Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE

Waste Code:	D002
Waste Description:	CORROSIVE WASTE

SIGNET ARMORLITE, INC., 1001 ARMORLITE DRIVE, SAN MARCOS, CA, 92069 (Continued)

Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	D039
Waste Description:	TETRACHLOROETHYLENE
Waste Code:	D040
Waste Description:	TRICHLORETHYLENE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003

SIGNET ARMORLITE, INC., 1001 ARMORLITE DRIVE, SAN MARCOS, CA, 92069 (Continued)

Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	P005
Waste Description:	2-PROPEN-1-OL (OR) ALLYL ALCOHOL
Waste Code:	U002
Waste Description:	2-PROPANONE (I) (OR) ACETONE (I)
Waste Code:	U007
Waste Description:	2-PROPENAMIDE (OR) ACRYLAMIDE
Waste Code:	U080
Waste Description:	METHANE, DICHLORO- (OR) METHYLENE CHLORIDE
Waste Code:	U112
Waste Description:	ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)
Waste Code:	U151
Waste Description:	MERCURY
Waste Code:	U154
Waste Description:	METHANOL (I) (OR) METHYL ALCOHOL (I)
Waste Code:	U220
Waste Description:	BENZENE, METHYL- (OR) TOLUENE
Waste Code:	U236
Waste Description:	2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO-4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Longitude:	-117.18586742878
Case Type:	Cleanup Program Site
Case Worker:	Not Reported
Local Agency:	Not Reported
RB Case Number:	2091500
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Acetone, Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Freon, Diesel, Gasoline
Site History:	The Facility is approximately 11.8 acres in size and contains buildings associated with the manufacture, marketing, and distribution of optical lenses. Site assessment activities have been

SIGNET ARMORLITE, INC., 1001 ARMORLITE DRIVE, SAN MARCOS, CA, 92069 (Continued)

	conducted at the Facility since the early 1990s. Investigations revealed the presence of VOCs, including methylene chloride, in soil and groundwater at the Facility. Signet has undertaken four remedial actions at the Facility, as well as subsequent investigation activities to assess the adequacy of the remedial actions. Active remediation has included operation of a multiphase extraction system (MPE system) from 1995 to 1998 to remove subsurface VOCs from source areas at the Facility. Additionally, three targeted source removal actions have been conducted at the Facility since 1986. Remedial activities have included removal and disposal of contaminated soil and addition of soil amendments to facilitate in-situ degradation. In late 2009, an interim remedial measure to extract VOCs from deep groundwater was evaluated, and the findings of this evaluation are incorporated into the CAP.

Quarterly Update:	WB Lead Agency for corrective action: Signet Armorlite Inc. (SAI) is located at 1001 Armorlite Drive, San Marcos, in northern San Diego County. Land use in the immediate vicinity is industrial. An Interim Status Document was issued to the facility by the U.S. EPA on January 4, 1982, for storage and treatment of these RCRA units: (1) hazardous waste storage unit, (1) elementary neutralization unit, (1) methylene chloride still, and (1) methylene chloride evaporation unit. SAI was classified as a treatment, storage, and disposal facility (TSDF). On November 2, 1984, the Department of Health Services denied SAIs request for hazardous waste reclassification from a TSDF to generator status, due to storage of hazardous waste on-site for longer than 90 days. The primary operations generated waste streams from the manufacturing plastic eyeglass lenses, and included the storage of nonchlorinated waste solvents, sodium hydroxide and water, and chlorinated waste solvents. As a treatment facility, SAI utilized two recovery units: one carbon adsorption unit and one distillation unit. The units were used to recover methylene chloride. The facility was formally clean closed by the U.S. EPA in a letter dated June 30, 1992. Our records indicate that in December 1997, the facility was referred to the Regional Water Quality Control Board (RWQCB) San Diego Region, as the lead agency for corrective action at the facility. In a letter dated October 28, 2005, the DTSC formally acknowledged that the RWQCB is the lead agency for corrective action at the facility.

INTENTIONALLY LEFT BLANK

1 Introduction and Background

This technical noise report evaluates the potential noise and vibration impacts during construction and operation of the proposed Marcos Specific Plan project (proposed Project, formerly known as Artist's Village). This assessment utilizes the significance thresholds in Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.).

Project Description

The proposed Marcos Specific Plan Project (project) includes a request for approval of a Specific Plan, General Plan Amendment, Rezone, Site Development Plan, Multi-Family Site Development Plan, Conditional Use Permit, Tentative Subdivision Map, and a Tentative Parcel Map for a residential mixed-use development project within the 12.06-acre Specific Plan Area. The General Plan Amendment and Rezone would change the General Plan designation and Zoning from Commercial (C) to Specific Plan Area (SPA). The Marcos Specific Plan has been prepared with the intent to provide a comprehensive plan to ensure the efficient development of a multi-land use development. The Specific Plan serves as both a policy document and a regulatory document for the systematic implementation of the policies and goals of the General Plan.

The project site is located at the northwest corner of Grand Avenue and Linda Vista Drive in the City of San Marcos (APNs 219-152-42, -44, -45, -51, -61, -70, -74, -75, -76, -77, -78, -79). Please refer to Figure 1, Project Location and Figure 2, Project Site. The existing project site has been previously disturbed and developed. Previous structures on-site have been demolished, and the site currently is vacant with remaining paved areas, billboards, and the bridge crossing over Las Posas Creek. Channel improvement work associated with the segment of Las Posas Creek that runs through the project site, and the associated bridge over the channel, was previously permitted by the City of San Marcos, and the channel is currently subject to restoration maintenance activities following channel improvements within the permitted conservation easement area. The project site is located in an urban area of the City surrounded by commercial and industrial uses to the north, east, and west, as well as undeveloped land to the south. The project site is located just south of State Route 78.

The project consists of construction of 102 multi-family residential units on 5.03 acres of the project site, and construction of 7,658 square feet (sf) of office space, 49,266 sf of specialty retail space and 7 live-work units on 6.05 acres of the project site (Figure 3, Site Plan). Residential units would be contained within 15 townhome buildings, and units would be a mix of six different unit types, ranging in size from two- to three-bedrooms. Additionally, the residential area would include a pool building, pool and spa area, barbeque area, picnic area, and play area for residents. The residential buildings would be located on the northwestern portion of the site, and commercial uses would be placed along the southern and eastern project boundaries. Access to the residential area would be provided via Grand Avenue at a northern driveway, and access to the commercial area would be via Grand Avenue at a southern driveway and two driveways along Linda Vista Drive. The project would provide 204 garage parking spaces for residences, 34 residential guest parking spaces, and 278 commercial parking spaces.

Noise Characteristics

Sound is mechanical energy transmitted by pressure waves in a compressible medium, such as air. Noise is defined as sound that is loud, unpleasant, unexpected, or undesired. The sound pressure level (SPL) has become the most common descriptor used to characterize the loudness of an ambient sound level. The unit of measurement of sound pressure is a decibel (dB). Under controlled conditions in an acoustics laboratory, the trained, healthy human ear is able to discern changes in sound levels of 1 dB when exposed to steady, single-frequency signals in the mid-

frequency range. Outside such controlled conditions, the trained ear can detect changes of 2 dB in normal environmental noise. It is widely accepted that the average healthy ear, however, can barely perceive noise level changes of 3 dB. A change of 5 dB is readily perceptible, and an upward change of 10 dB is perceived as twice as loud (Caltrans 2013). A doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g., doubling the number of ground vehicle daily trips along a given road segment) would result in a barely perceptible change in sound level.

Sound may be described in terms of level or amplitude (measured in dB), frequency or pitch (measured in hertz [Hz] or cycles per second), and duration (measured in seconds or minutes). Because the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale is used to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against low and very high frequencies in a manner approximating the sensitivity of the human ear.

Several descriptors of noise (noise metrics) exist to help predict average community reactions to the adverse effects of environmental noise, including traffic-generated noise. These descriptors include the equivalent noise level over a given period (L_{eq}), the day–night average noise level (L_{dn}), and the community noise equivalent level (CNEL). Each of these descriptors uses units of dBA.

L_{eq} is a decibel quantity that represents the constant or energy-averaged value equivalent to the amount of variable sound energy received by a receptor during a time interval. For example, a 1-hour L_{eq} measurement of 60 dBA would represent the average amount of energy contained in all the noise that occurred in that hour. L_{eq} is an effective noise descriptor because of its ability to assess the total time-varying effects of noise on sensitive receptors, which can then be compared to an established L_{eq} standard or threshold of the same duration. Another descriptor is maximum sound level (L_{max}), which is the greatest sound level measured during a designated time interval or event. The minimum sound level (L_{min}) is often called the *floor* of a measurement period.

Unlike the L_{eq}, L_{max}, and L_{min} metrics, L_{dn} and CNEL descriptors always represent 24-hour periods and differ from a 24-hour L_{eq} value because they apply a time-weighted factor designed to emphasize noise events that occur during the non-daytime hours (when speech and sleep disturbance is of more concern). *Time-weighted* refers to the fact that L_{dn} and CNEL penalize noise that occurs during certain sensitive periods. In the case of CNEL, noise occurring during the daytime (7:00 a.m. to 7:00 p.m.) receives no penalty. Noise during the evening (7:00 p.m. to 10:00 p.m.) is penalized by adding 5 dB, and nighttime (10:00 p.m. to 7:00 a.m.) noise is penalized by adding 10 dB. L_{dn} differs from CNEL in that the daytime period is longer (defined instead as 7:00 a.m. to 10:00 p.m.), thus eliminating the dB adjustment for the evening period. L_{dn} and CNEL are the predominant criteria used to measure roadway noise affecting residential receptors. These two metrics generally differ from one another by no more than 0.5–1 dB, and are often considered or actually defined as being essentially equivalent by many jurisdictions.

Vibration Fundamentals

Vibration is oscillatory movement of mass (typically a solid) over time. It is described in terms of frequency and amplitude and, unlike sound, can be expressed as displacement, velocity, or acceleration. For environmental studies, vibration is often studied as a velocity that, akin to the discussion of sound pressure levels, can also be expressed in dB as a way to cast a large range of quantities into a more convenient scale. Vibration impacts to buildings are generally discussed in terms of inches per second (ips) peak particle velocity (PPV), which will be used herein to discuss vibration levels for ease of reading and comparison with relevant standards. Vibration can also be annoying and thereby impact occupants of structures, and vibration of sufficient amplitude can disrupt sensitive equipment and processes (Caltrans 2020), such as those involving the use of electron microscopes and lithography equipment. Common sources of vibration within communities include construction activities and railroads.

Groundborne vibration generated by construction projects is usually highest during pile driving, rock blasting, soil compacting, jack hammering, and demolition-related activities where sudden releases of subterranean energy or powerful impacts of tools on hard materials occur. Depending on their distances to a sensitive receptor, operation of large bulldozers, graders, loaded dump trucks, or other heavy construction equipment and vehicles on a construction site also have the potential to cause high vibration amplitudes. The maximum vibration level standard used by the California Department of Transportation (Caltrans) for the prevention of structural damage to typical residential buildings is 0.3 ips PPV (Caltrans 2020).

2 Regulatory Setting

State

California Code of Regulations

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 dBA CNEL and "conditionally acceptable" up to 70 dBA CNEL. Multiple-family residential uses are "normally acceptable" up to dBA 65 CNEL and "conditionally acceptable" up to dBA 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 dBA CNEL, as are office buildings and business, commercial, and professional uses.

California Department of Transportation

In its Transportation and Construction Vibration Guidance Manual, Caltrans recommends a vibration velocity threshold of 0.2 ips PPV (Caltrans 2020) for assessing annoying vibration impacts to occupants of residential structures. Although this Caltrans guidance is not a regulation, it can serve as a quantified standard in the absence of such limits at the local jurisdictional level. Similarly, thresholds to assess building damage risk due to construction vibration vary with the type of structure and its fragility, but tend to range between 0.2 ips and 0.3 ips PPV for typical residential structures (Caltrans 2020).

Local

City of San Marcos Noise Level Compatibility Standards

The Noise Element of the *City of San Marcos General Plan* (City of San Marcos 2012) establishes target maximum noise levels in the City. Exhibit A (Table 7-3 of the Noise Element) depicts "acceptable," "conditionally acceptable," and "unacceptable" transportation-related exterior noise levels for the indicated land use designations.

With respect to commercial/industrial developments like the proposed Project, the Noise Element states: "the City should consider noise generation and potential impacts to surrounding development. New development can be made compatible with the noise environment by using noise and land use compatibility standards… as a guide for planning and development decisions. During the project design review process, the City can work with the project applicant to identify of potential impacts and reasonable mitigation measures. For example, the City can require an acoustical analysis for projects that will potentially generate noise that would affect sensitive receptors. These mitigation measures can include, but not be limited to, acoustically treated and/or quiet designs for furnaces, fans, motors, compressors, valves, pumps and other mechanical equipment. The City may also require limited delivery hours and/or hours of operation in order to reduce impacts to adjacent sensitive uses. In addition, all City departments must comply with State and federal OSHA standards. Any new equipment or vehicles purchased by the City will comply with local, State and federal noise standards."

Exhibit A. Reproduction of Table 7-3 from the City of San Marcos General Plan Noise Element

	Land Use Category	Exterior Noise Level (CNEL)					
		55	60	65	70	75	80
A	Residential—single family residences, mobile homes, senior/age-restricted housing						
B	Residential—multifamily residences, mixed use (residential/commercial)						
C	Lodging—hotels, motels						
D[2]	Schools, churches, hospitals, residential care facility, child care facilities						
E[2]	Passive recreational parks, nature preserves, contemplative spaces, cemeteries						
F[2]	Active parks, golf courses, athletic fields, outdoor spectator sports, water recreation						
G[2]	Office/professional, government, medical/dental, commercial, retail, laboratories						
H[2]	Industrial, manufacturing, utilities, agriculture, mining, stables, ranching, warehouse, maintenance/repair						

Acceptable - Specified land use is satisfactory, based upon the assumption that any buildings involved

Conditionally Acceptable - New construction or development should be undertaken only after a detailed noise analysis is conducted to determine if noise reduction measures are necessary to achieve acceptable levels for land use. Criteria for determining exterior and interior noise levels are listed in Table 7-4, Noise Standards. If a project cannot mitigate noise to a level deemed Acceptable, the appropriate County decision-maker must determine that mitigation has been provided to the greatest extent practicable or that extraordinary circumstances exist.

Unacceptable - New construction or development shall not be undertaken.

Source: City of San Marcos (2012)

Relevant City General Plan Noise Element policies include as follows:

- Policy N-1.1: Address the potential for excessive noise levels when making land use planning decisions in accordance with Table 7-3 Land Use Compatibility Noise Standards.
- Policy N-1.2: Ensure that acceptable noise levels are maintained near noise-sensitive uses.

- Policy N-1.4: Require new development projects to provide barriers to reduce noise levels, or provide sufficient spatial buffers to separate excessive noise generating land uses and noise-sensitive land uses.
- Policy N-1.5: Require an acoustical study for proposed developments in areas where the existing and projected noise level exceeds or would exceed the Normally Acceptable levels identified in Table 7-3.
- Policy N-3.4: Avoid excessive noise of commercial and industrial land uses through site and building design features.

The City's General Plan also specifies exterior noise level standards. Exhibit B (Table 7-4 of the Noise Element) depicts the exterior noise standards by the Land Use Category shown in Exhibit A.

Exhibit B Reproduction of Table 7-4 from the City of San Marcos General Plan Noise Element

1. The exterior noise level (as defined in Item 3) standard for Category A shall be 60 CNEL, and the interior noise level standard for indoor habitable rooms shall be 45 CNEL.
2. The exterior noise level standard for Categories B and C shall be 65 CNEL, and the interior noise level standard for indoor habitable rooms shall be 45 CNEL.
3. The exterior noise level standard for Categories D and G shall be 65 CNEL and the interior noise level standard shall be 50 dBA Leq (one hour average).
4. For single-family detached dwelling units, "exterior noise level" is defined as the noise level measured at an outdoor living area which adjoins and is on the same lot as the dwelling, and which contains at least the following minimum net lot area: (i) for lots less than 4,000 square feet in area, the exterior area shall include 400 square feet, (ii) for lots between 4,000 square feet to 10 acres in area, the exterior area shall include 10 percent of the lot area; (iii) for lots over 10 acres in area, the exterior area shall include 1 acre.
5. For all other residential land uses, "exterior noise level" is defined as noise measured at exterior areas which are provided for private or group usable open space purposes. "Private Usable Open Space" is defined as usable open space intended for use of occupants of one dwelling unit, normally including yards, decks, and balconies. When the noise limit for Private Usable Open Space cannot be met, then a Group Usable Open Space that meets the exterior noise level standard shall be provided. "Group Usable Open Space" is defined as usable open space intended for common use by occupants of a development, either privately owned and maintained or dedicated to a public agency, normally including swimming pools, recreation courts, patios, open landscaped areas, and greenbelts with pedestrian walkways and equestrian and bicycle trails, but not including off-street parking and loading areas or driveways
6. For non-residential noise sensitive land uses, exterior noise level is defined as noise measured at the exterior area provided for public use.
7. For noise sensitive land uses where people normally do not sleep at night, the exterior and interior noise standard may be measured using either CNEL or the one-hour average noise level determined at the loudest hour during the period when the facility is normally occupied.
8. The exterior noise standard does not apply for land uses where no exterior use area is proposed or necessary, such as a library.
9. For Categories E and F the exterior noise level standard shall not exceed the limit defined as "Acceptable" in by the City, or an equivalent one-hour noise standard.
(1) Exterior Noise Level compatibility guidelines for Land Use Categories A-H are identified in Table 3.11-6, Noise Compatibility Guidelines. Note: "Category(ies)" discussed in this table refer to lettered Land Use Category(ies) in Table 7-3 of this Element.

City of San Marcos Noise Ordinance

The City of San Marcos Municipal Code Chapter 10.24: Noise (San Marcos 2017) addresses construction noise. Erection and demolition of buildings is exempt between 7:00 a.m. and 6:00 p.m. Monday through Friday and on Saturdays from 8:00 a.m. to 5:00 p.m. The Municipal Codes does not set noise limits on construction activities. Commonly, the City has utilized the County of San Diego's Noise Ordinance construction noise limit of 75 dBA (8-hour average) as received by occupied properties. Treating construction noise as a type of non-transportation noise, this is supported by the following from Chapter 7 of the San Marcos General Plan (i.e., Noise Element): "San Marcos relies on the San Diego County Noise standards to regulate land use noise compatibility, transportation noise, and non-transportation noise" (City of San Marcos 2012).

Chapter 20.300 (Site Planning and General Development Standards) of the City's Municipal Code includes noise regulations in the form of noise standards by zone (Section 20.300.070, Performance Standards). It should be noted that Municipal Code noise standards typically pertain to stationary (i.e., non-transportation-related) noise sources. The relevant portions of these noise standards are provided below:

1. Noise shall be measured with a sound-level meter that meets the standards of the American National Standards Institute (ANSI) (Section S1.4-1979, Type 1 or Type 2). Noise levels shall be measured in decibels at the property line of the receptor property, and at least five (5) feet above the ground and ten (10) feet from the nearest structure or wall. The unit of measure shall be designated as an A-weighted decibel (dBA) L_{eq} standard. A calibration check shall be made of the instrument at the time any noise measurement is made (Ord. No. 2017-1446, 7-25-2017)

2. No person shall create or allow the creation of exterior noise that causes the noise level to exceed the noise standards established by Table 20.300-4 (shown in this report as Table 1). Increases in exterior noise levels listed in Table 20.300-4 are permitted but depend on cumulative duration of the increase within the measured hour. For instance, a 5 dB increase is allowed for up to fifteen (15) minutes within the hour, but a 10 dB increase above the limit is allowed for up to 5 cumulative minutes within that hour.

3. Use of compressors or other equipment, including vents, ducts, and conduits, but excluding window or wall-mounted air conditioners, that are located outside of the exterior walls of any building, shall be enclosed within a permanent, non-combustible, view-obscuring enclosure to ensure that the equipment does not emit noise in excess of the ANSI standards.

Table 1. City of San Marcos Exterior Noise Standards

Zone	Applicable Limit (decibels)	Time Period
Single-Family Residential (A, R-1, R-2) [1, 2]	60 50	7:00 a.m. to 10:00 p.m. 10:00 p.m. to 7:00 a.m.
Multifamily Residential (R-3) [1, 2]	65 55	7:00 a.m. to 10:00 p.m. 10:00 p.m. to 7:00 a.m.
Commercial (C, O-P, SR) [3]	65 55	7:00 a.m. to 10:00 p.m. 10:00 p.m. to 7:00 a.m.
Industrial	65 60	7:00 a.m. to 10:00 p.m. 10:00 p.m. to 7:00 a.m.

Source: San Marcos 2017 (Table 20.300-4)

Notes:

1. For single-family detached dwelling units, the "exterior noise level" is defined as the noise level measured at an outdoor living area which adjoins and is on the same lot as the dwelling, and which contains at least the following minimum net lot area: (i) for lots less than 4,000 square feet in area, the exterior area shall include 400 square feet, (ii) for lots between 4,000 square feet to 10 acres in area, the exterior area shall include 10 percent of the lot area; (iii) for lots over 10 acres in area, the exterior area shall include 1 acre.
2. For all other residential land uses, "exterior noise level" is defined as noise measured at exterior areas which are provided for private or group usable open space purposes. "Private Usable Open Space" is defined as usable open space intended for use of occupants of one dwelling unit, normally including yards, decks, and balconies. When the noise limit for Private Usable Open Space cannot be met, then a Group Usable Open Space that meets the exterior noise level standard shall be provided. "Group Usable Open Space" is defined as usable open space intended for common use by occupants of a development, either privately owned and maintained or dedicated to a public agency, normally including swimming pools, recreation courts, patios, open landscaped areas, and greenbelts with pedestrian walkways and equestrian and bicycle trails, but not including off-street parking and loading areas or driveways.
3. For non-residential noise sensitive land uses, exterior noise level is defined as noise measured at the exterior area provided for public use.

Marcos Specific Plan

The Marcos Specific Plan Section 2.6.7, Noise, establishes a limit on exterior noise levels at the Specific Plan boundary. The Specific Plan states that “noise attenuation techniques shall be employed, as needed, to ensure noise levels remain at or below 65 dBA L_{eq} at the specific plan boundary.” Further, the Specific Plan states that “each design feature and construction mitigation measure will conform the project to the City’s General Plan Noise Element requirements.”

The Marcos Specific Plan also addresses noise from events expected to be held at outdoor use spaces. Section 3.6.1.4, Events and Entertainment, (A.3) states that “events and entertainment may occur from 10 a.m. to 10 p.m. Noise Shall not exceed 65 dBA L_{eq} at the property line per SMMC 20.300.070E.”

3 Existing Conditions

Sound pressure level (SPL) measurements were conducted near the Project site on December 14, 2022, to quantify and characterize samples of the existing (a.k.a., baseline or pre-project) outdoor sound environment. Table 2 provides the location (and adjoining land use) and time at which these baseline noise level measurements were taken. The SPL measurements were performed by an attending Dudek field investigator using a Rion NL-52 sound level meter equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The sound level meter meets the current American National Standards Institute standard for a Type 1 (Precision Grade) sound level meter (SLM). The accuracy of the SLM was verified in the field using a reference sound signal (i.e., field calibrator) before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground.

Three short-term noise level measurement locations (ST1, ST2, and ST3) are depicted on Exhibit C. Table 2 presents L_{eq}, L_{max}, and L_{min} values for these surveyed positions, which were affected by the investigator-noted acoustical contributors as follows:

- ST1 – Traffic;
- ST2 – Traffic and distant industrial,
- ST3 – Traffic, birdsong, distant aircraft, and distant traffic.

As shown in Table 2, the measured sound levels ranged from approximately 64.0 dBA L_{eq} at ST2 to 76.7 dBA L_{eq} at ST1. Noise measurement data and photographs of the survey locations appear in Appendix A, Baseline Noise Measurement Field Data. These samples of daytime L_{eq} measured at the three representative receptor positions in Table 2 can be interpreted as approximations of CNEL, since evening SPL would likely be 5 dBA less, and nighttime SPL would be 10 dBA less than the daytime values (Federal Transit Administration [FTA] 2018).

Table 2. December 14, 2022 Measured Outdoor Ambient Sound Environment Samples

Survey Position	Location/Address	Start and End Time (hh:mm)	L_{eq} (dBA)	L_{max} (dBA)	L_{min} (dBA)
ST1	Northeast of the Project site, between Grand Ave. and CA-78	11:20 a.m. to 11:25 a.m.	76.7	84.8	70.5
ST2	Southern edge of the Project site, north of Linda Vista Dr.	11:35 a.m. to 11:50 a.m.	64.0	72.5	57.2
ST3	Adjacent to the building at 237 Via Vera Cruz, west of the Project site and east of Via Vera Cruz	11:40 a.m. to 11:50 a.m.	67.6	82.7	52.2

Source: Appendix A.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); L_{max} = maximum sound level during the measurement interval; dBA = A-weighted decibels; ST = short-term noise measurement locations.

4 Thresholds of Significance

The following significance criteria are based on Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.) and will be used to determine the significance of potential noise impacts. Impacts to noise would be significant if the proposed project would result in the following:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies
b. Generation of excessive groundborne vibration or groundborne noise levels
c. Expose people residing or working in the project area to excessive noise levels (for a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within 2 miles of a public airport or public use airport)

In light of these above significance criteria, this analysis uses the following standards to evaluate potential noise and vibration impacts.

- Construction noise – the City has adopted the County's construction noise threshold of not exceeding 75 dBA for an eight-hour period, between 7:00 a.m. and 7:00 p.m., when measured at any occupied property where the noise is being received.
- Off-site Project-attributed transportation noise – For purposes for this analysis, a direct roadway noise impact would be considered significant if increases in roadway traffic noise levels attributed to the proposed project were greater than 3 dBA CNEL at an existing noise-sensitive land use.
- Off-site Project-attributed stationary noise – For purposes for this analysis, a noise impact would be considered significant if noise from onsite Project sound sources, including typical operation of heating, ventilation, and air conditioning (HVAC), other electro-mechanical systems, as well as outdoor events, exceeded 65 dBA hourly L_{eq} at the property line from 7:00 a.m. to 10:00 p.m., and 55 dBA hourly L_{eq} from 10:00 p.m. to 7:00 a.m.
- Construction vibration – Guidance from Caltrans indicates that a vibration velocity level of 0.2 ips PPV received at a structure would be considered annoying by occupants within (Caltrans 2020). As for the receiving structure itself, aforementioned Caltrans guidance from Section 2 recommends that a vibration level of 0.3 ips PPV would represent the threshold for building damage risk.

5 Impact Discussion

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-Term Construction

Construction noise and vibration are temporary phenomena, varying from hour to hour and day to day, depending on the equipment in use, the operations performed, and the distance between the source and receptor. Equipment that would be in use during construction would include, in part, graders, scrapers, backhoes, rubber-tired dozers, loaders, cranes, forklifts, cement mixers, pavers, rollers, and air compressors. The typical maximum noise levels for various pieces of construction equipment at a distance of 50 feet are presented in Table 3. Usually, construction equipment operates in alternating cycles of full power and low power, which the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM) User's Guide (FHWA 2006) characterizes as "acoustical usage factor" (AUF) and thereby produces energy-average noise levels over time (L_{eq}) that are less than the listed maximum noise level (L_{max}). The average sound level of construction activity also depends on the amount of time that the equipment actually operates onsite.

Table 3. Typical Construction Equipment Maximum Noise Levels

FHWA RCNM Equipment Type	Acoustical Usage Factor (%)	Typical Equipment L_{max} (dBA at 50 Feet)	Typical Equipment L_{eq} (dBA at 50 Feet)
all other equipment > 5 HP	50	85	82
backhoe	40	78	74
compressor (air)	40	78	74
concrete mixer truck	40	79	75
crane	16	81	73
dozer	40	82	78
generator	50	72	69
grader	40	85	81
man lift	20	75	68
paver	50	77	74
roller	20	80	73
scraper	40	84	80
welder / torch	40	73	69

Source: FHWA 2006.
Note: L_{max} = maximum sound level; where L_{eq} = energy-equivalent sound level and can be calculated here with L_{eq} = L_{max} + 10*LOG(AUF); dBA = A-weighted decibels.

Using the provided construction information, prediction results are summarized in Table 4 at the nearest noise-sensitive receptor for two calculation scenarios as follows:

- Usage of the shortest activity-to-receptor distance for the loudest equipment type and quantity associated with the studied construction phase, with less noisy equipment types at successive distance increments of 50 feet; and

- An "acoustic centroid" approach, akin to the Federal Transit Administration (FTA) general assessment technique for estimating construction noise, whereby all listed equipment for a construction phases is represented by a common location at the geographic center of the studied construction zone or area.

The first of these methods is considered a conservative approach to assess what might be characterized as a peak exposure level, applicable to not more than approximately 10%–15% of the total construction period and when the studied construction activity is taking place with loudest equipment along the property boundary closest to these nearest off-site receivers. The second approach utilizes the acoustic centroid technique to represent a time-averaged location for the phase equipment and activity, thereby yielding average noise levels to represent overall noise exposure as experienced for adjacent receivers over the duration of each construction phase.

A Microsoft Excel–based noise prediction model emulating and using reference data from the FHWA RCNM (FHWA 2008) was used to estimate construction noise levels. (Although the RCNM was funded and promulgated by the Federal Highway Administration, it is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are often used for other types of construction.) Input variables for the predictive modeling consist of the equipment type and number of each, the afore-mentioned AUF, the expected duration (in hours) of onsite activity, and the distance from the receiver. Conservatively, no topographical or structural shielding was assumed in the modeling.

Appendix B displays the construction noise model worksheets for each of these analysis approaches. Although the quantities and types of equipment per construction phase are the same in each of the two approaches, due primarily to the differences in source-to-receptor distance variables, Table 4 shows that prediction results of both scenarios.

Table 4. Predicted Construction Noise Levels per Activity Phase

Construction Phase (and Equipment Types Involved)	8-Hour L_{eq} Closest Distance to Nearest Noise Sensitive Receptor (dBA)		8-Hour L_{eq} Acoustic Center to Nearest Noise Sensitive Receptor (dBA)	
	Feet	dBA	Feet	dBA
Demolition (concrete saw, excavator, dozer)	1,120	51.0	1,310	57.9
Site preparation (dozer, tractor, front end loader, backhoe)	1,060	53.5	1,300	58.2
Grading (excavator, grader, dozer, tractor, front end loader, scraper)	1,060	54.5	1,300	58.9
Building construction (crane, man-lift, generator, tractor, front end loader, backhoe, welder/torch)	1,100	51.9	1,290	53.9
Paving (paver, paving equipment, roller)	1,090	55.2	1,350	57.5
Architectural coating (air compressor)	1,100	45.9	1,290	44.5

Notes: L_{eq} = equivalent noise level; dBA = A-weighted decibels.

As presented in Table 4, the estimated construction noise exposure levels for each of the five expected sequential phases are not predicted to exceed 75 dBA L_{eq} over an 8-hour period at the nearest noise sensitive receptors to the north of the Project site. The predicted construction noise levels ranging from 45 to 58 dBA L_{eq} over an 8-hour period at the nearest noise sensitive receptor are also comparable to (or less than) the measured baseline outdoor sound level of 64 dBA at survey position "ST2" shown in Table 2. For these reasons, temporary construction-related noise impacts would be considered **less than significant**.

Long-Term Operational

Off-Site Roadway Traffic Noise

The proposed Project would result in the creation of additional vehicle trips on local roadways (i.e., Linda Vista Drive, Grand Avenue, and Via Vera Cruz), which could result in increased traffic noise levels at adjacent noise-sensitive land uses. The Project is expected to generate a net total of 2,241 daily trips to the roadway system. As shown in Table 3.1 of the Project's Transportation Impact Study, during the PM peak-hour, approximately 189 vehicles are estimated to enter or exit the Project site. Utilizing this information, an emulator based on the FHWA's Highway Traffic Noise Prediction Model RD-77-108 was used to estimate potential noise impacts at adjacent noise-sensitive uses. Information used in the model included posted traffic speeds, truck mix percentage, and average daily traffic (ADT) volumes (expressed as vehicles per hour) for the existing, near-term year 2024 with and without Project, and horizon year 2050 with and without Project conditions.

ADT volumes for I-78 were obtained separately via the San Diego Association of Governments (SANDAG) Transportation Forecast Information Center (TFIC) for the existing (2016), near-term (2025), and horizon (2050) years. Existing (2022) and Near-Term (2024) ADT volumes for I-78 were derived by determining the yearly percentage increase or decrease in traffic using the information available from the TFIC.

Consistent with Caltrans guidance (Caltrans, 2013), this analysis assumes 80% of the ADT occurs during daytime hours (7:00 a.m. to 7:00 p.m.), 5% during the evening (7:00 p.m. to 10:00 p.m.), and 15% during the nighttime (10:00 p.m. to 7:00 a.m.). Appendix C, Traffic Noise Model Calculations, contains the input data and results of the traffic noise modeling effort. According to acoustical principles, the increase in traffic noise level relates directly to the increase in volumes by the following expression: $10*LOG(V_f/V_e)$, where V_f is the future traffic volume, V_e is the existing traffic volume, and vehicle speeds and proportion of vehicle types are essentially unchanged. The Project would therefore have to roughly double the traffic volumes on nearby studied roadway segments in order to increase traffic by 3 dBA, which would be considered a barely perceptible increase (Caltrans 2013).

Traffic noise levels were modeled at the same geographic positions for ST2 and ST3 as shown in Exhibit B. The traffic noise level for ST1 was predicted at the northwestern boundary of the Project site in order to be representative of the future residences located behind a proposed six-foot noise wall. The traffic noise model results are summarized in Table 5, and represented by CNEL values.

Table 5. Off-site Roadway Traffic Noise Modeling Results

Modeled Receiver Tag (and Location Description)	Existing (2022) Noise Level (CNEL)	Near-Term (2024) Without Project (CNEL)	Near-Term (2024) With Project (CNEL)	Project-Related Near-Term (2024) Noise Level Increase (dB)	Horizon (2050) Without Project (CNEL)	Horizon (2050) With Project (CNEL)	Project-Related Horizon (2050) Noise Level Increase (dB)
ST1 (Northeastern boundary of the Project site, adjacent to Grand Ave. and CA-78)	76.6	76.5	73.8	-2.7	75.9	73.5	-2.4
ST2 (Southern edge of the Project site, north of Linda Vista Dr.)	67.3	67.3	68.3	1.1	67.5	68.5	1.0
ST3 (Adjacent to the building at 237 Via Vera Cruz, west of the Project site and east of Via Vera Cruz)	67.2	67.2	67.4	0.2	69.0	69.1	0.1

Notes: dBA = A-weighted decibel; CNEL = Community Noise Equivalent Level; dB = decibel.

Table 5 shows that at all three listed representative receivers, the addition of proposed Project traffic to the local roadway network would result in a CNEL increase of less than or equal 1 dB, which is below the discernible level of change for the average healthy human ear. Thus, a **less-than-significant impact** is expected for proposed project-related off-site traffic noise increases affecting existing residences in the vicinity.

On-Site Roadway Traffic Noise

As of January 2019, the study of future Project residential exposures to offsite transportation noise sources is not considered for noise impact assessment at the California state level. Hence, for informational purposes and as shown in Table 5, predicted future (2024 and 2050) "with project" noise levels exceed the City's "conditionally acceptable" multi-family/mixed-use land use compatibility standard threshold of 75 dBA CNEL at the receiver representing the multi-family residences located adjacent to Grand Avenue. The proposed six-foot noise wall on the northeastern side of the property, situated between the Project buildings and the parallel major roadway represented by Grand Avenue and CA-78 traffic, is predicted to provide an insertion loss of approximately three to four dBA for first-floor exterior areas.

Second floor balconies (as shown in Exhibit D) facing Grand Avenue and CA-78 are also predicted to exceed 75 dBA CNEL, but would not be benefited by the additional three to four dBA of insertion loss from the six-foot noise wall. If these balconies are not merely an architectural or decorative feature and are intended to be used as private outdoor spaces with the potential to be occupied by residents or their guests, then those balconies would need to be acoustically upgraded in order to reduce outdoor noise exposure for seated occupants.

Exhibit D. Project Multi-Family Residential Building with Balconies Facing Grand Avenue and CA-78

Source: Lab Holding, LLC California Pacific Homes (2022)
Note: Balconies are encircled in red

An approach that Dudek has recommended on previous residential projects is to provide this identified noise reduction need by way of the addition of a solid and sufficiently massive material layer to the planned square-tubed metal railings on the balcony usable area perimeter. As depicted in Exhibit E, showing detail from a previously studied project (and thus used merely for illustration purposes), proposed installation of a 6-millimeter (0.236 inch) sheet of plexiglass (acrylic) on the interior-facing side of the balcony railing structure would be expected to yield an effective sound transmission class (STC) rating of at least 15. Although the material itself has an STC rating of 29 (Arkema Group 2019), the approximate 1"-wide air gap between the bottom edge of the plexiglass panel and the balcony floor results in lower expected STC performance. In other words, the area of the gap as a fraction of the barrier material surface area causes the reduction in sound transmission loss performance. Other material options and designs are possible, subject to non-acoustical considerations such as desired barrier opacity, balcony deck drainage, etc., provided that the designed installation has barrier material having adequate mass and solidity, an approximate deck to top-edge height of 42 inches (3.5 feet), and with minimized air-gaps such as the sample appearing in Exhibit E.

Exhibit F illustrates examples of similar sound-blocking balcony barriers to help reduce incoming traffic noise and increase occupant privacy at pre-existing Vista Flores Apartments and Barham Villas Apartments that overlook and are within comparable horizontal distances to the CA-78 highway as anticipated Project facades appearing in Exhibit D.

On these bases, implementation of PDF-NOI-1 and PDF-NOI-2 below would help reduce traffic noise exposure levels. However, predicted traffic noise exposure levels may still exceed the City's land use compatibility standard of 65 dBA CNEL at the Private Usable Open Spaces for these Category B receptors per Table 7-4 (as shown in Exhibit B). As permitted by note 5 in Table 7-4, the Project's group Usable Open Spaces (pool, playground, etc.) that are shielded by multiple Project building rows would be predicted to have traffic noise exposure levels less than 65 dBA CNEL and would therefore be compatible with the City's land use compatibility standard. This is supported by language in note 5 from Table 7-4 as follows: "When the noise limit for Private Usable Open Space cannot be met, then a Group Usable Open Space that meets the exterior noise level standard shall be provided."

PDF-NOI-1 Where Project exterior onsite noise levels due to offsite surface transportation noise sources are predicted to exceed 65 dBA CNEL at useable open space areas, the Project shall install noise-

reducing features external to or upon the useable open space areas (or within, as practical and appropriate) in the form of sound walls, fencing, landscape berms, or similarly performing barriers to occlude incoming roadway traffic noise.

PDF-NOI-2 Residential unit patios or balconies with roadway-facing building facades predicted to be exposed to external noise levels in excess of 65 A-weighted decibels community noise equivalent level shall feature railings or other partial-height barriers comprising sufficiently solid and dense materials (e.g., acrylic, glass, wood that exhibits a sound transmission class rating of at least 20) and of a 42-inch minimum height (from floor or deck of the balcony surface) that occludes direct sound path from the noise-producing roadway of concern and a seated patio or balcony occupant.

Stationary Project Operations Noise

The completion of various buildings on the Project site will add a variety of noise-producing mechanical equipment that include those presented and discussed in the following paragraphs. In addition to noise-producing mechanical equipment on the roofs of the Project buildings, the site contains several proposed outdoor spaces on the east side of the site where events are expected to take place. Most of these noise-producing equipment or sound sources would be considered stationary or limited in mobility to a defined area.

The aggregate noise emission from these outdoor-exposed sound sources has been predicted with the Datakustik CadnaA sound propagation program. CadnaA is a commercially available software program for the calculation, presentation, assessment, and prediction of environmental noise based on algorithms and reference data per International Organization of Standardization (ISO) Standard 9613-2, "Attenuation of Sound During Propagation Outdoors, Part 2: General Method of Calculation" (ISO 1996). The CadnaA computer software allows one to position sources of sound emission in a simulated three-dimensional (3-D) space atop rendered "blocks" of project building masses having heights and footprints consistent with project architectural plans and elevations. In addition to the above-mentioned sound source inputs and building-block structures that define the three-dimensional sound propagation model space, the following assumptions and parameters are included in this CadnaA-supported stationary noise source assessment:

- Ground effect acoustical absorption coefficient equal to 0.5, which intends to represent an average or blending of ground covers that are characterized largely by hard reflective pavements and existing building surfaces across the Project site and the surroundings;
- Reflection order of 1, which allows for a single reflection of sound paths on encountered structural surfaces such as the modeled building masses;
- Off-site residential structures and the commercial buildings have not been rendered in the model;
- Calm meteorological conditions (i.e., no wind) with 68 degrees Fahrenheit and 50% relative humidity; and
- All of the modeled noise sources are operating concurrently and continuously for a minimum period of 1 hour.

HVAC Noise

The proposed Project buildings would be served by air-conditioning equipment that includes outdoor-exposed packaged air-handling units or—at a minimum—air-cooled condensers (ACC) that provide the expected cooling demand (expressed as refrigeration "tonnage") for the building.

Based on the available architectural plans and other design information for the proposed Project, there are a number of HVAC units proposed on the roof of each Project building. Rooftop HVAC reference sound levels were calculated from a combination of inputs that include the gross square footage (SF) values for the Project's residential and commercial facilities, Project applicant response to data requests, and manufacturer sound power level data.

Table 6 presents the predicted aggregate noise level exposures from the operating rooftop HVAC systems at each of four (4) nearby receptors (i.e., short-term measurement locations and the closest noise-sensitive receptor). Predicted levels shown in Table 6 range between 20 to 36 dBA hourly L_{eq}, which is below the City's noise standard of 60 dBA L_{eq} for single-family residential properties and below the Marcos Specific Plan limit of 65 dBA L_{eq} at the site boundary. Figure 4 displays the location of the studied receptors and noise contours for the HVAC-only condition. See Appendix D for quantitative details of the modeling inputs.

Table 6. HVAC Only Stationary Operations Noise Modeling Results

Studied Noise-Sensitive Receptor	Predicted Project-Attributed Noise Exposure Level at Nearby Receptors Project HVAC (dBA hourly L_{eq})
ST1	35.7
ST2	33.6
ST3	23.2
Nearest Noise-Sensitive Receptor	20.3

Note: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; HVAC = heating, ventilating, and air-conditioning. See Figure 4 for locations of studied noise-sensitive receptors for the HVAC only condition.

HVAC Plus Event Noise

Based on the information found in the Marcos Specific Plan Section 3.6.1.4, multiple event types and sizes will be allowed at the outdoor spaces developed by the Project. Anticipated event sizes are categorized by expected attendance and range from "small" (10-20 people) to "large" (100+ people).

For the same four (4) studied receptor positions listed in Table 6 (i.e., short-term measurement locations and the closest noise-sensitive receptor), and resulting from usage of the same CadnaA-based sound propagation prediction model, Table 7 presents the predicted aggregate noise level exposures from the operating rooftop HVAC systems and an in-progress event with 100 people at an outdoor use area on the east side of the commercial side of the Project. For purposes of this analysis, the added event-related noise would be considered equivalent to speech from one hundred speakers at an average "loud speaking" level (Hayne 2006) and geographically spread over the event area as shown in Figure 14 of the Marcos Specific Plan. Predicted levels shown in Table 7 range between 25 to 60 dBA hourly L_{eq}, which is below the Marcos Specific Plan standard of 65 dBA L_{eq} at the Specific Plan boundary. Figure 5 displays the location of the studied receptors and noise contours for this studied HVAC-plus-event Project noise emission scenario.

Table 7. HVAC Plus Event Stationary Operations Noise Modeling Results

Studied Noise-Sensitive Receptor	Predicted Project-Attributed Noise Exposure Level at Nearby Receptors Project HVAC + Event (dBA hourly L_{eq})
ST1	36.1
ST2	60.1
ST3	39.4
Nearest Noise-Sensitive Receptor	25.3

Note: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; HVAC = heating, ventilating, and air-conditioning. See Figure 3 for locations of studied noise-sensitive receptors for the HVAC plus event condition.

In summary, aggregate noise emission from continuously operating outdoor-exposed rooftop HVAC units is expected to be below the City's exterior noise threshold of 60 dBA L_{eq} for commercial land uses and below the Specific Plan threshold of 65 dBA L_{eq} at the site boundary. Additionally, aggregate Project noise emission from the combination of this anticipated building HVAC noise and a "large" in-progress outdoor event attended by 100 people at the planned event area would be compliant with the Specific Plan threshold of 65 dBA L_{eq} at the site boundary. Given that such a large attended outdoor event is predicted to be compliant, one can reasonably assume that an HVAC-plus-event noise emission associated with "small" outdoor events that may occur locally around distinct Project buildings would, on the basis of smaller event attendance having less acoustical contribution due to average speech levels, also be compliant with this Specific Plan standard.

Therefore, noise associated with stationary operations related to rooftop HVAC equipment would be considered a **less than significant impact**, and no mitigation is required.

Figure 5 Aggregate Stationary Sources Operational Noise Level Prediction – HVAC Plus Event

INTENTIONALLY LEFT BLANK

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Construction activities may expose persons to excessive groundborne vibration or groundborne noise, causing a potentially significant impact. Caltrans has collected groundborne vibration information related to construction activities (Caltrans 2020). Information from Caltrans indicates that continuous vibrations with a PPV of approximately 0.2 ips is considered annoying. For context, heavier pieces of construction equipment, such as a bulldozer that may be expected on the project site, have peak particle velocities of approximately 0.089 ips PPV or less at a reference distance of 25 feet (FTA 2018).

Groundborne vibration attenuates rapidly, even over short distances. The attenuation of groundborne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in FTA and Caltrans guidance. By way of example, for a vibratory roller operating on site and as close as the southern project boundary (i.e., 30 feet from the nearest occupied building) when involved in the paving phase of Project construction, the estimated vibration velocity level would be 0.16 ips per the equation as follows (FTA 2018):

$PPV_{rcvr} = PPV_{ref} * (25/D)^{1.5} = 0.16 = 0.21 * (25/30)^{1.5}$

In the above equation, PPV_{rcvr} is the predicted vibration velocity at the receiver position, PPV_{ref} is the reference value at 25 feet from the vibration source (the bulldozer), and D is the actual horizontal distance to the receiver. Therefore, at this predicted PPV, the impact of vibration-induced annoyance to occupants of nearby commercial buildings would be **less than significant**.

Construction vibration, at sufficiently high levels, can also present a building damage risk. However, anticipated construction vibration associated with the proposed project would yield levels of 0.16 ips PPV, which does not surpass the guidance limit of 0.3 ips PPV for preventing damage to older residential structures (Caltrans 2020). Because the predicted vibration level at 30 feet is less than this guidance limit, the risk of vibration damage to nearby structures is considered **less than significant**.

Once operational, the proposed project would not be expected to feature major producers of groundborne vibration. Anticipated mechanical systems like heating, ventilation, and air-conditioning units are designed and manufactured to feature rotating (fans, motors) and reciprocating (compressors) components that are well-balanced with isolated vibration within or external to the equipment casings. On this basis, potential vibration impacts due to proposed project operation would be **less than significant**.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no private airstrips within the vicinity of the project site. The closest airport to the project site is the McClellan Palomar Airport, approximately 5 miles west of the site. According to the Comprehensive Land Use for McClellan-Palomar Airport (SDCRAA 2011) the Project site is not located within a noise exposure contour and would therefore not expose people residing or working in the project area to excessive noise levels. Impacts from aviation overflight noise exposure would be **less than significant**.

6 Mitigation Measures

The results indicate that potential impacts during construction and operation of the proposed Project would be less than significant. No mitigation is required with proper implementation of the Specific Plan.

INTENTIONALLY LEFT BLANK

7 Summary of Findings

This noise report was conducted for the proposed Project. The results indicate that potential noise and vibration impacts during construction would be less than significant, and no noise or vibration mitigation is required.

Executive Summary

Project Setting and Description

The Project is a mixed-use development on 11.08 acres (5.03 acres of residential uses and 6.05 acres of office/retail uses) located at the northwest corner of Linda Vista Road and Grand Avenue in the City of San Marcos. The Project proposes to construct 102 multi-family dwelling units (on west end of project) as well as 7 live/work units (on east end of project) on approximately 5.03 acres. Live/work units are units consisting of a residential and commercial/office component, where a resident is able to both live and work. Additionally, the Project proposes to construct 7,658 square feet (SF) of office space and 49,266 SF of specialty retail space on approximately 6.05 acres. It should be noted that the office space is intended for single tenant and the retail space is not intended to be occupied by grocery store uses or similar uses.

The property is bordered by Grand Avenue on the northeast side, Linda Vista Road on the southeast side, and industrial land uses to the west. Per the City's General Plan, the site is designated as a Commercial (C) land use and thus the Project, being a mixed-use development, is inconsistent with the General Plan and zoning designation. However, the project applicant is processing a General Plan Amendment (GPA) to adjust the zoning to "Mixed-Use" in order to be consistent with the General Plan. The Project's assumed opening year is Year 2024.

The Project will provide the following four new side-street stop-controlled driveways and roadway improvements:

- Project Driveway #1 – This new, full-access driveway will be located approximately 900 feet northwest of Linda Vista Drive
- Project Driveway #2 – This new, full-access driveway will be located approximately 300 feet northwest of Linda Vista Drive
- Project Driveway #3 – This new, full-access driveway will be located approximately 700 feet southwest of Grand Avenue
- Project Driveway #4 – This new, full-access driveway will be located approximately 250 feet southwest of Grand Avenue
- Construction of raised median at Grand Avenue along Project Frontage. Median breaks will be present to allow for full access of the driveways along Grand Avenue.

Based on the preliminary review of the project site plan, the Project would not conflict with existing or planned transit, bicycle, or pedestrian facilities. The Project will construct a landscaped buffer and a Class I bike path with a separate pedestrian path adjacent to it along the segments of Linda Vista Drive and Grand Avenue fronting the Project. Additionally, the Project will reconstruct curb ramps located along project driveways, including detectable surface warning tactiles (yellow truncated domes). Implementation of the recommendation above should enhance the overall bicycle and pedestrian environment.

Per the City's Transportation Analysis Guidelines (TIAG), trip generation rates were derived from SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002).

The Project is anticipated to generate a net total of 2,241 daily trips, including 126 trips (60-in/62-out) during the AM peak hour and 189 (101-in/89-out) during the PM peak hour.

The following roadway segments and intersections were included for analysis:

Roadway Segments

- Via Vera Cruz, between Grand Avenue and Linda Vista Drive
- Via Vera Cruz, between Linda Vista Drive and West San Marcos Boulevard
- Grand Avenue, between Las Posas Road and Via Vera Cruz
- Grand Avenue, between Via Vera Cruz and Linda Vista Drive
- Grand Avenue, between Linda Vista Drive and West San Marcos Boulevard
- Linda Vista Drive, between Via Vera Cruz and Grand Avenue
- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue
- West San Marcos Boulevard, between South Bent Avenue and Grand Avenue

Intersections

1. South Las Posas Road & Grand Avenue
2. SR-78 EB Ramps/Via Vera Cruz & Grand Avenue
3. Via Vera Cruz & Linda Vista Drive
4. Linda Vista Drive & Grand Avenue
5. South Bent Avenue & Grand Avenue
6. Via Vera Cruz & West San Marcos Boulevard
7. Grand Avenue & West San Marcos Boulevard
8. Project Driveway #1 & Grand Avenue
9. Project Driveway #2 & Grand Avenue
10. Project Driveway #3 & Linda Vista Drive
11. Project Driveway #4 & Linda Vista Drive

LOS Deficiencies and Improvement Requirements

Determination of the Need for Off-Site Improvements to Accommodate Project Traffic – Near-Term Year 2024 with Project Conditions

Roadway Segment Analysis
No improvements required.

Intersection Analysis
No improvements required.

Determination of the Need for Off-Site Improvements to Accommodate Project Traffic – Horizon Year 2050 with Project Conditions

Roadway Segment Analysis
No improvements required.

Intersection Analysis
Because implementation of the Project would further deteriorate traffic operations and increase the delay at an intersection already operating at LOS E or F by more than 2.0 seconds, the Project would cause an inconsistency with Policy M-1.4 at the following intersection:

- Linda Vista Drive & Grand Avenue – To improve operations at this intersection, the Project shall provide a fair share contribution to install a traffic signal. It should be noted the intersection already operates at substandard LOS E without the Project, indicating the Project does not directly cause the inconsistency. Upon implementation of this improvement, the intersection would operate at acceptable LOS and better than pre-project conditions.

  The total number of vehicle trips passing through this intersection during the PM peak hour is 1,811, of which 101 (or 5.6% of the total volume) are vehicle trips generated by the Project. Thus, the Project would be responsible for 5.6% of the cost to implement this improvement.

1.0 Introduction

The purpose of this Local Transportation Analysis (LTA) is to document the effect the San Marcos Artist's Village project (the "Project") would have on the circulation network and to determine if improvements are required. Per the City's Transportation Impact Analysis Guidelines (TIAG), the City strives to maintain intersection and roadway segment operations based on LOS standards outlined in the General Plan Mobility Element. Improvements should be identified for any study facilities that do not meet City LOS standards to increase performance to acceptable or pre-project conditions.

1.1 Project Description

The Project is a mixed-use development on 11.08 acres (5.03 acres of residential uses and 6.05 acres of office/retail uses) located at the northwest corner of Linda Vista Road and Grand Avenue in the City of San Marcos. The Project proposes to construct 102 multi-family dwelling units (on west end of project) as well as 7 live/work units (on east end of project) on approximately 5.03 acres. Live/work units are units consisting of a residential and commercial/office component, where a resident is able to both live and work. Additionally, the Project proposes to construct 7,658 square feet (SF) of office space and 49,266 SF of specialty retail space on approximately 6.05 acres. It should be noted that the office space is intended for single tenant and the retail space is not intended to be occupied by grocery store uses or similar uses.

The property is bordered by Grand Avenue on the northeast side, Linda Vista Road on the southeast side, and industrial land uses to the west. Per the City's General Plan, the site is designated as a Commercial (C) land use and thus the Project, being a mixed-use development, is inconsistent with the General Plan and zoning designation. However, the project applicant is processing a General Plan Amendment (GPA) to adjust the zoning to "Mixed-Use" in order to be consistent with the General Plan. The Project's assumed opening year is Year 2024.

The Project will provide the following four new side-street stop-controlled driveways and roadway improvements:

- Project Driveway #1 – This new, full-access driveway will be located approximately 900 feet northwest of Linda Vista Drive
- Project Driveway #2 – This new, full-access driveway will be located approximately 300 feet northwest of Linda Vista Drive
- Project Driveway #3 – This new, full-access driveway will be located approximately 700 feet southwest of Grand Avenue
- Project Driveway #4 – This new, full-access driveway will be located approximately 250 feet southwest of Grand Avenue
- Construction of raised medians at Grand Avenue along Project Frontage. Median breaks will be present to allow for full access of the driveways along Grand Avenue. See **Appendix A** for improvement plan.

Figure 1.1 displays the Project's regional location. **Figure 1.2** displays the project site plan.

1.2 Report Organization

Following this introductory chapter, this report is organized into the following chapters:

2. Analysis Methodology – This chapter reviews the methods utilized to evaluate any potential General Plan inconsistencies and LOS deficiencies associated with the implementation of the Project, as required by the TIAG.
3. Project Traffic - This chapter describes the Project's land uses and associated trip generation. Additional information such as trip distribution patterns and project trip assignment are also included in this chapter, which is used to determine the project study area.
4. Existing Conditions – This chapter describes and evaluates the existing transportation network. Vehicular operations within the study area are evaluated. LOS analysis results are also provided for existing vehicular traffic conditions.
5. Near-Term Year 2024 Conditions – This chapter describes near-term developments anticipated to generate additional study area trips and establishes a near-term baseline against which traffic generated by the Project can be compared to at the project opening day, assumed to be Year 2024. LOS analysis results are also provided for Near-Term Year 2024 Base and Near-Term Year 2024 Base with Project vehicular traffic conditions.
6. Horizon Year 2050 Conditions – This chapter describes projected long-range conditions of the transportation network within the study area. Horizon Year 2050 scenario analysis is required per the City's TIAG. LOS analysis results are also provided for Horizon Year 2050 and Horizon Year 2050 with Project vehicular traffic conditions.
7. LOS Deficiencies and Improvement Requirements - This chapter identifies any substandard facilities and provides improvement requirements to improve substandard facilities to acceptable LOS or pre-project conditions.
8. Site Access & Circulation – This chapter addresses access to the project site and discusses the functionality of the Project's internal circulation.

2.0 Analysis Methodology

This study was performed in accordance with the standards and requirements in the TIAG. All analysis assumptions were documented within a scoping agreement memorandum, provided in **Appendix B**, and approved by the City of San Marcos. The following sections describe the analysis methods outlined in the TIAG to evaluate the traffic effect as a result of the Project in relation to LOS.

2.1 Level of Service (LOS) Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. **Table 2.1** describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 2.1 - LOS Definitions

LOS	Definition of Operation
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS, the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Source: Highway Capacity Manual (HCM) 6th Edition

2.2 Roadway Segment LOS Standards and Thresholds

Roadway segment LOS standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. **Table 2.2** displays roadway segment capacity standards found in the City's TIAG. The actual capacity of a roadway facility varies according to its physical attributes.

Table 2.2 - Roadway Segment Daily Capacity and LOS Standards

Street Classification	LOS/ADT Thresholds				
	A	B	C	D	E
Expressway (6-lane)	< 30,000	< 42,000	< 60,000	**< 70,000**	< 80,000
Prime Arterial (6-lane)	< 25,000	< 35,000	< 50,000	**< 55,000**	< 60,000
Major Arterial (6-lane, divided)	< 20,000	< 28,000	< 40,000	**< 45,000**	< 50,000
Major Arterial (4-lane, divided)	< 15,000	< 21,000	< 30,000	**< 35,000**	< 40,000
Major Arterial (3-lane, one-way)	< 12,500	< 16,500	< 22,500	**< 25,000**	< 27,500
Major Arterial (2-lane, one-way)	<10,000	<13,000	<17,500	**<20,000**	<22,500

Source: City of San Marcos Transportation Impact Analysis Guidelines (November 2020)

Note:
Bold number indicates the ADT thresholds for acceptable LOS.

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway varies according to its physical attributes. Typically, the performance and LOS of a roadway segment is heavily influenced by the ability of its intersections to accommodate peak hour traffic volumes. For the purposes of this traffic analysis, LOS D or better is considered acceptable for circulation element roadway segments.

2.3 Peak Hour Intersection LOS Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection capacity analyses at signalized and unsignalized intersections within the study area. The following assumptions were utilized in conducting all intersection LOS analyses:

- Peak Hour Factor (PHF) – Field-collected PHF for Existing and Near-Term Year 2024 Base Conditions. A PHF of 0.95 was assumed for Horizon Year 2050 analysis, except where the field-collected PHF exceeds 0.95.
- Lane Utilization Factor – HCM 6th Edition defaults were used for all scenarios.
- Conflicting Pedestrians/Bicycles – Existing pedestrian and bicycle counts are utilized for all scenarios.
- Signal Timing – Based on existing signal timing plans (as of June 2022 and July 2022), provided in **Appendix C**.
- Heavy Vehicle Factor (HVF) – 2% for all approaches, except where designated truck routes are present. HVF for truck route approaches are based on Caltrans truck percentage data.

2.3.1 Signalized Intersections

The analysis of signalized intersections utilized the operational analysis procedure as outlined in the Highway Capacity Manual (HCM) 6th Edition signalized (Chapter 19) intersection analysis methodology. This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique uses 1,900 vehicles per hour per lane (VPHPL) as the maximum saturation volume of an intersection. This saturation volume is adjusted to account for lane width, on-street parking, pedestrians, traffic composition (i.e., percentage trucks) and shared lane movements (i.e., through and right-turn movements originating from the same lane). The LOS criteria used for the analysis of signalized intersections are described in **Table 2.3**, identifying the thresholds of control delays and the associated LOS. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

Table 2.3 - Signalized Intersection LOS Operational Analysis Method

Average Stopped Delay Per Vehicle (Seconds)	LOS Characteristics
<10	LOS A describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
>10– 20	LOS B describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
>20 – 35	LOS C describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
>35– 55	LOS D describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
>55 – 80	LOS E is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80	LOS F describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the LOS D capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: HCM 6th Edition

2.3.2 Unsignalized Intersections

Unsignalized intersections were analyzed using the Highway Capacity 6th Edition side-street stop (Chapter 20) and all-way stop (Chapter 21) intersection analysis methodology. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

LOS was determined as follows:

- All-way stop intersections: Reported for the entire intersection as an average value
- Side-street stop intersections: Reported for the worst-case movement

The LOS criteria used for the analysis of unsignalized intersections are described in **Table 2.4**.

Table 2.4 - LOS Criteria for Stop Controlled Unsignalized Intersections

Average Stopped Delay Per Vehicle (Seconds)	LOS
0-10	A
> 10-15	B
> 15-25	C
> 25-35	D
> 35-50	E
> 50	F

Source: HCM 6th Edition

2.4 Determination of Project Study Area

Per the City's TIAG, the study area was defined using the following criteria:

- Signalized and unsignalized intersections along and adjacent to the project site
- Site access driveways
- Any classified (non-residential) roadway segments that are linked to the intersections that are being studied

2.5 City of San Marcos LOS Standards

This section outlines the Mobility Element Policies that are relevant to the Project. The City of San Marcos strives to maintain intersection and roadway segment operations LOS standards based on the following policy:

- Policy M-1.4: LOS D or better for Vehicles as a prioritized mode – Generally provides facilities that have minimum vehicle congestion during peak periods. Most motorists are delayed less than 55 seconds at a signal (or less than one signalized cycle).

Based on the policy listed above, LOS D or better is considered acceptable for study roadway segments and intersections. The TIAG provides the following thresholds to determine if the Project is required provide improvements for study area facilities:

- Implementation of the Project triggers a roadway segment operating at acceptable LOS to operate at unacceptable LOS and increases the volume/capacity (V/C) ratio by more than 0.02.
- Implementation of the Project increases the V/C ratio for a study roadway segment that is already operating at unacceptable LOS by more than 0.02.
- Implementation of the Project triggers an intersection operating at acceptable LOS to operate at unacceptable LOS and increases the average delay per vehicle by more than 2.0 seconds.
- Implementation of the Project increases the average delay for a study intersection that is already operating at unacceptable LOS by more than 2.0 seconds.

Improvements should be identified to increase performance to acceptable or pre-project conditions under each scenario.

3.0 Project Traffic

This chapter describes the Project's trip generation, trip distribution patterns, and trip assignment.

3.1 Project Trip Generation

Per the City's TIAG, trip generation rates were derived from SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002). It should be noted that the office space is intended for single tenant and the retail space is not intended to be occupied by grocery store uses or similar uses. **Table 3.1** displays the projected daily, as well as AM and PM peak hour, project trip generation.

As shown, the Project is anticipated to generate a net total of 2,241 daily trips, including 126 trips (60-in/62-out) during the AM peak hour and 189 (101-in/89-out) during the PM peak hour.

3.2 Project Trip Distribution and Assignment

The project trip distribution was manually developed based on the following:

- Existing travel patterns obtained from big data (Replica1) and Census data
- Geographical location of the Project, surrounding land uses, and knowledge of the City's traffic patterns.

Appendix D includes a technical memorandum detailing the development of the project trip distribution. Since the Project features different land uses, separate trip distributions were developed. The office and retail components of the Project are assumed to have the same trip distribution since trips associated with these land uses would utilize Project Driveways #2, #3, and #4.

The residential component of the Project differs in trip distribution as it has different travel patterns than those associated with office and retail land uses. The Project proposes to construct 102 multi-family residential units that would be accessed via Project Driveway #1 along the west side (residential area) of the Project and 7 live/work units would be accessed along the east side (office-retail area) of the Project via Project Driveway #3. Although the seven live/work units are located within the office-retail area of the Project, the units are anticipated to have similar travel patterns as the typical residential units on the east side. Therefore, the trips associated with live/work units were assumed to be strictly residential trips and not included as part of the office or retail component of the Project. **Figure 3.1A** and **Figure 3.1B** display the regional trip distribution patterns for the residential component of the Project. **Figure 3.2A** and **Figure 3.2B** display the regional trip distribution patterns for the office and retail component of the Project.

Based upon the project trip distribution patterns, daily and AM/PM peak hour project trips were assigned to the adjacent roadway network. **Figure 3.3A** and **Figure 3.3B** display the project trip

[1] Replica is a data provider that produces large-scale models to represent mobility throughout the United States. For more information, please visit the following: https://replicahq.com/.

assignment for the residential component of the Project. **Figure 3.4A** and **Figure 3.4B** display the project trip assignment for the office and retail component of the Project. **Figure 3.5A** and **Figure 3.5B** display the project trip assignment for the combined land uses (total trip assignment).

Table 3.1 - Project Trip Generation

3.3 Project Study Area

Based on the study area criteria previously outlined in Chapter 2, the project trip assignment shown in Figures 3.5A and 3.5B, and the preliminary project scoping with City of San Marcos staff, the following roadway segments and intersections were included for analysis:

Roadway Segments

- Via Vera Cruz, between Grand Avenue and Linda Vista Drive
- Via Vera Cruz, between Linda Vista Drive and West San Marcos Boulevard
- Grand Avenue, between Las Posas Road and Via Vera Cruz
- Grand Avenue, between Via Vera Cruz and Linda Vista Drive
- Grand Avenue, between Linda Vista Drive and West San Marcos Boulevard
- Linda Vista Drive, between Via Vera Cruz and Grand Avenue
- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue
- West San Marcos Boulevard, between South Bent Avenue and Grand Avenue

Intersections

1. South Las Posas Road & Grand Avenue
2. SR-78 EB Ramps/Via Vera Cruz & Grand Avenue
3. Via Vera Cruz & Linda Vista Drive
4. Linda Vista Drive & Grand Avenue
5. South Bent Avenue & Grand Avenue
6. Via Vera Cruz & West San Marcos Boulevard
7. Grand Avenue & West San Marcos Boulevard

Project Study Area

4.0 Active Transportation Evaluation

This section discusses the project site's active transportation modes.

4.1 Transit Access

The project site is within one half mile of the transit lines serviced by North County Transit District (NCTD) described below:

- Bus Route 347 – This bus route is serviced along West Mission Road and North Las Posas Road within the project study area. This bus route connects the Palomar College Transit Center to the CSU San Marcos SPRINTER Station. Operations starts at 5:31 AM and ends at 7:21 PM between Monday and Friday with 30-minute intervals. On Saturdays, operations start at 7:22 AM and ends at 7:08 PM with 60-minute intervals. This route does not operate on Sundays.
- Bus Route 445 – This bus route is serviced along West Mission Road and North Las Posas Road within the project study area. This bus route connects the Palomar College Transit Center to the Carlsbad Poinsettia Station (COASTER Connection). Between Monday and Friday, operations start at 6:34 AM and ends at 10:19 AM with 30-minute intervals for the morning period. Similarly, between Monday and Friday, operates start at 3:36 PM and ends at 7:19 PM with 30-minutes intervals for the afternoon period. This route does not operate on Saturdays or Sundays.
- SPRINTER – This light rail line runs between Oceanside Transit Center and Escondido Transit Center (eastbound and westbound direction). The nearest stop to the project site is the Palomar College Transit Center. Operation starts at 4:17 AM and ends at 9:10 PM between Monday and Sunday with 30-minute intervals.

Based on the preliminary review of the project site plan, the Project would not conflict with existing or planned transit facilities and would not result in any impacts to transit facilities.

4.2 Bicycle

Under Existing conditions, there are no Class II bicycle facilities along project frontage. However, per the City of San Marcos General Plan, there are planned Class II bicycle facilities along the segments of Grand Avenue and Linda Vista Drive fronting the Project. Based on the preliminary review of the project site plan, the Project would construct a Class I bike path at its project frontage along the segments of Linda Vista Drive and Grand Avenue.

4.3 Pedestrian

Sidewalks are proposed along the segments of Grand Avenue and Linda Vista Drive fronting the Project. Sidewalks are also proposed throughout the internal roadways providing direct access to dwelling units, office and commercial buildings, and other on-site amenities.

Based on the preliminary review of the project site plan, the following recommendation is provided:

- Reconstruct curb ramps located along project driveways, if needed, to include detectable surface warning tactiles (yellow truncated domes) and meet all ADA requirements.

Implementation of the recommendation above should enhance the walkability and safety of the overall pedestrian environment and would not result in any impacts to pedestrian facilities.

5.0 Existing Conditions

This chapter provides a qualitative description of the transportation facilities located in the project study area. A LOS analysis of the existing operations of the local transportation network facilities is also provided for study roadway segments and intersections.

5.1 Existing Transportation Network

Access to the Project from the regional transportation network will be provided via California State Route 78 (SR-78) freeway, Via Vera Cruz, Grand Avenue, Linda Vista Drive, and West San Marcos Boulevard. These facilities will either provide a direct connection to the Project, via a project driveway, or will provide a critical link between the Project and the regional transportation network. **Table 5.1** summarizes the existing physical characteristics of roadways within the study area. **Figure 5.1** displays the functional classifications for study roadway segments and **Figure 5.2** displays the intersection geometrics for study intersections under Existing conditions.

5.2 Existing Intersection Volumes

Traffic counts for study roadway segments and intersections were conducted on May 19, 2022, by Elite Traffic Dynamics, LLC. Traffic count worksheets are provided in **Appendix F**. To ensure that current travel patterns reflect traffic conditions prior to the COVID-19 restrictions, a count validation was conducted by comparing May 2022 traffic counts with historical traffic counts from November 2017 and May 2018. Historical traffic counts were obtained from the traffic study for the Bent Avenue Panera Bread project prepared by Linscott, Law & Greenspan, Engineers in December 2018. Based on the comparison it was determined that May 2022 traffic counts were greater than historical traffic counts. Thus, the May 2022 traffic counts were deemed appropriate to use for Existing conditions. **Figure 5.3A** displays existing daily traffic volumes for study roadway segments and **Figure 5.3B** displays the AM/PM peak hour turning movements for study intersections.

5.3 Existing Traffic Conditions

LOS analyses under Existing conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

5.3.1 Roadway Segment Analysis

Table 5.2 displays roadway segment and LOS analysis results for study roadway segments under Existing conditions.

As shown, all study roadway segments currently operate at acceptable LOS D or better under Existing conditions, with the exception of the following roadway segment:

- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue – LOS E.

5.3.2 Intersection Analysis

Table 5.3 displays intersection LOS and average vehicle delay results for the study intersections under Existing conditions. LOS calculation worksheets for Existing conditions are provided in **Appendix G**.

As shown, all study intersections currently operate at acceptable LOS D or better under Existing conditions, with the exception of the following intersection:

- SR-78 EB Ramps/Via Vera Cruz & Grand Avenue – LOS E during the PM peak hour.

Table 5.3 - Peak Hour Intersection LOS Results – Existing Conditions

#	Intersection	Control Type	Peak Hour	Avg. Delay (sec.)	LOS
1	South Las Posas Road & Grand Avenue	Signal	AM	31.6	C
			PM	39.1	D

Bold indicates LOS E or F.
SSSC = Side-Street Stop-Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the approaches.

6.0 Near-Term Year 2024 Conditions

This section provides an analysis of Near-Term Year 2024 Base traffic conditions both with and without the Project. The scenarios analyzed in this section include:

- Near-Term Year 2024 Base
- Near-Term Year 2024 Base with Project

6.1 Cumulative Project Traffic

The following ten (10) projects were identified by City of San Marcos staff as cumulative projects, since they are anticipated to contribute traffic within the project study area by the Project's opening year:

1. Pacific Commercial – This project is located at the northeast corner of the Grand Avenue and Pacific Street intersection. This project proposes to construct a 122-room hotel.
2. San Marcos Highlands – This project is located at the north end of Las Posas Road. This project proposes to construct 187 single-family residential dwelling units as well as a 21.68-acre passive park.
3. El Dorado II Specific Plan – This project is located at the southwest corner of the Richmar Avenue and Pleasant Way intersection. This project proposes to construct 72 multi-family dwelling units as well as 2,000 square feet of specialty retail.
4. Villa Serena – This project is located the northwest corner of the Richmar Avenue and Marcos Street intersection. This project proposes to construct 12 multi-family dwelling units.
5. Mariposa (Phase 1) – This project is located at the northeast corner of the Richmar Avenue and Los Olivos Drive intersection. This project proposes to develop 60 multi-family dwelling units.
6. Murai Subdivision – This project is located at the north end of Las Posas Road. This project proposes to construct 89 single-family residential dwelling units.
7. Pacifica San Marcos – This project is located at the southeast corner of the Rancho Santa Fe Road and 9th Street intersection. This project proposes to construct 31 multi-family dwelling units as well as 4,375 square feet of commercial use.
8. Karl Strauss Brewery – This project is located at the southeast corner of the North Las Posas Road and Armorlite Drive intersection. This project proposes to construct 10,528 square feet of uses that include a tasting room, commercial kitchen, and entertainment room.
9. Gran Vista Multi-Family – This project is located 250 feet northwest of the West Mission Road & North Las Posas Road intersection. This project proposes to construct 120 multi-family dwelling units.
10. Hughes Circuits – This project is located 650 feet south of the South Pacific Street & Linda Vista Drive intersection. This project proposes to construct 8,000 SF of office, 44,410 SF of warehouse, and 15,000 SF of manufacturing.

The traffic generated from the projects listed above was included in the Near-Term Year 2024 Base scenario. **Figure 6.1** displays the location of the cumulative projects identified above.

6.2 Cumulative Project Trip Generation

Cumulative project traffic was assigned to the project study area as identified within their respective traffic studies provided by the City of San Marcos. Cumulative project traffic for cumulative projects without completed traffic studies were estimated and assigned to the project study area utilizing the same methodology used for the Project, described in Chapter 3.0, consistent with the City's TIAG. Based on the obtained and assumed trip distribution patterns, only a few cumulative projects carry trips through the project study area. These trips primarily travel along S Las Posas Road, Grand Avenue, and W San Marcos Boulevard. **Table 6.1** displays the projected trip generation for the cumulative projects. **Figure 6.2A** displays the daily cumulative project trip assignment for study roadway segments and **Figure 6.2B** displays the AM/PM peak hour cumulative project trip assignment for study intersections. Relevant excerpts from the source of information regarding the cumulative project are provided in **Appendix H**.

Table 6.1 - Cumulative Project Trip Generation

Cumulative Project	Land Use	Daily Trips	AM Peak Hour (In/Out)	AM Peak Hour (In/Out)
Pacific Commercial	Hotel	854	69 (28-in/41-out)	77 (46-in/31-out)
San Marcos Highlands[1]	Single Family Residential/Passive Park	1,998	165 (52-in/113-out)	199 (137-in/62-out)
El Dorado II Specific Plan	Multi-Family Residential/Specialty Retail	512	38 (9-in/29-out)	47 (31-in/16-out)
Villa Serena	Multi-Family Residential	96	8 (2-in/6-out)	10 (7-in/3-out)
Mariposa (Phase 1)	Multi-Family Residential	360	29 (6-in/23-out)	33 (23-in/10-out)
Murai Subdivision[2]	Single Family Residential	890	71 (21-in/50-out)	89 (62-in/27-out)
Pacifica San Marcos	Multi-Family Residential/Specialty Retail	361	21 (7-in/14-out)	33 (20-in/13-out)

Figure 6.2B
Cumulative Project Trip Assignment

As shown, the cumulative projects are anticipated to generate 8,064 daily trips, including 651 trips during the AM peak hour and 762 trips during the PM peak hour, that will be dispersed throughout the San Marcos community and beyond the project study area.

6.3 Near-Term Year 2024 Base Roadway Network and Traffic Volumes

Roadway segment functional classifications and intersection geometrics under Near-Term Year 2024 Base conditions were assumed to be identical to Existing conditions (Figure 5.1 and Figure 5.2). The Near-Term Year 2024 Base scenario traffic volumes were derived by adding the additional trips generated by the cumulative projects listed in Section 6.1 (Figure 6.2A and Figure 6.2B) to the existing traffic volumes (Figure 5.3A and Figure 5.3B). **Figure 6.3A** displays projected daily traffic volumes for study roadway segments and **Figure 6.3B** displays the projected AM/PM peak hour turning movements for study intersections under Near-Term Year 2024 Base conditions.

6.4 Near-Term Year 2024 Base Traffic Conditions

LOS analyses under Near-Term Year 2024 Base conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

6.4.1 Roadway Segment Analysis

Table 6.2 displays roadway segment LOS analysis results for study roadway segments under Near-Term Year 2024 Base conditions.

As shown, all study roadway segments are projected to operate at acceptable LOS D or better under Near-Term Year 2024 Base conditions, with the exception of the following roadway segment:

- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue – LOS E.

6.4.2 Intersection Analysis

Table 6.3 displays intersection LOS and average vehicle delay results for the study intersections under Near-Term Year 2024 Base conditions. LOS calculation worksheets for Near-Term Year 2024 Base conditions are provided in **Appendix I**.

As shown, all study intersections are projected to operate at acceptable LOS D or better under Near-Term Year 2024 Base conditions, with the exception of the following intersection:

- SR-78 EB Ramps/Via Vera Cruz & Grand Avenue – LOS E during the AM peak hour and LOS F during the PM peak hour.

6.5 Near-Term Year 2024 Base with Project Roadway Network and Traffic Volumes

Roadway segment functional classifications and intersection geometrics under Near-Term Year 2024 Base with Project conditions were assumed to be identical to Near-Term Year 2024 Base conditions.

Traffic volumes for Near-Term Year 2024 Base with Project conditions were derived by combining the project trips (Figure 3.5A and Figure 3.5B) to the Near-Term Year 2024 Base traffic volumes (Figure 6.3A and Figure 6.3B). **Figure 6.4A** displays the projected daily traffic volumes for study roadway segments and **Figure 6.4B** displays the projected AM/PM peak hour turning movements for study intersections under Near-Term Year 2024 Base with Project conditions.

6.6 Near-Term Year 2024 Base with Project Traffic Conditions

LOS analyses under Near-Term Year 2024 Base with Project conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

6.6.1 Roadway Segment Analysis

Table 6.4 displays roadway segment LOS analysis results for study roadway segments under Near-Term Year 2024 Base with Project conditions.

As shown, all study roadway segments are projected to operate at acceptable LOS D or better under Near-Term Year 2024 Base with Project conditions, with the exception of the following roadway segment:

- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue – The roadway segment is projected to operate at LOS E under Near-Term Year 2024 Base with Project conditions. The roadway segment is already operating at substandard LOS under Near-Term Year 2024 Base conditions and the Project does not add any daily traffic along this segment.

This roadway segment is projected to operate at unacceptable LOS prior to the implementation of the Project. Project traffic would not increase the V/C ratio for this roadway segment by more than 0.02. Therefore, no study roadway segments are anticipated to degrade in LOS to unacceptable levels with implementation of the Project and no improvements will be required.

6.6.2 Intersection Analysis

Table 6.5 displays intersection LOS and average vehicle delay results for study area intersections under Near-Term Year 2024 Base with Project Conditions. LOS calculation worksheets for Near-Term Year 2024 Base with Project conditions are provided in **Appendix J**.

As shown, all study intersections are projected to operate at acceptable LOS D or better under Near-Term Year 2024 Base with Project conditions, with the exception of the following intersection:

- SR-78 EB Ramps/Via Vera Cruz & Grand Avenue – LOS E during the AM peak hour and LOS F during the PM peak hour. The intersection is already operating at substandard LOS under Near-Term Year 2024 Base conditions and the Project adds 0.7 seconds of delay during the AM peak hour and 0.1 seconds of delay during the PM peak hour.

This intersection is projected to operate at unacceptable LOS prior to the implementation of the Project. Project traffic would not increase the overall average delay at this intersection by more than 2.0 seconds. Therefore, no study intersections are anticipated to degrade in LOS to unacceptable levels with implementation of the Project and no improvements will be required.

Table 6.5 - Peak Hour Intersection LOS Results – Near-Term Year 2024 Base with Project Conditions

7.0 Horizon Year 2050 Conditions

This section provides an analysis of Horizon Year 2050 traffic conditions both with and without the Project. The scenarios analyzed in this section include:

- Horizon Year 2050
- Horizon Year 2050 with Project

7.1 Horizon Year 2050 Roadway Network and Traffic Volumes

Roadway segment functional classifications and intersection geometrics under Horizon Year 2050 Conditions were assumed to be identical to Existing conditions, as previously shown in Figure 5.1 and Figure 5.2.

Horizon Year 2050 ADT forecasts were obtained from the SANDAG Series 14 ABM2+/2021 RP forecast year 2050 model (scenario ID#459). Any study roadway segments with Near-Term Year 2024 Base ADT greater than forecasted TFIC ADT were adjusted using growth rates observed between existing and forecasted TFIC ADT for adjacent segments.

Intersection turning movement volumes were developed utilizing the projected study roadway segment volumes and the National Cooperative Highway Research Program (NCHRP) Report 255 methodology. This methodology describes the use of growth factors by comparing existing and estimated/forecasted daily roadway segment volumes. These factors are then applied to existing peak hour intersection approach and departure volumes to derive future intersection turning movement traffic volumes. Manual adjustments were also made to ensure that traffic volumes among adjacent intersections were reasonably balanced. Details on counts collected from TFIC and forecasted intersection turning movement volume calculations are provided in **Appendix K**.

Figure 7.1A displays projected daily traffic volumes for study roadway segments and **Figure 7.1B** displays the AM/PM peak hour turning movements for study intersections under Horizon Year 2050 conditions.

7.2 Horizon Year 2050 Traffic Conditions

LOS analyses under Horizon Year 2050 Conditions were conducted using the methodologies described in Chapter 2. Study roadway segment and intersection LOS analysis results are discussed below.

7.2.1 Roadway Segment Analysis

Table 7.1 displays roadway segment LOS analysis results for study roadway segments under Horizon Year 2050 conditions.

As shown, all study roadway segments are projected to operate at acceptable LOS D or better under Horizon Year 2050 conditions, with the exception of the following roadway segment:

- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue – LOS E.

7.2.2 Intersection Analysis

Table 7.2 displays intersection LOS and average vehicle delay results for study area intersections under Horizon Year 2050 Conditions. LOS calculation worksheets for Horizon Year 2050 Conditions are provided in **Appendix L**.

As shown, all study intersections are projected to operate at acceptable LOS D or better under Horizon Year 2050 Conditions, with the exception of the following intersection:

- SR-78 EB Ramps/Via Vera Cruz & Grand Avenue – LOS E during the AM peak hour and LOS F during the PM peak hour.
- Grand Avenue & West San Marcos Boulevard – LOS E during the PM peak hour.

Table 7.1 - Roadway Segment LOS Results – Horizon Year 2050 Conditions

Roadway	Segment	Functional Classification	Roadway Capacity	Daily Volume	V/C	LOS
Via Vera Cruz	Grand Avenue to Linda Vista Drive	4-Lane Secondary Arterial/Collector	30,000	12,600	0.420	B

7.3 Horizon Year 2050 with Project Roadway Network and Traffic Volumes

Roadway segment functional classifications and intersection geometrics under the Horizon Year 2050 with Project Conditions were assumed to be identical to the Horizon Year 2050 conditions, as previously discussed in Chapter 6.1.

Traffic volumes for the Horizon Year 2050 with Project Conditions were derived by combining the project trips (as previously shown in Figure 3.5A and Figure 3.5B) to the Horizon Year 2050 traffic volumes (as previously shown in Figure 7.1A and Figure 7.1B). **Figure 7.2A** displays projected daily traffic volumes for study roadway segments and **Figure 7.2B** displays projected AM/PM peak hour turning movements for study intersections under Horizon Year 2050 with Project conditions.

7.4 Horizon Year 2050 with Project Traffic Conditions

LOS analyses under Horizon Year 2050 with Project conditions were conducted using the methodologies described in Chapter 2. Study roadway segment and intersection LOS analysis results are discussed below.

7.4.1 Roadway Segment Analysis

Table 7.3 displays roadway segment LOS analysis results for study roadway segments under Horizon Year 2050 with Project conditions.

As shown, all study roadway segments are projected to operate at acceptable LOS D or better under Horizon Year 2050 with Project conditions, with the exception of the following roadway segment:

- West San Marcos Boulevard, between Via Vera Cruz and South Bent Avenue – The roadway segment is projected to operate at LOS E under Horizon Year 2050 with Project conditions. The roadway segment is already operating at substandard LOS under Horizon Year 2050 conditions and the Project does not add any daily traffic along this segment.

This roadway segment is projected to operate at unacceptable LOS prior to the implementation of the Project. Project traffic would not increase the V/C ratio for this roadway segment by more than 0.02. Therefore, no study roadway segments are anticipated to degrade in LOS to unacceptable levels with implementation of the Project and no improvements will be required.

7.4.2 Intersection Analysis

Table 7.4 displays intersection LOS and average vehicle delay results for the key study area intersections under Horizon Year 2050 with Project conditions. LOS calculation worksheets for Horizon Year 2050 with Project Conditions are provided in **Appendix M**.

As shown, all study intersections are projected to operate at acceptable LOS D or better under Horizon Year 2050 with Project conditions, with the exception of the following intersection:

- SR-78 EB Ramps/Via Vera Cruz & Grand Avenue – LOS E during the AM peak hour and LOS F during the PM peak hour. The intersection is already operating at substandard LOS under Horizon Year 2050 without Project conditions and the Project adds 1.1 seconds of delay during the AM peak hour and 0.8 seconds of delay during the PM peak hour.
- Linda Vista Drive & Grand Avenue – LOS F during the PM peak hour. The Project adds 32.9 seconds of delay and causes the LOS at this intersection to degrade from LOS E to LOS F during the PM peak hour.
- Grand Avenue & West San Marcos Boulevard – LOS E during the PM peak hour. The Project adds 1.1 seconds of delay to this intersection already operating at substandard LOS E under Horizon Year 2050 without Project conditions.

Implementation of the Project would cause an inconsistency with Policy M-1.4 at the intersection of Linda Vista Drive & Grand Avenue since it would increase the delay at an intersection already operating at LOS E or F by more than 2.0 seconds. In contrast, the intersections of SR-78 EB Ramps/Via Vera Cruz & Grand Avenue and Grand Avenue & West San Marcos Boulevard, which operate at LOS E or F during the PM peak hour, would experience an increase in delay less than 2.0 seconds and thus would not result in substantial effects to traffic operations.

Table 7.4 - Peak Hour Intersection LOS Results – Horizon Year 2050 with Project Conditions

Notes:
Bold indicates LOS E or F.
SSSC = Side-Street Stop-Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the approaches.
N/A = Not Applicable.

8.0 LOS Deficiencies and Improvement Requirements

This chapter provides improvements requirements needed to increase LOS to acceptable or pre-project conditions for any roadway segments or intersections found to operate unacceptably with implementation of the Project.

8.1 Determination of the Need for Off-Site Improvements to Accommodate Project Traffic – Near-Term Year 2024 with Project Conditions

This section identifies required improvements for any study roadway segments or intersections that are associated with the Project under Near-Term Year 2024 Base with Project conditions.

Roadway Segment Analysis

No improvements required.

Intersection Analysis

No improvements required.

8.2 Determination of the Need for Off-Site Improvements to Accommodate Project Traffic – Horizon Year 2050 with Project Conditions

This section identifies required improvements for any study roadway segments or intersections that are associated with the Project under Horizon Year 2050 with Project conditions.

Roadway Segment Analysis

No improvements required.

Intersection Analysis

Because implementation of the Project would further deteriorate traffic operations and increase the delay at an intersection already operating at LOS E or F by more than 2.0 seconds, the Project would cause an inconsistency with Policy M-1.4 at the following intersection:

- Linda Vista Drive & Grand Avenue – To improve operations at this intersection, the Project shall provide a fair share contribution to install a traffic signal. It should be noted the intersection already operates at substandard LOS E without the Project, indicating the Project does not directly cause the inconsistency. Upon implementation of this improvement, the intersection would operate at acceptable LOS and better than pre-project conditions.

The total number of vehicle trips passing through this intersection during the PM peak hour is 1,811, of which 101 (or 5.6% of the total volume) are vehicle trips generated by the Project. Thus, the Project would be responsible for 5.6% of the cost to implement this improvement.

Table 8.1 displays intersection LOS and average vehicle delay results under Horizon Year 2050 with Project with Mitigation conditions. LOS calculation worksheets and signal timing inputs are provided in **Appendix N**.

Table 8.1 - Peak Hour Intersection LOS Results – Horizon Year 2050 with Project with Mitigation Conditions

#	Intersection	Peak Hour	Control Type	Horizon Year 2050 with Project and Mitigation		Control Type	Horizon Year 2050 without Project and Mitigation		Δ Delay
				Avg. Delay (sec.)	LOS		Avg. Delay (sec.)	LOS	
4	Linda Vista Drive & Grand Avenue	AM	Signal	5.8	A	SSSC	11.2	B	-5.6
		PM		12.8	B		37.3	**E**	-24.5

Source: CR Associates (2022)

As shown, the recommended improvement would decrease the delay by 5.6 seconds during the AM peak hour and 24.5 seconds during the PM peak hour. Thus, the intersection would operate at acceptable LOS and better than pre-project conditions.

Traffic Signal Warrant

A traffic signal warrant analysis was conducted to determine if a signal would be warranted at the intersection of Linda Vista Drive & Grand Avenue. The ADT-based signal warrant (Figure 4C-103) of the California Manual on Uniform Traffic Control devices (CA MUTCD) was selected for this analysis. Based on the projected Horizon Year 2050 traffic volumes, the intersection of Linda Vista Drive & Grand Avenue would meet the requirements to satisfy the traffic signal warrant. The traffic signal warrant is provided in **Appendix O**.

9.0 Site Access and Circulation

This chapter addresses access to the project site and discusses the functionality of the project's internal circulation.

9.1 Driveway Access

Project site access will be provided via the following four new project driveways:

- Project Driveway #1 – This new, full-access driveway will be located along the south side of Grand Avenue approximately 900 feet northwest of Linda Vista Drive. This driveway will be a new side-street stop-controlled intersection with Grand Avenue as the uncontrolled approach and the project driveway as the stop-controlled approach. This driveway will serve as the main entry point for residents and is projected to operate at LOS B or better under all study scenarios.
- Project Driveway #2 – This new, full-access driveway will be located along the south side of Grand Avenue approximately 300 feet northwest of Linda Vista Drive. This driveway will be a new side-street stop-controlled intersection with Grand Avenue as the uncontrolled approach and the project driveway as the stop-controlled approach. This driveway will serve as one of three entry points for the retail and office components of the Project and is projected to operate at LOS B or better under all study scenarios.
- Project Driveway #3 – This new, full-access driveway will be located along the north side of Linda Vista Drive approximately 700 feet southwest of Grand Avenue. This driveway will be a new side-street stop-controlled intersection with Linda Vista Drive as the uncontrolled approach and the project driveway as the stop-controlled approach. This driveway will serve as one of three entry points for the retail and office components of the Project and is projected to operate at LOS B or better under all study scenarios.
- Project Driveway #4 – This new, full-access driveway will be located along the north side of Linda Vista Drive approximately 250 feet southwest of Grand Avenue. This driveway will be a new side-street stop-controlled intersection with Linda Vista Drive as the uncontrolled approach and the project driveway as the stop-controlled approach. This driveway will serve as one of three entry points for the retail and office components of the Project and is projected to operate at LOS B or better under all study scenarios.

A 95th percentile queue analysis was conducted to determine the extent of queueing at the project driveway intersections under Near-Term Year 2024 Base with Project conditions and Horizon Year 2050 with Project conditions. The queue analysis was conducted for the proposed project driveways and the offsite turning movements along Grand Avenue and Linda Vista Drive. **Table 9.1** displays the 95th percentile queue analysis results for project driveway intersections under both analysis scenarios. Intersection queueing reports are provided in **Appendix P.** A sight distance exhibit displaying line-of-sight at each of the proposed driveways is included in **Appendix Q.**

As shown, the 95th percentile queues at project driveway intersections are projected to fit within the available storage and would not impede circulation of traffic at the driveways or adjacent roadway system.

Table 9.1 - Project Driveway Queue Analysis Results

#	Intersection	Control Type	Turning Movement	Peak Hour	Available Storage[1] (ft)	Near-Term Year 2024 with Project Conditions		Horizon Year 2050 with Project Conditions	
						95th Percentile Queue (ft)	Excess Queue (ft)	95th Percentile Queue (ft)	Excess Queue (ft)

Source: CR Associates (2022)

Notes:
[1] Measured from project driveway to upstream intersection.
SSSC = Side-Street Stop-Controlled.
EBR = Eastbound Right, EBL = Eastbound Left
WBR = Westbound Right, WBL = Westbound Left

After further review of the project site plan, the following recommendations are provided:

- Driveways are recommended to be constructed in accordance with City standards
- Install stop signs (R1-1) at project driveways

9.2 Internal Circulation

Internal roadways on the project site allow for two-way flow of vehicle traffic. For the residential component, dead-end aisles between buildings provide direct access to garages for each dwelling unit. Guest parking is also provided at the project site.

Based upon review of the project site plan, the following recommendations are provided:

- Appropriate signage to warn drivers of pedestrian foot traffic.

Appendix B - Scoping Memorandum

TO:	Jonathan Quezada, Assistant Engineer; City of San Marcos Chris Garcia, Associate Planner; City of San Marcos
FROM:	Jonathan Sanchez, PE, TE, PTOE; CR Associates
DATE:	June 10, 2022
RE:	San Marcos Artist's Village Project – Memorandum of Approach (MOA)

This memorandum serves to document the assumptions that will be used to conduct both a Transportation Impact Analysis (TIA) and a Local Transportation Analysis (LTA), for the San Marcos Artist's Village project (the "Proposed Project"). The vehicle miles traveled (VMT) analysis for the TIS and level of service (LOS) analysis for the LTA will be performed in accordance with the *City of San Marcos Transportation Impact Analysis Guidelines*, *November 2020* (TIA Guidelines).

Project Description

The Proposed Project proposes to construct 102 multi-family dwelling units, 15,086 square feet of office, and 49,266 square feet (s.f.) of specialty retail at the northwest corner of Linda Vista Road and Grand Avenue, in the City of San Marcos. The Project will provide the following four new side-street stopped controlled driveways:

- *Project Driveway #1* – This new driveway will be located approximately 900 feet northwest of Linda Vista Drive
- *Project Driveway #2* – This driveway will be located approximately 300 feet northwest of Linda Vista Drive
- *Project Driveway #3* – This driveway will be located approximately 700 feet southwest of Grand Avenue
- *Project Driveway #4* – This driveway will be located approximately 250 feet southwest of Grand Avenue

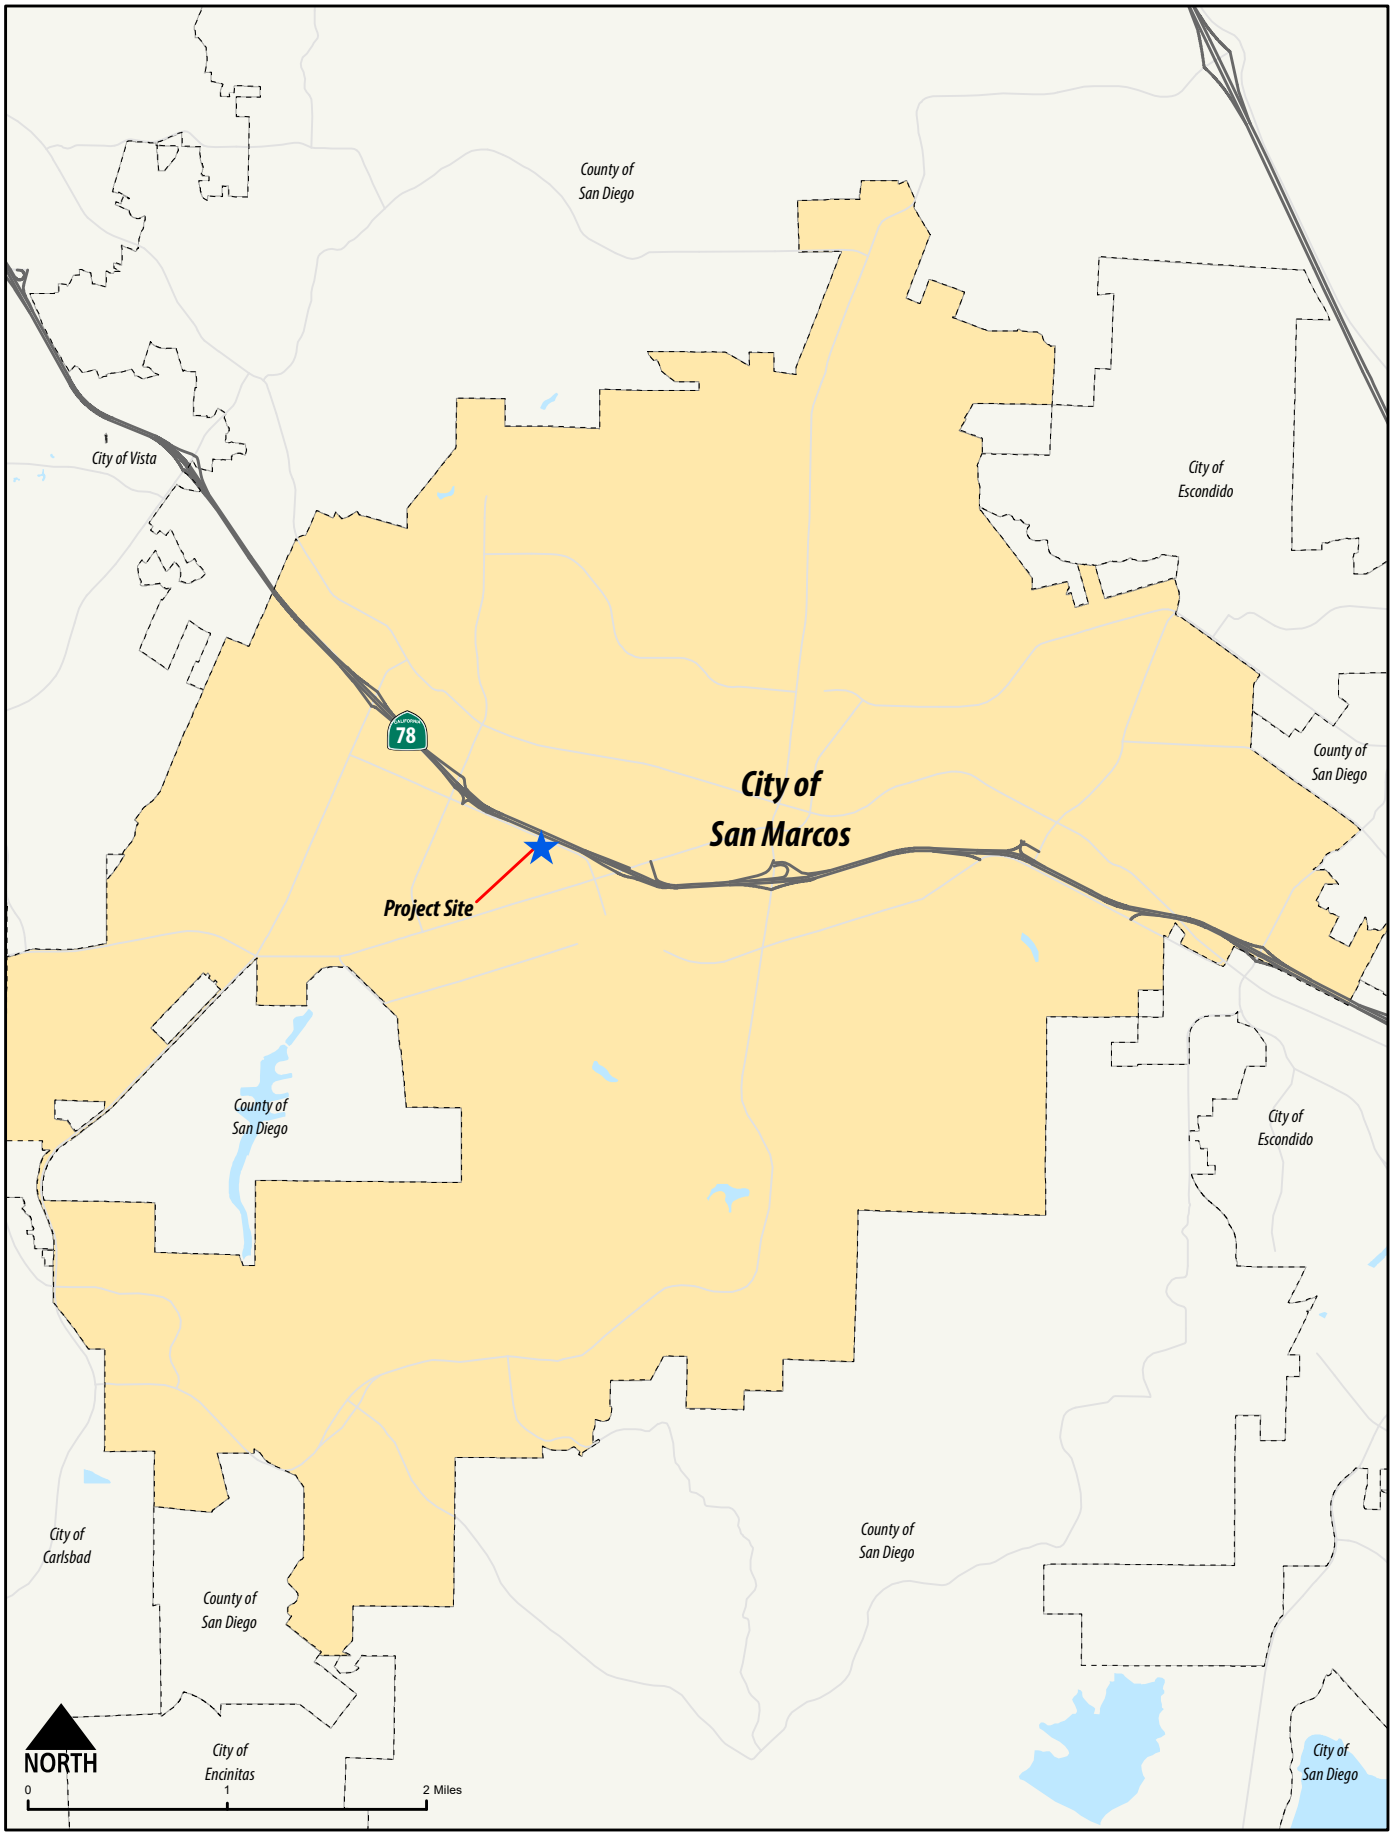
Figure 1 displays the Project's regional location. **Figure 2** displays the Project's current site plan.

VMT Analysis

According to the *City of San Marcos TIA Guidelines*, a VMT analysis is required if the following criteria for screening projects are not met: (1) small project screening, (2) affordable housing screening, (3) local-serving retail or public facility screening, (3) High Quality Transit Area (HQTA) screening, (4) low VMT area screening.

Since the Proposed Project is composed of a mix of land uses, each component must be evaluated independently and apply the significant threshold for each land use type, incorporating internalization reductions. Therefore, the VMT analysis for the project would be as follows:

- Residential Component – Per Section 2.1.2.5, the Proposed Project is located in an efficient VMT/Capita area. Therefore, the residential component is deemed to have a less-than-significant impact and no further VMT analysis is required.
- Office Component – Per Section 2.1.2.5, the Proposed Project is NOT located in an efficient VMT/Employee area. Therefore, a detailed VMT analysis is required.



San Marcos Artist's Village
Memorandum of Approach

C+R

Figure 1
Project Regional Location

NORTH

Figure 2
Project Site Plan

- Retail Component – Per Section 2.1.2.3, the Proposed Project is less than 50,000 square feet and considered "local-serving retail". Therefore, the retail component is deemed to have a less-than-significant impact and no further VMT analysis is required.

As described above, the VMT/Employee associated with the office component of the project does not meet any of the screening criteria and it requires a detailed VMT analysis to be conducted. The VMT analysis will be calculated using the SANDAG Online VMT Tool, as the office component of the project would generate less than 2,400 daily trips. The TIA will include discussions of VMT results, identify impacts, and make recommendations, as needed.

Local Transportation Analysis

The purpose of the LTA is to evaluate how the Project will affect the surrounding local transportation network, as well as to determine if additional transportation improvements will be needed. The LTA analysis will evaluate the following five (5) scenarios:

1. Existing Conditions (2022) - This scenario is utilized to establish the existing baseline of traffic operations within the study area.

2. Near-Term 2024 Base Conditions – This scenario establishes a near-term baseline against which traffic generated by the Proposed Project can be compared to at the project opening day, anticipated to be Year 2024. Ambient growth rates or addition of cumulative projects' traffic will be used to develop the Opening Year 2024 Base Conditions.

3. Near-Term 2024 Base with Project Conditions – This scenario represents the Opening Year traffic conditions with the addition of traffic generated by the Proposed Project.

4. Horizon Year 2050 Base Conditions – This scenario represents projected long-range baseline traffic conditions for Year 2050.

5. Horizon Year 2050 Base with Project Conditions – This scenario represents Year 2050 base traffic conditions with the addition of traffic generated by the Proposed Project.

Trip Generation

Project trip generation estimates were derived utilizing *SANDAG's (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (SANDAG, April 2002). **Table 1** displays daily, as well as AM and PM peak hour project trip generation.

As shown in the table, the Project is anticipated to generate a total net of 2,292 daily trips, including 117 (61-in / 54-out) trips during the AM peak hour and 218 trips (110-in / 108-out) during the PM peak hour.

Table 1 Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour				PM Peak Hour

Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002

Notes:
DU = Dwelling Unit.
KSF = Thousand Square Feet.
[1]Internal Capture reduction was calculated using ITE's trip reduction calculator, which is based on the NCHRP Report 664 *Enhancing Internal Trip Capture Estimation for Mixed-Use Developments. See* **Attachment A** for more details.

Project Trip Distribution

The trip distribution for the Project was developed based on the geographical location of the Project, as well as the characteristics of the surrounding land uses. The Project's trip distribution patterns are identified in **Figure 3.**

Project Trip Assignment

Based upon the Project's trip generation (Table 1) and distribution (Figure 3), daily project trips and AM/PM peak hour were assigned to the adjacent roadway network. **Figures 4** & **5** display daily trip assignment for the residential and retail components, respectively, while **Figure 6** displays the AM/PM peak hour trip assignment.

Project Study Area

The following roadway segments and intersections will be included in the project study area:

Roadway Segments

- Via Vera Cruz, between Grand Avenue and Linda Vista Drive
- Via Vera Cruz, between Linda Vista Drive and West San Marcos Blvd
- Grand Avenue, between Las Posas Road and Via Vera Cruz
- Grand Avenue, between Via Vera Cruz and Linda Vista Drive
- Grand Avenue, between Linda Vista Drive and West San Marcos Blvd
- Linda Vista Drive, between Via Vera Cruz and Grand Avenue
- West San Marcos Blvd, between Via Vera Cruz and San Marcos Blvd

Intersections

1. Las Posas Road & Grand Avenue
2. Via Vera Cruz & Grand Avenue
3. Via Vera Cruz & Linda Vista Drive
4. Grand Avenue & Linda Vista Drive
5. South Bent Avenue & Grand Avenue
6. Via Vera Cruz & West San Marcos Blvd
7. Grand Avenue & West San Marcos Blvd
8. Project Driveway #1 & Grand Avenue
9. Project Driveway #2 & Grand Avenue
10. Project Driveway #3 & Linda Vista Drive
11. Project Driveway #4 & Linda Vista Drive

The LTA will include a section regarding operational characteristics of the project driveways. **Figure 7** displays the project study area.

Traffic Volume Development

Traffic counts will be conducted along the study roadway segments and intersections listed above. To ensure that current travel patterns reflect traffic conditions prior to the COVID-19 restrictions, a count validation will be conducted. Historical counts will be compared against the new traffic counts. If current travel patterns are observed to be similar (less than 5% variations) to pre-COVID-19 conditions, the new traffic counts will be deemed appropriate to utilize for this TIA. Otherwise, these counts will be adjusted to account for reduced traffic conditions.

Appendix D - Trip Distribution Technical Memorandum

TO: Jonathan Quezada, Assistant Engineer; City of San Marcos
Chris Garcia, Associate Planner; City of San Marcos
Joe Shultz, PE; Kimley-Horn and Associates, Inc.

FROM: Jonathan Sanchez, PE, TE, PTOE; CR Associates

DATE: February 3, 2023

RE: San Marcos Artist's Village Project – Response to Comment #15 (2nd Review of TIA)

Trip Distribution

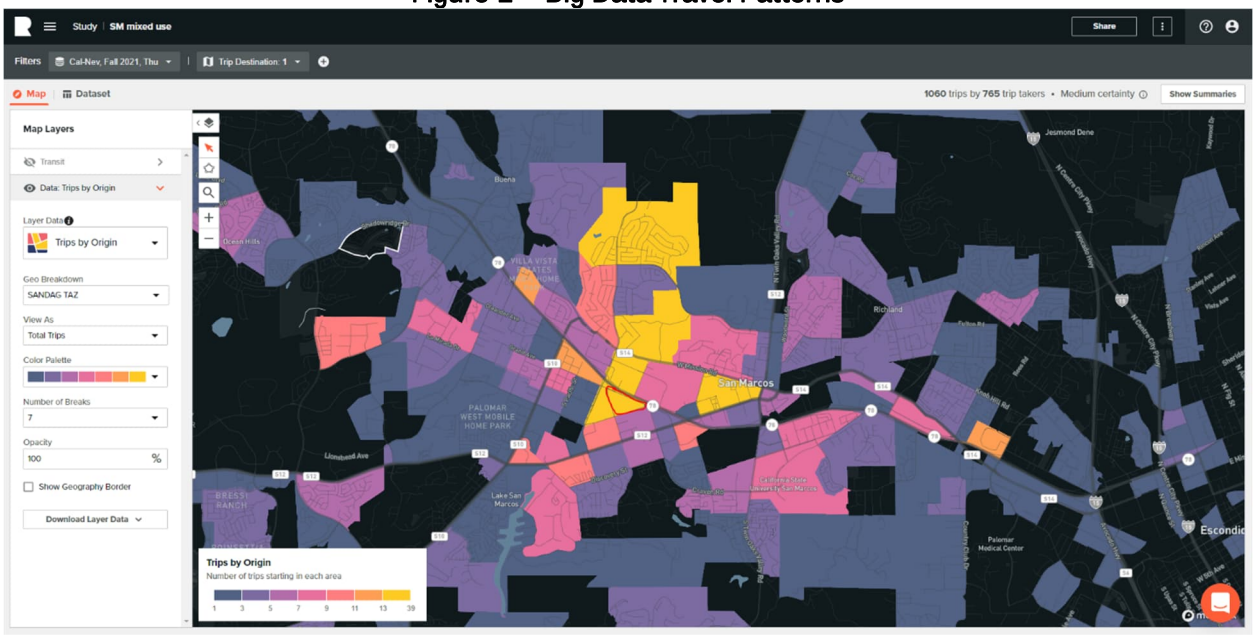
The project trip distribution was manually developed based on the following:

- Existing Travel Patterns based on big data (Replica[1]) and Census data.
- Geographical location of Project, surrounding land uses and knowledge of the City's traffic patterns.

The Project land uses consist of two components, approximately 70% retail/ employment and 30% residential land uses. The retail/ employment component of the Project are likely to attract residents from nearby developments (University District, Santa Fe Hills, etc.), whereas the residential component is likely to end up at professional jobs within the area (CSU San Marcos, Hughes Circuits, etc.).

Trip distribution for the Project was developed based on a Select Zone analysis, using data from Replica. **Figure 1** displays the current origin and destination pattern of the Traffic Analysis Zone (TAZ) where the Project is located.

Figure 1 – Big Data Travel Patterns



[1] Replica is a data provider that produces large-scale models to represent mobility throughout the United States. For more information, please visit the following: https://replicahq.com/

As seen in Figure 1 above, the yellow areas represent the TAZs where the highest concentration of trips originate and end up in the TAZ where the project is located. These TAZs are mainly composed of residential areas, which is consistent with the areas the project would attract trips from being that approximately 70 percent of the proposed project has commercial/retail and office land uses.

In order to understand the trip patterns associated with the remaining residential component of the Project; an analysis was conducted using data from US Census (2019). **Figure 2** below displays where residents that live within the selected area (orange area) work. As seen, the highest concentrations of employment are within San Marcos, Carlsbad, and southern Vista. **Figure 3** displays the same information but also shows the concentration of employment in the County of San Diego.

Figure 2 – Where Residents Work within Selected Area

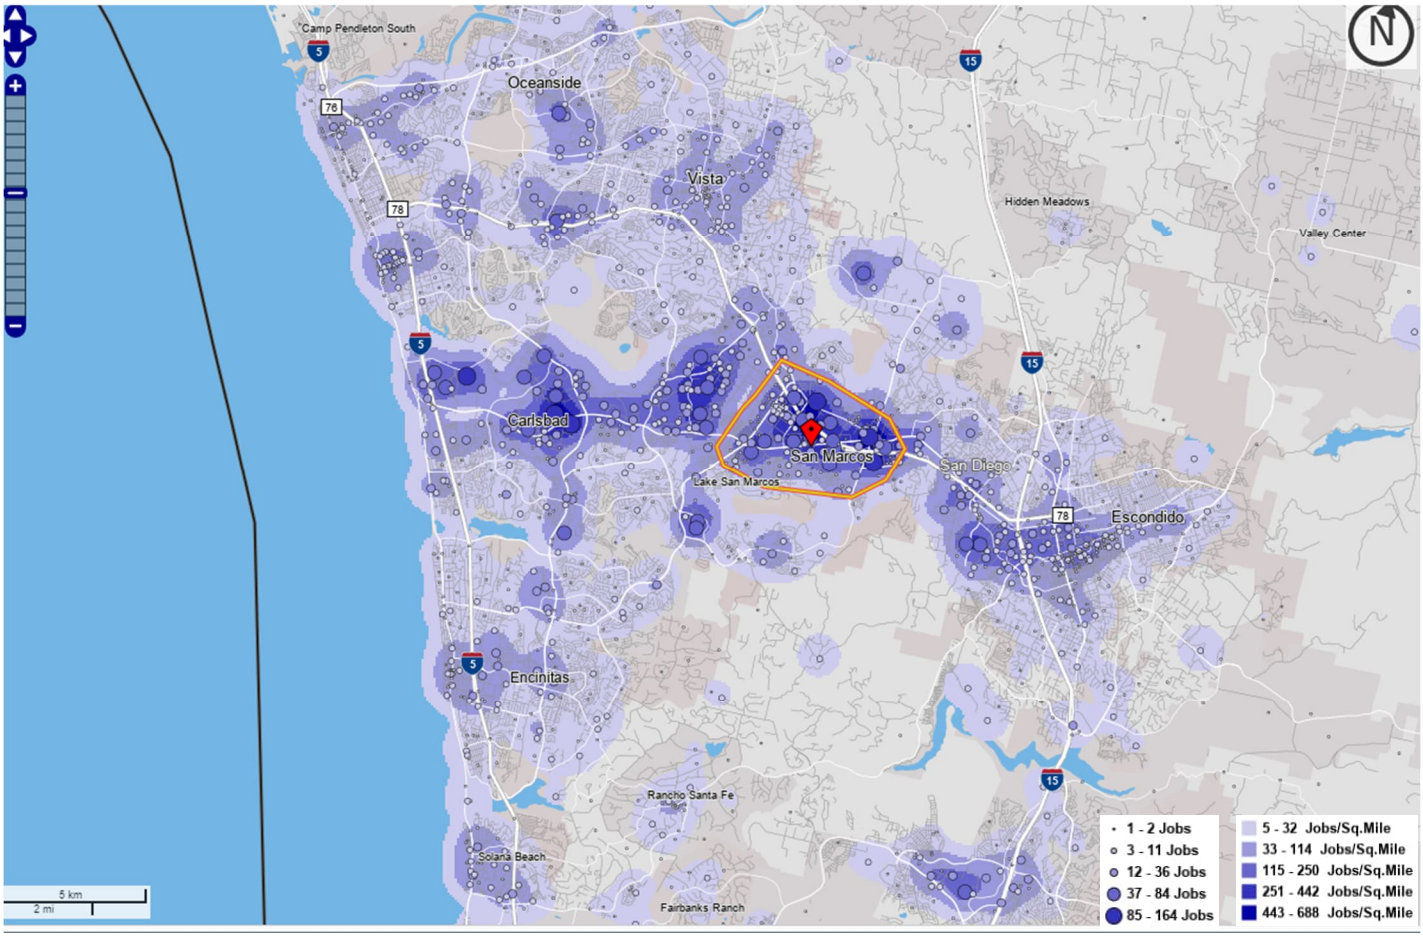


Figure 3 - Where Residents Work within Selected Area

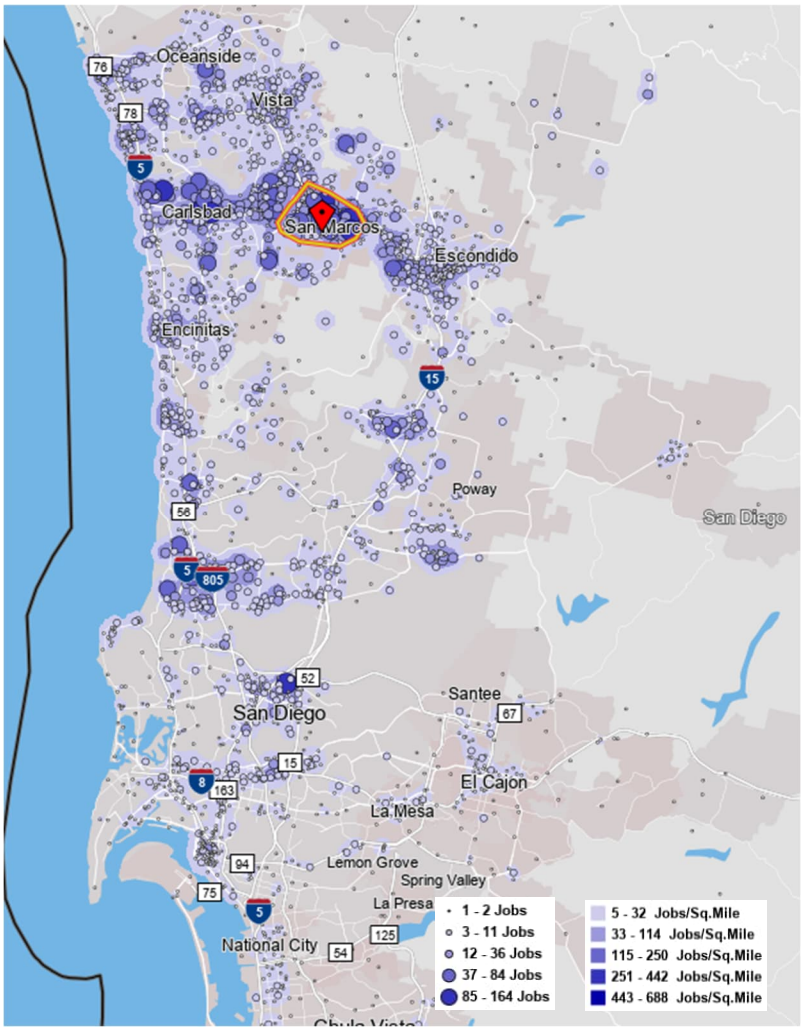

As seen in these two figures, the majority of the trips are anticipated to stay within San Marcos or travel to Carlsbad and southern Vista using San Marcos' transportation network. This can further be demonstrated by requesting directions from google maps, which is a widely used navigation platform. **Figures 4** and **5** display google maps directions to the areas with higher employment density.

Figure 4 – Preferred Routes to Carlsbad

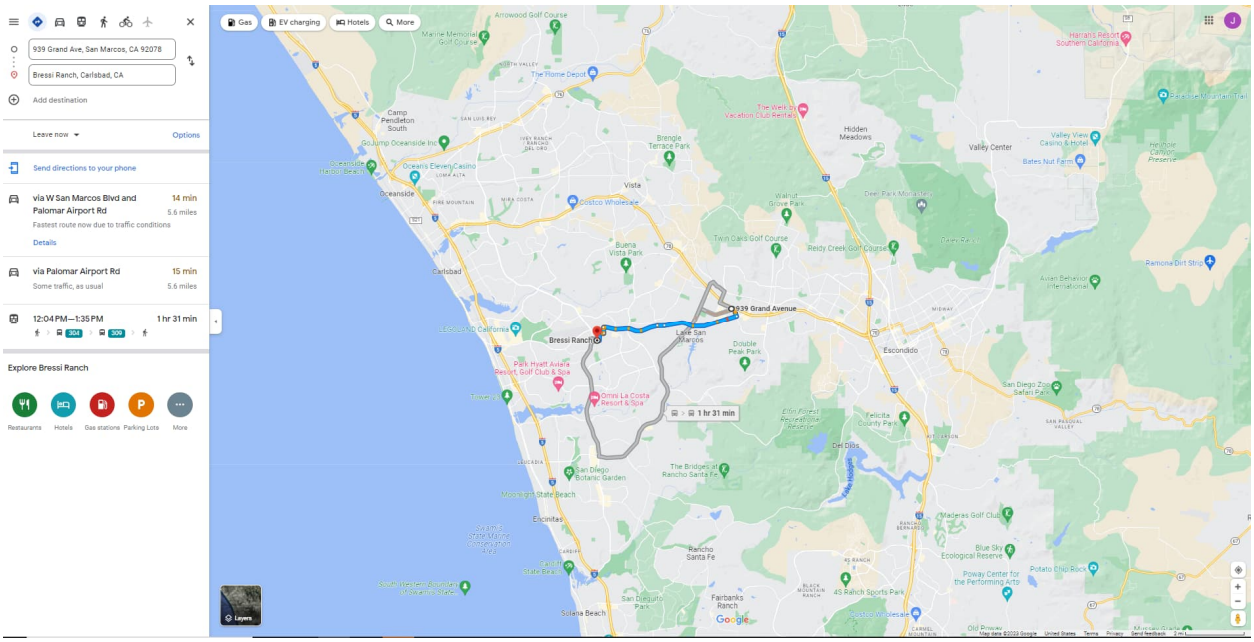

Figure 5 – Preferred Route to Southern Vista

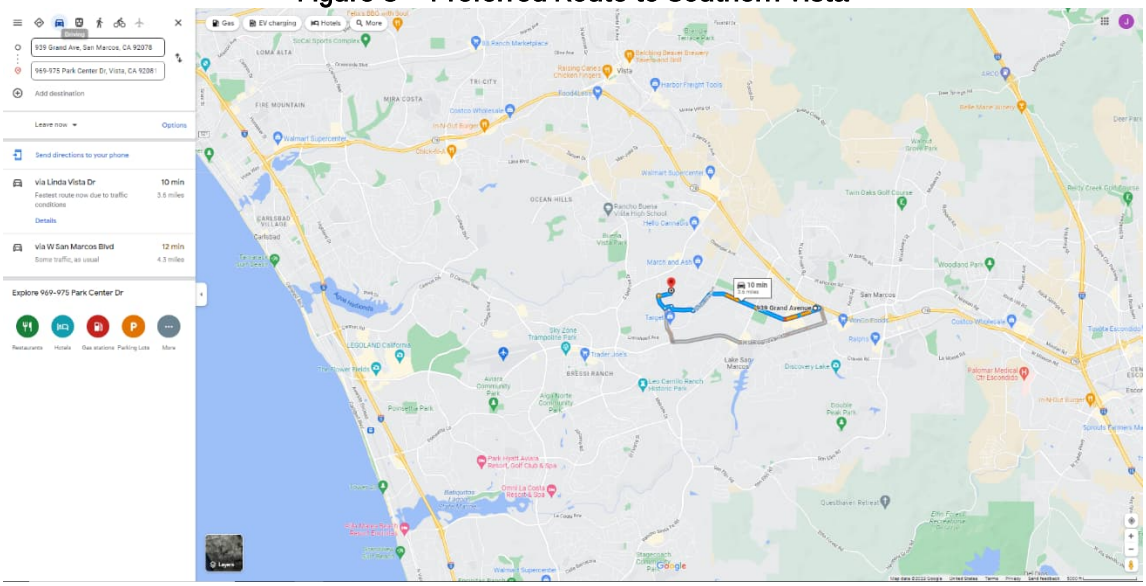
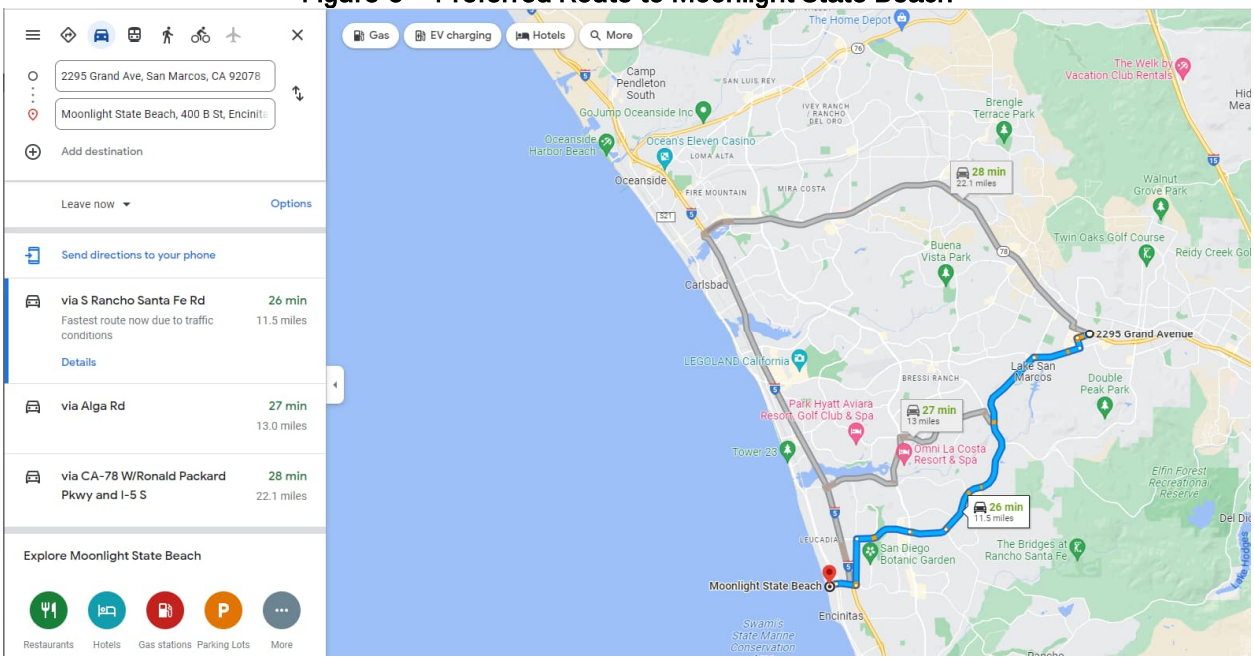


Additionally, CRA has have extensive experience working on other development projects within the City of San Marcos, such as the Urge, Baypoint Academy, Block C, PIMA, Discovery South, and others. Our experience with development projects allows us to understand the traffic patterns within the City. For example, trips traveling to and from I-5, especially toward Encinitas, Del Mar, and even the City of San Diego, sometimes prefer to use local roads such as Twin Oaks Valley Road instead of SR-78, mostly due to the longer driving distance along SR-78, as well as the congestion at the SR-78/I-5 interchange. **Figure 6** displays the travel times between three different routes from the Project's site to Moonlight State Beach (a popular destination) in the City of Encinitas.

Figure 6 – Preferred Route to Moonlight State Beach



As shown in Figure 6, it would take 26 minutes to travel to Moonlight State Beach via Rancho Santa Fe vs. the 28 minutes that it would takes via SR-78.

All of the information presented above supports the trip distribution assumptions shown in the approved MOA and the TIA. The trip distribution assumed that approximately 80 percent (80%) of the total trips of the project would remain within the City or travel to adjacent jurisdictions via the City's transportation network. The remainder of trips, approx. 20 percent, would utilize the freeway to travel to other parts of the County.

Appendix E - Internal Capture Calculations

HCM 6th LOS	F

Notes

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 6th Ctrl Delay	65.7
HCM 6th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Notes

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Appendix O - Traffic Signal Warrant

Figure 4C-103 (CA). Traffic Signal Warrants Worksheet
(Average Traffic Estimate Form)

		COUNT DATE	Horizon + Project
Major St:	Grand Avenue	# of Lanes:	2 or more
Minor St:	Linda Vista Drive	# of Lanes:	1

Speed limit or critical speed on major street traffic > 64 km/h (40 mph) .....

In built up area of isolated community of < 10,000 population.....

or } **RURAL (R)**

URBAN (U)

Major St ADT (Total):	12801	Roadway Type:	Urban
Minor Street ADT (Highest Direction):	2648		

(Based on Estimated Average Daily Traffic - See Note)

CONDITION A - Minimum Vehicular Volume

Satisfied X Not Satisfied

Number of lanes for moving traffic on each approach

Major Street	Minor Street	Minimum Requirements EADT: Vehicles Per Day on Major Street (Total of Both Approaches) Urban	Rural	Vehicles Per Day on Higher-Volume Minor Street Approach (One Direction Only) Urban	Rural
1	1	8000	5,600	2,400	1,680
2 or more	1	9,600	6,720	2,400	1,680
2 or more	2 or more	9,600	6,720	3,200	2,240
1	2 or more	8,000	5,600	3,200	2,240

CONDITION B - Interruption of Continuous Traffc

Satisfied Not Satisfied X

Number of lanes for moving traffic on each approach

Major Street	Minor Street	Vehicles Per Day on Major Street (Total of Both Approaches) Urban	Rural	Vehicles Per Day on Higher-Volume Minor Street Approach (One Direction Only) Urban	Rural
1	1	12,000	8,400	1,200	850
2 or more	1	14,400	10,080	1,200	850
2 or more	2 or more	14,400	10,080	1,600	1,120
1	2 or more	12,000	8,400	1,600	1,120

Combination of CONDITIONS A+B

Satisfied X Not Satisfied

No one condition satisfied, but following conditions fulfilled 80% or More

	110%	89%
	A	B

2 CONDITIONS 80%

2 CONDITIONS 80%

Note: **To be used only for NEW INTERSECTIONS or other locations where it is not reasonable to count**

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

RE: San Marcos Artist's Village – Vehicle Miles Traveled (VMT) Analysis Technical Memorandum

This technical memorandum documents the results of the SB-743 compliant transportation impact analysis conducted for the proposed San Marcos Artist's Village project (the "Proposed Project"). The analysis is based on the recently revised (January 2019) State California Environmental Quality Act (CEQA) Guidelines and the City of San Marcos Transportation Impact Analysis Guidelines (TIAG) Guidelines dated November 16, 2020.

Project Description

The Project is a mixed-use development on 10.03 acres (4.5 acres of residential uses and 5.53 acres of office/retail uses) located at the northwest corner of Linda Vista Road and Grand Avenue in the City of San Marcos. The Project proposes to construct 102 multi-family dwelling units (on west end of project) as well as 7 live/work units (on east end of project) on approximately 4.5 acres. Live/work units are units consisting of a residential and commercial/office component, where a resident is able to both live and work. Additionally, the Project proposes to construct 7,658 square feet (SF) of office space and 49,266 SF of specialty retail space on approximately 5.53 acres. It should be noted that the office space is intended for single tenant and the retail space is not intended to be occupied by grocery store uses or similar uses.

The property is bordered by Grand Avenue on the northeast side, Linda Vista Road on the southeast side, and industrial land uses to the west. Per the City's General Plan, the site is designated as a Commercial (C) land use and thus the Project, being a mixed-use development, is inconsistent with the General Plan and zoning designation. However, the project applicant is processing a General Plan Amendment (GPA) to adjust the zoning to "Mixed-Use" in order to be consistent with the General Plan. The Project's assumed opening year is Year 2024.

Figure 1 displays the Project's regional location. Figure 1 displays the project site plan.

Figure 2
Project Site Plan

Project Trip Generation

Per the City's TIAG, trip generation rates were derived from the SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002). **Table 1** displays the projected daily, as well as AM and PM peak hour, project trip generation.

As shown, the Proposed Project is anticipated to generate a net total of 2,241 daily trips, including 126 trips (60-in/62-out) during the AM peak hour and 189 (101-in/89-out) during the PM peak hour.

Analysis Methodology

On September 27, 2013, Governor Edmund G. Brown, Jr. signed SB-743 into law, starting a process that fundamentally changes the way transportation impact analysis is conducted under CEQA. Related revisions to the State's CEQA Guidelines include elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts, and replacement with Vehicle Miles Traveled (VMT) as the preferred CEQA transportation metric.

In December 2018, the California Resources Agency certified and adopted revised CEQA Guidelines, including the new section 15064.3. Under Section 15064.3, vehicle miles traveled (VMT), which includes the amount and distance of automobile traffic attributable to a project, is identified as the "most appropriate measure of transportation impacts." As of July 1, 2020, all CEQA lead agencies must analyze a project's transportation impacts using VMT. On November 16, 2020, the City of San Marcos adopted its Transportation Impact Analysis Guidelines.

Screening Thresholds

Many agencies use these screening thresholds to quickly identify when a project should be expected to cause a less-than-significant impact without conducting a detailed study. The TIAG suggest that a detailed transportation VMT analysis applies to all land development projects, except those that meet at least one of the screening criteria. Relevant screening criteria for the Proposed Project is described below:

- *Presumption of Less Than Significant Impact for Affordable Residential Development* – Residential projects with 100 percent deed restricted affordable housing can be presumed to have a less-than-significant transportation impact and would not require a detailed VMT analysis. If a project contains less than 100 percent affordable housing, the portion that is affordable should be screened out of requiring a detailed VMT analysis. Projects can only be screened out if they are located in parts of the city that have been identified by SANDAG and the City as Smart Growth Opportunity Areas. For mixed-use projects, this screening criteria should be applied to the residential component separately to determine if that portion of the project screens out of a detailed VMT analysis.
- *Local-Serving Retail* - Retail projects that have 50,000 square feet gross floor area or less can be presumed to have a less than-significant transportation impact and would not require a detailed VMT analysis. For a mixed-use project, this screening criteria should be applied to the retail/commercial component separately to determine if that portion of the project screens out of a detailed VMT analysis.

Table 1 – Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour					PM Peak Hour				
				%	Trips	Split	In	Out	%	Trips	Split	In	Out
Residential

	Internal Capture[1] (18%[2])		-492	-	-4	-	-2	-2	-	-64	-	-32	-32
		Net Total	**2,241**	**-**	**126**	**-**	**60**	**62**	**-**	**189**	**-**	**101**	**89**

Source: CR Associates (2023)

Notes:

[1] Internal capture was calculated using ITE's trip reduction calculator, which is based on the NCHRP Report 664 *Enhancing Internal Trip Capture Estimation for Mixed-Use Developments*. See **Appendix E** for more details.

[2] $1 - [(AM_{Net\ Total} + PM_{Net\ Total})/(AM_{Subtotal} + PM_{Subtotal})] = 1 - [(126 + 189)/(130 + 254)] = 18\%$

DU = Dwelling Unit.

KSF = 1,000 Square Feet

- *Map-Based Screening for Residential and Office Projects* – Residential and employment projects that are proposed in areas that generate VMT below adopted City thresholds can be presumed to have a less-than-significant transportation impact and would not require a detailed VMT analysis. This determination must be made using SANDAG's online residential and employment VMT maps for existing year or model baseline year VMT (whichever is available at the time analysis is being conducted), which show census tracts in the city where the VMT is below the regional average. The following types of projects could be screened out using this approach:
    - Residential projects proposed in census tracts with residential VMT per capita below the City's threshold of exceeding 85 percent of the SANDAG regional average.

  In order to utilize this screening approach, the project must incorporate similar land use characteristics to other projects in the census tract. For mixed-use projects, this screening criteria should be applied to the residential and employment components separately to determine if any portions of the project screen out of a detailed VMT analysis.

Since the Project would be composed of a mix of land uses, each component was evaluated independently per land use type. The screening criteria evaluation for each component is detailed below:

- Residential Component – Per Section 2.1.2.5 of the City's TIAG, the Project is located in an efficient VMT/capita area, as shown in **Figure 3**. Therefore, the residential component of the Project is deemed to have a less-than-significant impact and no further VMT analysis is required.
- Office Component – Per Section 2.1.2.5 of the City's TIAG, the Project's office component is not located in an efficient VMT/employee area, as shown in **Figure 4**. Therefore, the office component of the Project would not be screened out from completing detailed VMT analysis.
- Retail Component – Per Section 2.1.2.3 of the City's TIAG, the Project consists of less than 50,000 SF of retail and considered "local-serving retail". Therefore, the retail component of the Project is deemed to have a less-than-significant impact and no further VMT analysis is required.

Figure 3 – VMT Per Resident

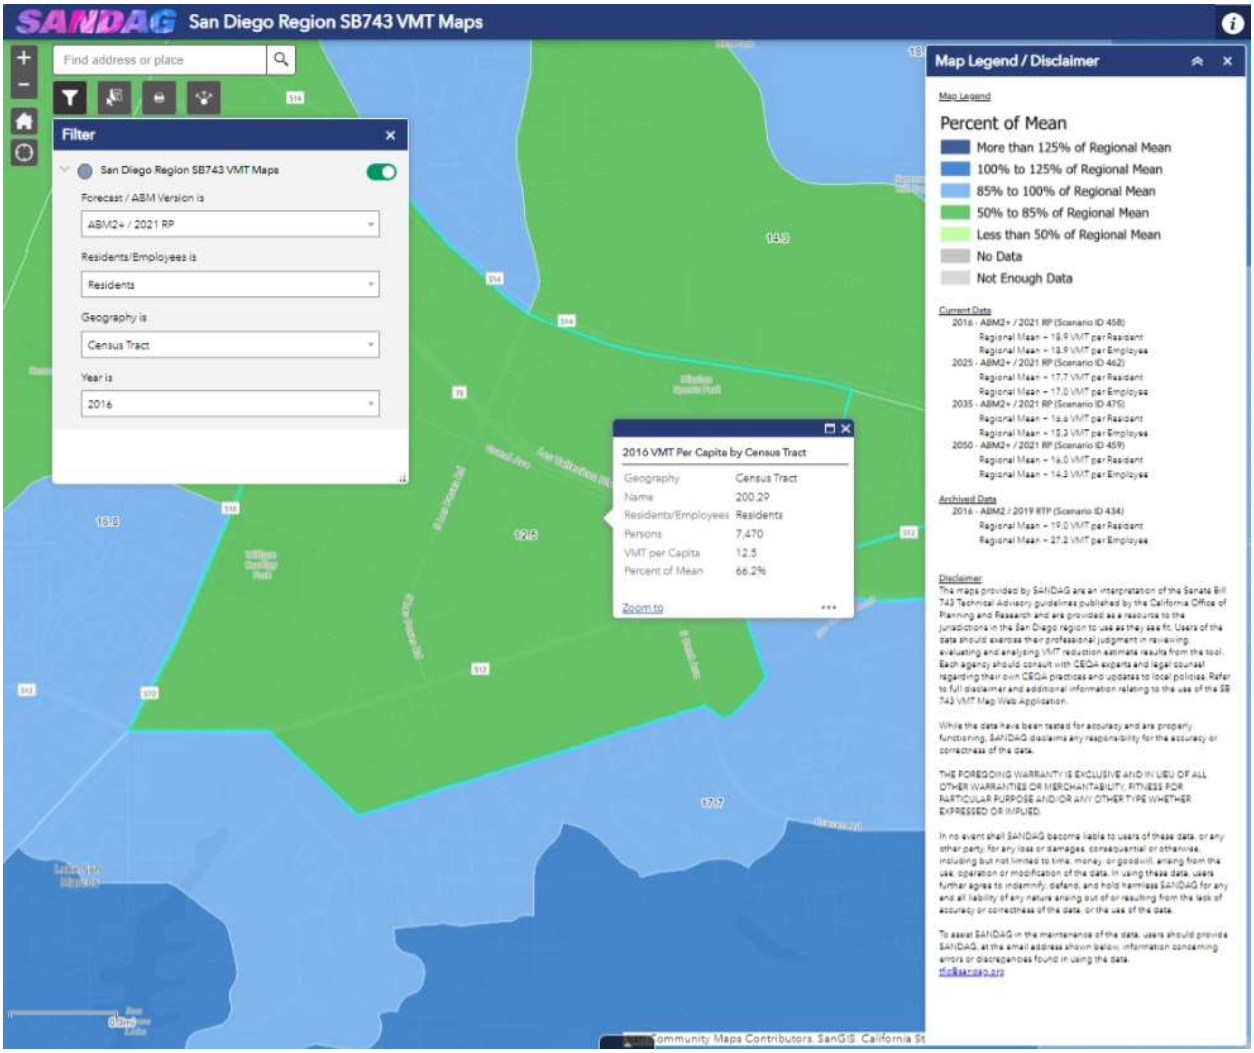

Figure 4 – VMT per Employee

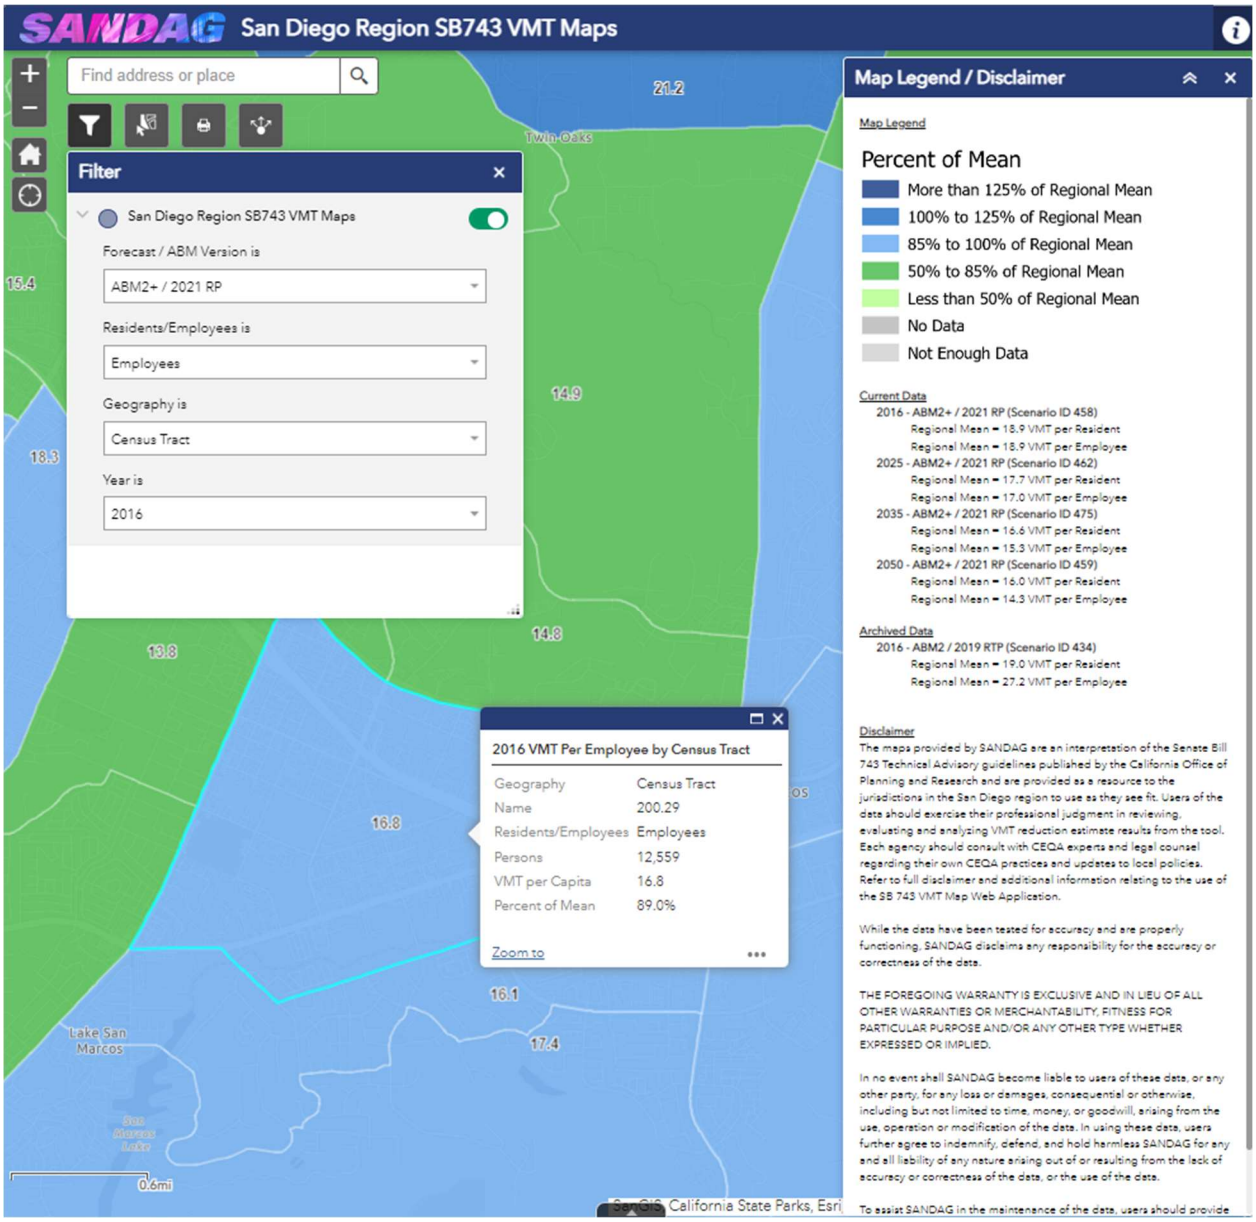

VMT Analysis

Analysis Metrics

Consistent with the City's TIAG, the office component of the Proposed Project shall be analyzed using the VMT per employee metric. When determining potentially significant impacts using efficiency metrics, such as VMT per employee, the following analysis methods should be used:

- The project's VMT per employee should be looked up using the latest SANDAG online mapping tool and the census tract containing the project site, or should be generated for the project TAZ if the latest version of the base year SANDAG travel demand model has been run to include the project.
- The existing countywide averages for VMT per employee are determined using the SANDAG online mapping tool or the latest version of the base year SANDAG travel demand model.
- An employee project is determined to have a significant impact if the project generates VMT per employee exceeding a level of 15 percent below the existing countywide average.

VMT per employee was obtained from the latest SANDAG VMT screening maps, displayed previously in Figure 4. The existing countywide average for VMT per employee was determined using the SANDAG Series 14 ABM2+/2021 RP Year 2016 Base model. **Table 2** summarizes the VMT analysis results.

Table 2 - VMT Impact Analysis – Office Component

Metric	VMT per Employee
Regional Average	18.90[1]
Significant Impact Threshold (85%)	16.07[2]
Proposed Project	16.80[1]
Significant Impact	Yes

Source: CR Associates (2023)

Notes:
[1] Source = SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model
[2] Regional Average x 85%

As shown, the Proposed Project is anticipated to generate a VMT per employee of 16.80 miles, which exceeds the significance threshold of 16.07 miles. Therefore, the Proposed Project would have a significant VMT impact and mitigation measures are required to reduce the VMT per employee.

VMT Mitigation

The VMT per employee for the office component of the Proposed Project is not anticipated to fall under the significant threshold as the project site is located in an area primarily composed of industrial and commercial land uses where employees travel longer-than-average distances for work compared to the region. As noted in the VMT analysis, the Project would have a significant VMT impact and mitigation measures are required to reduce the VMT per employee. The Project's total VMT per employee is 16.80 miles. To mitigate the Project's VMT to less than significant levels, mitigation measures would need to reduce the total VMT per employee by 4.4% from 16.80 miles to 16.07 miles.

To reduce the average VMT per employee, it is recommended that the Project implements a Transportation Demand Management (TDM) Program. A TDM program would facilitate increased opportunities for walking and bicycling, as well as provide the resources, means, and incentives for ridesharing and carpooling. The California Air Pollution Control Officers Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA Report) was taken into consideration initially, however, the SANDAG Mobility Management Guidebook/VMT Reduction Tool was determined more appropriate as it identifies several measures that specifically target employee VMT.

Based on discussion with the project applicant, the property managers of the office component of the Project will provide transit information to the tenants and make a good faith effort in offering transit passes or fares. Rideshare and micro mobility parking will be provided on site, as well as bicycle racks. Tenants within the office areas will be encouraged to implement telecommuting, flexible work schedules, and/or compressed work weeks. Additionally, a preferential parking permit program will be implemented.

The above strategies would satisfy the following SANDAG VMT Reduction Tool measure:

- 1A – Voluntary Employer Commute Program – 5.4% employee reduction with 100% employee eligibility.

See **Attachment A** for details on the VMT reduction calculation. **Table 3** summarizes the Project's trip reductions and mitigation results.

Table 3 – Project VMT Mitigation

VMT/Employee	Threshold	Mitigation Measure	VMT/Employee Reduction	Net VMT/Employee	Mitigated?
16.80	16.07	SANDAG 1A	-5.4%	15.89	Yes

Source: CR Associates (2023)

Notes:
[1] SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model (Figure 3)
[2] Regional Average x 85%
[3] [Net VMT per Resident] = [VMT per Resident] X [VMT per Resident Reduction]

Based on the VMT reduction results, implementation of the TDM Program is anticipated to reduce the VMT per employee generated by 5.4%. Thus, with the implementation of the TDM program, the Project is anticipated to generate 15.89 VMT per employee (16.80 VMT per employee * (1- 0.054)). The resulting 15.89 miles per employee does not exceed the 16.07 threshold. Therefore, since the mitigation measures would reduce the VMT per employee to less than significant levels, the impact is mitigated, and the Project is considered to have a less than significant impact.

1.0 PROJECT DESCRIPTION

The Marcos project consists of approximately 10.8 acres near the southwest corner of the Linda Vista Drive and Grand Avenue intersection in the city of San Marcos, California. The project is bisected by a channel which separates the project into two development areas. The 5.0 acres north of the channel will be used to develop 102 condominium residential units while the 5.8 acres south of the channel will be developed for commercial and mixed use.

2.0 SITE INFORMATION

The following sections summarize the site conditions which relate to drainage and hydromodification, including the geotechnical conditions, drainage basins, and the low flow threshold determination.

2.1 GEOTECHNICAL CONDITIONS

The Hydrologic Soils Group for the project was determined from the SANGIS Hydromod BMP Website. The site for this project is a mix of Hydrologic Soil Group C and Group D.

Please refer to Appendix 2 for the custom soils map.

2.2 BASIN DESCIPTION

The existing site consists of two development area that were previously commercial pads but have had the buildings demolished. From an aerial view, both areas visually appear flat. The channel was recently improved by the City of San Marcos (CIP Project Code 88214, "Grand Avenue Drainage / Road Improvements", IP-4826 and VWD no. 201930). The channel improvement drawings have been provided in Appendix 7 for reference. Each development area had new storm drain added to collect runoff from the pads and discharge into the improved channel. A bridge was constructed to link the two development areas as well.

Upon closer inspection of the topography shown on the Existing Hydrology Exhibit in Appendix 6, one can see that there are some subtle flow paths where the residential site drains to the storm drain outlets that were constructed as part of the channel improvements at nodes 200 and 400. The westerly third of the residential site leads to a local depression near node 10 before spilling out onto the adjacent property to the west. For AES calculation purposes, that localized ponding was ignored.

The commercial site has less defined flow paths. It appears that some of the site drains to the newly constructed storm drain outlets at nodes 300, 700 and 900 while other parts may sheet flow over the side of the channel at nodes 600 and 800. The easternmost third of the commercial site is very flat due to the concrete foundations that were left behind. While the flow paths are less definitive, it appears as though some of it flows out through sheet flow onto Linda Vista Drive. There are storm drain inlets further south down Linda Vista Drive that discharge into the same channel that bisects the project, so any runoff that leaves the project site ultimately ends up in the same channel.

As shown on the Proposed Hydrology Exhibit in Appendix 6, the proposed development areas will be re-graded to ensure that the runoff is routed to the channel. Runoff will no longer be allowed to spill out onto the adjacent property to the south or out onto Linda Vista Drive. The residential site has a system of concrete swales and storm drains to collect runoff and convey it to water quality basins and/or underground detention structures for hydromodification storage before being discharged to the channel at nodes 200,

400 and 1000. The commercial site has a similar system which outlets to the channel at nodes 300, 700 and 900.

3.0 METHODOLOGY

3.1 RATIONAL METHOD

The design criteria, as found in the County of San Diego Department of Public Works Flood Control Division Hydrology Manual, specifies the design runoff conditions within the San Diego County Flood Control District will be based on the 100-year storm frequency, as follows:

1.) Design for areas over 1 square mile will be based on the 100-year frequency storm.
2.) For areas under 1 square mile –
    a. The storm drain system shall be designed so that the combination of storm drain system capacity and overflow both inside and outside the right of way will be able to carry the 100 year frequency storm without damaging adjacent existing buildings or potential building sites.
    b. The storm drain system shall be designed so that the combination of storm drain system capacity and allowable street overflow will be able to carry the 50 year frequency storm without damaging adjacent property.
    c. Where a storm drain is required under headings 1 or 2 above, then as a minimum, the drain shall be designed to carry the 10-year frequency storm.
3.) Sump areas are to be designed for a sump capacity or outfall of a 100-year frequency storm.

Runoff produced on the project site will be calculated for the 100-year storm event using the methodology outlined in the 2003 San Diego County Hydrology Manual. Runoff will be calculated using the Rational Method, which is given by the following equation:

$Q = C \times I \times A$

Where:
Q = Flow rate in cubic feet per second (cfs)
C = Runoff coefficient
I = Rainfall Intensity in inches per hour (in/hr)
A = Drainage basin area in acres, (ac)

Soil Type – Hydrologic soil groups C and D are the prevalent soil groups on the project site as can be seen in the Soil Hydrologic Groups map provided in Appendix 2. Group C soils have slow infiltration rates when thoroughly wetted. This consists of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. Group D soils have a very slow infiltration rate when thoroughly wetted. Consisting chiefly of clay soils with a high swelling potential, soils with a high permanent water table, soils with clay pan or clay layer at or near the surface, and shallow soils over nearly impervious materials. Both type C & D soils have a very slow rate of water transmission.

Runoff Coefficient – In accordance with the County of San Diego standards, the appropriate runoff coefficients were determined based on table 3-1 from the 2003 San Diego County Hydrology Manual.

For the existing conditions, a C factor of 0.81 or 0.82 was used dependent on the prevalence of Soil Type C or D in each subbasin. This was chosen based on the current zoning of the property being for commercial use.

For the proposed conditions on the residential site, the C factor was determined by using the density and the soil type found in each subbasin. If more than one soil type was present, a weighted average was calculated

to determine the C factor. As shown on Table 3-1 in Appendix 1, the proposed residential density was calculated to be 20.3 DU/AC.

C factors per Table 3-1 in Appendix 1

	Soil Type C	Soil Type D
High Density Residential, 24.0 DU/AC or less	0.69	0.71
General Commercial	0.81	0.82

3.1 DATUM

The elevations utilized within this Drainage Study are based on the NGVD 29 Datum, since that datum was used for the aerial topography available at the time of this study's preparation. Since that time, the City of San Marcos has converted to using the NAVD 88 Datum. The project's Conceptual Grading Plans have been updated to the NAVD 88 Datum in accordance with City of San Marcos requirements. To convert the NGVD 29 elevations in this Drainage Study to the corresponding NAVD 88 elevations shown on the Conceptual Grading Plans, the conversion factor is +2.31 feet. The conversion factor was obtained utilizing the publicly available NGS Coordinate Conversion and Transformation Tool (NCAT).

4.0 CALCULATIONS/RESULTS

Detention Analysis was run using Civil 3D's Hydraflow software. Each of the water quality basins and underground detention structures was studied. Only volumes above the riser orifice were a part of the study, thus omitting any volume below the basin finished surface elevation. Refer to Appendix 5 for more information.

Detention Analysis Results

WEST	Before Detention				After Detention				
BMP ID	Node #	Tc (min)	A (ac)	Q	Node	Tc (min)	A (ac)	Qdet (cfs)	Δ (cfs)
1 WEST	1004	6.66	0.9	4.45	1004	6.66	0.90	3.64	-0.81
2 WEST	400	10.19	1.3	4.78	400	10.19	1.28	4.14	-0.64
3-DET WEST	206	9.14	2.6	10.23	204	9.14	2.57	6.80	-3.43

EAST	Before Detention				After Detention				
BMP ID	Node #	Tc (min)	A (ac)	Q	Node	Tc (min)	A (ac)	Qdet (cfs)	Δ (cfs)
A1	904	4.96	0.6	3.94	904	5.00	0.60	2.79	-1.15
B1	704	5.00	0.8	6.91	704	5.00	0.81	5.69	-1.22

B4	710	5.68	0.8	5.28	708	5.68	0.80	4.29	-0.99
D1	305	4.23	1.4	9.30	305	5.00	1.40	5.34	-3.96
D1-DET	301	5.74	1.4	5.34	301	5.74	1.40	4.25	-1.09

The results from the detention analysis were applied to the nodes listed above and re-run through AES. The post-detention AES runs can be found in Appendix 4. The results are summarized in the table below.

	Existing			Proposed (post detention)		
	A (Acre)	Tc (Min.)	Q (CFS)	A (Acre)	Tc (Min.)	Q (CFS)
Node 10	1.6	7.9	7.9	-	-	-
Node 100	7.9	11.9	33.2	10.7	9.5	33.2
Node 30	1.4	6.9	7.5	-	-	-

See appendix 3 & 4 for AES Analysis

5.0 SUMMARY AND CONCLUSIONS

The storm drain system for the Marcos project's residential and commercial development areas has been designed for the 100-year storm event. Through the use of onsite detention systems, the site has been designed so that the channel will see no increase in flow for the proposed condition. The table in section 4.0 summarizes the existing and proposed results. The proposed project will benefit the adjacent properties by eliminating potential vector control issues with localized ponding and re-routing flows that currently lead off-site or add to runoff in the street. In the proposed condition, those off-site runoffs will be captured, treated for water quality, and safely released to the channel.

DECLARATION OF RESPONSIBLE CHARGE

I HEREBY DECLARE THAT I AM THE ENGINEER OF WORK FOR THIS PROJECT, THAT I HAVE EXERCISED RESPONSIBLE CHARGE OVER THE DESIGN OF THIS PROJECT AS DEFINED IN SECTION 6703 OF THE BUSINESS AND PROFESSIONS CODE, AND THAT THE DESIGN IS CONSISTENT WITH CURRENT STANDARDS.

I UNDERSTAND THAT THE CHECK OF PROJECT DRAWINGS AND SPECIFICATIONS BY THE CITY OF SAN MARCOS AND THE VALLECITOS WATER DISTRICT IS CONFINED TO A REVIEW ONLY AND DOES NOT RELIEVE ME, AS ENGINEER OF WORK, OF MY RESPONSIBILITIES FOR PROJECT DESIGN.

VALLECITOS WATER DISTRICT DECLARATION OF ENGINEER OF WORK:

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS AS SHOWN ON THESE PLANS COMPLIES WITH PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER IN RESPONSIBLE CHARGE OF THE DESIGN OF THESE IMPROVEMENTS, I ASSUME FULL RESPONSIBLE CHARGE FOR SUCH DESIGN. I UNDERSTAND AND ACKNOWLEDGE THAT THE SIGNATURE OF THESE PLANS AND THE REVIEW OF THE PLANS BY THE VALLECITOS WATER DISTRICT, IS A REVIEW OF GENERAL COMPLIANCE WITH DISTRICT STANDARDS. THIS APPROVAL IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OR ACCURACY OF THE DESIGN OF THE IMPROVEMENTS. SUCH APPROVAL DOES NOT, THEREFORE, RELIEVE ME OF MY RESPONSIBILITY FOR THE DESIGN OF THESE IMPROVEMENTS.

GRADING NOTES

1. CALL THE CITY OF SAN MARCOS ENGINEERING REPRESENTATIVE [(760) 752-7550] 24 HOURS BEFORE COMMENCEMENT OF WORK.
2. IMPORTED MATERIAL SHALL BE OBTAINED FROM A LEGAL SITE.
3. ALL CUT AND FILL SLOPES SHALL BE PLANTED WITH A MIXTURE OF TREES, SHRUBS, AND GROUND COVER TO CONTROL EROSION. SLOPE LANDSCAPING SHALL BE INSTALLED AS SOON AS PRACTICAL. IRRIGATION SYSTEMS ARE REQUIRED AND SHALL BE INSTALLED FOR PERPETUAL MAINTENANCE OF THE PLANT LIFE USED FOR SLOPE STABILIZATION IN ACCORDANCE WITH SECTION 17.32.170 OF THE CITY'S GRADING ORDINANCE AND CSM LANDSCAPE STANDARD. (SEE LANDSCAPE PLANS FOR WETLAND RESTORATION AREA BY DUDEK FOR PLANTING IN CHANNEL)
4. PRECISE LOCATIONS/ELEVATIONS OF THE EXISTING UNDERGROUND UTILITIES ARE NOT KNOWN. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR MAKING SUFFICIENT EXPLORATIONS TO LOCATE ALL UTILITIES AND SUBSTRUCTURES WHETHER SHOWN ON THE PLANS OR NOT AND TO PROTECT THEM FROM ANY POSSIBLE DAMAGE PRIOR TO AND DURING CONSTRUCTION. THE EXPENSE OF REPAIR OR REPLACEMENT OF SAID UTILITIES AND SUBSTRUCTURES SHALL BE BORNE BY THE CONTRACTOR. CONTRACTOR SHALL NOTIFY THE ENGINEER-OF-WORK OF ANY POTENTIAL CONFLICTS SUFFICIENTLY IN TIME FOR CONSTRUCTION CHANGES TO BE MADE AND APPROVED.
5. THE CONTRACTOR SHALL CONTACT THE UNDERGROUND SERVICE ALERT AT 1-800-422-4133 AT LEAST 48 HOURS PRIOR TO EXCAVATING TO VERIFY THE LOCATIONS OF UNDERGROUND FACILITIES OF THE FOLLOWING UTILITIES:

   PACIFIC BELL/SBC
   SAN DIEGO GAS & ELECTRIC/SEMPRA
   VALLECITOS WATER DISTRICT
   COX COMMUNICATIONS OR TIME WARNER CABLE

   A DIG ALERT IDENTIFICATION NUMBER MUST BE ISSUED BEFORE A "PERMIT TO EXCAVATE" IS VALID PER GOVERNMENT CODE SECTION 4216/4217.
6. APPROVAL OF THESE PLANS BY THE CITY DOES NOT AUTHORIZE ANY WORK OR GRADING TO BE PERFORMED UNTIL THE PROPERTY OWNER'S PERMISSION IS OBTAINED AND A VALID GRADING PERMIT HAS BEEN ISSUED.
7. ALL OPERATIONS CONDUCTED ON THE PREMISES, INCLUDING THE WARMING UP, REPAIR, ARRIVAL, DEPARTURE OR RUNNING OF ANY EQUIPMENT SHALL BE LIMITED TO THE HOURS OF 7:00 A.M. TO 4:30 P.M., MONDAY THRU FRIDAY. NO WORK SHALL BE PERFORMED ON THE PREMISES ON SATURDAY, SUNDAY OR HOLIDAYS.
8. ALL MAJOR SLOPES SHALL BE SHAPED AND TRIMMED AS SHOWN ON THE PLANS AND ROUNDED INTO EXISTING SLOPES TO PRODUCE A CONTOURED TRANSITION FROM CUT OR FILL FACES TO NATURAL GROUND AND ABUTTING CUT OR FILL SLOPES. ALL STONES, ROOTS OR OTHER WASTE MATTER EXPOSED ON EXCAVATION OR EMBANKMENT SHALL BE REMOVED AND DISPOSED OF OFF-SITE IN A LEGAL MANNER BY THE CONTRACTOR. (SEE LIMITS OF WORK)
9. NOTWITHSTANDING THE MINIMUM STANDARDS SET FORTH IN THE CITY'S GRADING ORDINANCE AND THE APPROVAL OF THESE GRADING PLANS, THE PERMITTEE IS RESPONSIBLE FOR THE PREVENTION OF DAMAGE TO ADJACENT PROPERTY. NO PERSON SHALL EXCAVATE ON LAND SO CLOSE TO THE PROPERTY LINE AS TO ENDANGER ANY SYSTEM, OR ANY OTHER PUBLIC OR PRIVATE PROPERTY WITHOUT SUPPORTING AND PROTECTING SUCH PROPERTY FROM SETTLING, CRACKING, EROSION, SILTING, SCOUR OR OTHER DAMAGE WHICH MIGHT RESULT FROM THE GRADING DESCRIBED ON THIS PLAN. THE CITY WILL HOLD THE CONTRACTOR RESPONSIBLE FOR CORRECTION OF WORK WHICH CAUSE DAMAGE TO ADJACENT PROPERTY.
10. THE ENGINEER-OF-WORK SHALL BE NOTIFIED WHEN CONSTRUCTION COMMENCES.
11. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CONSTRUCTION/GRADING OF SLOPES, PADS, STREET GRADES AND INFRASTRUCTURE IMPROVEMENTS ACCORDING TO THESE PLANS. THE ENGINEER-OF-WORK SHALL BE CONTACTED WHEN CHANGES OR ADDITIONS MADE DURING THE PROGRESS OF CONSTRUCTION OR IF THERE IS A MISUNDERSTANDING OF THESE PLANS OR FIELD STAKES AND AN INTERPRETATION IS NEEDED. CERTIFICATION FROM THE REGISTERED CIVIL ENGINEER STATING THAT THE GRADING HAS BEEN COMPLETED PER THE APPROVED PLAN, AND THE COMPACTION REPORT FROM THE GEOTECHNICAL ENGINEER ON ANY REQUIRED FILL AREAS SHALL BE PROVIDED PRIOR TO BUILDING PERMITS BEING ISSUED.
12. MINIMUM 90% COMPACTION IS REQUIRED IN ALL ON-SITE FILL AREAS WITH A MINIMUM OF 95% COMPACTION WITHIN SIX INCHES (6") BELOW FINISHED SUBGRADE IN A STREET.
13. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING ANY MONUMENTATION AND/OR BENCHMARKS. ANY MONUMENTATION AND/OR BENCHMARKS WHICH ARE DISTURBED OR DESTROYED BY CONSTRUCTION SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. SUCH POINTS SHALL BE REFERENCED AND REPLACED WITH APPROPRIATE MONUMENTATION BY A LICENSED LAND SURVEYOR OR A REGISTERED CIVIL ENGINEER AUTHORIZED TO PRACTICE LAND SURVEYING. A CORNER RECORD OR RECORD OF SURVEY, AS APPROPRIATE, SHALL BE FILED BY THE LICENSED LAND SURVEYOR OR REGISTERED CIVIL ENGINEER AS REQUIRED BY THE LAND SURVEYOR'S ACT.
14. DUST CONTROL MEASURES, SUCH AS THE PERIODIC WETTING DOWN OF THE BARE AND EXPOSED AREAS, SHALL BE UTILIZED AT ALL TIMES DURING CONSTRUCTION TO THE SATISFACTION OF THE PUBLIC WORKS AND/OR BUILDING INSPECTORS.
15. ALL WORK SHOWN ON THESE PLANS TO BE COMPLETED IN ACCORDANCE WITH CITY GRADING ORDINANCE CHAPTER 17.32.
16. ALL GRADING SHALL BE SUPERVISED BY AN INDIVIDUAL APPROPRIATELY LICENSED UNDER THE BUSINESS AND PROFESSIONS CODE.
17. THE CONTRACTOR IS ADVISED THAT HE IS RESPONSIBLE FOR MAINTAINING THE ADJOINING PUBLIC STREETS AND RIGHTS-OF-WAY IN A CLEAN AND DUST FREE CONDITION WITHIN THE LIMITATION OF THE CITY MUNICIPAL CODE SECTION 14.15.030 "ILLICIT DISCHARGES PROHIBITED". THIS SECTION OF THE CODE PROHIBITS THE "WASHING DOWN" OF A STREET INTO A PUBLIC STORM DRAIN. THE CONTINUOUS USE OF STREET SWEEPING MACHINES MAY BE ADVISABLE.
18. THE CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING THE SAFETY OF ALL PERSONS AND PROPERTY. THIS REQUIREMENT SHALL APPLY CONTINUALLY AND NOT BE LIMITED TO NORMAL WORKING HOURS. THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER, THE ENGINEER AND THE CITY HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER, ENGINEER OR CITY.
19. A PERMIT MUST BE OBTAINED FROM THE SAN MARCOS FIRE DEPARTMENT PRIOR TO ANY BLASTING. SEPARATE CITY PERMITS ARE REQUIRED PRIOR TO ANY CONSTRUCTION, EXCAVATION, STORAGE OF MATERIALS OR ANY OTHER ENCROACHMENTS.

IMPROVEMENT NOTES:

1. THE STRUCTURAL SECTIONS SHOWN ON THESE PLANS ARE BASED ON R-VALUE TESTS OR MINIMUM STRUCTURAL STANDARDS REQUIRED BY THE CITY, WHICHEVER IS GREATER. ACTUAL STRUCTURAL SECTIONS WILL BE DETERMINED AFTER THE "R" VALUE TEST HAS BEEN CONDUCTED BY A QUALIFIED GEOTECHNICAL ENGINEER ON THE PREPARED SUB-BASE MATERIAL. THE "R" VALUE TEST AND RECOMMENDED ENGINEERED STRUCTURAL SECTION MUST BE APPROVED BY THE PUBLIC WORKS DIRECTOR PRIOR TO THE INSTALLATION OF BASE AND PAVING MATERIALS. STRUCTURAL SECTIONS SHALL BE DESIGNED IN ACCORDANCE WITH CHAPTER 600 OF THE CALTRANS HIGHWAY DESIGN MANUAL. STRUCTURAL SECTIONS SHALL BE NOTED ON THE "AS-BUILT" DRAWINGS.

   THIS NOTE WILL NOT APPLY TO THOSE AREAS WHERE GRADING IS MINIMAL AND "R" VALUES CAN BE OBTAINED PRIOR TO PLAN APPROVAL. ALL EXISTING STREETS SHALL BE CORE TESTED TO DETERMINE THE EXISTING STRUCTURAL SECTION AND TO DETERMINE THE EXTENT OF OVERLAY OR RECONSTRUCTION NECESSARY TO ACHIEVE THE REQUIRED "R" VALUES, TESTS SHALL BE PERFORMED AT LOCATIONS APPROVED BY THE PUBLIC WORKS DIRECTOR.
2. ALL ELECTRICAL, TELEPHONE AND CABLE TELEVISION UTILITIES SHALL BE CONSTRUCTED/CONVERTED TO UNDERGROUND. THE RELOCATION AND/OR UNDERGROUNDING OF EXISTING AND NEW UTILITIES SHALL BE DONE BY THE DEVELOPER OF THE PROPERTY AT NO COST TO THE CITY.
3. ALL UNDERGROUND UTILITIES AND LATERALS SHALL BE INSTALLED BEFORE CONSTRUCTION OF THE CURB AND GUTTER OR SURFACING OF STREETS.
4. A PERMIT SHALL BE OBTAINED FROM THE CITY OF SAN MARCOS FOR ANY EXCAVATION AND/OR CONSTRUCTION WITHIN THE PROPOSED PROJECT AND PUBLIC RIGHT-OF-WAY.
5. PRECISE LOCATIONS/ELEVATIONS OF THE EXISTING UNDERGROUND UTILITIES ARE NOT KNOWN. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR MAKING SUFFICIENT EXPLORATIONS TO LOCATE ALL UTILITIES AND SUBSTRUCTURES WHETHER SHOWN ON THE PLANS OR NOT AND TO PROTECT THEM FROM ANY POSSIBLE DAMAGE PRIOR TO AND DURING CONSTRUCTION. THE EXPENSE OF REPAIR OR REPLACEMENT OF SAID UTILITIES AND SUBSTRUCTURES SHALL BE BORNE BY THE CONTRACTOR. CONTRACTOR SHALL NOTIFY THE ENGINEER-OF-WORK OF ANY POTENTIAL CONFLICTS SUFFICIENTLY IN TIME FOR CONSTRUCTION CHANGES TO BE MADE AND APPROVED.
6. THE CONTRACTOR SHALL CONTACT THE UNDERGROUND SERVICE ALERT AT 1-800-422-4133 AT LEAST 48 HOURS PRIOR TO EXCAVATING TO VERIFY THE LOCATIONS OF UNDERGROUND FACILITIES OF THE FOLLOWING UTILITIES:

   COX COMMUNICATIONS OR TIME WARNER CABLE
   PACIFIC BELL/SBC
   SAN DIEGO GAS & ELECTRIC/SEMPRA
   VALLECITOS WATER DISTRICT

   A DIG ALERT IDENTIFICATION NUMBER MUST BE ISSUED BEFORE A "PERMIT TO EXCAVATE" IS VALID PER GOVERNMENT CODE SECTION 4216/4217.
7. AN AS-BUILT DRAWING SHALL BE SUBMITTED FOR ALL PUBLIC IMPROVEMENTS PRIOR TO ACCEPTANCE OF SAID IMPROVEMENTS.
8. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CONSTRUCTION/GRADING OF SLOPES, PADS, STREET GRADES AND INFRASTRUCTURE IMPROVEMENTS ACCORDING TO THESE PLANS. THE ENGINEER-OF-WORK SHALL BE CONTACTED WHEN CHANGES OR ADDITIONS MADE DURING THE PROGRESS OF CONSTRUCTION OR IF THERE IS A MISUNDERSTANDING OF THESE PLANS OR FIELD STAKES AND AN INTERPRETATION IS NEEDED. CERTIFICATION FROM THE REGISTERED CIVIL ENGINEER STATING THAT THE GRADING HAS BEEN COMPLETED PER THE APPROVED PLAN, AND THE COMPACTION REPORT FROM THE GEOTECHNICAL ENGINEER ON ANY REQUIRED FILL AREAS SHALL BE PROVIDED PRIOR TO BUILDING PERMITS BEING ISSUED.
9. CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING ANY MONUMENTATION AND/OR BENCHMARKS. ANY MONUMENTATION AND/OR BENCHMARKS WHICH ARE DISTURBED OR DESTROYED BY CONSTRUCTION SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. SUCH POINTS SHALL BE REFERENCED AND REPLACED WITH APPROPRIATE MONUMENTATION BY A LICENSED LAND SURVEYOR OR A REGISTERED CIVIL ENGINEER AUTHORIZED TO PRACTICE LAND SURVEYING. A CORNER RECORD OR RECORD OF SURVEY, AS APPROPRIATE, SHALL BE FILED BY THE LICENSED LAND SURVEYOR OR REGISTERED CIVIL ENGINEER AS REQUIRED BY THE LAND SURVEYOR'S ACT.
10. MINIMUM 90% COMPACTION IS REQUIRED IN ALL ON-SITE FILL AREAS WITH A MINIMUM OF 95% COMPACTION WITHIN SIX INCHES (6") BELOW SUBGRADE, IN A STREET.
11. ALL OPERATIONS CONDUCTED ON THE PREMISES, INCLUDING THE WARMING UP, REPAIR, ARRIVAL, DEPARTURE OR RUNNING OF ANY EQUIPMENT SHALL BE LIMITED TO THE HOURS OF 7:00 A.M. TO 4:30 P.M., MONDAY THRU FRIDAY. NO WORK SHALL BE PERFORMED ON THE PREMISES ON SATURDAY, SUNDAY OR HOLIDAYS.
12. NO PRIVATE IRRIGATION MAINS OR CONTROL VALVES SHALL BE PLACED WITHIN THE PUBLIC RIGHT-OF-WAY.
13. CURB RAMPS SHALL BE INSTALLED AT ALL CURB RETURNS PER TITLE 24, PART 2, STATE CHAPTER 71, SITE DEVELOPMENT REQUIREMENTS FOR HANDICAPPED ACCESSIBILITY, SECTION 7103, CURB RAMPS, OF THE CALIFORNIA BUILDING CODE.
14. ALL TRENCH EXCAVATION AND BACKFILL IN THE PUBLIC RIGHT-OF-WAY SHALL CONFORM TO THE REQUIREMENTS OF THE CITY'S EXCAVATION ORDINANCE.
15. THE ENGINEER-OF-WORK SHALL BEAR THE SOLE RESPONSIBILITY OF THE MATHEMATICAL DATA AND ACCURACY OF DESIGN SHOWN HEREON.
16. IF (FOR ANY REASON) GRADING PRODUCES A CONDITION WHERE AN EXISTING UTILITY IS ABANDONED, AND LESS THAN 2 FEET FROM THE SURFACE IN PAVEMENT AREAS, THE UTILITY SHOULD EITHER BE FULLY GROUTED, OR REMOVED.
17. STREET SIGNING AND STRIPING ARE THE RESPONSIBILITY OF THE CONTRACTOR AND ARE SUBJECT TO CITY OF SAN MARCOS PUBLIC WORKS DEPARTMENT APPROVAL.
18. DUST CONTROL MEASURES, SUCH AS THE PERIODIC WETTING DOWN OF THE BARE AND EXPOSED AREAS, SHALL BE USED AT ALL TIMES DURING CONSTRUCTION TO THE SATISFACTION OF THE PUBLIC WORKS AND/OR BUILDING INSPECTORS.
19. THE CONTRACTOR IS ADVISED THAT HE IS RESPONSIBLE FOR MAINTAINING THE ADJOINING PUBLIC STREETS AND RIGHT-OF-WAYS IN A CLEAN AND DUST FREE CONDITION WITHIN THE LIMITATION OF THE CITY MUNICIPAL CODE SECTION 14.15.030 "ILLICIT DISCHARGES PROHIBITED." THIS SECTION OF THE CODE PROHIBITS THE "WASHING DOWN" OF A STREET INTO A PUBLIC STORM DRAIN. THE CONTINUOUS USE OF STREET SWEEPING MACHINES MAY BE ADVISABLE.

IMPROVEMENT NOTES (CONT.):

20. A PERMIT MUST BE OBTAINED FROM THE SAN MARCOS FIRE DEPARTMENT PRIOR TO ANY BLASTING. CITY PERMITS ARE REQUIRED PRIOR TO ANY CONSTRUCTION, EXCAVATION, STORAGE OF MATERIALS OR ANY OTHER ENCROACHMENTS.
21. THE CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING THE SAFETY OF ALL PERSONS AND PROPERTY. THIS REQUIREMENT SHALL APPLY CONTINUALLY AND NOT BE LIMITED TO NORMAL WORKING HOURS. THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER, THE ENGINEER AND THE CITY HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER, ENGINEER OR CITY.
22. EROSION CONTROL, INCLUDING RIP-RAP, INTERIM SLOPE PROTECTION, SAND BAGS OR OTHER EROSION CONTROL MEASURES SHALL BE PROVIDED AS NECESSARY TO CONTROL SEDIMENT AND SILT FROM THE PROJECT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING ALL EROSION CONTROL FACILITIES THROUGHOUT THE DEVELOPMENT OF THE PROJECT.
23. A TRAFFIC CONTROL PLAN, INCLUDING THE LAYOUT OF CONSTRUCTION WARNING AND DETOUR SIGNS, SHALL BE SUBMITTED TO THE PUBLIC WORKS DEPARTMENT FOR APPROVAL A MINIMUM OF 72 HOURS PRIOR TO THE COMMENCEMENT OF CONSTRUCTION. TRAFFIC CONTROL SHALL BE IMPLEMENTED BEFORE ANY WORK IS STARTED.

CITY OF SAN MARCOS CIP NOTES

THE FOLLOWING NOTES ARE PROVIDED TO GIVE DIRECTION TO THE CONTRACTOR BY THE ENGINEER OF WORK. THE CITY ENGINEER'S SIGNATURE ON THESE PLANS DOES NOT CONSTITUTE APPROVAL OF ANY OF THESE NOTES, AND THE CITY WILL NOT BE RESPONSIBLE FOR THEIR ENFORCEMENT.

1. NEITHER THE OWNER, NOR THE ENGINEER OF WORK, WILL ENFORCE SAFETY MEASURES OR REGULATIONS. THE CONTRACTOR SHALL DESIGN, CONSTRUCT AND MAINTAIN ALL SAFETY DEVICES, INCLUDING SHORING, AND SHALL BE SOLELY RESPONSIBLE FOR CONFORMING TO ALL LOCAL, STATE, AND FEDERAL SAFETY AND HEALTH STANDARDS, LAWS AND REGULATIONS.
2. CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, AND THAT THIS REQUIREMENT SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER.
3. THE CONTRACTOR SHALL BE RESPONSIBLE TO ENSURE THAT ALL GRADING IS DONE IN ACCORDANCE WITH THESE PLANS. IF THERE ARE ANY QUESTIONS REGARDING THESE PLANS OR FIELD STAKES, THE CONTRACTOR SHALL REQUEST AN INTERPRETATION BEFORE DOING ANY WORK BY CALLING THE ENGINEER OF WORK AT (760) 931-7700. THE CONTRACTOR SHALL ALSO TAKE THE NECESSARY STEPS TO PROTECT THE PROJECT AND ADJACENT PROPERTY FROM EROSION AND SILTATIONS THAT RESULT FROM HIS OPERATIONS BY APPROPRIATE MEANS (SANDBAGS, HAY BALES, TEMPORARY DESILTING BASINS, DIKES, SHORING, ETC.) UNTIL SUCH TIME THAT THE PROJECT IS COMPLETED AND ACCEPTED FOR MAINTENANCE BY WHATEVER OWNER, AGENCY, OR ASSOCIATION IS TO BE ULTIMATELY RESPONSIBLE FOR MAINTENANCE.
4. ALL GRADING SHALL BE DONE UNDER THE OBSERVATION OF A QUALIFIED GEOTECHNICAL ENGINEER. ALL AREAS TO BE FILLED SHALL BE PREPARED TO BE FILLED AND ALL FILL SHALL BE PLACED IN ACCORDANCE WITH THE RECOMMENDED GRADING SPECIFICATIONS AND SPECIAL PROVISION ATTACHED TO THE GEOTECHNICAL INVESTIGATIONS FOR THIS SUBDIVISION. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PLACE, SPREAD, WATER AND COMPACT THE FILL IN STRICT ACCORDANCE WITH THESE SPECIFICATIONS.
5. OBSERVATIONS AND COMPACTION TESTS SHALL BE MADE BY THE GEOTECHNICAL ENGINEER DURING THE FILLING AND COMPACTING OPERATIONS SO THAT HE CAN STATE HIS OPINION THAT THE FILL WAS CONSTRUCTED IN ACCORDANCE WITH THE EARTHWORK SPECIFICATIONS.
6. DURING CONSTRUCTION: THE CONTRACTOR SHALL PROPERLY GRADE ALL EXCAVATED SURFACES TO PROVIDE POSITIVE DRAINAGE AND PREVENT PONDING OF WATER. HE SHALL CONTROL SURFACE WATER TO AVOID DAMAGE TO ADJOINING PROPERTIES OR TO FINISHED WORK ON THE SITE. THE CONTRACTOR SHALL TAKE REMEDIAL MEASURES TO PREVENT EROSION OF FRESHLY GRADED AREAS UNTIL SUCH TIME AS PERMANENT DRAINAGE AND EROSION CONTROL MEASURES HAVE BEEN INSTALLED. AFTER COMPLETION: AFTER GRADING IS COMPLETED AND THE SOILS ENGINEER HAS FINISHED HIS OBSERVATIONS OF THE WORK, NO FURTHER EXCAVATION OR FILLING SHALL BE DONE EXCEPT UNDER THE OBSERVATION OF THE SOILS ENGINEER.
7. THE CONTRACTOR SHALL TAKE THE NECESSARY PRECAUTIONS REQUIRED TO PROTECT ADJACENT PROPERTIES DURING THE GRADING OPERATIONS.
8. CUT AND FILL SLOPES SHALL BE TRIMMED TO THE FINISH GRADE TO PRODUCE A SMOOTH SURFACE AND UNIFORM CROSS SECTION. THE SLOPE OF THE EXCAVATIONS OR EMBANKMENTS SHALL BE SHAPED AND TRIMMED AS SHOWN ON THE PLANS AND LEFT IN A NEAT AND ORDERLY CONDITION. ALL STONES, ROOTS OR OTHER WASTE MATTER EXPOSED ON EXCAVATION OR EMBANKMENT SLOPES SHALL BE REMOVED AND DISPOSED OF OFFSITE IN A LEGAL MANNER BY THE CONTRACTOR.
9. CONTRACTOR SHALL PROVIDE MATERIALS MANAGEMENT AND STOCKPILING SUCH THAT EXISTING UPDATE SOILS MATERIALS ARE USED FOR CAPPING STREETS AND PADS AND NOT BURIED IN FILLS.

VALLECITOS WATER DISTRICT GENERAL NOTES- CITY CIP:

1. ALL WATER AND SEWER LINES SHALL BE CONSTRUCTED ACCORDING TO THE CONTRACT DOCUMENTS AND CURRENT STANDARD SPECIFICATIONS, DRAWINGS AND APPROVED MATERIAL LIST OF THE VALLECITOS WATER DISTRICT.
2. A MINIMUM OF ONE FOOT VERTICAL CLEARANCE IS REQUIRED AT ALL CROSSINGS OF THE DISTRICT FACILITIES WITH OTHER UTILITIES UNLESS APPROVED BY THE DISTRICT PRIOR TO CONSTRUCTION.
3. CONTRACTOR SHALL POTHOLE (EXCAVATE AND EXPOSE) ALL UTILITIES ALONG CONSTRUCTION EXCAVATION CORRIDOR AS SHOWN ON PLANS OR IDENTIFIED BY USA MARK-OUT. THE POTHOLE INFORMATION (UTILITY SIZE, TYPE, LOCATION, ELEVATION, GRADE AND ALIGNMENT) SHALL BE SUBMITTED TO VALLECITOS WATER DISTRICT PRIOR TO CONSTRUCTION. IN ADDITION, POTENTIAL CONFLICTS WITH EXISTING UTILITIES, AS IDENTIFIED BY THE CONTRACTOR, SHALL BE SUBMITTED PRIOR TO CONSTRUCTION. CONSEQUENCES OF CONTRACTOR'S FAILURE TO POTHOLE AND PROVIDE INFORMATION TO DISTRICT SHALL BE THE CONTRACTOR'S FULL RESPONSIBILITY AND LIABILITY.
4. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR THE ENFORCEMENT OF SAFETY STANDARDS.
5. A PRECONSTRUCTION CONFERENCE MEETING WITH VALLECITOS WATER DISTRICT PERSONNEL SHALL BE HELD A MINIMUM OF THREE (3) WORKING DAYS PRIOR TO CONSTRUCTION. INSPECTION OF ALL WORK IS REQUIRED. FORTY-EIGHT (48) HOURS ADVANCE NOTICE IS REQUIRED FOR INSPECTION.
6. ANY PROPOSED CHANGES IN THE APPROVED IMPROVEMENT PLANS MUSH BE REVIEWED AND APPROVED BY THE DISTRICT PRIOR TO THE INSTALLATION OF SUCH CHANGES AND THE CHANGES SHALL BE SHOWN ON THE IMPROVEMENT PLANS.
7. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO MAINTAIN AT ALL TIMES ON THE JOB SITE, AN "AS-BUILT" RECORD OF ALL WATER AND SEWER MAINS AND APPURTENANCES INSTALLED UNDER THIS CONTRACT.
8. A BLASTING PLAN SHALL BE SUBMITTED FOR DISTRICT APPROVAL PRIOR TO THE USE OF EXPLOSIVES NEAR DISTRICT FACILITIES.
9. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL OF ACP PIPE WHICH SHALL BE PERFORMED BY A CONTRACTOR REGISTERED BY CAL/OSHA AND CERTIFIED BY THE STATE CONTRACTORS LICENSING BOARD FOR ASBESTOS REMOVAL.
10. UPON CONNECTION OF THE NEW WATER SYSTEM TO THE EXISTING SYSTEM, ALL VALVES ON THE EXISTING AND NEW SYSTEM SHALL BE OPERATED ONLY BY DISTRICT PERSONNEL. SHUTDOWNS SHALL BE REQUESTED, IN WRITING, A MINIMUM OF 6 WORKING DAYS IN ADVANCE. ALL SHUTDOWNS REQUIRE STATE CERTIFIED BACTERIA TESTING PRIOR TO REACTIVATION.

PDP SWQMP PREPARER'S CERTIFICATION PAGE

Project Name: MARCOS SPECIFIC PLAN
Permit Application Number: [Insert Permit Application Number]

PREPARER'S CERTIFICATION

I hereby declare that I am the Engineer in Responsible Charge of design of storm water best management practices (BMPs) for this project, and that I have exercised responsible charge over the design of the BMPs as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the PDP requirements of the [INSERT AGENCY NAME] BMP Design Manual, which is a design manual for compliance with local [INSERT AGENCY NAME] and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

I have read and understand that the [City Engineer] has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this PDP SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this PDP SWQMP by the [City Engineer] is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

PDP SWQMP PROJECT OWNER'S CERTIFICATION PAGE – CALIFORNIA PACIFIC HOMES, INC.

Project Name: MARCOS SPECIFIC PLAN
Permit Application Number: [Insert Permit Application Number]

PROJECT OWNER'S CERTIFICATION

This PDP SWQMP has been prepared for CALIFORNIA PACIFIC HOMES, INC. by Fuscoe Engineering, Inc. The PDP SWQMP is intended to comply with the PDP requirements of the City of San Marcos BMP Design Manual, which is a design manual for compliance with local City of San Marcos and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan. Once the undersigned transfers its interests in the property, its successor-in-interest shall bear the aforementioned responsibility to implement the best management practices (BMPs) described within this plan, including ensuring on-going operation and maintenance of structural BMPs. A signed copy of this document shall be available on the subject property into perpetuity.

Form I-1
[March 15, 2016]

Project Identification

Project Name: Marcos Specific Plan

Description:
Proposed mixed-use development incorporating commercial and multi-family residential uses.

Permit Application Number (if applicable): | Date: 5/12/2023

Project Address: Grand Avenue and Linda Vista Drive

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:
http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above, Is the project a "development project" (See definition above)? See Section 1.3 of the BMP Design Manual for further guidance if necessary.	☒ Yes	Go to Step 2.
	☐ No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. **STOP.**
Discussion / justification if the project is not a "development project" (e.g., the project includes *only* interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? **To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual *in its entirety* for guidance.** **In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.**	☐ Standard Project	Only Standard Project requirements apply, including Standard Project SWQMP. **STOP.**
	☒ PDP	Standard and PDP requirements apply, including PDP SWQMP. **Go to Step 3 on the following page.**
	☐ Exception to PDP definitions	Standard Project requirements apply, and any additional requirements specific to the type of project. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP. **STOP.**
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2, Form Date: March 15, 2016		
Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements reply to the proposed PDP. Does the project:		
Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Hydromodification requirements apply to the project. Go to Step 4.
Discussion / justification if hydromodification control requirements do <u>not</u> apply:		
Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	☐ Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	☒ No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop. Project site is not identified as a Potential Critical Course Sediment Yield Area

Project Type Determination Checklist			Form I-2 [March 15, 2016]
Project Information			
Project Name/Description: Marcos Specific Plan			
Permit Application Number (if applicable):			Date: 10/11/2022
Project Address: Grand Avenue and Linda Vista Drive			
Project Type Determination: Standard Project or Priority Development Project (PDP)			
The project is (select one): ☐ New Development ☒ Redevelopment			
The total proposed newly created or replaced impervious area is: 155,750 ft^2 (3.58 acres)			
Is the project in any of the following categories, (a) through (f)?			
Yes ☐	No ☒	(a)	New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(c)	New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses: estaurants. This category is defined as a facility that sells prepared foods and drinks r consumption, including stationary lunch counters and refreshment stands selling epared foods and drinks for immediate consumption (Standard Industrial assification (SIC) code 5812). llside development projects. This category includes development on any natural ope that is twenty-five percent or greater. arking lots. This category is defined as a land area or facility for the temporary arking or storage of motor vehicles used personally, for business, or for commerce. treets, roads, highways, freeways, and driveways. This category is defined as any aved impervious surface used for the transportation of automobiles, trucks, otorcycles, and other vehicles.

Form I-2 Page 2, Form Date: March 15, 2016			
Yes ☐	No ☒	(d)	New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). *Note: ESAs are areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and San Diego Water Board; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and San Diego Water Board; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees. See BMP Design Manual Section 1.4.2 for additional guidance.*
Yes ☐	No ☒	(e)	New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses: (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.
Yes ☒	No ☐	(f)	New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction. *Note: See BMP Design Manual Section 1.4.2 for additional guidance.*

Does the project meet the definition of one or more of the Priority Development Project categories (a) through (f) listed above?

☐ No – the project is not a Priority Development Project (Standard Project).

☒ Yes – the project is a Priority Development Project (PDP).

The following is for redevelopment PDPs only:

The area of existing (pre-project) impervious area at the project site is: 12,216 ft^2 (A)
The total proposed newly created or replaced impervious area is 155,750ft^2 (B)
Percent impervious surface created or replaced (B/A)*100: 1275%
The percent impervious surface created or replaced is (select one based on the above calculation):

☐ less than or equal to fifty percent (50%) – only new impervious areas are considered PDP

OR

☒ greater than fifty percent (50%) – the entire project site is a PDP

Site Information Checklist For PDPs	Form I-3B (PDPs) [March 15, 2016]
Project Summary Information	
Project Name	Marcos Specific Plan
Project Address	Grand Avenue and Linda Vista Drive
Assessor's Parcel Number(s) (APN(s))	219-152-70, -74, -76, -77, -79
Permit Application Number	
Project Hydrologic Unit	Select One: ☐ Santa Margarita 902 ☐ San Luis Rey 903 ☒ Carlsbad 904 ☐ San Dieguito 905 ☐ Penasquitos 906 ☐ San Diego 907 ☐ Pueblo San Diego 908 ☐ Sweetwater 909 ☐ Otay 910 ☐ Tijuana 911
Project Watershed (Complete Hydrologic Unit, Area, and Subarea Name with Numeric Identifier)	Carlsbad Hydrologic Unit, San Marcos Hydrologic Area, Richland Hydrologic Sub-Area, 904.52
Parcel Area (total area of Assessor's Parcel(s) associated with the project)	4.73 Acres (206,040 Square Feet)
Area to be Disturbed by the Project (Project Area)	5.03 Acres (219,274 Square Feet)
Project Proposed Impervious Area (subset of Project Area)	3.86 Acres (167,966 Square Feet)
Project Proposed Pervious Area (subset of Project Area)	0.98 Acres (42,745 Square Feet)
Note: Proposed Impervious Area + Proposed Pervious Area = Area to be Disturbed by the Project. This may be less than the Parcel Area.	

Description of Existing Site Condition

Current Status of the Site (select all that apply):

- ☐ Existing development
- ☐ Previously graded but not built out
- ☒ Demolition completed without new construction
- ☐ Agricultural or other non-impervious use
- ☐ Vacant, undeveloped/natural

Description / Additional Information:
The project site was previously developed with commercial/industrial uses. The buildings have since been demolished, but portions of building slabs and paved parking areas remain.

Existing Land Cover Includes (select all that apply):

- ☒ Vegetative Cover
- ☒ Non-Vegetated Pervious Areas
- ☒ Impervious Areas

Description / Additional Information:
The project site was previously developed with commercial/industrial uses. The buildings have since been demolished, but portions of building slabs and paved parking areas remain.

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

- ☐ NRCS Type A
- ☐ NRCS Type B
- ☒ NRCS Type C
- ☒ NRCS Type D

Approximate Depth to Groundwater (GW):

- ☐ GW Depth < 5 feet
- ☐ 5 feet < GW Depth < 10 feet
- ☐ 10 feet < GW Depth < 20 feet
- ☒ GW Depth > 20 feet

Existing Natural Hydrologic Features (select all that apply):

- ☒ Watercourses
- ☐ Seeps
- ☐ Springs
- ☐ Wetlands
- ☐ None

Description / Additional Information:

Description of Existing Site Drainage Patterns

How is storm water runoff conveyed from the site? At a minimum, this description should answer:
(1) whether existing drainage conveyance is natural or urban;
(2) Is runoff from offsite conveyed through the site? if yes, quantify all offsite drainage areas, design flows, and locations where offsite flows enter the project site, and summarize how such flows are conveyed through the site;
(3)Provide details regarding existing project site drainage conveyance network, including any existing storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels; and
(4) Identify all discharge locations from the existing project site along with a summary of conveyance system size and capacity for each of the discharge locations. Provide summary of the pre-project drainage areas and design flows to each of the existing runoff discharge locations.

Describe existing site drainage patterns:

The existing site consists of development areas that were previously commercial pads but have had the buildings demolished. From an aerial view, the site visually appear flat. The channel was recently improved by the City of San Marcos (CIP Project Code 88214, "Grand Avenue Drainage / Road Improvements", IP-4826 and VWD no. 201930). The development area had new storm drain added to collect runoff from the pads and discharge into the improved channel. A bridge was constructed to link to the neighboring development site, east of this site.

Upon closer inspection of the topography, one can see that there are some subtle flow paths where the site drains to the storm drain outlets that were constructed as part of the channel improvements at nodes 200 and 400. The westerly third of the residential site leads to a local depression near node 10 before spilling out onto the adjacent property to the west.

Description of Proposed Site Development

Project Description / Proposed Land Use and/or Activities:
This project consists of approximately 5.03 acres near the southwest corner of the Linda Vista Drive and Grand Avenue intersection in the city of San Marcos, California. Located at the north of the channel, the site will be used to develop 102 residential condominiums.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):
Impervious areas will include buildings; vehicular paving in drive aisles and parking areas; and pedestrian pavement for sidewalk, bike paths, and walkways.

List/describe proposed pervious features of the project (e.g., landscape areas):
The project will include extensive landscape areas. Decomposed granite (DG) is also proposed for some parking spaces and walkways. As a conservative approach for BMP sizing, the DG areas were assumed to be impervious.

Does the project include grading and changes to site topography?

☒ Yes

☐ No

Description / Additional Information:
The project will be graded support drainage of the proposed project area to the storm water BMPs and the creek.

Description of Proposed Site Drainage Patterns

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

☒ Yes

☐ No

If yes, provide details regarding the proposed project site drainage conveyance network, including storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels, and the method for conveying offsite flows through or around the proposed project site. Identify all discharge locations from the proposed project site along with a summary of the conveyance system size and capacity for each of the discharge locations. Provide a summary of pre- and post-project drainage areas and design flows to each of the runoff discharge locations. Reference the drainage study for detailed calculations.

Describe proposed site drainage patterns::

The proposed development areas will be re-graded to ensure that the runoff is routed to the channel. The site has a system of concrete swales and storm drains to collect runoff and convey it to water quality basins and/or underground detention structures for hydromodification storage before being discharged to the channel at nodes 200, 400 and 1000.

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

- [X] On-site storm drain inlets
- [ ] Interior floor drains and elevator shaft sump pumps
- [X] Interior parking garages
- [X] Need for future indoor & structural pest control
- [X] Landscape/Outdoor Pesticide Use
- [X] Pools, spas, ponds, decorative fountains, and other water features
- [X] Food service
- [X] Refuse areas
- [ ] Industrial processes
- [ ] Outdoor storage of equipment or materials
- [ ] Vehicle and Equipment Cleaning
- [ ] Vehicle/Equipment Repair and Maintenance
- [ ] Fuel Dispensing Areas
- [ ] Loading Docks
- [X] Fire Sprinkler Test Water
- [ ] Miscellaneous Drain or Wash Water
- [X] Plazas, sidewalks, and parking lots

Description / Additional Information:

Identification and Narrative of Receiving Water and Pollutants of Concern

Describe flow path of storm water from the project site discharge location(s), through urban storm conveyance systems as applicable, to receiving creeks, rivers, and lagoons as applicable, and ultimate discharge to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):
Discharge from the site enters the unnamed creek with runs southwest through the site. The creek continues to flow southwest to a confluence with San Marcos Creek just upstream of Lake San Marcos. San Marcos Creek discharges to Batiquitos Lagoon, which is tidally connected to the Pacific Ocean.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs and/or Highest Priority Pollutants from the WQIP for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs / WQIP Highest Priority Pollutant
San Marcos Creek	DDE, Phosphorous, Sediment Toxicity, Selenium	DDE, Phosphorous, Sediment Toxicity, Selenium
San Marcos Lake	Ammonia Nitrogen, Nutrients	Ammonia Nitrogen, Nutrients

Identification of Project Site Pollutants*

***Identification of project site pollutants is only required if flow-thru treatment BMPs are implemented onsite in lieu of retention or biofiltration BMPs (note the project must also participate in an alternative compliance program unless prior lawful approval to meet earlier PDP requirements is demonstrated)**

Identify pollutants expected from the project site based on all proposed use(s) of the site (see BMP Design Manual Appendix B.6):

Pollutant	Not Applicable to the Project Site	Expected from the Project Site	Also a Receiving Water Pollutant of Concern
Sediment		X	X
Nutrients		X	X
Heavy Metals		X	X
Organic Compounds		X	
Trash & Debris		X	
Oxygen Demanding Substances		X	
Oil & Grease		X	
Bacteria & Viruses		X	
Pesticides		X	

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the BMP Design Manual)?

☒ Yes, hydromodification management flow control structural BMPs required.

☐ No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

***This Section only required if hydromodification management requirements apply**

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

☐ Yes

☒ No, No critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the BMP Design Manual been performed?

☐ 6.2.1 Verification of Geomorphic Landscape Units (GLUs) Onsite

☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment

☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite

☐ No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

☐ No critical coarse sediment yield areas to be protected based on verification of GLUs onsite

☐ Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 2.b of the SWQMP.

☐ Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

Flow Control for Post-Project Runoff*

***This Section only required if hydromodification management requirements apply**

List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit.

Has a geomorphic assessment been performed for the receiving channel(s)?

☐ No, the low flow threshold is 0.1Q2 (default low flow threshold)

☐ Yes, the result is the low flow threshold is 0.1Q2

☐ Yes, the result is the low flow threshold is 0.3Q2

☒ Yes, the result is the low flow threshold is 0.5Q2

If a geomorphic assessment has been performed, provide title, date, and preparer:
The receiving channel has been restored and is an actively managed conservation area, which will ensure erosion impacts will be minimal.

Discussion / Additional Information: (optional)

Other Site Requirements and Constraints

When applicable, list other site requirements or constraints that will influence storm water management design, such as zoning requirements including setbacks and open space, or local codes governing minimum street width, sidewalk construction, allowable pavement types, and drainage requirements.

Optional Additional Information or Continuation of Previous Sections As Needed

This space provided for additional information or continuation of information from previous sections as needed.

Source Control BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-4 [March 15, 2016]

Project Identification

Project Name: Marcos Specific Plan

Permit Application Number

Source Control BMPs

All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement source control BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided.

Source Control Requirement	Applied?		
SC-1 Prevention of Illicit Discharges into the MS4	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-1 not implemented:			
SC-2 Storm Drain Stenciling or Signage	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-2 not implemented:			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-3 not implemented:			
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-4 not implemented:			

Form I-4 Page 2 of 2, Form Date: March 15, 2016			
Source Control Requirement	**Applied?**		
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-5 not implemented:			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)			
☐ On-site storm drain inlets	☒ Yes	☐ No	☐ N/A
☐ Interior floor drains and elevator shaft sump pumps	☐ Yes	☐ No	☒ N/A
☐ Interior parking garages	☒ Yes	☐ No	☐ N/A
☐ Need for future indoor & structural pest control	☒ Yes	☐ No	☐ N/A
☐ Landscape/Outdoor Pesticide Use	☒ Yes	☐ No	☐ N/A
☐ Pools, spas, ponds, decorative fountains, and other water features	☒ Yes	☐ No	☐ N/A
☐ Food service	☒ Yes	☐ No	☐ N/A
☐ Refuse areas	☒ Yes	☐ No	☐ N/A
☐ Industrial processes	☐ Yes	☐ No	☒ N/A
☐ Outdoor storage of equipment or materials	☐ Yes	☐ No	☒ N/A
☐ Vehicle and Equipment Cleaning	☐ Yes	☐ No	☒ N/A
☐ Vehicle/Equipment Repair and Maintenance	☐ Yes	☐ No	☒ N/A
☐ Fuel Dispensing Areas	☐ Yes	☐ No	☒ N/A
☐ Loading Docks	☐ Yes	☐ No	☒ N/A
☐ Fire Sprinkler Test Water	☒ Yes	☐ No	☐ N/A
☐ Miscellaneous Drain or Wash Water	☐ Yes	☐ No	☒ N/A
☐ Plazas, sidewalks, and parking lots	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for all "No" answers shown above.			

Site Design BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-5 [March 15, 2016]

Project Identification

Project Name – Marcos Specific Plan

Permit Application Number

Site Design BMPs

All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement site design BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided.

Site Design Requirement	Applied?		
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-1 not implemented:			
SD-2 Conserve Natural Areas, Soils, and Vegetation	☐ Yes	☐ No	☒ N/A
Discussion / justification if SD-2 not implemented: Site was previously disturbed.			
SD-3 Minimize Impervious Area	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-3 not implemented:			
SD-4 Minimize Soil Compaction	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-4 not implemented:			
SD-5 Impervious Area Dispersion	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-5 not implemented:			

Form I-5 Page 2 of 2, Form Date: March 15, 2016			
Site Design Requirement	**Applied?**		
SD-6 Runoff Collection	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-6 not implemented:			
SD-7 Landscaping with Native or Drought Tolerant Species	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-7 not implemented:			
SD-8 Harvesting and Using Precipitation	☐ Yes	☒ No	☐ N/A
Discussion / justification if SD-8 not implemented: Harvest and reuse of stormwater is not feasible since irrigation demand will be low following rain events and native/low water use plants will be used.			

Summary of PDP Structural BMPs	Form I-6 (PDPs) [March 15, 2016]

Project Identification

Project Name – Marcos Specific Plan

Permit Application Number

PDP Structural BMPs

All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the BMP Design Manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the BMP Design Manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s).

PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative and engineer of record to certify construction of the structural BMPs (see Section 1.12 of the BMP Design Manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the BMP Design Manual).

Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).

Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the BMP Design Manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate.

Based on the geotechnical investigation, percolation rates at the site are very low. Therefore, infiltration BMPs are considered infeasible. Biofiltration BMPs were selected for the majority of the site as the highest performing BMPs that are feasible. Runoff will be collected in gutters, cross gutters, and shallow storm drain, which will direct the runoff to the biofiltration BMPs. The biofiltration BMPs have been sized for both pollutant control and hydromodification mitigation.

In DMA 3, sufficient space for a biofiltration basin is not available due to an existing public sewer line and easement. Here, a proprietary biofiltration unit and underground detention vault will be utilized to satisfy pollutant control and hydromodification requirements.

EPA SWMM was used to model the BMPs for hydromodification mitigation requirements.

The project street frontage on Grand Avenue will be treated utilizing Green Street features. The frontage improvements include addition of a sidewalk and bike path separated from Grand Avenue by a landscaped parkway. The sidewalk and bike path will be sloped to the landscaped parkway which will include street trees where allowed by sight distance constraints. This landscaped parkway and street trees will provide retention and pollutant removal of runoff from the sidewalk and bike path in accordance with Green Street guidance.

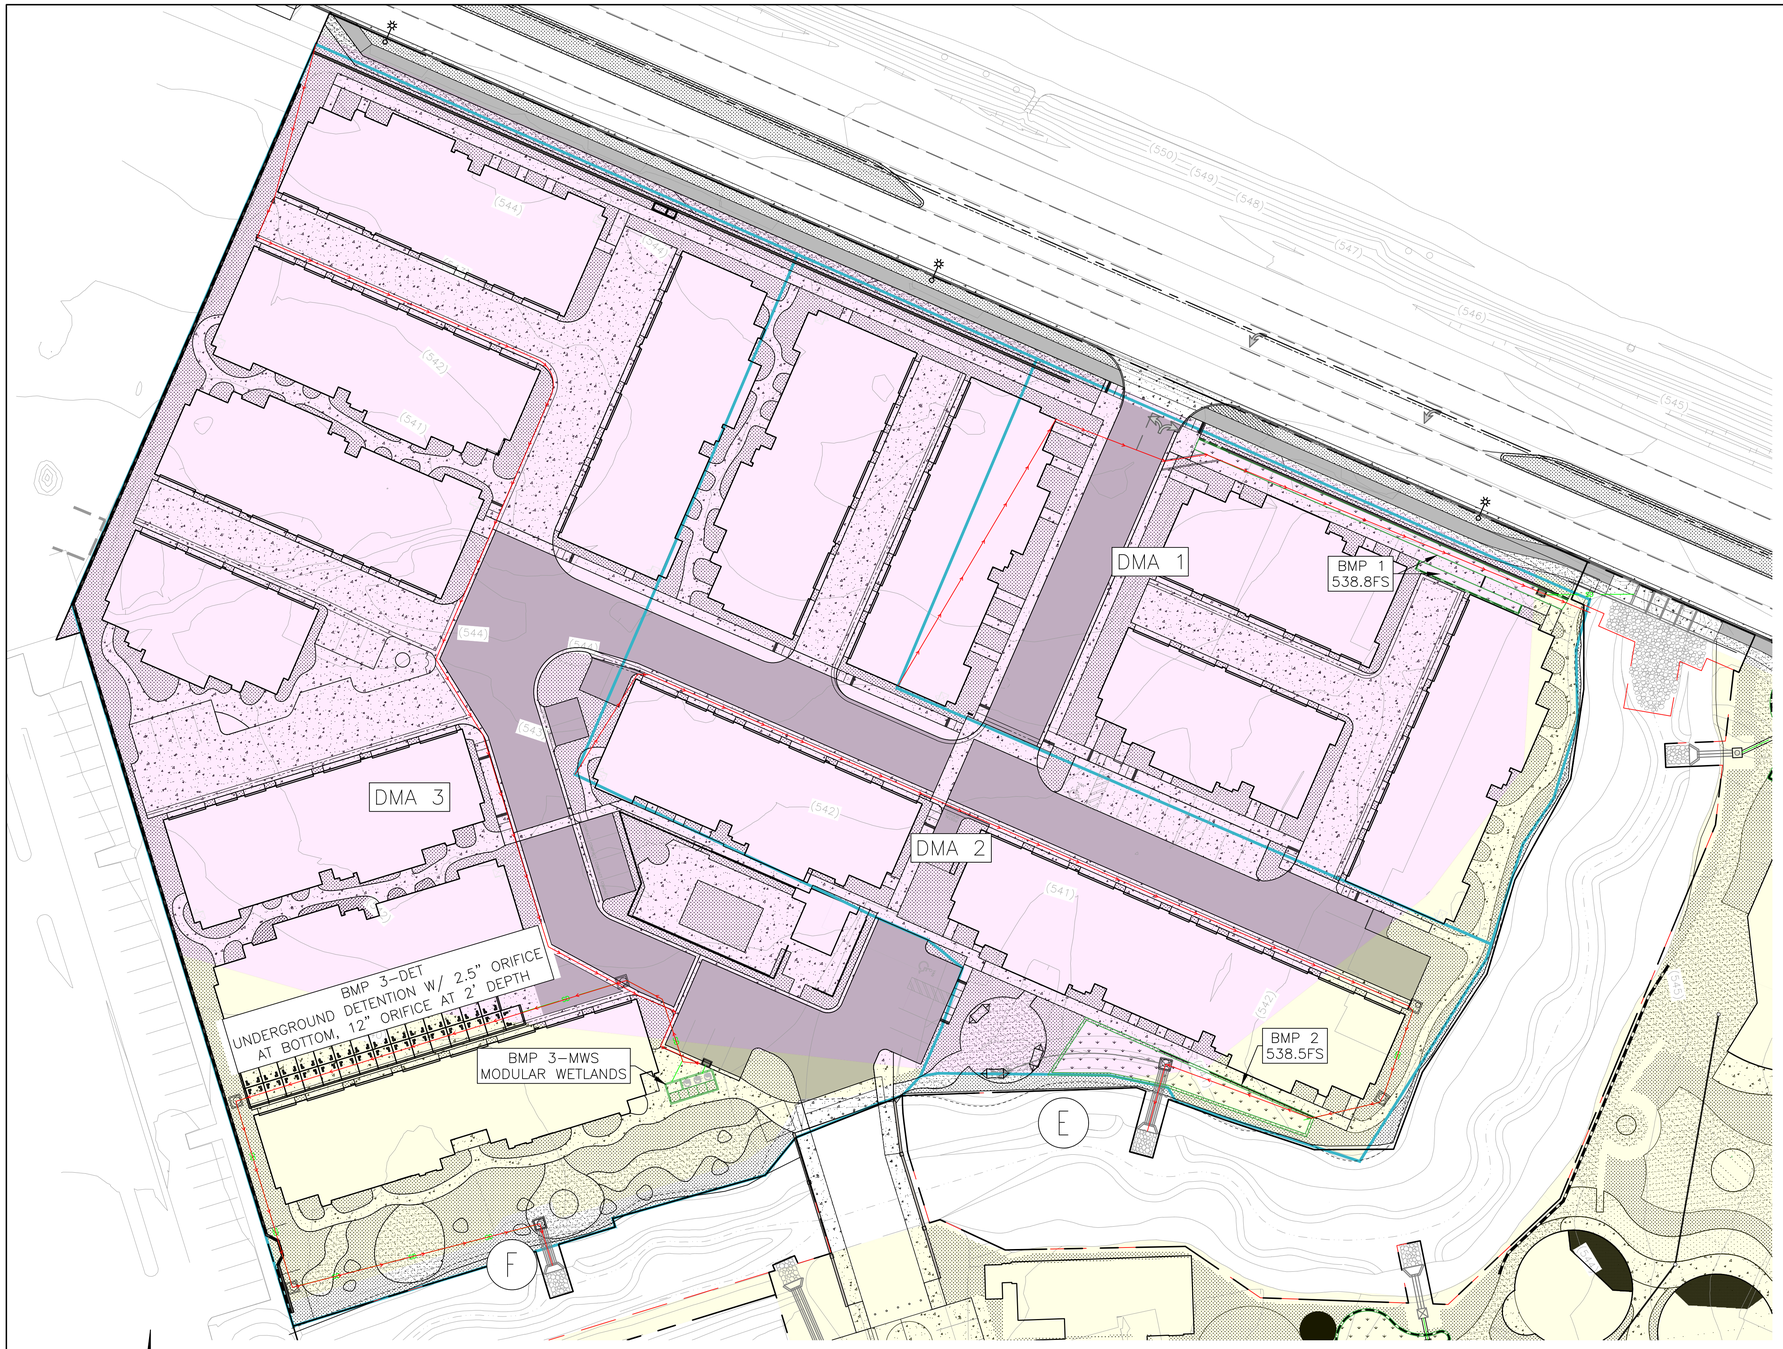
Attachment 1a	DMA Exhibit (Required) See DMA Exhibit Checklist on the back of this Attachment cover sheet.	☐ Included
Attachment 1b	Tabular Summary of DMAs Showing DMA ID matching DMA Exhibit, DMA Area, and DMA Type (Required)* *Provide table in this Attachment OR on DMA Exhibit in Attachment 1a	☐ Included on DMA Exhibit in Attachment 1a ☐ Included as Attachment 1b, separate from DMA Exhibit
Attachment 1c	Form I-7, Harvest and Use Feasibility Screening Checklist (Required unless the entire project will use infiltration BMPs) Refer to Appendix B.3-1 of the BMP Design Manual to complete Form I-7.	☐ Included ☐ Not included because the entire project will use infiltration BMPs
Attachment 1d	Form I-8, Categorization of Infiltration Feasibility Condition (Required unless the project will use harvest and use BMPs) Refer to Appendices C and D of the BMP Design Manual to complete Form I-8.	☐ Included ☐ Not included because the entire project will use harvest and use BMPs
Attachment 1e	Pollutant Control BMP Design Worksheets / Calculations (Required) Refer to Appendices B and E of the BMP Design Manual for structural pollutant control BMP design guidelines	☐ Included

Use this checklist to ensure the required information has been included on the DMA Exhibit:

The DMA Exhibit must identify:

- ☐ Underlying hydrologic soil group
- ☐ Approximate depth to groundwater
- ☐ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- ☐ Critical coarse sediment yield areas to be protected
- ☐ Existing topography and impervious areas
- ☐ Existing and proposed site drainage network and connections to drainage offsite
- ☐ Proposed demolition
- ☐ Proposed grading
- ☐ Proposed impervious features
- ☐ Proposed design features and surface treatments used to minimize imperviousness
- ☐ Drainage management area (DMA) boundaries, DMA ID numbers, and DMA areas (square footage or acreage), and DMA type (i.e., drains to BMP, self-retaining, or self-mitigating)
- ☐ Potential pollutant source areas and corresponding required source controls (see Chapter 4, Appendix E.1, and Form I-3B)
- ☐ Structural BMPs (identify location, type of BMP, and size/detail)



DMA SUMMARY

BIOFILTRATION/PLANTER DETAIL

(BMPS 1 & 2)

DETAIL NOTES:

1. OPTIONAL 3" OF WELL-AGED, SHREDDED HARDWOOD MULCH. PROPOSED LANDSCAPING SHALL BE DROUGHT TOLERANT
2. 18" MEDIA LAYER OF LOAMY SAND TYPE SOIL W/ MIN. FILTRATION RATE = 5 IN./HR. SOIL MEDIA SHALL MEET THE CITY OF SAN DIEGO STORM WATER STANDARDS MANUAL, BIOFILTRATION SOIL MEDIA SPECIFICATION PROVIDED IN APPENDIX F.4 OR COUNTY OF SAN DIEGO LOW IMPACT DEVELOPMENT HANDBOOK: APPENDIX G-BIORETENTION SOIL SPECIFICATION (JUNE 2014, UNLESS SUPERSEDED BY MORE RECENT EDITION).
3. 4" WASHED PEA GRAVEL FILTER COURSE LAYER
4. 12" CLASS 2 PERMEABLE PER CALTRANS SPECIFICATION 68-1.025 WASHED, OPEN-GRADED CRUSHED ROCK AGGREGATE STORAGE LAYER WITH 40% VOID RATIO
5. BOTH SIDES AND BOTTOM OF BIOFILTRATION PLANTER SHALL BE LINED WITH 30 MIL THICK PVC LINER. PROVIDE 18" OVERLAPPED, THERMAL WELDED SEAMS AT ALL SEAMS. PLACE NON-WOVEN FILTER FABRIC (MIRAFI 140N OR EQUAL) ON EITHER SIDE OF PVC LINER TO PROTECT LINER FROM PUNCTURE ON ALL SIDES, "SANDWICHING" THE PVC LINER WITH A FABRIC CUSHION.
6. 4" PVC EQUALIZATION PIPE @ 0% SLOPE FOR LINEAR BIOFILTRATIONS IF APPLICABLE
7. 6" PERFORATED PIPES @ +3" BOTTOM OF PLANTER WITH CLEANOUTS AND 1" ORIFICE AT CATCH BASIN

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS' SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL PIPES, RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO USE GROUT AND/OR BRICKS TO MATCH COVERS WITH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS. ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING CONTECH FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A CONTECH REPRESENTATIVE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT CONTECH.

36 hr. Demand < 0.25DCV	Yes	
Harvest Use:	Not Feasible	

Harvest and use is considered to be infeasible

Categorization of Infiltration Feasibility Condition — Form I-8

Part 1 – Full Infiltration Feasibility Screening Criteria

Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
1	**Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

2	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

3	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, storm water pollutants or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

4	**Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

Part 1 Result*	If all answers to rows 1-4 are "**Yes**" a full infiltration design is potentially feasible. The feasibility screening category is **Full Infiltration.** If any answer from row 1-4 is "**No**", infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a "full infiltration" design. Proceed to Part 2	**Full Infiltration Feasible** ☐	**Full Infiltration Infeasible** ☒

*To be completed using gathered site information and best professional judgement considering the definition of MEP in the MS4 permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings.

Categorization of Infiltration Feasibility Condition

Form I-8

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria

Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	**Do soil and geologic conditions allow for infiltration in any appreciable rate or volume?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

6	**Can infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.	☒	☐

Provide basis:

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

7	**Can infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, storm water pollutants or other factors)?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☒	☐
Provide basis: Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
8	**Can infiltration be allowed without violating downstream water rights?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☒	☐
Provide basis: Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
Part 2 Result*	If all answers to rows 1-4 are "**Yes**" a partial infiltration design is potentially feasible. The feasibility screening category is **Partial Infiltration.** If any answer from row 5-8 is "**No**", infiltration of any volume is considered to be **infeasible** within the drainage area. The feasibility screening category is **No Infiltration.**	**Partial Infiltration** ☐	**No Infiltration** ☒

*To be completed using gathered site information and best professional judgement considering the definition of MEP in the MS4 permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings.

B.6.3 Sizing Flow-Thru Treatment Control BMPs:

Flow-thru treatment control BMPs shall be sized to filter or treat the maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour of every storm event. The required flow-thru treatment rate should be adjusted for the portion of the DCV already retained or biofiltered onsite as described in Worksheet B.6-1. The following hydrologic method shall be used to calculate the flow rate to be filtered or treated:

$$Q = C \times i \times A$$

Where:

Q = Design flow rate in cubic feet per second

C = Runoff factor, area-weighted estimate using Table B.1-1.

i = Rainfall intensity of 0.2 in/hr.

A = Tributary area (acres) which includes the total area draining to the BMP, including any offsite or onsite areas that comingle with project runoff and drain to the BMP. Refer to Section 3.3.3 for additional guidance. Street projects consult Section 1.4.3.

Worksheet B.6-1: Flow-Thru Design Flows

Flow-thru Design Flows		Worksheet B.6-1		
1	DCV	DCV	5,332	cubic-feet
2	DCV retained	$DCV_{retained}$	0	cubic-feet
3	DCV biofiltered	$DCV_{biofiltered}$	0	cubic-feet
4	DCV requiring flow-thru (Line 1 – Line 2 – 0.67*Line 3)	$DCV_{flow\text{-}thru}$	5,332	cubic-feet
5	Adjustment factor (Line 4 / Line 1)*	AF=	1.5*	unitless
6	Design rainfall intensity	i=	0.20	in/hr
7	Area tributary to BMP (s)	A=	2.64	acres
8	Area-weighted runoff factor (estimate using Appendix B.2)	C=	0.73	unitless
9	Calculate Flow Rate = AF x (C x i x A)	Q=	0.58	cfs

1) Adjustment factor shall be estimated considering only retention and biofiltration BMPs located upstream of flow-thru BMPs. That is, if the flow-thru BMP is upstream of the project's retention and biofiltration BMPs then the flow-thru BMP shall be sized using an adjustment factor of 1.

2) Volume based (e.g., dry extended detention basin) flow-thru treatment control BMPs shall be sized to the volume in Line 4 and flow based (e.g., vegetated swales) shall be sized to flow rate in Line 9. Sand filter and media filter can be designed either by volume in Line 4 or flow rate in Line 9.

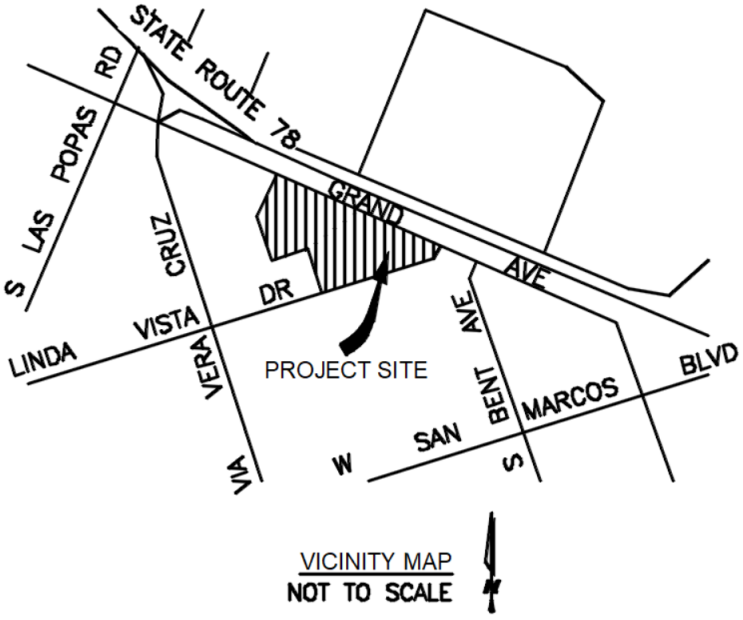
3) Proprietary BMPs, if used, shall provide certified treatment capacity equal to or greater than the calculated flow rate in Line 9; certified treatment capacity per unit shall be consistent with third party certifications.

* - Per City of San Marcos BMP Design Manual, proprietary biofiltration requires treatment of 1.5 times the DVC

INTRODUCTION

Project Description:

The Marcos project consists of approximately 10.8 acres near the southwest corner of the Linda Vista Drive and Grand Avenue intersection in the city of San Marcos, California. The project is bisected by a channel which separates the project into two development areas. The 5.0 acres north of the channel will be used to develop 102 condominium residential units while the 5.8 acres south of the channel will be developed for commercial and mixed use.



Existing Conditions:

The existing site consists of two development area that were previously commercial pads but have had the buildings demolished. From an aerial view, both areas visually appear flat. The channel was recently improved by the City of San Marcos (CIP Project Code 88214, "Grand Avenue Drainage / Road Improvements", IP-4826 and VWD no. 201930). Please reference Appendix 7 in the Drainage Report for channel improvement drawings. Each development area had new storm drain added to collect runoff from the pads and discharge into the improved channel. A bridge was constructed to link the two development areas.

Proposed Conditions:

In the proposed condition, onsite drainage will be covered by a separate SWQMP. Proposed public improvements around the site will be treated by green street elements including trees. Ultimately, the proposed development areas will be re-graded to ensure that the runoff is routed to the channel.

Green Street Elements

Public improvement treatment will be provided by private green street element trees. Proposed trees would capture storm water, provide shade, and cool pavement.

Water Quality Compliance:

The proposed project would not require Regional Water Quality Control Board Section 401 Certification or a U.S. Army Corps of Engineers 404 permit. The project site is fully developed and devoid of natural vegetation and habitat.

Operation/Maintenance:

Green street elements would fall under the responsibility of would be formed Homeowners Association.

Applicability of Storm Water Best Management Practices (BMP) Requirements (Storm Water Intake Form for all Development Permit Applications) For detailed information please visit: http://www.san-marcos.net/departments/development-services/stormwater/development-planning	Form I-1 Version 1.0 [March 15, 2016]

Project Identification

Project Name: Marcos Project	
Description: Proposed development of residential and commerical use buildings	
Permit Application Number (if applicable):	Date: 2022/10/5
Project Address: Grand Avenue and Linda Vista Drive	

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:
http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above, Is the project a "development project"? (see definition above) See Section 1.3 of the BMP Design Manual for further guidance if necessary.	☒ Yes	Go to Step 2.
	☐ No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. **STOP.**
Discussion / justification if the project is not a "development project" (e.g., the project includes *only* interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? **To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual *in its entirety* for guidance.** **In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.**	☐ Standard Project	Only Standard Project requirements apply, including Standard Project SWQMP. **STOP.**
	☒ PDP	Standard and PDP requirements apply, including PDP SWQMP. **Go to Step 3 on the following page.**
	☐ Exception to PDP definitions	Standard Project requirements apply, and any additional requirements specific to the type of project. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP. **STOP.**
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2		
Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements reply to the proposed PDP. Does the project:		
Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Hydromodification requirements apply to the project. Go to Step 4.
Discussion / justification if hydromodification control requirements do <u>not</u> apply:		
Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	☐ Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	☐ No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop.

ATTACHMENT 2
BACKUP FOR PDP HYDROMODIFICATION CONTROL MEASURES

This is the cover sheet for Attachment 2.

☐ Mark this box if this attachment is empty because the project is exempt from PDP hydromodification management requirements.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	**Contents**	**Checklist**
Attachment 2a	Hydromodification Management Exhibit (Required)	☐ Included See Hydromodification Management Exhibit Checklist on the back of this Attachment cover sheet.
Attachment 2b	Management of Critical Coarse Sediment Yield Areas (WMAA Exhibit is required, additional analyses are optional) See Section 6.2 of the BMP Design Manual.	☐ Exhibit showing project drainage boundaries marked on WMAA Critical Coarse Sediment Yield Area Map (Required) Optional analyses for Critical Coarse Sediment Yield Area Determination ☐ 6.2.1 Verification of Geomorphic Landscape Units Onsite ☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment ☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
Attachment 2c	Geomorphic Assessment of Receiving Channels (Optional) See Section 6.3.4 of the BMP Design Manual.	☐ Not performed ☐ Included ☐ Submitted as separate stand-alone document
Attachment 2d	Flow Control Facility Design, including Structural BMP Drawdown Calculations and Overflow Design Summary (Required) See Chapter 6 and Appendix G of the BMP Design Manual	☐ Included ☐ Submitted as separate stand-alone document
Attachment 2e	Vector Control Plan (Required when structural BMPs will not drain in 96 hours)	☐ Included ☐ Not required because BMPs will drain in less than 96 hours

Use this checklist to ensure the required information has been included on the Hydromodification Management Exhibit:

The Hydromodification Management Exhibit must identify:

- ☐ Underlying hydrologic soil group
- ☐ Approximate depth to groundwater
- ☐ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- ☐ Critical coarse sediment yield areas to be protected
- ☐ Existing topography
- ☐ Existing and proposed site drainage network and connections to drainage offsite
- ☐ Proposed grading
- ☐ Proposed impervious features
- ☐ Proposed design features and surface treatments used to minimize imperviousness
- ☐ Point(s) of Compliance (POC) for Hydromodification Management
- ☐ Existing and proposed drainage boundary and drainage area to each POC (when necessary, create separate exhibits for pre-development and post-project conditions)
- ☐ Structural BMPs for hydromodification management (identify location, type of BMP, and size/detail)

REACH ID	NAME
1	Santa Margarita River
2	San Luis Rey River
3	Buena Vista Creek
4	Agua Hedionda Creek
5	San Marcos Creek
6	Encinitas Creek
7	Cottonwood Creek (Carlsbad WMA)
8	Escondido Creek
9	San Dieguito Creek - Reach 1
10	San Dieguito Creek - Reach 2
11	Lusardi Creek
12	Los Penasquitos / Poway Creek
13	Rattlesnake Creek
14	Carroll Canyon Creek
15	Rose Creek
16	San Diego River
17	Sycamore Creek
18	Woodglen Vista Creek
19	San Vicente Creek
20	Forester Creek
21	Chollas Creek
22	Sweetwater River - Reach 1
23	Sweetwater River - Reach 2
24	Otay River
25	Jamul / Dulzura Creek
26	Tijuana River
27	Cottonwood Creek (Tijuana WMA)

Potential Critical Coarse Sediment Yield Areas

Regional San Diego County Watersheds

Exhibit Date: Sept. 8, 2014

ATTACHMENT 3
Structural BMP Maintenance Information

This is the cover sheet for Attachment 3.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 3a	Structural BMP Maintenance Thresholds and Actions (Required)	☐ Included See Structural BMP Maintenance Information Checklist on the back of this Attachment cover sheet.
Attachment 3b	Draft Maintenance Agreement (when applicable)	☐ Included ☐ Not Applicable

Use this checklist to ensure the required information has been included in the Structural BMP Maintenance Information Attachment:

☐ **Preliminary Design / Planning / CEQA level submittal:**

Attachment 3a must identify:

- ☐ Typical maintenance indicators and actions for proposed structural BMP(s) based on Section 7.7 of the BMP Design Manual

Attachment 3b is not required for preliminary design / planning / CEQA level submittal.

☐ **Final Design level submittal:**

Attachment 3a must identify:

- ☐ Specific maintenance indicators and actions for proposed structural BMP(s). This shall be based on Section 7.7 of the BMP Design Manual and enhanced to reflect actual proposed components of the structural BMP(s)
- ☐ How to access the structural BMP(s) to inspect and perform maintenance
- ☐ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- ☐ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- ☐ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- ☐ Recommended equipment to perform maintenance
- ☐ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management

Attachment 3b: For private entity operation and maintenance, Attachment 3b shall include a draft maintenance agreement in the local jurisdiction's standard format (PDP applicant to contact the [City Engineer] to obtain the current maintenance agreement forms).

E.18 BF-1 Biofiltration

Location: 43rd Street and Logan Avenue, San Diego, California

MS4 Permit Category
Biofiltration

Manual Category
Biofiltration

Applicable Performance Standard
Pollutant Control
Flow Control

Primary Benefits
Treatment
Volume Reduction (Incidental)
Peak Flow Attenuation (Optional)

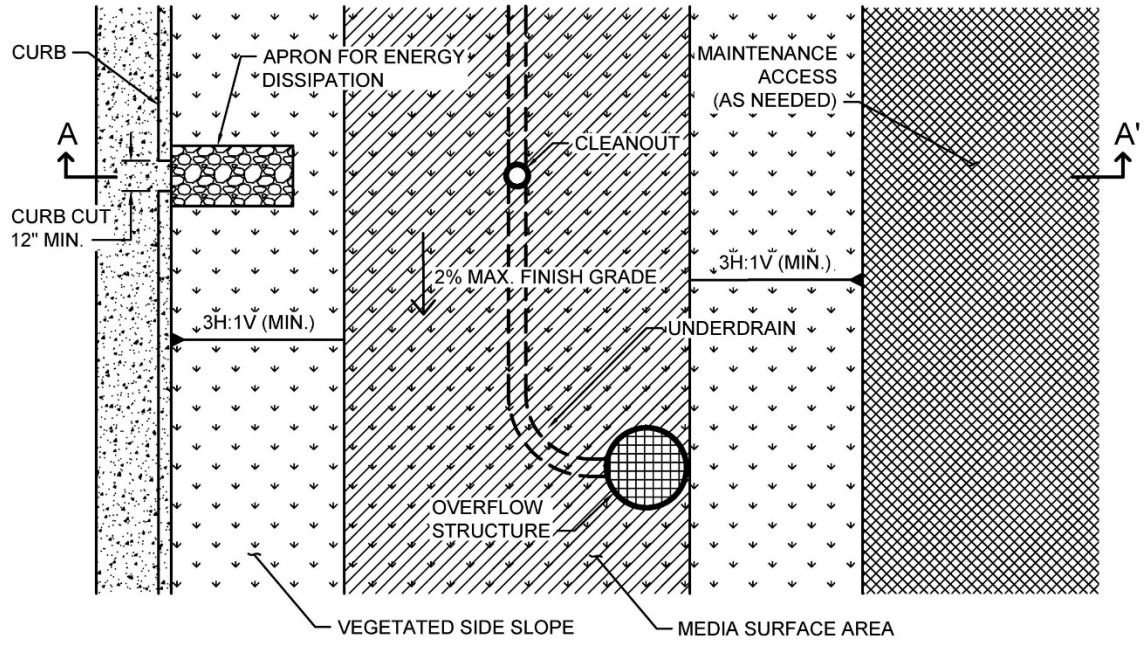
Description

Biofiltration (Bioretention with underdrain) facilities are vegetated surface water systems that filter water through vegetation, and soil or engineered media prior to discharge via underdrain or overflow to the downstream conveyance system. Bioretention with underdrain facilities are commonly incorporated into the site within parking lot landscaping, along roadsides, and in open spaces. Because these types of facilities have limited or no infiltration, they are typically designed to provide enough hydraulic head to move flows through the underdrain connection to the storm drain system. Treatment is achieved through filtration, sedimentation, sorption, biochemical processes and plant uptake.

Typical bioretention with underdrain components include:

- Inflow distribution mechanisms (e.g, perimeter flow spreader or filter strips)
- Energy dissipation mechanism for concentrated inflows (e.g., splash blocks or riprap)
- Shallow surface ponding for captured flows
- Side slope and basin bottom vegetation selected based on expected climate and ponding depth
- Non-floating mulch layer (Optional)
- Media layer (planting mix or engineered media) capable of supporting vegetation growth
- Filter course layer consisting of aggregate to prevent the migration of fines into uncompacted native soils or the aggregate storage layer
- Aggregate storage layer with underdrain(s)

- Impermeable liner or uncompacted native soils at the bottom of the facility
- Overflow structure



PLAN

Typical plan and Section view of a Biofiltration BMP

Design Adaptations for Project Goals

Biofiltration Treatment BMP for storm water pollutant control. The system is lined or un-lined to provide incidental infiltration, and an underdrain is provided at the bottom to carry away filtered runoff. This configuration is considered to provide biofiltration treatment via flow through the media layer. Storage provided above the underdrain within surface ponding, media, and aggregate storage is considered included in the biofiltration treatment volume. Saturated storage within the aggregate storage layer can be added to this design by raising the underdrain above the bottom of the aggregate storage layer or via an internal weir structure designed to maintain a specific water level elevation.

Integrated storm water flow control and pollutant control configuration. The system can be designed to provide flow rate and duration control by primarily providing increased surface ponding and/or having a deeper aggregate storage layer above the underdrain. This will allow for significant detention storage, which can be controlled via inclusion of an outlet structure at the downstream end of the underdrain.

Recommended Siting Criteria

Siting Criteria		*Intent/Rationale*
☐	Placement observes geotechnical recommendations regarding potential hazards (e.g., slope stability, landslides, liquefaction zones) and setbacks (e.g., slopes, foundations, utilities).	Must not negatively impact existing site geotechnical concerns.
☐	An impermeable liner or other hydraulic restriction layer is included if site constraints indicate that infiltration or lateral flows should not be allowed.	Lining prevents storm water from impacting groundwater and/or sensitive environmental or geotechnical features. Incidental infiltration, when allowable, can aid in pollutant removal and groundwater recharge.
☐	Contributing tributary area shall be ≤ 5 acres (≤ 1 acre preferred).	Bigger BMPs require additional design features for proper performance. Contributing tributary area greater than 5 acres may be allowed at the discretion of the [City Engineer} if the following conditions are met: 1) incorporate design features (e.g. flow spreaders) to minimizing short circuiting of flows in the

Siting Criteria	*Intent/Rationale*
	BMP and 2) incorporate additional design features requested by the [City Engineer] for proper performance of the regional BMP.
☐ Finish grade of the facility is ≤ 2%.	Flatter surfaces reduce erosion and channelization within the facility.

Recommended BMP Component Dimensions

BMP Component	*Dimension*	*Intent/Rationale*
Freeboard	≥ 12 inches	Freeboard provides room for head over overflow structures and minimizes risk of uncontrolled surface discharge.
Surface Ponding	≥ 6 and ≤ 12 inches	Surface ponding capacity lowers subsurface storage requirements. Deep surface ponding raises safety concerns. Surface ponding depth greater than 12 inches (for additional pollutant control or surface outlet structures or flow-control orifices) may be allowed at the discretion of the [City Engineer] if the following conditions are met: 1) surface ponding depth drawdown time is less than 24 hours; and 2) safety issues and fencing requirements are considered (typically ponding greater than 18" will require a fence and/or flatter side slopes) and 3) potential for elevated clogging risk is considered.
Ponding Area Side Slopes	3H:1V or shallower	Gentler side slopes are safer, less prone to erosion, able to establish vegetation more quickly and easier to maintain.
Mulch	≥ 3 inches	Mulch will suppress weeds and maintain moisture for plant growth. Aging mulch kills pathogens and weed seeds and allows the beneficial microbes to multiply.

Media Layer	≥ 18 inches	A deep media layer provides additional filtration and supports plants with deeper roots. Standard specifications shall be followed. For non-standard or proprietary designs, compliance with F.1 ensures that adequate treatment performance will be provided.
Underdrain Diameter	≥ 6 inches	Smaller diameter underdrains are prone to clogging.
Cleanout Diameter	≥ 6 inches	Properly spaced cleanouts will facilitate underdrain maintenance.

Design Criteria and Considerations

Bioretention with underdrain must meet the following design criteria. Deviations from the below criteria may be approved at the discretion of the [City Engineer] if it is determined to be appropriate:

Siting and Design		*Intent/Rationale*
Surface Ponding		
☐	Surface ponding is limited to a 24-hour drawdown time.	Surface ponding limited to 24 hours for plant health. Surface ponding drawdown time greater than 24-hours but less than 96 hours may be allowed at the discretion of the [City Engineer] if certified by a landscape architect or agronomist.
Vegetation		
☐	Plantings are suitable for the climate and expected ponding depth. A plant list to aid in selection can be found in Appendix E.20.	Plants suited to the climate and ponding depth are more likely to survive.
☐	An irrigation system with a connection to water supply should be provided as needed.	Seasonal irrigation might be needed to keep plants healthy.
Mulch (Optional or Mandatory – Dependent on jurisdiction)		
☐	A minimum of 3 inches of well-aged, shredded hardwood mulch that has been stockpiled or stored for at least 12 months is provided.	Mulch will suppress weeds and maintain moisture for plant growth. Aging mulch kills pathogens and weed seeds and allows the beneficial microbes to multiply.

Siting and Design		*Intent/Rationale*
Media Layer		
☐	Media maintains a minimum filtration rate of 5 in/hr over lifetime of facility. An initial filtration rate of 8 to 12 in/hr is recommended to allow for clogging over time; the initial filtration rate should not exceed 12 inches per hour.	A filtration rate of at least 5 inches per hour allows soil to drain between events. The initial rate should be higher than long term target rate to account for clogging over time. However an excessively high initial rate can have a negative impact on treatment performance, therefore an upper limit is needed.
☐	Media is a minimum 18 inches deep, meeting either of these two media specifications: Section F.3 Bioretention Soil Media (BSM) or specific jurisdictional guidance. Alternatively, for proprietary designs and custom media mixes not meeting the media specifications contained in the 2016 City Storm Water Standards or County LID Manual, the media meets the pollutant treatment performance criteria in Section F.1.	A deep media layer provides additional filtration and supports plants with deeper roots. Standard specifications shall be followed. For non-standard or proprietary designs, compliance with F.1 ensures that adequate treatment performance will be provided.
☐	Media surface area is 3% of contributing area times adjusted runoff factor or greater. Unless demonstrated that the BMP surface area can be smaller than 3%.	Greater surface area to tributary area ratios: a) maximizes volume retention as required by the MS4 Permit and b) decrease loading rates per square foot and therefore increase longevity. Adjusted runoff factor is to account for site design BMPs implemented upstream of the BMP (such as rain barrels, impervious area dispersion, etc.). Refer to Appendix B.2 guidance. Use Worksheet B.5-1 Line 26 to estimate the minimum surface area required per this criteria.
☐	Where receiving waters are impaired or have a TMDL for nutrients, the system is designed with nutrient sensitive media design (see fact sheet BF-2).	Potential for pollutant export is partly a function of media composition; media design must minimize potential for export of nutrients, particularly where receiving waters are impaired for nutrients.

Siting and Design		*Intent/Rationale*
Filter Course Layer		
☐	A filter course is used to prevent migration of fines through layers of the facility. Filter fabric is not used.	Migration of media can cause clogging of the aggregate storage layer void spaces or subgrade. Filter fabric is more likely to clog.
☐	Filter course is washed and free of fines.	Washing aggregate will help eliminate fines that could clog the facility and impede infiltration.
☐	Filter course calculations assessing suitability for particle migration prevention have been completed.	Gradation relationship between layers can evaluate factors (e.g., bridging, permeability, and uniformity) to determine if particle sizing is appropriate or if an intermediate layer is needed.
Aggregate Storage Layer		
☐	Class 2 Permeable per Caltrans specification 68-1.025 is recommended for the storage layer. Washed, open-graded crushed rock may be used, however a 4-6 inch washed pea gravel filter course layer at the top of the crushed rock is required.	Washing aggregate will help eliminate fines that could clog the aggregate storage layer void spaces or subgrade.
☐	The depth of aggregate provided (12-inch typical) and storage layer configuration is adequate for providing conveyance for underdrain flows to the outlet structure.	Proper storage layer configuration and underdrain placement will minimize facility drawdown time.
Inflow, Underdrain, and Outflow Structures		
☐	Inflow, underdrains and outflow structures are accessible for inspection and maintenance.	Maintenance will prevent clogging and ensure proper operation of the flow control structures.
☐	Inflow velocities are limited to 3 ft/s or less or use energy dissipation methods. (e.g., riprap, level spreader) for concentrated inflows.	High inflow velocities can cause erosion, scour and/or channeling.
☐	Curb cut inlets are at least 12 inches wide, have a 4-6 inch reveal (drop) and an apron and energy dissipation as needed.	Inlets must not restrict flow and apron prevents blockage from vegetation as it grows in. Energy dissipation prevents erosion.

Siting and Design		*Intent/Rationale*
☐	Underdrain outlet elevation should be a minimum of 3 inches above the bottom elevation of the aggregate storage layer.	A minimal separation from subgrade or the liner lessens the risk of fines entering the underdrain and can improve hydraulic performance by allowing perforations to remain unblocked.
☐	Minimum underdrain diameter is 6 inches.	Smaller diameter underdrains are prone to clogging.
☐	Underdrains are made of slotted, PVC pipe conforming to ASTM D 3034 or equivalent or corrugated, HDPE pipe conforming to AASHTO 252M or equivalent.	Slotted underdrains provide greater intake capacity, clog resistant drainage, and reduced entrance velocity into the pipe, thereby reducing the chances of solids migration.
☐	An underdrain cleanout with a minimum 6-inch diameter and lockable cap is placed every 250 to 300 feet as required based on underdrain length.	Properly spaced cleanouts will facilitate underdrain maintenance.
☐	Overflow is safely conveyed to a downstream storm drain system or discharge point Size overflow structure to pass 100-year peak flow for on-line infiltration basins and water quality peak flow for off-line basins.	Planning for overflow lessens the risk of property damage due to flooding.

Conceptual Design and Sizing Approach for Storm Water Pollutant Control Only

To design bioretention with underdrain for storm water pollutant control only (no flow control required), the following steps should be taken:

1. Verify that siting and design criteria have been met, including placement requirements, contributing tributary area, maximum side and finish grade slopes, and the recommended media surface area tributary ratio.
2. Calculate the DCV per Appendix B based on expected site design runoff for tributary areas.
3. Use the sizing worksheet presented in Appendix B.5 to size biofiltration BMPs.

Conceptual Design and Sizing Approach when Storm Water Flow Control is Applicable

Control of flow rates and/or durations will typically require significant surface ponding and/or aggregate storage volumes, and therefore the following steps should be taken prior to determination of storm water pollutant control design. Pre-development and allowable post-project flow rates and durations should be determined as discussed in Chapter 6 of the manual.

1. Verify that siting and design criteria have been met, including placement requirements, contributing tributary area, maximum side and finish grade slopes, and the recommended media surface area tributary ratio.
2. Iteratively determine the facility footprint area, surface ponding and/or aggregate storage layer depth required to provide detention storage to reduce flow rates and durations to allowable limits. Flow rates and durations can be controlled from detention storage by altering outlet structure orifice size(s) and/or water control levels. Multi-level orifices can be used within an outlet structure to control the full range of flows.
3. If bioretention with underdrain cannot fully provide the flow rate and duration control required by this manual, an upstream or downstream structure with significant storage volume such as an underground vault can be used to provide remaining controls.
4. After bioretention with underdrain has been designed to meet flow control requirements, calculations must be completed to verify if storm water pollutant control requirements to treat the DCV have been met.

Maintenance Overview

Normal Expected Maintenance. Biofiltration requires routine maintenance to: remove accumulated materials such as sediment, trash or debris; maintain vegetation health; maintain infiltration capacity of the media layer; replenish mulch; and maintain integrity of side slopes, inlets, energy dissipators, and outlets. A summary table of standard inspection and maintenance indicators is provided within this Fact Sheet.

Non-Standard Maintenance or BMP Failure. If any of the following scenarios are observed, the BMP is not performing as intended to protect downstream waterways from pollution and/or erosion. Corrective maintenance, increased inspection and maintenance, BMP replacement, or a different BMP type will be required.

- The BMP is not drained between storm events. Surface ponding longer than approximately 24 hours following a storm event may be detrimental to vegetation health, and surface ponding longer than approximately 96 hours following a storm event poses a risk of vector (mosquito) breeding. Poor drainage can result from clogging of the media layer, filter course, aggregate storage layer, underdrain, or outlet structure. The specific cause of the drainage issue must be determined and corrected.
- Sediment, trash, or debris accumulation greater than 25% of the surface ponding volume within one month. This means the load from the tributary drainage area is too high, reducing BMP function or clogging the BMP. This would require pretreatment measures within the tributary area draining to the BMP to intercept the materials. Pretreatment components, especially for sediment, will extend the life of components that are more expensive to replace such as media, filter course, and aggregate layers.

- Erosion due to concentrated storm water runoff flow that is not readily corrected by adding erosion control blankets, adding stone at flow entry points, or minor re-grading to restore proper drainage according to the original plan. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.

Other Special Considerations. Biofiltration is a vegetated structural BMP. Vegetated structural BMPs that are constructed in the vicinity of, or connected to, an existing jurisdictional water or wetland could inadvertently result in creation of expanded waters or wetlands. As such, vegetated structural BMPs have the potential to come under the jurisdiction of the United States Army Corps of Engineers, SDRWQCB, California Department of Fish and Wildlife, or the United States Fish and Wildlife Service. This could result in the need for specific resource agency permits and costly mitigation to perform maintenance of the structural BMP. Along with proper placement of a structural BMP, routine maintenance is key to preventing this scenario.

Sediment Loading. Consider the effects of BMP design and tributary area land uses on the clogging potential of the BMP. Complete the sediment loading analysis included in Appendix E.27.

Summary of Standard Inspection and Maintenance

The property owner is responsible to ensure inspection, operation and maintenance of permanent BMPs on their property unless responsibility has been formally transferred to an agency, community facilities district, homeowners association, property owners association, or other special district.

Maintenance frequencies listed in this table are average/typical frequencies. Actual maintenance needs are site-specific, and maintenance may be required more frequently. Maintenance must be performed whenever needed, based on maintenance indicators presented in this table. The BMP owner is responsible for conducting regular inspections to see when maintenance is needed based on the maintenance indicators. During the first year of operation of a structural BMP, inspection is recommended at least once prior to August 31 and then monthly from September through May. Inspection during a storm event is also recommended. After the initial period of frequent inspections, the minimum inspection and maintenance frequency can be determined based on the results of the first year inspections.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials, without damage to the vegetation or compaction of the media layer.	• Inspect monthly. If the BMP is 25% full* or more in one month, increase inspection frequency to monthly plus after every 0.1-inch or larger storm event. • Remove any accumulated materials found at each inspection.
Obstructed inlet or outlet structure	Clear blockage.	• Inspect monthly and after every 0.5-inch or larger storm event. • Remove any accumulated materials found at each inspection.
Damage to structural components such as weirs, inlet or outlet structures	Repair or replace as applicable	• Inspect annually. • Maintain when needed.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Poor vegetation establishment	Re-seed, re-plant, or re-establish vegetation per original plans.	• Inspect monthly. • Maintain when needed.
Dead or diseased vegetation	Remove dead or diseased vegetation, re-seed, re-plant, or re-establish vegetation per original plans.	• Inspect monthly. • Maintain when needed.
Overgrown vegetation	Mow or trim as appropriate.	• Inspect monthly. • Maintain when needed.
2/3 of mulch has decomposed, or mulch has been removed	Remove decomposed fraction and top off with fresh mulch to a total depth of 3 inches.	• Inspect monthly. • Replenish mulch annually, or more frequently when needed based on inspection.
Erosion due to concentrated irrigation flow	Repair/re-seed/re-plant eroded areas and adjust the irrigation system.	• Inspect monthly. • Maintain when needed.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Erosion due to concentrated storm water runoff flow	Repair/re-seed/re-plant eroded areas, and make appropriate corrective measures such as adding erosion control blankets, adding stone at flow entry points, or minor re-grading to restore proper drainage according to the original plan. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.	• Inspect after every 0.5-inch or larger storm event. If erosion due to storm water flow has been observed, increase inspection frequency to after every 0.1-inch or larger storm event. • Maintain when needed. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.
Standing water in BMP for longer than 24 hours following a storm event Surface ponding longer than approximately 24 hours following a storm event may be detrimental to vegetation health	Make appropriate corrective measures such as adjusting irrigation system, removing obstructions of debris or invasive vegetation, clearing underdrains, or repairing/replacing clogged or compacted soils.	• Inspect monthly and after every 0.5-inch or larger storm event. If standing water is observed, increase inspection frequency to after every 0.1-inch or larger storm event. • Maintain when needed.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Presence of mosquitos/larvae For images of egg rafts, larva, pupa, and adult mosquitos, see http://www.mosquito.org/biology	If mosquitos/larvae are observed: first, immediately remove any standing water by dispersing to nearby landscaping; second, make corrective measures as applicable to restore BMP drainage to prevent standing water. If mosquitos persist following corrective measures to remove standing water, or if the BMP design does not meet the 96-hour drawdown criteria due to release rates controlled by an orifice installed on the underdrain, the [City Engineer] shall be contacted to determine a solution. A different BMP type, or a Vector Management Plan prepared with concurrence from the County of San Diego Department of Environmental Health, may be required.	• Inspect monthly and after every 0.5-inch or larger storm event. If mosquitos are observed, increase inspection frequency to after every 0.1-inch or larger storm event. • Maintain when needed.
Underdrain clogged	Clear blockage.	Inspect if standing water is observed for longer than 24-96 hours following a storm event. Maintain when needed.

"25% full" is defined as ¼ of the depth from the design bottom elevation to the crest of the outflow structure (e.g., if the height to the outflow opening is 12 inches from the bottom elevation, then the materials must be removed when there is 3 inches of accumulation – this should be marked on the outflow structure).

ATTACHMENT 4
Copy of Plan Sheets Showing Permanent Storm Water BMPs

This is the cover sheet for Attachment 4.

Use this checklist to ensure the required information has been included on the plans:

The plans must identify:

- ☐ Structural BMP(s) with ID numbers matching Form I-6 Summary of PDP Structural BMPs
- ☐ The grading and drainage design shown on the plans must be consistent with the delineation of DMAs shown on the DMA exhibit
- ☐ Details and specifications for construction of structural BMP(s)
- ☐ Signage indicating the location and boundary of structural BMP(s) as required by the [City Engineer]
- ☐ How to access the structural BMP(s) to inspect and perform maintenance
- ☐ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- ☐ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- ☐ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- ☐ Recommended equipment to perform maintenance
- ☐ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
- ☐ Include landscaping plan sheets showing vegetation requirements for vegetated structural BMP(s)
- ☐ All BMPs must be fully dimensioned on the plans
- ☐ When proprietary BMPs are used, site-specific cross section with outflow, inflow, and model number shall be provided. Photocopies of general brochures are not acceptable.

PREPARER'S CERTIFICATION

I hereby declare that I am the Engineer in Responsible Charge of design of storm water best management practices (BMPs) for this project, and that I have exercised responsible charge over the design of the BMPs as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the PDP requirements of the [INSERT AGENCY NAME] BMP Design Manual, which is a design manual for compliance with local [INSERT AGENCY NAME] and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

I have read and understand that the [City Engineer] has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this PDP SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this PDP SWQMP by the [City Engineer] is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

PDP SWQMP PROJECT OWNER'S CERTIFICATION PAGE – AOA SAN MARCOS, LLC

Project Name: MARCOS SPECIFIC PLAN
Permit Application Number: [Insert Permit Application Number]

PROJECT OWNER'S CERTIFICATION

This PDP SWQMP has been prepared for AOA SAN MARCOS, LLC by Fuscoe Engineering, Inc. The PDP SWQMP is intended to comply with the PDP requirements of the City of San Marcos BMP Design Manual, which is a design manual for compliance with local City of San Marcos and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan. Once the undersigned transfers its interests in the property, its successor-in-interest shall bear the aforementioned responsibility to implement the best management practices (BMPs) described within this plan, including ensuring on-going operation and maintenance of structural BMPs. A signed copy of this document shall be available on the subject property into perpetuity.

http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Form I-1
[March 15, 2016]

Project Identification

Project Name: Marcos Specific Plan EastEnd

Description:
Proposed mixed-use development incorporating commercial and multi-family residential uses.

Permit Application Number (if applicable): | Date: 12/19/2022

Project Address: Grand Avenue and Linda Vista Drive

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:
http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above, Is the project a "development project" (See definition above)? See Section 1.3 of the BMP Design Manual for further guidance if necessary.	☒ Yes	Go to Step 2.
	☐ No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. **STOP.**
Discussion / justification if the project is not a "development project" (e.g., the project includes *only* interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? **To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual *in its entirety* for guidance.** **In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.**	☐ Standard Project	Only Standard Project requirements apply, including Standard Project SWQMP. **STOP.**
	☒ PDP	Standard and PDP requirements apply, including PDP SWQMP. **Go to Step 3 on the following page.**
	☐ Exception to PDP definitions	Standard Project requirements apply, and any additional requirements specific to the type of project. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP. **STOP.**
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2, Form Date: March 15, 2016		
Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements reply to the proposed PDP. Does the project:		
Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Hydromodification requirements apply to the project. Go to Step 4.
Discussion / justification if hydromodification control requirements do <u>not</u> apply:		
Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	☐ Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	☒ No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop. Project site is not identified as a Potential Critical Course Sediment Yield Area

Project Type Determination Checklist			Form I-2 [March 15, 2016]
Project Information			
Project Name/Description: Marcos Specific Plan EastEnd			
Permit Application Number (if applicable):			Date: 12/19/2022
Project Address: Grand Avenue and Linda Vista Drive			
Project Type Determination: Standard Project or Priority Development Project (PDP)			
The project is (select one): ☐ New Development ☒ Redevelopment			
The total proposed newly created or replaced impervious area is: 100,557 ft^2 (2.31 acres)			
Is the project in any of the following categories, (a) through (f)?			
Yes ☐	No ☒	(a)	New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(c)	New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses: estaurants. This category is defined as a facility that sells prepared foods and drinks r consumption, including stationary lunch counters and refreshment stands selling epared foods and drinks for immediate consumption (Standard Industrial assification (SIC) code 5812). llside development projects. This category includes development on any natural ope that is twenty-five percent or greater. arking lots. This category is defined as a land area or facility for the temporary arking or storage of motor vehicles used personally, for business, or for commerce. treets, roads, highways, freeways, and driveways. This category is defined as any aved impervious surface used for the transportation of automobiles, trucks, otorcycles, and other vehicles.

Form I-2 Page 2, Form Date: March 15, 2016			
Yes ☐	No ☒	(d)	New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). *Note: ESAs are areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and San Diego Water Board; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and San Diego Water Board; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees. See BMP Design Manual Section 1.4.2 for additional guidance.*
Yes ☐	No ☒	(e)	New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses: (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.
Yes ☒	No ☐	(f)	New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction. *Note: See BMP Design Manual Section 1.4.2 for additional guidance.*

Does the project meet the definition of one or more of the Priority Development Project categories (a) through (f) listed above?

☐ No – the project is not a Priority Development Project (Standard Project).

☒ Yes – the project is a Priority Development Project (PDP).

The following is for redevelopment PDPs only:

The area of existing (pre-project) impervious area at the project site is: 130,000 ft^2 (A)

The total proposed newly created or replaced impervious area is 320,000 ft^2 (B)

Percent impervious surface created or replaced (B/A)*100: 246%

The percent impervious surface created or replaced is (select one based on the above calculation):

☐ less than or equal to fifty percent (50%) – only new impervious areas are considered PDP

OR

☒ greater than fifty percent (50%) – the entire project site is a PDP

Site Information Checklist For PDPs	Form I-3B (PDPs) [March 15, 2016]
Project Summary Information	
Project Name	Marcos Specific Plan
Project Address	Grand Avenue and Linda Vista Drive
Assessor's Parcel Number(s) (APN(s))	219-152-42, -44, -45, -51, -61, -74, -75
Permit Application Number	
Project Hydrologic Unit	Select One: ☐ Santa Margarita 902 ☐ San Luis Rey 903 ☒ Carlsbad 904 ☐ San Dieguito 905 ☐ Penasquitos 906 ☐ San Diego 907 ☐ Pueblo San Diego 908 ☐ Sweetwater 909 ☐ Otay 910 ☐ Tijuana 911
Project Watershed (Complete Hydrologic Unit, Area, and Subarea Name with Numeric Identifier)	Carlsbad Hydrologic Unit, San Marcos Hydrologic Area, Richland Hydrologic Sub-Area, 904.52
Parcel Area (total area of Assessor's Parcel(s) associated with the project)	5.08 Acres (263,400 Square Feet)
Area to be Disturbed by the Project (Project Area)	7.02 Acres (305,880 Square Feet)
Project Proposed Impervious Area (subset of Project Area)	4.68 Acres (203,771 Square Feet)
Project Proposed Pervious Area (subset of Project Area)	1.06 Acres (45,970 Square Feet)
Note: Proposed Impervious Area + Proposed Pervious Area = Area to be Disturbed by the Project. This may be less than the Parcel Area.	

Description of Existing Site Condition

Current Status of the Site (select all that apply):

- ☐ Existing development
- ☐ Previously graded but not built out
- ☒ Demolition completed without new construction
- ☐ Agricultural or other non-impervious use
- ☐ Vacant, undeveloped/natural

Description / Additional Information:
The project site was previously developed with commercial/industrial uses. The buildings have since been demolished, but portions of building slabs and paved parking areas remain.

Existing Land Cover Includes (select all that apply):

- ☒ Vegetative Cover
- ☒ Non-Vegetated Pervious Areas
- ☒ Impervious Areas

Description / Additional Information:
The project site was previously developed with commercial/industrial uses. The buildings have since been demolished, but portions of building slabs and paved parking areas remain.

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

- ☐ NRCS Type A
- ☐ NRCS Type B
- ☒ NRCS Type C
- ☒ NRCS Type D

Approximate Depth to Groundwater (GW):

- ☐ GW Depth < 5 feet
- ☐ 5 feet < GW Depth < 10 feet
- ☐ 10 feet < GW Depth < 20 feet
- ☒ GW Depth > 20 feet

Existing Natural Hydrologic Features (select all that apply):

- ☒ Watercourses
- ☐ Seeps
- ☐ Springs
- ☐ Wetlands
- ☐ None

Description / Additional Information:

Description of Existing Site Drainage Patterns

How is storm water runoff conveyed from the site? At a minimum, this description should answer:
(1) whether existing drainage conveyance is natural or urban;
(2) Is runoff from offsite conveyed through the site? if yes, quantify all offsite drainage areas, design flows, and locations where offsite flows enter the project site, and summarize how such flows are conveyed through the site;
(3)Provide details regarding existing project site drainage conveyance network, including any existing storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels; and
(4) Identify all discharge locations from the existing project site along with a summary of conveyance system size and capacity for each of the discharge locations. Provide summary of the pre-project drainage areas and design flows to each of the existing runoff discharge locations.

Describe existing site drainage patterns:

The existing site consists of development areas that were previously commercial pads but have had the buildings demolished. From an aerial view, the site visually appear flat. The channel was recently improved by the City of San Marcos (CIP Project Code 88214, "Grand Avenue Drainage / Road Improvements", IP-4826 and VWD no. 201930). The development area had new storm drain added to collect runoff from the pads and discharge into the improved channel. A bridge was constructed to link to the neighboring development site, west of this site.

The site has less defined flow paths. It appears that some of the site drains to the newly constructed storm drain outlets at nodes 300, 700 and 900 while other parts may sheet flow over the side of the channel at nodes 600 and 800. The easternmost third of the commercial site is very flat due to the concrete foundations that were left behind. While the flow paths are less definitive, it appears as though it generally flows out through sheet flow onto Linda Vista Drive. There are storm drain inlets further south down Linda Vista Drive that discharge into the same channel that bisects the project, so any runoff that leaves the project site ultimately ends up in the same channel.

Description of Proposed Site Development

Project Description / Proposed Land Use and/or Activities:

This project consists of approximately 7.02 acres near the southwest corner of the Linda Vista Drive and Grand Avenue intersection in the city of San Marcos, California. Located at the South of the channel, the site will be developed for commercial and mixed use.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):
Impervious areas will include buildings; vehicular paving in drive aisles and parking areas; and pedestrian pavement for sidewalk, bike paths, and walkways.

List/describe proposed pervious features of the project (e.g., landscape areas):
The project will include extensive landscape areas on both the commercial and residential portions of the project. Decomposed granite (DG) is also proposed for some parking spaces and walkways. As a conservative approach for BMP sizing, the DG areas were assumed to be impervious.

Does the project include grading and changes to site topography?

☒ Yes

☐ No

Description / Additional Information:
The project will be graded support drainage of the proposed project area to the storm water BMPs and the creek.

Description of Proposed Site Drainage Patterns

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

☒ Yes

☐ No

If yes, provide details regarding the proposed project site drainage conveyance network, including storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels, and the method for conveying offsite flows through or around the proposed project site. Identify all discharge locations from the proposed project site along with a summary of the conveyance system size and capacity for each of the discharge locations. Provide a summary of pre- and post-project drainage areas and design flows to each of the runoff discharge locations. Reference the drainage study for detailed calculations.

Describe proposed site drainage patterns::

The proposed development areas will be re-graded to ensure that the runoff is routed to the channel. Runoff will no longer be allowed to spill out onto the adjacent property to the south or out onto Linda Vista Drive. The residential site has a system of concrete swales and storm drains to collect runoff and convey it to water quality basins and/or underground detention structures for hydromodification storage before being discharged to the channel at nodes 200, 400 and 1000. The commercial site has a similar system, except that there will be no underground detention. That side of the project will have a storm drain system that outlets to the channel at nodes 300, 700 and 900.

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

- [x] On-site storm drain inlets
- [ ] Interior floor drains and elevator shaft sump pumps
- [x] Interior parking garages
- [x] Need for future indoor & structural pest control
- [x] Landscape/Outdoor Pesticide Use
- [x] Pools, spas, ponds, decorative fountains, and other water features
- [x] Food service
- [x] Refuse areas
- [ ] Industrial processes
- [ ] Outdoor storage of equipment or materials
- [ ] Vehicle and Equipment Cleaning
- [ ] Vehicle/Equipment Repair and Maintenance
- [ ] Fuel Dispensing Areas
- [ ] Loading Docks
- [x] Fire Sprinkler Test Water
- [ ] Miscellaneous Drain or Wash Water
- [x] Plazas, sidewalks, and parking lots

Description / Additional Information:

Identification and Narrative of Receiving Water and Pollutants of Concern

Describe flow path of storm water from the project site discharge location(s), through urban storm conveyance systems as applicable, to receiving creeks, rivers, and lagoons as applicable, and ultimate discharge to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):
Discharge from the site enters the unnamed creek with runs southwest through the site. The creek continues to flow southwest to a confluence with San Marcos Creek just upstream of Lake San Marcos. San Marcos Creek discharges to Batiquitos Lagoon, which is tidally connected to the Pacific Ocean.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs and/or Highest Priority Pollutants from the WQIP for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs / WQIP Highest Priority Pollutant
San Marcos Creek	DDE, Phosphorous, Sediment Toxicity, Selenium	DDE, Phosphorous, Sediment Toxicity, Selenium
San Marcos Lake	Ammonia Nitrogen, Nutrients	Ammonia Nitrogen, Nutrients

Identification of Project Site Pollutants*

***Identification of project site pollutants is only required if flow-thru treatment BMPs are implemented onsite in lieu of retention or biofiltration BMPs (note the project must also participate in an alternative compliance program unless prior lawful approval to meet earlier PDP requirements is demonstrated)**

Identify pollutants expected from the project site based on all proposed use(s) of the site (see BMP Design Manual Appendix B.6):

Pollutant	Not Applicable to the Project Site	Expected from the Project Site	Also a Receiving Water Pollutant of Concern
Sediment		X	X
Nutrients		X	X
Heavy Metals		X	X
Organic Compounds		X	
Trash & Debris		X	
Oxygen Demanding Substances		X	
Oil & Grease		X	
Bacteria & Viruses		X	
Pesticides		X	

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the BMP Design Manual)?

☒ Yes, hydromodification management flow control structural BMPs required.

☐ No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

***This Section only required if hydromodification management requirements apply**

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

☐ Yes

☒ No, No critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the BMP Design Manual been performed?

☐ 6.2.1 Verification of Geomorphic Landscape Units (GLUs) Onsite

☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment

☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite

☐ No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

☐ No critical coarse sediment yield areas to be protected based on verification of GLUs onsite

☐ Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 2.b of the SWQMP.

☐ Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

Flow Control for Post-Project Runoff*

***This Section only required if hydromodification management requirements apply**

List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit.

Has a geomorphic assessment been performed for the receiving channel(s)?

☐ No, the low flow threshold is 0.1Q2 (default low flow threshold)

☐ Yes, the result is the low flow threshold is 0.1Q2

☐ Yes, the result is the low flow threshold is 0.3Q2

☒ Yes, the result is the low flow threshold is 0.5Q2

If a geomorphic assessment has been performed, provide title, date, and preparer:
The receiving channel has been restored and is an actively managed conservation area, which will ensure erosion impacts will be minimal.

Discussion / Additional Information: (optional)

Other Site Requirements and Constraints

When applicable, list other site requirements or constraints that will influence storm water management design, such as zoning requirements including setbacks and open space, or local codes governing minimum street width, sidewalk construction, allowable pavement types, and drainage requirements.

Optional Additional Information or Continuation of Previous Sections As Needed

This space provided for additional information or continuation of information from previous sections as needed.

Source Control BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-4 [March 15, 2016]

Project Identification

Project Name: Marcos Specific Plan

Permit Application Number

Source Control BMPs

All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement source control BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided.

Source Control Requirement	Applied?		
SC-1 Prevention of Illicit Discharges into the MS4	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-1 not implemented:			
SC-2 Storm Drain Stenciling or Signage	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-2 not implemented:			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-3 not implemented:			
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-4 not implemented:			

Form I-4 Page 2 of 2, Form Date: March 15, 2016			
Source Control Requirement	**Applied?**		
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-5 not implemented:			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)			
☐ On-site storm drain inlets	☒ Yes	☐ No	☐ N/A
☐ Interior floor drains and elevator shaft sump pumps	☐ Yes	☐ No	☒ N/A
☐ Interior parking garages	☒ Yes	☐ No	☐ N/A
☐ Need for future indoor & structural pest control	☒ Yes	☐ No	☐ N/A
☐ Landscape/Outdoor Pesticide Use	☒ Yes	☐ No	☐ N/A
☐ Pools, spas, ponds, decorative fountains, and other water features	☒ Yes	☐ No	☐ N/A
☐ Food service	☒ Yes	☐ No	☐ N/A
☐ Refuse areas	☒ Yes	☐ No	☐ N/A
☐ Industrial processes	☐ Yes	☐ No	☒ N/A
☐ Outdoor storage of equipment or materials	☐ Yes	☐ No	☒ N/A
☐ Vehicle and Equipment Cleaning	☐ Yes	☐ No	☒ N/A
☐ Vehicle/Equipment Repair and Maintenance	☐ Yes	☐ No	☒ N/A
☐ Fuel Dispensing Areas	☐ Yes	☐ No	☒ N/A
☐ Loading Docks	☐ Yes	☐ No	☒ N/A
☐ Fire Sprinkler Test Water	☒ Yes	☐ No	☐ N/A
☐ Miscellaneous Drain or Wash Water	☐ Yes	☐ No	☒ N/A
☐ Plazas, sidewalks, and parking lots	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for all "No" answers shown above.			

Site Design BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-5 [March 15, 2016]

Project Identification

Project Name – Marcos Specific Plan

Permit Application Number

Site Design BMPs

All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement site design BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided.

Site Design Requirement	Applied?		
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-1 not implemented:			
SD-2 Conserve Natural Areas, Soils, and Vegetation	☐ Yes	☐ No	☒ N/A
Discussion / justification if SD-2 not implemented: Site was previously disturbed.			
SD-3 Minimize Impervious Area	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-3 not implemented:			
SD-4 Minimize Soil Compaction	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-4 not implemented:			
SD-5 Impervious Area Dispersion	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-5 not implemented:			

Form I-5 Page 2 of 2, Form Date: March 15, 2016			
Site Design Requirement	**Applied?**		
SD-6 Runoff Collection	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-6 not implemented:			
SD-7 Landscaping with Native or Drought Tolerant Species	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-7 not implemented:			
SD-8 Harvesting and Using Precipitation	☐ Yes	☒ No	☐ N/A
Discussion / justification if SD-8 not implemented: Harvest and reuse of stormwater is not feasible since irrigation demand will be low following rain events and native/low water use plants will be used.			

Summary of PDP Structural BMPs	Form I-6 (PDPs) [March 15, 2016]

Project Identification

Project Name – Marcos Specific Plan

Permit Application Number

PDP Structural BMPs

All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the BMP Design Manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the BMP Design Manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s).

PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative and engineer of record to certify construction of the structural BMPs (see Section 1.12 of the BMP Design Manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the BMP Design Manual).

Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).

Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the BMP Design Manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate.

Based on the geotechnical investigation, percolation rates at the site are very low. Therefore, infiltration BMPs are considered infeasible. Biofiltration BMPs were selected for the majority of the site as the highest performing BMPs that are feasible. Runoff will be collected in gutters, cross gutters, and shallow storm drain, which will direct the runoff to the biofiltration BMPs. The biofiltration BMPs have been sized for both pollutant control and hydromodification mitigation.

EPA SWMM was used to model the BMPs for hydromodification mitigation requirements.

The project street frontages on Grand Avenue and Linda Vista Drive will be treated utilizing Green Street features. The frontage improvements on Grand Avenue include addition of a sidewalk and bike path separated from Grand Avenue by a landscaped parkway. The sidewalk and bike path will be sloped to the landscaped parkway which will include street trees where allowed by sight distance constraints. This landscaped parkway and street trees will provide retention and pollutant removal of runoff from the sidewalk and bike path in accordance with Green Street guidance. Grand Avenue itself will remain undisturbed.

The frontage improvements on Linda Vista Drive also include a sidewalk and bike path, with the addition of landscaped pop outs adjacent to the driveways and interspersed among the parallel parking spaces.

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 1)

These landscaped pop outs will include curb cuts and energy dissipators to accept runoff from Linda Vista Drive. They will also accept runoff from the adjacent sidewalk and bike path. The landscaped pop outs will provide opportunities for retention and treatment of the stormwater runoff. The landscaped pop outs will include street trees where allowed by sight distance constraints. High flows will continue to flow down Linda Vista Drive via a curb cut at the downstream end of the pop outs.

Structural BMP Summary Information
(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. BMP A1

Construction Plan Sheet No.

Type of structural BMP:
- ☐ Retention by harvest and use (HU-1)
- ☐ Retention by infiltration basin (INF-1)
- ☐ Retention by bioretention (INF-2)
- ☐ Retention by permeable pavement (INF-3)
- ☐ Partial retention by biofiltration with partial retention (PR-1)
- X☐ Biofiltration (BF-1)
- ☐ Biofiltration with Nutrient Sensitive Media Design (BF-2)
- ☐ Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- ☐ Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- ☐ Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- ☐ Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- ☐ Detention pond or vault for hydromodification management
- ☐ Other (describe in discussion section below)

Purpose:
- ☐ Pollutant control only
- ☐ Hydromodification control only
- X☐ Combined pollutant control and hydromodification control
- ☐ Pre-treatment/forebay for another structural BMP
- ☐ Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)	Kenneth T. Kozlik, PE Fuscoe Engineering, Inc. 6390 Greenwich Drive, Suite 170 San Diego, CA 92122 kkozlik@fuscoe.com
Who will be the final owner of this BMP?	AOA San Marcos, LLC
Who will maintain this BMP into perpetuity?	AOA San Marcos, LLC
What is the funding mechanism for maintenance?	Private

Form I-6 Page 16 of X (Copy as many as needed) , Form Date: March 15, 2016
Structural BMP ID No. BMP D1-DET
Construction Plan Sheet No.
Discussion (as needed): BMP D1-DET is an underground detention vault that will be utilized for hydromodification control and peak 100-year detention. Outflow from the detention vault will be controlled by a riser with orifice control. BMP D1-DET is located downstream of biofiltration basin BMP D-1, which will provide pollutant control treatment for DMA D1.

ATTACHMENT 1
BACKUP FOR PDP POLLUTANT CONTROL BMPS

This is the cover sheet for Attachment 1.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 1a	DMA Exhibit (Required) See DMA Exhibit Checklist on the back of this Attachment cover sheet.	☐ Included
Attachment 1b	Tabular Summary of DMAs Showing DMA ID matching DMA Exhibit, DMA Area, and DMA Type (Required)* *Provide table in this Attachment OR on DMA Exhibit in Attachment 1a	☐ Included on DMA Exhibit in Attachment 1a ☐ Included as Attachment 1b, separate from DMA Exhibit
Attachment 1c	Form I-7, Harvest and Use Feasibility Screening Checklist (Required unless the entire project will use infiltration BMPs) Refer to Appendix B.3-1 of the BMP Design Manual to complete Form I-7.	☐ Included ☐ Not included because the entire project will use infiltration BMPs
Attachment 1d	Form I-8, Categorization of Infiltration Feasibility Condition (Required unless the project will use harvest and use BMPs) Refer to Appendices C and D of the BMP Design Manual to complete Form I-8.	☐ Included ☐ Not included because the entire project will use harvest and use BMPs
Attachment 1e	Pollutant Control BMP Design Worksheets / Calculations (Required) Refer to Appendices B and E of the BMP Design Manual for structural pollutant control BMP design guidelines	☐ Included

Use this checklist to ensure the required information has been included on the DMA Exhibit:

The DMA Exhibit must identify:

- ☐ Underlying hydrologic soil group
- ☐ Approximate depth to groundwater
- ☐ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- ☐ Critical coarse sediment yield areas to be protected
- ☐ Existing topography and impervious areas
- ☐ Existing and proposed site drainage network and connections to drainage offsite
- ☐ Proposed demolition
- ☐ Proposed grading
- ☐ Proposed impervious features
- ☐ Proposed design features and surface treatments used to minimize imperviousness
- ☐ Drainage management area (DMA) boundaries, DMA ID numbers, and DMA areas (square footage or acreage), and DMA type (i.e., drains to BMP, self-retaining, or self-mitigating)
- ☐ Potential pollutant source areas and corresponding required source controls (see Chapter 4, Appendix E.1, and Form I-3B)
- ☐ Structural BMPs (identify location, type of BMP, and size/detail)

Area Breakdown		
Total Site Area	305,880	7.02
Existing Impervious	103,214	2.37
Proposed Impervious	203,771	4.68
Added Impervious	100,557	2.31
Existing Pervious	202,666	4.65
Proposed Pervious*	45,970	1.06
% Increase	97%

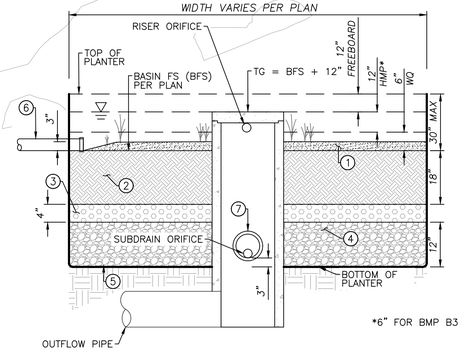
BIOFILTRATION/PLANTER DETAIL
(BMPS A1 AND D1)



BIOFILTRATION/PLANTER DETAIL
(BMPS B1-B4)

DETAIL NOTES:

1. OPTIONAL 3" OF WELL-AGED, SHREDDED HARDWOOD MULCH. PROPOSED LANDSCAPING SHOULD BE DROUGHT TOLERANT
2. 18" MEDIA LAYER OF LOAMY SAND TYPE SOIL W/ MIN. FILTRATION RATE = 5 IN/HR. SOIL MEDIA SHALL MEET THE CITY OF SAN DIEGO STORM WATER STANDARDS MANUAL, BIOFILTRATION SOIL MEDIA SPECIFICATION PROVIDED IN APPENDIX F.4 OR COUNTY OF SAN DIEGO LOW IMPACT DEVELOPMENT HANDBOOK: APPENDIX C-BIORETENTION SOIL SPECIFICATION (JUNE 2014, UNLESS SUPERSEDED BY MORE RECENT EDITION).
3. 4" WASHED PEA GRAVEL FILTER COURSE LAYER
4. 12" CLASS 2 PERMEABLE PER CALTRANS SPECIFICATION 68-1.025 WASHED, OPEN-GRADED CRUSHED ROCK AGGREGATE STORAGE LAYER WITH 40% VOID RATIO
5. BOTH SIDES AND BOTTOM OF BIOFILTRATION PLANTER SHALL BE LINED WITH 30 MIL THICK PVC LINER. PROVIDE 18" OVERLAPPED, THERMAL WELDED SEAMS AT ALL SEAMS. PLACE NON-WOVEN FILTER FABRIC (MIRAFI 140N OR EQUAL) ON EITHER SIDE OF PVC LINER TO PROTECT LINER FROM PUNCTURE ON ALL SIDES, "SANDWICHING" THE PVC LINER WITH A FABRIC CUSHION.
6. 4" PVC EQUALIZATION PIPE @ 0% SLOPE FOR LINEAR BIOFILTRATIONS IF APPLICABLE
7. 6" PERFORATED PIPES @ +3" BOTTOM OF PLANTER WITH CLEANOUTS AND SUBDRAIN ORIFICE

36 hr. Demand < 0.25DCV	Yes	
Harvest Use:	Not Feasible	

Harvest and use is considered to be infeasible

Planning Level Irrigation Demand by Plant Factor and Landscape Type		
General Landscape Type	**36-Hour Planning Level Irrigation Demand**	**Units**
Hydrozone - Moderate Plant Water Use	1,470	gal /acre / 36 hrs
Proposed Planted Area	1.63	acres
36 hr. Demand	320	cubic - feet
DCV	11,630	cubic - feet
36 hr. Demand ≥ DCV	No	
DCV > 36 hr. Demand > 0.25DCV	No	
36 hr. Demand < 0.25DCV	Yes	
Harvest Use:	Not Feasible	

Harvest and use is considered to be infeasible

Categorization of Infiltration Feasibility Condition — Form I-8

Part 1 – Full Infiltration Feasibility Screening Criteria

Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
1	**Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

2	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

3	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, storm water pollutants or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

4	**Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

Part 1 Result*	If all answers to rows 1-4 are "**Yes**" a full infiltration design is potentially feasible. The feasibility screening category is **Full Infiltration.** If any answer from row 1-4 is "**No**", infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a "full infiltration" design. Proceed to Part 2	**Full Infiltration Feasible** ☐	**Full Infiltration Infeasible** ☒

*To be completed using gathered site information and best professional judgement considering the definition of MEP in the MS4 permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings.

Categorization of Infiltration Feasibility Condition

Form I-8

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria

Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	**Do soil and geologic conditions allow for infiltration in any appreciable rate or volume?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	☐	☒

Provide basis:

Infiltration to be verified by testing per city's BMP Manual Appendix D. Maximum infiltration rate observed was 0.04 in/hr. Testing performed by GeoTek, Inc, in their report *Draft Geotechnical Evaluation, Proposed Commercial Development, SWC Grading Avenue and Linda Vista Drive*, dated 5/28/2020.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

6	**Can infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.	☒	☐

Provide basis:

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

7	**Can infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, storm water pollutants or other factors)?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☒	☐
Provide basis: Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
8	**Can infiltration be allowed without violating downstream water rights?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☒	☐
Provide basis: Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
Part 2 Result*	If all answers to rows 1-4 are "**Yes**" a partial infiltration design is potentially feasible. The feasibility screening category is **Partial Infiltration.** If any answer from row 5-8 is "**No**", infiltration of any volume is considered to be **infeasible** within the drainage area. The feasibility screening category is **No Infiltration.**	**Partial Infiltration** ☐	**No Infiltration** ☒

*To be completed using gathered site information and best professional judgement considering the definition of MEP in the MS4 permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings.

Automated Worksheet B.1: Calculation of Design Capture Volume (V2.0)

	37	Effective Depth of Biofiltration Storage	15.60	15.60	15.60	15.60	15.60	15.60	inches
	38	Drawdown Time for Surface Ponding	1	2	6	2	3	1	hours
	39	Drawdown Time for Effective Biofiltration Depth	3	6	16	4	7	3	hours
	40	Total Depth Biofiltered	45.60	30.96	21.55	39.51	28.71	45.60	inches
	41	Option 1 - Biofilter 1.50 DCV: Target Volume	1,608	2,224	5,289	1,301	1,988	4,077	cubic-feet
	42	Option 1 - Provided Biofiltration Volume	1,608	2,048	3,681	1,301	1,988	4,077	cubic-feet
	43	Option 2 - Store 0.75 DCV: Target Volume	804	1,112	2,644	650	994	2,039	cubic-feet
	44	Option 2 - Provided Storage Volume	748	1,032	2,644	650	994	1,885	cubic-feet
	45	Portion of Biofiltration Performance Standard Satisfied	1.00	0.93	1.00	1.00	1.00	1.00	ratio
Result	46	Do Site Design Elements and BMPs Satisfy Annual Retention Requirements?	Yes	Yes	Yes	Yes	Yes	Yes	yes/no
	47	Overall Portion of Performance Standard Satisfied (BMP Efficacy Factor)	1.00	1.00	1.00	1.00	1.00	1.00	ratio
	48	**Deficit of Effectively Treated Stormwater**	**0**	**0**	**0**	**0**	**0**	**0**	cubic-feet

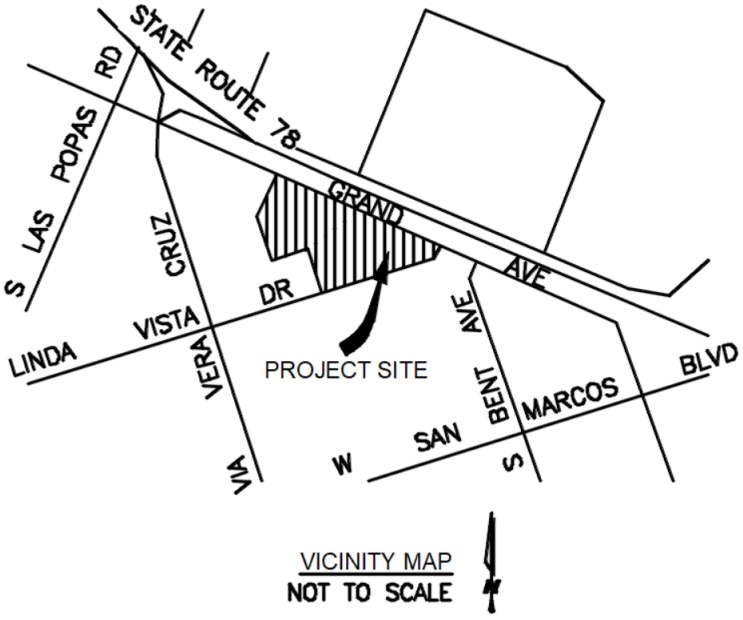
Attention!

-Minimum annual retention criteria are not satisfied for each individual drainage area. Implement additional site design elements, increase structural BMP retention capacity, or demonstrate that such requirements are satisfied at the project-level.
-This BMP does not fully satisfy the performance standards for pollutant control for the drainage area.

INTRODUCTION

Project Description:

The Marcos project consists of approximately 10.8 acres near the southwest corner of the Linda Vista Drive and Grand Avenue intersection in the city of San Marcos, California. The project is bisected by a channel which separates the project into two development areas. The 5.0 acres north of the channel will be used to develop 102 condominium residential units while the 5.8 acres south of the channel will be developed for commercial and mixed use.



Existing Conditions:

The existing site consists of two development area that were previously commercial pads but have had the buildings demolished. From an aerial view, both areas visually appear flat. The channel was recently improved by the City of San Marcos (CIP Project Code 88214, "Grand Avenue Drainage / Road Improvements", IP-4826 and VWD no. 201930). Please reference Appendix 7 in the Drainage Report for channel improvement drawings. Each development area had new storm drain added to collect runoff from the pads and discharge into the improved channel. A bridge was constructed to link the two development areas.

Proposed Conditions:

In the proposed condition, onsite drainage will be covered by a separate SWQMP. Proposed public improvements around the site will be treated by green street elements including trees. Ultimately, the proposed development areas will be re-graded to ensure that the runoff is routed to the channel.

Green Street Elements

Public improvement treatment will be provided by private green street element trees. Proposed trees would capture storm water, provide shade, and cool pavement.

Water Quality Compliance:

The proposed project would not require Regional Water Quality Control Board Section 401 Certification or a U.S. Army Corps of Engineers 404 permit. The project site is fully developed and devoid of natural vegetation and habitat.

Operation/Maintenance:

Green street elements would fall under the responsibility of would be formed Homeowners Association.

Applicability of Storm Water Best Management Practices (BMP) Requirements (Storm Water Intake Form for all Development Permit Applications) For detailed information please visit: http://www.san-marcos.net/departments/development-services/stormwater/development-planning	Form I-1 Version 1.0 [March 15, 2016]

Project Identification

Project Name: Marcos Project	
Description: Proposed development of residential and commerical use buildings	
Permit Application Number (if applicable):	Date: 2022/10/5
Project Address: Grand Avenue and Linda Vista Drive	

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:
http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above, Is the project a "development project"? (see definition above) See Section 1.3 of the BMP Design Manual for further guidance if necessary.	☒ Yes	Go to Step 2.
	☐ No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. **STOP.**
Discussion / justification if the project is not a "development project" (e.g., the project includes *only* interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? **To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual *in its entirety* for guidance.** **In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.**	☐ Standard Project	Only Standard Project requirements apply, including Standard Project SWQMP. **STOP.**
	☒ PDP	Standard and PDP requirements apply, including PDP SWQMP. **Go to Step 3 on the following page.**
	☐ Exception to PDP definitions	Standard Project requirements apply, and any additional requirements specific to the type of project. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP. **STOP.**
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2		
Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements reply to the proposed PDP. Does the project:		
Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	☒ No	Hydromodification requirements apply to the project. Go to Step 4.
Discussion / justification if hydromodification control requirements do <u>not</u> apply:		
Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	☐ Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	☐ No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop.

ATTACHMENT 2
BACKUP FOR PDP HYDROMODIFICATION CONTROL MEASURES

This is the cover sheet for Attachment 2.

☐ Mark this box if this attachment is empty because the project is exempt from PDP hydromodification management requirements.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	**Contents**	**Checklist**
Attachment 2a	Hydromodification Management Exhibit (Required)	☐ Included See Hydromodification Management Exhibit Checklist on the back of this Attachment cover sheet.
Attachment 2b	Management of Critical Coarse Sediment Yield Areas (WMAA Exhibit is required, additional analyses are optional) See Section 6.2 of the BMP Design Manual.	☐ Exhibit showing project drainage boundaries marked on WMAA Critical Coarse Sediment Yield Area Map (Required) Optional analyses for Critical Coarse Sediment Yield Area Determination ☐ 6.2.1 Verification of Geomorphic Landscape Units Onsite ☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment ☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
Attachment 2c	Geomorphic Assessment of Receiving Channels (Optional) See Section 6.3.4 of the BMP Design Manual.	☐ Not performed ☐ Included ☐ Submitted as separate stand-alone document
Attachment 2d	Flow Control Facility Design, including Structural BMP Drawdown Calculations and Overflow Design Summary (Required) See Chapter 6 and Appendix G of the BMP Design Manual	☐ Included ☐ Submitted as separate stand-alone document
Attachment 2e	Vector Control Plan (Required when structural BMPs will not drain in 96 hours)	☐ Included ☐ Not required because BMPs will drain in less than 96 hours

Use this checklist to ensure the required information has been included on the Hydromodification Management Exhibit:

The Hydromodification Management Exhibit must identify:

- ☐ Underlying hydrologic soil group
- ☐ Approximate depth to groundwater
- ☐ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- ☐ Critical coarse sediment yield areas to be protected
- ☐ Existing topography
- ☐ Existing and proposed site drainage network and connections to drainage offsite
- ☐ Proposed grading
- ☐ Proposed impervious features
- ☐ Proposed design features and surface treatments used to minimize imperviousness
- ☐ Point(s) of Compliance (POC) for Hydromodification Management
- ☐ Existing and proposed drainage boundary and drainage area to each POC (when necessary, create separate exhibits for pre-development and post-project conditions)
- ☐ Structural BMPs for hydromodification management (identify location, type of BMP, and size/detail)

ATTACHMENT 3
Structural BMP Maintenance Information

This is the cover sheet for Attachment 3.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 3a	Structural BMP Maintenance Thresholds and Actions (Required)	☐ Included See Structural BMP Maintenance Information Checklist on the back of this Attachment cover sheet.
Attachment 3b	Draft Maintenance Agreement (when applicable)	☐ Included ☐ Not Applicable

Use this checklist to ensure the required information has been included in the Structural BMP Maintenance Information Attachment:

☐ **Preliminary Design / Planning / CEQA level submittal:**

Attachment 3a must identify:

☐ Typical maintenance indicators and actions for proposed structural BMP(s) based on Section 7.7 of the BMP Design Manual

Attachment 3b is not required for preliminary design / planning / CEQA level submittal.

☐ **Final Design level submittal:**

Attachment 3a must identify:

☐ Specific maintenance indicators and actions for proposed structural BMP(s). This shall be based on Section 7.7 of the BMP Design Manual and enhanced to reflect actual proposed components of the structural BMP(s)
☐ How to access the structural BMP(s) to inspect and perform maintenance
☐ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
☐ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
☐ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
☐ Recommended equipment to perform maintenance
☐ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management

Attachment 3b: For private entity operation and maintenance, Attachment 3b shall include a draft maintenance agreement in the local jurisdiction's standard format (PDP applicant to contact the [City Engineer] to obtain the current maintenance agreement forms).

E.18 BF-1 Biofiltration

Location: 43rd Street and Logan Avenue, San Diego, California

MS4 Permit Category
Biofiltration

Manual Category
Biofiltration

Applicable Performance Standard
Pollutant Control
Flow Control

Primary Benefits
Treatment
Volume Reduction (Incidental)
Peak Flow Attenuation (Optional)

Description

Biofiltration (Bioretention with underdrain) facilities are vegetated surface water systems that filter water through vegetation, and soil or engineered media prior to discharge via underdrain or overflow to the downstream conveyance system. Bioretention with underdrain facilities are commonly incorporated into the site within parking lot landscaping, along roadsides, and in open spaces. Because these types of facilities have limited or no infiltration, they are typically designed to provide enough hydraulic head to move flows through the underdrain connection to the storm drain system. Treatment is achieved through filtration, sedimentation, sorption, biochemical processes and plant uptake.

Typical bioretention with underdrain components include:

- Inflow distribution mechanisms (e.g, perimeter flow spreader or filter strips)
- Energy dissipation mechanism for concentrated inflows (e.g., splash blocks or riprap)
- Shallow surface ponding for captured flows
- Side slope and basin bottom vegetation selected based on expected climate and ponding depth
- Non-floating mulch layer (Optional)
- Media layer (planting mix or engineered media) capable of supporting vegetation growth
- Filter course layer consisting of aggregate to prevent the migration of fines into uncompacted native soils or the aggregate storage layer
- Aggregate storage layer with underdrain(s)

- Impermeable liner or uncompacted native soils at the bottom of the facility
- Overflow structure

Typical plan and Section view of a Biofiltration BMP

Design Adaptations for Project Goals

Biofiltration Treatment BMP for storm water pollutant control. The system is lined or un-lined to provide incidental infiltration, and an underdrain is provided at the bottom to carry away filtered runoff. This configuration is considered to provide biofiltration treatment via flow through the media layer. Storage provided above the underdrain within surface ponding, media, and aggregate storage is considered included in the biofiltration treatment volume. Saturated storage within the aggregate storage layer can be added to this design by raising the underdrain above the bottom of the aggregate storage layer or via an internal weir structure designed to maintain a specific water level elevation.

Integrated storm water flow control and pollutant control configuration. The system can be designed to provide flow rate and duration control by primarily providing increased surface ponding and/or having a deeper aggregate storage layer above the underdrain. This will allow for significant detention storage, which can be controlled via inclusion of an outlet structure at the downstream end of the underdrain.

Recommended Siting Criteria

Siting Criteria		*Intent/Rationale*
☐	Placement observes geotechnical recommendations regarding potential hazards (e.g., slope stability, landslides, liquefaction zones) and setbacks (e.g., slopes, foundations, utilities).	Must not negatively impact existing site geotechnical concerns.
☐	An impermeable liner or other hydraulic restriction layer is included if site constraints indicate that infiltration or lateral flows should not be allowed.	Lining prevents storm water from impacting groundwater and/or sensitive environmental or geotechnical features. Incidental infiltration, when allowable, can aid in pollutant removal and groundwater recharge.
☐	Contributing tributary area shall be ≤ 5 acres (≤ 1 acre preferred).	Bigger BMPs require additional design features for proper performance. Contributing tributary area greater than 5 acres may be allowed at the discretion of the [City Engineer} if the following conditions are met: 1) incorporate design features (e.g. flow spreaders) to minimizing short circuiting of flows in the

Siting Criteria	*Intent/Rationale*
	BMP and 2) incorporate additional design features requested by the [City Engineer] for proper performance of the regional BMP.
☐ Finish grade of the facility is ≤ 2%.	Flatter surfaces reduce erosion and channelization within the facility.

Recommended BMP Component Dimensions

BMP Component	*Dimension*	*Intent/Rationale*
Freeboard	≥ 12 inches	Freeboard provides room for head over overflow structures and minimizes risk of uncontrolled surface discharge.
Surface Ponding	≥ 6 and ≤ 12 inches	Surface ponding capacity lowers subsurface storage requirements. Deep surface ponding raises safety concerns. Surface ponding depth greater than 12 inches (for additional pollutant control or surface outlet structures or flow-control orifices) may be allowed at the discretion of the [City Engineer] if the following conditions are met: 1) surface ponding depth drawdown time is less than 24 hours; and 2) safety issues and fencing requirements are considered (typically ponding greater than 18" will require a fence and/or flatter side slopes) and 3) potential for elevated clogging risk is considered.
Ponding Area Side Slopes	3H:1V or shallower	Gentler side slopes are safer, less prone to erosion, able to establish vegetation more quickly and easier to maintain.
Mulch	≥ 3 inches	Mulch will suppress weeds and maintain moisture for plant growth. Aging mulch kills pathogens and weed seeds and allows the beneficial microbes to multiply.

Media Layer	≥ 18 inches	A deep media layer provides additional filtration and supports plants with deeper roots. Standard specifications shall be followed. For non-standard or proprietary designs, compliance with F.1 ensures that adequate treatment performance will be provided.
Underdrain Diameter	≥ 6 inches	Smaller diameter underdrains are prone to clogging.
Cleanout Diameter	≥ 6 inches	Properly spaced cleanouts will facilitate underdrain maintenance.

Design Criteria and Considerations

Bioretention with underdrain must meet the following design criteria. Deviations from the below criteria may be approved at the discretion of the [City Engineer] if it is determined to be appropriate:

Siting and Design		*Intent/Rationale*
Surface Ponding		
☐	Surface ponding is limited to a 24-hour drawdown time.	Surface ponding limited to 24 hours for plant health. Surface ponding drawdown time greater than 24-hours but less than 96 hours may be allowed at the discretion of the [City Engineer] if certified by a landscape architect or agronomist.
Vegetation		
☐	Plantings are suitable for the climate and expected ponding depth. A plant list to aid in selection can be found in Appendix E.20.	Plants suited to the climate and ponding depth are more likely to survive.
☐	An irrigation system with a connection to water supply should be provided as needed.	Seasonal irrigation might be needed to keep plants healthy.
Mulch (Optional or Mandatory – Dependent on jurisdiction)		
☐	A minimum of 3 inches of well-aged, shredded hardwood mulch that has been stockpiled or stored for at least 12 months is provided.	Mulch will suppress weeds and maintain moisture for plant growth. Aging mulch kills pathogens and weed seeds and allows the beneficial microbes to multiply.

Siting and Design		*Intent/Rationale*
Media Layer		
☐	Media maintains a minimum filtration rate of 5 in/hr over lifetime of facility. An initial filtration rate of 8 to 12 in/hr is recommended to allow for clogging over time; the initial filtration rate should not exceed 12 inches per hour.	A filtration rate of at least 5 inches per hour allows soil to drain between events. The initial rate should be higher than long term target rate to account for clogging over time. However an excessively high initial rate can have a negative impact on treatment performance, therefore an upper limit is needed.
☐	Media is a minimum 18 inches deep, meeting either of these two media specifications: Section F.3 Bioretention Soil Media (BSM) or specific jurisdictional guidance. Alternatively, for proprietary designs and custom media mixes not meeting the media specifications contained in the 2016 City Storm Water Standards or County LID Manual, the media meets the pollutant treatment performance criteria in Section F.1.	A deep media layer provides additional filtration and supports plants with deeper roots. Standard specifications shall be followed. For non-standard or proprietary designs, compliance with F.1 ensures that adequate treatment performance will be provided.
☐	Media surface area is 3% of contributing area times adjusted runoff factor or greater. Unless demonstrated that the BMP surface area can be smaller than 3%.	Greater surface area to tributary area ratios: a) maximizes volume retention as required by the MS4 Permit and b) decrease loading rates per square foot and therefore increase longevity. Adjusted runoff factor is to account for site design BMPs implemented upstream of the BMP (such as rain barrels, impervious area dispersion, etc.). Refer to Appendix B.2 guidance. Use Worksheet B.5-1 Line 26 to estimate the minimum surface area required per this criteria.
☐	Where receiving waters are impaired or have a TMDL for nutrients, the system is designed with nutrient sensitive media design (see fact sheet BF-2).	Potential for pollutant export is partly a function of media composition; media design must minimize potential for export of nutrients, particularly where receiving waters are impaired for nutrients.

Siting and Design		*Intent/Rationale*
Filter Course Layer		
☐	A filter course is used to prevent migration of fines through layers of the facility. Filter fabric is not used.	Migration of media can cause clogging of the aggregate storage layer void spaces or subgrade. Filter fabric is more likely to clog.
☐	Filter course is washed and free of fines.	Washing aggregate will help eliminate fines that could clog the facility and impede infiltration.
☐	Filter course calculations assessing suitability for particle migration prevention have been completed.	Gradation relationship between layers can evaluate factors (e.g., bridging, permeability, and uniformity) to determine if particle sizing is appropriate or if an intermediate layer is needed.
Aggregate Storage Layer		
☐	Class 2 Permeable per Caltrans specification 68-1.025 is recommended for the storage layer. Washed, open-graded crushed rock may be used, however a 4-6 inch washed pea gravel filter course layer at the top of the crushed rock is required.	Washing aggregate will help eliminate fines that could clog the aggregate storage layer void spaces or subgrade.
☐	The depth of aggregate provided (12-inch typical) and storage layer configuration is adequate for providing conveyance for underdrain flows to the outlet structure.	Proper storage layer configuration and underdrain placement will minimize facility drawdown time.
Inflow, Underdrain, and Outflow Structures		
☐	Inflow, underdrains and outflow structures are accessible for inspection and maintenance.	Maintenance will prevent clogging and ensure proper operation of the flow control structures.
☐	Inflow velocities are limited to 3 ft/s or less or use energy dissipation methods. (e.g., riprap, level spreader) for concentrated inflows.	High inflow velocities can cause erosion, scour and/or channeling.
☐	Curb cut inlets are at least 12 inches wide, have a 4-6 inch reveal (drop) and an apron and energy dissipation as needed.	Inlets must not restrict flow and apron prevents blockage from vegetation as it grows in. Energy dissipation prevents erosion.

Siting and Design		*Intent/Rationale*
☐	Underdrain outlet elevation should be a minimum of 3 inches above the bottom elevation of the aggregate storage layer.	A minimal separation from subgrade or the liner lessens the risk of fines entering the underdrain and can improve hydraulic performance by allowing perforations to remain unblocked.
☐	Minimum underdrain diameter is 6 inches.	Smaller diameter underdrains are prone to clogging.
☐	Underdrains are made of slotted, PVC pipe conforming to ASTM D 3034 or equivalent or corrugated, HDPE pipe conforming to AASHTO 252M or equivalent.	Slotted underdrains provide greater intake capacity, clog resistant drainage, and reduced entrance velocity into the pipe, thereby reducing the chances of solids migration.
☐	An underdrain cleanout with a minimum 6-inch diameter and lockable cap is placed every 250 to 300 feet as required based on underdrain length.	Properly spaced cleanouts will facilitate underdrain maintenance.
☐	Overflow is safely conveyed to a downstream storm drain system or discharge point Size overflow structure to pass 100-year peak flow for on-line infiltration basins and water quality peak flow for off-line basins.	Planning for overflow lessens the risk of property damage due to flooding.

Conceptual Design and Sizing Approach for Storm Water Pollutant Control Only

To design bioretention with underdrain for storm water pollutant control only (no flow control required), the following steps should be taken:

1. Verify that siting and design criteria have been met, including placement requirements, contributing tributary area, maximum side and finish grade slopes, and the recommended media surface area tributary ratio.
2. Calculate the DCV per Appendix B based on expected site design runoff for tributary areas.
3. Use the sizing worksheet presented in Appendix B.5 to size biofiltration BMPs.

Conceptual Design and Sizing Approach when Storm Water Flow Control is Applicable

Control of flow rates and/or durations will typically require significant surface ponding and/or aggregate storage volumes, and therefore the following steps should be taken prior to determination of storm water pollutant control design. Pre-development and allowable post-project flow rates and durations should be determined as discussed in Chapter 6 of the manual.

1. Verify that siting and design criteria have been met, including placement requirements, contributing tributary area, maximum side and finish grade slopes, and the recommended media surface area tributary ratio.
2. Iteratively determine the facility footprint area, surface ponding and/or aggregate storage layer depth required to provide detention storage to reduce flow rates and durations to allowable limits. Flow rates and durations can be controlled from detention storage by altering outlet structure orifice size(s) and/or water control levels. Multi-level orifices can be used within an outlet structure to control the full range of flows.
3. If bioretention with underdrain cannot fully provide the flow rate and duration control required by this manual, an upstream or downstream structure with significant storage volume such as an underground vault can be used to provide remaining controls.
4. After bioretention with underdrain has been designed to meet flow control requirements, calculations must be completed to verify if storm water pollutant control requirements to treat the DCV have been met.

Maintenance Overview

Normal Expected Maintenance. Biofiltration requires routine maintenance to: remove accumulated materials such as sediment, trash or debris; maintain vegetation health; maintain infiltration capacity of the media layer; replenish mulch; and maintain integrity of side slopes, inlets, energy dissipators, and outlets. A summary table of standard inspection and maintenance indicators is provided within this Fact Sheet.

Non-Standard Maintenance or BMP Failure. If any of the following scenarios are observed, the BMP is not performing as intended to protect downstream waterways from pollution and/or erosion. Corrective maintenance, increased inspection and maintenance, BMP replacement, or a different BMP type will be required.

- The BMP is not drained between storm events. Surface ponding longer than approximately 24 hours following a storm event may be detrimental to vegetation health, and surface ponding longer than approximately 96 hours following a storm event poses a risk of vector (mosquito) breeding. Poor drainage can result from clogging of the media layer, filter course, aggregate storage layer, underdrain, or outlet structure. The specific cause of the drainage issue must be determined and corrected.
- Sediment, trash, or debris accumulation greater than 25% of the surface ponding volume within one month. This means the load from the tributary drainage area is too high, reducing BMP function or clogging the BMP. This would require pretreatment measures within the tributary area draining to the BMP to intercept the materials. Pretreatment components, especially for sediment, will extend the life of components that are more expensive to replace such as media, filter course, and aggregate layers.

- Erosion due to concentrated storm water runoff flow that is not readily corrected by adding erosion control blankets, adding stone at flow entry points, or minor re-grading to restore proper drainage according to the original plan. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.

Other Special Considerations. Biofiltration is a vegetated structural BMP. Vegetated structural BMPs that are constructed in the vicinity of, or connected to, an existing jurisdictional water or wetland could inadvertently result in creation of expanded waters or wetlands. As such, vegetated structural BMPs have the potential to come under the jurisdiction of the United States Army Corps of Engineers, SDRWQCB, California Department of Fish and Wildlife, or the United States Fish and Wildlife Service. This could result in the need for specific resource agency permits and costly mitigation to perform maintenance of the structural BMP. Along with proper placement of a structural BMP, routine maintenance is key to preventing this scenario.

Sediment Loading. Consider the effects of BMP design and tributary area land uses on the clogging potential of the BMP. Complete the sediment loading analysis included in Appendix E.27.

Summary of Standard Inspection and Maintenance

The property owner is responsible to ensure inspection, operation and maintenance of permanent BMPs on their property unless responsibility has been formally transferred to an agency, community facilities district, homeowners association, property owners association, or other special district.

Maintenance frequencies listed in this table are average/typical frequencies. Actual maintenance needs are site-specific, and maintenance may be required more frequently. Maintenance must be performed whenever needed, based on maintenance indicators presented in this table. The BMP owner is responsible for conducting regular inspections to see when maintenance is needed based on the maintenance indicators. During the first year of operation of a structural BMP, inspection is recommended at least once prior to August 31 and then monthly from September through May. Inspection during a storm event is also recommended. After the initial period of frequent inspections, the minimum inspection and maintenance frequency can be determined based on the results of the first year inspections.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials, without damage to the vegetation or compaction of the media layer.	• Inspect monthly. If the BMP is 25% full* or more in one month, increase inspection frequency to monthly plus after every 0.1-inch or larger storm event. • Remove any accumulated materials found at each inspection.
Obstructed inlet or outlet structure	Clear blockage.	• Inspect monthly and after every 0.5-inch or larger storm event. • Remove any accumulated materials found at each inspection.
Damage to structural components such as weirs, inlet or outlet structures	Repair or replace as applicable	• Inspect annually. • Maintain when needed.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Poor vegetation establishment	Re-seed, re-plant, or re-establish vegetation per original plans.	• Inspect monthly. • Maintain when needed.
Dead or diseased vegetation	Remove dead or diseased vegetation, re-seed, re-plant, or re-establish vegetation per original plans.	• Inspect monthly. • Maintain when needed.
Overgrown vegetation	Mow or trim as appropriate.	• Inspect monthly. • Maintain when needed.
2/3 of mulch has decomposed, or mulch has been removed	Remove decomposed fraction and top off with fresh mulch to a total depth of 3 inches.	• Inspect monthly. • Replenish mulch annually, or more frequently when needed based on inspection.
Erosion due to concentrated irrigation flow	Repair/re-seed/re-plant eroded areas and adjust the irrigation system.	• Inspect monthly. • Maintain when needed.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Erosion due to concentrated storm water runoff flow	Repair/re-seed/re-plant eroded areas, and make appropriate corrective measures such as adding erosion control blankets, adding stone at flow entry points, or minor re-grading to restore proper drainage according to the original plan. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.	• Inspect after every 0.5-inch or larger storm event. If erosion due to storm water flow has been observed, increase inspection frequency to after every 0.1-inch or larger storm event. • Maintain when needed. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.
Standing water in BMP for longer than 24 hours following a storm event Surface ponding longer than approximately 24 hours following a storm event may be detrimental to vegetation health	Make appropriate corrective measures such as adjusting irrigation system, removing obstructions of debris or invasive vegetation, clearing underdrains, or repairing/replacing clogged or compacted soils.	• Inspect monthly and after every 0.5-inch or larger storm event. If standing water is observed, increase inspection frequency to after every 0.1-inch or larger storm event. • Maintain when needed.

Threshold/Indicator	Maintenance Action	Typical Maintenance Frequency
Presence of mosquitos/larvae For images of egg rafts, larva, pupa, and adult mosquitos, see http://www.mosquito.org/biology	If mosquitos/larvae are observed: first, immediately remove any standing water by dispersing to nearby landscaping; second, make corrective measures as applicable to restore BMP drainage to prevent standing water. If mosquitos persist following corrective measures to remove standing water, or if the BMP design does not meet the 96-hour drawdown criteria due to release rates controlled by an orifice installed on the underdrain, the [City Engineer] shall be contacted to determine a solution. A different BMP type, or a Vector Management Plan prepared with concurrence from the County of San Diego Department of Environmental Health, may be required.	• Inspect monthly and after every 0.5-inch or larger storm event. If mosquitos are observed, increase inspection frequency to after every 0.1-inch or larger storm event. • Maintain when needed.
Underdrain clogged	Clear blockage.	Inspect if standing water is observed for longer than 24-96 hours following a storm event. Maintain when needed.

"25% full" is defined as ¼ of the depth from the design bottom elevation to the crest of the outflow structure (e.g., if the height to the outflow opening is 12 inches from the bottom elevation, then the materials must be removed when there is 3 inches of accumulation – this should be marked on the outflow structure).

ATTACHMENT 4
Copy of Plan Sheets Showing Permanent Storm Water BMPs

This is the cover sheet for Attachment 4.

Use this checklist to ensure the required information has been included on the plans:

The plans must identify:

- ☐ Structural BMP(s) with ID numbers matching Form I-6 Summary of PDP Structural BMPs
- ☐ The grading and drainage design shown on the plans must be consistent with the delineation of DMAs shown on the DMA exhibit
- ☐ Details and specifications for construction of structural BMP(s)
- ☐ Signage indicating the location and boundary of structural BMP(s) as required by the [City Engineer]
- ☐ How to access the structural BMP(s) to inspect and perform maintenance
- ☐ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- ☐ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- ☐ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- ☐ Recommended equipment to perform maintenance
- ☐ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
- ☐ Include landscaping plan sheets showing vegetation requirements for vegetated structural BMP(s)
- ☐ All BMPs must be fully dimensioned on the plans
- ☐ When proprietary BMPs are used, site-specific cross section with outflow, inflow, and model number shall be provided. Photocopies of general brochures are not acceptable.

Water and Sewer Study

VALLECITOS WATER DISTRICT

CALIFORNIA PACIFIC HOMES & AOA SAN MARCOS LLC. MIXED USE WATER AND SEWER STUDY

WORK ORDER # 267553

FINAL TECHNICAL MEMORANDUM

May 16, 2023

Prepared By: Elizabeth Lopez, Senior Engineer Development Services, and Lisa Whitesell Engineering Technician III

INTRODUCTION

The proposed California Pacific Homes project (Project) is a 102-unit multi-family residential development and AOA San Marcos LLC is the mixed use development with 7,536 square feet of Office Space, 42,434 square feet of commercial space consisting of Restaurant Space, Retail Space, Brewery and Distillery, and 8 – Live/Work Units on a grand total of 10.91-acres, located on the southwest corner of Grand Avenue and Linda Vista Drive (APN's 219-152-42, 44, 45, 51, 61, 70, 75, 76, 78, 79 and portions of 74).

The Project is located within Vallecitos Water District's (VWD) boundaries for water and wastewater service. The property does not need to annex, both water and wastewater services can be provided by VWD.

All new projects undergo evaluation by VWD to determine if the current water and sewer infrastructure is sufficient to accommodate the proposed water demands and sewage generation.

This study projects water demand and sewage generation increases due to the project densification. It analyzes the following aspects of VWD's infrastructure and makes recommendations for capital improvements for impacts that are created due to the land use change:

- Water distribution system, including the need to upsize pipelines, install new pipelines, or install flow control facilities.
- Water storage, including the need for additional storage and the adequacy of existing storage tanks and reservoirs to serve the proposed development.
- Water pump stations, including the need to install new pump stations or upsize existing pump stations to serve the proposed development.
- Wastewater collection system, including the need to upsize pipelines and manholes, or the need to install new pipelines and manholes.
- Wastewater lift stations, including the need to install new lift stations or upsize existing lift stations to serve the proposed development.

- Wastewater land outfall, including the need to construct a parallel land outfall to serve this and other proposed developments.
- Wastewater treatment facilities, including the need for obtaining additional capacity at the Encina Water Pollution Control Facility (EWPCF) or for expanding the Meadowlark Water Reclamation Facility (MRF).
- Existing VWD water and/or sewer facilities not being utilized for proposed development will need to be abandoned per VWD Standards and Specifications. Asbestos cement pipe shall be properly removed and legally disposed of by the Developer.

WATER SYSTEM ANALYSIS

The proposed 10.91-acre Project lies completely within VWD's 855 Pressure Zone. Figures 1 and 2 show the development's location in relation to pressure zone boundaries, identify pipelines within the vicinity of the development, and identify storage reservoirs that supply the development area.

Water Demand Projections

The City of San Marcos' approved land use designation for the proposed Project is Business Industrial (I/C) and Commercial (C). The 2018 Master Plan based its ultimate water demand planning on Industrial. Table 1 provides the average water demand generated both under the density planned for the 2018 Master Plan and for the proposed Project. The table shows California Pacific Homes & AOA Mixed-Use Project will increase the projected average water demand from the 2018 Master Plan land use by **28,967** gallons per day.

Table 1 – Project Estimated Water Demands for California Pacific Homes & AOA Mixed-Use

Land Use Type	Area (acres)	Residential Units	Duty Factor (gpd/ac)	Water Demand (gpd)
2018 Master Plan Land Use Demand				
Industrial	10.91		800	8,728
Total	**10.91**			**8,728**
Proposed Project Demand				
Residential (20-30 du/ac)	4.74	110	6,000	28,440
Commercial/Mixed use/Office	6.17		1,500	9,255
Total	**10.91**			**37,695**
Water Demand Increase				**28,967**

Water Distribution System Analysis

The 2018 Master Plan water system distribution and pressure criteria are as follows:

Water Distribution Infrastructure Criteria

The water service pressure criteria to be met by this development are as follows:

- Minimum allowable pressure at peak hour demand: 40 psi
- Minimum allowable pressure at max day plus fire demand: 20 psi
- Maximum allowable pressure: 150 psi

The City of San Marcos Fire Marshall has set the required fire demand at 1,875 gpm (West End Residential Townhomes) & 1,688 gpm (East End – Commercial/Mixed Use) for the Project.

To avoid excessive velocity and headloss within the distribution system, the following pipeline design criteria was also utilized:

- Maximum allowable velocity: 7 feet per second
- Maximum allowable headloss gradient: 15 feet per 1,000 feet
- Hazen-Williams C-factor: 130

Water Model Scenarios

The following scenarios were modeled to identify system impacts that may be created by the proposed water demands, and to recommend any improvements required to provide service to the Project:

- Average Day Demand with existing demands at the Project site
- Average Day Demand with the proposed Project
- Maximum Day Demand with existing demands at the Project site
- Maximum Day Demand with the proposed Project
- Peak Hour Demand with existing demands at the Project site
- Peak Hour Demand with the proposed Project
- Maximum Day Demand plus Fire Flow with existing demands at the Project site
- Maximum Day Demand plus Fire Flow with the proposed Project

Per the 2018 Master Plan, maximum day demands for this project are 300% those of average day demands, and peak hour demands are 620% those of average day demands.

Water Model Results

Modeling focused on the infrastructure in the direct vicinity of the Project. The model found that the Project did not create any distribution system deficiencies under average day demand or under maximum day plus fire flow demand conditions.

Table 2 & 2A presents a summary of the modeling results for this analysis including proposed off-site pipelines, shown in Figure 2.

Table 2 – Potable Water Pipeline Results under Maximum Day Demand plus Fire Flow Conditions @ 1,875 gpm for Residential

Pipe ID Number	Length (ft)	Existing Pipe Diameter (in)	Velocity under Average Day Demand (ft/s)	Velocity under Maximum Day + Fire Flow (ft/s)	Upsized Pipe Diameter (in)	Velocity under Maximum Day + Fire Flow w/ Upsized Pipe (ft/s)
MC-1	1,086	10	1.77	3.15	-	-
MC-2	481	10	1.77	4.61	-	-
MC-3	359	10	0.79	3.73	-	-
MC-4	424	10	0.79	3.81	-	-
MC-5	172	8	4.00	4.13	-	-

Table 2A – Potable Water Pipeline Results under Maximum Day Demand plus Fire Flow Conditions @ 1,688 gpm for Commercial

Pipe ID Number	Length (ft)	Existing Pipe Diameter (in)	Velocity under Average Day Demand (ft/s)	Velocity under Maximum Day + Fire Flow (ft/s)	Upsized Pipe Diameter (in)	Velocity under Maximum Day + Fire Flow w/ Upsized Pipe (ft/s)
MC-1	1,086	10	1.77	1.29	-	-
MC-2	481	10	1.77	1.09	-	-
MC-3	359	10	0.79	3.40	-	-
MC-4	424	10	0.79	3.54	-	-
MC-5	172	8	4.00	3.65	-	-

Water Storage Analysis

The 2018 Master Plan outlines VWD's potable water storage reservoirs for each pressure zone as follows:

> 1.5 times ADD (operational storage) + 3.0 times ADD (emergency storage) + fire flow demand = 4.5 times ADD + fire flow demand
>
> OR
>
> 5.0 times ADD, whichever is greater.

The Project is located entirely within the VWD 855 pressure zone. Water storage for this zone is located within the 920 zone and 1028 Twin Oaks pressure zones, as shown in Figure 1. Table 3 shows the required storage in the 855, 920, and 1028 Twin Oaks pressure zones for existing and ultimate build-out (Master Plan) conditions relative to the existing storage provided within each zone.

Table 3 – Existing Reservoir Storage Capacity and Requirements

Pressure Zone	Existing ADD (MGD)	Existing Storage Requirement (MG)	Ultimate ADD (MGD)	Ultimate Storage Requirement (MG)	Existing Storage Available (MG)
855	3.74	50.05	6.79	101.25	0
920	5.61		10.40		18
1028 Twin Oaks	0.66		3.06		73
Totals	10.01	**50.05**	20.25	**101.25**	**91**

The Project will increase the projected average water demand by approximately **28,967** gallons per day as shown in Table 1.

The amount of additional reservoir storage required is 500% of the development's average day demand or:

28,967 gallons * 500% = 144,835 gallons

The analysis finds that water storage capacity is currently available to serve the Project's increased storage requirements. Master Plan projects address and accommodate the ultimate build-out storage deficiency and Water Capital Facility Fees paid by this project will be used for the increase in storage necessitated by the Project's demand calculated above.

Water Pump Station Analysis

Since the proposed Project is located in a pressure zone that is not served by pumping, there are no impacts to existing or proposed pump stations by this Project.

WASTEWATER SYSTEM ANALYSIS

The proposed 10.91-acre Project lies completely within VWD sewer shed 22C. Figures 3 through 5 show the development's location in relation to sewer shed boundaries, identify wastewater infrastructure within the vicinity of the development, and identify the downstream collection infrastructure that will be impacted by the development.

Wastewater Flow Projections

The Project property's City of San Marcos approved land use designation for the proposed Project is Business Industrial (I/C) and Commercial (C). The 2018 Master Plan based its ultimate wastewater generation planning on Industrial. Table 4 provides the average wastewater flow generated both under the density planned for the 2018 Master Plan and with the proposed Project. The table shows California Pacific Homes & AOA Mixed-Use project will increase the projected average wastewater generation from the 2018 Master Plan land use by **21,097** gallons per day.

Table 4 – Project Estimated Wastewater Flows for California Pacific Homes & AOA Mixed-Use Project

Land Use Type	Area (acres)	Residential Units	Duty Factor (gpd/ac)	Wastewater Flow (gpd)
2018 Master Plan Land Use Flows				
Industrial	**10.91**		700	7,637
Total	**10.91**			**7,637**
Proposed Project Demand				
Residential (20-30 du/ac)	4.74	110	4,500	21,330
Commercial/Mixed Use	6.17		1,200	7,404
Total	**10.91**			**28,734**
Sewer Generation Increase				**21,097**

Wastewater Collection System Analysis

The 2018 Master Plan outlines VWD's wastewater system design criteria which are as follows:

Wastewater Collection Infrastructure Criteria

The wastewater pipeline criteria to be met both within and downstream of the development are as follows:

- Pipes 12 inches in diameter and smaller: ½ full maximum at peak flow
- Pipes over 12 inches in diameter: ¾ full maximum at peak flow
- Minimum velocity: 2 feet per second
- Maximum velocity: 10 feet per second
- Manning's n for gravity pipes: .013
- Hazen-Williams C-factor for force mains/siphons: 120
- Slope for pipes 8 inches in diameter and smaller: 0.4% minimum
- Slope for pipes over 8 inches in diameter: to be determined by VWD

When flow depth in gravity pipes exceeds maximum levels as stated above, a pipe upsize will be specified.

Wastewater Model Scenarios

The following scenarios were modeled to identify system impacts that may be created by the proposed sewer generation, and to recommend any improvements required to provide service to the Project:

- Average Dry Weather Flow with existing flows at the Project site
- Average Dry Weather Flow with the proposed Project
- Peak Dry Weather Flow with existing flows at the Project site
- Peak Dry Weather Flow with the proposed Project
- Peak Wet Weather Flow with existing flows at the Project site
- Peak Wet Weather Flow with the proposed Project

The peak dry weather curve is:

$$\text{Peak Dry Weather Factor} = 2.16 \times (\text{Average Dry Weather Flow Rate})^{-0.1618}$$

The wet weather peak curve is:

$$\text{Peak Wet Weather Factor} = 2.78 \times (\text{Average Dry Weather Flow Rate})^{-0.087}$$

Wastewater Model Results

Modeling focused not only on the sewer collection infrastructure in the direct vicinity of the Project, but also on all downstream infrastructure from the development to Lift Station No. 1 on San Marcos Boulevard that would be impacted by the proposed Project flows (see Figures 3 - 5).

Table 5 presents a summary of the modeling results from this analysis. The modeling results showed that no deficiencies were identified under the currently approved density under peak wet weather flows during ultimate build-out conditions.

Wastewater Lift Station Analysis

Lift stations are sized for peak wet weather flow with manufacturer's recommended cycling times for pumping equipment. Since the proposed Project is not located in a sewer shed that is served by a lift station, there are no lift station upgrade requirements for this project.

Parallel Land Outfall Analysis

VWD's existing land outfall is shown in Figure 6. The outfall is approximately 8 miles in length and consists of 4 gravity pipeline sections and 3 siphon sections varying in diameter from 20 inches to 54 inches. VWD maintains the entire pipeline from Lift Station No. 1 to the Encina Water Pollution Control Facility (EWPCF). From Lift Station No. 1 to El Camino Real, VWD is the sole user of this pipeline. From El Camino Real to the EWPCF, the ownership capacity is as shown in Table 6 below:

Table 6 – Land Outfall Capacity Ownership by Agency

Agency	Ownership Percentage	Capacity (MGD)
Carlsbad	23.98%	5.00
Vista	17.99%	3.75
VWD	58.03%	12.10
Totals	**100.00%**	**20.85**

The Meadowlark Water Reclamation Facility (MRF) has a capacity of 5.0 MGD with a peak wet weather capacity of 8.0 MGD. Therefore, VWD has a combined peak wet weather wastewater collection capacity of 20.10 MGD (12.10 MGD + 8.0 MGD).

VWD's 2014 average daily wastewater flow through the land outfall was 7.5 MGD. This corresponds to a peak wet weather flow of 17.5 MGD, which falls within VWD's combined peak wet weather collection capacity.

The 2018 Master Plan estimated that, under approved land uses, VWD has an ultimate build-out average dry weather flow of 14.4 MGD. This corresponds to a peak wet weather flow of 31.7 MGD, which exceeds VWD's combined peak wet weather collection capacity. To accommodate additional wastewater flows from planned development, the 2018 Master Plan recommended conveyance of peak flows to the EWPCF through a parallel land outfall.

The Project proposes to generate **21,097** gallons per day of additional average wastewater flow that was not accounted for in the Land Outfall's capacity studied in the 2018 Master Plan.

The analysis finds that outfall capacity is currently available to serve the Project's proposed wastewater generation. Wastewater Capital Facility Fees paid by this Project will be used toward design and construction of a parallel land outfall to be sized to accommodate ultimate build-out wastewater flows.

Wastewater Treatment Facility Analysis

VWD utilizes two wastewater treatment facilities to treat wastewater collected within its sewer service area.

- The Meadowlark Reclamation Facility (MRF) has liquids treatment capacity of up to 5.0 MGD with a peak wet weather capacity of 8.0 MGD. MRF does not have solids treatment capacity, and therefore all solids are treated at the Encina Water Pollution Control Facility (EWPCF).
- The EWPCF is located in the City of Carlsbad. This is a regional facility with treatment capacity of up to 40.51 MGD. VWD's current ownership capacity is noted below.

Solids Treatment Capacity
VWD currently owns 10.47 MGD of solids treatment capacity at EWPCF. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate solids treatment capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in a projected solids treatment capacity deficiency of 3.93 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the solid treatment capacity wastewater flow.

Liquids Treatment Capacity
VWD currently owns 7.67 MGD of liquids treatment capacity at the EWPCF in addition to the liquid's treatment capacity of 5.0 MGD at MRF for a total of 12.67 MGD of liquids treatment capacity. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate liquids treatment capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in a projected liquids treatment capacity deficiency of 1.73 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the ultimate average wastewater flow.

Ocean Disposal Capacity
VWD currently owns 10.47 MGD of ocean disposal capacity at the EWPCF. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate ocean disposal capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in an ocean disposal deficiency of 3.93 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the ocean disposal wastewater flow.

The District has determined that adequate wastewater treatment and disposal capacity exists for the proposed Project at this time subject to the qualifications referenced in the Conclusions and Conditions.

CONCLUSION AND CONDITIONS

The proposed California Pacific Homes & AOA Mixed-Use Project is expected to increase average daily water demands by 28,967 gallons per day and wastewater flows by 21,097 gallons per day over the ultimate flows projected in the 2018 Master Plan.

The study concludes that the proposed development will result in the following impacts:

- An increase of 28,967 gallons per day in water demand for proposed project.
- An increase of 144,895 gallons of potable water storage requirement.
- An increase of 21,097 gallons per day in solids handling, liquids handling and ocean disposal capacity requirements at Encina Water Pollution Control Facility.
- An increase of 21,097 gallons per day in the parallel land outfall's capacity requirement.

The following conditions are required for providing service to the proposed Project:

- Payment of all applicable Water and Wastewater Capital Facility Fees in affect at the time service is committed in accordance with District rules and regulations.
- Construction and Board acceptance of all on-site and off-site water and sewer facilities prior to service.

The District currently has water and sewer capacity available to serve the Project as proposed with the conditions herein addressed by the Developer. However, the ability to provide water and sewer service in the future depends upon ultimate build-out of the Project and could change depending upon the timing of the build-out, as well as build-outs of other development projects, continued reliable water supplies from the San Diego County Water Authority, the District's treatment capacity at the EWPCF and other factors affecting growth in the District which may change over time.

This Study is based on the current adopted land use utilized in VWD's 2018 Master Plan. The study addresses the incremental facility impacts of this Project only and does not include or consider any additional projects within VWD's service area that have deviated from adopted Master Plan land uses. Any land use changes upstream and/or downstream of the Study area may necessitate a revision of any onsite and offsite studies. VWD shall determine if and when revisions to the Study are necessary. Costs for revising this Study shall be borne by the Developer. The results of this study are not the accepted conditions for the development, final conditions shall be part of the construction agreement process or issued separately by the District.
