PDP SWQMP PREPARER'S CERTIFICATION PAGE

Project Name: Mission Villas

Permit Application Number: GP20-00016

PREPARER'S CERTIFICATION

I hereby declare that I am the Engineer in Responsible Charge of design of storm water best management practices (BMPs) for this project, and that I have exercised responsible charge over the design of the BMPs as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the PDP requirements of the [City of San Marcos] BMP Design Manual, which is a design manual for compliance with local [City of San Marcos] and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

I have read and understand that the [City Engineer] has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this PDP SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this PDP SWQMP by the [City Engineer] is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

PDP SWQMP PROJECT OWNER'S CERTIFICATION PAGE

Project Name: Cornerstone Communities Woodward

Permit Application Number:

PROJECT OWNER'S CERTIFICATION

This PDP SWQMP has been prepared for Cornerstone Communities Corporation by Excel Engineering. The PDP SWQMP is intended to comply with the PDP requirements of the City of San Marcos BMP Design Manual, which is a design manual for compliance with local City of San Marcos and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan. Once the undersigned transfers its interests in the property, its successor-in-interest shall bear the aforementioned responsibility to implement the best management practices (BMPs) described within this plan, including ensuring on-going operation and maintenance of structural BMPs. A signed copy of this document shall be available on the subject property into perpetuity.

Applicability of Storm Water Best Management Practices (BMP) Requirements

(Storm Water Intake Form for all Development Permit Applications)

For detailed information please visit:

<http://www.san-marcos.net/departments/development-services/stormwater/development-planning>

Form I-1
[March 15, 2016]

Project Identification

Project Name: CORNERSTONE COMMUNITIES WOODWARD

Description: 46 residential airspace units on a 8.57 acre site

Permit Application Number (if applicable):

Date:09/22/2022

Project Address: Woodward St, San Marcos, California

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:

<http://www.san-marcos.net/departments/development-services/stormwater/development-planning>

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above , Is the project a "development project" (See definition above)? See Section 1.3 of the BMP Design Manual for further guidance if necessary.	<input checked="" type="checkbox"/> Yes	Go to Step 2.
	<input type="checkbox"/> No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. STOP.
Discussion / justification if the project is <u>not</u> a "development project" (e.g., the project includes <i>only</i> interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual <i>in its entirety</i> for guidance. In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.	<input type="checkbox"/> Standard Project	<u>Only</u> Standard Project requirements apply, including <u>Standard Project SWQMP</u> . STOP.
	<input checked="" type="checkbox"/> PDP	Standard and PDP requirements apply, including <u>PDP SWQMP</u> . Go to Step 3 on the following page.
	<input type="checkbox"/> Exception to PDP definitions	<u>Standard Project</u> requirements apply, and <u>any additional requirements specific to the type of project</u> . Provide discussion and list any additional requirements below. Prepare <u>Standard Project SWQMP</u> . STOP.

Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:

Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements apply to the proposed PDP. Does the project:

Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	<input type="checkbox"/> Yes	STOP. Hydromodification requirements do not apply.
	<input checked="" type="checkbox"/> No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	<input type="checkbox"/> Yes	STOP. Hydromodification requirements do not apply.
	<input checked="" type="checkbox"/> No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	<input type="checkbox"/> Yes	STOP. Hydromodification requirements do not apply.
	<input checked="" type="checkbox"/> No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	<input type="checkbox"/> Yes	STOP. Hydromodification requirements do not apply.
	<input checked="" type="checkbox"/> No	Hydromodification requirements apply to the project. Go to Step 4.

Discussion / justification if hydromodification control requirements do not apply:

Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	<input type="checkbox"/> Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	<input checked="" type="checkbox"/> No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop.

Potential Critical Coarse Sediment

Data From WMAA Map

Legend

-  Potential Critical Course Sediment
-  Project Site

The map above shows potential critical course sediment areas. The northwesterly Critical Course Sediment area is located on the Woodward Street adjacent to the driveway. This critical course sediment is on a developed area, therefore this project does not impact the existing sediment. A critical course sediment analysis is provided on Attachment 2b.

Project Type Determination Checklist		Form I-2 [March 15, 2016]	
Project Information			
Project Name/Description: CORNERSTONE COMMUNITIES WOODWARD			
Permit Application Number (if applicable):		Date: 09/22/2022	
Project Address: Woodward St, San Marcos, California			
Project Type Determination: Standard Project or Priority Development Project (PDP)			
The project is (select one): <input checked="" type="checkbox"/> New Development <input type="checkbox"/> Redevelopment			
The total proposed newly created or replaced impervious area is: <u>373309</u> ft ² (<u>8.57</u>) acres			
Is the project in any of the following categories, (a) through (f)?			
Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	(a)	New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	(c)	<p>New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses:</p> <ul style="list-style-type: none"> (i) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (Standard Industrial Classification (SIC) code 5812). (ii) Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater. (iii) Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (iv) Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	(d)	New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). <i>Note: ESAs are areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and San Diego Water Board; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and San Diego Water Board; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees. See BMP Design Manual Section 1.4.2 for additional guidance.</i>
Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>	(e)	New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses: (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.
Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	(f)	New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction. <i>Note: See BMP Design Manual Section 1.4.2 for additional guidance.</i>

Does the project meet the definition of one or more of the Priority Development Project categories (a) through (f) listed above?

- No – the project is not a Priority Development Project (Standard Project).
 Yes – the project is a Priority Development Project (PDP).

The following is for redevelopment PDPs only:

The area of existing (pre-project) impervious area at the project site is: 0 ft² (A)

The total proposed newly created or replaced impervious area is _____ ft² (B)

Percent impervious surface created or replaced (B/A)*100: _____%

The percent impervious surface created or replaced is (select one based on the above calculation):

less than or equal to fifty percent (50%) – only new impervious areas are considered PDP

OR

greater than fifty percent (50%) – the entire project site is a PDP

Site Information Checklist For PDPs		Form I-3B (PDPs) [March 15, 2016]
Project Summary Information		
Project Name	CORNERSTONE COMMUNITIES WOODWARD	
Project Address	Woodward St, San Marcos, California	
Assessor's Parcel Number(s) (APN(s))	220-210-49	
Permit Application Number	SP22-0005/ TSM22-0004/ MFSDP22-0005	
Project Hydrologic Unit	Select One: <input type="checkbox"/> Santa Margarita 902 <input type="checkbox"/> San Luis Rey 903 <input checked="" type="checkbox"/> Carlsbad 904 <input type="checkbox"/> San Dieguito 905 <input type="checkbox"/> Penasquitos 906 <input type="checkbox"/> San Diego 907 <input type="checkbox"/> Pueblo San Diego 908 <input type="checkbox"/> Sweetwater 909 <input type="checkbox"/> Otay 910 <input type="checkbox"/> Tijuana 911	
Project Watershed (Complete Hydrologic Unit, Area, and Subarea Name with Numeric Identifier)	The project is located in the Richland Hydrologic Sub Area of the San Marcos Hydrologic Area of the CARLSBAD Hydrologic Unit (904.52).	
Parcel Area (total area of Assessor's Parcel(s) associated with the project)	8.57 Acres (373309 Square Feet)	
Area to be Disturbed by the Project (Project Area)	5.91 Acres (257621.10 Square Feet)	
Project Proposed Impervious Area (subset of Project Area)	3.209 Acres (139767 Square Feet)	
Project Proposed Pervious Area (subset of Project Area)	5.361 Acres (233542 Square Feet)	
Note: Proposed Impervious Area + Proposed Pervious Area = Area to be Disturbed by the Project. This may be less than the Parcel Area.		

Description of Existing Site Condition

Current Status of the Site (select all that apply):

- Existing development
- Previously graded but not built out
- Demolition completed without new construction
- Agricultural or other non-impervious use
- Vacant, undeveloped/natural

Description / Additional Information:

Existing Land Cover Includes (select all that apply):

- Vegetative Cover
- Non-Vegetated Pervious Areas
- Impervious Areas

Description / Additional Information:

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

- NRCS Type A
- NRCS Type B
- NRCS Type C
- NRCS Type D

Approximate Depth to Groundwater (GW):

- GW Depth < 5 feet
- 5 feet < GW Depth < 10 feet
- 10 feet < GW Depth < 20 feet
- GW Depth > 20 feet

Existing Natural Hydrologic Features (select all that apply):

- Watercourses
- Seeps
- Springs
- Wetlands
- None

Description / Additional Information:

Description of Existing Site Drainage Patterns

How is storm water runoff conveyed from the site? At a minimum, this description should answer:

- (1) whether existing drainage conveyance is natural or urban;
- (2) Is runoff from offsite conveyed through the site? if yes, quantify all offsite drainage areas, design flows, and locations where offsite flows enter the project site, and summarize how such flows are conveyed through the site;
- (3) Provide details regarding existing project site drainage conveyance network, including any existing storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels; and
- (4) Identify all discharge locations from the existing project site along with a summary of conveyance system size and capacity for each of the discharge locations. Provide summary of the pre-project drainage areas and design flows to each of the existing runoff discharge locations.

Describe existing site drainage patterns:

The existing drainage conveyance is natural and fronts onto Woodward Street and East Mission Road. The upper east side of the project site drains westerly to the existing 18 inches and 24 inches storm drain pipe then drains to poc-1, which is located at the southwest corner of the project site. The lower east side of the project site drains southerly to the existing 12 and 18 inches storm drain pipe then to poc-2, which is located at the southeast corner of the project site. At the north edge of the project site, surface runoff drains northerly to poc-3, which is located at the northwest edge of the project site.

At the northeast part of the project site, approximately 0.2 acres offsite areas conveyed through the site then drains to poc-3 finally. At the middle east edge of the project site, approximately 0.15 acres offsite areas conveyed through the site then drains to poc-1 finally. The lower east part of the project site, approximately, 1.2067 acers offsite drains to poc-2.

There are three discharge locations of the site: POC-1 is located at the southwest corner of the project site with the 100 year peak flow of 16.14 CFS. POC-2 is located at the southeast corner of the project site with the 100 year peak flow of 8.61 CFS, and POC-3 is at northwest edge of the project site with the 100 year peak flow of 2.17 CFS.

Description of Proposed Site Development

Project Description / Proposed Land Use and/or Activities:

The project is the construction of a 46 residential airspace units on a 8.57 acre lot. Improvements include new storm drain pipe systems which includes stormwater filtration and detention features, driveways, parking areas, and associated landscape areas.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):

The proposed impervious areas of the project will include the residential units, the associated parking areas and driveways areas, the associated landscape flatwork (sidewalks) and the paved access road up to the upper areas of the site.

List/describe proposed pervious features of the project (e.g., landscape areas):

The pervious features of the site include all of the landscape areas and the remaining natural areas with graded slopes.

Does the project include grading and changes to site topography?

Yes

No

Description / Additional Information:

The grading will occur to facilitate the construction of the residential units, associated site improvements, and relatively slope areas around the site.

Description of Proposed Site Drainage Patterns

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

Yes

No

If yes, provide details regarding the proposed project site drainage conveyance network, including storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels, and the method for conveying offsite flows through or around the proposed project site. Identify all discharge locations from the proposed project site along with a summary of the conveyance system size and capacity for each of the discharge locations. Provide a summary of pre- and post-project drainage areas and design flows to each of the runoff discharge locations. Reference the drainage study for detailed calculations.

Describe proposed site drainage patterns:

The proposed grading maintains the location of the three outfalls mentioned in the existing conditions. The post development runoff will pass through an underground storage pipe & biofiltration basin prior to existing the site. The underground storage pipe is designed to meet the hydromodification requirements as well as mitigating the increase runoff created by the development. The underground storage pipe 1 is used for peak flow detention and low flow control. Surface flow generated by proposed impervious surfaces firstly drains to storage pipe 1 then drains to BMP-A, finally drains to POC-1. Storage pipe 2 is only used for peak flow detention, surface flow drains to storage pipe 2 then drains to POC-3. Callouts and section detail are on DMA and HMP exhibit.

Post- Development Outfall POC-1

There are two bio-filtration basins proposed in this project and is labeled as BMP-A on the northeast and BMP-B on the west. Both BMP-A & BMP-B drains to outfall POC-1. The outfall of this system is tied into an existing curb inlet box. This plate has an orifice that meets the hydromodification criteria.

The middle part of the project site is proposed to build multifamily, park, and street improvement. The proposed impervious area routes surface runoff northerly through proposed storm drain storage pipe 1 then to BMP-A, which is located at northeast side of the project site. After runoff get treated in BMP-A, it flows southwesterly to poc-1, which is located at southwest corner of the project site. The west part of the project site includes proposed graded slope, existing slope, and the proposed driveway. This part of the project drains surface flow southwesterly to poc-1.

Post- Development Outfall POC-2

The rest of the project, the east part, routes stormwater southeasterly to the existing 12- and 18- inches storm drain pipe then to poc-2, which is located at the southeast corner of the project site.

Post- Development Outfall POC-3

At the east side of the property, the project proposed to build brow ditch to direct surface flow northerly to the proposed 36 inches storage pipe 2 then follow the existing site slope drains to poc-3, which is located at the north edge along the Woodward Street of the project site.

Summary of Q100 Runoff

	PRE			POST			POST MITIGATION	
	POC-1	POC-2	POC-3	POC-1	POC-2	POC-3	POC-1	POC-3
Q (CFS)	16.14	7.87	2.17	21.31	4.70	3.61	14.76	2.05
A (Acres)	7.10	2.88	0.89	6.59	2.34	1.46	6.59	1.46
TC (MIN)	8.54	6.29	6.98	11.22	7.34	7.57	17.15	11.73

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

- On-site storm drain inlets
- Interior floor drains and elevator shaft sump pumps
- Interior parking garages
- Need for future indoor & structural pest control
- Landscape/Outdoor Pesticide Use
- Pools, spas, ponds, decorative fountains, and other water features
- Food service
- Refuse areas
- Industrial processes
- Outdoor storage of equipment or materials
- Vehicle and Equipment Cleaning
- Vehicle/Equipment Repair and Maintenance
- Fuel Dispensing Areas
- Loading Docks
- Fire Sprinkler Test Water
- Miscellaneous Drain or Wash Water
- Plazas, sidewalks, and parking lots

Description / Additional Information:

Identification and Narrative of Receiving Water and Pollutants of Concern

Describe flow path of storm water from the project site discharge location(s), through urban storm conveyance systems as applicable, to receiving creeks, rivers, and lagoons as applicable, and ultimate discharge to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):

The project is located in the Richland Hydrologic Sub Area of the San Marcos Hydrologic Area of the CARLSBAD Hydrologic Unit (904.52). The project discharges to a public storm drain system which discharges to an un-named tributary which discharges to the San Marcos Creek which discharges to the Batiquitos Lagoon which discharges to the Pacific Ocean.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs and/or Highest Priority Pollutants from the WQIP for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs / WQIP Highest Priority Pollutant
San Marcos Creek	DDE, Phosphorus, Sediment Toxicity, Selenium	
Lake San Marcos	Ammonia (N), Nutrients	
Batiquitos Lagoon	Pathogen	

Identification of Project Site Pollutants*

***Identification of project site pollutants is only required if flow-thru treatment BMPs are implemented onsite in lieu of retention or biofiltration BMPs (note the project must also participate in an alternative compliance program unless prior lawful approval to meet earlier PDP requirements is demonstrated)**

Identify pollutants expected from the project site based on all proposed use(s) of the site (see BMP Design Manual Appendix B.6):

Pollutant	Not Applicable to the Project Site	Expected from the Project Site	Also a Receiving Water Pollutant of Concern
Sediment			
Nutrients			
Heavy Metals			
Organic Compounds			
Trash & Debris			
Oxygen Demanding Substances			
Oil & Grease			
Bacteria & Viruses			
Pesticides			

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the BMP Design Manual)?

- Yes, hydromodification management flow control structural BMPs required.
- No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.
- No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.
- No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

***This Section only required if hydromodification management requirements apply**

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

- Yes
- No, No critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the BMP Design Manual been performed?

- 6.2.1 Verification of Geomorphic Landscape Units (GLUs) Onsite
- 6.2.2 Downstream Systems Sensitivity to Coarse Sediment
- 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
- No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

- No critical coarse sediment yield areas to be protected based on verification of GLUs onsite
- Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 2.b of the SWQMP.
- Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

If identified GLU's are not large enough or steep enough to produce a significant amount of CCS they can be made exempt from avoidance. In order for a specific GLU to be considered valid it must rate as having a High Relative Sediment Production (RSP) rating. To conduct a Quantitative Analysis of identified GLU's use the following steps from the Carlsbad Watershed Management Area – Water Quality Improvement Plan, Section A.4.2.

After all the preceding steps are used to confirm the GLU Verifications of the Potential Critical Coarse Sediment onsite, the soil loss equation is used to determine if the local area will produce a significant amount of soil loss to contribute to the determination of the verified GLU's being a Critical Coarse Sediment Yield Area.

This is accomplished by using the RUSLE (RUSLE; Renard et al. 1997) Equation in Appendix D – Watershed Management Area Analysis Section A.4.2 Quantitative Analysis.

$$A = R \times K \times LS \times C \times P$$

Where

A = estimated average soil loss in tons/acre/year
R = rainfall-runoff erosivity factor R= 43
K = soil erodibility factor K=0.43
LS = slope length and steepness factor LS=1.05
C = cover-management factor C =0.14
P = support practice factor; assumed 1 for this analysis

$$A = 43 * 0.43 * 1.05 * 0.14 * 1$$

$$A = 2.72 \text{ ton/acre/year}$$

Low: Soil Loss <5.6 tons/acre/year

Since area has a low sediment production, it is determined that the site does not have any critical course sediment.

Regional datasets used to determine the inputs required to estimate the soil loss from each GLU are listed in table below:

https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/constpermits/guidance/k_factor_map.pdf

https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/constpermits/guidance/l_s_factor_map.pdf

<https://www.epa.gov/npdes/rainfall-erosivity-factor-calculator-small-construction-sites>

Flow Control for Post-Project Runoff*

***This Section only required if hydromodification management requirements apply**

List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit.

POC-1 is located at southwest corner of the project site. This POC drains to improved public storm drain facilities at the intersection of E Mission Road and Woodward Street. POC-2 is located at the southeast corner of the project site and connects to the existing public storm drain. POC-3 is located at the north edge along the Woodward Street of the project site.

Has a geomorphic assessment been performed for the receiving channel(s)?

- No, the low flow threshold is 0.1Q2 (default low flow threshold)
- Yes, the result is the low flow threshold is 0.1Q2
- Yes, the result is the low flow threshold is 0.3Q2
- Yes, the result is the low flow threshold is 0.5Q2

If a geomorphic assessment has been performed, provide title, date, and preparer:

Discussion / Additional Information: (optional)

Other Site Requirements and Constraints

When applicable, list other site requirements or constraints that will influence storm water management design, such as zoning requirements including setbacks and open space, or local codes governing minimum street width, sidewalk construction, allowable pavement types, and drainage requirements.

Optional Additional Information or Continuation of Previous Sections As Needed

This space provided for additional information or continuation of information from previous sections as needed.

Source Control BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)		Form I-4 [March 15, 2016]	
Project Identification			
Project Name: CORNERSTONE COMMUNITIES WOODWARD			
Permit Application Number:			
Source Control BMPs			
All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement source control BMPs shown in this checklist.			
Answer each category below pursuant to the following.			
<ul style="list-style-type: none"> • "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required. • "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided. • "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided. 			
Source Control Requirement		Applied?	
SC-1 Prevention of Illicit Discharges into the MS4		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SC-1 not implemented:			
SC-2 Storm Drain Stenciling or Signage		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SC-2 not implemented:			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal		<input type="checkbox"/> Yes	<input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Discussion / justification if SC-3 not implemented: There are no proposed outdoor material storage areas for this project.			
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal		<input type="checkbox"/> Yes	<input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Discussion / justification if SC-4 not implemented: There are no proposed outdoor material work areas for this project.			

Source Control Requirement	Applied?		
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Discussion / justification if SC-5 not implemented:			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)			
<input checked="" type="checkbox"/> On-site storm drain inlets	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input type="checkbox"/> Interior floor drains and elevator shaft sump pumps	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input checked="" type="checkbox"/> Interior parking garages	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input checked="" type="checkbox"/> Need for future indoor & structural pest control	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input checked="" type="checkbox"/> Landscape/Outdoor Pesticide Use	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input type="checkbox"/> Pools, spas, decorative fountains, and other water features	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input type="checkbox"/> Food service	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input checked="" type="checkbox"/> Refuse areas	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input type="checkbox"/> Industrial processes	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input type="checkbox"/> Outdoor storage of equipment or materials	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input type="checkbox"/> Vehicle and Equipment Cleaning	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input type="checkbox"/> Vehicle/Equipment Repair and Maintenance	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input type="checkbox"/> Fuel Dispensing Areas	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input type="checkbox"/> Loading Docks	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
<input checked="" type="checkbox"/> Fire Sprinkler Test Water	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input checked="" type="checkbox"/> Miscellaneous Drain or Wash Water	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
<input checked="" type="checkbox"/> Plazas, sidewalks, and parking lots	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for <u>all</u> "No" answers shown above.			

Site Design BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)		Form I-5 [March 15, 2016]	
Project Identification			
Project Name: CORNERSTONE COMMUNITIES WOODWARD			
Permit Application Number:			
Site Design BMPs			
All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement site design BMPs shown in this checklist.			
Answer each category below pursuant to the following.			
<ul style="list-style-type: none"> • "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required. • "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided. • "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided. 			
Site Design Requirement		Applied?	
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SD-1 not implemented:			
SD-2 Conserve Natural Areas, Soils, and Vegetation		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SD-2 not implemented:			
SD-3 Minimize Impervious Area		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SD-3 not implemented:			
SD-4 Minimize Soil Compaction		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SD-4 not implemented:			
SD-5 Impervious Area Dispersion		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Discussion / justification if SD-5 not implemented: There are no significant areas of level vegetation to implement this BMP. All impervious areas are directed to a biofiltration pond.			

Site Design Requirement	Applied?		
SD-6 Runoff Collection	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Discussion / justification if SD-6 not implemented:			
SD-7 Landscaping with Native or Drought Tolerant Species	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A
Discussion / justification if SD-7 not implemented:			
SD-8 Harvesting and Using Precipitation	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
Discussion / justification if SD-8 not implemented:			

Summary of PDP Structural BMPs	Form I-6 (PDPs) [March 15, 2016]
Project Identification	
Project Name: CORNERSTONE COMMUNITIES WOODWARD	
Permit Application Number:	
PDP Structural BMPs	
<p>All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the BMP Design Manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the BMP Design Manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s).</p>	
<p>PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative and engineer of record to certify construction of the structural BMPs (see Section 1.12 of the BMP Design Manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the BMP Design Manual).</p>	
<p>Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).</p>	
<p>Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the BMP Design Manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate.</p> <p>See next page:</p>	

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 1)

Step 1, the project was divided up and evaluated at the DMA scale. Each DMA area was classified as Self-Treating, Self-Retaining or Draining to a Best Management Practice (BMP). POC-2 has significantly reduced area in the post than in the predevelopment condition. Because of the 47% reduction in area and the fact that POC-2 will only receive self mitigating runoff. It is believed that no water quality, or flow control will be necessary. POC-3 has received more area in the post than in the pre-develop area and thus compliance with flow control and peak flow will be done. For POC-3 it is assumed that the hillside is self mitigating and will treat itself. POC-1 will have flow go to storage 1 then to BMP-A. Storage-1 will act as a flow control and peak flow facility. A weir plate will be placed to meter water into BMP-A. Once water is in BMP-A this BMP will be a conjunctive use facility and will provide 1 foot minimum of freeboard to ensure safety from failure. All offsite water will be conveyed around the site through browditches and there will be no combined flows onsite. DMA-1, DMA-2 and DMA-4 are for water quality purposes.

Step 2, For the DMAs that drain to BMPs, the appropriate runoff factors were applied to each area and the required Design Capture Volume (DCV) of each sub area calculated. For this project, Harvest and reuse is not considered feasible.

Step 3, due to the impermeability of the underlying soils, (soil type D), infiltration BMPs are not feasible.

Step 3A&B for the no infiltration condition leads to section 5.5.3 which is the Biofiltration BMP category. The various sizing methods included in Appendix B.5 were followed and the entire DCV can be treated within the proposed BMPs.

Step 4, each Biofiltration area is sized in accordance with the fact sheet BF-3 found in appendix E of the BMP design manual. This project requires hydromodification controls, so the Biofiltration units accomplish both storm water treatment and flow control mitigation in an integrated design.

Structural BMP Summary Information

(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. **BMP-A**

Construction Plan Sheet No. SHEET 13

Type of structural BMP:

- Retention by harvest and use (HU-1)
- Retention by infiltration basin (INF-1)
- Retention by bioretention (INF-2)
- Retention by permeable pavement (INF-3)
- Partial retention by biofiltration with partial retention (PR-1)
- Biofiltration (BF-1)
- Biofiltration with Nutrient Sensitive Media Design (BF-2)
- Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- Detention pond or vault for hydromodification management
- Other (describe in discussion section below)

Purpose:

- Pollutant control only
- Hydromodification control only
- Combined pollutant control and hydromodification control
- Pre-treatment/forebay for another structural BMP
- Other (describe in discussion section below)

Who will certify construction of this BMP?
Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)

The Engineer of Work
Robert Dentino
Excel Engineering
440 State Place
Escondido, CA 92029

Who will be the final owner of this BMP?

Project Home Owner's Association

Who will maintain this BMP into perpetuity?

Project Home Owner's Association

What is the funding mechanism for maintenance?

Project Home Owner's Association

Structural BMP Summary Information

(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. **BMP-B**

Construction Plan Sheet No. SHEET 13

Type of structural BMP:

- Retention by harvest and use (HU-1)
- Retention by infiltration basin (INF-1)
- Retention by bioretention (INF-2)
- Retention by permeable pavement (INF-3)
- Partial retention by biofiltration with partial retention (PR-1)
- Biofiltration (BF-1)
- Biofiltration with Nutrient Sensitive Media Design (BF-2)
- Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- Detention pond or vault for hydromodification management
- Other (describe in discussion section below)

Purpose:

- Pollutant control only
- Hydromodification control only
- Combined pollutant control and hydromodification control
- Pre-treatment/forebay for another structural BMP
- Other (describe in discussion section below)

Who will certify construction of this BMP?

**ATTACHMENT 1
BACKUP FOR PDP POLLUTANT CONTROL BMPS**

This is the cover sheet for Attachment 1.

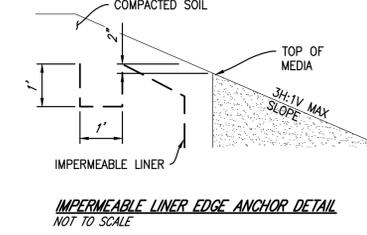

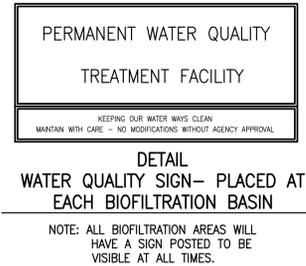

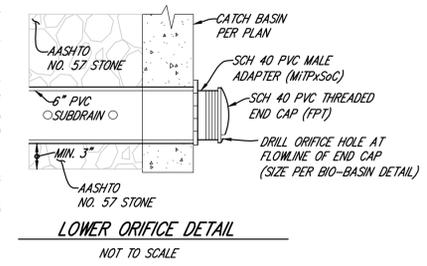

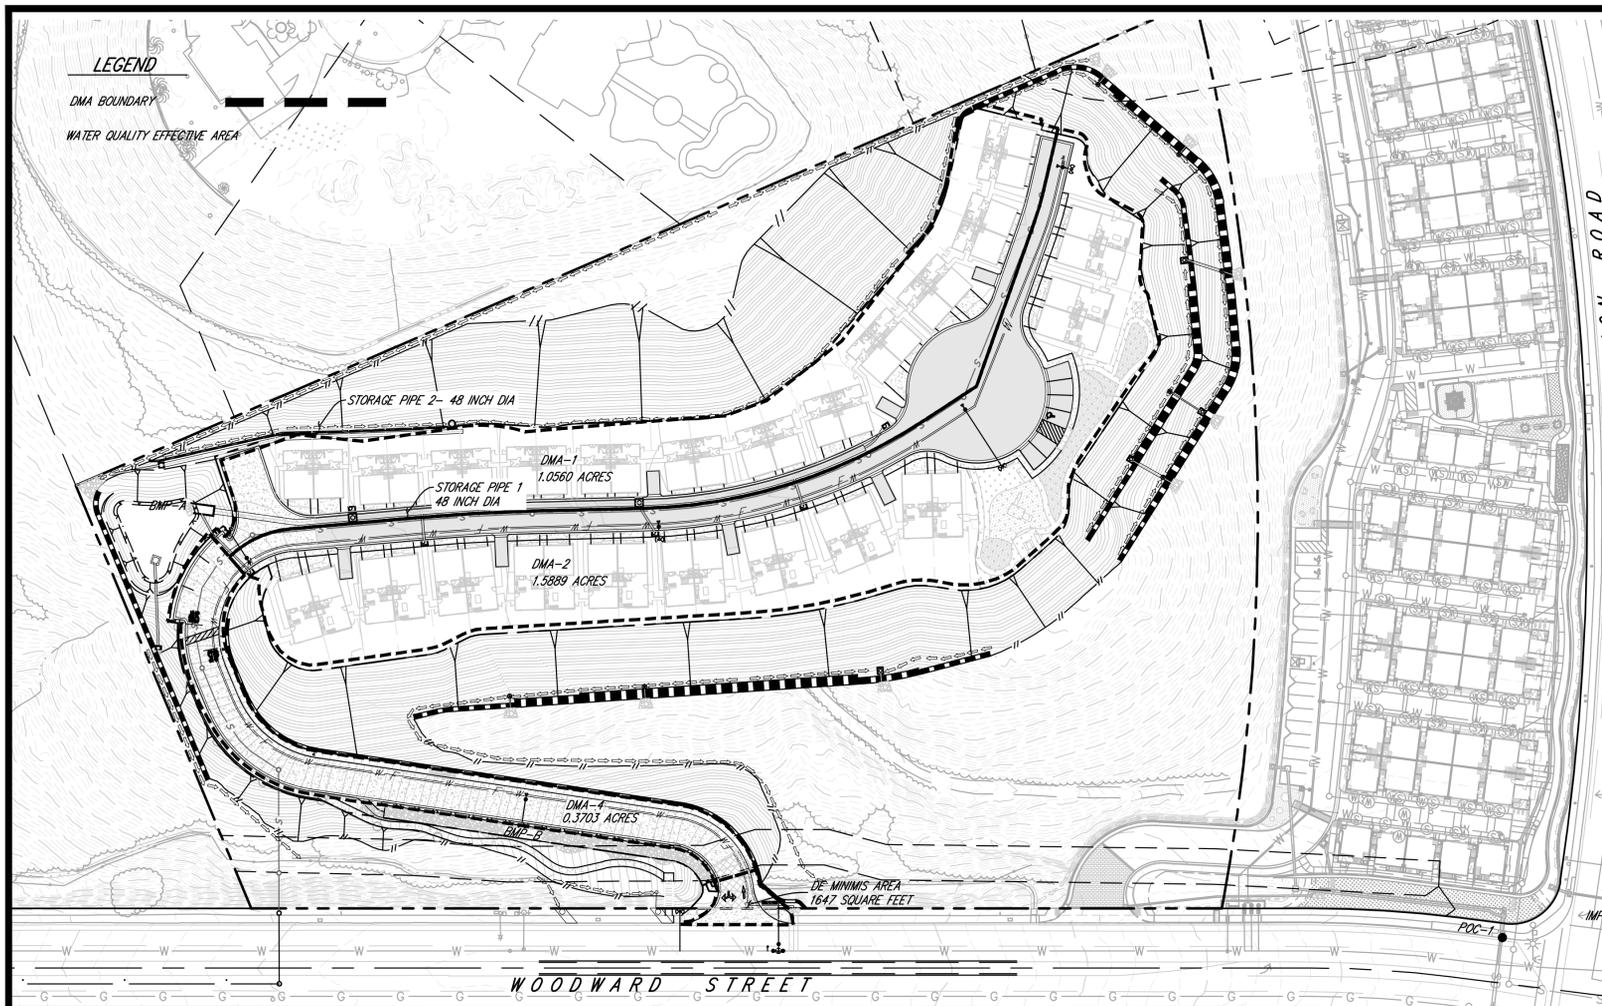

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 1a	DMA Exhibit (Required) See DMA Exhibit Checklist on the back of this Attachment cover sheet.	<input checked="" type="checkbox"/> Included
Attachment 1b	Tabular Summary of DMAs Showing DMA ID matching DMA Exhibit, DMA Area, and DMA Type (Required)* *Provide table in this Attachment OR on DMA Exhibit in Attachment 1a	<input checked="" type="checkbox"/> Included on DMA Exhibit in Attachment 1a <input type="checkbox"/> Included as Attachment 1b, separate from DMA Exhibit
Attachment 1c	Form I-7, Harvest and Use Feasibility Screening Checklist (Required unless the entire project will use infiltration BMPs) Refer to Appendix B.3-1 of the BMP Design Manual to complete Form I-7.	<input checked="" type="checkbox"/> Included <input type="checkbox"/> Not included because the entire project will use infiltration BMPs
Attachment 1d	Form I-8, Categorization of Infiltration Feasibility Condition (Required unless the project will use harvest and use BMPs) Refer to Appendices C and D of the BMP Design Manual to complete Form I-8.	<input checked="" type="checkbox"/> Included <input type="checkbox"/> Not included because the entire project will use harvest and use BMPs
Attachment 1e	Pollutant Control BMP Design Worksheets / Calculations (Required) Refer to Appendices B and E of the BMP Design Manual for structural pollutant control BMP design guidelines	<input checked="" type="checkbox"/> Included

Use this checklist to ensure the required information has been included on the DMA Exhibit:

The DMA Exhibit must identify:

- Underlying hydrologic soil group
- Approximate depth to groundwater
- Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- Critical coarse sediment yield areas to be protected
- Existing topography and impervious areas
- Existing and proposed site drainage network and connections to drainage offsite
- Proposed demolition
- Proposed grading
- Proposed impervious features
- Proposed design features and surface treatments used to minimize imperviousness
- Drainage management area (DMA) boundaries, DMA ID numbers, and DMA areas (square footage or acreage), and DMA type (i.e., drains to BMP, self-retaining, or self-mitigating)
- Potential pollutant source areas and corresponding required source controls (see Chapter 4, Appendix E.1, and Form I-3B)
- Structural BMPs (identify location, type of BMP, and size/detail)

HYDROLOGIC SOIL GROUP
THE ONSITE HYDROLOGIC SOIL GROUP FOR THIS SITE IS TYPE D.

EXISTING SITE FEATURES:

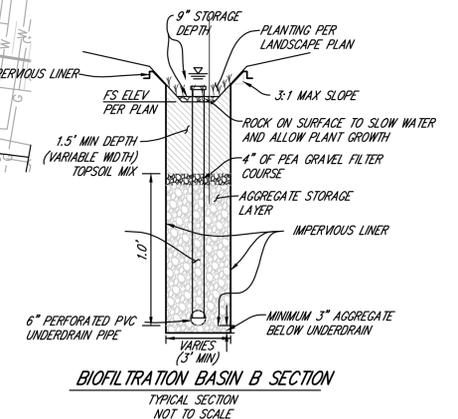

- THE APPROXIMATE DEPTH TO GROUNDWATER IS GREATER THAN 20 FEET.
- THERE ARE NO NATURAL HYDROLOGIC FEATURES ON THE SITE.
- THE SITE PROPOSES TO CONNECT TO THE EXISTING PUBLIC STORM DRAIN SYSTEM LOCATED IN THE SOUTH EDGE OF THE SITE.
- BASED ON WATERSHED MAPPING OF POTENTIAL CRITICAL COARSE SEDIMENT YIELD AREAS (CCSYA), THERE ARE NO CCSYA LOCATED WITHIN THE PROJECT BOUNDARY OR TRIBUTARY TO THE RUNOFF BYPASSED AROUND THE SITE.

SOURCE CONTROL		
SOURCE CONTROL REQUIREMENT	NODE	IMPLEMENTATION
SC-1 PREVENTION OF ILLICIT DISCHARGES	SC-1	EFFECTIVE IRRIGATION WILL BE IMPLEMENTED AND VEHICLE WASHING IS PROHIBITED
SC-2 STORM DRAIN STENCILING OR SIGNAGE	SC-2	STENCIL EVERY INLET WITH PROHIBITIVE WORDS: "NO DUMPING! DRAINS TO WATERWAYS" AND "NO CONTAMINE" IN SPANISH.
SC-5 PROTECT TRASH STORAGE	SC-5	TRASH ENCLOSURE WILL BE PROTECTED BY LID OR BE WALLED WITH ROOF TO AVOID STORMWATER GET CONTAMINATED

NOTE: HOA WILL BE THE FINAL OWNER OF BMPs, MAINTAIN BMPs INTO PERPETUITY, AND FUNDING MECHANISM FOR MAINTENANCE.

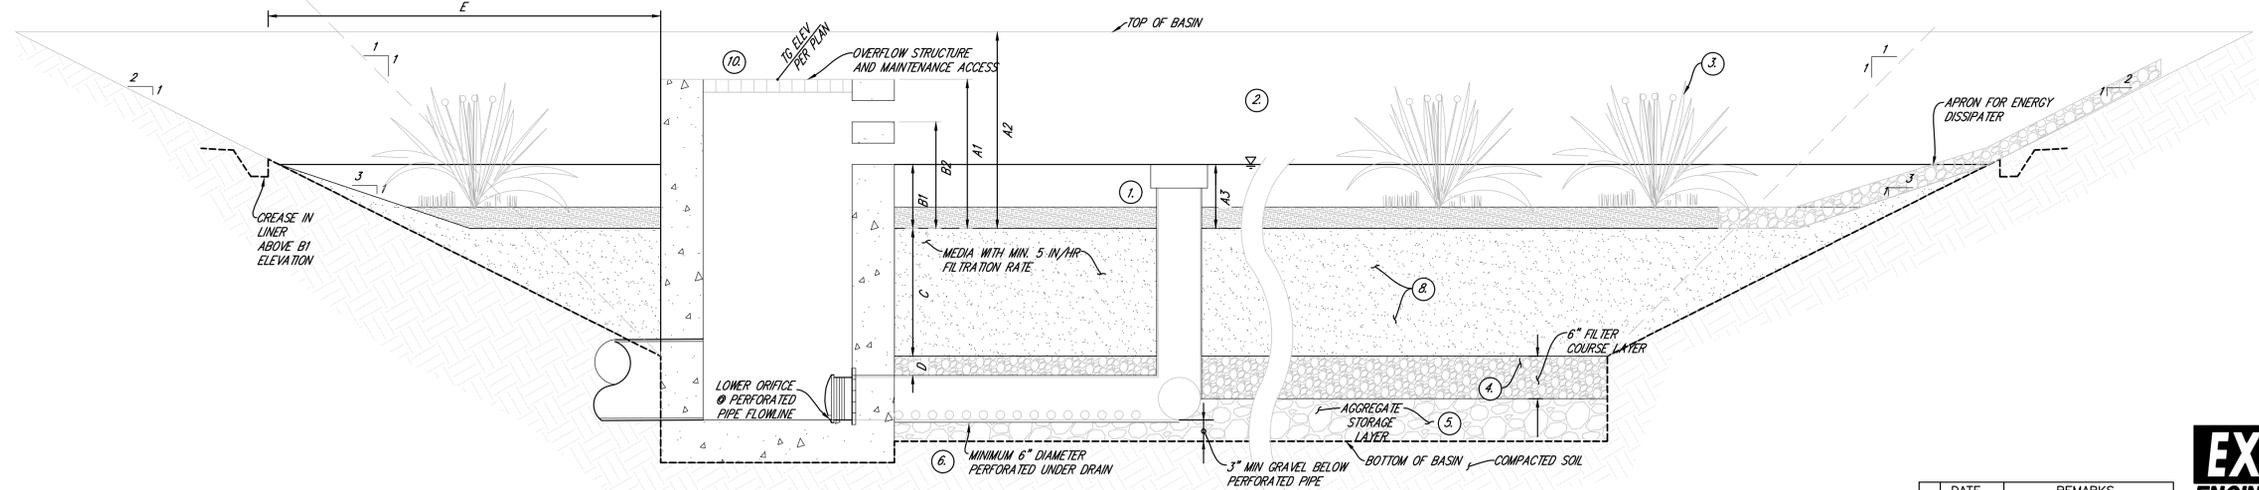

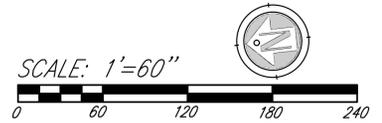

WATER QUALITY BASIN INSTALLATION NOTES:

- 3 INCHES OF WELL-AGED, SHREDDED HARDWOOD MULCH.
- AN UNDERDRAIN CLEANOUT WITH A MINIMUM 6-INCH DIAMETER AND LOCKABLE CAP IS PLACED EVERY 250 TO 300 FEET AS REQUIRED BASED ON UNDERDRAIN LENGTH.
- VEGETATION USED SHOULD BE SUITABLE FOR THE CLIMATE PER LANDSCAPE PLANS
- FILTER COURSE IS A MINIMUM OF 6 INCHES PROVIDED IN TWO SEPARATE 3 INCH LAYERS. THE TOP LAYER SHALL BE MADE OF ASTM C33 CHOKER SAND AND THE BOTTOM LAYER BE OF ASTM NO. 8 AGGREGATE. MARKERS STAKES SHALL BE USED TO ENSURE UNIFORM LIFT THICKNESS.
- AASHTO NO. 57 STONE OR CLASS 2 PERMABLE PER CAL TRANS SPECIFICATION 68-1.025 IS RECOMMENDED FOR THE AGGREGATE STORAGE LAYER. WASHED, OPEN-GRADED CRUSHED ROCK MAY BE USED, HOWEVER, A 4 INCH MINIMUM WASHED PEA GRAVEL FILTER COURSE LAYER AT THE TOP OF THE CRUSHED ROCK IS REQUIRED.
- IMPERMEABLE LINER SHALL BE INSTALLED WHEN THE BIOFILTRATION BASIN IS WITHIN 10 FEET OF RETAINING WALLS OR BUILDING FOUNDATIONS, OR AS RECOMMENDED BY THE SOILS ENGINEER, OR REQUIRED BY THESE PLANS. IMPERMEABLE LINER SHALL BE 30 MIL THICK (PER COUNTY OF SAN DIEGO GREEN STREETS DESIGN STANDARD DRAWING GS-3.00 AND COUNTY GREEN STREETS SUPPLEMENT TO CAL TRANS SPECIFICATIONS 20-11.08B) CONFIGURED TO ENTIRELY ENCOMPASS THE SIDES OF THE WATER QUALITY BASIN.
- IMPERMEABLE LINER BE CONSTRUCTED IN COMPLIANCE WITH THE COUNTY OF SAN DIEGO GREEN STREETS SUPPLEMENT TO CAL TRANS SPECIFICATIONS 20-11.08B.
- BIOFILTRATION SOIL MEDIA LAYER (BSM) SHALL CONSIST OF 60% TO 80% BY VOLUME SAND, UP TO 20% BY VOLUME TOPSOIL, AND UP TO 20% BY VOLUME COMPOST (PER COUNTY OF SAN DIEGO BMP DESIGN MANUAL SEPTEMBER 2020 APPENDIX F.2 SECTION 803-2 BLENDED BSM CRITERIA AND TESTING REQUIREMENTS) PLACED IN 6" LIFTS AND COMPACTED WITH WATER PRIOR TO THE NEXT LIFT. INITIAL PERMEABILITY SHALL BE 8" PER HOUR (WITH ASSUMED STABILIZED PERMEABILITY OF 5" PER HOUR).
- THE AGGREGATE STORAGE LAYER SHALL BE COMPACTED IN ACCORDANCE WITH SOILS ENGINEER'S RECOMMENDATIONS.
- MP B WILL HAVE A BOX THAT IS USED FOR A PUMP SIZED BELOW THE 0.102 STORM EVENT TO PUMP OUT LOW FLOW WATER AFTER CLEANING. PEAK FLOW WILL DISCHARGE THROUGH D-25 TO WOODWARD STREET.
- ALL LINER INSTALLATIONS, FIELD WELDING OF SEAMS, AND OBSERVATION OF SOIL MIX PLACEMENT SHALL REQUIRE SPECIAL INSPECTION BY THE PROJECT GEOTECHNICAL ENGINEER OR OTHER QUALIFIED PERSON. A LETTER CERTIFYING PROPER INSTALLATION SHALL BE PROVIDED TO THE ENGINEER OF RECORD TO ACCEPTANCE OF THE FACILITIES.
- SPECIAL INSPECTION SHALL BE REQUIRED FOR CONSTRUCTION OF ALL BIOFILTRATION BASINS. INSPECTION SHALL BE PERFORMED BY A QUALIFIED INDIVIDUAL (SUCH AS: ENGINEER OF RECORD, QSD). INSPECTION SHALL INCLUDE:
 - VERIFICATION OF OVERALL DIMENSIONS PRIOR TO PLACEMENT OF MATERIALS;
 - PLACEMENT OF THE LINER, IF REQUIRED; AND SEAMS OR PENETRATIONS
 - PLACEMENT OF THE GRAVEL, FILTER MATERIALS, AND FILTER MEDIA;
 - ALL INLET AND OUTLET STRUCTURES, INCLUDING UNDERDRAINS, IF REQUIRED.
 - CONTRACTOR SHALL TAKE PICTURES AT EACH STAGE OF INSTALLATION AND SUBMITTED TO ENGINEER FOR VERIFICATION OF INSTALL.
- SPECIAL INSPECTION SHALL BE GIVEN A MINIMUM OF 48 HOURS PRIOR TO INSPECTION. UPON COMPLETION THE INSPECTOR SHALL PROVIDE A CERTIFICATION TO THE ENGINEER OF WORK.
- PROPOSED MATERIALS, SUCH AS AGGREGATE, FILTER MATERIAL, AND FILTER MEDIA SHALL BE SUBMITTED TO THE ENGINEER OF WORK FOR APPROVAL.

STRUCTURAL BIO-BASIN SUMMARY TABLE																	
DMA NAME	DMA TYPE	BMP NAME	TYPE OF BMP	EFFECTIVE AREA (SQFT)	ORIFICE DIAMETER				BOX RISER OVERFLOW STRUCTURE SIZE (INCHES)	IMPERMEABLE LINER P							
					A1 (INCH)	A2 (INCH)	A3 (INCH)	B1 (INCH)			B2 (INCH)	C (INCH)	D (INCH)	E (INCH)			
DMA-1A	DRAINS TO BMP	BMP-A	BIOFILTRATION	1490	36	51.48	9	9	28.5	18	12	3	48x48	4' X 3' 4 BARRELS	2 BARRELS	1.4375	YES
DMA-2	DRAINS TO BMP	BMP-B	BIOFILTRATION	436	9	12	9	-	-	18	12	3	18x18	-	-	0.5	YES

NOTE:
- ONLY DMA-1, DMA-2, AND DMA-4 ARE FOR WATER QUALITY. OTHER AREAS ARE SELF-MITIGATING AND CONTAIN NO STRUCTURAL BMPs.
- FREEBOARD IS CALCULATED AS A2-A1
- BMP B WILL HAVE A BOX THAT IS USED FOR A PUMP SIZED BELOW THE 0.102 STORM EVENT TO PUMP OUT LOW FLOW WATER AFTER CLEANING. PEAK FLOW WILL DISCHARGE THROUGH D-25 TO WOODWARD STREET.

Attachment 1C
Harvest and Use Feasibility
Screening Checklist

Harvest and Use Feasibility Checklist		Form I-7
<p>1. Is there a demand for harvested water (check all that apply) at the project site that is reliably present during the wet season?</p> <p><input checked="" type="checkbox"/> Toilet and urinal flushing <input checked="" type="checkbox"/> Landscape irrigation <input type="checkbox"/> Other: _____</p>		
<p>2. If there is a demand; estimate the anticipated average wet season demand over a period of 36 hours. Guidance for planning level demand calculations for toilet/urinal flushing and landscape irrigation is provided in Section B.3.2.</p> <p>Flushing: (46 employees)x(9.3 gal/emp) = 427.8 gallons (427.8 gal)(1.5 days)/(7.48 gal/cu. ft.) = 85.79 cu. ft. Irrigation: 36-hr Mod. Water per Table B.3-3 = (1,470 gal days/acre)(5.361 acres)/(7.48 gal/cu feet) = 1053.57 cu ft.</p> <p>Total Demand = 1139.36 cu. ft.</p>		
<p>3. Calculate the DCV using worksheet B-2.1.</p> <p>DCV = <u>6279</u> (cubic feet) DCV = 6279 0.25xDCV=1569.75</p>		
<p>3a. Is the 36 hour demand greater than or equal to the DCV?</p> <p><input type="checkbox"/> Yes / <input checked="" type="checkbox"/> No </p> <p style="text-align: center;"></p>	<p>3b. Is the 36 hour demand greater than 0.25DCV but less than the full DCV?</p> <p><input type="checkbox"/> Yes / <input checked="" type="checkbox"/> No </p> <p style="text-align: center;"></p>	<p>3c. Is the 36 hour demand less than 0.25DCV?</p> <p><input checked="" type="checkbox"/> Yes </p>
<p>Harvest and use appears to be feasible. Conduct more detailed evaluation and sizing calculations to confirm that DCV can be used at an adequate rate to meet drawdown criteria.</p>	<p>Harvest and use may be feasible. Conduct more detailed evaluation and sizing calculations to determine feasibility. Harvest and use may only be able to be used for a portion of the site, or (optionally) the storage may need to be upsized to meet long term capture targets while draining in longer than 36 hours.</p>	<p>Harvest and use is considered to be infeasible.</p>
<p>Is harvest and use feasible based on further evaluation?</p> <p><input type="checkbox"/> Yes, refer to Appendix E to select and size harvest and use BMPs. <input checked="" type="checkbox"/> No, select alternate BMPs.</p>		

Attachment 1D
Categorization of Infiltration
Feasibility Condition

Worksheet I-8 : Categorization of Infiltration Feasibility Condition

Categorization of Infiltration Feasibility Condition		Worksheet I-8	
<p>Part 1 - Full Infiltration Feasibility Screening Criteria</p> <p>Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?</p>			
Criteria	Screening Question	Yes	No
1	Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X
<p>Provide basis:</p> <p>The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0.</p> <p>Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.</p>			
2	Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X
<p>Provide basis:</p> <p>The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0.</p> <p>Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.</p>			

Worksheet I-8 Page 2 of 4

Criteria	Screening Question	Yes	No
3	Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, storm water pollutants or other factors) that cannot be mitigated to an acceptable level? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
<p>Provide basis:</p> <p>The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0.</p> <p>Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.</p>			
4	Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
<p>Provide basis:</p> <p>The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0.</p> <p>Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.</p>			
Part 1 Result*	<p>If all answers to rows 1 - 4 are “Yes” a full infiltration design is potentially feasible. The feasibility screening category is Full Infiltration</p> <p>If any answer from row 1-4 is “No”, infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a “full infiltration” design. Proceed to Part 2</p>		

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by City Engineer to substantiate findings.

Worksheet I-8 Page 3 of 4

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria
 Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	Do soil and geologic conditions allow for infiltration in any appreciable rate or volume? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X
Provide basis: Due to site soils not percolating and the significant amount of clayey soils, it is unlikely that any appreciable volume of water will infiltrate.			
Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.			
6	Can Infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X
Provide basis:			
<p align="center"> The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0. </p>			
Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.			

Worksheet I-8 Page 4 of 4

Criteria	Screening Question	Yes	No
7	Can Infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, storm water pollutants or other factors)? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
<p>Provide basis:</p> <p align="center">The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0.</p> <p>Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.</p>			
8	Can infiltration be allowed without violating downstream water rights? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
<p>Provide basis:</p> <p align="center">The NRCS soils across the onsite are all Type D soils. The site soils are consistent with the NRCS mapped soil types based on site explorations and percolation testing. According to geotechnical report by GeoTek dated 5/16/2019, groundwater is not anticipated to be within 50 ft of the ground surface, which should have an infiltration rate is 0.</p> <p>Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.</p>			
Part 2 Result*	If all answers from row 1-4 are yes then partial infiltration design is potentially feasible. The feasibility screening category is Partial Infiltration. If any answer from row 5-8 is no, then infiltration of any volume is considered to be infeasible within the drainage area. The feasibility screening category is No Infiltration.		No Inf.

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by City Engineer to substantiate findings

Pollutant Control BMP Design
Worksheets & Calculations

Automated Worksheet B.1: Calculation of Design Capture Volume (V2.0)

Category	#	Description	<i>i</i>	<i>ii</i>	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	BMP-A	BMP-B	unitless
	2	85th Percentile 24-hr Storm Depth	0.67	0.67	inches
	3	Impervious Surfaces <u>Not Directed to Dispersion Area</u> (C=0.90)	107,435	16,132	sq-ft
	4	Semi-Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.30)			sq-ft
	5	Engineered Pervious Surfaces <u>Not Serving as Dispersion Area</u> (C=0.10)		0	sq-ft
	6	Natural Type A Soil <u>Not Serving as Dispersion Area</u> (C=0.10)			sq-ft
	7	Natural Type B Soil <u>Not Serving as Dispersion Area</u> (C=0.14)			sq-ft
	8	Natural Type C Soil <u>Not Serving as Dispersion Area</u> (C=0.23)			sq-ft
	9	Natural Type D Soil <u>Not Serving as Dispersion Area</u> (C=0.30)	7,776		sq-ft
Dispersion Area, Tree Well & Rain Barrel Inputs (Optional)	10	Does Tributary Incorporate Dispersion, Tree Wells, and/or Rain Barrels?	No	No	yes/no
	11	Impervious Surfaces Directed to Dispersion Area per SD-B (Ci=0.90)			sq-ft
	12	Semi-Pervious Surfaces Serving as Dispersion Area per SD-B (Ci=0.30)			sq-ft
	13	Engineered Pervious Surfaces Serving as Dispersion Area per SD-B (Ci=0.10)			sq-ft
	14	Natural Type A Soil Serving as Dispersion Area per SD-B (Ci=0.10)			sq-ft
	15	Natural Type B Soil Serving as Dispersion Area per SD-B (Ci=0.14)			sq-ft
	16	Natural Type C Soil Serving as Dispersion Area per SD-B (Ci=0.23)			sq-ft
	17	Natural Type D Soil Serving as Dispersion Area per SD-B (Ci=0.30)			sq-ft
	18	Number of Tree Wells Proposed per SD-A			#
	19	Average Mature Tree Canopy Diameter			ft
	20	Number of Rain Barrels Proposed per SD-E			#
Initial Runoff Factor Calculation	21	Average Rain Barrel Size			gal
	22	Total Tributary Area	115,211	16,132	sq-ft
	23	Initial Runoff Factor for Standard Drainage Areas	0.86	0.90	unitless
	24	Initial Runoff Factor for Dispersed & Dispersion Areas	0.00	0.00	unitless
	25	Initial Weighted Runoff Factor	0.86	0.90	unitless
	26	Initial Design Capture Volume	5,532	811	cubic-feet
Dispersion Area Adjustments	27	Total Impervious Area Dispersed to Pervious Surface	0	0	sq-ft
	28	Total Pervious Dispersion Area	0	0	sq-ft
	29	Ratio of Dispersed Impervious Area to Pervious Dispersion Area	n/a	n/a	ratio
	30	Adjustment Factor for Dispersed & Dispersion Areas	1.00	1.00	ratio
	31	Runoff Factor After Dispersion Techniques	0.86	0.90	unitless
	32	Design Capture Volume After Dispersion Techniques	5,532	811	cubic-feet
Tree & Barrel Adjustments	33	Total Tree Well Volume Reduction	0	0	cubic-feet
	34	Total Rain Barrel Volume Reduction	0	0	cubic-feet
Results	35	Final Adjusted Runoff Factor	0.86	0.90	unitless
	36	Final Effective Tributary Area	99,081	14,519	sq-ft
	37	Initial Design Capture Volume Retained by Site Design Elements	0	0	cubic-feet
	38	Final Design Capture Volume Tributary to BMP	5,532	811	cubic-feet
No Warning Messages					

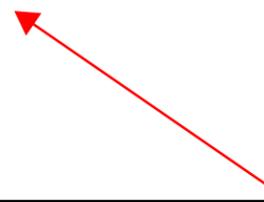

Automated Worksheet B.3: BMP Performance (V2.0)

Category	#	Description	<i>i</i>	<i>ii</i>	Units
BMP Inputs	1	Drainage Basin ID or Name	BMP-A	BMP-B	sq-ft
	2	Design Infiltration Rate Recommended	0.000	0.000	in/hr
	3	Design Capture Volume Tributary to BMP	5,532	811	cubic-feet
	4	Is BMP Vegetated or Unvegetated?	Vegetated	Vegetated	unitless
	5	Is BMP Impermeably Lined or Unlined?	Lined	Lined	unitless
	6	Does BMP Have an Underdrain?	Underdrain	Underdrain	unitless
	7	Does BMP Utilize Standard or Specialized Media?	Standard	Standard	unitless
	8	Provided Surface Area	1,490	719	sq-ft
	9	Provided Surface Ponding Depth	9	9	inches
	10	Provided Soil Media Thickness	18	18	inches
	11	Provided Gravel Thickness (Total Thickness)	12	12	inches
	12	Underdrain Offset	3	3	inches
	13	Diameter of Underdrain or Hydromod Orifice (Select Smallest)	1.44	0.50	inches
	14	Specialized Soil Media Filtration Rate			in/hr
	15	Specialized Soil Media Pore Space for Retention			unitless
	16	Specialized Soil Media Pore Space for Biofiltration			unitless
	17	Specialized Gravel Media Pore Space			unitless
Retention Calculations	18	Volume Infiltrated Over 6 Hour Storm	0	0	cubic-feet
	19	Ponding Pore Space Available for Retention	0.00	0.00	unitless
	20	Soil Media Pore Space Available for Retention	0.05	0.05	unitless
	21	Gravel Pore Space Available for Retention (Above Underdrain)	0.00	0.00	unitless
	22	Gravel Pore Space Available for Retention (Below Underdrain)	0.40	0.40	unitless
	23	Effective Retention Depth	2.10	2.10	inches
	24	Fraction of DCV Retained (Independent of Drawdown Time)	0.05	0.16	ratio
	25	Calculated Retention Storage Drawdown Time	120	120	hours
	26	Efficacy of Retention Processes	0.06	0.18	ratio
	27	Volume Retained by BMP (Considering Drawdown Time)	334	147	cubic-feet
28	Design Capture Volume Remaining for Biofiltration	5,198	664	cubic-feet	
Biofiltration Calculations	29	Max Hydromod Flow Rate through Underdrain	0.0931	0.0113	cfs
	30	Max Soil Filtration Rate Allowed by Underdrain Orifice	2.70	0.68	in/hr
	31	Soil Media Filtration Rate per Specifications	5.00	5.00	in/hr
	32	Soil Media Filtration Rate to be used for Sizing	2.70	0.68	in/hr
	33	Depth Biofiltered Over 6 Hour Storm	16.19	4.09	inches
	34	Ponding Pore Space Available for Biofiltration	1.00	1.00	unitless
	35	Soil Media Pore Space Available for Biofiltration	0.20	0.20	unitless
	36	Gravel Pore Space Available for Biofiltration (Above Underdrain)	0.40	0.40	unitless
	37	Effective Depth of Biofiltration Storage	16.20	16.20	inches
	38	Drawdown Time for Surface Ponding	3	13	hours
	39	Drawdown Time for Effective Biofiltration Depth	6	24	hours
	40	Total Depth Biofiltered	32.39	20.29	inches
	41	Option 1 - Biofilter 1.50 DCV: Target Volume	7,797	996	cubic-feet
	42	Option 1 - Provided Biofiltration Volume	4,021	996	cubic-feet
	43	Option 2 - Store 0.75 DCV: Target Volume	3,898	498	cubic-feet
	44	Option 2 - Provided Storage Volume	2,012	498	cubic-feet
	45	Portion of Biofiltration Performance Standard Satisfied	0.52	1.00	ratio
Result	46	Do Site Design Elements and BMPs Satisfy Annual Retention Requirements?	Yes	Yes	yes/no
	47	Overall Portion of Performance Standard Satisfied (BMP Efficacy Factor)	0.58	1.00	ratio
	48	Deficit of Effectively Treated Stormwater	-2,323	0	cubic-feet

Attention!
 - BMPs sized at <3% of the effective tributary areas must be accompanied by Reduced Size BMP Maintenance calculations (see last tab).

-This BMP does not fully satisfy the performance standards for pollutant control for the drainage area.

See next sheet for Reduced Size BMP Maintenance

Automated Worksheet B.4: Reduced Size BMP Maintenance Interval (V2.0)

Category	#	Description	<i>i</i>	Units
Drainage Basin Info	1	Drainage Basin ID or Name	BMP-A	unitless
	2	Final Effective Tributary Area	99,081	sq-ft
	3	Provided BMP Surface Area	1,490	sq-ft
Biofiltration Clogging Inputs	4	Average Annual Precipitation	13.0	inches
	5	Load to Clog (default =2.0)	2.0	lb/sq-ft
	6	TSS Pretreatment Efficacy	0.25	yes/no
	7	Percentage "Commercial"		percentage
	8	Percentage "Education"		percentage
	9	Percentage "Industrial"		percentage
	10	Percentage "Low Traffic Areas"	48%	percentage
	11	Percentage "Multi-Family Residential"	50%	percentage
	12	Percentage "Roof Areas"		percentage
	13	Percentage "Single Family Residential"		percentage
	14	Percentage "Transportation"		percentage
	15	Percentage "Vacant/Open Space"	2%	percentage
	16	Percentage "Steep Hillslopes"		percentage
Result	17	Total Percentage of Above Land Uses	100%	percentage
	18	Average TSS Concentration for Tributary After Pretreatment	18	mg/L
	19	Average Annual Runoff Volume	107,338	cubic-feet
	20	Average Annual TSS Load	121	lb/yr
	21	Available Sediment Storage within BMP	2,980	lb
	22	Anticipated Major Maintenance Frequency	24.7	years
No Warning Messages				

BMP meets 10 year minimum maintenance threshold

**ATTACHMENT 2
BACKUP FOR PDP HYDROMODIFICATION CONTROL MEASURES**

This is the cover sheet for Attachment 2.

Mark this box if this attachment is empty because the project is exempt from PDP hydromodification management requirements.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 2a	Hydromodification Management Exhibit (Required)	<input checked="" type="checkbox"/> Included See Hydromodification Management Exhibit Checklist on the back of this Attachment cover sheet.
Attachment 2b	Management of Critical Coarse Sediment Yield Areas (WMAA Exhibit is required, additional analyses are optional) See Section 6.2 of the BMP Design Manual.	<input checked="" type="checkbox"/> Exhibit showing project drainage boundaries marked on WMAA Critical Coarse Sediment Yield Area Map (Required) Optional analyses for Critical Coarse Sediment Yield Area Determination <input checked="" type="checkbox"/> 6.2.1 Verification of Geomorphic Landscape Units Onsite <input checked="" type="checkbox"/> 6.2.2 Downstream Systems Sensitivity to Coarse Sediment <input checked="" type="checkbox"/> 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
Attachment 2c	Geomorphic Assessment of Receiving Channels (Optional) See Section 6.3.4 of the BMP Design Manual.	<input type="checkbox"/> Not performed <input checked="" type="checkbox"/> Included <input type="checkbox"/> Submitted as separate stand-alone document
Attachment 2d	Flow Control Facility Design, including Structural BMP Drawdown Calculations and Overflow Design Summary (Required) See Chapter 6 and Appendix G of the BMP Design Manual	<input checked="" type="checkbox"/> Included <input type="checkbox"/> Submitted as separate stand-alone document
Attachment 2e	Vector Control Plan (Required when structural BMPs will not drain in 96 hours)	<input type="checkbox"/> Included <input checked="" type="checkbox"/> Not required because BMPs will drain in less than 96 hours

Attachment 2A:
Hydromodification Management Exhibit

Use this checklist to ensure the required information has been included on the Hydromodification Management Exhibit:

The Hydromodification Management Exhibit must identify:

- Underlying hydrologic soil group
- Approximate depth to groundwater
- Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- Critical coarse sediment yield areas to be protected
- Existing topography
- Existing and proposed site drainage network and connections to drainage offsite
- Proposed grading
- Proposed impervious features
- Proposed design features and surface treatments used to minimize imperviousness
- Point(s) of Compliance (POC) for Hydromodification Management
- Existing and proposed drainage boundary and drainage area to each POC (when necessary, create separate exhibits for pre-development and post-project conditions)
- Structural BMPs for hydromodification management (identify location, type of BMP, and size/detail)

- NOTES:**
1. ALL REFERENCES TO CLASS I OR II MATERIAL ARE PER ASTM D2321 "STANDARD PRACTICE FOR UNDERGROUND INSTALLATION OF THERMOPLASTIC PIPE FOR SEWERS AND OTHER GRAVITY FLOW APPLICATIONS", LATEST EDITION.
 2. ALL RETENTION AND DETENTION SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH ASTM D2321, LATEST EDITION AND THE MANUFACTURER'S PUBLISHED INSTALLATION GUIDELINES.
 3. MEASURES SHOULD BE TAKEN TO PREVENT THE MIGRATION OF NATIVE FINES INTO THE BACKFILL MATERIAL, WHEN REQUIRED, SEE ASTM D2321.
 4. FILTER FABRIC: A GEOTEXTILE FABRIC MAY BE USED AS SPECIFIED BY THE ENGINEER TO PREVENT THE MIGRATION OF FINES FROM THE NATIVE SOIL INTO THE SELECT BACKFILL MATERIAL.
 5. FOUNDATION: WHERE THE TRENCH BOTTOM IS UNSTABLE, THE CONTRACTOR SHALL EXCAVATE TO A DEPTH REQUIRED BY THE ENGINEER AND REPLACE WITH SUITABLE MATERIAL AS SPECIFIED BY THE ENGINEER, AS AN ALTERNATIVE AND AT THE DISCRETION OF THE DESIGN ENGINEER, THE TRENCH BOTTOM MAY BE STABILIZED USING A GEOTEXTILE MATERIAL.
 6. BEDDING: SUITABLE MATERIAL SHALL BE CLASS I OR II. THE CONTRACTOR SHALL PROVIDE DOCUMENTATION FOR MATERIAL SPECIFICATION TO ENGINEER, UNLESS OTHERWISE NOTED BY THE ENGINEER. MINIMUM BEDDING THICKNESS SHALL BE 4" (100mm) FOR 4"-24" (100mm-600mm); 6" (150mm) FOR 30"-60" (750mm-1500mm).
 7. INITIAL BACKFILL: SUITABLE MATERIAL SHALL BE CLASS I OR II IN THE PIPE ZONE EXTENDING NOT LESS THAN 6" ABOVE CROWN OF PIPE. THE CONTRACTOR SHALL PROVIDE DOCUMENTATION FOR MATERIAL SPECIFICATION TO ENGINEER, MATERIAL SHALL BE INSTALLED AS REQUIRED IN ASTM D2321, LATEST EDITION.
 8. MINIMUM COVER: MINIMUM COVER OVER ALL RETENTION/DETENTION SYSTEMS IN NON-TRAFFIC APPLICATIONS (GRASS OR LANDSCAPE AREAS) IS 12" FROM TOP OF PIPE TO GROUND SURFACE. ADDITIONAL COVER MAY BE REQUIRED TO PREVENT FLOATATION, FOR TRAFFIC APPLICATIONS. MINIMUM COVER IS 12" UP TO 36" DIAMETER PIPE AND 24" OF COVER FOR 42" - 60" DIAMETER PIPE. MEASURED FROM TOP OF PIPE TO BOTTOM OF FLEXIBLE PAVEMENT OR TO TOP OF RIGID PAVEMENT.

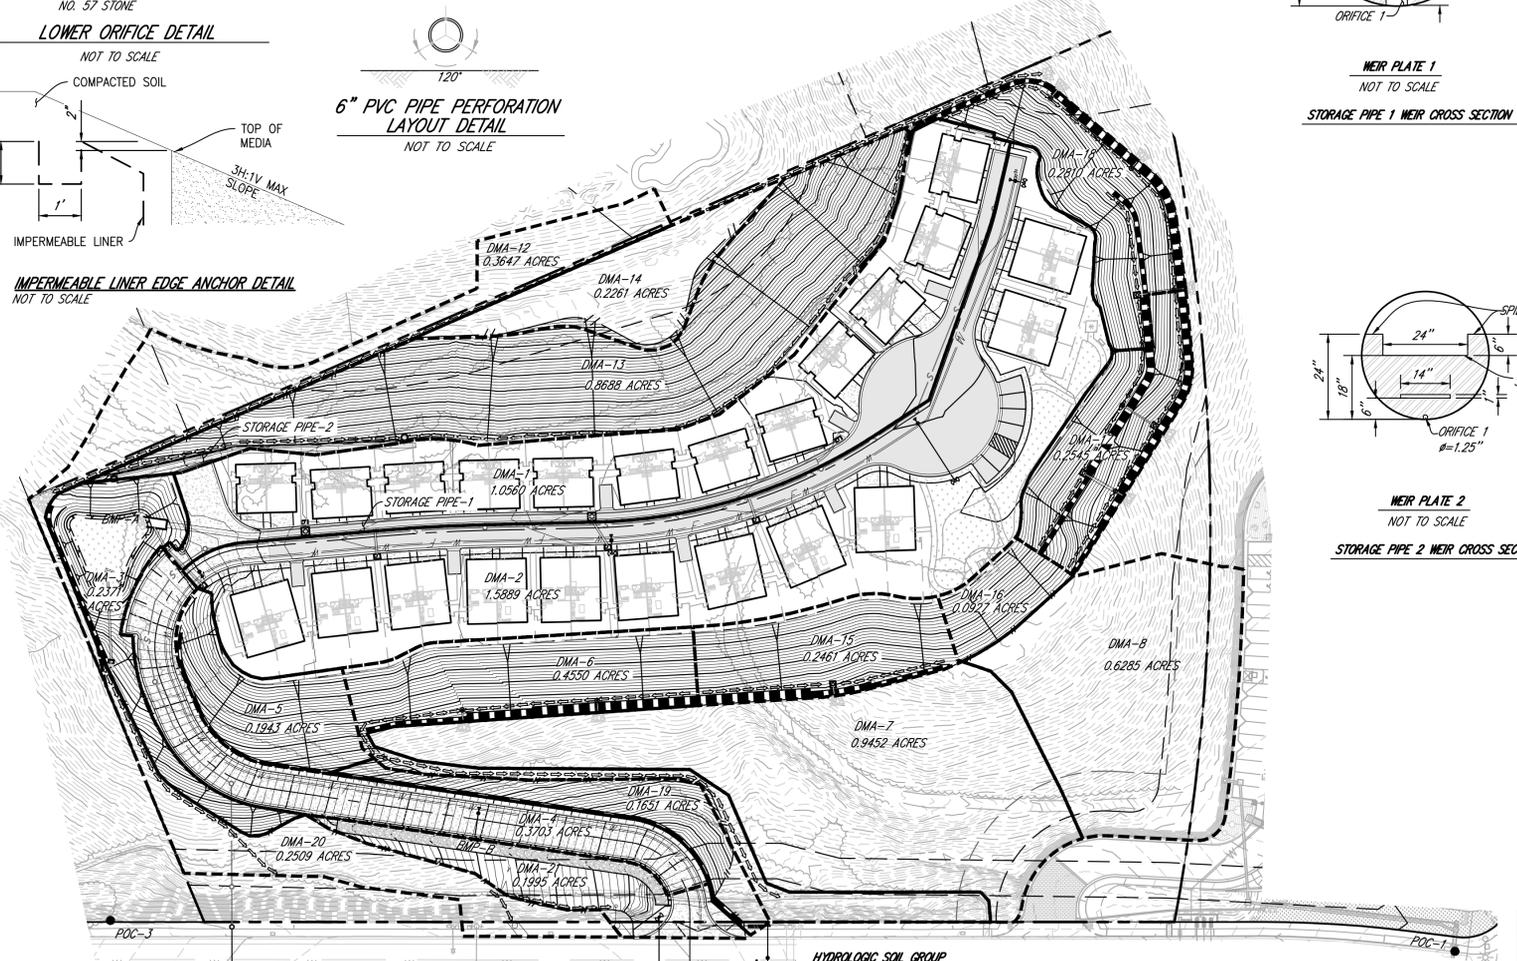

NOMINAL DIAMETER	NOMINAL O.D.	TYPICAL SPACING "S"	TYPICAL SPACING "C"	TYPICAL SIDE WALL "X"	H (NON-TRAFFIC)	H (TRAFFIC)
48" (1200 MM)	54" (1372 MM)	25" (635 MM)	78.5" (1994 MM)	18" (457 MM)	12" (282 MM)	24" (610 MM)

* CLASS I BACKFILL REQUIRED AROUND 60" DIAMETER FITTINGS.

 DRAWING NUMBER: STD-702

ADVANCED DRAINAGE SYSTEMS, INC. ("ADS") HAS PREPARED THIS DETAIL BASED ON INFORMATION PROVIDED TO ADS. THIS DRAWING IS INTENDED TO DEPICT THE COMPONENTS AS REQUESTED. ADS HAS NOT PERFORMED ANY ENGINEERING OR DESIGN SERVICES FOR THIS PROJECT, NOR HAS ADS INDEPENDENTLY VERIFIED THE INFORMATION SUPPLIED. THE INSTALLATION DETAILS PROVIDED HEREIN ARE GENERAL RECOMMENDATIONS AND ARE NOT SPECIFIC FOR THIS PROJECT. THE DESIGN ENGINEER SHALL REVIEW THESE DETAILS PRIOR TO CONSTRUCTION. IT IS THE DESIGN ENGINEER'S RESPONSIBILITY TO ENSURE THE DETAILS PROVIDED HEREIN MEETS OR EXCEEDS THE APPLICABLE NATIONAL, STATE, OR LOCAL REQUIREMENTS AND TO ENSURE THAT THE DETAILS PROVIDED HEREIN ARE ACCEPTABLE FOR THIS PROJECT.

HYDROLOGIC SOIL GROUP:
 THE ON-SITE HYDROLOGIC SOIL GROUP FOR THIS SITE IS TYPE D.

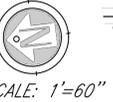

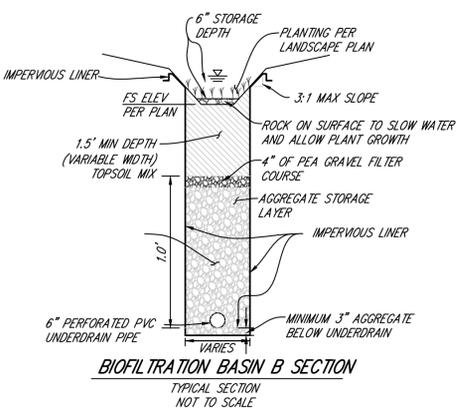

EXISTING SITE FEATURES:

- THE APPROXIMATE DEPTH TO GROUNDWATER IS GREATER THAN 20 FEET.
- THERE ARE NO NATURAL HYDROLOGIC FEATURES ON THE SITE.
- THE SITE PROPOSES TO CONNECT TO THE EXISTING PUBLIC STORM DRAIN SYSTEM LOCATED IN THE SOUTH EDGE OF THE SITE.
- BASED ON WATERSHED MAPPING OF POTENTIAL CRITICAL COARSE SEDIMENT YIELD AREAS (CCSYA), THERE ARE NO CCSYA LOCATED WITHIN THE PROJECT BOUNDARY OR TRIBUTARY TO THE RUNOFF BYPASSED AROUND THE SITE.

Summary

This report presents the findings of the Potential Critical Coarse Sediment analysis of the site. The analysis was conducted using the following the guidelines...

1. February 2016 San Diego Region Model BMP Design Manual, and associated Appendix
2. February 2016 County of San Diego BMP Design Manual, and associated appendix
3. June 2016 Carlsbad Watershed Management Area Water Quality Improvement Plan To meet requirements of the San Diego Regional Water Quality Control Board Order R9-2013-0001
https://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/wqip.html
<http://www.projectcleanwater.org/download/carlsbad-wqip-gis-files/>
4. January 2018 Model BMP Design Manual San Diego Region for Permanent Site Design, Storm Water Treatment and Hydromodification Management
5. The San Diego County Help Desk Questions and Answers.

Per results following, It is determined that the site is not a source of Critical Coarse Sediment for the downstream receiving waters and avoidance or mitigation is not necessary.

Introduction

The purpose of this study is to address the presence of WMAA (Watershed Management Area Analysis) Mapping indicating Potential Critical Coarse Sediment Yield Areas (PCCSYA's) on the Mission 316 West site. The WMAA Map area in question lies on the Northeasterly slope of the project and on the Northwesterly of the project. See Exhibits following. The drainage basin begins with the off-site hill slope which is at the edge of the neighbor's property. The drainage from the offsite property drains to a curb inlet located at the southwesterly of the project site. The total of offsite drainage area is 5.435 acres, 2.89 acres drain to southwest inlet (POC-1A) via existing dirt road and the other 2.55 acres drain to the southeast corner of the site (labeled as POC-2) via natural rill when it is raining and eventually drains to an existing concrete browditch and to an inlet. There are three discharge locations of the site: Two inlets located at the southwest corner of the site, labeled as POC-1A and POC-1B and one inlet located at the southeast corner of the site. This storm drain system ultimately discharges into San Marcos Creek.

The Mission 316 West is classified as a Priority Development Project with respect to stormwater discharge and is subject to Hydromodification requirements. Hydromodification requirements are intended to minimize excessive downstream erosion in receiving waters due to land development activities. There are two main components to hydromodification design. The first component is the mitigation of the increase in peak flow and flow duration rates that result from the addition of impervious surfaces and concentration of runoff that are typical of land development activities. The flow/duration component of the design is covered in a separate report. The second component of hydromodification is protection of the Critical Coarse Sediment (CCS) supply of the stream. The CCS component of the hydromodification requirements is intended to maintain any present sources of stream coarse sediment supply.

Sources of Methodology

The initial reference for analyzing the PCCSYA's is the **February 2016 San Diego Regional Model BMP Design Manual for the City of San Marcos**. Coarse sediments are addressed in Chapter 6 which primarily discusses Hydromodification requirements. This section is followed up with greater detail on the PCCSYA's topic in Appendix H. However, due to limited information in this version, other sources were needed to support this report. Since the printing of the February 2016 San Diego Regional Model BMP Design Manual, updates from the San Diego County Help Desk have been included (including some more in depth explanation and methodology) in a revised, extended Appendix H. These updates were shown to have been included within the more recent updated additions of the BMP Design Manual including the February 2016 County of San Diego BMP Design Manual, and associated Appendix and the January 2018 Model BMP Design Manual San Diego Region for Permanent Site Design, Storm Water Treatment and Hydromodification Management.

Also the San Diego County Regional Watershed Management Area Analysis (WMAA) printed October 1, 2015 was a reference as well as the June 2016 **Carlsbad Watershed Management**

Area Water Quality Improvement Plan regarding water quality and CCSYA that discusses the Geomorphic Landscape Units (GLU) in more detail than the BMP Manuals. This manual was referenced for greater clarity and provides criteria dictating whether or not avoidance is required for protection purposes.

In regards to the use of the “Carlsbad Watershed Management Area Analysis” report, please recall that the City of San Marcos lies within and is a part of the Richland HAS of the San Marcos Hydrologic Area of the overall Carlsbad Hydrologic Unit. This study was completed for the entire HSU and is not meant to be a reference specific to the City of Carlsbad.

Carlsbad WMA Water Quality Improvement Plan

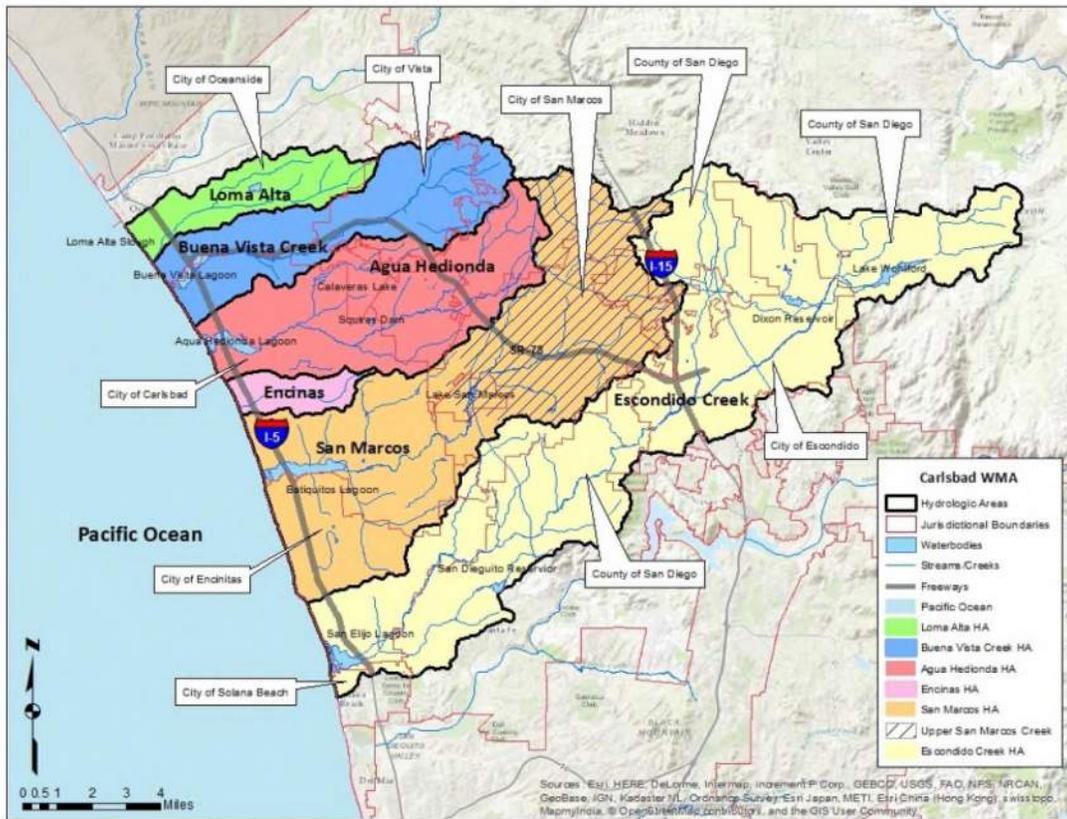

Figure 5: Carlsbad Watershed Management Area

Figure 1 Taken from June 30, 2016 Carlsbad Watershed Management Area (Water Quality Improvement Plan)-Executive Summary Page ES-2

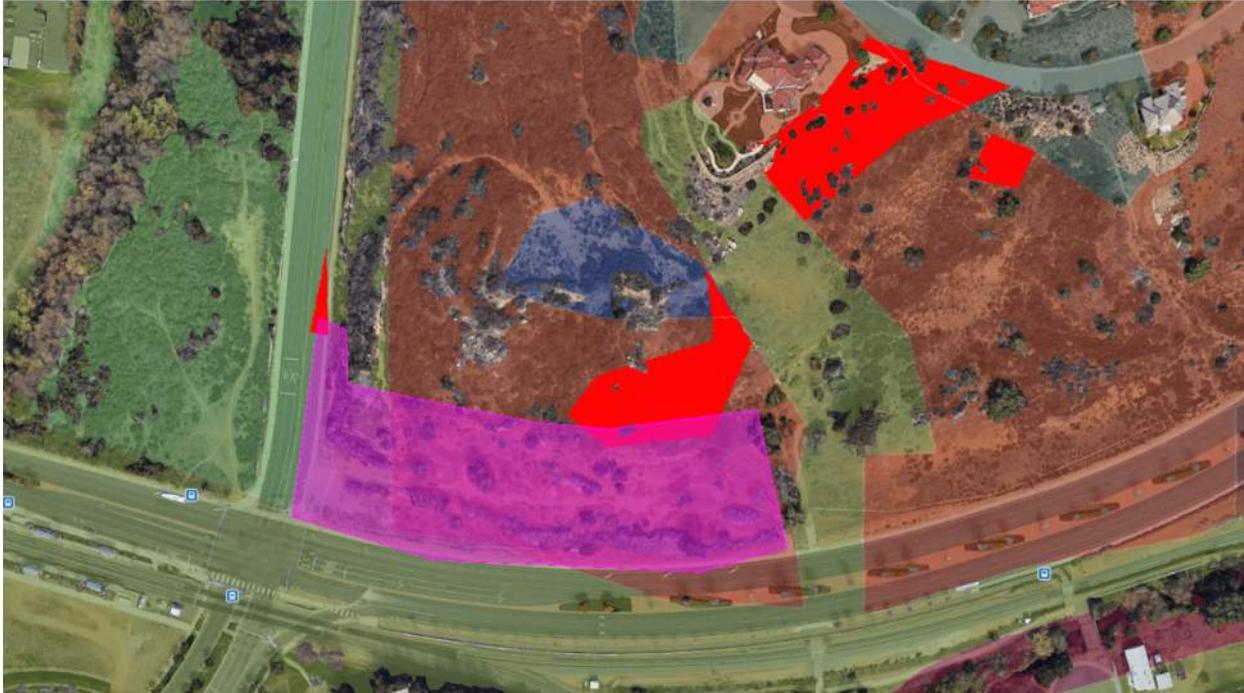

Figure 2 Google Earth Image of Mission 316 West Project with overlay of Hydrologic Area provided courtesy of SANGIS. The Watershed is defined as Carlsbad, HA is San Marcos; HAS Richland (904.52)

Steps of the Analysis

Section 6.2 of Chapter 6 of the February 2016 San Diego Region Model BMP Design Manual and subsequent related publications outline the steps necessary to evaluate if the project will impact the supply of critical coarse sediment to downstream receiving waters. The steps used in this report are summarized below:

Step 1: Consult the Potential Critical Coarse Sediment Yield Map included in the Regional WMAA (found on the Project Clean Water website). If potential areas exist within the project boundaries, then proceed to step 2.

Step 2: Verify the Geomorphic Landscape Units (GLUs) onsite. This process is outlined in Section 6.2.1 of Chapter 6 and Appendix H of the February 2016 San Diego Region Model BMP Design Manual. Further discussion for Carlsbad Watershed Specific areas are located in the Carlsbad Watershed Management Area – Water Quality Improvement Plan (WQIP). If GLU analysis confirms the CCS mapping in the WMAA, then proceed to step 3.

Step 3: Relate GLU to relative sediment production of the local site region. Per CCSYA criteria from the Carlsbad Watershed Management Area Analysis, perform a quantitative analysis of relative sediment production (RSP) using the RUSLE Equation. If RUSLE indicates a High sediment production for the specific site area and the site underlying Geologic Formation is CB, CSI or CSP, and then implement avoidance.

Step 1-Critical Coarse Sediment Mapping

The mapping of Potential Critical Coarse Sediment Areas obtained from the Project Clean Water web site was overlaid into the project site as well as the aerial photo. The resulting composite map shows that there are two areas of the project that have the potential to provide critical coarse sediment to downstream waterbodies (See Map):

Area 1 is located at north westerly of the project adjacent to the proposed driveway. This potential critical coarse sediment is located under the existing road Woodward St (developed area) and 5.7% slope or category 1 of slope category. Runoff from this area flows southwesterly away from the project and does not impact the site.

Area 2 is located at northeasterly of the project and upstream of the project. This potential critical coarse area is classified as a scrub/shrub vegetation cover with >40% slope or category 4 of slope category, runoff of this area drains toward the site.

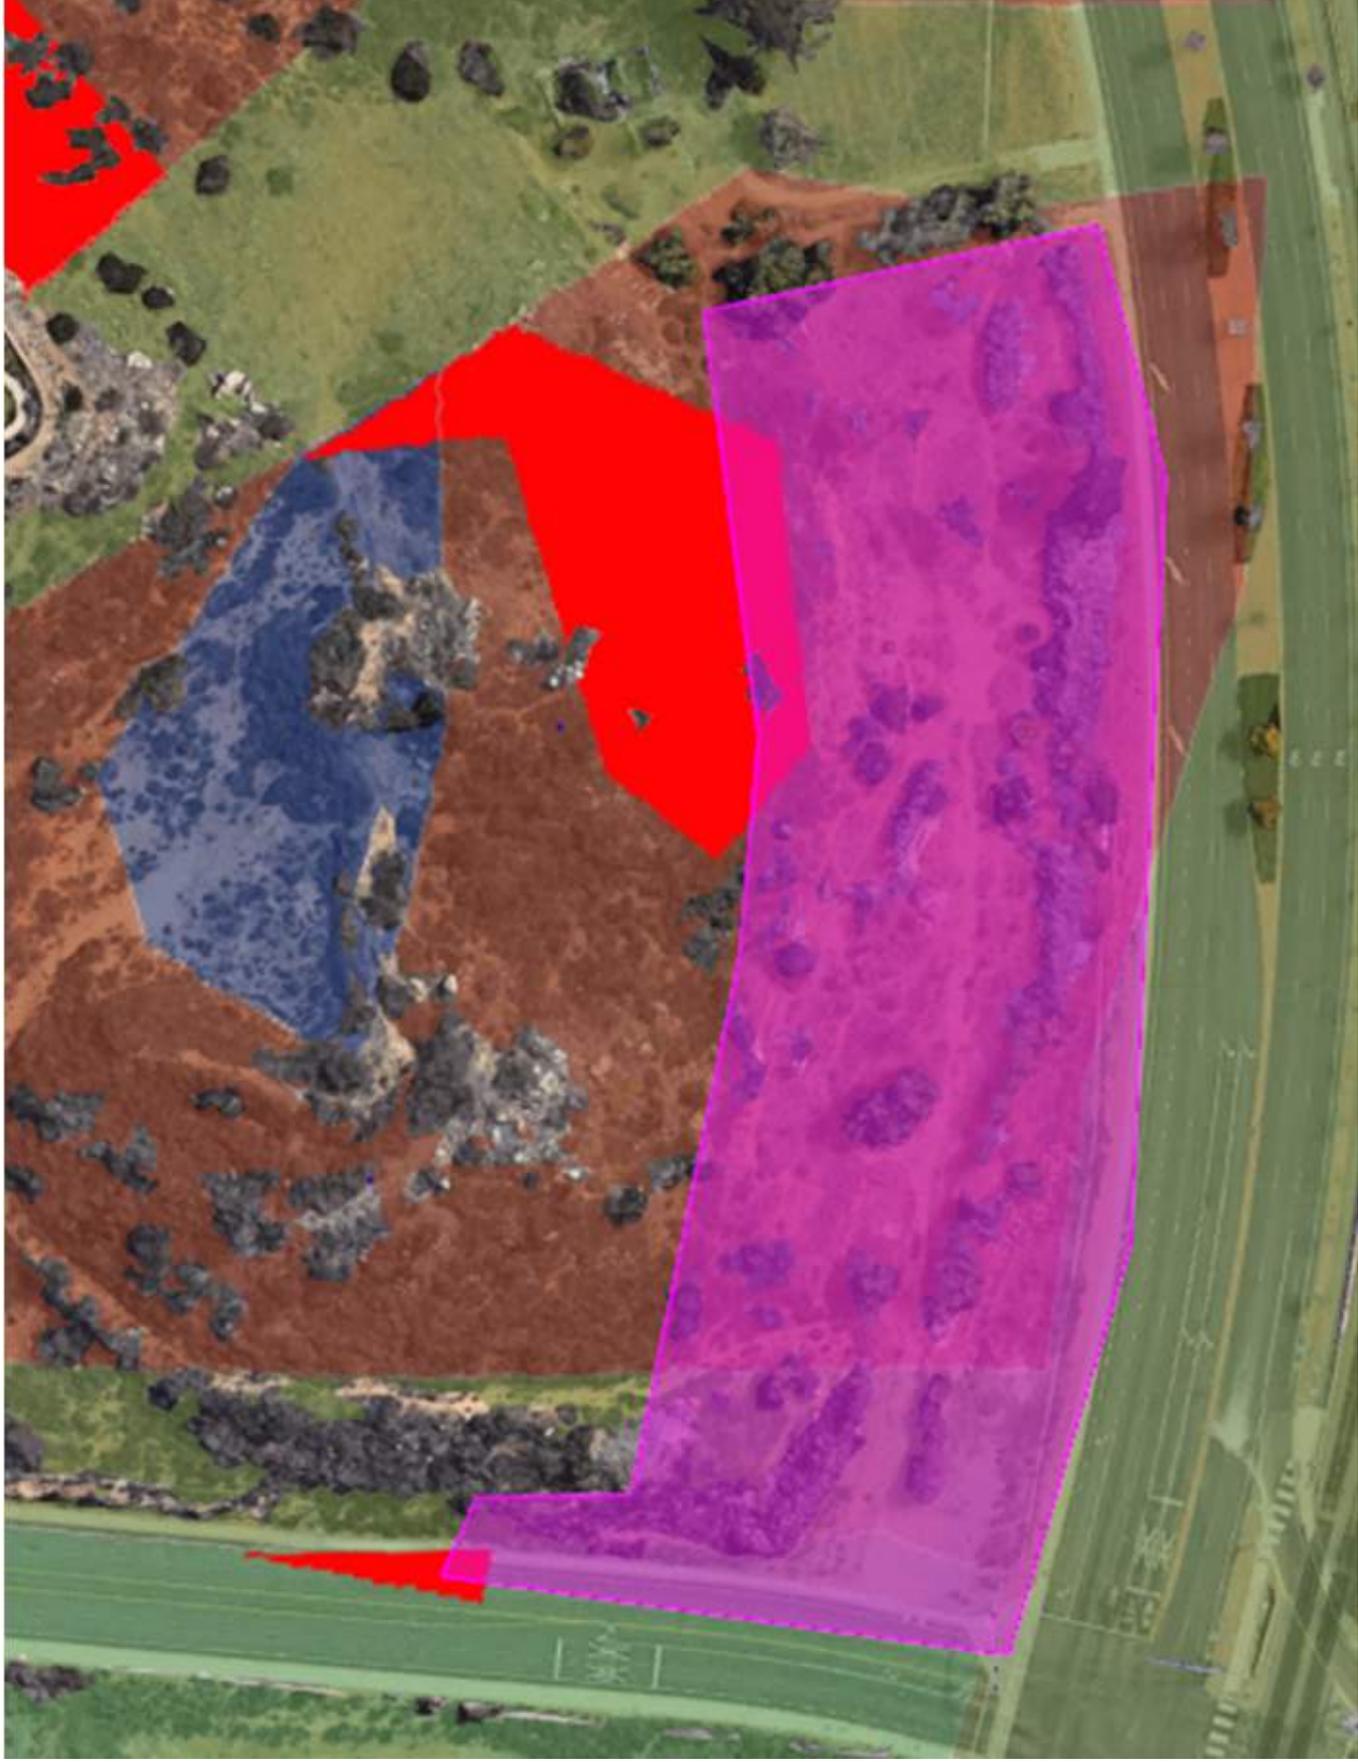

Figure provided from Google Earth with an overlay of potential critical course sediment area from San GIS

Based on the results of the map on the previous page, the site does show the presence of PCCSYA's. The analysis will move on to Step 2, the verification of GLUs onsite.

Step 2-Verification of GLUs Onsite

The WMAA map used in the first part of the analysis is based on regional level data sets. The inherent resolution of these regional level datasets may not accurately depict site specific conditions. Appendix H of the San Diego Region BMP Design Manual provides guidance to confirm if site specific GLUs exist within the project boundary. The following table was taken from the 2016 San Diego Region BMP Design Manual – 6-4 and provides criteria for PCCSYA's which must be investigated further.

TABLE 6-1. Potential Critical Coarse Sediment Yield Areas

GLU	Geology	Land Cover	Slope (%)
CB-Agricultural/Grass-3	Coarse Bedrock	Agricultural/Grass	20% - 40%
CB-Agricultural/Grass-4	Coarse Bedrock	Agricultural/Grass	>40%
CB-Forest-2	Coarse Bedrock	Forest	10 – 20%
CB-Forest-3	Coarse Bedrock	Forest	20% - 40%
CB-Forest-4	Coarse Bedrock	Forest	>40%
CB-Scrub/Shrub-4	Coarse Bedrock	Scrub/Shrub	>40%
CB-Unknown-4	Coarse Bedrock	Unknown	>40%
CSI-Agricultural/Grass-2	Coarse Sedimentary Impermeable	Agricultural/Grass	10 – 20%
CSI-Agricultural/Grass-3	Coarse Sedimentary Impermeable	Agricultural/Grass	20% - 40%
CSI-Agricultural/Grass-4	Coarse Sedimentary Impermeable	Agricultural/Grass	>40%
CSP-Agricultural/Grass-4	Coarse Sedimentary Permeable	Agricultural/Grass	>40%
CSP-Forest-3	Coarse Sedimentary Permeable	Forest	20% - 40%
CSP-Forest-4	Coarse Sedimentary Permeable	Forest	>40%
CSP-Scrub/Shrub-4	Coarse Sedimentary Permeable	Scrub/Shrub	>40%

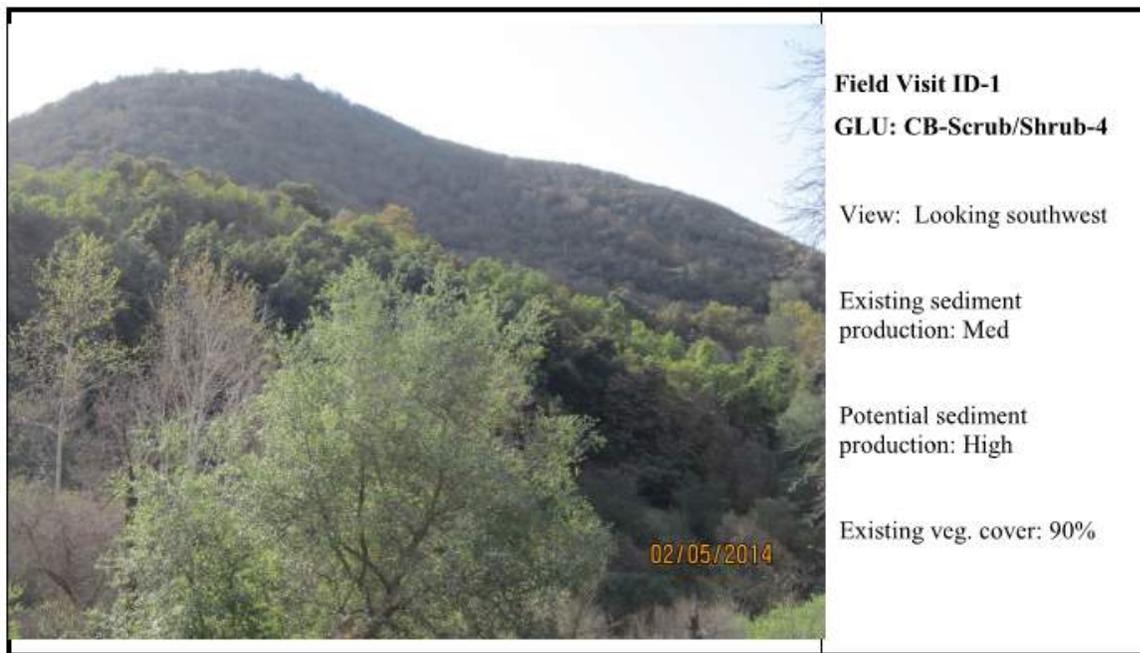

The first step of this process was to classify Land Cover of the site. Table H.1-2 provides a list of names regarding the different types of vegetation land cover but doesn't specify what these look like in the field. SanGIS provides shape files that can be used to determine the land cover in the area. The Mission 316 West project is located within the 32500 Scrub and Chaparral, and 63300 Riparian and Bottomland Habitat; which according to the Table H.1-2 is a Land cover grouping of Scrub/ Shrub. **Note that category-1 is not listed on the table above, therefore potential critical coarse sediment for area 1 is not relevant for critical coarse sediment assessment.**

Appendix H: Guidance for Investigation Potential Critical Coarse Sediment Yield Areas

Id	SanGIS Legend	SanGIS Grouping	Land Cover Grouping
119	32400 Maritime Succulent Scrub		Scrub/Shrub
120	32500 Diegan Coastal Sage Scrub		Scrub/Shrub
121	32510 Coastal form		Scrub/Shrub

Id	SanGIS Legend	SanGIS Grouping	Land Cover Grouping
105	63000 Riparian Scrubs		Scrub/Shrub
106	63300 Southern Riparian Scrub		Scrub/Shrub
107	63310 Mule Fat Scrub		Scrub/Shrub

The Carlsbad Watershed Management Area Water Quality Improvement Plan does include specified pictures for the region. In the Carlsbad WMAA Attachments section of the report the classifications that appear to be most like the proposed Mission 316 West Project are Scrub/Shrub-4. This type of land cover will be carried through the rest of this analysis for a complete comparison; see pictures below referenced from page 467, and 478 of the Carlsbad Watershed Management Area Water Quality Improvement Plan.

Picture 1

With pictures from the Mission 316 West project site itself, we can confirm the vegetation type; see below for Mission 316 West Pictures.

Picture 2 Image of Mission 316 West to Show Vegetation for GLU

The second step was to classify the site specific soil types into the seven listed GLU categories. This was done by determining the local geology. The specific geologic map used in the stage is the GEOLOGIC MAP OF THE OCEANSIDE 30'X60' QUADRANGLE, CALIFORNIA, California Geological Survey, Regional Geologic Map No. 2, 1:100,000 scale, Compiled by: Michael P. Kennedy and Siang S. Tan, 2002. This map can be found at: <http://www.quake.ca.gov/gmaps/RGM/oceanside/oceanside.html#>

The project site is then located on the geologic map and found to be within the Kt geologic unit. From Table H.1-1 of the BMP Design Manual, map unit Kt is Geologic Grouping of CB. See Figure 1 Below.

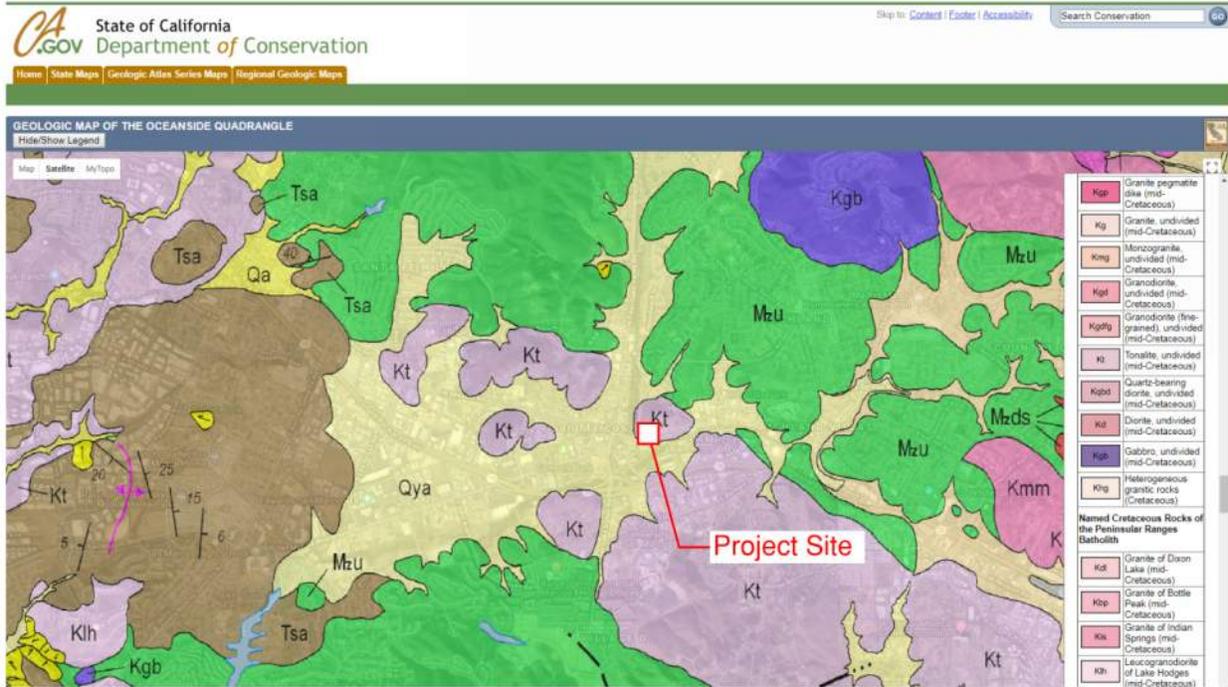

Figure 1

Since the geology is now identified as a Kt we can go back to the 2016 February Model BMP Design Manual to Table H.1-1 which is seen below in Figure 2.

Map Unit	Map Name	Anticipated Grain size of Weathered Material	Bedrock or Sedimentary	Impermeable/ Permeable	Geology Grouping
Kjv	El Cajon 30' x 60'	Coarse	Bedrock	Impermeable	CB
Klb	El Cajon 30' x 60'	Coarse	Bedrock	Impermeable	CB
Klh	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Klp	El Cajon 30' x 60'	Coarse	Bedrock	Impermeable	CB
Km	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kmg	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kmgp	El Cajon 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kmm	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kpa	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kpv	El Cajon 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kqbd	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kr	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Krm	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Krr	Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB
Kt	San Diego & Oceanside 30' x 60'	Coarse	Bedrock	Impermeable	CB

Figure 2 Table H.1-1: Geologic Grouping for Different Map Units

The third step in the analysis was to review slopes of the project site for comparison to the potential GLU's. Using Table 6-1 as a guide, the site was divided into two groups; slopes that are less than 40%, and slopes that are greater than 40%. The slopes that are greater than 40% are represented in cyan as can be seen on the following page.

MISSION 316 WEST

SAN MARCOS, CA 92069

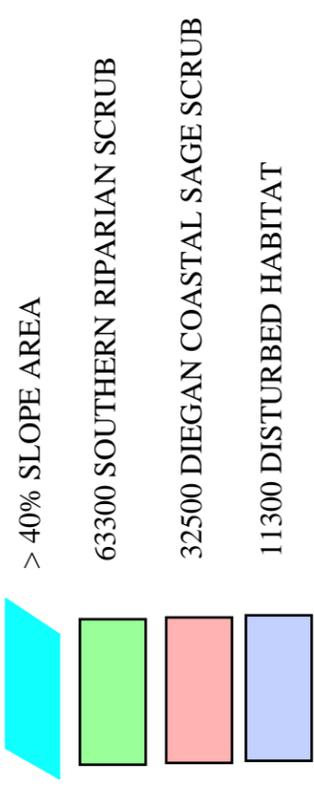

Table H.6-3: Potential Critical Coarse Sediment Yield Areas

GLU	Geology	Land Cover	Slope (%)
CB-Agricultural/Grass-3	Coarse Bedrock	Agricultural/Grass	20% - 40%
CB-Agricultural/Grass-4	Coarse Bedrock	Agricultural/Grass	>40%
CB-Forest-2	Coarse Bedrock	Forest	10 – 20%
CB-Forest-3	Coarse Bedrock	Forest	20% - 40%
CB-Forest-4	Coarse Bedrock	Forest	>40%
CB-Scrub/Shrub-4	Coarse Bedrock	Scrub/Shrub	>40%
CB-Unknown-4	Coarse Bedrock	Unknown	>40%
CSI-Agricultural/Grass-2	Coarse Sedimentary Impermeable	Agricultural/Grass	10 – 20%
CSI-Agricultural/Grass-3	Coarse Sedimentary Impermeable	Agricultural/Grass	20% - 40%
CSI-Agricultural/Grass-4	Coarse Sedimentary Impermeable	Agricultural/Grass	>40%
CSP-Agricultural/Grass-4	Coarse Sedimentary Permeable	Agricultural/Grass	>40%
CSP-Forest-3	Coarse Sedimentary Permeable	Forest	20% - 40%
CSP-Forest-4	Coarse Sedimentary Permeable	Forest	>40%
CSP-Scrub/Shrub-4	Coarse Sedimentary Permeable	Scrub/Shrub	>40%

As presented in Table H.6-3, the matching GLU's has the potential to supply critical coarse sediments. This area will now be the focus of further verification efforts.

In observing the GLU exhibit, it is readily apparent that there is only one area (28,104 sf) of PCCSYA inside the WMAA Mapping area.

Note that category-1 is not listed on the table above, therefore potential critical coarse sediment for area 1 is not relevant for critical coarse sediment assessment. However, Area 2 does show potential coarse sediment and further analysis needs to be taken.

STEP 3-Determine Relative Sediment Production of the Local Site Area

If identified GLU's are not large enough or steep enough to produce a significant amount of CCS they can be made exempt from avoidance. In order for a specific GLU to be considered valid it must rate as having a High Relative Sediment Production (RSP) rating. To conduct a Quantitative Analysis of identified GLU's use the following steps from the Carlsbad Watershed Management Area – Water Quality Improvement Plan, Section A.4.2.

After all the preceding steps are used to confirm the GLU Verifications of the Potential Critical Coarse Sediment onsite, the soil loss equation is used to determine if the local area will produce a significant amount of soil loss to contribute to the determination of the verified GLU's being a Critical Coarse Sediment Yield Area.

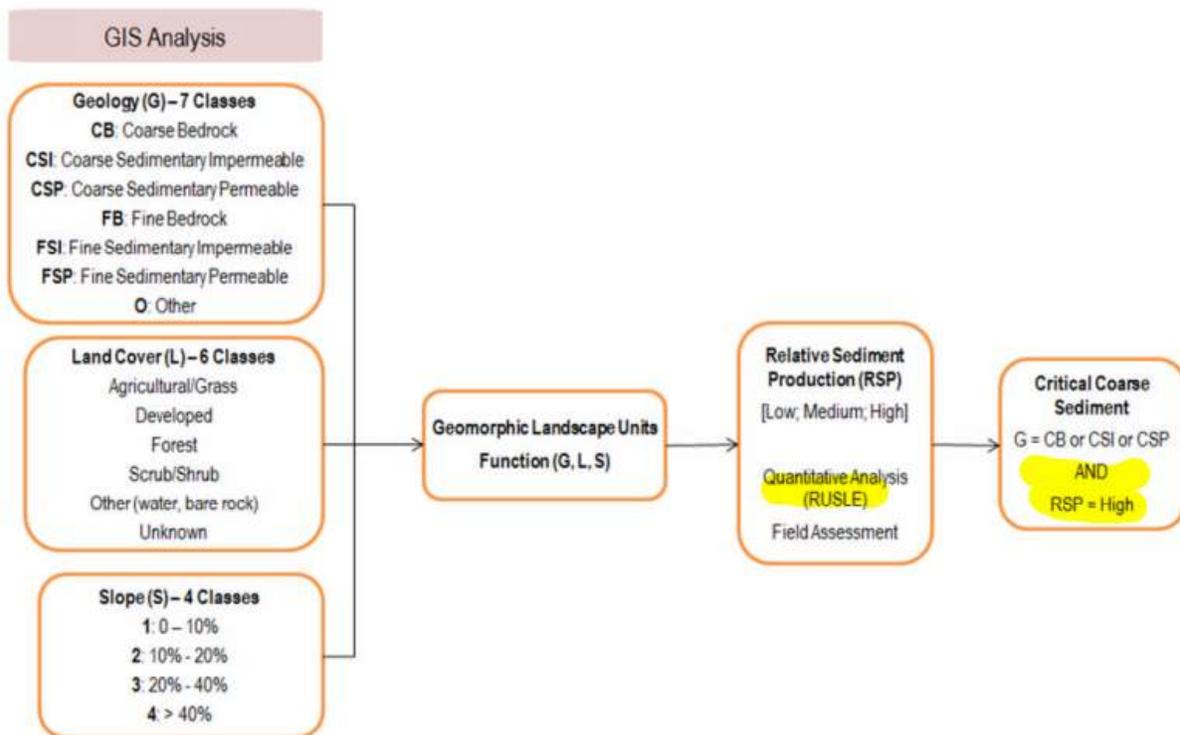

Image 1 Taken from June 30, 2016 Carlsbad Watershed Management Area (Water Quality Improvement Plan)-Carlsbad Watershed Management Area Analysis-Section 2.42 Methodology/ Assumptions/ Criteria for identifying potential critical coarse sediment yield areas

This is accomplished by using the RUSLE (RUSLE; Renard et al. 1997) Equation in Appendix D – Watershed Management Area Analysis Section A.4.2 Quantitative Analysis.

$$A = R \times K \times LS \times C \times P$$

Where

A = estimated average soil loss in tons/acre/year

R = rainfall-runoff erosivity factor

K = soil erodibility factor

LS = slope length and steepness factor

C = cover-management factor

P = support practice factor; assumed 1 for this analysis

Regional datasets used to determine the inputs required to estimate the soil loss from each GLU are listed in table below:

https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/constpermits/guidance/k_factor_map.pdf

https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/constpermits/guidance/ls_factor_map.pdf

<https://www.epa.gov/npdes/rainfall-erosivity-factor-calculator-small-construction-sites>

The following criterion was developed using the suggestions listed above and then used to assign relative sediment production rating to each GLU:

- Low: Soil Loss < 5.6 tons/acre/year [GLUs that have a soil loss of 0 to 5.6 tons/acre/year produces around 10% of the total coarse sediment soil loss from the study area]
- Medium: 5.6 tons/acre/year < Soil Loss < 8.4 tons/acre/year
- High: > 8.4 tons/acre/year [GLUs that have a soil loss greater than 8.4 tons/acre/year produces around 42% of the total coarse sediment soil loss from the study area]

Image 2 Taken from June 30, 2016 Carlsbad Watershed Management Area (Water Quality Improvement Plan)-Carlsbad Watershed Management Area Analysis-Section A.4.2 Quantitative Analysis

The results ended giving

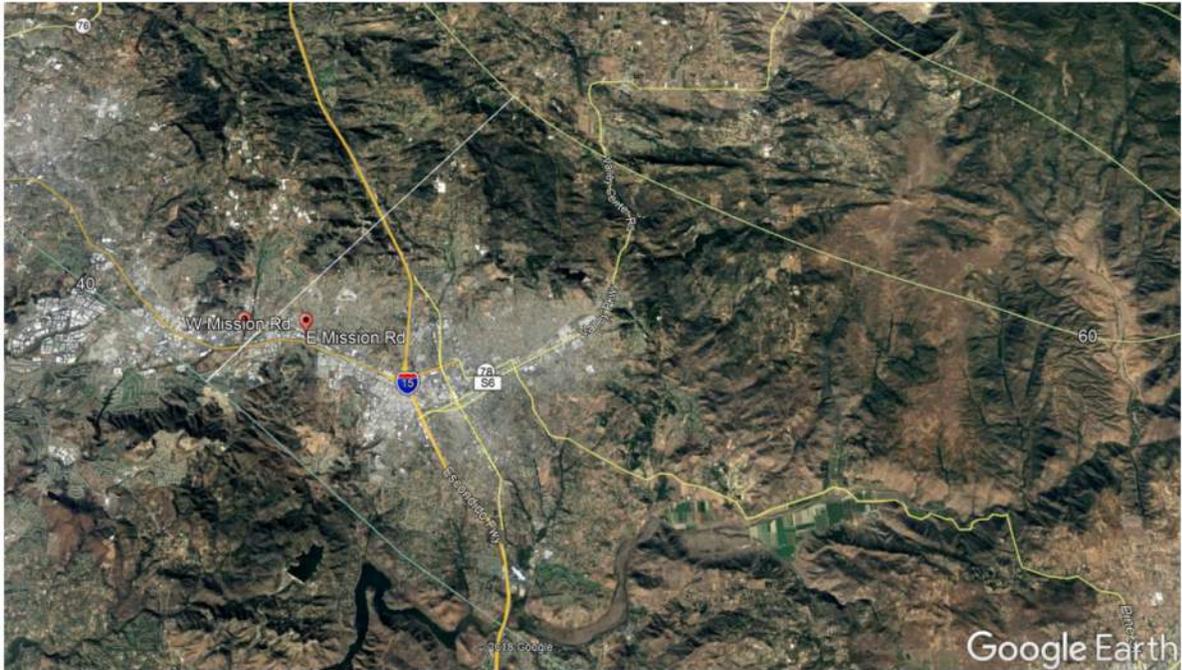

Figure provided from Google Earth with an overlay for RUSLE from SAN GIS
 $R = 43.2$

Figure provided from Google Earth with an overlay for RUSLE from SAN GIS
 $K = 0.43$

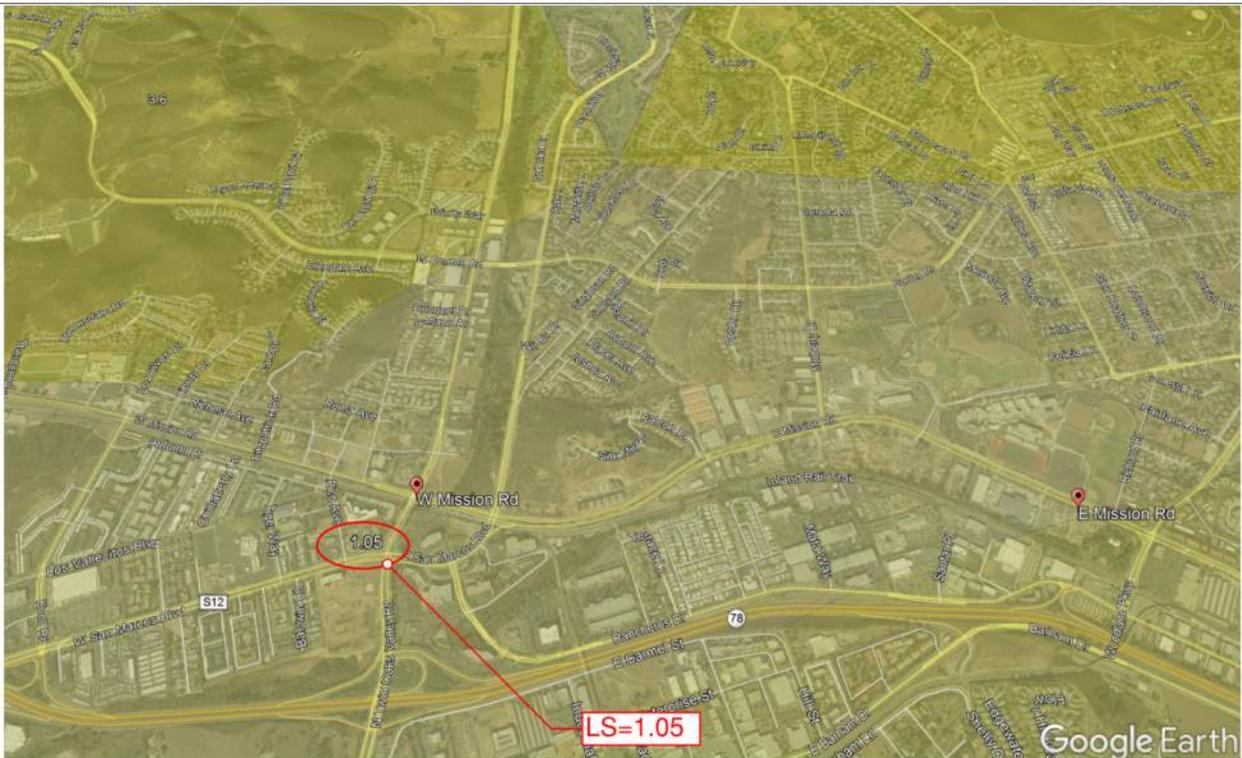

Figure provided from Google Earth with an overlay for RUSLE from SAN GIS
LS = 1.05

C factor will be placed as 0.14 to be conservative; this is the highest value in Table A.4.2 Located in the Carlsbad Watershed Management Area – Water Quality Improvement Plan.

P is set as 1 per analysis direction

To recap

R = 43.2

K = 0.43

Ls = 1.05

C = 0.14

P = 1

Therefore $A = 43.2 \times 0.43 \times 1.05 \times 0.14 \times 1$

$$A = 2.73 \text{ tons/acre/year}$$

By comparing this value to the soil loss criteria in Section A.4.2 the resultant annual soil loss for this specific region is considered LOW. For qualification of the area to be a Critical Coarse Sediment Yield Area per the Carlsbad WMAA (Image 1 from Page 14 the area must have a GLU

of CB, CSI, or CSP AND a High RSP. Due to the project sediment production being Low this indicates that the overall region does not produce enough overall soil loss to be considered a source of Critical Coarse Sediment.

Conclusions

Based on the findings of this report, the Mission 316 West project does not have a source of Coarse Sediment that would require avoidance or mitigation. The GLU analysis has verified that the site has limited areas with the potential to contribute coarse sediment. However the continuing analysis shows that the local area in which the site is situated does not produce enough annual soil loss (RSP) for any on site GLU to be considered a source of Coarse Critical Sediment. This is based on evaluation of the ground cover, underlying geology and the average slope of the local site area. Also the specific GLU areas evaluated do not meet the geographical requirements of a coarse critical sediment yield area. These findings are based on The RUSLE Equation indicates that the overall local site annual soil loss is LOW, which means the area does not produce sediment to be considered "Critical" in the overall than the generally established criteria for a Critical Coarse Sediment Yield Area (CCSYA) and So even though there is coarse sediment onsite, this sediment is not established as "Critical Coarse Sediment" and warrants no protection or further action.

If there are questions or concerns as related to this report, please contact Excel Engineering.

Conduit Surcharge Summary

No conduits were surcharged.

Analysis begun on: Mon Feb 13 13:34:17 2023

Analysis ended on: Mon Feb 13 13:36:05 2023

Total elapsed time: 00:01:48

STATISTICS ANALYSIS OF THE SWMM FILES FOR:

DISCHARGE NODE: POC-1

ANALYSIS DETAILS

Stream Susceptibility to Channel Erosion: High
Low Flow Threshold = $(0.1)Q_2 = (0.1)3.020 = Q_{lf} = 0.3020$ (cfs)
Flow Control Upper Limit = $Q_{10} = 4.240$ (cfs)
Assumed time between storms (hours): 24

PRE-DEVELOPMENT SWMM FILE

SWMM file name: V:\22\22027\Engineering\TM\Storm\Working Files\Hydmod\22027 pre hydromod.out
SWMM file time stamp: 9/14/2022 3:04:49 PM
Selected Node to Analyze: poc-1

POST-DEVELOPMENT MITIGATED SWMM FILE

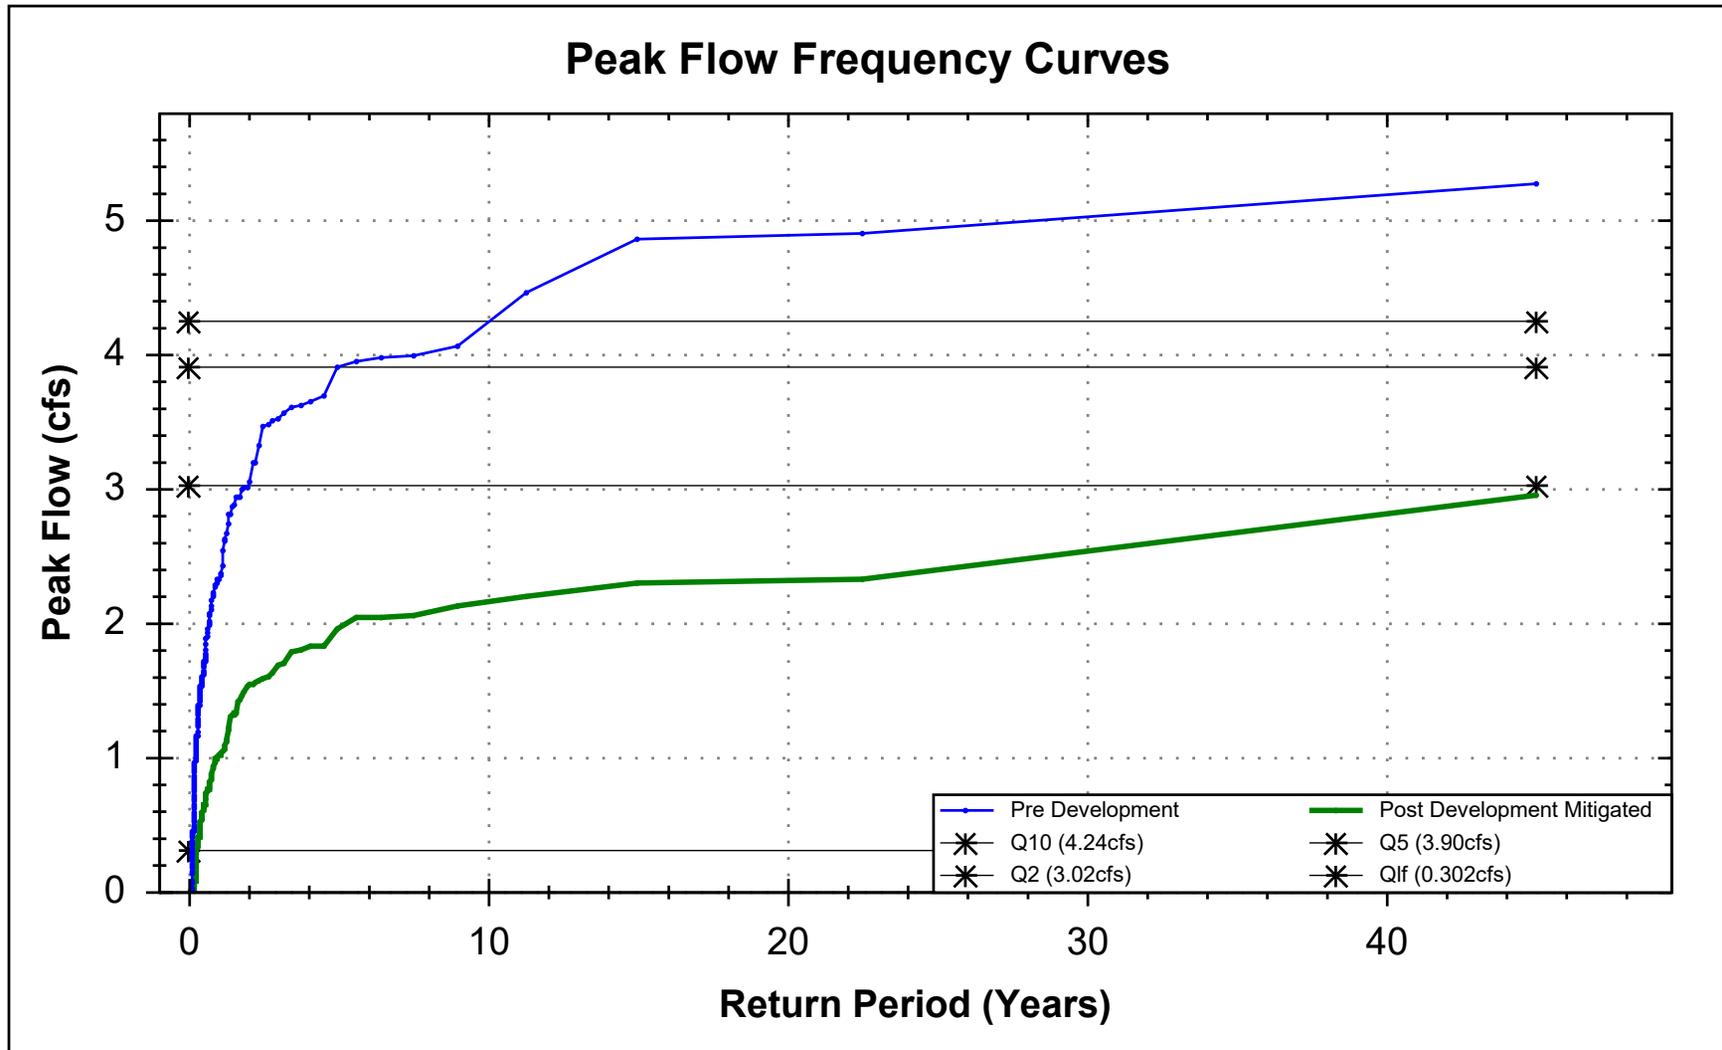

SWMM file name: V:\22\22027\Engineering\TM\Storm\Working Files\Hydmod\22027 post hydromod.out
SWMM file time stamp: 2/9/2023 10:24:07 AM
Selected Node to Analyze: poc-1

MITIGATED CONDITIONS RESULTS

For the Mitigated Conditions:
Peak Flow Conditions PASS
Flow Duration Conditions PASS

The Mitigated Conditions peak flow frequency curve is composed of 376 points. Of the points, 0 point(s) are above the flow control upper limit ($Q_{10} = 4.24$ (cfs)), 213 point(s) are below the low flow threshold value ($Q_{lf} = 0.302$ (cfs)). Of the points within the flow control range (Q_{lf} to Q_{10}), 163 point(s) have a lower peak flow rate than pre-development conditions. These points all pass. There are no points that failed, therefore the peak flow requirements have been met.

The Mitigated Conditions flow duration curve is composed of 100 flow bins (points). Each point represents the number of hours where the discharge was equal to or greater than the discharge value, but less than the next greater discharge value. Within the flow control range, comparing the post-development flow duration curve to the pre-development flow duration curve, 100 post-development curve point(s) have a lower flow duration than pre-development conditions. These points all pass. There are no points that failed, therefore the flow duration requirements have been met.

Compare Post-Development Curve to Pre-Development Curve							
Flow Control Upper Limit: 4.24 (cfs)							
Flow Control Lower Limit: 0.302 (cfs)

ATTACHMENT 3
Structural BMP Maintenance Information

This is the cover sheet for Attachment 3.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 3a	Structural BMP Maintenance Thresholds and Actions (Required)	<input checked="" type="checkbox"/> Included See Structural BMP Maintenance Information Checklist on the back of this Attachment cover sheet.
Attachment 3b	Draft Maintenance Agreement (when applicable)	<input type="checkbox"/> Included <input checked="" type="checkbox"/> Not Applicable

Use this checklist to ensure the required information has been included in the Structural BMP Maintenance Information Attachment:

Preliminary Design / Planning / CEQA level submittal:

Attachment 3a must identify:

- Typical maintenance indicators and actions for proposed structural BMP(s) based on Section 7.7 of the BMP Design Manual

Attachment 3b is not required for preliminary design / planning / CEQA level submittal.

Final Design level submittal:

Attachment 3a must identify:

- Specific maintenance indicators and actions for proposed structural BMP(s). This shall be based on Section 7.7 of the BMP Design Manual and enhanced to reflect actual proposed components of the structural BMP(s)
- How to access the structural BMP(s) to inspect and perform maintenance
- Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- Recommended equipment to perform maintenance
- When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management

Attachment 3b: For private entity operation and maintenance, Attachment 3b shall include a draft maintenance agreement in the local jurisdiction's standard format (PDP applicant to contact the [City Engineer] to obtain the current maintenance agreement forms).

BF-1

Biofiltration

BMP MAINTENANCE FACT SHEET FOR STRUCTURAL BMP BF-1 BIOFILTRATION

Biofiltration facilities are vegetated surface water systems that filter water through vegetation, and soil or engineered media prior to discharge via underdrain or overflow to the downstream conveyance system. Biofiltration facilities have limited or no infiltration. They are typically designed to provide enough hydraulic head to move flows through the underdrain connection to the storm drain system. Typical biofiltration components include:

- Inflow distribution mechanisms (e.g., perimeter flow spreader or filter strips)
- Energy dissipation mechanism for concentrated inflows (e.g., splash blocks or riprap)
- Shallow surface ponding for captured flows
- Side slope and basin bottom vegetation selected based on climate and ponding depth
- Non-floating mulch layer
- Media layer (planting mix or engineered media) capable of supporting vegetation growth
- Filter course layer consisting of aggregate to prevent the migration of fines into uncompacted native soils or the aggregate storage layer
- Aggregate storage layer with underdrain(s)
- Impermeable liner or uncompacted native soils at the bottom of the facility
- Overflow structure

Normal Expected Maintenance

Biofiltration requires routine maintenance to: remove accumulated materials such as sediment, trash or debris; maintain vegetation health; maintain infiltration capacity of the media layer; replenish mulch; and maintain integrity of side slopes, inlets, energy dissipators, and outlets. A summary table of standard inspection and maintenance indicators is provided within this Fact Sheet.

Non-Standard Maintenance or BMP Failure

If any of the following scenarios are observed, the BMP is not performing as intended to protect downstream waterways from pollution and/or erosion. Corrective maintenance, increased inspection and maintenance, BMP replacement, or a different BMP type will be required.

- The BMP is not drained between storm events. Surface ponding longer than approximately 24 hours following a storm event may be detrimental to vegetation health, and surface ponding longer than approximately 96 hours following a storm event poses a risk of vector (mosquito) breeding. Poor drainage can result from clogging of the media layer, filter course, aggregate storage layer, underdrain, or outlet structure. The specific cause of the drainage issue must be determined and corrected.
- Sediment, trash, or debris accumulation greater than 25% of the surface ponding volume within one month. This means the load from the tributary drainage area is too high, reducing BMP function or clogging the BMP. This would require pretreatment measures within the tributary area draining to the BMP to intercept the materials. Pretreatment components, especially for sediment, will extend the life of components that are more expensive to replace such as media, filter course, and aggregate layers.
- Erosion due to concentrated storm water runoff flow that is not readily corrected by adding erosion control blankets, adding stone at flow entry points, or minor re-grading to restore proper drainage according to the original plan. If the issue is not corrected by restoring the BMP to the original plan and grade, the [City Engineer] shall be contacted prior to any additional repairs or reconstruction.

BF-1

Biofiltration

Other Special Considerations

Biofiltration is a vegetated structural BMP. Vegetated structural BMPs that are constructed in the vicinity of, or connected to, an existing jurisdictional water or wetland could inadvertently result in creation of expanded waters or wetlands. As such, vegetated structural BMPs have the potential to come under the jurisdiction of the United States Army Corps of Engineers, SDRWQCB, California Department of Fish and Wildlife, or the United States Fish and Wildlife Service. This could result in the need for specific resource agency permits and costly mitigation to perform maintenance of the structural BMP. Along with proper placement of a structural BMP, **routine maintenance is key to preventing this scenario.**

<p>K. Vehicle/Equipment Repair and Maintenance Not Applicable</p>	<p>Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to protect from rainfall, run-on runoff, and wind dispersal.</p> <p>Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains must not be installed within the secondary containment areas.</p> <p>Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.</p>	<p>State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.</p> <p>State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency’s requirements.</p> <p>State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency’s requirements.</p>	<p>In the report, note that all of the following restrictions apply to use the site:</p> <p>No person must dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.</p> <p>No vehicle fluid removal must be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids must be contained or drained from the vehicle immediately.</p> <p>No person must leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.</p>

If These Sources Will Be on the Project Site Then Your SWQMP must consider These Source Control BMPs		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on Drawings	3 Permanent Controls—List in Table and Narrative	4 Operational BMPs—Include in Table and Narrative
<p>L. Fuel Dispensing Areas Not Applicable</p>	<p>Fueling areas¹⁶ must have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are (1) graded at the minimum slope necessary to prevent ponding; and (2) separated from the rest of the site by a grade break that prevents run-on of storm water to the MEP.</p> <p>Fueling areas must be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area¹.] The canopy [or cover] must not drain onto the fueling area.</p>		<p>The property owner must dry sweep the fueling area routinely.</p> <p>See the Business Guide Sheet, “Automotive Service—Service Stations” in the CASQA Storm Water Quality Handbooks at https://www.casqa.org/resources/bmp-handbooks.</p>

¹⁶ The fueling area must be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

If These Sources Will Be on the Project Site Then Your SWQMP must consider These Source Control BMPs		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on Drawings	3 Permanent Controls—List in	4 Operational BMPs—Include in Table and Narrative
<p>M. Loading Docks Not Applicable</p>	<p>Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks must be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts must be positioned to direct storm water away from the loading area. Water from loading dock areas should be drained to the sanitary sewer where feasible. Direct connections to storm drains from depressed loading docks are prohibited.</p> <p>Loading dock areas draining directly to the sanitary sewer must be equipped with a spill control valve or equivalent device, which must be kept closed during periods of operation.</p> <p>Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.</p>		<p>Move loaded and unloaded items indoors as soon as possible.</p> <p>See Fact Sheet SC-30, “Outdoor Loading and Unloading,” in the CASQA Storm Water Quality Handbooks at www.casqa.org/resources/bmp-handbooks/municipal-bmp-handbook.</p>

If These Sources Will Be on the Project Site Then Your SWQMP must consider These Source Control BMPs		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on Drawings	3 Permanent Controls—List in Table and Narrative	4 Operational BMPs—Include in Table and Narrative
<p>N. Fire Sprinkler Test Water Not Applicable</p>		<p>Provide a means to drain fire sprinkler test water to the sanitary sewer.</p>	<p>See the note in Fact Sheet SC-41, “Building and Grounds Maintenance,” in the CASQA Storm Water Quality Handbooks at www.casqa.org/resources/bmp-handbooks/municipal-bmp-handbook</p>
<p>O. Miscellaneous Drain or Wash Water Boiler drain lines Condensate drain lines Rooftop equipment Drainage sumps Roofing, gutters, and trim Not Applicable</p>		<p>Boiler drain lines must be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system.</p> <p>Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system.</p> <p>Rooftop mounted equipment with potential to produce pollutants must be roofed and/or have secondary containment.</p> <p>Any drainage sumps onsite must feature a sediment sump to reduce the quantity of sediment in pumped water.</p> <p>Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.</p>	

If These Sources Will Be on the Project Site Then Your SWQMP must consider These Source Control BMPs		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on Drawings	3 Permanent Controls—List in Table and Narrative	4 Operational BMPs—Include in Table and Narrative
<p>P. Plazas, sidewalks, and parking lots. Not Applicable</p>			<p>Plazas, sidewalks, and parking lots must be swept regularly to prevent the accumulation of litter and debris.</p> <p>Debris from pressure washing must be collected to prevent entry into the storm drain system. Washwater containing any cleaning agent or degreaser must be collected and discharged to the sanitary sewer and not discharged to a storm drain.</p>

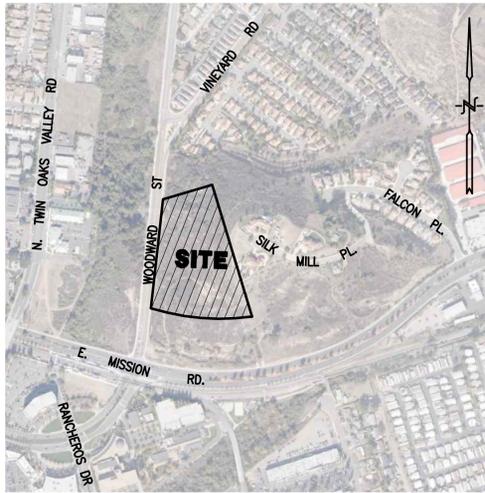

ATTACHMENT 4
Copy of Plan Sheets Showing Permanent Storm Water BMPs

This is the cover sheet for Attachment 4.

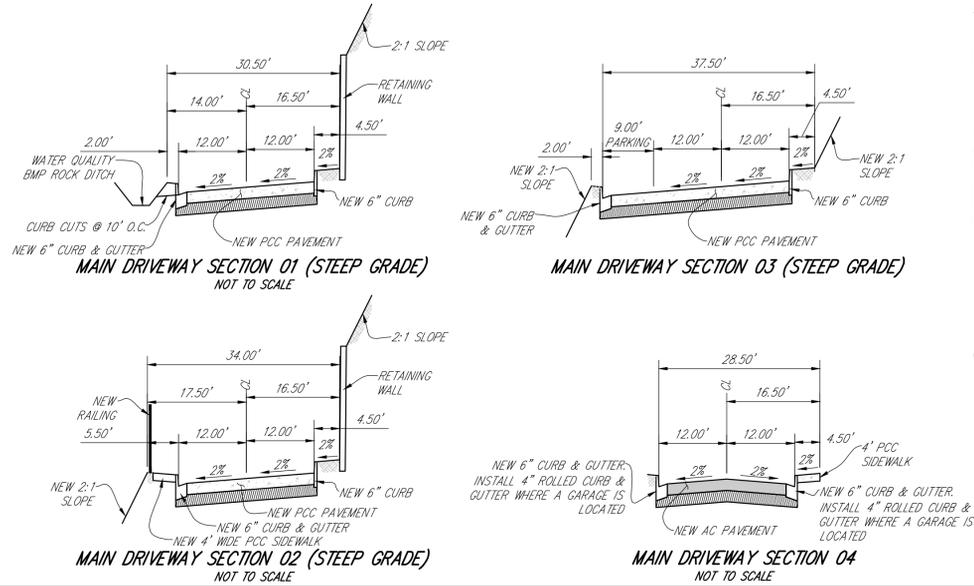

Use this checklist to ensure the required information has been included on the plans:

The plans must identify:

- Structural BMP(s) with ID numbers matching Form I-6 Summary of PDP Structural BMPs
- The grading and drainage design shown on the plans must be consistent with the delineation of DMAs shown on the DMA exhibit
- Details and specifications for construction of structural BMP(s)
- Signage indicating the location and boundary of structural BMP(s) as required by the City Engineer
- How to access the structural BMP(s) to inspect and perform maintenance
- Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- Recommended equipment to perform maintenance
- When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
- Include landscaping plan sheets showing vegetation requirements for vegetated structural BMP(s)
- All BMPs must be fully dimensioned on the plans
- When proprietary BMPs are used, site-specific cross section with outflow, inflow, and model number shall be provided. Photocopies of general brochures are not acceptable.

TENTATIVE SUBDIVISION MAP FOR CONDOMINIUM PURPOSES
FOR A TOTAL OF 46 RESIDENTIAL AIRSPACE UNITS.

LEGAL DESCRIPTION FOR APN 220-210-49-00

PARCEL B OF CERTIFICATE OF COMPLIANCE RECORDED FEBRUARY 29, 2008 AS INSTRUMENT NO. 2008-0107275 OF OFFICIAL RECORDS AND MORE PARTICULARLY DESCRIBED AS FOLLOWS:

LOT 5 IN BLOCK 52 OF RANCHO LOS VALLECITOS DE SAN MARCOS, IN THE CITY OF SAN MARCOS, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, ACCORDING TO MAP THEREOF NO. 806, FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, DECEMBER 21, 1895.

UTILITIES

FIRE - SAN MARCOS FIRE PROTECTION DISTRICT
SCHOOL SEWER - SAN MARCOS UNIFIED SCHOOL DISTRICT
WATER - VALLECITOS WATER DISTRICT
TELEPHONE - VALLECITOS WATER DISTRICT
GAS - COX COMMUNICATIONS
ELECTRIC - SAN DIEGO GAS & ELECTRIC
SAN DIEGO GAS & ELECTRIC

PROPOSED ONSITE UTILITIES

WATER - PRIVATE
FIRE SYSTEM - PRIVATE
SEWER - PRIVATE
STORM DRAIN - PRIVATE

CONDOMINIUM STATEMENT

THIS TENTATIVE MAP IS A CONDOMINIUM PROJECT AS DEFINED IN SECTION 4125 OF THE CIVIL CODE OF THE STATE OF CALIFORNIA AND IS FILED PURSUANT TO THE SUBDIVISION MAP ACT THAT PROPOSES 1 LOT WITH 46 AIR SPACE RESIDENTIAL CONDOMINIUMS.

LOTS

TOTAL LOTS EXISTING: 1
TOTAL LOTS PROPOSED: 2

APN 220-210-49

FLOOD ZONE DESIGNATION
FLOOD ZONE INFORMATION PER THE FEDERAL EMERGENCY MANAGEMENT AGENCY WEBSITE.

THIS SITE IS PART OF FEMA FLOOD PANEL NOS. 06073C-0793G AND 06073C-0794G, AND IS BASED ON THE NORTH AMERICAN VERTICAL DATUM OF 1988.
BOTH MAPS WERE REVISED: MAY 16, 2012

THE PROPERTY IS LOCATED WITHIN ZONE X - AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN.

EXCEPTING THEREFROM THE SOUTHERLY 233.00 FEET OF SAID LOT 5, MEASURED CONCENTRIC TO THE NORTHERLY RIGHT-OF-WAY OF MISSION ROAD THEREOF.

SOURCE OF TOPOGRAPHY

THE EXISTING TOPOGRAPHY SHOWN HEREON IS A COMBINATION OF THE FIELD TOPOGRAPHIC SURVEY CONDUCTED BY REPRESENTATIVE OF EXCEL ENGINEERING ON NOVEMBER 31, 2017, AERIAL SURVEY PERFORMED BY ANALYTICAL PHOTOGRAMMETRIC SURVEYS, INC. JULY 2013 & THE APPROVED PRECISE GRADING PLAN OF MISSION VILLAS (GP20-00016)

BASIS OF BEARINGS

THE BASIS OF BEARINGS FOR THIS PROJECT IS BETWEEN SURVEY CONTROL POINT #1024 "SMVC024" AND SURVEY CONTROL POINT #1077 "SMVC077" AS SHOWN ON RECORD OF SURVEY 1392B, RECORDED OCTOBER 1, 1992 AS FILE NO. 92-625379.

THE COMBINED FACTOR FOR THIS PROJECT IS BASED ON SURVEY CONTROL POINT #1024, BEING 0.999938891 GROUND TO GRID.

BENCHMARK

THE BENCHMARK FOR THIS SITE IS FROM THE CITY OF SAN MARCOS SURVEY CONTROL MAP, AS SHOWN ON RECORD OF SURVEY 1392B, RECORDED OCTOBER 1, 1992 AS FILE NO. 92-625379 AND UPDATED PER THE CITY OF SAN MARCOS BENCHMARK CONVERSION TABLE DATED SEPTEMBER 21, 2011.

POINT #1024 "SMVC024" - A 3" BRASS DISC IN STANDARD STREET WELL MONUMENT ENCLOSURE, PUNCHED, NOT STAMPED, LOCATED AT THE INTERSECTION OF SAN MARCOS BOULEVARD AND GRAND AVENUE.

ELEVATION = 551.909 FEET (NORTH AMERICAN VERTICAL DATUM OF 1988)

EXISTING EASEMENTS

CONSTRUCTION NOTES

SURFACE IMPROVEMENTS

- S-01 AC PAVEMENT (DRIVE AISLE)
- S-02 PCC PAVEMENT WITH BROOM FINISH
- S-03 6" PCC CURB
- S-04 6" PCC CURB & GUTTER
- S-05 3' WIDE PCC RIBBON GUTTER
- S-06 NEW GEOGRID TYPE RETAINING WALL
- S-07 SOIL NAIL TYPE RETAINING WALL
- S-08 CMU RETAINING WALL
- S-09 CURB CUTS
- S-10 PCC SIDEWALK
- S-11 STAIRS
- S-12 TRAFFIC SIGN ("STOP" OR "CROSSWALK AHEAD")

UTILITY IMPROVEMENTS

- UT-01 FIRELINE MAIN
- UT-02 FIRE HYDRANT
- UT-03 FIRE SERVICE LATERAL
- UT-04 DOMESTIC WATERLINE MAIN
- UT-05 SEWERLINE MAIN

STORM DRAIN / WATER QUALITY IMPROVEMENTS

- SD-01 PCC BROW DITCH
- SD-02 STORM DRAIN INLET
- SD-03 STORM DRAIN BOX/CLEANOUT
- SD-04 STORM DRAIN PIPE
- SD-05 WO BASIN OUTLET. SEE DETAIL ON SHEET 13
- SD-06 WATER QUALITY BASIN
- SD-07 RIPRAP
- SD-08 WO ROCK DITCH BIOFILTRATION. SEE DETAILS ON SHEET 13.
- SD-09 HEADWALL
- SD-10 INSTALL PVC CLEANOUT AT BEND
- SD-11 INSTALL CURB OUTLET

ROCK CRUSHER SPECIFICATIONS:

THUNDERBIRD HAZEMAG IMPACT CRUSHING PLANT #CP300

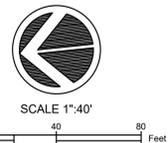

CERTIFIED NON-ROAD PORTABLE INTERNAL COMBUSTION ENGINE, COMPRESSION IGNITION, CATERPILLAR, MODEL 3406, SERIAL NO: ILS01162, RATED AT 387 BHP, DIESEL FUELED, EQUIPPED WITH TURBOCHARGER AND AFTERCOOLER.

PORTABLE ROCK CRUSHER AND SCREENING PLANT, RATED AT 150 TONS PER HOUR, WITH THE FOLLOWING:

- (1) VIBRATORY GRIZZLY FEEDER, 36" X 14'
- (1) IMPACT CRUSHER, HAZEMAG, MODEL 1010
- (1) DOUBLE DECK SCREEN, 5' X 14'
- (3) BELT CONVEYORS
- (3) RADIAL STACKERS
- (1) DCE DALMATIC FABRIC FILTER, MODEL 30/10

HYDROLOGIC SOIL GROUP
THE ONSITE HYDROLOGIC SOIL GROUP FOR THIS SITE IS TYPE D.

EXISTING SITE FEATURES:

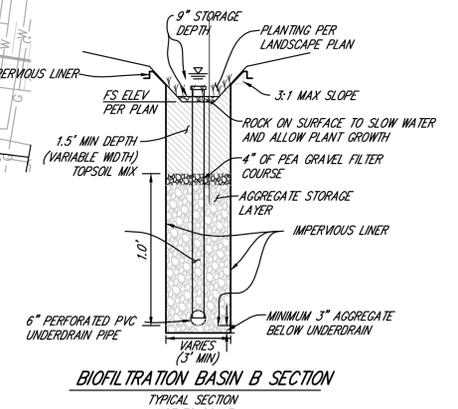

- THE APPROXIMATE DEPTH TO GROUNDWATER IS GREATER THAN 20 FEET.
- THERE ARE NO NATURAL HYDROLOGIC FEATURES ON THE SITE.
- THE SITE PROPOSES TO CONNECT TO THE EXISTING PUBLIC STORM DRAIN SYSTEM LOCATED IN THE SOUTH EDGE OF THE SITE.
- BASED ON WATERSHED MAPPING OF POTENTIAL CRITICAL COARSE SEDIMENT YIELD AREAS (CCSYA), THERE ARE NO CCSYA LOCATED WITHIN THE PROJECT BOUNDARY OR TRIBUTARY TO THE RUNOFF BYPASSED AROUND THE SITE.

SOURCE CONTROL		
SOURCE CONTROL REQUIREMENT	NODE	IMPLEMENTATION
SC-1 PREVENTION OF ILLICIT DISCHARGES	SC-1	EFFECTIVE IRRIGATION WILL BE IMPLEMENTED AND VEHICLE WASHING IS PROHIBITED
SC-2 STORM DRAIN STENCILING OR SIGNAGE	SC-2	STENCIL EVERY INLET WITH PROHIBITIVE WORDS: "NO DUMPING! DRAINS TO WATERWAYS" AND "NO CONTAMINE" IN SPANISH.
SC-5 PROTECT TRASH STORAGE	SC-5	TRASH ENCLOSURE WILL BE PROTECTED BY LID OR BE WALLED WITH ROOF TO AVOID STORMWATER GET CONTAMINATED

NOTE: HOA WILL BE THE FINAL OWNER OF BMPs, MAINTAIN BMPs INTO PERPETUITY, AND FUNDING MECHANISM FOR MAINTENANCE.

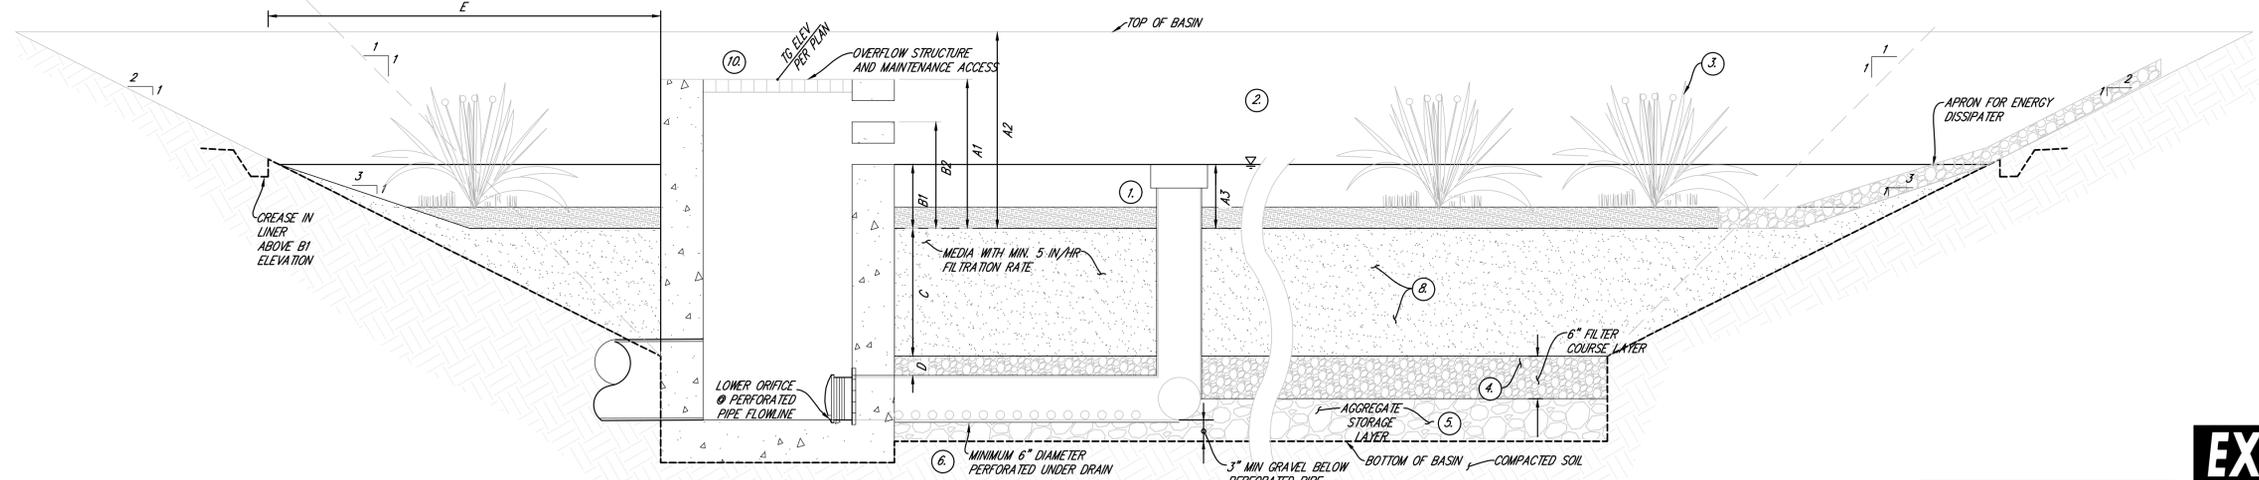

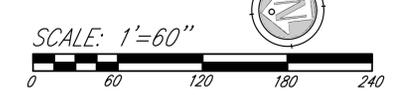

WATER QUALITY BASIN INSTALLATION NOTES:

1. 3 INCHES OF WELL-AGED, SHREDDED HARDWOOD MULCH.
2. AN UNDERDRAIN CLEANOUT WITH A MINIMUM 6-INCH DIAMETER AND LOCKABLE CAP IS PLACED EVERY 250 TO 300 FEET AS REQUIRED BASED ON UNDERDRAIN LENGTH.
3. VEGETATION USED SHOULD BE SUITABLE FOR THE CLIMATE PER LANDSCAPE PLANS
4. FILTER COARSE IS A MINIMUM OF 6 INCHES PROVIDED IN TWO SEPARATE 3 INCH LAYERS. THE TOP LAYER SHALL BE MADE OF ASTM C33 CHOKER SAND AND THE BOTTOM LAYER BE OF ASTM NO. 8 AGGREGATE. MARKERS STAKES SHALL BE USED TO ENSURE UNIFORM LIFT THICKNESS.
5. AASHTO NO. 57 STONE OR CLASS 2 PERMEABLE PER CAL TRANS SPECIFICATION 68-1.025 IS RECOMMENDED FOR THE AGGREGATE STORAGE LAYER. WASHED, OPEN-GRADED CRUSHED ROCK MAY BE USED, HOWEVER, A 4 INCH MINIMUM WASHED PEA GRAVEL FILTER COURSE LAYER AT THE TOP OF THE CRUSHED ROCK IS REQUIRED.
6. IMPERMEABLE LINER SHALL BE INSTALLED WHEN THE BIOFILTRATION BASIN IS WITHIN 10 FEET OF RETAINING WALLS OR BUILDING FOUNDATIONS, OR AS RECOMMENDED BY THE SOILS ENGINEER, OR REQUIRED BY THESE PLANS. IMPERMEABLE LINER SHALL BE 30 MIL THICK (PER COUNTY OF SAN DIEGO GREEN STREETS DESIGN STANDARD DRAWING GS-3.00 AND COUNTY GREEN STREETS SUPPLEMENT TO CAL TRANS SPECIFICATIONS 20-11.08B) CONFIGURED TO ENTIRELY ENCOMPASS THE SIDES OF THE WATER QUALITY BASIN.
7. IMPERMEABLE LINER BE CONSTRUCTED IN COMPLIANCE WITH THE COUNTY OF SAN DIEGO GREEN STREETS SUPPLEMENT TO CAL TRANS SPECIFICATIONS 20-11.08B.
8. BIOFILTRATION SOIL MEDIA LAYER (BSM) SHALL CONSIST OF 60% TO 80% BY VOLUME SAND, UP TO 20% BY VOLUME TOPSOIL, AND UP TO 20% BY VOLUME COMPOST (PER COUNTY OF SAN DIEGO BMP DESIGN MANUAL SEPTEMBER 2020 APPENDIX F.2 SECTION 803-2 BLENDED BSM CRITERIA AND TESTING REQUIREMENTS) PLACED IN 6" LIFTS AND COMPACTED WITH WATER PRIOR TO THE NEXT LIFT. INITIAL PERMEABILITY SHALL BE 8" PER HOUR (WITH ASSUMED STABILIZED PERMEABILITY OF 5" PER HOUR).
9. THE AGGREGATE STORAGE LAYER SHALL BE COMPACTED IN ACCORDANCE WITH SOILS ENGINEER'S RECOMMENDATIONS.
10. MP B WILL HAVE A BOX THAT IS USED FOR A PUMP SIZED BELOW THE 0.102 STORM EVENT TO PUMP OUT LOW FLOW WATER AFTER CLEANING. PEAK FLOW WILL DISCHARGE THROUGH D-25 TO WOODWARD STREET.
11. ALL LINER INSTALLATIONS, FIELD WELDING OF SEAMS, AND OBSERVATION OF SOIL MIX PLACEMENT SHALL REQUIRE SPECIAL INSPECTION BY THE PROJECT GEOTECHNICAL ENGINEER OR OTHER QUALIFIED PERSON. A LETTER CERTIFYING PROPER INSTALLATION SHALL BE PROVIDED TO THE ENGINEER OF RECORD TO ACCEPTANCE OF THE FACILITIES.
12. SPECIAL INSPECTION SHALL BE REQUIRED FOR CONSTRUCTION OF ALL BIOFILTRATION BASINS. INSPECTION SHALL BE PERFORMED BY A QUALIFIED INDIVIDUAL (SUCH AS: ENGINEER OF RECORD, QSD). INSPECTION SHALL INCLUDE:
 - VERIFICATION OF OVERALL DIMENSIONS PRIOR TO PLACEMENT OF MATERIALS;
 - PLACEMENT OF THE LINER, IF REQUIRED; AND SEAMS OR PENETRATIONS
 - PLACEMENT OF THE GRAVEL, FILTER MATERIALS, AND FILTER MEDIA;
 - ALL INLET AND OUTLET STRUCTURES INCLUDING UNDERDRAINS, IF REQUIRED.
 - CONTRACTOR SHALL TAKE PICTURES AT EACH STAGE OF INSTALLATION AND SUBMITTED TO ENGINEER FOR VERIFICATION OF INSTALL.
13. INSPECTOR SHALL BE GIVEN A MINIMUM OF 48 HOURS PRIOR TO INSPECTION. UPON COMPLETION THE INSPECTOR SHALL PROVIDE A CERTIFICATION TO THE ENGINEER OF WORK.
13. PROPOSED MATERIALS, SUCH AS AGGREGATE, FILTER MATERIAL, AND FILTER MEDIA SHALL BE SUBMITTED TO THE ENGINEER OF WORK FOR APPROVAL.

STRUCTURAL BIO-BASIN SUMMARY TABLE																	
DMA NAME	DMA TYPE	BMP NAME	TYPE OF BMP	EFFECTIVE AREA (SQFT)	A1	A2	A3	B1	B2	C	D	E	BOX RISER OVERFLOW STRUCTURE SIZE (INCHES)	ORIFICES DIAMETER		IMPERMEABLE LINER P	
					(INCH) WATER QUALITY	(INCH) TOP OF CLEAN BASIN	(INCH) CLEAN OUT	(INCH) UPPER ORIFICE	(INCH) UPPER ORIFICE	(INCH) MEDIA	(INCH) GRAVEL/OFFSET	UPPER H X W (INCH)		LOWER H X W (INCH)			
DMA-1A	DRAINS TO BMP	BMP-A	BIOFILTRATION	1490	36	51.48	9	9	28.5	18	12	3	48x48	4 X 3	6 X 12	1.4375	YES
DMA-2	DRAINS TO BMP	BMP-B	BIOFILTRATION	436	9	12	9	-	-	18	12	3	18x18	-	-	0.5	YES

NOTE:
- ONLY DMA-1, DMA-2, AND DMA-4 ARE FOR WATER QUALITY. OTHER AREAS ARE SELF-MITIGATING AND CONTAIN NO STRUCTURAL BMPs.
- FREEBOARD IS CALCULATED AS A2-A1
- BMP B WILL HAVE A BOX THAT IS USED FOR A PUMP SIZED BELOW THE 0.102 STORM EVENT TO PUMP OUT LOW FLOW WATER AFTER CLEANING. PEAK FLOW WILL DISCHARGE THROUGH D-25 TO WOODWARD STREET. DISTANCE FROM TOE OF SLOPE TO LINER
