by Cambridge Systematics,* Inc, *2009*. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI05] Provide Pedestrian Network Improvements

In coordination with City staff, the Project will construct a road diet and traffic calming features along Samaritan Drive between Samaritan Court to Samaritan Place to enhance multi-modal access and safety. This improvement would reduce the number of vehicle travel lanes from 5-lanes to 3-lanes, provide curb extensions, ADA compliant ramps, and protected Class VI bikeways beyond the Project frontage.

The corresponding VMT percent reduction for this measure is approximately 2.0% as per Table 3.1 of '*Moving Cooler. An Analysis of Transportation Strategies for Reducing Greenhouse Gas Emissions' by Cambridge Systematics,* Inc, *2009*. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[PK01] Right-Size Parking Supply

The corresponding VMT percent reduction for this measure based on the number of parking spaces provided is approximately 3.3%. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[PK02] Provide Bike Parking Facilities

The corresponding VMT percent reduction for this measure is approximately 1.1% for end-of-trip bike facilities' that will be provided by the proposed Project. Examples of end-of-trip include bike parking,

bicycle lockers, showers, and personal lockers. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[TP04] Provide Education, Marketing, and Outreach

The corresponding VMT percent reduction for this measure is approximately 2.0%. Fifty-percent (50%) employee participation was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[TP08] Provide Flexible Work Schedule

The corresponding VMT percent reduction for this measure is approximately 0.8%. A 4-day/40-hour/1 week work schedule with 5% participation of total hospital staff (only Admin staff for Hospital could participate) was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[TP10] Provide Ride-Share Program

The corresponding VMT percent reduction for this measure is approximately 1.1%. A 2% minimum employee participation was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

Total Phase 3 Employee VMT Reduction

As identified earlier in Section 4.2 & 4.3, the total increase in Daily Work (Employee) VMT caused by the Phase 3 (Buildout) Project would be 0.67%, which corresponds to 1,611 employee daily trips. This is potentially significant transportation impact, which will be fully mitigated through implementation of the measures above. As shown in **Table 13** above, with implementation of the measures for Phase 3 (Buildout) Conditions, a potential VMT trip reduction of 18.82% or 2,269 employee daily trips will be achieved, which is 658 employee daily trips more than the required mitigation.

4.6 Patient & Visitor VMT Reductions for Daily Other VMT

The patient and visitor daily other VMT/job reduction percentages as per the San José VMT Evaluation Tool and the 2023 Transportation Analysis Handbook for the proposed Project (i.e., Phase 1 and Phase 3 – Buildout), for the measures identified above are shown in **Table 14**.

The following calculations were conducted to determine the patient and visitor daily, AM, and PM trip reductions from the VMT reduction strategies shown in Table 14.

- Phase 1 (Hospital Campus 419 Beds)
    - Applied VMT reduction percentages to the entire hospital campus (419 total beds which include existing and project beds). This trip reduction represents Employees, Patients, and Visitors.
    - Converted the trip reduction into Patient & Visitor only trip reduction using the mode split developed in the Hexagon VMT analysis memo (Patient & Visitor commute trips represent 23.6% of the total daily project VMT)
- Phase 3 (Hospital Campus 419 Beds plus MOB 200 KSF)
    - Applied VMT reduction percentages to the hospital campus (419 total beds which include existing and project beds) and the MOB. This trip reduction represents Employees, Patients, and Visitors.

- Converted the trip reduction into Patient & Visitor only trip reduction using the mode split developed in the Hexagon VMT analysis memo (Patient & Visitor commute trips represent 23.6% of the total daily project VMT)

Table 14: Patient & Visitor Net Trip Generation Estimates – With VMT Reductions

LAND USE / DESCRIPTION	PROJECT SIZE	TOTAL DAILY TRIPS	AM PEAK TRIPS			PM PEAK TRIPS		
			TOTAL	IN	/ OUT	TOTAL	IN	/ OUT
Trip Generation Rates (ITE 11th Edition)								
Hospital [ITE 610]	Per Beds	22.32	1.79	72%	/ 28%	1.69	33%	/ 67%
Medical-Dental Office Building [ITE 720]	Per KSF	31.86	2.68	81%	/ 19%	2.84	25%	/ 75%
Development: Campus Expansion(Good Samaritan) + MOB - Phase 3 (Buildout)

Notes:

Land Uses assumed based on revised project description as per latest site plan.

Daily, AM, and PM trips based on average land use rates from the Institute of Traffic Engineers Trip Generation 11th Edition

ITE trip generation rates include employee and patient/visitor trips. The number patient only trips (visitor end-use) for VMT analysis was determined by the proportion of Daily Other VMT/Job from Table 4 of the VMT Analysis Samaritan Hospital Expansion Memo by Hexagon (December 2023). Assumed 23.6% of Hospital Campus and Medical Office Building trips are generated from Visitor-End Uses.

A 9% Mode Share Reduction from San Jose Transportation Analysis Handbook 2023 was applied since the project is located in an "Urban Low-Transit" area. Mode share reduction was applied to both Hospital and Medical Office Building.

VMT Reduction percentages were determined from the San Jose VMT Evaluation Tool and Transportation Analysis Handbook 2023. It should be noted that the VMT reduction percentages in the VMT Tool are an estimation and there is a range (overestimation/underestimaton) of how effective a TDM measure can reduce VMT.

Existing driveway count data was collected on 8 November 2022. Peak hour inbound and outbound volumes from driveway counts from all existing driveways are shown in the table above. Driveway Counts reflect 323 Existing Beds

Hospital – Phase 1

[PK01] Right-Size Parking Supply

The corresponding VMT percent reduction for this measure is 2.3% based on the number of parking spaces provided. This VMT percent reduction was applied to the proposed Project (Hospital trips).

[TP04] Provide Education, Marketing, and Outreach

The corresponding VMT percent reduction for this measure is 2.0%. Fifty-percent (50%) visitor/patient participation was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital trips).

Total Phase 1 Patient & Visitor VMT Reduction

As identified earlier in **Section 4.2** & **4.3**, the total increase in Daily Other (Patients and Visitors) VMT caused by the Phase 1 Project would be 0.13%, which corresponds to 96 patients/visitor daily trips. This is a potentially significant transportation impact, which will be fully mitigated through implementation of the measures above. As shown in **Table 14** above, with implementation of the measures for Phase 1 Conditions, a potential VMT trip reduction of 4.3% or 96 patients/visitor daily trips will be achieved, which would equal the required mitigation.

Hospital + MOB – Phase 3 (Buildout)

[MI01] Provide Bike and Micro-mobility Network Improvements:

In coordination with City staff, the Project will construct a road diet and traffic calming features along Samaritan Drive between Samaritan Court to Samaritan Place to enhance multi-modal access and safety. This improvement would reduce the number of vehicle travel lanes from 5-lanes to 3-lanes, provide curb extensions, ADA compliant ramps, and protected Class VI bikeways beyond the Project frontage.

The corresponding VMT percent reduction for this measure is approximately 0.02%. A 20% bike access improvement is assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI02] Provide Network Connectivity Design Improvements

The corresponding VMT percent reduction for this measure is approximately 3%. The project will be increasing multimodal connectivity by providing an additional bike and pedestrian crossing across Samaritan Drive with the proposed intersection and roadway improvements along the project frontage. An increase from four (4) to five (5) pedestrian crossings within ¼ mile of the project along Samaritan Drive was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI03] Provide Transit Network Improvements

In coordination with City and VTA staff, the Project will construct new bus shelters at the transit stop along Samaritan Dr.

The corresponding VMT percent reduction for this measure is approximately 1.6%. A 20% increase in transit accessibility was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI04] Provide Residential Street Improvements

In coordination with City and VTA staff, the Project will install a roundabout at the Samaritan Pl / Samaritan Drive intersection. This improvement would consist of new striping, bike lane transitions, RRFB crosswalks, shorter pedestrian crossings with refuge medians, and enhanced bus mobility beyond the Project frontage.

The corresponding VMT percent reduction for this measure is approximately 2.0%, as per Table 3.1 of '*Moving Cooler. An Analysis of Transportation Strategies for Reducing Greenhouse Gas Emissions' by Cambridge Systematics,* Inc, *2009*. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[MI05] Provide Pedestrian Network Improvements

In coordination with City staff, the Project will construct a road diet and traffic calming features along Samaritan Drive between Samaritan Court to Samaritan Place to enhance multi-modal access and safety. This improvement would reduce the number of vehicle travel lanes from 5-lanes to 3-lanes, provide curb extensions, ADA compliant ramps, and protected Class VI bikeways beyond the Project frontage.

The corresponding VMT percent reduction for this measure is approximately 2.0% as per Table 3.1 of '*Moving Cooler. An Analysis of Transportation Strategies for Reducing Greenhouse Gas Emissions' by Cambridge Systematics,* Inc, *2009*. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[PK01] Right-Size Parking Supply

The corresponding VMT percent reduction for this measure based on the number of parking spaces provided is approximately 3.3%. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[PK02] Provide Bike Parking Facilities

The corresponding VMT percent reduction for this measure is approximately 1.1% for end-of-trip bike facilities' that will be provided by the proposed Project. Examples of end-of-trip include bike parking, bicycle lockers, showers, and personal lockers. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

[TP04] Provide Education, Marketing, and Outreach

The corresponding VMT percent reduction for this measure is approximately 2.0%. Fifty-percent (50%) visitor/patient participation was assumed for this measure. This VMT percent reduction was applied to the proposed Project (Hospital + MOB trips).

Total Phase 3 Patient & Visitor VMT Reduction

As identified earlier in Section 4.2 & 4.3, the total increase in Daily Other (Patients and Visitors) VMT caused by the Phase 3 (Buildout) Project would be 1.25%, which corresponds to 926 visitor daily trips. This is potentially significant transportation impact, which is partially mitigated through implementation of measures above. As shown in **Table 14** above, with implementation of the measures for Phase 3 (Buildout) Conditions, a potential VMT trip reduction of 15.02% or 562 visitor daily trips will be achieved, which is 364 visitor daily trips less than the required mitigation; however, the combination of TDM measures and reduction in trip for employees, patients, and visitors reduces the VMT impact to less than significant levels.

Overall Total Phase 3 Employee, Patient, & Visitor VMT Reduction

As shown in **Table 13** and **Table 14** above, with implementation of the measures for Phase 3 (Buildout) Conditions, a potential reduction of 2,831 total daily trips (2,269 employee + 562 patient & visitor) will be achieved.

The overall reduction of 2,537 daily trips required to mitigate the Project's Phase 3 (Buildout) VMT impact is achieved by combining the daily trips reduction for employees and patients/visitors and the Phase 3 (Buildout) VMT impact would be reduced to less than significant level with mitigation incorporated.

5. TRANSPORTATION DEMAND MANAGEMENT (TDM) PLAN

The City's Transportation Demand Management (TDM) Program establishes a framework for new development Projects to provide alternative mobility options that residents, employees, and visitors can rely on. The goals of the TDM Program are to:

- Increase sustainable travel options for population of new Projects and surrounding neighborhoods;
- Monitor Projects' progress toward advancing the City's vehicle miles traveled (VMT) reduction goals; and
- Streamline the Transportation Analysis (TA) process for Projects.

As identified earlier in **Section 4.2** & **4.3**, the VMT analysis shows that Phase 1of the proposed Project would increase the daily VMT for employees by 47 (or 0.02%) and patients/visitors by 96 (or 0.13%). The total increase in daily VMT caused by Phase 1 of the proposed Project would be 143 (or 0.05%).

For Phase 3 (Buildout), the VMT analysis shows that the proposed Project would increase the daily VMT for employees by 1,611 (or 0.67%) and patients/visitors by 926 (or 1.25%). The total increase in daily VMT caused by the proposed Project would be 2,537 (or 0.81%).

The Project will implement a series of TDM measures as part of the VMT mitigation plan during Phase 1 and Phase 3. The TDM measures identified as part of Phase 1 will continue during Phase 2.

The City's 2023 Transportation Analysis Handbook defines a Project's TDM requirement as a TDM Point Target, to be met by committing to a package of TDM measures. San José Municipal Code Section 20.90.060 categorizes land uses into four categories: 'Home-End Uses,' 'Commute-End Uses,' 'Visit-End Uses,' and 'Other Uses.' These categories are based on the type of travel and/or parking demand each respective use generates, and the type(s) of TDM measures most effective in reducing vehicle trip demand. TDM point target for Projects within each category is listed below:

- Home-End Uses – 25 Points
- Commute-End Uses – 25 Points
- Visit-End Uses – 25 Points
- Other Uses – 5 Points

The 2023 Transportation Analysis Handbook defines these categories as follows:

- **Home-End Uses** are uses whose parking demand and VMT is largely determined by the vehicle ownership rates and use frequency among the residents to these uses. TDM measures for these uses focus on reducing automobile ownership rates among Project's residents.
- **Commute-End Uses** are uses whose parking demand and VMT is largely determined by the volume of commuters driving to jobs generated by these uses. TDM measures for these uses focus on reducing drive-alone commuting to, and automobile parking demand, at Project.
- **Visit-End Uses** are uses whose parking demand and VMT are largely determines by the volume of visitors driving to access goods, services, and social connection provided through these uses. TDM measures for these uses focus on increasing non-drive-alone visitor access to a Project.

- **Other Uses** are uses that typically generate moderate or minimal parking demand for personal vehicles and/or are typically minimally responsive to TDM measures.

Both phases of the proposed Project (i.e., Phase 1, Phase 2, and Phase 3 (Buildout)) fall under the 'Commute-End Uses' land use category for the jobs generated. Therefore, a TDM Plan was prepared for each of the Project phases.

5.1 TDM Plan

The following existing TDM measures are already in place at the Good Samaritan Hospital. Because these measures will be extended to any new staff and visitors and be offset in the overall TDM, full hospital operations was included in the TDM analysis. The hospital does not currently have metrics for these measures:

- TP04 - Provide Education, Marketing and Outreach
- TP08 – Flexible Work Schedule (by nature of your work, there are varied shifts between departments

The TDM Plan proposed for the Hospital (Phase 1) is shown in **Table 15.** The TDM Plan proposed for the Hospital (Phase 2) is shown in **Table 16**. The Hospital Plus Medical Office Building (Phase 3) TDM plan is shown in **Table 17**:

Phase 1 TDM

Table 15: TDM Plan – Phase 1

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
Commute-End Use (Hospital)	Phase 1	Parking	[PK01] Right-Size Parking Supply	Under Phase 1, the Project proposes up to 1,205 total on-site shared vehicle parking spaces for the Hospital. The parking ratio for the Hospital would equal 1.24 (1,205 spaces / 971 KSF of total Hospital). This Project parking ratio is less than the 2.25 parking ratio from ITE Parking Generation Manual rates. Therefore, the Project would be eligible for TDM point credits as per Transportation Analysis 2023 Handbook Pg. 119 based on the parking ratio.	20
	Phase 1	Programmatic TDM	[TP02] Provide Bike Share Stations	The Project proposes to provide: • Provide at least six (6) shared bikes/e-bikes on site via Bay Wheels or a dedicated fleet on-site for use by Project residents/employees and the general public. Include wayfinding signage. • Provide at least one (1) cargo bike and one (1) collapsible	2

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
				shopping/utility cart on site for use by Project residents/employees. Include wayfinding signage.	
	Phase 1	Programmatic TDM	[TP04] Provide Education, Marketing, and Outreach	The Project proposes to provide: • TDM promotions such as targeted messaging and communication campaigns, incentives, giveaways, and competitions. • Welcome packets with information about nearby amenities, travel options, and available transportation benefits and incentives.	2
	Phase 1	Programmatic TDM	[TP13] Provide Ride-Share Program	The Project proposes to provide a ride-matching service to match Project employees interested in carpooling or vanpooling who have similar commute patterns. A 2% participation rate was assumed.	1
CEU Potential TDM Point Total (25 points minimum)					**25**

As shown in **Table 15** above, the Phase 1 Project which includes the Hospital, satisfies the TDM Point Target with 25 points.

Phase 2 TDM

Table 16: TDM Plan –Phase 2

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
Commute-End Use (Hospital)	Phase 2	Parking	[PK01] Right-Size Parking Supply	Under Phase 2, The Project proposes up to 1,494 total on-site shared vehicle parking spaces for the Hospital. The parking ratio for the Hospital would equal 2.36 (1,494 spaces / 633 KSF of total Hospital).The Project would be eligible for TDM point credits as per Transportation Analysis 2023 Handbook Pg. 119 based on the parking ratio.	16
	Phase 2	Programmatic TDM	[TP02] Provide Bike Share Stations	The Project proposes to provide: • Provide at least six (6) shared bikes/e-bikes on site via Bay Wheels or a	2

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
				dedicated fleet on-site for use by Project residents/employees and the general public. Include wayfinding signage. • Provide at least one (1) cargo bike and one (1) collapsible shopping/utility cart on site for use by Project residents/employees. Include wayfinding signage.	
	Phase 2	Programmatic TDM	[TP04] Provide Education, Marketing, and Outreach	The Project proposes to provide: • TDM promotions such as targeted messaging and communication campaigns, incentives, giveaways, and competitions. • Welcome packets with information about nearby amenities, travel options, and available transportation benefits and incentives.	2
	Phase 2	Programmatic TDM	[TP13] Provide Ride-Share Program	The Project proposes to provide a ride-matching service to match Project employees interested in carpooling or vanpooling who have similar commute patterns. A 2% participation rate was assumed.	1
CEU Potential TDM Point Total (25 points minimum)					**21**

As shown in **Table 16**, the addition of new surface parking in Phase 2 lowers the effectiveness of "Right-Size Vehicle Parking Supply" TDM measure of Phase 1 TDM Plan into Phase 2. As a result, the total CEU potential TDM point value for Phase 2 would be 21-points and would be short by 4-points to make the 25-point minimum requirement. To meet the 25-point minimum requirement, the following Phase 3 TDM measures are required;

- [MI01] Provide Bike and Micro-mobility Network Improvements
  - This measure will achieve a potential point value of 2 points.
- [MI03] Provide Transit Network Improvements
  - This measure will achieve a potential point value of 1 point.
- [MI05] Provide Pedestrian Network Improvements (2 points)
  - This measure will achieve a potential point value of 2 points.

However, if the Project reduces the number of parking spaces provided during Phase 2 to a parking ratio of 2.0 or less, then the Project meets the 25-point minimum requirement and TDM MI01, MI03, and

MI05 would not be required under Phase 2. It should be noted that Phase 3 would still meet the 25-point minimum requirement, even if the above measures are required during Phase 2.

The [MI01] Provide Bike and Micro-mobility Network Improvements (Samaritan Dr Road Diet) will tie-in with existing geometry at the Samaritan Dr/Samaritan Pl intersection during Phase 2, if the Project reduces the number of parking spaces provided during Phase 2 to a parking ratio of 2.0 or less.

Phase 3 TDM

Table 17: TDM Plan – Hospital (419 Beds) + Medical Office Building (200 KSF) - Phase 3 (Buildout)

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
	Phase 3	Multimodal Network Improvements	[MI01] Provide Bike and Micro-mobility Network Improvements	In coordination with City staff, the Project will construct a road diet and traffic calming features along Samaritan Drive between Samaritan Court to Samaritan Pl to enhance multi-modal access and safety. This improvement would reduce the number of vehicle travel lanes from 5-lanes to 3-lanes, provide curb extensions, ADA compliant ramps, and protected Class VI bikeways beyond the Project frontage. The project will implement on-street parking protected Class IV bike lane on the southside of Samaritan Drive (eastbound) between Samaritan Court and Samaritan Place. Up to $2 per square foot of non-residential gross floor area from the Project would be contributed for up to 1 TDM point credits: $2 per SF * 500,000 SF added Hospital + MOB = $1,000,000	2
	Phase 3	Multimodal Network Improvements	[MI03] Provide Transit Network Improvements	In coordination with City and VTA staff, the Project will construct new bus shelters at the transit stop along Samaritan Dr. As part of the Samaritan Drive Road Diet, the existing bus stops along the project frontage will be evaluated for appropriate location that best serves the Hospital and the adjacent uses. A suggested location could be between Driveway #3 and #4, with the ultimate location determined by the City Engineer or their designee as part of Samaritan Drive Street improvement plans. Up to $1 per square foot of non-residential gross floor area from the Project would be contributed for up to 1	1

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
Commute-End Use (Hospital+ MOB)				TDM point credits: $1 per SF * 500,000 SF added Hospital + MOB = $500,000	
	Phase 3	Multimodal Network Improvements	[MI04] Provide Residential Street Improvements	In coordination with City and VTA staff, the Project will install a roundabout at the Samaritan Pl / Samaritan Drive intersection. This improvement would consist of new striping, bike lane transitions, RRFB crosswalks, shorter pedestrian crossings with refuge medians, and enhanced bus mobility beyond the Project frontage. Up to $3 per square foot of non-residential gross floor area from the Project would be contributed for up to 3 TDM point credits: $3 per SF * 500,000 SF added Hospital + MOB = $1,500,000	3
	Phase 3	Multimodal Network Improvements	[MI05] Provide Pedestrian Network Improvements	In coordination with City staff, the Project will construct a road diet and traffic calming features along Samaritan Drive between Samaritan Court to Samaritan Pl to enhance multi-modal access and safety. This improvement would reduce the number of vehicle travel lanes from 5-lanes to 3-lanes, provide curb extensions, ADA compliant ramps, and protected Class VI bikeways beyond the Project frontage. The location of the mid-block pedestrian crossing will relocate with the Samaritan Drive Road Diet, which is suggested west of proposed Driveway #3. The ultimate location of the mid-block pedestrian crossing will be determined by the City Engineer or their designee as part of the Samaritan Drive Street improvements. The project may need to implement a bulbout and/or Rectangular Rapid Flashing Beacons (RRFB's) at the crosswalk. Up to $1 per square foot of non-residential gross floor area from the Project would be contributed for up to 1 TDM point credits: $1 per SF * 500,000 SF added Hospital + MOB = $500,000	1

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
	Phase 3	Parking	[PK01] Right-Size Parking Supply	The Project proposes up to 2,179 total on-site shared vehicle parking spaces under Phase 3 Buildout Conditions. The Project's total parking ratio for the site would equal 2.29 (2,179 spaces / 950 KSF of total Hospital & MOB). This Project parking ratio is less than the 2.46 parking ratio from ITE Parking Generation Manual rates. Therefore, the Project would be eligible for TDM point credits as per Transportation Analysis 2023 Handbook Pg. 119 based on the parking ratio.	18
	Phase 3	Parking	[PK02] Provide Bike Parking Facilities	The Project proposes to provide: • Short-term and long-term parking at 2 times as many on-site bicycle parking spaces as required by zoning. Wayfinding signage included. • Showers, changing rooms, lockers at 2 times as many on-site facilities as required by zoning. Wayfinding signage included.	1
	Phase 3	Programmatic TDM	[TP02] Provide Bike Share Stations	The Project proposes to provide: • Provide at least six (6) shared bikes/e-bikes on site via Bay Wheels or a dedicated fleet on-site for use by Project residents/employees and the general public. Include wayfinding signage. • Provide at least one (1) cargo bike and one (1) collapsible shopping/utility cart on site for use by Project residents/employees. Include wayfinding signage.	2
	Phase 3	Programmatic TDM	[TP04] Provide Education, Marketing, and Outreach	The Project proposes to provide: • TDM promotions such as targeted messaging and communication campaigns, incentives, giveaways, and competitions. • Welcome packets with information about nearby amenities, travel options, and available transportation benefits and incentives.	2

Land Use Category	Project Phase	TDM Category	TDM Measure [ID]	TDM Description	Potential Point Value
	Phase 3	Programmatic TDM	[TP13] Provide Ride-Share Program	The Project proposes to provide a ride-matching service to match Project employees interested in carpooling or vanpooling who have similar commute patterns. A 2% participation rate was assumed.	1
CEU Potential TDM Point Total (25 points minimum)					**31**

As shown in **Table 17** above, the Phase 3 (Buildout) Project which includes the Hospital + MOB, also satisfies the TDM Point Target with 31 points.

5.2 TDM Plan Compliance and Monitoring

Projects including a TDM plan as a Condition of Approval are required to implement the proposed TDM measures for the life of the Project and fulfill ongoing compliance and monitoring requirements. As per the 2023 Transportation Analysis Handbook, Projects must execute and record a Covenant and Agreement that the approved TDM Plan as required by the TDM Program, and the TDM measures contained therein, have been provided and will be maintained throughout the life of the Project.

The Project is classified as Level 2 (large Project) and would be subject to annual monitoring. Projects that are subject to annual monitoring must submit a completed TDM Compliance Form, a completed TDM Monitoring Report, and associated administrative fees to the City Department of Transportation every year. A TDM Monitoring Report must include the following three (3) components:

- ***Project Mode Share***
  For commute-end and visit-end Project uses, their drive-alone mode share target is 25% below the drive-alone mode share of trips generated by the surrounding neighborhood before the Project was occupied. The TDM Monitoring Report must compare the Project's drive-alone mode share with that of the surrounding neighborhood to inform the effectiveness of the Project's TDM Plan. The mode share of the surrounding neighborhood would be derived from available census data or Santa Clara County Congestion Management Plan data.

- ***Project Trip Cap***
  If the Project proposes to include at least one programmatic TDM measure in the Project description or as mitigation measures to address its CEQA transportation impacts, the Project must demonstrate that its VMT is below the relevant thresholds after the opening day. The Trip cap VMT threshold will be a combination of the employee and patient/visitor trips.

- ***Evaluation of TDM Plan***
  If the TDM Monitoring Report finds that the Project does not meet the mode share target and the trip cap as indicated in the TDM Plan, the Project is required to work with the City to evaluate how the Project has been implementing existing measures, identify more effective ways to implement the existing measures, and recommend changes to the Project's TDM Plan for the upcoming year as needed – the Project's mode share, the Project's trip cap (CEQA), and the evaluation of the Project's TDM Plan.

As per the San Jose Transportation Analysis Handbook dated April 2023, the first submission of the TDM Compliance Form and the TDM Monitoring Report is due within 30 calendar days of the 18-month anniversary of the issuance of the initial Certificate of Occupancy. The proposed Project will submit a completed TDM Compliance Form, a completed TDM Monitoring Report, and associated administrative fees to the City Department of Transportation every year.

6. LTA INTERSECTION OPERATIONS

This chapter describes the local transportation analysis including intersection operations analysis for existing, background, Project, and cumulative conditions, intersection vehicle queuing analysis, and mitigation measures for any adverse effects to intersection level of service caused by the Project.

6.1 Existing Conditions Analysis

Weekday AM and PM peak hour intersection turning movement counts were collected for all study intersections during May 2022, except for study intersection of S. Bascom Avenue. / East Mozart Avenue., which was collected during November 2022. These counts included vehicles, bicycles, and pedestrians and were collected when local schools were in session and the weather was fair. Peak hour volumes during each intersection's respective peak were conservatively used in this analysis, therefore, some volume imbalances were observed between study intersections. Where imbalances occurred, volumes were conservatively increased slightly above what was counted in the field. Existing intersection lane geometry and peak hour turning movement volumes are shown in **Figure 15** and **Figure 16** respectively.

Traffic operations were evaluated at all study intersections under Existing Conditions, and the results of the analysis are presented in **Table 18**.

Table 18: Intersection Operations Summary of Existing Conditions

#	Intersection	LOS Criteria	Existing Conditions							
			AM Peak				PM Peak			
			LOS	Delay (Sec)	v/c Ratio	Crit. Delay (sec)	LOS	Delay (Sec)	v/c Ratio	Crit. Delay (sec)
1	S Bascom Ave / Camden Ave*	E	D-	53.4	0.766	56.6	D	48.2	0.685	46.2
2	S Bascom Ave / White Oaks Ave	D	C	25.3	0.308	23.3	C+	21.9	0.355	19.2

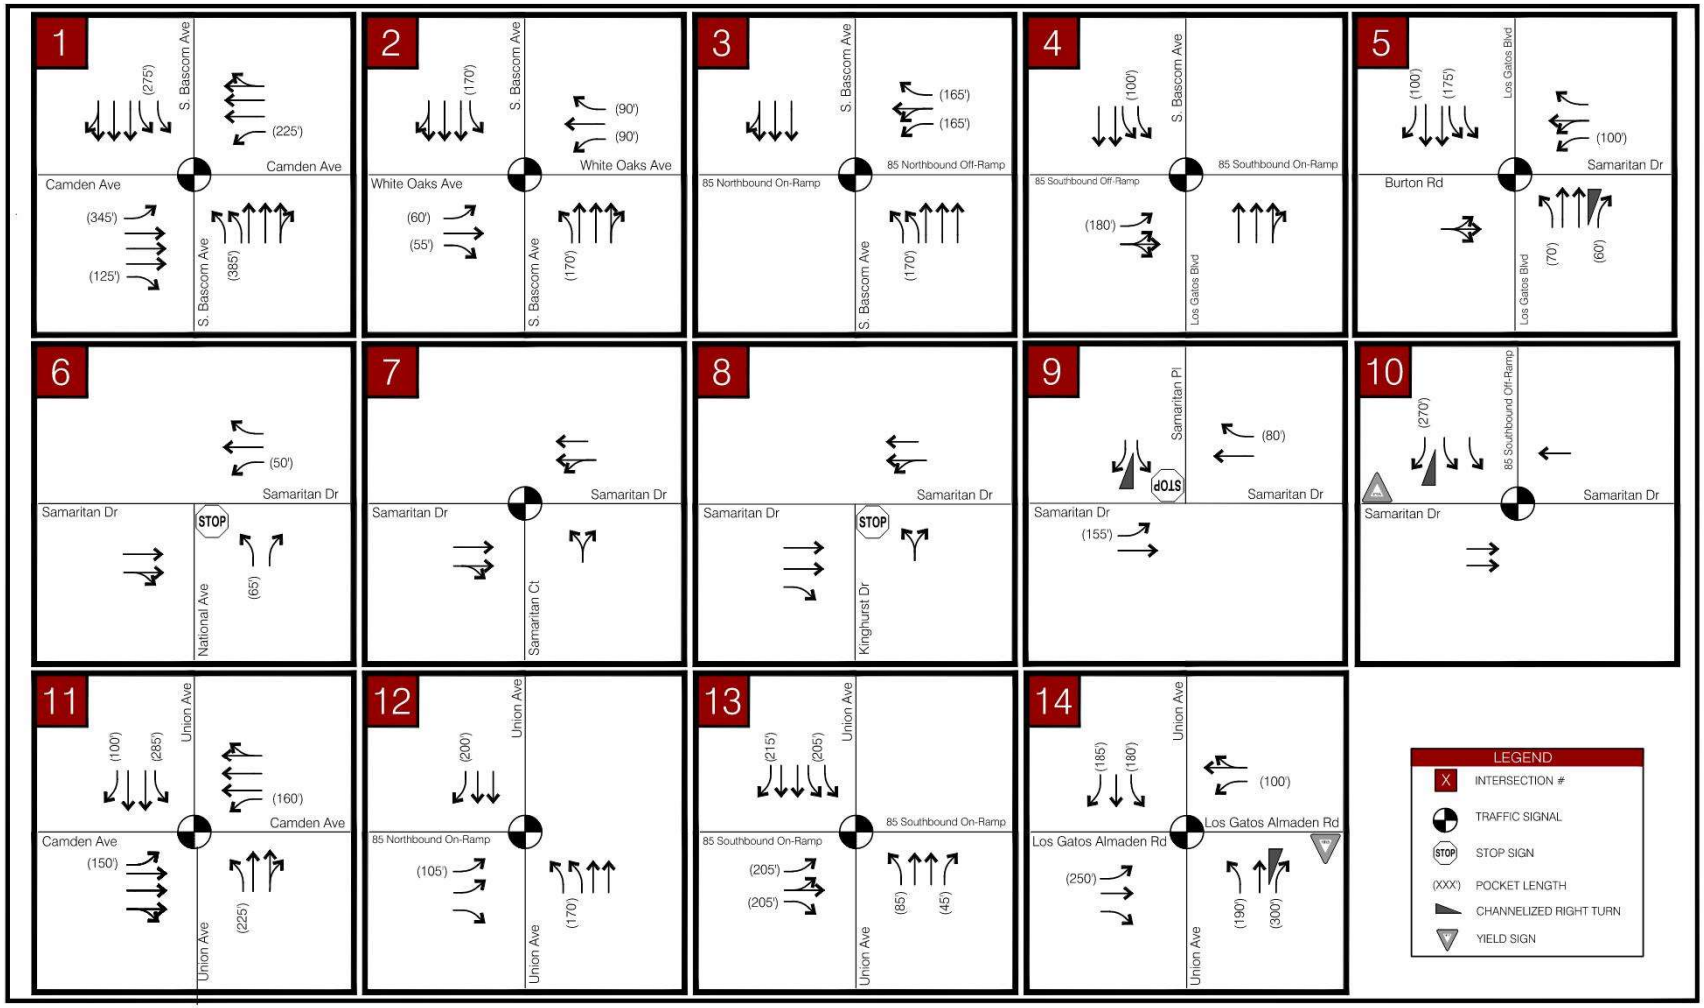
* - CMP Intersection										

San José and Los Gatos Intersections LOS Results

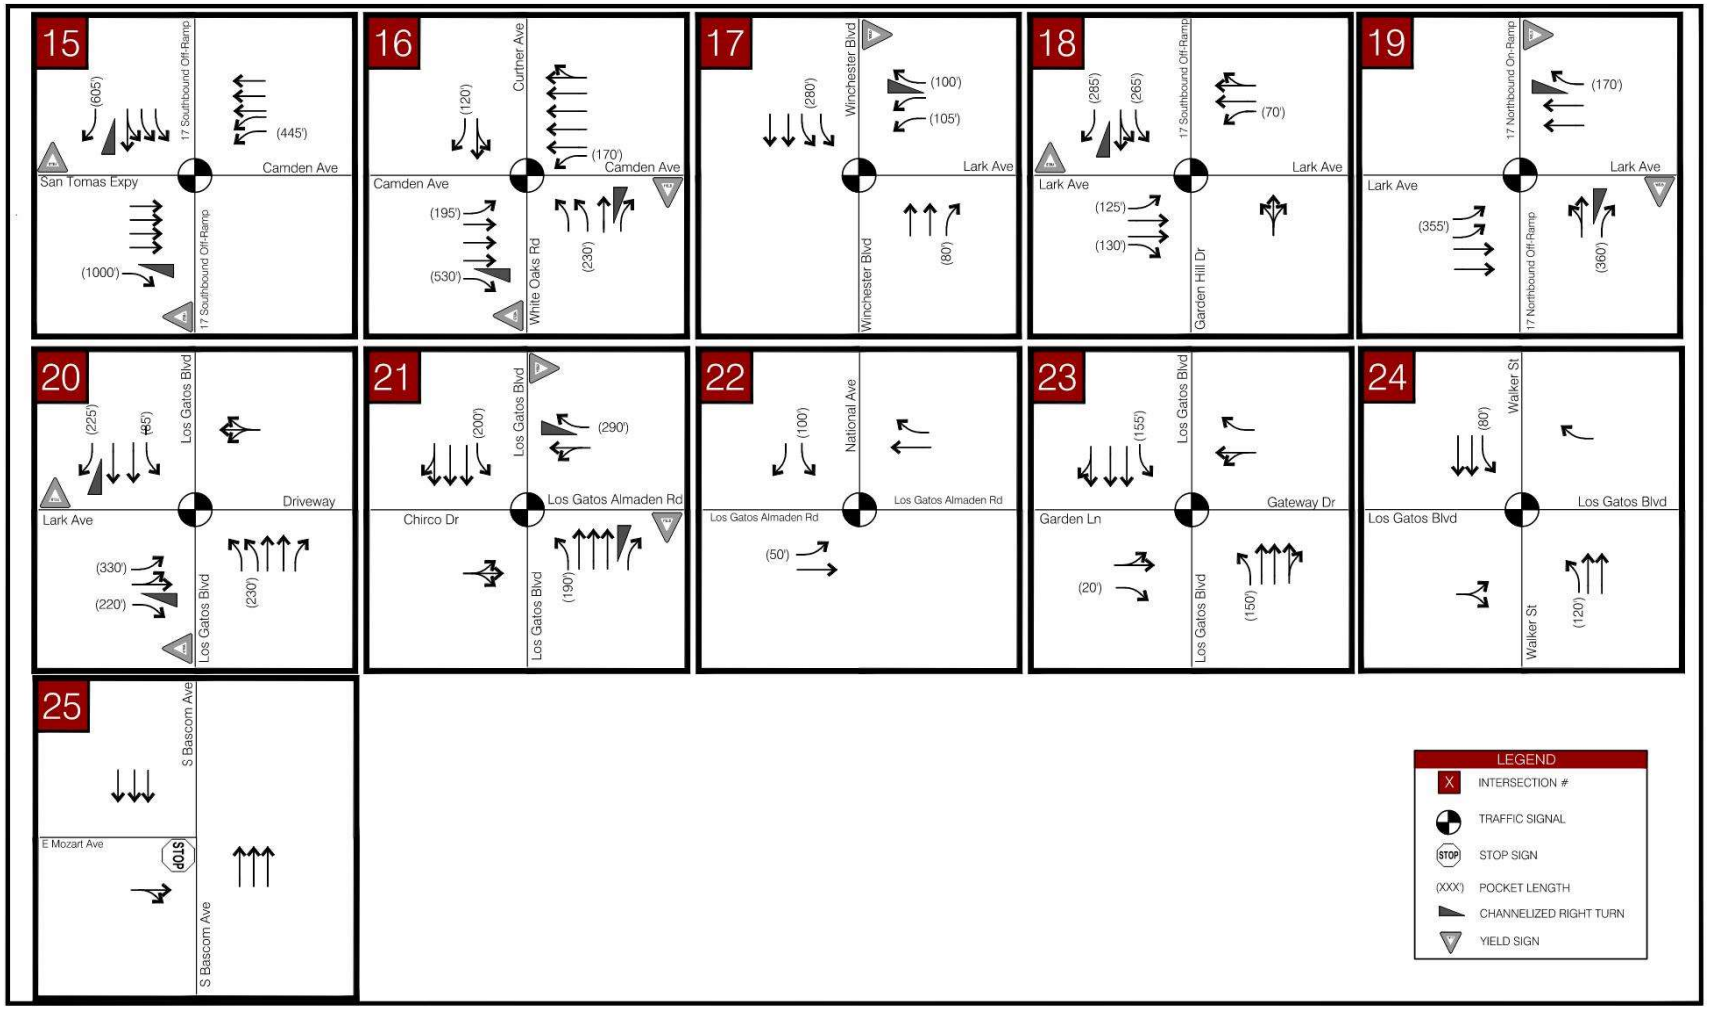
All study intersections within the City of San José and Town of Los Gatos, operates at an acceptable LOS (LOS D or better) during both AM and PM peak hours under Existing Conditions.



CMP Intersections LOS Results

All CMP intersections within the City of San José, City of Campbell, and Town of Los Gatos, operate at an acceptable LOS (E or better) during both AM and PM peak hours under Existing Conditions, except for the following CMP intersection within Town of Los Gatos, which operates at unacceptable LOS during the AM peak hour:

- Int.#15 - SR 17 Southbound Off-Ramp / Camden Avenue – San Thomas Expy.
    - LOS F (Delay 90.2, V/C 1.294, Critical Delay 200.4)



Intersection turning-movement counts and TRAFFIX output sheets are provided in the **Appendix C** and **Appendix D,** respectively.

6.2 Background Conditions Analysis

As identified earlier in Section 1.1 of the report, under existing conditions, the Good Samaritan Hospital has 323 Operational Beds, and the hospital is currently licensed for 404 beds. Therefore, the background baseline traffic volumes were estimated by 1) adding trips generated by Good Samaritan Hospital if it were to operate at existing allowed capacity of 404 Licensed Beds, 2) adding traffic generated from other approved Projects near the Project study area which were obtained from the City of San José Approved Trip Inventory (ATI) database, and 3) adding traffic generated from other approved Projects near the Project study area which were obtained from the Town of Los Gatos and City of Campbell.

The additional Good Samaritan Hospital trips were distributed using the approved Project trip distribution shown in **Figure 12**. The ATI traffic volumes for approved Projects from the City of San José include the following local Projects:

- PDC15-028 (RET) (3-17945) Samaritan Medical Campus Development Plan*
- PDC20-113676 (MU) (3-13401) Cambrian Park Mixed-Use
- PDC20-114321 (MU) (3-04613) 3090 S Bascom Avenue
- PDC20-121628 (RET) (3-03484) 3229 S Bascom Avenue Preschool
- PDC19-130780 (RES) (3-10682) Campbell Union High School District Residential
- PDC21-026967 (RES) (3-25710) 1975 Cambrianna Drive Residential
- PDC18-131803 (RET) (3-18419) Belmont Village Assisted Living

*- Samaritan Medical Campus Development Plan Project proposes a total of 475,250 square feet of medical office space on two sites and removal of 110,524 square feet of existing medical office building. Per City's direction, 75% of the Project trips were added to the network, as a quarter of this Project is already implemented.

Traffic generated from other approved Projects in the Town of Los Gatos and the City of Campbell include the following:

- 400 Blossom Hill Road – Residential (Town of Los Gatos)
  - 78 assisted living units and 36 memory care units
- 16212 Los Gatos Blvd. – Retail/Commercial (Town of Los Gatos)
  - 11,317 square feet of office space and 2,312 square feet of existing retail space to remain.
- 405 Alberto Way – Office (Town of Los Gatos)
  - 69,000 square feet of office space
- 105 Newell – Residential (Town of Los Gatos)
  - 4 Single Family Residential Homes
- North 40 Specific Plan – Mixed Use (Town of Los Gatos)
  - 269,000 square feet shopping center, 150 room hotel, 62,500 square feet of medical-dental office building, 62,500 square feet of office building, 73 detached dwelling units, 73 apartment units, and 218 condominium units.
- 16100 Greenridge Terrace – Residential (Town of Los Gatos)
  - 8 residential units
- 16940 Roberts Rd – Residential (Town of Los Gatos)
  - 3 residential units

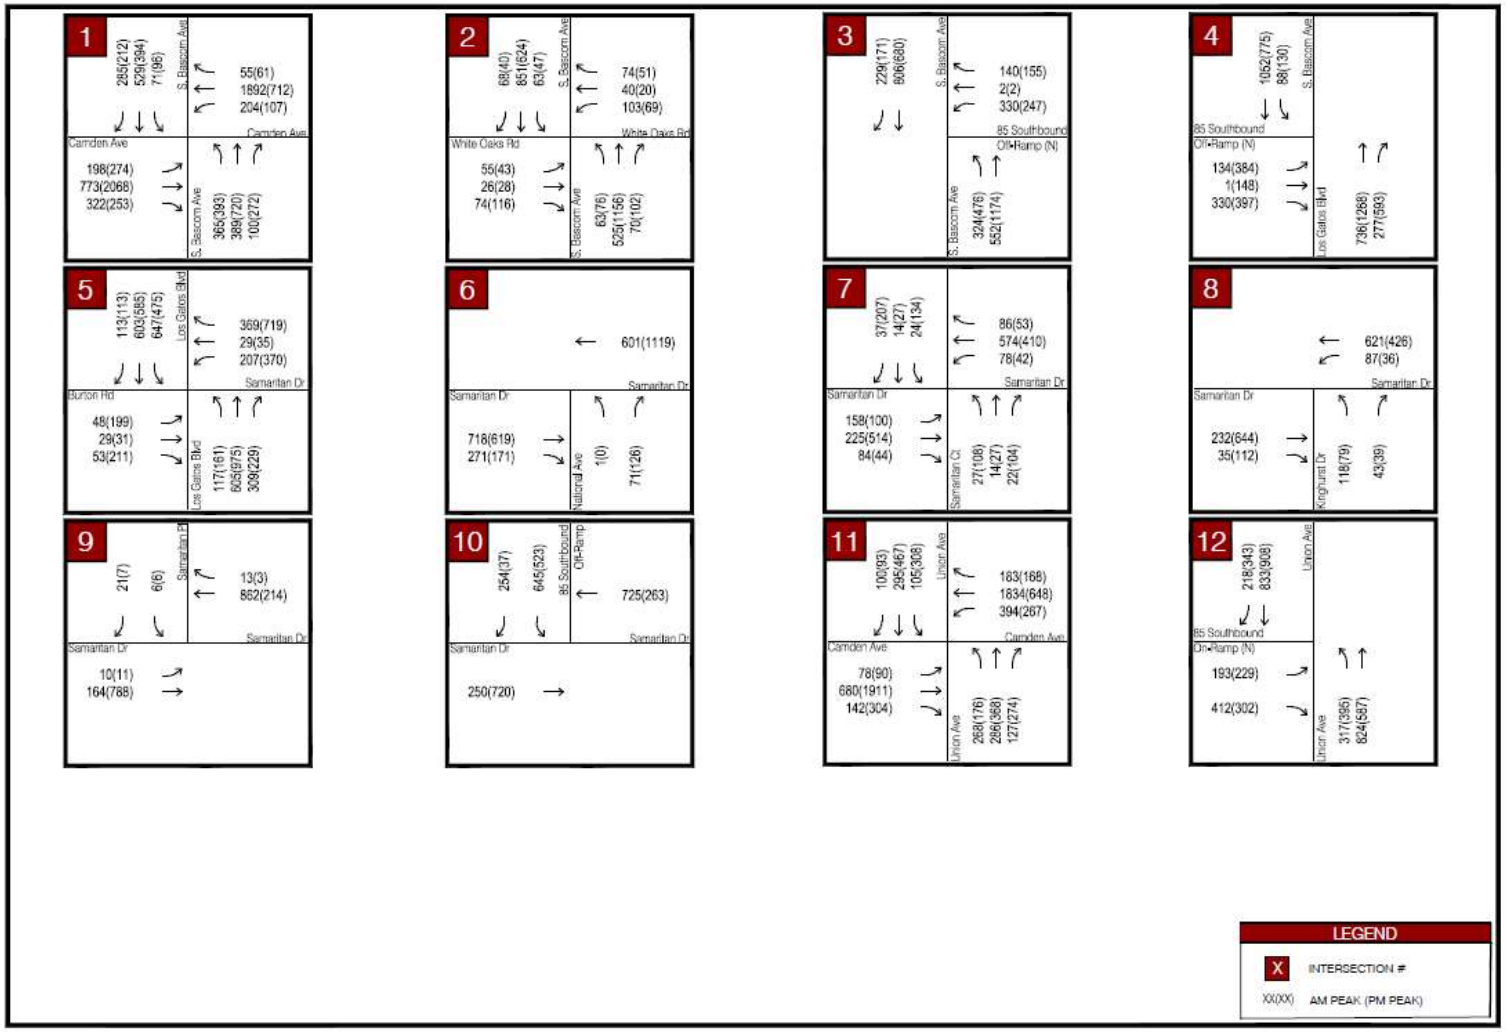
- 16195 George St – Residential (Town of Los Gatos)
    - 4 residential units
- 401 Alberto Way – Office (Town of Los Gatos)
    - 93,500 square feet of new office space and removal of 30,000 square feet of existing office space
- 1700 Dell Avenue – Office (City of Campbell)
    - 161,870 square feet of new office space and removal of 71,620 square feet of existing office space

The additional traffic generated from other approved Projects from the City of San José, Town of Los Gatos and the City of Campbell were added to the existing traffic counts to generate the Background baseline scenario.

The roadway network under Background conditions would be the same as the existing roadway network with the addition of the following planned intersection improvements.

- **Samaritan Drive / Samaritan Court:** This intersection will construct a new traffic signal and would include adding a fourth leg to the intersection, converting the existing two-way center left turn lane on Samaritan Drive into dedicated eastbound and westbound left-turn pockets with protected left-turn phasing, and adding crosswalks with pedestrian signal heads on Samaritan Dr. This planned intersection improvement is implemented, excluding the north leg which still needs to be constructed.

- **Los Gatos-Almaden Road / Union Avenue:** This intersection will widen the westbound shared through/right-turn lane on Los Gatos-Almaden Road to allow for a separate right-turn movement onto northbound Union Avenue. This will include, but not limited to, widening the shared through/right turn lane, shifting the lanes on the westbound approach of the intersection approximately two feet to the south with the relocation of the detector loops and lane restriping and realigning the eastbound left-turn lane with the westbound left turn lane, which would require restriping only.



- **Kinghurst Drive / Lost Oaks Drive:** This intersection will construct traffic calming measures for neighborhood intrusion and promotion of other modes of transportation This will include, but not limited to, the following improvements: bulb-outs, restriping, realigning the crosswalks and drainage improvements needed for the improvements.

- **Bascom Avenue / Samaritan Dr:** This intersection will add a third northbound through lane which will require restriping and signal modifications to install a new loop detector and signal head for the new northbound lane.

- **Camden Avenue / Union Avenue:** This intersection will lengthen the westbound left-turn pocket by 200 feet.

Traffic operations for the study intersections under Background conditions are shown below in **Table 19** and **Figure 17**.

* - CMP Intersection										

San José and Los Gatos Intersections LOS Results

All study intersections within the City of San José and Town of Los Gatos, operates at an acceptable LOS (LOS D or better) during both AM and PM peak hours under Background Conditions.

CMP Intersections LOS Results

All CMP intersections within the City of San José, City of Campbell, and Town of Los Gatos, operate at an acceptable LOS (E or better) during both AM and PM peak hours under Background Conditions, except for the following CMP intersection within Town of Los Gatos, which operates at unacceptable LOS during the AM peak hour:

- Int.#15 - SR 17 Southbound Off-Ramp / Camden Avenue – San Thomas Expy. (CMP)
  - LOS F (Delay 89.7, V/C 1.294, Critical Delay 200.4)

Intersection turning-movement counts and TRAFFIX output sheets are provided in the **Appendix D.**

6.3 Project Conditions Analysis

Traffic operations were evaluated at the study intersections under Project conditions based on Background conditions and adding the net vehicle trips from the proposed Good Samaritan Hospital Project (Phase 1 & Phase 3 – Buildout) to the Background roadway geometry and traffic control. The Project traffic volumes were incorporated from the Trip Generation and Trip Distribution described in **Section 3** of this report.

Phase 1 Conditions

Traffic operations for the study intersections under Phase 1 Project conditions are shown below in **Table** 20 and **Figure 18**.

Table 20: Intersection Operations Summary of Background Plus Phase 1 Project

* - CMP Intersection													

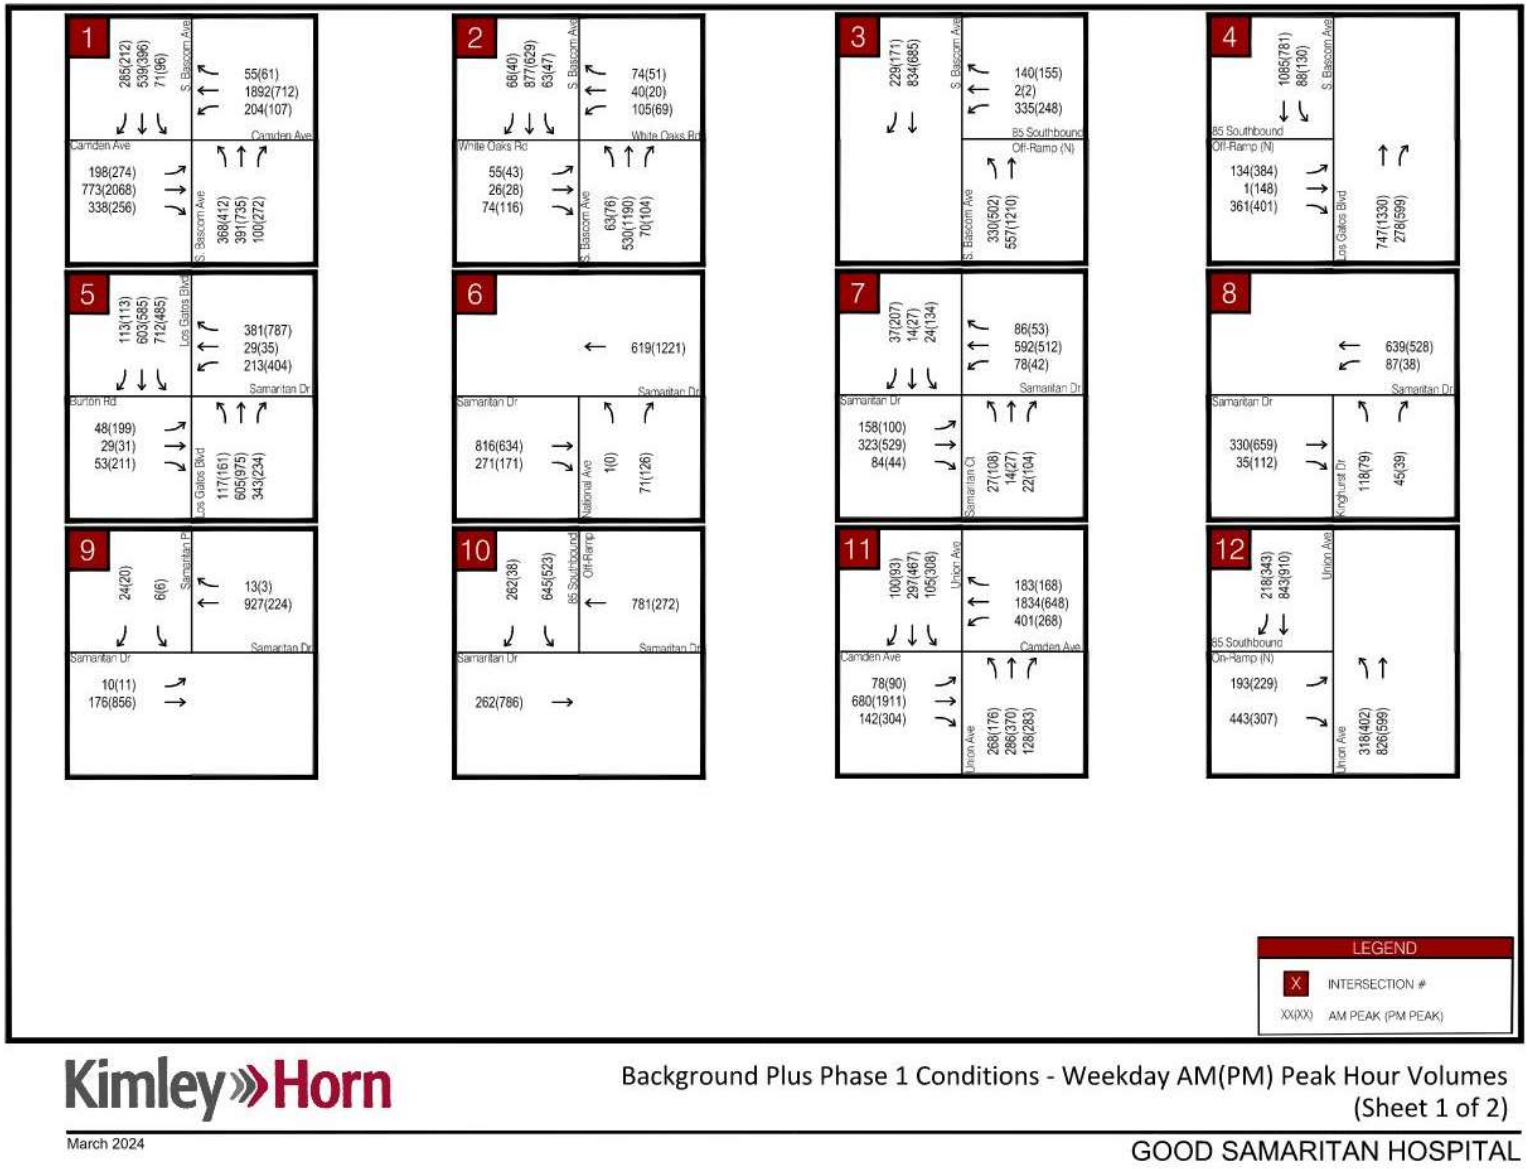
San José and Los Gatos Intersections LOS Results

All study intersections within the City of San José and Town of Los Gatos, operates at an acceptable LOS (LOS D or better) during both AM and PM peak hours under Background Plus Phase 1 Conditions.



CMP Intersections LOS Results

All CMP intersections within the City of San José, City of Campbell, and Town of Los Gatos, operate at an acceptable LOS (E or better) during both AM and PM peak hours under Background Plus Phase 1 Conditions, except for the following CMP intersection within Town of Los Gatos, which continues to operate at unacceptable LOS during the AM peak hour:

- Int.#15 - SR 17 Southbound Off-Ramp / Camden Avenue – San Thomas Expy. (CMP)
    - LOS F (Delay 89.6, V/C 1.294, Critical Delay 200.4)

The Project is not anticipated to create a significant traffic adverse effect under Background Plus Project Phase 1 Conditions. Intersection turning-movement counts and TRAFFIX output sheets are provided in the **Appendix E.**

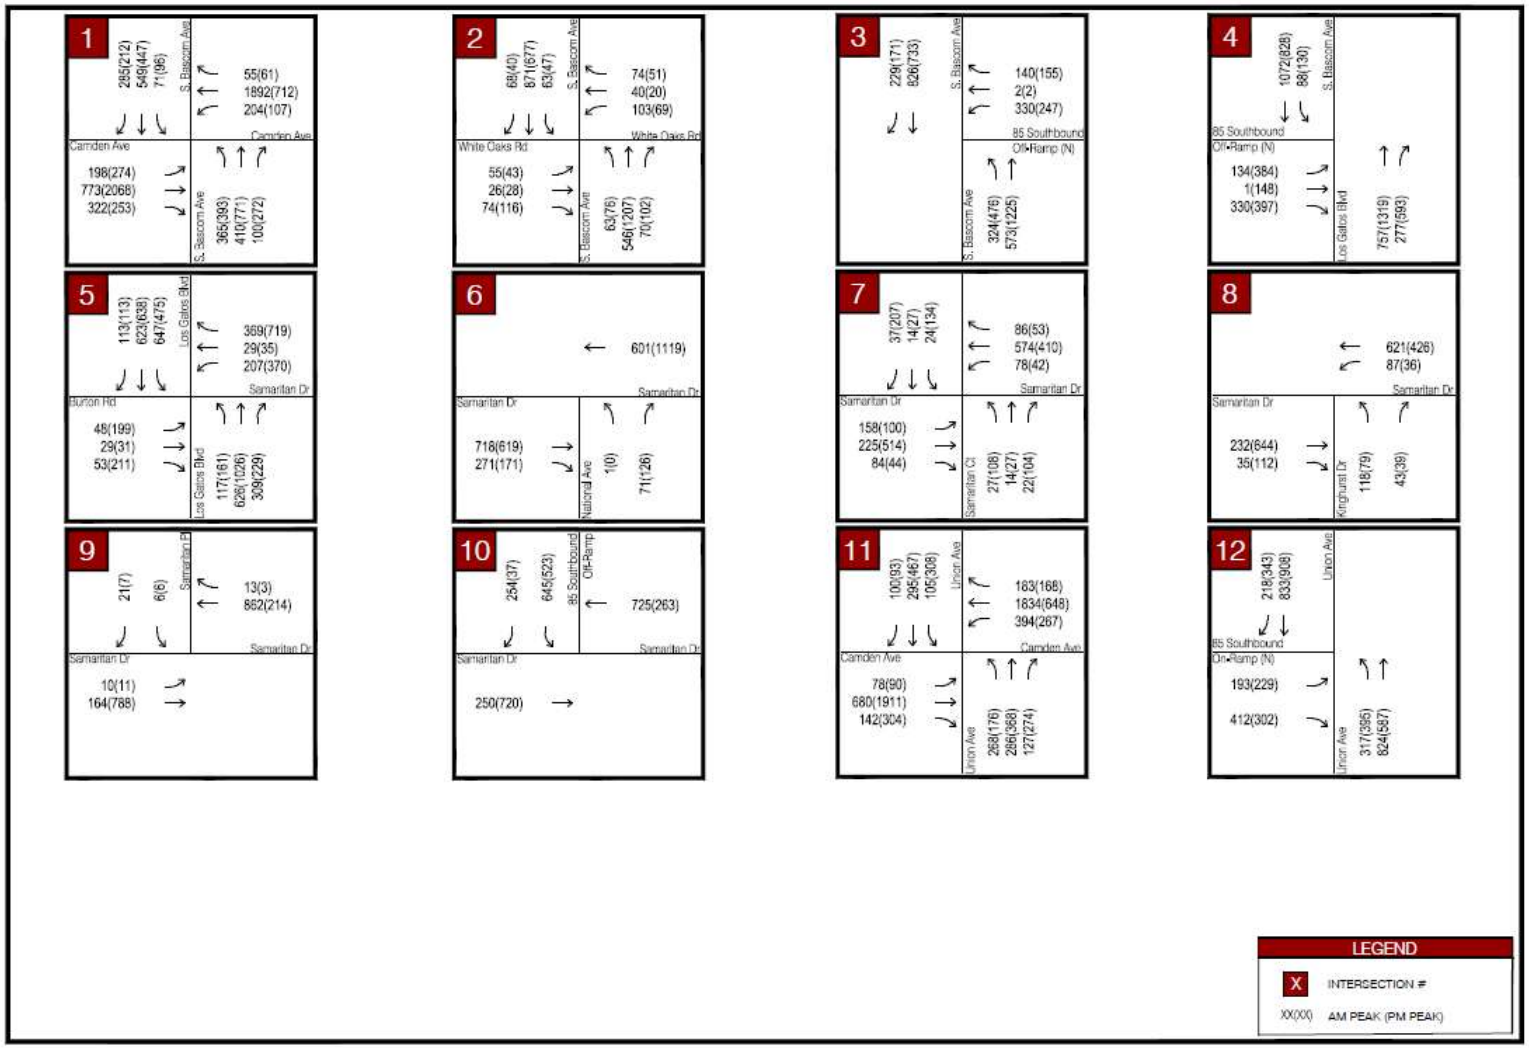
6.4 Cumulative Conditions Analysis

The Cumulative scenario was evaluated using peak-hour traffic volumes, intersection geometry, and traffic control from forecasted traffic growth from approved Projects and other proposed but pending developments in the Project study area. No pending Projects were identified within the City of San José and the City of Campbell. However, the following pending Projects in the Town of Los Gatos were included in the cumulative analysis.



- 14926 Los Gatos Blvd. – Residential/Commercial (Town of Los Gatos)
  - 6,100 square feet commercial and 5 apartment units
- 15475 Los Gatos Blvd. – Commercial (Town of Los Gatos)
  - 4,700 square feet restaurant with drive-through
- 15860 Winchester Blvd. – Residential (Town of Los Gatos)
  - 107 assisted living units,18 memory care units and removal of 3 existing single family homes
- 15600-15659 Los Gatos Blvd. – Commercial
  - 40,190 square feet of grocery store and removal of 27,580 square feet of existing car dealership

Traffic operations for the study intersections under Cumulative conditions are shown below in **Table 22** and **Figure 20**. TRAFFIX output sheets for Background conditions are provided in the **Appendix G**.

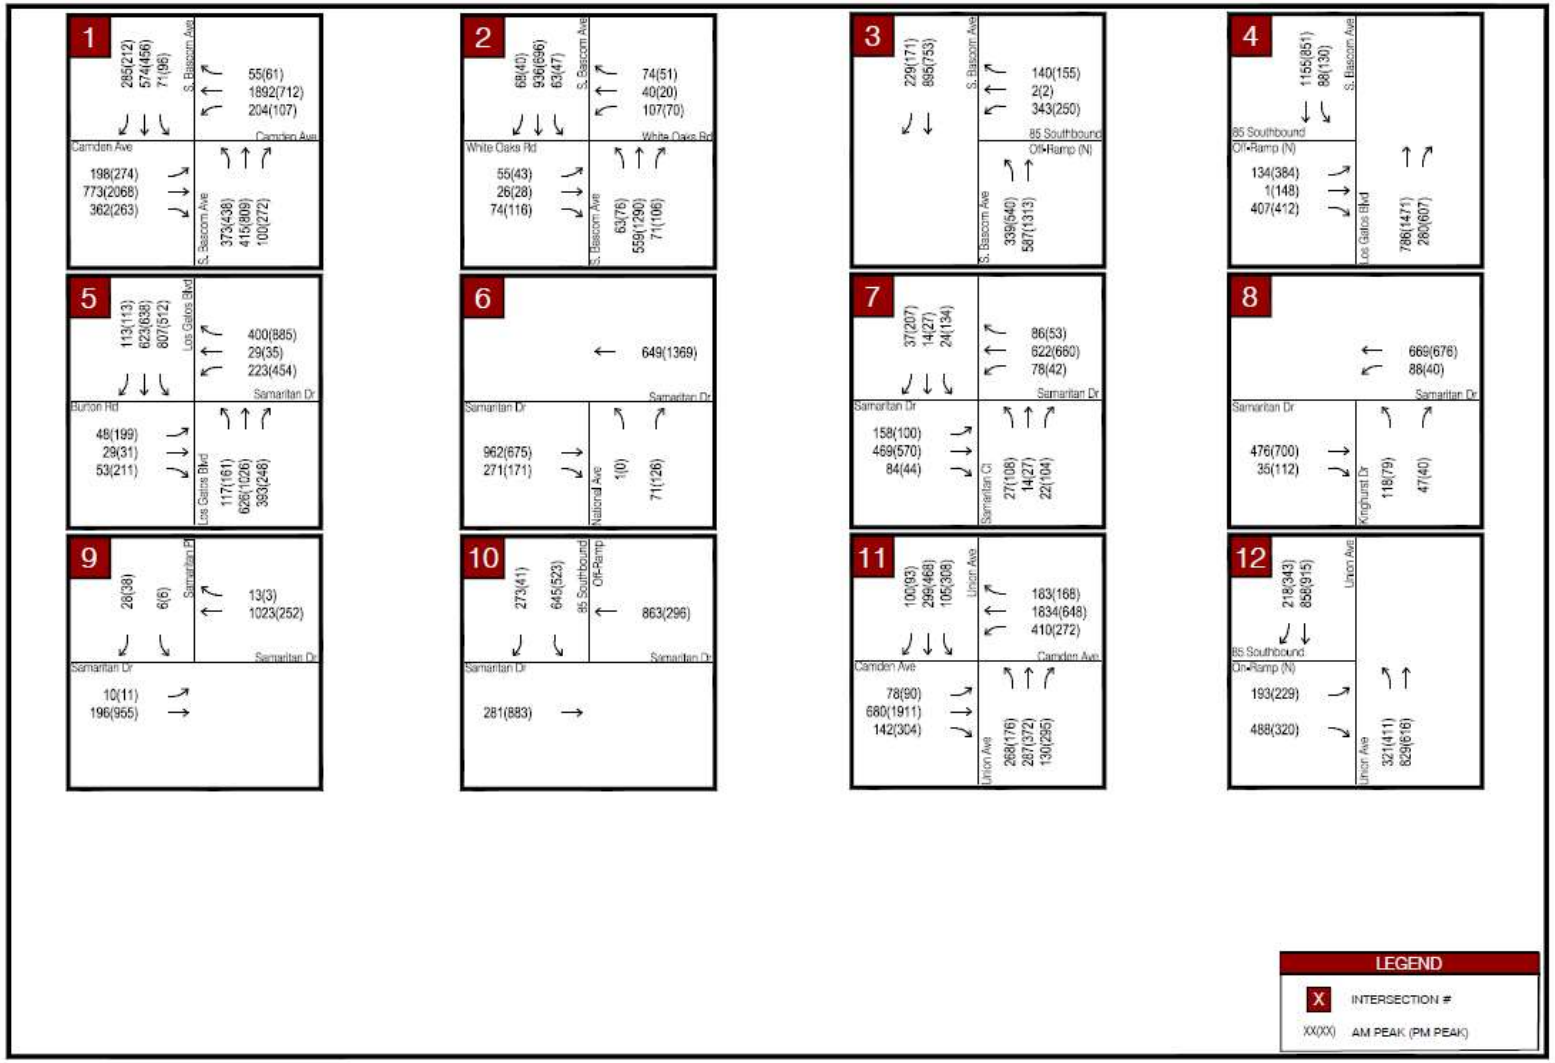
6.5 Cumulative Plus Phase 3 (Buildout) Analysis

The net Project vehicle trips from the Good Samaritan Hospital with Phase 3 (Buildout) was added to the Cumulative scenario to evaluate Cumulative Plus Project conditions, and the results are shown below in **Table 23** and **Figure 21.** Under Cumulative Plus Project Phase 3 (Buildout) Conditions, all signalized study intersections operate at acceptable LOS during both AM and PM peak hour, except for the following intersection which operates at unacceptable LOS during the AM peak hour:

- Int.#15 - SR 17 Southbound Off-Ramp / Camden Avenue – San Thomas Expy. (CMP)
    - LOS F (Delay 89.4, V/C 1.294, Critical Delay 200.4)



The study intersections are anticipated to operate at acceptable LOS during the AM and PM peak hour, and the Project is not anticipated to create a significant traffic adverse effect under Cumulative Plus Project Phase 3 (Buildout) conditions. TRAFFIX output sheets for Cumulative Plus Project Phase 3 (Buildout) conditions are provided in the **Appendix H.**

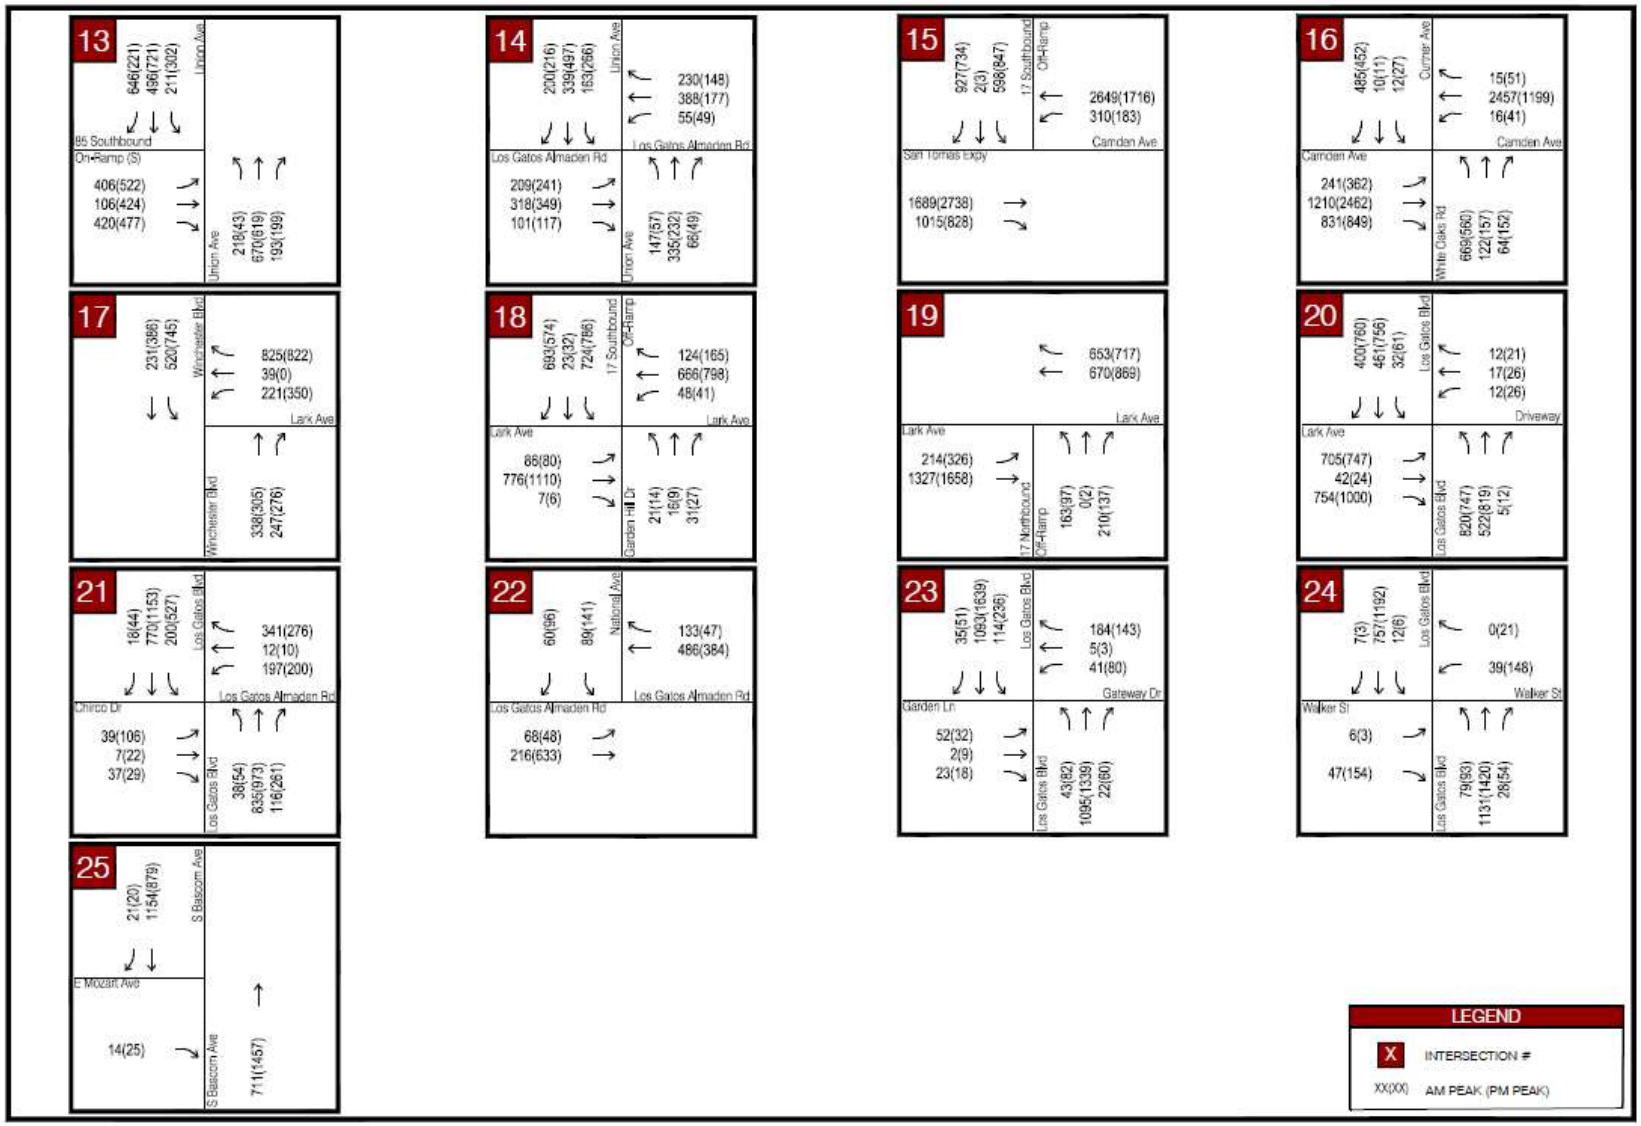


Table 23: Intersection Operations Summary of Cumulative Plus Phase 3 (Buildout) Project

March 2024

GOOD SAMARITAN HOSPITAL

6.6 Intersection Queue Analysis

Selected study intersections near the Project site were evaluated for left-turn vehicle queuing capacity and storage analysis for each study scenario is summarized in **Table 24** and **Table 25**.

It was observed that sufficient storage has been provided for left turn movements at all study intersections, except for the following intersections, where the addition of Project trips either exacerbates existing queues or causes the queues to exceed the storage length:

AM Peak Hour

- Int. #5 – Bascom Avenue & Samaritan Drive
  - Northbound Left (NBL)
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario
  - Southbound Left (SBL)
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario
- Int. #11 – Union Avenue & Camden Avenue
  - Northbound Left (NBL) & Westbound Left (WBL)
    - Under Existing Conditions Scenario
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario
- Int. #13 – Union Avenue & SR-85 (South)
  - Northbound Left (NBL)
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario

PM Peak Hour

- Int. #5 – Bascom Avenue & Samaritan Drive
  - Northbound Left (NBL)
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario
- Int. #11 – Union Avenue & Camden Avenue

  - Northbound Left (NBL) & Southbound Left (SBL) & Westbound Left (WBL)
    - Under Existing Conditions Scenario
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario

- Int. #21 – Union Avenue & Camden Avenue
  - Southbound Left (SBL)
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario

- Int. #22 – National Avenue & Los Gatos-Almaden Rd
  - Southbound Left (SBL)
    - Under Background Conditions Scenario
    - Under Background + Phase 1 & Phase 2 Project Conditions Scenario
    - Under Background + Phase 3 (Buildout) Project Conditions Scenario
    - Under Cumulative Conditions Scenario
    - Under Cumulative + Phase 3 (Buildout) Project Conditions Scenario

Int. #5: Bascom Avenue & Samaritan Drive
Northbound Left Turn (NBL): The storage length for the NBL is approximately 95 ft. and is not sufficient to accommodate the 95th percentile left turn queue of 4 vehicles under Background Conditions and continues to be deficient during Cumulative Conditions and during Plus Project Scenarios (Phase 1/2 & Phase 3). No Project trips are added to the NBL turns.

Southbound Left Turn (SBL): The storage length for the SBL is approximately 210 ft, and under existing conditions two lanes are provided. The SBL turn storage is able to accommodate the left turn queues under all scenarios, except during the Background Plus Phase 3 (Buildout) Conditions and Cumulative Plus Phase 3 (Buildout) Conditions during the AM peak hour. The addition of Phase 3 (Buildout) Project trips causes the 95th percentile queue to exceed the available storage and increased the queue length from 300 ft to 375 ft. during the AM peak hour.

Improvements: Due to the proximity of the Bascom Avenue & SR-85 South Ramps intersection, the storage length cannot be extended further. Therefore, no geometric improvement measures are recommended at this intersection. It should be noted that the 95th percentile queues have a 5 percent probability of exceeding during the analysis periods and is not what an average driver would experience. To minimize southbound left turn queues, signal coordination along Bascom Avenue is recommended.

Int. #11: Union Avenue & Camden Avenue
Northbound Left Turn (NBL): The storage length for the NBL is approximately 245 ft. and is not sufficient to accommodate the 95th percentile left turn queues of under all scenarios during both AM and PM peak hours. It should be noted that no Project trips are added to the NBL turn movement.

Southbound Left Turn (SBL): The storage length for the SBL is approximately 310 ft and is not sufficient to accommodate the 95th percentile queues under all scenarios during the PM peak hour. It should be noted that no Project trips are added to the SBL turn movement.

Westbound Left Turn (WBL): The storage length for the WBL is approximately 215 ft and is not sufficient to accommodate the 95th percentile queues under all scenarios. The addition of Phase 3 (Buildout) Project trips causes the 95th percentile queue to exceed the available storage and increased the queue length from 450 ft. to 475 ft. (1 vehicle length) during both AM and PM peak hour.

Improvements: The westbound left turn storage length could be further extended by modifying the existing landscape median along Camden Avenue. However, it should be noted that the 95th percentile queues have a 5 percent probability of exceeding during the analysis periods and is not what an average driver would experience. Therefore, it is recommended that the signal timing modification be made at this intersection to minimize the queues.

Int. #13: Union Avenue & SR-85 (South) Ramps
Northbound Left Turn (NBL): The storage length for the NBL is approximately 100 ft and is not sufficient to accommodate the 95th percentile queues under all scenarios, except Existing Conditions. The addition of Phase 3 (Buildout) Project trips causes the 95th percentile queue to exceed the available storage and increased the queue length from 125 ft. to 150 ft. (1 vehicle length) during the AM peak hour.

Improvements: The northbound left turn storage length could be further extended by modifying the painted median along Union Avenue. However, it should be noted that the 95th percentile queues have a 5 percent probability of exceeding during the analysis periods and is not what an average driver would experience. Therefore, it is recommended that the signal timing modification be made at this intersection to minimize the queues.

Int. #21: Union Avenue & SR-85 (South) Ramps
Southbound Left Turn (SBL): The storage length for the SBL is approximately 240 ft and is not sufficient to accommodate the 95th percentile queues under all scenarios, except Existing Conditions during the PM peak hour. It should be noted that no Project trips are added to the SBL turn movement and no improvements are recommended.

Int. #22: National Avenue & Los Gatos-Almaden Rd
Southbound Left Turn (SBL): The storage length for the NBL is approximately 100 ft and is not sufficient to accommodate the 95th percentile queues under all scenarios, except Existing Conditions during the PM peak hour. It should be noted that no Project trips are added to the SBL turn movement.

At all other study intersections, the Project is not anticipated to increase the vehicle queue and create an adverse effect.

Table 24: Left Turn Queue Analysis – AM Peak Hour

S.No.	Study Intersection	Movement	Number of Turn Lanes	Storage (ft/ln)	Total Storage (ft/ln)	AM Peak Hour																	
						Existing Conditions Scenario			Background Conditions Scenario			Background + Phase 1 & Phase 2 Project Conditions Scenario			Background + Phase 3 (Buildout) Project Conditions Scenario			Cumulative Conditions Scenario			Cumulative + Phase 3 (Buildout) Project Conditions Scenario		
						95% Queue (car/ln)	95% Queue (ft/ln)	Sufficient Storage?	95% Queue (car/ln)	95% Queue (ft/ln)	Sufficient Storage?	95% Queue (car/ln)	95% Queue (ft/ln)	Sufficient Storage?	95% Queue (car/ln)	95% Queue (ft/ln)	Sufficient Storage?	95% Queue (car/ln)	95% Queue (ft/ln)	Sufficient Storage?	95% Queue (car/ln)	95% Queue (ft/ln)	Sufficient Storage?

6.7 Improvements Measures

This section discusses significant transportation Project impacts identified under Background Plus Project and Cumulative Plus Project conditions. Per City guidelines in the 2023 Transportation Analysis Handbook, proposed mitigation measures to address negative adverse effect at study intersection should prioritize improvements related to alternative transportation modes, parking measures, and/or TDM measures with secondary improvements that increase vehicle capacity to the transportation network.

As identified earlier in **Section 6.3** & **Section 6.5**, all study intersections are anticipated to operate at acceptable LOS during the AM and PM peak hour, except for CMP Intersection #15 (SR 17 Southbound Off-Ramp / Camden Avenue – San Thomas Expy., which operates at unacceptable LOS F during the AM peak hour under Existing Conditions, and continues to operate at LOS F during Background Plus Phase 1 Project Conditions, Background Plus Phase 3 (Buildout) Conditions, and Cumulative Plus Project Phase 3 (Buildout) Conditions respectively.

The Project is not anticipated to create any other significant traffic adverse effect under Background Plus Phase 1 Project Conditions, Background Plus Phase 3 (Buildout) Conditions, and Cumulative Plus Project Phase 3 (Buildout) Conditions. Therefore, no improvement measures are required at any of the study intersections. However, as part of the VMT mitigation plan, the following TDM measures involving improvements related to alternative transportation modes are proposed:

- **Samaritan Drive Road Diet:** A road diet will be implemented with Phase 3 (Buildout), along the Project frontage and beyond along Samaritan Drive from Samaritan Ct. to the intersection of Samaritan Dr/ Samaritan Pl. The road diet will reduce the number of travel lanes from five lanes (i.e., two lanes in each direction and one central left turn lane) to three lanes (i.e., one lane in each direction and one central left turn lane). The project will implement an on-street Class IV Protected Bike Path along the Project's frontage and non-frontage along Samaritan Drive and along Samaritan Place and beyond the project frontage along Samaritan Drive.

  The proposed improvements involving Road Diet Is in line with City's 'Better Bike Plan 2025', which proposes a Class IV Protected Bike Lane in each direction along Samaritan Drive from Los Gatos Blvd. to Union Avenue and a Class III Bike Route along Samaritan Pl. providing connection to the existing pedestrian bridge over SR-85.

- **Samaritan Drive / Samaritan Place Roundabout:** A roundabout at the existing unsignalized intersection of Samaritan Drive. / Samaritan Place. will also be implemented with Phase 3 (Buildout). The proposed roundabout will tie in with the Road Diet and will have a single lane in each direction. The proposed roundabout will provide the opportunity for existing VTA bus routes to make a U-turn along Samaritan Drive.

The Project will also include off-site right-of-way improvements at the Project site's access points on Samaritan Drive and Samaritan Place. These improvements would include new curb cuts for the proposed driveway access points, as well as rehabilitation of the existing pedestrian sidewalks. The road diet concepts along Samaritan Drive and Samaritan Place are shown in **Figure 22** to **Figure 25** and the proposed roundabout at the study intersection of Samaritan Drive / Samaritan Place is shown in **Figure 26**.

Figure 22: Road Diet – Samaritan Drive Future Cross-Section – Sheet 1

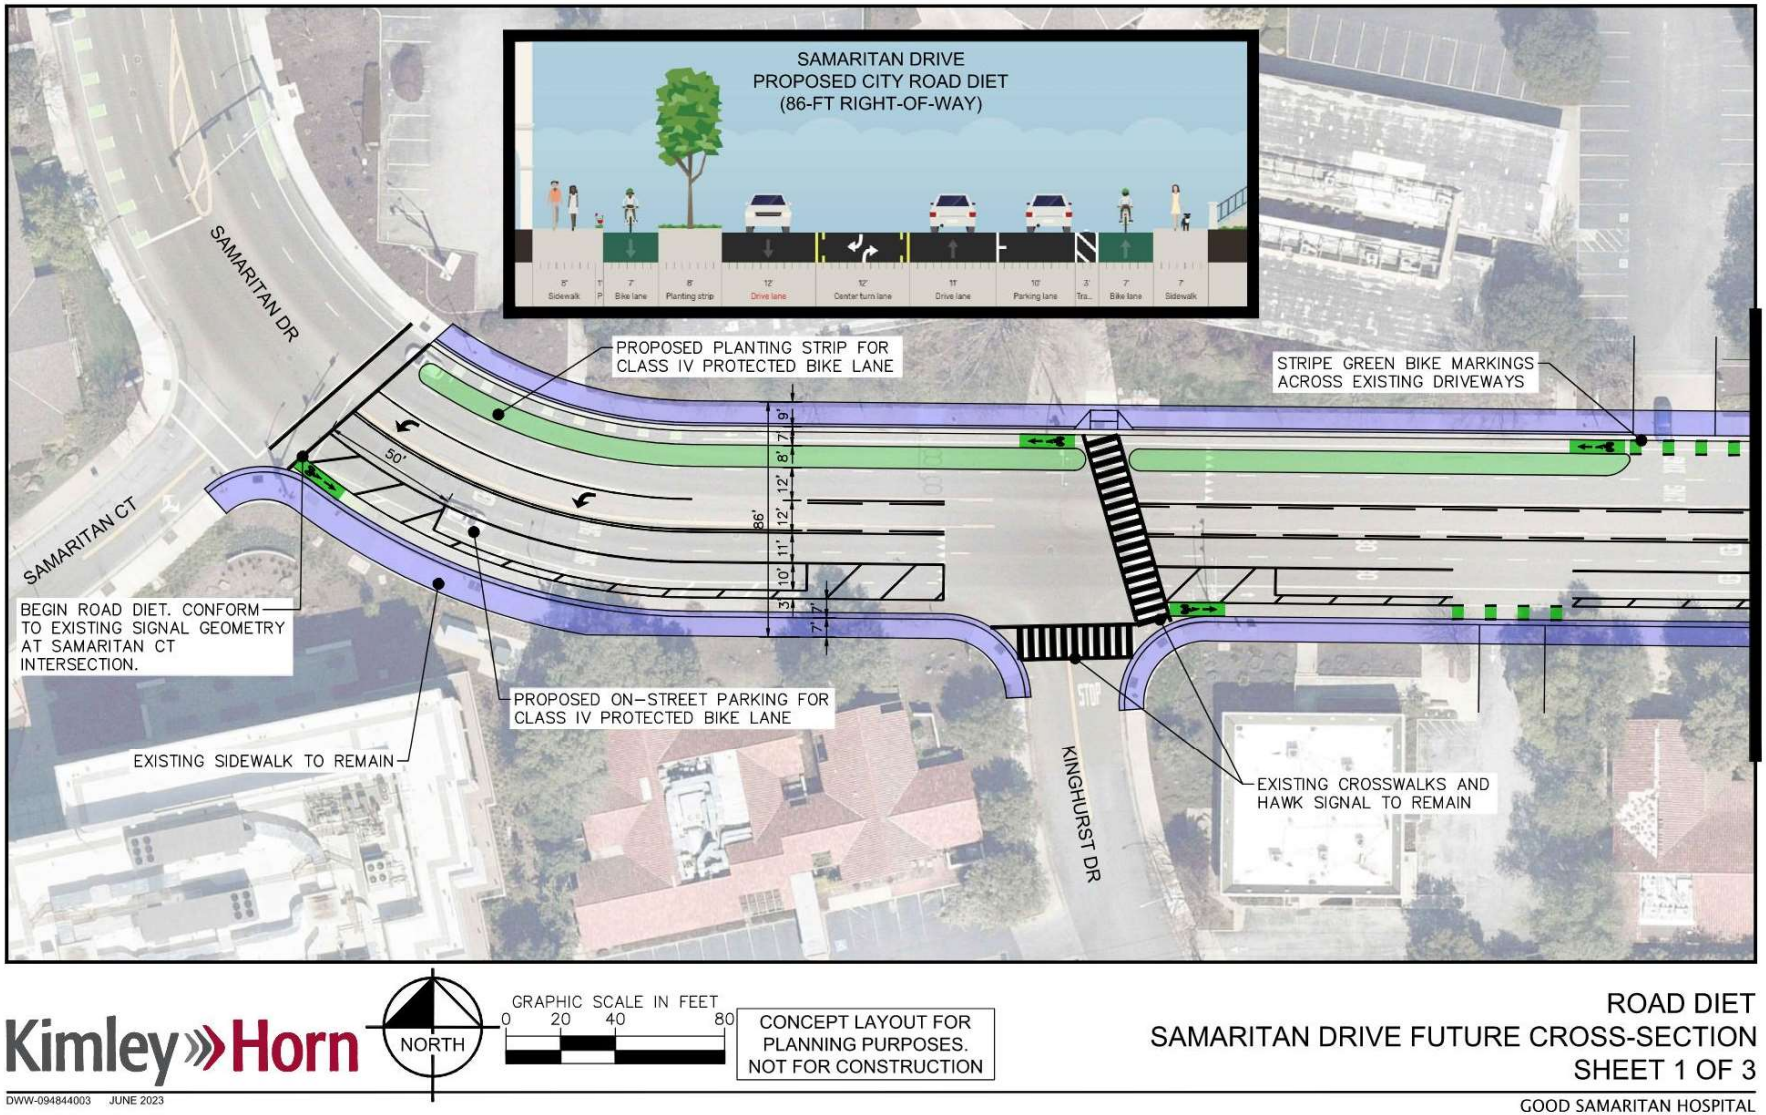

Figure 23: Road Diet – Samaritan Drive Future Cross-Section – Sheet 2

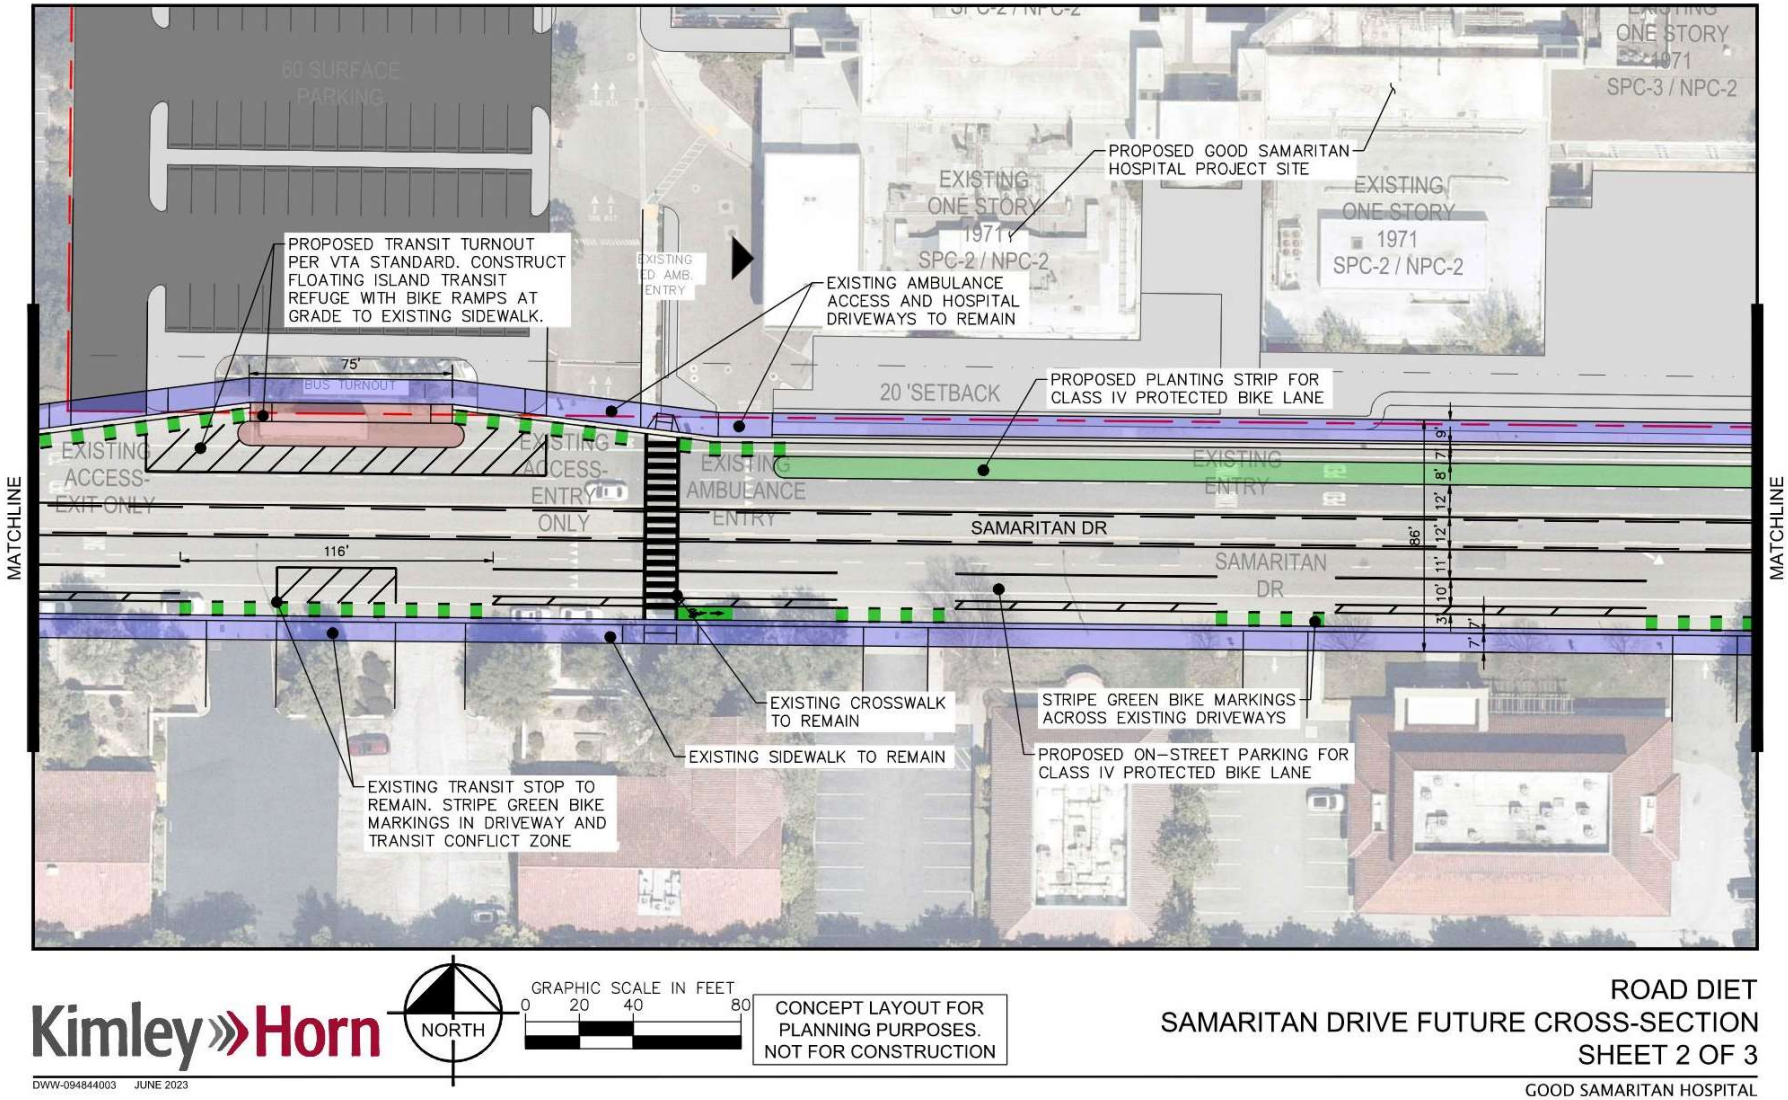

Figure 24: Road Diet – Samaritan Drive Future Cross-Section – Sheet 3

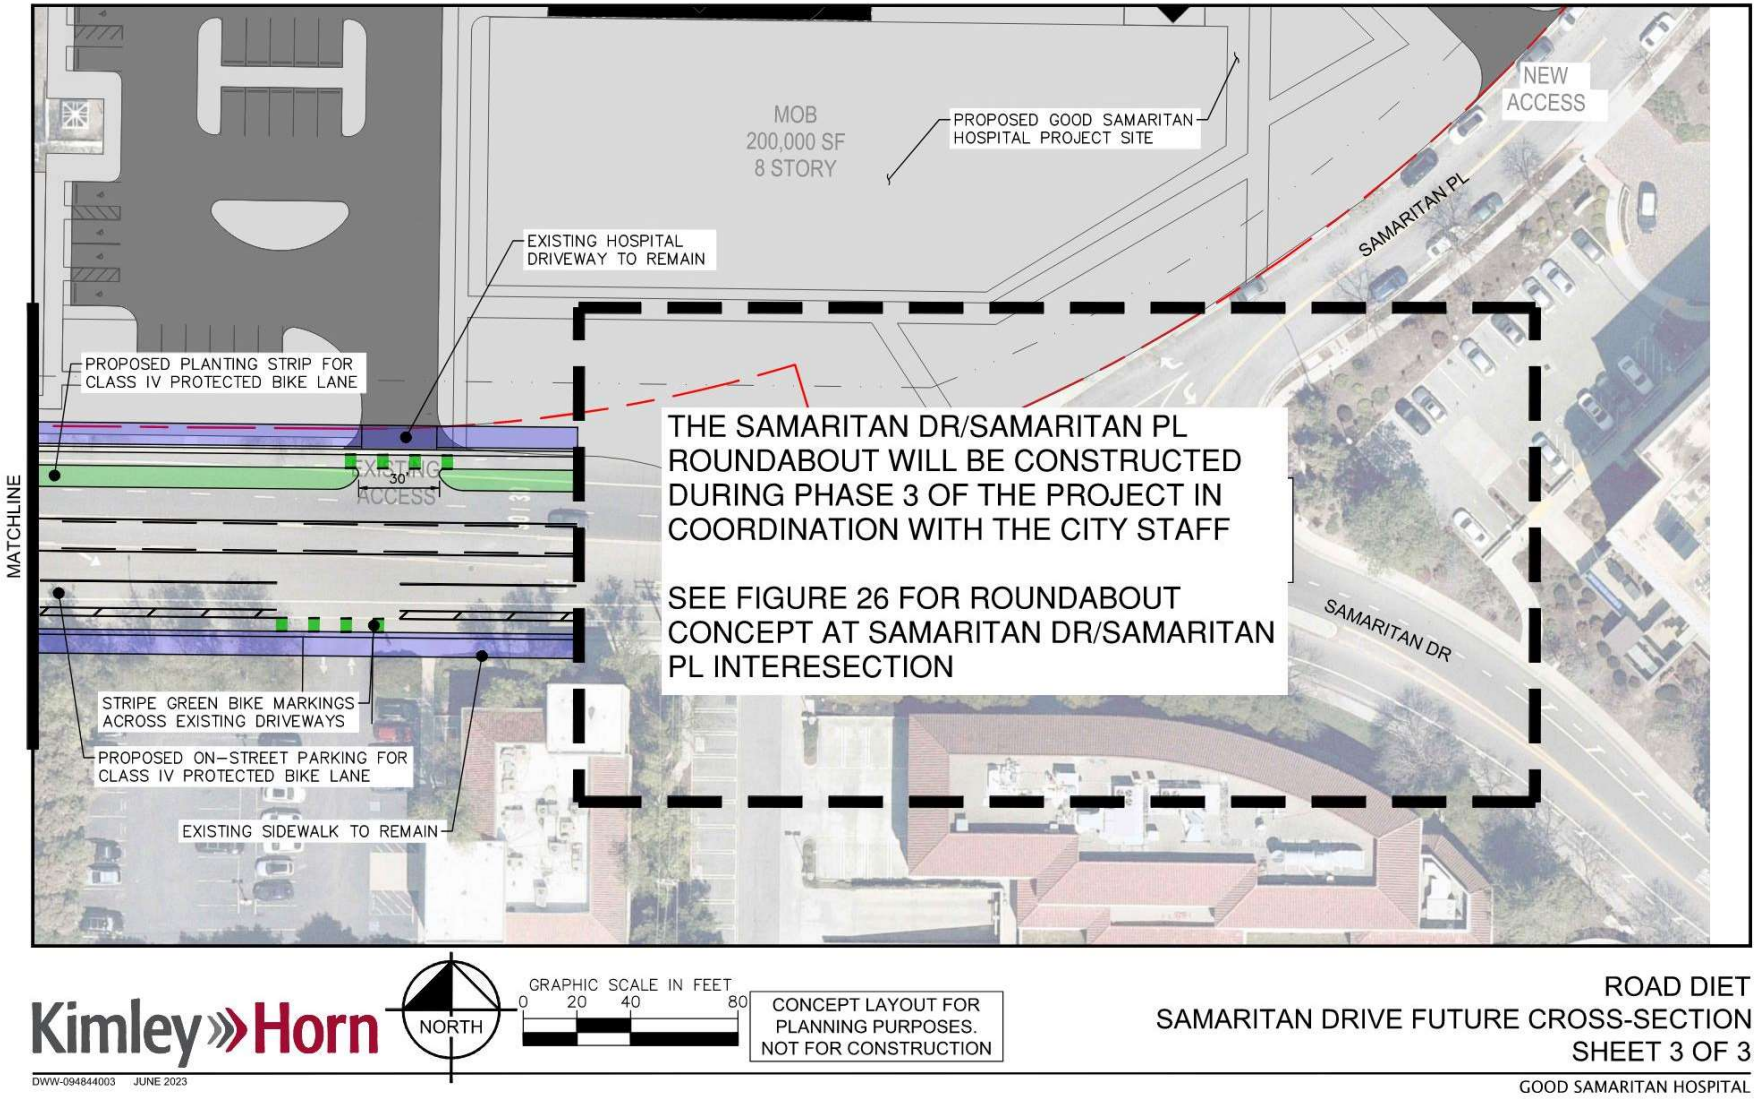

Figure 25: Samaritan Pl Future Cross-Section

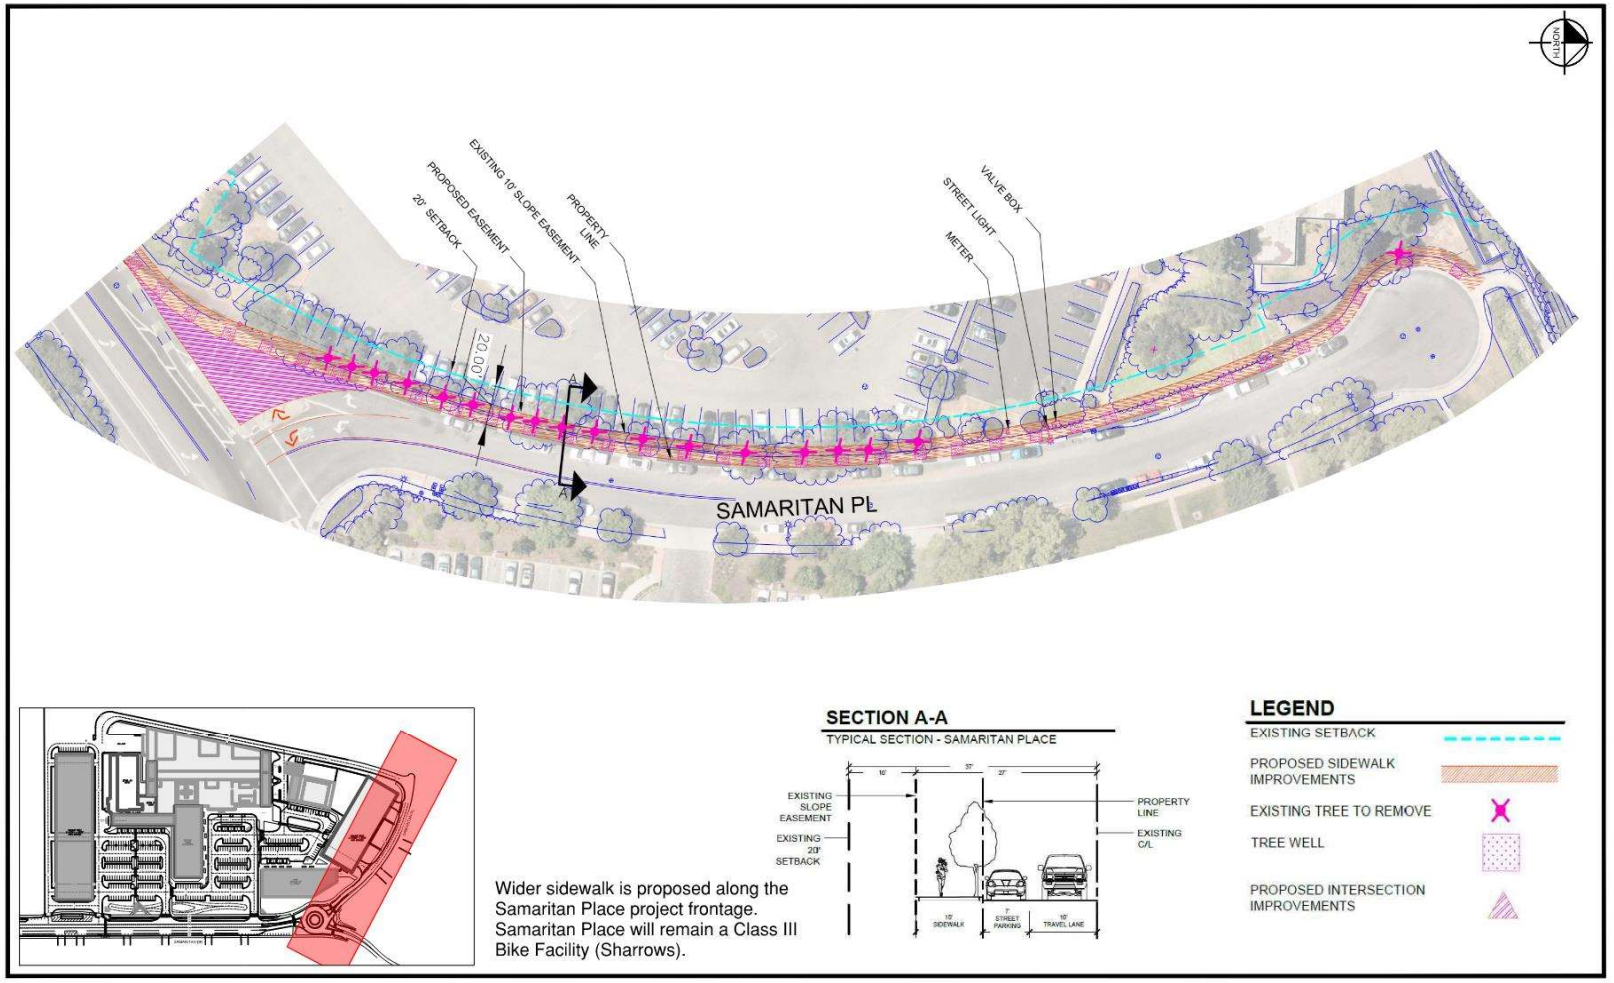

Figure 26: Samaritan Drive / Samaritan Place–- Roundabout

6.8 Samaritan Drive / Samaritan Place – Operational and Level of Service Analysis Results–- Roundabout

As identified earlier, the study intersection of Samaritan Drive / Samaritan Pl is an unsignalized intersection under existing conditions and will remain unsignalized until Project Phase 3 (Buildout) is constructed. In Phase 3 (Buildout) Conditions, a single-lane roundabout is proposed at the intersection. The LOS and queuing results for the proposed roundabout with Project's Phase 3 (Buildout) Conditions is shown in **Table 26** and **Table 27** below. The operational results were estimated using SIDRA software which is most widely-used for roundabout capacity and performance analysis.

It should be noted that for the proposed roundabout at the study intersection of Samaritan Drive / Samaritan Pl, the net trip generation for Phase 3 (Buildout) Conditions was used as per **Table 6** (**Section 7**). SIDRA output sheets for Cumulative Plus Project Phase 3 (Buildout) conditions are provided in the **Appendix I.**

Table 26: Cumulative Plus Phase 3 (Buildout) Conditions LOS

#	Intersection	LOS Criteria	Cumulative Plus Phase 3 (Buildout) Conditions					
			AM Peak Hour			PM Peak Hour		
			LOS	Delay (Sec)	v/c Ratio	LOS	Delay (Sec)	v/c Ratio
9	Samaritan Dr / Samaritan Pl	D	C	16.4	0.841	B	12.8	0.781

Table 27: Cumulative Plus Phase 3 (Buildout) Conditions–- Queues

#	Intersection	Cumulative Plus Phase 3 (Buildout) Conditions 95th Percentil Queue Length (in feet)					
		AM Peak Hour			PM Peak Hour		
		Westbound Leg	Eastbound Leg	Southbound Leg	Westbound Leg	Eastbound Leg	Southbound Leg
9	Samaritan Dr / Samaritan Pl	432	20.8	7.8	24.9	341.3	4.9

As shown in tables above, the study intersection of Samaritan Drive / Samaritan Pl is anticipated to operate at acceptable LOS during the AM and the PM peak hours, with the proposed roundabout.

6.9 Signal Warrant Analysis

Peak Hour Signal Warrant #3 from the California Manual on Uniform Traffic Control Devices (CAMUTCD) was evaluated for Cumulative Conditions and Cumulative Plus Phase 3 (Buildout) Project Conditions scenarios, for the following three unsignalized study intersections:

- Int. #8 – Kingshurst Drive & Samaritan Dr
- Int. #9 – Samaritan Pl & Samaritan Dr
- Int. #25 – Bascom Avenue & East Mozart Avenue

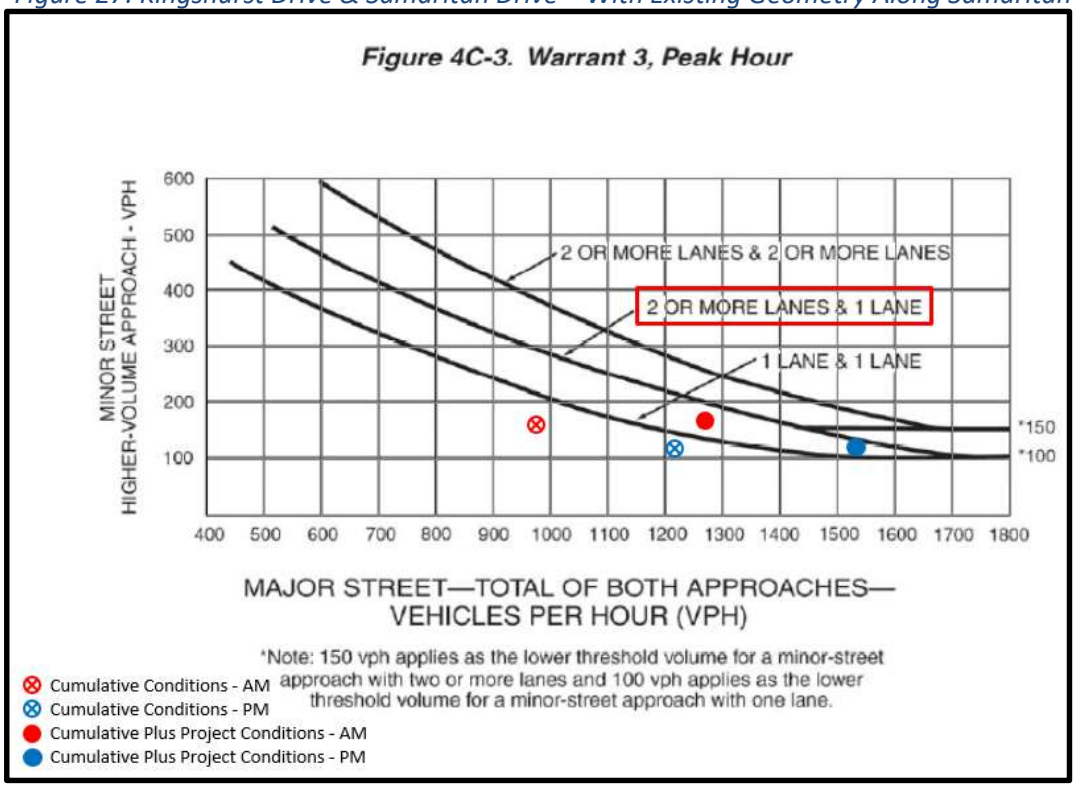
The intersection of National Avenue & Samaritan Drive (Int. #6) was excluded from warrant analysis, as geometric improvements were recently (2021) made to eliminate the northbound left turn from National Avenue, as part of the 'Samaritan Medical Campus Development Plan' transportation analysis report dated May 2016.

Int. #8 – Kingshurst Drive & Samaritan Dr

The results of the peak hour signal warrant #3 is shown in **Figure 27** and **Figure 28** below. The AM and PM peak hours were analyzed using the following lane geometry assumptions and volumes:

- Samaritan Dr
  - Major Street – 4 Lanes (Existing Geometry) and 2 Lanes (With Road Diet)
  - AM Approach Volumes (Total of Both Approaches): 975 vehicles (Cumulative Conditions) & 1,268 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
  - PM Approach Volumes (Total of Both Approaches): 1,218 vehicles ((Cumulative Conditions) & 1,528 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
- Kingshurst Dr
  - Minor Street – one lane
  - AM Approach Volumes (Higher-Volume approach): 161 vehicles (Cumulative Conditions) & 165 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
  - PM Approach Volumes (Higher-Volume approach): 118 vehicles ((Cumulative Conditions) & 119 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)

Figure 27: Kingshurst Drive & Samaritan Drive – With Existing Geometry Along Samaritan Dr



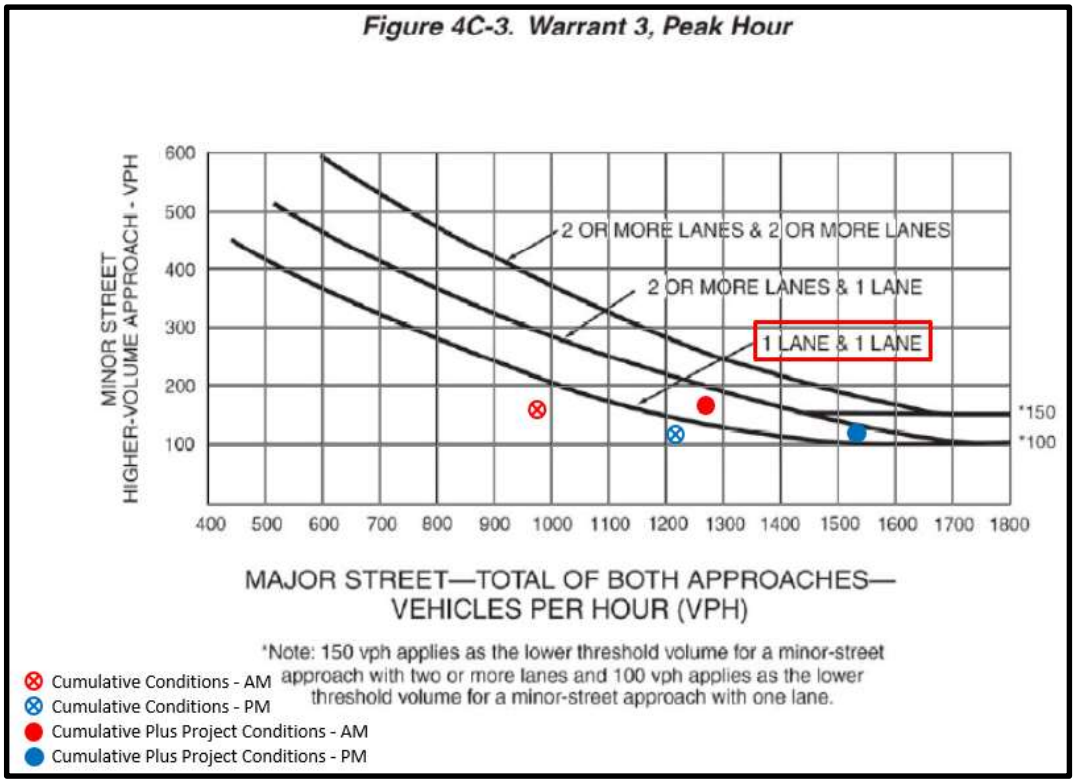


Figure 28: Kingshurst Drive & Samaritan Drive – With Proposed Road Diet Samaritan Dr

As shown in **Figure 27** and **Figure 28** above, the intersection of Kingshurst Drive & Samaritan Drive does not meet the Peak Hour Warrant #3 requirements during both AM and PM peak hours under Cumulative Conditions. Under Cumulative Plus Phase 3 (Buildout) Project Conditions, the intersection meets the Peak Hour Warrant #3 requirements during both the AM and PM peak hours with the proposed road diet on Samaritan Drive with one vehicle travel lane for both approaches.

The intersection of Samaritan Ct & Samaritan Drive (Int. # 7) was recently signalized (2022) as part of improvement measures identified in the 'Samaritan Medical Campus Development Plan' transportation analysis report dated May 2016. The Samaritan Ct & Samaritan Dr intersection is approximately 225 feet west of the Kingshurst Dr & Samaritan Dr intersection, and due to this proximity, signalization of the Kingshurst & Samaritan intersection is not recommended. In addition, the proposed Road Diet along Samaritan Drive which is recommended as part of the Project's improvement measures extends west up to Samaritan Ct and signalization of the intersection will disrupt the improvement.

Int. #9 – Samaritan Pl & Samaritan Dr

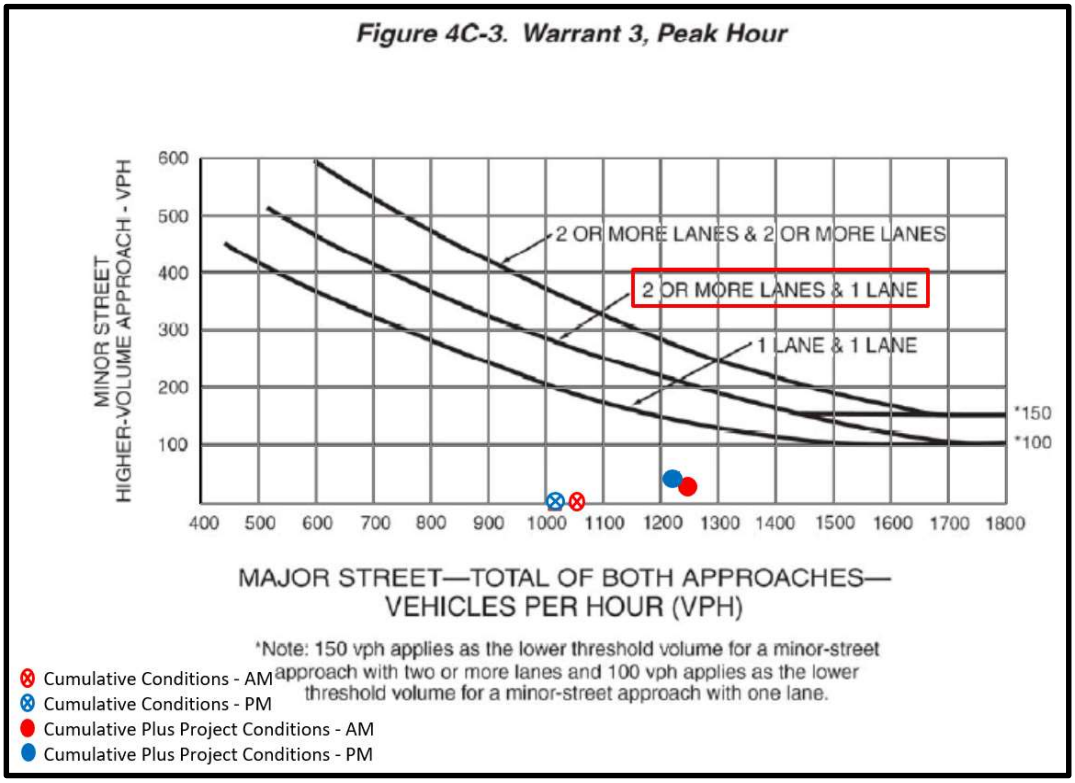
The results of the peak hour signal warrant #3 is shown in **Figure 29** and **Figure 30** below. The AM and PM peak hours were analyzed using the following lane geometry assumptions and volumes:

- Samaritan Drive
  - Major Street – 4 Lanes (Existing Geometry) and 2 Lanes (With Road Diet)
  - AM Approach Volumes (Total of Both Approaches): 1,049 vehicles (Cumulative Conditions) & 1,242 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
  - PM Approach Volumes (Total of Both Approaches): 1,016 vehicles ((Cumulative Conditions) & 1,221 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)

- Samaritan Place
  - Minor Street – one lane
  - AM Approach Volumes (Higher-Volume approach): 27 vehicles (Cumulative Conditions) & 34 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
  - PM Approach Volumes (Higher-Volume approach): 13 vehicles ((Cumulative Conditions) & 44 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)

As shown in **Figure 29** and **Figure 30** below, the intersection of Samaritan Place & Samaritan Drive does not meet the Peak Hour Warrant #3 requirements under Cumulative Conditions. In addition the intersection does not meet the Peak Hour Warrant #3 under Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours.

Figure 29: Samaritan Drive & Samaritan Place – With Existing Geometry Along Samaritan Dr



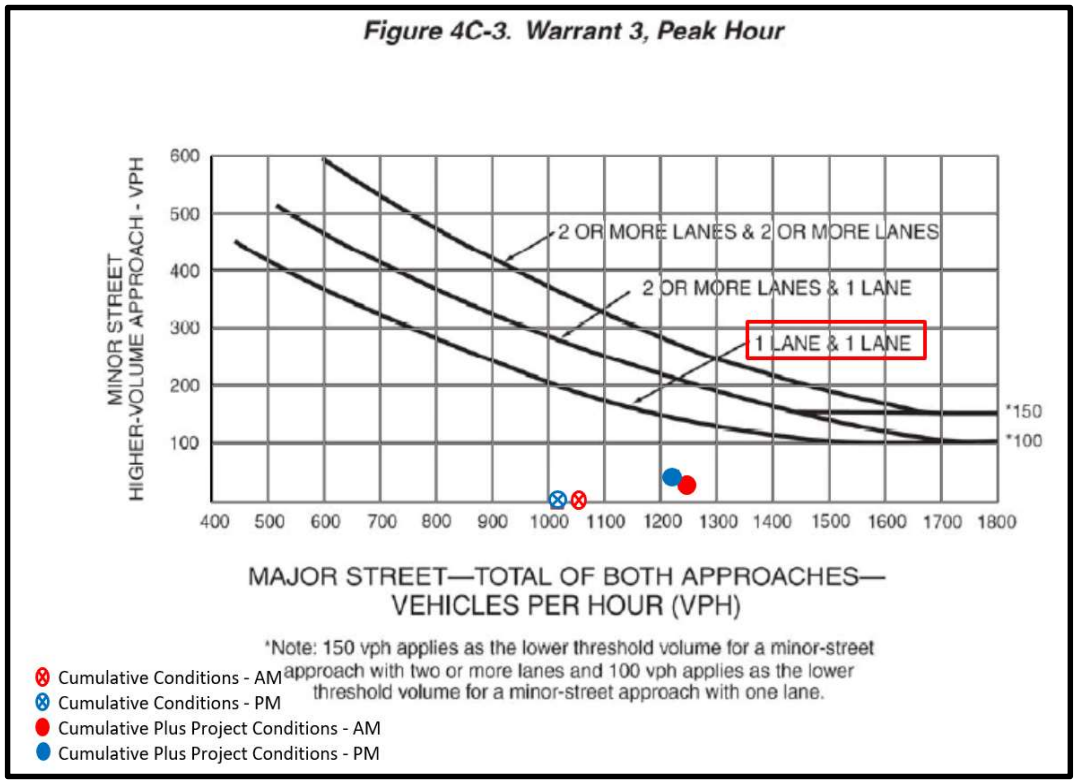


Figure 30: Samaritan Drive & Samaritan Place – With Proposed Road Diet Samaritan Dr

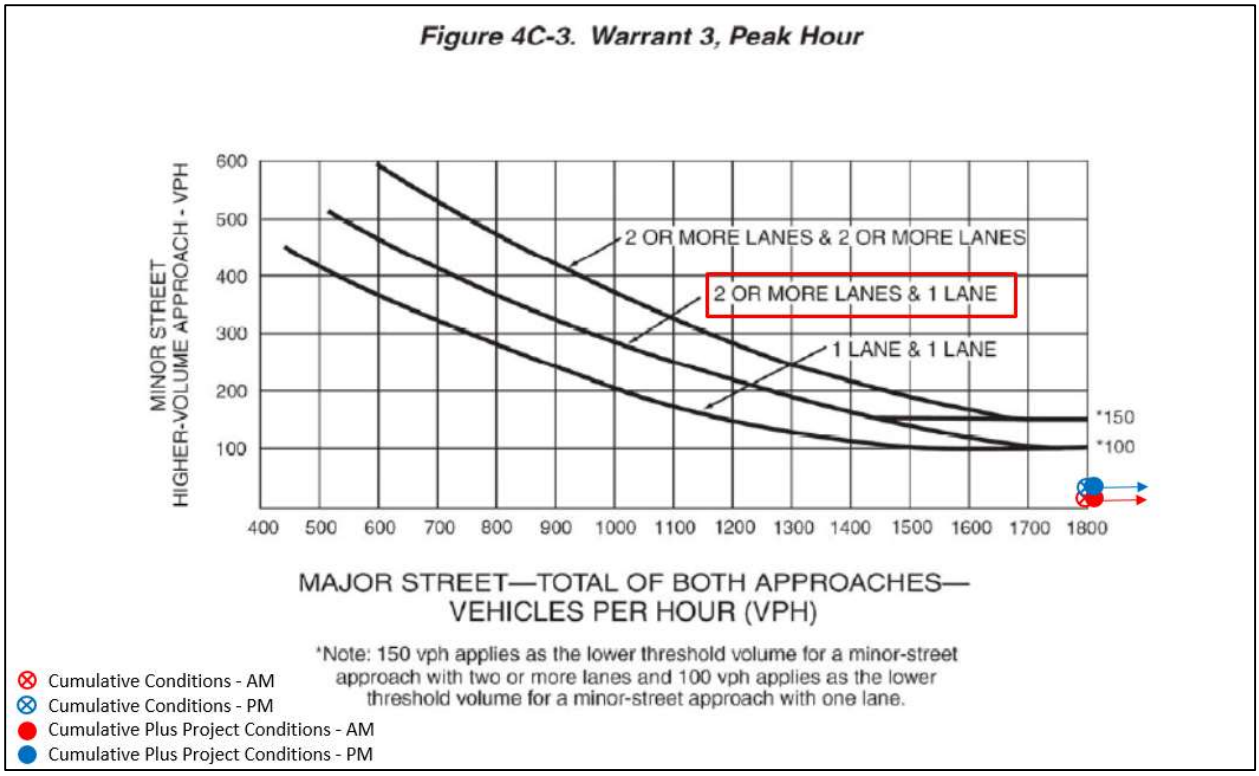


Int. #25 – Bascom Avenue & East Mozart Avenue

The results of the peak hour signal warrant #3 is shown in **Figure 31** below. The AM and PM peak hours were analyzed using the following lane geometry assumptions and volumes:

- Bascom Avenue
  - Major Street – 6 Lanes
  - AM Approach Volumes (Total of Both Approaches): 1,803 vehicles (Cumulative Conditions) & 1,886 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
  - PM Approach Volumes (Total of Both Approaches): 2,248 vehicles ((Cumulative Conditions) & 2,248 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
- East Mozart Avenue
  - Minor Street – one lane
  - AM Approach Volumes (Higher-Volume approach): 14 vehicles (Cumulative Conditions) & 14 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)
  - PM Approach Volumes (Higher-Volume approach): 25 vehicles ((Cumulative Conditions) & 25 vehicles (Cumulative Plus Phase 3 (Buildout) Project Conditions)

Figure 31: Signal Warrant Analysis – Bascom Avenue & East Mozart Avenue

As shown in **Figure 31** above, the intersection of Bascom Avenue & East Mozart Avenue does not meet the Peak Hour Warrant #3 requirements under Cumulative Conditions. In addition, the intersection does not meet the Peak Hour Warrant #3 under Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours.

6.10 East Mozart Avenue Traffic Delays

Per City's direction, the impact of potential median island opening and signal modification at Int. #3 – Bascom Avenue & SR 85 NB Ramps signal to include East Mozart Avenue as a signalized leg, was also evaluated. Modified signal phasing provided by the City was used for this evaluation.

Under existing conditions, the intersection of East Mozart Avenue & Bascom Avenue is an unsignalized intersection with stop controlled for East Mozart Avenue. All vehicles from East Mozart Avenue who would like to go north (i.e., left turn) along Bascom Avenue, need to make a right turn onto southbound Bascom Avenue and head southbound through Int. #3–- Bascom Avenue & SR 85 Northbound Ramps, and make a U-turn at Int. #4 – Bascom Avenue & SR 85 Southbound Ramps and travel north.

Intersection LOS results under Existing Conditions and under Cumulative Plus Phase 3 (Buildout) Project Conditions with and without the signal modification described above are shown in **Table 28** below. LOS outputs are attached in **Appendix J**. A conceptual drawing for the proposed median island opening and signal modification to include East Mozart Avenue is shown in **Figure 32**.

Table 28: Int. #25 – East Mozart Avenue & Bascom Avenue – Signal Modification

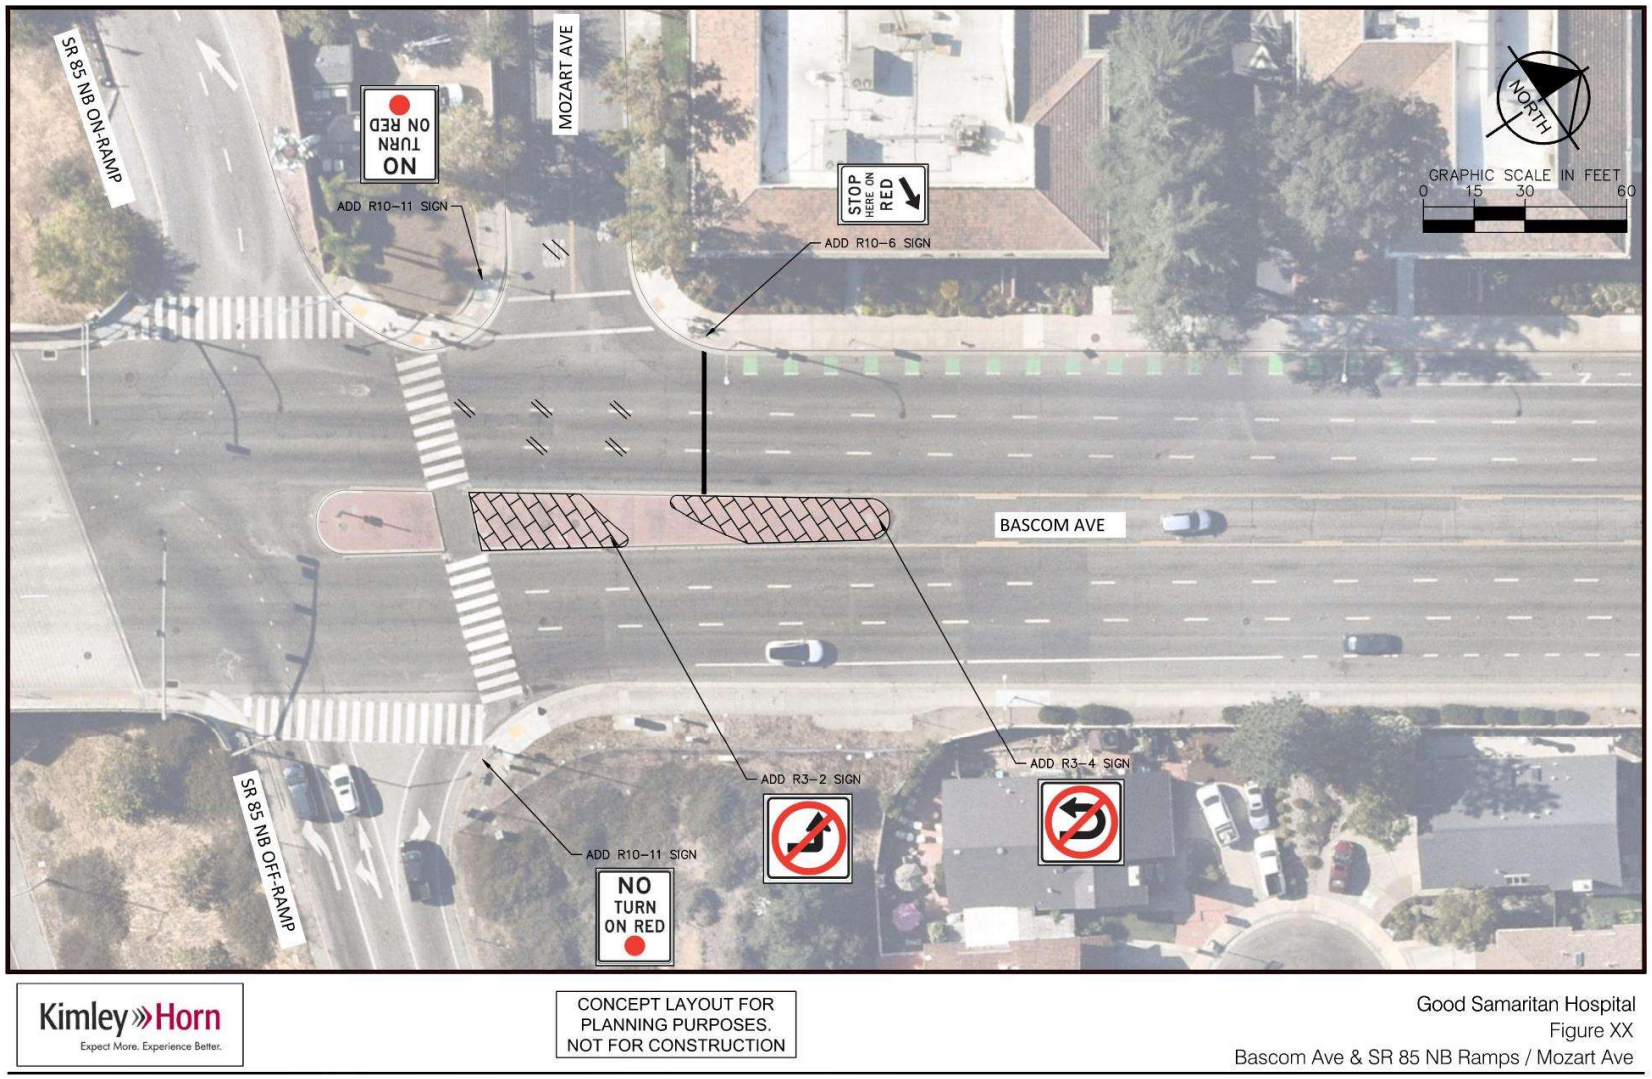
#	Intersection	LOS Criteria	Control	Existing Conditions							Cumulative Plus Phase 3 (Buildout) Project Conditions					
				AM Peak			PM Peak				AM Peak			PM Peak		
				LOS	Avg. Delay (Sec)	v/c Ratio	MVMT	LOS	Avg. Delay (Sec)	v/c Ratio	LOS	Delay (Sec)	v/c Ratio	LOS	Delay (Sec)	v/c Ratio
25	Bascom Ave/ East Mozart Ave	D	TWSC (Overall)	B	0.1	0.77	Overall	B	0.1	0.685						
			Worst Approach (EB)	B	10.4	-	EB	B	10	-						
			Signalized								B	14.2	0.63	B	12.6	0.59

TWSC - Two-way stopped controlled

Note: For the evaluation of the median island opening along Bascom Avenue with signal modification, fifty percent of the existing traffic along East Mozart Avenue was assumed to go north on Bascom Avenue and the other fifty percent is assumed to go south on Bascom Avenue.

As shown in **Table 28** above, the intersection of East Mozart Avenue & Bascom Avenue operates at acceptable LOS C or better under both Existing Conditions and Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours, with existing traffic control (unsignalized intersection) and with proposed traffic control (signalized intersection). As shown in **Figure 32** below, the proposed median island opening and signal modification to include East Mozart Avenue is not recommended due to the following reasons.

- The volumes along East Mozart Avenue are significantly lower than the volumes along Bascom Avenue and addition of exclusive signal phase for East Mozart Avenue will increase the delays for traffic along Bascom Avenue. Under existing conditions, eastbound right turn volumes are 14 vehicles during the AM peak hour and 25 vehicles during the PM peak hour.



- The resulting signalized intersection will require No Right-Turn-On-Red (RTOR) signs installed for the SR 85 northbound right turns and also for the eastbound traffic along East Mozart Avenue, to avoid conflicts with other movements at the intersection. This no RTOT will increase the delays and queues for the SR 85 northbound right Turns and for the eastbound traffic along East Mozart Avenue.

- The proposed median island opening will require relocating the existing stop bar for the southbound traffic along Bascom Avenue to north of East Mozart Avenue. The existing pedestrian crosswalk across Bascom Avenue (north leg) will need to remain at its existing location, thereby creating a wide intersection. This will create confusion for the southbound traffic as the pedestrian crosswalk will be away from the relocated stop bar. Alternatively, the pedestrian crosswalk could also be moved north along with the relocated stop bar, however, this creates a much wider intersection and will require left turning traffic from East Mozart Avenue (to northbound Bascom Avenue) to yield to pedestrians causing further delays.

The proposed median island opening along Bascom Avenue and signal modification is likely to create more confusion for motorists with wider intersection and is also likely to increase delays and queuing along SR 85 Northbound Off-Ramp. Wider intersections lead to speeding as vehicles would like to cross the intersection within the time allocated. It also creates confusion for motorists who get caught in middle of intersection, therefore the median island opening along Bascom Avenue with signal

modification is not recommended. The City of San Jose does not support the median opening or signalization of Bascom/Mozart due to the proximity of the Bascom/SR-87 on/off ramp signal; Caltrans coordination and approval would be also needed for any changes to the Bascom/SR-87 on/off ramp signal.

Figure 32: Bascom Avenue & SR 85 Northbound Ramps & East Mozart Avenue

7. LTA SITE ACCESS AND CIRCULATION

This chapter describes the local transportation analysis including site access and on-site circulation review, effects on bicycle, pedestrian, and transit facilities, roundabout analysis, construction operations, and neighborhood interface.

7.1 Vehicle Site Access and Circulation

In Phase 1 Conditions, the Project would keep the existing four driveways (see **Table 4**) and add three new driveways (Driveway 5, Driveway 6, and Driveway 7) along Samaritan Pl. As shown in Figure 9, Driveway 5 and Driveway 6 would provide access to Garage East and Driveway 7 would lead to the relocated ambulance entry to the east of Building C**.** During Phase 2 condition, no additional driveways would be constructed and during Phase 3 (Buildout) the Driveway 3 is relocated to provide better spacing between driveways and access to surface parking as shown in **Figure 11**. **Table 29** provides additional details about existing access which will be retained and the proposed new driveway access to the Project site.

Table 29: Exiting and Proposed Driveways

Driveway	Location	Width	Movement	Use	Status
1	Approximately 925 feet west of Samaritan Dr/Samaritan Pl intersection	24 feet	Restricted – Egress only[1]	Public	Existing
2	Approximately 700 feet west of Samaritan Dr/Samaritan Pl intersection	30 feet	Restricted- Ingress only[1]	Public – leads to the hospital's main entrance and access to proposed Garage West	Existing
3	**Existing:** Approximately 690 feet west of Samaritan Dr/Samaritan Pl intersection. **Proposed (Phase 3):** Approximately 360 feet west of Samaritan Dr/Samaritan Pl intersection	24 feet	**Existing:** Restricted-Ingress only **Proposed (Phase 3):** Full Access (Unrestricted Turn Movements)	**Existing:** Ambulance Use, Only for ER **Proposed (Phase 3):** Public – leads to the hospital's surface parking lot	Relocated in Phase 3
4	Approximately 160 feet west of Samaritan Dr/Samaritan Pl intersection	34 feet	Full Access (Unrestricted Turn Movements)	Public – leads to the hospital's east entrance	Existing
5	Approximately 200 feet east of Samaritan Dr/Samaritan Pl intersection	26 feet	Full Access (Unrestricted Turn Movements)	Public – leads to Garage East	Constructed in Phase 1

Driveway	Location	Width	Movement	Use	Status
6	Approximately 330 feet east of Samaritan Dr/Samaritan Pl intersection	24 feet	Full Access (Unrestricted Turn Movements)	Public – leads to Garage East	Constructed in Phase 1
7	At Samaritan Pl Cul-De-Sac, approximately 660 feet east of Samaritan Dr/Samaritan Pl intersection	26 feet	Full Access (Unrestricted Turn Movements	Ambulance Use Only	Constructed in Phase 1

Source: Perkins & Will – September 2023, Site Plan.

1. The ingress only and egress only driveways are existing driveways. Wider widths of the driveways were to accommodate emergency vehicles and delivery trucks under existing conditions. With the construction of the proposed Project, the widths of each driveway will be finalized in coordination with City staff and as per City's design requirements for driveways, during the Planned Development Permit phase of the Project.

Per City guidance, all driveways to the Project site are at a minimum of 150 feet from any intersection. All proposed driveways are as per City standards and these driveway locations optimizes sight distance and spacing for the proposed site plan. The width of the driveways shown above will be finalized in coordination with the City staff and as per the City's design requirements for driveways, during the Planned Development Permit phase of the project.

On-site vehicle queues and delays are not expected to be significant issues. Some minor on-site vehicle queues are expected due to a combination of inherent unpredictability of vehicle arrivals at driveways and the random occurrence of gaps in traffic; however, these conditions are typical at Hospitals. To improve vehicle sight distance of approaching pedestrians and bicycles on Samaritan Drive and Samaritan Pl, low clearance landscaping between the back of sidewalk and building frontage is provided on both sides of the driveway.

Vehicle On-Site Project Circulation

Vehicle maneuverability and access for the parking spaces and garage was analyzed using AutoTURN software which measures design vehicle swept paths and turning through simulation and clearance checks. A passenger car design from the American Association of State Highway and Transportation Officials (AASHTO) was assessed for the internal parking spaces.

Analysis using the AASHTO template revealed that passenger vehicles could adequately access the driveway and maneuver through the parking garage. All drive aisles within the surface parking are at least 24-feet wide and 90-degree parking is provided on both sides. On-site parking spaces are dimensioned at least 8.5-feet by 18-feet and satisfy City parking standards.

Heavy Vehicle Truck Access and Loading Zones

The loading docks are located towards the north of Building B of the Project site. It is assumed that only delivery and moving truck vehicles will be authorized to use the loading area augmented with appropriate signing and striping. It is further assumed that the delivery trucks will access the Project site via Driveway 7 along Samaritan Pl, travel along the north end of the Project site and access the loading docks located north of Building B.

The WB-40 truck based on AASHTO was assumed as the maximum size delivery truck that would be allowed on the site due to maneuverability constraints in downtown. Fire apparatus and garbage trucks were also checked for site access, and these vehicle dimensions were based on NCHRP 659 – Guide for the Geometric Design of Driveways.

WB-40 delivery trucks would be able to maneuver in and out of the loading area by parallel parking and backing into the proposed loading docks space. Exact location of the Garbage and recycling bins within the Project site is unknown and is assumed to be located near the loading docks. The Garbage truck is expected to follow the same path as the delivery truck to access the Project site. It is recommended that trash and recycling collection activity occur during off-peak timings.

Emergency Vehicle Access

In the event of an emergency, a fire apparatus vehicle can enter and exit all driveways and access all building structures including parking garages. All driveways are more than 22-feet wide and satisfies the 20-foot minimum access road requirement from the 2016 CA Fire Code. Fire code also requires driveway ramps to provide at least 32-feet of clearance for fire truck access which is provided since on-street parking along Samaritan Drive and Samaritan Pl will be prohibited along the Project frontage. The proposed roundabout at the intersection of Samaritan Dr./Samaritan Pl. will include a mountable curb for larger trucks to maneuver.

To ensure illegal on-street parking do not impede the emergency operations, it is recommended to delineate red curb striping and no parking signs along the Project frontage on Samaritan Drive and Samaritan Pl.

For Ambulances, a designated entry and exit is provided via Driveway #7 from Samaritan Pl. No other vehicles are allowed to access Driveway #7, except for delivery trucks and garbage trucks to ensure limited interference with the Ambulance operations. Traffic signs will be placed at the entrance of Driveway #7 to restrict entry for other vehicles. Deliveries and garbage pick-up to the Project are scheduled and the frequency of these deliveries is controlled for efficiency. Majority of the deliveries to the Project site are anticipated to occur during the off-peak periods to minimize delays. In case of an event, during which the delivery truck/garbage truck movement through Driveway #7 coincides with the Ambulance arriving or leaving the Project site, ample room exists for delivery trucks to yield and give-way to the Ambulance.

Figure 33 to **Figure 37** show site access and vehicle turn templates at the Project driveway, loading zone, and on-site parking garage for the design vehicles described above.

7.2 Project Driveway Sight Distance Analysis

A preliminary stopping sight distance and intersection sight distance analysis was conducted to determine the feasibility of the proposed Project driveway location. The AASHTO methodology was used in this analysis. The sight distance needed under various assumptions of physical conditions and driver behavior is directly related to vehicle speeds and to the resultant distances traversed during perception-reaction time and braking.

Stopping sight distance is defined as the sum of reaction distance and braking distance. The reaction distance is based on the reaction time of the driver while the braking distance is dependent upon the vehicle speed and the coefficient of friction between the tires and roadway as the vehicle decelerates to a complete stop. This sight distance analysis indicates the minimum visibility that is required for an approaching vehicle on Samaritan Drive and Samaritan Pl to stop safely if a vehicle from the Project driveway enters or exits the approaching road. The driver should also have an unobstructed view of the intersection, including any traffic-control devices, and sufficient lengths along the intersecting road to permit the driver to anticipate and avoid potential collisions.

For vehicles entering Samaritan Drive from the proposed Project driveway (Driveway 3 – new added driveway) and vehicles entering Samaritan Pl from the proposed Project driveways (Driveway 5 and Driveway 6), the AASHTO method evaluates sight distance from a vehicle exiting the intersection from the driveway to a vehicle approaching from either direction. The intersection sight distance is defined along intersection approach legs and across their included corners known as departure sight triangles. These specified areas should be clear of obstructions that might block a driver's view of potentially conflicting vehicles. Intersection sight distance is measured from a point 3.5-feet above the existing grade (driver's eye) along the potential driveway to a 3.5-foot object height in the center of the approaching lane on Samaritan Drive and Samaritan Pl. A vehicle setback in a stopped position from the back of sidewalk was assumed for determining intersection sight distance.

Minimum sight distance criteria for the potential driveway along Samaritan Drive and Samaritan Pl was determined from the 2018 AASHTO Geometric Design of Highways and Streets 7th Edition (Green Book). For the purposes of this analysis, a design speed of 35 mph (30 mph posted speed limit) was assumed along both Samaritan Drive and a design speed of 30 mph (25 mph posted speed limit) was assumed along Samaritan Pl. AASHTO standard time gap variables for passenger cars stopped on the proposed Project driveways were used. Based on the existing traffic control, minimum sight distance was calculated for the following scenarios:

- Stopping Sight Distance on Samaritan Drive and Samaritan Pl
- Intersection Sight Distance Case B – Stop control at the proposed Project driveway
    - Case B1 – Left turn from the minor road
    - Case B2 – Right turn from the minor road

From Table 9-6 and Table 9-8 of the Green Book, the minimum stopping sight distance along Samaritan Drive (Driveway 3) and Samaritan Pl (Driveway 5) are 250 feet and 200 feet, respectively. The intersection sight distance along Samaritan Drive (Driveway 3) and Samaritan Pl (Driveway 5) are 415 feet and 335 feet respectively for Case B1 and 335 feet and 290 feet for Case B2 assuming approach grades of 3 percent or less at 35 and 30 mph, respectively.

Vehicles on the road will have sufficient sight distance to react and stop safely if a vehicle from the Project driveway enters or exits the road. It is assumed that vehicles turning left or right from Samaritan Dr/Samaritan Pl intersection would be travelling less than 30 mph and would have sufficient visibility and stopping sight distance to stop and avoid any conflicting vehicles.

Vehicles exiting Driveway 6 will only be turning right as entry into Driveway 7 is restricted to Ambulance Use Only. Since Driveway 6 will be located at the north end of Samaritan Pl near the cul-de-sac, the design speed was assumed to be 10 mph. From Table 9-6 and Table 9-8 of the Green Book, the minimum stopping sight distance for Samaritan Pl is 50 feet. Driveway 6 will also have sufficient intersection sight distance of 100 feet to make a right turn onto the road per AASHTO Case B2 scenario.

Table 30 summarizes the intersection and stopping site distance at Project driveways.

Table 30: Project Driveway Sight Distance

Type	Design Speed (MPH)	Required Sight Distance (ft)	Actual Sight Distance (ft)	Sufficient Sight Distance?
Samaritan Drive (Project Driveway 3)				
SSD on Primary Road	35	250	>500	Yes
ISD Case B1 (Left Turn)	35	415	>500	Yes
ISD Case B2 (Right Turn)	35	335	>500	Yes
Samaritan Place (Project Driveway 5)				
SSD on Primary Road	30	200	>200	Yes
ISD Case B1 (Left Turn)	30	335	>335	Yes
ISD Case B2 (Right Turn)	30	290	>290	Yes
Samaritan Place (Project Driveway 6)				
SSD on Primary Road	10	50	>50	Yes
ISD Case B2 (Right Turn)	10	100	>100	Yes

Overall, the proposed Project driveway locations (Driveway 3, Driveway 5, and Driveway 6) provides sufficient sight distance for traffic conditions. To ensure that exiting vehicles can see bikes and vehicles traveling on the roadway, no parking zones striped with red curb should be established immediately adjacent to the Project driveways. **Figure 40**, **Figure 41**, and **Figure 42** shows the available stopping and intersection sight distances for Driveways 3, 5 and 6 respectively.

Figure 40: Driveway 3 – Sight Distance Analysis

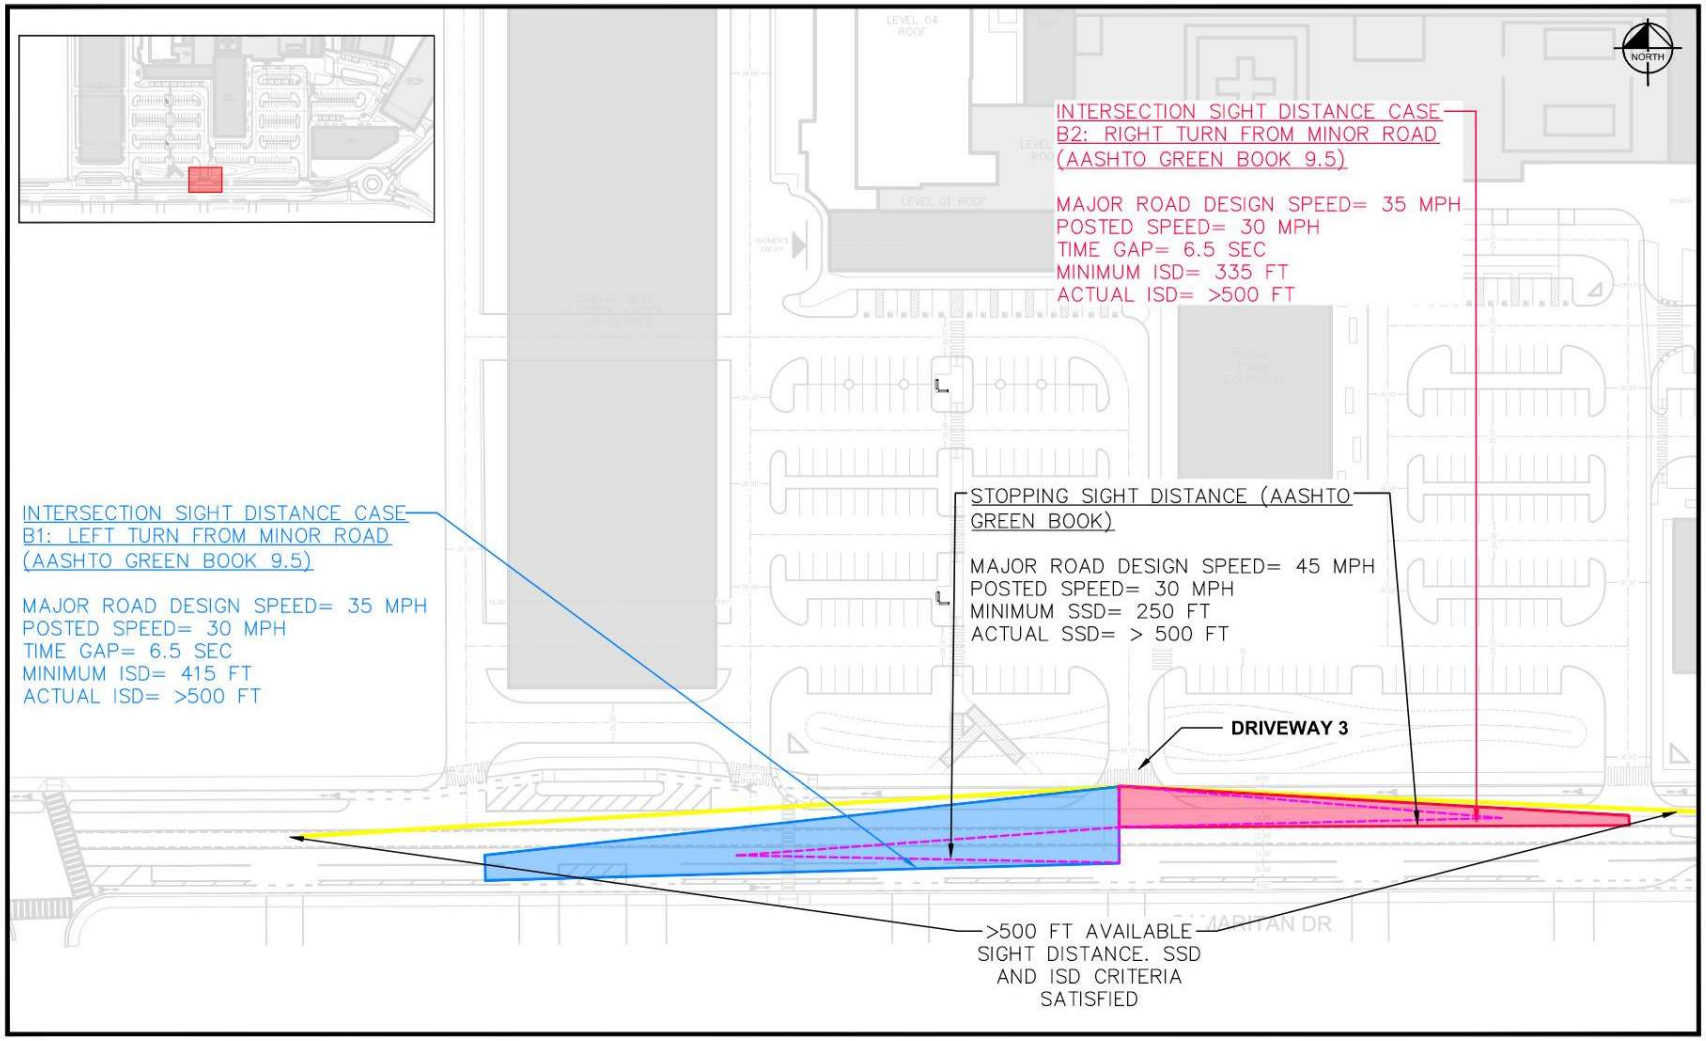

Figure 41: Driveway 5 – Sight Distance Analysis

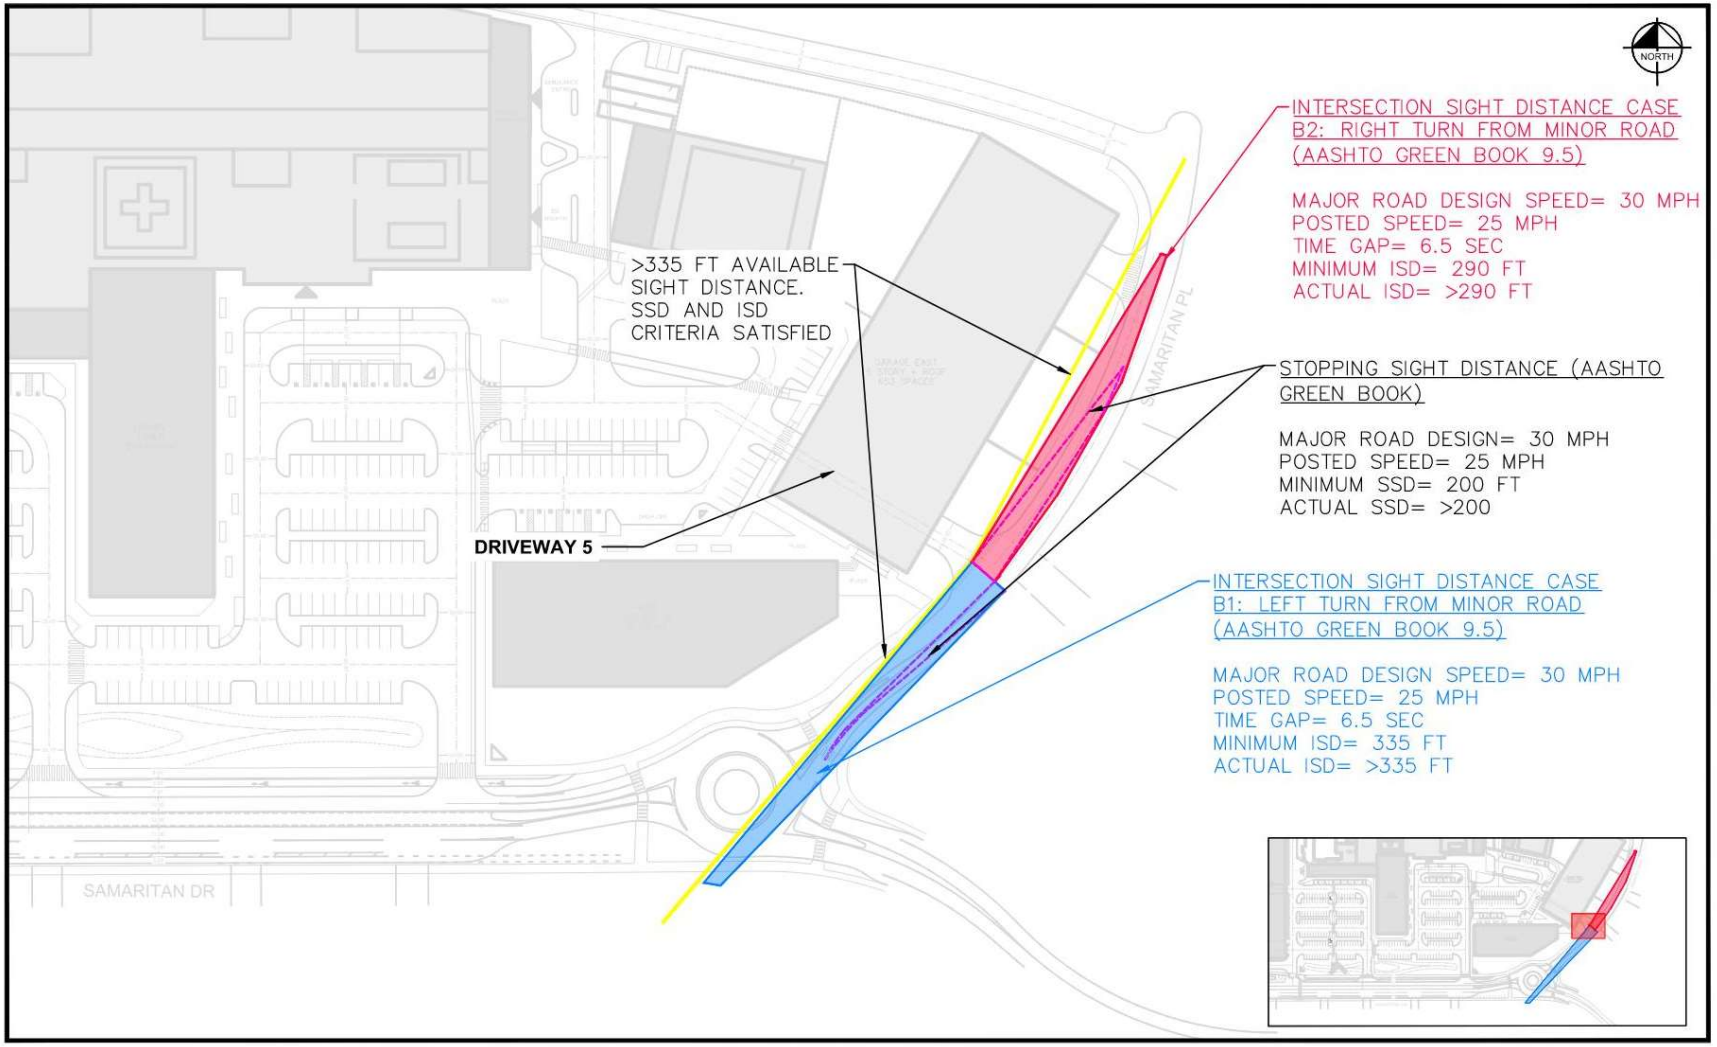

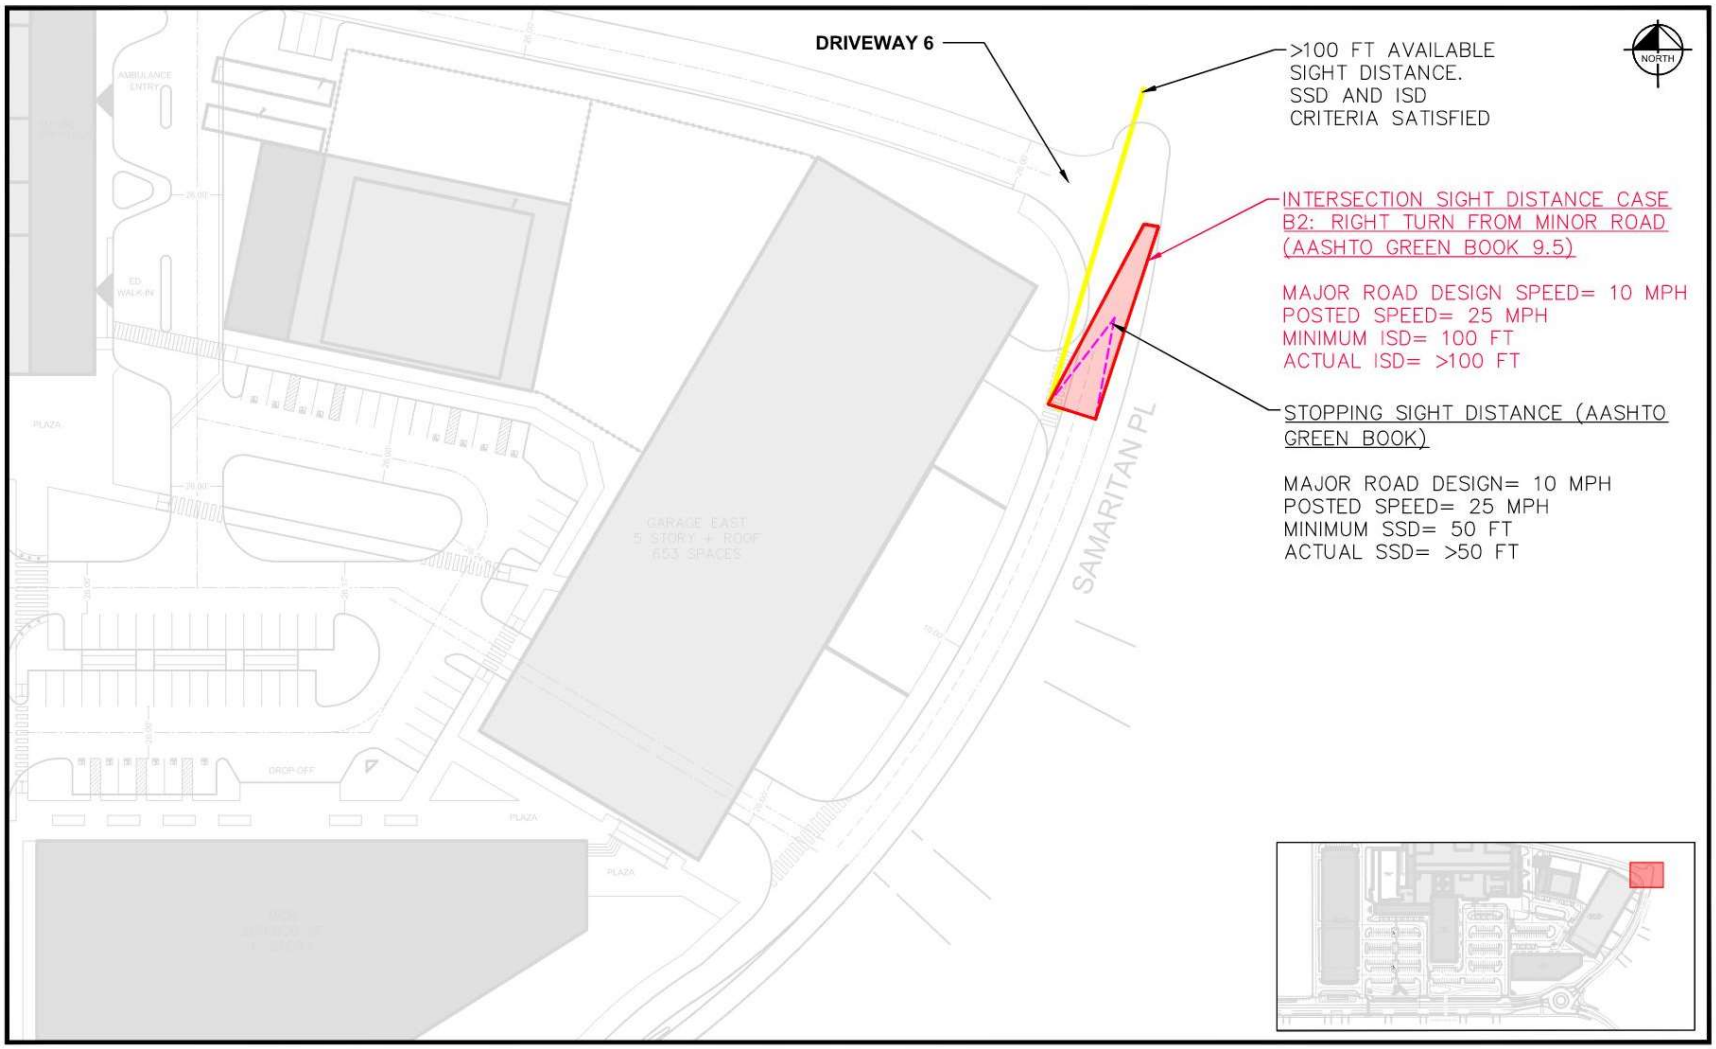

Figure 42: Driveway 6 – Sight Distance Analysis

7.3 Pedestrian and Bicycle Site Access and Circulation

The Project will provide on-site pedestrian and bicycle improvements, which includes marked crosswalks and short-term/long-term bicycle parking facilities. To mitigate the Project's VMT impact, off-site pedestrian and bicycle improvements along Project frontage and beyond will be implemented during Project Phase 3 (Buildout) Conditions. These improvements include a Road Diet along Samaritan Dr, pedestrian improvements along Samaritan Pl, and a roundabout at the intersection of Samaritan Drive / Samaritan Pl.

As stated in **Section 6.5** of the report earlier, a road diet will be implemented with Phase 3 (Buildout), along the Project frontage and beyond along Samaritan Drive from Samaritan Ct. to the intersection of Samaritan Dr/ Samaritan Pl. The road diet will reduce the number of travel lanes from five lanes (i.e., two lanes in each direction and one central left turn lane) to three lanes (i.e., one lane in each direction and one central left turn lane). The project will implement an on-street Class IV Protected Bike Path along the Project's frontage and non-frontage along Samaritan Drive from Samaritan Ct. to Samaritan Pl.

Along Samaritan Pl, the existing approximately 6 ft wide sidewalk will be improved to provide approximately a 10 ft wide sidewalk, resulting in improved pedestrian connection to the existing pedestrian bridge over SR-85. The pedestrian bridge connects to existing Class III Bike Routes along White Oaks Avenue, Browning Avenue, Kilmer Avenue and to the Los Gatos Creek Trail. The roundabout will also enhance pedestrian and bicycle safety at this location and improve all modes travel through this intersection.

The cross-section for the Road Diet along Samaritan Drive is shown in **Figure 22** to **Figure 24**. The Samaritan Pl pedestrian improvements along Project's frontage is shown in **Figure 25** and the Roundabout concept is shown in **Figure 26.**

The proposed improvements involving Road Diet are in line with City's 'Better Bike Plan 2025', which proposes a Class IV Protected Bike Lane in each direction along Samaritan Drive from Los Gatos Blvd. to Union Avenue. A Class III Bike Route along Samaritan Place. as per the City's 'Better Bike Plan 2025' will be retained with improved sidewalk along Projects frontage. Existing marked pedestrian crosswalk across Samaritan Drive at Project's Driveway 2 which connects to the existing bus stop will be retained.

The existing network of sidewalks and crosswalks within the vicinity of the Project's study area are adequate with walkable routes to nearby retail/commercial services, employment centers and residential areas for Project's visitors/employees. In addition, the Project's frontage improvements will feature lighting, landscaping (planting strip), and wider sidewalks, which improve pedestrian perceptions of comfort and safety and provide a positive pedestrian experience.

The proposed Project improves the pedestrian and bicycle connectivity and would not create an adverse effect to existing pedestrian and bicycle operations.

7.4 Transit Site Access and Circulation

As stated in **Section 2.4** of the report, the Project site is served by Route 27 and Route 61 which provides local and regional transit connections. The nearest bus stops to the Project site are located along Samaritan Drive in both eastbound and westbound directions. The westbound direction bus stop is located just south of the existing Good Samaritan Hospital between Driveway 1 and Driveway 2. The

eastbound bus stop is located directly across Driveway 1 and Driveway 2. Access to transit stops is provided through existing sidewalks and marked crosswalks across Samaritan Dr.

The existing bus stop in the westbound direction (between Driveway 1 and Driveway 2) will be improved to accommodate the proposed Road Diet along Samaritan Dr. The improvements to the westbound direction bus stop will include a bus turnout per the VTA standards, a relocated bus shelter in the middle of the bus turnout with floating island transit refuge with bike ramps at grade to existing sidewalk. The City staff prefers the existing bus stop in the westbound direction is relocated east between Driveway 3 and Driveway 4. The final location of the bus stop in the westbound direction will be discussed and finalized in coordination with City and VTA staff during the Plan Development Permits phase. The eastbound direction bus stop will be retained and green bike marking in driveways and transit conflict zone will be painted. The existing old bus shelters at the eastbound and westbound bus stops will be replaced with VTA's new standard shelters. It is recommended that the existing non-sheltered eastbound bus stop is removed and the existing eastbound bus stop with shelter retained.

To mitigate the Project's VMT impact, a single lane roundabout is also proposed at the intersection of Samaritan Drive / Samaritan Pl, along with the Road Diet along Samaritan Dr. The proposed roundabout will allow buses to make U-turns along Samaritan Dr, thus eliminating the need to travel longer to make the turn and provides VTA the much-needed flexibility for bus turnaround in the surrounding area. The proposed roundabout will include a mountable curb for buses to maneuver. VTA Bus turning template is shown in **Figure 39** above.

The proposed Project improves the transit facilities and connectivity and would not create an adverse effect to transit operations.

7.5 Vehicle and Bicycle Parking

The San José City Council voted unanimously on December 6, 2022, to update its parking ordinance to no longer have minimum parking requirements for development proposals and to favor other modes of transportation. The new ordinance is in effect as of April 10, 2023. However, the proposed amounts of vehicle, bicycle, and motorcycle parking are analyzed against Table 20-190 of the San José Municipal Code (SJMC) in effect when the PD Zoning application was deemed complete in March 2023. The proposed Project is required to provide the following off-street parking:

- Hospital/In-Patient Facility
    - One (1) vehicle parking space per 2.5 Beds
    - One (1) bicycle parking space per 25 Beds
- Medical
    - One (1) vehicle parking space per 250-square feet of total gross floor area
    - One (1) bicycle parking space per 4,000-square feet of total gross floor area

City of San José's Municipal Code (SJMC) Chapter 90.90 Part 9 requires development proposals to complete a Transportation Demand Management (TDM) Plan that addresses the parking needs and alternatives to vehicle parking. Both Phase 1 (419 Beds) and Phase 3 (419 Beds and 200 KSF MOB) will cause a net increase in VMT, and therefore are required to prepare a TDM Plan pursuant to the requirements outlined in SJMC Section 20.90.905. A separate TDM plan for Phase 1 and Phase 3 will be prepared for subsequent permit approvals in accordance with SJMC Section 20.90.905. It should be

noted that the Project meets the current Municipal Code Standards with the TDM points target (refer to Section 5 of the report).

The Project would only increase the hospital's existing licensed bed count by 15 beds and add 200,000 square feet MOB. **Table 31** breaks down the phasing of the Project's parking.

Table 31: Required Parking Per City Code

GUIDELINE SOURCE	PARKING TYPE	LAND USE	PARKING STANDARD PER GUIDELINE	PROJECT SIZE	VEHICLE PARKING (# SPACES)	BICYCLE PARKING (# SPACES)
San Jose Municipal Code	**Phase 1 (419 Beds)**					
	Vehicle	Hospital/In-Patient Facility	1 vehicle space per 2.5 Beds	419	168	-
		Medical Office	1 vehicle space per 250 SQFT	0	-	-
	Bicycle	Hospital/In-Patient Facility	1 bicycle space per 25 Beds	419	-	17
		Medical Office	1 bicycle space per 4,000 SQFT	0	-	0
			Total Parking Requirement		**168**	**17**
			Proposed Parking Supply		**1,205**	**17**
			Sufficient Parking?		**YES**	**YES**
	Phase 3 (419 Beds + 200 KSF)					
	Vehicle	Hospital/In-Patient Facility	1 vehicle space per 2.5 Beds	419	168	-
		Medical Office	1 vehicle space per 250 SQFT	200,000	800	-
	Bicycle	Hospital/In-Patient Facility	1 bicycle space per 25 Beds	419	-	17
		Medical Office	1 bicycle space per 4,000 SQFT	200,000	-	50
			Total Parking Requirement		**968**	**67**
			Proposed Parking Supply		**2,179**	**67**
			Sufficient Parking?		**YES**	**YES**

NOTES:
SQFT = Square Feet; GFA = Gross Floor Area;
Proposed parking supply based on project description from applicant
Parking requirements based on San Jose Municipal Code

According SJMC Section 20.90.900, the proposed hospital addition is exempt from completing a TDM Plan because it is an existing use as part of the existing PD zone, which has been effectuated prior to the approval of Ordinance No. 30857. However, because the proposed medical office building (MOB) is not included in the existing PD zone, a TDM Plan would need to be prepared pursuant to the requirements

outlined in SJMC Section 20.90.905. A separate TDM plan for the MOB will be prepared for subsequent permit approvals in accordance with SJMC Section 20.90.905.

7.6 Construction Operations

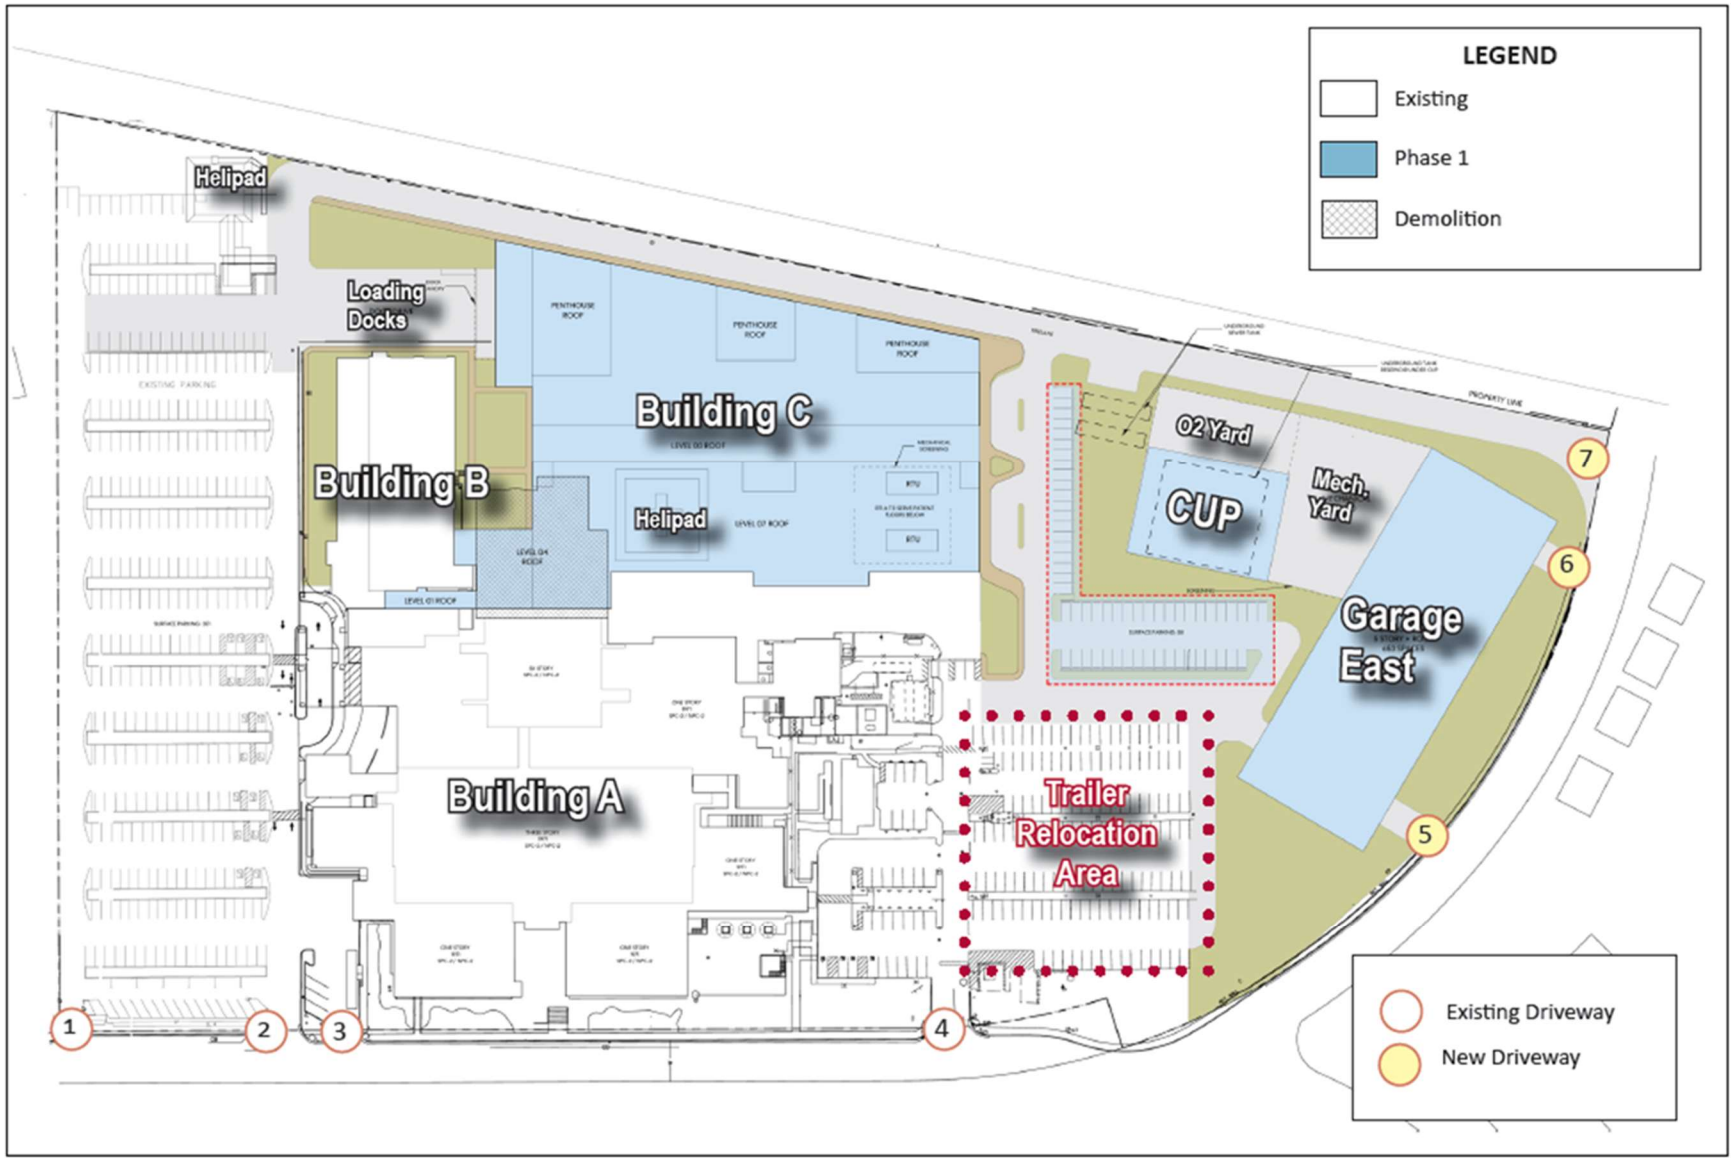
The Project consists of the phased construction of an eight-story building (basement plus eight floors), a central utility plant, two new parking garages, a medical office building, underground water and sewer tanks, and the demolition of existing Building A and daycare center associated with the existing Good Samaritan Hospital Campus. It is anticipated that the Project's full buildout would result in the construction of two new hospital wings totaling approximately 750,000 square feet, an approximately 200,000 square foot medical office building, and two new parking garage structures totaling approximately 679,000 square feet.

The Project would be developed in three phases: Phase 1 would be constructed over approximately four years starting in 2024, Phase 2 would occur over approximately two years starting in 2029, and Phase 3 would be constructed over approximately two years starting in 2032.

Specifically, Phase 1 would include demolition of approximately 20,946 square feet of the existing hospital main building (Building A) to construct a new SPC 5-rated approximately 548,000-square-foot hospital wing (Building C) and demolish the existing 6,700 square foot daycare center to construct a new five-story parking garage (Garage East) totaling approximately 253,800 square feet and a central utility plant totaling approximately 23,750 square feet (see **Figure 43**). Up to 10 temporary trailers currently used for office and educational purposes are anticipated be relocated from the northern portion of the Project site to the first floor of Garage East during Phase 1 construction to allow for the construction of Building C. Once Building C is completed, the temporary trailers would be removed and the office and educational uses would be relocated into Building C.

Phase 2 would include demolition of the remaining portion of Building A to allow for access to the new hospital (Building C) and replace it with surface parking. Phase 3 would include construction of an approximately 202,000-square-foot hospital wing (Building D), an approximately 200,000 square foot medical office building (Building E), and an approximately 425,200 square foot five-story garage structure (Garage West) (**Figure 44**). Phase 3 also depicts the Project at full buildout.

Figure 43: Phase 1 – Conceptual Plan



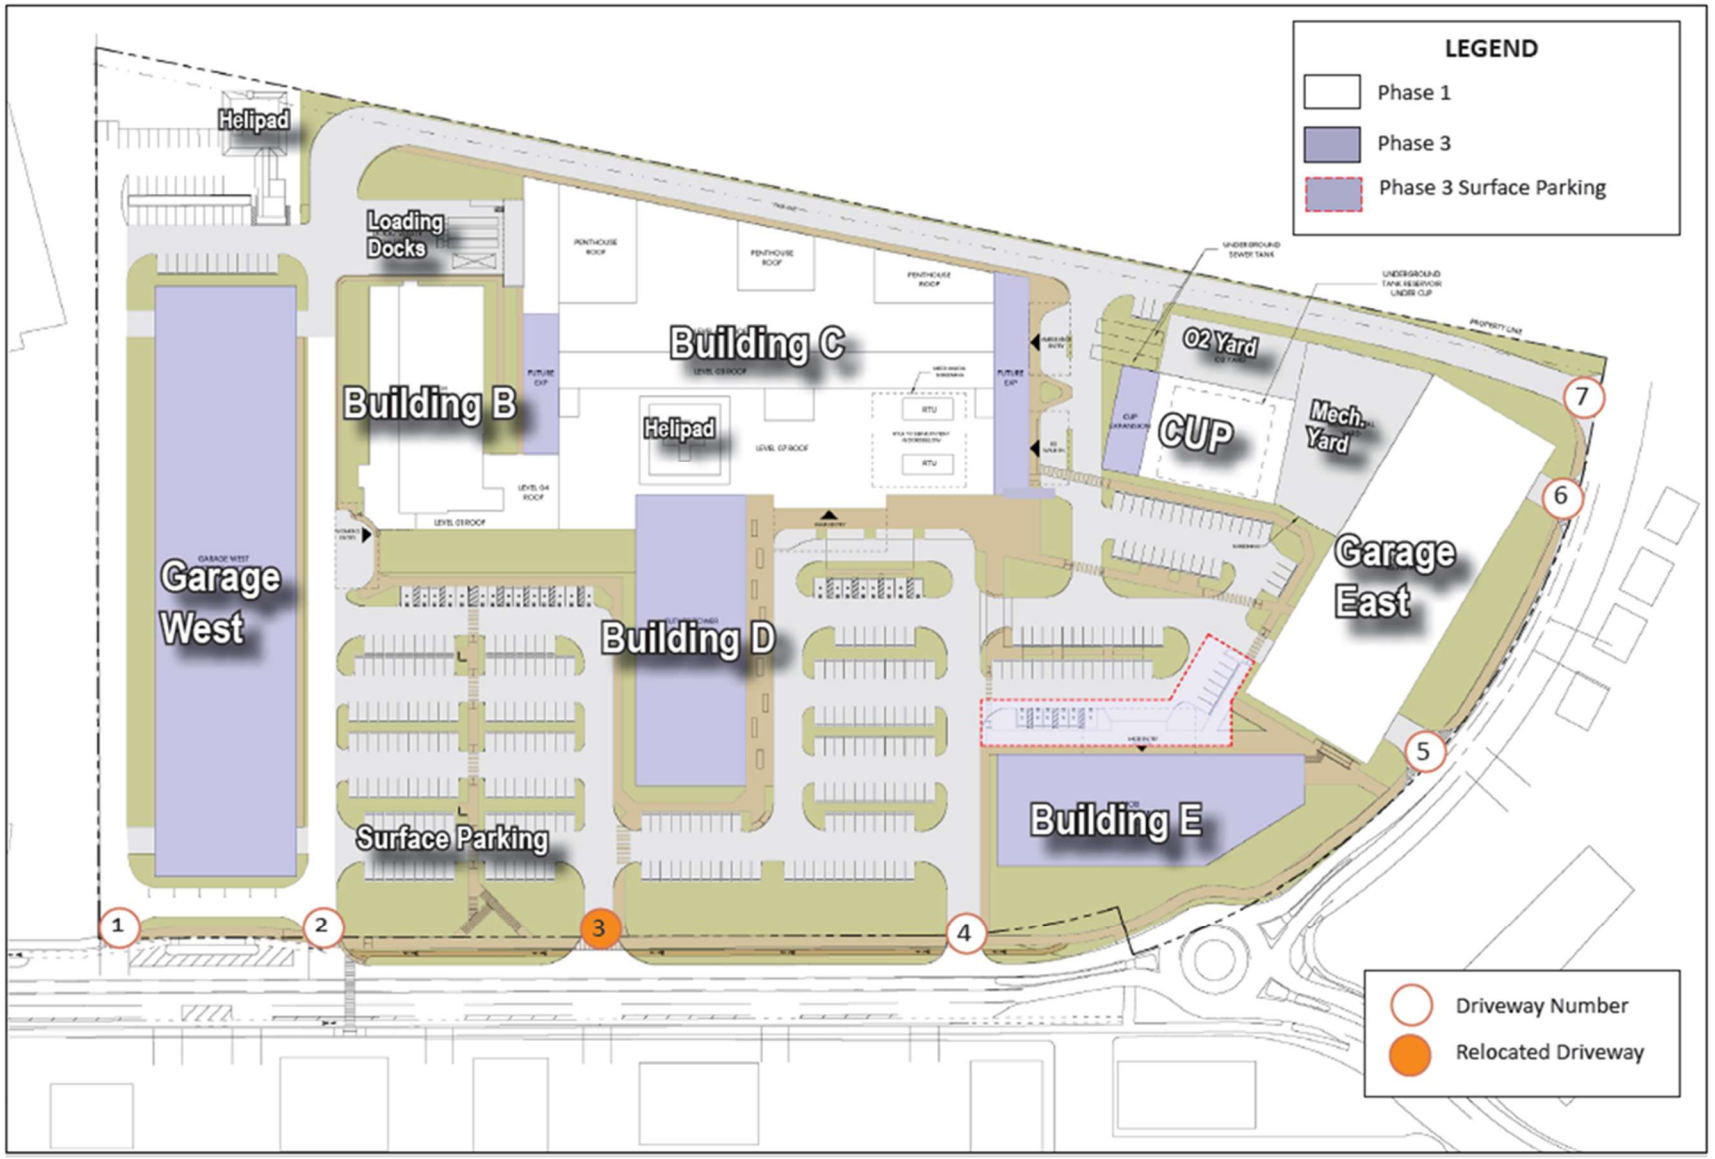


Figure 44: Phase 3 – Conceptual Plan

Phase 1 construction is anticipated to occur over a period of approximately four years. It is anticipated that construction would typically occur six days a week (Monday through Saturday) from 7:00 a.m. to 7:00 p.m. However, nighttime construction may occur for 24-hour concrete pours. Since residential uses are located within 500 feet of the Project site, a development permit granting extended hours would be required, if overnight concrete pours and/or extended construction hours were to occur. No onsite contractor parking would be provided. Temporary construction fencing would be installed prior to the start of construction.

Pedestrians would not be able to travel on the west side of Samaritan Place during Phase 1 construction and would need to use the existing sidewalk and bike facilities on the opposite side of the street. Pedestrians travelling southbound along Samaritan Place from the overhead pedestrian bridge would need to detour to the other side of the street and avoid the sidewalk closure. Bicyclists along Samaritan Place are not anticipated to be impacted due to Phase 1 construction.

Phase 2 would occur over approximately two years starting in December 2029. It is anticipated that construction would typically occur six days a week (Monday through Saturday) from 7:00 a.m. to 7:00 p.m. No onsite contractor parking would be provided. Construction fencing would be placed around Building A once Building C is fully operational and the existing hospital has been fully vacated. A temporary main entry point to Building C would be accessible while the existing hospital is demolished.

Prior to construction, the contractor should place as needed temporary signs indicating closed sidewalk facilities, install a temporary screened fence around the work area, protect existing features/utilities, and repair any damaged improvements within public right of way per City of San José requirements.

7.7 Neighborhood Interface

The area immediately south of Samaritan Dr, within the vicinity of the Project site is mostly residential with some offices along National Avenue. Carlton Elementary School is within a quarter mile radius and Union Middle School is within one mile radius from the Project site. Pedestrian and bicycle circulation within the vicinity of the Project is provided via a combination of sidewalks and existing bicycle facilities. Under existing conditions, National Avenue is classified as a Bike Boulevard and Los Gatos Almaden Rd is classified as Class II Bike Lane facility. Access to Carlton Elementary School is provided via Carlton Avenue, which is proposed as Class III Bike Boulevard as per the 'San José Better Bike Plan 2025'. Los Gatos Almaden Rd which provides access to Union Middle School is proposed as Class IV Protected Bike Lane facility as per 'San José Better Bike Plan 2025'.

As per the trip distribution pattern, around 15 percent of the trips are anticipated to originate from south. However, majority of these trips are anticipated to use SR 17, Los Gatos Blvd, and Union Boulevard to access the Project site as these streets provide a more direct route with more travel lanes and higher travel speeds. Negligible Project trips are anticipated through the residential neighborhood streets.

Field visits were conducted within the vicinity of the Project site to observe on-street parking occupancy along Samaritan Dr, Kinghurst Dr, Lost Oaks Dr, and National Avenue. In addition, field observations were conducted to determine whether visitors to Good Samaritan Hospital park utilize on-street parking instead of parking on-site. The field observations are summarized below:

- An average parking occupancy of 75% for on-site parking spaces was observed on a typical weekday during morning, lunch time and afternoon peak periods.

- Visitors were observed to use the parking spaces for the medical office buildings west of existing Project site and walk to the hospital.
- Visitors were also observed to use on-street parking spaces along Samaritan Pl and Samaritan Drive and walk to the hospital. While the on-street parking was almost fully utilized along Samaritan Pl, on-street parking spaces were available along Samaritan Dr. It should be noted that the time limit for on-street parking along Samaritan Drive is 2 hours and there is no time limit along Samaritan Pl.
- On-street parking along Kinghurst Drive between Samaritan Drive and Lost Oaks Drive was fully occupied; however, no visitors were observed to park along Kinghurst Drive and walk to the hospital.
- No visitors were observed to park along Lost Oak Drive and National Avenue and walk to the hospital.

From the parking analysis, the Project's on-site parking would satisfy the City's vehicle parking standard, and the Project is not anticipated to create an adverse effect to the existing parking condition in the surrounding area. ADT traffic count data for Kinghurst Avenue, Lost Oaks Avenue, Carlton Avenue, Samaritan Pl, and National Avenue is provided in the **Appendix D.**

The existing sidewalks at least six feet wide are available on both the north and south sides of Samaritan Dr, with good lighting and signing. Marked crosswalks and ADA standard curb ramps are also provided in the area. The Project is not anticipated to create an adverse effect to the existing pedestrian and bicycle facilities in the surrounding neighborhood area.

7.8 Effects on Neighborhood Streets

As shown in **Figure 13** and **Figure 14**, the project trips will use major City Collector Streets (i.e., Bascom Ave., Los Gatos Blvd., Union Ave., Samaritan Dr.) to access the project site. Local or residential streets within the vicinity of the project site are anticipated to carry negligible project traffic and the effect on these streets is anticipated to be minimal. The following roadway segments which provide access to the adjacent neighborhoods were studied:

1. Kinghurst Dr., South of Lost Oaks Dr.
2. Lost Oaks Dr., West of Kingshurst Dr.
3. Carlton Ave., East of Kingridge Dr.
4. Samaritan Dr., Between Kingshurst Dr. and Samaritan Pl.
5. Samaritan Pl., North of Samaritan Dr.
6. National Ave., Between Samaritan Dr. and Lost Oaks Dr.
7. Carlton Ave., Between Kingsdale Dr. and Kingwood Way
8. Lost Oaks Dr., Between Kingshurst Dr. and Kingwood Way
9. Kingshurst Ave., Between Kingfield Way and Carlton Ave.

The roadway segments studied are shown in **Figure 45**.

The City of San Jose does not have a criterion to study the TIRE (Traffic Infusion on Residential Environment), however, the City's Traffic Calming Toolkit identifies threshold criteria to implement comprehensive traffic calming projects based on street type, posted speed limit, and observed 85th percentile speed limit.

Effects of project trips on neighborhood streets were evaluated based on engineering judgement, using the anticipated daily project traffic volumes added and percent increase in traffic volumes along these roadway segments. It should be noted that the effect of project traffic on neighborhood streets is dependent on multiple variables such as traffic volumes, traffic mix (i.e., passenger cars, trucks, transit, bike, pedestrian, etc.), resultant increase in traffic (i.e., vehicles, pedestrian, bicyclists, etc.), neighborhood characteristics, parcel size, presence of on-street parking, pavement conditions, perception of residents within the neighborhood to increase in traffic and noise levels, etc., which makes it difficult to quantify. The information provided in this section of the report is for informational purposes only.

All roadway segments evaluated are identified as residential streets in the Vision San Jose 2040 General Plan, except Samaritan Dr. which is classified as a City Connector Street from Bascom Ave./Los Gatos Blvd. to Ester Dr. and as a Local Connector Street from Ester Dr. to Union Ave. All residential roadway segments consist of two-lane roadway and Samaritan Dr. consists of two-lanes in each direction with a central left-turn lane. The posted speed limit for all roadway segments evaluated is 25 mph, except for Samaritan Dr. where the posted speed limit is 30 mph.

As per the City of San Jose Traffic Calming Toolkit, a Local Street carries average daily traffic (ADT) volumes typically ranging from 1,000 to 3,000 vehicles with a posted speed limit of 25 mph and a Neighborhood Collector Street carries average daily traffic (ADT) volumes typically ranging from 1,000 to 6,000 vehicles with a posted speed limit of 30 mph. City's street typology of Local Connector Street can be related to 2-Lane Collector as per the Highway Capacity Manual, carrying ADT volumes typically ranging from 6,000 to 12,000 vehicles. Similarly, City's Street typology of City Connector Street can be related to 2-Lane Arterial (with left-turn lane) as per the Highway Capacity Manual, carrying ADT volumes typically ranging from 11,000 to 18,000 vehicles.

The 24-hour traffic count data and the observed 85th percentile speed for the evaluated roadway segments are shown in **Table 32**. The traffic count and the speed data were collected during May 2022 and December 2022 for the evaluated roadway segments. The observed 85th percentile speed for the following segments exceed the threshold criteria as per City of San Jose Traffic Calming Toolkit, triggering the need for comprehensive traffic calming projects:

- Samaritan Dr., between Kingshurst Dr. and Samaritan Pl.
- National Ave., between Samaritan Dr. and Los Oaks Dr.

It should be noted that no project trips are added along National Ave. during Phase 1 and Phase 3 (Buildout). Even though the observed 85th percentile speed along National Ave. is 33 mph in both directions, comprehensive traffic calming projects are not recommended.

Under existing conditions, the ADT volumes for all evaluated roadway segments are within the capacities associated with the street types. The addition of project trips increases the daily traffic volumes along these roadway segments, however, all evaluated roadway segments continue to be within capacities associated with the street types under the Background and Cumulative Conditions. Therefore, no impact is anticipated on neighborhood streets with the addition of project traffic. As described in **Section 6.7** of this report, comprehensive traffic calming in form of Road Diet is proposed along Samaritan Dr. between Kingshurst Dr. and Samaritan Pl. along with a roundabout at the Samaritan Dr. / Samaritan Pl. intersection. Additionally, traffic calming improvements are also identified along Samaritan Pl., along the project frontage.

Figure 45: Neighborhood Roadway Segments

Table 32: Average Daily Traffic (ADT) Volumes on Neighborhood Streets

#	Roadway Segment	Direction	Posted Speed (mph) [1]	85th Percentile Speed (mph)	Existing Average Daily Traffic (ADT)	Traffic Calming Threshold Criteria Met (Yes/No)	Background Projects (PM) Trips	Background Projects ADT	Project Phase 1 & Phase 2 (PM) Trips	Project Phase 1 & Phase 2 - Net Daily Project Trips	Existing + Background + Phase 1 & Phase 2 - Daily Trips	Percent (%) Project Trips	Cumulative Projects (PM) Trips	Cumulative Projects ADT	Project Phase 3 Buildout (PM Trips)	Project Phase 3 - Net Daily Project Trips	Existing + Cumulative + Phase 3 Buildout - Daily Trips	Percent (%) Project Trips

Notes:
1. Posted Speed limit, based on field visit or as per California Vehicle Code which identifies a speed limit of 25 mph for streets within residential districts.
2. Threshold Criteria from City of San Jose Traffic Calming Toolkit for Comprehensive Traffic Calming Projects.

8. CMP FREEWAY SEGMENT ANALYSIS

The following freeway segments were selected based on their proximity to the Project study area along SR 85 and SR 17:

SR 17

1. SR 17 Northbound (NB), between Saratoga Avenue and Lark Avenue
2. SR 17 Northbound (NB), between Lark Avenue and SR 85
3. SR 17 Northbound (NB), between SR 85 and San Tomas Expwy/Camden Avenue
4. SR 17 Northbound (NB), between San Tomas Expwy/Camden Avenue to Hamilton Avenue
5. SR 17 Southbound (SB), between Hamilton Avenue to San Tomas Expwy/Camden Avenue
6. SR 17 Southbound (SB), between San Tomas Expwy/Camden Avenue to SR 85
7. SR 17 Southbound (SB), between SR 85 and Lark Avenue
8. SR 17 Southbound (SB), between Lark Avenue and Saratoga Avenue

SR 85

9. SR 85 Eastbound (EB), between Camden Avenue and Union Avenue
10. SR 85 Eastbound (EB), between Union Avenue and S. Bascom Avenue
11. SR 85 Eastbound (EB), between S. Bascom Avenue and SR 17
12. SR 85 Eastbound (EB), between SR 17 and Winchester Blvd
13. SR 85 Westbound (WB), between Winchester Blvd and SR 17
14. SR 85 Westbound (WB), between SR 17 and S. Bascom Avenue
15. SR 85 Westbound (WB), between S. Bascom Avenue and Union Avenue
16. SR 85 Westbound (WB), between Union Avenue and Camden Avenue

As per the 2018 CMP Monitoring & Conformance Report, a capacity of 2,300 vehicles per hour per lane should be used for mixed-flow segments with three or more lanes in one direction, and a capacity of 2,200 vehicles per hour per lane should be used for mixed-flow segments that are two lanes in one direction. For High Occupancy Vehicle (HOV) lanes, a capacity of 1,650 vehicles per hour per lane should be used.

Existing freeway segment volumes were obtained from the 2018 CMP Monitoring & Conformance Report. Cumulative Conditions freeway segment volumes were estimated by adding the ATI traffic volumes for approved and pending Projects to the existing freeway volumes. The Cumulative Plus Project Conditions freeway segment volumes were estimated by adding the Project trips to the Cumulative Conditions. It should be noted that the freeway segment analysis was conducted for Project Phase 3 (Buildout) only.

8.1 Existing Conditions Analysis

Freeway segment operations were evaluated at the study locations under Existing conditions, and the results of the analysis are presented in **Table 33**.

As shown in **Table 33** below, under existing conditions 6 segments during the AM peak hour and 5 segments during the PM peak hour operate at unacceptable LOS F.

Table 33: Freeway Segment Capacity Analysis - Existing Conditions

						Existing Conditions									
ID	Facility	Dir	Freeway Segment	Peak Hour	Miles	Volume (pc)		Speed (mph)		Lanes (ln)		Density (pc/mi/ln)		LOS

8.2 Cumulative and Cumulative Plus Project Phase 3 (Buildout) Conditions Analysis

Freeway segment operations were evaluated at the study locations under Cumulative and Cumulative Plus Project Phase 3 (Buildout) conditions, and the results of the analysis are presented in **Table 34**. As shown in **Table 34** below, under Cumulative Plus Project Conditions, the same freeway segments which were operating at unacceptable LOS F (6 segments during the AM peak hour and 5 segments during the PM peak hour) continue to operate at unacceptable LOS F. The addition of Project trips causes increase of more than one percent of the capacity of the following freeway segments, resulting in an adverse effect on traffic conditions:

- SR 85 EB - Mixed Flow Lane, between Camden Avenue and Union Avenue during the PM peak hour
- SR 85 WB – Mixed Flow Lane and HOV Lane, between Winchester Blvd. and SR-17

Table 34: Freeway Segment Operations Summary for Cumulative Conditions

ID	Freeway Segment	Peak Hour	Miles	Volume (pc)						Speed (mph)		Lanes (ln)		Capacity		Cumulative Conditions				Cumulative Plus Project Conditions

As identified above, the addition of Project trips increases the capacity of mixed flow lane and HOV lane at two freeway segments which are already operating at LOS F, causing an adverse effect. No improvements involving freeway widening to increase vehicle capacity are identified, however, the 2040 VTA's Valley Transportation Plan (VTP) identifies express lane Projects along SR-85, between Mountain View and US 101 totaling approximately 24 miles. The proposed facility will allow single occupancy vehicles access to the express lanes by paying a toll. This express lane Project will convert the existing HOV lanes in either direction to express lanes. The Project will also include the continuation of the express lanes for three miles to US 101 in South San José, through the SR 85/ US 101 Interchange, for a total of 27 miles.

It should be noted that it is not feasible for the proposed Project to bear the cost of implementing the improvements due to constraints related to right-of-way (ROW) and land acquisition costs. The project is proposing to implement a TDM plan with various programmatic measures especially for employees, which would potentially reduce the number of trips the project will generate during the AM and PM peak hours.

8.3 Freeway On-Ramp Analysis

On-Ramp Queuing Analysis

To assess the potential adverse effect of added Project trips at on-ramps, queuing analysis was conducted using Synchro and SimTraffic software. Maximum per lane capacity for on-ramp analysis was assumed at 900 vehicles/lane and 10-multiple SimTraffic simulation runs were performed for average queuing results. Anticipated average queues (50th percentile) and 95th percentile queues are shown in **Table 35** below.

Table 35: Freeway On-Ramp Queuing Analysis

S. No.	Study Ramps	No. of Lanes	Storage (ft/ln)	Total Storage (ft)	Scenario	AM Peak				PM Peak			
						Average Queue (ft/ln)	Sufficient Storage?	95% Queue (ft/ln)	Sufficient Storage?	Average Queue (ft/ln)	Sufficient Storage?	95% Queue (ft/ln)	Sufficient Storage?
1	Union Ave & SR-85 NB On-Ramp	2	715	1430	Existing Conditions	40	YES	65	YES	50	YES	76	YES
					Background Conditions	45	YES	77	YES	48	YES	70	YES
					Background Plus Project (Phase 3 Buildout) Conditions	40	YES	62	YES	50	YES	82	YES
					Cumulative Conditions	45	YES	78	YES	46	YES	79	YES
					Cumulative Plus Project (Phase 3 Buildout) Conditions	42	YES	71	YES	56	YES	90	YES
2	Union Ave & SR-85 SB On-Ramp	1	815	815	Existing Conditions	51	YES	88	YES	110	YES	167	YES
					Background Conditions	62	YES	116	YES	116	YES	192	YES
					Background Plus Project (Phase 3 Buildout) Conditions	58	YES	102	YES	188	YES	304	YES
					Cumulative Conditions	61	YES	88	YES	140	YES	225	YES
					Cumulative Plus Project (Phase 3 Buildout) Conditions	57	YES	87	YES	307	YES	523	YES
3	S Bascom Ave & SR-85 NB On-Ramp	1	1135	1135	Existing Conditions	37	YES	67	YES	40	YES	68	YES
					Background Conditions	40	YES	78	YES	44	YES	83	YES
					Background Plus Project (Phase 3 Buildout) Conditions	51	YES	84	YES	54	YES	94	YES
					Cumulative Conditions	42	YES	72	YES	39	YES	68	YES
					Cumulative Plus Project (Phase 3 Buildout) Conditions	42	YES	67	YES	57	YES	85	YES
4	S Bascom Ave & SR-85 SB On-Ramp	2	1785	3570	Existing Conditions	17	YES	41	YES	36	YES	57	YES
					Background Conditions	20	YES	39	YES	34	YES	60	YES
					Background Plus Project (Phase 3 Buildout) Conditions	27	YES	44	YES	32	YES	47	YES
					Cumulative Conditions	27	YES	42	YES	37	YES	63	YES
					Cumulative Plus Project (Phase 3 Buildout) Conditions	20	YES	40	YES	33	YES	52	YES

As shown in **Table 35** above, the addition of Project trips will increase the queue length, however, these increase in queue length is not anticipated to be significant and can be accommodated within the available storage space. It should also be noted that that the 95th percentile queues have 5 percent probability of exceeding during the analysis time period and is not what an average driver would experience. Furthermore, the San José Transportation Analysis Handbook dated April 2023 does not require analysis of on-ramps and no adverse effect criteria is identified for the analysis.

The project is proposing to implement a TDM plan with various programmatic measures especially for employees, which would potentially reduce the number of trips the project will generate during the AM and PM peak hours.

9. CONCLUSIONS AND RECOMMENDATIONS

Phase 1 includes the construction of a new 548,444 square foot 413 bed hospital. Phase 2 of the project demolishes the remaining portion of the existing hospital building and replace it with surface parking. Phase 3 incudes the construction of a 201,936 square foot hospital expansion with a total of 419 beds and the addition of a 200,000 square foot MOB.

The CEQA transportation analysis which provides an evaluation of VMT, looked at a conservative scenario for Phase 1 by assuming all 419 licensed beds are operational by end of Phase 1. Phase 3 (Buildout) includes VMT evaluation of 419 licensed beds and 200 KSF of MOB. No VMT analysis was conducted for Phase 2 as no traffic is generated.

The total increase in daily VMT caused by Phase 1 would be 0.05% (i.e., 143 daily trips) and by the Phase 3 (Buildout) would be 0.81% (i.e.,2,537 daily trips). The Project will be required to implement a series of TDM measures to mitigate the VMT impacts discussed above. The Project will fully mitigate its Phase 1 and Phase 3 (Buildout) VMT impacts.

Phase 1 – Hospital (419 Beds)

Because of the nature of the land use, and consistent with the City Handbook, the transportation metric for CEQA is a net change in VMT. The VMT analysis shows that the Project's Phase 1 would increase the daily VMT for employees by 47 daily trips from 240,569 to 240,616 (or 0.02%) and for patients/visitors by 96 daily trips from 73,798 to 73,894 (or 0.13%). The total increase in daily VMT caused by Phase 1 would be 143 daily trips from 314,367 to 314,510 (or 0.05%). Since Phase 1 would result in a net increase in daily VMT, a potentially significant impact would occur. Mitigation measures are required to reduce the VMT impact to a less than significant level.

Percent (%) VMT Reductions - Phase 1 – Hospital (419 Beds)

With implementation of the TDM measures for Phase 1 Conditions outlined in Section 4, a potential reduction of 503 employee daily trips will be achieved (which is 456 employee daily trips more than the required mitigation) and a reduction of 96 patients/visitors' daily trips is achieved (which would equal the required mitigation). Therefore, the Project's Phase 1 VMT impact would be reduced to a less than significant level with mitigation incorporated. See Section 4 for further details.

Phase 3 (Buildout) – Hospital (419 Beds) + MOB (200 KSF)

The VMT analysis shows that Phase 3 (Buildout) would increase the daily VMT for employees by 1,611 from 240,569 to 242,180 (or 0.67%) and visitors and patients by 926 from 73,798 to 74,724 (or 1.25%). The total increase in daily VMT caused by the proposed Project would be 2,537 (or 0.81%). Since Phase 3 would result in a net increase in daily VMT, a potentially significant impact would occur. Mitigation measures are required to reduce the VMT impact to a less than significant level.

Percent (%) VMT Reductions – - Phase 3 (Buildout) - Hospital (419 Beds) + MOB (200 KSF)

With implementation of the TDM measures for Phase 3 (Buildout) Conditions outlined in Section 4, a potential reduction of 2,269 employee daily trips will be achieved (which is 658 employee daily trips more than the required mitigation) and a reduction of 562 patients/visitors' daily trips is achieved (which would be 362 patients/visitor's daily trips less than the required mitigation). The overall reduction of 2,537 daily trips required to mitigate the Project's Phase 3 (Buildout) VMT impact is achieved by combining the daily trips reduction for employees and patients/visitors. Therefore, the

Phase 3 (Buildout) VMT impact would be reduced to less than significant level with mitigation incorporated.

Transportation Demand Management (TDM) Plan

The City's 2023 Transportation Analysis Handbook defines a Project's TDM requirement as a TDM Point Target to be met by committing to a package of TDM measures. San José Municipal Code Section 20.90.060 categorizes land uses into four categories: 'Home-End Uses,' 'Commute-End Uses,' 'Visit-End Uses,' and 'Other Uses.'

Phase 1, Phase 2, and Phase 3 (Buildout)) falls under the 'Commute-End Uses' land use category for the jobs generated. The Phase 1 Project which includes the Hospital (419 Beds), satisfies the TDM Point Target with 25 points. The Phase 2 Project which includes the demolition of the existing Hospital, does not satisfy the TDM Point Target with 21 points. To meet the 25-point minimum requirement, the following Phase 2 TDM measures are required;

- [MI01] Provide Bike and Micro-mobility Network Improvements
  - This measure will achieve a potential point value of 2 points
- [MI03] Provide Transit Network Improvements
  - This measure will achieve a potential point value of 1 point
- [MI05] Provide Pedestrian Network Improvements (2 points)
  - This measure will achieve a potential point value of 2 points

However, if the Project reduces the number of parking spaces provided during Phase 2 to a parking ratio of 2.0 or less, then the Project meets the 25-point minimum requirement and TDM measure MI01, MI03, and MI05 would not be required under Phase 2. It should be noted that Phase 3 would still meet the 25-point minimum requirement, even if the above measures are required during Phase 2

The Phase 3 (Buildout) Project which includes the Hospital and Medical Office Building (MOB), satisfies the TDM Point Target with 31 points.

Projects including a TDM plan as a Condition of Approval are required to implement the proposed TDM measures for the life of the Project and fulfill ongoing compliance and monitoring requirements. As per the 2023 Transportation Analysis Handbook, the Project is classified as Level 2 (large Project) and would be subject to annual monitoring. The proposed Project will submit a completed TDM Compliance Form, a completed TDM Monitoring Report, and associated administrative fees to the City Department of Transportation every year.

Proposed Mitigation Plan Measures

The following TDM measures involving improvements related to alternative transportation modes are proposed:

- **Samaritan Drive Road Diet:** A road diet will be implemented with Phase 3 (Buildout), along the Project frontage and beyond along Samaritan Drive from Samaritan Ct. to the intersection of Samaritan Dr/ Samaritan Pl. The road diet will reduce the number of travel lanes from five lanes

(i.e., two lanes in each direction and one central left turn lane) to three lanes (i.e., one lane in each direction and one central left turn lane). The project will be required to provide an on-street Class IV Protected Bike Path along the Project's frontage and non-frontage along Samaritan Drive and along Samaritan Pl.

The proposed improvements involving Road Diet is in line with City's 'Better Bike Plan 2025', which proposes a Class IV Protected Bike Lane in each direction along Samaritan Drive from Los Gatos Blvd. to Union Avenue and a Class III Bike Route along Samaritan Pl. providing connection to the existing pedestrian bridge over SR-85.

Samaritan Drive / Samaritan Place Roundabout: A roundabout at the existing unsignalized intersection of Samaritan Drive. / Samaritan Place. Will also be implemented with Phase 3 (Buildout). The proposed roundabout will tie in with the Road Diet and will have a single lane in each direction. The proposed roundabout will provide the opportunity for existing VTA bus routes to make a U-turn along Samaritan Drive

Local Transportation Analysis

Project Trip Generation

Trip generation for the proposed Project land uses was calculated using trip generation rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition*. Per the 2023 *Transportation Analysis Handbook*, trip generation reduction credits were applied to the Project including location-based mode-share and removal of existing driveway counts.

During Phase 1, the Project will increase the number of currently licensed 404 Beds to 413 Beds. For conservative scenario, no credits were taken for the existing hospital demolition. During Phase 2, the Project will demolish the remaining portion existing hospital main building to allow for access to the new hospital and replace it with surface parking (552 spaces). While there will be a redistribution of the trips internally within the site, no additional trips will be added during Phase 2 of the Project. Phase 3 (Buildout) of the Project includes the 419 beds and the addition of a 200,000 square foot MOB.

For a conservative scenario, all 419 beds were assumed to be operational by end of Phase 1. Baseline vehicle trips for Phase 1 Project (excluding trip adjustments) are anticipated to generate a gross total of 9,352 daily trips, 750 AM peak hour trips, and 708 PM peak hour trips. With all applicable trip reductions (location-based adjustment of 9%, VMT reductions, and existing driveway trip credits), the Phase 1 Project is anticipated to generate a total of 3,266 daily trips, 196 AM peak hour trips (165 In / 31 Out), and 197 PM peak hour trips (25 In / 172 Out).

During Phase 3 (Buildout), baseline vehicle trips for the Project (excluding trip adjustments) are anticipated to generate a gross total of 15,724 daily trips, 1,286 AM peak hour trips, and 1,276 PM peak hour vehicle trips. Development of the Project with all applicable trip reductions (location-based adjustment of 9%, VMT reduction, and existing driveway counts) is anticipated to generate a net total of 6,762 additional daily trips, 489 AM peak hour trips (409 In / 80 Out), and 516 PM peak hour trips (95 In / 421 Out) to the roadway network.

Intersection Traffic Operations

Weekday AM and PM peak hour intersection turning movement counts were collected for all study intersections during May 2022, except for study intersection of S. Bascom Avenue. / East Mozart

Avenue., which was collected during November 2022. Traffic conditions for each study intersection was analyzed during the 7:00 – 9:00 AM and 4:00 – 6:00 PM peak hours of traffic which represent the most heavily congested traffic on a typical weekday. The study intersections were assessed under Existing, Background, Background Plus Phase 1 Project, Background Plus Phase 3 (Buildout) Project, Cumulative, Cumulative Plus Phase 3 (Buildout) Project Condition scenarios. The City of San José, the City of Campbell, the Town of Los Gatos, and the Valley Transportation Authority Congestion Management Program intersection level of service standards and significance thresholds were used to determine adverse effects caused by the Project.

Adverse Effects and Improvements

The Project is not anticipated to generate an adverse effect on the study intersections during the Phase 1 and Phase 3 (Buildout) scenarios.

The addition of Phase 3 (Buildout) Project trips increases the capacity of mixed flow lane and HOV lane at two freeway segments which are already operating at LOS F, causing a significant adverse effect. No improvements involving freeway widening to increase vehicle capacity are identified as it is not feasible for the proposed Project to bear the cost of implementing the improvements due to constraints related to right-of-way (ROW) and land acquisition costs.

The Project will implement the following geometric improvements as part of the TDM measures during Phase 3 (Buildout) to mitigate the VMT impact:

- **Samaritan Drive Road Diet:** A road diet will be implemented with Phase 3 (Buildout), along the Project frontage and beyond along Samaritan Drive from Samaritan Ct. to the intersection of Samaritan Dr/ Samaritan Pl. The road diet will reduce the number of travel lanes from five lanes (i.e., two lanes in each direction and one central left turn lane) to three lanes (i.e., one lane in each direction and one central left turn lane). The project will be required to provide an on-street Class IV Protected Bike Path along the Project's frontage and non-frontage along Samaritan Drive and along Samaritan Pl. The proposed improvements involving the Road Diet are in line with City's 'Better Bike Plan 2025', which proposes a Class IV Protected Bike Lane in each direction along Samaritan Drive from Los Gatos Blvd. to Union Avenue and a Class III Bike Route along Samaritan Place. Providing connection to the existing pedestrian bridge over SR-85.

- **Samarian Drive and Samaritan Place Roundabout:** A roundabout at the existing unsignalized intersection of Samaritan Drive / Samaritan Place will also be implemented with Phase 3 (Buildout). The proposed roundabout will tie in with the Road Diet and will have a single lane in each direction. The proposed roundabout will provide the opportunity for existing VTA bus routes to make a U-turn along Samaritan Drive.

The Project will also include off-site right-of-way improvements at the Project site's access points on Samaritan Drive and Samaritan Place. These improvements would include new curb cuts for the proposed driveway access points, as well as rehabilitation of the existing pedestrian sidewalks.

Vehicle Site Access and Circulation

In Phase 1, the Project would keep the existing four driveways and add three new driveways (Driveway 5, Driveway 6, and Driveway 7) along Samaritan Pl. Driveway 5 and Driveway 6 would provide access to Garage East and Driveway 7 would lead to the relocated ambulance entry to the east of Building C**.**

During Phase 2, no additional driveways would be constructed and during Phase 3 (Buildout), Driveway 3 will be relocated to provide better spacing between driveways and access to surface parking.

Per City guidance, all driveways to the Project site are at a minimum of 150 feet from any intersection. All proposed driveways are as per City standards and these driveway locations optimize sight distance and spacing for the proposed site plan. Passenger vehicles, delivery trucks, refuse, and emergency vehicles are able to circulate within the Project site without conflict.

Signal Warrant Analysis

- Under Cumulative Conditions, the intersection of Kingshurst Drive & Samaritan Drive does not meet the Peak Hour Warrant #3 requirements during both AM and PM peak hours. Under Cumulative Plus Phase 3 (Buildout) Project Conditions, the intersection meets the Peak Hour Warrant #3 requirements during both the AM and PM peak hours with the proposed road diet on Samaritan Drive with one vehicle travel lane for both approaches; however, the intersection of Samaritan Ct & Samaritan Drive (Int. # 7) was recently signalized (2022) as part of improvement measures identified in the 'Samaritan Medical Campus Development Plan' transportation analysis report dated May 2016. The Samaritan Ct & Samaritan Dr intersection is approximately 225 feet west of the Kingshurst Dr & Samaritan Dr intersection, and due to this proximity, signalization of the Kingshurst & Samaritan intersection is not recommended.

- The intersection of Samaritan Place & Samaritan Drive does not meet the Peak Hour Warrant #3 requirements under Cumulative Conditions. In addition the intersection does not meet the Peak Hour Warrant #3 under Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours. During the Phase 3 (Buildout) project condition, the Samaritan Pl & Samaritan Dr intersection would be converted into a roundabout.

- The intersection of Bascom Avenue & East Mozart Avenue does not meet the Peak Hour Warrant #3 requirements under Cumulative Conditions. In addition, the intersection does not meet the Peak Hour Warrant #3 under Cumulative Plus Phase 3 (Buildout) Project Conditions, during both AM and PM peak hours.

Pedestrian, Bicycle, and Transit Site Access

The Project will provide on-site pedestrian and bicycle improvements, which include marked crosswalks and short-term/long-term bicycle parking facilities. To mitigate the Project's VMT impact, off-site pedestrian and bicycle improvements along Project frontage and beyond will be implemented during Project Phase 3 (Buildout) Conditions. These improvements include a Road Diet along Samaritan Drive, pedestrian improvements along Samaritan Place, and a roundabout at the intersection of Samaritan Drive / Samaritan Place. The Project improves pedestrian and bicycle connectivity and would not create an adverse effect concerning existing pedestrian and bicycle operations.

The existing bus stop in the westbound direction (between Driveway 1 and Driveway 2) will be improved to accommodate the proposed Road Diet along Samaritan Dr. The improvements to the westbound direction bus stop will include a bus turnout per the VTA standards, a relocated bus shelter in the middle of the bus turnout with floating island transit refuge with bike ramps at grade to existing sidewalk. The City staff prefers the existing bus stop in the westbound direction is relocated east between Driveway 3 and Driveway 4. The final location of the bus stop in the westbound direction will be discussed and finalized in coordination with City and VTA staff during the Plan Development Permits

phase. The eastbound direction bus stop will be retained and green bike marking in driveways and transit conflict zone will be painted. The existing old bus shelters at the eastbound and westbound bus stops will be replaced with VTA's new standard shelters. It is recommended that the existing non-sheltered eastbound bus stop is removed and the existing eastbound bus stop with shelter retained. The proposed Project improves the transit facilities and connectivity and would not create an adverse effect concerning transit operations.

On-Site Vehicle and Bicycle Parking

Based on Section 5: Transportation Demand Management (TDM) Plan of the TA Report, the project is adhering to the current TDM ordinance and achieving the TDM Points Target for Phase 1 and 3.

The number of proposed vehicle and bicycle spaces provided for Phase 1, Phase 2, and Phase 3 are summarized below:

- Phase 1 – 1,205 vehicle spaces and 17 bicycle spaces
- Phase 2 – 1,494 vehicle spaces and 17 bicycle spaces
- Phase 3 – 2,179 vehicle spaces and 52 bicycle spaces

The San José City Council voted unanimously on December 6, 2022, to update its parking ordinance to no longer have minimum parking requirements for development proposals and to favor other modes of transportation. The new ordinance is in effect as of April 10, 2023. However, the proposed amounts of vehicle, bicycle, and motorcycle parking are analyzed against Table 20-190 of the San José Municipal Code (SJMC) in effect when the PD Zoning application was deemed complete in March 2023. Per the City's parking standard, the Project site is anticipated to provide sufficient on-site vehicle and bicycle parking.

Neighborhood Interface

The Project's on-site parking would satisfy the City's vehicle parking standard, and the Project is not anticipated to create an adverse effect concerning the existing parking condition in the surrounding area. The Project is not anticipated to create an adverse effect concerning the existing pedestrian and bicycle facilities in the surrounding area.

To: Frederick Venter, Ali Mustafa

From: At van den Hout

Subject: VMT Analysis Samaritan Hospital Phase 1 and Phase 3 Expansion

Introduction

Hexagon Transportation Consultants, Inc. has completed a vehicle-miles traveled (VMT) analysis for the proposed Samaritan Hospital Expansion. The proposed project is located at 2425 Samaritan Drive in San José, California. Phase 1 (or interim conditions) of the proposed project would increase the number of hospital beds by 15. Phase 3 (or buildout conditions) would add a 200 ksf medical office building to Phase 1of the project. Phase 2 will demolish the remaining portion of the existing hospital main building to allow for access to the new hospital and replace it with surface parking. Phase 2 does not generate additional traffic and no VMT analysis is included for this phase.

The City of San José has adopted the Santa Clara Countywide VMT Evaluation Tool ("VMT tool") to assess a project's potential VMT based on the project's description, location, and attributes. For most residential, office, and industrial projects, the VMT tool is the approved method to calculate Project VMT. For non-residential or non-office projects, very large projects, or projects that can potentially shift travel patterns, such as the proposed hospital expansion, the VMT tool would not be appropriate or adequate for the CEQA transportation analysis. In such cases, the San José Travel Demand Model ("CSJ model") should be used. Hexagon and Kimley-Horn had several meetings with San José staff to establish the methodology to evaluate the VMT impact for this project. It was agreed that the CSJ model would be used to calculate the change in VMT resulting from the proposed hospital expansion, using the methodology described below.

Methodology

The purpose of this analysis of the proposed hospital expansion is to determine if adding these medical services at 2425 Samaritan Drive would reduce or increase VMT. The premise is that the hospital expansion would not cause an *increase* in the number of trips but instead result in a *change* in trip-making because adding hospital beds and a medical office building does not mean that more people will be seeking medical care. Therefore, it is assumed that some employees would leave their jobs at other hospitals and find employment at the hospital expansion. Likewise, patients are assumed to find treatment at the proposed project instead of going to other hospitals in the region, as will such shifts occur by hospital visitors and patients of the new medical office building.

The CSJ model uses employment to estimate trip-making associated with the proposed project. Therefore, the 15 hospital beds and the 200 ksf medical office building were converted to jobs using data contained in the Institute of Transportation Engineers Trip Generation Manual. Based on trip generation estimates of a Hospital [ITE Code 610], 15 hospital beds would generate the same number of trips as 89 hospital employees. Similarly, traffic generation of the 200 ksf medical office [ITE Code 720] is equivalent to traffic generated by 869 medical office jobs. To model the changes in VMT for Phase 1, the 15 additional hospital beds would increase the jobs at 2425 Samaritan Drive by 89. Phase 3 of the project

would also add a 200 ksf medical office to the site, which generates the same number of daily vehicles as 869 medical office workers. Phase 3 would increase the jobs at the site by 89+869=958.

Since it is assumed that the total number of trips would not change, City staff provided five hospitals with medical office facilities in Santa Clara County from which jobs should be shifted to the proposed project site:

- Kaiser Permanente Medical Offices (TAZ 926)
- Santa Clara Valley Medical Center (TAZs 795, 3033, and 3034)
- O'Connor Hospital (TAZ 775)
- Kaiser Permanente Santa Clara (TAZ 95)
- El Camino Health Los Gatos Hospital (TAZ 7)

Phase 1 VMT Analysis

Hospital trips are estimated in the model using service employment as the trip generator. For the VMT analysis of Phase 1, the 89 service jobs reflecting the hospital expansion were added to the project TAZ 623 and removed from the TAZs where the five hospitals are located, directly proportional to their size and inversely proportional to the distance squared from the project site. Table 1 presents the calculations of the shifts in service jobs between the TAZs.

Table 1
Service Employment Reduction [89 Jobs] At Other Hospitals

TAZ	Distance to TAZ 623 (mls)	1 Distance^2	Normalized [A]	No Project Service Employment	Normalized [B]	Factor [A]*[B]	Normalized [C]	Service Employment Reduction [C]*89
7	3.95	0.06	0.34	1,317	0.18	0.06	0.37	-33
95	9.29	0.01	0.06	212	0.03	0.00	0.01	-1
775	8.03	0.02	0.08	1,154	0.16	0.01	0.08	-7
795	5.93	0.03	0.15	551	0.08	0.01	0.07	-6
926	8.62	0.01	0.07	116	0.02	0.00	0.01	-1
3033	5.88	0.03	0.15	69	0.01	0.00	0.01	-1
3034	5.92	0.03	0.15	3,741	0.52	0.08	0.46	-41

The CSJ model was run without (No Project scenario) and with (Project Phase 1 scenario) these employment shifts. Daily work VMT for the employees, with and without the project, was calculated for the hospital personnel. Trips made by hospital visitors are reflected in the model as "other" trips. Daily VMT for those trips for both scenarios was calculated for the other (non-work) trips. These data are presented in Table 2.

Table 2
No Project and Phase 1 Project VMT Characteristics and Estimates

VMT Characteristics	No Project	Project	Project - No Project	
			Absolute Change	Percent Change
Daily Work (Employees) VMT	240,569	240,616	47	0.02%
Daily Other (Patients and Visitors) VMT	73,798	73,894	96	0.13%
Total Daily VMT	314,367	314,510	143	0.05%
Number of Jobs	15,567	15,567	0	0.00%
Daily Work VMT/Job	15.45	15.46	0.01	0.02%
Daily Other VMT/Job	4.74	4.75	0.01	0.13%
Daily VMT/Job	20.19	20.20	0.01	0.05%

The VMT analysis shows that Phase 1 of the proposed project would increase the daily VMT for employees by 47 (or 0.02%) and visitors by 96 (or 0.13%). The total increase in daily VMT caused by Phase 1 of the proposed project would be 143 (or 0.05%). The daily VMT/job would increase by 0.01, from 20.19 in the No Project scenario to 20.20 with Phase 1 of the proposed project. *Note that the VMT/Job numbers in Table 2 are rounded to the nearest two decimal places.* The threshold of significance is 'no net change' in VMT and since Phase 1 of the proposed project will result in net change in VMT, mitigation measures will be required to reduce the VMT impact.

Phase 3 VMT Analysis

Hospital and medical office trips are estimated in the model using service employment as the trip generator. The 958 service jobs reflecting the hospital (bed) expansion and the added medical office building were added to project TAZ 623 and removed from the TAZs where the five hospitals and medical office buildings are located, directly proportional to their size and inversely proportional to the distance squared from the project site. Table 3 presents the calculations of the shifts in service jobs between the TAZs.

Table 3
Service Employment Reduction [958 Jobs] At Other Hospitals and Medical Office Buildings

TAZ	Distance to TAZ 623 (mls)	$\frac{1}{\text{Distance}^2}$	Normalized [A]	No Project Service Employment	Normalized [B]	Factor [A]*[B]	Normalized [C]	Service Employment Reduction [C]*958
7	3.95	0.06	0.34	1,317	0.18	0.06	0.37	-350
95	9.29	0.01	0.06	212	0.03	0.00	0.01	-10
775	8.03	0.02	0.08	1,154	0.16	0.01	0.08	-74
795	5.93	0.03	0.15	551	0.08	0.01	0.07	-65
926	8.62	0.01	0.07	116	0.02	0.00	0.01	-6
3033	5.88	0.03	0.15	69	0.01	0.00	0.01	-8
3034	5.92	0.03	0.15	3,741	0.52	0.08	0.46	-443

The CSJ model was run without (No Project scenario) and with (Phase 3 Project scenario) these employment shifts. Daily work VMT for the employees, with and without the project, was calculated for the hospital and medical office personnel. Trips made by hospital visitors and patients of the medical offices are reflected in the model as "other" trips. Daily VMT for those trips for both scenarios was calculated for the other (non-work) trips. These data are presented in Table 4.

Table 4
No Project and Phase 3 Project VMT Characteristics and Estimates

VMT Characteristics	No Project	Project	Project - No Project	
			Absolute Change	Percent Change
Daily Work (Employees) VMT	240,569	242,180	1,611	0.67%
Daily Other (Patients and Visitors) VMT	73,798	74,724	926	1.25%
Total Daily VMT	314,367	316,904	2,537	0.81%
Number of Jobs	15,567	15,567	0	0.00%
Daily Work VMT/Job	15.45	15.56	0.10	0.67%
Daily Other VMT/Job	4.74	4.80	0.06	1.25%
Daily VMT/Job	20.19	20.36	0.16	0.81%

The VMT analysis shows that the Phase 3 of the proposed project would increase the daily VMT for employees by 1,611 (or 0.67%) and visitors and patients by 926 (or 1.25%). The total increase in daily VMT caused by the proposed project would be 2,537 (or 0.81%). The daily VMT/job would increase by 0.16, from 20.19 in the No Project scenario to 20.36 with the Phase 3 of the proposed project. *Note that the VMT/Job numbers in Table 2 are rounded to the nearest two decimal places.* The threshold of significance is 'no net change' in VMT and since Phase 3 of the proposed project will result in net change in VMT, mitigation measures will be required to reduce the VMT impact.

Appendix B – San José VMT Evaluation Tool for VMT Mitigation and Reduction Strategies

CITY OF SAN JOSE VEHICLE MILES TRAVELED EVALUATION TOOL SUMMARY REPORT

PROJECT:

Name: Phase 1-Good Samaritan Hospital Expansion
Location: 2425 Samaritan Dr., San Jose, CA 95124
Parcel: 42136009 Parcel Type: Urban Low Transit
Proposed Parking Spaces Vehicles: 1,494 Bicycles: 17

Tool Version: 2/29/2019
Date: 5/9/2024

LAND USE:

Residential:	
Single Family	0 DU
Multi Family	0 DU
Subtotal	0 DU
Office:	391.9 KSF
Retail:	0 KSF
Industrial:	0 KSF

Percent of All Residential Units

Extremely Low Income (≤ 30% MFI)	0 % Affordable
Very Low Income (> 30% MFI, ≤ 50% MFI)	0 % Affordable
Low Income (> 50% MFI, ≤ 80% MFI)	0 % Affordable

VMT REDUCTION STRATEGIES

Tier 1 - Project Characteristics

Increase Residential Density
- Existing Density (DU/Residential Acres in half-mile buffer) 5
- With Project Density (DU/Residential Acres in half-mile buffer) 5

Increase Development Diversity
- Existing Activity Mix Index 0.64
- With Project Activity Mix Index 0.61

Integrate Affordable and Below Market Rate
- Extremely Low Income BMR units . . . . . 0 %
- Very Low Income BMR units . . . . . 0 %
- Low Income BMR units . . . . . 0 %

Increase Employment Density
- Existing Density (Jobs/Commercial Acres in half-mile buffer) 62
- With Project Density (Jobs/Commercial Acres in half-mile buffer) 78

Tier 2 - Multimodal Infrastructure

Traffic Calming Measures *(In Coordination with SJ)*
- Are improvements provided beyond the development frontage? . . . . . No

Pedestrian Network Improvements *(In Coordination with SJ)*
- Are pedestrian improvements provided beyond the development frontage? . . . . . No

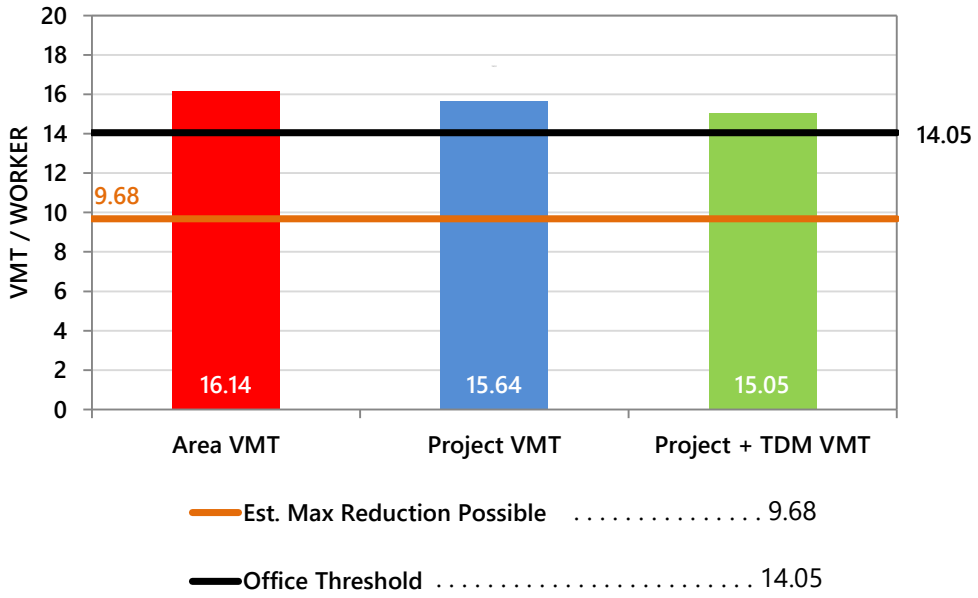
Tier 3 - Parking

Limit Parking Supply
- Minimum Parking Required by Municipal Code . . . . . 1567 spaces
- Total Parking Spaces Available to Employees . . . . . 1494 spaces
- Does the surrounding street parking have RPP, meters, or time limits? . . . . . Yes

Tier 4 - TDM Programs

Commute Trip Reduction Marketing/ Education
- Percent of Eligible Employees . . . . . 50 %

Telecommuting and Alternative Work Schedule Program



Alternative Work Schedule	4/40 Schedule
Percent of Eligible Eemployees	5 %

Ride-Sharing Programs

Percent of Eligible Eemployees	2 %

EMPLOYMENT ONLY

The tool estimates that the project would generate per non-industrial worker VMT above the City's threshold and per industrial worker VMT below the City's threshold. There are selected strategies that require coordination with the City of San Jose to implement.

CITY OF SAN JOSE VEHICLE MILES TRAVELED EVALUATION TOOL SUMMARY REPORT

PROJECT:

Name: Phase 3-Good Samaritan Hospital Expansion
Location: 2425 Samaritan Dr., San Jose, CA 95124
Parcel: 42136009 Parcel Type: Urban Low Transit
Proposed Parking Spaces Vehicles: 2,179 Bicycles: 52

Tool Version: 2/29/2019
Date: 5/9/2024

LAND USE:

Residential:		Percent of All Residential Units	
Single Family	0 DU	Extremely Low Income (≤ 30% MFI)	0 % Affordable
Multi Family	0 DU	Very Low Income (> 30% MFI, ≤ 50% MFI)	0 % Affordable
Subtotal	0 DU	Low Income (> 50% MFI, ≤ 80% MFI)	0 % Affordable
Office:	979.7 KSF		
Retail:	0 KSF		
Industrial:	0 KSF		

VMT REDUCTION STRATEGIES

Tier 1 - Project Characteristics

Increase Residential Density
- Existing Density (DU/Residential Acres in half-mile buffer) 5
- With Project Density (DU/Residential Acres in half-mile buffer) 5

Increase Development Diversity
- Existing Activity Mix Index 0.64
- With Project Activity Mix Index 0.57

Integrate Affordable and Below Market Rate
- Extremely Low Income BMR units . . . . . 0 %
- Very Low Income BMR units . . . . . 0 %
- Low Income BMR units . . . . . 0 %

Increase Employment Density
- Existing Density (Jobs/Commercial Acres in half-mile buffer) 62
- With Project Density (Jobs/Commercial Acres in half-mile buffer) 102

Tier 2 - Multimodal Infrastructure

Bike Access Improvements *(In Coordination with SJ)*
- Distance to Nearest Existing Bicycle Facility . . . . . 100 feet
- Distance to Nearest Bicycle Facility With Project . . . . . 80 feet

Increase Network Connectivity *(In Coordination with SJ)*
- Intersection Density . . . . . 4 int/sqmi
- Intersection Density with Project . . . . . 5 int/sqmi

Increase Transit Accessibility *(In Coordination with SJ)*
- Distance to Closest Transit Stop Without Project . . . . . 100 feet
- Distance to Closest Transit Stop With Project . . . . . 80 feet

Traffic Calming Measures *(In Coordination with SJ)*
- Are improvements provided beyond the development frontage? . . . . . Yes

Pedestrian Network Improvements *(In Coordination with SJ)*
- Are pedestrian improvements provided beyond the development frontage? . . . . . Yes

Tier 3 - Parking

Limit Parking Supply

Minimum Parking Required by Municipal Code	2333	spaces
Total Parking Spaces Available to Employees	2179	spaces
Does the surrounding street parking have RPP, meters, or time limits?	Yes	

End of Trip Bike Facilities

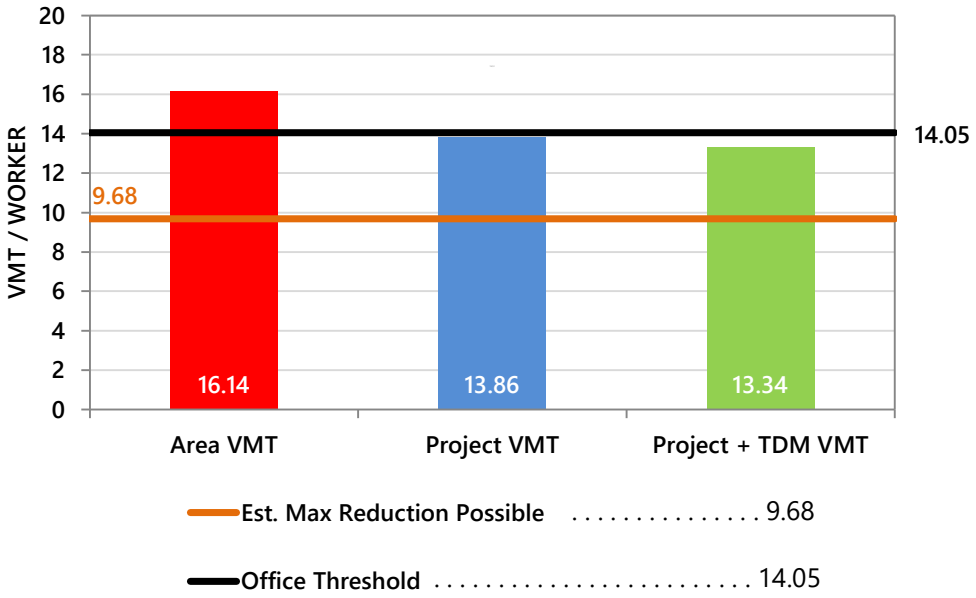
Bicycle Parking Spaces Provided by Project	52	spaces
Project Provides Additional End-of-Trip Facilities Beyond Parking?	Yes	

Tier 4 - TDM Programs

Commute Trip Reduction Marketing/ Education

Percent of Eligible Employees	50	%

Telecommuting and Alternative Work Schedule Program



Alternative Work Schedule	4/40 Schedule	
Percent of Eligible Eemployees	5	%

Ride-Sharing Programs

Percent of Eligible Eemployees	2	%

EMPLOYMENT ONLY

The tool estimates that the project would generate per non-industrial worker VMT below the City's threshold. There are selected strategies that require coordination with the City of San Jose to implement.

Peak Hour Delay Signal Warrant Report

****

Intersection #6 SAMARITAN/NATIONAL

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	1 0 0 0 1			0 0 0 0 0			0 0 1 1 0			1 0 1 0 1		
Initial Vol:	1	0	71	0	0	0	0	421	271	0	511	0
ApproachDel:	10.8			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.2]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1275]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=0.4]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=106]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=842]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #9 SAMARITAN/SAMARITAN PLACE

****

 Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 0 0 0			1 0 0 0 1			1 0 1 0 0			0 0 1 0 1		
Initial Vol:	0	0	0	6	0	7	11	547	0	0	106	3
ApproachDel:	xxxxxx			11.1			xxxxxx			xxxxxx		

Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=13]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=680]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1637]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

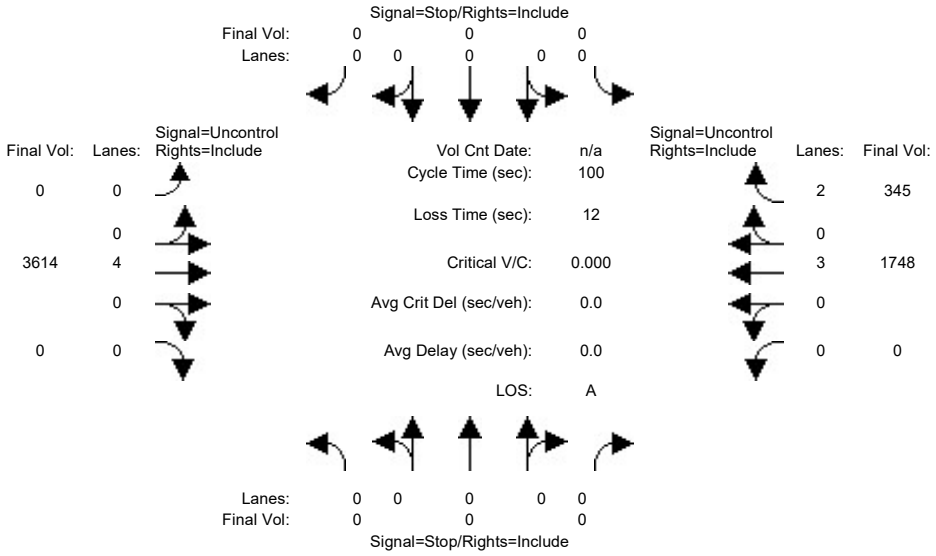
Major Street Volume: 5714
Minor Approach Volume: 0
Minor Approach Volume Threshold: -316 [less than minimum of 100]

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).



The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #6 SAMARITAN/NATIONAL

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 0 2 0 0		
Initial Vol:	1	0	71	0	0	0	0	718	271	0	601	0
ApproachDel:	13.1			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.3]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1662]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #8 SAMARITAN/KINGHURST

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 1 1 0 0		
Initial Vol:	118	0	43	0	0	0	0	232	35	87	621	0
ApproachDel:	19.5			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.9]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=161]
SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1136]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #9 SAMARITAN/SAMARITAN PLACE

****

 Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 0 0 0			1 0 0 0 1			1 0 1 0 0			0 0 1 0 1		
Initial Vol:	0	0	0	6	0	7	11	788	0	0	214	3
ApproachDel:	xxxxxx			13.9			xxxxxx			xxxxxx		

Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.1]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=13]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1029]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #25 BASCOM/EAST-MOZART

****

 Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Uncontrolled			Uncontrolled			Stop Sign			Stop Sign		
Lanes:	0 0 3	0	0	0 0 2	1	0	0 0 0	0	1	0 0 0	0	0
Initial Vol:	0 697		0	0 1085		21	0	0	14	0	0	0
ApproachDel:	xxxxxx			xxxxxx			10.8			xxxxxx		

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1817]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #6 SAMARITAN/NATIONAL

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 0 2 0 0		
Initial Vol:	1	0	71	0	0	0	0	816	271	0	619	0
ApproachDel:	13.9			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.3]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1778]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #8 SAMARITAN/KINGHURST

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 1 1 0 0		
Initial Vol:	118	0	45	0	0	0	0	330	35	87	639	0
ApproachDel:	23.6			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=1.1]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=163]
SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1254]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #9 SAMARITAN/SAMARITAN PLACE

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 0 0 0			1 0 0 0 1			1 0 1 0 0			0 0 1 0 1		
Initial Vol:	0	0	0	6	0	20	11	856	0	0	224	3
ApproachDel:	xxxxxx			12.1			xxxxxx			xxxxxx		

Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.1]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=26]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1120]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1850]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

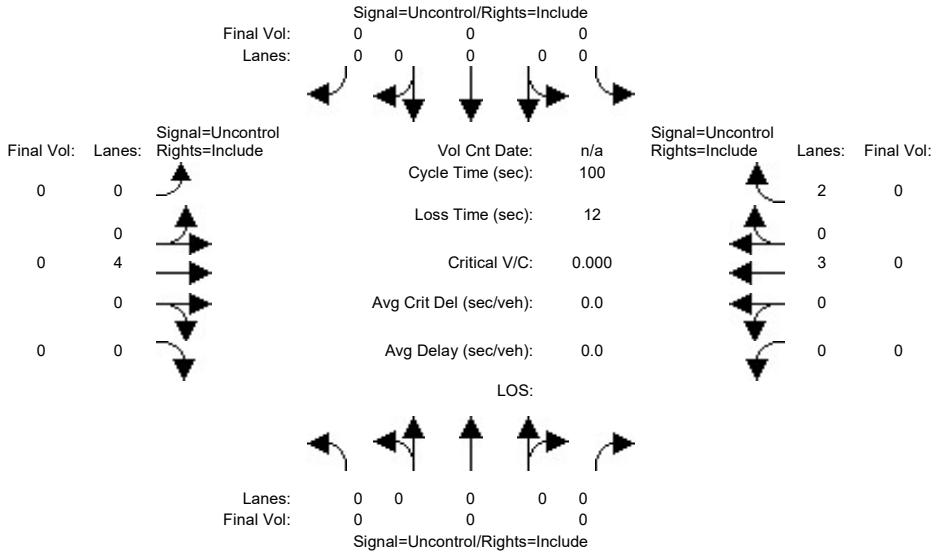
Minor Approach Volume Threshold: -0 [less than minimum of 100]
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).



The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.
```

ApproachDel:	15.2			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.3]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1954]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #8 SAMARITAN/KINGHURST

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 1 1 0 0		
Initial Vol:	118	0	47	0	0	0	0	476	35	88	669	0
ApproachDel:	34.3			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=1.6]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=165]
SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1433]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #9 SAMARITAN/SAMARITAN PLACE

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 0 0 0			1 0 0 0 1			1 0 1 0 0			0 0 1 0 1		
Initial Vol:	0	0	0	6	0	28	10	196	0	0	1023	13
ApproachDel:	xxxxxx			19.8			xxxxxx			xxxxxx		

Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.2]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=34]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1276]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

------------|---------------||---------------||---------------||---------------|
Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1900]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

------------|---------------||---------------||---------------||---------------|
Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.1]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=25]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2381]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #6 SAMARITAN/NATIONAL

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 0 2 0 0		
Initial Vol:	1	0	71	0	0	0	0	718	271	0	601	0
ApproachDel:	13.1			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.3]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1662]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #8 SAMARITAN/KINGHURST

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 1 1 0 0		
Initial Vol:	118	0	43	0	0	0	0	232	35	87	621	0
ApproachDel:	19.5			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.9]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=161]
SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1136]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #9 SAMARITAN/SAMARITAN PLACE

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 0 0 0			1 0 0 0 1			1 0 1 0 0			0 0 1 0 1		
Initial Vol:	0	0	0	6	0	21	10	164	0	0	862	13
ApproachDel:	xxxxxx			16.6			xxxxxx			xxxxxx		

Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.1]
FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=27]
FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1076]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

ApproachDel:	xxxxxx			xxxxxx			19.5			xxxxxx		

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.1]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1817]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #6 SAMARITAN/NATIONAL

****

Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Stop Sign			Stop Sign			Uncontrolled			Uncontrolled		
Lanes:	0 0 1! 0 0			0 0 0 0 0			0 0 1 1 0			0 0 2 0 0		
Initial Vol:	1	0	71	0	0	0	0	962	271	0	649	0
ApproachDel:	15.2			xxxxxx			xxxxxx			xxxxxx		

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.3]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=72]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1954]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.4]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=126]
SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2341]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

------------|---------------||---------------||---------------||---------------|
Approach[southbound][lanes=2][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.2]
   FAIL - Vehicle-hours less than 5 for two or more lane approach.
Signal Warrant Rule #2: [approach volume=34]
   FAIL - Approach volume less than 150 for two or more lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1276]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

****

Intersection #25 BASCOM/EAST-MOZART

****

 Copyright (c) 2008 Dowling Associates, Inc.

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound			South Bound			East Bound			West Bound		
Movement:	L	T	R	L	T	R	L	T	R	L	T	R
Control:	Uncontrolled			Uncontrolled			Stop Sign			Stop Sign		
Lanes:	0 0 1	0	0	0 0 0	1	0	0 0 0	0	1	0 0 0	0	0
Initial Vol:	0 711		0	0 1154		21	0	0	14	0	0	0
ApproachDel:	xxxxxx			xxxxxx			21.0			xxxxxx		

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.1]
FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=1900]
SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).
Roundabout Capacity Model: US HCM 6.
Delay Model: HCM Delay Formula (Geometric Delay is not included).
Queue Model: HCM Queue Formula.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & v/c (HCM 6). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 6).
Roundabout Capacity Model: US HCM 6.
Delay Model: HCM Delay Formula (Geometric Delay is not included).
Queue Model: HCM Queue Formula.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Appendix M – Conceptual Landscape Site Plan

The widths of each driveway will be finalized in coordination with City staff and as per City's design requirements for driveways, during the Planned Development Permit (PDP) phase of the Project.

Appendix M shows a Conceptual Site Plan for illustrative purposes. The final location and widths of each driveway will be determined in coordination with the City staff during the PDP phase.

LANDSCAPE NOTES

A. Street trees shown in the public right-of-way are for information only. The Planning Permit does not authorize the installation or removal of trees in the public right-of-way. Actual street tree location will be determined by Public Works at the implementation stage on the Public Improvement plan. The installation or removal of the street trees require a permit from the Department of Transportation. The City Arborist will specify the species.

B. Include 3 inches of composted, non-floatable mulch in areas between stormwater treatment plantings.

C. Project will not locate trees within the basin or bank planting zones of Bioretention Areas, but rather on the upland planting zones per Appendix D of the SCVURPPP C.3 Stormwater Handbook. Trees will also not be located directly in line with or next to stormwater inlets (curb openings, bubble box emitters, etc.) and will offset or relocate trees where necessary outside of the Bioretention Area basin and bank planting zones to maximize runoff dispersal throughout Bioretention Areas.

Short term Bike parking, TYP.

PLANT LEGEND

TREES	BOTANICAL / COMMON NAME	SIZE	QTY
	PARKING LOT TREE SUCH AS:	**24" BOX MIN.**	**81**
	Agonis flexuosa / Australian Willow		
	✳Geijera parviflola / Australian Willow		
	✳Koelreuteria bipinatta / Chinese Flame Tree		
	Quercus Ilex / Holly Oak		
	MEDIUM SHADE / PINE TREE SUCH AS:	**24" BOX MIN.**	**28**
	Cupaniopsis anacardioides / Carrotwood		
	Pinus coulteri / Coulter Pine		
	Pistacia chinensis / Chinese Pistache		
	Quercus shumardii / Shumard Oak		
	NARROW SHADE / PINE TREE SUCH AS:	**24" BOX MIN.**	**98**
	✳Ginkgo biloba / Ginkgo		
	Quercus suber / Cork Oak		
	Sequoia sempervirens / Coast Redwood		
	✳Tristania conferta / Brisbane Box		
	LARGE SHADE / PINE TREE SUCH AS:	**24" BOX MIN.**	**17**
	Pseudotsuga menziesii / Douglas Fir		
	Cedrus deodara / Deodar Cedar		
	Pinus sabiniana / Ghost Pine		
	Quercus rubra / Red Oak		
	LARGE FOCAL TREE SUCH AS:	**24" BOX MIN.**	**44**
	✳Platanus racemosa / California Sycamore		
	✳Quercus agrifolia / Coast Live Oak		
	Quercus lobata / Valley Oak		
	Ulmus parviflora / Chinese Elm		

TREES	BOTANICAL / COMMON NAME	SIZE	QTY
	SMALL ACCENT TREE SUCH AS:	**24" BOX MIN.**	**132**
	Arctostaphylos glauca / Big Berry Manzanita		
	✳Cercis occidentalis / Western Redbud		
	✳Lagerstromia indica hybrids / Crepe Myrtle		
	✳Prunus ilicifolia lyonii / Catalina Cherry		
	MEDIUM ACCENT TREE SUCH AS:	**24" BOX MIN.**	**130**
	✳Arbutus x 'Marina' / Marina Strawberry Tree		
	Olea europa 'Swan Hill' / Fruitless Olive		
	Rhus lancea / African Sumac		
	Zelkova serrata / Sawleaf Zelkova		
	EXISTING PINE TREE (SPECIES VARY)	EXTG.	7
	EXISTING CANOPY TREE (SPECIES VARY)	EXTG.	12
	EXISTING LANDSCAPE AREA TO REMAIN	EXTG.	14,732 SF

SHRUBS	BOTANICAL / COMMON NAME	SIZE	QTY
	NEW LANDSCAPE AREAS		**121,393 SF**
	LARGE SHRUBS SUCH AS:	**5 GAL. MIN.**	**TBD**
	✳Arctostaphylos species		
	Leptospermum sco. 'Ruby Glow' / New Zealand Tea Tree		
	Leucophyllum frutescens / Texas Ranger		
	Myrica californica / Pacific Wax Myrtle		
	Philodendron selloum / Split Leaf Philodendron		
	Phormium tenax / New Zealand Flax		
	Pittosporum tobira / Mock Orange		
	Viburnum burkwoodii / Burkwood Viburnum		
	Xylosma congestum / Shiny Xylosma		
	MEDIUM SHRUBS SUCH AS:	**5 GAL. MIN.**	**TBD**
	✳Arctostaphylos species		
	Agave species		
	Aloe species		
	Azalea species		
	✳Cistus species		
	Escallonia 'Fradesii' / Pink Escallonia		
	Ligustrum japonicum / Texas Privet		
	✳Rhamnus californica / Coffeeberry		
	Salvia species		
	Westringia species		
	Woodwardia fimbriata / Giant Chain Fern		

SHRUBS	BOTANICAL / COMMON NAME	SIZE	QTY
	SMALL SHRUBS/GRASSES SUCH AS:	**1 GAL. MIN.**	**TBD**
	Acacia redolens 'Low Boy' / Prostrate Acacia		
	✳Arctostaphylos 'Pacific Mist' / Manzanita		
	Asparagus densiflorus / Foxtail Fern		
	Carissa macrocarpa 'Green Carpet' / Green Carpet Natal Plum		
	✳Bouteloua gracilis 'Blonde Ambition' / Blonde Ambition		
	Dianella revoluta 'Baby Bliss' / Flax Lily		
	✳Dietes bicolor / Fortnight Lily		
	Elymus condensatus 'Canyon Prince' / Canyon Prince Wild Rye		
	Heuchera species		
	Koeleria macrantha / Prairie Junegrass		
	Lavandula stoechas / Spanish Lavender		
	Leymus triticoides 'Grey Dawn' / Grey Creeping Wild Rye		
	Lomandra longifolia 'Breeze' / Dwarf Mat Rush		
	✳Muhlenbergia rigens / Deer Grass		
	Myrtus communis 'Compacta' / Dwarf Myrtle		
	Nephrolepis cordifolia / Southern Sword Fern		
	Polystichum munitum / Western Sword Fern		
	Salvia species		
	Westringia fruticosa 'Morning Light' / Coast Rosemary		
	WATER QUALITY BASIN / DRY CREEK AREA SUCH AS:	**1 GAL. MIN.**	**11,931 SF**
	✳Chondropetalum tectorum / Cape Rush		
	✳Juncus species		
	** SHALL INCLUDE DECORATIVE ROCK, COBBLE, AND BOULDERS THROUGHOUT **		

✳ DENOTES PLANTS THAT WILL BE USED IN BIORETENTION, FLOW-THROUGHPLANTER AREAS, AND HYDROMODIFICATION BASINS
