Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Stoddard solvent / Mineral Spriits / Distillates
Site History:	The North County Factory Outlet site is occupied by a single story, high-bay type, office-warehouse-shop building with 106,157 square feet (ft2) of area and an attached 2-story parking garage with associated asphalt parking areas and driveways and surrounding landscaped areas. The Site was undeveloped land until it was developed beginning in 1970 with the new Spanjian Sportswear, Inc. facility. They built the facility and operated there from 1971 to 1985.

Click here to access the California GeoTracker records for this facility:

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Case Number: H20785-002
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline
Site History: On May 15, 2003, the Department of Environmental Health (DEH) directed soil sampling associated with the replacement of product piping and dispenser pans at this unmanned commercial fueling facility. The resulting analytical data indicated a release of

SKS, SAN MARCOS (Continued) **S100274033**

hydrocarbons had occurred at the site and DEH subsequently opened unauthorized release case H20785-002 and required that hydrocarbon impacts be assessed. As a result, three monitoring wells and one boring were installed at the site to assess sorbed- and dissolved-phase hydrocarbons. Hydrocarbon-impacted soil was primarily observed in the vicinity of the northern dispenser islands with concentrations of total petroleum hydrocarbons as gasoline and methyl tertiary butyl ether (MTBE) detected at 150 and 0.820 milligrams per kilogram (mg/kg), respectively. The consultant estimated that approximately 50 cubic yards of hydrocarbon-impacted soil above 100 mg/kg remain in the central portion of the site. Dissolved-phase hydrocarbons have primarily been observed in only one monitoring well in the eastern central portion of the site. Dissolved-phase hydrocarbon impacts have generally been limited to MTBE, and its breakdown product tertiary butyl alcohol, with concentrations as high as 990 and 26 micrograms per liter (%g/l), respectively. Groundwater sampling indicates that dissolved-phase hydrocarbon impacts are limited and confined to the site boundaries. A natural attenuation evaluation was conducted at the site. Based on trend analysis conducted with site specific data, the consultant determined that natural attenuation is an effective mitigation strategy and estimates that MTBE will reach the secondary maximum contaminant level (MCL) of 5 %g/l within approximately 20 years or by the year 2030. The consultant contacted the local water purveyor, Vallecitos Water District, to inquire on the potential use of groundwater in the vicinity of the site on August 16, 2011. According to Larry Gastar of the Engineering Department, the Vallecitos Water District imports all of their water and does not utilize groundwater within their service area. There are currently no plans to utilize groundwater in the future. The consultant conducted an exposure pathway evaluation for the site, which is an unmanned commercial fueling facility. Based on the evaluation of the site in its existing condition and considering that the contaminants do not appear to extend offsite, the consultant concluded that human health and the environment are adequately protected. The consultant prepared a corrective action plan for the site and notified the public, including surrounding property owners and other interested parties, of the recommendation to implement natural attenuation and close the associated DEH case. Based on the provided data, DEH agrees with the consultants recommendation for no further action and regulatory case closure.

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Diesel
Site History: Four 12,000-gallon underground storage tanks (USTs) which contained gasoline and diesel were located in the central portion of the subject property. Three fuel dispenser islands were located to the north of the USTs, and four dispenser islands were located to the south of the USTs. An unauthorized release of petroleum hydrocarbons was discovered when the USTs and associated pipelines were removed on May 24, 2016.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H05072-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: During routine pressure testing of fuel lines at a service station located at 145 Via Vera Cruz in San Marcos, California, a manhole cover was reportedly placed or dropped over a diesel turbine, causing a line leak detector to break. According to a report submitted by the consultant (Geocon), the break occurred in late October 1995, resulting in a calculated release of 3,800 gallons of diesel fuel over a four-month period. The leak detector was capped and repaired on February 20, 1996, and the release was reported to DEH. Geocon performed a soil and groundwater investigation at the site in January 1998. Ten direct-push borings were advanced at the site for the collection of soil samples and groundwater grab samples. Groundwater was not encountered in seven of the borings, which were advanced to a depth of 15 feet below ground surface; thus, three groundwater grab samples were collected. Total petroleum hydrocarbons (TPH) as diesel were detected in at least one soil sample collected from nine of the

CLARENCE OCHS OIL (Continued) **S100852026**

borings. TPH as diesel was detected in each of the grab groundwater samples. Although the samples were not tested for TPH as gasoline, aromatic hydrocarbons were detected in both soil and groundwater, as was methyl-tert-butyl ether (MTBE). Based on the consultants report, DEH opened an unauthorized release case on April 30, 1998. Three 12,000-gallon capacity, steel, gasoline underground storage tanks (USTs), one 12,000-gallon capacity, steel diesel UST, and one 4,000-gallon capacity, steel holding tank, as well as associated dispensers and piping, were removed from the site on July 30, 1998. Thirteen soil samples were collected during the DEH tank removal inspection. Petroleum hydrocarbons were detected in three soil samples, each of which was collected beneath USTs at depths of 13 to 14 feet below ground surface (bgs). Ten additional soil samples were collected from the base and sidewalls of the UST excavation by the consultant (PIC Environmental Services, Inc.) on July 31, 1998. The excavation was enlarged and impacted soil was removed to maximum depths of 14 to 18 feet bgs until confirmation sample results for TPH as diesel were less than 500 milligrams per kilogram (mg/kg). Based on the soil sample results, 1,972 tons of impacted soil was removed from the excavation and disposed to an off-site bio-treatment facility in July and August 1998. Four groundwater monitoring wells were installed on the property in July 1999 using hollow-stem auger equipment. Groundwater sampling analytical results indicated the site chemicals of concern were aromatic hydrocarbons and the fuel oxygenates methyl-tert-butyl ether (MTBE) and tert-butyl alcohol (TBA). Water level data indicated that groundwater was approximately 7 to 12 feet below the top-of-casing reference points. A fifth groundwater monitoring well was installed on the property in March 2001. In order to assess if groundwater was impacted offsite, a boring was advanced on the west side of Via Vera Cruz in May 2002 to collect a groundwater grab sample. Additional off-site groundwater monitoring wells were installed in June 2008 and August 2011. Groundwater monitoring and sampling was performed until December 2011, when analytical data indicated the dissolved contaminant plume had been adequately delineated. Free product had been detected in one of the wells (MW-4) in September 2006 with an apparent thickness of 1.25 inches (approximately 0.10-foot) and was subsequently bailed manually until November 2006, when it was no longer detected. Approximately one gallon of free product had been removed by bailing. In June 2008, a hydrocarbon sheen was noted in MW-4. The apparent thickness of the free product increased to 1.39 feet when measured in September 2011. A pneumatic pump was used to extract 14.85 gallons of free product from the well until no measureable free product was observed in December 2011. A Corrective Action Plan CAP) was initially submitted to DEH in August 2005 that recommended remediation by natural attenuation. The initial CAP presented the results of vapor risk calculations for benzene and naphthalene in groundwater underlying an office/warehouse building on the property. The results were below the human health carcinogenic risk threshold. However, DEH did not approve the CAP citing the need for additional development of the site conceptual model. A revised CAP was submitted in June 2009. The revised CAP included an estimate of the volume of impacted soil remaining in place as approximately 900 cubic yards. The revised CAP also identified two production wells located within a half mile of the site. One of the wells is used for irrigation purposes and is located approximately 425 feet west of the site. The other well was formerly used for municipal supply purposes and is

CLARENCE OCHS OIL (Continued) **S100852026**

located over 2,000 feet south of the site. However, the well was taken off line about 20 years ago by the Vallecitos Water District due to odor and color concerns. Both of the production wells are screened more than 200 feet bgs. The revised CAP was not approved pending the installation of groundwater monitoring wells MW-8 and MW-9 in August 2011 and an updated site conceptual model. A CAP addendum was submitted in May 2012 that presented an updated site conceptual model that included trend analyses for benzene and MTBE concentrations detected in groundwater samples. The trend analyses indicated decreasing trends for both benzene and MTBE for samples collected from wells in the source area. Based on the trend analyses, MTBE concentrations are estimated to fall below its Secondary Maximum Contaminant Level (MCL) in approximately 20 years and benzene levels would drop below its MCL in approximately 100 years. The revised CAP and its addendum were approved on July 9, 2012. Based on the removal of petroleum hydrocarbon-impacted soil in the source area, the decreasing trends for benzene and MTBE concentrations in groundwater, and the lack of human health risk from ingestion of groundwater or from inhalation of vapor, DEH concurs with the CAPs recommendation for soil and groundwater remediation by natural attenuation and the consultants recommendations for no further action and case closure.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 08/30/1995
Comments: Pursuant to the MOU, DTSC has prepared a Phase I Environmental Assessment for the North County Health Services (NCHS). The subject properties are vacant, undeveloped lots owned by NCHS which are located in the city of San Marcos. No development of the lots is being proposed at this time. A Phase I Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: On January 20, 2006, three underground storage tanks (USTs) were removed from the site. Analytical results from groundwater and soil sampling collected during UST removal indicated petroleum hydrocarbon impacts. Site assessment is currently ongoing. Please see submitted ESI data for further details.

Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Waste Description:	MERCURY
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE

SIGNET ARMORLITE, INC. (Continued) **1000314091**

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P005
Waste Description: 2-PROPEN-1-OL (OR) ALLYL ALCOHOL

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U007
Waste Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U112
Waste Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Waste Code: U151
Waste Description: MERCURY

SIGNET ARMORLITE, INC. (Continued) **1000314091**

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U236
Waste Description: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE
