Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CHURCHS PEST REMOVERS (Continued) **1000354485**

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Last Updated: 2022-01-07T01:00:52.000
Chemical Name: Sulfur, micronized
Common Name: Microthiol Disperss
Case Number: 7704-34-9

Record ID: DEH2009-HUPFP-210762
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2022-HCHEM-0317266
Trade Secret: N
Hazardous Material Type: Mixture
Last Updated: 2022-01-07T01:00:52.000
Chemical Name: Potassium Bicarbonate
Common Name: MILSTOP
Case Number: Mixture

Record ID: DEH2009-HUPFP-210762
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2022-HCHEM-0317267
Trade Secret: N
Hazardous Material Type: Mixture
Last Updated: 2022-01-07T01:00:52.000
Chemical Name: Desinfectant
Common Name: Nacco San
Case Number: MIXTURE

Record ID: DEH2009-HUPFP-210762
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2022-HCHEM-0317268
Trade Secret: N
Hazardous Material Type: Mixture
Last Updated: 2022-01-07T01:00:52.000
Chemical Name: Cuprous Oxide
Common Name: Nordox 75WG
Case Number: 1317-39-1

Record ID: DEH2009-HUPFP-210762
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2022-HCHEM-0317269
Trade Secret: N
Hazardous Material Type: Mixture

PEP BOYS #1712 (Continued) **S103818030**

Site ID: 58613
Site Name: Pep Boys #1712
Violation Date: 07-27-2019
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Case Worker:	EM
RB Case Number:	Not reported
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	DEH2014-LSAM-000278
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Diesel
Site History:	This site is currently vacant land to be graded and developed by the city into a single span bridge on the northern portion of the site. This release was opened in 2014 due to elevated soil and groundwater samples with gasoline and diesel. Three phases of investigation were completed between October 2009 and April 2014. The elevated hydrocarbons in soil and groundwater were located in the area where five underground storage tanks and dispenser islands were removed in 1991. Five monitoring wells (MWs) were installed in October 2015. Three quarterly sampling events did not reveal any detectable levels of contaminants in groundwater. Figure 3 of the Second and Third Quarter Groundwater Monitoring Report shows the location of the five wells and groundwater flow direction. Figure 4 of that report shows historical concentrations of the MWs. It should be noted that the groundwater concentrations from B1-GW, B2-GW, B3-GW, B4-GW, B7-GW & B9-GW on Figure 4 are from soil boring grab groundwater samples taken in 2009 and are not considered to be representative groundwater concentrations at the site. The Second and Third Quarter 2016 Groundwater Monitoring Report dated November 11, 2016 included the evaluation and request for closure using the Low Threat Closure Policy (LTCP) closure because: Groundwater has not been impacted (soils-only case) based on the data from the five monitoring wells indicating Non Detect (ND) in all sampling events. There are no health risks to current structures since the site is a vacant lot. Soil impacts are limited to diesel. The consultant states that approximately 130 cubic yards of soil remains on site with over 100 mg/kg TPH. This soil is located in northern portion of the site in the area of the four former 12,000 gallon diesel tanks from 2' -7' bgs per Figures 4 & 5 of the 2016 Site Assessment Report. DEH concurs with the consultants conclusions and approves case closure by low risk criteria. Permit #DEH2017-LMWP-002801 was issued by DEH for destruction of the 5 wells associated with the site.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations Active Permits:

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV0226
Violation: HW NOT ACCUMULATED IN TANK/CONTAINER
Violation Citation: Did not accumulate waste in container or tank. 66262.34 (d)(2)
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV0234
Violation: FACILITY NOT OPERATED TO MINIM. RELEASE
Violation Citation: Did not maintain &/or operate facility to prevent release or fire. CFR 265.31
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV1711
Violation: INADEQ./NO ONSITE UNIT INSPECTION SCHED.
Violation Citation: Inadequate or no onsite written inspection schedule for containers, tanks, & equipment (must include inspections for safety equipment, emergency & security devices, specify problems checked for, and frequency of inspections). {For containers-CE: 25201.5(d)(4)&(5); CEL: 25201.14(c)(1); CA: 25200.3(c)(5); PBR: 67450.3(c)(8)(B) & 67450.3(c)(9)(A) & (D); 66265.15} (For tanks, also 66265.195)
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV1712
Violation: INADEQ./NO RECORDS OF UNIT INSPECTIONS
Violation Citation: Inadequate or no onsite records/logs of inspections conducted (must

RMP METAL FINISHING (Continued) **1001613135**

include dates, times, name of inspector, observations, and specifics of any needed repairs or corrective actions). (3 years for CE and PBR units, 5 years for CA). {CE: 25201.5(d)(4)&(5), 25201.14(c)(1); CA: 25200.3(c)(5)&(7); PBR: 67450.3(c)(8) & (9)(A) & (D), 66265.73(a)&(b)(1); 66265.15(b) & (d)}

Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV1716
Violation: INADEQ/NO WRITTEN UNIT OPERATING INSTR.
Violation Citation: Inadequate or no written operating instructions for treatment unit (must include for every unit: how to operate unit, how to perform waste treatment, and how to manage residuals AND records of the dates, volumes, and types of wastes treated). Records must be kept 3 years for CE; 5 years for CA; or until closure for PBR unit. {CE: 25201.5(d)(3)&(5); CEL: 25201.14(c)(1); CA: 25200.3(c)(6) & (7); PBR: 67450.3(c)(9)(D) and 66265.73(a) & (b)(1)}
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV1744
Violation: PHASE I ASSESSMENT NOT DONE/INADEQ.
Violation Citation: Phase I site assessment checklist not completed & filed (with DTSC) within one year of being authorized to operate unit. {CA: 25200.3(c)(3); PBR: 67450.7(a)(3); 25200.14(b)(1)}
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV1751
Violation: PBR NOTIFICATION NOT FILED/RENEWED
Violation Citation: PBR notification not renewed/filed annually (due by January 1) or sooner {if significant change(s) occurred}. {67450.3(c)(1) & (c)(2)}
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 08/09/2007
Violation Code: 6HV1756
Violation: WRITTEN ANALYSIS PLAN INADEQUATE/ABSENT
Violation Citation: Written waste analysis plan does not exist or is inadequate in specifying parameters of analysis, testing methods, frequency of analysis and sampling methods used to obtain representative samples. {66265.13(b) & 67450.3(c)(9)(A)}
Activity: ACTIVE

Permit Number: 108597
Update Date: 11/02/2012
Inspection Date: 07/13/2010
Violation Code: 6HV0224
Violation: MISMANAGED EMPTY CONTAINERS >5GALS.
Violation Citation: Failed to mark date on empty container larger than 5 gallons and/or

SOLID WASTE SERVICES (Continued) **S104234424**

CERS ID: 10375948
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 27461
Site Name: EDCO WASTE & RECYCLING SERVICE
Violation Date: 08-25-2021
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 09/23/2021. Inspection Sequence ID:6801228
Violation Division: San Diego County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Site ID: 27461
Site Name: EDCO WASTE & RECYCLING SERVICE
Violation Date: 01-25-2017
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to adequately discuss in the SPCC Plan facility drainage or drainage controls such as secondary containment around containers and other structures, equipment, and procedures for the control of a discharge.
Violation Notes: Returned to compliance on 02/13/2017.
Violation Division: San Diego County Department of Env Health
Violation Program: APSA
Violation Source: CERS,

Site ID: 27461

Violation Program: HW
Violation Source: CERS,

Site ID: 27461
Site Name: EDCO WASTE & RECYCLING SERVICE
Violation Date: 01-26-2016
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 01/26/2016.
Violation Division: San Diego County Department of Env Health

SOLID WASTE SERVICES (Continued) **S104234424**

Violation Program: UST
Violation Source: CERS,

Site ID: 27461
Site Name: EDCO WASTE & RECYCLING SERVICE
Violation Date: 01-30-2014
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Description: Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment: 1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order; 2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste; 3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design; 4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and 5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

SOLID WASTE SERVICES (Continued) **S104234424**

Violation Description:	Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Local Case Number: H05072-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: During routine pressure testing of fuel lines at a service station located at 145 Via Vera Cruz in San Marcos, California, a manhole cover was reportedly placed or dropped over a diesel turbine, causing a line leak detector to break. According to a report submitted by the consultant (Geocon), the break occurred in late October 1995, resulting in a calculated release of 3,800 gallons of diesel fuel over a four-month period. The leak detector was capped and repaired on February 20, 1996, and the release was reported to DEH. Geocon performed a soil and groundwater investigation at the site in January 1998. Ten direct-push borings were advanced at the site for the collection of soil samples and groundwater grab samples. Groundwater was not encountered in seven of the borings, which were advanced to a depth of 15 feet below ground surface; thus, three groundwater grab samples were collected. Total petroleum hydrocarbons (TPH) as diesel were detected in at least one soil sample collected from nine of the borings. TPH as diesel was detected in each of the grab groundwater samples. Although the samples were not tested for TPH as gasoline, aromatic hydrocarbons were detected in both soil and groundwater, as was methyl-tert-butyl ether (MTBE). Based on the consultants report, DEH opened an unauthorized release case on April 30, 1998. Three 12,000-gallon capacity, steel, gasoline underground storage tanks (USTs), one 12,000-gallon capacity, steel diesel UST, and one

CLARENCE OCHS OIL (Continued) **S100852026**

4,000-gallon capacity, steel holding tank, as well as associated dispensers and piping, were removed from the site on July 30, 1998. Thirteen soil samples were collected during the DEH tank removal inspection. Petroleum hydrocarbons were detected in three soil samples, each of which was collected beneath USTs at depths of 13 to 14 feet below ground surface (bgs). Ten additional soil samples were collected from the base and sidewalls of the UST excavation by the consultant (PIC Environmental Services, Inc.) on July 31, 1998. The excavation was enlarged and impacted soil was removed to maximum depths of 14 to 18 feet bgs until confirmation sample results for TPH as diesel were less than 500 milligrams per kilogram (mg/kg). Based on the soil sample results, 1,972 tons of impacted soil was removed from the excavation and disposed to an off-site bio-treatment facility in July and August 1998. Four groundwater monitoring wells were installed on the property in July 1999 using hollow-stem auger equipment. Groundwater sampling analytical results indicated the site chemicals of concern were aromatic hydrocarbons and the fuel oxygenates methyl-tert-butyl ether (MTBE) and tert-butyl alcohol (TBA). Water level data indicated that groundwater was approximately 7 to 12 feet below the top-of-casing reference points. A fifth groundwater monitoring well was installed on the property in March 2001. In order to assess if groundwater was impacted offsite, a boring was advanced on the west side of Via Vera Cruz in May 2002 to collect a groundwater grab sample. Additional off-site groundwater monitoring wells were installed in June 2008 and August 2011. Groundwater monitoring and sampling was performed until December 2011, when analytical data indicated the dissolved contaminant plume had been adequately delineated. Free product had been detected in one of the wells (MW-4) in September 2006 with an apparent thickness of 1.25 inches (approximately 0.10-foot) and was subsequently bailed manually until November 2006, when it was no longer detected. Approximately one gallon of free product had been removed by bailing. In June 2008, a hydrocarbon sheen was noted in MW-4. The apparent thickness of the free product increased to 1.39 feet when measured in September 2011. A pneumatic pump was used to extract 14.85 gallons of free product from the well until no measureable free product was observed in December 2011. A Corrective Action Plan CAP) was initially submitted to DEH in August 2005 that recommended remediation by natural attenuation. The initial CAP presented the results of vapor risk calculations for benzene and naphthalene in groundwater underlying an office/warehouse building on the property. The results were below the human health carcinogenic risk threshold. However, DEH did not approve the CAP citing the need for additional development of the site conceptual model. A revised CAP was submitted in June 2009. The revised CAP included an estimate of the volume of impacted soil remaining in place as approximately 900 cubic yards. The revised CAP also identified two production wells located within a half mile of the site. One of the wells is used for irrigation purposes and is located approximately 425 feet west of the site. The other well was formerly used for municipal supply purposes and is located over 2,000 feet south of the site. However, the well was taken off line about 20 years ago by the Vallecitos Water District due to odor and color concerns. Both of the production wells are screened more than 200 feet bgs. The revised CAP was not approved pending the installation of groundwater monitoring wells MW-8 and MW-9 in August 2011 and an updated site conceptual model. A CAP addendum was submitted in May 2012 that presented an updated site

CLARENCE OCHS OIL (Continued) **S100852026**

conceptual model that included trend analyses for benzene and MTBE concentrations detected in groundwater samples. The trend analyses indicated decreasing trends for both benzene and MTBE for samples collected from wells in the source area. Based on the trend analyses, MTBE concentrations are estimated to fall below its Secondary Maximum Contaminant Level (MCL) in approximately 20 years and benzene levels would drop below its MCL in approximately 100 years. The revised CAP and its addendum were approved on July 9, 2012. Based on the removal of petroleum hydrocarbon-impacted soil in the source area, the decreasing trends for benzene and MTBE concentrations in groundwater, and the lack of human health risk from ingestion of groundwater or from inhalation of vapor, DEH concurs with the CAPs recommendation for soil and groundwater remediation by natural attenuation and the consultants recommendations for no further action and case closure.

RB Case Number:	2090027
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Stoddard solvent / Mineral Spriits / Distillates

SPANJIAN/ DUFOUR (Continued) **S105692328**

Site History: The North County Factory Outlet site is occupied by a single story, high-bay type, office-warehouse-shop building with 106,157 square feet (ft2) of area and an attached 2-story parking garage with associated asphalt parking areas and driveways and surrounding landscaped areas. The Site was undeveloped land until it was developed beginning in 1970 with the new Spanjian Sportswear, Inc. facility. They built the facility and operated there from 1971 to 1985.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violation Date: 02-12-2014
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees

HUGHES CIRCUITS INC (Continued) **1007200409**

shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. The generator complies with section 66265.171, 66265.172, and 66265.173(a). The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words Hazardous Waste including specified information Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a 90 day accumulation area 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Violation Date: 02-12-2014
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 05/20/2014.
Violation Division: San Diego County Department of Env Health

Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. The generator complies with section 66265.171, 66265.172, and 66265.173(a). The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words Hazardous Waste including specified information Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a 90 day accumulation

HUGHES CIRCUITS INC (Continued) **1007200409**

area 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

leak.
Violation Notes: Returned to compliance on 07/22/2016. Inspection Sequence ID:4086966
Violation Division: San Diego County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Site ID: 37254
Site Name: HUGHES CIRCUITS INC
Violation Date: 02-12-2014
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Description: Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment: 1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order; 2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste; 3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design; 4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and 5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).
Violation Notes: Returned to compliance on 05/20/2014.

Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Evidence of a petroleum hydrocarbon release was reported by a County inspector during removal of an underground storage tank (UST) system on May 1, 1990. Soil discoloration was observed by the inspector and hydrocarbon odors were noted as emanating from the excavation; however, no soil samples were collected from the excavation immediately following the removal of the 2,000-gallon capacity, gasoline UST and its associated dispenser. [It should be noted that a purported gasoline distribution pipeline from the UST to the warehouse/office building onsite was not removed]. The UST excavation was subsequently widened and deepened based on soil sample analytical results: if the detected gasoline concentration in a soil sample exceeded 100 milligrams per kilogram, the consultant (Geocon Environmental Consultants, Inc.) directed that additional excavation be performed. The northeastern portion of the excavation generally yielded the highest gasoline concentrations; as a result, the eastern wall of the excavation was extended two to three feet eastward beneath a concrete block building on the immediately adjoining property. Based on analytical results for soil samples collected from horizontal and vertical hand-auger borings advanced into the eastern sidewall and floor of the excavation, respectively, Geocon concluded that the extent of petroleum-impacted soils is limited in horizontal and vertical extent to less than 5 feet [into] the northeastern portion of the east wall and [below} the bottom of the excavation. A temporary groundwater monitoring well was installed to a depth of 31 feet below ground surface (bgs) near the southeastern corner of the excavated area on August 31, 1990. Gasoline and its aromatic hydrocarbon constituents (benzene, toluene, ethylbenzene, and xylenes [BTEX]) were not detected in the groundwater grab sample collected from the temporary well on September 5, 1990. Based on these results and the soil removal in the source area, DEH issued a letter on February 8, 1991, stating that no further action was required. A Phase II environmental site assessment was performed in June 2007 by

SCHMID INSULATION CONTRACTORS (Continued) **U001572227**

Odic Environmental in association with a real estate transaction. Six borings were advanced in former UST area to depths ranging from 15 to 30 feet bgs. Groundwater was encountered in one boring and a temporary well was installed. Depth to water in the temporary well was measured as 11.40 feet bgs and a grab groundwater sample was collected. Each of the BTEX compounds was detected at concentrations in excess of their respective Maximum Contaminant Levels (MCLs) for drinking water. Naphthalene, as well as volatile organic compounds indicative of weathered gasoline, were also detected in the sample. The detection of benzene in groundwater prompted DEH to re-open the case due to concerns of potential vapor migration into the previously-described building on the adjoining property. No subsequent site assessment activities have been performed.

Case Worker: KK
RB Case Number: Not reported
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H20785-002
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline
Site History: On May 15, 2003, the Department of Environmental Health (DEH) directed soil sampling associated with the replacement of product piping and dispenser pans at this unmanned commercial fueling facility. The resulting analytical data indicated a release of hydrocarbons had occurred at the site and DEH subsequently opened unauthorized release case H20785-002 and required that hydrocarbon impacts be assessed. As a result, three monitoring wells and one boring were installed at the site to assess sorbed- and dissolved-phase hydrocarbons. Hydrocarbon-impacted soil was primarily observed in the vicinity of the northern dispenser islands with concentrations of total petroleum hydrocarbons as gasoline and methyl tertiary butyl ether (MTBE) detected at 150 and 0.820 milligrams per kilogram (mg/kg), respectively. The consultant estimated that approximately 50 cubic yards of hydrocarbon-impacted soil above 100 mg/kg remain in the central portion of the site. Dissolved-phase hydrocarbons have primarily been observed in only one monitoring well in the eastern central portion of the site. Dissolved-phase hydrocarbon impacts have generally been limited to MTBE, and its breakdown product tertiary butyl alcohol, with concentrations as high as 990 and 26 micrograms per liter (%g/l), respectively. Groundwater sampling indicates that dissolved-phase hydrocarbon impacts are limited and confined to the site boundaries. A natural attenuation evaluation was conducted at the site. Based on trend analysis conducted with site specific data, the consultant determined that natural attenuation is an effective mitigation strategy and estimates that MTBE will reach the secondary maximum contaminant level (MCL) of 5 %g/l within approximately 20 years or by the year 2030. The consultant contacted the local water purveyor, Vallecitos Water District, to inquire on the potential use of groundwater in the

SKS INC. (Continued) **S100274033**

vicinity of the site on August 16, 2011. According to Larry Gastar of the Engineering Department, the Vallecitos Water District imports all of their water and does not utilize groundwater within their service area. There are currently no plans to utilize groundwater in the future. The consultant conducted an exposure pathway evaluation for the site, which is an unmanned commercial fueling facility. Based on the evaluation of the site in its existing condition and considering that the contaminants do not appear to extend offsite, the consultant concluded that human health and the environment are adequately protected. The consultant prepared a corrective action plan for the site and notified the public, including surrounding property owners and other interested parties, of the recommendation to implement natural attenuation and close the associated DEH case. Based on the provided data, DEH agrees with the consultants recommendation for no further action and regulatory case closure.

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Diesel
Site History: Four 12,000-gallon underground storage tanks (USTs) which contained gasoline and diesel were located in the central portion of the subject property. Three fuel dispenser islands were located to the north of the USTs, and four dispenser islands were located to the south of the USTs. An unauthorized release of petroleum hydrocarbons was discovered when the USTs and associated pipelines were removed on May 24, 2016.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
