Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

SIGNET ARMORLITE, INC. (Continued) **1000314091**

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

SIGNET ARMORLITE, INC. (Continued) **1000314091**

Waste Code: P005
Waste Description: 2-PROPEN-1-OL (OR) ALLYL ALCOHOL

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U007
Waste Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U112
Waste Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Waste Code: U151
Waste Description: MERCURY

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U236
Waste Description: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D007
Waste Description:	CHROMIUM

SIGNET ARMORLITE, INC. (Continued) **1000314091**

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P005
Waste Description: 2-PROPEN-1-OL (OR) ALLYL ALCOHOL

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

SIGNET ARMORLITE, INC. (Continued) **1000314091**

Waste Code: U007
Waste Description: 2-PROPENAMIDE (OR) ACRYLAMIDE

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U112
Waste Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Waste Code: U151
Waste Description: MERCURY

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U236
Waste Description: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Lead Agency Case Number:	H02662-001
Latitude:	33.1441271643332
Longitude:	-117.18586742878
Case Type:	Cleanup Program Site
Case Worker:	Not reported
Local Agency:	Not reported
RB Case Number:	2091500
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Acetone, Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Freon, Diesel, Gasoline
Site History:	The Facility is approximately 11.8 acres in size and contains buildings associated with the manufacture, marketing, and distribution of optical lenses. Site assessment activities have been conducted at the Facility since the early 1990s. Investigations revealed the presence of VOCs, including methylene chloride, in soil and groundwater at the Facility. Signet has undertaken four remedial actions at the Facility, as well as subsequent investigation activities to assess the adequacy of the remedial actions. Active remediation has included operation of a multiphase extraction system (MPE system) from 1995 to 1998 to remove subsurface VOCs from source areas at the Facility. Additionally, three targeted source removal actions have been conducted at the Facility since 1986. Remedial activities have included removal and disposal of contaminated soil and addition of soil amendments to facilitate in-situ degradation. In late 2009, an interim remedial measure to extract VOCs from deep groundwater was evaluated, and the findings of this evaluation are incorporated into the CAP.

Quarterly Update:	WB Lead Agency for corrective action: Signet Armorlite Inc. (SAI) is located at 1001 Armorlite Drive, San Marcos, in northern San Diego County. Land use in the immediate vicinity is industrial. An Interim Status Document was issued to the facility by the U.S. EPA on January 4, 1982, for storage and treatment of these RCRA units: (1) hazardous waste storage unit, (1) elementary neutralization unit, (1) methylene chloride still, and (1) methylene chloride evaporation unit. SAI was classified as a treatment, storage, and disposal facility (TSDF). On November 2, 1984, the Department of Health Services denied SAIs request for hazardous waste reclassification from a TSDF to generator status, due to storage of hazardous waste on-site for longer than 90 days. The primary operations generated waste streams from the manufacturing plastic eyeglass lenses, and included the storage of nonchlorinated waste solvents, sodium hydroxide and water, and chlorinated waste solvents. As a treatment facility, SAI utilized two recovery units: one carbon adsorption unit and one distillation unit. The units were used to recover methylene chloride. The facility was formally clean closed by the U.S. EPA in a letter dated June 30, 1992. Our records indicate that in December 1997, the facility was referred to the Regional Water Quality Control Board (RWQCB) San Diego Region, as the lead agency for corrective action at the facility. In a letter dated October 28, 2005, the DTSC formally acknowledged that the RWQCB is the lead agency for corrective action at the facility.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	08/13/1991
Comments:	PA Report was reviewed by Region 4 staff. The site is located at 217 Las Posas R. between Mission Rd. & Hwy 78 in San Marcos. The area is industrial, but Palomar College is north of Mission Rd. Site includes 4,000 sf bldg., 2 small storage sheds, outdoor drum storage area, and abandoned above ground storage tanks (550 gal.). Chemical company is still operating repackaging and storing various chemical products (Algi-gon pool treatment etc.). No sampling result were considered in EPA's PA. Staff recommends PEARM to de- termine if there is a problem DTSC should address.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2022

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Data Release Frequency: Quarterly

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

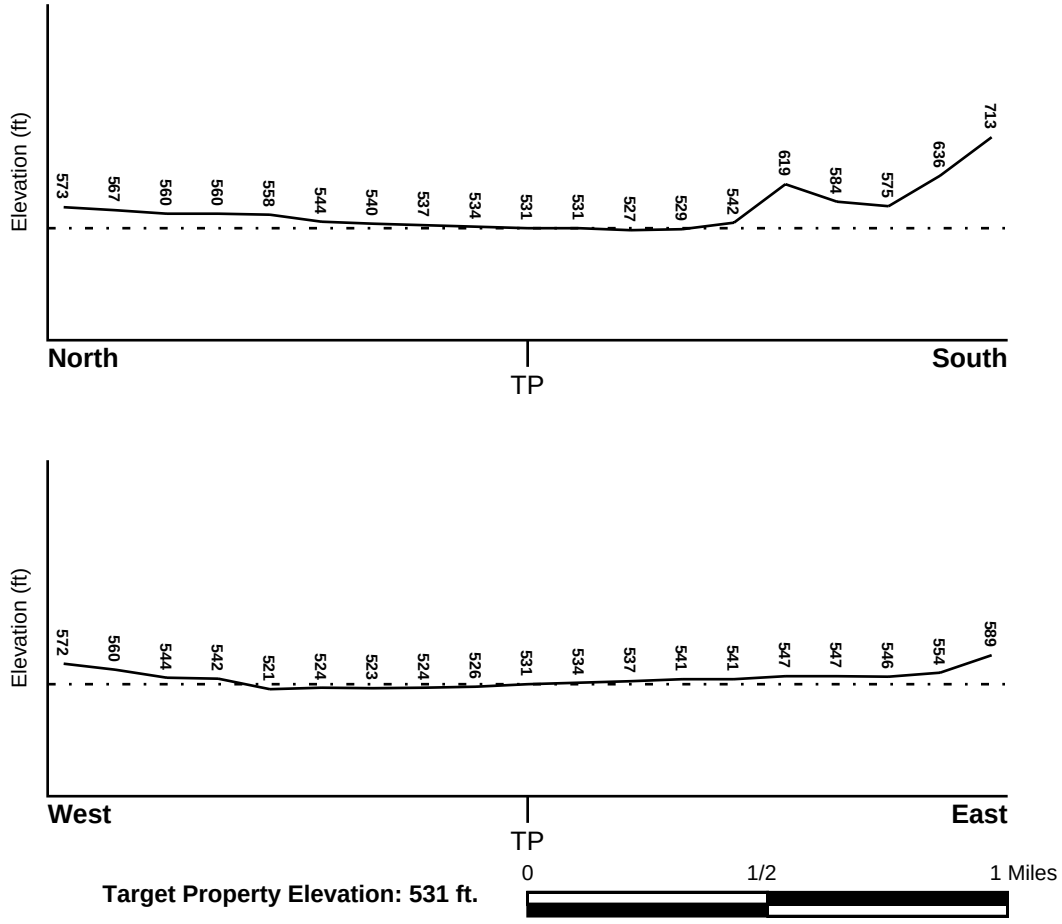
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 531 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C0789H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06073C0793G	FEMA FIRM Flood data

06073C1056F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN MARCOS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9
2	12 inches	33 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9
3	33 inches	62 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.7
2	12 inches	33 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.7
3	33 inches	62 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.7

Soil Map ID: 3

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

4	53 inches	62 inches		Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: RAMONA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.3 Min: 6.6
2	16 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.3 Min: 6.6
3	59 inches	74 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4 Min: 1.4	Max: 7.3 Min: 6.6

Soil Map ID: 5

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The following questions represent the facility's activities, NOT the specific project description.

PART I: FIRE DEPARTMENT – HAZARDOUS MATERIALS DIVISION: OCCUPANCY CLASSIFICATION: (not required for projects within the City of San Diego): Indicate by circling the item, whether your business will use, process, or store any of the following hazardous materials. If any of the items are circled, applicant must contact the Fire Protection Agency with jurisdiction prior to plan submittal.

Occupancy Rating:

1. Explosive or Blasting Agents
2. Compressed Gases
3. Flammable/Combustible Liquids
4. Flammable Solids
5. Organic Peroxides
6. Oxidizers
7. Pyrophorics
8. Unstable Reactives
9. Water Reactives
10. Cryogenics
11. Highly Toxic or Toxic Materials
12. Radioactives
13. Corrosives
14. Other Health Hazards
15. None of These.

Facility's Square Footage (including proposed project):

PART II: SAN DIEGO COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH – HAZARDOUS MATERIALS DIVISION (HMD): If the answer to any of the questions is yes, applicant must contact the County of San Diego Hazardous Materials Division, 5500 Overland Avenue, Suite 110, San Diego, CA 92123. Call (858) 505-6700 prior to the issuance of a building permit.

FEES ARE REQUIRED Project Completion Date: Expected Date of Occupancy: (for new construction or remodeling projects)

	YES	NO	
1.	☐	☒	Is your business listed on the reverse side of this form? (check all that apply).
2.	☐	☒	Will your business dispose of Hazardous Substances or Medical Waste in any amount?
3.	☐	☒	Will your business store or handle Hazardous Substances in quantities greater than or equal to 55 gallons, 500 pounds and/or 200 cubic feet?
4.	☐	☒	Will your business store or handle carcinogens/reproductive toxins in any quantity?
5.	☐	☒	Will your business use an existing or install an underground storage tank?
6.	☐	☒	Will your business store or handle Regulated Substances (CalARP)?
7.	☐	☒	Will your business use or install a Hazardous Waste Tank System (Title 22, Article 10)?
8.	☐	☒	Will your business store petroleum in tanks or containers at your facility with a total facility storage capacity equal to or greater than 1,320 gallons? (California's Aboveground Petroleum Storage Act).

☐ CalARP Exempt — Date / Initials

☐ CalARP Required — Date / Initials

☐ CalARP Complete — Date / Initials

PART III: SAN DIEGO COUNTY AIR POLLUTION CONTROL DISTRICT (APCD): Any YES* answer requires a stamp from APCD 10124 Old Grove Road, San Diego, CA 92131 apcdcomp@sdcounty.ca.gov (858) 586-2650). [*No stamp required if Q1 Yes and Q3 Yes and Q4-Q6 No]. The following questions are intended to identify the majority of air pollution issues at the planning stage. Projects may require additional measures not identified by these questions. For comprehensive requirements contact APCD. Residences are typically exempt, except - those with more than one building' on the property; single buildings with more than four dwelling units; townhomes; condos; mixed-commercial use; deliberate burns; residences forming part of a larger project. [*Excludes garages & small outbuildings.]

	YES	NO	
1.	☒	☐	Will the project disturb 160 square feet or more of existing building materials?
2.	☐	☒	Will any load supporting structural members be removed? Notification may be required 10 working days prior to commencing demolition.
3.	☒	☐	(ANSWER ONLY IF QUESTION 1 or 2 IS YES) Has an asbestos survey been performed by a Certified Asbestos Consultant or Site Surveillance Technician?
4.	☐	☒	(ANSWER ONLY IF QUESTION 3 IS YES) Based on the survey results, will the project disturb any asbestos containing material? Notification may be required 10 working days prior to commencing asbestos removal.
5.	☐	☒	Will the project or associated construction equipment emit air contaminants? See the reverse side of this form or APCD factsheet (www.sdapcd.org/info/facts/permits.pdf) for typical equipment requiring an APCD permit.
6.	☐	☒	(ANSWER ONLY IF QUESTION 5 IS YES) Will the project or associated construction equipment be located within 1,000 feet of a school boundary

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

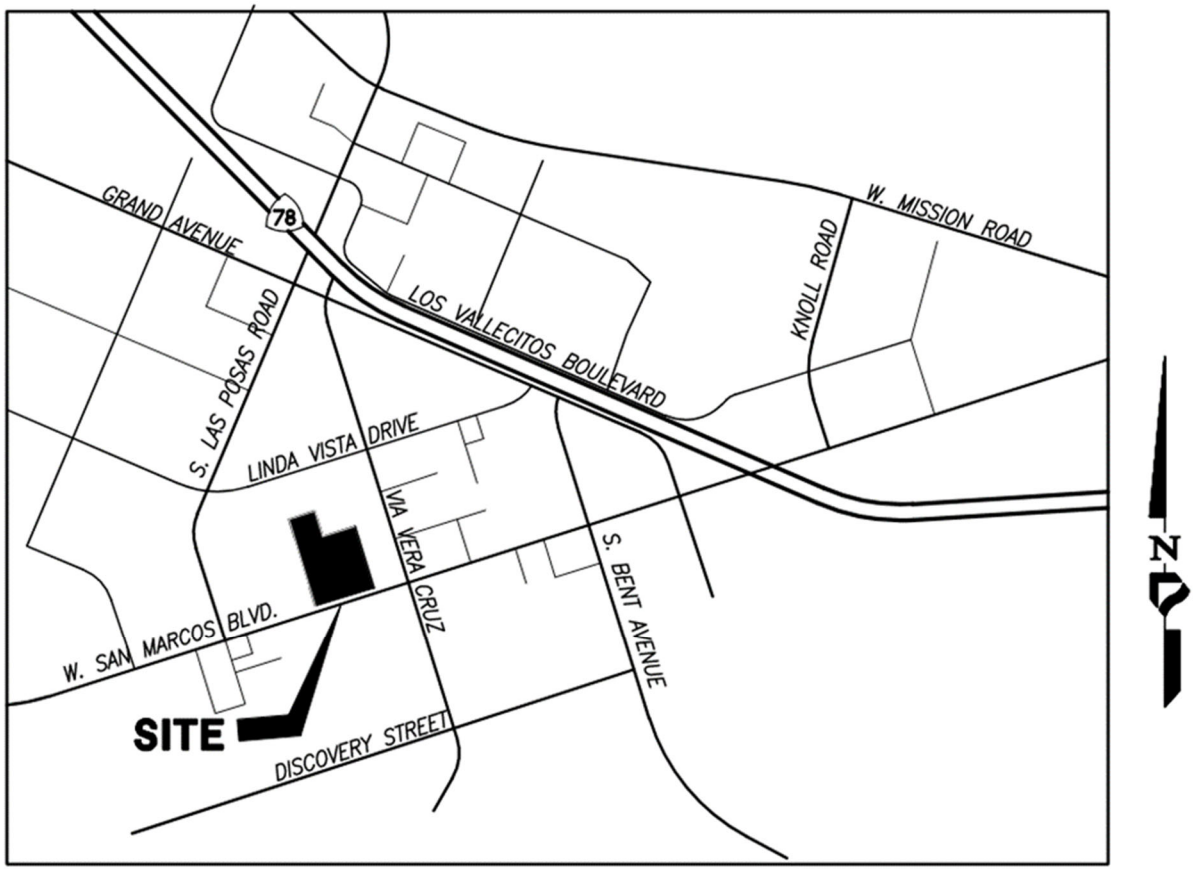
INTRODUCTION

The proposed Restaurant Row redevelopment project will be located within Old California Restaurant Row in the city of San Marcos. The site is bounded by West San Marcos Boulevard to the south and Via Vera Cruz to the east (see the Vicinity Map). Surrounding uses include Wells Fargo Bank, a Buffalo Wild Wings, and additional restaurants to the east as well as health service and commercial buildings to the north. An unoccupied commercial site and a Regal Edwards cinema are to the west. Vacant land and commercial uses are south along the opposite side of West San Marcos Boulevard. Under existing conditions, the project area consists of commercial development with restaurants surrounded by a large parking lot. The site generally drains towards its center within the middle of the large parking lot. Surface grates collect project runoff and convey the runoff to an existing 30-inch pipe that runs west through site. This 30-inch pipe connects an upstream 36-inch by 60-inch elliptical pipe from Via Vera Cruz to an existing downstream concrete trapezoidal channel west of the site. San Marcos Creek is located approximately 1,000 feet south of the site and ultimately collects the project's storm runoff.



VICINITY MAP

NOT TO SCALE

The project proposes a mixed-use zone that incorporates retail storefronts, urban living, and community destinations in a vertical pedestrian-oriented setting. To maintain the pedestrian-oriented setting, the ground floor will be limited to retail and other active uses along the primary street frontage of Via Vera Cruz and West San Marcos Boulevard. Residential units will

encompass the majority of the site, including homes over commercial units along the project frontage. Another project known as the Sears Site, under a different developer, is adjacent and west of this project. The Sears Site and this Restaurant Row project are designed in conjunction to provide a pedestrian paseo access between both sites. The pedestrian access is included throughout this project connecting to the Sears Site in order to provide pedestrian access from Buffalo Wild Wings to the Regal Edwards cinema. This pedestrian paseo corridor also serves as a secure, illuminated access throughout the project site. A flood park is implemented in the existing floodway (see FEMA discussion below) with a variety of amenities tolerant of inundation. The proposed site will allow for opportunity to program special events for the community.

FEMA has mapped a 100-year floodplain, 500-year floodplain, and regulatory floodway within the site. These are associated with the "North Split" from San Marcos Creek and contained on Flood Insurance Rate Map No. 06073C0793G. FEMA's Letter of Map Revision Determination Document is attached after this report text and became effective March 7, 2013.

The project grading is being designed by Project Design Consultants (PDC). The project will fill areas north and south of the floodway to raise the proposed buildings above the 100-year floodplain elevations with required freeboard. Grading and encroachments will be minimized within the floodway. This report contains preliminary existing and proposed condition 100-year hydraulic analyses for entitlement of the redevelopment project.

HYDRAULIC ANALYSIS

The FEMA effective study was performed about a decade ago, so an updated 100-year HEC-RAS (latest version 6.3.1) floodplain analysis was performed for the North Split based on July 16, 2021 1-foot contour interval topographic mapping prepared for the project (NAVD 88). The HEC-RAS Work Map in the map pocket contains the topographic mapping and cross-sections as well as the proposed grading. The existing condition cross-sections start just below the site and extend just upstream of the site. Cross-sections 3041.591 and 3496.377 are at the same locations as the effective cross-sections, but based on the recent mapping. Additional existing condition cross-sections (2910.673, 3196.821, 3348.291, 3614.247, and 3753.787) were added to allow a more detailed analysis of the site than the effective model. Downstream cross-section 2623.03 and upstream cross-section 3952.589 are at the effective locations and from the effective model for tie-in purposes. Cross-sections 3196.821 to 3753.787 are at the lower and upper ends of the project footprint. For proposed conditions, these two cross-sections as well as the intermediate ones were modified to reflect PDC's grading plan.

The prior Sears site is just west of Restaurant Row. The Sears site is currently being permitted. The most recent grading was obtained and proposed condition cross-sections 2910.673 and 3041.591 reflect the grading.

The following describes the additional HEC-RAS input parameters and results. The FEMA 100-year flow rate of 2,136.96 cubic feet per second was used. The downstream starting floodplain and floodway water surface elevations at cross-section 2623.023 were set at 528.57 and 528.92 feet NAVD 88, respectively, to tie in with the effective model. The effective model uses a roughness

coefficient of 0.020 throughout the study reach analyzed in this report. This is likely because the floodplain primarily contains paved surfaces as well as landscape islands, trees, and lighting (see Figure 1). Asphalt pavement has a roughness coefficient of 0.013 to 0.016 per the County of San Diego *Hydraulic Design Manual.* The effective combined roughness of the asphalt, scattered landscaping, lighting, and other improvements is 0.020. The existing condition model uses a roughness coefficient of 0.020 consistent with the effective model. The proposed conditions park area design is under development, but is currently proposed with a dog park (n=0.030), skate park (n=0.015), landscaping (0.030 for grass to 0.040 for plants), and playground (0.030). The park area is outlined on the proposed condition rational method work map. The proposed driveways and parking are modeled with n=0.020. The other portions of the proposed conditions cross-sections use the same n=0.020 as existing conditions.

Figure 1. Existing Parking Lot within Restaurant Row

The effective, existing, and proposed condition 100-year results are included in Appendix A and summarized in Table 1. The proposed condition elevations are mostly equal to or less than the existing condition elevations. The proposed condition 100-year water surface elevation is slightly higher than the existing condition elevation at cross-section 3348.291, but the proposed condition elevation is lower than the effective elevation. The water surface elevations match at the upstream tie-in at cross-section 3952.589.

FIRM Station	River Station	Dup. Effective WSE, ft	Existing WSE, ft	Proposed WSE, ft	Prop. – Exist. WSE, ft	Prop. – Effect. WSE, ft
	3952.589	535.03	535.03	535.03	0.00	0.00
	3753.787		532.74	532.71	-0.03	
	3614.247		532.15	531.57	-0.58	
	3496.377	532.21	531.38	531.02	-0.36	-1.19
	3348.291		530.10	530.22	0.12	
	3196.821		530.26	530.13	-0.13	
A	3041.591	529.75	529.71	529.38	-0.33	-0.37
	2910.673		529.41	529.41	0.00	
	2623.023	528.57	528.57	528.57	0.00	0.00

Table 1. 100-Year HEC-RAS Water Surface Elevation (WSE) Results (NAVD 88)

A proposed condition 100-year floodway analysis was also performed. The results are included with the proposed condition floodplain analysis in Appendix A, and show that the surcharge at cross-sections 2623.023 to 3952.589 is between 0 and 1 feet so meet FEMA requirements. The upstream effective and proposed condition floodway elevations at cross-section 3952.589 match and are 535.03 NAVD 88. The proposed condition floodway is plotted on the Proposed Condition HEC-RAS Work Map along with the effective floodway. The plotting shows that the proposed condition floodway is generally along or inside the effective floodway, so the proposed condition floodway will not impact floodway-related development potential on surrounding properties.

CONCLUSION

Existing and proposed condition 100-year HEC-RAS hydraulic analyses have been performed for entitlement of the Restaurant Row project. The proposed conditions reflect Project Design Consultants' entitlement grading plans. The site design is intended to minimize floodway encroachments and results in minor changes to the existing condition 100-year water surface elevations. The proposed condition water surface elevations are generally lower than existing conditions. There is a minor increase in water surface elevations at cross-section 3348.291, but the proposed 100-year water surface elevation is lower than FEMA's current effective elevation, so there is no impact on the effective floodplain. In addition, no insurable structures are affected.

DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION

APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway revision we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

COMMUNITY REMINDERS

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Sally M. Ziolkowski
Director, Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway Street, Suite 1200
Oakland, CA 94607-4052
(510) 627-7175

STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM and FIS report for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel(s) and FIS report warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. PUBLIC NOTIFICATION OF REVISION

A notice of changes will be published in the *Federal Register*. This information also will be published in your local newspaper on or about the dates listed below and through FEMA's Flood Hazard Mapping website at https://www.floodmaps.fema.gov/fhm/Scripts/bfe_main.asp.

LOCAL NEWSPAPER Name: *The North County Times*
Dates: October 31, 2012 and November 7, 2012

Within 90 days of the second publication in the local newspaper, a citizen may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. Therefore, this letter will be effective only after the 90-day appeal period has elapsed and we have resolved any appeals that we receive during this appeal period. Until this LOMR is effective, the revised flood hazard determination information presented in this LOMR may be changed.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

APPENDIX A

DRAFT MT-2 FORMS

HEC-RAS EFFECTIVE, EXISTING CONDITION, AND PROPOSED CONDITION RESULTS

DEPARTMENT OF HOMELAND SECURITY
Federal Emergency Management Agency

OVERVIEW & CONCURRENCE FORM

OMB Control Number: 1660-0016
Expiration: 1/31/2024

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 500 C Street, SW, Washington, DC 20472 , Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.
PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).
ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.
DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

A. REQUESTED RESPONSE FROM DHS-FEMA

This request is for a (check one):

☒ CLOMR: A letter from DHS-FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision, or proposed hydrology changes (See 44 CFR Ch. 1, Parts 60, 65 & 72). All CLOMRs require documentation of compliance with the Endangered Species Act. Refer to the Instructions for details.

☐ LOMR: A letter from DHS-FEMA officially revising the current NFIP map to show the changes to floodplains, regulatory floodway or flood elevations. (See 44 CFR Ch. 1, Parts 60, 65 & 72).

B. OVERVIEW

1. The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	State	Map No.	Panel No.	Effective Date
060296	City of San Marcos	CA	06073C	0789H	03/07/2013

2. a. Flooding Source: Northern Split San Marcos Creek

b. Types of Flooding: ☒ Riverine ☐ Coastal ☐ Shallow Flooding (e.g., Zones AO and AH)
☐ Alluvial Fan ☐ Lakes ☐ Other (Attach Description)

3. Project Name/Identifier: Restaurant Row

4. FEMA zone designations (choices: A, AH, AO, A1-A30, A99, AE, AR, V, V1-V30, VE, B, C, D, X)

a. Effective: AE, Shaded X

b. Revised: AE, Shaded X

5. Basis for Request and Type of Revision:

a. The basis for this revision request is (check all that apply)

☐ Physical Change	☒ Improved Methodology/Data	☒ Regulatory Floodway Revision	☐ Base Map Changes
☐ Coastal Analysis	☒ Hydraulic Analysis	☐ Hydrologic Analysis	☐ Corrections
☐ Weir-Dam Changes	☐ Levee Certification	☐ Alluvial Fan Analysis	☐ Natural Changes
☒ New Topographic Data	☐ Other (Attach Description)		

Note: A photograph and narrative description of the area of concern is not required, but is very helpful during review.

b. The area of revision encompasses the following structures (check all that apply)

Structures: ☐ Channelization	☐ Levee/Floodwall	☐ Bridge/Culvert	
☐ Dam	☒ Fill	☐ Other (Attach Description)	

6. ☒ Documentation of ESA compliance is submitted (required to initiate CLOMR review). Please refer to the instructions for more information.

C. REVIEW FEE

Has the review fee for the appropriate request category been included? ☒ Yes Fee amount: $ 6,500.00

☐ No, Attach Explanation

- **Please see the DHS-FEMA Web site at http://www.fema.gov/forms-documents-and-software/flood-map-related-fees for Fee Amounts and Exemptions.**

D. SIGNATURES

1. REQUESTOR'S SIGNATURE

All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Name: Wayne W. Chang	Company: Chang Consultants	
Mailing Address: P.O. Box 9496 Rancho Santa Fe, CA 92067	Daytime Telephone: (858) 692-0760	Fax No.: (858) 832-1402
	E-mail Address: wayne@changconsultants.com	
	Date: 9/22/2022	

Signature of Requestor (required):

2. COMMUNITY CONCURRENCE

As the community official responsible for floodplain management, I hereby acknowledge that we have received and reviewed this Letter of Map Revision (LOMR) or conditional LOMR request. Based upon the community's review, we find the completed or proposed project meets or is designed to meet all of the community floodplain management requirements, including the requirements for when fill is placed in the regulatory floodway, and that all necessary Federal, State, and local permits have been, or in the case of a conditional LOMR, will be obtained. For Conditional LOMR requests, the applicant has documented Endangered Species Act (ESA) compliance to FEMA prior to FEMA's review of the Conditional LOMR application. For LOMR requests, I acknowledge that compliance with Sections 9 and 10 of the ESA has been achieved independently of FEMA's process. For actions authorized, funded, or being carried out by Federal or State agencies, documentation from the agency showing its compliance with Section 7(a)(2) of the ESA will be submitted. In addition, we have determined that the land and any existing or proposed structures to be removed from the SFHA are or will be reasonably safe from flooding as defined in 44CFR 65.2(c), and that we have available upon request by FEMA, all analyses and documentation used to make this determination.

Community Official's Name and Title:

Mailing Address: 1 Civic Center Drive San Marcos, CA 92067	Community Name: City of San Marcos	
	Daytime Telephone: (760) 744-1050	Fax No.:
	E-mail Address:	
Community Official's Signature (required):	Date:	

3. CERTIFICATION BY REGISTERED PROFESSIONAL ENGINEER AND/OR LAND SURVEYOR

This certification is to be signed and sealed by a licensed land surveyor, registered professional engineer, or architect authorized by law to certify elevation information data, hydrologic and hydraulic analysis, and any other supporting information as per NFIP regulations paragraph 65.2(b) and as described in the MT-2 Forms Instructions. All documents submitted in support of this request are correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

Certifier's Name: Wayne W. Chang		License No.: 46548	Expiration Date: 6/30/2023
Company Name: Chang Consultants		Mailing Address: P.O. Box 9496 Rancho Santa Fe, CA 92067	
Telephone No.: (858) 692-0760	Fax No.: (858) 832-1402		
E-mail Address: wayne@changconsultants.com			
Signature:			Date: 9/22/2022

Ensure the forms that are appropriate to your revision request are included in your submittal.

Form Name and (Number)	Required if …
☒ Riverine Hydrology and Hydraulics Form (Form 2)	New or revised discharges or water-surface elevations
☐ Riverine Structures Form (Form 3)	Channel is modified, addition/revision of bridge/culverts, addition/revision of levee/floodwall, addition/revision of dam
☐ Coastal Analysis Form (Form 4)	New or revised coastal elevations
☐ Coastal Structures Form (Form 5)	Addition/revision of coastal structure
☐ Alluvial Fan Flooding Form (Form 6)	Flood control measures on alluvial fans

Seal (Optional)

Federal Emergency Management Agency

RIVERINE HYDROLOGY & HYDRAULICS FORM (FORM 2)

OMB Control Number: 1660-0016
Expiration: 1/31/2024

PAPERWORK BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing, reviewing, and submitting the form. You are not required to respond to this collection of information unless it displays a valid OMB control number. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden to: Information Collections Management, Department of Homeland Security, Federal Emergency Management Agency, 500 C Street, SW, Washington, DC 20472 , Paperwork Reduction Project (1660-0016). Submission of the form is required to obtain or retain benefits under the National Flood Insurance Program. **Please do not send your completed survey to the above address.**

PRIVACY ACT STATEMENT

AUTHORITY: The National Flood Insurance Act of 1968, Public Law 90-448, as amended by the Flood Disaster Protection Act of 1973, Public Law 93-234.
PRINCIPAL PURPOSE(S): This information is being collected for the purpose of determining an applicant's eligibility to request changes to National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM).
ROUTINE USE(S): The information on this form may be disclosed as generally permitted under 5 U.S.C § 552a(b) of the Privacy Act of 1974, as amended. This includes using this information as necessary and authorized by the routine uses published in DHS/FEMA/NFIP/LOMA-1 National Flood Insurance Program (NFIP); Letter of Map Amendment (LOMA) February 15, 2006, 71 FR 7990.
DISCLOSURE: The disclosure of information on this form is voluntary; however, failure to provide the information requested may delay or prevent FEMA from processing a determination regarding a requested change to a (NFIP) Flood Insurance Rate Maps (FIRM).

Flooding Source: Northern Split San Marcos Creek

Note: Fill out one form for each flooding source studied

A. HYDROLOGY

1. Reason for New Hydrologic Analysis (check all that apply):

☒ Not revised (skip to section B) ☐ No existing analysis ☐ Improved data
☐ Alternative methodology ☐ Proposed Conditions (CLOMR) ☐ Changed physical condition of watershed

2. Comparison of Representative 1%-Annual-Chance Discharges

Location	Drainage Area (Sq. Mi.)	Effective/FIS (cfs)	Revised (cfs)

3. Methodology for New Hydrologic Analysis (check all that apply)

☐ Precipitation/Runoff Model → Specify Model: _____ Duration: _____ Rainfall Amount: _____

☐ Statistical Analysis of Gage Records

☐ Regional Regression Equations ☐ Other (please attach description)

Please enclose all relevant models in digital format, maps, computations (including computation of parameters), and documentation to support the new analysis.

4. Review/Approval of Analysis

If your community requires a regional, state, or federal agency to review the hydrologic analysis, please attach evidence of approval/review. 4. HEC-RAS File Description**:

5. Impacts of Sediment Transport on Hydrology

Is the hydrology for the revised flooding source(s) affected by sediment transport? ☐ Yes ☐ No

If yes, then fill out Section F (Sediment Transport) of Form 3. If No, then attach your explanation.

B. HYDRAULICS

1. Reach to be Revised

	Description	Cross Section	Water-Surface Elevation (ft.)	
			Effective	Proposed/Revised
Downstream Limit*	480' u/s S. Las Posas Rd	2623.023	528.27	528.27
Upstream Limit*	d/s side Via Vera Cruz	3952.589	535.05	535.03

*Proposed/Revised elevations must tie-into the Effective elevations within 0.5 foot at the downstream and upstream limits of revision.

2. Hydraulic Method/Model Used: HEC-RAS v6.2

☒ Steady State ☐ Unsteady State ☒ One-Dimensional ☐ Two-Dimentional

3. Pre-Submittal Review of Hydraulic Models*

DHS-FEMA has developed two review programs, CHECK-2 and CHECK-RAS, to aid in the review of HEC-2 and HEC-RAS hydraulic models, respectively. We recommend that you review your HEC-2 and HEC-RAS models with CHECK-2 and CHECK-RAS.

4. HEC-RAS File Description**: Note: File Name below is 1655San_Marcos_Creek.prj.

Models Submitted	Natural Run		Floodway Run		Datum
Duplicate Effective Model*	File Name:	Plan Name:	File Name:	Plan Name:	
	1655San_Marcos_C	Dup Eff MP	655San_Marcos_Cr	Dup Eff Floodway	NAVD 88
Corrected Effective Model*	File Name:	Plan Name:	File Name:	Plan Name:	
	N/A	N/A	N/A	N/A	N/A
Existing or Pre-Project Conditions Model	File Name:	Plan Name:	File Name:	Plan Name:	
	655San_Marcos_Cr	Exist Cond RR	N/A	N/A	NAVD 88
Revised or Post-Project Conditions Model	File Name:	Plan Name:	File Name:	Plan Name:	
	655San_Marcos_Cr	PC2023-0728FPFW	655San_Marcos_Cr	PC2023-0728FPFW	NAVD 88
Other - (attach description)	File Name:	Plan Name:	File Name:	Plan Name:	
	N/A	N/A	N/A	N/A	N/A

* For details, refer to the corresponding section of the instructions.
**See instructions for information about modeling other then HEC-RAS. ☒ Digital Models Submitted? (Required)

C. MAPPING REQUIREMENTS

A **certified topographic work map** must be submitted showing the following information (where applicable): the boundaries of the effective, existing, and proposed conditions 1%-annual-chance floodplain (for approximate Zone A revisions) or the boundaries of the 1%- and 0.2%-annual-chance floodplains and regulatory floodway (for detailed Zone AE, AO, and AH revisions); location and alignment of all cross sections with stationing control indicated; stream, road, and other alignments (e.g., dams, levees, etc.); current community easements and boundaries; boundaries of the requester's property; certification of a registered professional engineer registered in the subject State; location and description of reference marks; and the referenced vertical datum (NGVD, NAVD, etc.).

Topographic Information: ☒ Digital Mapping (GIS/CADD) Data Submitted (preferred)

Source: Project Design Consultants | Date: 7/16/2021

Vertical Datum: NAVD 88 | Spatial Projection: NAD 83

Accuracy: 1-foot contour interval

Note that the boundaries of the existing or proposed conditions floodplains and regulatory floodway to be shown on the revised FIRM and/or FBFM must tie-in with the effective floodplain and regulatory floodway boundaries. Please attach **a copy of the effective FIRM and/or FBFM**, at the same scale as the original, annotated to show the boundaries of the revised 1%-and 0.2%-annual-chance floodplains and regulatory floodway that tie-in with the boundaries of the effective 1%-and 0.2%-annual-chance floodplain and regulatory floodway at the upstream and downstream limits of the area on revision.

☒ Annotated FIRM and/or FBFM (Required)

D. COMMON REGULATORY REQUIREMENTS*

1. For LOMR/CLOMR requests, do Base Flood Elevations (BFEs) or Special Flood Hazard Areas (SFHAs) increase compared to the effective BFEs? ☒ Yes ☐ No

   If Yes, please attach **proof of property owner notification**. Examples of property owner notifications can be found in the MT-2 Form 2 Instructions.

2. For CLOMR requests, if either of the following is true, please submit **evidence of compliance with Section 65.12 of the NFIP regulations**:

   - The proposed project encroaches upon a regulatory floodway and would result in increases above 0.00 foot compared to pre-project conditions.
   - The proposed project encroaches upon a SFHA with or without BFEs established and would result in increases above 1.00 foot compared to pre-project conditions.

3. Does the request involve the placement or proposed placement of fill? ☒ Yes ☐ No

   If Yes, the community must be able to certify that the area to be removed from the special flood hazard area, to include any structures or proposed structures, meets all of the standards of the local floodplain ordinances, and is reasonably safe from flooding in accordance with the NFIP regulations set forth at 44 CFR 60.3(A)(3), 65.5(a)(4), and 65.6(a)(14). Please see the MT-2 instructions for more information.

4. ~~Does the request involve the placement or proposed placement of fill?~~ For LOMR requests, is the regulatory floodway being revised? N/A, not a LOMR. ☐ Yes ☐ No

   If Yes, attach **evidence of regulatory floodway revision notification**. As per Paragraph 65.7(b)(1) of the NFIP Regulations, notification is required for requests involving revisions to the regulatory floodway Elements and examples of regulatory floodway revision notification can be found in the MT-2 Form 2 Instructions.

5. For CLOMR requests, please submit documentation to FEMA and the community to show that you have complied with Sections 9 and 10 of the Endangered Species Act (ESA). For actions authorized, funded, or being carried out by Federal or State agencies, please submit documentation from the agency showing its compliance with Section 7(a)(2) of the ESA. Please see the MT-2 instructions for more detail.

INTENTIONALLY LEFT BLANK

1 Introduction and Background

This technical noise report evaluates the potential noise impacts during construction and operation of the Restaurant Row Project (project). This assessment utilizes City of San Marcos (City) significance thresholds that are comparable to those relating to noise and vibration assessment in Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.).

Project Description

The Project site is located at 1020 West San Marcos Boulevard on the northeast corner of West San Marcos Boulevard and Via Vera Cruz (APNs 219-200-30, 31, and 45). The project location and project site boundary are shown in Figure 1 (Project Location).

The proposed Restaurant Row Project (project) consists of demolition of 63,484 square feet (sf) of existing (primarily vacant) restaurant uses on-site, and re-development of 202 multi-family residential units and 10,400 sf of commercial retail uses on the 10.5-acre project site (Figure 2, Conceptual Site Plan). Residential units would consist of eight (8) three-bedroom townhomes over commercial (town over commercial); 17 front street townhomes ranging in size from three- to four-bedrooms; 57 court townhomes ranging in size from two- to four-bedrooms; and 120 motor court units ranging in size from two- to three-bedrooms. The project would also incorporate a 1.2 acre neighborhood public park including dedicated dog areas, four tot lots, a rolling plaza (for roller skates/roller blades), skaters bowl, open lawn area and 4 pickleball courts. The park would not include an amphitheater or event space, and no outdoor amplified sound system is proposed. From the perspective of potential noise generation for the neighborhood park component, the pickleball courts represent the only potential noise source of concern.

The project includes a request for a Specific Plan, General Plan Amendment, Rezone, Site Development Plan for the private development, and Vesting Tentative Subdivision Map for a mixed-use residential development project on a 10.5-acre site in the City of San Marcos. Additionally, the project requests a separate Site Development Plan for the development of a proposed 1.1-acre neighborhood public park. The General Plan Amendment and Rezone would change the General Plan designation and Zoning from Mixed-Use 1 (MU-1) and Light Industrial (L-1) to Specific Plan Area (SPA). The Specific Plan has been prepared with the intent to provide a comprehensive plan to ensure the efficient development of a new mixed-use residential community. The Specific Plan serves as both a policy document and a regulatory document for the systematic implementation of the policies and goals of the General Plan. The Site Development Plan would configure the site for multi-family dwelling units, ground floor commercial mixed-use space, recreational open space, and private open space. The Tentative Subdivision Map presents specific infrastructure, and lot and street configurations for the site.

Noise Characteristics

Sound is mechanical energy transmitted by pressure waves in a compressible medium, such as air. Noise is defined as sound that is loud, unpleasant, unexpected, or undesired. The sound pressure level (SPL) has become the most common descriptor used to characterize the loudness of an ambient sound level. The unit of measurement of sound pressure is a decibel (dB). Under controlled conditions in an acoustics laboratory, the trained, healthy human ear is able to discern changes in sound levels of 1 dB when exposed to steady, single-frequency signals in the mid-frequency range. Outside such controlled conditions, the trained ear can detect changes of 2 dB in normal environmental noise. It is widely accepted that the average healthy ear, however, can barely perceive environmental noise level changes of 3 dB. A change of 5 dB is readily perceptible, and a change of 10 dB is perceived as twice

or half as loud (Caltrans 2013). A doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g., doubling the number of daily trips along a given road) would result in a barely perceptible change in sound level.

Sound may be described in terms of level or amplitude (measured in dB), frequency or pitch (measured in hertz or cycles per second), and duration (measured in seconds or minutes). Because the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale is used to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against low and very high frequencies in a manner approximating the sensitivity of the human ear. Table 1 provides examples of common noise levels in the indoor and outdoor environment, expressed using the dBA scale.

Several descriptors of noise (a.k.a., noise metrics) exist to help predict average community reactions to the adverse effects of environmental noise, including traffic-generated noise. These descriptors include the equivalent noise level over a given period (L_{eq}), the day–night average noise level (L_{dn}), and the community noise equivalent level (CNEL). Each of these descriptors uses units of dBA.

Table 1
Typical Noise Levels Associated With Common Activities

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110	Rock Band
Jet Flyover at 1,000 feet	105	
Gas Lawn Mower at three feet	95	
Diesel Truck at 50 feet, 50 mph	85	Food Blender at 3 feet
	80	Garbage Disposal at 3 feet
Noisy Urban Area, Daytime	75	
	70	Vacuum Cleaner at 10 feet
Commercial Area	65	Normal speech at 3 feet
Heavy Traffic at 300 feet	**60**	
	55	Large Business Office
Quiet Urban Daytime	**50**	Dishwasher (in next room)
Quiet Urban Nighttime	**40**	Theater, Large Conference Room (background)
Quiet Suburban Nighttime	35	
	30	Library
Quiet Rural Nightime	25	Bedroom at Night, Concert Hall (background)
	15	Broadcast/Recording Studio
Lowest Threshold of Human Hearing (Healthy)	**0**	Lowest Threshold of Human Hearing (Healthy)

Source: Caltrans 2013.
Notes: dBA = A-weighted decibel; mph = miles per hour.

L_{eq} is a decibel quantity that represents the constant or energy-averaged value equivalent to the amount of variable sound energy received by a receptor during a time interval. For example, a 1-hour L_{eq} measurement of 60 dBA would represent the average amount of energy contained in all the noise that occurred in that hour. L_{eq} is an effective noise descriptor because of its ability to assess the total time-varying effects of noise on sensitive receptors, which can then be compared to an established L_{eq} standard or threshold of the same duration. Another descriptor is maximum sound level (L_{max}), which is the greatest sound level measured during a designated time interval or event. The minimum sound level (L_{min}) is often called the *floor* of a measurement period.

Unlike the L_{eq}, L_{max}, and L_{min} metrics, L_{dn} and CNEL descriptors always represent 24-hour periods and differ from a 24-hour L_{eq} value because they apply a time-weighted factor designed to emphasize noise events that occur during the non-daytime hours (when speech and sleep disturbance is of more concern). *Time weighted* refers to the fact that L_{dn} and CNEL penalize noise that occurs during certain sensitive periods. In the case of CNEL, noise occurring during the daytime (7:00 a.m. to 7:00 p.m.) receives no penalty. Noise during the evening (7:00 p.m. to 10:00 p.m.) is penalized by adding 5 dB to the actual levels, and nighttime (10:00 p.m. to 7:00 a.m.) noise is penalized by adding 10 dB to the actual levels. L_{dn} differs from CNEL in that the daytime period is longer (defined instead as 7:00 a.m. to 10:00 p.m.), thus eliminating the dB adjustment for the evening period. L_{dn} and CNEL are the predominant criteria used to measure roadway noise affecting residential receptors. These two metrics generally differ from one another by no more than 0.5–1 dB and are often considered or actually defined as being essentially equivalent by many jurisdictions.

Exterior Noise Distance Attenuation

Noise sources are classified in two forms: (1) point sources, such as stationary equipment or a group of construction vehicles and equipment working within a spatially limited area at a given time, and (2) line sources, such as a roadway with a large number of pass-by sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6.0 dBA for each doubling of distance from the source to the receptor at acoustically "hard" sites and at a rate of 7.5 dBA for each doubling of distance from source to receptor at acoustically "soft" sites. Sound generated by a line source (i.e., a roadway) typically attenuates at a rate of 3 dBA and 4.5 dBA per doubling distance, for hard and soft sites, respectively. Sound levels can also be attenuated by man-made or natural barriers.

For the purpose of sound attenuation discussion, a "hard" or reflective site does not provide any excess ground-effect attenuation and is characteristic of asphalt or concrete ground surfaces, as well as very hard-packed soils. An acoustically "soft" or absorptive site is characteristic of unpaved loose soil or vegetated ground.

Vibration Fundamentals

Vibration is oscillatory movement of mass (typically a solid) over time. It is described in terms of frequency and amplitude and, unlike sound, can be expressed as displacement, velocity, or acceleration. For environmental studies, vibration is often studied as a velocity that, akin to the discussion of sound pressure levels, can also be expressed in dB as a way to cast a large range of quantities into a more convenient scale and with respect to a reference quantity. Vibration impacts to buildings are generally discussed in terms of inches per second (ips) peak particle velocity (PPV), which will be used herein to discuss vibration levels for ease of reading and comparison with relevant standards.

Vibration can also be annoying and thereby impact occupants of structures, and vibration of sufficient amplitude can disrupt sensitive equipment and processes (Caltrans 2020), such as those involving the use of electron microscopes and lithography equipment. Common sources of vibration within communities include construction activities and railroads. Groundborne vibration generated by construction projects is usually highest during pile driving, rock blasting, soil compacting, jack hammering, and demolition-related activities where sudden releases of subterranean energy or powerful impacts of tools on hard materials occur. Depending on their distances to a sensitive receptor, operation of large bulldozers, graders, loaded dump trucks, or other heavy construction equipment and vehicles on a construction site also have the potential to cause high vibration amplitudes.

Health Effects of Noise

Excessively noisy conditions can affect an individual's quality of life, health, and well-being. The effects of noise can be organized into six broad categories: sleep disturbance, permanent hearing loss, human performance and behavior, social interaction or communication, extra-auditory health effects, and general annoyance. An individual's reaction to noise and its level of disturbance depends on many factors such as the source of the noise, its loudness relative to the background noise level, time of day, whether the noise is temporary or permanent, and subjective sensitivity.

2 Regulatory Setting

Regulatory Setting

Federal

Federal Transit Administration

In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (FTA 2018) when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project. Although this FTA guidance is not a regulation, it can serve as a quantified standard in the absence of such limits at the state and local jurisdictional levels.

State

California Department of General Services, California Code of Regulations, Title 24

Title 24 of the California Code of Regulations sets standards that new development in California must meet. According to Title 24, Chapter 12, Section 1206.4, interior noise levels are not to exceed 45 dBA CNEL in any habitable room (California Building Code 2022).

California Department of Health Services Guidelines

The California Department of Health Services has developed guidelines of community noise acceptability for use by local agencies (OPR 2003). Selected relevant levels are listed here:

- Below 60 dBA CNEL: normally acceptable for low-density residential use
- 50 to 70 dBA: conditionally acceptable for low-density residential use
- Below 65 dBA CNEL: normally acceptable for high-density residential use and transient lodging
- 60 to 70 dBA CNEL: conditionally acceptable for high-density residential, transient lodging, churches, educational, and medical facilities

California Department of Transportation

In its Transportation and Construction Vibration Guidance Manual (Caltrans 2020), the California Department of Transportation (Caltrans) recommends 0.5 inches per second (ips) peak particle velocity (PPV) as a threshold for the avoidance of structural damage risk to typical newer residential buildings exposed to continuous or frequent intermittent sources of groundborne vibration. For transient vibration events, such as blasting, the damage risk threshold would be 1.0 ips PPV (Caltrans 2020) at the same type of newer residential structures. For older structures, these guidance thresholds would be more stringent: 0.3 ips PPV for continuous/intermittent vibration sources, and 0.5 ips PPV for transient vibration events. With respect to human annoyance, Caltrans guidance indicates that building occupants exposed to groundborne vibration of 0.10 ips PPV from continuous or frequently intermittent sources may find it "strongly perceptible" (Caltrans 2020) and on such basis would thus be considered a significant groundborne vibration impact for purposes of this assessment. Although these Caltrans guidance thresholds are not regulations, they can serve as quantified standards in the absence of such limits at the local jurisdictional level.

Local

The following are summarized or reproduced portions of relevant City regulations and General Plan policies.

San Marcos

City of San Marcos Municipal Code

The City of San Marcos Municipal Code Chapter 10.24: Noise (San Marcos 2017) addresses construction noise. Erection and demolition of buildings is exempt between 7:00 a.m. and 6:00 p.m. Monday through Friday and on Saturdays from 8:00 a.m. to 5:00 p.m. The Municipal Codes does not set noise limits on construction activities. Commonly, the City has utilized the County of San Diego's Noise Ordinance noise limit of 75 dBA (8-hour average) for construction activities.

Chapter 20.300 (Site Planning and General Development Standards) of the City's Municipal Code includes noise regulations in the form of noise standards by zone (Section 20.300.070, Performance Standards). It should be noted that Municipal Code noise standards typically pertain to stationary (i.e., non-transportation-related) noise sources. The relevant portions of these noise standards are provided below:

1. Noise shall be measured with a sound-level meter that meets the standards of the American National Standards Institute (ANSI) (Section S1.4-1979, Type 1 or Type 2). Noise levels shall be measured in decibels at the property line of the receptor property, and at least five (5) feet above the ground and ten (10) feet from the nearest structure or wall. The unit of measure shall be designated as an A-weighted decibel (dBA) Leq standard. A calibration check shall be made of the instrument at the time any noise measurement is made (Ord. No. 2017-1446, 7-25-2017)

2. No person shall create or allow the creation of exterior noise that causes the noise level to exceed the noise standards established by Table 20.300-4 [shown in this report as Table 2, following page]. Increases in allowable noise levels listed in Table 20.300-4 may be permitted in accordance with the standards outlined in Table 20.300-5 [shown in this report as Table 3, following page].

3. No person shall create nor allow the creation of noise that causes the interior noise level when measured within a dwelling unit to exceed forty-five (45) dBA at any time, except as permitted by Table 20.300-6 [shown in this report as Table 4, following page].

4. Use of compressors or other equipment, including vents, ducts, and conduits, but excluding window or wall-mounted air conditioners, that are located outside of the exterior walls of any building, shall be enclosed within a permanent, non-combustible, view-obscuring enclosure to ensure that the equipment does not emit noise in excess of the ANSI standards.

Table 2. Exterior Noise Standards by Zone

Zone	Allowable Noise Level (dBA L_{eq}) Measured from the Property Line
Single-Family Residential (A, R-1, R-2) [1, 2]	
7 a.m. to 10 p.m. (daytime)	60
10 p.m. to 7 a.m. (overnight)	50
Multifamily Residential (R-3) [1, 2]	
7 a.m. to 10 p.m. (daytime)	65
10 p.m. to 7 a.m. (overnight)	55
Commercial (C, O-P, SR) [3]	
7 a.m. to 10 p.m. (daytime)	65
10 p.m. to 7 a.m. (overnight)	55
Industrial	
7 a.m. to 10 p.m. (daytime)	65
10 p.m. to 7 a.m. (overnight)	60

Source: City of San Marcos 2017 (Table 20.300-4)

Notes:

1 For single-family detached dwelling units, the "exterior noise level" is defined as the noise level measured at an outdoor living area which adjoins and is on the same lot as the dwelling, and which contains at least the following minimum net lot area: (i) for lots less than 4,000 square feet in area, the exterior area shall include 400 square feet, (ii) for lots between 4,000 square feet to 10 acres in area, the exterior area shall include 10 percent of the lot area; (iii) for lots over 10 acres in area, the exterior area shall include 1 acre.

2 For all other residential land uses, "exterior noise level" is defined as noise measured at exterior areas which are provided for private or group usable open space purposes. "Private Usable Open Space" is defined as usable open space intended for use of occupants of one dwelling unit, normally including yards, decks, and balconies. When the noise limit for Private Usable Open Space cannot be met, then a Group Usable Open Space that meets the exterior noise level standard shall be provided. "Group Usable Open Space" is defined as usable open space intended for common use by occupants of a development, either privately owned and maintained or dedicated to a public agency, normally including swimming pools, recreation courts, patios, open landscaped areas, and greenbelts with pedestrian walkways and equestrian and bicycle trails, but not including off-street parking and loading areas or driveways.

3 For non-residential noise sensitive land uses, exterior noise level is defined as noise measured at the exterior area provided for public use.

City of San Marcos General Plan

To control transportation related noise sources such as arterial roads, freeways, airports, and railroads, the City of San Marcos has established guidelines for acceptable community noise levels in the Noise Element of the General Plan (City of San Marcos 2012). For noise-sensitive rural and single-family residential uses, schools, libraries, parks, and recreational areas the City Noise Element requires an exterior noise levels of less than 60 dBA CNEL for outdoor usable area. For multi-family developments the standard is 65 dBA CNEL and a standard of 70 dBA CNEL is typically applied to commercial uses. The City has also established an interior noise limit of 45 dBA CNEL for all residential uses.

3 Existing Conditions

Sound pressure level (SPL) measurements were conducted near the proposed project site on June 24, 2022, to quantify and characterize the existing outdoor ambient sound levels. Table 5 provides the location, date, and time period at which these baseline noise level measurements were performed by an attending Dudek field investigator using a Rion-branded Model NL-52 sound level meter (SLM) equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The SLM meets the current American National Standards Institute standard for a Type 1 (Precision Grade) sound level meter. The accuracy of the SLM was verified using a field calibrator before and after the measurements, and the measurements were conducted with the microphone positioned approximately five feet above the ground.

Four (4) short-term (ST) noise level measurement locations (ST1 – ST4) intended to be representative of the outdoor ambient sound environment for existing or potential future noise-sensitive receivers in the vicinity of the proposed project were selected near the proposed project site. These locations are depicted as receivers ST1 – ST4 on Figure 3, Noise Measurement Locations. The measured L_{eq} and L_{max} noise levels at these surveyed locations are provided in Table 5. The primary noise sources at the sites identified in Table 5 consisted of traffic along adjacent roadways, the sounds of leaves rustling, and birdsong. As shown in Table 5, the measured SPL ranged from 63.5 dBA L_{eq} at ST2 to 74 dBA L_{eq} at ST1. Beyond the summarized information presented in Table 5, detailed noise measurement data is included in Appendix A, Baseline Noise Measurement Field Data.

Table 5. Measured Baseline Outdoor Ambient Noise Levels

Site	Location/Address	Date/Time	L_{eq}	L_{max}
ST1	South side of San Marcos Blvd. East of Project site, adjacent to pre-school.	2022-06-24, 09:40 AM to 09:55 AM	74	83
ST2	West side of Via Vera Cruz, East of Project site.	2022-06-24, 10:10 AM to 10:25 AM	63.5	74.5
ST3	Northern Project site boundary, adjacent to parking lot and The Father's House church.	2022-06-24, 10:30 AM to 10:45 AM	46.5	58.1
ST4	East side of S. Las Posas Road, West of Project site,	2022-06-24, 10:50 AM to 11:05 AM	64.9	74.5

Source: Appendix A.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); L_{max} = maximum sound level during the measurement interval; dBA = A-weighted decibels; ST = short-term noise measurement locations.

Generally, the measured samples of daytime L_{eq} agree with expectations: ST1 is 74 dBA L_{eq} due largely to its proximity to San Marcos Boulevard, a major roadway and thus fairly continuous acoustical contributor to the measured outdoor ambient sound environment. Likewise, ST2 and ST4 are located adjacent to relatively busy roadways, with daytime L_{eq} values of approximately 65 and 65 dBA, respectively; these roadways would also produce fairly continuous contributions to the ambient noise environment. Surrounding land uses include restaurant, commercial office and retail to the east, mixed commercial and light industrial and a church to the north, commercial retail, restaurant, and movie theater to the west, and a plant nursery and RV storage yard to the south. The nearest noise-sensitive land use is a church located approximately 50 feet to the north of the proposed project northern boundary (near ST3). The second closest noise-sensitive use is a pre-school that is located on San Marcos Boulevard approximately 850 feet to the east of the proposed project eastern boundary (near ST1).

4 Thresholds of Significance

The following significance criteria are based on Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.) and will be used to determine the significance of potential noise impacts. Impacts to noise would be significant if the proposed project would result in the following:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

b. Generation of excessive groundborne vibration or groundborne noise levels; and

c. Expose people residing or working in the project area to excessive noise levels (for a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within 2 miles of a public airport or public use airport).

In light of these above significance criteria, this analysis uses the following standards to evaluate potential noise and vibration impacts.

- Construction noise – The City of San Marcos Municipal Code Chapter 10.24: Noise (San Marcos 2017) addresses construction noise. Erection and demolition of buildings is exempt between 7:00 a.m. and 6:00 p.m. Monday through Friday and on Saturdays from 8:00 a.m. to 5:00 p.m. The Municipal Code does not set noise limits on construction activities. Through adherence to the limitation of allowable construction times provided in the City of San Marcos Municipal Code, the construction-related noise levels would not exceed local standards. However, were the City to consider adoption of the County of San Diego's Noise Ordinance noise limit of 75 dBA (8-hour L_{eq}) for construction activities, then for information purposes this assessment will compare predicted construction noise against the County's 75 dBA 8-hour L_{eq} threshold. The analysis assumes that the 8-hour period over which the County's 75 dBA L_{eq} could apply would be within the aforementioned exempt hours as allowed by the City of San Marcos.

- Off-site project-attributed transportation noise – For purposes for this analysis, a direct roadway noise impact would be considered significant if increases in roadway traffic noise levels attributed to future residential development as a result of the proposed project were greater than 3 dBA CNEL at an existing noise-sensitive land use.

- Off-site project-attributed stationary noise – For purposes for this analysis, a noise impact would be considered significant if noise from typical operation of heating, ventilation, and air conditioning and other electro-mechanical systems associated with future residential development as a result of the proposed project exceeded 65 dBA hourly L_{eq} for multi-family homes and 60 dBA hourly L_{eq} for single-family homes at the property line from 7:00 a.m. to 9:59 p.m., and 55 dBA hourly L_{eq} for multi-family homes and 50 dBA hourly L_{eq} for single-family homes from 10:00 p.m. to 6:59 a.m.

- Construction vibration – Guidance from Caltrans indicates that a vibration velocity level of 0.2 ips PPV received at a structure would be considered annoying by occupants within (Caltrans 2013b). As for the receiving structure itself, aforementioned Caltrans guidance from Section 2 recommends that a vibration level of 0.3 ips PPV would represent the threshold for building damage risk.

For purposes of disclosure, since current CEQA noise criteria listed above do not consider it, this analysis also evaluates compatibility of on-site traffic noise exposure levels with the City of San Marcos exterior noise standards of 65 dBA CNEL for multi-family homes and 60 dBA CNEL for parks and recreation areas, and with the adopted residential interior noise standard of 45 dBA CNEL..

5 Impact Discussion

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standard of other agencies?

Short-Term Construction

Construction noise and vibration are temporary phenomena. Construction noise and vibration levels vary from hour to hour and day to day, depending on the equipment in use, the operations performed, and the distance between the source and receptor.

Construction assumptions, including timing, phasing, and equipment type and quantity, as well as worker and vendor truck trips, were based on information provided by the applicant. Default values provided by the California Emissions Estimator Model (CalEEMod) were used since detailed project site-specific information is not currently available. Equipment that could be in use during construction would include, in part, graders, backhoes, concrete saws, excavators, dump trucks, loaders, cranes, manlifts, cement mixers, pavers, rollers, welders, and air compressors. The typical maximum noise levels for various pieces of construction equipment at a distance of 50 feet are presented in Table 6. Usually, construction equipment operates in alternating cycles of full power and low power, producing average noise levels over time that are less than the listed maximum noise level. The average sound level of construction activity also depends on the amount of time that the equipment operates and the intensity of construction activities during that time.

Table 6. Typical Construction Equipment Maximum Noise Levels

Equipment Type	Typical Equipment (L_{max}, dBA at 50 Feet)
Air compressor	78
Backhoe	78
Concrete pump truck	81
Grader	85
Crane	81
Roller	80
Manlift	75
Generator	72
Front End Loader	79
Paver	77
Scraper	84
Welder	74

Source: DOT 2006.
Note: L_{max} = maximum sound level; dBA = A-weighted decibels.

Aggregate noise emission from assumed construction activities, broken down by sequential phase, was predicted at three distances to the nearest apparent existing noise-sensitive receptor: 1) from the nearest position of the construction site boundary; 2) from the nearest position of construction activity for the "main" portion of the site (the closest receiver to construction activity is adjacent to the northern extension

of the Project site, which would contain six multi--family residential structures); and , 3) from the geographic center of the construction site, which serves as the time-averaged location or geographic *acoustical centroid* of active construction equipment for the phase under study.

The intent of the first distance is to help evaluate anticipated construction noise from a limited quantity of equipment or vehicle activity expected to be at the boundary for some period of time, which would be most appropriate for phases such as site preparation, grading, and paving within the northern site extension. The intent of the second distance is to address the closest construction activity within the main portion of the Project site, which is located substantially further from the adjacent noise-sensitive receiver than the northern extension of the Project site. Since construction within the northern site extension would have a much shorter duration, the distance to the main site represents the highest average noise levels that would occur at the northern portion of the main Project site, at the closest off-site sensitive receiver. The third distance is used in a manner similar to the general assessment technique as described in Federal Transit Administration (FTA) guidance for construction noise assessment (FTA 2018), when the location of individual equipment for a given construction phase is uncertain over some extent of (or the entirety of) the construction site area. Because of this uncertainty, all the equipment for a construction phase is assumed to operate—on average—from the acoustical centroid. Table 7 summarizes these three distances to the apparent closest noise-sensitive receptor for each of the five sequential construction phases. Adoption of San Diego County's noise ordinance threshold would mean that an "occupied property", which could be a residence or any occupied building, would be the nearest noise-sensitive receptor in this context. At the site boundary, this analysis assumes that the equipment may be operating up to all of eight (8) hours per day (i.e., comparable to a typical on-site work shift).

Table 7. Estimated Distances between Construction Activities and the Nearest Noise-Sensitive Receptors

Construction Phase (and Equipment Types Involved)	Distance from Nearest Noise-Sensitive Receptor to Construction Site Boundary – North Extension (Feet)	Distance from Nearest Noise-Sensitive Receptor to Main Site Construction Boundary (Feet)	Distance from Nearest Noise-Sensitive Receptor to Acoustical Centroid of Site (Feet)
Demolition (Concrete Saw, Excavator, Dozer)	50	300	525
Site Preparation (Backhoe, Dozer)	50	300	525
Grading (Excavator, Grader, Dozer, Scraper, Backhoe)	50	300	525
Building Construction (Crane, Forklift, Backhoe, Welder, Generator)	50	300	525
Architectural Finishes (Air Compressor)	50	300	525
Paving (Roller, Paver, Mixer Truck)	50	300	525

A Microsoft Excel–based noise prediction model emulating and using reference data from the Federal Highway Administration Roadway Construction Noise Model (RCNM) (FHWA 2008) was used to estimate construction noise levels at the nearest occupied noise-sensitive land use. (Although the RCNM was funded and promulgated by the Federal Highway Administration, it is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are often used for other types of construction.) Input variables for the predictive modeling consist of the equipment type and number of each (e.g., two graders, a loader, a tractor), the duty cycle for each piece of equipment (e.g., percentage of time within a specific time period, such as an hour, when the equipment is expected to operate at full power or capacity and thus make noise at a level comparable to what is presented in Table 6, Typical Construction Equipment Maximum Noise Levels), and the distance from the noise-sensitive receiver. The predictive model also considers how many hours that equipment may be on site and operating (or idling) within an established work shift. Conservatively, no topographical or structural shielding was assumed in the modeling. The RCNM has default duty-cycle values for the various pieces of equipment, which were derived from an extensive study of typical construction activity patterns. Those default duty-cycle values were used for this noise analysis, which is detailed in Appendix B, Construction Noise Modeling Input and Output, and produce the predicted results displayed in Table 8.

Table 8. Predicted Construction Noise Levels per Activity Phase

Construction Phase (and Equipment Types Involved)	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Construction Site Boundary (dBA)	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Main Construction Area (dBA)	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Acoustical Centroid of Site (dBA)
Demolition (Concrete Saw, Excavator, Dozer)	**86.8**	71.2	66.4
Site Preparation (Backhoe, Dozer)	**84.6**	69.1	64.2
Grading (Excavator, Grader, Dozer, Scraper, Backhoe)	**87.3**	71.8	66.9
Building Construction (Crane, Forklift, Backhoe, Welder, Generator)	**85.3**	69.7	64.9
Architectural Finishes (Air Compressor)	**81.9**	66.3	61.4
Paving (Roller, Paver, Mixer Truck)	**72.8**	57.2	52.3

Notes: L_{eq} = equivalent noise level; dBA = A-weighted decibels.

As presented in Table 8, the estimated construction noise levels at the closest noise-sensitive receptor (church) are predicted to be greater than 75 dBA L_{eq} even averaged over an 8-hour period, when activities take place within the rectangular extended site area at the northern end of the Project site. Note that these estimated noise levels at a source-to-receiver distance of 50 feet occur when noted pieces of heavy equipment would each operate for a cumulative period of 8 hours a day along the northern property boundary of the northern site extension area. Although construction noise at the closest off-site noise-sensitive receiver could exceed the County of San Diego threshold, the analysis of these noise levels is extremely conservative, because it assumes all equipment in the phase is working simultaneously along the northern boundary. Given the analysis at this distance is very conservative, and because San Marcos has not adopted the San Diego County ordinance, construction noise impacts even within the northern site extension area would be considered **less than significant**..

The site extension area at the north end of the Project site has a depth of approximately 300 feet, as measured perpendicular to the closest noise-sensitive receptor. The construction noise model was run with this distance separation for construction activities, the results of which are also presented in Table 8 (Nearest Noise Sensitive Receptor to Main Construction Area). As can be seen in Table 8, the estimated construction noise levels at the closest noise-sensitive receptor (church) are predicted to be less than 75 dBA L_{eq} averaged over an 8-hour period, when activities take place no closer than the boundary of the main Project site (along the northern Project site boundary, excluding the extension or pop-out near the middle of the northern Project site boundary). Note that these estimated noise levels at a source-to-receiver distance of 300 feet occur when noted pieces of heavy equipment would each operate for a cumulative period of 8 hours a day. Therefore, for construction activities taking place within the main Project site boundaries (i.e., no closer than 300 feet to the adjacent church)., construction noise levels at the closest noise-sensitive receptor would comply with the San Diego County standard.

Finally, Table 8 provides the results of the construction noise analysis based upon the distance from the acoustical centroid to the closest noise-sensitive receptor. This scenario is meant to address construction activities distributed across the site, rather than those occurring along the closest site boundary to the sensitive receptor. The values based on the acoustical centroid are considered to be more representative of average construction noise exposure levels at adjacent properties across the entire construction period. As illustrated in Table 8, noise levels based on the acoustical centroid would average no more than approximately 66 dBA, which is the equivalent of normal conversation levels. Thus, when considered over the entire construction process, it is anticipated that construction noise levels at the closest noise-sensitive receptor would not be intrusive or disruptive.

Compared to measurements of the daytime outdoor ambient sound level at representative sample locations as shown in Table 5, predicted construction noise levels ranging in the lower to middle seventies of A-weighted decibels as appearing in Table 8 are considerably higher and would be clearly perceptible to an average listener having healthy human hearing. However, there are no residences within 1,000 feet of the Project site; the nearest noise-sensitive uses are a church and a pre-school. At the nearby church and pre-school, exposure to such construction-related noise would typically be relatively short term and temporary—lasting only as long as construction occurs during allowable hours. And because it is anticipated that construction activities associated with future development as a result of the proposed project would take place within the hours of 7:00 a.m. and 6:00 p.m. Monday through Friday and on Saturdays from 8:00 a.m. to 5:00 p.m., the noise-producing activity would thus be in compliance with the City's Municipal Code with respect to allowable hours.

Long-Term Operational

Roadway Traffic Noise

The proposed project's residences and commercial space would result in the introduction of vehicle trips on local arterial roadways (i.e., San Marcos Boulevard, Via Vera Cruz, and South Las Posas). However, the project would eliminate several existing restaurants that have high trip generation rates. According to the project local transportation assessment (Intersection Metrics, September 2022), the project would reduce average daily trips coming from the Project site, compared to the existing restaurants. Table 9 presents the conclusion of the traffic analysis, which is shown as estimated reduction of 4,659 average daily trips to local roadways.

Table 9. Project Traffic Generation Versus Current Uses Traffic

Land Use	Units	Trip Rate	Average Daily Trips (ADT)
Multi-Family Units	202 Dwelling Units	6 /Dwelling Unit	1,212
Specialty Retail	10,400 Square Feet	40 / thousand sq. ft.	416
City Park	1.24 Acres	50 / Acre	62
Existing Uses (to be eliminated)			
Existing Restaurants	-63,484	100 / thousand sq. ft.	-6,349
Net Trip Generation	--	--	-4,659

Source: Intersecting Metrics, Old California Restaurant Row Local Transportation Assessment, September 2022.

Given the project would reduce traffic trips from the site to area roadways, traffic noise on area roadways would be reduced as a result of project implementation. Thus, a **less-than-significant impact** is expected for proposed project-related off-site traffic noise affecting existing residences in the vicinity.

Exterior Noise Exposure for Future Project Occupants

Aside from exposure to aviation traffic noise, current CEQA noise-related guidelines at the state level do not require an assessment of exterior-to-interior noise intrusion, environmental noise exposure to occupants of newly-created project residences, or environmental noise exposure to exterior non-residential uses attributed to the potential future development at the proposed project site. Nevertheless, the City's CEQA guidelines and the California Building Code requires that interior background noise levels not exceed a CNEL of 45 dB within habitable rooms. Hence, the following predictive analysis of traffic noise exposure and commercial noise sources at the exteriors of occupied residences and outdoor living areas is provided to support evaluation of the Project for Noise Element policy compliance.

Traffic Noise

Potential noise exposure for future project residents from vehicular traffic on adjacent roadways was assessed using worksheets based upon the Federal Highway Administration's Traffic Noise Model version 2.5. Information used in the model included the roadway geometry, posted traffic speeds, and traffic volumes. The distances from the roadway centerline to the closest building façade adjacent to the roadway were used in the model to calculate roadway traffic noise from each roadway segment at the building façade oriented toward that roadway To model "existing" traffic noise levels, Dudek used traffic volume data from the City of San Marcos Public Works Division (https://www.san-marcos.net/departments/public-works/transportation-engineering/traffic-counts-adt-table) for the Year 2019. To project Year 2030 roadway volumes, Dudek assumed a 1.5% annual growth rate (which is representative of regional traffic growth in California and compares well to the current actual annual growth rate for San Marcos of 1.9% annually). Table 10 presents the results of traffic noise modeling. Appendix C contains the traffic noise spreadsheets. Note that proposed new driveways/roads interior to the project site were not assessed for noise generation, due to the much lower quantity of trips on these roadways compared to Las Posas or Via Vera Cruz, both of which were found to generate noise levels less than 60 dBA CNEL.

Table 10. Roadway Traffic Noise Modeling Results

Roadway Segment / Building Facades Facing	Existing (2019 Counts) ADT	Existing Traffic Noise Exposure Level (dBA CNEL)	Year 2030 Predicted Traffic ADT	Year 2030 Traffic Noise Exposure Level (dBA CNEL)
Las Posas Road.	10,951	57.1	12,758	57.8
San Marcos Blvd.	32,216	70.0	37,582	70.6
Via Vera Cruz	9,654	58.5	11,247	59.2

Source: Dudek **Notes:** dBA = A-weighted decibel; CNEL = Community Noise Equivalent Level; dB = decibel.

The traffic noise exposure levels in Table 10 are calculated for the Project boundary closest to the identified roadway segment. For Project boundaries closest to Las Posas Road and Via Vera Cruz, a number of existing structures exist between the roadway segment and the Project boundary. These existing buildings would provide some shielding for traffic noise propagation, and thus calculated roadway traffic noise levels along these Project boundaries would be lower than the calculated value presented in Table 10 (the values represent a conservative worst-case with no intervening buildings). The Project boundary adjacent to San Marcos Blvd. has unobstructed exposure to the street, and therefore the traffic noise value in Table 10 for San Marcos Boulevard represents expected future conditions, with no conservatism.

The proposed park would extend from the Project boundary closest to Las Posas Road to the Project boundary closest to Via Vera Cruz. From Table 10, the maximum traffic noise level exposure at the ends of the park closest to these roadways would be no greater than 59.2 dBA CNEL, which is below the Noise Element recommended 60 dBA CNEL maximum for parks. Proposed residences along these Project boundaries would also be exposed to traffic noise levels below the Noise Element Policy limit of 65 dBA CNEL for multi-family residences.

The Project would place five rows of two-story structures between San Marcos Blvd. and the park area, which would be expected to reduce traffic noise exposure within the park area by a minimum of 20 dBA CNEL. Therefore, traffic noise exposure levels from San Marcos Blvd. in the Park area would not be anticipated to exceed 50 dBA CNEL. Traffic noise exposure levels in the park area would therefore remain within the Noise Element policy limits of 60 dBA CNEL.

Based on the Year 2030 results of the above traffic noise analysis, the first row of structures adjacent to San Marcos Blvd. could have traffic noise levels in front yard areas and at the façade facing San Marcos Blvd. of approximately 70 dBA CNEL. To achieve compliance with the Noise Element multi-family residential exterior exposure limits of 65 dBA CNEL in yard areas immediately adjacent to San Marcos Blvd., a solid fence or landscape wall of six (6) feet in height should be provided between the yard area and San Marcos Blvd. Such a wall would reduce traffic noise exposure in the yard areas to approximately 63 dBA CNEL.

The first building row adjacent to San Marcos Blvd. is proposed to be two stories in height, effectively spanning the Project property frontage except for one entry drive. This row of buildings would reduce traffic noise exposure at the next row of residences by a minimum of 10 dBA CNEL, and the further distance from the traffic noise source would reduce levels by another 3 dBA CNEL. Therefore, residences interior to the Project site would not be exposed to traffic noise exposure levels greater than approximately 57 dBA CNEL, comfortably within the Noise Element limit of 65 dBA CNEL.

CCR Title 24 requires that an interior noise analysis be performed where exterior noise exposure would exceed 60 dBA CNEL, which would be the case for the facades of the first row of buildings immediately adjacent to San Marcos Blvd.. CCR Title 24 and the City of San Marcos also require that interior noise levels due to exterior noise sources not exceed 45 dBA CNEL for multi-family residences. An interior noise analysis is not currently required under CEQA, but a preliminary discussion for informational purposes is provided. No exterior wall assembly has been provided yet, but it is assumed the exterior wall for the Project structures will be of standard construction and consist of 3-coat stucco or exterior paneling over sheathing, on wood studs with a single layer of gypsum board on the interior and batt insulation in the cavity. This assembly has an attenuation capacity of typically 40-45 (identified by a Sound Transmission Classification [STC] rating), which means the exterior solid wall could reduce exterior noise levels by at least 40 dBA in interior spaces. However, windows and doors are not as effective in reducing noise levels from exterior to interior spaces. Therefore, for residences in the first row of structures adjacent to San Marcos Blvd., to achieve the interior criterion of 45 dBA CNEL, exterior doors and windows located on the building façade facing San Marcos Blvd should have a minimum STC rating of 35.

Exterior Noise Exposure Levels From Adjacent Commercial Land Uses

Existing commercial uses including restaurants, commercial offices, and a bank would be preserved on the property immediately to the east and north of the project site. Industrial enterprises would also be preserved on parcels to the north (with all work activity restricted to the interior of the structures). Roof-mounted HVAC equipment on the closest restaurant to the eastern project site boundary is located approximately 100 feet from the eastern property boundary of the project site. Based on a Carrier brand 20-ton package HVAC unit, the sound level for the HVAC equipment at the closest restaurant would be 77 dBA at 10 feet, attenuated to approximately 59 dBA at the project site eastern boundary. Parking lots associated with the commercial uses north and east of the project site would be the primary noise source that would continue to exist adjacent to the project. The average noise level for a commercial parking lot is approximately 63 dBA L_{eq} at 50 feet from the edge of the parking lot (Dudek 2020b). The closest parking stalls to the project site would be located at approximately 50 feet from future residences within the project. Adding HVAC noise to the parking lot noise would result in noise exposure no greater than approximately 66 dBA L_{eq} at residences along the northern and eastern project site boundary. With standard residential construction capable of providing an exterior to interior attenuation of 25 dBA, interior noise levels should remain below 45 dBA L_{eq}. The adjacent businesses would not be anticipated to operate between 10 PM and 7 AM, and therefore industrial and commercial uses should not result in interior noise levels within project homes that exceed 45 dBA CNEL. For the first row of residences along the northern and eastern Project site boundaries, noise could be marginally above the recommended exterior limits (66 dBA CNEL compared to a limit of 65 dBA CNEL) where yards are provided between the residences and the Project site boundary. Solid fencing or landscape walls six feet in height at the yard boundary closet to the Project site boundary would prevent exterior noise exposure that exceeds the Noise Element limit at proposed yard areas adjacent to the northern and eastern Project site boundaries.

Exterior Noise Exposure - Recreational Noise Sources

The proposed recreation area within the project site illustrates four proposed pickleball courts, at the extreme east end of the park site. The pickleball courts locations are between approximately 50 and 108 feet from the closest residence on the site (immediately south of the pickleball courts). Other on-site residences in the area (along the southern park boundary) would be located between 60 and 200 feet from the pickleball courts. Pickleball play has been demonstrated to generate average sound levels of approximately 64 dBA L_{eq} at 30 feet (Dudek 2020a). Pickleball noise could average 62 dBA L_{eq} at the

closest on-site residence while all the courts are in use; other on-site residences further away would experience lower pickleball noise levels. These noise levels would comply with the municipal code daytime limit of 65 dBA L_{eq} for multi-family residence zoning. The pickleball courts would not be anticipated to be used in the nighttime period (i.e., later than 10 PM), and therefore would not need to comply with the nighttime municipal code limit of 55 dBA L_{eq}. Daytime/evening only use of the pickleball courts would produce exterior noise levels no greater than 63 dBA CNEL at the closest residence, which would result in interior noise levels no greater than 38 dBA CNEL, given an exterior to interior attenuation performance for residential construction. While the pickleball noise would not be expected to exceed applicable limits in the City municipal code, the use of sound attenuating material on the court fences would reduce the potential for residence annoyance from pickleball play. Sound levels at the closest property line from pickleball play would attenuate to approximately 63 dBA L_{eq} and therefore pickleball noise would also be compliant with the City municipal code limit of 65 dBA L_{eq} within the commercial zone to the east of the Project site. The conceptual park plan also illustrates a proposed lawn area with some casual tiered seating, with no proposed amplified sound system. In addition to the pickleball courts, proposed active recreational uses include a tot lot and all-wheel rolling plaza (i.e., area for rollerblading, skating, skateboarding, etc.); neither of these two active recreation areas would be equipped with an amplified sound system. As such, sound levels generated by use of the tot lot and roller plaza would be anticipated to remain well below the municipal code daytime limit of 65 dBA L_{eq} at the nearest multi-family residences; neither the tot lot nor roller plaza are anticipated to be open in the nighttime period. As a public Park, the Parks Department would need to issue a permit for a special event at the tiered lawn area or within other areas of the proposed Park. Due to the proximity of the Park to homes, it is anticipated the City would restrict special event permits to prohibit the use or portable amplified sound systems.

Stationary Operations Noise

Future residential and commercial development on the project site will add a variety of noise-producing mechanical equipment, primarily involving heating, ventilation, and air conditioning equipment for habitable spaces. While there would be some commercial space included in the proposed development, residential structures would be the dominant land use and the quantity of HVAC units would substantially outnumber the systems dedicated to commercial spaces Therefore this stationary equipment operations noise analysis focuses on residential space HVAC equipment. Within the park component, the only substantial noise source would be the proposed pickleball courts (discussed above). Modeling of Project stationary source noise levels at areas adjacent to the Project site does include both residential HVAC sources and the pickleball courts.

Prediction of stationary source operational noise attributed to the Project involved creation of a sound propagation model using a Dudek proprietary software tool. Dudek NoisePro is used for calculation, presentation, assessment, and prediction of environmental noise. Dudek used NoisePro to calculate the combined sound emission from the above-described air conditioner condensers and pickleball courts to predict sound levels at receiver points placed in the model. The outdoor noise propagation formulas in NoisePro follow the International Organization of Standardization (ISO) Standard 9613-2, "Attenuation of Sound During Propagation Outdoors, Part 2: General Method of Calculation" (ISO 1996).

As proposed, structures would be arranged to create a relatively continuous building block along the exterior Project site. The gaps between structures would be minor compared to the length of connected structures and therefore the first row of buildings along the exterior lot boundary would present an effective sound barrier for stationary noise sources more internal to the Project Site. The noise model therefore includes air conditioner condenser units for the first row of building closest to the exterior perimeter of the Project

site. Dudek used the reference sound level (68 dBA at 1 meter) for a Carrier 16NA-48 5-ton HVAC unit to represent the HVAC system for each residential unit located along the Project site boundary. A total of 64 HVAC units were included in the model for the residences along the Project site boundaries. A sound level reference of 64 dBA at 30 feet was included in the model for each of the four pickleball courts. A total of seven receiver points were included in the model space, along the Project property boundary adjacent to concentrations of Project stationary noise sources, to represent the worst-case noise levels for simultaneous operation of all air conditioners in residential units along the site boundaries, and with games on each of the four pickleball courts.

Table 11 presents the results of the Project operational noise prediction modeling at the seven receiver locations (R1-R7) in the NoisePro model space, as well as at the two closest ambient noise measurement locations (ST2 and ST3). Refer to Figure 4 for the locations of R1-R7, ST2 and ST3. These modeled receptor positions are intended to represent Project operational sound levels along the Project Site property boundaries as well as at the noise-sensitive uses closest to the Project site, for comparison to City of San Marcos noise ordinance limits. Properties immediately adjacent to the Project Site include commercial land uses to the west, south and east, as well as north of the eastern half of the Project site, where the applicable municipal code limit in the overnight period is 55 dBA $L_{eq.}$ and during the daytime is 65 dBA $L_{eq.}$ Uses to the north of the western half of the Project Site are industrial, where the applicable municipal code limit in the overnight period is 60 dBA $L_{eq.}$ and during the daytime is 65 dBA $L_{eq.}$ As indicated in Table 11, Project operational noise levels at each modeled location except R4 and R5 would fall below the more stringent nighttime limit, indicating that even if all equipment is operating in the overnight period, the Project noise levels would comply. At receiver R4 and R5, the modeled noise levels reflect use of all four pickleball courts simultaneously. Since the courts would not be anticipated to be open in the overnight period from 10 PM to 7 AM, noise levels from the courts at the adjacent Project Site boundaries would be subject to the daytime limit for commercial zones of 65 dBA $L_{eq;}$ the modeled noise levels of 60 and 57 dBA L_{eq} at the property lines adjacent to the Pickleball courts would comply with the commercial zone daytime limits of 65 dBA $L_{eq.}$ NoisePro also generates an exhibit with noise contours depicting the noise levels resulting from project operations, that illustrates noise levels extending several hundred feet from the site. Refer to Figure 4 for the noise contour map from the NoisePro modeling.

Table 11. Stationary Noise Source Levels Compared to Noise Ordinance

Receiver	Description	Predicted Noise Level (dBA L_{eq})	Applicable Sound Level Limit (dBA L_{eq})	Limit Exceeded?
R1	Midpoint of Eastern Project Property Boundary	53	55	NO
R2	Midpoint of Northern Extension Property Boundary	51	60	NO
R3	Midpoint of Eastern Extension Property Boundary	51	55	NO
R4	Property Boundary North of Pickleball Courts	60	65	NO

Noise Contours - Aggregate Stationary Sources Operational Noise Level Prediction

San Marcos Restaurant Row

INTENTIONALLY LEFT BLANK

Dudek also compared the predicted operational noise to ambient noise levels documented during the ambient noise survey, as reported for locations ST1, ST2, ST3 and ST4. Table 12 presents the predicted Project operational noise levels to the measured ambient noise levels; predicted Project operational noise levels at each ambient noise measurement point would fall below the measured ambient noise level. Adding the Project operational noise to the ambient noise level would in each case result in less than a 3 dB increase.

Table 12. Stationary Noise Source Modeling Results Compared to Ambient

Road Segment ID	Description	Predicted Noise Level (dBA L_{eq})	Ambient Noise Level (dBA L_{eq})	Ambient Plus Project Noise Level (dBA L_{eq})	Increase Greater Than 3 dBA?
ST1	Pre-School on San Marcos, East of Project	31	74	74	NO
ST2	Commercial uses on Via Vera Cruz, East of Project	42	63	63	NO
ST3	Church, North of Project	45	46	48	NO
ST4	Commercial uses on Las Posas, West of Project	32	65	65	NO

Source: Appendix D

On the basis of comparing predicted Project operational noise levels against both noise ordinance limits and ambient noise levels, **a less-than-significant impact would occur for proposed project operational noise**

Cumulative Noise Assessment

Transportation Sources

The proposed project would result in a reduction in the total number of traffic trips added to the local roadway network, when compared to the existing restaurant uses which would be eliminated by the project. Therefore, the project would not have a considerable contribution to cumulative traffic impacts in the region.

Construction Activities

Temporary changes to the outdoor sound environment could also occur not only due to project construction noise that has already been presented herein, but as a cumulative result of potential concurrent project construction activity noise and the noise emission from construction of other projects in the vicinity.

Due to the decrease in noise levels with distance and the presence of physical barriers (i.e., intervening buildings and topography), noise due to construction of other projects would not meaningfully combine with that of the proposed project and produce a cumulative noise effect during construction. By way of illustration, if there are two concurrent construction projects of comparable sound emission intensity, and the activity nearest to a common studied noise-sensitive receptor is compliant with the aforementioned 75 dBA 8-hour L_{eq}, then the other activity could be no closer than three times the distance of the receptor to the nearest activity and not make a cumulatively measurable contribution to the total noise exposure level. If, on the other hand, two concurrent projects were comparably close to a receptor, the cumulative noise would be one of the following:

- The louder (in dBA) of the two concurrent activities; or
- a logarithmic sum of the two activity noise levels that, per acoustic principles, cannot be more than 3 dBA greater than the louder of the two individual noise-producing activities.

In sum, cumulative construction noise is likely to be dominated by the closest or loudest activity to the receptor, and the combination will be no more than a barely perceptible difference (i.e., up to a 3 dBA change). On the basis of such a barely perceptible cumulative construction noise level occurring due to the proposed project and what may be a nearby concurrent construction activity, the impact would be considered less than significant.

Stationary Operational Sources

Akin to the preceding discussion of cumulative construction noise, operation noise from stationary equipment attributed to the proposed project (as already presented herein) and any others potentially operating in the future and in the vicinity of a common offsite noise-sensitive receptor would need to be compliant with the City's applicable standards. Cumulative contribution of the proposed project to this future aggregate noise level from multiple established projects or facilities assumed to have comparable individual noise emission from stationary sources would be bounded by the same potential outcomes as follows:

- The louder (in dBA) of the two concurrently operating projects or facilities; or
- a logarithmic sum of the two operation noise levels that, per acoustic principles, cannot be more than 3 dBA greater than the louder of the two individual levels.

In sum, cumulative operation noise is likely to be dominated by the closest or loudest project to the receptor, and the combination will be no more than a barely perceptible difference (i.e., up to a 3 dBA change). On the basis of such a barely perceptible cumulative operation noise level occurring due to the proposed project and what may be nearby and concurrent operation of offsite stationary noise sources, the impact would be considered less than significant.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Conventional Construction Activity Vibration

Construction activities may expose persons to excessive groundborne vibration or groundborne noise, causing a potentially significant impact. Caltrans has collected groundborne vibration information related to construction activities (Caltrans 2020). Information from Caltrans indicates that continuous vibrations with a PPV of approximately 0.1 inch per second (ips) could be considered annoying on the basis of it being "strongly perceptible" by building occupants. For context, heavier pieces of construction equipment, such as a bulldozer that may be expected on the project site, have peak particle velocities of approximately 0.089 ips PPV or less at a reference distance of 25 feet (FTA 2018).

Groundborne vibration attenuates rapidly, even over short distances. The attenuation of groundborne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in FTA and Caltrans guidance. By way of example, for a bulldozer operating on site and as close as the northern project boundary (i.e., 50 feet from the nearest occupied

property) the estimated vibration velocity level would be 0.03 ips PPV per the equation as follows (FTA 2018):

$$PPV_{rcvr} = PPV_{ref} * (25/D)^{1.5} = 0.089 * (25/50)^{1.5} = 0.006$$

In the above equation, PPV_{rcvr} is the predicted vibration velocity at the receiver position, PPV_{ref} is the reference value at 25 feet from the vibration source (the bulldozer), and D is the actual horizontal distance to the receiver. Therefore, at this predicted PPV, the impact of vibration-induced annoyance to occupants of nearby existing homes would be less than 0.1 ips PPV and therefore less than significant.

Construction vibration, at sufficiently high levels, can also present a building damage risk. However, anticipated construction vibration associated with future development on-site would yield levels of 0.03 ips, which do not surpass the guidance limit of 0.2 to 0.3 ips PPV for preventing damage to residential structures (Caltrans 2020). Because the predicted vibration level at 50 feet is less than this guidance limit, the risk of vibration damage to nearby structures is considered **less than significant**.

c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

There are no private airstrips within the vicinity of the project site. The closest airport to the project site is the McClellan Palomar Airport approximately 4.6 miles west of the site; the project site is not located within the boundaries of the land use plan adopted for this airport.. Impacts from aviation overflight noise exposure would be considered **less than significant**.

INTENTIONALLY LEFT BLANK

6 Mitigation Measures

Short-term construction noise levels at the closest receivers, on-site operational noise levels, off-site traffic noise contributions, and construction vibration levels were each determined to be less than significant, and therefore no mitigation measures would be required for these impacts.

Traffic noise exposure for a proposed noise-sensitive use, such as a residence, is no longer addressed under CEQA. With respect to Project compliance with Noise Element policies regarding exterior noise exposure levels for multi-family residences, the following site design element is recommended:

- For residences with yard area that lies adjacent to the southern, eastern, or norther Project Site boundary, a six-foot-high solid fence or landscape wall should be provided along the yard/project site boundary in order to ensure exterior noise levels from roadway traffic and adjacent commercial uses does not exceed 65 dBA CNEL in these yard areas.

.

INTENTIONALLY LEFT BLANK

7 Summary of Findings

This noise report was conducted for potential future development associated with the approval of the proposed project. The results indicate short-term construction noise levels at the closest receivers, on-site operational noise levels, off-site traffic noise contributions, and construction vibration levels were each determined to be less than significant. No mitigations would therefore be required for noise or vibration effects of the proposed project.

Traffic Noise Modeling Input and Output

San Marcos Restaurant Row

Traffic Noise Exposure Modeling Calculations - Summary

Project: **13844 San Marcos Restaurant Row**

Number	Name	Segment Description and Location From	To	Existing (2019)	Year 2030 Prediction	
Summary of Net Changes						
1	South Las Posas	North of San Marcos Blvd.		57.1	57.8	
2	San Marcos Blvd.	Las Posas	Via Vera Cruz	70.0	70.6	
3	Via Vera Cruz	San Marcos Blvd.	Grand Avenue	58.5	59.2	

*All modeling assumes average pavement, level roadways (less than 1.5% grade), constant traffic flow and does not account for shielding of any type or finite roadway adjustments. All levels are reported as A-weighted noise levels.

Stationary Sources Operational Noise Prediction

Technical Basis of Dudek's "NoisePro" Excel-based Outdoor Sound Propagation Prediction Model

In summary, the Microsoft Excel-based **NoisePro** outdoor sound propagation model developed by Dudek calculates the aggregate sound pressure level (SPL) received by each and every cell within a two-dimensional (2D) array (a product of X columns of cells by Y rows of cells). The quantity of this received SPL, in A-weighted decibels (dBA), is the logarithmic sum of acoustical contribution from each of "n" user-input sound emitting point sources located on the same 2D array, which may be written as follows:

$$SPL_{X,Y} = 10 * \log \sum_{i=1}^{n} 10^{0.1[L_i - A_i]}$$

where each individual source sound level (L_i) is attenuated by an algebraic sum of three attenuation factors ($A_i = A_{div} + A_{atm} + A_{gr}$) that are each dependent on the distance between the sound source position on the X by Y array and the receiving $SPL_{X,Y}$ position on a different position in the same 2D array of worksheet cells, where each cell is defined by the user as representing the center of a square area having equal sides of user-defined length in feet. The above expression is based on Equation 5 from the International Organization for Standardization (ISO) 9613-2 "Acoustics – Attenuation of sound during propagation outdoors – Part 2: General method of calculation", and the individual attenuation factors used by **NoisePro** emulate those in Equation 4 and may be summarized as follows:

- $\boldsymbol{A_{div}}$ = attenuation due to *geometrical divergence* (i.e., pure distance), equating to 20*LOG(d/d_{ref}); and where $\boldsymbol{d}$ is the horizontal distance between a source and a receiver position, while $\boldsymbol{d_{ref}}$ is the reference distance at which the sound source L_i is defined.
- $\boldsymbol{A_{atm}}$ = attenuation due to *atmospheric absorption*, which for 1,000 Hz (1 kHz) = 4.16*$\boldsymbol{d}$/3280 and is derived from Equation 5.7 in Noise & Vibration Control Engineering (Beranek and Ver, 1992).
- $\boldsymbol{A_{gr}}$ = attenuation due to *ground effects*, appearing as Equation 10 in ISO 9613-2 and can be expressed with the following Excel formula:

  $$\boldsymbol{A_{gr}} = \text{MAX}(0,4.8-[\boldsymbol{h_s}+\boldsymbol{h_r}]/\boldsymbol{d}*[17+984/\boldsymbol{d}])$$

  where $\boldsymbol{h_s}$ and $\boldsymbol{h_r}$ are the heights (in feet) of the sound source and receiver positions above grade, respectively. This means that for small distances, attenuation from ground effects will be small or essentially zero; and, even at great distances, the attenuation from ground effects is effectively capped at 4.8 dB.

The Excel workbook comprising **NoisePro** calculates $SPL_{X,Y}$ by using a coding loop to evaluate the acoustic contribution from each attenuated sound source ($\boldsymbol{L_i}$ - $\boldsymbol{A_i}$) in sequence, and logarithmically adding the new evaluation to the previous total in a cumulative manner. When all sources have been evaluated, the loop terminates and yields an aggregate or log-summed total $SPL_{X,Y}$ value that is thus unique to a position in the 2D array of cells represented by X and Y, and can thus be "mapped". If the user has defined a particular cell in the X by Y array as a uniquely tagged Receiver, then the corresponding $SPL_{X,Y}$ value can be indexed and displayed accordingly.

The resulting output array of cells, each having an individually calculated $SPL_{X,Y}$ numerical value, is then filled with a color (from a user-defined palette) by application of a Conditional Formatting rules set (an Excel formatting feature) that compares the dB quantity with user-defined "high" and "low" dB ranges for each available color. Each colored cell can thus be likened to a "pixel" within a 2D array that forms a composite image representing—visually—the sound propagation from all modeled sound sources.

Local Transportation Assessment (LTA)

MEMORANDUM

To:	David Shepherd, Lennar
From:	Stephen Cook, TE, Intersecting Metrics
Date:	July 7, 2023
Regarding:	Old California Restaurant Row Focused Local Transportation Assessment

The purpose of this technical memorandum is to document the changes in traffic operations that may be associated with the proposed redevelopment of the Old California Restaurant Row site (Proposed Project). The Proposed Project is located on the northwest corner of the West San Marcos Boulevard and Via Vera Cruz intersection, in the City of San Marcos. The Proposed Project plans to replace existing restaurant uses with multifamily dwelling units, commercial retail uses, and a community park. This proposed change in land uses will result in a net decrease in the site's total trip generation. Therefore, since the Proposed Project is anticipated to reduce trips, it is not required to conduct a full local transportation assessment (LTA) per the City's *Transportation Impact Study Guidelines*. However, a focused transportation assessment analyzing the site's driveways and the adjacent major intersection, West San Marcos Boulevard and Via Vera Cruz, was conducted to ensure that acceptable operations would still be maintained with the change in travel patterns associated with the Proposed Project.

Following this introductory section, this memo is organized in the following sections:

1. Proposed Project
2. Analysis Methodology
3. Existing and Existing Plus Project Conditions
4. Site Access and Circulation

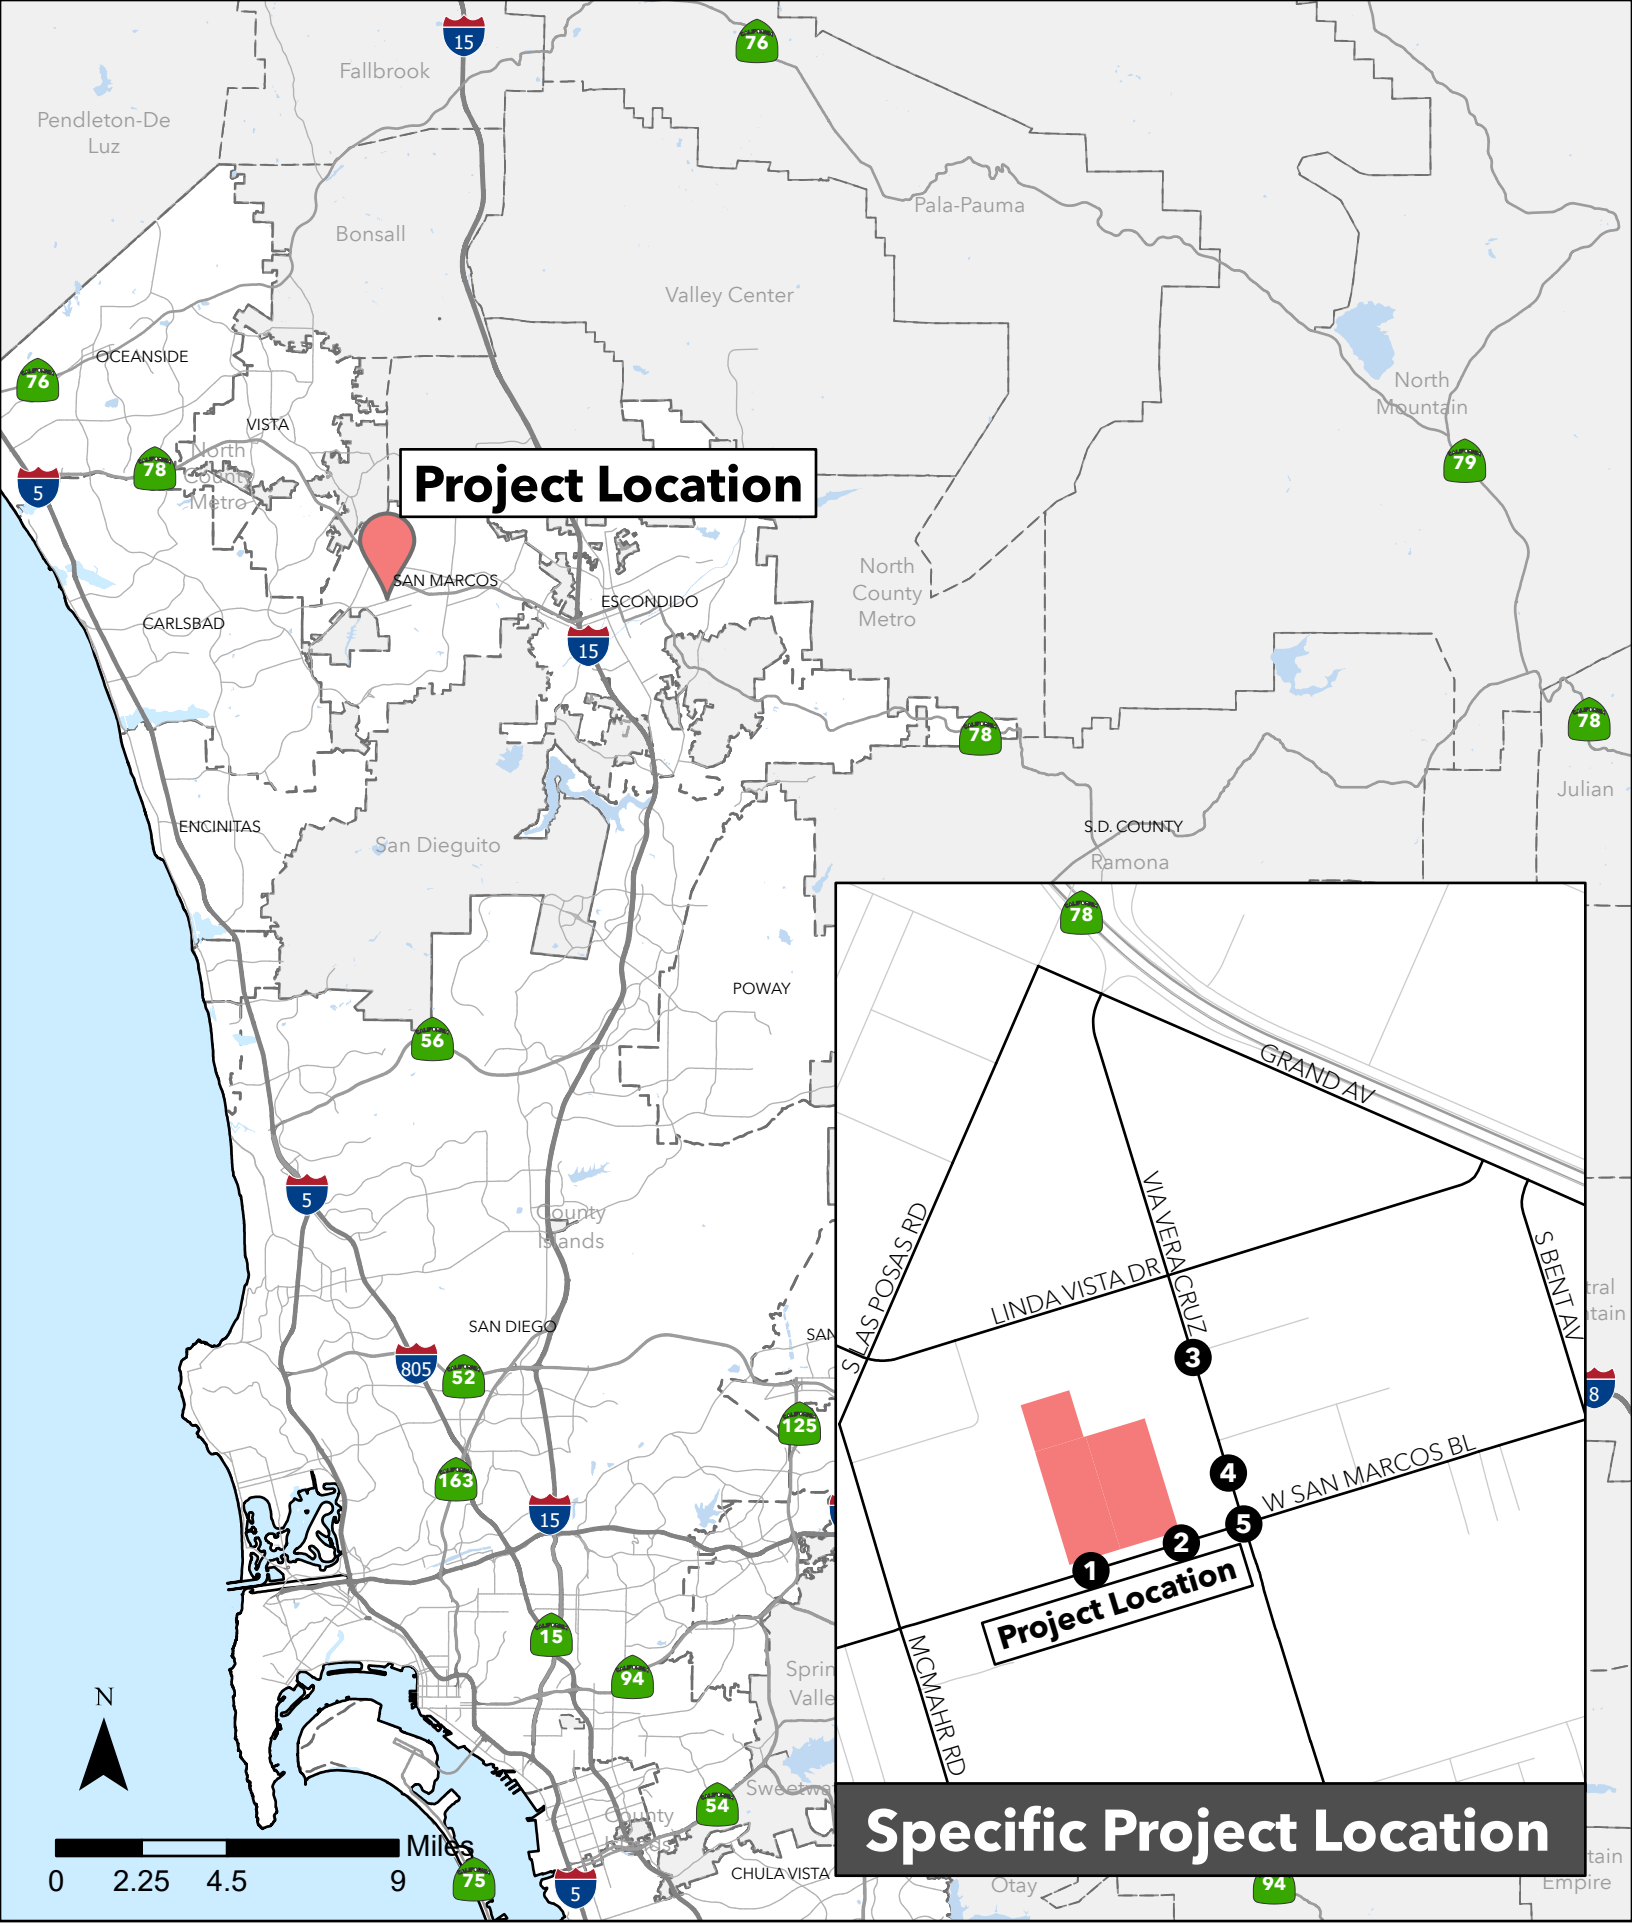
1.0 Proposed Project

This section provides a description of the Proposed Project as well as its associated trip generation, trip distribution patterns, and the resulting project trip assignment.

Project Description

The Proposed Project will replace 63,484 square feet (SF) of existing restaurant uses with 202 multi-family dwelling units,10,400 SF of commercial retail uses, and 1.1 acres of a community park. The Proposed Project will have four primary access points, which include the two unsignalized driveways on West San Marcos Boulevard, and two unsignalized driveways on Via Vera Cruz (the existing northern and southern Restaurant Row driveways). The western driveway on West San Marcos Boulevard will be converted from full-access to right-in-right-out access only. The northern driveway on Via Vera Cruz will connect to the existing east-west roadway that traverses through the OCRR site and the Regal Edwards San Marcos theater lot, and connects to South Las Posas Road. The project site will have access to the driveway on South Las Posas Road, but it is anticipated to serve a negligible amount of project trips as it would be a circuitous path for people accessing the project site from the east or north.

Figure 1 displays the Proposed Project's location, while Figure 2 displays the Proposed Project site plan.



Old California Restaurant Row

Figure 1
Project Location

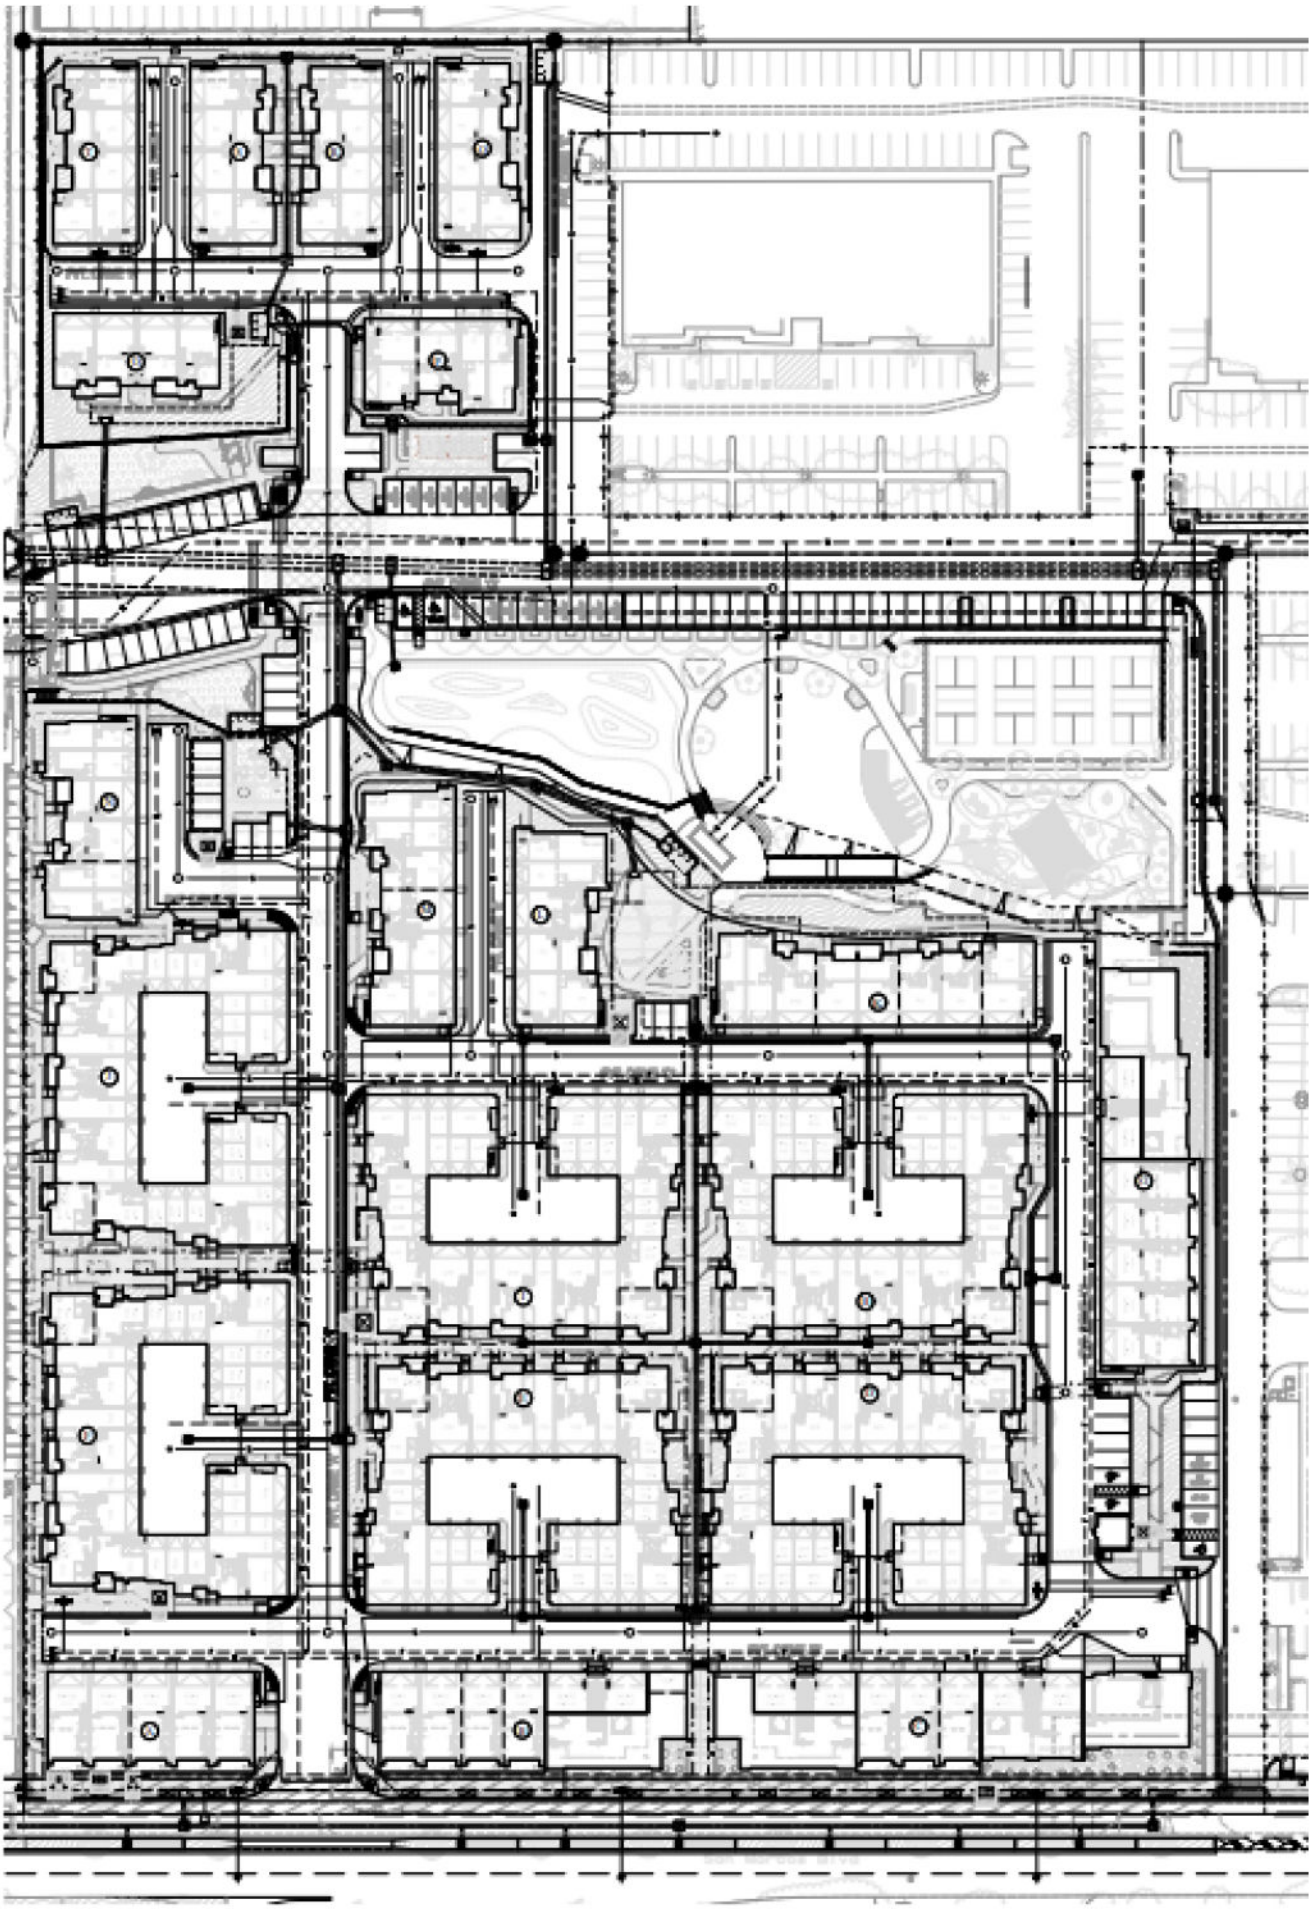


Figure 2
Project Site Plan

Trip Generation

Table 1 displays the anticipated trip generation for the Proposed Project, as well as the trip credits that would be associated with the removal of the existing restaurant uses. Trip Generation rates were derived from the *SANDAG (Not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002*.

Table 1: Proposed Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM				PM			
				%	Trips	In	Out	%	Trips	In	Out
Multi-Family Units	202 DU	6/DU	1,212	8%	97	19	78	9%	110	77	33
Strip Commercial	10,400 SF	40/KSF	416	3%	13	8	5	9%	38	19	19
City Park	1.1 Acres	50/Acres	55	13%	9	5	4	9%	6	3	3
		Project Total	1,683		118	31	87		153	99	54
Existing Uses											
Restaurant (Quality)	-63,484 SF	100/KSF	-6,348[1]	1%	-64	-38	-26	8%	-508	-356	-152
		Net Change	-4,665		54	-7	61		-355	-257	-98

As shown in Table 1, implementation of the Proposed Project is anticipated to result in a net decrease of 4,665 daily trips, a net increase of 54 AM peak hour trips (-7 inbound; 61 outbound), as well as a net decrease of 355 PM peak hour trips (-257 inbound; -98 outbound).

Project Trip Distribution & Assignment

The Proposed Project trip distribution was developed based on land use characteristics of the Proposed Project, the surrounding roadway network, and the existing travel patterns. Figure 3 displays the assumed trip distribution patterns and the net trip assignment associated of the Proposed Project[1]. Detailed trip assignment calculations are provided in Attachment 1.

2.0 Analysis Methodology & Substantial Effects

The signalized and unsignalized intersection analyses utilized in this study conforms to the operational analysis methodology outlined in Chapters 19 and 20, respectively, of the Highway Capacity Manual 6th Edition (HCM 6th Edition). The computerized analysis of intersection operations was performed utilizing the Synchro 11 traffic analysis software (by Trafficware). Additional information regarding the analysis methodology and Level of Service (LOS) definitions are provided in Attachment 2. Per the City's LTA guidelines, the Proposed Project is considered having a Substantial Effect if the traffic from the Proposed Project causes an intersection currently operating at acceptable LOS A through D to operate at LOS E or F and adds two (2) or more seconds to the average vehicle delay. If an intersection is already operating at LOS E, then the Proposed Project is considered to have a Substantial Effect if the Proposed Project adds two (2) or more seconds to the average vehicle delay.

[1] It should be noted that the existing restaurant uses were not performing/operating at their full capacity when the traffic counts were conducted. In some cases, the trip credits, which assume the restaurants are operating at their full capacity, exceeded the existing intersection turning movement volume at some locations. Thus, for movements where the trip credit exceeded the existing volume it was assumed that the volume would be reduced to zero with the removal of the existing uses, and the total trip assignment for the Proposed Project uses (i.e. multi-family, commercial, and/or park) for the movement was assumed.

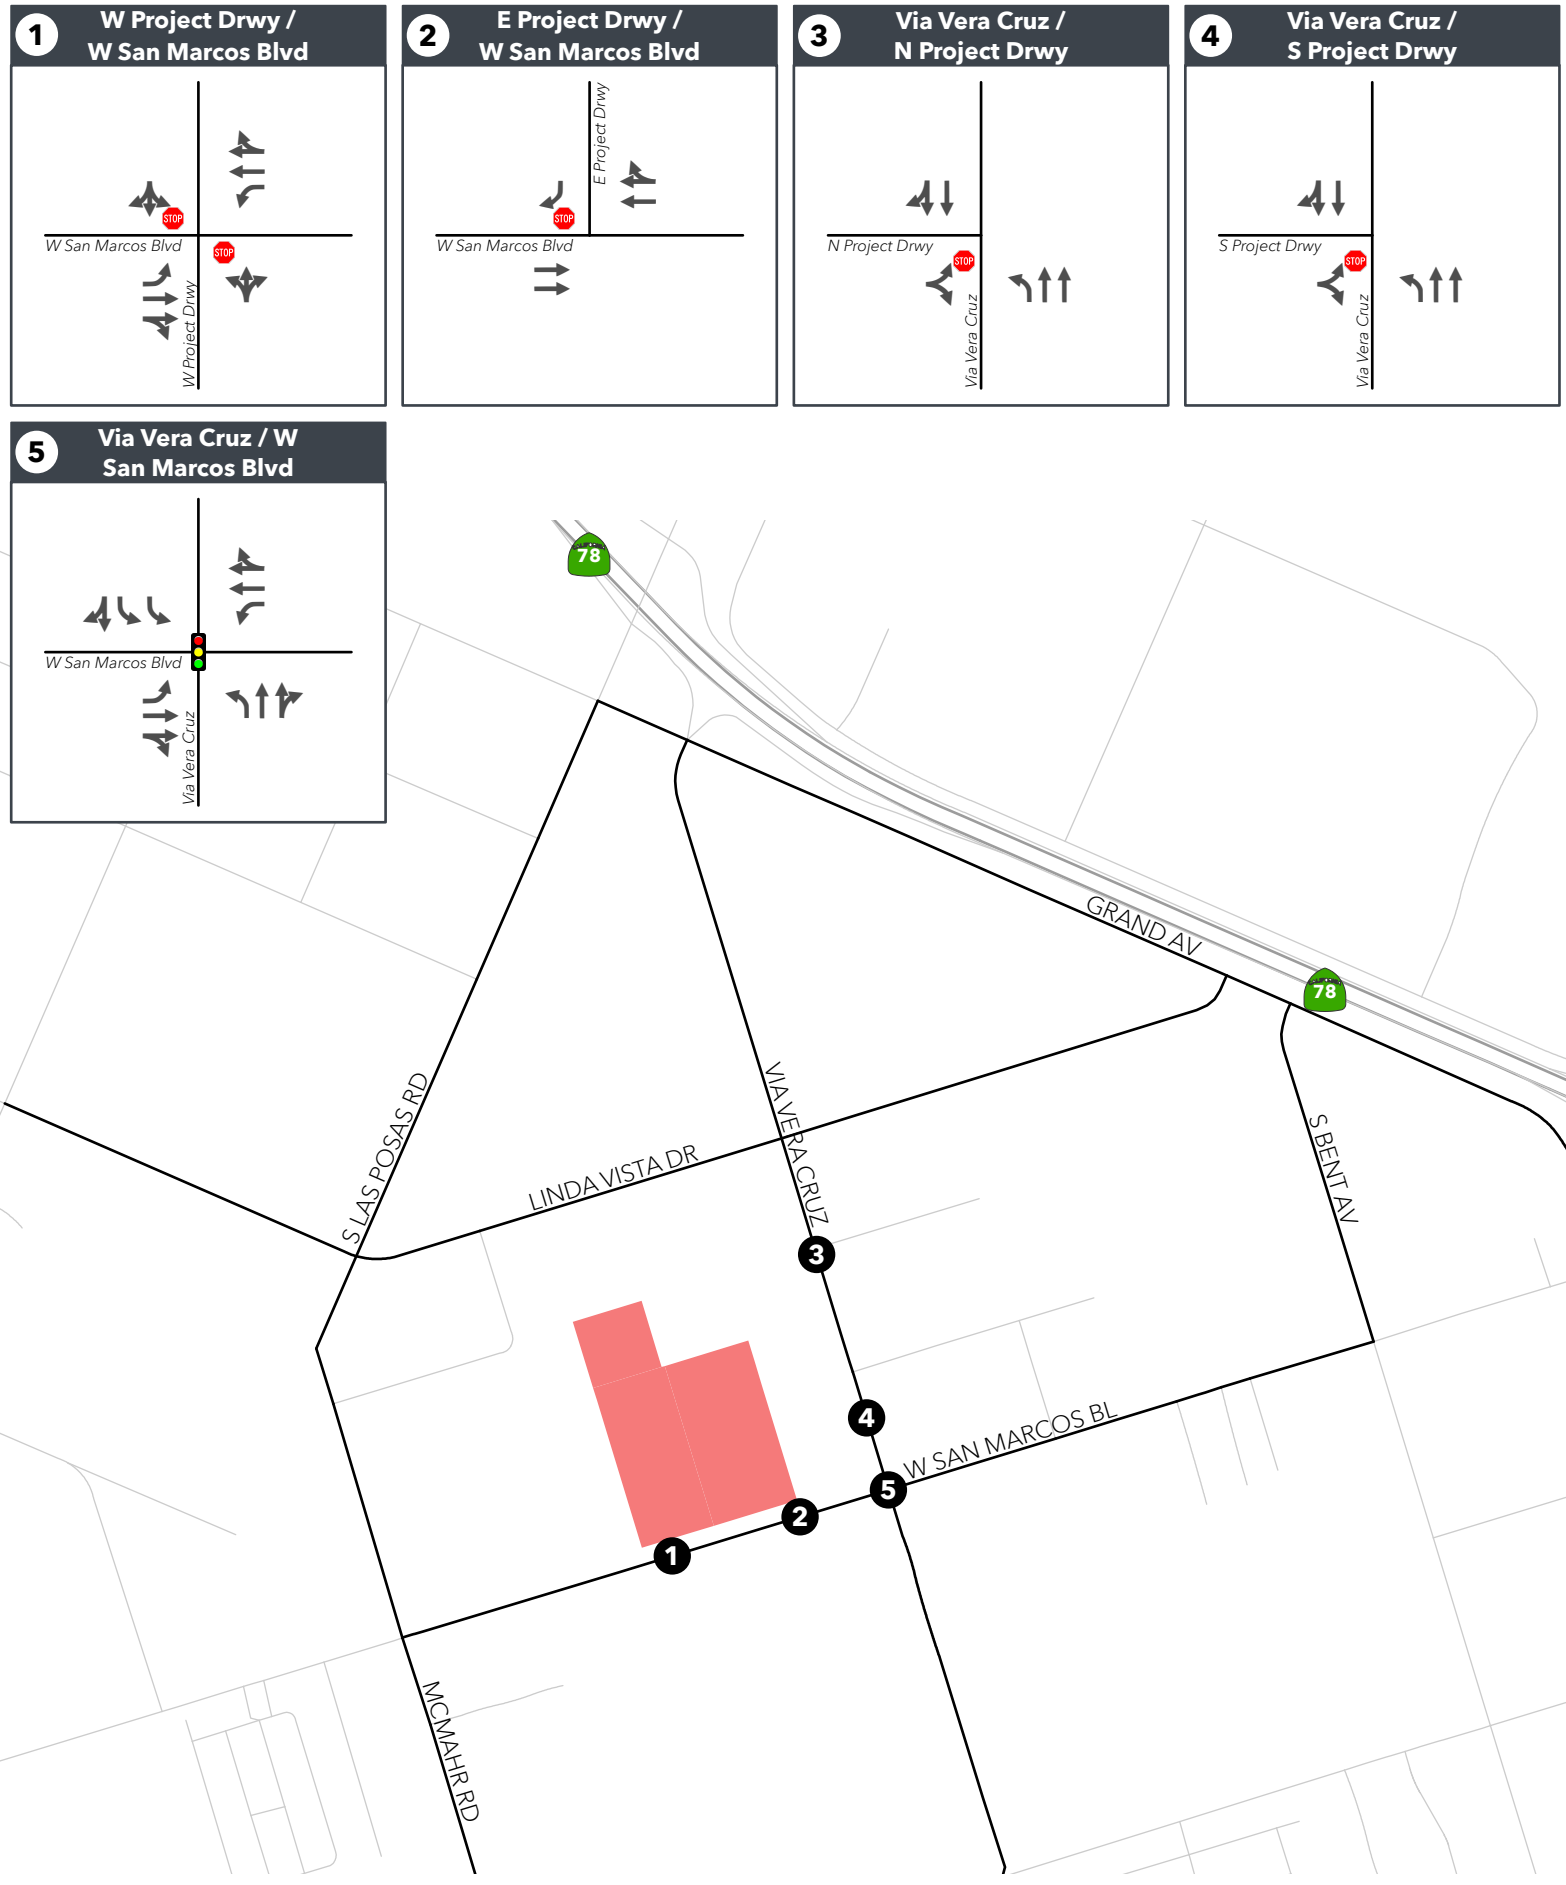

Figure 3

Intersection Lane Configurations
Existing Conditions

Old California Restaurant Row

Intersecting Metrics

3.0 Existing Conditions

This section describes the study area roadway conditions, intersection geometrics, and peak hour traffic volumes under Existing conditions. LOS analysis for all study area intersections under Existing and Existing Plus Project conditions are also presented.

Existing Roadway Network

Direct access to the Proposed Project site is provided via West San Marcos Boulevard and Via Vera Cruz. Descriptions of these transportation network facilities are described below:

West San Marcos Boulevard is a four-lane divided roadway that connects Carlsbad to its eastern terminus at East Mission Road. San Marcos Boulevard has and has a posted speed limit of 40 miles per hour (mph). Sidewalks and bicycle lanes are currently provided on both sides of the roadway. Bus route 347 by the North County Transit District (NCTD) serves Palomar College and travels on West San Marcos Boulevard. The closest bus stops are on South Las Posas Road and Via Vera Cruz, approximately ¼-mile east and south, respectively, of the project site. Along the project frontage, West San Marcos Boulevard is classified as a Multi-Way Boulevard by the *City of San Marcos Mobility Element (February 2012)*. The City's *San Marcos Boulevard Multi-Way Complete Streets* project plans to transform the roadway to provide complete streets elements, including a multiway path on the north side of the roadway to provide a safe space for pedestrians, bicyclists, and vehicles accessing the commercial uses, such as the Proposed Project and Restaurant Row sites.

Via Vera Cruz is a four-lane roadway with a two-way left-turn lane, which connects State Route 78 (SR-78) and Grand Avenue to Discovery Street. South of Discover Street, Via Vera Cruz serves the single family residential communities near Discovery Lake. Within the study area, sidewalks and bicycle lanes are currently provided on both sides of the roadway, and the roadway has a posted speed limit of 40 mph. Bus Route 347 travels on Via Vera Cruz, south of West San Marcos Boulevard, with a bus stop located south of the West San Marcos Boulevard and Via Vera Cruz intersection. Along the project frontage, Via Vera Cruz is classified as a Major Roadway by the *City of San Marcos Mobility Element (February 2012)*.

Figure 4 displays the existing intersection geometries at the study intersections.

Existing Traffic Volumes

Peak hour vehicular intersection counts were performed on Thursday, September 16, 2021 between the hours of 7:00AM - 9:00AM and 4:00PM - 6:00PM. The traffic counts were compared to pre-pandemic conditions (collected in May 2018) and were determined to have nominal variations in traffic patterns for most movements, but higher traffic volumes in 2021 than 2018 on San Marcos Boulevard. Therefore, recent 2021 counts were deemed to be representative as "typical conditions" and appropriate to use in the analysis. Attachment 3 contains the intersection traffic counts sheets, Including the 2018 counts. Figure 5 displays the existing traffic volumes.

Existing Intersection Analysis

Table 2 displays intersection LOS and average vehicle delay results for the study area intersections under Existing conditions. LOS calculation worksheets for Existing conditions are provided in Attachment 4. As shown, all study area intersections currently operate at an acceptable LOS C or better during both the AM and PM peak hours, except the West San Marcos Boulevard and Western Project Driveway. The southbound left-turn at this side-street stop-controlled intersection currently experiences long delays as vehicles must wait for gaps in traffic on West San Marcos Boulevard during the AM and PM peak hours.

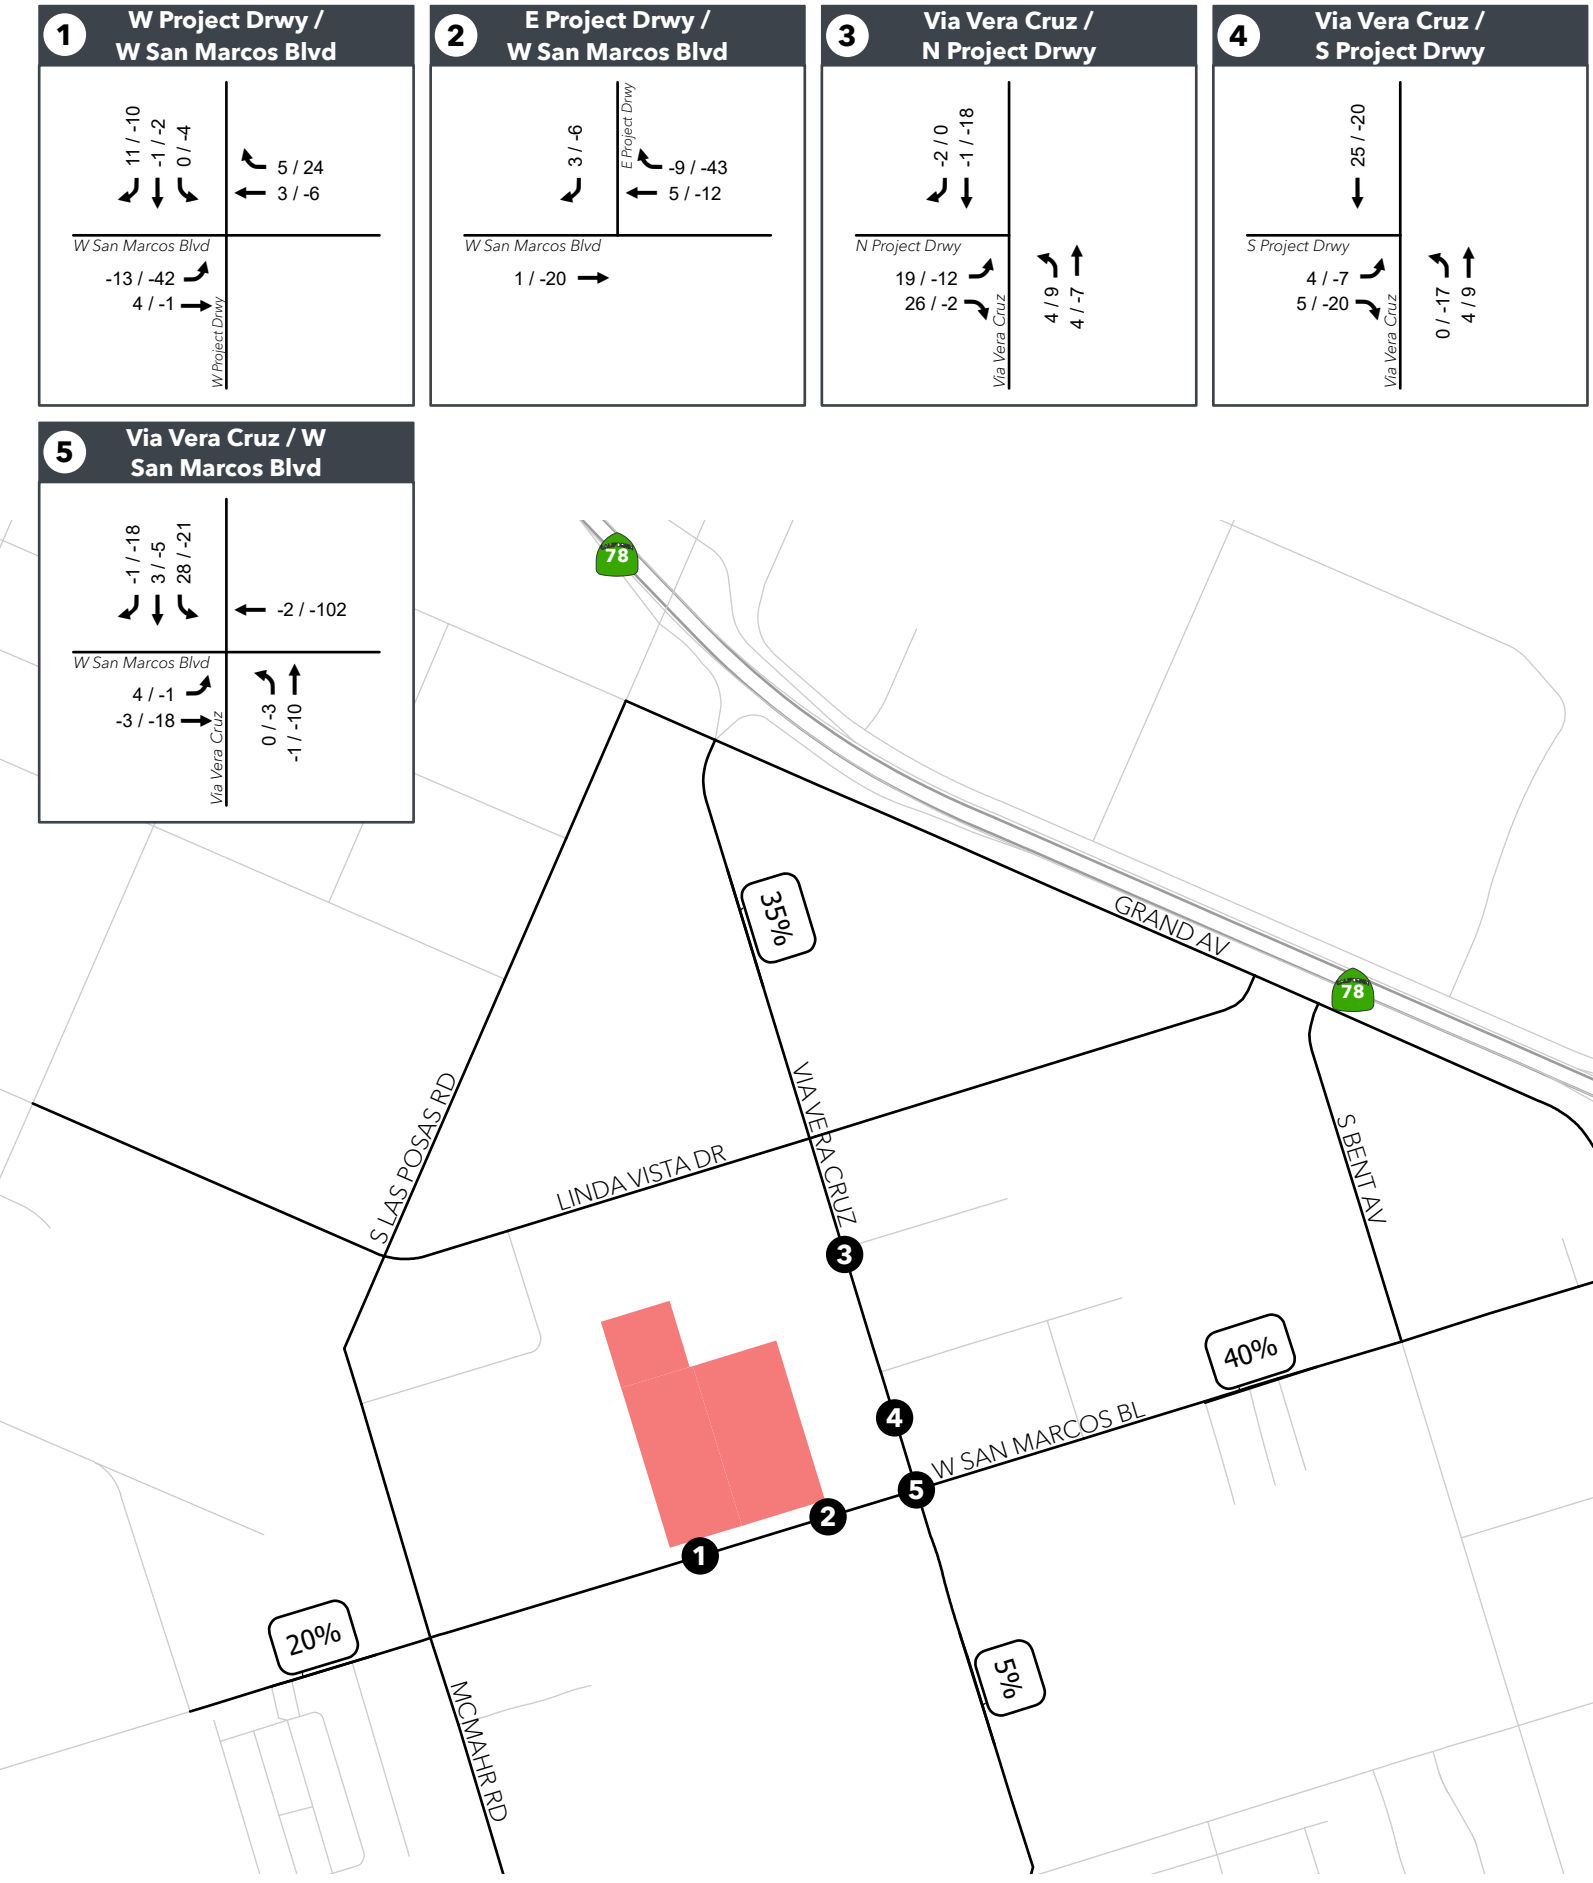

Figure 4

Traffic Volumes
Project Trip Assignment

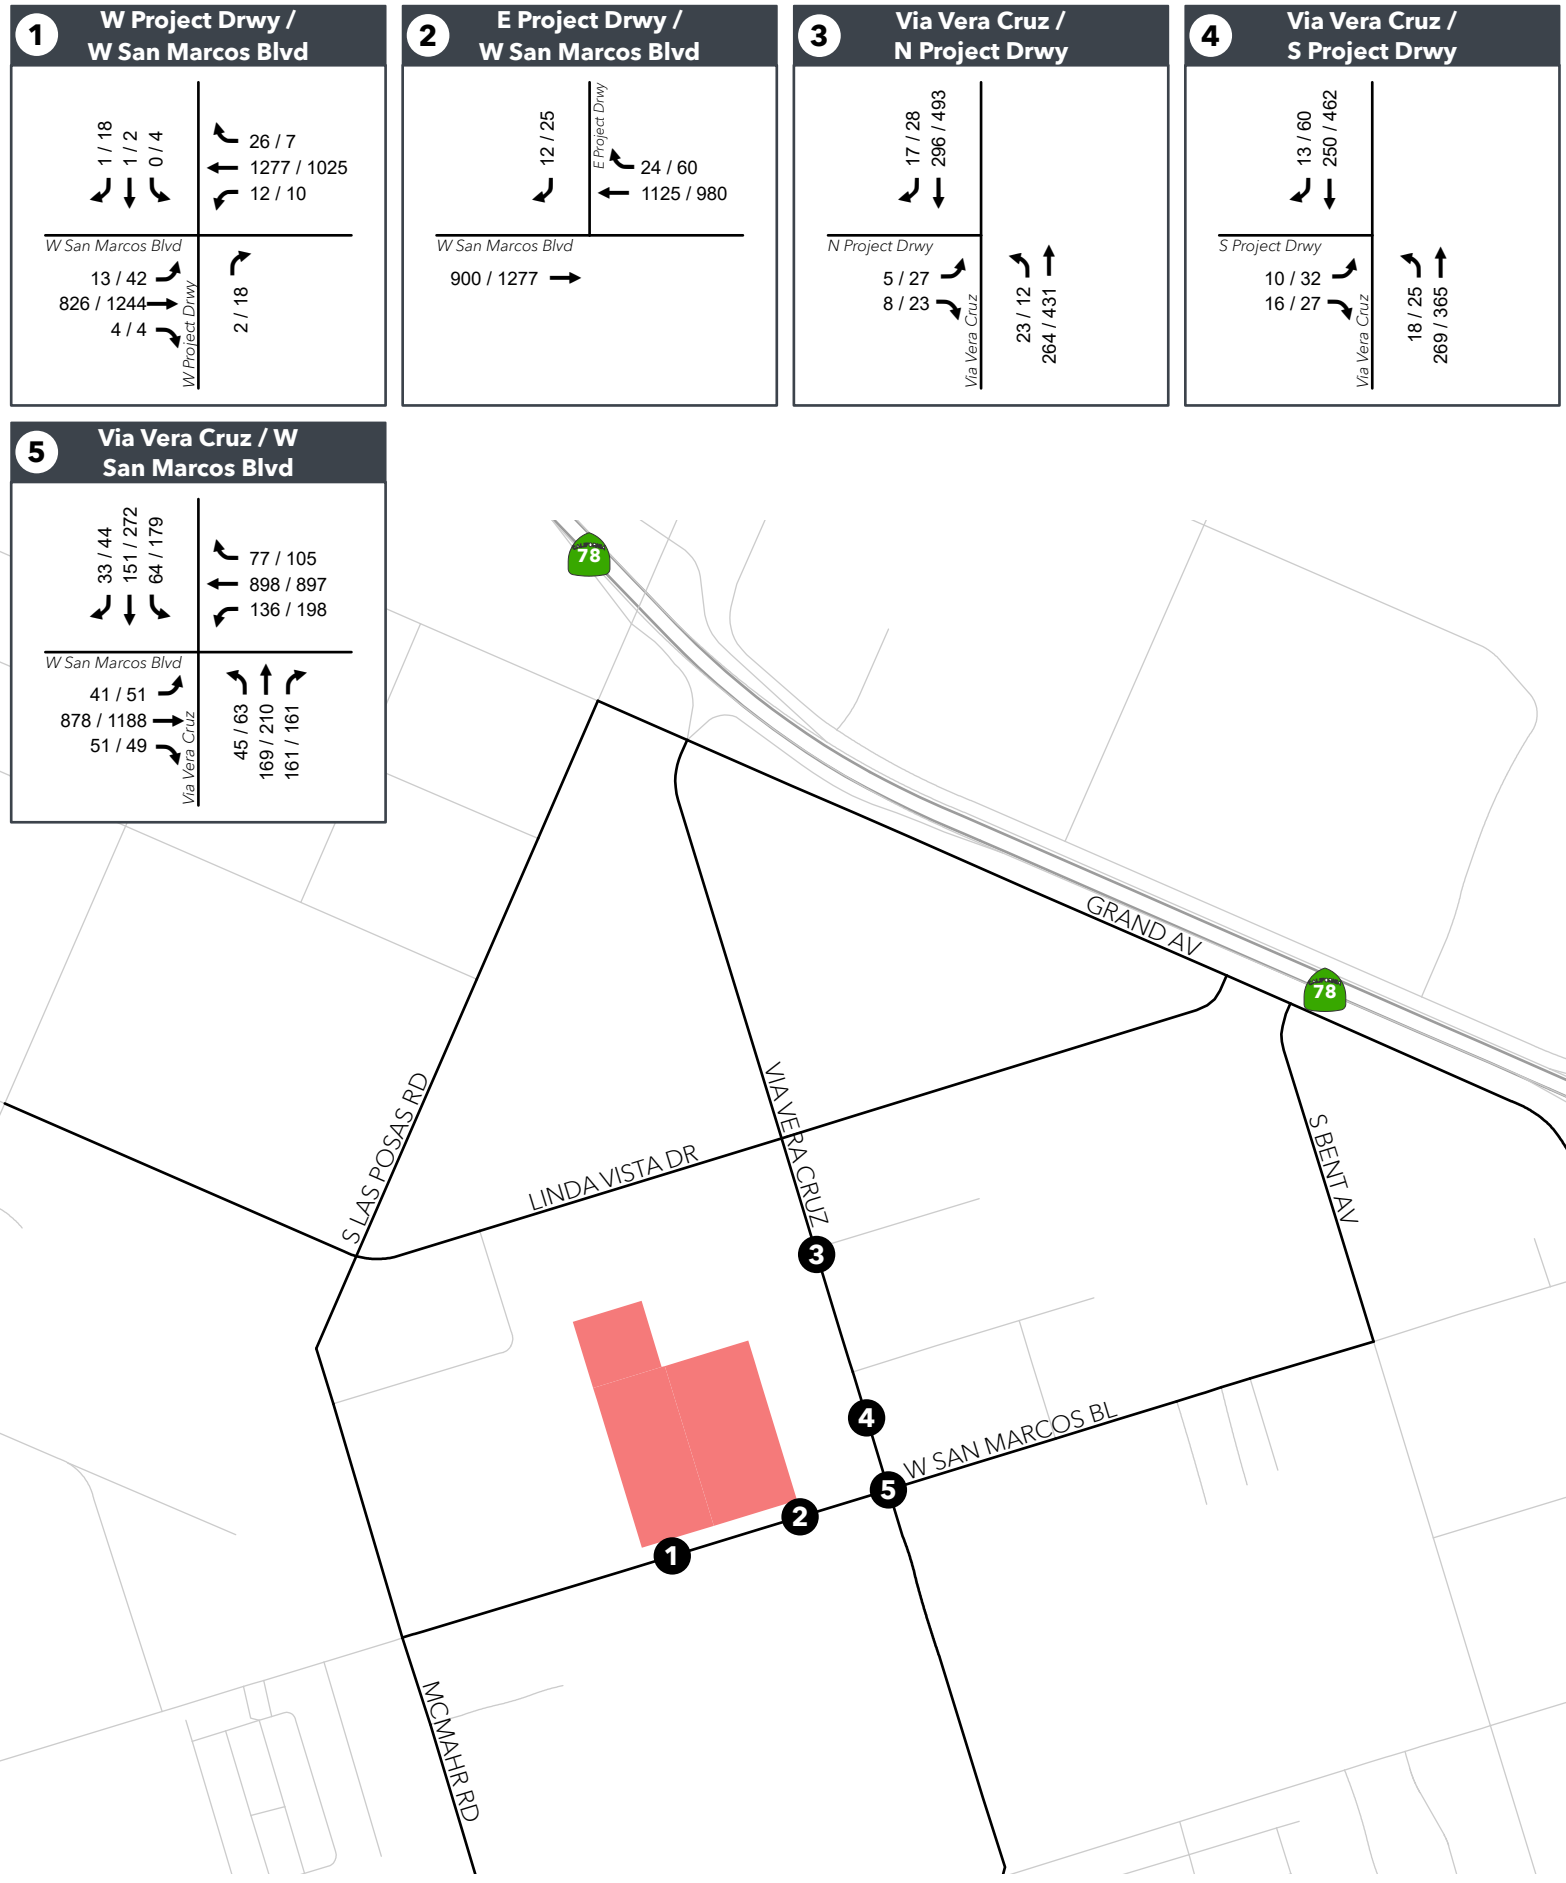

Figure 5

Traffic Volumes
Existing Conditions

Table 2 Peak Hour Intersection LOS Results - Existing Conditions

Intersection	Control	AM		PM	
		Delay	LOS	Delay	LOS
1: West San Marcos Boulevard & Western Driveway	SSSC	**61.4**	**F**	**40.7**	**E**
2: West San Marcos Boulevard & Eastern Driveway	SSSC	14.4	B	12.9	B
3: Via Vera Cruz & Northern Driveway	SSSC	10.6	B	14.8	B
4: Via Vera Cruz & Southern Driveway	SSSC	11.0	B	15.6	C
5: Via Vera Cruz & West San Marcos Boulevard	Signal	19.2	B	30.4	C

Note:
Bold indicates substandard operations.
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the approaches.

Existing with Project Roadway Network and Traffic Volumes

The roadway network under Existing with Project conditions was assumed to be identical to Existing conditions shown in Figure 3, except the existing western project driveway on West San Marcos Boulevard that will be converted to right-in-right-out, as shown in Figure 2. As part of the *San Marcos Boulevard Multi-Way Boulevard Complete Streets* project, a continuous median will be constructed along the project frontage on West San Marcos Boulevard, which will eliminate the left-turn ingress and egress movements at the western project driveway. The Proposed Project will move the existing curb approximately 16 feet into the project site to correspond with the ultimate alignment of the multi-way roadway.

Existing with Project traffic volumes were derived by adding the project trip assignment volumes (shown in Figure 3) to existing intersection volumes (shown in Figure 4). Existing with Project traffic volumes are shown in **Figure 6**.

Existing Plus Project Intersection Analysis

Table 3 displays intersection LOS and average vehicle delay results under Existing with Project conditions. LOS calculation worksheets for Existing with Project conditions are provided in **Attachment 5.**

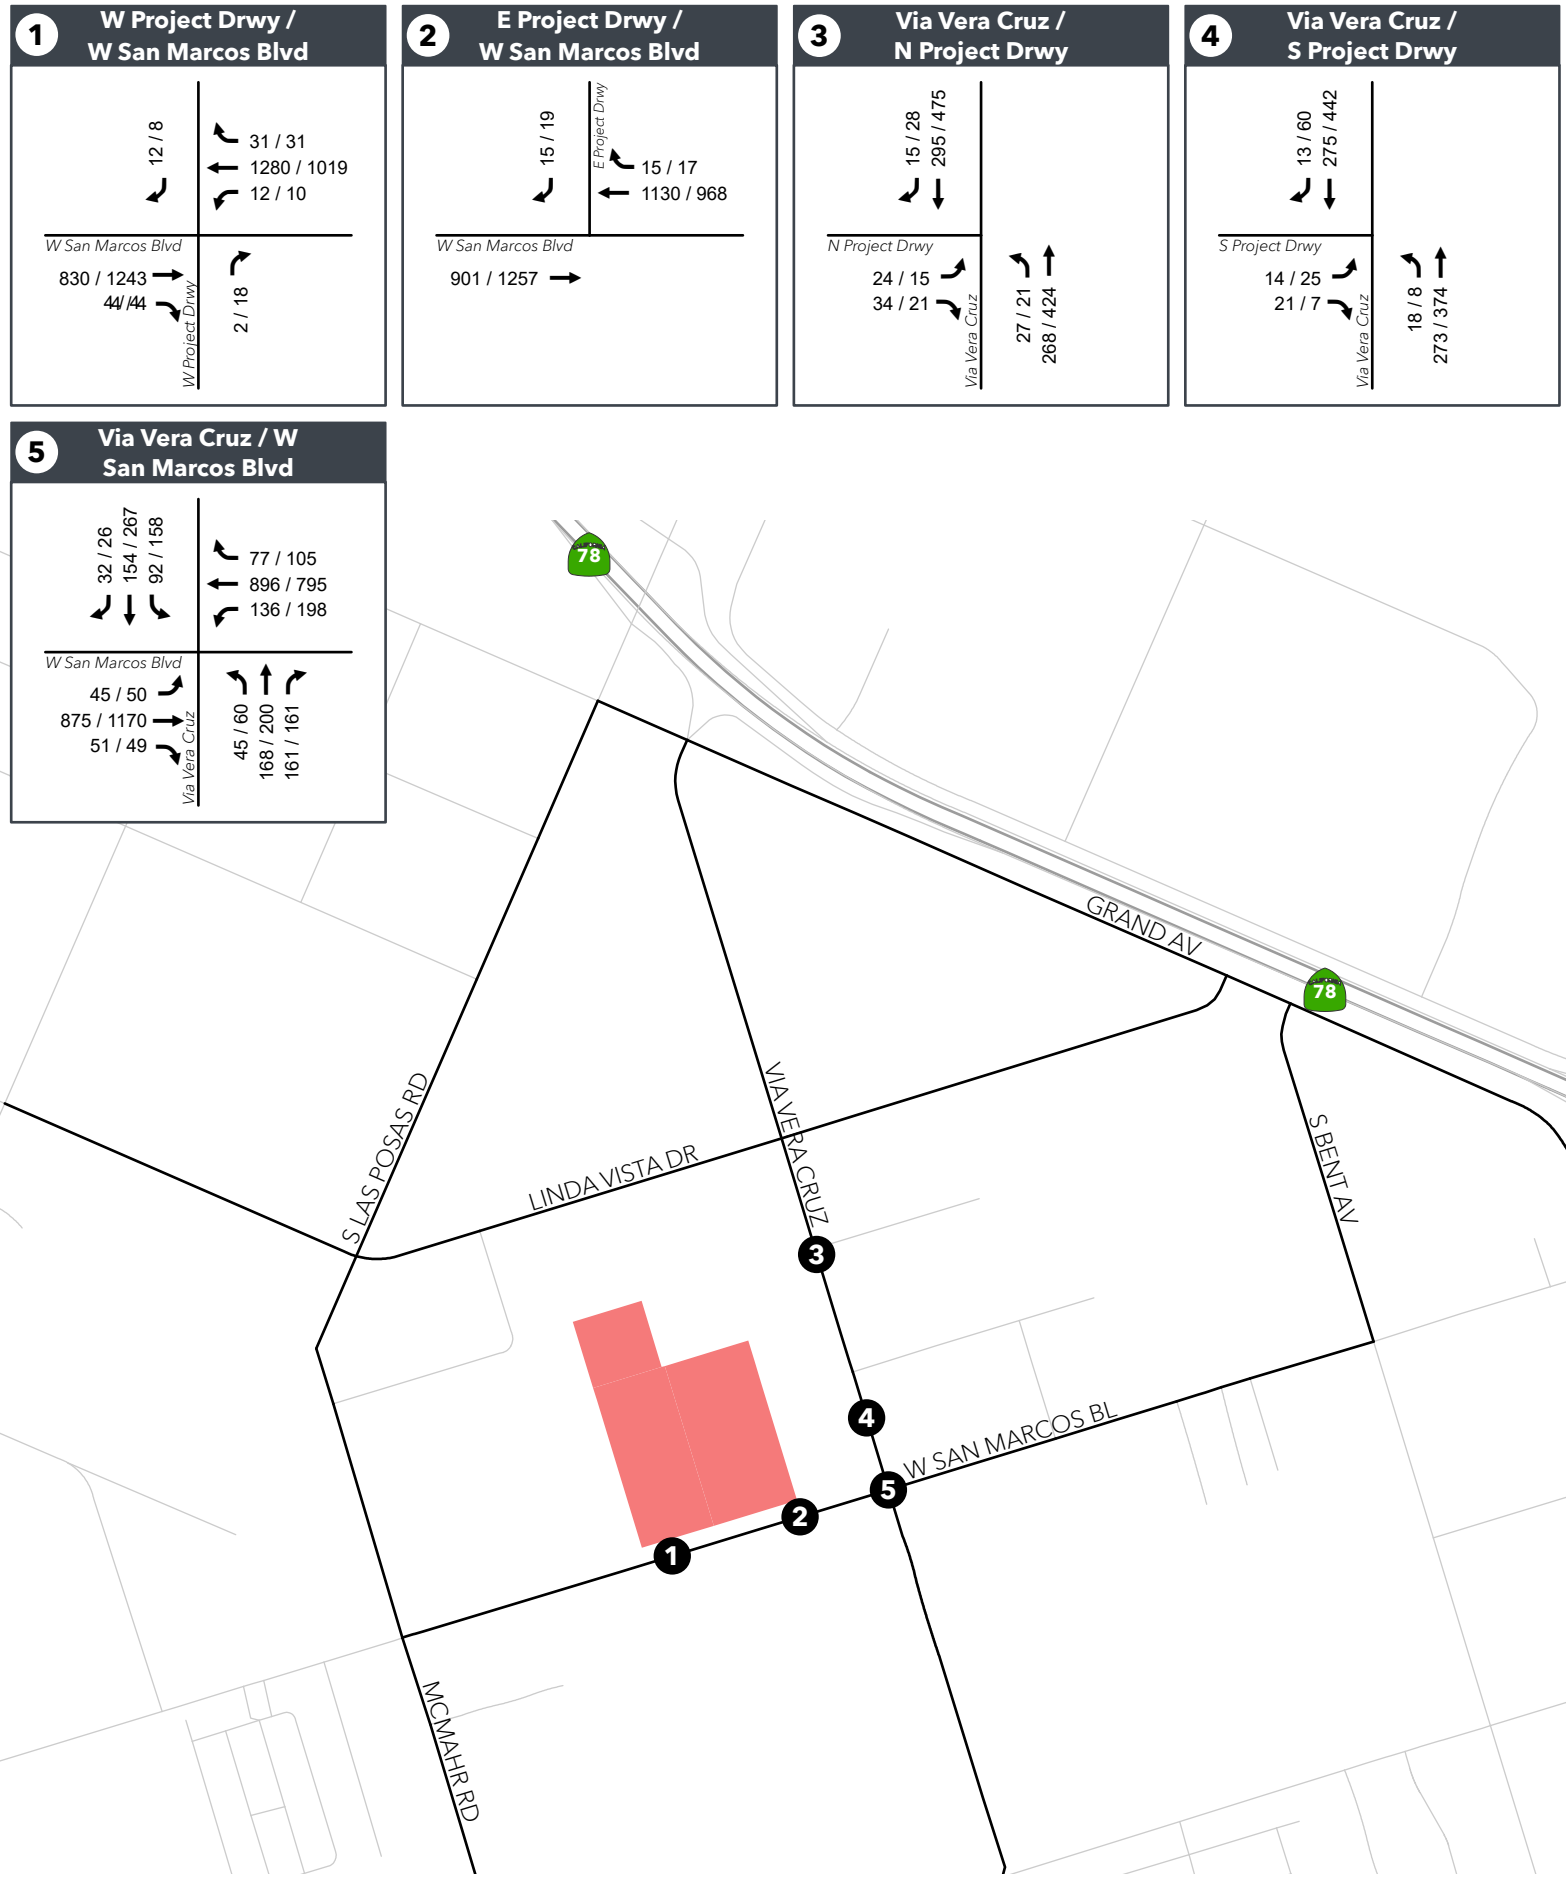

Figure 6

Intersection Lane Configurations
Existing Plus Project Conditions

Table 3 Peak Hour Intersection LOS Results - Existing with Project Conditions

Intersection	Control	AM		PM		Delay w/o Project (sec) AM/PM	LOS w/o Project AM/PM	Δ Delay (sec)	SE?
		Delay	LOS	Delay	LOS

5: Via Vera Cruz & West San Marcos Boulevard	Signal	14.2	B	28.4	C	19.2 / 30.4	B / C	-5.0 / -2.0	N / N

Notes:
Bold indicates substandard operations.
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the approaches
SE = Substantial Effect

As shown in Table 3, all study area intersections are anticipated to operate at an acceptable LOS C or better during both the AM and PM peak hours, with the anticipated changes in the traffic patterns associated with the Proposed Project. Additionally, the reconfiguration of the western driveway on West San Marcos Boulevard from right-in right out only eliminated the failing movement (the southbound left-turn out of the project site), resulting in much improved operations at the driveway. Therefore, the Proposed Project is not considered to be having a Substantial Effect to the study area intersections under Existing with Project conditions.

4.0 Site Access and Circulation

The Proposed Project is located on the north side of West San Marcos Boulevard, just west of the West San Marcos Boulevard/Via Vera Cruz intersection. Based on review of the project site plan and field conditions, the following comments regarding site access are offered:

- The Proposed Project will maintain all existing driveways on West San Marcos Boulevard and Via Vera Cruz; however, the western driveway on West San Marcos Boulevard will convert to a right-in-right-out access.
- Adequate corner and stopping site distances will be maintain at all driveway locations.
- All project site driveways will operate at acceptable LOS C or better during both the AM and PM peak hours with the Proposed Project.

5.0 Conclusions

As outlined in Table 3, all study area intersections and driveways will continue to operate at LOS C or better with the implementation of the Proposed Project. Thus, the implementation of the Proposed Project will not result in a Substantial Effect to the surrounding roadway network.

HCM 6TH EDITION METHODOLOGIES AND LEVEL OF SERVICE DEFINITION

Level of Service Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. Table 1 describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 1 Level of Service Definitions

LOS Category	Definition of Operation
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Signalized Intersection Analysis

The analysis of signalized intersections utilized the operational analysis procedure as outlined in the Highway Capacity Manual (HCM) 6th Edition signalized intersection analysis methodology. This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique uses 1,900 vehicles per hour per lane (VPHPL) as the maximum saturation volume of an intersection. This saturation volume is adjusted to account for lane width, on-street parking, pedestrians, traffic composition (i.e., percentage trucks) and shared lane movements (i.e., through and right-turn movements originating from the same lane). The LOS criteria used for the analysis of signalized intersections are described in Table 2, identifying the thresholds of control delays and the associated LOS. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

Table 2 Signalized Intersection LOS Operational Analysis Method

Average Stopped Delay Per Vehicle (seconds)	Level of Service (LOS) Characteristics
<10	*LOS A* describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
>10– 20	*LOS B* describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
>20 – 35	*LOS C* describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
>35– 55	*LOS D* describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
>55 – 80	*LOS E* is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80	*LOS F* describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the LOS D capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: Highway Capacity Manual 6th Edition

Unsignalized Intersection Analysis

Side-street stop-controlled intersections were analyzed using the Highway Capacity Manual 6th Edition (Section 19) Two-Way Stop-Controlled Intersection analysis methodology. The Synchro Version 11 software supports this methodology and was utilized to produce LOS results. The LOS for a two-way stop-controlled (SSSC) intersection is determined by the computed or measured control delay and is defined for each minor movement. Table 3 summarizes the LOS criteria for unsignalized intersections.

Table 3 LOS Criteria for Stop-Controlled Unsignalized Intersections

Average Stopped Delay Per Vehicle (sec/veh)	LOS
<10	A
>10 to <15	B
>15 to <25	C
>25 to <35	D
>35 to <50	E
>50	F

Appendix J
VMT Impact Analysis

July 7, 2023

David Shepherd
Director of Entitlements
Lennar Homes of California, LLC
16465 Via Esprillo, Suite 150
San Diego, CA 92127

Regarding: San Marcos Restaurant Row – VMT Impact Analysis

Dear Mr. Shepard,

The purpose of this letter is to evaluate and document the potential transportation impacts that may be associated with the proposed San Marcos Restaurant Row Redevelopment Project (Proposed Project), as outlined under the California Environmental Quality Act (CEQA). Transportation related CEQA impacts were evaluated based on the methodologies and thresholds outlined in the *City of San Marcos Transportation Impact Analysis Guidelines (TIAG), November 16, 2020*.

Proposed Project

The Proposed Project will replace 63,484 square feet (SF) of existing restaurant uses with 202 multi-family dwelling units,10,400 SF of commercial retail uses, and a 1.1 acre park. The Proposed Project is located on the northwest corner of the West San Marcos Boulevard / Via Vera Cruz intersection, and will have four access points, two located on West San Marcos Boulevard (the existing western and eastern Restaurant Row driveways) and two others located on Via Vera Cruz (the existing northern and southern Restaurant Row driveways). Figure 1 displays the Proposed Project's location, while Figure 2 displays the Proposed Project site plan.

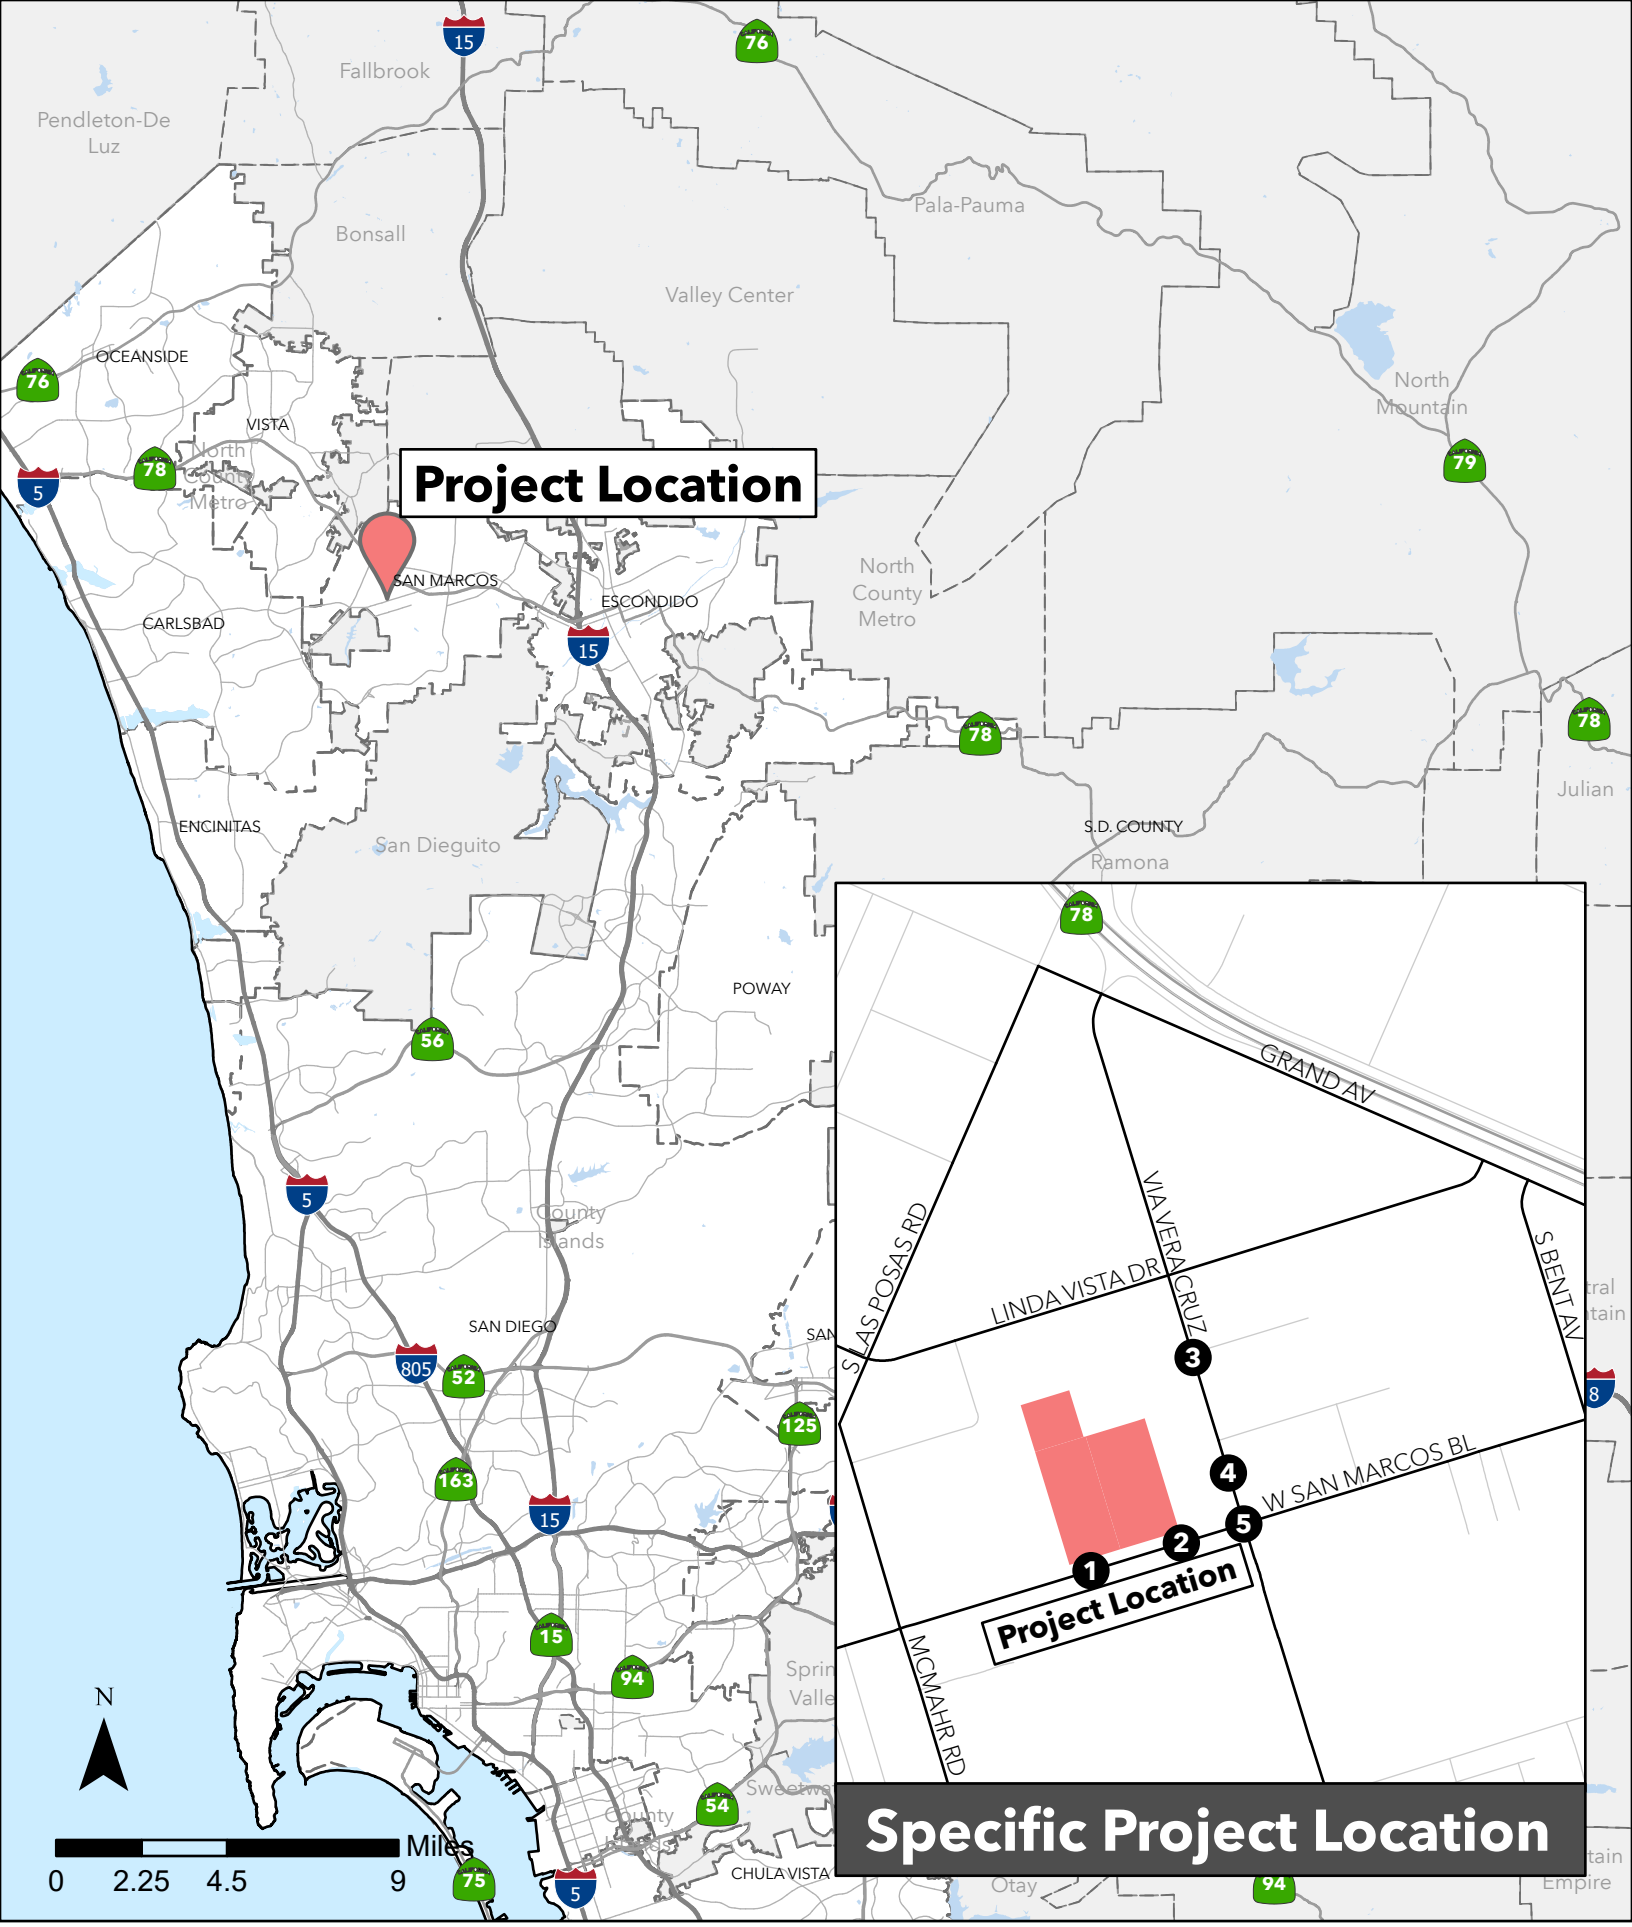
Table 1 displays the anticipated trip generation for the Proposed Project, as well as the trip credits that would be associated with the removal of the existing resultant uses. Trip Generation rates were derived from the *SANDAG (Not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002*.

Table 1: Proposed Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM				PM			
				%	Trips	In	Out	%	Trips	In	Out
Multi-Family Units	202 DU	6/DU	1,212	8%	97	19	78	9%	110	77	33
Strip Commercial	10,400 SF	40/KSF	416	3%	13	8	5	9%	38	19	19
City Park	1.1 Acres	50/Acres	55	13%	9	5	4	9%	6	3	3
		Project Total	1,683		118	31	87		153	99	54
Existing Uses											
Restaurant (Quality)	-63,484 SF	100/KSF	-6,348[1]	1%	-64	-38	-26	8%	-508	-356	-152
		Net Change	-4,665		54	-7	61		-355	-257	-98

Note

[1]Driveway counts were conducted at the Proposed Project site on September 16, 2021, when some of the restaurant facilities were till operational. Driveway count worksheets and summary tables are provided in Attachment 1. The driveway counts show that the existing uses generate 2,179 daily trips.



Old California Restaurant Row

Figure 1
Project Location

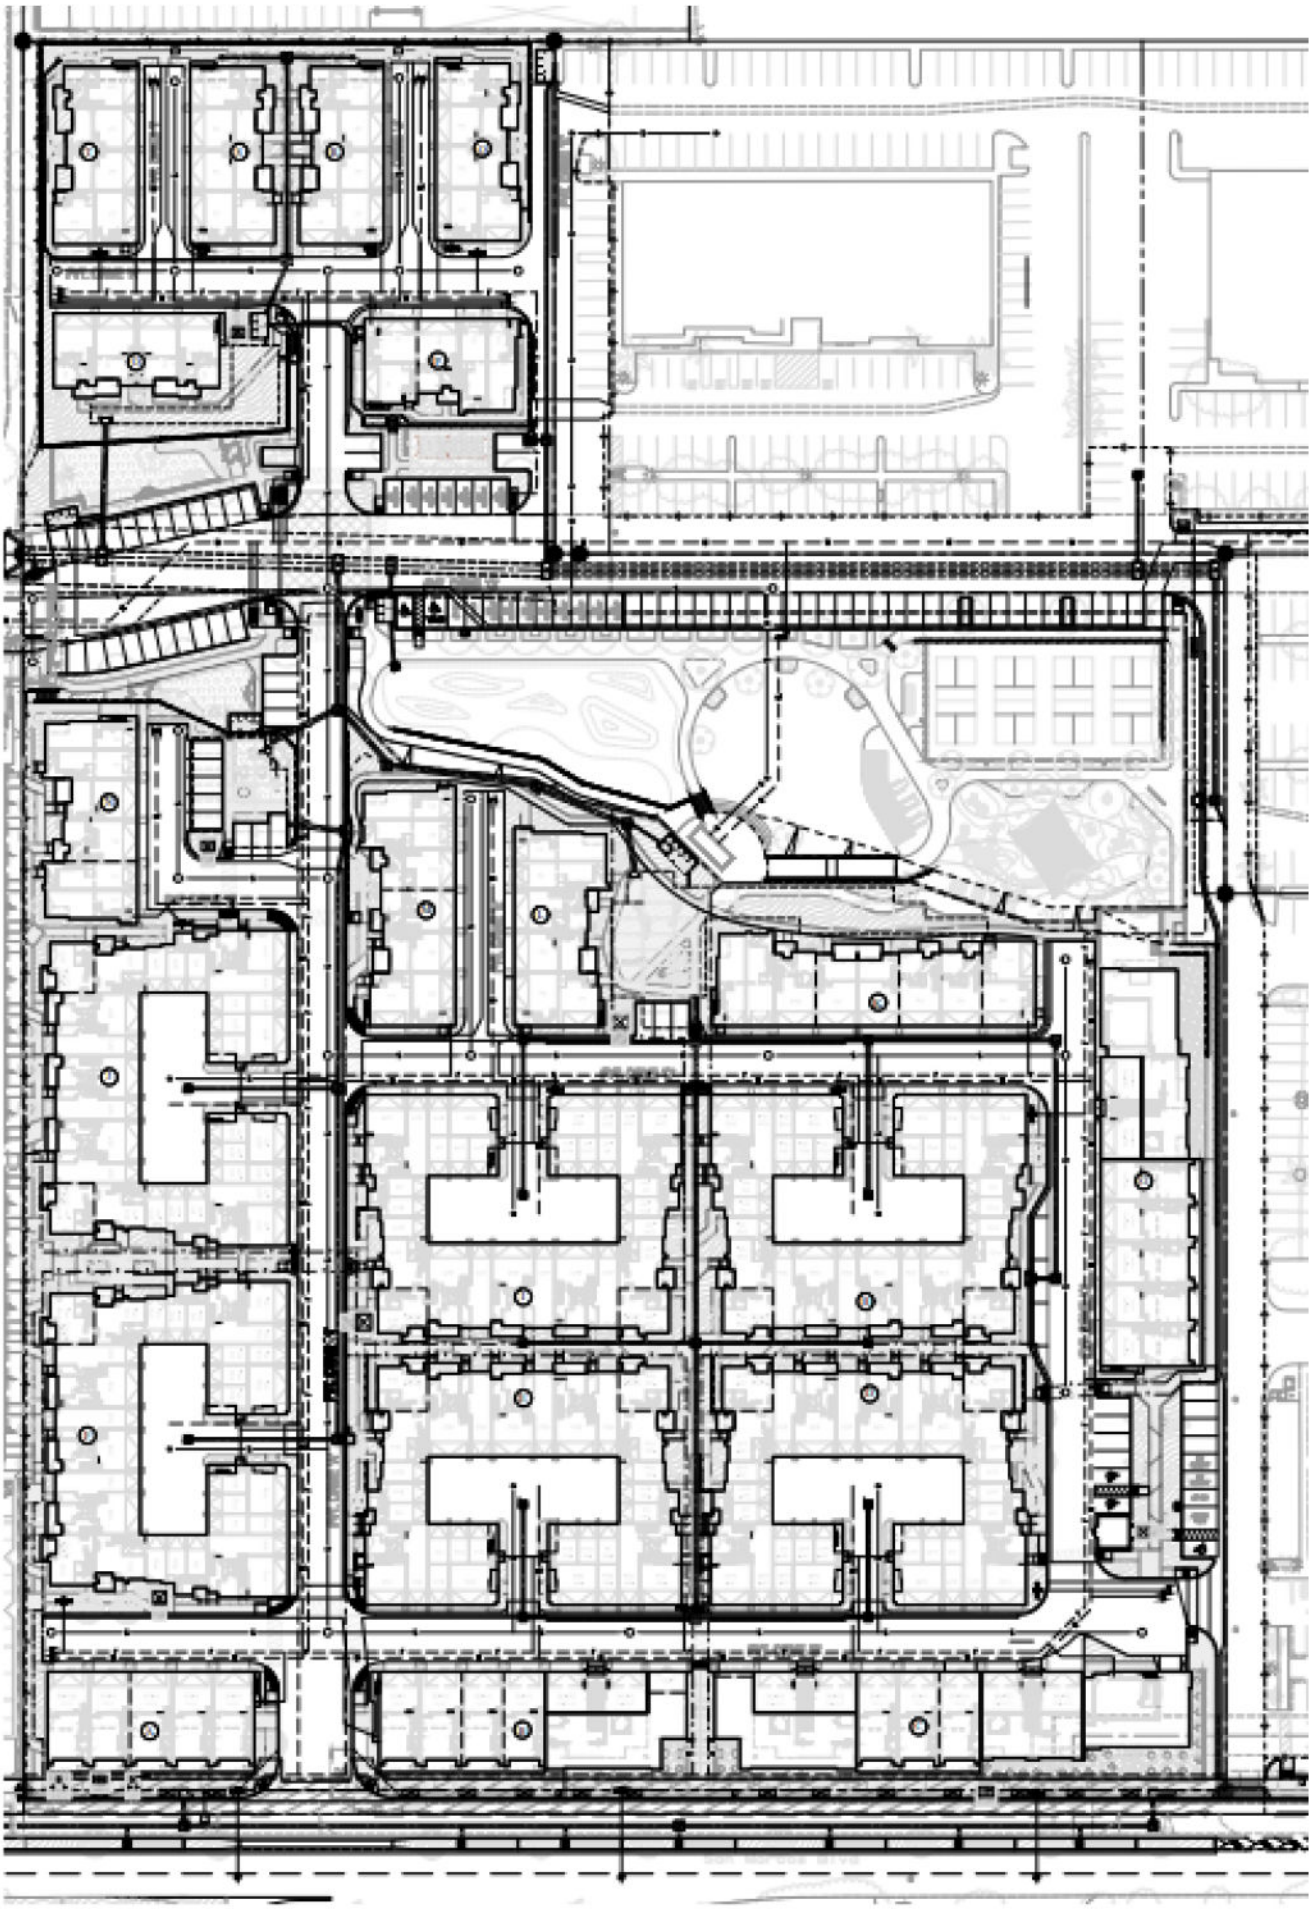


Figure 2
Project Site Plan

As shown in Table 1, implementation of the Proposed Project is anticipated to result in a net decrease of 4,665 daily trips, a net increase of 54 AM peak hour trips, and a net decrease of 355 PM peak hour trips.

VMT Impact Analysis

Section 2.1.3 of the City's TIAG, identifies the impact thresholds that should be applied to the different types of land development projects within the City. Since the Proposed Project will be replacing existing land uses, it is considered a redevelopment project; therefore, the following impact threshold was applied to identify VMT related impacts:

Redevelopment Projects

> *Redevelopment Projects (Replaces Existing Uses)* – As noted in Section 2.1.3.2 of the TIAG, per CEQA, a redevelopment project that replaces existing uses and results in a net decrease in VMT can be presumed to have a less-than-significant transportation impact and would not require a detailed VMT analysis; a redevelopment project that replaces existing uses and results in a net increase in VMT will require a VMT analysis. This should be calculated by estimating the total VMT for the previous and proposed land uses using SANDAG trip generation rates and citywide average trip lengths from the California Household Travel Survey (CHTS). If a project replaces existing uses and the project leads to a net overall increase in VMT compared to the previous uses, then the appropriate metrics and thresholds should be applied to each proposed use. If the project is a mixed-use project, then internalization should be considered when estimating its total VMT and each component's trip generation should be multiplied by its respective trip length; if the project results in a net increase in VMT, then each individual use should be analyzed under its respective threshold. In addition, the proposed land uses should be analyzed without incorporating a credit or reduction for the displacement of existing land uses at the project site.

Table 2 calculates the VMT the Proposed Project is anticipated to generate and compares it to the VMT generated by the current uses on the project site. This comparison reflects the net change in VMT on the project site.

Table 2: Change in VMT with the Proposed Project

Land Use	Amount	Rate[1]	ADT	Trip Length (Miles)[2]	VMT
Multi-Family Residential	202 DUs	6 Trips/DU	1,212	6.39	7,745
Strip Retail	10,400 SF	40 Trips/KSF	416	5.39	2,242
Park	1.1 Acres	50 Trips/Acre	55	7.63	420
		Total	1,683		10,407
Existing Uses					
Restaurant (Quality)	63,484 SF	100 Trips/KSF	6,348	5.39	34,216
		Net Change	-4,665		-23,809

Notes:
[1]Source: SANDAG (Not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002
[2]Source: California Household Travel Survey, as outlined in the City' s TIAG.

Mobility Improvements

As part of the San Marcos Boulevard Multi-Way Complete Streets project, the Proposed Project will implement a continuous center median along the project frontage on West San Marcos Boulevard. This will eliminate the left-turn ingress and egress movements at the western project driveway. The Proposed Project will also move the existing northern curb line along West San Marcos Boulevard approximately 16 feet into the project site to accommodate the proposed multi-way roadway improvements. It should be noted that the proposed curbline adjustment will be to accommodate safety and multi-modal improvements and will be non-vehicular capacity enhancing. Finally, the Proposed Project will implement a raised curb along its frontage on West San Marcos Boulevard, which will separate the multi-way facility from the through travel lanes on San Marcos Boulevard.

As part of the Multi-Way improvements, the Proposed Project will reconstruct the existing sidewalk along its frontage. The new sidewalk will be constructed to City of San Marcos standards and will be compliant with American Disabilities Act (ADA) regulations. The Proposed Project will also maintain the existing Class II bike lane along San Marcos Boulevard. Based on the final Multi-Way design, the existing San Marcos Blvd & Via Vera Cruz bus stop, located on the northwest corner of the West San Marcos Boulevard / Via Vera Cruz intersection, may need to be moved slightly to the west. However; this change, if necessary, will not substantially change the bus stop spacing along the route and will have minimum to no impact on the route's operations. The amenities at the bus stop will be replaced in kind to current conditions, if the stop is moved.

Conclusion

As shown in Table 2, the Proposed Project is projected to generate 23,809 miles of travel less than the existing Restaurant Row uses. Therefore, as per Section 2.1.3.2 of the City's TIAG, the implementation of the Proposed Project would result in a less than significant transportation related impact.

Sincerely

Stephen Cook
Steve@IntersectingMetrics.com

Attachment 1

Driveway Counts

San Marcos Restaurant Row – Driveway County Summary

Driveway	ADT	AM		PM	
		In	Out	In	Out
Western Driveway - West San Marcos Boulevard	802	41	11	50	26
Eastern Driveway - West San Marcos Boulevard	952	24	12	60	25
Northern Driveway - Via Vera Cruz	958	40	15	39	53
Mid Driveway - Via Vera Cruz	412	5	1	44	16
Southern Driveway - Via Vera Cruz	1,803	31	26	85	59
Total	4,927	141	65	278	179

San Marcos Restaurant Row - Removed Trip Generation

Driveway[1]	ADT	AM		PM	
		In	Out	In	Out
Western Driveway - West San Marcos Boulevard	802	41	11	50	26
Eastern Driveway - West San Marcos Boulevard[2]	476	12	6	30	12
Southern Driveway - Via Vera Cruz[1]	901	15	13	42	29
Total	2,179	68	30	122	67

Notes:
[1]To be conservative, traffic from the Northern Via Vera Cruz and Mid Via Vera Cruz driveways were not assumed to be associated with the existing resultant uses that will be removed from the Proposed Project.
[2]To be conservative, it is assumed that only half of these driveway volumes are associated with the resultant uses that will be removed with the Proposed Project. As shown below over 70% of the existing uses on site ill be removed with the proposed project.

Existing Uses on the Project Site:

- 63,484 SF of Restaurant (to be removed)
- 18,246 SF of Restaurant (to be maintained)
- 7,650 SF of Bank (to be maintained)

Appendix K
Water and Sewer Study

VALLECITOS WATER DISTRICT

RESTAURANT ROW MIXED-USE WATER AND SEWER STUDY

WORK ORDER # 263272

FINAL TECHNICAL MEMORANDUM
January 17, 2023

Prepared By: Elizabeth Lopez, Development Services Senior Engineer and Lisa Whitesell, Engineering Technician III

INTRODUCTION

The proposed Restaurant Row Mixed-Use project (Project) is a mixed-use development on 10.52-acres, with 202 dwelling units and 10,400 square feet of commercial space and community park. The Project is located on San Marcos Blvd. between Las Posas Road and Via Vera Cruz (APN 219-200-30, 31 & 45).

The Project is located within VWD's boundaries for water and wastewater service. The property does not need to annex, both water and wastewater services can be provided by the Vallecitos Water District (VWD).

All new projects undergo evaluation by VWD to determine if the current water and sewer infrastructure is sufficient to accommodate the proposed water demands and sewage generation.

This study projects water demand and sewage generation increases due to the project densification. It analyzes the following aspects of VWD's infrastructure and makes recommendations for capital improvements for impacts that are created due to the land use change:

- Water distribution system, including the need to upsize pipelines, install new pipelines, or install flow control facilities.
- Water storage, including the need for additional storage and the adequacy of existing storage tanks and reservoirs to serve the proposed development.
- Water pump stations, including the need to install new pump stations or upsize existing pump stations to serve the proposed development.
- Wastewater collection system, including the need to upsize pipelines and manholes, or the need to install new pipelines and manholes.
- Wastewater lift stations, including the need to install new lift stations or upsize existing lift stations to serve the proposed development.
- Wastewater land outfall, including the need to construct a parallel land outfall to serve this and other proposed developments.

- Wastewater treatment facilities, including the need for obtaining additional capacity at the Encina Water Pollution Control Facility (EWPCF) or for expanding the Meadowlark Water Reclamation Facility (MRF).
- Existing VWD water and/or sewer facilities not being utilized for proposed development will need to be abandoned per VWD Standards and Specifications. Asbestos cement pipe shall be properly removed and legally disposed of by the Developer.

WATER SYSTEM ANALYSIS

The proposed 10.52-acre Project lies completely within VWD's 855 Pressure Zone. Figures 1 and 2 show the development's location in relation to pressure zone boundaries, identify pipelines within the vicinity of the development, and identify storage reservoirs that supply the development area.

Water Demand Projections

The City of San Marcos approved land use designation for the proposed Project is Mixed-Use 1 and Light Industrial. The 2018 Master Plan based its ultimate water demand planning on Commercial & Office Space. Table 1 provides the average water demand generated both under the density planned for the 2018 Master Plan and with the proposed Project. The table shows that Restaurant Row Mixed-Use will increase the projected average water demand from the 2018 Master Plan land use by **40,860** gallons per day.

Table 1 – Project Estimated Water Demands for Restaurant Row Mixed-Use

Land Use Type	Area (acres)	Residential Units	Duty Factor (gpd/ac)	Water Demand (gpd)
2018 Master Plan Land Use Demand				
Commercial	8.89		1,500	13,335
Office Space	1.63		1,500	2,445
Total	**10.52**			**15,780**
Proposed Project Demand				
Residential 20-30 du/ac	9.08	202	6,000	54,480
Commercial	0.24		1,500	360
Park	1.20		1,500	1,800
Total	**10.52**			**56,640**
Water Demand Increase				**40,860**

Water Distribution System Analysis

The 2018 Master Plan water system distribution and pressure criteria are as follows:

Water Distribution Infrastructure Criteria

The water service pressure criteria to be met by this development are as follows:

- Minimum allowable pressure at peak hour demand: 40 psi
- Minimum allowable pressure at max day plus fire demand: 20 psi
- Maximum allowable pressure: 150 psi

The City of San Marcos Fire Marshall has set the required fire demand at 1,940 gpm for the Project.

To avoid excessive velocity and headloss within the distribution system, the following pipeline design criteria was also utilized:

- Maximum allowable velocity: 7 feet per second
- Maximum allowable headloss gradient: 15 feet per 1,000 feet
- Hazen-Williams C-factor: 130

Water Model Scenarios

The following scenarios were modeled to identify system impacts that may be created by the proposed water demands, and to recommend any improvements required to provide service to the Project:

- Average Day Demand with existing demands at the Project site
- Average Day Demand with the proposed Project
- Maximum Day Demand with existing demands at the Project site
- Maximum Day Demand with the proposed Project
- Peak Hour Demand with existing demands at the Project site
- Peak Hour Demand with the proposed Project
- Maximum Day Demand plus Fire Flow with existing demands at the Project site
- Maximum Day Demand plus Fire Flow with the proposed Project

Per the 2018 Master Plan, maximum day demands for this project are 300% those of average day demands, and peak hour demands are 620% those of average day demands.

Water Model Results

Modeling focused on the infrastructure in the direct vicinity of the Project. An existing 6-inch water main and existing 14-inch water main are in San Marcos Boulevard along the Project frontage. There is also an existing 12-inch water main along the Alley Way on the north end of the property within the Vallecitos easement, as well as an existing 8-inch water main in the Alley Way that connects to Via Vera Cruz. Both the 14-inch and 12-inch water mains are in the 920-pressure zone and are not available for new service connections. Both mains are transmission lines. This study analyzed two options for water service to the Project.

Option 1 assumes that all water services to the site will be connected to the 6-inch water main in San Marcos Boulevard as shown in Figure 2. The model found that the Project did not create any distribution system deficiencies under average day demand but did under maximum day plus fire flow demand conditions as shown in Table 2 below. This would require upsizing the existing 6-inch main in San Marcos Boulevard to 10-inch main and all meter locations and backflows to be designed and installed per District Standards.

Table 2 – Option 1– Potable Water Pipeline Results under Maximum Day Demand plus Fire Flow Conditions

Pipe ID Number	Length (ft)	Existing Pipe Diameter (in)	Velocity under Average Day Demand (ft/s)	Velocity under Maximum Day + Fire Flow (ft/s) (Ex. Pipe Diameter)	Upsized Pipe Diameter (in)	Velocity under Maximum Day + Fire Flow w/ Upsized Pipe Diameter (ft/s)
RR-1	530	6	0.53	**12.62**	**10**	4.96
RR-2	456	6	0.53	**11.48**	**10**	4.55
RR-3	944	6	0.53	**7.59**	**10**	4.06

Option 2 assumes that all water services to the site will be connected to a new 10-inch water main installed north of the project site in Alley Way and upsize existing facilities to 10-inch as shown in Figure 2. The model found that the Project did not create any distribution system deficiencies under average day demand but did under maximum day plus fire flow demand conditions as shown in Table 3 below.

Table 3 – Option 2– Potable Water Pipeline Results under Maximum Day Demand plus Fire Flow Conditions

Pipe ID Number	Length (ft)	Proposed & Ex. Pipe Diameter (in)	Velocity under Average Day Demand (ft/s)	Velocity under Maximum Day + Fire Flow (ft/s) (Ex. Pipe Diameter)	Upsized Pipe Diameter (in)	Velocity under Maximum Day + Fire Flow w/ Upsized Pipe (ft/s)
RR-1A	652	10	0.33	4.72	-	-
RR-2A	272	10	0.43	4.72	-	-
RR-3A	264	10	0.46	4.08	-	-
RR-4A	714	Ex. 8	0.65	7.74	10	5.97

Water Storage Analysis

The 2018 Master Plan outlines VWD's potable water storage reservoirs for each pressure zone as follows:

> 1.5 times ADD (operational storage) + 3.0 times ADD (emergency storage) + fire flow demand = 4.5 times ADD + fire flow demand
>
> OR
>
> 5.0 times ADD, whichever is greater.

The Project is located entirely within the VWD 855 pressure zone. Water storage for this zone is located within the 920 zone and 1028 Twin Oaks pressure zones, as shown in Figure 1. Table 4 shows the required storage in the 855, 920, and 1028 Twin Oaks pressure zones for existing and ultimate build-out (Master Plan) conditions relative to the existing storage provided within each zone.

Table 4 – Existing Reservoir Storage Capacity and Requirements

Pressure Zone	Existing ADD (MGD)	Existing Storage Requirement (MG)	Ultimate ADD (MGD)	Ultimate Storage Requirement (MG)	Existing Storage Available (MG)
855	3.74	50.05	6.79	101.25	0
920	5.61		10.40		18
1028 Twin Oaks	0.66		3.06		73
Totals	10.01	**50.05**	20.25	**101.25**	**91**

The Project will increase the projected average water demand by approximately 40,860 gallons per day as shown in Table 1.

The amount of additional reservoir storage required is 500% of the development's average day demand or:

40,860 gallons * 500% = 204,300 gallons

The analysis finds that water storage capacity is currently available to serve the Project's increased storage requirements. Master Plan projects address and accommodate the ultimate build-out storage deficiency and Water Capital Facility Fees paid by this project will be used for the increase in storage necessitated by the Project's demand calculated above.

Water Pump Station Analysis

Since the proposed Project is located in a pressure zone that is not served by pumping, there are no impacts to existing or proposed pump stations by this Project.

WASTEWATER SYSTEM ANALYSIS

The proposed 10.52-acre Project lies completely within VWD sewer shed 30C. Figures 3 and 4 shows the development's location in relation to sewer shed boundaries, identify wastewater infrastructure within the vicinity of the development, and identify the downstream collection infrastructure that will be impacted by the development.

Wastewater Flow Projections

The City of San Marcos' approved land use designation for the proposed Project is Mixed-Use 1 and Light Industrial. The 2018 Master Plan based its ultimate wastewater generation planning on Commercial and Office Space. Table 5 provides the average wastewater flow generated both under the density planned for the 2018 Master Plan and with the proposed Project. The table shows that the Restaurant Row Mixed-Use project will increase the projected average wastewater generation from the 2018 Master Plan land use by **28,824** gallons per day.

Table 5 – Project Estimated Wastewater Flows for Restaurant Row Mixed-Use

Land Use Type	Area (acres)	Residential Units	Duty Factor (gpd/ac)	Wastewater Flow (gpd)
2018 Master Plan Land Use Flows				
Commercial	**8.89**		1,200	10,668
Office Space	**1.63**		1,200	1,956
Total	**10.52**			**12,624**
Proposed Project Demand				
Residential 20-30 du/ac	9.08	202	4,500	40,860
Commercial	0.24		1,200	288
Park	1.20		250	300
Total	**10.52**			**41,448**
Sewer Generation Increase				**28,824**

Wastewater Collection System Analysis

The 2018 Master Plan outlines VWD's wastewater system design criteria which are as follows:

Wastewater Collection Infrastructure Criteria

The wastewater pipeline criteria to be met both within and downstream of the development are as follows:

- Pipes 12 inches in diameter and smaller: ½ full maximum at peak flow
- Pipes over 12 inches in diameter: ¾ full maximum at peak flow
- Minimum velocity: 2 feet per second
- Maximum velocity: 10 feet per second
- Manning's n for gravity pipes: .013
- Hazen-Williams C-factor for force mains/siphons: 120
- Slope for pipes 8 inches in diameter and smaller: 0.4% minimum
- Slope for pipes over 8 inches in diameter: to be determined by VWD

When flow depth in gravity pipes exceeds maximum levels as stated above, a pipe upsize will be specified.

Wastewater Model Scenarios

The following scenarios were modeled to identify system impacts that may be created by the proposed sewer generation, and to recommend any improvements required to provide service to the Project:

- Average Dry Weather Flow with existing flows at the Project site
- Average Dry Weather Flow with the proposed Project
- Peak Dry Weather Flow with existing flows at the Project site
- Peak Dry Weather Flow with the proposed Project
- Peak Wet Weather Flow with existing flows at the Project site
- Peak Wet Weather Flow with the proposed Project

The peak dry weather curve is:

$$\text{Peak Dry Weather Factor} = 2.16 \times (\text{Average Dry Weather Flow Rate})^{-0.1618}$$

The wet weather peak curve is:

$$\text{Peak Wet Weather Factor} = 2.78 \times (\text{Average Dry Weather Flow Rate})^{-0.087}$$

Wastewater Model Results

Modeling focused not only on the sewer collection infrastructure in the direct vicinity of the Project, but also on all downstream infrastructure from the development to Lift Station No. 1 on San Marcos Boulevard that would be impacted by the Project flows (see Figures 3 through 4).

Table 6 presents a summary of the modeling results from this analysis. The modeling results showed that no deficiencies were identified under the currently approved density under peak wet weather flows during ultimate build-out conditions.

Due to the extensive upgrades required to provide service to the project from facilities located in San Marcos Boulevard and the District's desire to remove flows from the already burdened sewer facilities, the District's preference is to extend future sewer facilities on the north end of the project property in the Alley Way within the Vallecitos easement.

PROPOSED DENSITY: **81** **GPM**

Wastewater Lift Station Analysis

Lift stations are sized for peak wet weather flow with manufacturer's recommended cycling times for pumping equipment. Since the proposed Project is not located in a sewer shed that is served by a lift station, there are no lift station upgrade requirements for this project.

Parallel Land Outfall Analysis

VWD's existing land outfall is shown in Figure 5. The outfall is approximately 8 miles in length and consists of 4 gravity pipeline sections and 3 siphon sections varying in diameter from 20 inches to 54 inches. VWD maintains the entire pipeline from Lift Station No. 1 to the Encina Water Pollution Control Facility (EWPCF). From Lift Station No. 1 to El Camino Real, VWD is the sole user of this pipeline. From El Camino Real to the EWPCF, the ownership capacity is as shown in Table 7 below:

Table 7 – Land Outfall Capacity Ownership by Agency

Agency	Ownership Percentage	Capacity (MGD)
Carlsbad	23.98%	5.00
Vista	17.99%	3.75
VWD	58.03%	12.10
Totals	**100.00%**	**20.85**

The Meadowlark Water Reclamation Facility (MRF) has a capacity of 5.0 MGD with a peak wet weather capacity of 8.0 MGD. Therefore, VWD has a combined peak wet weather wastewater collection capacity of 20.10 MGD (12.10 MGD + 8.0 MGD).

VWD's 2014 average daily wastewater flow through the land outfall was 7.5 MGD. This corresponds to a peak wet weather flow of 17.5 MGD, which falls within VWD's combined peak wet weather collection capacity.

The 2018 Master Plan estimated that, under approved land uses, VWD has an ultimate build-out average dry weather flow of 14.4 MGD. This corresponds to a peak wet weather flow of 31.7 MGD, which exceeds VWD's combined peak wet weather collection capacity. To accommodate additional wastewater flows from planned development, the 2018 Master Plan recommended conveyance of peak flows to the EWPCF through a parallel land outfall.

The Project proposes to generate **28,824** gallons per day of additional average wastewater flow that was not accounted for in the Land Outfall's capacity studied in the 2018 Master Plan.

The analysis finds that outfall capacity is currently available to serve the Project's proposed wastewater generation. Wastewater Capital Facility Fees paid by this Project will be used toward design and construction of a parallel land outfall to be sized to accommodate ultimate build-out wastewater flows.

Wastewater Treatment Facility Analysis

VWD utilizes two wastewater treatment facilities to treat wastewater collected within its sewer service area.

- The Meadowlark Reclamation Facility (MRF) has liquids treatment capacity of up to 5.0 MGD with a peak wet weather capacity of 8.0 MGD. MRF does not have solids treatment capacity, and therefore all solids are treated at the Encina Water Pollution Control Facility (EWPCF).
- The EWPCF is located in the City of Carlsbad. This is a regional facility with treatment capacity of up to 40.51 MGD. VWD's current ownership capacity is noted below.

Solids Treatment Capacity
VWD currently owns 10.47 MGD of solids treatment capacity at EWPCF. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate solids treatment capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in a projected solids treatment capacity deficiency of 3.93 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the solid treatment capacity wastewater flow.

Liquids Treatment Capacity
VWD currently owns 7.67 MGD of liquids treatment capacity at the EWPCF in addition to the liquid's treatment capacity of 5.0 MGD at MRF for a total of 12.67 MGD of liquids treatment capacity. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate liquids treatment capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in a projected liquids treatment capacity deficiency of 1.73 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the ultimate average wastewater flow.

Ocean Disposal Capacity
VWD currently owns 10.47 MGD of ocean disposal capacity at the EWPCF. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate ocean disposal capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in an ocean disposal deficiency of 3.93 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the ocean disposal wastewater flow.

The District has determined that adequate wastewater treatment and disposal capacity exists for the proposed Project at this time subject to the qualifications referenced in the Conclusions and Conditions.

CONCLUSION AND CONDITIONS

The proposed Restaurant Row Mixed-Use Project is expected to increase average daily water demands by 40,860 gallons per day and wastewater flows by 28,824 gallons per day over the ultimate flows projected in the 2018 Master Plan.

The study concludes that the proposed development will result in the following impacts:

- An increase of 40,860 gallons per day in water demand for proposed project.
- An increase of 204,300 gallons of potable water storage requirement.
- An increase of 28,824 gallons per day in solids handling, liquids handling and ocean disposal capacity requirements at Encina Water Pollution Control Facility.
- An increase of 28,824 gallons per day in the parallel land outfall's capacity requirement.

The following items are required for providing service to the proposed Project:

- Construct approx. 1,541 feet of 8-inch PVC sewer main into the project site in the Alley Way (RR-1 through RR-5).
- Construct approx. 1,188 feet of new 10-inch PVC water main into the project site (Option 2: RR-1A through RR-3A) and replace approx. 714 feet of existing 8-inch ACP water main with new 10-inch PVC water main in the Alley Way (RR-4A). Or connect to San Marcos Boulevard, by replacing existing 6-inch water main and upsizing approx. 1,930 feet to 10-inch water main (Option 1: RR-1 through RR-3).
- Payment of all applicable Water and Wastewater Capital Facility Fees in affect at the time service is committed in accordance with District rules and regulations.
- Construction and Board acceptance of all on-site and off-site water and sewer facilities prior to service.

The District currently has water and sewer capacity available to serve the Project as proposed with the conditions herein addressed by the Developer. However, the ability to provide water and sewer service in the future depends upon ultimate build-out of the Project and could change depending upon the timing of the build-out, as well as build-outs of other development projects, continued reliable water supplies from the San Diego County Water Authority, the District's treatment capacity at the EWPCF and other factors affecting growth in the District which may change over time.

This Study is based on the current adopted land use utilized in VWD's 2018 Master Plan. The study addresses the incremental facility impacts of this Project only and does not include or consider any additional projects within VWD's service area that have deviated from adopted Master Plan land uses. Any land use changes upstream and/or downstream of the Study area may necessitate a revision of any onsite and offsite studies. VWD shall determine if and when revisions to the Study are necessary. Costs for revising this Study shall be borne by the Developer. The results of this study are not the accepted conditions for the development, final conditions shall be part of the construction agreement process or issued separately by the District.

FIRE RESPONSE TECHNICAL MEMORANDUM

To:	
From:	Dudek Fire Protection Planning Team, Michael Huff, Principal
Subject:	San Marcos Restaurant Row Fire and Medical Response Analysis
Date:	July 7, 2023
cc:	N/A
Attachment(s):	1. San Marcos Fire Department Fire Station 1 Modeled Response Time 2. San Marcos Fire Department Fire Station 2 Modeled Response Time

The following technical memorandum provides a summary of Dudek's fire service response analysis for the San Marcos Restaurant Row Project (Project) in San Marcos, California. This letter provides a preliminary summary of the existing San Marcos Fire Department's (SMFD) nearby resources, their modeled travel time responses into the Project, and their existing call volumes. The goal is to determine the potential impact of the Project on the SMFD.

1 Assignment

Dudek's assignment was to:

- Conduct evaluation of existing, nearby SMFD fire station travel times to the project site;
- Acquire existing call volumes for nearby stations to determine their current work load;
- Analyze generated information to determine if any of the Project site cannot be reached within the City's response time goal; and
- Analyze call volume information to determine if the Project's projected call load would significantly impact the ability of existing stations to provide response to the Project.

2 Project Description

The proposed Project is the development of a vacant 10.5-acre site located west of the intersection of W. San Marcos Boulevard and Via Vera Cruz in the western central region of the City of San Marcos, California (Figure 1, Project Location). The approximately 10.5-acre project site is located at the northwest corner of West San Marcos Boulevard and Via Vera Cruz in the City of San Marcos (1020 West San Marcos Boulevard; APNs 219-200-45-00, 219-200-31-00, and 219-200-30-00). The property is zoned Mixed-Use 1 (MU-1) on two parcels, and Light Industrial (L-1) on one parcel.

The project would include development of 202 residential units and 10,400 sf of commercial retail uses on the 10.5-acre site. Open space amenities would be located in the northeastern portion of the project site, and commercial uses would be placed along the southern and eastern project boundaries. A total of 501 parking spaces would be provided. Primary project access would be via West San Marcos Boulevard at the project's southern boundary.

The Project is located within the jurisdiction of the SMFD. The fire department provides structural fire protection and advanced life support-level emergency medical services within the City limits; unincorporated territory adjacent to the city's northern boundary (Project Area); discontinuous, unincorporated areas between the City of San Marcos and the City of Escondido; and the community of Lake San Marcos. The fire department operates two Fire Stations (Stations 1 and 2) that would respond to an incident at the proposed Project site, with primary response likely from Station 1 given its closer location and greater coverage in a faster timeframe. Station 2 would respond as necessary and also provides fast response to all units. Table 1 presents a summary of the location, equipment, and staffing levels for the two SMFD stations responding to the site.

Table 1
SMFD Responding Fire Stations Summary

Fire Station	Location	Equipment	Staffing
Station 1	180 W. Mission Road San Marcos, California 92069	Paramedic Engine Co. Paramedic Truck Co. Wildland Fire Engine Paramedic Ambulance Battalion Chief Vehicle	On duty: 9
Station 2	1250 S. Rancho Santa Fe Rd San Marcos, California 92069	Paramedic Engine Co. Paramedic Ambulance	On-duty: 5

3 Methods

3.1 Travel Time Response Modeling

Dudek conducted a GIS-based travel time coverage modeling effort in order to determine if the project meets the SMFD's response goal. The SMFD indicates "the average initial total response standard in the City of San Marcos is to arrive within seven minutes for 90% of the emergency calls received, and within 10 minutes for 90% of the non-emergency calls received[1]."

[1] 2021 Call volume, response standard, and fire station statistics provided by Jason Nailon, SMFD Fire Marshal, via e-mail communication. 2021

Travel time is one part of the overall response time and is based largely on the distance from the fire station to the project. The analysis that follows evaluates travel time and assumes the dispatch and turnout times as a constant i.e., 2 minutes and 30 seconds, total.

3.2 GIS Response Travel Time Modeling

Following compilation of all necessary data layers received from project applicant and acquired via publicly available sources, Dudek verified that all data layers were in the correct State Plane Zone coordinate system with units in feet. A network data set was then created utilizing ESRI's Network Analyst extension in the Arc Catalog module. The data set was created by merging the existing centerline street layer with the proposed San Marcos Restaurant Row Project centerline street data, provided by project applicants, and assigning parameters to the created data set. Several parameters are available during the creation of a network data set and include elevation constraints, U-turn capabilities, curb approach direction and travel impedance.

Due to the emergency nature of the response scenarios modeled in this analysis, U-turns were permitted on every road. Curb approach determines on which side of the street the vehicle needs to approach and includes three options, left, right, or either. The 'either' option was selected for all roads in this analysis based on the emergency nature of the response situations. Finally, travel impedance was utilized to include the effect of speed limits on response travel time. A custom impedance value was created for each road segment and was a function of road segment distance (miles) divided by speed (mph). This value was utilized in Network Analyst calculations for both modeling types and reflected the time necessary for a vehicle to cover the distance of the road segment. Speed was set at 35 mph, consistent with National Fire Protection Association (NFPA) 1142 Table C.11(b) and the Insurance Services Office (ISO) travel time formula (T=0.65 +1.7D).

Once the network data set parameters were finalized, the route analysis was run using the Network Analyst extension in ArcGIS 10.2.2. This function determines the best route between a minimum of two points based on the parameters chosen. The analysis includes response from SMFD Fire Stations 1 and 2, which are the closest stations to the Project. A route analysis procedure was then run using Network Analyst with each respective fire station as the starting point, and a remote location within the Project as the destination. The maps depicting each Station travel time coverage area are presented in Attachments 1 and 2.

3.3 Modeling Results

As indicated in Table 2 and Attachments 1 and 2, response to the project site from the closest existing SMFD fire station (Station 1) would arrive at the Project's primary entrance off W. San Marcos Boulevard within 3 minutes, 45 seconds travel time (6 minutes 15 seconds total response time). The most remote units within the Project are reached within 4 minutes 04 seconds travel time, or 6 minutes 34 seconds total response time. This analysis indicates that the entire Project is within the SMFD's internal response timeframes with up to 24 seconds of additional time available. This analysis also indicates that there is redundancy in response capability of meeting the internal response standard. Station 2 can also respond within SMFD's seven minute total response goal to an estimated 100% of the project site. Although slightly further away, Station 2 would have travel times of 3 minutes 50 seconds to 4 minutes 10 seconds and total response times ranging from 6 minutes 20 seconds to 6 minutes 40 seconds.

Table 2
SMFD Fire Station Response Time to Project

Call Response Times	Estimated Percent of San Marcos Restaurant Row Project Achievable			
	Fire Station 1		*Fire Station 2*	
	Travel Time	*Total Response Time*	*Travel Time*	*Total Response Time*
Less than 7 minutes	100%	100%	100%	100%

3.4 Response Time Capability Assessment

The Project includes a substantial number of new residential structures. Service level requirements could, in the absence of fire facilities and resources improvements, cause a decline in the SMFD response times and capabilities for existing residents. However, it is clear that from a response time perspective, the project does comply with the City's total response time standard.

4 Call Volume Analysis

4.1 Estimated Calls and Demand for Service from the Project

The SMFD estimates approximately 11,486 total annual calls (Nailon, J. 2021) and a City population of approximately 95,000 (SMFD 2021). The per capita call volume is roughly .12 for the City of San Marcos. The Project plans for 202 new dwelling units, including 2, 3, and 4 bedroom units. As a conservative approach, this analysis assumes a per dwelling unit population of 4 persons per unit.

A population of 808 persons would generate approximately 97 calls per year, most of which are expected to be medical-related calls, consistent with typical emergency call statistics.

The closest SMFD fire stations, Stations 1 and 2 currently responds to roughly 16 to 18 calls per day (up to 6,570 calls per year) in their primary service areas. These are busy fire stations and adding calls can cumulatively create an impact and result in longer response times or stacked calls requiring assistance from more distant fire stations. It is anticipated that the Project's contributions, along with other projects' contributions to fire service and availability fees through property taxes and/or other avenues provide funding needed to augment service capabilities such that an impact is not experienced. Despite the current busy call load, an addition of 97 calls per year, or 1 call every 3.5 days, is not expected to significantly impact service level requirements given the measures that can be implemented by SMFD with provided ongoing funding from new development.

5 Discussion and findings

5.1 Emergency Response

As presented, both Stations 1 and 2 are well-within the City's time response goal for first-in fire engine and medic ambulance to the entire Project site.

5.2 Call Volume/Load

The Project would generate emergency calls, primarily medical, proportionally with its population. At build out, there may be as many as 97 calls per year generated by the on-site population. The addition of one call per 3.5 days or 0.28 calls per day to a station that is currently running approximately 17 to 18 calls per day is not considered a significant increase. Based on the information provided by SMFD, the Project's additional call volume should not cause a significant stress on the response capabilities. However, SMFD would make the final determination, based on specific fire station call volumes (which were not provided for this analysis), whether the station would incur delayed response times or an increase in call volume that could not be absorbed.

6 Recommendations

The following Recommendation is provided based on the preceding analysis:

It is recommended that SMFD provide emergency response to the proposed Project from Stations 1 and or 2. Factors supporting this recommendation are the absorbable number of calls that would be anticipated as the Project is built and the response time that is within range of local and national standards.

Please feel free to contact me if you have any questions or need any additional information. I look forward to continuing to work with you on this project's fire safety considerations.

1.0 INTRODUCTION

1.1 Purpose

The Restaurant Row Specific Plan (Specific Plan) describes the permitted land uses, regulatory provisions, form-based code requirements, public infrastructure, implementation measures, and policies for the development of approximately 10.5 acres of land located within the City of San Marcos. The Specific Plan sets forth the comprehensive planning framework for the development of a mixed-use community, which includes approximately 202 multi-family residential townhomes and 10,400 square feet (sf) of commercial space located north of San Marcos Boulevard and west of Via Vera Cruz. An approximately 1.1-acre public park will be included onsite and will serve residents of the new development and surrounding community.

Recognizing the many milestones celebrated at the Old California Restaurant Row over the years, the primary goal of this Specific Plan is to create a sense of place and recapture the fun, connection, and celebration people know and love.

1.2 Project Description

The project site is located at 1020 West San Marcos Boulevard (northwest corner of West San Marcos Boulevard and Via Vera Cruz), in the City of San Marcos (APNs 219-200-30,31 and 45), between the former Sears site directly to the west, and three restaurants and bank to the east. The revitalization of these 10.5 acres is envisioned as a vibrant, mixed-use hub that will include 10,400 square feet for updated dining offerings and new retail space, a neighborhood park, and 202 multi-family residential homes linked together by a series of pedestrian paseos.

Residential homes will consist of eight (8) three-bedroom townhomes over commercial (town over commercial); 17 front street townhomes ranging in size from three- to four-bedrooms; 57 Greencourt townhomes ranging in size from two- to four-bedrooms; and 120 Motorcourt townhomes ranging in size from two- to three-bedrooms. Each housing type is described in Section 4.3: Architectural Design Guidelines.

The site will be linked together through a series of landscaped promenades and paseos that not only facilitate pedestrian and bike connectivity but create public spaces for people to congregate. The pedestrian connections will be punctuated with social gathering nodes and opportunities for public art. The north-south connecting paseo will link to the Public Park in the northeast portion of the Specific Planning area. The Park design has been initiated with a public workshop; whereby multiple amenities were explored. Those in attendance voiced a strong interest in facilities such as pickleball, skate plazas, shade structures, and tot-lots amongst other passive uses. A noise attenuation fence was proposed to mitigate sound between the park and the neighboring residential homes and would define each parcel.

Commercial nodes, woven throughout residential and mixed-use buildings, will be located along the southern and eastern project boundaries to encourage walkability and convenient access to onsite commercial uses as well as along West San Marcos Boulevard. The intent of the pending commercial uses is to complement the existing restaurants and create a synergy between the establishments. The commercial nodes along the southern project boundary adjacent to San Marcos Boulevard have the goal of activating street activity by encouraging residents and visitors to shop, eat, linger, and stay along the San

Marcos Boulevard corridor. The commercial nodes along the eastern project boundary offers a connecting space to integrate the park, Western Paseo, and parking, into Restaurant Row.

Primary project access will be via 2 driveways on West San Marcos Boulevard, at the Project's southern boundary. A secondary project access will be on the northern project boundary via the east-west alleyway providing connections to both Via Vera Cruz and Las Posas Rd, respectively. In conformance with the San Marcos Boulevard Complete Street Project, San Marcos Boulevard will be redeveloped incorporating a multi-way that will facilitate multi-modal transportation and improve circulation.

The Project will require the demolition of 63,484 sf of existing (primarily vacant) restaurant uses on-site. However, elements from the Old California Restaurant Row will be preserved and incorporated into the project design to create an "old meets new" aesthetic that celebrates the history of the site.

1.3 Setting

1.3.1 Regional Setting

The Specific Plan Area is centrally located within the City of San Marcos, in northern San Diego County. San Marcos is generally bounded by the Cities of Carlsbad and Vista on the west, unincorporated lands to the north and south, and the City of Escondido to the east. The project is located along West San Marcos Boulevard between Los Posas Road and Via Vera Cruz. Major east-west access through the area is provided by Mission Road, San Marcos Boulevard, and State Route 78 (SR-78). North-south access is provided by Twin Oaks Valley Road and La Moree Road (Refer to Figure 1.1, Regional Location Map).

California State University San Marcos (CSUSM) is located approximately two miles east of the site. The 304-acre campus currently holds a population of around 16,000 students, including undergraduate and graduate degree programs. Founded in 1989, CSUSM is one of 23 campuses within the California State University system. Palomar College, a public community college with a population of about 24,000 students, is approximately a mile north of the site.

Lake San Marcos sits southwest of the site. On the northeastern tip of the lake lies St. Marks Golf Club. The majority of businesses surrounding the site on San Marcos Boulevard are of commercial use, typically auto dependent, and feature large parking lots. One block north, along Linda Vista Drive is a row of large department stores. The setting begins to change from largely commercial to more residential and rural uses as one travels away from the project site along Las Posas Road.

1.3.2 Local Setting

The project site is currently situated on three parcels between the former Sears site directly to the west and three restaurants and bank to the east. The Project will be accessible from San Marcos Boulevard heading west bound and through an access road connected to Via Vera Cruz and Las Posas. On-site, Private Drive "A" heads north-south, connecting the units along San Marcos Boulevard to the public park and northern units. Private Drive "B", Private Drive "E", and Private Drive "J" are east-west streets that connect the eastern border commercial spaces with the surrounding development (Refer to Figure 1.2, Vicinity Map).

Vicinity Map

Restaurant Row

2.2 Authority to Prepare

This Specific Plan provides the basis for the preparation of implementing subdivision and improvement plans and specifies permitted land uses, densities, maximum residential units, and required public facilities as allowed by California Government Code §65450 through §65457.

The Specific Plan will implement the applicable goals and objectives of the San Marcos General Plan. It is anticipated that refinements such as the San Marcos Multi-Way, and changes in housing type or configuration will occur during the development of the subdivisions and/or Site Plans. Such refinements, with approval of the Planning Director, or their designee, will not require amendments to this Specific Plan provided the number of residential dwelling units is not exceeded and the overall character of Restaurant Row complies with the design guidelines included herein. Any matter or issue not specifically covered by this Specific Plan shall be subject to the regulations and procedures of the City of San Marcos Zoning Ordinance. In the case of a conflict between this Specific Plan and the Zoning Ordinance, this Specific Plan shall take precedence. The City of San Marcos will adopt this Specific Plan by ordinance, requiring public hearings by both the Planning Commission and City Council.

2.2 Concurrent Processing

In addition to this Specific Plan (SP22-0004), the Restaurant Row project includes concurrent processing of the following discretionary actions:

A General Plan Amendment (GPA22-0002) to re-designate the site from Light Industrial (LI) and Mixed Use 1 (MU1) to Specific Plan Area (SPA).

A Rezone (R22-0002) to change the zoning designation from Light Industrial (L-I) and Mixed Use 1 (MU-1) to Specific Plan Area (SPA).

A Tentative Subdivision Map (TSM22-0003) to subdivide the land.

A Site Development Plan (SDP22-0006) for the development of the mixed-use project.

A Site Development Plan (SDP23-0004) for the development of the public park.

2.0 PLANNING CONSIDERATIONS

This chapter provides essential background information for the Specific Plan area regarding historic context, land use and zoning, and relevant regulatory documents.

2.1 Historic Context

Old California Restaurant Row has served San Marcos and surrounding County of San Diego residents since 1978. Born from San Marcos' prime central location in North County, the impetus to create a unique and diverse dining destination was conceptualized and developed by Jim and Vera Eubank and family. Originally starting as a fruit stand featuring produce from surrounding farms, the site evolved into the Old California Restaurant Row, which once hosted a movie theatre, market shops, and a diverse outdoor food court where chain and local restaurants thrived.

The Eubanks took inspiration from California history, even bringing in river rock from the Pala Indian Reservation and salvaging 100-year-old lumber and timber beams from vintage buildings. Old California Restaurant Row's architecture follows a mission style and pays homage to California's historic ranchos. Its external materials include aged stucco, clay tile roof, brick, stone, and handmade tiles purchased in Mexico by Jim himself.

San Marcos has undergone a major transformation since the opening of the original Old California Restaurant Row on San Marcos Boulevard. The City has become one of the fastest growing cities in the County. According to the City of San Marcos General Plan, the City has grown from a population of 17,479 in 1980 (State of California Department of Finance, 2022) to approximately 94,926 residents as of 2021 (United States Census Bureau, 2022). In 2012, the area along the northern side of San Marcos Boulevard was zoned Mixed-Use. The vision is to create a vibrant, walkable development that aligns with the site's mixed-use zoning, meets city needs, and honors the original legacy and vision of a place for the community to come together.

2.2 Old California Restaurant Row

Old California Restaurant Row has retained its design theme of reverence for California culture and history, even decades after its formation. Its façade exhibits natural materials used for building in the region such as, clay tile roof, brick, and stone.

The existing signs around Old California Restaurant Row alert and attract drivers along San Marcos Boulevard. The utilization of exposed brick partially covered by crème wood or stucco is a strong indicator of the site's thematic goals. The bold red and white lettering of "Old California" and "Restaurant Row" draws onlooker's eyes to the local restaurant hub.

Above – photos of existing signage at Old Restaurant Row

Old Cal Coffee and San Marcos Brewery Building, the two notable vendors pictured below, are located at the southwest corner of the project site. Their charming atmosphere and décor have contributed greatly to the site's thematic elements making Old Restaurant Row an attractive destination for patrons.

Above – photo of Old Cal Coffee and San Marcos Brewery & Grill

In addition to local staples, chain restaurants (such as IHOP, pictured below) were able to extend their businesses to San Marcos. A diversity of eateries provided to residents and guests in the community, within the parameters of the design of Old California Restaurant, contributed to the goals of the site.

Above – photo of IHOP

The red tile brick in combination with grey stone cladded fences and wood features showcases the inspiration behind Old California Restaurant Row. This grounded, aesthetic approach provided comfort and familiarity to the residents and visitors of San Marcos.

Above – photo of existing buildings at Old California Restaurant Row

2.3 Surrounding Development

Existing uses surrounding the site consist of commercial and retail developments. Development along San Marcos Boulevard is characterized by entertainment retail which offers a variety of neighborhood and regional retail opportunities throughout the area. Four restaurants directly abut the eastern border of the site and share parking. Surrounding uses directly west of the site remain commercial in nature ranging from a movie theater and transitioning to light-industrial uses north of the site. To the south, immediately across San Marcos Boulevard, lies a nursery, a garden store, a vacant strip of land, and retail strip offering a variety of uses ranging from personal services to restaurants. The San Marcos Creek District Specific Plan area is

located south of Restaurant Row, and is envisioned with residential dwelling units, retail and/or commercial space, office space, a park, and urban open space. South and west of Discovery Street, features existing development transitions, primarily to clustered single-family residential development and some institutional uses, including a church and an elementary school.

2.4 Regulatory Environment

Discretionary actions and projects proposed within the Specific Plan area are required to demonstrate consistency with this Specific Plan. The actions processed under this Specific Plan which require consistency prior to approval, and/or adoption by the San Marcos City Council are the General Plan Amendment and Rezone of the project site, a Site Development Permit, and a Tentative Subdivision Map (TSM). Subsequent projects proposed within the Specific Plan area must demonstrate compliance with the Specific Plan's policies, rules, regulations, and design standards.

2.4.1 San Marcos General Plan

The San Marcos General Plan serves as the guiding document for achieving the community vision for the future. The project site is located within the Business/Industrial District. The Specific Plan will continue to attract activity to this center by proposing a myriad of uses that pay homage to the past while brightly looking towards the future. This balance of land uses reinforces the City's desire to create pedestrian friendly, mixed-use neighborhoods where people can live, work, shop, and play.

The project site is located within San Marcos Boulevard, Focus Area 3. This area provides an opportunity for the City to create a desired commercial and mixed-use destination. The community shares the desire for a downtown area that attracts people region wide while also supporting the needs of residents. Redevelopment is intended to complement the character of, and increase connections to, the mixed use-oriented Creek District, to create a cohesive downtown area with a host of destinations that enhance the urban experience for residents and visitors. The project proposes a park that will fulfill the community desire for a neighborhood park along West San Marcos Boulevard between Las Posas Road and Via Vera Cruz.

The City of San Marcos General Plan designates APN 219-200-30 as Light Industrial (LI) while the remaining two parcels of the site (APNs 219-200-31 and -45) are designated MU1 (Mixed Use 1) (Figure 2.1, Existing General Plan Land Use Map). The LI designation permits light manufacturing, processing, assembly, wholesale, office, and research and development laboratories, all within enclosed buildings with limited outdoor storage, in freestanding or campus-style industrial development. Supporting uses, such as office, limited retail, and business services are also allowed. The maximum floor area ratio (FAR) permitted is 0.60. The MU1 designation permits a wide variety of commercial, office, civic, and residential uses integrated as a cohesive development. These uses may be organized horizontally or vertically with retail and active uses encouraged on the ground floor to activate the street. This designation permits a maximum floor area ratio (FAR) of 1.75 and a density of 20.1 – 30.0 du/ac. The project proposes a General Plan Amendment to designate the area as Specific Plan Area (SPA) (Figure 2.2, Proposed General Plan Land Use Map).

The Restaurant Row Specific Plan seeks to meet the goals and policies outlined in the General Plan, including those focused on leveraging smart growth principles in mixed-use and infill opportunities. The supplemental General Plan Amendment (GPA) studies provided with this project will detail how the project conforms with the General Plan and its guiding themes. See the GPA's Land Use Analysis incorporated into this Restaurant Row's Specific Plan.

2.4.2 San Marcos Zoning Ordinance

Under existing conditions, the site is currently zoned Mixed Use -1 (MU-1), with the northern most parcel (APN 219-200-30-00) zoned Light Industrial (L-I). As part of the rezone application, the entire site would be designated SPA (Specific Plan Area) with the intent of implementing the MU-1 zone as its foundation. A portion of the site is already designated MU-1. The MU-1 zone is intended to define major corridors and transit-proximate locations as mixed-use corridors. The MU-1 zone should incorporate retail storefronts, urban living, and community destinations in a vertical pedestrian-oriented setting. The MU-1 zone promotes a variety of commercial, office, civic, and residential uses integrated as a cohesive development.

Uses established pursuant to this Specific Plan shall be subject to the conditions and restrictions set forth in this Specific Plan. Upon adoption of a Specific Plan and requisite Zone/General Plan amendments, the Specific Plan shall replace and take precedence over the Zone regulations of this Zoning Ordinance for the subject property. Where the regulations of a Specific Plan are silent, the comparable regulations of this Zoning Ordinance, and all adopted ordinances, regulations, standards, and guidelines of the City shall prevail, as deemed appropriate by the Director.

2.4.3 San Marcos Boulevard Complete Street

The San Marcos Boulevard Complete Street Project is an initiative that plans to transform the stretch of San Marcos Boulevard from Discovery Street to Bent Avenue with improved street crossings, bike lanes, and bus stops so all users can travel safely and efficiently.

The Restaurant Row Specific Plan redesigns San Marcos Boulevard into a Multi-Way that meets Complete Street criteria through its design features and pedestrian and bike amenities. These amenities are enhanced by wider sidewalks, greater separation from San Marcos Boulevard via the barrier of the lateral parkway median, and the integration of a new streetscape. Please refer to Sections 5.6.1 and 6.10 for details on the Form-Based Code and Infrastructure Plan of the San Marcos Boulevard Multi-Way.

Multi-way Frontage Conceptual Image:

3.0 GOALS AND POLICIES

The following goals and policies were created to shape the design of Restaurant Row. They are intended to guide future developments within the Specific Plan area.

Goal 1 **Provide entertainment and recreation opportunities for on-site residents, Restaurant Row patrons, and the surrounding community.**

Policy 1.1 Construct a neighborhood public park on-site that will offer recreation options for various age groups and demographics.

Policy 1.2 Connect residents and Restaurant Row patrons to surrounding amenities through a series of aesthetically pleasing, thoughtfully designed walkways and paseos.

Goal 2 **Adapt to changing community and economic needs by providing attainable housing in a mixed-use, in-fill setting.**

Policy 2.1 Provide multi-family residential homes that support the existing and future housing needs of the City of San Marcos.

Policy 2.2 Provide a variety of affordable and accessible homes within the community to alleviate the displacement of the existing population.

Policy 2.3 Integrate commercial components that encourage opportunities for local ownership of businesses.

Policy 2.4 Encourage residential over commercial uses that offset independent offices as well as mortgage burden.

Goal 3 **Support the revitalization of San Marcos Boulevards by creating an inviting neighborhood that activates the street frontage and facilitates multi-modal transportation to and from the existing community.**

Policy 3.1 Create a long-lasting walkable community through the connection of on-site pathways to San Marcos Boulevard sidewalks that allows residents to walk or bike to nearby destinations.

Policy 3.2 Deliver the first segment of the Multi-Way along San Marcos Boulevard to encourage a range of transportation options for San Marcos visitors and residents.

Policy 3.3 Design a series of roadways that safely link the development to the larger community allowing residents and Restaurant Row patrons to safely and efficiently enter and exit the project site.

Policy 3.4 Implement the standards set forth by the San Marcos Fire Department to meet emergency vehicle needs.

Goal 4 Celebrate the legacy of Old California Restaurant Row through the revitalization of the site with updated commercial and outdoor spaces, in a manner that enhances the atmosphere created by the previous Old California Restaurant Row, and complements the surrounding environment and neighborhoods.

Policy 4.1 Use materials that reference featured elements on Old California Restaurant Row buildings. The architecture and plant palette will take inspiration from the former design elements.

Policy 4.2 Prioritize local restaurants and artisans to fill the commercial spaces.

Policy 4.3 Create a network of outdoor spaces that culminate at the new neighborhood park. The integration of public art, design features, and interpretive signage into the landscape will help create a sense of place and foster an identity that will continue to reinforce Restaurant Row as a memorable San Marcos destination.

Policy 4.4 Public art will be integrated into the public park as an amenity to the community. It may be in the form of the past, current, or future abstracts reminiscent of the site.
It may be a repurposing of materials of the site's history, a commendation or recognition of significant community members, or an inspirational element to provide a memory landmark for the area. These elements may be provided in the private open space as well.

4.0 Design Guidelines

4.1 Introduction and Applicability

Restaurant Row is designed to attract residents and visitors alike. These Design Guidelines are intended to guide the design and development of Restaurant Row. The guidelines will ensure that the design of the project will build an aesthetically pleasing and cohesive community. The arrangement of multi-use buildings and facilities will promote the goals of the Specific Plan and provide residential, commercial, and public spaces for San Marcos residents to enjoy. In doing so, it will become like other charming mixed-use districts that have successfully woven together shops, outdoor areas, and other key features that celebrate an active and social lifestyle.

While incorporating influences from the Old California Restaurant Row, the Design Guidelines will pay tribute to the history behind the City's unofficial center, while updating the neighborhood with sleek and efficient modern design that revitalizes Restaurant Row as a sought-out destination in San Marcos. The Design Guidelines will complement adjacent development along San Marcos Boulevard.

This chapter shall provide general design guidance to supplement the development standards asserted in Chapter 5.0: Form-Based Code. Photographs and exhibits are intended to showcase the planned design of the Restaurant Row Specific Plan.

4.2 Site Design Plan

The project has been designed to create a new direction and model for San Marcos Boulevard developments while maintaining the character and feel of Old California Restaurant Row. Restaurant Row will feature store frontage along San Marcos Boulevard to create a walkable vibrant community with diverse transportation options. Through the creation of a multi-modal transportation system along San Marcos Boulevard, people can stroll, stop, and shop along the commercial uses offered.

4.3 Architectural Design Guidelines

The goal of the architectural design is to energize the public spaces and encourage connection, while providing a transition zone to the residential areas within the Specific Plan area.

The architecture along San Marcos Boulevard frames large plazas and outdoor dining areas that wrap the site and lead to the park at the northeast corner of the development. Private residential areas are reinforced by the use of private drives/streets and tighter paseos framed by taller buildings compared to the open spaces and common plazas shared by the retail and dining areas.

The following types of developments are dispersed throughout the Specific Plan area:

- Mixed Use – Residential and commercial spaces are designed as one structure, allowing for the maximum utility of land use along San Marcos Boulevard.
    - Commercial – Commercial is placed along street frontages and corners to preserve the neighborhood's identity as a lively town center. It also creates an attractive place for pedestrians, cyclists, and other non-automotive riders to enjoy outdoor public space in the City of San Marcos.
    - Town over Commercial – Residential uses attached vertically to Commercial.
    - Front Street Rowtown – Residential uses attached horizontally to Commercial.

- **Residential** – Additional residential opportunities are placed north of the Mixed-use buildings and are set back from San Marcos Boulevard, giving residents the comfort of a primarily residential neighborhood with access to public and private park amenities and inviting commercial spaces just a stroll away.
    - Greencourt – The homes are placed parallel to one another and are close to the private amenities and the public park.
    - Motorcourt – The homes are placed around the site's paseos to promote a walkable community.

Motorcourt Conceptual Image:

4.3.1 Building Massing

The overall architecture features strong vertical massing that softens or tapers back at key locations to invite users to explore adjacent spaces. For example, in the main plaza on San Marcos Boulevard, the building steps back and away from the plaza to create a more comfortable scale for users while simultaneously opening the view to a paseo that leads directly to the park on the opposite side of the site. Similar design elements are used to create plazas and dining decks at the corners of the site and implemented in the Motorcourt buildings leading users to larger thoroughfares that cut through the site. The introduction of a colonnade also helps to frame the outdoor commercial spaces and ties the commercial buildings at the perimeter of the site together.

Greencourt Conceptual Image:

4.3.2 Materials and Colors

The project draws inspiration from Old California Restaurant Row through its colors and materials. Referential materials and colors occur off San Marcos Boulevard and in the commercial buildings adjacent to the park. These materials are contrasted by the contemporary residential developments characterized by contemporary colors, materials, and forms. This design creates a stronger contrast between the history of the site and the new architectural development. The project incorporates Old California Restaurant Row inspired materials, and pairs them with cool and muted grays of various shades to give the area a fresh, modern aesthetic.

Recommended materials include, but are not limited to, the following:

Residential (Greencourt and Motorcourt)

- Smooth stucco
- Metal shading elements
- Wood accents
- Stone veneer
- Lap siding accents
- Contemporary brick

Figure 4.1

Greencourt - Scheme 1

Restaurant Row

Greencourt - Scheme 2

Restaurant Row

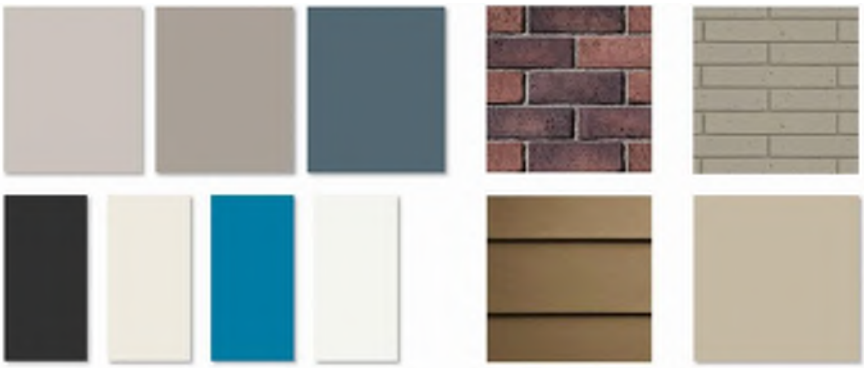

Figure 4.3

Greencourt - Scheme 3

Restaurant Row

Figure 4.4
Motorcourt - Scheme 1
Restaurant Row

Figure 4.5
Motorcourt - Scheme 2
Restaurant Row

Mixed Use

- Wooden beams
- Various wooden siding
- Tumbled brick with heavy mortar joints
- Heavy metal accents and heavy metal siding
- Corrugated metal
- Integration of historical features (i.e., bells, beams, signage details)

Figure 4.6

Mixed Use - Front Steet Rowtowns

Restaurant Row

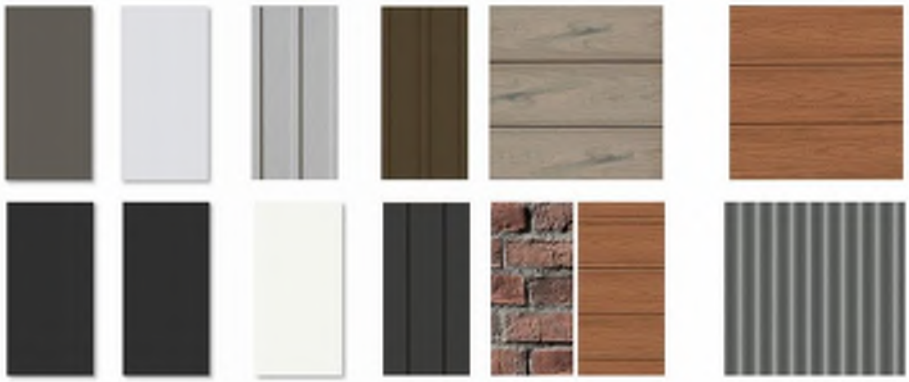

Figure 4.7

Mixed Use - Commercial / Town Over Commercial (San Marcos Blvd)

Restaurant Row

Figure 4.8

Mixed Use - Commercial / Town Over Commercial (Parkside)

Restaurant Row

4.3.3 Architectural Styles

The contemporary architectural styles for Restaurant Row allude to the massing, materials, and color scheme of Old California Restaurant Row. The Old California architecture style is akin to the Contemporary Architecture with significant differences between Front Street Townhomes and Town over Commercial such as brick in lieu of stucco on the front façade. While no specific architectural style is selected, contemporary architectural styles that pull from coastal, Southern California, or Old California Restaurant Row influences are preferred.

Residential (Greencourt and Motorcourt)*:*

- Natural materials, cool colors, and sharp clean lines;
- Soaring butterfly roofs and flat roofs emphasizing vertical massing interspersed with deep recesses;
- Flat roofs with deep recessed massing and cantilevers at upper levels;
- Semi-private entry stoops to encourage pedestrian activity along commercial store frontages;
- Porches and patios are wrapped or recessed around buildings to help create private outdoor space;
- Large, asymmetrically placed windows, living spaces, and upper balconies facing streets and plazas, help energize the public space; *and*
- Garages located along one face of the building, on the internal motor court, or centralized to interior private streets, promote a pedestrian friendly atmosphere.

Figure 4.9

Greencourt Front Elevation View

Restaurant Row

Figure 4.10

Motorcourt Front Elevation View

Restaurant Row

Mixed Use:

- Natural materials, wood elements, and siding are increased along San Marcos Boulevard;
- Cool colors for the Townhomes over Commercial homes provide visual interest;
- Wood elements, siding, and brick to provide a warmer color palette;
- Colonnade design that ties in the existing style of San Marcos; *and*
- Heavy material such as wood and brick to differentiate between public and private spaces.

4.4 Streetscape Design

The streetscape design of Restaurant Row should contribute to the contemporary architectural and landscape designs of the community to enhance the aesthetic form. The streetscape is also where references to the Old California Restaurant Row can be observed. This design is meant to encompass all streetscapes for the project, e.g., San Marcos Blvd Right-of-Way, private streets, onsite private driveways, and access easements. Street furniture, bicycle racks, signage, lighting, walls, and fencing should be unique in design and facilitate the utilization of alternative modes of transportation.

Southeast Corner Commercial Conceptual Image:

4.4.1 Street Furniture

- Incorporate site furnishings, such as tables, benches, and shade structures, to the overall site design and contemporary architectural character of the development;
- Place seating and patio umbrellas in commercial plazas and public outdoor spaces;
- Select materials and colors that achieve the desired aesthetic and vision for the public realm;
- Street furnishings will complement the color scheme of surrounding buildings and streetscape features, such as lighting or fencing;
- All furnishings will be durable and resistant to vandalism; *and*
- Street furniture placed within the public right of way will be subject to the approval of the City of San Marcos.

(Images for conceptual and illustrative purposes only)

4.4.2 Trash & Recycling Areas

Residential:

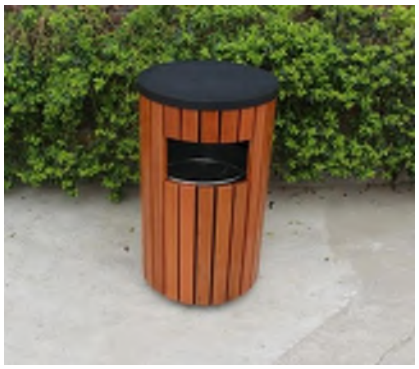
- Provide space for residential trash and recycle cans in private garage spaces.

Commercial:

- Commercial entities will have the use of the commercial trash facilities which are located on the south-west side of Pvt. Drive “C”. These facilities will house trash (waste), recycling, and compost, and will be locked to prevent illegal dumping.

Public / Common areas:

- Locate receptacles adjacent to recycling areas;
- Receptacles to be functional yet contribute to the character and aesthetic of the commercial area; *and*
- Ensure the design and distribution of trash receptacles are accessible to individuals of all abilities.



(Images for conceptual and illustrative purposes only)

4.4.3 Bicycle Racks

- Short-term on-street bicycle parking will be primarily available along the street frontage of San Marcos Boulevard, in the park, and near building entrances without blocking pedestrian activity.
- Bike racks will be available for public use, or residential use when visiting on-site shops or services, however, residents will be required to house bikes within their homes when not visiting on-site shops or services, per the CC&R's.
- Bike racks will offer unique and functional design features.

(Images for conceptual and illustrative purposes only)

4.4.4 Signage

The signage regulations for the commercial areas are intended to reignite the lively and active atmosphere that the Old California Restaurant Row brought to San Marcos in 1978. Signage should be modern, in scale with tenant spaces, compatible with adjacent residential uses (above commercial), and include pedestrian oriented signage. However, a contemporary motif in likeness to the history of the Old California Restaurant

Row is encouraged to honor the project's history. Carefully designed signage that alludes to the nostalgia of Old California Row will enhance the aesthetic character and identity of the neighborhood.

Commercial:

- Sidewalks and commercial frontages along San Marcos Boulevard and Via Vera Cruz are intended to be a place for pedestrian activity. Therefore, the allowed types, sizes, and placements of signs must enhance this character in a way that promotes communication between business owners, residents, community members, and customers.
- Reference to the Old California Restaurant Row through style, font, or imagery is preferred.
- Old California Restaurant Row's commercial and residential properties will have a contemporary sign program to provide a unique identity and unify the project.

Parkside Corner Commercial Conceptual Image:

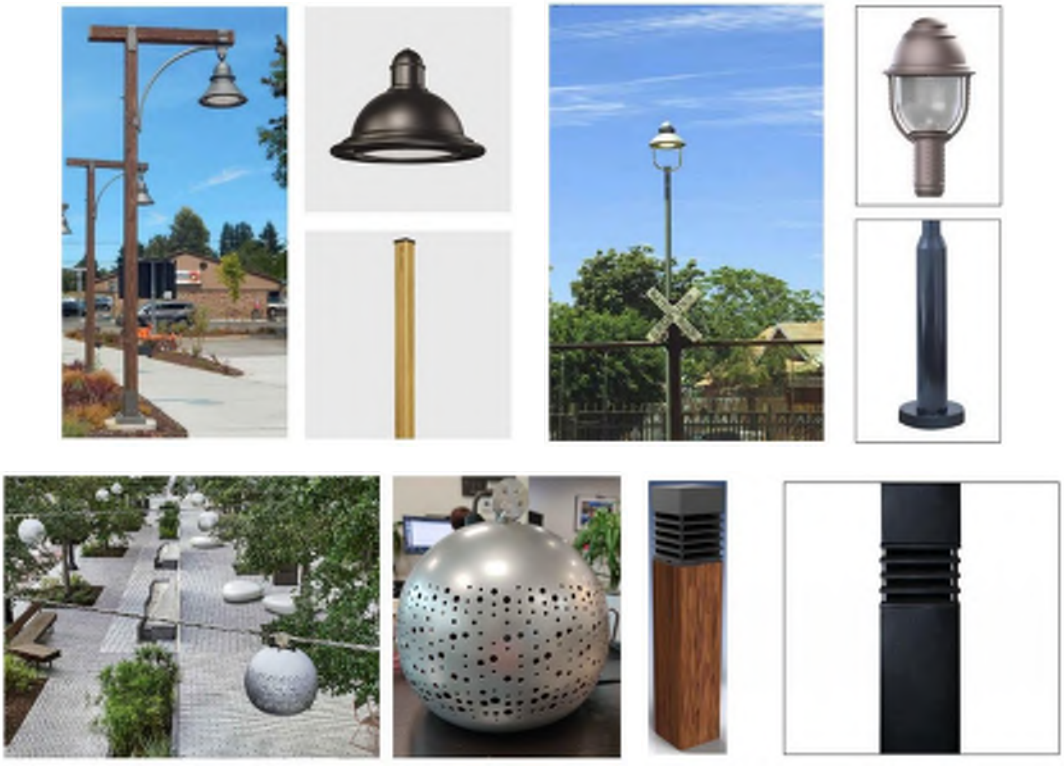
Residential:

- Paseos and other residential neighborhoods should have uniform and subtle signs that inform residents and guests where they are, where amenities are located, and how to find an address in the neighborhood.
- Residential signs should fit the contemporary theme of cool colors, sharp lines, and fresh fonts.

4.4.5 Lighting

Streetlights shall be provided, subject to City approval, and will be used in conjunction with privately maintained string, pole, and pedestrian areas to ensure a well-lit community. This will enhance public safety and security for the existing community at large and future residents. Outdoor lighting fixtures (both attached and detached to buildings) are simple and reminiscent of the site's history. Lighting materials will compliment and accent the exterior of the buildings and help distinguish and define commercial, residential, and paseos spaces.

Opportunities to incorporate unique lighting styles could be created from vintage or reclaimed site materials where possible. New lighting that is referential to the Old California Restaurant Row, such as bell-shaped light fixtures, should be considered as a possible style. Landscape lighting should be incorporated into the site creating an ambiance and guide pedestrians through the paseos and open space.



(Images for conceptual and illustrative purposes only)

4.4.6 Walls and Fencing

There are various walls and fences that are strategically placed around the Specific Plan area.

Attached Residential Walls and Fences:

- Walls for private entryways, such as porches or patios, are simple stucco with gates made from slatted wood planks with wrought iron frames and vary in height depending on site location.
- Walls at entry stoops in the mixed-use townhomes are 4'-0" tall to help protect from street/parking lot activity.
- Walls at Greencourt and Motorcourt building are 3'-0" allowing more views/interactions with the surrounding park, paseos, and green spaces.
- Attached walls/fences will be as illustrated per the architectural plans.

(Images for conceptual and illustrative purposes only)

Unattached Residential Walls and Fences:

- The low walls enclosing the Greencourt Townhomes exclusive use areas, will be low masonry block with brick veneer.
- Along the frontage of the Greencourt Townhomes and the park, a glass and block wall will be provided for viewing into the park while attenuating the noise of recreational activities.
- For the Front Street Rowtown homes facing San Marcos Boulevard, there will be a 3'-4' solid fence to give residents privacy while also paying homage to the Old California Restaurant Row's use of earthtone veneers in its design aesthetic.

- As a residential amenity, the plan's Site Gathering Area will have cable security fencing, or glass and block sound walls as needed around the east and north sides of the park like settings. A semi-private fence with a gabion wall with a timber wall cap may be provided around the west and south sides to provide some privacy for residents who want to socialize while allowing them to view and feel connected to the rest of the park.
- The Park Connector amenity will be barrier free for ease of access to the public park.

(Images for conceptual and illustrative purposes only)

Commercial Walls and Fences:

- The large commercial space facing San Marcos Boulevard will feature open fencing to delineate between pedestrian and dining spaces while also paying homage to the Old California Restaurant Row's use of a historic design aesthetic.

- The commercial specialty fence may be designed using materials recovered from the Old California Restaurant Row to create a visually appealing fence around the deck overlooking the park.

4.5 Landscape Design Guidelines

The conceptual landscape plan has been designed to maximize the open space that is provided onsite while creating attractive and important paseos connecting adjacent residence and commercial plazas. The plant palette will be carried throughout the common area landscaping, public and private parks, and pedestrian pathways to create a unified sense of place.

Figure 4.12

Conceptual Landscape Plan
Restaurant Row

4.5.1 Common Area Landscaping

The common areas within the project have been designed to complement the surrounding development of mixed uses, including restaurants, residential sites, and commercial spaces. The homes have designated spaces to allow landscape areas between buildings, providing beautification measures and attractive places. Landscaped areas include open areas adjacent to roads and, where space is available, street trees offering additional shade and buffer. Landscaped areas will be irrigated permanently and will be planted with a combination of natives and naturalized species. Some of the existing specimen vegetation may be repurposed from the original site reminiscent of the Old California Restaurant Row era.

4.5.2 Parks

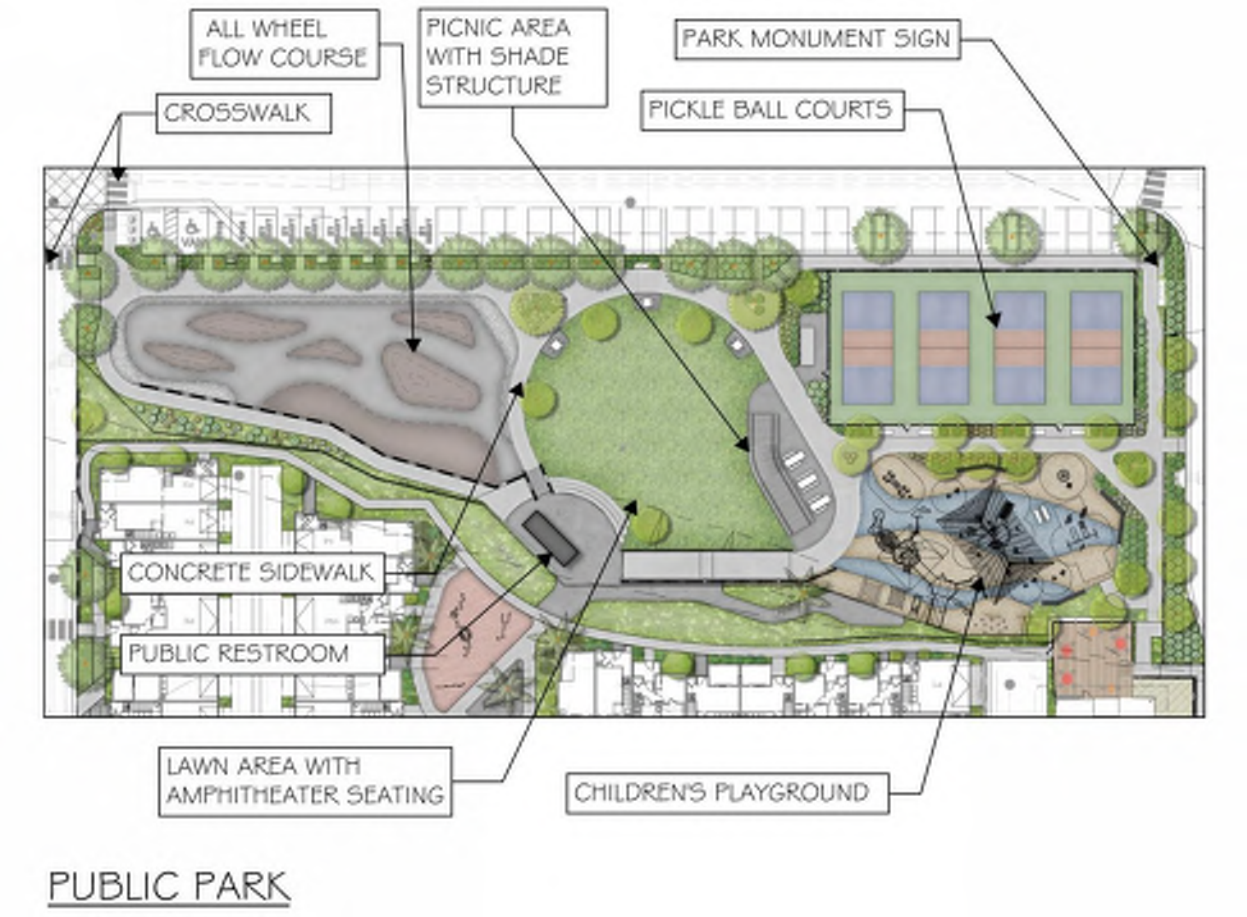
The Project will feature multiple parks and site amenities, all of which will be accessible to the public regardless of ownership or maintenance responsibility. The project will provide a 1.1-acre neighborhood public park, three (3) HOA owned and maintained parks, and two (2) HOA owned and maintained site amenities. All park types will provide facilities for adults and children alike. Features may range from flexible open space with connecting walkways to nodes of shaded areas with seating or play equipment.

The public park space was designed through a series of public workshops so the community at-large could have input into the creation of the recreational area. The development of the public park will occur with a separate Site Development Plan (SDP23-0004).

Much of the park is encumbered by a floodway and floodplain, so amenities and park features may be limited by environmental constraints. The park will have features that will not impede a 100-year storm event. As the amenities of the park evolve, the hydrology report ("Hydraulic Analyses for Restaurant Row", dated July 27, 2023, by Chang Consultants) will document assurance that flooding does not occur beyond the limits of the existing FEMA zone.

4.5.2.1 Public Park

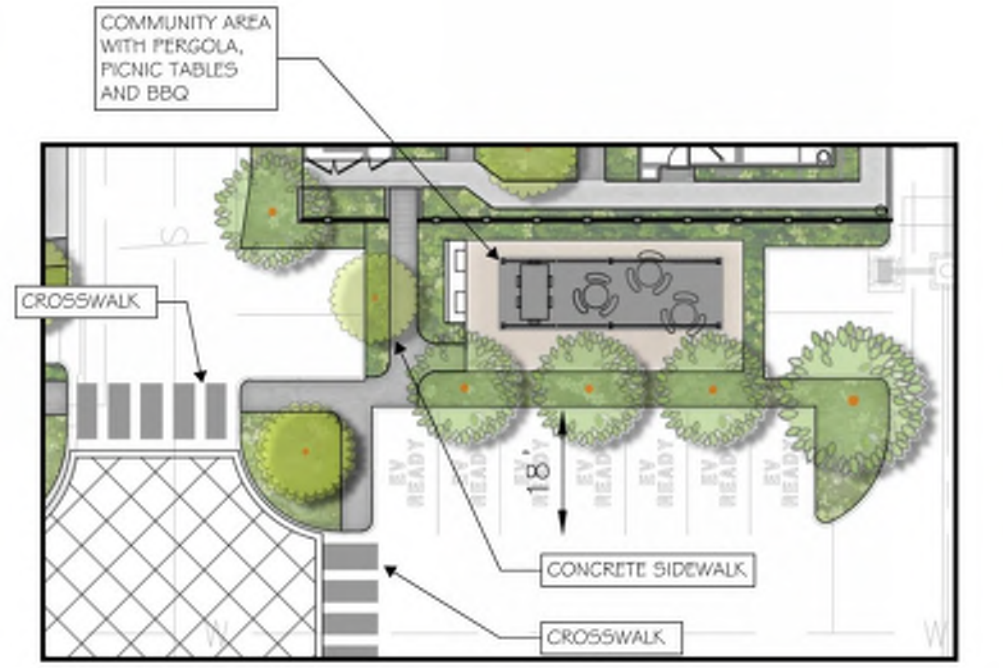
The public park's purpose is to serve the needs of the larger community beyond the project site. A public park along the northern side of the Specific Plan area will anchor the site and provide respite for both residents and visitors alike. Its amenities will include 4 pickleball courts, a large tot-lot playground intended for children ages 2-12, a central open space lawn, a multipurpose amphitheater, a restroom, and an all-wheel flow course plaza. Park amenities are subject to change at the discretion of the City.



Public Park – Approximately 1.1 acres

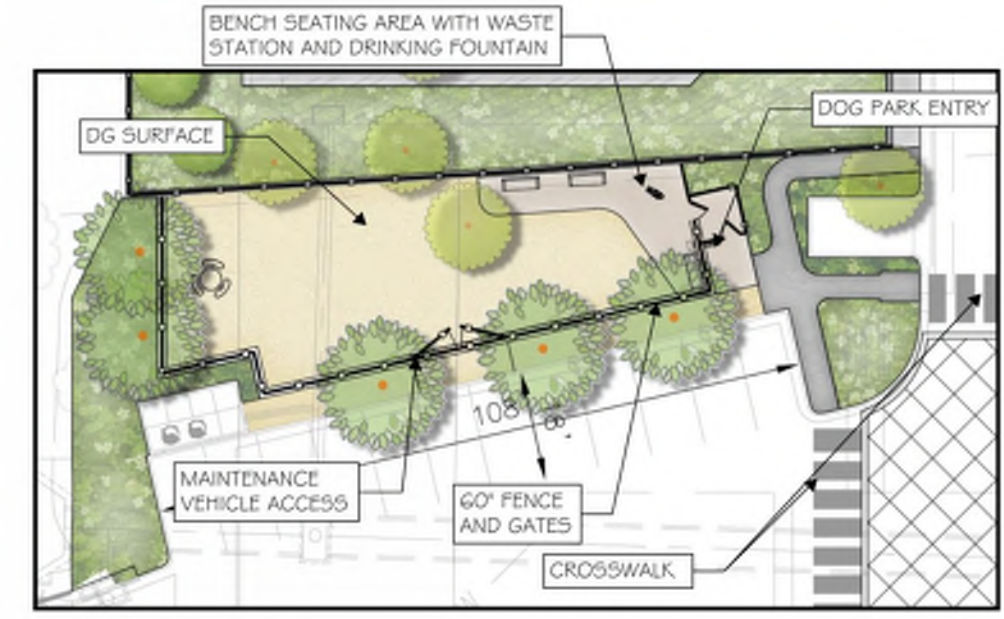
4.5.2.2 HOA Parks

There will be three (3) HOA owned and maintained parks that are publicly accessible on the project site, subject to the terms of public access easements. The parks are proposed throughout the Project site and are intended to serve the needs of both future residents and the public. These parks offer options for every age demographic providing amenities such as dog parks and gathering areas in addition to the publicly owned and maintained park. These smaller parks consist of a community gathering area, a large dog park, and a small dog park.



COMMUNITY GATHERING AREA

Community Gathering Area – Approximately 0.035 acres



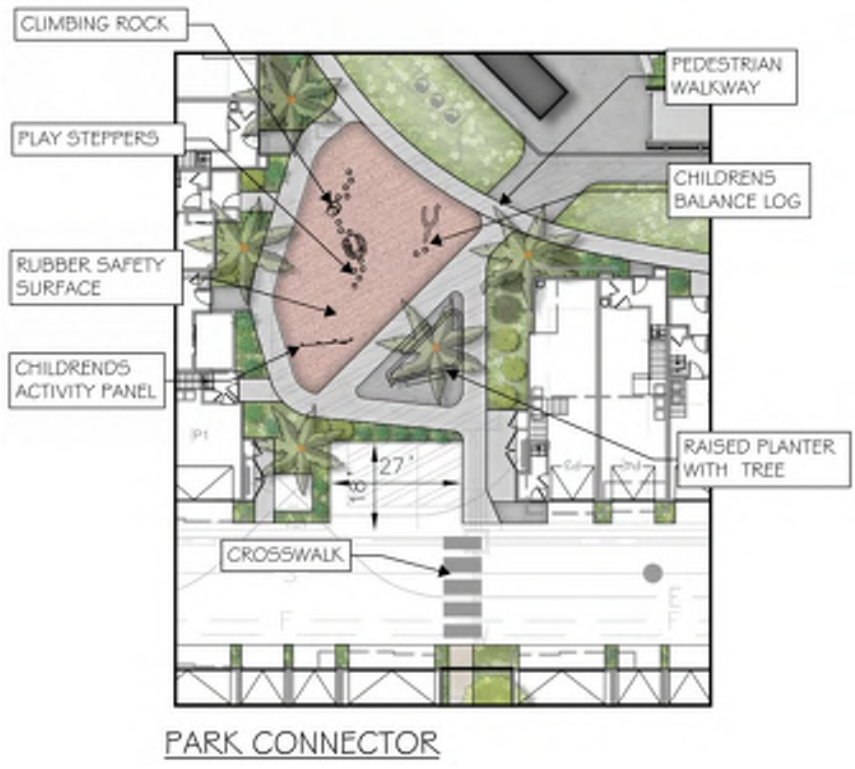
LARGE DOG PARK

Large Dog Park – Approximately 0.06 acres

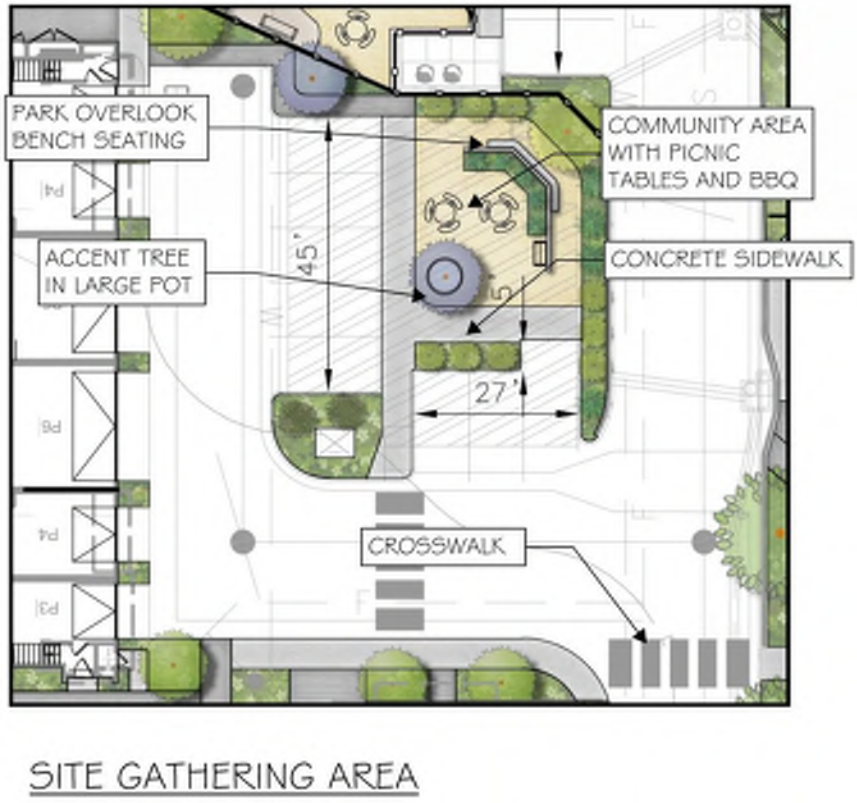
Small Dog Park – Approximately 0.03 acre

4.5.2.3 Site Amenities

There will be two (2) publicly accessible HOA owned and maintained amenities on the project site. The Park Connector and Site Gathering area are intended to serve the needs of future residents. The Park Connector will feature an adventure playground with contouring mounding, play apparatus with minimal footings, rubberized or wooden fiber play surface, and elements such as steppers, logs, or climbing rock. The Project will have onsite amenities woven throughout that offer options for every age demographic.



Park Connector – Approximately 0.06 acre



Site Gathering Area – Approximately 0.025 acres

4.5.3 Paseos

Pedestrian connections along San Marcos Boulevard and within adjacent developments are an important goal for both Restaurant Row and the City. The project will provide east to west and south to north paseos that traverse the site and create easily accessible walkable spaces intended to preserve and enhance pedestrian connectivity to adjacent properties and commercial nodes. The south to north paseo will provide a link from San Marcos Boulevard to the public park. The east to west paseo will provide a pedestrian connection from the commercial/restaurants on the east, through the future residential neighborhood, and onto the movie theater on the west. The pedestrian connections will be punctuated with social gathering nodes and opportunities for public art. Additional internal pathways lead to the open space amenities at the northeastern end of the project site, existing restaurants to the east, San Marcos Boulevard, and the Creek District Specific Plan area to the south. Decorative paving and enhanced colored concrete will also provide subtle wayfinding to help pedestrians navigate the site.

4.5.4 Plant Palettes

4.5.4.1 Site Planting Legend

The interior site areas are to be planted with the functional purpose of providing shade while embodying an aesthetic quality of colorful material. The sloped areas will have plant species with deep rooting characteristics in conformance with the grading ordinance. Drought tolerant native and naturalized species are to be planted in an informal pattern. Seasonal maintenance will be needed once established. Acceptable species include but are not limited to:

Street Trees

Street tree grates will be provided to improve the pedestrian experience.

Form/Function: Medium to large deciduous, round head, shade, with root systems compatible with underground utilities and street/sidewalk maintenance. Street trees are subject to change by City.

- *Arbutus marina* (Marina Madrone)
- *Cassia leptophylla* (Gold Medallion Tree
- *Jacaranda mimosifolia* (Jacaranda)
- *Koelreuteria bipinnata* (Chinese Flame Tree)
- *Koelreuteria paniculata* (Golden Rain Tree)
- *Lagerstromia indica* spp. (Crape Myrtle)
- *Meterosideros excelsa* (New Zealand Christmas Tree)
- *Platanus x acerifolia* 'Bloodgood' (London Plane Tree)
- *Podocarpus gracilior* (Fern Pine)
- *Pyrus calleryana* (Pear Tree)
- *Searsia lancea* (African Sumac)

Palm Trees (Private only)

Form/Function: Vertical interest, Wayfinding Palm trees

- *Archontophoenix alexandrae* (King Palm)
- *Bismarkia nobilis* (Bismark Palm)
- *Phoenix dactylifera* 'Medjool' (Medjool Date Palm)

Accent Trees

Form/Function: Ornamental structure or flowering accent trees

- *Aloe 'Hercules'* (Hercules Aloe)
- *Acacia stenophylla* (Shoestring Acacia)
- *Bauhinia purpurea* (Purple Orchid Tree)
- *Cassia leptophylla* (Gold Medallion Tree)
- *Eriobotrya deflexa* (Bronze Loquat)
- *Lagerstroemia hybrids* (Crape Myrtle)
- *Liriodendron tulipifera* 'Arnold' (Arnold Tulip Tree)
- *Podocarpus henkelii* (Long Leafed Yellow-Wood)
- *Raphiolepis indica* 'Majestic Beauty' (Majestic Beauty Patio Tree)

- *Schinus molle* (California Pepper)-for historic reference (planted with deep root barriers)
- *Stenocarpus sinuatus* (Fire Wheel Tree)

Shrubs 36" O.C.

Form/Function: Medium size ornamental shrubs

- *Agave* 'Blue Flame' (Blue Flame Agave)
- *Aloe* Spp. (Aloe)
- *Anigozanthos 'Bush Sunset'* (Bush Sunset Kangaroo Paw)
- *Callistemon viminalis* 'Little John' (Little John Bottlebush)
- *Cistus* Spp. (Purple rockrose)
- *Dianella revoluta* (Little Rev Flax Lily)
- *Dietes grandiflora* (Fortnight Lily)
- *Lantana montevidensis* (Purple Lantana)
- *Leptospermum scoparium* (New Zealand Tea Tree)
- *Nandina domestica* (Heavenly Bamboo)
- *Nandina domestica* 'Gulf Stream' (Gulf Stream Nandina)
- *Phormium tenax* spp. (New Zealand Flax)
- *Pittosporum* spp. (Pittosporum)
- *Raphiolepsis indica* 'Ballerina' (Indian Hawthorne)
- *Salvi*a spp. (Salvia)
- *Strelitzia nicolai* (Giant Bird of Paradise)
- *Strelitzia juncea* (Narrowleaf B.O.P.)

Groundcover & Accents

Form/Function: Low Ornamental Groundcover

- *Dymondia margaretae* (Silver Carpet)
- *Myoporum parvifolium*(Creeping Myoporum)
- *Rosmarinus officianalis* Irene (Trailing Blue Rosemary)
- *Senecio serpens* (Blue Chalksticks)
- *Thymus serpyllum* (Creeping Thyme)
- *Trachelospermum jasminoides* (Star Jasmine)
- *Tulbaghia violacea* (Variegated Society Garlic)

Non-Invasive Grasses

Form/Function: Accent Grasses

- *Carex spissa* (San Diego Sedge)
- *Festuca glauca* 'Elijah Blue' (Elijah Blue Fescue)
- *Muhlenbergia rigens* (Deer Grass)
- *Muhlenbergia capillaris* (Pink Muhly Grass)

Vines

Form/Function: Upright Vines

- *Bougainvilla* spectabilis 'Barbara Karst' (Barbbara Karst Bougainvilla)
- *Distictis* 'Rivers' (Royal Trumpet Vine)
- *Jasminum polyanthum* (Pink Jasmine)
- *Trachelospermum jasminiodes* (Star Jasmine)
- *Tecomaria capensis* (Cape Honeysuckle)

4.5.4.2 Park Planting Legend

Recreational areas will be planted with drought tolerant plants that are also safe for children and pets. The plant selection will be based on those species which will be acceptable within the flood zone. Species will be able to tolerate being occasionally inundated while not impeding the flow of storm water. Lawn areas may be used to easily convey the storm event while providing for open play for children and pets. The tree selection will include upright vertically oriented species. The adjacent side slopes will feature a variety of trees and shrubs to stabilize edges from erosion.

A combination of small to medium trees will be coupled with occasional groupings of flowering shrubs. Groundcover will be incorporated to add visual interest. The following plant palette is suggested, but is not limited to, the following species:

Recreational Area Trees

Form/Function: Shade, Seasonal color, Medium to Large Canopy

- *Agonis flexuosa* (Peppermint Willow)
- *Cassia leptophylla* (Golden Medallion)
- *Cercis occidentalis* (Western Redbud)
- *Jacaranda mimosifolia* (Jacaranda)
- *Lophostemon confertus* Brisbane Box)
- *Tipuana tipu* (Tipu Tree)
- *Quercus agrifolia* (Coast Live Oak)

Vertical Trees

Form/Function: Vertical Interest

- Brachychiton populneus (Bottletree)
- *Hymenosporum flavum (Sweetshade)*
- *Liquidambar styraciflua (Sweetgum)*

Recreational Area Shrubs, Grasses and Groundcovers

Form/Function: Evergreen, screening, accent color, drought tolerant

Shrubs:

- *Arbutus unedo* 'Compacta' (Dwarf Strawberry Tree)
- *Cistus x purpeus* (Orchid Rockrose)

- *Ceanothus* spp. (Ceanothus)
- *Dianella revoluta* (Little Rev Flax Lily)
- *Dietes grandiflora* (Fortnight Lilly)
- *Juncus patens* (Common Rush)
- *Olea europaea* 'Little Ollie' (Dwarf Olive)
- *Rhaphiolepis indica* 'Ballerina' (Indian Hawthorn)
- *Rosemarinus officinalis* (Rosemary)
- *Salvia* spp. (Sage)
- *Teucrium fruticans* (Bush Germander)
- *Westringia fruticosa* 'Mundi' (Low Coast Rosemary)

Grasses:

- *Carex spissa* (San Diego Sedge)
- *Festuca glauca* 'Elijah Blue (Elijah Blue Fescue)
- *Leymus condensatus* 'Canyon Prince' (Canyon Prince Wild Rye)
- *Muhlenbergia rigens* (Deer Grass)
- *Muhlenbergia capillaris* (Pink Muhly Grass)

Groundcovers:

- *Baccharis pilularis* 'Pigeon Point' (Pigeon Point Coyote Brush)
- *Ceanothus thyrsifolia* 'Yankee Point' (Yankee Point Wild Lilac)
- *Dymondia margaretae* (Silver Carpet)
- *Iva hayesiana* (Poverty Weed)
- *Lantana* spp. (Lantana)
- *Lippia nodiflora* (Kurapia)
- *Verbena rigida* (Sandpiper)

Turf:

- Tall Fescue
- UC Verde Buffalo Grass
- Kurapia
- Bandera Bermuda

Slopes (Temporary Irrigation) Hydroseed Mix

The slope areas are to be hydroseeded with a mix of native plant material to aid in controlling soil erosion. Approximately 50% of the seed mix is to contain plant material that will grow to 24" or less.

Coastal Sage Scrub Hydroseed Mix

- *Artemesia californica* (Coastal Sage Brush)
- *Encelia californica* (California Sunflower)
- *Eriogonum fasciculatum* (California Buckwheat)
- *Eriophyllum confertiflorum* (Golden Yarrow)
- *Eschscholzia californica* (California Poppy)
- *Lotus scoparius* (Deerweed)

- *Lupinus bicolor* (Miniture Lupine)
- *Lupinus nanus* (Sky Lupine)
- *Mimulus aurantiacus puniceus* (Red Monkey-Flower)
- *Salvia mellifera* (Black Sage)
- *Nassella pulchra* (Purple Needle Grass)

5.0 FORM-BASED CODE

5.1 Introduction Applicability

The purpose of this Form-Based Code is to provide a set of development regulations and procedures for property owners or developers to implement the envisioned urban form and character of Restaurant Row. This Form-Based Code applies to future development and redevelopment within Restaurant Row. The Code regulates the massing of proposed development through building heights, setbacks, building form, and orientation.

5.2 Land Use Designation

The Restaurant Row Project Specific Plan will include one land use typology, which will be Specific Plan Area. This individual land use will accommodate the multi-family mixed-use development planned for future development. The site has a density of 21.7 du/ac, consistent with the Mixed Use 1 (MU1) General Plan land use classification of 20.0-30.0 du/ac. Open space within the Specific Plan Area will total approximately 2 acres. Components of the three sub-categories of open space will be defined by the following forms: passive open space (landscaping, bio-retention basins), active open space (open turf areas, tot-lots/playgrounds, amphitheater, etc.), and private open space (porches, balconies, etc.). These features comprise a well-rounded residential neighborhood that is supportive of community activities and the wellness of the residents.

Table 5.1 – Land Use Designation

Residential Land Use	Provided by project (in acres)
Multi-Family Residential	3.3
Commercial	0.24
Driveways/Alleys/ Parking/Loading/misc. sidewalks	3.86
Common Open Space area w/ grades 10% or greater	0
Common Open Space area w/ grades less than 10%	1.2
Public Park	1.1
Private Open Space	.56
Bio-Retention Areas	.24
Site Total	10.5

Figure 5.1

Land Use Designation Plan

Restaurant Row

5.3 Zoning Designations and Development Regulations

As discussed in Section 2.3.2, the Restaurant Row Specific Plan zoning map consists of a single on-site designation: Specific Plan Area (SPA).

Home types will be sited in a manner that supports the future of San Marcos Boulevard developments planned in the San Marcos General Plan. This section provides the framework for the implementation of the Specific Plan zoning designation and development regulations.

Commercial, Town over Commercial, Front Street Rowtown, Greencourt Townhomes, and Motorcourt are the five building developments that are permitted within this zone.

Table 5.2: Specific Plan Development Regulations

Development Regulation	Specific Plan
Residential Minimum	20.0
Residential Maximum	30.0
FAR Minimum	0.30
FAR Maximum	1.75
Minimum Building Height	10’
Ground Floor Commercial Height	10’
San Marcos Boulevard. - Building Placement	**Residential** = 40% @ 3’ offset from right of way **Corner commercial** = 15% @ 8’ offset from right of way **Central commercial** = 19% @ 25’ offset from right of way
Pedestrian-Oriented	**Central courtyard** = 6% @ 25’ from the right of way
Interior Property Line	5’
Alley Property Line	35’
Western Residential Property Setback	9’
San Marcos Boulevard Front Setback	5’
Eastern Residential Property Setback	10’
Rear Setback	10’

Permitted Uses

The following land uses are permitted throughout the Specific Plan and are further defined in Section 5 of this Specific Plan. However, they may be amended from time to time by the City of San Marcos.

Table 5.3: Permitted Mixed Uses

A – (Accessory Uses) Permitted uses restricted to accessory uses in conjunction with a primary permitted use.
P – (Permitted Uses) subject to compliance with all applicable provisions of this Zoning Ordinance.
CUP – (Conditional Use Permit) A Conditional Use Permit is required from the City of San Marcos
ZA – (Zoning Approval) Subject to review and approval per the process standards of Chapter 20.500
DP – (Director Permit) Permitted subject to Planning Director review, condition, and determination.
T – (Temporary) Permitted as a temporary uses restricted to limited occurrences and time periods.
--- – (Prohibited) Use not allowed.

*Accessory Dwelling Units (ADU) shall be reviewed by the projects HOA for aesthetic compatibility with the Specific Plan with appropriate permitting through the City per the States guidelines.
When a use is not specifically listed, that use is prohibited. However, consistent with SMMC Section 20.205.030(C) (Unlisted and Similar Compatible Uses), the City of San Marcos Planning Director shall have the authority to determine whether the proposed use shall be permitted or conditionally permitted based on the finding that the proposed use is similar to and no more detrimental than a particular use permitted in the Zone.

Neighborhood public park is subject to the land use regulations of the Public Institutional (P-I) Zone (SMMC Chp. 20.240), as updated from time to time by the City.

Parking requirements for the land uses outlined in Table 5.3 are outlined in Section 5.5.

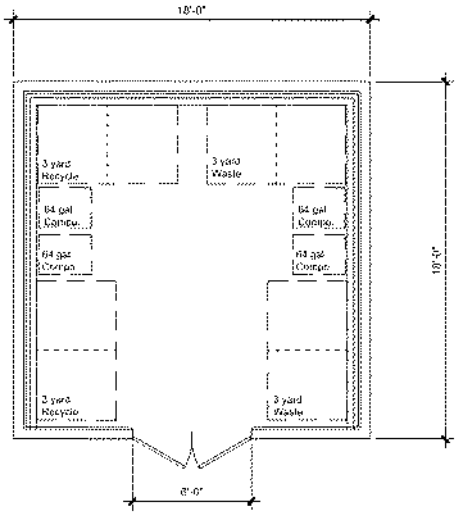
5.4 Urban Standards

The following development standards have been devised to implement the pedestrian-oriented, multi-modal character envisioned by the Specific Plan. Incorporation of any of the residential products described in section 4.3 shall be permitted provided that the maximum residential density does not exceed the site standards.

5.4.1 Commercial

Commercial spaces are located along street frontages and adjacent to plazas and paseos. These spaces are generally located on the ground floor. Some spaces are larger than others with heights ranging from 10 to 25 feet. The commercial spaces located below the Town over Commercial homes are smaller in size and range less than 15’ in height. The commercial areas will have the ability to be divided into smaller tenant spaces, depending on the commercial market demand. For permitted uses see Table 5.3: Permitted Mixed Uses

Commercial entities will have the use of the commercial trash facilities which are located on the south-west side of Pvt. Drive “C”. These facilities will house trash (waste), recycling, and compost, and will be locked to prevent illegal dumping.



Trash Enclosure 4 F&B Tenants
Service frequency: 3x per week: Waste
Service frequency: 5x per week: Recycling
Service frequency: 2x per week Compost

Table 5.4 - Commercial Urban Standards	
Unit Size	Varies
Building Height	One floor – 10’ to 25’
Building Placement	Along San Marcos Boulevard and the northeast corner of the project site
Allowable Building Frontage Types	Commercial
Private Recreation Space	n/a
Type of Parking	Open bay spaces

Note:

Dining opportunities at Restaurant Row are open to a wider customer base due to the proximity to multi-modal transportation. However, vehicular access has also been accommodated by providing ample parking space in accordance with standards from the City of San Marcos. The outdoor dining will be in accordance with Section 20.400.150 Outdoor Dining section of the Municipal Code.

Restaurant definitions from the municipal code Sections 20.400.150 and 20.600.170 are as follows:

Outdoor Dining (land use).
To energize the Restaurant Row experience, private outdoor dining will be the forefront for activating the streetscape. The outdoor spaces will be open and seamless to all patrons of the commercial uses. The area limits would be determined based on final permitting by the City.
For long term flexibility, the actual private outdoor dining areas will depend on the final building layout perimeter fencing and, leasing tenants. Individual restaurant tenant spaces would be allowed to create exclusive outdoor dining areas (meaning an area fenced off for use only by that individual restaurant) of up to 35% of the cumulative net commercial interior square footage. Additional exclusive outdoor dining area exceeding 35% may be provided with the approval of a Director’s Permit (DP), pursuant to the provisions of Section 5.5.3

5.4.2 Town over Commercial Buildings

There are currently eight Town over Commercial units shown on the project site plan. This product type will include six 3-bedroom units along San Marcos Boulevard (above the proposed commercial space) and two 3-bedroom units above the commercial space located in the northeastern corner of the development.

The Town over Commercial buildings are intended to increase density along the proposed commercial frontages and create a unique sense of place. The people that occupy these units will often frequent the commercial spaces near them and increase social interaction amongst on-site residents. The commercial space shall be limited to the ground floor and shall be separate from the residential unit with entrances and exits that will not affect residents above.

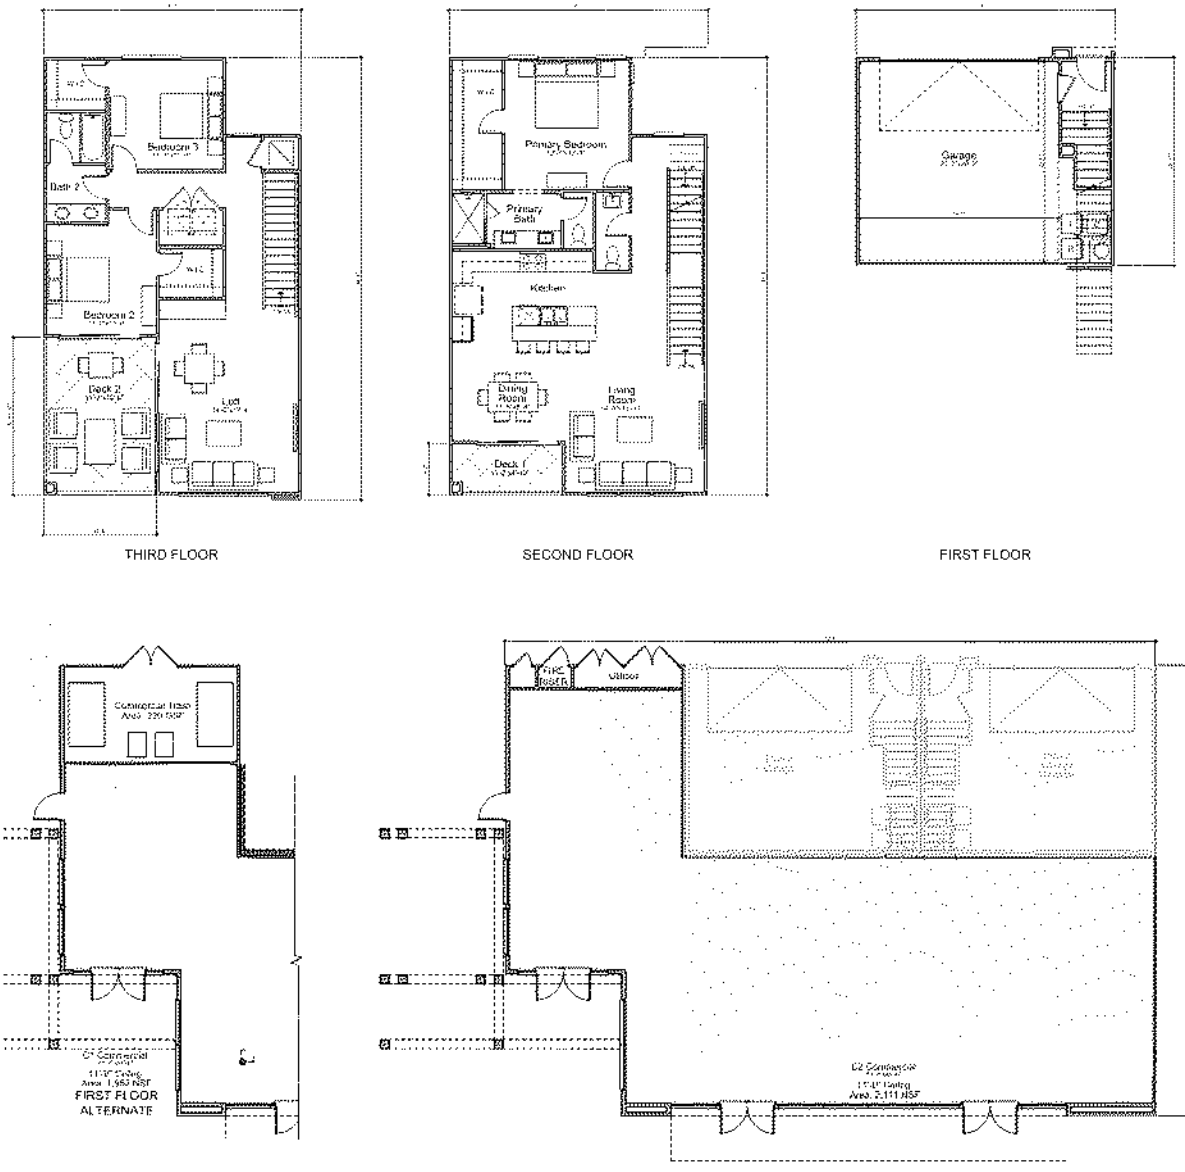

Figure 5.5

Town Over Commercial Diagrams

Restaurant Row

5.4.3 Front Street Rowtown Residential Buildings

The Restaurant Row Specific Plan currently displays 17 Front Street Rowtown dwelling units along both San Marcos Boulevard and the eastern border of the development site. These 3-bedroom units will include interior parking spaces accessible from Private Drive 'B' on San Marcos Boulevard units, and Private Drive 'C' on units located on the eastern border.

The Front Street Rowtown units will provide easy access to nearby commercial spaces as well as privately owned attached garage spaces. The Rowtowns will generate foot traffic along San Marcos Boulevard and potentially increase the number of consumers walking to nearby businesses.

The building frontages shall support quality urban form; windows, doors, balconies, and porches shall be facing the street thus promoting conversation and social interaction.

5.5 Parking Regulations

Development within Restaurant Row will be a combination of private garages that will serve the project residents and open bay parking spaces to accommodate visitors and patrons to the commercial establishments for the Project.

A Parking Management Plan (PMP) will allocate the available onsite parking spaces among onsite uses and will define enforcement measures to ensure onsite compliance. The PMP will be submitted to the City for approval and may not be changed without approval by the City.

Required Parking:

The parking requirements for both the residential and public portions of the project are outlined in the tables below:

Residential Parking Requirements

Land Use	Quantity	Parking Supply Rate	Required Parking Supply
Multi-Family (2 BR)	107 d.u.	2 BR = 1.75/d.u.	188
Multi-Family (3+ BR)	95 d.u.	3 + BR= 2/d.u.	190
Guest Parking	202 d.u.	0.15 per d.u. (1)	31
Total Residential Spaces Needed			**409**

Note:
(1) Rate is based on *Urban Land Use Institute's (ULI) Shared Parking Guide, Third Edition, 2020* as it better reflects the mixed-use and urban environment in which the Proposed Project would be located.

Non Residential Parking Requirements (5)

Land Use	Estimated Quantity	Parking Supply Rate	Required Parking Supply
Park Site	1.1 Acres	9 spaces per acre (1)	10
Restaurant, > 2,000 s.f.	3,232 s.f.	7.5 spaces per 1,000 s.f. (2)	24
Restaurant, < 2,000 s.f.	4,063 s.f. (1)	6.5 spaces per 1,000 s.f. (2)	27
Non-Residential	2,280 s.f. (3)	3 spaces per 1,000 s.f. (4)	7
Total Public Spaces Needed			**68**

See Appendix for parking demand observed at adjacent sit-down restaurants and shared parking agreements.
Notes:
(1) Based on reasonable park usage.
(2) Three separate restaurant spaces are included in this total

(3) Rate based on non-residential use within a mixed-use area See City of San Marcos Municipal Code Table 20.340-2

(4) Two separate restaurant spaces are included in this total

(5) "Non residential" uses are any commercial use allowed in the specific plan that is not a restaurant or park, should provide 3 spaces per 1,000 square feet.

Parking Provided:

The table below summarizes the parking spaces within the project that will be allocated to residents, either through personal garages or reserved open bay spaces within the project site.

Residential Parking Provided

Land Use	Parking Spaces Provided
2 car garage-(190 d.u.)	380 Garage Spaces
1 car garage-(12 d.u.)	12 Garage Spaces
Assigned open bay spaces for units with a single car garage (1)	9 Open Bay Spaces
Guest Spaces	31 Open Bay Spaces
Total residential spaces:	**432**

(1) Nine (9) open bay spaces are needed to fulfill the parking requirement of 1.75 spaces per unit for the as 2-bedroom units with only a single car garage (12 units X 1.75 spaces per unit = 21 spaces needed)

As shown, the Proposed Project will provide 432 reserved parking spaces for residential uses, which is sufficient to accommodate its 378 residential parking space requirements.

The proposed Project will also include 69 open bay parking spaces that will be available to the public, which is sufficient to accommodate the public parking requirement of 68 public spaces.

Non-Residential Parking Provided

Land Use	Parking Spaces Provided
Park	10
Commercial Uses	59
Total residential spaces:	**69**

Open Parking Space Types:

The table below outlines the different space types that will be provided across the 100 public spaces within the project site.

Space Type	Parking Spaces Provided
Standard	74
EV Ready	17
ADA Standard	4
ADA Van	1
EVCS	3

EVCS Van	1
Total Open Bay Spaces:	**100**

Note

(1) Number of ADA and EV parking subject to changed based on requirements of California Building Code

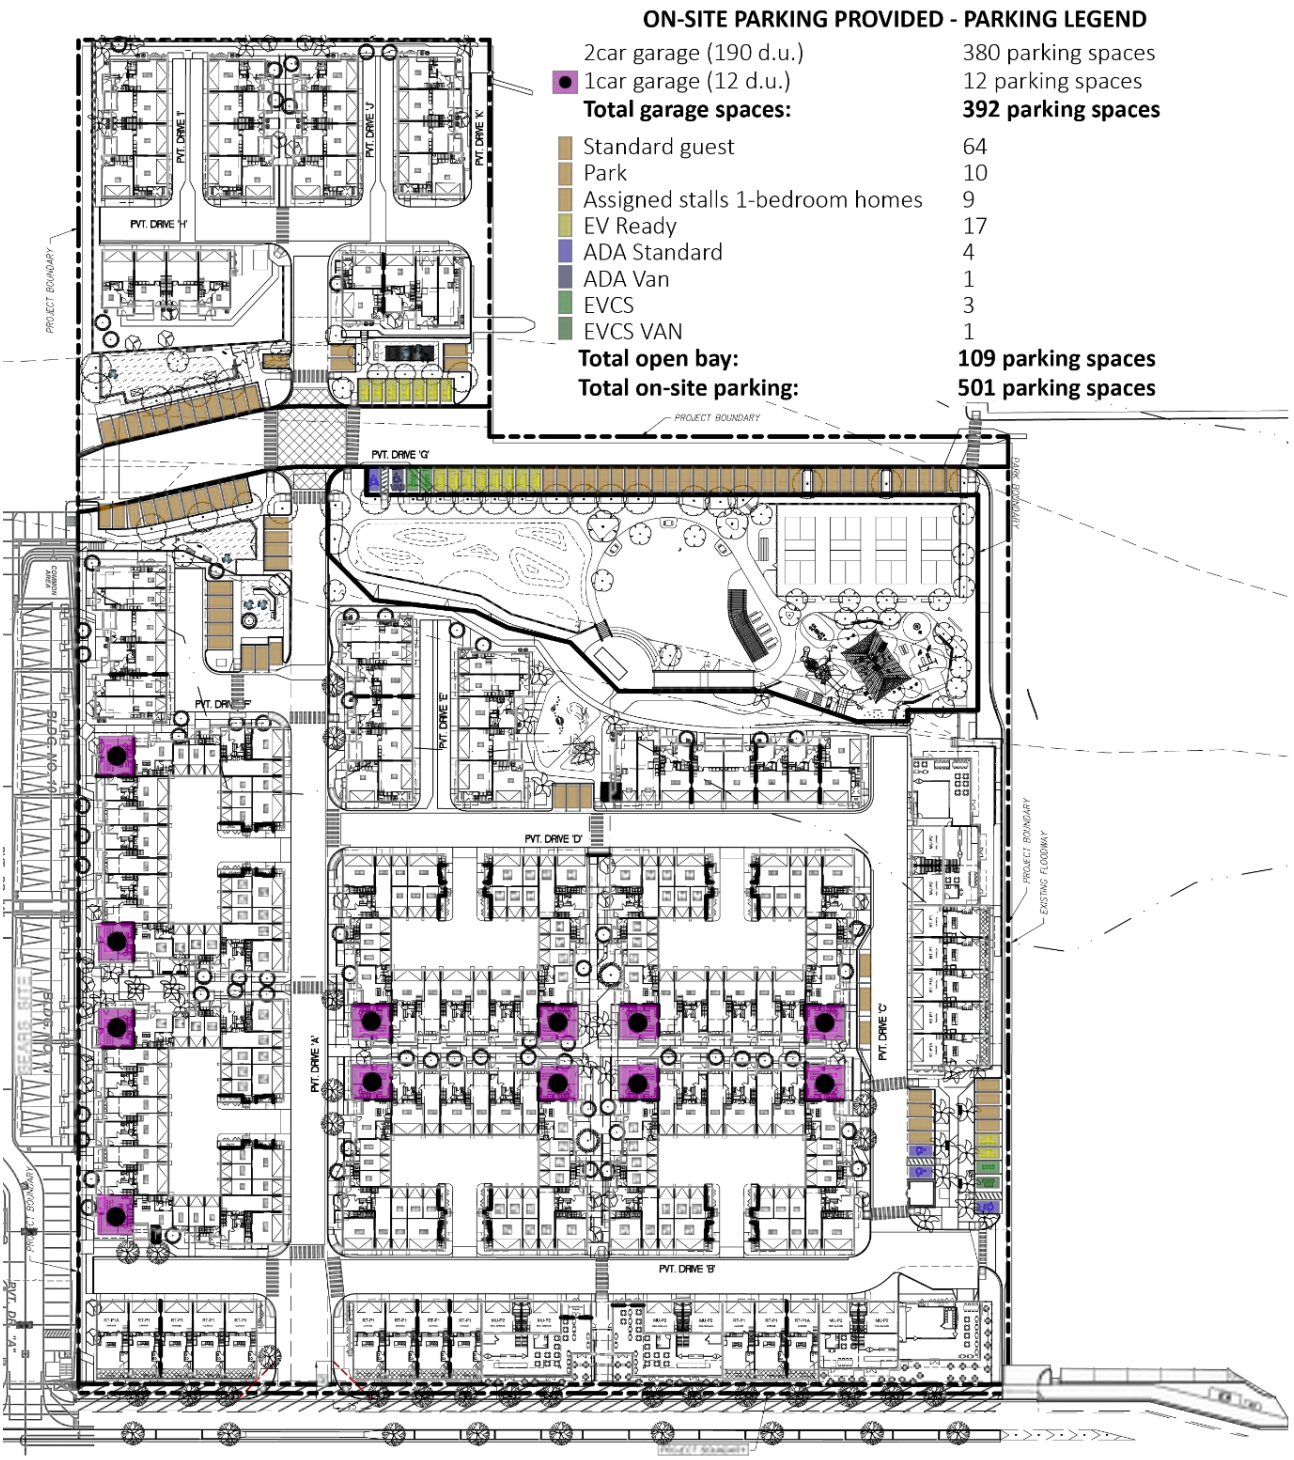

Figure 5.13

On-Site Parking Plan

Restaurant Row

File Name: P:\4457\Planning\Physical\Exhibits\Specific Plan Exhibits\10 Landscape Concept Plan\DWG\4457 SP Land Use Designation.dwg, Date Last Plotted: 7/27/2023 9:26:09 AM,

As this development will foster an active lifestyle for residents and visitors, short-term bicycle parking will be available throughout the site, primarily along the street frontage of San Marcos Boulevard, in the park, and near building entrances without blocking pedestrian activity. Attractive and practical bike racks will be available for public use, though these on-site features will also be available for residents when visiting shops and services in and around the neighborhood. However, residents will be required to house bikes within their homes when not actively using the site's shops and services, per the CC&R's. Bicycles shall be parked at the owner's risk.

5.5.1 Off-Street Parking Demand Onsite

Due to the mixed-use nature of the Proposed Project, the different land use types included within the specific plan will experience their peak parking demands at different times of the day. All open bay spaces, with the exception of the nine spaces reserved for residents, will be shared among all guests and patrons of the Proposed Project; thus, parking spaces from uses that are not experiencing their peak demand can be shared with other uses to help off-set the overall demand. For example, the City of San Marcos requires that all public parks be closed during the late evening and nighttime hours. This frees up the 10 parking spaces allocated to the park use during dinner time, which is when the restaurant uses experience their peak demand. Additionally, residential guest spaces typically experience their highest demand during evening and nighttime hours, leaving excess spaces for park users to access during daytime hours when the park is open. As such, more parking should be available at any given time than what is projected above.

5.5.2 Parking Management Plan (PMP)

To evaluate a project's compliance with the parking reduction criteria (above), the reviewing authority may require submittal of a parking management plan in addition to the required permit. The parking management plan shall indicate evidence or documentation necessary to demonstrate the conditions that warrant a parking reduction, including the following:

1. Parking quantity information that documents the need for fewer spaces (e.g., sales receipts, records of customer visits, information on parking standards required for the proposed land use in other cities, etc.);
2. Floor plans indicating the typical uses of the building; *and*
3. Programs that may be implemented that would reduce parking demand.

Requests for parking reductions shall be processed as a Director's Permit (DP). Review and approval of parking management plans will be at the discretion of the Director, or appropriate reviewing authority.

5.5.3 Shared Parking Analysis/Potential Parking Reductions

It should be noted that the specific uses that will occupy the commercial suites within the project are unknown at this time and are subject to change over the development. Therefore, future commercial establishments within the specific plan area have the ability to seek a directors permit from the City of San Marcos to establish new parking ratios based on their use type (See Municipal Code Section SMMC 20.340.050(B), if they can present evidence that they will generate less parking demand than what is outlined above, or if they have the ability to share parking spaces with adjacent sites via agreements with the adjacent sites, they may then rely on the shared parking agreement(s) to meet the Specific Plan parking requirements.

5.5.4 Relationship to Shared Parking Agreements

There are several uses occupying the adjacent parcels to the specific plan site which currently have access to the same pool of parking as the Proposed Project. The Proposed Project will allow these adjacent parcels to continue utilizing the unreserved parking on site, as required by these shared parking agreements (Agreement Numbers: 89-378260, 90-050972, and 1996-0564623). Pursuant to these agreements, the Proposed Project will continue to have reciprocal rights to utilize parking on adjacent parcels as well. The Proposed Project does not rely upon these parking rights to satisfy parking requirements, however, as it provides all required parking onsite within the boundaries of the Proposed Project. A detailed discussion of these agreements is provided in Appendices A and B.

5.5.4.1 Vehicular Driveway Access and Curb Cuts

The site is intended to be walkable, with active uses on the ground floor and pedestrian-friendly private internal streetscapes. Curb cuts for surface parking, private garage access or delivery/loading, shall be well planned and limited in frequency. All public drive aisles shall be a minimum of 24 feet and all garages shall have a minimum of 24 feet of unobstructed back-up and maneuverable space.

Properties with frontages solely along San Marcos Boulevard will have secondary street access, alley-loaded vehicular access, or off-site parking with on-street loading. Parking and loading access is not permitted along the throughway on San Marcos Boulevard. Access will be limited to the multi-way frontage.

5.5.4.2 Private Streets and Driveway Access

Within the private streets, drive widths will vary according to design from 20-feet to 40-feet in width. Width range is as follows:

20-foot width:

- Pvt. Drive ‘A’ (varies)
- Pvt. Drive ‘E’
- Pvt. Drive ‘I’
- Pvt. Drive ‘J’

24-foot width:

- Pvt. Drive ‘B’
- Pvt. Drive ‘C’
- Pvt. Drive ‘D’
- Pvt. Drive ‘F’ (varies)
- Pvt. Drive ‘H’
- Pvt. Drive ‘K’

26-foot width:

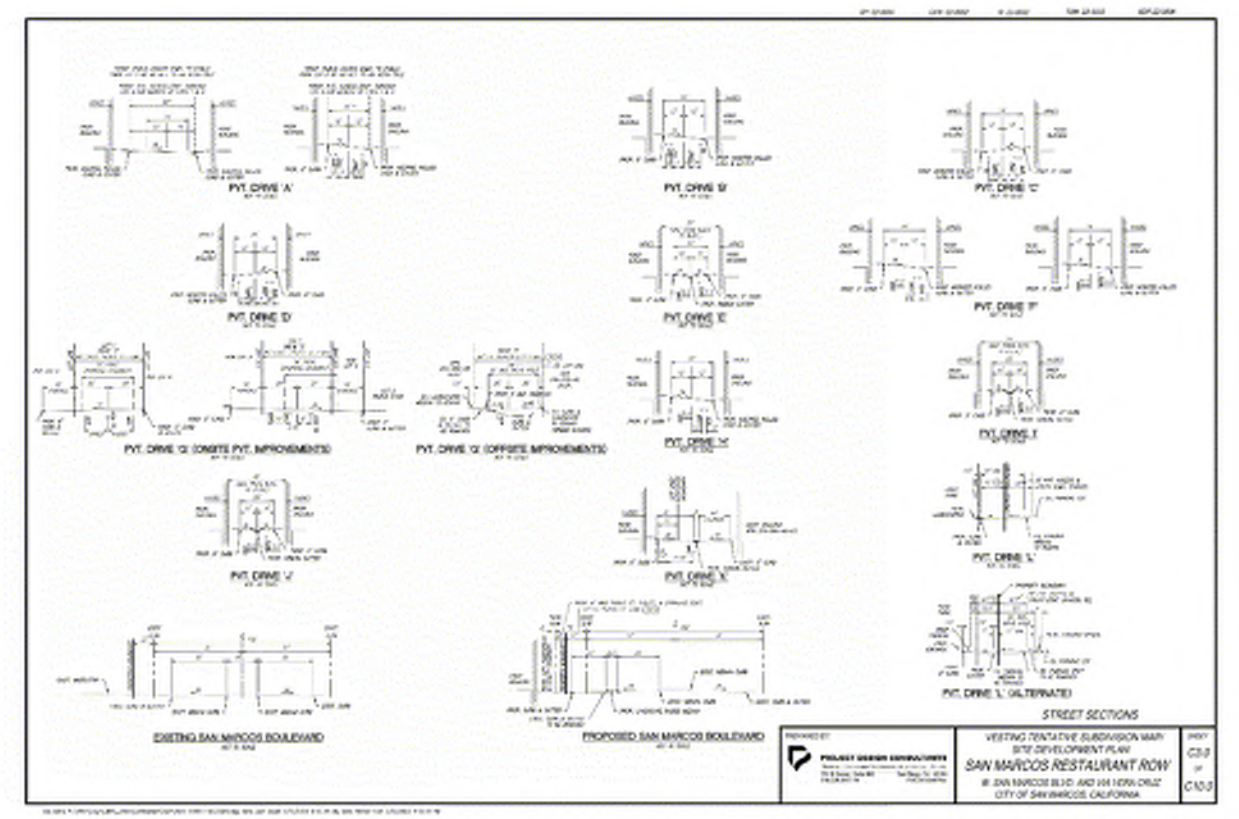
- Pvt. Drive ‘F’ (varies)

38-foot width:

- Pvt. Drive ‘A’ (varies)

40-foot width:

- Pvt. Drive ‘G’



- Curb cuts along San Marcos Boulevard are prohibited unless approved by the City Engineer for emergency access purposes;
- Vehicular driveway access or entries to parking garages are prohibited along frontages that require active, pedestrian-oriented uses; *and*
- Developments with internal parking and/or structures/garages may be permitted one (1) curb cut for parking structure entry per block subject to site plan review.

5.6 Mobility

The Restaurant Row Specific Plan intends to prioritize efficient and accessible mobility for many types of transportation, such as but not limited to vehicles, bicycles, buses, and pedestrians.

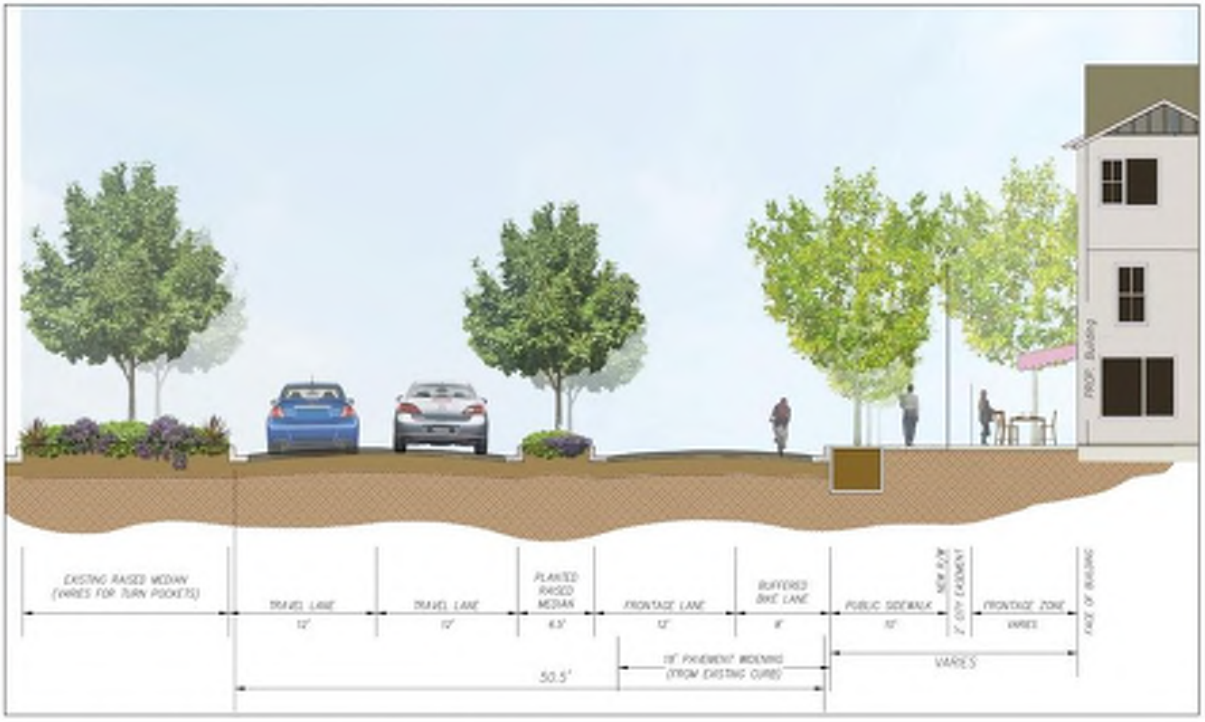
5.6.1 San Marcos Boulevard Multi-Way

San Marcos Boulevard is a major road that directs residents to both the town center and centers outside of the City. San Marcos Boulevard is a four-lane collector road with a bike path and no street parking.

The San Marcos Multi-Way objectives:

- Two- lanes west bound through way;
- A 6.5’ median;
- 12’ multi-use lane;
- 8’ Buffered Bicycle Lane;
- A proposed 10’ wide tree lined sidewalk to encourage pedestrian and social interactivity; *and*
- A variable private outdoor dining area acceptable to the City which includes the 2’ pedestrian and public utility easement.

The right-of-way may be reconfigured by the City of San Marcos.



SECTION B - SAN MARCOS BLVD.

NTS

5.6.2 Internal Vehicular Circulation

All internal driveways are private and will be built in compliance with applicable fire safety standards and approved dead end length modifications ensuring safety and emergency vehicle access. All drive isles to accommodate emergency vehicle shall be 24’ with stub drives E, I and J are to be 20’ wide.

5.7 Open Space

Restaurant Row will provide both public as well as private and common open space. The public open space park design was determined through several public workshops where stakeholders had the opportunity to identify amenities envisioned for the recreational area.

Recreational open space will fall under usable spaces for residents. The onsite private open space will serve the residents as well as some areas for public use. Private open space will include recreation areas, and general landscaping to enhance the development and offer diverse options to on-site residents and visiting guests.

5.7.1 Private Open Space

Private open space has been provided to ensure each resident has an area they can call their own. The development will provide private open space for each unit through the use of balconies and patios. The site will require 36 sq. ft. of open space per unit. There is currently 202 multifamily units proposed, which would require a total of 7,272 sq. ft. of private open space.

- There will be multiple options for passive landscaped open space such as paseo walks, bench seating, art elements, lighting, etc.
- The Restaurant Row project may provide tot-lot playgrounds, bench seating shade structures, and flexible open space.

5.7.2 Common Open Space

Common open space will be available to all residents and the public through paseo access easement corridors.

Table 5.9 Common Outdoor Open Space

Per OCRR Specific Plan
Approximately 1,400 s.f. per dwelling unit

Table 5.10 - Private Open Space Required

Open Space Areas	San Marcos Municipal Code Table 20.225-7	Per OCRR Specific Plan
Private Unit Open Space	36 s.f. minimum dimension 6 feet required for 50% of all residential units	36 s.f., minimum dimension of 6' minimum for 50% of the units
All Common Open Space	40 feet x 12 feet dimensions or greater 10% of open space shall be planting	11.3% of the residential portion of the Specific Plan is planted

6.0 INFRASTRUCTURE PLAN

6.1 Mobility

The Proposed Project will have four access points, two located on West San Marcos Boulevard (the existing western and eastern Restaurant Row driveways) and two others located on Via Vera Cruz (the existing northern and southern Restaurant Row driveways). The updates to San Marcos Boulevard are discussed in section 6.9.

6.1.1 Regional Vehicular Access

Restaurant Row can be accessed regionally by State Route 78. Local access to the area is via San Marcos Boulevard, Via Vera Cruz, and Las Posas Road.

6.1.2 Local Vehicular Circulation

The project site will be accessible from San Marcos Boulevard on the western end of the development frontage. People entering the site will be traveling west on San Marcos Boulevard. It will also be accessible from the second driveway (eastern driveway) on San Marcos Boulevard as well as the access point on Via Vera Cruz using the shared alleyway.

6.1.3 Pedestrian Routes

Restaurant Row will contain an extensive onsite system of landscaped paseos and pathways. Winding pathways between residential buildings will connect paseos and parks within the development.

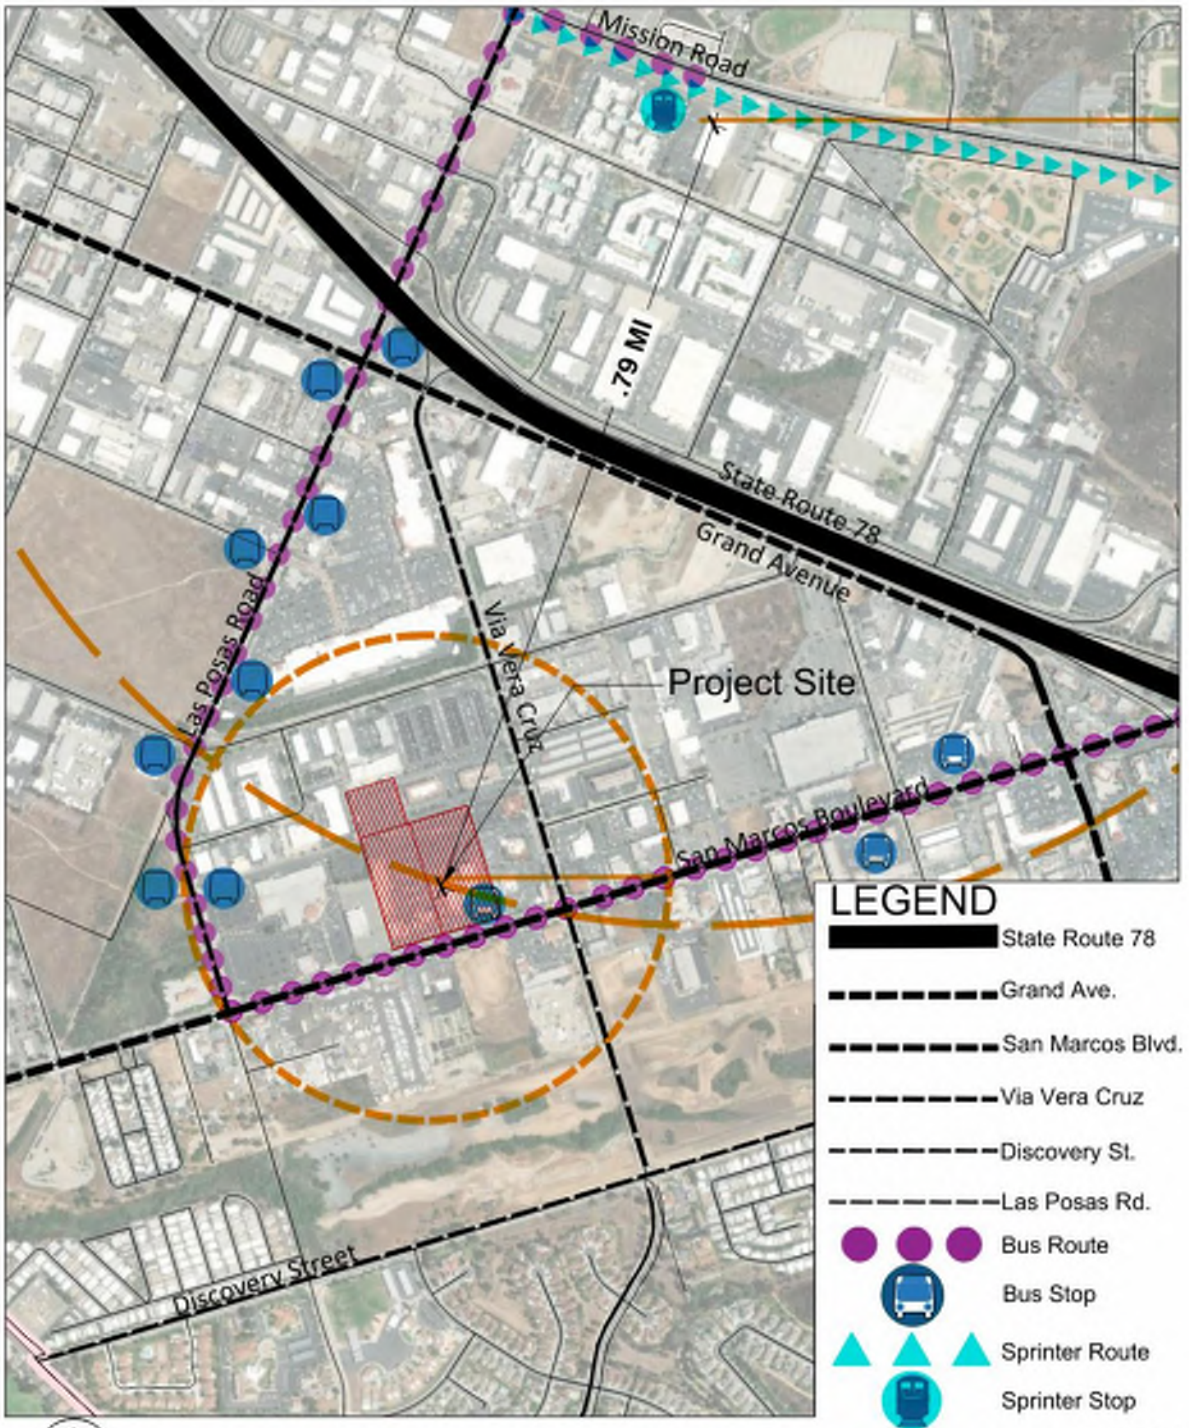


Figure 6.1

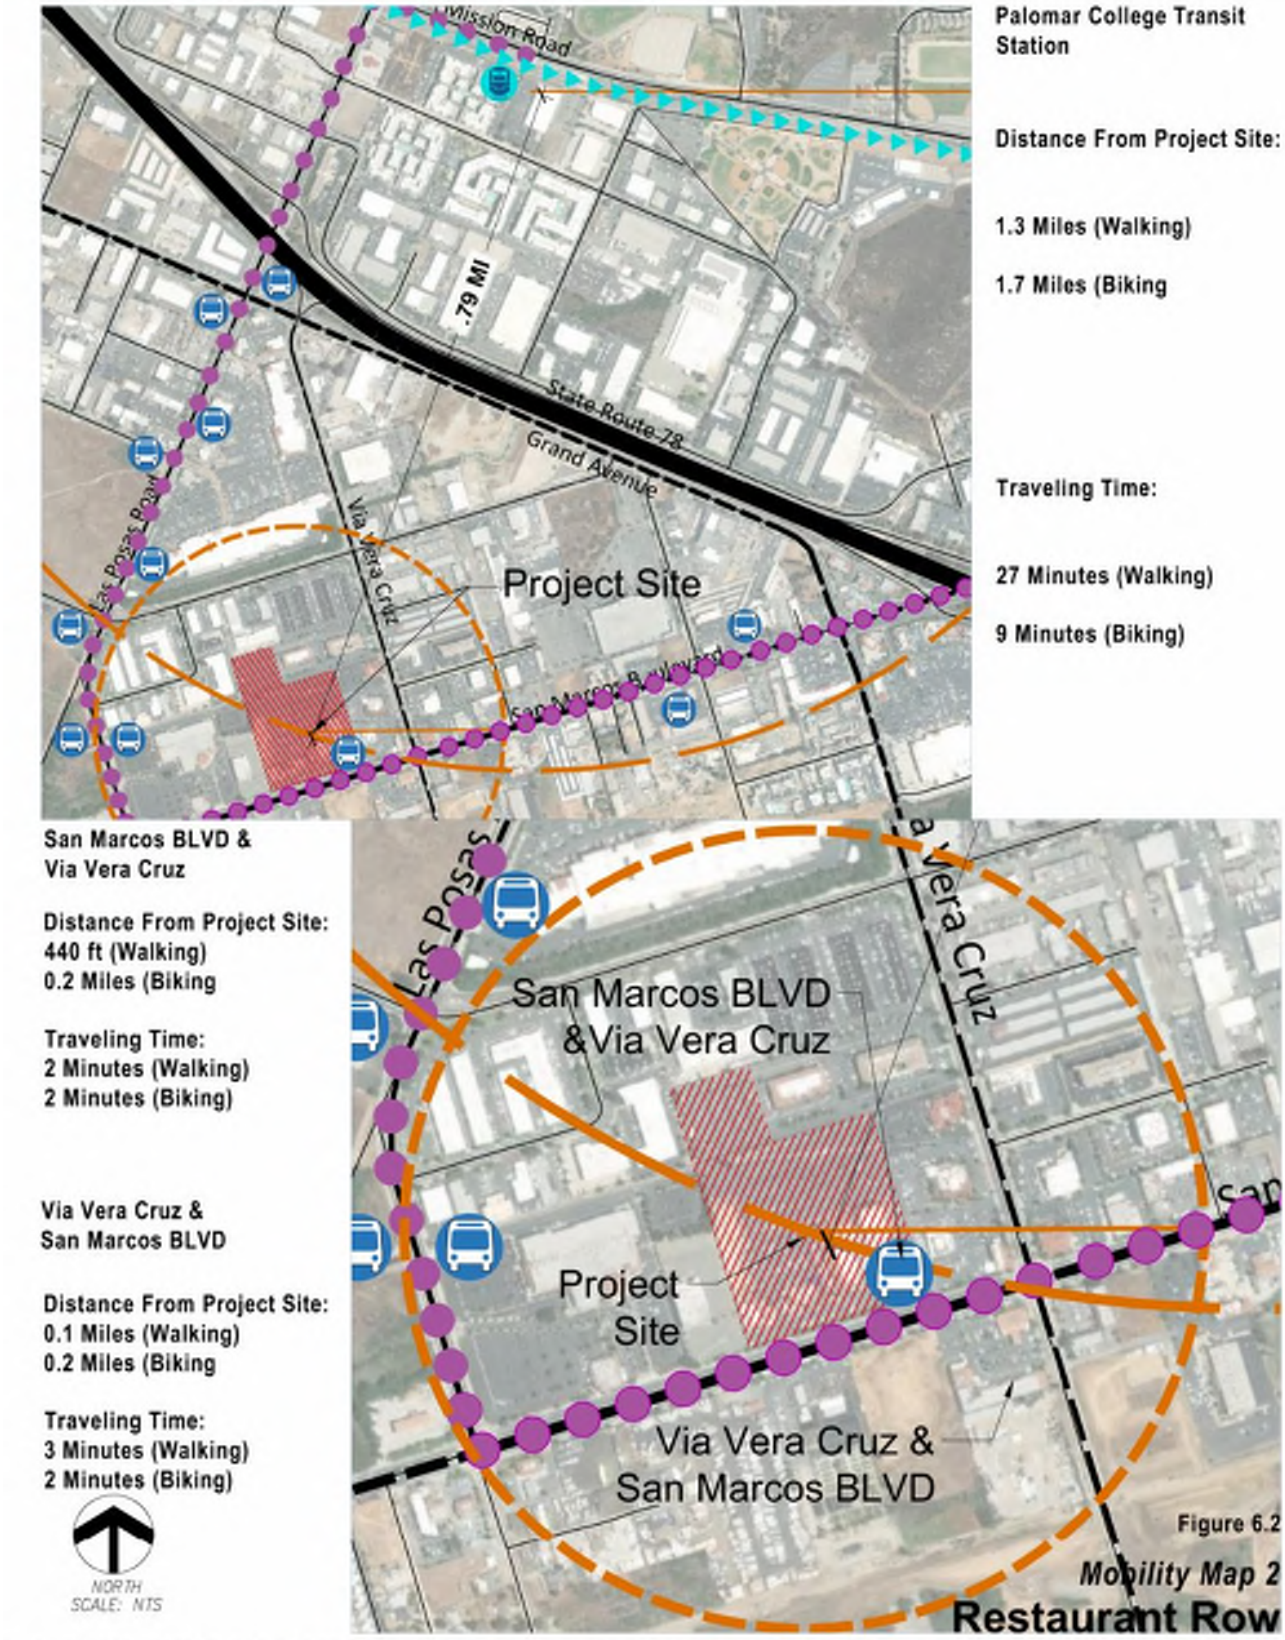
Mobility Map 1

Restaurant Row

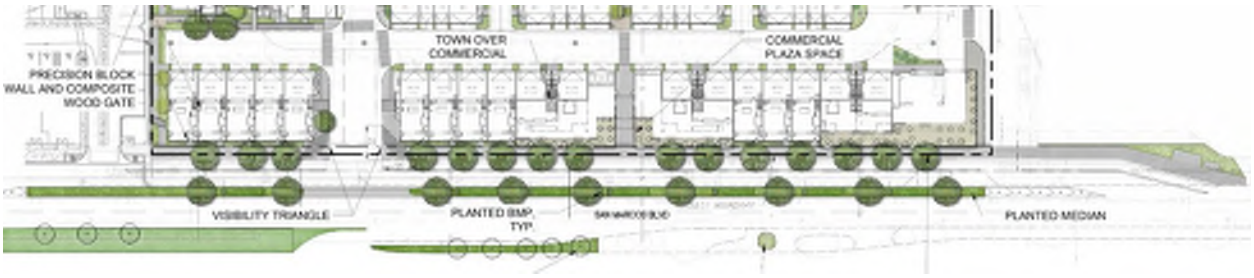


File Name: \\projects\p_drive\4457\Planning\Physical\Exhibits\Specific Plan Exhibits\07 Mobility Map\DWG\4457 Mobility Map.dwg, Date Last Plotted: 6/26/2023 1:42:38 PM

6.1.4 San Marcos Boulevard Multi-Way

The San Marcos Boulevard multi-way street along the frontage of the Specific Plan area will accommodate a variety of mobility features. The multi-way follows the guides set forth by the adopted San Marcos Boulevard Complete Street Project. The Specific Plan does not regulate the design and/or configuration of the right-of-way and is subject to change, as determined necessary by the City. The following features will be incorporated into the street frontage:

- Pedestrian sidewalk - The 10’ wide sidewalk will accommodate a 6’ wide pedestrian corridor to provide a 4’ wide (ADA) throughway. Also, a 6’ clear corridor will be provided around tree planting cut-out.
- Ingress and egress to the project site - Two vehicular entries into the project are provided from San Marcos Boulevard: one on the eastern property line (existing driveway) with a second entry approximately 150’ from the western property line.
- Expanded pavement area - The northern curb line will be located in the ultimate roadway condition, with an interim expanded paved area of 20’ that will become curbside parking in the future when the properties to the east and west develop their multi-way improvements. In the interim, this expanded paved area could be used for a bike lane.
- Street Trees - The street trees will be located outside of the vehicular site visibility triangle. The tree canopy will also provide green street features by shading and cooling the paved environment as well as reducing storm water run-off.
- Westbound bike lane - The interim westbound bike lane will be an 8’ paved corridor buffered by pavement striping. The ultimate configuration will accommodate parallel parking along the northern curb.
- 6.5’ wide median - This will be a green street element BMP biofiltration basin located between proposed median trees. This will also serve as a traffic calming element within the westbound throughway while buffering access to the mixed-use development.
- Two westbound through lanes - The westbound vehicular lanes adjacent to the 6.5' wide secondary median will be two 12’ wide travel lanes. A 12’ wide turn pocket will be provided in the redesigned median to accommodate westbound lane turning south into the existing nursery property. The redesign will also close the eastbound turn into the project.
- The medians will be modified to restrict public turns into the project while permitting emergency vehicles.



NTS

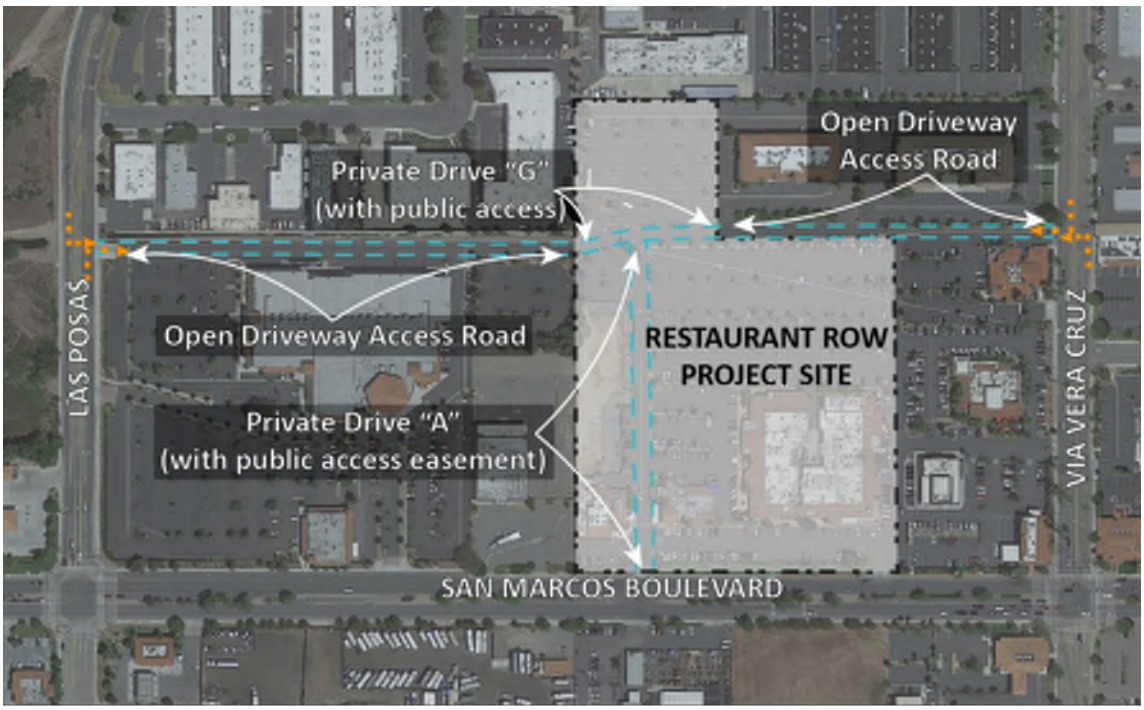
Figure 6.3

San Marcos Boulevard Multi-Way

Restaurant Row

6.1.5 Via Vera Cruz Public Access

An open alleyway provides vehicular access to the Restaurant Row Specific Plan as well as other commercial parcels to the north, east, and west from Via Vera Cruz to Las Posas. Public pedestrian and vehicular access are per the existing easements granted through the alley way (proposed Private Drive "G"). The alley is controlled and maintained by reciprocal access easement agreements amongst the neighboring properties, which grant the rights to travel to and through the project site. Permission is also granted to the abutting landowners and properties further to the west.



NTS

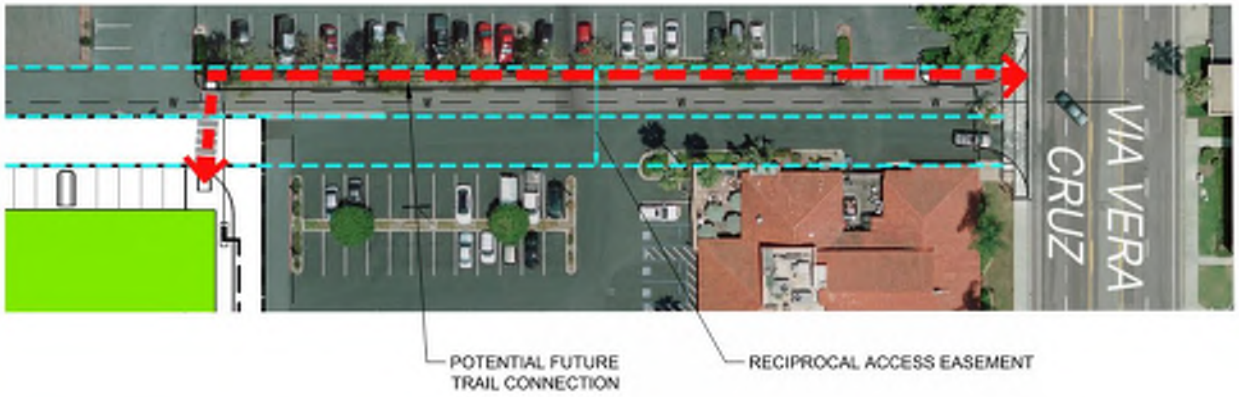
Figure 6.4

Private Drive "G" / Open Driveway Access Road

Restaurant Row

With the commercial interests of these land uses around the alley, they exist by permitting the public at large to travel through this corridor open and freely. Limiting uses to only those with access agreements would not be in the interest of the ongoing businesses thereby emphasizing the importance of providing the public open use of the alleyway.

To achieve future connectivity goals for pedestrians, bicycles, and non-motorized vehicles, the ongoing coordination should be established with the property along the northern edge of the alley to strengthen the linkage to the future park site. This connectivity would continue to be strengthened with a continuous walk (minimum 5' in width) proposed through the future park site to the westside of the planning area.



NTS

Figure 6.4.1

Via Vera Cruz

Restaurant Row

6.2 Water Service

Development of the project site is subject to approval by the Vallecitos Water District (VWD) and all applicable fees and charges shall be paid to the District per their regulations. VWD has provided a Technical Memorandum demonstrating that water service will be provided and the OCRR application can be implemented per this Specific Plan. Multi-family residential sites in the VWD are typically served by onsite private water systems, which consist of separate fire and domestic systems onsite. Private fire systems typically supply onsite fire hydrants and building fire sprinkler systems and require a backflow preventer at the connection to the public water system. There are existing water facilities in the vicinity of the project site which serve the existing uses on-site and surrounding uses.

Water service for potable residential use and fire service to the project site would be provided by VWD. VWD receives its water from the SDCWA. SDCWA is San Diego County's predominant source of water, supplying from 75 to 95 percent of the region's water needs (SDCWA 2016). The population within the Water Authority's service area was approximately 3.3 million people in 2020 and is projected to increase to roughly 3.8 million people by 2045. The County of San Diego is expected to develop an additional 130,000 acres between 2020 and 2050, with the majority (125,000 acres) of development dedicated to residential land uses. These regional growth projections are based on the San Diego Association of Governments

[SANDAG] Series 14 Regional Growth Forecast, developed for its 2019 Federal Regional Transportation Plan adopted by SANDAG's Board of Directors on October 25, 2019. In fiscal year 2020, total water demand in the Water Authority's service area was 463,128 acre-feet (AF), of which 92% was for municipal and industrial (M&I) use and 8% was for agricultural water use. By 2045, the Water Authority's total water demands are projected to reach 630,771 AF. This projection accounts for planned future water conservation savings (SDCWA 2016).The Restaurant Row project proposes to connect the existing public water mains at Las Posas on the west to Via Vera Cruz on the east by upgrading and extending through the existing alley (drive 'G') within VWD easements.

Lot 1 is proposed as the portion of the existing alley (drive "G") through the Restaurant Row property. The private water services for the public park (Lot 2) and the private water system for HOA (Lots 3 & 4) will connect to the public water main in Lot 1 (drive "G") with separate water meters and backflows. Separate private fire water protection systems will serve HOA lots 3 & 4 and will connect to the public water main in lot 1 with individual fire service connections and backflows.

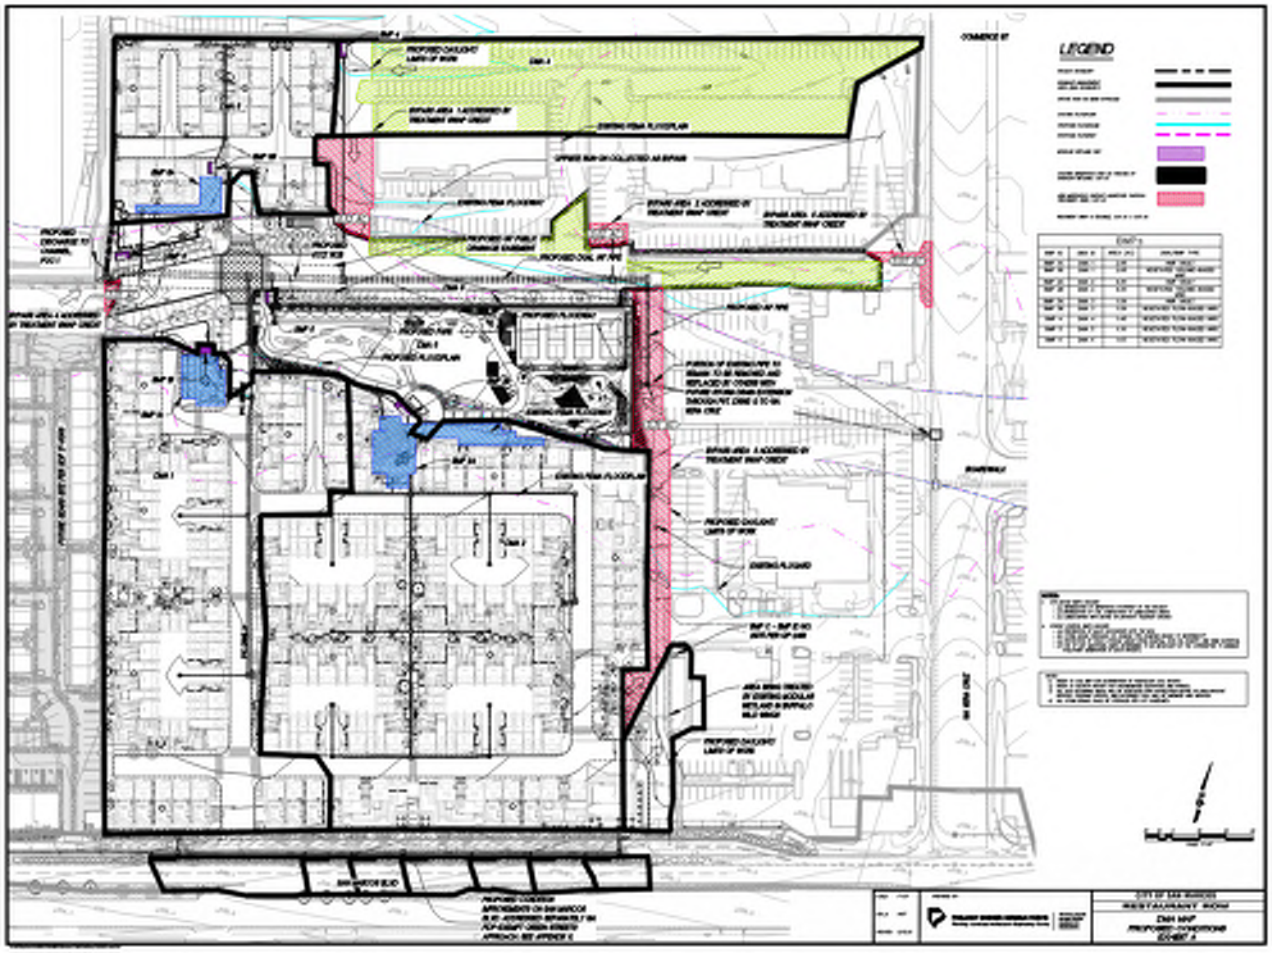
6.3 Sewer Service

The VWD also provides sanitary sewer service to San Marcos and the SPA. VWD has provided a Technical Memorandum demonstrating that sewer service will be provided and the OCRR application can be implemented per this Specific Plan.

The project proposes to connect into the existing public sewer main in Las Posas with a new manhole and extending the public main through the Alley Way and into Lot 1 of the project site. Private sewer lines will serve Lots 2 (public park) and HOA Lots 3 & 4 and connect to the proposed public main in Lot 1. Proposed private sewer lines are located in private drives A, B, C, D, E, F, H, I, J, and K.

6.4 Drainage

The Specific Plan area will address stormwater requirements through a combination of BMPs, including proprietary and non-proprietary biofiltration, source control, and underground hydromodification storage tanks. The site will use Private Vegetated Modular Wetlands, Public Vegetated Modular Wetlands, and storm vaults to adequately mitigate stormwater from the site.



NORTH
SCALE: NTS
(In Specific Plan Document)

Figure 6.5

Drainage Plan
Restaurant Row

6.5 Schools

The entire Restaurant Row Specific Plan lies within the jurisdiction of the San Marcos Unified School District (SMUSD) serving grades K-12. The SMUSD currently operates 12 elementary schools, five middle schools, and two high schools. Of these schools, the Restaurant Row Specific Plan is served primarily by La Mirada Academy serving grades K-8 and San Marcos High School serving students in grades 9-12. All students generated by residential development within the Restaurant Row Specific Plan will be accommodated by existing or new schools within the San Marcos area.

SMUSD has adopted student generation rates to estimate the number of students generated from proposed residential development, as illustrated in Table 6.1 below. Development of Restaurant Row would generate approximately 86 total students with 46 elementary school students, 19 middle school students, and 21 high school students.

Table 6.1 – Projected Student Population

Dwelling Type	Number of Units	Education Level	Student Generation Rate	Number of Students
Multi-Family Attached Units	202	Elementary School Grades K-5	0.2271	46
		Middle School Grades 9-12	0.0963	19
		High School Grades 9-12	0.1032	21

Prior to project approval, the project would be required to obtain will-serve letters from the SMUSD or servicing schools to confirm such schools have adequate capacity. Furthermore, the project would be required to contribute development fees to SMUSD pursuant to California Education Code Section 17620 et seq. and Government Code Sections 65995(h) and 65996(b), as well as the City's Municipal Code Section 17.52.050. The project developer/applicant would be required to pay the school mitigation fees that are in effect at the time of building permit issuance unless a direct agreement otherwise has been made with the SMUSD. The current school fee for residential development required by SMUSD is $4.44 per square foot; however, this fee amount could change between the drafting of the CEQA document for the project and the time of building permit issuance (SMUSD 2020). Further, consistent with General Plan Policy LU-11.2, the project would be required to provide a letter from the school district(s) to the City prior to the issuance of building permits confirming these fees have been paid (City of San Marcos 2012b). State Bill (SB) 50 states that the fees imposed by school districts shall constitute the exclusive method of considering and mitigating impacts on school facilities caused by a development project. Such payment shall provide "full and complete mitigation of the impacts of any legislative or adjudicative act...on the provision of adequate school facilities" (Government Code Section 65995(h)).

6.6 Law Enforcement

The City of San Marcos contracts with the San Diego County Sheriff's Department for law enforcement services. The Restaurant Row Specific Plan is serviced by the San Marcos Sheriff's Station located at 182 Santar Place. Residents are served by a staff of more than 100 deputies, volunteers, and professional staff members. The station has a total service area of more than 100 square miles and provides services to the citizens and visitors of San Marcos and the surrounding unincorporated communities of Lake San Marcos, Elfin Forest, Harmony Grove, Hidden Meadows, Ivy Del, Del Dios, Lake Hodges, and the San Pasqual Valley. The station is approximately 4- miles east of the project site. The project will be required to annex into CFD 98-01IA1, which pays for police services.

Residential development at the project site would increase the demand on police protection services in comparison to the existing uses on-site and uses allowed under the current land use designation due to the introduction of residents. Although not all residents would be new to the City, the proposed project could increase the need for police protection services through routine police and emergency calls and could increase the demand on the San Diego County Sheriff's Department San Marcos Station which would serve the project site.

Implementation of the proposed project would be expected to increase the frequency of emergency and non-emergency calls to the Sherriff's Department. However, over 100 deputies, volunteers, and professional staff serve the residents of the City. Law enforcement services include general patrol, criminal investigation, crime prevention, juvenile services, narcotics and gang investigations, communications and dispatch, and various management support services. Unlike fire services, which respond solely to emergencies, law enforcement services consist of patrolling large areas 24 hours a day, 365 days a year. Police units are continuously mobile, and service calls are responded to by the nearest available mobile unit. At the San Marcos Station, patrol deputies are assigned to a geographical "beat" area, allowing deputies to become familiar with citizens and problems within their "beats" (SDCSD n.d.a.). Accordingly, service ratios and response times are anticipated to remain adequate with implementation of the proposed project. As such, the proposed project is not expected to affect police protection such that new or physically altered governmental facilities are needed.

6.7 Fire and Emergency Medical Services

The San Marcos Fire Department (SMFD) is a full-service department responsive to the City of San Marcos and the San Marcos Fire Protection District, which covers an area of 33 square miles and a population of approximately 95,000 residents. The project will be required to annex into CFD 2001-01, which pays for fire/paramedic services.

The Fire Department maintains four fire stations and a regional emergency services training facility. The Department operates the following fire and emergency resources on a daily basis:

- 4 – Fire Stations
- 4 – Paramedic assessment engine companies
- 1 – Paramedic assessment truck company
- 5 – Paramedic transport ambulances (24 hour units)
- 1 –Shift Battalion Chief
- 1 – On-call duty Chief

The Restaurant Row Specific Plan is served by Fire Station #1, the station is located at 180 West Mission Road in the central part of San Marcos. It houses an engine, truck, brush engine, and ambulance. The battalion chief's office is at this location.

The proposed project would increase the demand on SMFD resources in comparison to the existing development on-site and that allowed under the current land use designation of Light Industrial and Mixed-Use. Although not all residents of the project would be new to the City, the estimated additional numbers of residents at the project site would increase the need for fire protection services related to routine fire and emergency medical calls and would increase the demand on SMFD Station 1 which would provide primary response to the project site; with SMFD Station 2 responding, as necessary.

The proposed project would be required to comply with the City's Development Services Fees outlined in Section 17.44.030 of the City's Municipal Code. Payment of the Development Services Fees go towards City services, which include the Fire Protection District, to ensure adequate fire protection facilities are provided. In addition, the project would be required to comply with any recommendations outlined in the Fire Protection Technical Memorandum prepared for the project. The Fire Protection Technical Memorandum prepared for the project determined that both SMFD Stations 1 and 2 are well-within the City's time response goal for first-in fire engine and medic ambulance to the entire project site. Furthermore, the addition of approximately one call per 3.5 days anticipated as a result of the project is not considered a significant increase. This is modeled off a conservative approach of 4 persons per unit as described in the Fire Protection Technical Memorandum.

6.8 Power and Gas

San Diego Gas and Electric (SDG&E) provides both gas and electric service to the Restaurant Row Specific Plan area. The area is highly developed and should have existing facilities in place to serve Restaurant Row's needs for gas and electric services. All on site facilities will be screened with landscape elements, or potentially placed below ground while allowing for adequate service access.

Roof top solar panels and electrical monitoring systems will be provided. Solar panel will be shielded from public view with architectural features.

Restaurant Row

7.0 IMPLEMENTATION

This chapter provides a detailed description of the mechanisms and regulations needed for implementation of the Specific Plan and will be the primary document consulted when questions arise concerning future development or development changes within the Restaurant Row Specific Plan.

7.1 Authority

This Specific Plan will serve as the zoning for Restaurant Row and shall be incorporated by reference into the San Marcos Zoning Ordinance. This chapter shall be used as the primary guiding document for review of all subsequent discretionary entitlements within the Specific Plan. As a regulatory document, successful implementation of a development project within the Plan area is contingent upon meeting the land use and associated design, development, infrastructure standards, and other policies outlined herein.

The Restaurant Row Specific Plan establishes development design, infrastructure, and implementation parameters and incorporates those standards through reference of applicable Zoning Ordinance or other appropriate standards and provisions of the City of San Marcos Municipal Code, to establish specific zoning standards, which govern development within the Specific Plan area. Proposed development and design activities within the Restaurant Row Specific Plan must be consistent with the established parameters of this Plan. Should any requirements contained herein of the Restaurant Row Specific Plan conflict with the City of San Marcos Municipal Code, the Restaurant Row Specific Plan shall be the primary document used to resolve the conflict. If the Restaurant Row Specific Plan is silent on any issues, the City of San Marcos Municipal Code, or other applicable adopted City standard(s) shall be referred to for regulations and standards.

7.2 Administration

As the lead agency, the City of San Marcos shall be primarily responsible for the implementation, administration, and enforcement of the Restaurant Row Specific Plan. The homeowner's association or other comparable group established for the Restaurant Row Specific Plan Area shall be responsible for the enforcement of private property and open space easement requirements pursuant to standards identified herein as well as any covenants, conditions, and restrictions (CC&R's) developed separately from this Plan. Once completed with the determination of who will regulate the commercial units as well as the residential units on the property, CC&R's will be submitted to the City of San Marcos to be reviewed for compliance and approved.

7.3 Implementing Permits

In addition to this Specific Plan (SP22-0004), the City of San Marcos is concurrently processing a General Plan Amendment (GPA22-0002), Rezone (R22-0002), Tentative Subdivision Map (TSM22-0003), and Site Development Plan (SDP22-0006). The public park will be developed under SDP23-0004. Future development projects within the Specific Plan Area may be subject to further review and subsequent discretionary permits and approval from the City of San Marcos Development Services Department. Project application(s) will be reviewed for consistency with the Restaurant Row Specific Plan and all relevant development standards, design standards, and mitigation measures identified during the environmental review process, as well as other applicable conditions of approval adopted as part of this Specific Plan. Application(s) for subsequent development projects, use permits, building permits, landscape permits, or public improvements and other activities will be reviewed by the Development Services Department using

established procedures for consistency with this Plan. Review and analysis of subsequent project permit(s) may trigger additional conditions the City determines to be reasonably necessary to ensure the project application(s) and or plans achieve compliance with this Specific Plan. Procedures to amend the Restaurant Row Specific Plan are detailed below, should the applicant or City staff determine changes in the project area would trigger an amendment to this Specific Plan to remain compliant with the adopted Specific Plan/General Plan.

7.4 Construction sequence & Development Phasing Plan

Construction of Restaurant Row is planned to be accomplished in four stages. Development of the site will be accomplished in six phases. Construction sequence and development phasing is subject to change and will be approved by the Building Division.

7.4.1 Construction sequence

- 1: Land development – demolition of the existing structures and mass grading of the site. The site will be graded all at once.
- 2: Residential construction – model homes from each product type will be completed in the initial production phases to enable sales to begin, with the rest of the homes to follow.
- 3: Retail – construction of the commercial and mixed-use buildings will be completed.
- 4: Public improvements, including San Marcos Multi-Way and the public park are subject to additional review and permitting.

7.4.2 Development Phasing Plan

After Construction sequence 1 is complete, residential construction will begin with model homes for each product type, followed by the rest of the homes to be built in phases 1 – 6.

7.5 Minor Amendments to the Specific Plan

California Government Code 65452 grants the City of San Marcos the authority to make minor amendments to the Specific Plan to account for market force changes, either administratively through the Planning Director's, or their designee's, review or through the Planning Commission. The applicant may submit an application to the City of San Marcos' Development Services Department, which may include maps, text, and or technical studies describing the nature and intent of minor amendments. Upon submittal, the Planning Director, or their designee will make a determination as to the applicability of the Substantial Conformance. The Planning Director, or their designee, may delegate their administrative decision to the Planning Commission and conversely the applicant may apply to the Planning Commission for administrative decision. Minor amendments may include, but are not restricted to:

- Changes to the site plan such as, but not limited to, plotting and elevations;
- Modifications to road and trail alignments, if approved by the Development Services Department;
- Changes in landscaping, fencing, signage, lighting, and streetscape design provided the change are consistent with the conceptual landscape design outlined in the Specific Plan;
- The addition of public or private parks, relocation of parks, and/or reconfiguration of parks; *and/or*
- Minor architectural changes in relation to design materials.

Substantial Conformance is a necessary tool the City can use to assist the development of the Specific Plan Area. The conceptual land use plan and general guidelines and regulations set forth in this Specific Plan require a modification process to allow minor design changes to conform to the intent of the Specific Plan. The land uses and development yield identified herein have been carefully analyzed in the Mitigated Negative Declaration (MND). The results of the MND analysis and subsequent mitigation requirements are valid for minor amendments to the land uses and development yields which result in equal to or a reduction in vehicular miles travelled (VMT) during peak-hour travel times. Minor adjustments, including substitutions and density changes that do not exceed the allowed densities of the Specific Plan, are allowable under this Specific Plan as Substantial Conformance, provided they do not result in an increase in VMT for peak-hour travel times. Proposed development projects within the Specific Plan Area, which exceed the VMT generation thresholds identified in the MND, may still be processed as Substantial Conformance, so long as no new mitigation measures are required to offset any potential increase in traffic impacts. Similarly, any change that does not create new significant unmitigated environmental impacts that would require a subsequent or supplemental Mitigated Negative Declaration pursuant to Public Resources Code Section 21166, changes that do not violate any applicable public safety and health standards as applied to each line item herein, and any other minor modifications, similar to those listed above and deemed minor by the Planning Director, or their designee, which are in keeping with the intent of the Specific Plan would be considered as Substantial Conformance. A revision to the Plan will not be considered minor if the revision causes an impact for an adjacent property or property owner that is determined to surpass the level of significance as determined by city guidelines for each studied environmental subject as described in the Final MND, and as determined by the Planning Director, or their designee.

7.6 Other Revisions to the Specific Plan

Should the Planning Director, or their designee determine a proposed revision does not meet the criteria from the above-listed minor modification guidelines, then a Revised Tentative Tract Map, Plot Plan, and/or a modification to the Site Development Plan, whichever is determined to be appropriate by the Planning

Director, or their designee, can be processed without concurrently processing a formal amendment to the Specific Plan. The Planning Director, or their designee shall determine the applicable process by referencing the procedures stated herein with the Subdivision Ordinance or Zoning Ordinance.

7.7 Major Amendments to the Specific Plan

If no minor modification mechanism can be applied from the defined parameters listed previously in this chapter or as determined by the Planning Director, or their designee, a major amendment to the Specific Plan shall be required. California Government Code, Section 65453 allows for discretionary Specific Plan Amendment procedures and regulations and allows for the amendment approval by the Planning Commission and City Council of the City of San Marcos. The City of San Marcos shall process formal Specific Plan Amendments with additional environmental review unless the proposed changes do not warrant additional environmental review in accordance with the "Options for Further CEQA Review of Subsequent Discretionary Approvals" as described in Section 7.2.1.1.

7.8 Projects Exempt from Additional Environmental Documentation

Subsequent development proposals within the Specific Plan, if found by the City of San Marcos to be consistent with this Plan and the impact analysis and mitigation measures found in the MND, or as otherwise statutorily or categorically exempt from CEQA, may be approved, and implemented without further public environmental review according to California Government Code Section 65457.

7.9 Projects that Require Additional Environmental Documentation

Any future development within the Specific Plan area may be subject to further review and subsequent discretionary permits and approval from the City of San Marcos Development Services Department. Application, fee, and processing requirements shall be in accordance with the City's regulations, unless modified by this Specific Plan. Applications for subsequent development projects or public improvements and other activities will be reviewed by the Development Services Department using established procedures to determine consistency with the Pacific Specific Plan and all pertinent development standards, design standards, and mitigation measures identified during the environmental review process, as well as other applicable conditions of approval adopted as part of this Specific Plan. Review and analysis of a subsequent project permit(s) may trigger conditions of approval that the City determines to be reasonably necessary to ensure the projects application and or plans achieve compliance with this Specific Plan. Amendments to the Specific Plan may be necessary to respond to changes in housing market trends and the economy. Applications that are not in substantial conformance and do not qualify for a minor deviation will require an amendment to the Specific Plan. Amendments may be processed either administratively through the Planning Director, or their designee's review or through the Planning Commission. The applicant may submit an application to the City of San Marcos' Development Services Department, which may include maps, text, and or technical studies describing the nature and intent of minor modifications. Upon submittal, the Planning Director or their designees will make a determination as to the applicability of the amendment process. No amendment shall be approved that is not consistent with the General Plan.

8.0 GLOSSARY

This chapter provides definitions for selected terms and land uses within the Restaurant Row Specific Plan. If terms are not specifically defined in this chapter, the comparable regulations of this Zoning Ordinance and all adopted ordinances, regulations, standards, and guidelines of the City shall apply, subject to the Director's discretion.

8.1 Land Use Definitions

Multifamily Dwelling. A type of residential development comprised of a building or portion thereof, used for occupancy by three (3) or more households living independently of each other, and containing three (3) or more dwelling units. See definition of "Dwelling, Multifamily" in SMMC Section 20.600.060 for additional information.

Accessory Dwelling Unit (ADU). An attached residential dwelling unit that provides complete independent living facilities for one or more persons. It shall include permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel as the single-family or multifamily dwelling is situated. An Accessory Dwelling Unit also include an efficiency unit, as defined in Section 17958.1 of the Health and Safety Code.

Rooming House. Rooming House (land use). A building containing three (3) or more bedrooms or other rooms used, designed, or intended to be used, rented, leased, let or hired to be occupied or which are occupied by five (5) or more individuals under five (5) or more separate oral or written leases, subleases or any other contractual agreement designed to effectuate the same result, with or without meals, for compensation, as permanent guests pursuant to an arrangement for compensation for definite periods, by the month or greater term. A “Rooming Housing” does not require a property owner, or an agent, or a rental manager, to be in residence. A “Rooming House” may or may not have individual or group cooking facilities. A “Rooming House” may or may not provide free access to common living areas beyond the bedrooms or guest rooms. A “room” means any rented, leased, let, or hired room, living space or other square footage within the building that is used or designed to provide sleeping accommodations for one (1) or more persons. A property permitted accessory dwelling unit, second unit, or “granny flat” shall not be considered a rooming house if used, designed, or intended to be used, rented, leased, let or hired, to be occupied or that is occupied by two (2) or fewer individuals under two (2) or fewer written leases, subleases or any other contractual agreement designed to effectuate the same result, with or without meals, for compensation, as permanent guests pursuant to an arrangement for compensation for definite periods, by the month or greater term Row Home. A series of dwelling units, attached in a row, separated from each other by an unpierced wall extending from basement to roof.

Live-Work Unit. Live/Work means an integrated dwelling unit and working space, in which the work component is the primary use, and the residential component is secondary, occupied by a single housekeeping unit in a structure, that has been designed or structurally modified to accommodate joint residential occupancy and work activity, and that includes:

1. Complete kitchen space and sanitary facilities in compliance with the Building Code; and,

2. Working space reserved for and regularly used by one (1) or more occupants of the unit.

Artist Studio. Businesses engaged in the production of objects of art or craft produced by individuals or groups of fewer than three (3) individuals that are intended for direct retail sale. This included private and public art studio spaces, but does not include manufacturing activities that result in goods intended for wholesale distribution.

Banks and Other Financial Institution. Establishments that provide retail banking, credit, and mortgage services to individuals and businesses. This classification includes banks, credit unions, and savings and loan establishments but excludes business primarily engaged in check cashing or short-term (e.g. "payday") loans

Bar. Any retail facility maintaining and using an "On Sale Beer" license or an alcohol-related license other than an On Sale Beer license. For facilities operating under an On Sale Beer license, food shall not be sold or served to the public except as required by the license.

Builder Sales Office/ Design Studio. Any commercial use engaged in retail sales or leasing of the residential housing or commercial facilities within the Specific Plan area. Sales may be regulated by square footage thresholds subject to the regulations of the Specific Plan and shall be categorized by the following programmatic categories:

1) New home sales. The sale or leasing of new homes including the following:
    - Townhomes
    - Motorcourts
    - Greencourt
    - Towns over commercial
    - Front Street Rowtowns
2) Commercial
    - Commercial uses as defined in Table 5.3 Permitted Mixed Uses
3) Showrooms. Stand-alone and retail showroom establishments engaged in the sales or leasing of new residential homes or commercial spaces. All showrooms shall be subject to the operational and design standards of the SMMC section 200.440.190 (Showrooms), and the business operator shall sign an affidavit acknowledging all operational standards for such uses prior to issuance of a business license.

Clubs and Lodges. Meeting, recreational, or social facilities of a private or nonprofit organization primarily for use by members or guests including residential accommodations that are available to members on a temporary basis but excluding residential hotels. This classification includes union halls, social clubs, and youth centers.

Daycare, Large. A day care facility located in a residence and licensed by the State as a family childcare home, where a full-time resident provides care and supervision for periods of less than twenty-four (24) hours that serves three (3) to five (5), plus two (2) additional children after school, as defined in the Health

and Safety Code Chapter 3.4. Children under the age of ten (10) years old whole reside in the home count as children served by the day care facility. This use may be permitted by a DP subject to compliance with the following procedures and restrictions:

1) It is located in a three (3) bedroom home.
2) The large family daycare home shall be located a minimum of three hundred (300) feet from any other large family daycare home. If the facility is located between three (300) hundred and five hundred (500) feet from an existing large family daycare home, the applicant shall submit proof that the existing large family daycare home is operating at full capacity.
3) An application for a DP to allow a large family care home shall be processed under its own application from and specific fee and shall not be subject to the submittal requirements of the standard project application.

Farmer's Market (Certified) outdoor. A temporary marketplace, either indoors or outdoors, for the display and sale of produce and other agricultural products such as, but not limited to, fresh fruits, vegetables, nuts, honey, shell eggs, flowers, and nursery stock, for which a Certified Farmers' Market Certificate has been issued by the County Agricultural Commissioner pursuant to California Code of Regulations, Title 3, Division 3, Chapter 1, Subchapter 4, Article 6.5.

Food and beverage sales. Retail sales of food and beverages for off-site preparation and consumption. Typical uses include supermarkets, specialty food stores, delicatessens, or convenience markets. This classification excludes large-scale stores that sell food items and beverages in bulk.

Industrial Design and Services (builder sales office design/studio. Any business providing or combining professional design services and light fabrication or assembly technology for product specification. This land use may include office space and light or quasi-light industrial space to provide the full range of design, testing, and modification of commercial and industrial products.

Live Entertainment as an accessory use. Music, comedy, readings, dancing, acting, or other entertainment performed on a site three (3) or more days during a calendar year. This includes dancing by patrons to live or recorded music.

Massage, Accessory Use. A use where massages occurs either permanently or temporarily in conjunction with a primary permitted land use, and the area where the massage occurs covers less than twenty percent (20%) of the gross floor of the principal use. All persons performing massages shall be state licensed.

Merchandise Sales, New Retail. Any commercial use engaged in retail sales of merchandise not specifically listed under another use. Merchandise sales may be regulated by square footage thresholds subject to the regulations of the applicable Zone and shall be categorized by the following programmatic categories:

1) Discount. The retail sales of new merchandise by discount retailers, including all products or commercial stores listed under "New Retail."

2) New Retail. The retail sales of new merchandise including the following products or commercial stores:

- Antique shop
- Artists'/craft supplies
- Bicycle shops
- Bodegas
- Books/stationary
- Cameras and photographic supply stores
- Candy shop
- Cheese shops
- Clothing and accessories
- Collectibles (cards, coins, comics, stamps) excludes second-hand and pawn
- Department stores
- Dry goods
- Fabrics and sewing supplies
- Pharmacy
- Florist and house plants (indoor sales only)
- Hardware
- Hobby materials
- Jewelry
- Luggage and leather goods
- Movie rental and sales (does not include cinemas)
- Musical instruments, parts and accessories
- Newsstands
- Orthopedic supplies
- Paint sales
- Small wares
- Specialty shops
- Sporting goods and equipment

- Toys and games
- Variety stores
- Wine shops

3) Showrooms. Standalone and retail showroom establishments engaged in the retail sales of larger-scale new merchandise including appliances, indoor or outdoor furniture. All showrooms shall be subject to the operational and design standards of section 200.400.190 (Showrooms), and the business operator shall sign an affidavit acknowledging all operational standards for such uses prior to issuance of a business license.

4) Used/Pawn. An establishment engaged in the retail sale of secondhand merchandise, or offering loans secured by personal property.

Microbrewery. A facility for the production of beer, fermented on the premises, for distribution, retail, or wholesale on or off premises. On-site tasting facilities shall be limited to the sale/tasting of product produced on-site and shall not exceed fifty percent (50%) of the building area. Ancillary retail sales are permitted. Alcohol-related businesses are subject to all applicable state law (California Business and Professions Code Section 23000 et seq.) licensing requirements for the sale or provision of alcohol.

Museum, Library, or Gallery. A commercial or nonprofit use that displays or preserves objects of interest in literature, the arts, or sciences.

Office: Administrative, Business, Corporate, non-profit. An establishment providing direct, "over-the-counter" services or business services to consumers or clients (e.g., insurance agencies, real estate offices, travel agencies, utility company offices, etc.) and office-type facilities occupied by businesses providing professional services and/or engaged in the production of intellectual property. Offices shall be categorized by the following programmatic categories:

1) Corporate, Administrative, Business. Offices for private commercial or nonprofit business.
2) Government. Any office building or space owned, operated or leased by a municipal entity for the purpose of conducting municipal business or operations.
3) Medical/Dental/Holistic. Offices for the conduct of medical practice out-patient Services

On-Premises Alcoholic Beverage Sales. The retail sale of liquor beer, wine, or other alcoholic beverages for on-premises consumption, such as bars and nightclubs, but excluding full-service restaurants.

Outdoor Dining. Any outdoor space directly adjacent and accessory to a primary Restaurant land use for the purpose of outdoor food or beverage service and dining. Subject to provisions of chapter 20.400 (Specific Use Standards) and regulated by Zone.

Personal Services (land use). Any place of business providing services and accessory retail sales of products related to the services provided, categorized by the following programmatic elements:

1) General. An establishment providing non-medical services to individuals as a primary use, including the following service types.
   - Barber shops
   - Beauty salons
   - Bridal salon/clothing rental

- Ear piercing services as ancillary use
- Hair salons
- Home electronics and small appliance repair
- Massage accessory use (see definition in this chapter)
- Nail salons
- Seamstress/tailors tanning salons
- Permanent makeup services as an ancillary use to a beauty, hair, or nail salon. To qualify as an ancillary use, permanent makeup services cannot be provided in conjunction with any Tattoo and/or Body Art Facility. Said facilities are considered a Tattoo and/or Body Art Facility land use, subject to the SMMC Section 20.400.200 (Tattoo and/or Body Art Facility)
- Shoe repair shops

2) Fitness/Health Facility. Any place of business or membership club providing facilities devoted especially to health, beauty, and relaxation that deals with the cosmetic, therapeutic, and/or holistic treatments, where people visit for professionally administered personal care treatments, including health or physical fitness clubs.Massage accessory use(s) may be permitted. A medical spa shall be classified as a Medical Office land use.
3) Limited Instructions. Any place of business that is intended for group or individual instruction, including art, dance, gymnastics/gymnasium, indoor batting cages, martial arts of any form, mediation, modeling agencies, pilates, pottery, rock climbing, tutoring, volleyball club/organizations, yoga, weight control clinics. Massage shall not be regulated under this land use.

Places of Assembly (Small). Gathering places for public, private, commercial or nonprofit gatherings with permanent or moveable seating. Attached portions of civic center and public-school buildings including non-fixed seating may also be considered community assembly space that may be rented to nonprofit civic or community organizations; no additional use permit shall be required for this rental use. The following use types shall all be considered within the "Places of Assembly" land use:

1) Auditorium. A building used or designed for audience attendance, including public assembly, meetings, lectures, dances, entertainment, and similar uses. This use does not apply to auditoriums within a school facility.

2) Place of Worship. A facility or establishment the principal purpose of which is religious worship. A primarily religious or nonprofit facility may include structures and activities including sanctuary space, religious education, ministry, clothing and food distribution (kitchen facility), counseling, employment assistance, study or library space, referral services, and support groups, and assembly rooms. A place of worship shall be limited to one (1) single-family dwelling unit; any additional dwelling units or spaces require separate land use approvals and permits as applicable and permitted within the Zone. A place of worship does not include businesses operated by the religious group for support of religious activities or for charitable purposes. A place of worship falls within the "Community Assembly" land use and requires a conditional use permit.

Restaurant. Any establishment operated for the primary purpose of providing food, beverages, or meals for compensation, which has suitable kitchen facilities for the preparation, storage and service of food. Any bar area, all applicable licenses required, shall be limited to five hundred (500) square feet or thirty percent (30%) of the dining area; bar areas exceeding these limits shall be classified as a bar.

Appendix "A"

Intersecting Metrics

MEMORANDUM

To: David Shepherd, Lennar
From: Stephen Cook, TE, Intersecting Metrics
Date: August 17, 2023

Regarding: Old California Restaurant Row Parking Analysis

The purpose of this technical memorandum is to analyze and document the parking demand and supply for the proposed Old California Restaurant Row (OCRR) Redevelopment Project (Proposed Project) as well as document the shared parking easements and covenants currently in place with the other adjacent properties within the Via Los Vallecitos De San Marcos site, of which the Proposed Project is a part. The Via Los Vallecitos De San Marcos site is the commercial center generally running along West San Marcos Boulevard, between Los Posas Road and Via Vera Cruz Street, and is currently improved with retail, restaurant, theater, and office uses (Via Los Vallecitos De San Marcos site).

Project Background

The Proposed Project is located on the northwest corner of the West San Marcos Boulevard and Via Vera Cruz intersection, in the Via Los Vallecitos De San Marcos site. The Proposed Project will replace 63,484 square feet (SF) of existing restaurant uses (Old California Restaurant Row) with 202 multi-family dwelling units, approximately 9,575 SF of leasable commercial retail uses (approximately 10,400 SF of gross), and 1.1 acres of neighborhood park. The Proposed Project will provide 501 parking spaces on-site, with 392 private garage spaces, d 9 open bay residential spaces reserved for project residents, and the remaining 100 spaces being open to the Proposed Project's residential guests, retail patrons and park users, as well as other users of the larger Via Los Vallecitos De San Marcos site pursuant to the shared parking agreements are further described herein. Figure 1 displays the Proposed Project's location, while Figure 2 displays the Proposed Project's site plan.

Proposed Project Parking Demand

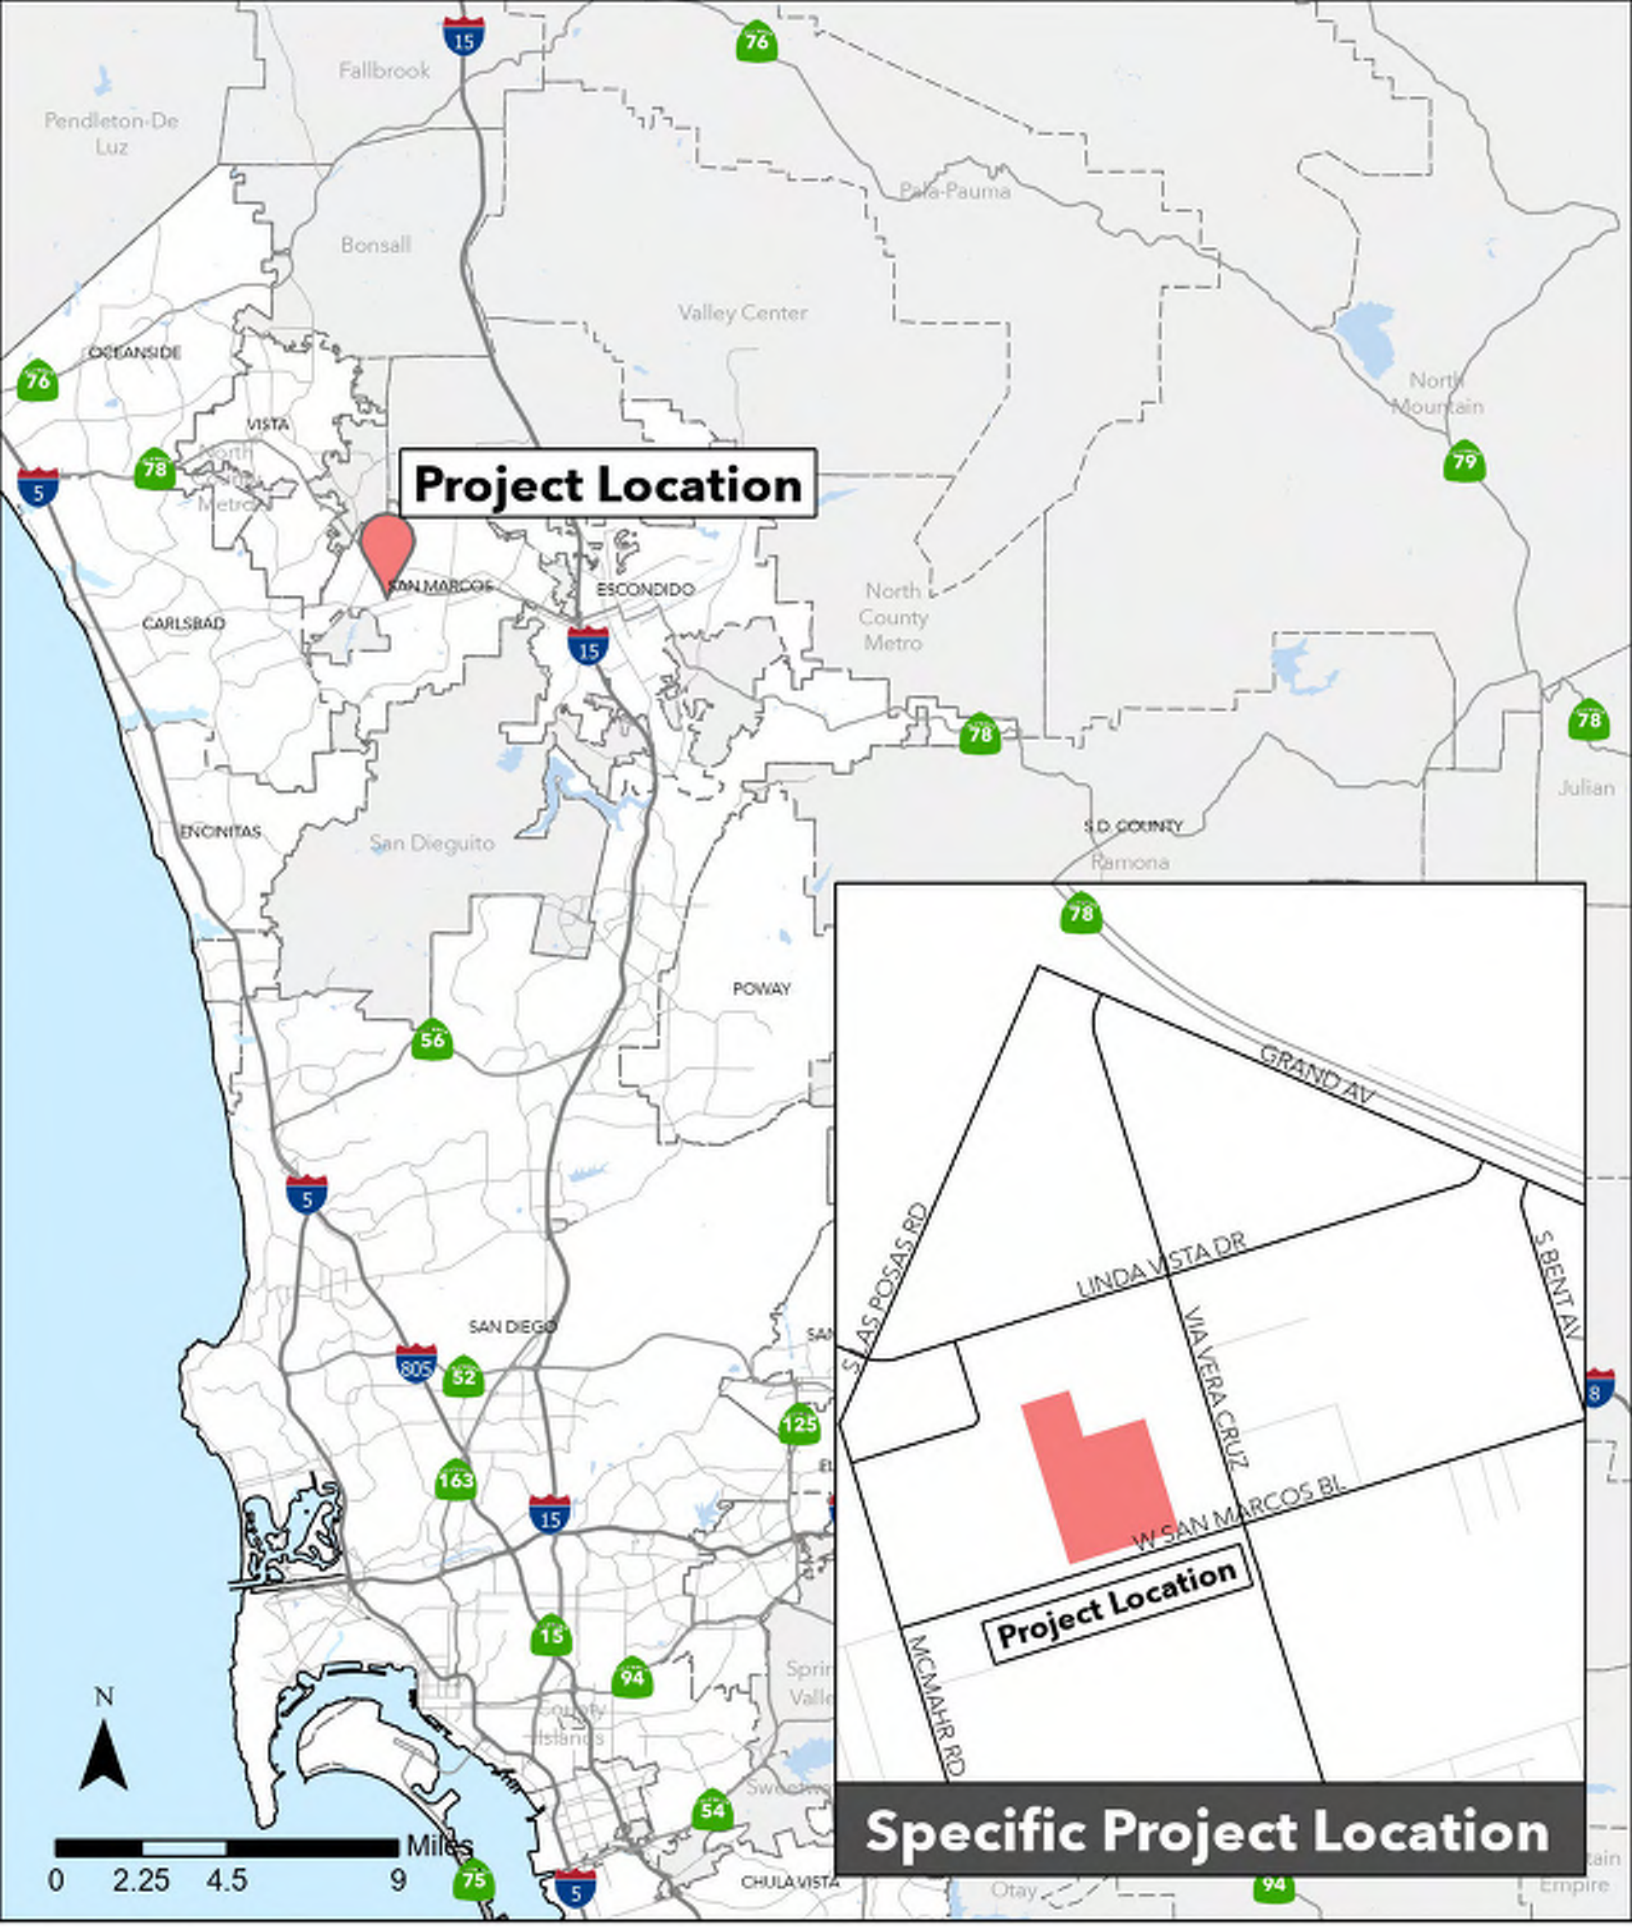
Tables 1 & 2 provide a summary of the parking requirements for the Proposed Project's land uses. The parking requirements for each land use was derived from the requirements outlined in Section 20.340 of the City of San Marcos Municipal Code, unless otherwise noted[1].

Table 1: Proposed Project Parking Requirements – Residential Uses

Land Use	Quantity	Parking Supply Rate	Required Parking Supply
Multi-Family (2 BR)	107 Units	1.75 per Unit	188
Multi-Family (3+ BR)	95 Units	2 per Unit	190
Guest Parking	202 Units	0.15 per DU[1]	31
Total			409

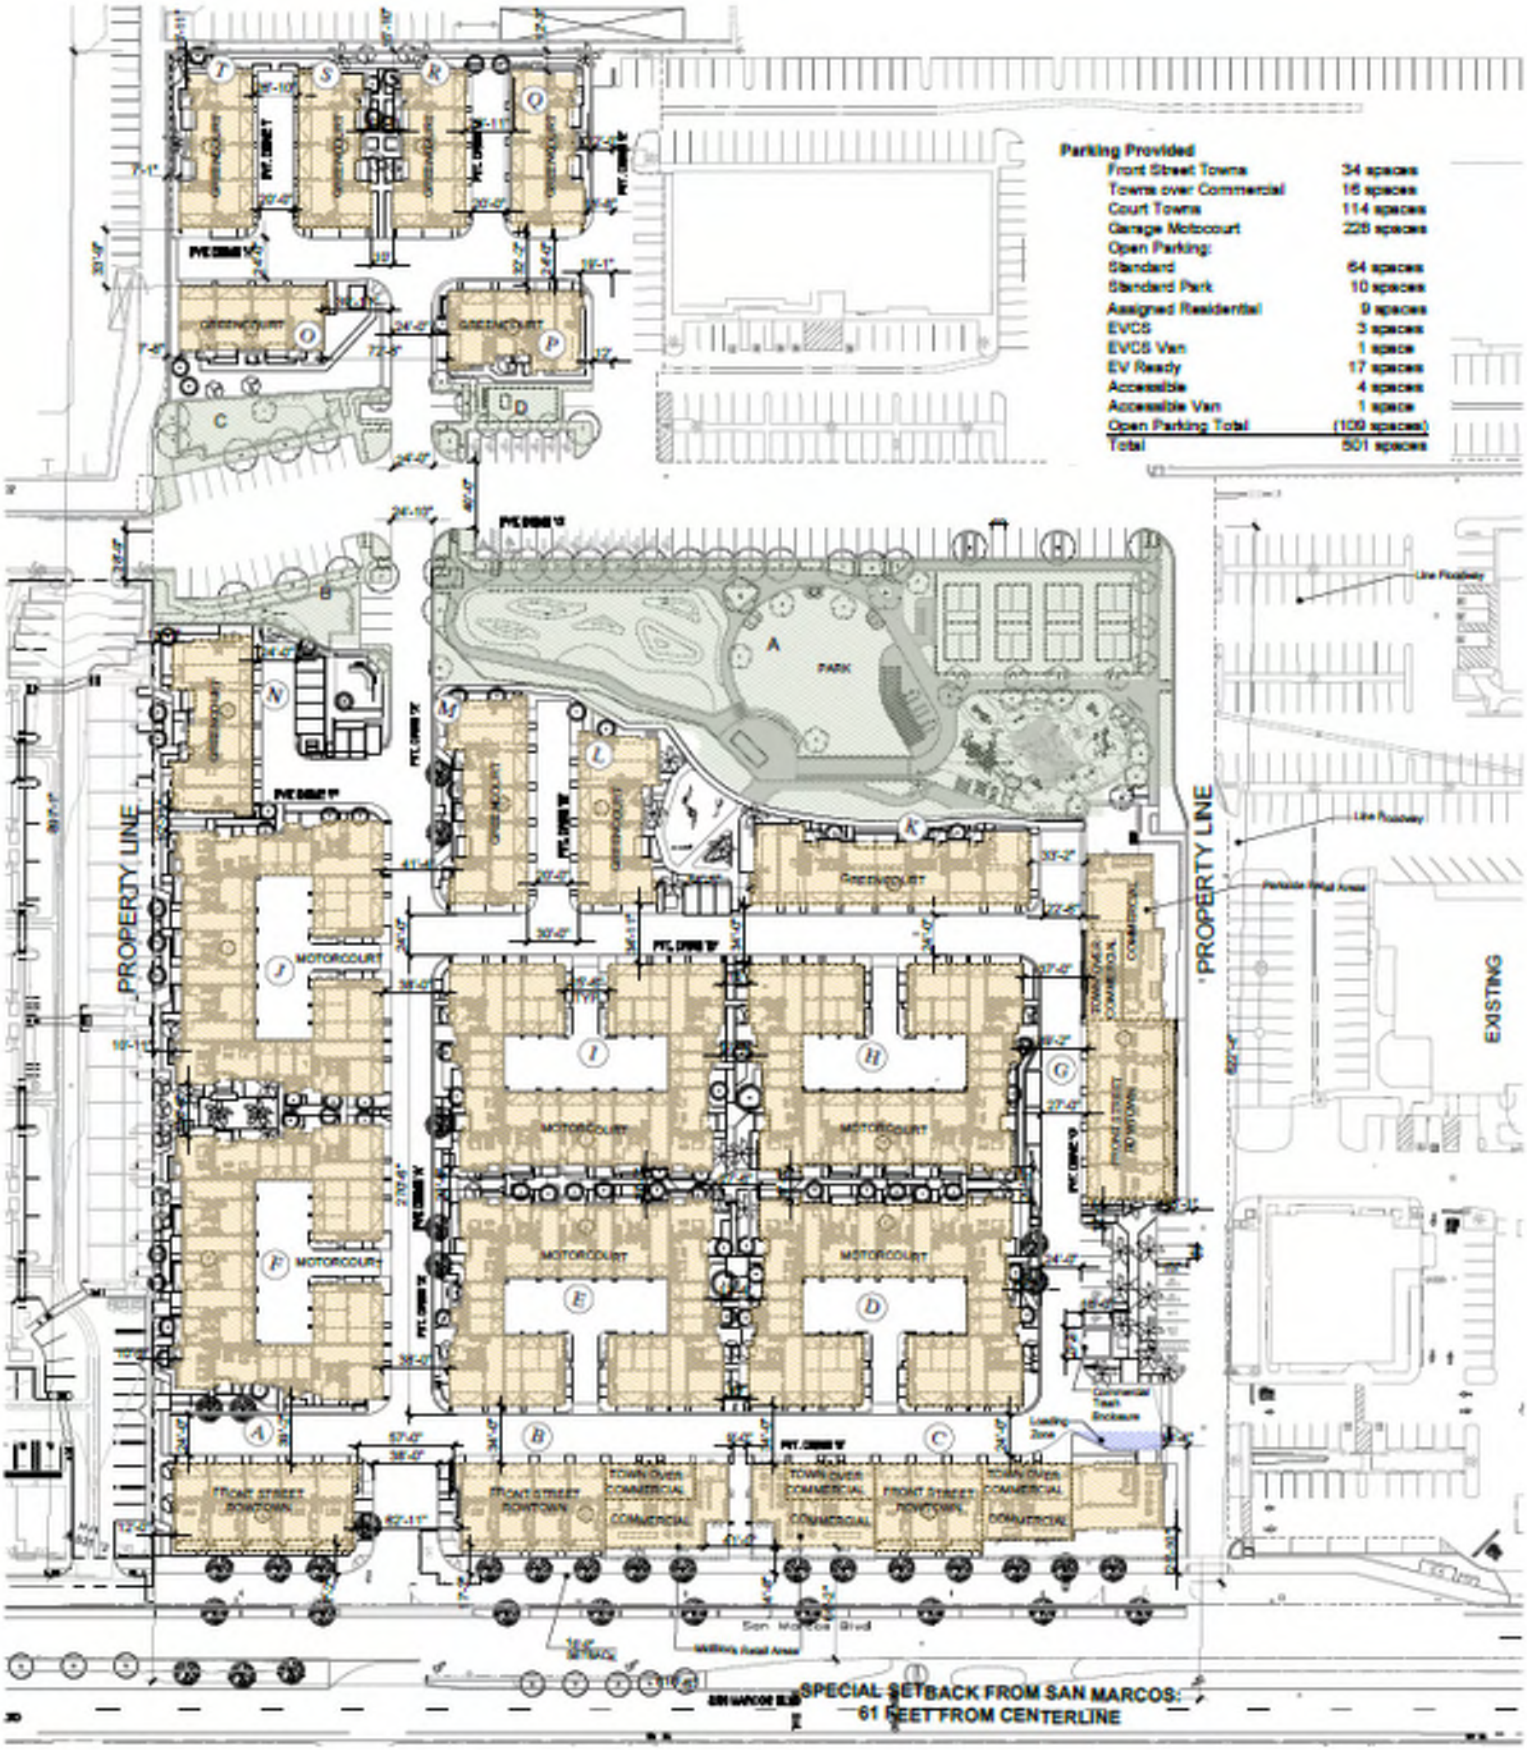
Note:
[1]Rate is based on *Urban Land Use Institute's (ULI) Shared Parking Guide, Third Edition, 2020* as it better reflects the mixed-use and urban environment in which the Proposed Project would be located.

[1] A Specific Plan is being processed for the Proposed Project that will set forth parking requirements based on Section 20.340 of the Municipal Code, the Urban Land Use Institute's (ULI) Shared Parking Guide, Third Edition, 2020, observed parking demands, and other industry based parking guidance to develop parking standards appropriate for Proposed Project's mix of land uses considering the existing surrounding environment.



Old California Restaurant Row

Figure 1
Project Location



Old California Restaurant Row

Figure 2
Project Site Plan

Table 2: Proposed Project Parking Requirements – Non-Residential Uses

Land Use	Quantity	Parking Supply Rate	Required Parking Supply
Park Site	1.1 Acres	9 per Acre	10
Sit-Down Restaurant > 2,000 SF	3,232 SF	7.5 spaces per 1,000 SF[3]	24
Take-Out Restaurant < 2000 SF	4,063 SF	6.5 spaces per 1,000 SF	27
Retail	2,280 SF	3 spaces per 1,000 SF	7
		Total	68

Note:
[1]Rate established based on the parking demand observed at the adjacent sit-down restaurants, see **Attachment 1**.

Residential Parking Supply

Table 3 summarizes the parking spaces that the Proposed Project will allocate to its residents, either through personal garages or reserved open bay spaces within the project site.

Table 3: Residential Parking Spaces Provided

Land Use	Parking Spaces Provided
2 car garages (190 units)	380
1 car garages (12 units)	12
Assigned open bay spaces for units with a single car garage[1]	9
Residential Guest Parking Spaces	31[2]
Total Residential Parking Spaces:	432

Note:
[1]Nine open bay spaces are needed to fulfill the parking requirement of 1.75 spaces per unit for the 2-bedroom units with only a single car garage (12 units X 1.75 spaces per unit = 21 spaces needed = 9 open bay spaces + 12 garage spaces)
[2]Residential guest parking spaces (open bay spaces) will not be reserved for individual users or uses. Instead, they will be included in the larger pool of parking that will be available to guests of non-residential uses both within the Proposed Project as well as the adjacent properties that have a shared parking covenant or easement.

As shown in Table 3, the Proposed Project will provide 432 reserved parking spaces for its residential uses, which is sufficient to accommodate its 409 residential parking space requirement (See Table 1).

Non-Residential Parking Supply

Table 4 summarizes the parking spaces that the Proposed Project will allocate towards non-residential uses. All non-residential parking spaces will be open bay spaces they will be included in the larger pool of parking that will be available to guests of non-residential uses both within the Proposed Project as well as the adjacent properties that have a shared parking covenant or easement.

Table 4 : Non-Residential Parking Spaces Provided

Land Use	Parking Spaces Provided
Park	10
Commercial Uses	59
Total Residential Parking Spaces:	69

As shown in Table 4, the proposed Project will also include 69 open bay parking spaces that will be available to the public, which is sufficient to accommodate the public parking requirement of 68 public spaces (see Table 2).

It should also be noted that, as per Easement Agreement recorded on January 30, 1990 as Document Number 90-050972, 36 of the 100 open bay parking spaces (includes the 31 guest parking spaces) can be used by Fish House Vera Cruz customers and invitees on a nonexclusive basis ("FHVC 36 Space Parking Easement"). All public spaces will also be available to the permitted users of other adjacent parcels in the Via Los Vallecitos De San Marcos site pursuant to the Declaration of Reciprocal Easement Agreements recorded as Document Number 1996-0564623 ("Parking REA"). The FHVC 36 Space Parking Easement, the Parking REA and other shared parking arrangements affecting the Proposed Project site are further described herein.

Bicycle Parking Requirements

Table 4 outlines the Proposed Project's bicycle parking requirements as per the requirements outlined in Table 20.340-2 of the City of San Marcos Municipal Code.

Table 4: Bicycle Parking Requirements

Land Use	Quantity	Rate	Bike Parking Spaces Required
2 Bedroom Units	107 Units	0.75/unit	81
3+ Bedroom Unit	95 Units	1/unit	95
Non-Residential	9,575 SF	0.75/1000 SF	8

As shown in Table 4, the Proposed Project is required to provide 176 bicycle parking spaces to accommodate its residential uses. All residential units will have private garages, which is identified as a Class I locker in Table 20.340-6 of the City of San Marcos Municipal Code, thus meeting this bike parking requirement. The Proposed Project is also required to provide eight bike parking spaces for the retail uses. These spaces will be placed in the public areas on the east side of the project site. As per the Municipal Code two of the bike spaces will be Class I spaces (25%) and six spaces will be Class II spaces (75%).

Existing Parking Supply & Parking Covenants / Easements

There are several uses occupying the adjacent parcels to the project site within the Via Los Vallecitos De San Marcos site which currently have access to the same pool of parking as the OCRR site. The Proposed Project will allow these adjacent parcels to continue utilizing parking on the Proposed Project site, as required by the shared parking agreements described below. Pursuant to those agreements, the Proposed Project will continue to have reciprocal rights to utilize parking on adjacent parcels as well. The Proposed Project does not rely upon these parking rights to satisfy parking requirements, however, as it provides all required parking onsite within the boundaries of the Proposed Project.

Agreement Number 1996-0564623

The Parking REA[2] was recorded against the Edwards Cinema site, the auxiliary parking lot located north of the former Sears Site, the OCRR site (including Buffalo Wild Wings and Cocina Del Charro), the 338 Via Vera Cruz office building, and the Wells Fargo site. This Parking REA grants all employees, agents, contractors, customers, visitors, invitees, licensees, and concessionaires of the owners and/or lessees of the affected properties (Permitted Users) included within the agreement the nonexclusive right to use each other's access points, common areas, and parking spaces. As such, this Parking REA allows for shared parking between the sites listed above. The owners benefitted by the Parking REA will be allowed

[2]Note: The Parking REA originally did not encumber the entire theater parcel, but was amended on April 19, 1999 to expand Parcel D (Theater Site) to include Parcel 210-200-43 (Doc ID# 1999-025887). This agreement is provided in Attachment 1.

to utilize open parking within the Proposed Project site[3] and the Proposed Project will be allowed to utilized parking on the affected adjacent parcels. It should be noted that the 334 Via Vera Cruz office building, the Fish House Vera Cruz, and the southern portion of the former Sears site were not included in the Parking REA and therefore do not have rights to park on the Proposed Project site under the Parking REA. Finally, the Parking REA does not specify any number of parking spaces a property needs to maintain or share with the other properties. All agreements are provided in Attachment 2.

CUP 94-255

The Conditional Use Permit (CUP) for the Regal Edwards Cinema (theater site) (CUP 94-255), which is west of the project site and connects to the OCRR's parking lot, requires that a reciprocal agreement for access and shared parking be developed between the theater site and the adjacent parcels within the OCRR site. The CUP may have been the impetus for the Parking REA. However, CUP 94-255 does not cite a specific number of off-site spaces that are be required for the theater site, only that 782 be made available on-site or on the identified areas of the OCRR site (which are sites included in the Parking REA). There are more than 782 parking spaces available to the theater[4] without reliance on the Proposed Project site so development of the Proposed Project will not cause the theater to have access to fewer than 782 parking spaces.

FHVC Shared Parking Agreements

The Fish House Vera Cruz site was not included in the Parking REA with the other parcels adjacent to the project site, described above. However, there are two parking and access easements between the OCRR site and the Fish House Vera Cruz:

1. An Easement Agreement recorded on July 18, 1989 as Document Number 89-378260 (FHVC 54 Space Parking Easement) allows the OCRR site (including the Proposed Project site, Cocina Del Charro and Buffalo Wild Wings, all identified as Parcel B) the nonexclusive right to use up to 54 parking spaces located on the Fish House Vera Cruz site (Parcel A). There is no limitation requiring users of these parking spaces to be customers, invitees or patrons restaurants operating on the OCRR site. The only limitation is that the easement cannot be construed as a gift or dedication to the general public or for "public purposes." The Proposed Project will not "gift or dedicate" any of the 54 parking spaces on the Fish House Vera Cruz property to the general public or for public purposes. As the Proposed Project will satisfy parking requirements onsite, it will not rely on use of these 54 parking spaces to satisfy parking requirements at all.

2. A second easement, the FHVC 36 Space Parking Easement described above, allows the Fish House Vera Cruz site (Parcel A) the nonexclusive right to use 36 parking spaces on Parcel B. Fish House Vera Cruz will have the continued right to use 36 parking spaces on Parcel B, including the Proposed Project site on a nonexclusive basis, consistent with the terms of the FHVC 36 Space Parking Easement Agreement.

The two agreements only permit each party to use the allocated number of parking spaces on either property (Fish House Vera Cruz can use up to 36 spaces within the OCRR site and OCRR can use up to 54 spaces on the Fish House Vera Cruz site). However; neither agreement requires either party to reserve any number of spaces for the use of the other party nor does it guarantee that the spaces will be unoccupied at any time.

[3] The Parking REA does not require benefitted owners the right to use residential garage or the 9 reserved residential parking spaces as the Parking REA allows a reduction in shared parking on the project site so long as the reduction does not cause any parcel in the Center to have insufficient parking to meet City parking requirements. (Parking REA, §2.) The removal of parking spaces from the Proposed Project site does not cause any other parcel subject to the Parking REA to fail to meet applicable City parking requirements.

[4] The theater parcel alone has 725 onsite parking spaces, as shown on Attachment 3.

Buffalo Wild Wings Lease

The November 17, 2014 lease agreement between the project site and the Buffalo Wild Wings site identifies an area of no change within the parking areas around the Buffalo Wild Wings site and its adjacent access points on San Marcos Boulevard and Via Vera Cruz. This agreement and the exhibit depicting the area of no change is provided in Attachment 2.

Figure 3 displays a map of the properties that have a shared parking agreement with the project site, as discussed above.

Table 5 outlines the existing parking supply for these sites, the current land uses which utilize parking supply, and the agreements in which each site is a part of. A recent aerial image displaying the parking spaces included within each parcel is provided in Attachment 3.

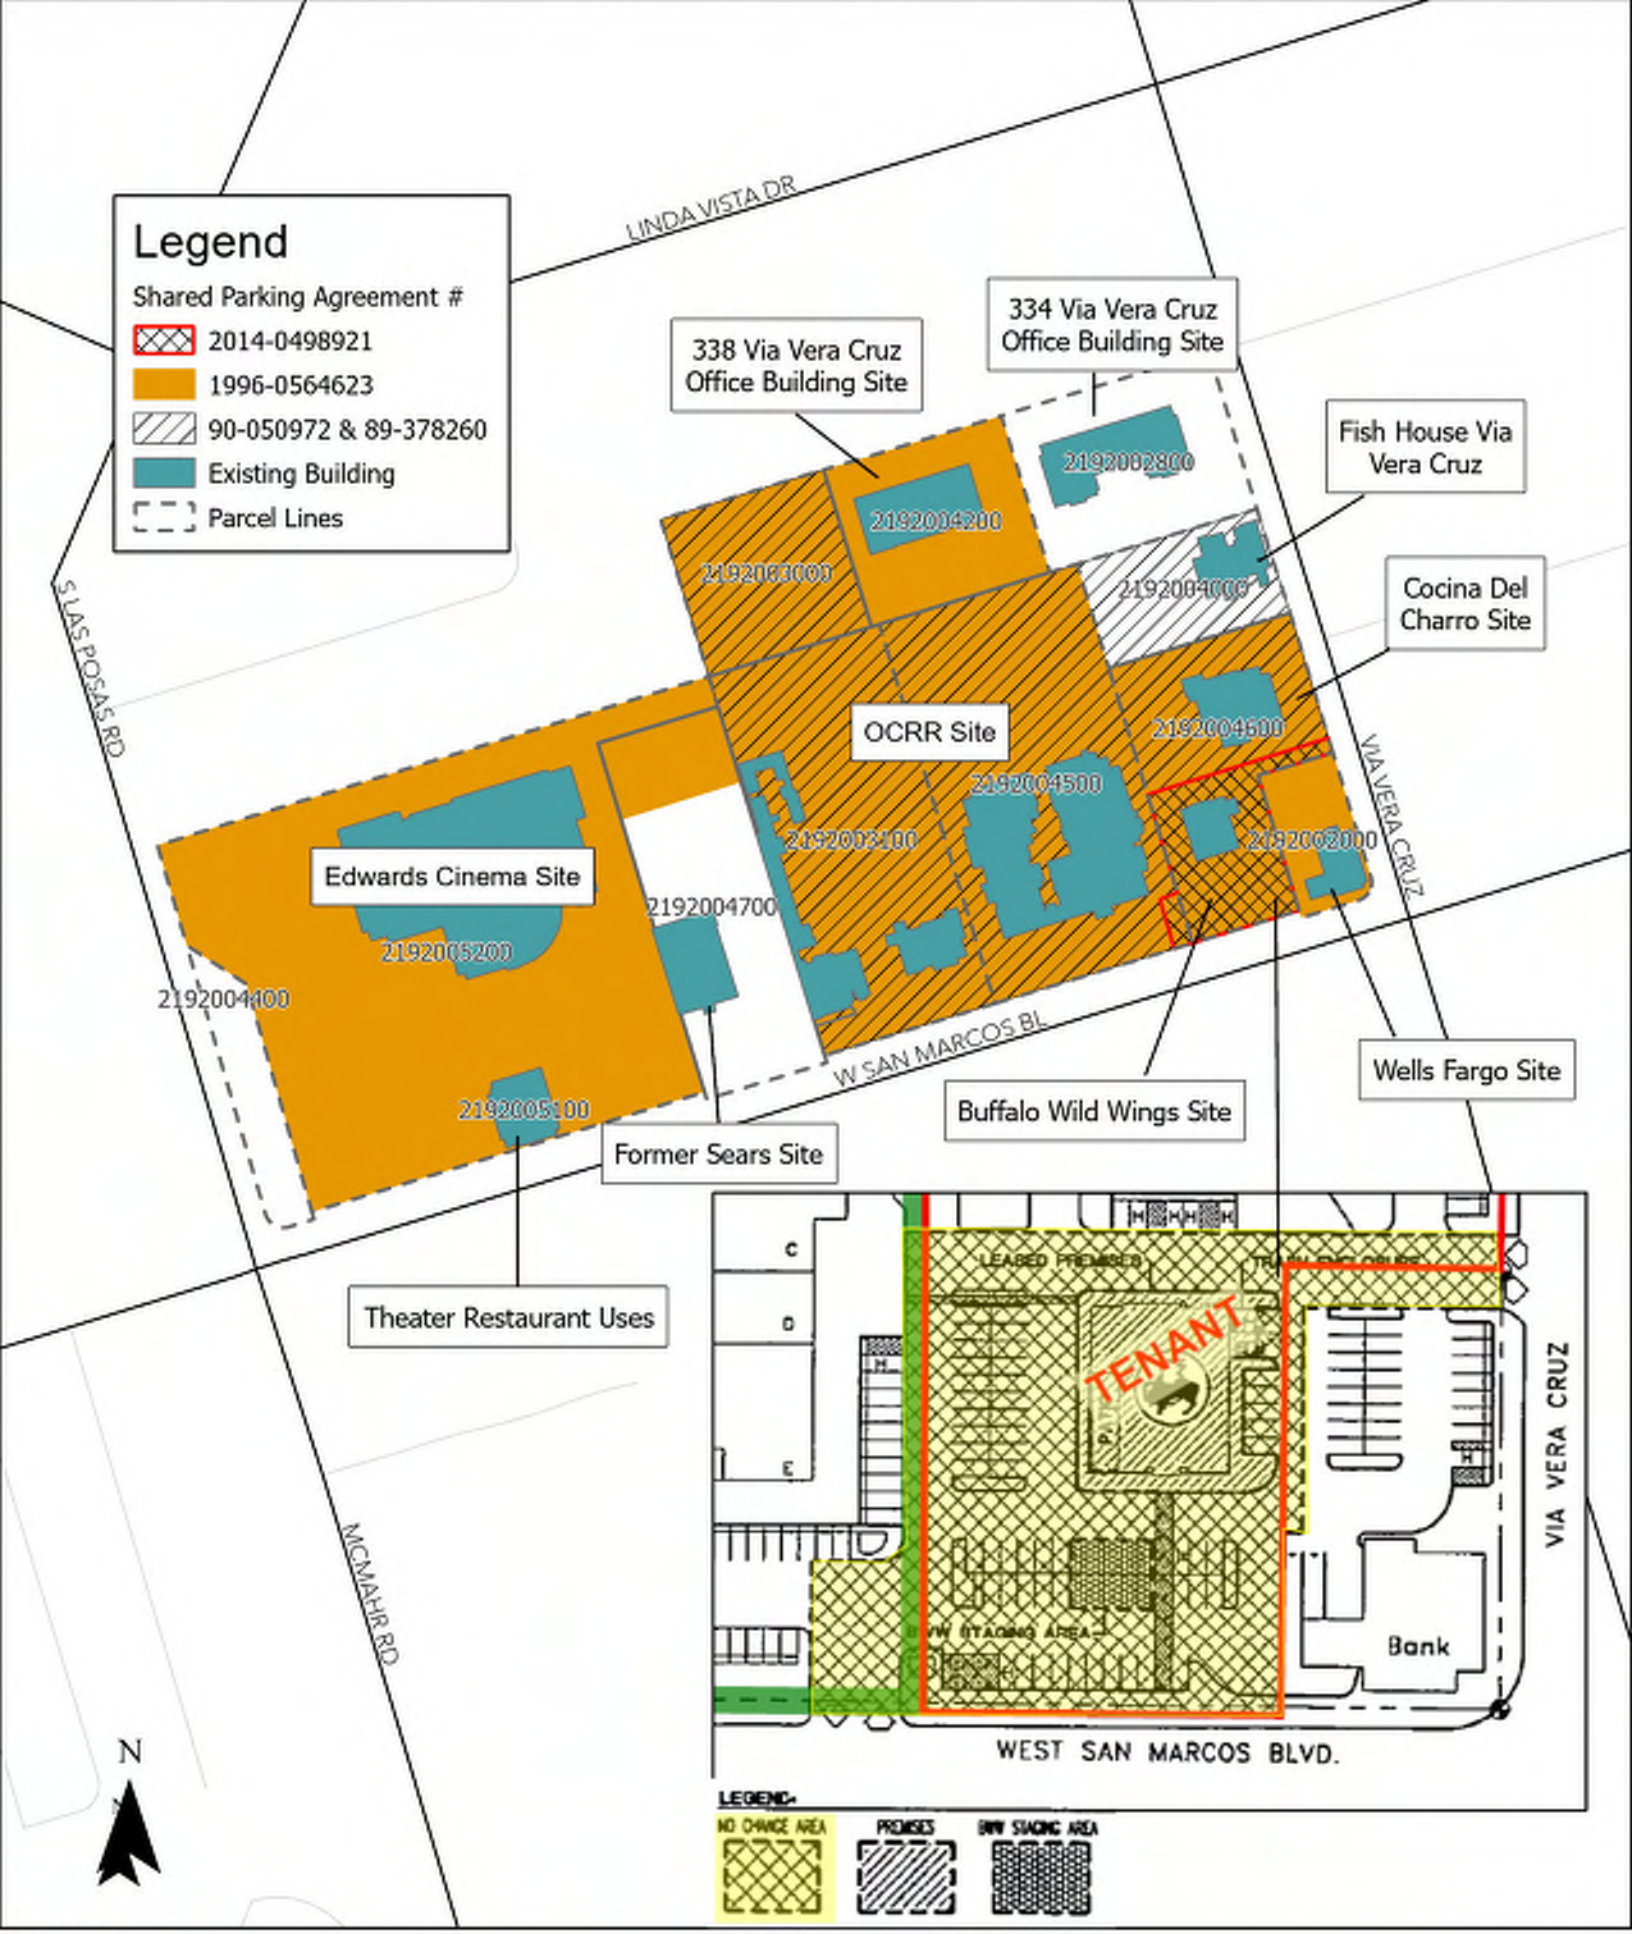
Table 5: Existing Parking Supply

Parcel (APN)	Use(s)	Size (SF)	Parking Spaces
2192003000	OCRR Site[1,2]	63,484 SF	822
2192003100			
2192004500			
2192004000	Fish House Vera Cruz[2]	9,100 SF	82
2192004600	Cocina Del Charro[1,2]	12,047 SF	98
	Buffalo Wild Wings[1,2]	5,445 SF	56
2192002000	Wells Fargo[1]	6,682SF	25
2192004200	338 Via Vera Cruz Office Building[1]	34,000 SF	132
2192004700	Sears Site Shared Parking Lot[1,3]	-	85
2192004400	Regal Edwards San Marcos[1]	3,200 seats[4]	725
2192005200			
2192005100	Theater Restaurants[1]	7,500	

Notes:
[1]Included in the Parking REA, allowing patrons of all uses to use each other's parking supply.
[2]Inclused in FHVC 36 Space Parking Easement and the FHVC 54 Space Parking Easement which allows the OCRR uses to use 54 parking spaces on the Fish House Vera Cruz site and Fish House Vera Cruz to use 36 spaces on the OCRR site.
[3]The Sears Site is no longer party to the Parking REA as it only benefitted and burdened the Sears leasehold interest, which has terminated.
[4]Source:Regal Edward Cinema CUP (CUP 94-255)

Off-Stie Parking Changes

The Proposed Project will remove seven spaces, that currently serve the Buffalo Wilding Wings site, to accommodate the implementation of the Multi-Way along San Marcos Boulevard. This change will reduce Buffalo Wild Wings Parking from 56 spaces to 49 spaces. The parking spaces to be removed are located is within an irrevocable offer of dedication (IOD) which the City of San Marcos is requesting the Proposed Project utilize to accommodate the multi-way improvements. As noted in Figure 3, this change is within the area of no change outlined in the Buffalo Wild Wings lease with OCRR. Thus, this change will require an amendment to the existing lease. It should be noted that the Buffalo Wild Wings site will still meet the City's parking requirements with this proposed removal of the 7 parking spaces (5,445 SF X 8.5 spaces per 1,000 SF = 47 spaces required with 49 being provided). The Proposed Project does not propose to remove parking spaces from the Fish House Vera Cruz site or any other sites.



Old California Restaurant Row

Figure 3

Shared Parking Agreements

Conclusion

The Proposed Project will provide 401 reserved parking spaces for its residential uses, as well as allocate 31 unreserved open bay spaces for residential guests, which is sufficient to accommodate its 409 residential parking space requirement. The Proposed Project will also include 69 open bay parking spaces that will be available to the public, which is sufficient to accommodate the Proposed Project's public parking requirement of 68 public spaces. 36 of the 100 open bay parking spaces can be used by Fish House Vera Cruz patrons on a nonexclusive basis; thus fulfilling the obligations outlined in FHVC 36 Space Shared Parking Agreement. Finally, all public spaces will also be available to the Permitted Users of the other properties benefitted by the Parking REA, as required by the terms of the Parking REA. Therefore, the Proposed Project will accommodate its full parking demand on-site and will continue to fulfill the current obligations contained within the current parking easements / covenants affecting the Proposed Project site.

Attachment 1
Restaurant Parking Study

MEMORANDUM

To: David Shepherd, Lennar
From: Stephen Cook, TE, Intersecting Metrics
Date: Augusst 17, 2023
Regarding: Old California Restaurant Row Restaurant Parking Analysis

The purpose of this technical memorandum is to document the observed parking demand of the existing restaurants adjacent to the Old California Restaurant Row (OCRR) Site. The observed parking demand of the existing restaurants can then serve as an analog for the parking requirements for sit-down restaurants that may be included within of the OCRR Re-Development Specific Plan.

To determine the parking demand for the sit-down restaurant uses that may be included within the OCRR Re-Development Specific Plan, a parking occupancy study was performed on the three sit-down restaurants adjacent to the OCRR site (Fish House Vera Crus, Cocina Del Charro and Buffalo Wild Wings). Hourly parking occupancy counts were conducted for all sites during peak times (between 4:00 PM and 9:00 PM), on Friday April 28, 2023 and Saturday April 29, 2023. The observed parking counts are displayed in Table 1.

Table 1: Observed Parking Counts

Date	Use	Observed Parking Demand			
		Fish House Vera Cruz	Cocina Del Charro	Buffalo Wild Wings	Total
4/28/2023 (Friday)	4:00 PM	32	66	25	123
	5:00 PM	49	80	39	168
	6:00 PM	59	89	51	199
	7:00 PM	49	83	36	168
	8:00 PM	42	71	29	142
	9:00 PM	22	63	36	121
4/29/2023 (Saturday)	4:00 PM	30	50	34	114
	5:00 PM	31	64	26	121
	6:00 PM	40	78	41	159
	7:00 PM	47	82	38	167
	8:00 PM	33	73	39	145
	9:00 PM	12	58	28	98

As shown in the table, the highest observed parking demand, across all three sites, occurred at 6:00 PM on a Friday, April 28th. To determine the parking ratio of the uses, Table 2 compares the maximum observed parking demand at each restaurant to the total square footage of each site.

Table 2: Restaurant Parking Demand

Restaurant	Size (SF)	Peak Demand
Buffalo Wild Wings	5,445	51
Cocina Del Charro	12,047	89
Fish House Vera Cruz	9,100	59
Total	26,592	199
	Parking Ratio	0.00748

As shown in Table 2, the 26,592 SF of existing restaurant uses generated a maximum observed parking demand of 199 spaces. This resulted in a parking demand ratio of approximately 7.5 spaces per 1,000 SF (199 Spaces / 26.592 KSF). As such, it is recommended that the OCRR Re-Development Specific Plan utilize a parking ratio of 7.5 spaces per 1,000 SF for all of its restaurant uses that have more than 2,000 SF of leasable area.

COVENANT FOR EASEMENT

This covenant made this 18th day of July 1989, by the undersigned parties.

WHEREAS, the undersigned are the owners of the real property in the City of San Marcos, County of San Diego, State of California, being a portion of lot 1 in block 77 of Rancho Los Vallecitos de San Marcos, in the City of San Marcos, County of San Diego, State of California, according to map thereof No. 806, filed in the Office of the County Recorder of San Diego County, December 21, 1895, and more particularly described on Exhibit "A" attached hereto and incorporated herein by this reference.

WHEREAS, it is the desire and intention of the undersigned to restrict said land as a condition of obtaining approval by the City of San Marcos of the boundary adjustment effecting said property.

NOW THEREFORE, in consideration for the approval the undersigned covenants with the City of San Marcos and agrees on behalf of itself, its heirs, successors and assigns to retain for the use and benefit of Parcel B of the aforedescribed real property, an appurtenant, non-exclusive parking easement with a minimum of fifty-four (54) vehicular parking spaces, burdening and running with the land on Parcel A. The right to use shall be in

common with the right of use by the owners and occupants of Parcel A and it is expressly understood that this easement is not to be deemed a gift or dedication of any portion of Parcel A to the general public or for the use by the general public or for any public purpose whatsoever.

IT WITNESS WHEREOF, the parties hereto have executed this agreement on the day and year first above written.

EASEMENT AGREEMENT

THIS AGREEMENT made this 21st day of July 1989, by and between JAMES ROLLINS EUBANK and VERA PAULINE EUBANK as co-trustees UTD 12/22/86 FBO the Eubank Family Trust, hereinafter referred to as EUBANK who is the owner of that certain property hereinafter referred to as OLD CALIFORNIA and more particularly described as:

A portion of Lot 1 in Block 77 of Rancho Los Vallecitos de San Marcos, in the City of San Marcos, County of San Diego, State of California, according to Map thereof No. 806, filed in the Office of the County Recorder of San Diego County, December 21, 1895, described as follows:

Parcel B

Beginning at the point of intersection of the Northerly line of said Lot 1 with the Westerly line of Via Vera Cruz (84.00 feet wide) as shown on Parcel Map No. 10751 as recorded in the Office of said County Recorder, December 2, 1980; thence along said Northerly line, South 71°32' West (South 71°33'48" West, per Parcel Map No. 10751) 302.00 feet to the True Point of Beginning; thence South 18°28' East, 173.50 feet; thence North 71°32' East, 302.00 feet to said Westerly line of Via Vera Cruz; thence along said line, South 18°28' East (South 18°26'49" East, per Parcel Map No. 10751) 231.50 feet; thence South 71°32' West, 125.00 feet; thence South 18°28' East, 255.00 feet to the Southeasterly line of said Lot 1, also being the Northwesterly line of Encinitas Road (now known as San Marcos Boulevard), 66 feet wide as shown on said Map no. 806; thence along said line, South 71°32' West, 506 feet; thence North 18°28' West, 660.00 feet to said Northerly line of Lot 1;

OFFICIAL RECORDS SAN DIEGO COUNTY, VERA L. LYLE, RECORDER

thence Northeasterly along said line, 329.00 feet to the True Point of Beginning.

EXCEPTING THEREFROM the Southerly 18.00 feet.

with BBG PROPERTIES, a California General Partnership, hereinafter referred to as BBG who is the owner of that certain real property hereinafter referred to as the RESTAURANT PROPERTY and more particularly described as:

A portion of Lot 1 in Block 77 of Rancho Los Vallecitos de San Marcos, in the City of San Marcos, County of San Diego, State of California, according to Map thereof No. 805, filed in the Office of the County Recorder of San Diego County, December 21, 1895, described as follows:

Parcel A

Beginning at the point of intersection of the Northerly line of said Lot 1 with the Westerly line of Via Vera Cruz (84.00 feet wide) as shown on Parcel Map No. 10751 as recorded in the Office of said County Recorder December 2, 1980; thence long said Northerly line, South 71°32' West, 302.00 feet (South 71°33'48" West, per Parcel Map No. 10751); thence South 18°28' East, 173.50 feet; thence North 71°32' East, 302.00 feet to said Westerly line of Via Vera Cruz; thence along said Westerly line, North 18°28' West (North 18°26'49" West, per Parcel Map No. 10751) 173.50 feet to the Point of Beginning.

The parties desire to enter into a non-exclusive reciprocal parking agreement and BBG desires to acquire and EUBANK agrees to grant 36 designated parking spaces on OLD CALIFORNIA.

In consideration of their mutual promises, it is therefore agreed as follows:

1. Grant of Reciprocal Parking Easement.

A. EUBANK grants to BBG the right of the customers and invitees of BBG to use, in common with EUBANK, its customers and invitees and its tenants customers and invitees all areas used for parking on OLD CALIFORNIA, subject to the terms and conditions contained herein.

B. BBG grants to EUBANK the right of the customers and

OFFICIAL RECORDS, SAN DIEGO COUNTY, VERA L. LYLE, RECORDER

invitees of EUBANK and EUBANK's tenants, to use in common with BBG, its customers and invitees all areas used for parking on the RESTAURANT PROPERTY, subject to the terms and conditions contained herein.

C. Each reciprocal parking easement is subject to the following restrictions, terms and conditions:

i. It shall be used only for vehicular parking and vehicular and pedestrian ingress and egress to their respective premises;

ii. It shall not be used for vehicular parking by employees, workman, suppliers or suppliers of the respective grantee;

iii. It shall be subject to such reasonable rules and regulations as may now or hereafter from time to time be adopted by the respective grantor;

iv. It shall be maintained by the grantor at grantor's sole cost and expense; and

v. Each grantor may make such reasonable changes and relocate its parking area so long as the changes do not substantially impair the right of use by the grantee.

2. Grant of Non-exclusive Designated Parking: EUBANK hereby grants to BBG the non-exclusive right to use in common with EUBANK, EUBANK's tenants and the customers and invitees of EUBANK and EUBANK's tenants, the 36 parking spaces designated as such on the map attached hereto marked exhibit "A". Said easement and the use of said easement by BEG and its employees, customers and invitees is subject to the following terms, conditions and restrictions:

A. Duties of EUBANK: EUBANK shall have the duty to maintain the designated parking area in a smooth and even condition, to remove all debris and keep the area in a neat, clean and orderly condition; to repair and replace, when necessary, such artificial lighting facilities as shall be reasonably required, to provide adequate striping and lines, to pay all real property taxes attributable to the parking area and to maintain general public liability and property damage insurance covering the designated area

OFFICIAL RECORDS SAN DIEGO COUNTY, VERA L. LYLE, RECORDER

against claims of personal injuries, death, or property damage, such insurance liability protection to a limit not less than $100,000 for injury or death to one person, $300,000 per incident and $25,000 property damage.

B. Duties of BBG: To pay its proportionate share of the costs of premise liability and property damage insurance, lighting, maintenance, stripping, cleaning and taxes attributable to the land, exclusive of improvements in the proportional amount those spaces equal to the entire parking area in OLD CALIFORNIA.

C. Defaults and remedies:

i. In the event of a failure of performance by a party, the other party will not be in default under this agreement unless the party has been given a written notice specifying the nature of the default and allowing the party to cure it within a period of 30 days commencing on the date the notice of default was delivered. However, if the default is not capable of being cured within the specified time, the party shall be required to diligently proceed to complete the curing of the default. This exception does not excuses curing a default that can be cured. Said notice shall be personally delivered to the then owner of record or mailed by certified or registered mail, return receipt requested, to the address at which tax information is to be received.

ii. In the event of any violation or threat of violation of any party, successor or assign of the terms restrictions or covenants contained herein, either of the parties or their respective successors or assigns will have, in addition to the right to collect damages, the right to enjoin such violation or threaten violation or to cure the default and seek monetary damages from the other party. In addition to the aforementioned remedies, if BBG, its successors of assigns should fail to make the monetary payments due payable under this agreement, EUBANK it successors and assigns shall have the option to terminate the easement for designated parking in a court of competent jurisdiction.

D. In the event the City of San Marcos does not require BBG to provide 36 off-site parking spaces, whether designated or

undesignated, BBG and EUBANK, upon written request of BBG, agree to relinquish their rights and duties herein by execution of a recordable instrument revoking the duties under this paragraph. This may be a total or partial revocation dependent upon the requirements of the City of San Marcos.

3. **Agreement to Provide Sufficient Parking**: EUBANK is aware that the City of San Marcos has required that EUBANK provide additional parking spaces upon OLD CALIFORNIA, for the need of OLD CALIFORNIA, prior to the occupancy by BBG of the proposed restaurant. In consideration of the exchange between the parties, EUBANK agrees, that in addition to the parking elsewhere provided in this agreement and the parking BBG has agreed to provide on the RESTAURANT PROPERTY, EUBANK will provide sufficient parking on OLD CALIFORNIA to obtain approval of the proposed restaurant by the City of San Marcos and that said parking will be provided by EUBANK prior to the completion of construction of the proposed restaurant. In the event EUBANK shall fail to provide the required parking, BBG shall have the right to enter onto OLD CALIFORNIA to construct and install the required parking and EUBANK shall be responsible for and shall reimburse BBG to the extent of such costs incurred.

4. **Not Public Dedication**: Nothing contained herein will be deemed to be a gift or dedication of any portion of either of the properties involved herein for the general public or for any public purpose whatsoever.

5. **Attorneys Fees**: In the event any controversy, claim or dispute relating to this instrument or the breach thereof, the prevailing party shall be entitled to recover from the loosing party reasonable expenses, attorneys fees and costs.

DECLARATION OF RECIPROCAL EASEMENT AGREEMENTS

THIS DECLARATION OF RECIPROCAL EASEMENT AGREEMENTS ("REA") is made by **CCSS San Marcos, L.P., a California partnership ("CCSS"); John M. Siegel, an individual, Robert C. Siegel, an individual (hereinafter collectively "Siegels"; Ben Cipranic, an individual, David Cipranic, an individual (hereinafter "Cipranic"); James Rollins Eubank and Vera Pauline Eubank, Co-Trustees of that certain Revocable Trust Agreement, executed December 22, 1986, by James Rollins Eubank and Vera Pauline Eubank for the benefit of the Eubank Family (hereinafter "Eubank"); John Frank, an individual (hereinafter "Frank"), and Nancy Bretzfield, an individual (hereinafter "Bretzfield"); North County Bank, a State Bank (hereinafter "North County"); Old California Development Company (hereinafter "OCD"); and Edwards Theatres Circuit, Inc., a California corporation (hereinafter "Edwards")** (hereinafter sometimes collectively referred to as "Declarant"), with reference to the following facts:

RECITALS

A. Siegels now own in fee that certain real property located in the City of San Marcos, County of San Diego, State of California more particularly described on Exhibits "1-1" and "1-2" attached hereto, and fully incorporated herein by this reference as Parcel "A", and Siegels have, or concurrently with the close of the transaction more particularly described and contemplated in that certain Purchase and Sale Agreement and Escrow Instructions dated on or about August 11, 1995, as amended ("Agreement") shall, assign all right, title and interest in Parcel A to CCSS; and CCSS shall assume all obligations and duties under the Agreement and shall acquire the title to Parcel A that Siegels own(ed).

Order: 140810 Page 1 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

B. Eubank now owns in fee that certain real property located in the City of San Marcos, County of San Diego, State of California, more particularly described on Exhibit "1-1" and "1-2" attached hereto, and fully incorporated herein by this reference, as Parcel "B", and commonly known as the Old California Restaurant Row.

C. Bretzfield and Frank now own in fee, as tenants in common, that certain real property located in the City of San Marcos, County of San Diego, State of California, more particularly described on Exhibit "1-1" and "1-2" attached hereto, and fully incorporated herein by this reference, as Parcel "C", and commonly known as the Courthouse.

D. OCD owns the OCD Leasehold leased interest under a lease recorded May 19, 1995, as file no. 1995-0211705 of the Official Records in that certain real property located in the City of San Marcos, County of San Diego, State of California, more particularly described on Exhibit "1-1" and "1-2" attached hereto, and fully incorporated herein by this reference as Leasehold Parcel "E". CCSS is in the process of acquiring that certain real property now part of parcel A located in the southwesterly corner of Parcel A and containing approximately 7500 square feet, more particularly described on Exhibit 1-1 attached hereto and designated as Parcel D.

E. North County now owns in fee that certain real property located in the City of San Marcos, County of San Diego, State of California, more particularly described on Exhibit "1-1" and "1-2" attached hereto, and fully incorporated herein by this reference, as Parcel "F".

F. Pursuant to the transaction contemplated under the Agreement, Edwards is about to become the owner in fee of Parcel A upon close of the escrow created by the Agreement, and in order to induce Edwards to enter the Agreement and to complete the transaction therein described, and for the mutual benefit of CCSS, Siegels, OCD, Cipranic, North County, Bretzfield, Frank, Eubank, and Edwards, Eubank desires to grant to Edwards, North County, Bretzfield, Frank, CCSS, Siegels, OCD, and Cipranic for the benefit of their respective parcels, now or hereafter owned on Parcels A, B, C, D, E and F, a non-exclusive right of way and easement for parking of automobiles, light trucks, recreation utility vehicles, and similar vehicles; and a non-exclusive right of way for ingress and egress by automobiles and pedestrians over, on, in and across all portions of Parcel B now and hereafter improved for pedestrian and vehicular ingress, egress and parking purposes.

G. Concurrently, CCSS, Siegels, OCD, Cipranic, North County, Bretzfield, Frank and Edwards desire to grant to Eubank, and each other for the benefit of each of their respective parcels of real

Order: 140810 Page 2 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

property and for other consideration, now or hereafter owned on Parcels A, B, C, D, E and F, a non-exclusive right of way and easement for parking of automobile, light trucks, recreation utility vehicles, and similar vehicles; and a non-exclusive right of way for ingress and egress by vehicles and pedestrians over, on, in and across all portions of Parcel A, B, C, D, E and F now and hereafter improved for pedestrian and vehicular ingress, egress and parking purposes.

H. Prior to the date of this Declaration, Declarant has commenced to develop the Parcels A, B, C, D, E and F as a mixed use commercial center substantially in the manner shown on the site development plan attached hereto as Exhibit "2" (the "Site Plan" and hereinafter sometimes referred to as the "Center"). Declarant intends to continue to develop the Center; and, Declarant intends that the Center will be developed, improved, and operated in accordance with the relevant provisions of this Declaration. It is the purpose and intent of Declarant by way of this Declaration to subject each of the Parcels comprising the Center to the covenants, conditions, and restrictions hereinafter set forth and to establish the reciprocal easements for parking and ingress and egress hereinafter described, pursuant to a general plan of improvement for the Center for the mutual benefit of the present and future owners of any and all portions and interests in the Center and their respective heirs, executors, successors, assigns, grantees, mortgagees, and tenants.

NOW, THEREFORE, Declarant hereby declares as follows:

1. Definitions.

The following terms shall have the meanings set forth below, unless the context clearly indicates otherwise:

1.1 Building. The term "Building" shall mean each Building to be built upon a Parcel which, collectively, may house the shops, stores, and other businesses which shall hereafter operate upon the Center.

1.2 Common Area. "Common Area" shall mean all areas of Parcels A, B, C, D, E and F in the Center which are not improved from time to time by a Building or Buildings, and shall include, but not be limited to, common utility lines and systems, the Parking Areas, access roads, driveways, walkways, sidewalks, and landscaping.

1.3 Parking Area. "Parking Area" shall mean those portions of the Common Area in Parcels A, B, C, D, E and F and the Center used for (i) pedestrian and vehicular ingress to and egress from the Center from adjacent public streets, (ii) pedestrian and vehicular movement in and about the Center, and (iii) the areas

Order: 140810 Page 3 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

depicted on the Site Plan for the parking of motor vehicles which now exist or may hereafter exist, together with all parking improvements to the Common Area which at any time are erected thereon, including interior roadways, pedestrian stairways, walkways, curbs and landscaping within or adjacent to such areas.

1.4 Owner. The term "Owner" shall mean and include the owners of a parcel as set forth in the above Recitals and shall mean and include individuals, partnerships, firms, associations, joint ventures, corporations, or any other legal entities, and trustees, heirs, executors, administrators, and other personal representatives.

1.5 Parcel. The term "Parcel" shall mean the Property or a separate legal lot or parcel within the Property or any possessory interest in any such parcel as shown on any recorded final map or map or any site plan or lease or rental agreement for any interest in the Property.

1.6 Permittees. "Permittees" shall mean all Persons from time to time entitled to the use and occupancy of any Building within the Center (or any portion thereof) under any lease, deed or other arrangement with an Owner and the respective officers, directors, employees, agents, contractors, customers, visitors, invitees, licensees and concessionaires of such Persons.

1.7 Person. "Person" shall mean and include individuals, partnerships, firms, associations, joint ventures, corporations, or any other legal entities, and trustees, heirs, executors, administrators, and other personal representatives.

2. Grant of Parking and Ingress and Egress by Eubank. Eubank hereby declares that each other Declarant, and the above recited Owners of a Parcel in the Center and its Permittees shall benefit from, and Declarant hereby reserves for the benefit of each other Declarant and above recited Owners of a Parcel in the Center and their respective Permittees, nonexclusive easements for ingress, egress, and access by and for vehicular and pedestrian traffic upon, over and across the Common Area and the Parking Area, and for vehicle parking upon, over, and across the Parking Area without fee or charge. No changes shall be made in the improvements in the Parking Area without the prior written approval of each Declarant; provided, however, this covenant shall not require Eubank, or any other owner, to obtain approval of each Declarant for changes to any building or improvement on the Parcel Eubank or any other owner owns or for changes in the Parking Area that do not diminish the number of parking spaces available for parking, below the minimum number of parking spaces required by the City of San Marcos for each parcel in the Center.

Order: 140810 Page 4 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

3. Grant of Parking and Ingress and Egress Easement by CCSS, Siegels, North County, OCD and Cipranic. CCSS, Siegels, North County, OCD and Cipranic hereby declare that each other Declarant, and the above recited Owners of a Parcel in the Center and their respective Permittees shall benefit from, and Declarant hereby reserves for the benefit of each other Declarant and the above recited Owners of a Parcel in the Center and their Permittees, nonexclusive easements for ingress, egress, and access by and for vehicular and pedestrian traffic upon, over and across the Common Area and the Parking Area, and for vehicle parking upon, over, and across the Parking Area without fee or charge. No changes shall be made in the improvements in the Parking Area without the prior written approval of each Declarant; provided, however, this covenant shall not require CCSS, Siegels, North County, OCD and Cipranic to obtain approval of each Declarant for changes to any building or improvements on the Parcel they own or for changes in the Parking Area that do not diminish the number of parking spaces available for parking.

4. Grant of Parking and Ingress and Egress Easement by Bretzfield and Frank. Bretzfield and Frank hereby declare that each other Declarant, and the above recited Owners of a Parcel in the Center and their Permittees shall benefit from, and Declarant hereby reserves for the benefit of each other Declarant and the above recited Owners of Parcels in the Center and their Permittees, nonexclusive easements for ingress, egress, and access by and for vehicular and pedestrian traffic upon, over and across the Common Area and the Parking Area, and for vehicle parking upon, over, and across the Parking Area without fee or charge.

5. Grant of Parking and Ingress and Egress Easement by Edwards. Edwards hereby declares that each other Declarant, and the above recited Owners of a Parcel in the Center and their Permittees shall benefit from, and Declarant hereby reserves for the benefit of each other Declarant and the above recited Owners of a Parcel in the Center and their Permittees, nonexclusive easements for ingress, egress, and access by and for vehicular and pedestrian traffic upon, over and across the Common Area and the Parking Area, and for vehicle upon, over, and across the Parking Area without fee or charge. No changes shall be made in the improvements in the Parking Area without the prior written approval of each Declarant; provided, however, this covenant shall not require Edwards to obtain approval of each Declarant for changes to any building or improvement on the Parcel Edwards owns or for changes in the Parking Area that do not diminish the number of parking spaces available for parking.

6. Construction Easements. Each above recited Owner of a Parcel in the Center shall have for the benefit of its Parcel, or Parcels, and their Permittees, the nonexclusive easements for incidental encroachments upon the Common Area as a result of the

Order: 140810 Page 5 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

use of ladders, scaffolding, store front barricades, and similar facilities resulting in temporary obstruction of portions of the Common Area. The portions of the Common Area may be utilized for (i) the ingress and egress of vehicles transporting construction materials, equipment, and persons employed in connection with any work provided for herein, and (ii) the temporary storage of materials and vehicles being utilized in connection with such construction, subject to all of the other terms in this Declaration; provided, however, any such temporary storage shall only be with the prior written permission of the owner on whose parcel any such materials and/or vehicles are to be stored.

7. Paragraph Omitted.

8. Unimpeded Access and Parking Over Parking and Common Areas. Except as may be reasonably and temporarily necessary in connection with construction, maintenance, or repair work as may be undertaken and performed in accordance with this Declaration, no walls, fences, or barriers of any sort or kind shall be constructed or maintained in the Center, which shall prevent or impair the use or exercise of any of the easements reserved herein, or the free access of Persons in and about the Center, including without limitation pedestrian and vehicular traffic between the Parcels in the Center. However, reasonable traffic controls to guide and control the orderly flow of traffic may be installed so long as access driveways to the Common Area are not closed or blocked, and the traffic circulation pattern of the Common Area, as shown on the Site Plan, is not materially and adversely affected; provided, however, each Owner may temporarily obstruct the use or exercise of any of the easements reserved herein for temporary fund-raising activities for a time period not to exceed forty eight (48) hours on any single event, and for no more than ten (10) days in any calendar year without the prior consent of each other Declarant.

9. Binding Effect; Covenants Running With Land. The covenants contained in this Declaration shall constitute covenants running with the land applicable to the Center; shall be binding upon, and shall inure to the benefit of, the Center and any portion thereof or interest therein; and shall be binding upon, and shall inure to the benefit of, Declarant, all Owners, and any Person having or acquiring any portion of the Center or any interest therein and their successive owners and assigns.

10. Mechanics' Liens. If an Owner (the "Responsible Owner") shall permit any mechanics' liens to be filed against another Owner's Parcel (an "Affected Owner"), the Responsible Owner shall either pay the same and have it discharged of record promptly, or take such action as may be required to reasonably and legally object to such lien and the placing of same against such Affected Owner's Parcel. In all events, the Responsible Owner shall cause the lien to be discharged prior to the entry of judgment for

Order: 140810 Page 6 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

foreclosure of such lien. Upon request of an Affected Owner, the Responsible Owner shall furnish such security or indemnity to and for the benefit of such Affected Owner as may be required to permit a title endorsement or title policy to be issued relating to such Affected Owner's Parcel without showing thereon the effect of such lien.

11. Maintenance of Common Area and Parking Area, Insurance & Taxes.

11.1 Each Declarant, Owner and other Persons and Permittees now owning or hereafter owning any portion of any Parcel at the Center shall be solely responsible for the repair, maintenance, insuring and operations over, on, across and arising out of use of the Parcel such Declarant, Owner or other Person and Permittee owns or owned. Such obligation shall include, without limitation, that Eubank shall be solely responsible for repair and maintenance of Parcel B; that CCSS, Siegels, OCD and Cipranic shall be solely responsible for repair and maintenance of Parcels D and E, including without limitation, the Fee and Leasehold; that Edwards shall be solely responsible for repair and maintenance of Parcel A; that Bretzfield and Frank shall be solely responsible for repair and maintenance of Parcel C; and that North County shall be solely responsible for repair and maintenance of Parcel F. Each Declarant, above recited Owner of a Parcel in the Center, and other Person and Permittee, as applicable, shall pay, or cause to be paid, when due, all real estate taxes and assessments which may be levied, assessed, or charged by any public authority against such Owner's Parcel, the Improvements thereon, or any other part thereof, including any Common Area portion thereof. Each Declarant, Owner and other Person and Permittees shall in its reasonable discretion from and after the date of recordation of this Declaration, maintain standard form fire insurance with such extended coverage endorsements as are commonly written in California (with construction endorsements when appropriate, but excluding earthquake coverage), written by one or more insurance companies with a Best's rating of at least B, covering all Improvements in the Common Area, which insurance shall be in an amount not less than one hundred percent (100%) of the actual replacement cost thereof (excluding foundation and excavation costs). Without limiting the generality of the foregoing, each Declarant, Owner and other Person shall from and after commencement of construction on such Owner's Parcel, maintain, at its sole costs and expense, comprehensive general public liability insurance written by one or more insurance companies with a Best's rating of at least B, insuring against (i) liability for such Owner's construction activities and business operations in the Center, and (ii) any and all activities within or upon any said Owner's Building or Common Area or Parking Area. This covenant may be satisfied by naming the other above recited Owners of a Parcel in the Center as additional insureds. Proof of such insurance shall

Order: 140810 Page 7 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

be delivered to any parcel owner in the Center upon reasonable notice and request by any other such owner.

11.2 Each Declarant, Owner, and other Person and Permittee, as applicable, shall perform the maintenance and repair obligations herein in conformance with standards comparable to other retail real estate developments of comparable size and use in the geographical region where the Parcels A, B, C, D, E and F are located.

12. Effectiveness & Duration. In the event that the Owner of Parcel A begins to develop a theatre on Parcel A, this REA shall become automatically effective (the "Effective Date of the REA"); provided, however, that this REA shall not be effective or encumber any Parcel of the Center until commencement of development of a theatre on Parcel A. If a theatre is developed on Parcel A, this Declaration and each term, easement, covenant, restriction and undertaking contained herein will remain in effect for a term of ninety-nine (99) years from the date of recordation hereof, unless extended or earlier terminated with the unanimous consent of all then parcel owners in the Center before the end of the 99 year base term hereof.

13. Severability. If any clause, sentence, or other portion of this Declaration shall become illegal, null, or void for any reason, or shall be held by any court of competent jurisdiction to be so, the remaining portions thereof shall remain in full force and effect.

14. Attorneys' Fees; Court Costs. If any action or proceeding is instituted to enforce or interpret any of the provisions of this Declaration or for damages on account of the breach of this Declaration, the prevailing party in any such action or proceeding shall be entitled to recover from the other party its reasonable attorneys' fees and costs and expenses of litigation incurred in such action or proceeding.

15. Force Majeure. If any Declarant, Owner or any other Person shall be delayed or hindered in or prevented from the performance of any act required to be performed by such Person under this Declaration by reason of Acts of God, strikes, lockouts, unavailability of materials, failure of power, prohibitive governmental laws or regulations, government action or inaction, litigation, land use entitlement issues, riots, insurrections, adverse weather conditions preventing the performance of work as certified to by the licensed architect, engineer, or other individual overseeing the performance of the relevant work, war or other reason beyond such party's control, then the time for performance of such act shall be extended for a period equal to the period of such delay. Lack of adequate funds or financial

Order: 140810 Page 8 of 39 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 1996-564623 REC ALL

inability to perform shall not be deemed to be a cause beyond the control of such party.

16. Effect of Declaration; Binding Covenants; Equitable Servitudes. Except as otherwise expressly provided herein, no rights or privileges conferred upon Owners by this Declaration shall inure to the benefit of any Permittee or other Person who is not an Owner, nor shall any non-Owner be deemed to be a third party beneficiary of any of the provisions contained herein. Each and all of the restrictions, covenants, and easements of this Declaration (i) shall constitute equitable servitudes which shall apply to and be binding on the Owners and all Persons having or hereafter acquiring any interest in any portion of the Center and each and all of their respective successors, assigns, Mortgagees, and Permittees; and (ii) are imposed pursuant to a general plan for the improvement and use of the Center and are designed for the mutual benefit of the Owners and the Declarant.

17. Recordation. Subject to Paragraph 12, above, this Declaration shall be recorded in the Office of the County Recorder of the County in which the Center is located and shall be effective upon such recordation.

18. No Public Dedication. Nothing herein contained shall be deemed to be dedication of any portion of the Center to the general public or for the general public or for any public purpose. It is the intention of Declarants that the use of the Center be limited to and for the purposes herein expressed always under the ownership and control of the Owners. The right of the public to make use of the Center is by permission, and subject to control, of the Owners. Each Declarant may take reasonable steps, as necessary to prevent a prescriptive easement from arising by reason of continued public use, provided that any such restriction shall be continued only for such duration as is required under applicable law to prevent the creation of any such prescriptive easement.

This Declaration may be executed in counterparts and is executed and dated June 27th, 1996 for identification purposes only and shall be effective upon recordation in Official Records of San Diego County, California.

MEMORANDUM OF LEASE

THIS MEMORANDUM OF LEASE, dated as of 9/29, 2014, by and between The Old California Partnership, L.P., a California limited partnership (hereinafter called "**Landlord**"), and Blazin Wings, Inc., a Minnesota corporation (hereinafter called "**Tenant**"):

WITNESSETH:

A. Landlord and Tenant have entered into that certain Lease dated 9/29, 2014 ("**Lease**") relating to certain leased premises ("**Premises**") adjacent to and part of a shopping center known as Old California Restaurant Row ("**Shopping Center**"), situated on certain real property in the City of San Marcos, San Diego County, California. The Shopping Center is legally described on Exhibit A attached hereto.

B. Landlord and Tenant now wish to memorialize of record that existence of the Lease and certain specific terms of the same.

NOW THEREFORE, in consideration of the Lease and other good and valuable consideration, landlord and Tenant agree as follows:

1. Landlord and Tenant have entered in to the Lease effective as of September 29, 2014, to demise and let the Premises upon the terms and conditions more particularly set forth in the Lease.

2. The Lease term shall be for an initial term of one hundred twenty (120) consecutive calendar months commencing on the Rent Commencement Date, as such term is defined in the Lease.

3. Subject to the terms and conditions more particularly set forth in the Lease, Tenant has the option to extend the term of the Lease for four (4) consecutive periods of sixty (60) calendar months each, with the first Renewal Term commencing upon expiration of the Initial Term, and subsequent Renewal Terms commencing upon expiration of the preceding Renewal Term.

4. The Lease contains the following exclusivity provision:

Order: 140810 Page 1 of 9 Requested By: Jennifer Fries , Printed: 11/20/2020 11:01 AM
Doc: 2014-498921 REC ALL

The following definitions are used in the next paragraph:

Beer Exclusive: A restaurant and/or bar that has more than fifteen (15) beer taps.

Competing Use: A use that violates any portion of the Exclusive Use.

Exclusive Use: Collectively, the Sports Bar Exclusive, the Wings Exclusive and the Beer Exclusive.

Sports Bar Exclusive: A restaurant and/or bar which (a) markets itself for viewing sporting events or (b) has eight (8) or more televisions in excess of 37" diagonal.

Wings Exclusive: A restaurant and/or bar which derives five percent (5%) or more of its food sales (on a gross revenue basis) from the aggregated sale of bone-in and/or boneless chicken wings with two (2) or more sauces.

Subject to the terms of the Lease, Landlord will prohibit any other space in the Shopping Center to be used by a person or entity whose business is a Competing Use. Landlord shall include a provision in all future leases in the Shopping Center prohibiting the use of such leased space for a Competing Use. Businesses which are considered a Competing Use include, without limitation, Champps, Hooters, Wing Stop, Buffalo Wings & Rings, Quaker Steak and Lube, Brick House Tavern & Tap, The Green Turtle, Tilted Kilt Pub & Eatery, Cheddar's Casual Café, East Coast Wings & Grill, BJ's Restaurant and Brewhouse, Carolina Ale, Miller's Ale House, Duffy's Sports Gills, Ker's WingHouse, Bru's Room Sports Grill, and Hurricane Grill & Wings, Logan's Roadhouse, Mellow Mushroom, The Ram, CB-Potts, Dave & Buster's, Twin Peaks, Beef O'Brady's, Taco Mac, and Ale House.

5. The parties have agreed to a No Change Area as depicted on Exhibit B. Landlord agrees to abide by the terms of the Lease relating to the No Change Area, including without limitation the covenant not to construct any structure(s) or to reduce the number of available parking stalls within the No Change Area.

6. Landlord hereby grants to Tenant a non-exclusive easement over and across the parking areas and drive lanes of the Shopping Center and over any access easements benefitting the Shopping Center for ingress and egress of vehicular and pedestrian traffic from all public roads adjacent to the Shopping Center to the Premises.

7. Except as otherwise indicated herein, capitalized terms used in this Memorandum are defined as set forth in the Lease.

8. The purpose of this instrument is to give notice of said Lease and all of its terms, covenants, and conditions to the same extent as if said Lease were set forth herein.

9. This Memorandum of Lease is not intended to cover all the terms and conditions of the Lease and is not to be construed as restricting, enlarging, modifying or amending the Lease. Both Landlord and Tenant possess executed counterparts of the Lease to which reference is made for the exact terms, provisions and conditions.

10. The conditions, covenants and agreements contained in this instrument shall be binding upon and inure to the benefit of the parties hereto, their respective heirs, personal representatives, successors and assigns. In the event of any conflict between the terms and conditions of this instrument and the term and conditions of the Lease, it is agreed that the terms and conditions of the Lease shall control.

IN WITNESS WHEREOF, the parties hereto have executed this Memorandum of Lease as of the day and year first above written.

RESOLUTION PC 95-2843

A RESOLUTION OF THE CITY OF SAN MARCOS PLANNING COMMISSION APPROVING A MAJOR CONDITIONAL USE PERMIT TO ALLOW THE USE OF OFF-SITE AND SHARED PARKING AND TO EXCEED HEIGHT LIMITS ON PROPOSED TOWER, ROOF AND PARAPETS FOR A THEATER BUILDING WITHIN THE COMMERCIAL ZONE.

CASE NO. CUP 94-255 (95mod)
OLD CALIFORNIA DEVELOPMENT COMPANY

WHEREAS, an application was made by the Old California Development Company to allow for off-site and shared parking and to exceed height limits on architectural features, tiled roof entry and scalloped parapets of the building for the proposed a fourteen screen theater/commercial center in the C (commercial) zone located on the north side of San Marcos Boulevard, between Las Posas Road and Via Vera Cruz, more particularly described as:

Portions of Lots 1 and 2, Block 77, Map 806 and Parcel A, B and C of Parcel Map 10751. Assessor's Parcel Numbers: 219-220-25, 09, 31, 30, 45, & 42; and

WHEREAS, the Developmental Services Department has reviewed the subject application and recommends conditional approval; and

WHEREAS, the Planning Commission did consider a Mitigated Negative Declaration (ND 95-387) pursuant to CEQA; and

WHEREAS, the required Public Hearing held on November 6, 1995 was duly advertised and held in the manner prescribed by law;

WHEREAS, the Planning Commission's decision is based upon the following findings and determinations:

A. The granting of the Conditional Use Permit for off-site and shared parking with the conditions of approval will not be materially detrimental to the public health, safety, or general welfare of the people residing or working in the area, and will not be materially injurious to properties or improvements in the vicinity, in that there is sufficient parking, taking into consideration the demonstrated peak hours of the restaurants within Old California restaurant row and has under utilized parking spaces; shared parking would still allow adequate parking to be available through reciprocal easement agreements and would be utilized by all properties and tenants; there is adequate vehicular and pedestrian ingress/egress to the center within the center and adjacent property.

B. The granting of the Conditional Use Permit to allow architectural features with the conditions of approval will not be materially detrimental to the public health, safety, morals, or general welfare of properties or improvements in the vicinity, in that the proposed architectural features are consistent with the San Marcos Boulevard Design Guidelines and is consistent with the objectives of the General Plan, the community, the surrounding neighborhood and environment; the building placement and design exceed all setback standards.

C. The commercial complex with the proposed uses is consistent with the objectives of the zoning ordinance and the use of shared and reciprocal and parking access agreements as conditioned will not adversely affect the implementation of the General Plan, the community, the surrounding neighborhood or environment.

NOW, THEREFORE, the Planning Commission of the City of San Marcos resolves as follows:

1. The foregoing recitals are true and correct

2. Mitigated Negative Declaration No. 95-387 is hereby approved.

3. The Planning Commission does hereby approve a modification to Conditional Use Permit No. 94-255 (95M) with the following conditions.

4. The site plan and architectural elevations are conditionally approved based upon the submitted plans except as modified by conditions of Site Development Plan 94-120 (95 Mod) as contained in Resolution PC 95-2842 and incorporated herein by reference.

5. Within sixty (60) days of approval of this resolution the revised building elevations and revised site plan shall be modified to reflect the conditions of approval and submitted to the Planning Division for plan check.

6. Within 30 days of the approval of the revised site plan, it shall be submitted as an original mylar along with a mylar of this resolution as a title page. This title page shall include the statement "I(we), _____, the owner(s) or the owner's representative, have read, understand and agree to the conditions of Resolution PC 95-2842 and 2843." Immediately following this statement shall appear a signature block for the owner or the owner's representative which shall be signed. Signature blocks for the Planner Division Director and the Senior Civil Engineer shall also appear on all mylars. The mylars shall be approved by the City prior to any grading plan, improvement plan or final map submittal.

7. A minimum total of 782 parking spaces shall be made available for the theater/commercial center. These parking spaces shall be provided on site (APN

219-200-25) and on the identified areas of Old California Restaurant Row per recorded parking easements/agreements. No off-site/shared parking shall be provided on APN 219-200-43 unless there is a reciprocal parking agreement between the two properties in the future. The proposed theater shall be limited to a maximum of 60,000 square feet and 3,200 seats. The maximum gross floor area of the separate building is 7,500 square feet.

8. Prior to the issuance of any building permit for the center, reciprocal easement agreements for access and shared parking shall be recorded between all parcels 219-220-25, 09, 31, 30, 45, and 42, (portions of Lots 1 and 2, Block 77, Map 806 and Parcels 1, 2, 3, of Parcel Map 17325 and Parcel B of Parcel Map 10751). Copies of said recorded documents shall be submitted to the Planning Division.

9. The pedestrian walkway (Old California Walk) shall be provided for on the south side of the additional parking at the rear of the Sears building as indicated on the submitted site plan. A detailed plan shall be provided showing undulating, landscaping and hardscape with theme lighting shall be submitted prior to issuance of building permits. If the lease agreement is terminated, a replacement walkway shall be provided.

10. Adequate lighting shall be provided throughout all the parking to the satisfaction of the City Engineer. Low sodium lighting shall be used as required by City Council policy for outdoor lighting. Special theme light standards shall be used within the Old California Walk Area.

11. Security personnel shall be provided by the theater to:
    a) Patrol all of the theater's parking areas during the evening hours; and
    b) To prevent theater patrons from parking on the adjacent property to the west (APN 219-200-43).

PASSED AND ADOPTED by the Planning Commission of the City of San Marcos, State of California, at a regular meeting thereof, this 6th day of November, 1995 by the following roll call vote:

FIRST AMENDMENT TO DECLARATION OF RECIPROCAL EASEMENT AGREEMENT

This Amendment to that certain Declaration of Reciprocal Easement Agreements recorded as document number 1996-0564623, on November 7, 1996 ("REA"), is entered into this 20th day of July, 1998, by and between CCSS San Marcos, L.P., a California partnership ("CCSS"); John M. Siegel, an individual, Robert C. Siegel, an individual (hereinafter collectively "Siegels"); Ben Cipranic, an individual, David Cipranic, an individual (hereinafter "Cipranic"); James Rollins Eubank and Vera Pauline Eubank, Co-Trustees of that certain Revocable Trust Agreement, executed December 22, 1986, by James Rollins Eubank and Vera Pauline Eubank for the benefit of the Eubank Family (hereinafter "Eubank"); John Frank, an individual (hereinafter "Frank"); and Nancy Bretzfield, an individual (hereinafter "Bretzfield"); North County bank, a State Bank (hereinafter "North County"); Old California Development Company (hereinafter "OCD"); and Edwards Theatres Circuit, Inc., a California corporation (hereinafter "Edwards"), (hereinafter sometimes collectively referred to as "Declarant"), with reference to the following facts:

WHEREAS, on or about November 7, 1996, CCSS, Siegels, Cipranic, Eubank, Frank, Bretzfield, North County, OCD and Edwards entered into a Declaration of Reciprocal Easement Agreement for certain real property in the City of San Marcos, providing for nonexclusive easements for ingress, egress and access by and for vehicular and pedestrian traffic upon, over and across the Common Area and the Parking Area, and for vehicle parking upon, over and across the Parking Area without fee or charge, for the benefit and use of each of the above- referenced Declarants and their Permittees; and

WHEREAS, pursuant to that Certificate of Compliance recorded on January 20, 1998 as Document Number 1998-0025480 in the San Diego County Recorder's Office ("Certificate of Compliance"), Parcel No: APN 219-200-43, which consists of a portion of lot 2 in Block 77 of Rancho Los Vallecitos De San Marcos, County of San Diego, State of California, was adjusted to include Parcel 1 of Parcel Map 17775, Parcel No: APN 219-200-60, in the City of San Marcos, County of San Diego, State of California, according to the Map Thereof No. 806, filed in the Office of the County Recorder of San Diego County, December 21, 1895.

NOW, THEREFORE, the parties hereto acknowledge and agree for each party's mutual benefit, as follows:

1. Reconfiguration of Site: The area of the site, as set forth in Exhibits 1 and 2, and described as Parcel "A" of the Declaration of Reciprocal Easement Agreements dated November 7, 1996, by and between the parties referenced above is hereby revised to combine Parcel 1 of Parcel Map 17775, with a portion of Lot 2 in Block 77, Map 806 of Rancho Los Vallecitos de San Marcos, as depicted on the attached Certificate of Compliance, and, as depicted as Parcel "G" on the Site Plan. The Site Map and Site Plan which are attached hereto and incorporated herein by this reference as Exhibit "A", hereby

replace and supersede the Site Map and Site Plan attached to the original agreement as Exhibits 1 and 2, thereby expand Parcel A in accordance with the Certificate of Compliance. The definition of Parcel shall include Parcel "G" as shown on Exhibit "A" attached hereto and fully incorporated herein by this reference ("Parcel G"). The definition of Common Area shall include areas of Parcel "G" not improved from time to time by a Building or Buildings, and shall include, without limitation, common utility lines and systems, access roads, driveways, walkways, sidewalks, landscaping, and the Parking Areas now or hereafter depicted on the attached Exhibit "A". The definition of Parking Area shall include those portions of the Common Area in Parcel G hereinafter constructed and used for (i) pedestrian and vehicular ingress to and egress from the Center from adjacent public streets, (ii) pedestrian and vehicular movement in and about the Center, and (iii) the areas developed for the parking of motor vehicles that may now or hereafter exist on Parcel "G". Each of the parties to that certain Declaration of Reciprocal Easement Agreements (recorded November 7, 1996 as document no. 1996-0564623), hereby acknowledges, agrees and consents to the inclusion of Parcel "G" as beneficiary of each, every and all of the grants of easement contained in the REA, and the Owner of Parcel "G" acknowledges, agrees and consents to the reservation as to Parcel "G" of nonexclusive easements for ingress, egress, and access by and for vehicular and pedestrian traffic upon, over and across the Common Area and the Parking Area and for vehicle parking upon , over and across the Parking Area on Parcel G as provided in the REA.

2. No Further Changes: Except as provided herein, the terms and conditions of the Reciprocal Easement Agreement shall remain in full force and effect without modification as on the date first written. Capitalized terms as used herein shall have the same meanings as set forth in the original agreement. Any terms not defined herein shall have the meanings set forth in the original agreement.

This Amendment to Declaration of Reciprocal Easement Agreement may be executed in counterparts and is executed and dated July 20, 1998, and shall be effective upon recordation in the Official Records of San Diego County, California.

MEMORANDUM

To: David Shepherd, Lennar
From: Stephen Cook, TE, Intersecting Metrics
Date: Augusst 17, 2023
Regarding: Old California Restaurant Row Restaurant Parking Analysis

The purpose of this technical memorandum is to document the observed parking demand of the existing restaurants adjacent to the Old California Restaurant Row (OCRR) Site. The observed parking demand of the existing restaurants can then serve as an analog for the parking requirements for sit-down restaurants that may be included within of the OCRR Re-Development Specific Plan.

To determine the parking demand for the sit-down restaurant uses that may be included within the OCRR Re-Development Specific Plan, a parking occupancy study was performed on the three sit-down restaurants adjacent to the OCRR site (Fish House Vera Crus, Cocina Del Charro and Buffalo Wild Wings). Hourly parking occupancy counts were conducted for all sites during peak times (between 4:00 PM and 9:00 PM), on Friday April 28, 2023 and Saturday April 29, 2023. The observed parking counts are displayed in **Table 1**.

Table 1: Observed Parking Counts

Date	Use	Observed Parking Demand			
		Fish House Vera Cruz	Cocina Del Charro	Buffalo Wild Wings	Total
4/28/2023 (Friday)	4:00 PM	32	66	25	123
	5:00 PM	49	80	39	168
	6:00 PM	59	89	51	199
	7:00 PM	49	83	36	168
	8:00 PM	42	71	29	142
	9:00 PM	22	63	36	121
4/29/2023 (Saturday)	4:00 PM	30	50	34	114
	5:00 PM	31	64	26	121
	6:00 PM	40	78	41	159
	7:00 PM	47	82	38	167
	8:00 PM	33	73	39	145
	9:00 PM	12	58	28	98

As shown in the table, the highest observed parking demand, across all three sites, occurred at 6:00 PM on a Friday, April 28th. To determine the parking ratio of the uses, **Table 2** compares the maximum observed parking demand at each restaurant to the total square footage of each site.

Table 2: Restaurant Parking Demand

Restaurant	Size (SF)	Peak Demand
Buffalo Wild Wings	5,445	51
Cocina Del Charro	12,047	89
Fish House Vera Cruz	9,100	59
Total	26,592	199
	Parking Ratio	0.00748

As shown in Table 2, the 26,592 SF of existing restaurant uses generated a maximum observed parking demand of 199 spaces. This resulted in a parking demand ratio of approximately 7.5 spaces per 1,000 SF (199 Spaces / 26.592 KSF). As such, it is recommended that the OCRR Re-Development Specific Plan utilize a parking ratio of 7.5 spaces per 1,000 SF for all of its restaurant uses that have more than 2,000 SF of leasable area.

1. Restaurant, > 2,000 s.f. Any restaurant for the primary purpose of on-site service and consumption and/or serving meals in non-disposable containers. Accessory sale of food and nonalcoholic beverages for off-site consumption is permitted provided that all food and beverages sold for on-site consumption are served in non-disposable containers.

2. Restaurant < 2,000 s.f. Any restaurant for the primary purpose of serving meals in disposable containers (paper, plastic, or otherwise disposable/recyclable), for the intent of consumption offsite. No more than 50% of interior floor area may be used for onsite dining purposes. This use includes, but is not limited to, retail bakeries, coffee and beverage shops, ice cream shops, etc.

Restaurant – with Live Entertainment. A Restaurant with Music, comedy, readings, dancing, acting, or other entertainment performed on a site three (3) or more days during a calendar year. This includes dancing by patrons to live or recorded music.

Tasting Room without food service. An area devoted to the sampling and sales thereof of wine or beer produced on or off the premises and the sale of food is prohibited. On-site tasting facilities shall be limited to the sale/tasting of product produced on-site and shall not exceed fifty percent (50%) of the building area. Ancillary retail sales are permitted. Alcohol-related businesses are subject to all applicable state law (California Business and Professions Code Section 23000 et seq.) licensing requirements for the sale or provision of alcohol.

Retail (land use) Any establishment that sells goods for any purpose other than resale in the regular course of business. Retail may also include, but is not limited to, establishments that sell prepared food items that are not meant to be consumed on-site. This may include, but is not limited to, wine shops w/ tasting (no dining facilities), cheese shops, bodegas, and candy stores.

PDP SWQMP PREPARER'S CERTIFICATION PAGE

Project Name: San Marcos Restaurant Row
Permit Application Number: [SP22-0004 GPA22-0002 R22-0002 TSM 22-0003 SDP 22-0006]

PREPARER'S CERTIFICATION

I hereby declare that I am the Engineer in Responsible Charge of design of storm water best management practices (BMPs) for this project, and that I have exercised responsible charge over the design of the BMPs as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the PDP requirements of the City of San Marcos BMP Design Manual, which is a design manual for compliance with local City of San Marcos and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

I have read and understand that the [City Engineer] has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this PDP SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this PDP SWQMP by the [City Engineer] is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

PROJECT OWNER'S CERTIFICATION

This PDP SWQMP has been prepared for [Lennar Homes of California, Inc.] by [Project Design Consultants]. The PDP SWQMP is intended to comply with the PDP requirements of the City of San Marcos BMP Design Manual, which is a design manual for compliance with local City of San Marcos and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan. Once the undersigned transfers its interests in the property, its successor-in-interest shall bear the aforementioned responsibility to implement the best management practices (BMPs) described within this plan, including ensuring on-going operation and maintenance of structural BMPs. A signed copy of this document shall be available on the subject property into perpetuity.

Project Identification

Project Name: San Marcos Restaurant Row

Description: A multi-use project providing live/work units designed to provide a secure access separating the residential space from the commercial space. A proposed park located along the existing floodway is proposed to provide a community garden and can be programmed for special events.

Permit Application Number (if applicable): SP22-0004 GPA22-0002 R22-0002 TSM 22-0003 SDP 22-0006	Date:7/19/2023

Project Address: W San Marcos Blvd and Via Vera Cruz, San Marcos, CA 92078

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:
http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above, Is the project a "development project" (See definition above)? See Section 1.3 of the BMP Design Manual for further guidance if necessary.	■ Yes	Go to Step 2.
	□ No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. **STOP.**
Discussion / justification if the project is not a "development project" (e.g., the project includes *only* interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions?	□ Standard Project	Only Standard Project requirements apply, including Standard Project SWQMP. **STOP.**
	■ PDP	Standard and PDP requirements apply, including PDP SWQMP. **Go to Step 3 on the following page.**

To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual *in its entirety* for guidance. **In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.**	☐ Exception to PDP definitions	Standard Project requirements apply, and any additional requirements specific to the type of project. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP. **STOP.**
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2, Form Date: March 15, 2016

Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements reply to the proposed PDP. Does the project:

Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	■ No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	■ No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	■ No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	☐ Yes	**STOP**. Hydromodification requirements do not apply.
	■ No	Hydromodification requirements apply to the project. Go to Step 4.
Discussion / justification if hydromodification control requirements do not apply:		

Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	☐ Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	■ No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop.

Project Type Determination Checklist			Form I-2 [March 15, 2016]
Project Information			
Project Name/Description: San Marcos Restaurant Row			
Permit Application Number (if applicable): SP22-0004 GPA22-0002 R22-0002 TSM 22-0003 SDP 22-0006			Date: 7/10/2023
Project Address: W San Marcos Blvd and Via Vera Cruz, San Marcos, CA 92078			
Project Type Determination: Standard Project or Priority Development Project (PDP)			
The project is (select one): New Development ■ Redevelopment			
The total proposed newly created or replaced impervious area is: 426,888 ft^2 (9.8) acres			
Is the project in any of the following categories, (a) through (f)?			
Yes	No ■	(a)	New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ■	No	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ■	No	(c)	New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses: (i) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (Standard Industrial Classification (SIC) code 5812). (ii) Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater. (iii) Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (iv) Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

Form I-2 Page 2, Form Date: March 15, 2016			
Yes	No ■	(d)	New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). *Note: ESAs are areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and San Diego Water Board; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and San Diego Water Board; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees. See BMP Design Manual Section 1.4.2 for additional guidance.*
Yes	No ■	(e)	New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses: (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.
Yes ■	No	(f)	New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction. *Note: See BMP Design Manual Section 1.4.2 for additional guidance.*

Does the project meet the definition of one or more of the Priority Development Project categories (a) through (f) listed above?

No – the project is not a Priority Development Project (Standard Project).

■ Yes – the project is a Priority Development Project (PDP).

The following is for redevelopment PDPs only:

The area of existing (pre-project) impervious area at the project site is: __474,804__ ft^2 (A)
The total proposed newly created or replaced impervious area is __426,888__ ft^2 (B)
Percent impervious surface created or replaced (B/A)*100: _90_%
The percent impervious surface created or replaced is (select one based on the above calculation):

less than or equal to fifty percent (50%) – only new impervious areas are considered PDP

OR

■ greater than fifty percent (50%) – the entire project site is a PDP

- ☐ Previously graded but not built out
- ☐ Demolition completed without new construction
- ☐ Agricultural or other non-impervious use
- ☐ Vacant, undeveloped/natural

Description / Additional Information:

Existing Land Cover Includes (select all that apply):

- ■ Vegetative Cover
- ■ Non-Vegetated Pervious Areas
- ■ Impervious Areas

Description / Additional Information:

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

- ☐ NRCS Type A
- ☐ NRCS Type B
- ■ NRCS Type C
- ■ NRCS Type D

Approximate Depth to Groundwater (GW): Geotech letter states approximately 7 feet – 21 feet below existing ground surface.

- ☐ GW Depth < 5 feet
- ■ 5 feet < GW Depth < 10 feet
- ■10 feet < GW Depth < 20 feet
- ■GW Depth > 20 feet

Existing Natural Hydrologic Features (select all that apply):

- ■Watercourses
- ☐ Seeps
- ☐ Springs
- ☐ Wetlands
- ☐ None

Description / Additional Information:
An existing floodway runs approximately through the center of the project. However, this floodway is within an existing parking lot and does not represent a natural watercourse.

Description of Existing Site Drainage Patterns

How is storm water runoff conveyed from the site? At a minimum, this description should answer:
(1) whether existing drainage conveyance is natural or urban;
(2) Is runoff from offsite conveyed through the site? if yes, quantify all offsite drainage areas, design flows, and locations where offsite flows enter the project site, and summarize how such flows are conveyed through the site;
(3)Provide details regarding existing project site drainage conveyance network, including any existing storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels; and
(4) Identify all discharge locations from the existing project site along with a summary of conveyance system size and capacity for each of the discharge locations. Provide summary of the pre-project drainage areas and design flows to each of the existing runoff discharge locations.

Describe existing site drainage patterns:

The project site is bounded by West San Marcos Boulevard and Via Vera Cruz. The project lies within an existing 100-year floodway and floodplain, just downstream of the San Marcos Creek highway 78 Splitflow. Under existing condition, the project area consist of commercial development with a large parking lot area and a number of restaurants. The project site generally drains towards the center, towards the middle of the large parking lot. Surface grates along the project site collect project runoff and convey the runoff towards an existing 30” pipe that runs through the project site. This 30” pipe connects the 36” x 60” elliptical pipe in Via Vera Cruz to an existing concrete channel west of the site. San Marcos Creek is located southwest of the project site, downstream of the project outfall point.

Description of Proposed Site Development

Project Description / Proposed Land Use and/or Activities:

The project proposes a mixed use zone that incorporates retail storefronts, urban living, and community destinations in a vertical pedestrian-oriented setting. To maintain the pedestrian-oriented setting, the ground floor will be limited to retail and other active uses along the primary street frontage of Via Vera Cruz and West San Marcos Boulevard. Residential units will encompass the majority of the site, including homes over commercial units along the project frontage. Another project known as the Sears Site, under a different developer, is adjacent and west of this project. The Sears Site and this project (Restaurant Row) are designed in conjunction to provide a pedestrian paseo access between both sites. The pedestrian access is designed throughout this project connecting to the Sears Site in order to provide pedestrian access from Buffalo Wild Wings to Edwards Cinema's. This pedestrian paseo corridor also serves as a secure, illuminated pedestrian access throughout the project site. A flood park is implemented in the existing floodway with a variety of ammenities tolerant of inundation. The proposed site will allow for opportunity to program special events for the community. In addition, a smaller residential park is proposed just south and out of the floodway in order to provide playground structures for children of different age groups.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):

Some impervious features from the project include proposed residential and commercial buildings, private roads, and parking lots.

List/describe proposed pervious features of the project (e.g., landscape areas):

Pervious features in the project include a flood-park along the floodway of the site designed in anticipation of inundation during large rain events, as well as some vegetation along the residential areas.

Does the project include grading and changes to site topography?

■ Yes

□ No

Description / Additional Information:

Description of Proposed Site Drainage Patterns

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

■ Yes

□ No

If yes, provide details regarding the proposed project site drainage conveyance network, including storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels, and the method for conveying offsite flows through or around the proposed project site. Identify all discharge locations from the proposed project site along with a summary of the conveyance system size and capacity for each of the discharge locations. Provide a summary of pre- and post-project drainage areas and design flows to each of the runoff discharge locations. Reference the drainage study for detailed calculations.

Describe proposed site drainage patterns:

The project site will generally maintain existing drainage patterns, the project site drains to the center towards the proposed flood-park. Most of the roof drainage for the residential motorcourts will drain to the center of their courtyards and collected in an inlet and conveyed through storm drain. Water quality requirements will be addressed with modular wetland systems and hydromodification requirements will be addressed with underground storage vaults. The entire project site will drain to a proposed dual 36-inch pipe and/or box culvert that will replace the existing 30-inch pipe with a new alignment. A proposed 30" pipe will connect the existing 30" pipe to the new alignment pipe. This connection will occur within project boundary limits to avoid offsite improvements to the neighbor's property. A proposed dual 36" pipe is proposed that will transition to a dual RCB after it picks up the northern offsite run-on near Private Drive 'K'. The dual RCB will then discharge to an existing concrete channel on the west side of the project. The post-project 100-year design flow for the project's discharge point is less than the existing condition because in the project site reduces imperviousness in the post-project condition. For more information on the drainage analysis of this site, please refer to the Drainage Report prepared by PDC.

In addition, offsite improvements along the southeast area of the project will include improvements near the existing Buffalo Wild Wings. These improvements will increase the tributary area to an existing Modular Wetland Unit. The existing modular wetland is significantly larger than the minimum required, based on the 1.5 times the water quality flow rate calculated using the post-project's tributary drainage area. See calculations provided in Attachment 1a for the revised tributary area and calculation regarding this existing MWS. The increase in tributary area is adequate for this existing Modular Wetland Unit.

Note that even though the existing Buffalo Wild Wings was permitted prior to the current storm water permit, the existing MWS is adequate for the current stormwater requirements.

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

- ■ On-site storm drain inlets
- ☐ Interior floor drains and elevator shaft sump pumps
- ☐ Interior parking garages
- ☐ Need for future indoor & structural pest control
- ■ Landscape/Outdoor Pesticide Use
- ☐ Pools, spas, ponds, decorative fountains, and other water features
- ■ Food service
- ☐ Refuse areas
- ☐ Industrial processes
- ☐ Outdoor storage of equipment or materials
- ☐ Vehicle and Equipment Cleaning
- ☐ Vehicle/Equipment Repair and Maintenance
- ☐ Fuel Dispensing Areas
- ☐ Loading Docks
- ■ Fire Sprinkler Test Water
- ☐ Miscellaneous Drain or Wash Water
- ■ Plazas, sidewalks, and parking lots

Description / Additional Information:

Identification and Narrative of Receiving Water and Pollutants of Concern

Describe flow path of storm water from the project site discharge location(s), through urban storm conveyance systems as applicable, to receiving creeks, rivers, and lagoons as applicable, and ultimate discharge to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):

The project site discharges the proposed dual 36" pipe to an existing concrete channel that flows west towards South Las Posas Road, and discharges to a natural channel west of South Las Posas Road and North of West San Marcos Blvd. Runoff continues south and commingles with San Marcos Creek.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs and/or Highest Priority Pollutants from the WQIP for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs / WQIP Highest Priority Pollutant
San Marcos Creek	Bifenthrin, Nitrogen, Pyrethroids, Total Dissolved Solids, Benthic Community Effects, DDE, Phosphorus, Selenium, Toxicity, Indicator Bacteria	

Identification of Project Site Pollutants*

***Identification of project site pollutants is only required if flow-thru treatment BMPs are implemented onsite in lieu of retention or biofiltration BMPs (note the project must also participate in an alternative compliance program unless prior lawful approval to meet earlier PDP requirements is demonstrated)**

Identify pollutants expected from the project site based on all proposed use(s) of the site (see BMP Design Manual Appendix B.6):

Pollutant	Not Applicable to the Project Site	Expected from the Project Site	Also a Receiving Water Pollutant of Concern
Sediment		X	
Nutrients		X	X
Heavy Metals		X	
Organic Compounds	X		
Trash & Debris		X	
Oxygen Demanding Substances		X	
Oil & Grease		X	
Bacteria & Viruses		X	X
Pesticides		X	

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the BMP Design Manual)?

■ Yes, hydromodification management flow control structural BMPs required.

☐ No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

***This Section only required if hydromodification management requirements apply**

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

☐ Yes

■ No, No critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the BMP Design Manual been performed?

☐ 6.2.1 Verification of Geomorphic Landscape Units (GLUs) Onsite

☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment

☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite

☐ No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

☐ No critical coarse sediment yield areas to be protected based on verification of GLUs onsite

☐ Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 2.b of the SWQMP.

☐ Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

No potential critical coarse sediment yield areas existing within the project boundaries.

Flow Control for Post-Project Runoff*

***This Section only required if hydromodification management requirements apply**

List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit.

There is only one POC for this project, which for the purposes of the hydromodification analysis is the discharge point into the existing concrete channel west of the project site.

Has a geomorphic assessment been performed for the receiving channel(s)?

☐ No, the low flow threshold is 0.1Q2 (default low flow threshold)

☐ Yes, the result is the low flow threshold is 0.1Q2

☐ Yes, the result is the low flow threshold is 0.3Q2

■ Yes, the result is the low flow threshold is 0.5Q2

If a geomorphic assessment has been performed, provide title, date, and preparer:

"Hydromodification Screening for Restaurant Row", dated September 20, 2022 prepared by Chang Consultants. Report can be found in Attachment 2d.

Discussion / Additional Information: (optional)

Other Site Requirements and Constraints

When applicable, list other site requirements or constraints that will influence storm water management design, such as zoning requirements including setbacks and open space, or local codes governing minimum street width, sidewalk construction, allowable pavement types, and drainage requirements.

Optional Additional Information or Continuation of Previous Sections As Needed

This space provided for additional information or continuation of information from previous sections as needed.

Source Control BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-4 [March 15, 2016]

Project Identification

Project Name: San Marcos Restaurant Row

Permit Application Number

Source Control BMPs

All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement source control BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided.

Source Control Requirement	Applied?		
SC-1 Prevention of Illicit Discharges into the MS4	■ Yes	□ No	□ N/A
Discussion / justification if SC-1 not implemented			
SC-2 Storm Drain Stenciling or Signage	■ Yes	□ No	□ N/A
Discussion / justification if SC-2 not implemented:			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	■ Yes	□ No	□ N/A
Discussion / justification if SC-3 not implemented:			
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	■ Yes	□ No	□ N/A
Discussion / justification if SC-4 not implemented:			

Form I-4 Page 2 of 2, Form Date: March 15, 2016			
Source Control Requirement	**Applied?**		
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	■ Yes	☐ No	☐ N/A
Discussion / justification if SC-5 not implemented:			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)			
■ On-site storm drain inlets	■ Yes	☐ No	☐ N/A
☐ Interior floor drains and elevator shaft sump pumps	☐ Yes	☐ No	■ N/A
☐ Interior parking garages	☐ Yes	☐ No	■ N/A
☐ Need for future indoor & structural pest control	☐ Yes	☐ No	■ N/A
■ Landscape/Outdoor Pesticide Use	■ Yes	☐ No	☐ N/A
☐ Pools, spas, ponds, decorative fountains, and other water features	☐ Yes	☐ No	■ N/A
■ Food service	■ Yes	☐ No	☐ N/A
☐ Refuse areas	☐ Yes	☐ No	■ N/A
☐ Industrial processes	☐ Yes	☐ No	■ N/A
☐ Outdoor storage of equipment or materials	☐ Yes	☐ No	■ N/A
☐ Vehicle and Equipment Cleaning	☐ Yes	☐ No	■ N/A
☐ Vehicle/Equipment Repair and Maintenance	☐ Yes	☐ No	■ N/A
☐ Fuel Dispensing Areas	☐ Yes	☐ No	■ N/A
☐ Loading Docks	☐ Yes	☐ No	■ N/A
■ Fire Sprinkler Test Water	■ Yes	☐ No	☐ N/A
☐ Miscellaneous Drain or Wash Water	☐ Yes	☐ No	■ N/A
■ Plazas, sidewalks, and parking lots	■ Yes	☐ No	☐ N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for <u>all</u> "No" answers shown above.			

Site Design BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-5 [March 15, 2016]

Project Identification

Project Name: San Marcos Restaurant Row

Permit Application Number

Site Design BMPs

All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement site design BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided.

Site Design Requirement	Applied?		
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features	■ Yes	□ No	□ N/A
Discussion / justification if SD-1 not implemented:			
SD-2 Conserve Natural Areas, Soils, and Vegetation	■ Yes	□ No	□ N/A
Discussion / justification if SD-2 not implemented:			
SD-3 Minimize Impervious Area	■ Yes	□ No	□ N/A
Discussion / justification if SD-3 not implemented:			
SD-4 Minimize Soil Compaction	■ Yes	□ No	□ N/A
Discussion / justification if SD-4 not implemented:			
SD-5 Impervious Area Dispersion	■ Yes	□ No	□ N/A
Discussion / justification if SD-5 not implemented:			

Form I-5 Page 2 of 2, Form Date: March 15, 2016			
Site Design Requirement	**Applied?**		
SD-6 Runoff Collection	☐ Yes	☐ No	■ N/A
Discussion / justification if SD-6 not implemented:			
SD-7 Landscaping with Native or Drought Tolerant Species	■ Yes	☐ No	☐ N/A
Discussion / justification if SD-7 not implemented:			
SD-8 Harvesting and Using Precipitation	☐ Yes	■ No	☐ N/A
Discussion / justification if SD-8 not implemented: Harvesting is not feasible in this project			

Summary of PDP Structural BMPs	Form I-6 (PDPs) [March 15, 2016]

Project Identification

Project Name: San Marcos Restaurant Row

Permit Application Number SP22-0004 GPA22-0002 R22-0002 TSM 22-0003 SDP 22-0006

PDP Structural BMPs

All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the BMP Design Manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the BMP Design Manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s).

PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative and engineer of record to certify construction of the structural BMPs (see Section 1.12 of the BMP Design Manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the BMP Design Manual).

Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).

Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the BMP Design Manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate.

The project site is anticipated to be a no-infiltration site, see Form I-8 provided from the Geotechnical Engineer in Attachment 1d. The majority of the site will drain to underground vaults for hydromodification mitigation sized with a 0.5Q2 water quality threshold, see project's SCCRWP prepared by Chang Consultants for the downstream channel assessment. Three underground vaults are proposed for hydromodification and six modular wetlands are proposed for water quality treatment. The southern portions of the site will drain to their corresponding underground vaults and then low flows will drain to a modular wetland unit for water quality treatment. Since the modular wetland is situated downstream of the vault, and the vault detains the water quality capture volume, the modular wetland unit is sized based on a volume-basis for water quality treatment. The BMP sizing is based on the percent capture method and volume-based sizing methodology, to ensure that the vault and modular wetland are sized adequately.

Specifically, as described in the Section B.4.2 of the City BMP Design Manual, based on the Percent Capture Method, capturing and treating 0.85 times the DCV with a 12-hour drawdown is equivalent to capturing and treating 1.5 times the DCV with a 36-hour drawdown. A 9-hour drawdown is utilized as well for BMP 2A & 2B with treating 0.72 times the DCV. The "default" sizing methodology for proprietary biofiltration is 1.5 times the water quality flowrate, but in this case the BMPs will be sized based on the percent capture method and the volume-based sizing methodology.

(Continue on page 2 as necessary.)

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 1)

The northern portion of the site drains to a modular wetland first; before draining to its corresponding hydromodification vault. This modular wetland is designed as a flow-rate based BMP (1.5 times the water quality flowrate) since it is upstream of the vault. This modular wetland unit collects runoff from the gutter and shallow area drains along the buildings before discharging to the vault for hydromodification mitigation. Surface runoff will be conveyed through a curb inlet which will then convey low-flow runoff through a DVERT to the modular wetland unit for water quality treatment. Once onsite runoff gets treated through the MWS, it will be conveyed towards the underground vault for flow control before it discharges to the POC. High flows from the proposed curb inlet are also routed to the underground vault.

The new impervious area within the park will be treated by vegetated modular wetland systems. Two separate units are proposed for the development along the floodway limits, one that treats the park and another to treat Private Drive 'G' separately.

In addition, another modular wetland is proposed in the north eastern portion of the site to treat the edge condition improvements along with the project run-on tributary to the site. The treatment of this run-on will serve as an offset for the rest of the edge condition improvements that are difficult to treat. This offset will serve as a "treatment swap"; see the DMA Exhibit in Attachment 1a for the delineation and calculation of the treatment swap area. In addition, the edge condition improvements along the southeast portion of the project increased the tributary area for the existing modular wetland unit built with the recent Buffalo Wild Wings project. The as-builts for Buffalo Wild Wings show that this unit was oversized; therefore, this unit is able to treat the additional area, see associated calculations in Attachment 1e. Also, see the hydromodification report in Attachment 2d.

Note that the treatment swap approach is proposed in order to meet the overall permit compliance for the total disturbed project footprint. The edge condition grading resulted in perimeter drainage areas along the property limits that were difficult to capture and treat, due to necessity to tie into existing grades along the property edges. The treatment swap approach will treat more than the required treatment area, due to the proposed treatment of some runon. If the project's adjacent properties redevelop in the future, it is anticipated that the majority of the bypass perimeter areas will be collected and treated with future BMPs along with the rest of the adjoining property limits per the potential future redevelopment projects.

Also, note that the current City of San Marcos BMP Design Manual is dated February 2016. The current BMP Design Manual states that volume retention requirements are not applicable to the project, since it is a "no-infiltration" site. The City may update the manual in the future, but this project is being designed to comply with current City requirements.

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 2)

The project also proposes improvements in San Marcos Boulevard along the project frontage. These improvements include a small side median and some improvements to the existing center median and parkway improvements. Water quality treatment for these improvements will be addressed under the Green Streets criteria, see the Green Streets report in Appendix 5 for San Marcos Boulevard improvements. It is anticipated that current Green Streets requirements will be met with the proposed additional landscaping and green street elements in the medians, and the proposed street trees along the project's frontage.

Structural BMP Summary Information
(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. BMP 1B

Construction Plan Sheet No.

Type of structural BMP:

- ☐ Retention by harvest and use (HU-1)
- ☐ Retention by infiltration basin (INF-1)
- ☐ Retention by bioretention (INF-2)
- ☐ Retention by permeable pavement (INF-3)
- ☐ Partial retention by biofiltration with partial retention (PR-1)
- ☐ Biofiltration (BF-1)
- ☐ Biofiltration with Nutrient Sensitive Media Design (BF-2)
- ■ Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- ☐ Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- ☐ Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- ☐ Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- ☐ Detention pond or vault for hydromodification management
- ☐ Other (describe in discussion section below)

Purpose:

- ■ Pollutant control only
- ☐ Hydromodification control only
- ☐ Combined pollutant control and hydromodification control
- ☐ Pre-treatment/forebay for another structural BMP
- ☐ Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)	Project Design Consultants 619.235.6471 Chelisa Pack, RCE 71026
Who will be the final owner of this BMP?	HOA
Who will maintain this BMP into perpetuity?	HOA
What is the funding mechanism for maintenance?	HOA funded

What is the funding mechanism for maintenance?	HOA

Structural BMP Summary Information
(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. BMP 5

Construction Plan Sheet No.

Type of structural BMP:
- ☐ Retention by harvest and use (HU-1)
- ☐ Retention by infiltration basin (INF-1)
- ☐ Retention by bioretention (INF-2)
- ☐ Retention by permeable pavement (INF-3)
- ☐ Partial retention by biofiltration with partial retention (PR-1)
- ☐ Biofiltration (BF-1)
- ☐ Biofiltration with Nutrient Sensitive Media Design (BF-2)
- ■ Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- ☐ Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- ☐ Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- ☐ Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- ☐ Detention pond or vault for hydromodification management
- ☐ Other (describe in discussion section below)

Purpose:
- ■ Pollutant Control Only
- ☐ Hydromodification control only
- ☐ Combined pollutant control and hydromodification control
- ☐ Pre-treatment/forebay for another structural BMP
- ☐ Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)	Project Design Consultants 619.235.6471 Chelisa Pack, RCE 71026
Who will be the final owner of this BMP?	Public. City-owned.
Who will maintain this BMP into perpetuity?	City of San Marcos
What is the funding mechanism for maintenance?	City of San Marcos

Structural BMP Summary Information

ATTACHMENT 1
BACKUP FOR PDP POLLUTANT CONTROL BMPS

This is the cover sheet for Attachment 1.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 1a	DMA Exhibit (Required) See DMA Exhibit Checklist on the back of this Attachment cover sheet.	■ Included
Attachment 1b	Tabular Summary of DMAs Showing DMA ID matching DMA Exhibit, DMA Area, and DMA Type (Required)* *Provide table in this Attachment OR on DMA Exhibit in Attachment 1a	■ Included on DMA Exhibit in Attachment 1a □ Included as Attachment 1b, separate from DMA Exhibit
Attachment 1c	Form I-7, Harvest and Use Feasibility Screening Checklist (Required unless the entire project will use infiltration BMPs) Refer to Appendix B.3-1 of the BMP Design Manual to complete Form I-7.	■ Included □ Not included because the entire project will use infiltration BMPs
Attachment 1d	Form I-8, Categorization of Infiltration Feasibility Condition (Required unless the project will use harvest and use BMPs) Refer to Appendices C and D of the BMP Design Manual to complete Form I-8.	■ Included □ Not included because the entire project will use harvest and use BMPs
Attachment 1e	Pollutant Control BMP Design Worksheets / Calculations (Required) Refer to Appendices B and E of the BMP Design Manual for structural pollutant control BMP design guidelines	■ Included

ATTACHMENT 1A

Use this checklist to ensure the required information has been included on the DMA Exhibit:

The DMA Exhibit must identify:

■ Underlying hydrologic soil group
■ Approximate depth to groundwater
■ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
□ Critical coarse sediment yield areas to be protected
■ Existing topography and impervious areas
■ Existing and proposed site drainage network and connections to drainage offsite
□ Proposed demolition
■ Proposed grading
■ Proposed impervious features
■ Proposed design features and surface treatments used to minimize imperviousness
■ Drainage management area (DMA) boundaries, DMA ID numbers, and DMA areas (square footage or acreage), and DMA type (i.e., drains to BMP, self-retaining, or self-mitigating)
□ Potential pollutant source areas and corresponding required source controls (see Chapter 4, Appendix E.1, and Form I-3B)
■ Structural BMPs (identify location, type of BMP, and size/detail)

BMP 4	DMA 4	1.48	VEGETATED FLOW-BASED MWS
BMP 5	DMA 5	1.16	VEGETATED FLOW-BASED MWS
BMP 6	DMA 6	1.64	VEGETATED FLOW-BASED MWS

NOTES:
1. SITE DESIGN BMPS INCLUDE:
   - (e) MINIMIZATION OF IMPERVIOUS FOOTPRINT OF THE PROJECT
   - (f) MINIMIZATION OF SOIL COMPACTION TO LANDSCAPED AREAS
   - (k) LANDSCAPING WITH NATIVE OR DROUGHT TOLERANT SPECIES
2. SOURCE CONTROL BMPS INCLUDE:
   - (a) PREVENTION OF ILLICIT DISCHARGES INTO THE MS4
   - (b) STORM DRAIN STENCILING OR SIGNAGE ("NO DUMPING DRAINS TO WATERWAYS")
   - (e) PROTECTION OF TRASH STORAGE AREAS FROM RAINFALL, RUN-ON, RUNOFF, AND WIND DISPERSAL
   - (f) USE OF ANY ADDITIONAL BMPS DETERMINED TO BE NECESSARY BY THE COPERMITTEE TO MINIMIZE POLLUTANT GENERATION AT EACH PROJECT,

NOTES:
1) REFER TO SOIL MAP FOR DISTRIBUTION OF HYDROLOGIC SOIL GROUPS.
2) REFER TO GEOTECH REPORT FOR GROUNDWATER ELEVATIONS AND RANGES.
3) ALL SELF-RETAINING AREAS WILL BE VEGETATED WITH NATIVE/NON-NATIVE OR NON-INVASIVE DROUGHT TOLERANT SPECIES, AND DISTURBED SOILS WILL BE AMENDED AND AERATED.
4) ALL STORM DRAINS SHALL BE STENCILED PER CITY GUIDELINES.

Harvest and Use Feasibility Checklist	Form I-7

1. Is there a demand for harvested water (check all that apply) at the project site that is reliably present during the wet season?

- ☐ Toilet and urinal flushing
- ☒ Landscape irrigation
- ☐ Other:_____

2. If there is a demand; estimate the anticipated average wet season demand over a period of 36 hours. Guidance for planning level demand calculations for toilet/urinal flushing and landscape irrigation is provided in Section B.3.2.

[Provide a summary of calculations here]

LOW PLANT WATER USE =390 GALLONS= 52.1 CF

3. Calculate the DCV using worksheet B-2.1.

DCV = 20,664 (cubic feet)

3a. Is the 36 hour demand greater than or equal to the DCV?	3b. Is the 36 hour demand greater than 0.25DCV but less than the full DCV?	3c. Is the 36 hour demand less than 0.25DCV?
☐ Yes / ☐ No ⇨ ⇩	☐ Yes / ☐ No ⇨ ⇩	☐ Yes ⇩
Harvest and use appears to be feasible. Conduct more detailed evaluation and sizing calculations to confirm that DCV can be used at an adequate rate to meet drawdown criteria.	Harvest and use may be feasible. Conduct more detailed evaluation and sizing calculations to determine feasibility. Harvest and use may only be able to be used for a portion of the site, or (optionally) the storage may need to be upsized to meet long term capture targets while draining in longer than 36 hours.	Harvest and use is considered to be infeasible.

Is harvest and use feasible based on further evaluation?

- ☐ Yes, refer to Appendix E to select and size harvest and use BMPs.
- ☒ No, select alternate BMPs.

ATTACHMENT 1D

Categorization of Infiltration Feasibility Condition	Form I-8

Part 1 - Full Infiltration Feasibility Screening Criteria

Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
1	**Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X

Provide basis:

Based on the results of previous infiltration testing by others, the in-situ infiltration rates in two locations and using the Porchet Method to convert percolation rate to infiltration rate, were less than 0.02 and 0.01 inches per hour (iph). After applying a feasibility factor of safety of 2, the design infiltration rates are less than 0.01 iph. In addition, the USDA NRCS web soil survey indicates the proposed BMP's are located in soil belonging to Hydrologic Soil Group D with anticipated rates of 0.0 to 0.06 iph, which are not conducive to infiltration.

Based on the infiltration rates, full infiltration is infeasible.

2	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X

Provide basis:

If water is allowed to infiltrate into the underlying highly expansive soils, there is an increased risk for heaving and soil movement that could adversely impact nearby structures and improvements. The potential for groundwater mounding exists. Groundwater is located between 10 to 20 feet below existing grades.

Form I-8 Page 2 of 4			
Criteria	Screening Question	**Yes**	**No**
3	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, storm water pollutants or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	X	
Provide basis: Groundwater is located approximately 10 to 20 feet from the ground surface. No contamination is suspected based on review of the Storm Water Standards Manual and Geotracker website. Per the SWS Manual, infiltration BMP's should be located at least 10 feet from groundwater if the groundwater is considered of beneficial use.			
4	**Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	X	
Provide basis: We do not expect infiltration will cause water balance issues such as seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters. However, evaluating water balance issues is beyond the scope of the geotechnical engineer and should be evaluated by others.			
Part 1 Result *	If all answers to rows 1 - 4 are "**Yes**" a full infiltration design is potentially feasible. The feasibility screening category is **Full Infiltration** If any answer from row 1-4 is "**No**", infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a "full infiltration" design. Proceed to Part 2		No

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings

Form I-8 Page 3 of 4

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria

Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	**Do soil and geologic conditions allow for infiltration in any appreciable rate or volume?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X

Provide basis:

Based on the results of previous infiltration testing by others, the in-situ infiltration rates in two locations and using the Porchet Method to convert percolation rate to infiltration rate, were less than 0.02 and 0.01 inches per hour (iph). After applying a feasibility factor of safety of 2, the design infiltration rates are less than 0.01 iph. A design infiltration rate of 0.05 iph is considered necessary to consider partial infiltration. In addition, the USDA NRCS web soil survey indicates the proposed BMP's are located in soil belonging to Hydrologic Soil Group D with anticipated rates of 0.0 to 0.06 iph, which are not conducive to infiltration.

Based on the infiltration rates, partial infiltration is considered infeasible.

6	**Can Infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level**? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X

Provide basis:

If water is allowed to infiltrate into the underlying highly expansive soils, there is an increased risk for heaving and soil movement that could adversely impact nearby structures and improvements. The potential for groundwater mounding exists. Groundwater is located between 10 to 20 feet below existing grades.

Form I-8 Page 4 of 4			
Criteria	Screening Question	**Yes**	**No**
7	**Can Infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, storm water pollutants or other factors)?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	X	
Provide basis: Groundwater is located approximately 10 to 20 feet from the ground surface. No contamination is suspected based on review of the Storm Water Standards Manual and Geotracker website. Per the SWS Manual, infiltration BMP's should be located at least 10 feet from groundwater if the groundwater is considered of beneficial use.			
8	**Can infiltration be allowed without violating downstream water rights**? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	X	
Provide basis: We do not expect infiltration to violate downstream water rights, however, evaluating water rights is not a geotechnical issue and should be evaluated by others.			
Part 2 Result*	If all answers from row 5-8 are yes then partial infiltration design is potentially feasible. The feasibility screening category is **Partial Infiltration.** If any answer from row 5-8 is no, then infiltration of any volume is considered to be **infeasible** within the drainage area. The feasibility screening category is **No Infiltration.**	No Infiltration	

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings

B.4.2 Percent Capture Method

This section describes the recommended method of sizing volume-based BMPs to achieve the 80 percent capture performance criterion. This method has a number of potential applications for sizing BMPs, including:

- Use this method when a BMP can draw down in less than 36 hours and it is desired to demonstrate that 80 percent capture can be achieved using a BMP volume smaller than the DCV.
- Use this method to determine how much volume (greater than the DCV) must be provided to achieve 80 percent capture when the drawdown time of the BMP exceeds 36 hours.
- Use this method to determine how much volume should be provided to achieve 80 percent capture when upstream BMP(s) have achieved some capture, but have not achieved 80 percent capture.

By nature, the percent capture method is an iterative process that requires some initial assumptions about BMP design parameters and subsequent confirmation that these assumptions are valid. For example, sizing calculations depend on the assumed drawdown time, which depends on BMP depth, which may in turn need to be adjusted to provide the required volume within the allowable footprint. In general, the selection of reasonable BMP design parameters in the first iteration will result in minimal required additional iterations. Figure B.4-1 presents the nomograph for use in sizing retention BMPs in San Diego County.

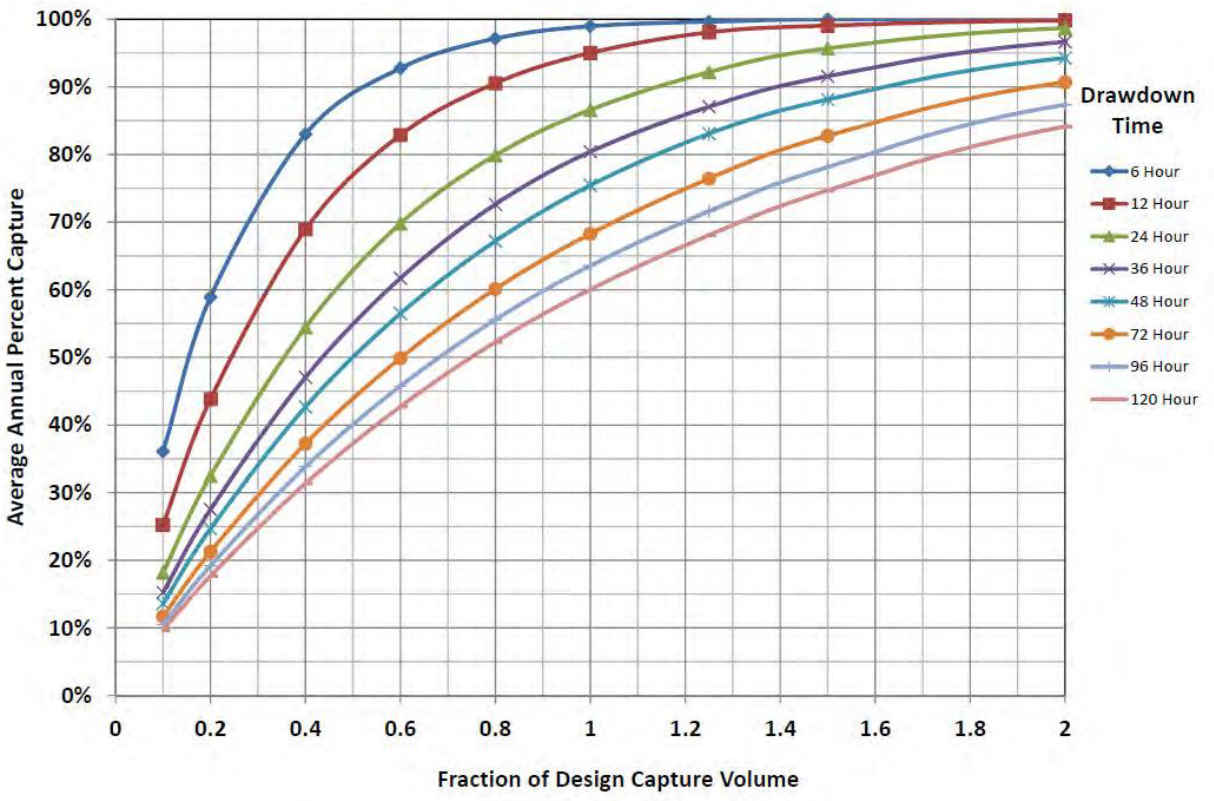

Figure B.4-1: Percent Capture Nomograph

B.5.2 Sizing Biofiltration BMPs Downstream of a Storage Unit

B.5.2.1 Introduction

In scenarios, where the BMP footprint is governed based on Option 1 (Line 21 of Worksheet B.5-1) or the required volume reduction of 40% average annual (long term) runoff capture for partial infiltration conditions (Line 31 of Worksheet B.5.1) the footprint of the biofiltration BMP can be optimized using the sizing calculations in this Appendix B.5.2 when there is an upstream storage unit (e.g. cistern) that can be used to regulate the flows through the biofiltration BMP.

This methodology is **not** applicable when the minimum footprint factor is governed based on the alternative minimum footprint sizing factor calculated using Worksheet B.5-2 (Line 11). Biofiltration BMP smaller than the alternative minimum footprint sizing factor is considered compact biofiltration BMP and may be allowed at the discretion of the City Engineer if the BMP meets the requirements in Appendix F **and** Option 1 or Option 2 sizing in Worksheet B.5-1.

B.5.2.2 Sizing Calculations

Sizing calculations for the biofiltration footprint shall demonstrate that one of two equivalent performance standards is met:

1. Use continuous simulation and demonstrate one of the following is met based on the infiltration condition identified in Chapter 5.4.2:
    a. **No infiltration condition**: The BMP or series of BMPs biofilters at least 92 percent of average annual (long term) runoff volume. This can be demonstrated through reporting of output from the San Diego Hydrology Model, or through other continuous simulation modeling meeting the criteria in Appendix G, as acceptable to the City Engineer. The 92 percent of average annual runoff treatment corresponds to the average capture achieved by implementing a BMP with 1.5 times the DCV and a drawdown time of 36 hours (Appendix B.4.2).
    b. **Partial infiltration condition**: The BMP or series of BMPs biofilters at least 92 percent of average annual (long term) runoff volume and achieves a volume reduction of at least 40 percent of average annual (long term) runoff volume. This can be demonstrated through reporting of output from the San Diego Hydrology Model, or through other continuous simulation modeling meeting the criteria in Appendix G, as acceptable to the City Engineer.
2. Use the simple sizing method in Worksheet B.5-3. The applicant is also required to complete Worksheet B.5-1 and B.5-2 when the applicant elects to use Worksheet B.5-3 to optimize the biofiltration BMP footprint. Worksheet B.5-3 was developed to satisfy the following two criteria as applicable:
    a. Greater than 92 percent of the average annual runoff volume from the storage unit is routed to the biofiltration BMP through the low flow orifice and the peak flow from the low flow orifice can instantaneously be filtered through the biofiltration media. If the outlet design includes orifices at different elevations and an overflow structure,

only flows from the overflow structure should be excluded from the calculation (both for 92 percent capture and for peak flow to the biofiltration BMP that needs to be instantaneously filtered), unless the flows from other orifices also bypass the biofiltration BMP, in which case flows from the orifices that bypass should also be excluded.

b. The retention losses from the optimized biofiltration BMP is equal to or greater than the retention losses from the conventional biofiltration BMP. This second criterion is only applicable for partial infiltration condition.

Table B.5-4 Storage required for different drawdown times

Drawdown Time (hours)	Storage requirement (below the overflow elevation, or below outlet elevation that bypass the biofiltration BMP)
12	0.85 DCV
24	1.25 DCV
36	1.50 DCV
48	1.80 DCV
72	2.20 DCV
96	2.60 DCV
120	2.80 DCV

For drawdown times that are outside the range of values presented in Table B.5-4 above the storage unit should be designed to discharge greater than 92% average annual capture to the downstream Biofiltration BMP.

Worksheet B.5-3: Optimized Biofiltration BMP Footprint when Downstream of a Storage Unit

Optimized Biofiltration BMP Footprint when Downstream of a Storage Unit		Worksheet B.5-3	
1	Area draining to the storage unit and biofiltration BMP		sq-ft
2	Adjusted runoff factor for drainage area (Refer to Appendix B.1 and B.2)		
3	Effective impervious area draining to the storage unit and biofiltration BMP [Line 1 x Line 2]		sq-ft
4	Remaining DCV after implementing retention BMPs		cubic-feet
5	Infiltration rate from Worksheet D.5-1 if partial infiltration is feasible		ft/hr.
6	Media Thickness [1.5 feet minimum], also add mulch layer thickness to this line for sizing calculations		ft
7	Media filtration rate to be used for sizing (0.42 ft/hr. with no outlet control; if the filtration rate is controlled by the outlet use the outlet controlled rate)		ft/hr
8	Media retained pore storage	0.1	ft/ft
Storage Unit Requirement			
9	Drawdown time of the storage unit, minimum(from the elevation that bypasses the biofiltration BMP, overflow elevation)		hours
10	Storage required to achieve greater than 92 percent capture (see Table B.5-4)		fraction
11	Storage required in cubic feet (Line 4 x Line 10)		cubic-feet
12	Storage provided in the design, minimum(from the elevation that bypasses the biofiltration BMP, overflow elevation)		cubic-feet
13	Is Line 12 ≥ Line 11. If no increase storage provided until this criteria is met	☐ Yes	☐ No
Criteria 1: BMP Footprint Biofiltration Capacity			
14	Peak flow from the storage unit to the biofiltration BMP (using the elevation used to evaluate the percent capture)		cfs
15	Required biofiltration footprint [(3,600 x Line 14)/Line 7]		sq-ft
Criteria 2: Alternative Minimum Sizing Factor (Clogging)			
16	Alternative Minimum Footprint Sizing Factor [Line 11 of Worksheet B.5-2]		Fraction
17	Required biofiltration footprint [Line 3 x Line 16]		sq-ft
Criteria 3: Retention requirement [Not applicable for No Infiltration Condition]			
18	Conventional biofiltration footprint Line 28 of Worksheet B.5-1		sq-ft
19	Retention Losses from the conventional footprint (36 x Line 5 + Line 6 x Line 8) x Line 18		cubic-feet
20	Average discharge rate from the storage unit to the biofiltration BMP		cfs
21	Depth retained in the optimized biofiltration BMP {Line 6 x Line 8} + {[(Line 4)/(2400 x Line 20)] x Line 5}		ft
22	Required optimized biofiltration footprint (Line 19/Line 21)		sq-ft
Optimized Biofiltration Footprint			
23	Optimized biofiltration footprint, maximum(Line 15, Line 17, Line 22)		sq-ft

Note: Biofiltration BMP smaller than the alternative minimum footprint sizing (Line 17) is considered compact biofiltration BMP and may be allowed at the discretion of the City Engineer if the BMP meets the requirements in Appendix F and Option 1 or Option 2 sizing in Worksheet B.5-1.

SOURCE CONTROL BMPS

SOURCE CONTROL BMPS	PROJECT IMPLEMENTATION	PERMIT COMPLIANCE MET
ON-SITE/FUTURE STORM DRAIN INLETS	MARK ALL INLETS WITH THE WORDS "NO DUMPING! DRAINS TO WATERWAYS" AND "NO CONTAMINE" IN SPANISH. (X LOCATIONS SEE DETAIL HEREON)	YES
LANDSCAPE/OUTDOOR PESTICIDE USE	LANDSCAPING HAS BEEN DESIGNED TO MINIMIZE IRRIGATION AND RUNOFF, AND TO MINIMIZE THE USE OF FERTILIZERS AND PESTICIDES THAT CAN CONRIBUTE TO STORM WATER.	YES
SIDEWALKS AND PARKING LOTS	SIDEWALKS AND PARKING LOTS SHALL BE SWEPT REGULARLY TO PREVENT THE ACCUMULATION OF LITTER AND DEBRIS. LITTER AND DEBRIS FROM PRESSURE WASHING WILL BE COLLECTED TO PREVENT ENTRY INTO THE STORM DRAIN SYSTEM. WASH WATER CONTAINING ANY CLEANING AGENT OR THE GREASER SHALL BE COLLECTED AND DISCHARGED TO THE SANITARY SEWER AND NOT DISCHARGED TO A STORMDRAIN	YES
TRASH ENCLOSURE (REFUSE AREA)	TRASH ENCLOSURE AREA SHALL BE COVERED AND SWEPT REGULARLY TO PREVENT THE ACCUMULATION OF LITTER AND DEBRIS. TRASH ENCLOSURE SHALL DRAIN TO PROJECT SANITARY SEWER SYSTEM UPSTREAM OF PROPOSED GREASE INTERCEPTOR. RUNON AND RUNOFF TO/FROM THE TRASH ENCLOSURE SHALL BE MINIMIZED BY CREATING A RIDGE WITHIN. ADJACENT STORM FLOWS WITHIN PARKING LOT SHALL NOT COMINGLE WITH ANY FLOWS WITHIN THE TRASH ENCLOSURE. SIGNS SHALL BE POSTED "DO NOT DUMP HAZARDOUS MATERIALS HERE" AND "NO HAZARDOUS MATERIALS".	YES

SITE DESIGN LID

THIS PROJECT INCORPORATES THE FOLLOWING LID STRATEGIES:

1. OPTIMIZING THE SITE LAYOUT
   - –DETAIN AND RETAIN RUNOFF THROUGHOUT THE SITE
   - –MINIMIZE IMPERVIOUS/DIRECTLY CONNECTED IMPERVIOUS AREAS
2. DIRECT RUNOFF FROM IMPERVIOUS AREAS TO BIORETENTION AND BIOFILTRATION FACILITIES
3. TRASH ENCLOSURE AREA SHALL BE COVERED AND WILL DRAIN TO PROPOSED SEWER SYSTEM UPSTREAM OF GREASE INTERCEPTOR. FLOWS WILL NOT COMINGLE WITH ADJACENT SURFACE STORM FLOWS.
4. ROOF DRAINS SHALL EITHER DRAIN TO BIORETENTION AREA VIA SHEET FLOW OR TO BIOFILTRATION UNITS VIA STORM DRAIN LINE.

POST-PROJECT DMA CALCULATIONS

PROJECT NAME: OLD CALIFORNIA RESTAURANT ROW – BUFFALO WILD WINGS
PROJECT LOCATION: NORTHWEST CORNER OF SAN MARCOS BOULEVARD AND VIA VERA CRUZ, SAN MARCOS, CA 92078
SOIL TYPE: D (BASED ON SAN DIEGO COUNTY SOIL MAP HYDROLOGY MANUAL)
TOTAL AREA: 0.86 ACRES

E.14 BF-3 Proprietary Biofiltration Systems

The purpose of this fact sheet is to help explain the potential role of proprietary BMPs in meeting biofiltration requirements, when full retention of the DCV is not feasible. The fact sheet does not describe design criteria like the other fact sheets in this appendix because this information varies by BMP product model.

Criteria for Use of a Proprietary BMP as a Biofiltration BMP

A proprietary BMP may be acceptable as a "biofiltration BMP" under the following conditions:

(1) The BMP meets the minimum design criteria listed in Appendix F, including the pollutant treatment performance standard in Appendix F.1;

(2) The BMP is designed and maintained in a manner consistent with its performance certifications (See explanation in Appendix F.2); and

(3) The BMP is acceptable at the discretion of the City Engineer. In determining the acceptability of a BMP, the City Engineer should consider, as applicable, (a) the data submitted; (b) representativeness of the data submitted; (c) consistency of the BMP performance claims with pollutant control objectives; certainty of the BMP performance claims; (d) for projects within the public right of way and/or public projects: maintenance requirements, cost of maintenance activities, relevant previous local experience with operation and maintenance of the BMP type, ability to continue to operate the system in event that the vending company is no longer operating as a business; and (e) other relevant factors. If a proposed BMP is not accepted by the City Engineer, a written explanation/reason will be provided to the applicant..

Guidance for Sizing a Proprietary BMP as a Biofiltration BMP

Proprietary biofiltration BMPs must meet the same sizing guidance as non-proprietary BMPs. Sizing is typically based on capturing and treating 1.50 times the DCV not reliably retained. Guidance for sizing biofiltration BMPs to comply with requirements of this manual is provided in Appendix F.2.

WASHINGTON STATE DEPARTMENT OF ECOLOGY

July 2017

GENERAL USE LEVEL DESIGNATION FOR BASIC, ENHANCED, AND PHOSPHORUS TREATMENT

For the

MWS-Linear Modular Wetland

Ecology's Decision:

Based on Modular Wetland Systems, Inc. application submissions, including the Technical Evaluation Report, dated April 1, 2014, Ecology hereby issues the following use level designation:

1. General use level designation (GULD) for the MWS-Linear Modular Wetland Stormwater Treatment System for Basic treatment

    - Sized at a hydraulic loading rate of 1 gallon per minute (gpm) per square foot (sq ft) of wetland cell surface area. For moderate pollutant loading rates (low to medium density residential basins), size the Prefilters at 3.0 gpm/sq ft of cartridge surface area. For high loading rates (commercial and industrial basins), size the Prefilters at 2.1 gpm/sq ft of cartridge surface area.

2. General use level designation (GULD) for the MWS-Linear Modular Wetland Stormwater Treatment System for Phosphorus treatment

    - Sized at a hydraulic loading rate of 1 gallon per minute (gpm) per square foot (sq ft) of wetland cell surface area. For moderate pollutant loading rates (low to medium density residential basins), size the Prefilters at 3.0 gpm/sq ft of cartridge surface area. For high loading rates (commercial and industrial basins), size the Prefilters at 2.1 gpm/sq ft of cartridge surface area.

3. General use level designation (GULD) for the MWS-Linear Modular Wetland Stormwater Treatment System for Enhanced treatment

    - Sized at a hydraulic loading rate of 1 gallon per minute (gpm) per square foot (sq ft) of wetland cell surface area. For moderate pollutant loading rates (low to medium density residential basins), size the Prefilters at 3.0 gpm/sq ft of cartridge surface area. For high loading rates (commercial and industrial basins), size the Prefilters at 2.1 gpm/sq ft of cartridge surface area.

4. Ecology approves the MWS - Linear Modular Wetland Stormwater Treatment System units for Basic, Phosphorus, and Enhanced treatment at the hydraulic loading rate listed above. Designers shall calculate the water quality design flow rates using the following procedures:

    - Western Washington: For treatment installed upstream of detention or retention, the water quality design flow rate is the peak 15-minute flow rate as calculated using the latest version of the Western Washington Hydrology Model or other Ecology-approved continuous runoff model.
    - Eastern Washington: For treatment installed upstream of detention or retention, the water quality design flow rate is the peak 15-minute flow rate as calculated using one of the three methods described in Chapter 2.2.5 of the Stormwater Management Manual for Eastern Washington (SWMMEW) or local manual.
    - Entire State: For treatment installed downstream of detention, the water quality design flow rate is the full 2-year release rate of the detention facility.

5. These use level designations have no expiration date but may be revoked or amended by Ecology, and are subject to the conditions specified below.

Ecology's Conditions of Use:

Applicants shall comply with the following conditions:

1. Design, assemble, install, operate, and maintain the MWS – Linear Modular Wetland Stormwater Treatment System units, in accordance with Modular Wetland Systems, Inc. applicable manuals and documents and the Ecology Decision.
2. Each site plan must undergo Modular Wetland Systems, Inc. review and approval before site installation. This ensures that site grading and slope are appropriate for use of a MWS – Linear Modular Wetland Stormwater Treatment System unit.
3. MWS – Linear Modular Wetland Stormwater Treatment System media shall conform to the specifications submitted to, and approved by, Ecology.
4. The applicant tested the MWS – Linear Modular Wetland Stormwater Treatment System with an external bypass weir. This weir limited the depth of water flowing through the media, and therefore the active treatment area, to below the root zone of the plants. This GULD applies to MWS – Linear Modular Wetland Stormwater Treatment Systems whether plants are included in the final product or not.
5. Maintenance: The required maintenance interval for stormwater treatment devices is often dependent upon the degree of pollutant loading from a particular drainage basin. Therefore, Ecology does not endorse or recommend a "one size fits all" maintenance cycle for a particular model/size of manufactured filter treatment device.

    - Typically, Modular Wetland Systems, Inc. designs MWS - Linear Modular Wetland systems for a target prefilter media life of 6 to 12 months.
    - Indications of the need for maintenance include effluent flow decreasing to below the design flow rate or decrease in treatment below required levels.
    - Owners/operators must inspect MWS - Linear Modular Wetland systems for a minimum of twelve months from the start of post-construction operation to determine site-specific

maintenance schedules and requirements. You must conduct inspections monthly during the wet season, and every other month during the dry season. (According to the SWMMWW, the wet season in western Washington is October 1 to April 30. According to SWMMEW, the wet season in eastern Washington is October 1 to June 30). After the first year of operation, owners/operators must conduct inspections based on the findings during the first year of inspections.

- Conduct inspections by qualified personnel, follow manufacturer's guidelines, and use methods capable of determining either a decrease in treated effluent flowrate and/or a decrease in pollutant removal ability.
- When inspections are performed, the following findings typically serve as maintenance triggers:
    - Standing water remains in the vault between rain events, or
    - Bypass occurs during storms smaller than the design storm.
    - If excessive floatables (trash and debris) are present (but no standing water or excessive sedimentation), perform a minor maintenance consisting of gross solids removal, not prefilter media replacement.
    - Additional data collection will be used to create a correlation between pretreatment chamber sediment depth and pre-filter clogging (see *Issues to be Addressed by the Company* section below)

6. Discharges from the MWS - Linear Modular Wetland Stormwater Treatment System units shall not cause or contribute to water quality standards violations in receiving waters.

Applicant:	Modular Wetland Systems, Inc.
Applicant's Address:	*PO. Box 869* *Oceanside, CA 92054*

Application Documents:

- *Original Application for Conditional Use Level Designation*, Modular Wetland System, Linear Stormwater Filtration System Modular Wetland Systems, Inc., January 2011
- *Quality Assurance Project Plan*: Modular Wetland system – Linear Treatment System performance Monitoring Project, draft, January 2011.
- *Revised Application for Conditional Use Level Designation*, Modular Wetland System, Linear Stormwater Filtration System Modular Wetland Systems, Inc., May 2011
- *Memorandum: Modular Wetland System-Linear GULD Application Supplementary Data, April 2014*
- *Technical Evaluation Report: Modular Wetland System Stormwater Treatment System Performance Monitoring, April 2014.*

Applicant's Use Level Request:

General use level designation as a Basic, Enhanced, and Phosphorus treatment device in accordance with Ecology's Guidance for Evaluating Emerging Stormwater Treatment Technologies Technology Assessment Protocol – Ecology (TAPE) January 2011 Revision.

Applicant's Performance Claims:

- The MWS – Linear Modular wetland is capable of removing a minimum of 80-percent of TSS from stormwater with influent concentrations between 100 and 200 mg/l.
- The MWS – Linear Modular wetland is capable of removing a minimum of 50-percent of Total Phosphorus from stormwater with influent concentrations between 0.1 and 0.5 mg/l.
- The MWS – Linear Modular wetland is capable of removing a minimum of 30-percent of dissolved Copper from stormwater with influent concentrations between 0.005 and 0.020 mg/l.
- The MWS – Linear Modular wetland is capable of removing a minimum of 60-percent of dissolved Zinc from stormwater with influent concentrations between 0.02 and 0.30 mg/l.

Ecology Recommendations:

- Modular Wetland Systems, Inc. has shown Ecology, through laboratory and field-testing, that the MWS - Linear Modular Wetland Stormwater Treatment System filter system is capable of attaining Ecology's Basic, Total phosphorus, and Enhanced treatment goals.

Findings of Fact:

<u>Laboratory Testing</u>

The MWS-Linear Modular wetland has the:

- Capability to remove 99 percent of total suspended solids (using Sil-Co-Sil 106) in a quarter-scale model with influent concentrations of 270 mg/L.
- Capability to remove 91 percent of total suspended solids (using Sil-Co-Sil 106) in laboratory conditions with influent concentrations of 84.6 mg/L at a flow rate of 3.0 gpm per square foot of media.
- Capability to remove 93 percent of dissolved Copper in a quarter-scale model with influent concentrations of 0.757 mg/L.
- Capability to remove 79 percent of dissolved Copper in laboratory conditions with influent concentrations of 0.567 mg/L at a flow rate of 3.0 gpm per square foot of media.
- Capability to remove 80.5-percent of dissolved Zinc in a quarter-scale model with influent concentrations of 0.95 mg/L at a flow rate of 3.0 gpm per square foot of media.
- Capability to remove 78-percent of dissolved Zinc in laboratory conditions with influent concentrations of 0.75 mg/L at a flow rate of 3.0 gpm per square foot of media.

Field Testing

- Modular Wetland Systems, Inc. conducted monitoring of an MWS-Linear (Model # MWS-L-4-13) from April 2012 through May 2013, at a transportation maintenance facility in Portland, Oregon. The manufacturer collected flow-weighted composite samples of the system's influent and effluent during 28 separate storm events. The system treated approximately 75 percent of the runoff from 53.5 inches of rainfall during the monitoring period. The applicant sized the system at 1 gpm/sq ft. (wetland media) and 3gpm/sq ft. (prefilter).
- Influent TSS concentrations for qualifying sampled storm events ranged from 20 to 339 mg/L. Average TSS removal for influent concentrations greater than 100 mg/L (n=7) averaged 85 percent. For influent concentrations in the range of 20-100 mg/L (n=18), the upper 95 percent confidence interval about the mean effluent concentration was 12.8 mg/L.
- Total phosphorus removal for 17 events with influent TP concentrations in the range of 0.1 to 0.5 mg/L averaged 65 percent. A bootstrap estimate of the lower 95 percent confidence limit (LCL95) of the mean total phosphorus reduction was 58 percent.
- The lower 95 percent confidence limit of the mean percent removal was 60.5 percent for dissolved zinc for influent concentrations in the range of 0.02 to 0.3 mg/L (n=11). The lower 95 percent confidence limit of the mean percent removal was 32.5 percent for dissolved copper for influent concentrations in the range of 0.005 to 0.02 mg/L (n=14) at flow rates up to 28 gpm (design flow rate 41 gpm). Laboratory test data augmented the data set, showing dissolved copper removal at the design flow rate of 41 gpm (93 percent reduction in influent dissolved copper of 0.757 mg/L).

Issues to be addressed by the Company:

1. Modular Wetland Systems, Inc. should collect maintenance and inspection data for the first year on all installations in the Northwest in order to assess standard maintenance requirements for various land uses in the region. Modular Wetland Systems, Inc. should use these data to establish required maintenance cycles.
2. Modular Wetland Systems, Inc. should collect pre-treatment chamber sediment depth data for the first year of operation for all installations in the Northwest. Modular Wetland Systems, Inc. will use these data to create a correlation between sediment depth and pre-filter clogging.

Revision History

Date	**Revision**
June 2011	Original use-level-designation document
September 2012	Revised dates for TER and expiration
January 2013	Modified Design Storm Description, added Revision Table, added maintenance discussion, modified format in accordance with Ecology standard
December 2013	Updated name of Applicant
April 2014	Approved GULD designation for Basic, Phosphorus, and Enhanced treatment
December 2015	Updated GULD to document the acceptance of MWS-Linear Modular Wetland installations with or without the inclusion of plants
July 2017	Revised Manufacturer Contact Information (name, address, and email)

Appendix F Biofiltration Standard and Checklist

Introduction

The MS4 Permit and this manual define a specific category of storm water pollutant treatment BMPs called "biofiltration BMPs." The MS4 Permit (Section E.3.c.1) states:

Biofiltration BMPs must be designed to have an appropriate hydraulic loading rate to maximize storm water retention and pollutant removal, as well as to prevent erosion, scour, and channeling within the BMP, and must be sized to:

a) **Treat 1.5 times the DCV not reliably retained onsite, OR**

b) **Treat the DCV not reliably retained onsite with a flow-thru design that has a total volume, including pore spaces and pre-filter detention volume, sized to hold at least 0.75 times the portion of the DCV not reliably retained onsite.**

A project applicant must be able to affirmatively demonstrate that a given BMP is designed and sized in a manner consistent with this definition to be considered as a "biofiltration BMP" as part of a compliant storm water management plan. Retention is defined in the MS4 Permit as evapotranspiration, infiltration, and harvest and use of storm water vs. discharge to a surface water system.

Contents and Intended Uses

This appendix contains a checklist of the key underlying criteria that must be met for a BMP to be considered a biofiltration BMP. The purpose of this checklist is to facilitate consistent review and approval of biofiltration BMPs that meet the "biofiltration standard" defined by the MS4 Permit.

This checklist includes specific design criteria that are essential to defining a system as a biofiltration BMP; however it does not present a complete design basis. This checklist was used to develop BMP Fact Sheets for PR-1 biofiltration with partial retention and BF-1 biofiltration, which do present a complete design basis. Therefore, biofiltration BMPs that substantially meet all aspects of the Fact sheets PR-1 or BF-1 should be able to complete this checklist without additional documentation beyond what would already be required for a project submittal.

Other biofiltration BMP designs[1] (including both non-proprietary and proprietary designs) may also meet the underlying MS4 Permit requirements to be considered biofiltration BMPs. These BMPs may be classified as biofiltration BMPs if they (1) meet the minimum design criteria listed in this appendix, including the pollutant treatment performance standard in Appendix F.1, (2) are designed and maintained in a manner consistent with their performance certifications (See explanation in Appendix F.2), if applicable, and (3) are acceptable at the discretion of the City Engineer. The applicant may be required to provide additional studies and/or required to meet additional design criteria beyond the scope of this document in order to demonstrate that these criteria are met.

Organization

The checklist in this appendix is organized into the seven (7) main objectives associated with biofiltration BMP design. It describes the associated minimum criteria that must be met in order to qualify a biofiltration BMP as meeting the biofiltration standard. The seven main objectives are listed below. Specific design criteria and associated manual references associated with each of these objectives is provided in the checklist in the following section.

1. Biofiltration BMPs shall be allowed only as described in the BMP selection process in this manual (i.e., retention feasibility hierarchy).

2. Biofiltration BMPs must be sized using acceptable sizing methods described in this manual.

3. Biofiltration BMPs must be sited and designed to achieve maximum feasible infiltration and evapotranspiration.

4. Biofiltration BMPs must be designed with a hydraulic loading rate to maximize pollutant retention, preserve pollutant control/sequestration processes, and minimize potential for pollutant washout.

5. Biofiltration BMPs must be designed to promote appropriate biological activity to support and maintain treatment processes.

6. Biofiltration BMPs must be designed to prevent erosion, scour, and channeling within the BMP.

7. Biofiltration BMP must include operations and maintenance design features and planning

[1] Defined as biofiltration designs that do not conform to the specific design criteria described in Fact Sheets PR-1 or BF-1. This category includes proprietary BMPs that are sold by a vendor as well as non-proprietary BMPs that are designed and constructed of primarily of more elementary construction materials.

considerations to provide for continued effectiveness of pollutant and flow control functions.

Biofiltration Criteria Checklist

The applicant shall provide documentation of compliance with each criterion in this checklist as part of the project submittal. The right column of this checklist identifies the submittal information that is recommended to document compliance with each criterion. Biofiltration BMPs that substantially meet all aspects of Fact Sheets PR-1 or BF-1 should still use this checklist; however additional documentation (beyond what is already required for project submittal) should not be required.

1. Biofiltration BMPs shall be allowed to be used only as described in the BMP selection process based on a documented feasibility analysis.

Intent: This manual defines a specific prioritization of pollutant treatment BMPs, where BMPs that retain water (retained includes evapotranspired, infiltrated, and/or harvested and used) must be used before considering BMPs that have a biofiltered discharge to the MS4 or surface waters. Use of a biofiltration BMP in a manner in conflict with this prioritization (i.e., without a feasibility analysis justifying its use) is not permitted, regardless of the adequacy of the sizing and design of the system.

☐	The project applicant has demonstrated that it is not technically feasible to retain the full DCV onsite.	Document feasibility analysis and findings in SWQMP per Appendix C.

2. Biofiltration BMPs must be sized using acceptable sizing methods.

Intent: The MS4 Permit and this manual defines specific sizing methods that must be used to size biofiltration BMPs. Sizing of biofiltration BMPs is a fundamental factor in the amount of storm water that can be treated and also influences volume and pollutant retention processes.

☐	The project applicant has demonstrated that biofiltration BMPs are sized to meet one of the biofiltration sizing options available (Appendix B.5).	Submit sizing worksheets (Appendix B.5) or other equivalent documentation with the SWQMP.

3. Biofiltration BMPs must be sited and designed to achieve maximum feasible infiltration and evapotranspiration.

Intent: Various decisions about BMP placement and design influence how much water is retained via infiltration and evapotranspiration. The MS4 Permit requires that biofiltration BMPs achieve maximum feasible retention (evapotranspiration and infiltration) of storm water volume.

☐	The biofiltration BMP is sited to allow for maximum infiltration of runoff volume based on the feasibility factors considered in site planning efforts. It is also designed to maximize evapotranspiration through the use of amended media and plants (biofiltration designs without amended media and plants may be permissible; see Item 5).	Document site planning and feasibility analyses in SWQMP per Section 5.4.
☐	For biofiltration BMPs categorized as "Partial Infiltration Condition" the infiltration storage depth in the biofiltration design has been selected to drain in 36 hours (+/-25%) or an alternative value shown to maximize infiltration on the site.	Included documentation of estimated infiltration rate per Appendix D; provide calculations using Appendix B.4 and B.5 to show that the infiltration storage depth meets this criterion. Note, depths that are too shallow or too deep may not be acceptable.
☐	For biofiltration BMP locations categorized as "Partial Infiltration Condition," the infiltration storage is over the entire bottom of the biofiltration BMP footprint.	Document on plans that the infiltration storage covers the entire bottom of the BMP (i.e., not just underdrain trenches); or an equivalent footprint elsewhere on the site.
☐	For biofiltration BMP locations categorized as "Partial Infiltration Condition," the sizing factor used for the infiltration storage area is not less than the minimum biofiltration BMP sizing factors calculated using Worksheet B.5.1 to achieve 40% average annual percent capture within the BMP or downstream of the BMP. .	Provide a table that compares the minimum sizing factor per Appendix B.5 to the provided sizing factor. Note: The infiltration storage area could be a separate storage feature located downstream of the biofiltration BMP, not necessarily within the same footprint.
☐	An impermeable liner or other hydraulic restriction layer is only used when needed to avoid geotechnical and/or subsurface contamination issues in locations identified as "No Infiltration Condition."	If using an impermeable liner or hydraulic restriction layer, provide documentation of feasibility findings per Appendix C that recommend the use of this feature.

☐	The use of "compact" biofiltration BMP design[2] is permitted only in conditions identified as "No Infiltration Condition" and where site-specific documentation demonstrates that the use of larger footprint biofiltration BMPs would be infeasible.	Provide documentation of feasibility findings that recommend no infiltration is feasible. Provide site-specific information to demonstrate that a larger footprint biofiltration BMP would not be feasible.
4.	**Biofiltration BMPs must be designed with a hydraulic loading rate to maximize pollutant retention, preserve pollutant control processes, and minimize potential for pollutant washout.** Intent: Various decisions about biofiltration BMP design influence the degree to which pollutants are retained. The MS4 Permit requires that biofiltration BMPs achieve maximum feasible retention of storm water pollutants.	
☐	Media selected for the biofiltration BMP meets minimum quality and material specifications per 2016 City Storm Water Standards or County LID Manual, including the maximum allowable design filtration rate and minimum thickness of media. **OR**	Provide documentation that media meets the specifications in 2016 City Storm Water Standrads or County LID Manual.
☐	Alternatively, for proprietary designs and custom media mixes not meeting the media specifications contained in the 2016 City Storm Water Standards or County LID Manual, field scale testing data are provided to demonstrate that proposed media meets the pollutant treatment performance criteria in Section F.1 below.	Provide documentation of performance information as described in Section F.1.
☐	To the extent practicable, filtration rates are outlet controlled (e.g., via an underdrain and orifice/weir) instead of controlled by the infiltration rate of the media.	Include outlet control in designs or provide documentation of why outlet control is not practicable.

[2] Compact biofiltration BMPs are defined as features with infiltration storage footprint less than the minimum sizing factors required to achieve 40% volume retention. Note that if a biofiltration BMP is accompanied by an infiltrating area downstream that has a footprint equal to at least the minimum sizing factors calculated using Worksheet B.5.1 assuming a partial infiltration condition, then it is not considered to be a compact biofiltration BMP for the purpose of Item 4 of the checklist. For potential configurations with a higher rate biofiltration BMP upstream of an larger footprint infiltration area, the BMP would still need to comply with Item 5 of this checklist for pollutant treatment effectiveness.

☐	The water surface drains to at least 12 inches below the media surface within 24 hours from the end of storm event flow to preserve plant health and promote healthy soil structure.	Include calculations to demonstrate that drawdown rate is adequate. Surface ponding drawdown time greater than 24-hours but less than 96 hours may be allowed at the discretion of the City Engineer if certified by a landscape architect or agronomist.
☐	If nutrients are a pollutant of concern, design of the biofiltration BMP follows nutrient-sensitive design criteria.	Follow specifications for nutrient sensitive design in Fact Sheet BF-2. Or provide alternative documentation that nutrient treatment is addressed and potential for nutrient release is minimized.
☐	Media gradation calculations or geotextile selection calculations demonstrate that migration of media between layers will be prevented and permeability will be preserved.	Follow specification for choking layer or geotextile in Fact Sheet PR-1 or BF-1. Or include calculations to demonstrate that choking layer is appropriately specified.
5. Biofiltration BMPs must be designed to promote appropriate biological activity to support and maintain treatment processes. Intent: Biological processes are an important element of biofiltration performance and longevity.		
☐	Plants have been selected to be tolerant of project climate, design ponding depths and the treatment media composition.	Provide documentation justifying plant selection. Refer to the plant list in Appendix E.20.
☐	Plants have been selected to minimize irrigation requirements.	Provide documentation describing irrigation requirements for establishment and long term operation.
☐	Plant location and growth will not impede expected long-term media filtration rates and will enhance long term infiltration rates to the extent possible.	Provide documentation justifying plant selection. Refer to the plant list in Appendix E.20.
☐	If plants are not part of the biofiltration design, other biological processes are supported as needed to sustain treatment processes (e.g., biofilm in a subsurface flow wetland).	For biofiltration designs without plants, describe the biological processes that will support effective treatment and how they will be sustained.
6. Biofiltration BMPs must be designed with a hydraulic loading rate to prevent erosion, scour, and channeling within the BMP. Intent: Erosion, scour, and/or channeling can disrupt treatment processes and reduce biofiltration effectiveness.		

☐	Scour protection has been provided for both sheet flow and pipe inflows to the BMP, where needed.	Provide documentation of scour protection as described in Fact Sheets PR-1 or BF-1 or approved equivalent.
☐	Where scour protection has not been provided, flows into and within the BMP are kept to non-erosive velocities.	Provide documentation of design checks for erosive velocities as described in Fact Sheets PR-1 or BF-1 or approved equivalent.
☐	For proprietary BMPs, the BMP is used in a manner consistent with manufacturer guidelines and conditions of its third-party certification[3] (i.e., maximum tributary area, maximum inflow velocities, etc., as applicable).	Provide copy of manufacturer recommendations and conditions of third-party certification.
	7. Biofiltration BMP must include operations and maintenance design features and planning considerations for continued effectiveness of pollutant and flow control functions. Intent: Biofiltration BMPs require regular maintenance in order provide ongoing function as intended. Additionally, it is not possible to foresee and avoid potential issues as part of design; therefore plans must be in place to correct issues if they arise.	
☐	The biofiltration BMP O&M plan describes specific inspection activities, regular/periodic maintenance activities and specific corrective actions relating to scour, erosion, channeling, media clogging, vegetation health, and inflow and outflow structures.	Include O&M plan with project submittal as described in Chapter 7.
☐	Adequate site area and features have been provided for BMP inspection and maintenance access.	Illustrate maintenance access routes, setbacks, maintenance features as needed on project water quality plans.
☐	For proprietary biofiltration BMPs, the BMP maintenance plan is consistent with manufacturer guidelines and conditions of its third-party certification (i.e., maintenance activities, frequencies).	Provide copy of manufacturer recommendations and conditions of third-party certification.

[3] Certifications or verifications issued by the Washington Technology Acceptance Protocol-Ecology program and the New Jersey Corporation for Advanced Technology programs are typically accompanied by a set of guidelines regarding appropriate design and maintenance conditions that would be consistent with the certification/verification

ATTACHMENT 2
BACKUP FOR PDP HYDROMODIFICATION CONTROL MEASURES

This is the cover sheet for Attachment 2.

☐ Mark this box if this attachment is empty because the project is exempt from PDP hydromodification management requirements.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	**Contents**	**Checklist**
Attachment 2a	Hydromodification Management Exhibit (Required)	■ Included SEE HMP REPORT See Hydromodification Management Exhibit Checklist on the back of this Attachment cover sheet.
Attachment 2b	Management of Critical Coarse Sediment Yield Areas (WMAA Exhibit is required, additional analyses are optional) See Section 6.2 of the BMP Design Manual.	☐ Exhibit showing project drainage boundaries marked on WMAA Critical Coarse Sediment Yield Area Map (Required) Optional analyses for Critical Coarse Sediment Yield Area Determination ☐ 6.2.1 Verification of Geomorphic Landscape Units Onsite ☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment ☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
Attachment 2c	Geomorphic Assessment of Receiving Channels (Optional) See Section 6.3.4 of the BMP Design Manual.	☐ Not performed ■ Included ☐ Submitted as separate stand-alone document
Attachment 2d	Flow Control Facility Design, including Structural BMP Drawdown Calculations and Overflow Design Summary (Required) See Chapter 6 and Appendix G of the BMP Design Manual	■ Included ☐ Submitted as separate stand-alone document
Attachment 2e	Vector Control Plan (Required when structural BMPs will not drain in 96 hours)	☐ Included ■ Not required because BMPs will drain in less than 96 hours

Use this checklist to ensure the required information has been included on the Hydromodification Management Exhibit:

The Hydromodification Management Exhibit must identify:

■ Underlying hydrologic soil group
■ Approximate depth to groundwater
■ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
□ Critical coarse sediment yield areas to be protected
■ Existing topography
■ Existing and proposed site drainage network and connections to drainage offsite
■ Proposed grading
■ Proposed impervious features
■ Proposed design features and surface treatments used to minimize imperviousness
■ Point(s) of Compliance (POC) for Hydromodification Management
■ Existing and proposed drainage boundary and drainage area to each POC (when necessary, create separate exhibits for pre-development and post-project conditions)
■ Structural BMPs for hydromodification management (identify location, type of BMP, and size/detail)

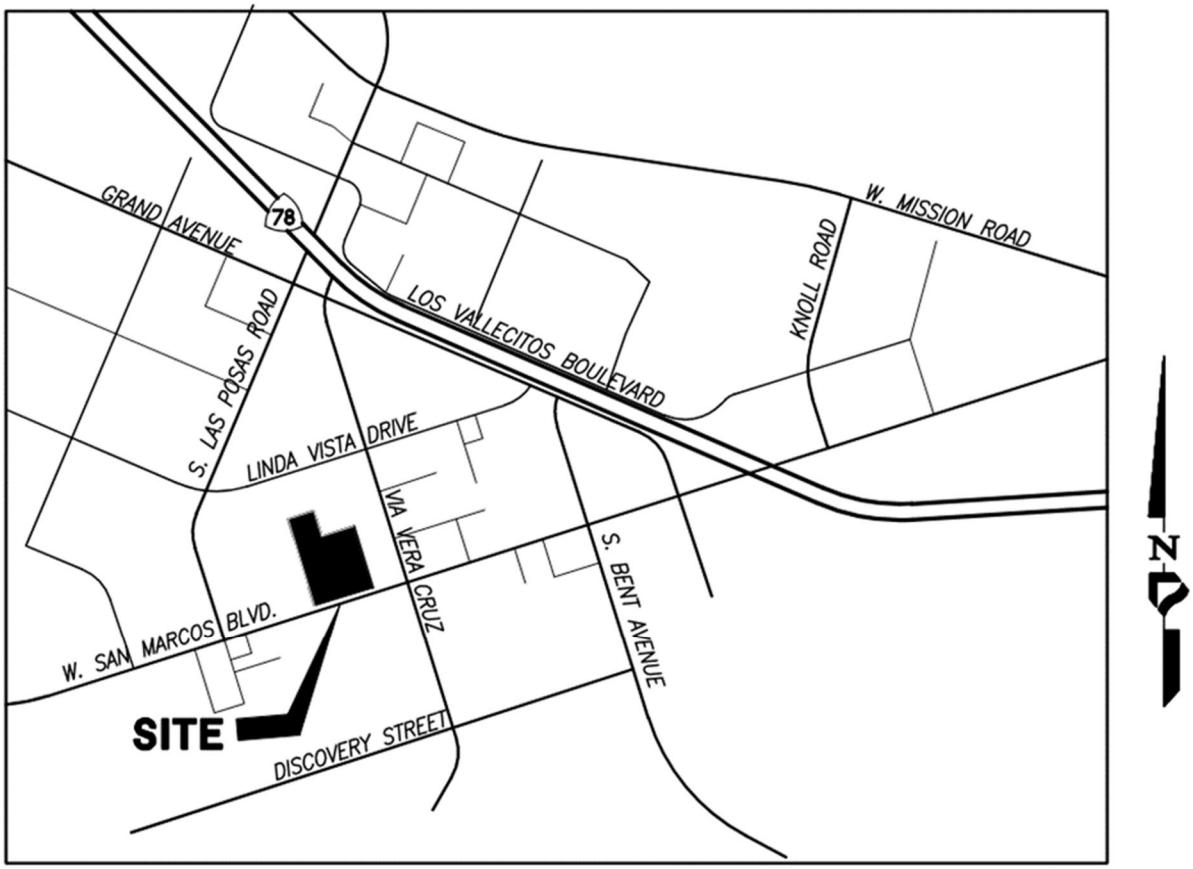
INTRODUCTION

The County of San Diego's March 2011, *Final Hydromodification Management Plan;* January 8, 2011, *Standard Urban Stormwater Mitigation Plan* (SUSMP); and City of San Marcos' February 2016, *BMP Design Manual,* outline low flow thresholds for hydromodification analyses. The thresholds are based on a percentage of the pre-project 2-year flow (Q_2), i.e., $0.1Q_2$ (low flow threshold and high susceptibility to erosion), $0.3Q_2$ (medium flow threshold and medium susceptibility to erosion), or $0.5Q_2$ (high flow threshold and low susceptibility to erosion). A flow threshold of $0.1Q_2$ represents a natural downstream receiving conveyance system with a high susceptibility to bed and/or bank erosion. This is the default value used for hydromodification analyses and will result in the most conservative (largest) on-site facility sizing. A flow threshold of $0.3Q_2$ or $0.5Q_2$ represents downstream receiving conveyance systems with a medium or low susceptibility to erosion, respectively. In order to qualify for a medium or low erosion susceptibility rating, a project must perform a channel screening analysis based on the March 2010, *Hydromodification Screening Tools: Field Manual for Assessing Channel Susceptibility,* developed by the Southern California Coastal Water Research Project (SCCWRP). The SCCWRP results are compared with the critical shear stress results from the County of San Diego's Critical Flow Calculator spreadsheet to establish the appropriate erosion susceptibility threshold of low, medium, or high.



VICINITY MAP

NOT TO SCALE

This report provides a hydromodification screening analysis for the proposed Restaurant Row redevelopment project located within Old California Restaurant Row in the city of San Marcos. The site is bounded by West San Marcos Boulevard to the south and Via Vera Cruz to the east (see the Vicinity Map). Under existing conditions, the project area consists of commercial development with restaurants surrounded by a large parking lot. Surrounding uses include Wells Fargo Bank, a Buffalo Wild Wings, and additional restaurants to the east as well as health service and commercial buildings to the north. An unoccupied commercial site and a Regal Edwards cinema are to the west. Vacant land and commercial uses are south along the opposite side of West San Marcos Boulevard.

The project proposes to demolish the existing development and replace it with a mixed-use zone that incorporates retail storefronts, urban living, and community destinations in a vertical pedestrian-oriented setting. To maintain the pedestrian-oriented setting, the ground floor will be limited to retail and other active uses along the primary street frontage of Via Vera Cruz and West San Marcos Boulevard. Residential units will encompass the majority of the site, including homes over commercial units along the project frontage.

Under existing conditions, the site generally drains towards its center. The storm runoff is captured by a culvert that extends westerly through the center of the site from Via Vera Cruz to an existing downstream concrete trapezoidal channel (see the Study Area Exhibit in Appendix A). The project will treat its storm runoff in on-site BMPs, then convey the runoff to the culvert and trapezoidal channel similar to existing conditions. The downstream drainage conveyances under existing and proposed conditions are as follows. The concrete trapezoidal channel continues approximately 900 feet west to South Las Posas Road. The flow then enters a box culvert that crosses under the road. The box culvert discharges into an unnamed natural drainage course on the west side of the road. The unnamed natural drainage course extends 270 feet west to Lower Las Posas Creek. Lower Las Posas Creek is a naturally-lined watercourse that continues over 1,700 feet south to San Marcos Creek. San Marcos Creek is also naturally-lined and flows a short distance to Lake San Marcos and ultimately over 4 miles to Batiquitos Lagoon.

The SCCWRP screening tool requires both office and field work to establish the vertical and lateral susceptibility of a downstream receiving channel to erosion. The vertical and lateral assessments are performed independently of each other although the lateral results can be affected by the vertical rating. A screening analysis was performed to assess the low flow threshold for the project's point of compliance, which is at the discharge point from the South Las Posas Road box culvert into the unnamed natural drainage course.

The initial step in performing the SCCWRP screening analysis is to establish the domain of analysis and the study reaches within the domain. This is followed by office and field components of the screening tool along with the associated analyses and results. The following sections cover these procedures in sequence.

DOMAIN OF ANALYSIS

SCCWRP defines an upstream and downstream domain of analysis, which establish the study limits. The County of San Diego's HMP specifies the downstream domain of analysis based on the SCCWRP criteria. The HMP indicates that the downstream domain is the first point where one of these is reached:

- at least one reach downstream of the first grade control point
- tidal backwater/lentic waterbody
- equal order tributary
- accumulation of 50 percent drainage area for stream systems or 100 percent drainage area for urban conveyance systems (storm drains, hardened channels, etc.)

The upstream limit is defined as:

- proceed upstream for 20 channel top widths or to the first grade control point, whichever comes first. Identify hard points that can check headward migration and evidence of active headcutting.

SCCWRP defines the maximum spatial unit, or reach (a reach is circa 20 channel widths), for assigning a susceptibility rating within the domain of analysis to be 200 meters (656 feet). If the domain of analysis is greater than 200 meters, the study area can be subdivided into smaller reaches of less than 200 meters for analysis. Most of the units in the HMP's SCCWRP analysis are metric. Metric units are used in this report only where given so in the HMP. Otherwise, English units are used.

Downstream Domain of Analysis

The downstream domain of analysis for the study area has been determined by assessing and comparing the four bullet items above. As discussed previously, the project's storm runoff will outlet from hardened, non-erodible drainage facilities to an unnamed natural drainage course on the west side of South Las Posas Road. The discharge point into the unnamed natural drainage course is the point of compliance (POC) for hydromodification purposes (see the Study Area Exhibit included in Appendix A). The POC is the point below which a drainage course is natural and susceptible to erosion. The downstream domain of analysis location is selected below this POC.

Per the first bullet item, the first permanent grade control below the POC was identified during a site visit. The first grade control occurs where Lower Las Posas Creek enters triple reinforced concrete box culverts that cross under West San Marcos Boulevard, which are approximately 1,100 feet downstream of the POC. The culverts are non-erodible facilities that provide a grade control for the upstream channel bed. i.e., they will prevent erosion of the upstream channel bed.

The second bullet item criteria is based on the lentic waterbody. The nearest lentic (standing or still water such as ponds, pools, marshes, lakes, etc.) waterbody is Lake San Marcos. The Lake San Marcos lentic waterbody is further downstream from the POC than the permanent grade

control, so the second bullet item will not govern over the first bullet item in establishing the downstream domain of analysis location.

The third bullet item is met when the natural watercourse below a POC confluences with a stream with an equal order or larger tributary area. As mentioned above, the unnamed natural drainage course confluences with Lower Las Posas Creek 270 feet downstream of the POC. The Lower Las Posas Creek watershed covers over 2.6 square miles according to the USGS Streamstats program (see Appendix A), which is based on a digital elevation model and digital representation of the stream network. This is larger than the watershed tributary to the unnamed natural drainage course, which was delineated as 99.80 acres from SANGIS 2-foot contour interval topographic mapping (see the Watershed Exhibit in Appendix A). Therefore, the third bullet item is met at the confluence since the unnamed natural drainage course joins the much larger Lower Las Posas Creek watershed. The confluence is closer to the POC than the permanent grade control, so the third bullet item will govern over the first in establishing the downstream domain of analysis location.

The fourth bullet item is met when the natural stream below a POC accumulates 50 or 100 percent drainage area for natural or urban drainage systems, respectively. The unnamed natural drainage course below the POC is a natural drainage system, so 50 percent applies. It is clear from the Watershed Exhibit that 50 percent additional drainage area will not be accumulated along the unnamed natural drainage course between the POC and Lower Las Posas Creek. Therefore, the fourth bullet item will not govern over the third bullet item.

Based on the above information, the downstream domain of analysis location is established by the equal order tributary criteria (bullet item 3) and occurs where unnamed natural drainage course confluences with the larger Lower Las Posas Creek.

Upstream Domain of Analysis

The existing hardened, non-erodible drainage facilities (culverts and concrete trapezoidal channel) from the site to the POC outlet into the uppermost end of the unnamed natural drainage course. Since the unnamed natural drainage course does not extend upstream of the POC, the upstream domain of analysis location is at the POC.

Study Reaches within Domain of Analysis

After the upstream and downstream domain of analysis locations are established for the POC, the study reach is identified (see the Study Area Exhibit). The entire domain of analysis extends along the unnamed natural drainage course from the upstream domain of analysis location at the POC to the downstream domain of analysis location at the confluence with Lower Las Posas Creek. This segment was analyzed as a single study reach, Reach 1, which is 270 feet long so within the 656-foot maximum reach length specified by SCCWRP.

INITIAL DESKTOP ANALYSIS

After the domain of analysis is established, SCCWRP requires an "initial desktop analysis" that involves office work. The initial desktop analysis establishes the watershed area, mean annual

precipitation, valley slope, and valley width. These terms are defined in Form 1, which is included in Appendix A. SCCWRP recommends the use of National Elevation Data (NED) to determine the watershed area, valley slope, and valley width. NED is similar to USGS quadrangle mapping. SANGIS' 2-foot contour topographic mapping was available, which is more accurate than NED mapping, so the SANGIS mapping was used to determine the watershed area, valley slope, and valley width.

The watershed area associated with Reach 1 was delineated from the SANGIS topographic mapping supplemented with existing drainage facility data from the City of San Marcos' April 2019 *Drainage Master Plan Storm Drain Inventory* sheets. The delineation is included on the Watershed Exhibit and shows that the watershed area tributary to Reach 1 covers 99.80 acres (0.1559 square miles).

The mean annual precipitation was obtained from the rain gages closest to the site. These are the Western Regional Climate Center's Escondido and Escondido 2 gages (see Appendix A). The average annual rainfall measured at the Escondido gage for the period of record from 1893 to 1979 is 16.22 inches. The average annual rainfall measured at the Escondido 2 gage for the period of record from 1979 to 2013 is 14.93 inches. The time-weighted average rainfall from these two gages is 15.85 inches.

The valley slope and valley width for Reach 1 was obtained from SANGIS' 2-foot contour interval topographic mapping. The valley slope is the longitudinal slope of the channel bed along the flow line, so it is determined by dividing the elevation difference within a study reach by the length of the flow line. The valley width is the valley bottom width dictated by breaks in the hillslope. The valley slope and valley width within Reach 1 along with the watershed area are included in Table 1.

Reach	Tributary Watershed Area, sq. mi.	Valley Slope, m/m	Valley Width, m
1	0.1559	0.0110	2.74

Table 1. Summary of Drainage Area, Valley Slope, and Valley Width

The above described values were input to a spreadsheet to calculate the simulated peak flow, screening index, and valley width index outlined in Form 1. The input data and results are tabulated in Appendix A. This completes the initial desktop analysis.

FIELD SCREENING

After the initial desktop analysis is done, a field assessment must be performed. The field assessment is used to establish a natural channel's vertical and lateral susceptibility to erosion. SCCWRP states that although they are admittedly linked, vertical and lateral susceptibility are assessed separately for several reasons. First, vertical and lateral responses are primarily controlled by different types of resistance, which, when assessed separately, may improve ease of use and lead to increased repeatability compared to an integrated, cross-dimensional

assessment. Second, the mechanistic differences between vertical and lateral responses point to different modeling tools and potentially different management strategies. Having separate screening ratings may better direct users and managers to the most appropriate tools for subsequent analyses.

The field screening tool uses combinations of decision trees and checklists. Decision trees are typically used when a question can be answered fairly definitively and/or quantitatively (e.g., d_{50} < 16 mm). Checklists are used where answers are relatively qualitative (e.g., the condition of a grade control). Low, medium, high, and very high ratings are applied separately to the vertical and lateral analyses. When the vertical and lateral analyses return divergent values, the most conservative value shall be selected as the flow threshold for the hydromodification analyses.

Vertical Stability

The purpose of the vertical stability decision tree (Figure 6-4 in the County of San Diego HMP) is to assess the state of the channel bed with a particular focus on the risk of incision (i.e., down cutting). The decision tree is included in Figure 5. The first step is to assess the channel bed resistance. There are three categories defined as follows:

1. Labile Bed – sand-dominated bed, little resistant substrate.

2. Transitional/Intermediate Bed – bed typically characterized by gravel/small cobble, Intermediate level of resistance of the substrate and uncertain potential for armoring.

3. Threshold Bed (Coarse/Armored Bed) – armored with large cobbles or larger bed material or highly-resistant bed substrate (i.e., bedrock).

Based on the channel photographs and site investigation, the bed material and resistance (associated with moderate to dense vegetation) are generally within the transitional/intermediate bed category. Some bed areas contained smaller grain sizes typically found in a labile bed. However, Reach 1 does not meet the criteria of containing loosely-packed material. The material is moderately-packed with dense vegetation binding the soil, which is a characteristic of an intermediate bed.

In addition to the material size and compaction, there are several factors that establish the erodibility of a channel such as the flow rate (i.e., size of the tributary area), grade controls, channel slope, vegetative cover, channel planform, etc. The Introduction of the SCCWRP *Hydromodification Screening Tools: Field Manual* identifies several of these factors. When multiple factors influence erodibility, it is appropriate to perform the more detailed SCCWRP analysis, which is to analyze a channel according to SCCWRP's transitional/intermediate bed procedure. This requires the most rigorous steps and will generate the appropriate results given the range of factors that define erodibility. The transitional/intermediate bed procedure takes into account that bed material may fall within the labile category (the bed material size is used in SCCWRP's Form 3 Figure 4), but other factors may trend towards a less erodible condition. Dr. Eric Stein from SCCWRP, who co-authored the Hydromodification Screening Tools: Field Manual in the Final Hydromodification Management Plan (HMP), indicated that it would be appropriate to analyze channels with multiple factors that impact erodibility using the

transitional/intermediate bed procedure. Consequently, this procedure was used to produce more accurate results.

Transitional/intermediate beds cover a wide susceptibility/potential response range and need to be assessed in greater detail to develop a weight of evidence for the appropriate screening rating. The three primary risk factors used to assess vertical susceptibility for channels with transitional/intermediate bed materials are:

1. Armoring potential – three states (Checklist 1)

2. Grade control – three states (Checklist 2)

3. Proximity to regionally-calibrated incision/braiding threshold (Screening Index Threshold – Probability Diagram)

These three risk factors are assessed using checklists and a diagram (see Appendix B), and the results of each are combined to provide a final vertical susceptibility rating for the intermediate/transitional bed-material group. Each checklist and diagram contains a Category A, B, or C rating. Category A is the most resistant to vertical changes while Category C is the most susceptible.

Checklist 1 determines armoring potential of the channel bed. The natural channel bed along Reach 1 is assigned to Category B, which represents intermediate bed material of unknown resistance or unknown armoring potential due to a surface veneer such as vegetation. The soil was probed and penetration was relatively difficult through the underlying layer. Consequently, Reach 1 is classified in Category B within Checklist 1.

Checklist 2 determines grade control characteristics of the channel bed. This is established by the spacing of grade controls along the channel. Category B on Checklist 2 is based on a spacing of $2/S_v$ or $4/S_v$. S_v is 0.0110 from the Form 1 analysis in Appendix A. From this, $2/S_v$ is 182 meters (597 feet), while $4/S_v$ is 364 meters (1,194 feet). Reach 1 is 270 feet long. Therefore, Reach 1 is shorter than $2/S_v$ and within Category A on Checklist 2.

The Screening Index Threshold is a probability diagram that depicts the risk of incising or braiding based on the potential stream power of the valley relative to the median particle diameter. The threshold is based on regional data from Dr. Howard Chang of Chang Consultants and others. The probability diagram is based on d_{50} as well as the screening index (INDEX) value determined in the initial desktop analysis (see Appendix A). The Form 1 results in Appendix A determined an INDEX of 0.010 for Reach 1. The Screening Index Threshold diagram shows that the probability of incising or braiding is less than 50 percent regardless of d_{50} for an INDEX value of 0.010. Since Reach 1's Screening Index value is less than all of the 50 percent values, Reach 1 is within Category A.

The overall vertical rating is determined from the Checklist 1, Checklist 2, and Mobility Index Threshold results. The scoring is based on the following values:

Category A = 3, Category B = 6, Category C = 9

The vertical rating score is based on these values and the equation:

$$\text{Vertical Rating} = [(\text{armoring} \times \text{grade control})^{1/2} \times \text{screening index score}]^{1/2}$$
$$= [(6 \times 3)^{1/2} \times 3]^{1/2}$$
$$= 3.6$$

Since the vertical rating is less than 4.5, Reach 1 has a low threshold for vertical susceptibility.

Lateral Stability

The purpose of the lateral decision tree (Figure 6-5 from County of San Diego HMP included in Figure 6) is to assess the state of the channel banks with a focus on the risk of widening. Channels can widen from either bank failure or through fluvial avulsions such as chute cutoffs and braiding. Widening through fluvial avulsions/active braiding is a relatively straightforward observation. If braiding is not already occurring, the next logical step is to assess the condition of the banks. Banks fail through a variety of mechanisms; however, one of the most important distinctions is whether they fail in mass (as many particles) or by fluvial detachment of individual particles. Although much research is dedicated to the combined effects of weakening, fluvial erosion, and mass failure, SCCWRP found it valuable to segregate bank types based on the inference of the dominant failure mechanism (as the management approach may vary based on the dominant failure mechanism). A decision tree (Form 4 in Appendix B) is used in conducting the lateral susceptibility assessment. Definitions are provided below for terms used in the lateral susceptibility assessment.

The first step in the decision tree is to determine if lateral adjustments are occurring. The adjustments can take the form of extensive mass wasting (greater than 50 percent of the banks are exhibiting planar, slab, or rotational failures and/or scalloping, undermining, and/or tension cracks). The adjustments can also involve extensive fluvial erosion (significant and frequent bank cuts on over 50 percent of the banks). Neither mass wasting nor extensive fluvial erosion was evident within Reach 1 during a field investigation.

The next step in the Form 4 decision tree is to assess the consolidation of the bank material. The banks were moderate to well-consolidated. This determination was made because the ground surface was difficult to penetrate with a probe and the banks were densely vegetated as seen in the figures. In addition, the banks showed no evidence of extensive crumbling and were composed of relatively well-packed particles.

Form 6 (see Appendix B) is used to assess the probability of mass wasting. Form 6 identifies a 10, 50, and 90 percent probability based on the bank angle and bank height. From the topographic mapping and site investigation, the average bank angle in Reach 1 is approximately 2:1 (22.6 degrees) or less. Form 6 shows that the probably of mass wasting and bank failure has less than 10 percent risk for a 22.6 degree bank angle or less regardless of the bank height.

The final two steps in the Form 4 decision tree are based on the braiding risk determined from the vertical rating as well as the Valley Width Index (VWI) calculated in Appendix A. If the

vertical rating is high, the braiding risk is considered to be greater than 50 percent. Excessive braiding can lead to lateral bank failure. For Reach 1 the vertical rating is low, so the braiding risk is less than 50 percent. Furthermore, a VWI greater than 2 represents channels unconfined by bedrock or hillslope and, hence, subject to lateral migration. The VWI calculation in the spreadsheet in Appendix A shows that the VWI for Reach 1 (0.42) is less than 2.

From the above steps, the lateral susceptibility rating is low (red circles are included on the Form 4: Lateral Susceptibility Field Sheet decision tree in Appendix B showing the decision path).

CONCLUSION

The SCCWRP channel screening tools were used to assess the downstream channel susceptibility for the Restaurant Row redevelopment project being designed by Project Design Consultants. The project runoff will be treated and then collected and conveyed in hardened, non-erodible drainage facilities to an unnamed natural drainage course. An assessment was performed for the unnamed natural drainage course based on office analyses and field work. The results indicate a low threshold for vertical and lateral susceptibilities for Reach 1.

The HMP requires that these results be compared with the critical stress calculator results outlined in the County of San Diego HMP. The critical stress results are included in Appendix B for the study reach using the spreadsheet provided by the County. The channel dimensions were estimated from topographic mapping and Google Earth. Based on these values, the critical stress results returned a low threshold consistent with the SCCWRP channel screening results. Therefore, the SCCWRP analyses and critical stress calculator demonstrate that a low overall threshold is applicable to the study reach (i.e., $0.5Q_2$).

Chang Consultants previously prepared the June 24, 2021, *Hydromodification Screening for the Cherokee Property,* which contained an assessment of Lower Las Posas Creek below Reach 1. The Cherokee report determined a lower susceptibility to erosion, so the Restaurant Row results are consistent with the downstream receiving channel results.

Unnamed Natural Drainage Course - Tributary to Lower Las Posas Creek

GIS Parameters: The International System of Units (SI) is used throughout the assessment as the field standard and for consistency with the broader scientific community. However, as the singular exception, US Customary units are used for contributing drainage area (A) and mean annual precipitation (P) to apply regional flow equations after the USGS. See SCCWRP Technical Report 607 for example measurements and "Screening Tool Data Entry.xls" for automated calculations.

Form 1 Table 1. Initial desktop analysis in GIS.

Symbol		Variable	Description and Source	Value
Watershed properties (English units)	**A**	Area (mi^2)	Contributing drainage area to screening location via published Hydrologic Unit Codes (HUCs) and/or ≤ 30 m National Elevation Data (NED), USGS seamless server	See attached Form 1 table on next page for calculated values for each reach.
	P	Mean annual precipitation (in)	Area-weighted annual precipitation via USGS delineated polygons using records from 1900 to 1960 (which was more significant in hydrologic models than polygons delineated from shorter record lengths)	
Site properties (SI units)	**S_v**	Valley slope (m/m)	Valley slope at site via NED, measured over a relatively homogenous valley segment as dictated by hillslope configuration, tributary confluences, etc., over a distance of up to ~500 m or 10% of the main-channel length from site to drainage divide	
	W_v	Valley width (m)	Valley bottom width at site between natural valley walls as dictated by clear breaks in hillslope on NED raster, irrespective of potential armoring from floodplain encroachment, levees, etc. (imprecise measurements have negligible effect on rating in wide valleys where VWI is >> 2, as defined in lateral decision tree)	

Form 1 Table 2. Simplified peak flow, screening index, and valley width index. Values for this table should be calculated in the sequence shown in this table, using values from Form 1 Table 1.

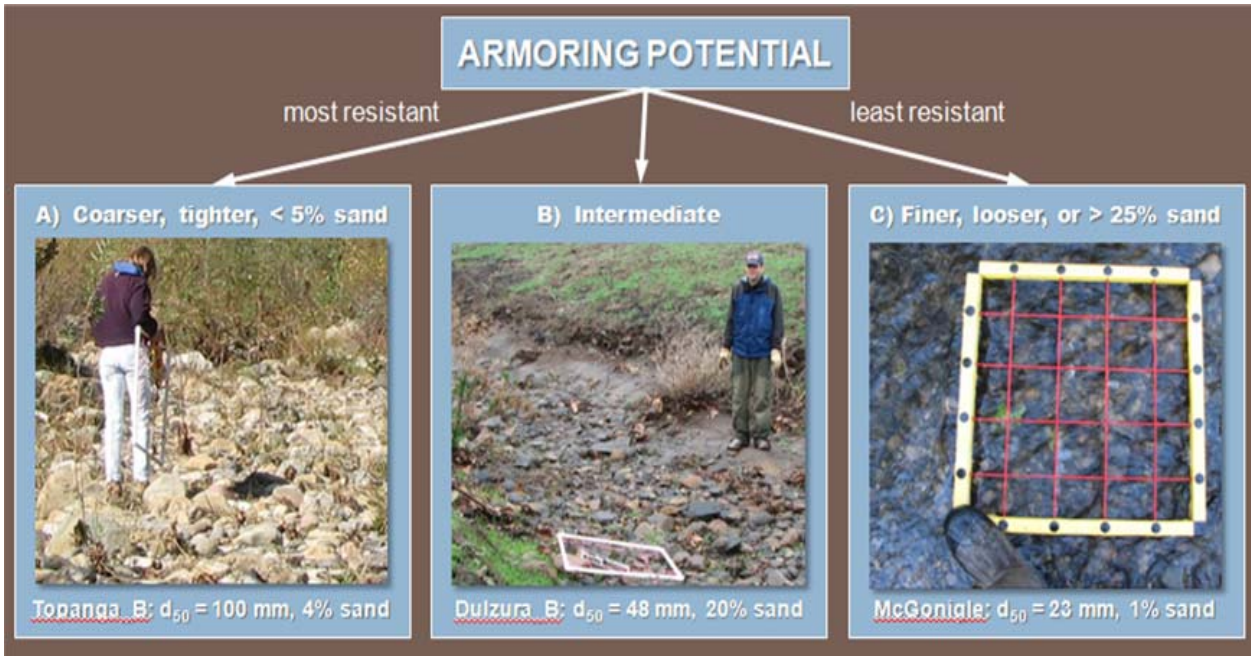
SCCWRP FIELD SCREENING DATA

Form 3 Support Materials

Form 3 Checklists 1 and 2, along with information recording in Form 3 Table 1, are intended to support the decisions pathways illustrated in Form 3 Overall Vertical Rating for Intermediate/Transitional Bed.

Form 3 Checklist 1: Armoring Potential

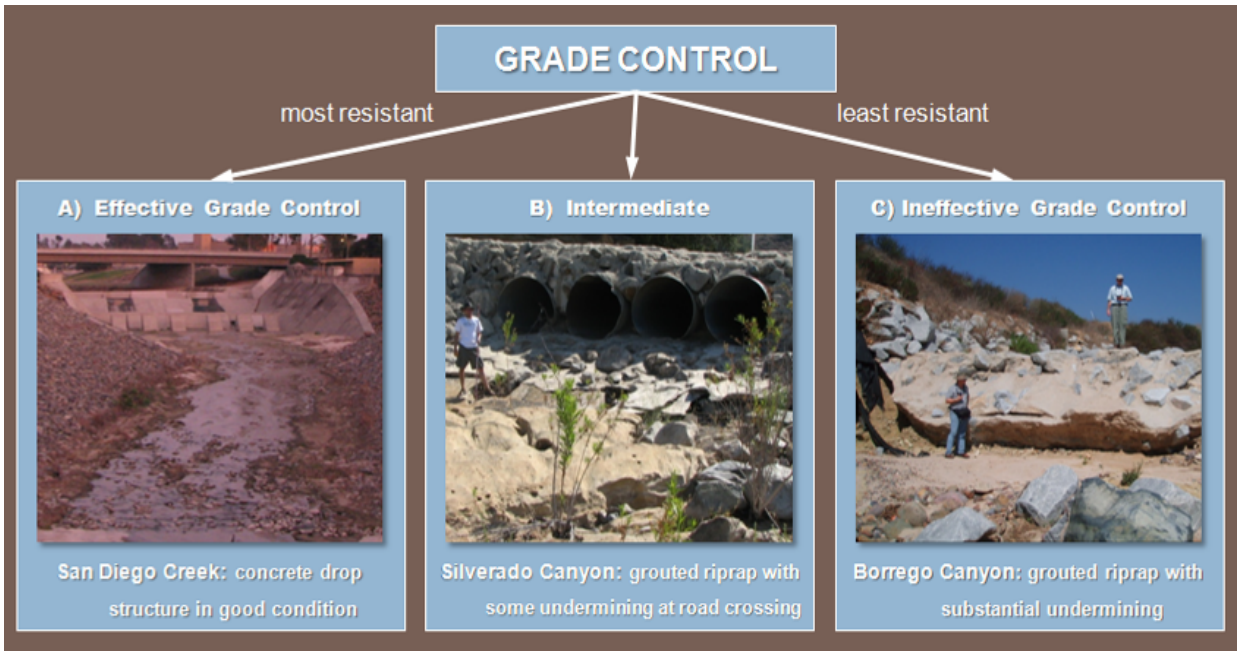
□	A	A mix of coarse gravels and cobbles that are tightly packed with <5% surface material of diameter <2 mm
X	B	Intermediate to A and C or hardpan of unknown resistance, spatial extent (longitudinal and depth), or unknown armoring potential due to surface veneer covering gravel or coarser layer encountered with probe
□	C	Gravels/cobbles that are loosely packed or >25% surface material of diameter <2 mm



Form 3 Figure 2. Armoring potential photographic supplement for assessing intermediate beds (16 < d_{50} < 128 mm) to be used i**n conjunction with Form 3 Checklist 1.**

Form 3 Checklist 2: Grade Control

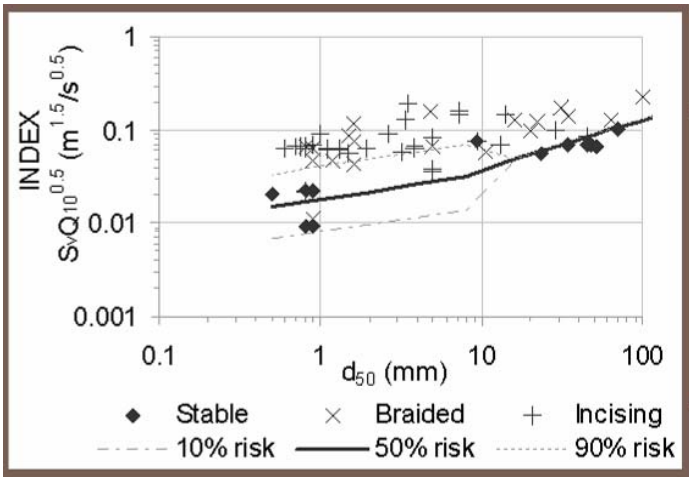
x	A	Grade control is present with spacing <50 m or $2/S_v$ m • No evidence of failure/ineffectiveness, e.g., no headcutting (>30 cm), no active mass wasting (analyst cannot say grade control sufficient if mass-wasting checklist indicates presence of bank failure), no exposed bridge pilings, no culverts/structures undermined • Hard points in serviceable condition at decadal time scale, e.g., no apparent undermining, flanking, failing grout • If geologic grade control, rock should be resistant igneous and/or metamorphic; For sedimentary/hardpan to be classified as 'grade control', it should be of demonstrable strength as indicated by field testing such as hammer test/borings and/or inspected by appropriate stakeholder
□	B	Intermediate to A and C – artificial or geologic grade control present but spaced 2/Sv m to 4/Sv m or potential evidence of failure or hardpan of uncertain resistance
□	C	Grade control absent, spaced >100 m or $>4/S_v$ m, or clear evidence of ineffectiveness



Form 3 Figure 3. Grade-control (condition) photographic supplement for assessing intermediate beds ($16 < d_{50} < 128$ mm) to be used in conjunction with Form 3 Checklist 2.

Regionally-Calibrated Screening Index Threshold for Incising/Braiding

For transitional bed channels (d_{50} between 16 and 128 mm) or labile beds (channel not incised past critical bank height), use Form 3 Figure 3 to determine Screening Index Score and complete Form 3 Table 1.



Model Type	d_{50} (mm)	50% Risk $S_vQ_{10}^{0.5}$ ($m^{1.5}/s^{0.5}$)
Logistic Regression $d_{50} \geq 16$ mm	128	0.145
	96	0.125
	80	0.114
	64	0.101
	48	0.087
	32	0.070
	16	0.049
Logistic Reg. $d_{50} < 16$ mm	8	0.031
	4	0.026
	2	0.022
	1	0.018
	0.5	0.015

Form 3 Table 1. Values for Screening Index Threshold (probability of incising/braiding) to be used in conjunction with Form 3 Figure 4 (above) to complete Form 3 Overall Vertical Rating for Intermediate/Transitional Bed (below).. Screening Index Score: A = <50% probability of incision for current Q_{10}, valley slope, and d_{50}; B = Hardpan/d_{50} indeterminate; and C = ≥50% probability of incising/braiding for current Q_{10}, valley slope, and d_{50}.

d_{50} (mm) *From Form 2*	$S_v{*}Q_{10}^{0.5}$ ($m^{1.5}/s^{0.5}$) *From Form 1*	$S_v{*}Q_{10}^{0.5}$ ($m^{1.5}/s^{0.5}$) *50% risk of incising/braiding from table in Form 3 Figure 3 above*	Screening Index Score (A, B, C)

Overall Vertical Rating for Intermediate/Transitional Bed

Calculate the overall Vertical Rating for Transitional Bed channels using the formula below. Numeric values for responses to Form 3 Checklists and Table 1 as follows: A = 3, B = 6, C = 9.

$$Vertical\ Rating = \sqrt{\{(\sqrt{armoring} * grade\ control) * screening\ index\ score\}}$$

6 x 3 x 3 = 3.6

Vertical Susceptibility based on Vertical Rating: <4.5 = LOW; 4.5 to 7 = MEDIUM; and >7 = HIGH.

FORM 4: LATERAL SUSCEPTIBILTY FIELD SHEET

Circle appropriate nodes/pathway for proposed site
OR use sequence of questions provided in Form 5.

REACH 1 RESULTS

FORM 6: PROBABILITY OF MASS WASTING BANK FAILURE

If mass wasting is not currently extensive and the banks are moderately- to well-consolidated, measure bank height and angle at several locations (i.e., at least three locations that capture the range of conditions present in the study reach) to estimate representative values for the reach. Use Form 6 Figure 1 below to determine if risk of bank failure is >10% and complete Form 6 Table 1. Support your results with photographs that include a protractor/rod/tape/person for scale.

	Bank Angle (degrees) *(from Field)*	**Bank Height (m)** *(from Field)*	**Corresponding Bank Height for 10% Risk of Mass Wasting (m)** *(from Form 6 Figure 1 below)*	**Bank Failure Risk** *(<10% Risk) (>10% Risk)*
Left Bank	26.6 degrees (2:1) ---	---	---	<10%
Right Bank	26.6 degrees (2:1) ----	---	---	<10%

1. INTRODUCTION

This Hydromodification Management Study has been prepared in support of the Tentative Map Entitlement submittal for the Restaurant Row project, which is located in the City of San Marcos west of State Route 78 (SR 78), bounded by West San Marcos Boulevard and Via Vera Cruz.. This report is a companion report to the following project technical studies:

- Hydrology/Drainage Study for Restaurant Row, prepared by Project Design Consultants
- Storm Water Quality Management Plan (SWQMP), prepared by Project Design Consultants
- Project Downstream Channel SCCWRP Analysis, prepared by Chang Consultants, entitled "Hydromodification Screening for Restaurant Row."

The purpose of this report is to document the project's compliance with the City's Final Hydromodification Management Plan (HMP). The stated purpose of the final hydromodification management requirements for PDPs is "…to minimize the potential of storm water discharges from the MS4 from causing altered flow regimes and excessive downstream erosion in receiving waters" (City of San Marcos BMP Design Manual, page 6-1). Flow duration control is the most common form of hydromodification management. Unless a project meets an exemption or is granted prior lawful approval, the County Hydromodification Management Plan (HMP) requires that all priority projects comply with the HMP. Since the project's Point of Compliance (POC) does not qualify for an exemption, the project is required to address the applicability of Final HMP requirements.

2. PROJECT DESCRIPTION

The site is approximately 10 acres in size and located in the City of San Marcos west of State Route 78 (SR 78), bounded by West San Marcos Boulevard and Via Vera Cruz. The site in the existing condition is bounded by a Wells Fargo, a Buffalo Wild Wings and similar restaurants to the east, and some home health service buildings to the north.

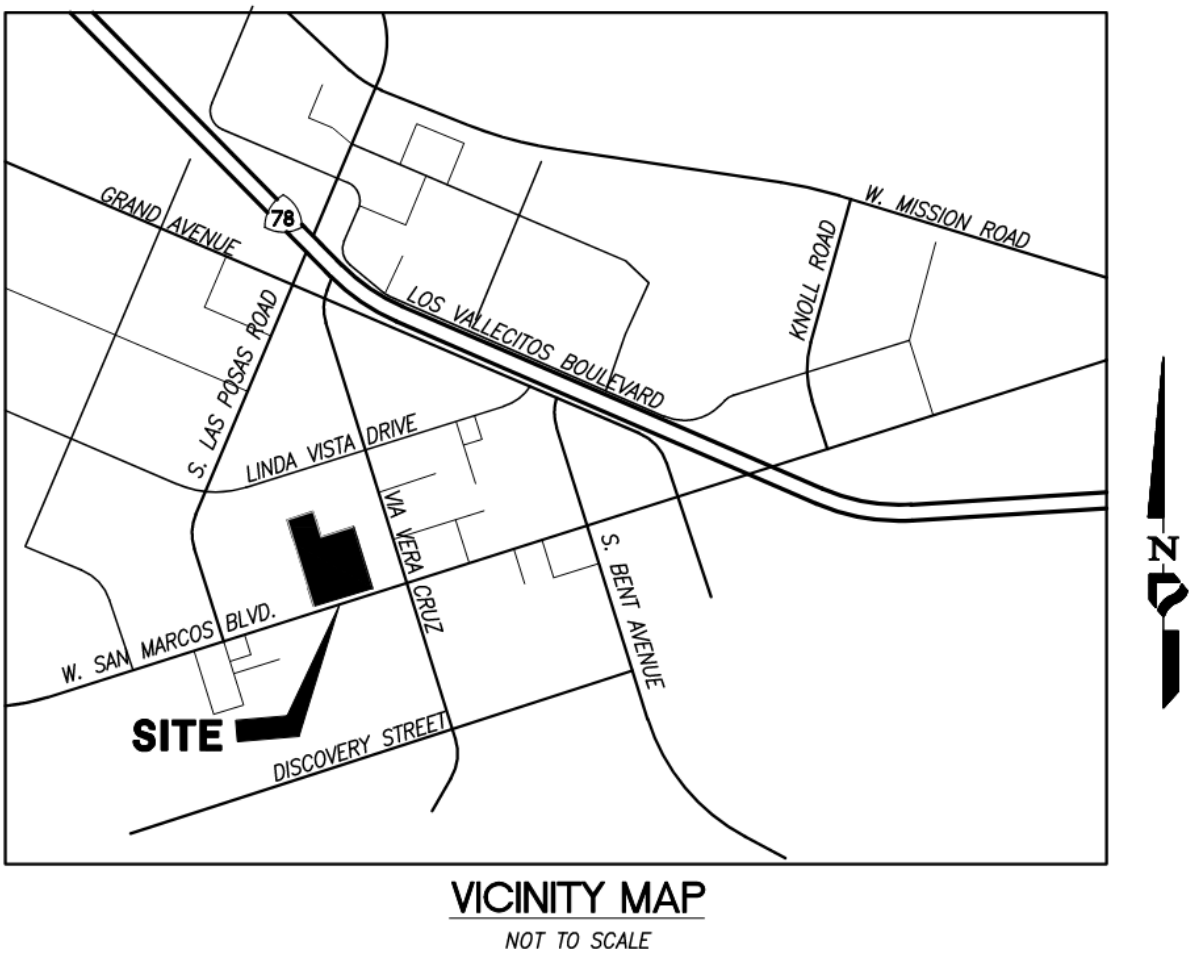

Figure 1: Project Vicinity Map

The project proposes a mixed use zone that incorporates retail storefronts, urban living, and community destinations in a vertical pedestrian-oriented setting. Residential units will encompass the majority of the site, including live-work units and town over commercial units along the project frontage.

The project lies within an existing 100-year floodway and floodplain, just downstream of the San Marcos Creek highway 78. Under existing condition, the project area consist of commercial development with a large parking lot area and a number of restaurants. The project site generally drains towards the center, towards the middle of the large parking lot. Surface grates along the project site collect project runoff and convey the runoff towards an existing 30" pipe that runs through the project site. This 30" pipe connects a 36" x 60" elliptical pipe in Via Vera Cruz to an

existing concrete channel west of the site. San Marcos Creek is located southwest of the project site, downstream of the project outfall point.

The project proposes a mixed use zone that incorporates retail storefronts, urban living, and community destinations in a vertical pedestrian-oriented setting. To maintain the pedestrian-oriented setting, the ground floor will be limited to retail and other active uses along the primary street frontage of Via Vera Cruz and West San Marcos Boulevard. Residential units will encompass the majority of the site, including homes over commercial units along the project frontage. Another project known as the Sears Site, under a different developer, is adjacent and west of this project. The Sears Site and this project (Restaurant Row) are designed in conjunction to provide a pedestrian paseo access between both sites. The pedestrian access is designed throughout this project connecting to the Sears Site in order to provide pedestrian access from Buffalo Wild Wings to Edwards Cinema's. This pedestrian paseo corridor also serves as a secure, illuminated pedestrian access throughout the project site. A flood park is implemented in the existing floodway with a variety of ammenities tolerant of inundation. The proposed site will allow for opportunity to program special events for the community. In addition, a smaller residential park is proposed just south and out of the floodway in order to provide playground structures for children of different age groups.

The dual 36" pipe discharges to the existing concrete channel and is subject to hydromodification compliance; see associated calculations in this report. The entire site discharges to one Point of Compliance (POC).

3. HYDROMODIFICATION MANAGEMENT APPROACH

The project will comply with final hydromodification requirements through flow control management for the portions of the project that require hydromodification mitigation. The entire site discharges to one Point of Compliance (POC).

The entire project site requires hydromodification, including the flood park portion. The park in the middle of the site plan proposes new impervious surface, which needs to meet hydromodification requirements. However, due to the floodway, no hydromodification BMP is allowed within the floodway limits in the park. Therefore, the three on-site hydromodification vaults will over-mitigate to offset the hydromodification requirements for the bypass areas, which includes the proposed impervious areas of the park. The entire project site is tributary to one discharge location (the existing concrete channel), therefore the hydromodification model is modeled to combine to one POC for compliance purposes. The park in the floodway and the edge condition areas along the project site are modeled as bypass areas that discharge directly to the POC in PCSWMM.

3.1 Basin Modeling Assumptions

This study identifies one hydromodification management detention system needed to mitigate the increased rates and durations of stormwater runoff to the POC. This Hydromodification Management Study identifies a conservative estimate for the concrete vaults and will be refined in final engineering and as the design progresses. The proposed hydromodification management volumes have been modeled conservatively with no infiltration into native soils. The geotechnical engineer has recommended that the site's BMPs be designed to avoid infiltration.

Table 1. Continuous Simulation Model Input Parameters

Total Drainage Area	11.1 acres
Pre-project land cover	Soil Types C and D
Post-project land cover	Soil Types C and D
Rainfall Gage	Escondido
Low Flow Threshold	0.5Q2 low-flow threshold
Upper Flow Threshold	Q10 based on PCSWMM partial duration statistics

3.2 Flow Duration Curves for Hydromodification Compliance

The pre and post developed flow duration exceedance curves were developed for the hourly flow data using an automatic partial duration series calculator in PCSWMM. These curves are graphed over the flow ranges provided in Appendix 2. In all cases the duration of post developed flows are brought to within that of the pre developed flows for a fraction of the two-year flow to the ten-

year flow indicating that the suite of BMPs will provide the flow attenuation required for compliance.

3.3 Drawdown

All three hydromodification vaults are designed to be compliant with DEH guidelines. Therefore, they will all drain with a time frame less than 96 hours. In addition to drawdown for hydromodification requirements, drawdown for the lower portion of the vault will comply with water quality requirements.

4.0 SUMMARY

The pre-developed conditions of the Restaurant Row project site were modelled in PCSWMM to determine a baseline of flow durations that would need to be controlled in the post-developed conditions. The proposed Restaurant Row development was modelled in PCSWMM with a number of hydromodification vaults. Modular Wetlands would be used to treat for pollutant removal. Based on the SWMM model results for this study it is determined that the vaults sized for the POC will be adequate to meet hydromodification compliance.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 15, May 27, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 23, 2020—Feb 13, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
PeA	Placentia sandy loam, 0 to 2 percent slopes, warm MAAT, MLRA 19	C	0.4	3.9%
PeC	Placentia sandy loam, 2 to 9 percent slopes, warm MAAT, MLRA 19	C	6.9	60.5%
PfA	Placentia sandy loam, thick surface, 0 to 2 percent slo pes	D	3.9	34.6%
RaB	Ramona sandy loam, 2 to 5 percent slopes	C	0.1	1.0%
Totals for Area of Interest			**11.4**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

1. SITE DESIGN BMPS INCLUDE:
   - (e) MINIMIZATION OF IMPERVIOUS FOOTPRINT OF THE PROJECT
   - (f) MINIMIZATION OF SOIL COMPACTION TO LANDSCAPED AREAS
   - (k) LANDSCAPING WITH NATIVE OR DROUGHT TOLERANT SPECIES
2. SOURCE CONTROL BMPS INCLUDE:
   - (a) PREVENTION OF ILLICIT DISCHARGES INTO THE MS4
   - (b) STORM DRAIN STENCILING OR SIGNAGE ("NO DUMPING DRAINS TO WATERWAYS")
   - (e) PROTECTION OF TRASH STORAGE AREAS FROM RAINFALL, RUN-ON, RUNOFF, AND WIND DISPERSAL
   - (f) USE OF ANY ADDITIONAL BMPS DETERMINED TO BE NECESSARY BY THE COPERMITTEE TO MINIMIZE POLLUTANT GENERATION AT EACH PROJECT,

NOTES:
1) REFER TO SOIL MAP FOR DISTRIBUTION OF HYDROLOGIC SOIL GROUPS.
2) REFER TO GEOTECH REPORT FOR GROUNDWATER ELEVATIONS AND RANGES.
3) ALL SELF-RETAINING AREAS WILL BE VEGETATED WITH NATIVE/NON-NATIVE OR NON-INVASIVE DROUGHT TOLERANT SPECIES, AND DISTURBED SOILS WILL BE AMENDED AND AERATED.
4) ALL STORM DRAINS SHALL BE STENCILED PER CITY GUIDELINES.

ATTACHMENT 3
Structural BMP Maintenance Information

This is the cover sheet for Attachment 3.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	**Contents**	**Checklist**
Attachment 3a	Structural BMP Maintenance Thresholds and Actions (Required)	■ Included See Structural BMP Maintenance Information Checklist on the back of this Attachment cover sheet.
Attachment 3b	Draft Maintenance Agreement (when applicable)	□ Included □ Not Applicable

Use this checklist to ensure the required information has been included in the Structural BMP Maintenance Information Attachment:

■ **Preliminary Design / Planning / CEQA level submittal:**

Attachment 3a must identify:

■ Typical maintenance indicators and actions for proposed structural BMP(s) based on Section 7.7 of the BMP Design Manual

Attachment 3b is not required for preliminary design / planning / CEQA level submittal.

□ **Final Design level submittal:**

Attachment 3a must identify:

- □ Specific maintenance indicators and actions for proposed structural BMP(s). This shall be based on Section 7.7 of the BMP Design Manual and enhanced to reflect actual proposed components of the structural BMP(s)
- □ How to access the structural BMP(s) to inspect and perform maintenance
- □ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- □ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- □ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- □ Recommended equipment to perform maintenance
- □ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management

Attachment 3b: For private entity operation and maintenance, Attachment 3b shall include a draft maintenance agreement in the local jurisdiction's standard format (PDP applicant to contact the [City Engineer] to obtain the current maintenance agreement forms).

Modular Wetlands® Linear

A Stormwater Biofiltration Solution

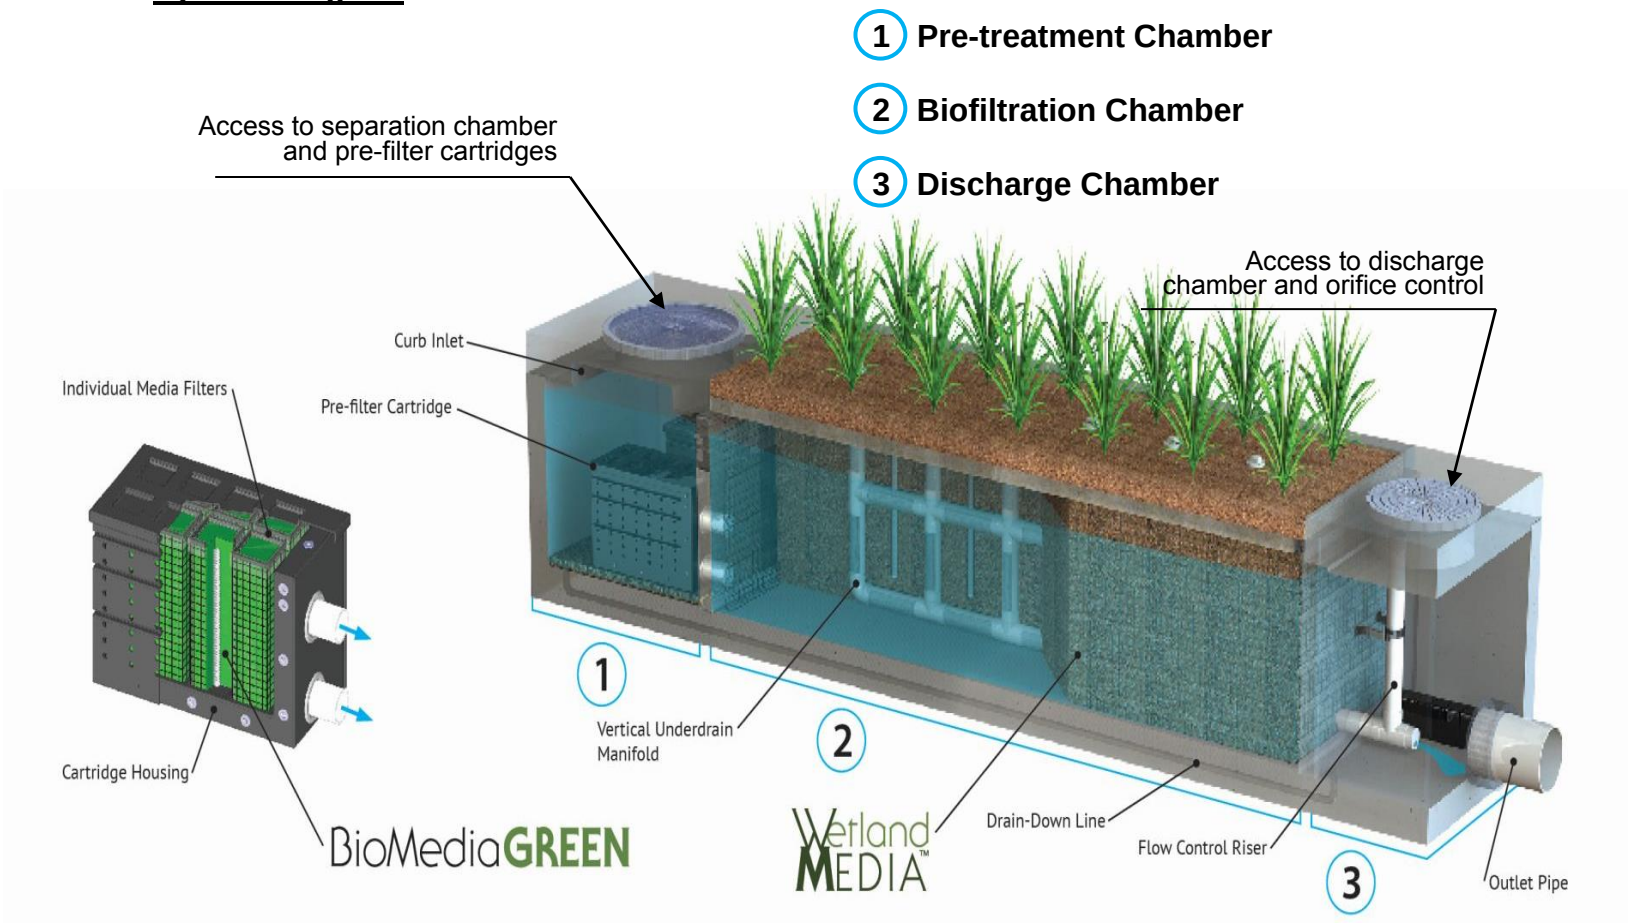
OPERATION & MAINTENANCE MANUAL

Inspection Guidelines for Modular Wetland System - Linear

Inspection Summary

- Inspect Pre-Treatment, Biofiltration and Discharge Chambers – average inspection interval is 6 to 12 months.
  - (1*5 minute average inspection time*).
- NOTE: Pollutant loading varies greatly from site to site and no two sites are the same. Therefore, the first year requires inspection monthly during the wet season and every other month during the dry season in order to observe and record the amount of pollutant loading the system is receiving.

System Diagram



Inspection Overview

As with all stormwater BMPs inspection and maintenance on the MWS Linear is necessary. Stormwater regulations require that all BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess the site specific loading conditions. This is recommended because pollutant loading and pollutant characteristics can vary greatly from site to site. Variables such as nearby soil erosion or construction sites, winter sanding on roads, amount of daily traffic and land use can increase pollutant loading on the system. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years to ensure appropriate maintenance is provided. Without appropriate maintenance a BMP will exceed its storage capacity which can negatively affect its continued performance in removing and retaining captured pollutants.

Inspection Equipment

Following is a list of equipment to allow for simple and effective inspection of the MWS Linear:

- Modular Wetland Inspection Form
- Flashlight
- Manhole hook or appropriate tools to remove access hatches and covers
- Appropriate traffic control signage and procedures
- Measuring pole and/or tape measure.
- Protective clothing and eye protection.
- 7/16” open or closed ended wrench.
- Large permanent black marker (initial inspections only – first year)
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections of the system.

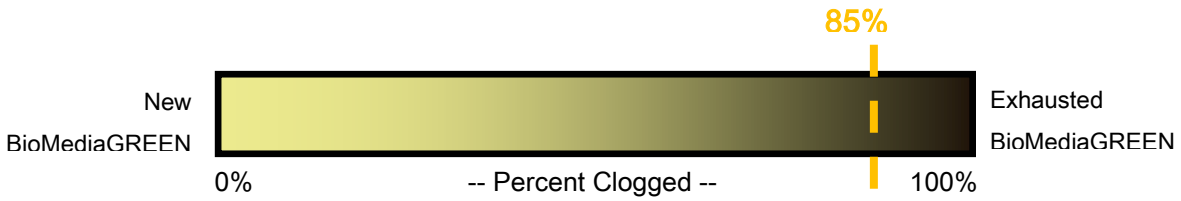
Inspection Steps

The core to any successful stormwater BMP maintenance program is routine inspections. The inspection steps required on the MWS Linear are quick and easy. As mentioned above the first year should be seen as the maintenance interval establishment phase. During the first year more frequent inspections should occur in order to gather loading data and maintenance requirements for that specific site. This information can be used to establish a base for long term inspection and maintenance interval requirements.

The MWS Linear can be inspected though visual observation without entry into the system. All necessary pre-inspection steps must be carried out before inspection occurs, especially traffic control and other safety measures to protect the inspector and near-by pedestrians from any dangers associated with an open access hatch or manhole. Once these access covers have been safely opened the inspection process can proceed:

- Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other info (see inspection form).
- Observe the inside of the system through the access hatches. If minimal light is available and vision into the unit is impaired utilize a flashlight to see inside the system and all of its chambers.
- Look for any out of the ordinary obstructions in the inflow pipe, pre-treatment chamber, biofiltration chamber, discharge chamber or outflow pipe. Write down any observations on the inspection form.
- Through observation and/or digital photographs estimate the amount of trash, debris and sediment accumulated in the pre-treatment chamber. Utilizing a tape measure or measuring stick estimate the amount of trash, debris and sediment in this chamber. Record this depth on the inspection form.

- Through visual observation inspect the condition of the pre-filter cartridges. Look for excessive build-up of sediments on the cartridges, any build-up on the top of the cartridges, or clogging of the holes. Record this information on the inspection form. The pre-filter cartridges can further be inspected by removing the cartridge tops and assessing the color of the BioMediaGREEN filter cubes (requires entry into pre-treatment chamber – see notes above regarding confined space entry). Record the color of the material. New material is a light green in color. As the media becomes clogged it will turn darker in color, eventually becoming dark brown or black. Using the below color indicator record the percentage of media exhausted.



- The biofiltration chamber is generally maintenance free due to the system's advanced pre-treatment chamber. For units which have open planters with vegetation it is recommended that the vegetation be inspected. Look for any plants that are dead or showing signs of disease or other negative stressors. Record the general health of the plants on the inspection and indicate through visual observation or digital photographs if trimming of the vegetation is needed.
- The discharge chamber houses the orifice control structure, drain down filter and is connected to the outflow pipe. It is important to check to ensure the orifice is in proper operating conditions and free of any obstructions. It is also important to assess the condition of the drain down filter media which utilizes a block form of the BioMediaGREEN. Assess in the same manner as the cubes in the Pre-Filter Cartridge as mentioned above. Generally, the discharge chamber will be clean and free of debris. Inspect the water marks on the side walls. If possible, inspect the discharge chamber during a rain event to assess the amount of flow leaving the system while it is at 100% capacity (pre-treatment chamber water level at peak HGL). The water level of the flowing water should be compared to the watermark level on the side walls which is an indicator of the highest discharge rate the system achieved when initially installed. Record on the form is there is any difference in level from watermark in inches.

- NOTE: During the first few storms the water level in the outflow chamber should be observed and a 6” long horizontal watermark line drawn (using a large permanent marker) at the water level in the discharge chamber while the system is operating at 100% capacity. The diagram below illustrates where a line should be drawn. This line is a reference point for future inspections of the system:

Using a permanent marker draw a 6 inch long horizontal line, as shown, at the higher water level in the MWS Linear discharge chamber.

- Water level in the discharge chamber is a function of flow rate and pipe size. Observation of water level during the first few months of operation can be used as a benchmark level for future inspections. The initial mark and all future observations shall be made when system is at 100% capacity (water level at maximum level in pre-treatment chamber). If future water levels are below this mark when system is at 100% capacity this is an indicator that maintenance to the pre-filter cartridges may be needed.
- Finalize inspection report for analysis by the maintenance manager to determine if maintenance is required.

Maintenance Indicators

Based upon observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components or cartridges.
- Obstructions in the system or its inlet or outlet.
- Excessive accumulation of floatables in the pre-treatment chamber in which the length and width of the chamber is fully impacted more than 18”.

- Excessive accumulation of sediment in the pre-treatment chamber of more than 6” in depth.

- Excessive accumulation of sediment on the BioMediaGREEN media housed within the pre-filter cartridges. The following chart shows photos of the condition of the BioMediaGREEN contained within the pre-filter cartridges. When media is more than 85% clogged replacement is required.

- Excessive accumulation of sediment on the BioMediaGREEN media housed within the drain down filter. The following photos show of the condition of the BioMediaGREEN contained within the drain down filter. When media is more than 85% clogged replacement is required.

- Overgrown vegetation.

- Water level in discharge chamber during 100% operating capacity (pre-treatment chamber water level at max height) is lower than the watermark by 20%.

Inspection Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

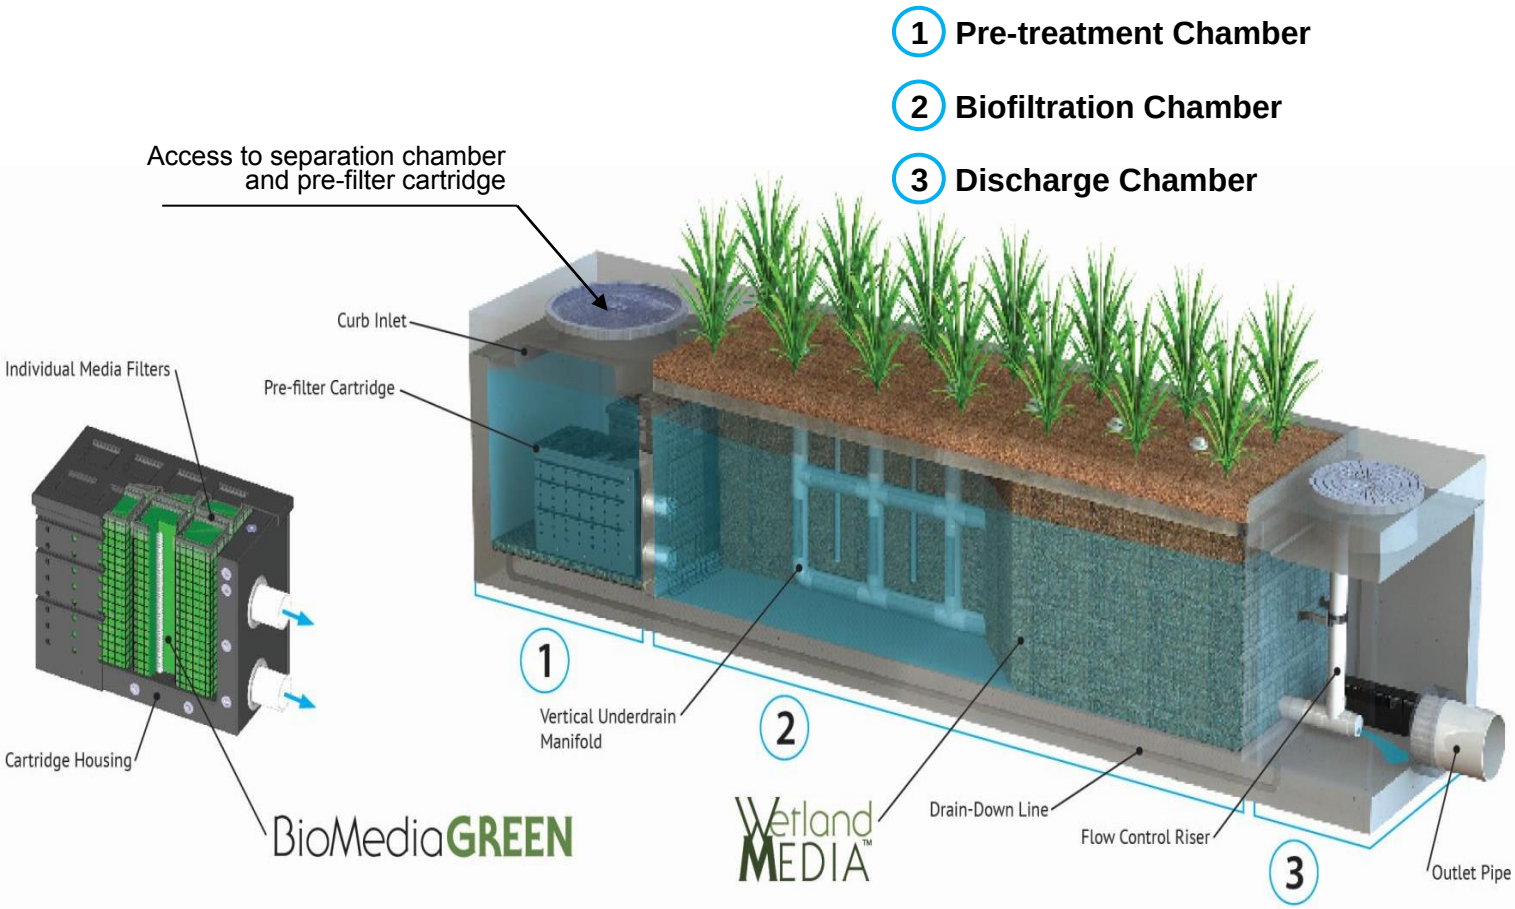
6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may not require irrigation after initial establishment.

Maintenance Guidelines for Modular Wetland System - Linear

Maintenance Summary

- Remove Sediment from Pre-Treatment Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Pre-Filter Cartridge Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

System Diagram



Maintenance Overview

The time has come to maintain your Modular Wetland System Linear (MWS Linear). To ensure successful and efficient maintenance on the system we recommend the following. The MWS Linear can be maintained by removing the access hatches over the systems various chambers. All necessary pre-maintenance steps must be carried out before maintenance occurs, especially traffic control and other safety measures to protect the inspector and near-by pedestrians from any dangers associated with an open access hatch or manhole. Once traffic control has been set up per local and state regulations and access covers have been safely opened the maintenance process can begin. It should be noted that some maintenance activities require confined space entry. All confined space requirements must be strictly followed before entry into the system. In addition the following is recommended:

- Prepare the maintenance form by writing in the necessary information including project name, location, date & time, unit number and other info (see maintenance form).
- Set up all appropriate safety and cleaning equipment.
- Ensure traffic control is set up and properly positioned.
- Prepare a pre-checks (OSHA, safety, confined space entry) are performed.

Maintenance Equipment

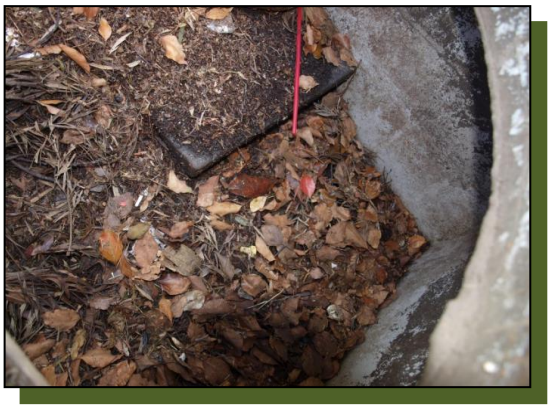
Following is a list of equipment required for maintenance of the MWS Linear:

- Modular Wetland Maintenance Form
- Manhole hook or appropriate tools to access hatches and covers
- Protective clothing, flashlight and eye protection.
- 7/16” open or closed ended wrench.
- Vacuum assisted truck with pressure washer.
- Replacement BioMediaGREEN for Pre-Filter Cartridges if required (order from manufacturer).

Maintenance Steps

1. Pre-treatment Chamber (bottom of chamber)

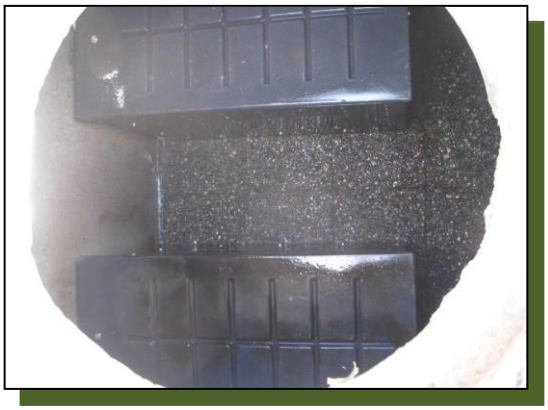
   A. Remove access hatch or manhole cover over pre-treatment chamber and position vacuum truck accordingly.
   B. With a pressure washer spray down pollutants accumulated on walls and pre-filter cartridges.
   C. Vacuum out Pre-Treatment Chamber and remove all accumulated pollutants including trash, debris and sediments. Be sure to vacuum the floor until pervious pavers are visible and clean.
   D. If Pre-Filter Cartridges require media replacement move onto step 2. If not, replace access hatch or manhole cover.



Removal of access hatch to gain access below.

Insertion of vacuum hose into separation chamber.

Removal of trash, sediment and debris.



Fully cleaned separation chamber.

2. Pre-Filter Cartridges (attached to wall of pre-treatment chamber)

A. After finishing step 1 enter pre-treatment chamber.

B. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.

Pre-filter cartridges with tops on.

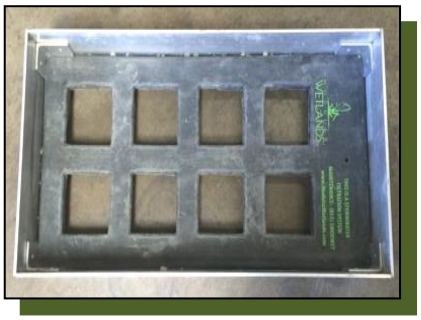
Inside cartridges showing media filters ready for replacement.

C. Place the vacuum hose over each individual media filter to suck out filter media.

Vacuuming out of media filters.

D. Once filter media has been sucked use a pressure washer to spray down inside of the cartridge and it's containing media cages. Remove cleaned media cages and place to the side. Once removed the vacuum hose can be inserted into the cartridge to vacuum out any remaining material near the bottom of the cartridge.

E. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase. Utilize the manufacture provided refilling trey and place on top of cartridge. Fill trey with new bulk media and shake down into place. Using your hands slightly compact media into each filter cage. Once cages are full removed refilling trey and replace cartridge top ensuring bolts are properly tightened.



Refilling trey for media replacement.

Refilling trey on cartridge with bulk media.

F. Exit pre-treatment chamber. Replace access hatch or manhole cover.

3. Biofiltration Chamber (middle vegetated chamber)

A. In general, the biofiltration chamber is maintenance free with the exception of maintaining the vegetation. Using standard gardening tools properly trim back the vegetation to healthy levels. The MWS Linear utilizes vegetation similar to surrounding landscape areas therefore trim vegetation to match surrounding vegetation. If any plants have died replace plants with new ones:

4. Discharge Chamber (contains drain down cartridge & connected to pipe)

A. Remove access hatch or manhole cover over discharge chamber.

B. Enter chamber to gain access to the drain down filter. Unlock the locking mechanism and left up drain down filter housing to remove used BioMediaGREEN filter block as shown below:

C. Insert new BioMediaGREEN filter block and lock drain down filter housing back in place. Replace access hatch or manhole cover over discharge chamber.

Inspection Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may not require irrigation after initial establishment.

ATTACHMENT 4
Copy of Plan Sheets Showing Permanent Storm Water BMPs

This is the cover sheet for Attachment 4.

Use this checklist to ensure the required information has been included on the plans:

The plans must identify:

■ Structural BMP(s) with ID numbers matching Form I-6 Summary of PDP Structural BMPs
■ The grading and drainage design shown on the plans must be consistent with the delineation of DMAs shown on the DMA exhibit
■ Details and specifications for construction of structural BMP(s)
■ Signage indicating the location and boundary of structural BMP(s) as required by the [City Engineer]
□ How to access the structural BMP(s) to inspect and perform maintenance
□ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
□ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
□ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
□ Recommended equipment to perform maintenance
□ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
□ Include landscaping plan sheets showing vegetation requirements for vegetated structural BMP(s)
■ All BMPs must be fully dimensioned on the plans
□ When proprietary BMPs are used, site-specific cross section with outflow, inflow, and model number shall be provided. Photocopies of general brochures are not acceptable.

ATTACHMENT 5
PDP-Exempt Green Street Memo for San Marcos Blvd Frontage Improvements

DATE: November 18, 2022 **FILE: 4457.00**

TO: City of San Marcos

FROM: Chelisa Pack, Project Design Consultants

SUBJECT: Restaurant Row (SP22-0004 GPA22-0002 R22-0002 TSM 22-0003 SDP 22-0006)- PDP-Exempt Green Street Report Memo for Public Improvements of San Marcos Blvd

This report supports the PDP-exempt stormwater requirements for the development of the public offsite street improvements for San Marcos Boulevard for the Restaurant Row project. The project proposes to construct some public improvements and street widening along the project frontage. These public improvements include center median improvements, and a new side median for multi-way traffic improvement lanes in San Marcos Boulevard. The water quality requirements for the onsite improvements within the Restaurant Row project are addressed in a separate report entitled PDP SWQMP for San Marcos Restaurant Row prepared by PDC. The purpose of this Green Street PDP-Exempt report is to summarize the water quality design approach as a "Green Street" project for the roadway improvements. Pursuing the Green Street Approach for the offsite Public Improvements, the offsite improvements will be exempt from Priority Development Project (PDP) designation, and hydromodification requirements do not apply.

The project proposes street widening and new median improvements. San Marcos Blvd will not be significantly re-graded with the exception of road widening and the multi-way traffic improvements. Based on the coordination with the Geotechnnical Engineer from Geocon, the infiltration feasibility evaluation (and I-8 Form) for the onsite project also applies to the offsite area, due to similar soil conditions. Due to the nature of the project and site constraints, infiltration of stormwater is not desirable, and could increase the risk of pavement distress. The Green Streets approach for the proposed San Marcos Blvd public improvements focuses on implementing vegetated planters with curb cuts to accept gutter runoff where feasible. A portion of San Marcos Blvd to be disturbed will be treated in the vegetated planters that drains westerly in San Marcos Blvd. Street trees will also be planted in the parkway and median to enhance canopy interception and reduce the proposed imperviousness.

See Attachment A for the vegetated planter sizing calculations. Although green street requirements are not subject to the same BMP sizing requirements as PDP projects, planter design is based on the County of San Diego Stormwater Pollutant Control Worksheets. The planter on the most west end with the biggest DMA area (worst case scenario) was analyzed. The calculations are included in Attachment A. The calculations show that the selected planters have the ability to treat runoff from the DMA draining into the planters.

Since the proposed biofiltration planters in the median are treating public runoff, it is expected that the biofiltration planters will be public and publically maintained by the City of San Marcos. Anticipated maintenance measures include landscaping management, removal of trash and sediment, replacement of mulch, and maintenance of overflow grates and underdrains.

Automated Worksheet B.1: Calculation of Design Capture Volume (V2.0)

Category	#	Description	*i*	Units
Standard Drainage Basin Inputs	1	Drainage Basin ID or Name	1	unitless
	2	85th Percentile 24-hr Storm Depth	0.67	inches
	3	Impervious Surfaces Not Directed to Dispersion Area (C=0.90)	6,095	sq-ft
	4	Semi-Pervious Surfaces Not Serving as Dispersion Area (C=0.30)		sq-ft
	5	Engineered Pervious Surfaces Not Serving as Dispersion Area (C=0.10)	677	sq-ft
	6	Natural Type A Soil Not Serving as Dispersion Area (C=0.10)		sq-ft
	7	Natural Type B Soil Not Serving as Dispersion Area (C=0.14)		sq-ft
	8	Natural Type C Soil Not Serving as Dispersion Area (C=0.23)		sq-ft
	9	Natural Type D Soil Not Serving as Dispersion Area (C=0.30)		sq-ft
Dispersion Area, Tree Well & Rain Barrel Inputs (Optional)	10	Does Tributary Incorporate Dispersion, Tree Wells, and/or Rain Barrels?	No	yes/no
	11	Impervious Surfaces **Directed to Dispersion Area** per SD-B (Ci=0.90)		sq-ft
	12	Semi-Pervious Surfaces **Serving as Dispersion Area** per SD-B (Ci=0.30)		sq-ft
	13	Engineered Pervious Surfaces **Serving as Dispersion Area** per SD-B (Ci=0.10)		sq-ft
	14	Natural Type A Soil **Serving as Dispersion Area** per SD-B (Ci=0.10)		sq-ft
	15	Natural Type B Soil **Serving as Dispersion Area** per SD-B (Ci=0.14)		sq-ft
	16	Natural Type C Soil **Serving as Dispersion Area** per SD-B (Ci=0.23)		sq-ft
	17	Natural Type D Soil **Serving as Dispersion Area** per SD-B (Ci=0.30)		sq-ft
	18	Number of Tree Wells Proposed per SD-A		#
	19	Average Mature Tree Canopy Diameter		ft
	20	Number of Rain Barrels Proposed per SD-E		#
	21	Average Rain Barrel Size		gal
Initial Runoff Factor Calculation	22	Total Tributary Area	6,772	sq-ft
	23	Initial Runoff Factor for Standard Drainage Areas	0.82	unitless
	24	Initial Runoff Factor for Dispersed & Dispersion Areas	0.00	unitless
	25	Initial Weighted Runoff Factor	0.82	unitless
	26	Initial Design Capture Volume	310	cubic-feet
Dispersion Area Adjustments	27	Total Impervious Area Dispersed to Pervious Surface	0	sq-ft
	28	Total Pervious Dispersion Area	0	sq-ft
	29	Ratio of Dispersed Impervious Area to Pervious Dispersion Area	n/a	ratio
	30	Adjustment Factor for Dispersed & Dispersion Areas	1.00	ratio
	31	Runoff Factor After Dispersion Techniques	0.82	unitless
	32	Design Capture Volume After Dispersion Techniques	310	cubic-feet
Tree & Barrel Adjustments	33	Total Tree Well Volume Reduction	0	cubic-feet
	34	Total Rain Barrel Volume Reduction	0	cubic-feet
Results	35	Final Adjusted Runoff Factor	0.82	unitless
	36	Final Effective Tributary Area	5,553	sq-ft
	37	Initial Design Capture Volume Retained by Site Design Elements	0	cubic-feet
	38	Final Design Capture Volume Tributary to BMP	310	cubic-feet

Automated Worksheet B.2: Retention Requirements (V2.0)

Category	#	Description	*i*	Units
Basic Analysis	1	Drainage Basin ID or Name	1	unitless
	2	85th Percentile Rainfall Depth	0.67	inches
	3	Predominant NRCS Soil Type Within BMP Location	C	unitless
	4	Is proposed BMP location Restricted or Unrestricted for Infiltration Activities?	Restricted	unitless
	5	Nature of Restriction	Groundwater	unitless
	6	Do Minimum Retention Requirements Apply to this Project?	Yes	yes/no
	7	Are Habitable Structures Greater than 9 Stories Proposed?	No	yes/no
Advanced Analysis	8	Has Geotechnical Engineer Performed an Infiltration Analysis?	No	yes/no
	9	Design Infiltration Rate Recommended by Geotechnical Engineer		in/hr
Result	10	Design Infiltration Rate Used To Determine Retention Requirements	0.000	in/hr
	11	Percent of Average Annual Runoff that Must be Retained within DMA	1.5%	percentage
	12	Fraction of DCV Requiring Retention	0.01	ratio
	13	Required Retention Volume	3	cubic-feet

No Warning Messages

Automated Worksheet B.3: BMP Performance (V2.0)

Category	#	Description	*i*	Units
BMP Inputs	1	Drainage Basin ID or Name	1	sq-ft
	2	Design Infiltration Rate Recommended	0.000	in/hr
	3	Design Capture Volume Tributary to BMP	310	cubic-feet
	4	Is BMP Vegetated or Unvegetated?	Vegetated	unitless
	5	Is BMP Impermeably Lined or Unlined?	Lined	unitless
	6	Does BMP Have an Underdrain?	Underdrain	unitless
	7	Does BMP Utilize Standard or Specialized Media?	Standard	unitless
	8	Provided Surface Area	165	sq-ft
	9	Provided Surface Ponding Depth	4	inches
	10	Provided Soil Media Thickness	21	inches
	11	Provided Gravel Thickness (Total Thickness)	15	inches
	12	Underdrain Offset	3	inches
	13	Diameter of Underdrain or Hydromod Orifice (Select Smallest)	8.00	inches
	14	Specialized Soil Media Filtration Rate		in/hr
	15	Specialized Soil Media Pore Space for Retention		unitless
	16	Specialized Soil Media Pore Space for Biofiltration		unitless
	17	Specialized Gravel Media Pore Space		unitless
Retention Calculations	18	Volume Infiltrated Over 6 Hour Storm	0	cubic-feet
	19	Ponding Pore Space Available for Retention	0.00	unitless
	20	Soil Media Pore Space Available for Retention	0.05	unitless
	21	Gravel Pore Space Available for Retention (Above Underdrain)	0.00	unitless
	22	Gravel Pore Space Available for Retention (Below Underdrain)	0.40	unitless
	23	Effective Retention Depth	2.25	inches
	24	Fraction of DCV Retained (Independent of Drawdown Time)	0.10	ratio
	25	Calculated Retention Storage Drawdown Time	120	hours
	26	Efficacy of Retention Processes	0.12	ratio
	27	Volume Retained by BMP (Considering Drawdown Time)	37	cubic-feet
	28	Design Capture Volume Remaining for Biofiltration	273	cubic-feet
Biofiltration Calculations	29	Max Hydromod Flow Rate through Underdrain	2.7872	cfs
	30	Max Soil Filtration Rate Allowed by Underdrain Orifice	729.74	in/hr
	31	Soil Media Filtration Rate per Specifications	5.00	in/hr
	32	Soil Media Filtration Rate to be used for Sizing	5.00	in/hr
	33	Depth Biofiltered Over 6 Hour Storm	30.00	inches
	34	Ponding Pore Space Available for Biofiltration	1.00	unitless
	35	Soil Media Pore Space Available for Biofiltration	0.20	unitless
	36	Gravel Pore Space Available for Biofiltration (Above Underdrain)	0.40	unitless
	37	Effective Depth of Biofiltration Storage	13.00	inches
	38	Drawdown Time for Surface Ponding	1	hours
	39	Drawdown Time for Effective Biofiltration Depth	3	hours
	40	Total Depth Biofiltered	43.00	inches
	41	Option 1 - Biofilter 1.50 DCV: Target Volume	409	cubic-feet
	42	Option 1 - Provided Biofiltration Volume	409	cubic-feet
	43	Option 2 - Store 0.75 DCV: Target Volume	204	cubic-feet
	44	Option 2 - Provided Storage Volume	179	cubic-feet
	45	Portion of Biofiltration Performance Standard Satisfied	1.00	ratio
Result	46	Do Site Design Elements and BMPs Satisfy Annual Retention Requirements?	Yes	yes/no
	47	Overall Portion of Performance Standard Satisfied (BMP Efficacy Factor)	1.00	ratio
	48	**Deficit of Effectively Treated Stormwater**	**0**	cubic-feet

Attention!

- BMPs sized at <3% of the effective tributary areas must be accompanied by Reduced Size BMP Maintenance calculations (see last tab).

Automated Worksheet B.4: Reduced Size BMP Maintenance Interval (V2.0)

Category	#	Description	*i*	Units
Drainage Basin Info	1	Drainage Basin ID or Name	1	unitless
	2	Final Effective Tributary Area	5,553	sq-ft
	3	Provided BMP Surface Area	165	sq-ft
Biofiltration Clogging Inputs	4	Average Annual Precipitation	10.0	inches
	5	Load to Clog (default =2.0)	2.0	lb/sq-ft
	6	TSS Pretreatment Efficacy		yes/no
	7	Percentage "Commercial"		percentage
	8	Percentage "Education"		percentage
	9	Percentage "Industrial"		percentage
	10	Percentage "Low Traffic Areas"		percentage
	11	Percentage "Multi-Family Residential"		percentage
	12	Percentage "Roof Areas"		percentage
	13	Percentage "Single Family Residential"		percentage
	14	Percentage "Transportation"	90%	percentage
	15	Percentage "Vacant/Open Space"	10%	percentage
	16	Percentage "Steep Hillslopes"		percentage
Result	17	Total Percentage of Above Land Uses	100%	percentage
	18	Average TSS Concentration for Tributary After Pretreatment	65	mg/L
	19	Average Annual Runoff Volume	4,628	cubic-feet
	20	Average Annual TSS Load	19	lb/yr
	21	Available Sediment Storage within BMP	330	lb
	22	Anticipated Major Maintenance Frequency	17.6	years

MEMORANDUM FOR RESTAURANT ROW PROJECT- BUILT ENVIRONMENT CEQA HISTORIC RESOURCES

To:	Sean del Solar, Senior Planner, City of San Marcos, email: sdelsolar@san-marcos.net
From:	Kathryn Haley, email: khaley@dudek.com; Nicole Frank, email: nfrank@dudek.com
Subject:	Memorandum for Restaurant Row Project – Built Environment CEQA Historic Resources
Date:	July 2023
cc:	Vanessa Scheidel, email: vscheidel@dudek.com
Attachment(s):	N/A

The project site consists of an approximately 10.5-acre area covering three parcels: 1020-1080 W San Marcos Boulevard (APNs 219-200-30, 31, and 45) known locally as, "Old California Restaurant Row." On May 19, 2023, Dudek Architectural Historian, Nicole Frank, MSHP, requested building permits for the existing buildings located in the project site through the City of San Marcos City Clerk Department. On June 5, 2023, the City's Clerk Department electronically provided Ms. Frank with an extensive file of building, plumbing, and electrical permits for the above-mentioned parcels (Request Number: PRA-2023-145). Using the requested permit records, the existing buildings located within the boundary of the proposed project site, have the following construction dates:

- APN 219-200-31-00, two buildings located on the parcel, one building was constructed in 1978 (Permit # 4487) and the other appears to date to 1994 (Permit # 22654)
- APN 219-200-45-00, one building constructed in 1978 (Permit # 4830)
- APN 219-200-30-00, no buildings are located on this parcel

The following text provides a summary of Dudek's efforts to identify known CEQA historical resources within the project site.

1 Records Search Review

In May 2022, Dudek archeologists submitted a record search request for the project site including a surrounding one-mile radius buffer. This request was conducted by the South Coastal Information Center (SCIC) staff. The

records search did not identify any previously recorded or evaluated archaeological sites or built environment building or structures within the proposed project site.

2 Built Environment Resource Directory

The Built Environment Resource Directory (BERD) files provide information, organized by county, regarding non-archaeological resources in the Office of Historic Preservation's (OHP) inventory. The OHP inventory contains information only for built environment resources that have been processed through the office. This includes resources reviewed for eligibility for the NRHP and the California Historical Landmarks programs through federal and state environmental compliance laws, and resources nominated under federal and state registration programs. The BERD replaces the former Historic Properties Directory (HPD) that previously provided evaluation status information for resources processed through the OHP.

Dudek accessed the San Diego BERD from OHP on May 24, 2023. The project site was searched for in the online BERD; no listing was found for the project site.

3 County of San Diego Historic Property List

Dudek accessed the County of San Diego's Historic Property List on May 24, 2023. The Historic Property List contains all properties located within unincorporated San Diego County identified as a historic resource prior to 2002 through 2022 as well as a list of qualified historic unreinforced masonry buildings. Despite the Project area being located within the City of San Marcos, the County's list includes properties located directly adjacent to or within some city boundaries and therefore required verification for listing of the project site. The project site was searched for in the online list; no listing was found for the project site.

4 City of San Marcos

According to the City of San Marcos Environmental Review and Sustainability website, as of 2009, many historical and archaeological resource sites have been identified within San Marcos. On May 25, 2023, Dudek Architectural Historian Nicole Frank, MSHP contacted Planning Director, Joseph Farace, in reference to these known resource sites in relationship to the project site. Mr. Farace sent a copy of Resolution No. 2005-6539, adopted by the San Marcos of City Council, establishing a Mills Act Program in the city. The resolution identified additional historically significant structures and sites in the city that are qualified to participate in the Mills Act program. Dudek reviewed all of this data and confirmed that no previously identified Historic Structure or Site of San Marcos has been identified within the project site boundary.

5 Summary

There are buildings located in the proposed project site associated with "Old California Restaurant Row" that appear to date to 1978 which as of 2023 makes them 45 years old (APN 219-200-31-00 and APN 219-200-45-00). As summarized above, no previously identified built environment cultural resources including the extant buildings located within the project site have been previously recorded, evaluated, considered eligible, or were found during

research to be formally listed in a federal, state, or local register. As the CEQA Lead Agency, the City has determined that no further documentation or consideration under CEQA for the existing buildings located within the project site is required. In consideration of these factors, there are no known historical resources for the purposes of CEQA located within the project site.
