SUSTAINABLE SANTEE ACTION PLAN

CONSISTENCY CHECKLIST

Sustainable Santee Action Plan Consistency and Implementation Tracking Checklist

The Sustainable Santee Action Plan Project Consistency Checklist (Checklist) is intended to be a tool for development projects to demonstrate consistency with Santee's (City's) Sustainable Santee Action Plan, which is a qualified greenhouse gas (GHG) emissions reduction plan in accordance with California Environmental Quality Act (CEQA) Guidelines Section 15183.5. This Checklist has been developed as part of the Sustainable Santee Action Plan implementation and monitoring process and will support the achievement of individual GHG reduction measures as well as the City's overall GHG reduction goals. In addition, this Checklist will further the City's sustainability goals and policies that encourage sustainable development and aim to conserve and reduce the consumption of resources, such as energy and water, among others.

CEQA Guidelines Section 15183.5 allows lead agencies to analyze the impacts associated with GHG emissions at a programmatic level in plan-level documents such as Climate Action Plans or sustainability plans, so that project-level environmental documents may tier from the programmatic review. Projects that meet the requirements of this Checklist will be deemed to be consistent with the Sustainable Santee Action Plan and will be found to have a less than significant contribution to cumulative GHG (i.e., the project's incremental contribution to cumulative GHG effects is not cumulatively considerable), pursuant to CEQA Guidelines Sections 15064(h)(3), 15130(d), and 15183(b). Projects that do not meet the requirements in this Checklist will be deemed to be inconsistent with the Sustainable Santee Action Plan and must prepare a project-specific analysis of GHG emissions, including quantification of existing and projected GHG emissions and incorporation of the measures in this Checklist to the extent feasible. This GHG Checklist can be updated to reflect adoption of new GHG reduction strategies or to comply with any changes and updates in the Plan or local, State or federal regulations.

1. Project Information	
Contact Information	
Project No./Name:	Palisade Santee Commerce Center Project
Address:	10990 N. Woodside Avenue
Applicant Name:	North Palisades Partners
Contact Information:	William Jacobs, Senior Development Manager
Project Description Characteristics	
1. What is the size of the Project (acres)?	13.49
2. Identify all Applicable Proposed Land uses:	Warehousing and Distribution
a. Residential-Single Family (Indicate number of single-family units)	N/A
b. Residential-Multifamily (Indicate number of multifamily units)	N/A
c. Commercial (total square footage)	300,145
d. Industrial (total square footage)	
e. Other (describe)	
3. Provide a brief description of the project proposed:	The Project would include 291,290SF of warehouse and 10,000SF of associated office space.

2. Determining Land Use Consistency		
Checklist Item		
As the first step in determining the consistency with the Sustainable Santee Action Plan for the discretionary development projects, this section allows the City to determine the project's consistency with the land use assumptions used in the Plan.		
	Yes	**No**
1. Is the proposed project consistent with the existing General Plan and land use zoning designations? OR	X	
2. If the proposed project is not consistent with the existing land use plan and zoning designations, does the project include a land use plan and/or zoning designation amendment that is identified in the Sustainable Santee Action Plan Land Use Buffer (see Appendix A, Table 11)?		
3. If the proposed project is not consistent with the existing land use plan, zoning designations, or Land Use Buffer, does the project include a land use plan and/or zoning designation ammendment that will result in an equivalent or less GHG-intensive project when compared to the existing designations?		

Notes:

For questions 1, if the answer is **Yes**, proceed to the Sustainable Santee Action Plan Consistency Checklist. If the answer is **No**, procced to question 2.

For question 2, if the answer is **Yes**, proceed to the Sustainable Santee Action Plan Consistency Checklist. If the answer is **No**, proceed to question 3.

For question 3, if the answer is **Yes** provide estimated project emissions under both existing and proposed designation (s) for comparison. Compare the maximum buildout of the existing designation and the maximum buildout of the proposed designation. If the answer of question 3 is **No** then, in accordance with the City's Significance Determination Thresholds, the project's GHG impact may be significant. The project must nonetheless incorporate each of the applicable measures identified in the Checklist to mitigate cumulative GHG emissions impacts unless the decision maker finds that a measure is infeasible in accordance with CEQA Guidelines Section 15091.

Sustainable Santee Action Plan CEQA Project Consistency Checklist					Notes
Greenhouse Gas Reduction Measure	**Measure Applicability**				This checklist is to be filled out by the applicant
	Yes	**No**	**N/A**	**Description**	
Emissions Measures Category: Energy Efficiency					
Land Use Sector-Residential					Measure 1.1 is not on checklist because it focuses on minor residental alterations not subject to CEQA
Goal 1. Increase Energy Efficiency in Existing Residential Units					
Measure 1.2. For existing Residential Unit Permit for Major Modifications (more than 30% of dwelling unit size, including bathroom and kitchen) that is considered a Project under CEQA must implement energy efficiency retrofits recommended from City Energy Audit and explain the energy efficiency retrofits implemented.			X	The project does not include residential units.	Measure 1.2 only applies if alteration is subject to CEQA
Goal 2. Increase Energy Efficiency in the New Residential Units					
Measure 2.1. New residential construction meet or exceed California Green Building Standards Tier 2 Voluntary Measures, such as obtaining green building ratings including LEED, Build it Green, or Energy Star Certified building certifications in scoring development and explain the measures implemented.			X	The project does not include residential units.	
Land Use Sector-Commercial					Measure 3.1 is not on checklist because it focuses on minor alterations which are not subject to CEQA
Goal 3. Increase Energy Efficiency in Existing Commercial Units					
Measure 3.2. For existing commercial units of 10,000 sq. ft. or more seeking building permits for modifications representing 30% or more sq. ft, and considered a Project under CEQA must implement energy efficiency retrofits recommended by the City to meet California Green Building Standards Tier 1 Voluntary Measures and explain the retrofits implemented.			X	The project does not include existing commercial units	Measure 3.2 only applies if alteration is subject to CEQA
Goal 4. Increase Energy Efficiency in New Commercial Units					
Measure 4.1. New commercial units meet or exceed California Green Building Standards Tier 2 Voluntary Measures such as obtain green building ratings including: LEED, Build it Green, or Energy Star Certified buildings certifications in scoring development and explain the measures implemented.	X			The Project will meet or exceed CALGreen Tier 2 Standards in effect at the time of building permit application. Documentation shall be provided to the City demonstrating that the Project meets this requirement prior to the issuance of building permits.	
Emissions Measures Category: Advanced Goals Measures					
Land Use Sector-Commercial					
Goal 5. Decrease Energy Demand through Reducing Urban Heat Island Effect					
Measure 5.1. Project utilizes tree planting for shade and energy efficiency such as tree planting in parking lots and streetscapes.	X			See Figure 3-9 of the Landscape Plan. Landscaping proposed for the passenger parking area and around portions of the building as well as site frontages. Includes trees, shrubs, and cover.	
Measure 5.2. Project uses light-reflecting surfaces such as enhanced cool roofs on commercial buildings.	X			Roof structures shall be designed to include "cool roof" materials with a minimum aged reflectance and thermal emittance values equal to or greater than current CALGreen Table A5.106.11.3, Tier 1.	
Emissions Measures Category: Transportation					
Land Use Sector-Residential and Commercial					
Goal 6. Decrease GHG Emissions through a Reduction in VMT					
Measure 6.1. Proposed project streets include sidewalks, crosswalks, and other infrastructure that promotes non-motorized transportation options.	X			The Project includes street, sidewalk, and landscaping improvments, as shown on Figure 3-7, Conceptual Site Plan.	
Measure 6.2. Proposed project installs bike paths to improve bike transit.			X	The Project is a commercial warehouse	

X

Item 3 Attachment 1 ECCV Capable Stall

Land Use Sector-Residential and Commercial					
Goal 7: Increase Use of Electric Vehicles					
Measure 7.1. Install electric vehicle chargers in all new residential and commercial developments.	X			The Project includes 16 EVCS (EV Capable Stall with EVSE). See site plan	
a. For new Single-Family Residential, install complete 40 Amp electrical service and one e-charger.			X	The Project does not include residential units	
b. For new Multifamily Residential, install e-chargers for 13 percent of total parking.			X	The Project does not include residential units	
c. For new Office Space, Regional Shopping Centers, and Movie Theaters, install e-chargers for 5 percent of total parking spaces.			X	The Project is a commercial warehouse	
d. For new Industrial and other Land Uses employing 200 or more employees, install e-charges for 5 percent of total parking spaces.	X			The Project includes 301 total parking spaces. 301 x 0.05 = 15 spaces. The Project includes 16 EVCS with EVSE.	
Land Use Sector-Residential and Commercial					
Goal 8. Improve Traffic Flow					
Measure 8.1. Implement traffic flow improvement program.			x	The Project does not include traffic controls	Projects that include traffic controls need to show consistency with one of these
a. Install smart traffic signals at intersections warranting a traffic signal, OR			x		
b. Install roundabout.			x	.	
Emissions Measures Category: Solid Waste					
Land Use Sector-Residential and Commercial					
Goal 9: Decrease GHG Emissions through Reducing Solid Waste Generation					
Measure 9.1. Reduce waste at landfills.	X			The Project will include storage areas for recyclables and green waste as well as food waste	
waste.					
Emissions Measures Category: Clean Energy					
Land Use Sector-Residential and Commercial					
Goal 10. Decrease GHG Emissions through Increased Clean Energy Use					
Measure 10.1. Increase distributed energy generation within City of Santee by implementing the following applicable photovoltaic solar systems:					
a. Single-family residential to install at least 2kW per unit of PV solar systems, unless the installation is infeasible due to poor solar resources established in a solar feasibility study prepared by a qualified solar consultant submitted with an application			X	The Project does not include residential units	
b. Multifamily residential to install at least 1kW per unit of PV solar systems, unless the installation is infeasible due to poor solar resources established in a solar feasibility study prepared by a qualified solar consultant submitted with an applicant's formal project submittal to City.			X	The Project does not include residential units	
c. On commercial buildings, install at least 2 kW per square foot of building area (e.g., 2,000 sq. ft. = 3 kW) unless the installation is infeasible due to poor solar resources.	X			The Project will include 450 kW of solar PV based on 300,145 SF / (2,000SF / 3 kW)

1 Introduction

This Biological Technical Report describes the existing biological conditions of the site proposed for the Santee Commerce Center (Project) within the City of Santee, California. Included in this report are a discussion of the biological survey methods and results, and the impacts to vegetation communities and potential special-status species evaluated under the California Environmental Quality Act (CEQA), the San Diego Multiple Species Conservation Program (MSCP) Plan (City of San Diego 1998), the Draft Santee MSCP Subarea Plan (City of Santee 2023), and the state and federal Endangered Species Acts. Additionally, measures are recommended to avoid, minimize, or mitigate potential impacts, where feasible, to less-than-significant levels.

1.1 Project Location and Description

The approximately 13.49-acre Project site is in the southeastern part of the City of Santee, which is within the East County region of San Diego County, as shown in Figure 1, Project Location. The Project site is at 10990 N. Woodside Avenue and is bound by the San Diego River to the north, the existing Santee Drive-In driveway to the east and west, and Wheatlands Avenue to the south. The Project site is in Section 23 of Township 15 South, Range 1 West, as depicted on the U.S. Geological Survey El Cajon, California 7.5-minute topographic quadrangle map. The Assessor's Parcel Number of the Project site is 381-070-5200.

Project site is currently a developed parking lot with a two-screen drive-in theater and a building containing restrooms and a snack bar. The Project site boundary extends slightly beyond the pavement into the undeveloped area approximately 20 to 30 feet above the San Diego River corridor. The proposed Project would involve demolition of all existing on-site structures and construction of a 300,145-square-foot industrial/warehousing building. The Project would include 290,145 square feet of warehouse space and 10,000 square feet of office space. In addition to the industrial building, the Project would include up to 42 dock-high doors, 4 grade-level doors, 2 truck courts, and up to 301 passenger-vehicle parking spaces; 30- and 40-foot-wide fire access lanes along the building perimeter; landscaping; and fencing along portions of the developed perimeter with automated gates at certain driveway locations. The Project would also include associated utility, stormwater treatment, and roadway improvements.

INTENTIONALLY LEFT BLANK

2 Regulatory Setting

2.1 Federal

2.1.1 Federal Endangered Species Act

The federal Endangered Species Act (FESA) of 1973 (16 USC 1531 et seq.), as amended, is administered by the U.S. Fish and Wildlife Service (USFWS) for most plant and animal species, and by the National Oceanic and Atmospheric Administration National Marine Fisheries Service for certain marine species. This legislation is intended to provide a means to conserve the ecosystems upon which endangered and threatened species depend, and provide programs for the conservation of those species, thus preventing the extinction of plants and wildlife. FESA defines an endangered species as "any species that is in danger of extinction throughout all or a significant portion of its range." A threatened species is defined as "any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." Under FESA, it is unlawful to "take" any listed species; "take" is defined as, "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct."

FESA allows for the issuance of incidental take permits for listed species under Section 7, which is generally available for projects that also require other federal agency permits or other approvals, and under Section 10, which provides for the approval of habitat conservation plans on private property without any other federal agency involvement.

2.1.2 Migratory Bird Treaty Act

The Migratory Bird Treaty Act prohibits the intentional and unintentional take of any migratory bird or any part, nest, or eggs of any such bird. Under the Migratory Bird Treaty Act, "take" is defined as pursuing, hunting, shooting, capturing, collecting, or killing, or attempting to do so (16 USC 703 et seq.). Currently, the Migratory Birds office considers nests that support eggs, nestlings, or juveniles to be active. Additionally, Executive Order 13186, Responsibilities of Federal Agencies to Protect Migratory Birds, requires that any project with federal involvement address impacts of federal actions on migratory birds with the purpose of promoting conservation of migratory bird populations (66 FR 3853–3856). Executive Order 13186 requires federal agencies to work with USFWS to develop a memorandum of understanding. USFWS reviews actions that might affect these species.

2.1.3 Clean Water Act

The Clean Water Act (CWA) provides guidance for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters. Section 401 requires a project operator for a federal license or permit that allows activities resulting in a discharge to waters of the United States to obtain state certification, thereby ensuring that the discharge will comply with provisions of the CWA. The Regional Water Quality Control Boards (RWQCBs) administer the certification program in California. Section 402 establishes a permitting system for the discharge of any pollutant (except dredged or fill material) into waters of the United States. Section 404 establishes a permit program administered by the U.S. Army Corps of Engineers (USACE) that regulates the discharge of dredged or fill material into waters of the United States, including wetlands. USACE implementing regulations are found in the Code of Federal Regulations (CFR) at 33 CFR Parts 320 to 332. Guidelines for implementation are referred to as the Section 404(b)(1) Guidelines, which were developed by the U.S. Environmental Protection Agency in

conjunction with USACE (40 CFR 230). The guidelines allow the discharge of dredged or fill material into the aquatic system only if there is no practicable alternative that would have less adverse impacts.

Wetlands and Other Waters of the United States

Based on a recent court case ordering vacation of the Navigable Waters Protection Rule, USACE and the U.S. Environmental Protection Agency have halted implementation of the rule and are interpreting waters of the United States consistent with the pre-2015 regulatory regime until further notice. Per 33 CFR 328.3(a), waters of the United States are defined as follows:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
2. All interstate waters including interstate wetlands;
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
    a. Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
    b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
    c. Which are used or could be used for industrial purposes by industries in interstate commerce;
4. All impoundments of waters otherwise defined as waters of the United States under this definition;
5. Tributaries of waters identified in paragraphs (a)(1) through (4) of this section;
6. The territorial seas;
7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a)(1) through (6) of this section; and
8. Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA [the Clean Water Act] (other than cooling ponds as defined in 40 CFR 423.11(m) which also meet the criteria of this definition) are not waters of the United States.

The USACE/U.S. Environmental Protection Agency Rapanos Guidance states that USACE will regulate traditional navigable waters and adjacent wetlands, and relatively permanent waters tributary to traditional navigable waters and adjacent wetlands. Non-relatively permanent waters (those exhibiting less than 3 months of continuous surface flows) and their adjacent wetlands would be regulated if there is a significant nexus from the site to traditional navigable waters.

The State Water Resources Control Board has authority over wetlands through Section 401 of the CWA, as well as the Porter–Cologne Water Quality Control Act (Porter–Cologne Act), California Code of Regulations Section 3831(k), and California Wetlands Conservation Policy. The CWA requires that an applicant for a Section 404 permit (to discharge dredge or fill material into waters of the United States) first obtain certification from the appropriate state agency stating that the fill is consistent with the state's water quality standards and criteria. In California, the authority to either grant certification or waive the requirement for permits is delegated by the State Water Resources Control Board to the nine RWQCBs. A request for certification is submitted to the RWQCB at the same time that an application is filed with USACE.

2.2 State

2.2.1 California Endangered Species Act

The California Endangered Species Act (CESA) (California Fish and Game Code Sections 2050–2068) provides protection for and prohibits the take of plant, fish, and wildlife species listed by the State of California. Unlike FESA, under CESA, state-listed plants have the same degree of protection as wildlife, but insects and other invertebrates may not be listed. Take is defined similarly to FESA and is prohibited for both listed and candidate species. Take authorization may be obtained by a project applicant from the California Department of Fish and Wildlife (CDFW) under CESA Section 2081, which allows take of a listed species for educational, scientific, or management purposes. In this case, developers consult with CDFW to develop a set of measures and standards for managing the listed species, including full mitigation for impacts, funding of implementation, and monitoring of mitigation measures.

2.2.2 California Fish and Game Code

Fully Protected Species

Sections 3511, 4700, 5050, and 5515 of the California Fish and Game Code outline protection for fully protected species of mammals, birds, reptiles, amphibians, and fish. Species that are fully protected by these sections may not be taken or possessed at any time. CDFW cannot issue permits or licenses that authorize the "take" of any fully protected species, except under certain circumstances, such as scientific research and live capture and relocation of such species pursuant to a permit for the protection of livestock. On July 10, 2023, Senate Bill 147 was signed into law and amends the California Fish and Game Code to allow a 10-year permitting mechanism for a defined set of projects within the renewable energy, transportation, and water infrastructure sectors. Furthermore, it is the responsibility of the CDFW to maintain viable populations of all native species. Toward that end, CDFW has designated certain vertebrate species as Species of Special Concern, because declining population levels, limited ranges, and/or continuing threats have made them vulnerable to extinction.

Sections 1600–1616

CDFW jurisdiction includes ephemeral, intermittent, and perennial watercourses (including dry washes) and lakes characterized by the presence of (1) definable bed and banks and (2) existing fish or wildlife resources. CDFW takes jurisdiction to the top of bank of the stream, or the limit of the adjacent riparian vegetation, which may include oak woodlands in canyon bottoms. Historical court cases have further extended CDFW jurisdiction to include watercourses that seemingly disappear but reemerge elsewhere. Under the CDFW definition, a watercourse need not exhibit evidence of an ordinary high-water mark to be claimed as jurisdictional. CDFW does not have jurisdiction over ocean or shoreline resources.

Under California Fish and Game Code Sections 1600–1616, CDFW has the authority to regulate work that will substantially divert or obstruct the natural flow of, or substantially change or use any material from, the bed, channel, or bank of any river, stream, or lake. CDFW also has the authority to regulate work that will deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. This regulation takes the form of a requirement for a Lake or Streambed Alteration Agreement and is applicable to all projects. Applications to CDFW must include a complete certified CEQA document.

California Native Plant Protection Act

The Native Plant Protection Act of 1977 (see Section 1900 et seq. of the California Fish and Game Code) directed CDFW to carry out the Legislature's intent to "preserve, protect and enhance rare and endangered plants in this State." The Native Plant Protection Act gave the California Fish and Game Commission the power to designate native plants as "endangered" or "rare" and protect endangered and rare plants from take. CESA expanded on the original Native Plant Protection Act and enhanced legal protection for plants, but the Native Plant Protection Act remains part of the California Fish and Game Code. To align with federal regulations, CESA created the categories of "threatened" and "endangered" species. It converted all "rare" animals into the act as threatened species but did not do so for rare plants. Thus, there are three listing categories for plants in California: rare, threatened, and endangered. Because rare plants are not included in CESA, mitigation measures for impacts to rare plants are specified in a formal agreement between CDFW and the project proponent.

Nesting Birds

Section 3503 of the California Fish and Game Code states that it is unlawful to take, possess, or needlessly destroy the nests or eggs of any bird, except as otherwise provided by this code or any regulation made pursuant thereto. Section 3503.5 protects all birds of prey (raptors) and their eggs and nests. Section 3511 states that fully protected birds or parts thereof may not be taken or possessed at any time. Section 3513 states that it is unlawful to take or possess any migratory non-game bird as designated in the Migratory Bird Treaty Act.

2.2.3 California Environmental Quality Act

CEQA requires identification of a project's potentially significant impacts on biological resources and ways that such impacts can be avoided, minimized, or mitigated. CEQA also provides guidelines and thresholds for use by lead agencies for evaluating the significance of proposed impacts.

The State of California CEQA Guidelines (CEQA Guidelines) Section 15380(b)(1) defines endangered animals or plants as species or subspecies whose "survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors." A rare animal or plant is defined in Section 15380(b)(2) as a species that, although not presently threatened with extinction, exists "in such small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens; or … [t]he species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered 'threatened' as that term is used in the federal Endangered Species Act." Additionally, an animal or plant may be presumed to be endangered, rare, or threatened if it meets the criteria for listing, as defined further in CEQA Guidelines Section 15380(c).

CDFW has developed a list of "Special Species" as "a general term that refers to all of the taxa the California Natural Diversity Database (CNDDB) is interested in tracking, regardless of their legal or protection status." This is a broader list than those species that are protected under FESA, CESA, and other California Fish and Game Code provisions, and includes lists developed by other organizations, including, for example, the Audubon Watch List Species. Guidance documents prepared by other agencies, including the U.S. Bureau of Land Management's Sensitive Species and USFWS Birds of Special Concern, are also included on this CDFW Special Species list. Additionally, CDFW has concluded that plant species listed as California Rare Plant Rank (CRPR) 1 and 2 by the California Native Plant Society, and potentially some CRPR 3 plants, are covered by CEQA Guidelines Section 15380.

Section IV, Appendix G (Environmental Checklist Form), of the CEQA Guidelines requires an evaluation of impacts to "any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or the U.S. Fish and Wildlife Service."

2.2.4 Porter–Cologne Water Quality Control Act

Pursuant to provisions of the Porter–Cologne Act, the RWQCBs regulate discharging waste, or proposing to discharge waste, within any region that could affect a water of the state (California Water Code, Section 13260[a]). The State Water Resources Control Board defines a waters of the state as "any surface water or groundwater, including saline waters, within the boundaries of the state" (California Water Code, Section 13050[e]). All waters of the United States are waters of the state. Waters of the state include wetlands, and the State Water Resources Control Board definition of wetlands includes the following:

1. Natural wetlands.
2. Wetlands created by modification of a surface water of the state.
3. Artificial wetlands that meet any of the following criteria:
    a. Approved by an agency as compensatory mitigation for impacts to other waters of the state, except where the approving agency explicitly identifies the mitigation as being of limited duration.
    b. Specifically identified in a water quality control plan as a wetland or other water of the state.
    c. Resulted from historic human activity, is not subject to ongoing operation and maintenance, and has become a relatively permanent part of the natural landscape.
    d. Greater than or equal to 1 acre in size unless the artificial wetland was constructed and is currently used and maintained, primarily for one or more of the following purposes: industrial or municipal wastewater treatment or disposal; settling of sediment; detention, retention, infiltration, or treatment of stormwater runoff and other pollutants or runoff subject to regulation under a municipal, construction, or industrial permitting program; treatment of surface waters; agricultural crop irrigation or stock watering; fire suppression; industrial processing or cooling water; active surface mining – even if the site is managed for interim wetlands functions and values; log storage; treatment, storage, or distribution of recycled water; maximizing groundwater recharge (this does not include wetlands that have incidental groundwater recharge benefits); or fields flooded for rice growing.

Wetlands that may not meet all of USACE's wetland delineation criteria are considered wetland waters of the state if, "under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation" (SWRCB 2021). Additionally, aquatic resources that USACE determines to not be waters of the United States because they lack a significant nexus to a traditional navigable water or are above the ordinary high-water mark limit of federal jurisdiction may also be considered waters of the state. If a CWA Section 404 permit is not required for a project, the RWQCB may still require a permit (waste discharge requirements) for impacts to waters of the state under the Porter–Cologne Act.

2.3 Regional Resource Planning Context

2.3.1 Multiple Species Conservation Program Plan

The Project site is within the boundaries of the MSCP Plan (City of San Diego 1998). The MSCP Plan is a multijurisdictional habitat conservation planning program that involves USFWS, CDFW, the County of San Diego, the Cities of San Diego and Chula Vista, and other local jurisdictions and special districts. Local jurisdictions and special districts implement the MSCP Plan for their respective portions through subarea plans. The combination of the MSCP Plan and subarea plans serve as a Habitat Conservation Plan pursuant to FESA Section 10(a)(1)(B), and as a Natural Community Conservation Plan pursuant to the California Natural Community Conservation Planning Act of 1991 (City of San Diego 1998).

The MSCP Plan study area encompasses 582,243 acres within the southwestern portion of San Diego County. As stated in the MSCP Plan, an objective of the MSCP is to conserve a connected system of biologically viable habitat lands in a manner that maximizes the protection of sensitive species and precludes the need for future listings of species as threatened or endangered. The MSCP Plan identifies a Multi-Habitat Planning Area (MHPA), which is the area within which the permanent MSCP Preserve is assembled and managed for its biological resources. The MHPA is defined in many areas by mapped boundaries in figures in the MSCP Plan and is also defined by quantitative targets for conservation of vegetation communities and goals and criteria for Preserve design. The MSCP Plan targets 171,917 acres within the MHPA for conservation (City of San Diego 1998).

A total of 85 plant and animal species are "covered" by the MSCP Plan. The MSCP Plan Final Environmental Impact Report/Environmental Impact Statement identifies "Vegetation Community Conservation Target Areas" for conservation by subarea (Appendix B of the MSCP Plan [City of San Diego 1998]). A total of 2,067 acres is expected to be conserved within the Santee Subarea MHPA. With approval of each subarea plan and corresponding implementing agreement, each participating local jurisdiction receives permits and/or authorization to directly impact or take MSCP Covered Species. The Covered Species include species listed as endangered or threatened by FESA and/or CESA, as well as unlisted species. Table 3-5 in the MSCP Plan provides a list of the MSCP Covered Species, and includes specific conditions required for take authorizations (City of San Diego 1998).

2.3.2 Draft Santee MSCP Subarea Plan

The City of Santee has been preparing its subarea plan since the original approval of the San Diego MSCP Plan and is currently in the process of completing the Santee MSCP Subarea Plan. Although the Draft Santee MSCP Subarea Plan has not yet been approved or permitted, it is used as the guidance document for projects occurring within the City of Santee. The current Draft Santee MSCP Subarea Plan seeks coverage for up to 23 species, and relies on a combination of hardline conservation areas, criteria-based upland standards areas, San Diego River conservation opportunities areas, and City-owned preserve lands to protect species and habitat (City of Santee 2023). Coverage for species is dependent on a number of factors, including multijurisdictional participation, adequate building of the Preserve system, adequate protection of certain populations, permanent management funding, and other factors.

The Draft Santee MSCP Subarea Plan Preserve boundaries are a result of the City of Santee's efforts to refine and expand the MHPA boundaries, to better define conservation priorities within the City of Santee, and to formulate a Habitat Conservation Plan under the MSCP Plan. Because the Draft Santee MSCP Subarea Plan is still in

development, portions of the subarea plan may still change, including hardline Preserve areas and Covered Species. The Project site is entirely outside of the Preserve areas identified in the Draft Santee MSCP Subarea Plan (City of Santee 2023). However, as shown in Figure 1, the Project site is adjacent to Preserve areas associated with the San Diego River corridor, as identified in the Draft Santee MSCP Subarea Plan (City of Santee 2023).

INTENTIONALLY LEFT BLANK

3 Methods

Data regarding biological resources present within the Project site were obtained through a review of pertinent literature and field surveys conducted in 2023; both are described in detail below. Survey conditions are provided in Table 1.

Table 1. Survey Conditions

Date	Hours	Personnel	Survey Focus	Survey Conditions
03/09/2023	NR	Brock Ortega	Reconnaissance Survey and Wildlife Habitat Assessment	NR
04/07/2023	12:15 PM–03:15 PM	Dylan Ayers	Vegetation Mapping and Jurisdictional Aquatic Resource Assessment	64–67°F, 30% cc, 1–3 mph
05/03/2023	06:10 AM – 08:40 AM	Brock Ortega	Least Bell's Vireo Survey	50–55°F, 100–90% cc, 1–3 mph
05/13/2023	08:45 AM – 10:50 AM	Brock Ortega	Least Bell's Vireo Survey	62–67°F, 80–60% cc, 1–3 mph
05/23/2023	06:15 AM – 08:20 AM	Brock Ortega	Least Bell's Vireo Survey	57–63°F, 100–70% cc, 1–0 mph
06/03/2023	08:11 AM – 10:22 AM	Brock Ortega	Least Bell's Vireo Survey	63–69°F, 90–50% cc, 0–5 mph
06/18/2023	06:03 AM – 08:12 AM	Brock Ortega	Least Bell's Vireo Survey	63–70°F, 80–20% cc, 1–3 mph
06/27/2023	08:40 AM – 10:30 AM	Brock Ortega	Least Bell's Vireo Survey	58–72°F, 100–50% cc, 0–5 mph
07/07/2023	06:00 AM–08:05 PM	Brock Ortega	Least Bell's Vireo Survey	60–65°F, 100–50% cc, 0–1 mph
07/20/2023	06:20 AM–08:26 AM	Brock Ortega	Least Bell's Vireo Survey	66–72°F, 0% cc, 0 mph

Note: NR = not recorded; cc = cloud cover; mph = miles per hour (wind).

3.1 Literature Review

Prior to conducting field surveys, Dudek biologists reviewed the latest CDFW California Natural Diversity Database (CDFW 2023a), California Native Plant Society's Inventory of Rare and Endangered Plants of California (CNPS 2023), and USFWS and San Diego Geographic Information Source (SanGIS) databases to identify special-status species that are known to occur or may potentially occur within the Project site based on the physical characteristics of the site (including biogeography, elevation, soils, and vegetation communities).

3.2 Survey Methods

Vegetation mapping within the Project site was conducted on April 7, 2023, by Dudek biologist Dylan Ayers. Vegetation community classifications follow Holland (1986), as revised by Oberbauer et al. (2008). Vegetation communities and land covers were mapped in the field using a mobile data collection application. Vegetation

surveys were conducted throughout the site on foot. Following the completion of fieldwork, vegetation polygons were digitized using ArcGIS, and GIS coverage was created. Acreage calculations of vegetation communities and land covers were determined using ArcGIS. An assessment for jurisdictional aquatic resources was conducted concurrently with the vegetation mapping. Latin names for plant species observed during the vegetation mapping survey follow the Jepson Interchange List of Currently Accepted Names of Native and Naturalized Plants of California (Jepson Flora Project 2022), and common names follow the CDFW California Natural Communities List (CDFW 2023b) or the U.S. Department of Agriculture Natural Resources Conservation Service Plants Database (USDA 2023).

A habitat assessment for potentially occurring special-status resources was conducted on March 9, 2023. Based on that survey, it was determined that a protocol-level least Bell's vireo (*Vireo bellii pusillus*) survey should be conducted within the riparian habitat adjacent (i.e., within 500 feet) to the Project site. The eight surveys for least Bell's vireo followed the Least Bell's Vireo Survey Guidelines (USFWS 2001), which states that a minimum of eight survey visits should be made to all riparian areas and any other potential least Bell's vireo habitats between April 10 and July 31. The site visits are required to be conducted at least 10 days apart to maximize the detection of early and late arrivals, females, non-vocal birds, and nesting pairs. Taped playback of least Bell's vireo vocalizations was not used during the surveys per USFWS 2001 protocol. Surveys were conducted between dawn and noon, and were not conducted during periods of excessive or abnormal cold, heat, wind, rain, or other inclement weather. All surveys consisted of slowly walking a methodical, meandering transect along the Project site's northern boundary that occurs adjacent to the riparian habitat within the San Diego River corridor. This route was arranged to cover all suitable adjacent habitat. If least Bell's vireo or any other special-status species were encountered, field personnel recorded data points demarcating the location using the Esri ArcGIS mobile application. Survey conditions are summarized in Table 1.

All wildlife species detected during the field surveys by sight, vocalizations, burrows, tracks, scat, or other sign were recorded. The site was visually scanned with and without binoculars to identify wildlife. Latin and common names of animals follow Crother (2017) for reptiles and amphibians, the American Ornithological Society for birds (AOS 2023), and Wilson and Reeder (2005) for mammals.

4 Results

4.1 Vegetation Mapping and Land Covers

Based on species composition and general physiognomy, four vegetation communities or land cover types occur within the Project site, and 10 vegetation communities or land cover types occur within the 500-foot buffer surrounding the Project site. Acreages for each vegetation community or land cover type are provided in Table 2, and their spatial distribution is shown in Figure 2, Biological Resources. Descriptions for each vegetation community or land cover type are provided below.

Table 2. Vegetation Communities and Land Covers within the Project Site and 500-Foot Buffer

Vegetation Community/Land Cover Type	Holland/Oberbauer Code	500-Foot Buffer (Acres)	Project Site (Acres)
Riparian/Bottomland Vegetation Communities			
Coastal and Valley Freshwater Marsh	52410	1.52	0
Southern Arroyo Willow Riparian Forest	61320	5.69	0
Southern Cottonwood–Willow Riparian Forest	61330	0.56	0
Southern Willow Scrub	63320	2.02	0
Open Water	64140	8.09	0
Riparian/Bottomland Vegetation Communities Subtotal		*17.88*	*0*
Upland Vegetation Communities			
Diegan Coastal Sage Scrub	32500	1.04	0
Non-Native Communities and Land Cover Types			
Non-Native Grassland	42200	0.95	0.27
Non-Native Woodland	79000	0.62	0.51
Disturbed Habitat	11300	0.48	0.02
Urban/Developed	12000	53.39	12.70
Non-Native Communities and Land Cover Types Subtotal		*55.45*	*13.49*
Total		**74.37**	**13.49**

Note: Totals may not sum due to rounding.

Coastal and Valley Freshwater Marsh (52410)

Coastal and valley freshwater marsh is a wetland habitat that is permanently flooded by freshwater lacking a significant current (Oberbauer et al. 2008). Because it is permanently flooded by fresh water, there is an accumulation of deep, peaty soils. Typically, this community is dominated by species such as cattail (*Typha* spp.), sedge (*Carex* spp.), yellow nutsedge (*Cyperus esculentus*), and bulrushes (*Scirpus* spp.).

Coastal and valley freshwater marsh totals 1.52 acres within the Project site's 500-foot buffer and is within the San Diego River corridor. As a wetland community, coastal and valley freshwater marsh is typically under the jurisdiction of the aquatic resource agencies.

Southern Arroyo Willow Riparian Forest (61320)

Southern arroyo willow riparian forest is a winter-deciduous riparian forest dominated by broad-leafed trees and arroyo willow (*Salix lasiolepis*). Typically it consists of a moderately tall, closed, or nearly closed canopy, with an understory of shrubby willows (Oberbauer et al. 2008). Southern arroyo willow riparian forest is characterized by the presence of several species besides arroyo willow, including San Diego sagewort (*Artemisia palmeri*), mulefat (*Baccharis salicifolia*), manroot (*Marah macrocarpus*), western sycamore (*Platanus racemosa*), Fremont cottonwood (*Populus fremontii* ssp*. fremontii*), Goodding's willow (*Salix gooddingii*), narrowleaf willow (*Salix exigua*), and yellow willow (*Salix lasiandra*) (Oberbauer et al. 2008). Southern arroyo willow riparian forest occurs in sub-irrigated and frequently overflowed areas along rivers and streams that are perennially wet (Oberbauer et al. 2008).

Southern arroyo willow riparian forest totals 5.69 acres within the Project site's 500-foot buffer, and it is within the San Diego River corridor. As a wetland community, southern arroyo willow riparian forest is typically under the jurisdiction of the aquatic resource agencies.

Southern Cottonwood–Willow Riparian Forest (61330)

Southern cottonwood–willow riparian forest is described in Oberbauer et al. 2008 as a tall, open, broadleafed winter-deciduous riparian forest dominated by Fremont cottonwood or balsam poplar (*Populus trichocarpa*), and various willow trees (*Salix* sp.). The shrub layer typically includes various willow species, mulefat, and western sycamore. This community typically occurs in overflow lands along rivers and streams (Oberbauer et al. 2008).

Southern cottonwood–willow riparian forest totals 0.56 acres within the Project site's 500-foot buffer, and it is within the San Diego River corridor. As a wetland community, southern cottonwood–willow riparian forest is typically under the jurisdiction of the aquatic resource agencies.

Southern Willow Scrub (63320)

Southern willow scrub is a dense, broad-leafed, winter-deciduous riparian thicket dominated by several willow species (*Salix* sp.), with scattered emergent Fremont cottonwood and western sycamore (Oberbauer et al. 2008). Most stands are too dense to allow much understory development. This habitat is considered seral due to repeated disturbance/flooding, and is therefore unable to develop into the taller southern cottonwood willow riparian forest (Oberbauer et al. 2008). Southern willow scrub totals 2.02 acres within the Project site's 500-foot buffer, and it is within the San Diego River corridor. As a wetland community, southern willow scrub is typically under the jurisdiction of the aquatic resource agencies.

Open Water (64140)

Open water is composed of year-round bodies of fresh water (extremely low salinity) in the form of lakes, streams, ponds, or rivers (Oberbauer et al. 2008). This includes those portions of water bodies that are usually covered by water and contain less than 10% vegetative cover (Oberbauer et al. 2008). Open water totals 8.09 acres within the Project site's 500-foot buffer and it represents the San Diego River. As a wetland community, open water is typically under the jurisdiction of the aquatic resource agencies.

Diegan Coastal Sage Scrub (32500)

Diegan coastal sage scrub is a native vegetation community. According to Oberbauer et al. (2008), coastal sage scrub is composed of a variety of soft, low, aromatic shrubs, characteristically dominated by drought-deciduous species—such as California sagebrush (*Artemisia californica*), California buckwheat (*Eriogonum fasciculatum*), and sages (*Salvia* spp.)—with scattered evergreen shrubs, including lemonadeberry (*Rhus integrifolia*) and laurel sumac (*Malosma laurina*). Diegan coastal sage scrub totals 1.04 acres within the Project site's 500-foot buffer, and it occurs within the San Diego River corridor.

Non-Native Grassland (42200)

Non-native grassland consists of dense to sparse cover of annual grasses with flowering culms between 0.5 to 3 feet in height (Oberbauer et al. 2008). In some areas, depending on past disturbance and annual rainfall, annual forbs may be the dominant species. However, it is presumed that grasses will dominate.

Within the Project site, 0.27 acres of non-native grassland is dominated by wild oat (*Avena fatua*), bromes (*Bromus diandrus, B. rubens*), redstem stork's bill (*Erodium cicutarium*), Maltese star-thistle (*Centaurea melitensis*), and mustard (*Hirschfeldia incana*). This area had been recently mowed during the site visit on April 7, 2023. Non-native grassland also occurs within the Project site's 500-foot buffer and totals 0.95 acres.

Non-Native Woodland (79000)

Non-native woodland consists of exotic trees, usually intentionally planted, that are not maintained or artificially irrigated (Oberbauer et al. 2008); it does not usually apply where these trees have naturalized or in riparian woodlands (Oberbauer et al. 2008). Within the Project site, 0.51 acres of non-native woodland occurs along the northern boundary and is composed of African sumac (*Searsia lancea*), acacia (*Acacia* spp.), eucalyptus (*Eucalyptus* spp.), and silky oak trees (*Grevillea robusta*). Non-native woodland also occurs within the Project site's 500-foot buffer and totals 0.62 acres.

Disturbed Habitat (11300)

Disturbed habitats are areas that have been physically disturbed and are no longer recognizable as a native or naturalized vegetation association (Oberbauer et al. 2008). These areas may continue to retain soil substrate. If vegetation is present, it is almost entirely composed of non-native vegetation, such as ornamentals or ruderal exotic species. Examples of these areas may include graded landscapes or areas, graded firebreaks, graded construction pads, temporary construction staging areas, off-road-vehicle trails, areas repeatedly cleared for fuel management, or areas that are repeatedly used in ways that prevent revegetation (e.g., parking lots, trails that have persisted for years) (Oberbauer et al. 2008).

Disturbed habitat totals 0.48 acres within the Project site's 500-foot buffer and 0.02 acres within the Project site. This land cover type includes the dirt road adjacent to the Project site that separates the site from the San Diego River.

Urban/Developed (12000)

Developed land consists of buildings, structures, homes, parking lots, paved roads, and maintained areas. Developed areas do not support vegetation. Urban/developed land covers the vast majority of the Project site (94%, 12.70 acres). The developed area is associated with the parking lot and drive-in movie theater. A total of 53.39 acres, or 72% of the Project site's 500-foot buffer, is composed of developed lands.

4.2 Plant and Wildlife Species

A total of 19 species of native or naturalized plants, 2 native (11%) and 17 non-native (89%), were recorded on the Project site (see Appendix A). The majority of these plant species are ornamental trees planted in association with the current development on site. Due to the lack of habitat (i.e., site is currently a parking lot), very few wildlife species were observed within the Project site (i.e., nine total, consisting of eight bird species and one mammal species). A total of 42 wildlife species common to San Diego County were observed within the surrounding area during surveys. Appendix B includes all wildlife species observed within the Project site and the 500-foot buffer.

4.2.1 Special-Status Plant Species

Special-status plant species include those listed, or candidates for listing, as threatened or endangered by USFWS and CDFW, and species identified as rare by the California Native Plant Society (particularly CRPR 1A, presumed extinct in California; CRPR 1B, rare, threatened, or endangered throughout its range; and CRPR 2, rare or endangered in California, more common elsewhere). Appendix C provides a table of all special-status plant species whose geographic ranges fall within the general vicinity of the Project site. Special-status species' potential to occur within the Project site were evaluated based on known species distribution, species-specific habitat preferences, and Dudek biologists' knowledge of regional biological resources. Each special-status species was assigned a rating of "not expected," "low," "moderate," or "high" potential to occur within the Project site based on relative location to known occurrences, vegetation community, soil, and elevation.

No special-status plant species were observed within the Project site during surveys, and due to lack of habitat, none are expected to occur. There is moderate potential for special-status plant species to occur off site within suitable habitat areas in the 500-foot buffer surrounding the Project site within the San Diego River corridor.

4.2.2 Special-Status Wildlife Species

Special-status wildlife species include those listed, or candidates for listing, as threatened or endangered by USFWS and CDFW, and those designated as Species of Special Concern by CDFW and as sensitive by USFWS. Appendix D provides a table of all special-status wildlife species whose geographic ranges fall within the general vicinity of the Project site. Special-status species' potential to occur within the Project site were evaluated based on known species distribution, species-specific habitat preferences, and Dudek biologists' knowledge of regional biological resources. Each special-status species was assigned a rating of "not expected," "low," "moderate," or "high" potential to occur within the Project site based on relative location to known occurrences, vegetation community, soil, and elevation.

No special-status wildlife species were observed within the Project site during surveys, and due to lack of habitat, none are expected to occur. However, three special-status wildlife species—least Bell's vireo, yellow-breasted chat (*Icteria virens*), and yellow warbler (*Setophaga petechia*)—were observed off site within the Project site's 500-foot

buffer that overlaps the riparian habitat associated with the San Diego River. Three nesting pairs of least Bell's vireo were detected within the riparian habitat; one pair occurred on the southern side of the San Diego River and two pairs occurred on the northern side. One pair of yellow breasted chat was detected, and both were active across much of the habitat. A number of yellow warblers were detected, and much of the riparian habitat was used by them.

Additionally, coastal California gnatcatcher (*Polioptila californica californica*) was observed outside the 500-foot buffer (more than 700 feet north of the Project site) in coastal scrub habitat during the riparian bird surveys. However, there is minimal suitable habitat for this species within the 500-foot buffer area. The coastal sage scrub occurring within the 500-foot buffer is small (i.e., approximately 1 acre), disturbed, on steep slopes, and likely not used for nesting by this species.

4.3 Jurisdictional Aquatic Resources

No jurisdictional aquatic resources were observed within the Project site during the jurisdictional aquatic resource assessment. The northern edge of the Project site is adjacent to stands of thick vegetation occurring along a chain-link fence line that lines the parking lot. This vegetation was dominated by African sumac (*Searsia lancea*), a non-native low-growing tree species that is known to occupy disturbed areas. African sumac would not be considered a jurisdictional wetland or riparian vegetation subject to aquatic resources regulation. In addition, the edge of the Project site occurs at least 20 to 30 feet in elevation higher than and approximately 70 to 100 feet south of the riparian (willow forest) and wetland (freshwater marsh) vegetation communities associated with the San Diego River. These wetland areas occur outside of the Project site. A strip of disturbed habitat separates the San Diego River and the upland communities adjacent to the Project site; multiple encampments created by people experiencing homelessness were observed in this area. Two culverts were observed during the jurisdictional aquatic resource assessment that appear to transport flows from the Project site boundary northward toward the San Diego River; however, no channels or aquatic resources have developed around the culvert structures. Other culverts could exist but are likely obscured by vegetation growth and erosion.

4.4 Wildlife Corridors and Habitat Linkages

Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals. Wildlife corridors contribute to population viability by ensuring continual exchange of genes between populations, providing access to adjacent habitat areas for foraging and mating, and providing routes for recolonization of habitat after local extirpation or ecological catastrophes (e.g., fires).

Habitat linkages are small patches that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation. Habitat linkages provide a potential route for gene flow and long-term dispersal of plants and animals, and may also serve as primary habitat for smaller animals, such as reptiles and amphibians. Habitat linkages may be continuous habitat or discrete habitat islands that function as steppingstones for dispersal.

The MSCP Plan (City of San Diego 1998) defines core and linkage areas as those maintaining ecosystem function and processes, including large animal movement. Each core area is connected to other core areas or to habitat areas outside of the MSCP study area either through common boundaries or through linkages. Core areas have multiple connections to help ensure that the balance in the ecosystem will be maintained.

The Project site is currently developed as a parking lot and drive-in theater and is not mapped as a core area or habitat linkage under the MSCP (City of San Diego 1998). Therefore, the Project site does not function as a wildlife

corridor or habitat linkage. However, the Project site is adjacent to the San Diego River, which could potentially function as a wildlife corridor for local populations of common species. Larger species, like mule deer (*Odocoileus hemionus*) and mountain lion (*Puma concolor*), are not expected to use this highly urbanized vicinity of the river corridor due to the amount of adjacent commercial and industrial uses, large presence of human encampments, and general lack of connectivity to larger core areas of suitable habitat. It is unlikely that bobcats would use this area for the same reasons. Species most likely to use this area include coyote (*Canis latrans*), raccoon (*Procyon lotor*), striped skunk (*Mephitis mephitis*), and Virginia opossum (*Didelphis virginiana*).

5 Project Impacts

This section addresses direct and indirect impacts to biological resources that would result from implementation of the Project, provides the significance determinations for proposed or potential impacts, and proposes mitigation. Cumulative impacts are addressed in the Project's Environmental Impact Report.

5.1 Explanation of Findings of Significance

Impacts to sensitive vegetation communities, special-status plant and wildlife species, and jurisdictional aquatic resources, including wetlands, must be quantified and analyzed to determine whether such impacts are significant under CEQA. CEQA Guidelines Section 15064(b) states that an ironclad definition of a "significant" effect is not possible because the significance of an activity may vary with the setting. Appendix G of the CEQA Guidelines, however, does provide "examples of consequences which may be deemed to be a significant effect on the environment" (14 CCR 15064[e]). These effects include substantial effects on rare or endangered species of animal or plant or the habitat of the species. CEQA Guidelines Section 15065(a) is also helpful in defining whether a project may have a significant effect on the environment. Under that section, a proposed project may have a significant effect on the environment if the project has the potential to (1) substantially degrade the quality of the environment, (2) substantially reduce the habitat of a fish or wildlife species, (3) cause a fish or wildlife population to drop below self-sustaining levels, (4) threaten to eliminate a plant or animal community, (5) reduce the number or restrict the range of a rare or endangered plant or animal, or (6) eliminate important examples of a major period of California history or prehistory.

The following are the significance thresholds for biological resources provided in the CEQA Guidelines Appendix G Environmental Checklist, which states that a project would potentially have a significant effect if it does any of the following:

- **Impact BIO-1.** Has a substantial adverse effect, either directly or through habitat modifications, on any species identified as being a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
- **Impact BIO-2.** Has a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by CDFW or USFWS.
- **Impact BIO-3.** Has a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.
- **Impact BIO-4.** Interferes substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impedes the use of native wildlife nursery sites.
- **Impact BIO-5.** Conflicts with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- **Impact BIO-6.** Conflicts with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

The evaluation of whether an impact to a particular biological resource is significant must consider both the resource itself and the role of that resource in a regional context. Substantial impacts are those that contribute to, or result in, permanent loss of an important resource, such as a population of a rare plant or wildlife species. Impacts may be important locally because they result in an adverse alteration of existing site conditions, but considered not significant because they do not contribute substantially to the permanent loss of that resource regionally. The severity of an impact is the primary determinant of whether that impact can be mitigated to a level below significance.

5.2 Definition of Impacts

Direct impacts refer to complete loss of a biological resource. For the purposes of this report, direct impacts refer to the area where vegetation clearing, grubbing, or grading replaces biological resources. Direct impacts were quantified by overlaying the proposed impact limits on the biological resources map of the Project site. Direct impacts would occur from construction of an industrial/warehouse building and associated loading docks; trailer stalls; passenger vehicle parking spaces; and street, sidewalk, and landscape improvements.

Indirect impacts are reasonably foreseeable effects caused by a project's implementation on remaining or adjacent biological resources outside the direct disturbance zone. For purposes of this report, indirect impacts may affect areas associated with biological resources present within the San Diego River corridor. Indirect impacts may be short-term and construction-related, or long-term and associated with development in proximity to biological resources.

Cumulative impacts refer to the combined environmental effects of a project and other relevant projects. These impacts may be minor when analyzed individually but become collectively significant as they occur over time. Cumulative impacts are addressed in the Project's Environmental Impact Report.

The evaluation of Project impacts is organized by the resource potentially affected: riparian and sensitive vegetation communities (special-status vegetation communities), special-status species, jurisdictional waters and wetlands, and wildlife movement.

5.3 Impact Analysis

The entire 13.49-acre Project site would be directly impacted with Project implementation. Acreages for each vegetation community or land cover type permanently impacted are provided in Table 3, and their spatial distribution is shown in Figure 3, Impacts.

Table 3. Impacts to Vegetation Communities and Land Covers within the Project Site

Vegetation Community/ Land Cover Type	Holland/Oberbauer Code	Permanent Impact (Acres)
Non-Native Grassland	42200	0.27
Non-Native Woodland	79000	0.51
Disturbed Habitat	11300	0.02
Urban/Developed	12000	12.70
	Total	**13.49**

Note: Totals may not sum due to rounding.

5.3.1 Impact BIO-1: Special-Status Species

5.3.1.1 Direct Impacts

No special-status plant or wildlife species were observed within the Project site during surveys, and due to lack of habitat, none are expected to occur. Therefore, no direct impacts would occur to special-status plant or wildlife species with Project implementation.

Direct impacts to nesting birds, protected under Section 3503 of the California Fish and Game Code, could occur within areas of the Project site mapped as non-native woodland or within the existing ornamental trees as part of the current development's landscaping. Project implementation of Mitigation Measure (MM) BIO-1 (Pre-Construction Nesting Bird Survey) would reduce potential direct impacts to nesting birds to a less-than-significant level through performance of a nesting bird survey if construction occurs during the nesting season. Additionally, all trees removed as part of Project implementation that could potentially provide nesting habitat for birds would be replaced as directed by MM-BIO-4 (Tree Replacement, Encroachment, and Preservation). Therefore, no significant direct impacts are anticipated with Project implementation to nesting birds or their habitat.

The Project site does not occur within federally designated critical habitat for plant or wildlife species. Therefore, no direct impacts would occur to critical habitat with Project implementation.

5.3.1.2 Indirect Impacts

Project implementation has the potential to result in indirect impacts to special-status wildlife species, specifically least Bell's vireo, yellow-breasted chat, and yellow warbler, as well as special-status plant species occurring within 500 feet of the Project site.

Construction-Related: Potential short-term or temporary indirect impacts to least Bell's vireo, yellow-breasted chat, yellow warbler, coastal California gnatcatcher, and special-status plant species resulting from construction activities include the release of chemical pollutants; adverse effects from noise, vibration, and increased human presence; and night-time lighting. These potential construction-related indirect impacts would be potentially significant absent mitigation.

Project implementation of MM-BIO-1 (Pre-Construction Nesting Bird Survey) would reduce potential indirect impacts from construction noise to a less-than-significant level through performance of a nesting bird survey if construction occurs during the nesting season. If nesting least Bell's vireo, yellow-breasted chat, and/or yellow warbler are identified, an adequate buffer will be implemented to ensure that effects from noise, vibration, and human presence are minimized. In addition, implementation of MM-BIO-2 (Construction-Related Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) will minimize indirect impacts to least Bell's vireo, yellow-breasted chat, yellow warbler, and special-status plant species through biological monitoring, requirement of a Worker Environmental Awareness Training that will cover the special-status resources and mitigation requirements for the Project, delineation of Project boundaries, requiring that all vehicles and equipment be serviced in designated staging areas, and ensuring that construction will not be conducted at night. Project construction would be limited to the City of Santee's allowable construction hours of 7:00 a.m. and 7:00 p.m. and is not anticipated to require lighting. In the event that construction lighting is required, it would be properly shielded to avoid spillover effects (MM-BIO-2).

Implementation of MM-BIO-1 (Pre-Construction Nesting Bird Survey) and MM-BIO-2 (Construction-Related Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of construction-related indirect impacts to least Bell's vireo, yellow-breasted chat, yellow warbler, and special-status plant species to less than significant with mitigation incorporated.

Long-Term: Potential long-term, indirect impacts that could result from Project implementation to suitable foraging and nesting habitat for least Bell's vireo, yellow-breasted chat, and yellow warbler and special-status plants include chemical releases, such as oils and grease from vehicles that could degrade habitat; increased invasive plant species that may degrade habitat; nighttime lighting; and trampling of vegetation and soil compaction by humans, which could affect soil moisture, water penetration, surface flows, and erosion. These potential long-term indirect impacts would be potentially significant absent mitigation. Because the Project site is located within the City of Santee's industrial zone, there are existing ambient noise levels that were measured by Dudek and are included in Table 2 of the Project's Noise Technical Report (Dudek 2024). The measured baseline outdoor ambient noise level for areas north of the Project site (i.e., occurring within the San Diego River corridor) were established to be between 50 to 56 A-weighted decibels (dBA). Figures 5 and 6 of the Project's Noise Technical Report (Dudek 2024) show that the maximum predicted operational noise levels will be in the 35 to 45 dBA range for areas occurring north of the Project site within the San Diego River corridor. Installation of an 8-foot-tall noise barrier along the northern perimeter of the Project site is proposed as a feature of the Project. With installation of this noise barrier, Project-related operational noise levels are predicted to be less than the current existing ambient sound levels in the areas occurring north of the Project site within the San Diego River corridor by a factor of 5 to 21 dBA. Additionally, all operational noise levels comply with the City of Santee's noise threshold for industrial land uses and are below 60 dBA, which is typically used as the noise threshold for wildlife species. Therefore, long-term operational noise impacts are less than significant.

The Project site currently contains sources of artificial nighttime light that are typical of a drive-in movie theater use. In addition, streetlights are present along Wheatlands Court and North Woodside Avenue to the west, south, and east, all of which are sources of nighttime light as well. Other exterior artificial light sources in the immediate vicinity of the Project site include nearby industrial uses bordering the site to the south, east, and west. There are no existing sources of light or glare from the San Diego River corridor abutting the Project site to the north; however, typical residential light sources in the residential neighborhood to the north of the Project site and the San Diego River corridor may be visible from the Project site. Implementation of MM-BIO-3 (Long-Term Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of long-term indirect impacts from proposed lighting as it would be designed consistent with the requirements of Section 13.30.030(B) of the Santee Municipal Code, which states that lighting shall be shielded, or recessed, and directed downward and away from adjoining properties.

Implementation of MM-BIO-3 (Long-Term Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of long-term indirect impacts to least Bell's vireo, yellow-breasted chat, yellow warbler, and special-status plant species by requiring measures to ensure runoff is not altered from existing conditions and toxicants are not discharged, preparation of landscaping plans that will emphasize native species and not include species from the California Invasive Plant Council's Invasive Plant Inventory, and incorporation of barriers to prevent unauthorized public access to open space areas associated with the San Diego River corridor. Therefore, long-term indirect impacts to special-status species would be reduced to less than significant with mitigation incorporated.

5.3.2 Impact BIO-2: Sensitive Vegetation Communities

5.3.2.1 Direct Impacts

A total of 13.49 acres would be permanently impacted with Project implementation (Figure 3). Table 3 summarizes permanent and temporary direct impacts to vegetation communities and land covers within the Project site. No riparian habitat would be impacted with Project implementation. Communities listed by CDFW as high priority for inventory (i.e., State Rank [S] 1, 2, or 3) are considered sensitive and typically require mitigation (CDFW 2023b). There are no sensitive vegetation communities with CDFW State Ranks of 1, 2, or 3 within the Project site. Permanent direct impacts to non-native grassland would typically require mitigation to comply with regional MSCP conservation goals (City of San Diego 1998). However, because the Project's impact to non-native grassland is very minimal (0.27 acres) and the non-native grassland within the Project site is highly disturbed and dominated by annual forb species, impacts to this vegetation community would be less than significant and no mitigation measures are required.

5.3.2.2 Indirect Impacts

Project implementation has the potential to result in indirect impacts to sensitive vegetation communities occurring adjacent to the Project site.

Construction-Related*:* Sensitive vegetation communities may be indirectly impacted during construction of the proposed Project. Potential short-term or temporary indirect impacts to sensitive vegetation communities resulting from construction activities include inadvertent spillover impacts, including unintentional clearing, trampling, or grading outside of the Project footprint; generation of fugitive dust; changes in hydrology resulting from construction, including sedimentation and erosion; the release of chemical pollutants; and the adverse effect of invasive plant species. These potential construction-related, indirect impacts to sensitive vegetation communities would be potentially significant absent mitigation.

Implementation of MM-BIO-2 (Construction-Related Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of construction-related indirect impacts to sensitive vegetation communities to less than significant with mitigation incorporated.

Long-Term: Potential long-term, indirect impacts that could result from development near sensitive vegetation communities include chemical releases, such as oils and grease from vehicles that could degrade habitat; increased invasive plant species that may degrade habitat; and trampling of vegetation and soil compaction by humans, which could affect soil moisture, water penetration, surface flows, and erosion. These potential long-term indirect impacts to sensitive vegetation communities would be potentially significant absent mitigation.

Implementation of MM-BIO-3 (Long-Term Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize long-term indirect impacts by requiring measures to ensure runoff is not altered from existing conditions and toxicants are not discharged, preparation of landscaping plans that will emphasize native species and not include species from the California Invasive Plant Council's Invasive Plant Inventory, and incorporation of barriers to prevent unauthorized public access to open space areas associated with the San Diego River corridor. Therefore, long-term indirect impacts to sensitive vegetation communities would be less than significant with mitigation incorporated.

5.3.3 Impact BIO-3: State or Federally Protected Wetlands

5.3.3.1 Direct Impacts

No jurisdictional aquatic resources, including state or federally protected wetlands, occur within the Project site. The edge of the Project site occurs at least 20 to 30 feet in elevation higher than and approximately 70 to 100 feet south of the riparian (willow forest) and wetland (freshwater marsh) vegetation communities associated with the San Diego River. Therefore, no direct impacts to state or federally protected wetlands are anticipated within Project implementation, and no permits under Sections 401 or 404 of the Clean Water Act are required.

5.3.3.2 Indirect Impacts

Project implementation has the potential to result in indirect impacts to jurisdictional aquatic resources occurring within 500 feet of the Project site associated with the San Diego River.

Construction-Related: Jurisdictional aquatic resources of the United States/state may be indirectly impacted during construction. Potential short-term or temporary indirect impacts to jurisdictional aquatic resources resulting from construction activities include the generation of fugitive dust; changes in hydrology resulting from construction, including sedimentation and erosion; the release of chemical pollutants; and unintentional clearing, trampling, or grading outside of the proposed construction zone. Construction-related indirect impacts to jurisdictional aquatic resources would be potentially significant absent mitigation.

Implementation of MM-BIO-2 (Construction-Related Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize construction-related indirect impacts through biological monitoring, requirement of Worker Environmental Awareness Training that will cover the special-status resources and mitigation requirements for the Project, delineation of Project boundaries, implementation of standard dust control measures, development of a Stormwater Pollution Prevention Plan, and requiring all vehicles and equipment to be serviced in designated staging areas. Therefore, construction-related indirect impacts to jurisdictional aquatic resources would be less than significant with mitigation incorporated.

Long-Term: Potential long-term indirect impacts that could result from development near jurisdictional aquatic resources of the United States/state include pollutants that could degrade water quality and habitat; increased invasive plant species that may degrade habitat; and trampling of vegetation and soil compaction by humans, which could affect soil moisture, water penetration, surface flows, and erosion. Long-term indirect impacts to jurisdictional aquatic resources would be potentially significant absent mitigation.

Implementation of MM-BIO-3 (Long-Term Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize long-term indirect impacts by requiring measures to ensure runoff is not altered from existing conditions and toxicants are not discharged, preparation of landscaping plans that will emphasize native species and not include species from the California Invasive Plant Council's Invasive Plant Inventory, and incorporation of barriers to prevent unauthorized public access to areas with state and federally protected waterways. Therefore, long-term indirect impacts to jurisdictional aquatic resources would be less than significant with mitigation incorporated.

5.3.4 Impact BIO-4: Wildlife Corridors and Habitat Linkages

5.3.4.1 Direct Impacts

The Project site is currently developed as a parking lot and drive-in theater and is not mapped as a core area or habitat linkage under the MSCP (City of San Diego 1998). Therefore, the Project site does not function as a wildlife corridor or habitat linkage. Therefore, no direct impacts are anticipated to wildlife corridors and/or habitat linkages with Project implementation.

5.3.4.2 Indirect Impacts

Project implementation has the potential to result in indirect impacts to the San Diego River corridor, which occurs adjacent to the Project site and may function as a local wildlife corridor.

Construction-Related: The San Diego River wildlife corridor may be indirectly impacted during construction of the proposed Project. Potential short-term or temporary indirect impacts to biological resources within the San Diego River wildlife corridor resulting from construction activities include inadvertent spillover impacts, including unintentional clearing, trampling, or grading outside of the Project footprint; generation of fugitive dust; changes in hydrology resulting from construction, including sedimentation and erosion; the release of chemical pollutants; and the adverse effects of invasive plant species. These potential construction-related, indirect impacts to the San Diego River wildlife corridor would be potentially significant absent mitigation.

Implementation of MM-BIO-2 (Construction-Related Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of construction-related indirect impacts to the San Diego River wildlife corridor to less than significant with mitigation incorporated. Project construction would be limited to the City of Santee's allowable construction hours of 7:00 a.m. and 7:00 p.m. and is not anticipated to require lighting. In the event that construction lighting is required, it would be properly shielded to avoid spillover effects (MM-BIO-2).

Long-Term: Potential long-term, indirect impacts that could result from development near the San Diego River wildlife corridor include chemical releases such as oils and grease from vehicles that could degrade habitat; increased invasive plant species that may degrade habitat; nighttime lighting; and trampling of vegetation and soil compaction by humans, which could affect soil moisture, water penetration, surface flows, and erosion. These potential long-term indirect impacts to the San Diego River wildlife corridor would be potentially significant absent mitigation. Because the Project site is located within the City of Santee's industrial zone, the Project's operational noise (e.g., manufacturing; heating, ventilation, and air conditioning; truck loading and unloading) would not change the existing noise levels in the surrounding vicinity, and all operational noise levels comply with the City of Santee's noise threshold for industrial land uses. Therefore, long-term operational noise impacts are less than significant.

The Project site contains sources of artificial nighttime light that are typical of a drive-in movie theater use. In addition, streetlights are present along Wheatlands Court and North Woodside Avenue to the west, south, and east, all of which are sources of nighttime light as well. Other exterior artificial light sources in the immediate vicinity of the Project site include nearby industrial uses bordering the site to the south, east, and west. There are no existing sources of light or glare from the San Diego River corridor abutting the Project site to the north; however, typical residential light sources in the residential neighborhood to the north of the Project site and the San Diego River may be visible from the Project site. Implementation of MM-BIO-3 (Long-Term Indirect Impacts to Special-Status

Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of long-term indirect impacts from the Project's lighting as it would be designed consistent with the requirements of Section 13.30.030(B) of the Santee Municipal Code, which states that lighting shall be shielded, or recessed, and directed downward and away from adjoining properties.

Implementation of MM-BIO-3 (Long-Term Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources) would minimize the effect of long-term indirect impacts to the San Diego River wildlife corridor by requiring measures to ensure runoff is not altered from existing conditions and toxicants are not discharged, preparation of landscaping plans that will emphasize native species and not include species from the California Invasive Plant Council's Invasive Plant Inventory, and incorporation of barriers to prevent unauthorized public access to open space areas associated with the San Diego River corridor. Therefore, long-term indirect impacts to wildlife corridors would be reduced to less than significant with mitigation incorporated.

5.3.5 Impact BIO-5: Local Policies and Ordinances

City of Santee

The City of Santee's Urban Forestry Ordinance contains tree-related policies, regulations, and generally accepted standards for planting, trimming, and removing trees on public property and public rights-of-way (Santee Municipal Code, Section 8.06 [City of Santee 2020]). The ordinance gives the City of Santee control of all trees, shrubs, and other plantings in any street, park, public right-of-way, landscape maintenance district or easement, or other City-owned property. City of Santee staff review of development plans for the City-owned and maintained property would ensure that the proposed landscaping and maintenance requirements conform to the Urban Forestry Ordinance. The proposed site plan would require removal of 109 trees, encroachment upon 24 trees, and preservation of 7 trees. As such, tree replacement would occur at a 1:1 mitigation ratio with 15-gallon trees, as directed by MM-BIO-4. Additionally, measures to minimize damage to the encroachment and preserved trees, as well as recommendations for long-term maintenance and care for trees that will be retained on site, would be included in the Project's Landscape Plan. Therefore, the proposed Project would comply with the Urban Forestry Ordinance, and impacts would be less than significant with mitigation incorporated.

In the Conservation Element of the City of Santee General Plan, biological resources are discussed, and specific objectives and policies are presented (City of Santee 2003). The proposed Project does not conflict with any objectives or policies as presented in the Conservation Element of the Santee General Plan. Therefore, impacts to local policies and ordinances would be less than significant and no mitigation measures are required.

5.3.6 Impact BIO-6: Habitat Conservation Plans

MSCP Plan and Draft Santee MSCP Subarea Plan

The Project site is within the boundaries of the MSCP Plan (City of San Diego 1998). The Draft Santee MSCP Subarea Plan would serve as a Habitat Conservation Plan under the MSCP Plan (City of San Diego 1998) pursuant to Section 10(a)(1)(B) of FESA, and as a Natural Community Conservation Plan pursuant to the California Natural Community Conservation Planning Act of 1991. The Draft Santee MSCP Subarea Plan, once finalized, will contribute to the regional MSCP for preservation, mitigation for impacts, and conservation of sensitive biological resources within San Diego County. The Draft Santee MSCP Subarea Plan is also intended to provide cumulative mitigation for impacts to Covered Species within the City of Santee's jurisdiction, as long as projects are consistent with and

covered by provisions of the Santee MSCP Subarea Plan, and to ensure sufficient biological resources are conserved to assist in the conservation and recovery of Covered Species under the MSCP.

Although the Draft Santee MSCP Subarea Plan has not yet been approved or permitted, it is used as the guidance document for projects occurring within the City of Santee. All Project impacts would occur outside of the Draft Santee MSCP Subarea Plan Preserve area. However, as shown in Figure 1, the Project site is adjacent to Preserve areas associated with the San Diego River corridor as identified in the Draft Santee MSCP Subarea Plan. MM-BIO-1 through MM-BIO-3 are proposed to prevent any indirect impacts to special-status species, sensitive vegetation communities, and/or jurisdictional aquatic resources associated with the San Diego River Preserve. Furthermore, Project implementation would not conflict with the provisions of the MSCP Plan or Draft Santee MSCP Subarea Plan, nor would it prevent the Draft Santee MSCP Subarea Plan from being approved or compromise continued implementation of the MSCP in San Diego County. Therefore, impacts to Habitat Conservation Plans would be less than significant and no mitigation measures are required.

INTENTIONALLY LEFT BLANK

6 Mitigation Measures

MM-BIO-1 Pre-Construction Nesting Bird Survey. Construction within all potential nesting resource areas within the Project site (i.e., non-native woodland areas and ornamental trees) and areas of the Project site within 500 feet of the San Diego River should be avoided during the migratory bird nesting season (typically January 1 through September 30). If construction activities (i.e., grading, tree removal, external construction involving heavy equipment generating noise in excess of 60 dBA [energy equivalent level]) must occur during the bird nesting season, an avian nesting survey of all potential nesting resource areas (e.g., non-native woodland areas and ornamental trees) within the Project site and areas of the San Diego River within 500 feet of all impact areas must be conducted to determine the presence/absence of special-status species, protected migratory birds, and active nests. The avian nesting survey shall be performed by a qualified wildlife biologist within 14 days prior to the start of construction, and one more survey pass shall be conducted within 24 hours of initiation of construction activities in accordance with the Migratory Bird Treaty Act and California Fish and Game Code Sections 3503, 3503.5, and 3513. If construction activities are on hold for more than 30 days, then pre-construction surveys would need to be reinitiated. If an active bird nest is found, the nest shall be flagged and mapped on the construction plans, along with an appropriate buffer established around the nest, which will be determined by the biologist based on the species' sensitivity to disturbance (typically 300 feet for passerines and 500 feet for raptors and special-status species), existing nearby conditions (e.g., natural habitat versus roads or existing noisy activities), existing buffering features (e.g., topography, tall and dense trees, buildings), legal status of species (i.e., listed versus non-listed), general sensitivities of the species (e.g., disturbance tolerant or urban versus not disturbance tolerant), and other variables. The nest area shall be avoided until the nest is vacated and the juveniles have fledged. The nest area shall be demarcated in the field with flagging and stakes or construction fencing. On-site construction monitoring shall also be conducted when an active nest buffer is in place. No Project activities shall encroach into established buffers without the consent of a monitoring biologist. The buffer shall remain in place until it is determined that the nestlings have fledged and the nest is no longer active.

MM-BIO-2 Construction-Related Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources. Prior to approval of grading plans and issuance of a grading permit, construction plans and conditions of approval shall include the following to address potential indirect impacts to special-status species occurring within all suitable habitat associated with the San Diego River corridor (i.e., within 500 feet of the Project site):

- **Biological Monitoring.** A qualified Project biologist approved by the City of Santee shall monitor ground-disturbing and vegetation clearing activities for the duration of the Project to ensure that practicable measures are being employed to avoid incidental disturbance of habitat, species of concern, and other sensitive biological resources outside the Project footprint. Once ground-disturbing and vegetation clearing activities are complete, the Project biologist shall conduct weekly checks to inspect construction fencing and ensure that all applicable requirements from the mitigation measures are being upheld.

- **Worker Environmental Awareness Training.** Prior to grading, a pre-construction meeting shall be required that includes a training session for Project personnel by a qualified biologist. The training shall include (1) a description of the species of concern and its habitats; (2) the general provisions of the applicable regulations pertaining to biological resources, including the Endangered Species Act and the Clean Water Act; (3) the need to adhere to the provisions of the Endangered Species Act, the Clean Water Act, and other applicable regulations; (4) the penalties associated with violating the provisions of the Endangered Species Act, Clean Water Act, and other applicable regulations; (5) the general measures that are being implemented to conserve the species of concern as they relate to the Project; and (6) the access routes to and Project site boundaries within which the Project activities must be accomplished. Additionally, the training shall include the measures and mitigation requirements for the applicable resources. Copies of the mitigation measures and any required permits from the resource agencies shall be made available to construction personnel.
- **Delineation of Property Boundaries.** Before beginning activities that would cause impacts, the contractor shall, in consultation with the biological monitor, clearly delineate the boundaries with fencing, stakes, or flags, consistent with the grading plan, within which the impacts will take place. All impacts outside the fenced, staked, or flagged areas shall be avoided, and all fencing, stakes, and flags shall be maintained until the completion of impacts in that area. In addition, any avoided environmental resources shall be clearly delineated. Prior to implementing construction activities, the biological monitor shall verify that the flagging clearly delineates the construction limits and any sensitive environmental resources to be avoided.
- **Standard Dust Control Measures.** Standard dust control measures as per the San Diego County Air Pollution Control District shall be implemented to reduce impacts on nearby plants and wildlife. Measures include controlling speed to 15 miles per hour or less on unpaved roads, replacing ground cover in disturbed areas as quickly as possible, frequently watering active work sites, installing shaker plates, and suspending excavation and grading operations during periods of high winds.
- **Stormwater Pollution Prevention Plan.** Prior to issuance of a grading permit for construction, the applicant shall submit a Stormwater Pollution Prevention Plan (SWPPP) to the City of Santee that specifies best management practices to prevent all construction pollutants from contacting stormwater, with the intent of keeping sedimentation or any other pollutants from moving off site and into receiving waters. The requirements of the SWPPP shall be incorporated into design specifications and construction contracts. Best management practice categories employed on site shall include erosion control, sediment control, and non-stormwater good housekeeping. Best management practices recommended for the construction phase shall include, but not be limited to, the following:
  - Limiting grading to the minimum area necessary for construction, operation, and decommissioning of the Project.
  - Limiting vegetation disturbance/removal to the maximum extent practicable.
  - Implementing fiber rolls and sandbags around drainage areas and the site perimeter.
  - Stockpiling and disposing of demolition debris, concrete, and soil properly.
  - Installing a stabilized construction entrance/exit and stabilizing disturbed areas.
  - Installing proper protections for fueling and maintaining equipment and vehicles.

- Managing waste, aggressively controlling litter, and implementing sediment controls.
- Stabilizing soil in disturbed areas through revegetation.

The following water quality measures shall be included in the SWPPP:

- Erodible fill material shall not be deposited into water courses. Brush, loose soils, or other similar debris material shall not be stockpiled within the stream channel or on its banks.
- The Project shall be designed to avoid the placement of equipment and personnel within the stream channel or on sand and gravel bars, banks, and adjacent upland habitats used by target species of concern, as feasible. Project activities that cannot be conducted without placing equipment or personnel in sensitive habitats shall be timed to avoid the breeding season of riparian species.
- Water pollution and erosion control plans shall be developed and implemented in accordance with the Regional Water Quality Control Board.
- Minimize Spills of Hazardous Materials. All vehicles and equipment shall be maintained in proper condition to minimize the potential for fugitive emissions of motor oil, antifreeze, hydraulic fluid, grease, or other hazardous materials. Hazardous spills shall be immediately cleaned up and the contaminated soil shall be properly handled and disposed of at a licensed facility. Servicing of construction equipment shall take place only at a designated staging area. The staging area will be located on the south side of the Project site, away from the San Diego River, and no stockpiles will be allowed adjacent to the San Diego River corridor.
- Wildlife Hazards. The following measures shall be implemented to ensure that wildlife do not become trapped, entangled, injured, or poisoned by construction activities:
  - Structures in which wildlife may become trapped (e.g.,, open pipes, pits, trenches) shall be tightly covered at the end of each work day. If covering the structure is not possible, an escape ramp shall be provided to allow any wildlife that falls in to safely escape.
  - Debris piles, construction materials, equipment, and other items that may be used as wildlife refuge shall be inspected for wildlife at the start of each work day and prior to disturbance. If wildlife is discovered, it shall either be moved out of harm's way by a qualified biologist or allowed to move off of the Project site on its own.
  - Nets and mesh shall be made of loose weave material that is not fused at the intersections of the weave because nets with welded weaves present an entanglement risk.
  - Toxic materials and garbage shall be removed from the work site and safely stored or disposed of at the end of each work day.
- Invasive Weeds. To reduce the spread of invasive plant species, landscape plants shall not be on the most recent version of the California Invasive Plant Council's Invasive Plant Inventory (http://www.cal-ipc.org/ip/inventory/index.php).
- Night Work. All construction activities shall be conducted during the daytime, and lights shall not be kept on overnight in the construction area, as practicable. If night lighting is required during construction activities, all exterior lighting along undeveloped land shall be fully shielded and directed downward in a manner that will prevent light spillage or glare into the adjacent open space.

MM-BIO-3 Long-Term Indirect Impacts to Special-Status Species, Sensitive Vegetation Communities, and Jurisdictional Aquatic Resources. Prior to approval of grading plans and issuance of a grading permit, construction plans and conditions of approval shall include the following to address potential indirect impacts to special-status species occurring within all suitable habitat associated with the San Diego River corridor (i.e., within 500 feet of the Project site):

- **Runoff:** Future development within 500 feet of suitable habitat for special-status species shall incorporate measures, including measures required through the National Pollutant Discharge Elimination System, to ensure that the quantity and quality of runoff discharged is not altered in an adverse way when compared with existing conditions. In particular, measures, such as an infiltration system designed to capture and treat stormwater pollutants, consistent with commercial/industrial developments and associated parking lots, and including oil, grease, metals, trash, and debris, shall be put in place to avoid discharge of untreated surface runoff from developed and paved areas into open space or suitable habitat for special-status species. Stormwater systems shall be designed to prevent the release of toxins, chemicals, petroleum products, exotic plant materials, or other elements that might degrade or harm biological resources or ecosystem processes. This can be accomplished using a variety of methods, including natural detention basins, grass swales, or mechanical trapping devices. Regular maintenance shall occur to ensure effective operation of runoff control systems.
- **Lighting:** Project lighting would be designed consistent with the requirements of Section 13.30.030(B) of the Santee Municipal Code. Night lighting shall be directed away from open space and/or suitable habitat for special-status species to protect species from direct night lighting. Shielding, including use of light-controlling devices such as light guards, shall be incorporated in Project designs to ensure that ambient lighting is not increased.
- **Invasive Species:** Landscape Plans shall incorporate native species that occur in the region. Invasive, non-native plant species listed on the most recent California Invasive Plant Council's Invasive Plant Inventory (https://www.cal-ipc.org/plants/inventory/) with a rating of moderate or high shall not be included in landscaping.
- **Barriers:** The proposed Project shall incorporate barriers, where appropriate, to minimize unauthorized public access, domestic animal predation, illegal trespass, or dumping in open space and/or suitable habitat for special-status wildlife (e.g., San Diego River corridor). Such barriers may include native landscaping, rocks/boulders, fencing, walls, signage, and/or other appropriate mechanisms.

MM-BIO-4 Tree Replacement, Encroachment, and Preservation. Prior to approval of grading plans and issuance of a grading permit, construction plans, conditions of approval, and the Project's Landscape Plan shall include the following to address tree removal, encroachment into protected zone, and retained trees:

- **Replacement:** The proposed site plan would require removal of 109 trees. Tree replacement shall occur at a 1:1 mitigation ratio with 15-gallon trees and be included in the Project's Landscape Plan, which shall also include recommendations for long-term maintenance and care for regulated trees that will be retained on site.
- **Encroachment into Protected Zone and Retained Trees:** The Project would encroach upon 24 trees and preserve 7 trees. As such, the recommendations provided in the Tree Protection

Measures from the Arborist Report for the Palisade Santee Commerce Center Project (prepared by Dudek in May 2024) designed to mitigate impacts from construction encroachment into the protected zone of the preserved and encroached upon trees shall be implemented. These Tree Protection Measures are consistent with best management practices for tree protection on construction sites and would help minimize impacts to preserved and encroached trees. These measures shall be implemented prior to, during, and following construction. This includes measures such as exclusion fencing and worker training to avoid direct impacts to trees, and measures such as irrigation and monthly inspections by a certified arborist to promote the long-term health of retained trees.

Appendix A

Plant Species Observed on Site

Plant Species

Vascular Species

Eudicots

ANACARDIACEAE – SUMAC OR CASHEW FAMILY

* *Rhus lancea* – African sumac
* *Schinus molle* – Peruvian peppertree
* *Schinus terebinthifolius* – Brazilian peppertree

ASTERACEAE – SUNFLOWER FAMILY

* *Centaurea melitensis* – Maltese star-thistle

BRASSICACEAE – MUSTARD FAMILY

* *Hirschfeldia incana* – shortpod mustard

FABACEAE – LEGUME FAMILY

* *Acacia* sp. – acacia

MYRTACEAE – MYRTLE FAMILY

* *Eucalyptus cladocalyx* – sugargum
* *Eucalyptus polyanthemos* – redbox
* *Lophostemon confertus* – brisbane box
* *Syzygium paniculatum* – no common name

OLEACEAE – OLIVE FAMILY

* *Olea europaea* – olive

PLATANACEAE – PLANE TREE, SYCAMORE FAMILY

Platanus racemosa – California sycamore

PROTEACEAE – PROTEA FAMILY

* *Grevillea robusta* – silkoak

VIBURNACEAE – MUSKROOT FAMILY

Sambucus mexicana – blue elderberry

Gymnosperms and Gnetophytes

CUPRESSACEAE – CYPRESS FAMILY

* *Cupressus sempervirens* – Italian cypress

Monocots

ARECACEAE – PALM FAMILY

* *Washingtonia robusta* – Washington fan palm

POACEAE – GRASS FAMILY

* *Avena fatua* – wild oat
* *Bromus diandrus* – ripgut brome
* *Bromus rubens* – red brome

* signifies introduced (non-native) species

Appendix B
Wildlife Species Observed on Site

Wildlife Species

Amphibians

Frogs

HYLIDAE – TREEFROGS

Pseudacris hypochondriaca – Baja California treefrog

RANIDAE – TRUE FROGS

* *Lithobates catesbeianus* – American bullfrog

Birds

Blackbirds, Orioles and Allies

ICTERIDAE – BLACKBIRDS

Agelaius phoeniceus – red-winged blackbird

Euphagus cyanocephalus – Brewer's blackbird

Icterus cucullatus – hooded oriole

* *Molothrus ater* – brown-headed cowbird

Bushtits

AEGITHALIDAE – LONG-TAILED TITS AND BUSHTITS

Psaltriparus minimus – bushtit

Cardinals, Grosbeaks and Allies

CARDINALIDAE – CARDINALS AND ALLIES

Pheucticus melanocephalus – black-headed grosbeak

Cormorants

PHALACROCORACIDAE – CORMORANTS

Nannopterum auritus – double-crested cormorant

Finches

FRINGILLIDAE – FRINGILLINE AND CARDUELINE FINCHES AND ALLIES

Haemorhous mexicanus – house finch

Spinus psaltria – lesser goldfinch

Flycatchers

TYRANNIDAE – TYRANT FLYCATCHERS

Myiarchus cinerascens – ash-throated flycatcher
Sayornis nigricans – black phoebe
Tyrannus vociferans – Cassin's kingbird

Grebes

PODICIPEDIDAE – GREBES

Podilymbus podiceps – pied-billed grebe

HAWKS

ACCIPITRIDAE – HAWKS, KITES, EAGLES, AND ALLIES

Accipiter cooperii – Cooper's hawk
Buteo jamaicensis – red-tailed hawk
Buteo lineatus – red-shouldered hawk

Herons and Bitterns

ARDEIDAE – HERONS, BITTERNS, AND ALLIES

Ardea alba – great egret
Egretta thula – snowy egret
Nycticorax nycticorax – black-crowned night-heron

Hummingbirds

TROCHILIDAE – HUMMINGBIRDS

Calypte anna – Anna's hummingbird

Jays, Magpies and Crows

CORVIDAE – CROWS AND JAYS

Corvus brachyrhynchos – American crow

Mockingbirds and Thrashers

MIMIDAE – MOCKINGBIRDS AND THRASHERS

Mimus polyglottos – northern mockingbird

Old World Sparrows

PASSERIDAE – OLD WORLD SPARROWS

* *Passer domesticus* – house sparrow

Old World Warblers and Gnatcatchers

POLIOPTILIDAE – GNATCATCHERS

Polioptila caerulea – blue-gray gnatcatcher

Pigeons and Doves

COLUMBIDAE – PIGEONS AND DOVES

Zenaida macroura – mourning dove

Rails, Gallinules and Coots

RALLIDAE – RAILS, GALLINULES, AND COOTS

Fulica americana – American coot

Silky Flycatchers

PTILOGONATIDAE – SILKY-FLYCATCHERS

Phainopepla nitens – phainopepla

Thrushes

TURDIDAE – THRUSHES

Turdus migratorius – American robin

Vireos

VIREONIDAE – VIREOS

Vireo bellii pusillus – least Bell's vireo

Waterfowl

ANATIDAE – DUCKS, GEESE, AND SWANS

Anas platyrhynchos – mallard

Branta canadensis – Canada goose

Bucephala albeola – bufflehead

Mareca americana – American wigeon

Wood Warblers and Allies

PARULIDAE – WOOD-WARBLERS

Geothlypis trichas – common yellowthroat

Setophaga petechia – yellow warbler

Woodpeckers

PICIDAE – WOODPECKERS AND ALLIES

Dryobates nuttallii – Nuttall's woodpecker

Wrens

TROGLODYTIDAE – WRENS

Troglodytes aedon – house wren

Thryomanes bewickii – Bewick's wren

Waxbills

ESTRILDIDAE – WAXBILLS

* *Lonchura punctulata* – scaly-breasted munia

New World Sparrows

PASSERELLIDAE – NEW WORLD SPARROWS

Melospiza melodia – song sparrow

Melozone crissalis – California towhee

Pipilo maculatus – spotted towhee

Chats

ICTERIIDAE – YELLOW-BREASTED CHAT

icteria virens – yellow-breasted chat

Typical Warblers, Parrotbills, Wrentit

SYLVIIDAE – SYLVIID WARBLERS

Chamaea fasciata – wrentit

Mammals

Hares and Rabbits

LEPORIDAE – HARES AND RABBITS

Sylvilagus bachmani – brush rabbit

Squirrels

SCIURIDAE – SQUIRRELS

Otospermophilus beecheyi – California ground squirrel

Raccoons

PROCYONIDAE – RACCOONS AND RELATIVES

Procyon lotor – northern raccoon

Reptiles

Lizards

PHRYNOSOMATIDAE – IGUANID LIZARDS

Sceloporus occidentalis – western fence lizard

Uta stansburiana – common side-blotched lizard

* signifies introduced (non-native) species

Appendix C

Special-Status Plant Species Potential to Occur

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Acanthomintha ilicifolia	San Diego thorn-mint	FT/SE/1B.1	Chaparral, coastal scrub, valley and foothill grassland, vernal pools; clay, openings/ annual herb/Apr–June/35–3,145	Not expected to occur. No suitable vegetation present.
Acmispon prostratus	Nuttall's acmispon	None/None/1B.1	Coastal dunes, coastal scrub (sandy)/annual herb/Mar–June(July)/0–35	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Adolphia californica	California adelphia	None/None/2B.1	Chaparral, coastal scrub, valley and foothill grassland; clay/perennial deciduous shrub/Dec–May/35–2,425	Not expected to occur. No suitable vegetation present.
Allium marvinii	Yucaipa onion	None/None/1B.2	Chaparral (clay, openings)/perennial bulbiferous herb/Apr–May/2,490–3,490	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Ambrosia chenopodiifolia	San Diego bur-sage	None/None/2B.1	Coastal scrub/perennial shrub/ Apr–June/180–510	Not expected to occur. No suitable vegetation present.
Ambrosia monogyra	singlewhorl burrobrush	None/None/2B.2	Chaparral, Sonoran desert scrub; sandy/perennial shrub/Aug–Nov/35–1,640	Not expected to occur. No suitable vegetation present.
Ambrosia pumila	San Diego ambrosia	FE/None/1B.1	Chaparral, coastal scrub, valley and foothill grassland, vernal pools; alkaline (sometimes), clay (sometimes), disturbed areas (often), loam (sometimes), sandy (sometimes)/ perennial rhizomatous herb/Apr–Oct/ 65–1,360	Not expected to occur. No suitable vegetation present.
Aphanisma blitoides	aphanisma	None/None/1B.2	Coastal bluff scrub, coastal dunes, coastal scrub; gravelly (sometimes), sandy (sometimes)/annual herb/Feb–June/ 5–1,000	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Arctostaphylos glandulosa ssp. *crassifolia*	Del Mar manzanita	FE/None/1B.1	Chaparral (maritime, sandy)/perennial evergreen shrub/June–Apr/0–1,195	Not expected to occur. No suitable vegetation present.
Arctostaphylos otayensis	Otay manzanita	None/None/1B.2	Chaparral, cismontane woodland/perennial evergreen shrub/Jan–Apr/900–5,575	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Artemisia palmeri	San Diego sagewort	None/None/4.2	Chaparral, coastal scrub, riparian forest, riparian scrub, riparian woodland; mesic, sandy/perennial deciduous shrub/ (Feb) May–Sep/15–3,000	Not expected to occur. No suitable vegetation present.
Asplenium vespertinum	western spleenwort	None/None/4.2	Chaparral, cismontane woodland, coastal scrub; rocky/perennial rhizomatous herb/Feb–June/590–3,280	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Astragalus deanei	Dean's milk-vetch	None/None/1B.1	Chaparral, cismontane woodland, coastal scrub, riparian forest/perennial herb/ Feb–May/245–2,280	Not expected to occur. No suitable vegetation present.
Astragalus oocarpus	San Diego milk-vetch	None/None/1B.2	Chaparral (openings), cismontane woodland/ perennial herb/May–Aug/1,000–5,000	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Atriplex coulteri	Coulter's saltbush	None/None/1B.2	Coastal bluff scrub, coastal dunes, coastal scrub, valley and foothill grassland; alkaline (sometimes), clay (sometimes)/perennial herb/Mar–Oct/10–1,505	Not expected to occur. No suitable vegetation present.
Atriplex pacifica	south coast saltscale	None/None/1B.2	Coastal bluff scrub, coastal dunes, coastal scrub, playas/annual herb/Mar–Oct/0–460	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Baccharis vanessae	Encinitas baccharis	FT/SE/1B.1	Chaparral (maritime), cismontane woodland; sandstone/perennial deciduous shrub/ Aug–Nov/195–2,360	Not expected to occur. No suitable vegetation present.
Bergerocactus emoryi	golden-spined cereus	None/None/2B.2	Chaparral, closed-cone coniferous forest, coastal scrub; sandy/perennial stem/ May–June/10–1,295	Not expected to occur. No suitable vegetation present.
Bloomeria clevelandii	San Diego goldenstar	None/None/1B.1	Chaparral, coastal scrub, valley and foothill grassland, vernal pools; clay/perennial bulbiferous herb/Apr–May/165–1,525	Not expected to occur. No suitable vegetation present.
Brodiaea filifolia	thread-leaved brodiaea	FT/SE/1B.1	Chaparral (openings), cismontane woodland, coastal scrub, playas, valley and foothill grassland, vernal pools; clay (often)/perennial bulbiferous herb/Mar–June/80–3,670	Not expected to occur. No suitable vegetation present.
Brodiaea orcuttii	Orcutt's brodiaea	None/None/1B.1	Chaparral, cismontane woodland, closed-cone coniferous forest, meadows and seeps, valley and foothill grassland, vernal pools; clay, mesic/perennial bulbiferous herb/ May–July/100–5,550	Not expected to occur. No suitable vegetation present.
Calandrinia breweri	Brewer's calandrinia	None/None/4.2	Chaparral, coastal scrub; burned areas, disturbed areas, loam (sometimes), sandy (sometimes)/annual herb/ (Jan) Mar–June/35–4,000	Not expected to occur. No suitable vegetation present.
Calochortus dunnii	Dunn's mariposa-lily	None/SR/1B.2	Chaparral, closed-cone coniferous forest, valley and foothill grassland; gabbroic (sometimes), rocky/perennial bulbiferous herb/(Feb) Apr–June/605–6,000	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Carex obispoensis	San Luis Obispo sedge	None/None/1B.2	Chaparral, closed-cone coniferous forest, coastal prairie, coastal scrub, valley and foothill grassland; clay (often), gabbroic (sometimes), seeps (often), serpentinite (often)/perennial cespitose herb/ Apr–June/35–2,690	Not expected to occur. No suitable vegetation present.
Castilleja plagiotoma	Mojave paintbrush	None/None/4.3	Great Basin scrub (alluvial), Joshua tree "woodland," lower montane coniferous forest, pinyon and juniper woodland/perennial herb (hemiparasitic)/Apr–June/985–8,200	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Ceanothus cyaneus	Lakeside ceanothus	None/None/1B.2	Chaparral, closed-cone coniferous forest/perennial evergreen shrub/ Apr–June/770–2,475	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Ceanothus otayensis	Otay Mountain ceanothus	None/None/1B.2	Chaparral (gabbroic, metavolcanic)/perennial evergreen shrub/Jan–Apr/1,965–3,605	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Ceanothus verrucosus	wart-stemmed ceanothus	None/None/2B.2	Chaparral/perennial evergreen shrub/ Dec–May/5–1,245	Not expected to occur. No suitable vegetation present.
Centromadia pungens ssp. *laevis*	smooth tarplant	None/None/1B.1	Chenopod scrub, meadows and seeps, playas, riparian woodland, valley and foothill grassland; alkaline/annual herb/Apr–Sep/ 0–2,095	Not expected to occur. No suitable vegetation present.
Chloropyron maritimum ssp. *maritimum*	salt marsh bird's-beak	FE/SE/1B.2	Coastal dunes, marshes and swamps (coastal salt)/annual herb (hemiparasitic)/ May–Oct (Nov)/0–100	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Chorizanthe polygonoides var. *longispina*	long-spined spineflower	None/None/1B.2	Chaparral, coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools; clay (often)/annual herb/ Apr–July/100–5,015	Not expected to occur. No suitable vegetation present.
Clarkia delicata	delicate clarkia	None/None/1B.2	Chaparral, cismontane woodland; gabbroic (often)/annual herb/Apr–June/770–3,280	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Clinopodium chandleri	San Miguel savory	None/None/1B.2	Chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland; gabbroic (sometimes), rocky (sometimes)/perennial shrub/Mar–July/ 395–3,525	Not expected to occur. No suitable vegetation present.
Comarostaphylis *diversifolia* ssp. *diversifolia*	summer holly	None/None/1B.2	Chaparral, cismontane woodland/perennial evergreen shrub/Apr–June/100–2,590	Not expected to occur. No suitable vegetation present.
Convolvulus simulans	small-flowered morning-glory	None/None/4.2	Chaparral (openings), coastal scrub, valley and foothill grassland; clay, seeps, serpentinite/annual herb/ Mar–July/100–2,425	Not expected to occur. No suitable vegetation present.
Corethrogyne filaginifolia var. *incana*	San Diego sand aster	None/None/1B.1	Chaparral, coastal bluff scrub, coastal scrub/perennial herb/June–Sep/10–375	Not expected to occur. No suitable vegetation present.
Cylindropuntia californica var. *californica*	snake cholla	None/None/1B.1	Chaparral, coastal scrub/perennial stem/ Apr–May/100–490	Not expected to occur. No suitable vegetation present.
Deinandra conjugens	Otay tarplant	FT/SE/1B.1	Coastal scrub, valley and foothill grassland; clay/annual herb/(Apr)May–June/80–985	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Deinandra floribunda	Tecate tarplant	None/None/1B.2	Chaparral, coastal scrub/annual herb/ Aug–Oct/230–4,000	Not expected to occur. No suitable vegetation present.
Dicranostegia orcuttiana	Orcutt's bird's-beak	None/None/2B.1	Coastal scrub/annual herb (hemiparasitic)/ (Mar)Apr-July (Sep)/35–1,145	Not expected to occur. No suitable vegetation present.
Dudleya variegata	variegated dudleya	None/None/1B.2	Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland, vernal pools; clay/perennial herb/Apr–June/ 10–1,900	Not expected to occur. No suitable vegetation present.
Ericameria palmeri var. *palmeri*	Palmer's goldenbush	None/None/1B.1	Chaparral, coastal scrub; mesic/perennial evergreen shrub/(July)Sep–Nov/100–1,965	Not expected to occur. No suitable vegetation present.
Eriodictyon sessilifolium	sessile-leaved yerba santa	None/None/2B.1	Coastal scrub; volcanic/perennial shrub/July/560–560	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Eriogonum evanidum	vanishing wild buckwheat	None/None/1B.1	Chaparral, cismontane woodland, lower montane coniferous forest, pinyon and juniper woodland; gravelly (sometimes), sandy (sometimes)/annual herb/ July–Oct/3,605–7,295	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Eryngium aristulatum var. *parishii*	San Diego button-celery	FE/SE/1B.1	Coastal scrub, valley and foothill grassland, vernal pools; mesic/annual/perennial herb/ Apr–June/65–2,030	Not expected to occur. No suitable vegetation present.
Euphorbia abramsiana	Abrams' spurge	None/None/2B.2	Mojavean desert scrub, Sonoran desert scrub; sandy/annual herb/(Aug)Sep–Nov/-15–4,295	Not expected to occur. No suitable vegetation present.
Euphorbia misera	cliff spurge	None/None/2B.2	Coastal bluff scrub, coastal scrub, Mojavean desert scrub; rocky/perennial shrub/ (Oct)Dec–Aug/35–1,640	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Ferocactus viridescens	San Diego barrel cactus	None/None/2B.1	Chaparral, coastal scrub, valley and foothill grassland, vernal pools/perennial stem/ May–June/10–1,475	Not expected to occur. No suitable vegetation present.
Frankenia palmeri	Palmer's frankenia	None/None/2B.1	Coastal dunes, marshes and swamps (coastal salt), playas/perennial herb/May–July/0–35	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Fraxinus parryi	chaparral ash	None/None/2B.2	Chaparral/perennial shrub/Mar–May/ 700–2,030	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Fremontodendron mexicanum	Mexican flannelbush	FE/SR/1B.1	Chaparral, cismontane woodland, closed-cone coniferous forest; gabbroic, serpentinite/perennial evergreen shrub/ Mar–June/35–2,345	Not expected to occur. No suitable vegetation present.
Galium proliferum	desert bedstraw	None/None/2B.2	Joshua tree woodland, Mojavean desert scrub, pinyon and juniper woodland; carbonate, rocky/annual herb/ Mar–June/3,900–5,345	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Geothallus tuberosus	Campbell's liverwort	None/None/1B.1	Coastal scrub (mesic), vernal pools/ephemeral liverwort/35–1,965	Not expected to occur. No suitable vegetation present.
Githopsis diffusa ssp. *filicaulis*	Mission Canyon bluecup	None/None/3.1	Chaparral (disturbed areas, mesic)/annual herb/Apr–June/1,475–2,295	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Grindelia hallii	San Diego gumplant	None/None/1B.2	Chaparral, lower montane coniferous forest, meadows and seeps, valley and foothill grassland/perennial herb/ May–Oct/605–5,725	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Harpagonella palmeri	Palmer's grapplinghook	None/None/4.2	Chaparral, coastal scrub, valley and foothill grassland; clay, openings/annual herb/ Mar–May/65–3,130	Not expected to occur. No suitable vegetation present.
Hesperocyparis forbesii	Tecate cypress	None/None/1B.1	Chaparral, closed-cone coniferous forest; clay, gabbroic (sometimes)/perennial evergreen tree/260–4,920	Not expected to occur. No suitable vegetation present.
Heterotheca sessiliflora ssp. *sessiliflora*	beach goldenaster	None/None/1B.1	Chaparral (coastal), coastal dunes, coastal scrub/perennial herb/Mar–Dec/0–4,015	Not expected to occur. No suitable vegetation present.
Holocarpha virgata ssp. *elongata*	graceful tarplant	None/None/4.2	Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland/annual herb/May–Nov/195–3,605	Not expected to occur. No suitable vegetation present.
Horkelia truncata	Ramona horkelia	None/None/1B.3	Chaparral, cismontane woodland; clay, gabbroic/perennial herb/ May–June/1,310–4,265	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Isocoma menziesii var. *decumbens*	decumbent goldenbush	None/None/1B.2	Chaparral, coastal scrub (often disturbed areas, sandy)/perennial shrub/Apr–Nov/ 35–820	Not expected to occur. No suitable vegetation present.
Iva hayesiana	San Diego marsh-elder	None/None/2B.2	Marshes and swamps, playas/perennial herb/Apr–Oct/0–1,640	Not expected to occur. No suitable vegetation present.
Juglans californica	Southern California black walnut	None/None/4.2	Chaparral, cismontane woodland, coastal scrub, riparian woodland/perennial deciduous tree/Mar–Aug/165–2,950	Not expected to occur. No suitable vegetation present.
Juncus acutus ssp. *leopoldii*	southwestern spiny rush	None/None/4.2	Coastal dunes (mesic), coastal scrub, marshes and swamps (coastal salt), meadows and seeps (alkaline seeps)/perennial rhizomatous herb/(Mar)May–June/10–2,950	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	None/None/1B.1	Marshes and swamps (coastal salt), playas, vernal pools/annual herb/Feb–June/5–4,000	Not expected to occur. No suitable vegetation present.
Lathyrus splendens	pride-of-California	None/None/4.3	Chaparral/perennial herb/Mar–June/ 655–5,000	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Lepechinia cardiophylla	heart-leaved pitcher sage	None/None/1B.2	Chaparral, cismontane woodland, closed-cone coniferous forest/perennial shrub/ Apr–July/1,705–4,490	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Lepechinia ganderi	Gander's pitcher sage	None/None/1B.3	Chaparral, closed-cone coniferous forest, coastal scrub, valley and foothill grassland; gabbroic (sometimes)/perennial shrub/ June–July/1,000–3,295	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Lepidium virginicum var. *robinsonii*	Robinson's pepper-grass	None/None/4.3	Chaparral, coastal scrub/annual herb/ Jan–July/5–2,900	Not expected to occur. No suitable vegetation present.
Leptosyne maritima	sea dahlia	None/None/2B.2	Coastal bluff scrub, coastal scrub/perennial herb/Mar–May/15–490	Not expected to occur. No suitable vegetation present.
Monardella breweri ssp. *microcephala*	small-headed monardella	None/None/2B.2	Chaparral, cismontane woodland, lower montane coniferous forest; disturbed areas (sometimes), granitic, openings/annual herb/May–Aug/755–3,935	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Monardella hypoleuca ssp. *lanata*	felt-leaved monardella	None/None/1B.2	Chaparral, cismontane woodland/perennial rhizomatous herb/June–Aug/985–5,165	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Monardella viminea	willowy monardella	FE/SE/1B.1	Chaparral, coastal scrub, riparian forest, riparian scrub, riparian woodland; alluvial terraces, washes/perennial herb/ June–Aug/165–740	Not expected to occur. No suitable vegetation present.
Myosurus minimus ssp. *apus*	little mousetail	None/None/3.1	Valley and foothill grassland, vernal pools (alkaline)/annual herb/Mar–June/65–2,095	Not expected to occur. No suitable vegetation present.
Nama stenocarpa	mud nama	None/None/2B.2	Marshes and swamps (lake margins, riverbanks)/annual/perennial herb/ Jan–July/15–1,640	Not expected to occur. No suitable vegetation present.
Navarretia fossalis	spreading navarretia	FT/None/1B.1	Chenopod scrub, marshes and swamps (shallow freshwater), playas, vernal pools/annual herb/Apr–June/100–2,145	Not expected to occur. No suitable vegetation present.
Navarretia prostrata	prostrate vernal pool navarretia	None/None/1B.2	Coastal scrub, meadows and seeps, valley and foothill grassland (alkaline), vernal pools; mesic/annual herb/Apr–July/10–3,965	Not expected to occur. No suitable vegetation present.
Nemacaulis denudata var. *denudata*	coast woolly-heads	None/None/1B.2	Coastal dunes/annual herb/Apr–Sep/0–330	Not expected to occur. No suitable vegetation present.
Nolina interrata	Dehesa nolina	None/SE/1B.1	Chaparral (gabbroic, metavolcanic, serpentinite)/perennial herb/ June–July/605–2,805	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Orcuttia californica	California Orcutt grass	FE/SE/1B.1	Vernal pools/annual herb/ Apr–Aug/50–2,165	Not expected to occur. No suitable vegetation present.
Packera ganderi	Gander's ragwort	None/SR/1B.2	Chaparral (burned areas, gabbroic outcrops)/ perennial herb/Apr–June/1,310–3,935	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Pentachaeta aurea ssp. *aurea*	golden-rayed pentachaeta	None/None/4.2	Chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, riparian woodland, valley and foothill grassland/annual herb/Mar–July/260–6,065	Not expected to occur. No suitable vegetation present.
Piperia cooperi	chaparral rein orchid	None/None/4.2	Chaparral, cismontane woodland, valley and foothill grassland/perennial herb/ Mar–June/50–5,200	Not expected to occur. No suitable vegetation present.
Pogogyne abramsii	San Diego mesa mint	FE/SE/1B.1	Vernal pools/annual herb/ Mar–July/295–655	Not expected to occur. No suitable vegetation present.
Pogogyne nudiuscula	Otay Mesa mint	FE/SE/1B.1	Vernal pools/annual herb/ May–July/295–820	Not expected to occur. No suitable vegetation present.
Pseudognaphalium leucocephalum	white rabbit-tobacco	None/None/2B.2	Chaparral, cismontane woodland, coastal scrub, riparian woodland; gravelly, sandy/perennial herb/(July) Aug–Nov (Dec)/ 0–6,885	Not expected to occur. No suitable vegetation present.
Quercus cedrosensis	Cedros Island oak	None/None/2B.2	Chaparral, closed-cone coniferous forest, coastal scrub/perennial evergreen tree/ Apr–May/835–3,145	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Quercus dumosa	Nuttall's scrub oak	None/None/1B.1	Chaparral, closed-cone coniferous forest, coastal scrub; clay, loam, sandy/perennial evergreen shrub/Feb–Apr (May–Aug)/ 50–1,310	Not expected to occur. No suitable vegetation present.
Quercus engelmannii	Engelmann oak	None/None/4.2	Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland/perennial deciduous tree/ Mar–June/165–4,265	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Ribes canthariforme	Moreno currant	None/None/1B.3	Chaparral, riparian scrub/perennial deciduous shrub/Feb–Apr/1,115–3,935	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Romneya coulteri	Coulter's matilija poppy	None/None/4.2	Chaparral, coastal scrub; burned areas (often)/perennial rhizomatous herb/ Mar–July(Aug)/65–3,935	Not expected to occur. No suitable vegetation present.
Salvia munzii	Munz's sage	None/None/2B.2	Chaparral, coastal scrub/perennial evergreen shrub/Feb–Apr/375–3,490	Not expected to occur. No suitable vegetation present.
Selaginella cinerascens	ashy spike-moss	None/None/4.1	Chaparral, coastal scrub/perennial rhizomatous herb/65–2,095	Not expected to occur. No suitable vegetation present.
Senecio aphanactis	chaparral ragwort	None/None/2B.2	Chaparral, cismontane woodland, coastal scrub; alkaline (sometimes)/annual herb/ Jan–Apr(May)/50–2,620	Not expected to occur. No suitable vegetation present.
Sphaerocarpos drewiae	bottle liverwort	None/None/1B.1	Chaparral, coastal scrub; openings/ ephemeral liverwort/295–1,965	Not expected to occur. No suitable vegetation present.
Stemodia durantifolia	purple stemodia	None/None/2B.1	Sonoran desert scrub (often mesic, sandy)/ perennial herb/(Jan) Apr–Dec/590–985	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Stipa diegoensis	San Diego County needle grass	None/None/4.2	Chaparral, coastal scrub; mesic (often), rocky/ perennial herb/Feb–June/35–2,620	Not expected to occur. No suitable vegetation present.
Streptanthus bernardinus	Laguna Mountains jewelflower	None/None/4.3	Chaparral, lower montane coniferous forest/ perennial herb/May–Aug/2,195–8,200	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Stylocline citroleum	oil neststraw	None/None/1B.1	Chenopod scrub, coastal scrub, valley and foothill grassland; clay/annual herb/ Mar–Apr/165–1,310	Not expected to occur. No suitable vegetation present.
Suaeda esteroa	estuary seablite	None/None/1B.2	Marshes and swamps (coastal salt)/perennial herb/(Jan–May)July–Oct/0–15	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Tetracoccus dioicus	Parry's tetracoccus	None/None/1B.2	Chaparral, coastal scrub/perennial deciduous shrub/Apr–May/540–3,280	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.
Texosporium sancti-jacobi	woven-spored lichen	None/None/3	Chaparral (openings)/crustose lichen (terricolous)/195–2,165	Not expected to occur. No suitable vegetation present.
Triquetrella californica	coastal triquetrella	None/None/1B.2	Coastal bluff scrub, coastal scrub/moss/ 35–330	Not expected to occur. No suitable vegetation present.
Viguiera laciniata	San Diego County viguiera	None/None/4.3	Chaparral, coastal scrub/perennial shrub/Feb–June(Aug)/195–2,460	Not expected to occur. No suitable vegetation present.
Xanthisma junceum	rush-like bristleweed	None/None/4.3	Chaparral, coastal scrub/perennial herb/ Jan–Oct/785–3,280	Not expected to occur. The site is outside of the species' known elevation range and there is no suitable vegetation present.

Status Legend
Federal
FE: Federally listed as endangered
FT: Federally listed as threatened
State
SE: State listed as endangered
SR: State listed as rare
CRPR: California Rare Plant Rank
1B: Plants rare, threatened, or endangered in California and elsewhere
2B: Plants rare, threatened, or endangered in California, but more common elsewhere

3: Plants about which more information is needed – A Review List
4: Plants of Limited Distribution – A Watch List

Threat Rank

0.1 – Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
0.2 – Moderately threatened in California (20%–80% occurrences threatened/moderate degree and immediacy of threat)
0.3 – Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

Appendix D

Special-Status Wildlife Species Potential to Occur

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Amphibians				
Anaxyrus californicus	arroyo toad	FE/SSC	Semi-arid areas near washes, sandy riverbanks, riparian areas, palm oasis, Joshua tree, mixed chaparral and sagebrush; stream channels for breeding (typically third order); adjacent stream terraces and uplands for foraging and wintering	Not expected to occur. No suitable vegetation present.
Spea hammondii	western spadefoot	None/SSC	Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture	Not expected to occur. No suitable vegetation present.
Reptiles				
Anniella stebbinsi	southern California legless lizard	None/SSC	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and moist sandy or loose, loamy soils	Not expected to occur. No suitable vegetation present.
Arizona elegans occidentalis	California glossy snake	None/SSC	Arid scrub, rocky washes, grasslands, chaparral, open areas with loose soil	Not expected to occur. No suitable vegetation present.
Aspidoscelis hyperythra	orange-throated whiptail	None/WL	Low-elevation coastal scrub, chaparral, and valley–foothill hardwood	Not expected to occur. No suitable vegetation present.
Aspidoscelis tigris stejnegeri	San Diegan tiger whiptail	None/SSC	Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas.	Not expected to occur. No suitable vegetation present.
Chelonia mydas	green sea turtle	FT/None	Shallow waters of lagoons, bays, estuaries, mangroves, eelgrass, and seaweed beds	Not expected to occur. No suitable vegetation present.
Coleonyx variegatus abbotti	San Diego banded gecko	None/SSC	Rocky areas within coastal scrub and chaparral	Not expected to occur. No suitable vegetation present.
Crotalus ruber	red diamondback rattlesnake	None/SSC	Coastal scrub, chaparral, oak and pine woodlands, rocky grasslands, cultivated areas, and desert flats	Not expected to occur. No suitable vegetation present.
Diadophis punctatus similis	San Diego ringneck snake	None/None	Moist habitats, including wet meadows, rocky hillsides, gardens, farmland grassland, chaparral, mixed-conifer forest, and woodland habitats	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Emys marmorata	western pond turtle	None/SSC	Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter	Not expected to occur. No suitable vegetation present.
Masticophis fuliginosus	Baja California coachwhip	None/SSC	In California restricted to southern San Diego County, where it is known from grassland and coastal sage scrub; open areas in grassland and coastal sage scrub	Not expected to occur. No suitable vegetation present.
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains, including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Not expected to occur. No suitable vegetation present.
Plestiodon skiltonianus interparietalis	Coronado skink	None/WL	Woodlands, grasslands, pine forests, and chaparral; rocky areas near water	Not expected to occur. No suitable vegetation present.
Salvadora hexalepis virgultea	coast patch-nosed snake	None/SSC	Brushy or shrubby vegetation; requires small mammal burrows for refuge and overwintering sites	Not expected to occur. No suitable vegetation present.
Thamnophis hammondii	two-striped gartersnake	None/SSC	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	Not expected to occur. No suitable vegetation present.
Birds				
Accipiter cooperii (nesting)	Cooper's hawk	None/WL	Nests and forages in dense stands of live oak, riparian woodlands, or other woodland habitats often near water	Not expected to occur. No suitable vegetation present.
Agelaius tricolor (nesting colony)	tricolored blackbird	BCC/SSC, ST	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture	Not expected to occur. No suitable vegetation present.
Aimophila ruficeps canescens	Southern California rufous-crowned sparrow	None/WL	Nests and forages in open coastal scrub and chaparral with low cover of scattered scrub interspersed with rocky and grassy patches	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Ammodramus savannarum (nesting)	grasshopper sparrow	None/SSC	Nests and forages in moderately open grassland with tall forbs or scattered shrubs used for perches	Not expected to occur. No suitable vegetation present.
Aquila chrysaetos (nesting and wintering)	golden eagle	None/FP, WL	Nests and winters in hilly, open/semi-open areas, including shrublands, grasslands, pastures, riparian areas, mountainous canyon land, open desert rimrock terrain; nests in large trees and on cliffs in open areas and forages in open habitats	Not expected to occur. No suitable vegetation present.
Artemisiospiza belli belli	Bell's sage sparrow	None/WL	Nests and forages in coastal scrub and dry chaparral; typically in large, unfragmented patches dominated by chamise; nests in more dense patches but uses more open habitat in winter	Not expected to occur. No suitable vegetation present.
Athene cunicularia (burrow sites and some wintering sites)	burrowing owl	BCC/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Not expected to occur. No suitable vegetation present.
Buteo swainsoni (nesting)	Swainson's hawk	None/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture	Not expected to occur. No suitable vegetation present.
Campylorhynchus brunneicapillus sandiegensis (San Diego and Orange Counties only)	coastal cactus wren	None/SSC	Southern cactus scrub patches	Not expected to occur. No suitable vegetation present.
Charadrius nivosus nivosus (nesting)	western snowy plover	FT, BCC/SSC	On coasts nests on sandy marine and estuarine shores; in the interior nests on sandy, barren or sparsely vegetated flats near saline or alkaline lakes, reservoirs, and ponds	Not expected to occur. No suitable vegetation present.
Coccyzus americanus occidentalis (nesting)	western yellow-billed cuckoo	FT/SE	Nests in dense, wide riparian woodlands and forest with well-developed understories	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Coturnicops noveboracensis	yellow rail	BCC/SSC	Nesting requires wet marsh/sedge meadows or coastal marshes with wet soil and shallow, standing water	Not expected to occur. No suitable vegetation present.
Elanus leucurus (nesting)	white-tailed kite	None/FP	Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands	Not expected to occur. No suitable vegetation present.
Empidonax traillii extimus (nesting)	southwestern willow flycatcher	FE/SE	Nests in dense riparian habitats along streams, reservoirs, or wetlands; uses variety of riparian and shrubland habitats during migration	Not expected to occur. No suitable vegetation present.
Eremophila alpestris actia	California horned lark	None/WL	This subspecies of horned lark occurs on the state's southern and central coastal slope and in the San Joaquin Valley; nests and forages in grasslands, disturbed lands, agriculture, and beaches	Not expected to occur. No suitable vegetation present.
Falco mexicanus (nesting)	prairie falcon	None/WL	Forages in grassland, savanna, rangeland, agriculture, desert scrub, alpine meadows; nests on cliffs or bluffs	Not expected to occur. No suitable vegetation present.
Icteria virens (nesting)	yellow-breasted chat	None/SSC	Nests and forages in dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush	Not expected to occur. No suitable vegetation present.
Ixobrychus exilis (nesting)	least bittern	None/SSC	Nests in freshwater and brackish marshes with dense, tall growth of aquatic and semi-aquatic vegetation	Not expected to occur. No suitable vegetation present.
Laterallus jamaicensis coturniculus	California black rail	None/FP, ST	Tidal marshes, shallow freshwater margins, wet meadows, and flooded grassy vegetation; suitable habitats are often supplied by canal leakage in Sierra Nevada foothill populations	Not expected to occur. No suitable vegetation present.
Pandion haliaetus (nesting)	osprey	None/WL	Large waters (lakes, reservoirs, rivers) supporting fish; usually near forest habitats, but widely observed along the coast	Not expected to occur. No suitable vegetation present.
Passerculus sandwichensis beldingi	Belding's savannah sparrow	BCC/SE	Nests and forages in coastal saltmarsh dominated by pickleweed (*Salicornia* spp.)	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Polioptila californica californica	coastal California gnatcatcher	FT/SSC	Nests and forages in various sage scrub communities, often dominated by California sagebrush and buckwheat; generally avoids nesting in areas with a slope of greater than 40%; majority of nesting at less than 1,000 feet above mean sea level	Not expected to occur. No suitable vegetation present.
Rallus obsoletus levipes	Ridgway's rail	FE/FP, SE	Coastal wetlands, brackish areas, coastal saline emergent wetlands	Not expected to occur. No suitable vegetation present.
Setophaga petechia (nesting)	yellow warbler	None/SSC	Nests and forages in riparian and oak woodlands, montane chaparral, open ponderosa pine, and mixed-conifer habitats	Not expected to occur. No suitable vegetation present.
Sternula antillarum browni (nesting colony)	California least tern	FE/FP, SE	Forages in shallow estuaries and lagoons; nests on sandy beaches or exposed tidal flats	Not expected to occur. No suitable vegetation present.
Vireo bellii pusillus (nesting)	least Bell's vireo	FE/SE	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season	Not expected to occur. No suitable vegetation present.
Nannopterum auritum (nesting colony)	double-crested cormorant	None/WL	Nests in riparian trees near ponds, lakes, artificial impoundments, slow-moving rivers, lagoons, estuaries, and open coastlines; winter habitat includes lakes, rivers, and coastal areas	Not expected to occur. No suitable vegetation present.
Mammals				
Aeorestes cinereus	northern hoary bat	None/None	Forest, woodland riparian, and wetland habitats; also juniper scrub, riparian forest, and desert scrub in arid areas; roosts in tree foliage and sometimes cavities, such as woodpecker holes	Not expected to occur. No suitable vegetation present.
Antrozous pallidus	pallid bat	None/SSC	Grasslands, shrublands, woodlands, forests; most common in open, dry habitats with rocky outcrops for roosting, but also roosts in trees and human-built structures	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Chaetodipus californicus femoralis	Dulzura pocket mouse	None/SSC	Open habitat, coastal scrub, chaparral, oak woodland, chamise chaparral, mixed-conifer habitats; disturbance specialist; 0 to 3,000 feet above mean sea level	Not expected to occur. No suitable vegetation present.
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None/SSC	Coastal scrub, mixed chaparral, sagebrush, desert wash, desert scrub, desert succulent shrub, pinyon–juniper, and annual grassland	Not expected to occur. No suitable vegetation present.
Choeronycteris mexicana	Mexican long-tongued bat	None/SSC	Desert and montane riparian, desert succulent scrub, desert scrub, and pinyon–juniper woodland; roosts in caves, mines, and buildings	Not expected to occur. No suitable vegetation present.
Corynorhinus townsendii	Townsend's big-eared bat	None/SSC	Mesic habitats characterized by coniferous and deciduous forests and riparian habitat, but also xeric areas; roosts in limestone caves and lava tubes, human-built structures, and tunnels	Not expected to occur. No suitable vegetation present.
Dasypterus xanthinus	western yellow bat	None/SSC	Valley–foothill riparian, desert riparian, desert wash, and palm oasis habitats; below 2,000 feet above mean sea level; roosts in riparian and palms	Not expected to occur. No suitable vegetation present.
Eumops perotis californicus	western mastiff bat	None/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	Not expected to occur. No suitable vegetation present.
Lepus californicus bennettii	San Diego black-tailed jackrabbit	None/None	Arid habitats with open ground; grasslands, coastal scrub, agriculture, disturbed areas, and rangelands	Not expected to occur. No suitable vegetation present.
Myotis ciliolabrum	western small-footed myotis	None/None	Arid woodlands and shrublands, but near water; roosts in caves, crevices, mines, abandoned buildings	Not expected to occur. No suitable vegetation present.
Myotis evotis	long-eared myotis	None/None	Brush, woodland, and forest habitats from sea level to 9,000 feet above mean sea level; prefers coniferous habitats; forages along habitat edges, in open habitats, and over water; roosts in buildings, crevices, under bark, and snags; uses caves as night roosts	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Myotis yumanensis	Yuma myotis	None/None	Riparian, arid scrublands and deserts, and forests associated with water (streams, rivers, tinajas); roosts in bridges, buildings, cliff crevices, caves, mines, and trees	Not expected to occur. No suitable vegetation present.
Neotoma lepida intermedia	San Diego desert woodrat	None/SSC	Coastal scrub, desert scrub, chaparral, cacti, rocky areas	Not expected to occur. No suitable vegetation present.
Nyctinomops femorosaccus	pocketed free-tailed bat	None/SSC	Pinyon–juniper woodlands, desert scrub, desert succulent shrub, desert riparian, desert wash, alkali desert scrub, Joshua tree, and palm oases; roosts in high cliffs or rock outcrops with drop-offs, caverns, and buildings	Not expected to occur. No suitable vegetation present.
Nyctinomops macrotis	big free-tailed bat	None/SSC	Rocky areas; roosts in caves, holes in trees, buildings, and crevices on cliffs and rocky outcrops; forages over water	Not expected to occur. No suitable vegetation present.
Taxidea taxus	American badger	None/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils	Not expected to occur. No suitable vegetation present.
Lasiurus frantzii	western red bat	None/SSC	Forest, woodland, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange; roosts in tree canopy	Not expected to occur. No suitable vegetation present.
Invertebrates				
Bombus crotchii	Crotch bumble bee	None/SCE	Open grassland and scrub communities supporting suitable floral resources	Not expected to occur. No suitable vegetation present.
Branchinecta sandiegonensis	San Diego fairy shrimp	FE/None	Vernal pools, non-vegetated ephemeral pools	Not expected to occur. No suitable vegetation present.
Callophrys thornei	Thorne's hairstreak	None/None	Interior cypress woodland dominated by host plant *Hesperocyparis forbesii* (Tecate cypress)	Not expected to occur. No suitable vegetation present.
Carolella busckana	Busck's gallmoth	None/None	Coastal scrub dunes	Not expected to occur. No suitable vegetation present.
Cicindela gabbii	western tidal-flat tiger beetle	None/None	Inhabits estuaries and mudflats along the coast of Southern California	Not expected to occur. No suitable vegetation present.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Deltaspis ivae	marsh-elder long-horned beetle	None/None	Found in a few scattered locations in San Diego and Riverside Counties; larva breeds in San Diego marsh-elder (*Iva hayesiana*) root collars	Not expected to occur. No suitable vegetation present.
Euphydryas editha quino	Quino checkerspot butterfly	FE/None	Annual forblands, grassland, open coastal scrub and chaparral; often soils with cryptogamic crusts and fine-textured clay; host plants include *Plantago erecta*, P. *patagonica*, and *Antirrhinum coulterianum*, among others	Not expected to occur. No suitable vegetation present.
Lycaena hermes	Hermes copper	FT/None	Mixed woodlands, chaparral, and coastal scrub	Not expected to occur. No suitable vegetation present.
Streptocephalus woottoni	Riverside fairy shrimp	FE/None	Vernal pools, non-vegetated ephemeral pools	Not expected to occur. No suitable vegetation present.
Cicindela latesignata	western beach tiger beetle	None/None	Mudflats and beaches in coastal Southern California	Not expected to occur. No suitable vegetation present.
Danaus plexippus plexippus pop. 1	monarch – California overwintering population	FC/None	Wind-protected tree groves with nectar sources and nearby water sources	Not expected to occur. No suitable vegetation present.

1 Introduction

This report summarizes Dudek's evaluation and analysis of tree resources within the tree survey area at the proposed Palisade Santee Commerce Center Project (project) site, located at 10990 N. Woodside Ave. in Santee, CA 92701 (APN 381-070-52-00). The project site is in the City of Santee, California (see Figure 1, Project Location) The site is on the existing Santee Drive In Theatre property and is surrounded by industrial uses on the east, west, and south and the San Diego River to the north. Access is provided via a single access road that extends to N. Woodside Ave. The project site is located within Township 15S, Range 12 West, of the San Bernardino U.S. Geological Survey 7.5-minute quadrangle map (Figure 1); the approximate centroid of the site is longitude 116°57'34.13"W and latitude 32°50'53.57"N.

The field inventory and assessments of the survey area's trees (development footprint) were conducted on March 9, 2023. The focus of Dudek's field evaluations was to identify and inventory all on-site trees that are subject to regulation by the City of Santee's Municipal Code that could be affected by the proposed development per the site plan. This report includes a discussion of tree inventory, evaluation and analysis methods, a summary of findings, identification of anticipated impacts, and tree protection and tree impact mitigation recommendations consistent with the City of Santee's Municipal Code and the tree removal permit process specified therein.

The City of Santee (City) requires a permit to trim, prune, cut, break, deface, destroy, burn or remove any tree, hedge or shrub from any City-owned public property or from a public highway.

The analysis of potential tree impacts in this report considers the requirements outlined in the appropriate sections of the City of Santee Municipal Code (Chapter 8.06 – Urban Forestry). In total, 140 trees were inventoried on and immediately adjacent to the proposed project site, all of which are located on private property. The proposed project would result in the removal of 109 private trees, encroachment of 24 trees, and preservation of seven trees with no impacts.

1.1 Summary

The field survey recorded 140 trees within the survey area, none of which are subject to regulation under the City of Santee Municipal Code. Trees identified within the survey area consisted of two native trees (one *Coast Live Oak (Quercus agrifolia) and one western sycamore (Platanus racemosa*)) and 138 non-native trees. The inventoried tree locations are depicted in Appendix A. The proposed project tree impacts are depicted in Appendix B.

Based on an evaluation of the most current project site plan, the project disturbance area is focused on the existing drive-in movie theater and its associated infrastructure. Construction of the proposed project is expected to require removal of 109 private trees. Furthermore, the protected zone of up to 24 trees would be encroached upon as a result of proposed grading and construction. The remaining seven trees would be preserved in place.

The City's municipal ordinance does not define a tree replacement ratio requirement. As such, the tree replacement recommendations contained herein propose a minimum 1:1 mitigation ratio with 15-gallon trees and recommendations for long-term maintenance and care for regulated trees that will be retained on site.

Based on the recommended 1:1 replacement ratio, Dudek recommends planting a minimum of 109 trees on site to mitigate for the anticipated removal of 109 trees. Species composition of the planted trees should be consistent of species appropriate for the region and planting location.

1.2 Assignment

Dudek's International Society of Arboriculture (ISA) Certified Arborists performed the following tasks:

- Assessed and inventoried all trees with protected zones within the survey area (based on project site plan) and documented species, general health, general structural condition, size, appearance, and presence of pests.
- Mapped the location of regulated oak and landmark trees on surveyed site base data and used GPS technology, as necessary, to develop a tree location exhibit and for planning reference.
- Prepared a tree information matrix that details the attributes of each regulated tree and identifies the species and landmark status.
- Analyzed tree attribute data and coordinated with the project design team to promote tree retention on site, to the maximum extent practicable.
- Evaluated tree impacts based on the project site plans.
- Prepared this report to document the results of field surveys and impact analyses and provide recommendations for tree protection and impact mitigation measures per the provisions of the City of Santee Municipal Code tree preservation requirements.

1.3 Project Description

North Palisade Partners (Applicant) proposes demolition of the existing Santee drive-in theatre for construction of a warehouse building equaling 291,290 SF, including a total of 10,000 SF of office use (5,000 SF of office mezzanines), associated truck loading docks (up to 42 Dock-Hi doors), employee parking, landscaping, access road widening and improvements, and frontage improvements on N Woodside Avenue. The proposed project includes tree, shrub, and groundcover landscaping throughout the post development landscape, which will include the planting of 213 trees based upon the March 2024 landscape plan. The proposed project would conform with the site's existing designation and zoning (General Plan designation for the site is Light Industrial-IL and zoning is Light Industrial District-IL).

1.4 Location/Setting

The project site is located at 10990 N. Woodside Ave., Santee, CA 92701 (APN 381-070-52-00) (Figure 1, project location). The site is on Santee Drive In Theatre property and is surrounded by industrial uses on the east, west, and south and the San Diego River to the north (Figure 1). Access is provided via a single access road that extends to N. Woodside Ave.

2 Methods

The following sections describe the methods used by Dudek's ISA Certified Arborists to inventory and evaluate trees in the tree survey area.

2.1 Field Tree Inventory and Evaluation

Dudek's ISA Certified Arborists Katrina Burritt (#WE-10771A) and Chris Kallstrand (#WE-82087A) conducted the following tree inventory and evaluation:

- March 9, 2023 – Tree inventory and evaluation to document tree locations and attribute information for all trees within the survey area.

The arborists examined trees that would be disturbed by the proposed development and mapped protection zones. Tree attribute data collected during the field survey included species, trunk diameter and circumference, tree height, canopy spread, general health condition, structural condition, and presences of observable pests or other tree maladies. Trunk diameters were measured using a diameter tape, which provides adjusted numbers for diameter measurements when wrapping the tape around the circumference of a tree trunk. Diameter measurements were collected using standard protocol described by the Council of Tree and Landscape Appraisers in its Guide for Plant Appraisal (ISA 2000), published by the ISA, and per guidance given in the City's Municipal Code.

Trunk diameter and circumference measurements were taken at 4.5 feet above the ground along the trunk axis, with a few common exceptions. In cases where the trunk of a tree split into multiple stems at approximately 4.5 feet above the ground, the measurement was made at the location that best represented the trunk's diameter. Tree height measurements were estimated by the arborist, and tree canopy radius measurements were documented by "pacing-off" the measurement based on the arborist's knowledge of their stride length or visually estimating the canopy width.

Pursuant to the Guide for Plant Appraisal (ISA 2000), tree health and structure were evaluated with respect to five distinct tree components: roots, trunk, scaffold branches, small branches, and foliage. Health and structure were graded as *good*, *good/fair*, *fair*, *fair/poor*, or *poor*. Good condition trees exhibit acceptable vigor, healthy foliage, minor if any structural issues, and no apparent maladies. Fair condition trees are typical, with few maladies, moderate structural issues, and may exhibit less vigor in foliage and new growth. Trees assigned a poor condition rating exhibit significant health or structural problems or damage.

The location of each individual tree was mapped using a Trimble Pathfinder Pro XH GPS receiver. The Pathfinder has a horizontal accuracy of 1-meter (1-sigma) using differential code positioning techniques. Because tree canopies can sometimes cause loss of satellite lock by blocking the line-of-sight to satellites, an electronic compass and reflectorless electronic distance measuring (EDM) device was also used in mapping tree locations. The EDM/compass combination operates in concert with the Pathfinder system to position offsets, and offset information is automatically attached to the GPS position data string. Dudek used the data collected to create a master tree inventory data set, inclusive of all trees within the tree survey area.

Individual tree locations are presented in Appendix A, Tree Location Exhibit, and individual tree attribute data and impact determination is presented in Appendices B, Tree Impact Exhibit, and Appendix C, Tree Information Matrix.

2.2 Tree Impact Analysis

Following data collection, processing, and analysis efforts, an impact determination was made for each tree based on proximity to the proposed disturbance area. Impact determinations used in this report are as follows:

- Not Impacted (tree not affected by project)
- Removal (tree to be removed)
- Encroachment (project disturbance would occur within the protected zone of the tree)

A summary of project-related tree impacts is presented in Section 3.2, Project-Related Impacts, and impact determination status for each tree recorded in the tree survey area is provided in Appendix C.

2.3 Scope of Work Limitations

This report presents tree information as observed in the field. No root crown excavations or investigations, internal probing, or aerial canopy inspections were performed during the tree assessment. Therefore, the presence or absence of internal decay or other hidden or inaccessible inferiorities in individual trees could not be confirmed.

3 Findings/Results

3.1 Inventory Summary

Dudek's arborist recorded 140 trees with protected zones on the proposed project site. Of the 140 trees found on the proposed project all 140 are located on private property. Table 1 provides a summary of the species and regulatory status of the trees mapped within the tree survey area.

Table 1. Summary of Existing Trees

Scientific Name	Common Name	Tree Quantities
Cupressus sempervirens	Italian cypress	24
Eucalyptus cladocalyx	Sugar gum eucalyptus	15
Eucalyptus polyanthemos	Silver-dollar gum	17
Grevillea robusta	Silk oak	4
Lophostemon confertus	Brisbane box	8
Olea europaea	Olive	1
Platanus racemosa	Western sycamore	1
Quercus agrifolia	Coast live oak	1
Rhus lancea	African sumac	24
Sambucus nigra	Mexican elderberry	3
Schinus molle	Peruvian pepper	28
Schinus terebinthifolius	Brazillian pepper	2
Syzygium paniculatum	Bush cherry	1
Washingtonia robusta	Mexican fan palm	11
	Total	**140**

As presented in Appendix C, 80 (57.14%) of the trees exhibit good (Rating B) health, 59 (42.14%) of the trees exhibit fair (Rating C) health, and 1 (0.71%) of the trees exhibited poor (Rating D) health. Thirty-one trees (22.14%) trees have good (Rating B) structure, 107 (76.43%) trees exhibit fair (Rating C) structure, and 2 (1.43%) trees have poor (Rating D) structure.

Trees in the tree survey area vary in size and stature according to species. Tree diameters range from 1 inch to 40 inches. Tree heights vary from 15 feet to 50 feet. Tree canopy extents range from 5 feet to 45 feet at their widest location. Individual attributes of each tree are presented in Appendix C, Tree Information Matrix.

3.2 Project-Related Impacts

There is wide variation in tolerance to construction impacts among tree species, and the response of an individual tree to impacts also varies with age and condition. Impacts assessed for this project include trees with protected zones within the proposed improvement and disturbance areas as defined in the project site plan. The impact

discussion in this section identifies all impacts anticipated to result to regulated trees based on an evaluation of tree locations compared with the project site plan. Much of the survey area will be graded to accommodate construction of the project and necessary infrastructure (e.g., utilities, access roads, fire lanes). Trees identified for retention and removal are graphically presented in the Tree Impact Exhibit (Appendix B).

Based on grading and development plans for the proposed project, it is estimated that 109 private trees will be removed. Project disturbance is expected to encroach on the protected zone of 24 private trees. The project would result in no direct impacts to seven trees that would remain in place with no impacts.

Table 2 summarizes impact determinations for trees within the tree survey area.

Table 2. Summary of Protected Tree Impact Determinations

Species	Impact Determination			Total
	Removal	Encroachment	No Impact	
African sumac	24	-	-	24
Brazillian pepper	2	-	-	2
Brisbane box	-	7	1	8
Brush cherry	*1*	-	-	*1*
Coast live oak	-	-	1	1
Italian cypress	24	-	-	24
Mexican elderberry	3	-	-	3
Mexican fan palm	4	6	1	11
Olive	1	-	-	1
Peruvian pepper	28	-	-	28
Silk oak	4	-	-	4
Silver dollar gum	17	-	-	17
Sugar gum	-	11	4	15
Western sycamore	1	-	-	1
Total Trees	**109**	**24**	**7**	**140**

4 Mitigation and Management Recommendations

4.1 Mitigation Recommendations

Removals

The City's municipal ordinance does not define a tree replacement ratio requirement. As such, the tree replacement recommendations contained herein propose a minimum 1:1 mitigation ratio with 15-gallon trees and recommendations for long-term maintenance and care for regulated trees that will be retained on site.

The proposed site plan would require removal of 109 trees, encroachment upon 24 trees, and preservation of seven trees. Based on the recommended 1:1 mitigation ratio, Dudek recommends planting a minimum of 109 15-gallon mitigation trees. Based upon a review of the proposed landscape plan (March 2024) , a total of 213 trees would be planted in post construction landscape. The total number of proposed tree plantings exceed the recommend replacement ratio of 1:1, resulting in a mitigation ratio of nearly 2:1. A copy of the site's proposed landscape plan can be found in Appendix D, Proposed Landscape Plan.

Encroachment into Protected Zone and Retained Trees

As previously stated, the project will encroach up and preserve seven trees. As such, in an effort to minimize damage to the encroachment and preserved trees, *Appendix E provides tree protection recommendations* provides reccomendations to mitigate impacts from construction encroachment into the protected zone of the preserved and encroached up trees. The measures included in Appendix E are consistent with Best Management Practices for tree protection on construction sites and would help minimize impacts to preserved and encroached trees. Appendix E includes measures to implement prior to, during, and following construction. This includes measures such as exclusion fencing and worker training to avoid direct impacts to trees, and measures such as irrigation and monthly inspections by an arborist to promote the long-term health of retained trees. Arborist monitoring during construction when encroachments into tree protection zones would occur is also recommend minimizing root disturbance and determine the best course of actions for root pruning, supplemental irrigation, branch trimming, or other measures that would minimize impacts from ground-disturbing and other potential impactful activities. Please refer to Appendix E for detailed recommendations for trees retained on or adjacent to the project site.

5 Disclosure

This arborist report provides conclusions and recommendations based only on a visual examination of the trees within the tree survey area by ISA Certified Arborists and reasonable reliance on the completeness and accuracy of the information provided to the arborists. The examination did not include subterranean or internal examination of the trees.

Arborists are tree specialists who use their education, knowledge, training, and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near them. Although trees provide many benefits to those who live near them, they also include inherent risks from breakage or failure that can be minimized but not eliminated.

Arborists cannot detect every condition that could possibly lead to the failure of a tree. Trees are living organisms subject to attack by disease, insects, fungi, weather, and other forces of nature, and conditions that lead to failure are often hidden within trees and belowground. There are some inherent risks with trees that cannot be predicted with any degree of certainty, even by a skilled and experienced arborist. Arborists cannot predict acts of nature, including, without limitation, storms of sufficient strength, which can cause an apparently healthy tree to fail. Additionally, arborists cannot guarantee that a tree will be healthy or safe under all circumstances or for any specific period of time. A tree's condition could change over a short or long period of time due to climatic, cultural, or environmental conditions. Further, there is no guarantee or certainty that recommendations or efforts to correct unsafe conditions will prevent future breakage or failure of a tree.

To live or work near trees is to accept some degree of risk. Neither the author of this arborist report nor Dudek assume any responsibility for or will be liable for any claims, losses, or damages for damage to any tree, death or injury to any person, or any loss of or damage to any personal or real property.

Appendix E

Tree Protection Measures

Tree Protection Measures

The following tree protection measures are provided as general guidelines for tree protection from construction impacts. The measures presented should be monitored by arborists and enforced by contractors and developers for maximum benefit to the trees.

Tree Protection Measures Prior to Construction

Prior to any construction activity (drainage, demolition, material removal or delivery), oak and landmark trees with canopies that fall within 30 feet of construction activity shall be protected by fencing and signage. All contractors shall be made aware of the tree protection measures. A project arborist shall be assigned to monitor tree health and construction activity near retained trees on site. The project arborist shall be an International Society of Arboriculture (ISA) Certified Arborist.

Fencing. A 6-foot high, chain link fence with tree protection signs shall be erected around all trees (or tree groups) with canopies that fall within 30 feet of construction activity. The protective fence should be installed at a distance from the trunk that is equal to the dripline radius plus 5 feet (protected tree zone). For any trees that would be encroached upon by construction activities, fencing shall be placed as far away from trunk of the tree as possible while still allowing the required construction activities to proceed. This fencing will delineate the tree protection zone and prevent unwanted activity in and around the trees in order to reduce soil compaction in the root zones of the trees and other damage from heavy equipment. Fences are to be mounted on two-inch diameter galvanized iron posts, driven into the ground to a depth of at least 2-feet at no more than 10-foot spacing. In areas where fencing is located on paving or concrete that will not be demolished, then the posts may be supported by an appropriate grade level concrete base. Tree protection signs should be attached to every fourth post. The contractor shall maintain the fence to keep it upright, taut, and aligned at all times. Fencing shall be removed only after all construction activities are complete.

Pre-Construction Meeting. A pre-construction meeting shall be held between all contractors and the arborist. The arborist will instruct the contractors on tree protection practices and answer any questions. All equipment operators and spotters, assistants, or those directing operators from the ground, shall provide written acknowledgement of their receiving tree protection training. This training shall include information on the location and marking of protected trees, the necessity of preventing damage, and the discussion of work practices that will accomplish such.

Protection and Maintenance During Construction

Once construction activities have begun, the following measures shall be adhered to:

Avoidance: Signs, ropes, cables, or any other items shall not be attached to any tree.

Equipment Operation and Storage. Operating heavy machinery around the root zones of trees will increase soil compaction, which decreases soil aeration and subsequently reduces water penetration in the soil. All heavy equipment and vehicles shall stay out of the fenced tree protection zone, unless where specifically approved in writing by the City Arborist and under the supervision of an ISA Certified Arborist

Storage and Disposal. Do not store or discard any supply or material, including paint, lumber, concrete overflow, etc. within the fenced tree protection zone. Remove all foreign debris within the fenced tree protection zone; it is

important to leave the duff, mulch, chips, and leaves around the retained trees for water retention and nutrients. Avoid draining or leakage of equipment fluids near retained trees. Fluids such as: gasoline, diesel, oils, hydraulics, brake and transmission fluids, paint, paint thinners, and glycol (anti-freeze) should be disposed of properly. Keep equipment parked outside of the fenced tree protection zone of retained trees to avoid the possibility of leakage of equipment fluids into the soil. The effect of toxic equipment fluids on the retained trees could lead to decline and death.

Moving Construction Materials. Moving Construction Materials: Care will be taken when moving equipment or supplies near the trees, especially overhead. Avoid damaging the tree(s) when transporting or moving construction materials and working around retained trees (even outside of the fenced tree protection zone). Above ground tree parts that could be damaged (e.g., low limbs, trunks) should be flagged with red ribbon. If contact with the tree crown is unavoidable, prune the conflicting branch(es) using ISA or ANSI A300 standards.

Grade Changes. Grade changes, including adding fill, are not permitted within the tree protection zone, without special written authorization and under supervision by a Certified Arborist. Lowering the grade within this area will necessitate cutting main support and feeder roots, jeopardizing the health and structural integrity of the tree(s). Adding soil, even temporarily, on top of the existing grade will compact the soil further, and decrease both water and air availability to the trees' roots.

Root Pruning. Except where specifically approved in writing, all trenching shall be outside of the fenced tree protection zone. Roots primarily extend in a horizontal direction, forming a support base to the tree similar to the base of a wineglass. Where trenching is necessary in areas that contain tree roots, prune the roots using a Dosko root pruner or equivalent. All cuts shall be clean and sharp, to minimize ripping, tearing, and fracturing the root system. The trench shall be made no deeper than necessary.

Trenching. Unless a Tree Permit has been issued for trenching activity within the fenced tree protection zone, all trenching shall be outside of the fenced tree protection zone. Roots primarily extend in a horizontal direction forming a support base to the tree similar to the base of a wineglass. Where trenching is necessary in areas that contain tree roots, prune the roots using a Dosko root pruner or equivalent. All cuts should be clean and sharp, to minimize ripping, tearing, and fracturing of the root system. The trench should be made no deeper than necessary

Irrigation. Trees that have been substantially root pruned (30% or more of their root zone) will require irrigation for the first twelve months. The first irrigation should be within 48 hours of root pruning. They should be deep watered every two to four weeks during the summer and once a month during the winter (adjust accordingly with rainfall). One irrigation cycle should thoroughly soak the root zones of the trees to a depth of 3 feet. The soil should dry out between watering; avoid keeping a consistently wet soil. Designate one person to be responsible for irrigating (deep watering) the trees. Check soil moisture with a soil probe before irrigating. Irrigation is best accomplished by installing a temporary above ground micro-spray system that will distribute water slowly (to avoid runoff) and evenly throughout the fenced tree protection zone ***but never soaking the area located within 6- feet of the tree trunk***.

Pruning. Do not prune any of the trees until all construction is completed. This will help protect the tree canopies from damage. All pruning shall be completed under the direction of an ISA Certified Arborist and using ISA guidelines. Only dead wood shall be removed from tree canopies.

Washing. Periodic washing of the foliage is recommended during construction but no more than once every two weeks. Washing should include the upper and lower leaf surfaces and the tree bark. This should continue beyond the

construction period at a less frequent rate with a high-powered hose only in the early morning hours. Washing will help control dirt/dust buildup that can lead to mite and insect infestations.

Inspection. An ISA Certified Arborist shall inspect the trees on at least a monthly basis for the duration of construction activity. A summary report documenting observations and management recommendations shall be submitted to the owner following each inspection. Photographs of representative trees are to be included in each report.

Maintenance After Construction

Once construction is complete the tree protection fencing may be removed and the following measures performed to sustain and enhance the vigor of the preserved trees.

Mulch. Provide a 4-inch mulch layer of mulch under the canopy of trees. Mulch shall be clean and organic and provide long-term soil conditioning, soil moisture retention, and soil temperature control.

Pruning. Pruning should only be done to maintain clearance and remove broken, dead or diseased branches. Pruning shall only take place following a recommendation by an ISA Certified Arborist and performed under the supervision of an ISA Certified Arborist. No more than 15% of the canopy shall be removed at any one time. All pruning shall conform to ISA or ANSI A300 standards.

Watering. Retained trees on site shall be watered as they were prior to the commencement of construction activity. Supplemental irrigation may be necessary for twelve months following substantial root pruning.

Watering Adjacent Plant Material. All plants near the trees shall be compatible with water requirements of said trees. Watering regime included in the site's landscape plan shall be developed with consideration for the water needs of retained trees.

Spraying. If the trees are maintained in a healthy state, regular spraying for insect or disease control should not be necessary. If a problem does develop, an ISA Certified Arborist should be consulted; the trees may require application of insecticides to prevent the intrusion of bark-boring beetles and other invading pests. All chemical spraying should be performed by a licensed applicator under the direction of a licensed pest control advisor.

Inspection. All trees within 30 feet of construction activity shall be monitored by an ISA Certified Arborist for the first two years after construction completion. An annual monitoring report shall be submitted to the City Arborist. Each report shall summarize the inspection efforts, document observations and management actions taken, include photographs of each tree, and compare postconstruction tree conditions with the original, pre-construction baseline condition. If any retained trees die within this inspection period, they shall be replaced at a ratio approved by the City.

Los Angeles, CA 90013

Subject: Archaeological Resources Inventory Report for the Palisade Santee Commerce Center Project, City of Santee, California

To Whom it May Concern:

This letter documents the negative archaeological resources inventory conducted by Dudek for the Palisade Santee Commerce Center Project (Project), located in the City of Santee, California (Figure 1, Project Location). The proposed Project would involve the construction of one warehouse building (300,145 square feet), including office and mezzanine and approximately 42 dock-hi doors; parking spaces; improvements to internal roadways, driveway access, and Woodside Avenue North frontage; automated gates equipped with knox boxes; and landscaping. The City of Santee (City) is the lead agency responsible for compliance with the California Environmental Quality Act (CEQA). In accordance with CEQA, Dudek performed an archaeological resources inventory for the entire Project area. The Project area consists of almost 14 acres of mostly developed land currently dedicated to the Santee Drive-in Theatre (Figure 2, Project Area).

Dudek conducted a records search for the proposed Project and the surrounding one-mile radius at the South Coastal Information Center (SCIC). The records search did not identify any archaeological resources within the Project area; however, 20 archaeological resources were identified within the one-mile radius of the Project area. A Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search was requested, and results were positive. Tribal outreach letters were mailed to Tribal representatives on April 5, 2023. To date, one response has been received, requesting Tribal monitoring during survey, site visits, and ground disturbance.

A qualified Dudek archaeologist and Native American monitor visited the Project area on March 31, 2023. The Project area consists mostly of paved parking and includes various built environment resources associated with the Santee Drive-in Theatre. While no archaeological resources were identified within the Project area, much of the surface was obscured by development, including pavement and minor landscaping. Archival research indicates the Project area has been utilized as a drive-in theatre since 1962, and before that, as irrigated cropland. Although the records search and pedestrian survey did not identify any archaeological resources within the Project area, based on its proximity to the San Diego River and the quantity and significance of the archaeological resources identified within a one-mile radius of the Project area, there is moderate potential for the inadvertent discovery of archaeological resources during Project implementation. Dudek recommends full time archaeological and Native American monitoring during initial ground disturbing activities for the Project. If disturbed sediments (e.g., fill) or other sediments and formations are identified that do not have the potential to contain archaeological resources, then monitoring may be reduced or terminated.

The Santee Drive-in Theatre identified as part of this Project will be addressed in a separate built environment inventory and evaluation report that is, to date, currently in process.

1 Project Description and Location

The proposed Project area is located on 13.66 acres at 10990 Woodside Avenue North (Woodside Avenue N.) in Santee, California. The Project area falls within Section 23 of Township 15 South, Range 1 West of the El Cajon, California 7.5-minute Quadrangle and encompasses one Assessor Parcel Number (APN): 381-070-52-00 (Figure 1 and Figure 2). The Project area contains the Santee Drive-In Theatre, an access road that extends to Woodside Avenue N., some landscaping, and an undeveloped area located along the northern boundary of the parcel. The Project area is bound by industrial uses to the east, west, and south, and the San Diego River to the north. Residential areas are located just north of the San Diego River. No change to current site zoning and land use designation are proposed.

The Project would redevelop the site for the construction of one warehouse building (280,000 to 300,000 square feet), including office and mezzanine and approximately 42 dock-hi doors; parking spaces; improvements to internal roadways, driveway access, and Woodside Avenue North frontage; automated gates equipped with knox boxes; and landscaping. This scope of work assumes project development would extend to the undeveloped northern boundary of APN 381-070-52-00 and that project access would be limited to the driveway access at Woodside Avenue N.

2 Regulatory Framework

2.1 CEQA and the California Register of Historic Resources

CEQA requires that all private and public activities not specifically exempted be evaluated for the potential to impact the environment, including effects to historical resources. Historical resources are recognized as part of the environment under CEQA. It defines historical resources as "any object, building, structure, site, area, or place, which is historically significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (Division I, Public Resources Code, Section 5021.1(b)).

Lead agencies have a responsibility to evaluate historical resources against the California Register of Historic Resources (CRHR, or California Register) criteria prior to making a finding as to a proposed project's impacts to historical resources. Mitigation of adverse impacts is required if the proposed project will cause substantial adverse change. Substantial adverse change includes demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired. While demolition and destruction are fairly obvious significant impacts, it is more difficult to assess when change, alteration, or relocation crosses the threshold of substantial adverse change. The CEQA Guidelines provide that a project which demolishes or alters those physical characteristics of a historical resource that convey its historical significance (i.e., its character-defining features) can be considered to materially impair the resource's significance.

The California Register is used in the consideration of historic resources relative to significance for purposes of CEQA. The California Register includes resources listed in, or formally determined eligible for the National Register of Historic Places (NRHP) and some California State Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts) or that have been identified in a local historical resources inventory may be eligible for listing in the California Register, and they are presumed to be significant resources for purposes of CEQA unless a preponderance of evidence indicates otherwise. Generally, a resource shall be considered by the lead agency to be "historically

significant" if the resource meets the criteria for listing on the CRHR (Pub. Res. Code SS5024.1, Title 14 CCR, Section 4850 et seq.), consisting of the following:

1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States; or
2. It is associated with the lives of persons important to local, California, or national history; or
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values; or
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

2.2 Native American Historic Cultural Sites (California Public Resources Code section 5097 et seq.)

State law addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project; and establishes the NRHC to resolve disputes regarding the disposition of such remains. In addition, the Native American Historic Resource Protection Act makes it a misdemeanor punishable by up to 1 year in jail to deface or destroy an Indian historic or cultural site that is listed or may be eligible for listing in the CRHR.

2.3 California Native American Graves Protection and Repatriation Act

The California Native American Graves Protection and Repatriation Act (California Repatriation Act), enacted in 2001, required all state agencies and museums that receive state funding and that have possession or control over collections of human remains or cultural items, as defined, to complete an inventory and summary of these remains and items on or before January 1, 2003, with certain exceptions. The California Repatriation Act also provides a process for the identification and repatriation of these items to the appropriate tribes.

2.4 California Health and Safety Code section 7050.5 and Public Resources Code Section 5097.98

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98.

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the County coroner has examined the remains (California Health and Safety Code Section 7050.5[b]). If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must

contact the NAHC within 24 hours (California Health and Safety Code Section 7050.5[c]). In accordance with California Public Resources Code Section 5097.98(a), the NAHC will notify the Most Likely Descendant (MLD). With the permission of the landowner, the MLD may inspect the site of discovery. Within 48 hours of being granted access to the site, the MLD may recommend means of treatment or disposition, with appropriate dignity, of the human remains and associated grave goods.

2.5 Assembly Bill 52

California Assembly Bill 52, which took effect July 1, 2015, establishes a consultation process between California Native American Tribes and lead agencies in order to address tribal concerns regarding project impacts and mitigation to "tribal cultural resources" (TCR). Public Resources Code section 21074(a) defines TCRs and states that a project that has the potential to cause a substantial adverse change to a TCR is a project that may have an adverse effect on the environment. A TCR is defined as a site, feature, place, cultural landscape, sacred place, and object with cultural value to a California Native American tribe that is either:

1. listed or eligible for listing in the CRHR or a local register of historical resources, or
2. determined by a lead agency to be a TCR.

2.6 City of Santee General Plan

Divided into nine elements, the Santee General Plan is a statement of intent by the City as to the future development of the community. This is accomplished through objectives and policies that serve as a long-term policy guide for physical, economic, and environmental growth. The Conservation Element of the Santee General Plan discusses water resources, land resources, archaeological and cultural resources, biological resources, and open space. Section 4.3 of the Conservation Element discusses archaeological, cultural, and historic resources known to be within the City. The goal of the Conservation Element is to conserve open space, natural, and cultural resources. The following objective and policies contained in the Conservation Element of the Santee

- General Plan are relevant to the analysis found in this section:
  - Objective 8.0: Preserve significant cultural resources.
    - Policy 8.1. The City shall require either the preservation of significant historic or prehistoric sites, or the professional retrieval of artifacts prior to the development of a site, consistent with the provisions of the California Environmental Quality Act. Preservation may include various measures including avoidance, preservation in place, incorporation into open space, or covering or capping. The type of preservation would depend upon the nature and significance of the archaeological resource and the practical requirements of the proposed land use.
    - Policy 8.2. The City should require curation of any recovered artifacts as a condition of any cultural resources mitigation program.

2.7 Guidelines for Determining Significance

According to CEQA (§15064.5b), a project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. CEQA defines a substantial adverse change:

> Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

The significance of an historical resource is materially impaired when a project:

- Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the CRHR; or
- Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
- Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the CRHR as determined by a lead agency for purposes of CEQA.

Section 15064.5(c) of CEQA applies to effects on archaeological sites and contains the following additional provisions regarding archaeological sites:

- When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).
- If a lead agency determines that the archaeological site is a historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, and this section, Section 15126.4 of the Guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.
- If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archaeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c–f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.
- If an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or Environmental Impact Report (EIR), if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

Section 15064.5(d) and (e) contain additional provisions regarding human remains. Regarding Native American human remains, paragraph (d) provides:

> When an initial study identifies the existence of, or the probable likelihood of, Native American human remains within the project, a lead agency shall work with the appropriate Native Americans as identified by the Native American Heritage Commission as provided in Public Resources Code SS5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the Native American Heritage Commission. Action implementing such an agreement is exempt from:
>
> 1. The general prohibition on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5); and
> 2. The requirement of CEQA and the Coastal Act.

Under CEQA, an EIR is required to evaluate any impacts on unique archaeological resources (California Public Resources Code section 21083.2.) A "unique archaeological resource" is defined as:

> [A]n archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:
>
> 1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
> 2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
> 3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

(California Public Resources Code section 21083.2(g)). An impact to a non-unique archaeological resource is not considered a significant environmental impact and such non-unique resources need not be further addressed in the EIR (Public Resources Code section 21083.2(a); CEQA Guidelines section 15064.5(c)(4)).

As stated above, CEQA contains rules for mitigation of "unique archaeological resources." For example, "[i]f it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of that treatment, in no order of preference, may include, but are not limited to, any of the following:

1. Planning construction to avoid archaeological sites.
2. Deeding archaeological sites into permanent conservation easements.
3. Capping or covering archaeological sites with a layer of soil before building on the sites.
4. Planning parks, greenspace, or other open space to incorporate archaeological sites." (Pub. Resources Code section 21083.2(b)(1)-(4).)

Public Resources Code section 21083.2(d) states that "[e]xcavation as mitigation shall be restricted to those parts of the unique archaeological resource that would be damaged or destroyed by the project. Excavation as mitigation shall not be required for a unique archaeological resource if the lead agency determines that testing or studies

already completed have adequately recovered the scientifically consequential information from and about the resource, if this determination is documented in the environmental impact report."

The rules for mitigating impacts to archaeological resources to qualify as "historic resources" are slightly different. According to CEQA Guidelines section 15126.4(b), "[p]ublic agencies should, whenever feasible, seek to avoid damaging effects on any historic resource of an archaeological nature. The following factors shall be considered and discussed in an EIR for a project involving such an archaeological site:

A. Preservation in place is the preferred manner of mitigating impacts to archaeological sites. Preservation in place maintains the relationship between artifacts and the archaeological context. Preservation may also avoid conflict with religious or cultural values of groups associated with the site.
B. Preservation in place may be accomplished by, but is not limited to, the following:
    1. Planning construction to avoid archaeological sites;
    2. Incorporation of sites within parks, greenspace, or other open space;
    3. Covering the archaeological sites with a layer of chemically stable soil before building tennis courts, parking lots, or similar facilities on the site[; and]
    4. Deeding the site into a permanent conservation easement.

Thus, although section 21083.2 of the Public Resources Code, in addressing "unique archaeological sites," provides for specific mitigation options "in no order of preference," CEQA Guidelines section 15126.4(b), in addressing "historical resources of an archaeological nature," provides that "[p]reservation in place is the preferred manner of mitigating impacts to archaeological sites."

Under CEQA, "[w]hen data recovery through excavation is the only feasible mitigation," the lead agency may cause to be prepared and adopt a "data recovery plan," prior to any excavation being undertaken. The data recovery plan must make "provision for adequately recovering the scientifically consequential information from and about the historic resource." (CEQA Guidelines section 15126.4(b)(3)(C).) The data recovery plan also "must be deposited with the California Historical Resources Regional Information Center." (*Ibid*.) Further, "[i]f an artifact must be removed during project excavation or testing, curation may be an appropriate mitigation." (*Ibid*.)

However, "[d]ata recovery shall not be required for an historical resource if the lead agency determines that testing or studies already completed have adequately recovered the scientifically consequential information from and about the archaeological or historic resource, provided that determination is documented in the EIR and that the studies are deposited with the California Historical Resources Regional Information Center." (CEQA Guidelines Section 15126.4(b)(3)(D).)

3 Results

3.1 Records Search

Dudek performed a California Historical Resources Information Systems (CHRIS) records search on March 15, 2023, at the South Coastal Information Center (SCIC) located on the campus of California State University, San

Diego. The records search provided information on all documented cultural resources and previous archaeological investigations within the Project area and a one-mile radius of the Project aera.

3.1.1 Previous Cultural Resources Reports

The records search results revealed that 82 previous cultural resources studies have been conducted within a one-mile radius of the Project area. Of the 82 previous studies, four studies intersect the Project area and are listed in Table 1 below. These studies consist of a regional archaeological survey, two archaeological resources inventory reports, and an extended phase I and phase II testing and evaluation report. Overall, approximately 10% of the Project area has been subject to previous cultural resources investigations. All intersecting studies have resulted in negative findings within the overlapping portions of the Project area. The results of this records search are attached as part of Confidential Appendix A.

Table 1. Cultural Resources Studies Intersecting Project Area

Report Number	Authors	Date	Title

SD-04934	Caltrans	1986	Extended Phase I and Phase II Archaeological Test Excavations at Sites CA-SDi-205, 5053, 8594, 9242, and 10,148 Santee, California 11-SD-52 P.M. 7.3/17.2 11222-047050
SD-19383	ASM Affiliates, Inc.	2016	Update to the Revised Preliminary Cultural Resources Study to Support the Padre Dam Municipal Water District Master Plan Update Pier, San Diego County, California

3.1.2 Previously Recorded Cultural Resources

The SCIC records search did not identify any cultural resources within the Project area, though it did identify 20 cultural resources within a one-mile radius of the Project area (Table 2). Of the 20 resources identified within the one-mile radius, twelve are prehistoric resources, six are historic resources, and two are multicomponent resources. Additionally, two historic addresses, one with multiple historic structures, were recorded within the one-mile radius of the Project area, but do not intersect it. The results of this records search and all DPR forms are attached as part of Confidential Appendix A.

Table 2. Previously Recorded Cultural Resources within One-Mile of Project Area

Primary Number	Trinomial	Age	Description	In/Out of Project Area
P-37-005148	CA-SDI-005148	Prehistoric	AP4; Bedrock milling slicks	Out
P-37-005669	CA-SDI-005669	Prehistoric	AP15; Lithic and groundstone scatter	Out
P-37-005827	CA-SDI-005827	Prehistoric	AP4; Bedrock milling slick	Out

Table 2. Previously Recorded Cultural Resources within One-Mile of Project Area

Primary Number	Trinomial	Age	Description	In/Out of Project Area
P-37-006936	CA-SDI-006936	Prehistoric	AP2; Lithic scatter	Out

P-37-032655	CA-SDI-020693	Historic	AH5; Cistern	Out
P-37-032878	CA-SDI-020778	Multicomponent	AP15; Prehistoric midden deposit with HR and historic refuse	Out
P-37-034298	-	Historic	HP2; James and Margaret O'Connell Residence and Barn	Out
P-37-036592	CA-SDI-022115	Historic	AH5; Cistern and refuse scatter	Out
P-37-039090	CA-SDI-022955	Multicomponent	AH2, AH11, AP4, AP15; Bedrock milling features and Santee School	Out

3.2 Archival Research

In addition to the SCIC records search, Dudek conducted an online review of Bureau of Land Management (BLM) General Land Office Records, historical topographic (topo) maps, and historic aerial photographs to understand the development of the Project area and surrounding properties over time. The Project area was first recorded within Lot No. 37 of The Rancho El Cajon Land Grant in an 1883 original survey for the BLM by William H. Brown (BLM 2023). Historic topo maps of the Project area are available from 1893 to 1996 (USGS 2023). The first historic topo from 1883 shows the Project area within the natural path of the San Diego River. South of the Project area there is an established roadway and railway running roughly parallel to the San Diego River on a northeast to southwest axis. The surrounding areas remain undeveloped. There is little change within the Project area and its immediate surroundings as depicted in the historic topos until 1939. By then, it appears that the San Diego River has been diverted to the north of the Project area. By 1955, an established dirt road is shown running through the center of the Project area on a north to south axis. Although additional development appears to the south, the Project area remains undeveloped. By 1967, the Project area has been developed into a drive-in theatre. The historic topo shows a single structure in the middle of the Project area with an established road leading up to it from Riverford Road

(now Woodside Avenue N.). There are two additional structures to the east of the Project area, and a residential community to the southeast, across State Route 67 (SR 67). Although there is additional development within the surrounding areas over the next 20 years as depicted in the historic topos, the Project area remains unchanged (USGS 2023).

Historic aerial photographs (historic aerials) of the Project area are available from 1953 to 2020 and provide more detail on the historic development of the subject property and surrounding properties through time (NETR 2023). The earliest historic aerial from 1953 shows the Project area as irrigated cropland with an established dirt road running through it on a north to south axis. The San Diego Riverbed lies to the north of the Project area, and there are several structures to the south with frontage on Woodside Avenue N. By 1964, the Project area has been developed into a drive-in theatre and appears to be predominantly a dirt parking lot. There is a single structure in the middle of the Project area and a screen in the northwest corner of the Project area. Additionally, there appears to be a dirt road leading from the front of the Project area out to Woodside Avenue N. The northernmost portion of the project area abutting the San Diego Riverbank remains undeveloped. By 1968, an established pathway appears along the northern boundary of the Project area running parallel to the riverbank, while the remaining Project area remains unchanged. It is not until 1978 that the Project area appears to have been entirely paved over and the parking area has been rearranged to accommodate an additional screen, located opposite the first, in the southeast corner. There also appears to be another structure along the eastern boundary of the Project area. The Project area displays no discernible changes since the 1978 historical aerial photograph (NETR 2023).

3.3 Review of Geomorphological Context

According to the U.S. Department of Agriculture Natural Resources Conservation Services (USDA 2023), two soil types are mapped within the Project area. 98% of the Project area consists of Visalia sandy loam, 0 to 2 percent slopes. The Visalia sandy loam soil series generally occurs in settings with alluvial fans deriving from granite bedrock and is found in areas with elevations ranging from 600 to 1,200 feet above sea level. The remainder of the Project area (2%) consists of Riverwash. Riverwash is found along drainageway landforms and is characterized as a sandy, gravelly, or cobbly alluvium typically derived from mixed sources and occurs at elevations between 700 to 2,900 feet above sea level.

3.4 NAHC and Tribal Correspondence

Dudek requested a Native American Heritage Commission (NAHC) search of the Sacred Lands File (SLF) for the Project area on March 13, 2023. The SLF consists of a database of known Native American resources. These resources may not be included in the SCIC database. The NAHC SLF results, received March 28, 2023, reported that the Project area is positive for Native American Cultural resources (Appendix B). Additionally, the NAHC provided a list of 20 Native American tribes and individuals/organizations with traditional geographic associations that might have knowledge of cultural resources in the area. Tribal outreach letters were mailed on April 5, 2023, to all Native American group representatives included on the NAHC contact list (Appendix B). These letters attempted to solicit information relating to Native American resources that may be impacted by Project implementation. Native American representatives were requested to define a general area where known resources intersect the Project area. To date, Dudek has received one response to this information request. This response is paraphrased below:

Bernice Paipa of the Sycuan Band of the Kumeyaay Nation Cultural Resource Center and Museum (Sycuan Band) responded on April 13, 2023. Ms. Paipa's response indicated that the Project area is within the boundaries the Sycuan Band considers their Traditional Use Area and is near known locations of Kumeyaay cultural resources. No specific locational information or descriptions were provided. Ms. Paipa requests that a qualified Kumeyaay Cultural Monitor be on site for any surveys, site visits or ground disturbing activities.

Any additional responses to these outreach letters will be forwarded to the City and included in subsequent drafts of the report.

In compliance with Assembly Bill 52, the City, as lead agency, is responsible for conducting government to government consultation with pertinent tribal entities. For information regarding Assembly Bill 52, please refer to the Project's CEQA document.

3.5 Intensive Pedestrian Survey

Dudek archaeologist Matthew DeCarlo and Red Tail Environmental Native American Monitor Natasha Eggan conducted a site visit of the proposed Project area on March 31, 2023. The site visit employed standard archaeological procedures and techniques consistent with the Secretary of the Interior Standards. When possible, 15-meter interval survey transects were conducted oriented in cardinal direction. Where the ground surface was visible, the ground surface was examined for prehistoric artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions, features indicative of the current or former presence of structures or buildings (e.g., standing exterior walls, post holes, foundations), and historic artifacts (e.g., metal, glass, ceramics, building materials). Ground disturbances such as rodent/reptile burrows, cut banks, and drainages were also visually inspected for exposed subsurface materials.

The Project area is flat and almost completely developed, consisting predominantly of paved parking areas, structures associated with the Santee Drive-In Theatre, and some minor landscaping. Only the northernmost portion of the Project area along the San Diego Riverbank was unpaved. Within the unpaved portion of the Project area, ground visibility was high because the southern bank of the San Diego River had been terraced and is level with minimal vegetation. Modern debris (e.g., refuse, plastic fragments, irrigation pipes, glass fragments) were strewn throughout this northern portion of the Project area. The pedestrian survey did not identify any archaeological resources within the Project area. The Santee Drive-in Theatre and its associated structures were noted as existing within the Project area during the pedestrian survey.

4 Summary and Management Considerations

4.1 Archaeological Recommendations

Dudek's archaeological resources inventory of the Project indicates that there is moderate potential for the inadvertent discovery of archaeological resources during Project implementation. Although the SCIC records search and the site visit did not identify any archaeological resources within the Project area, there are 20 cultural resources within a one-mile radius of the Project area. Additionally, the NAHC has indicated that known Native American cultural resources are in the vicinity of the Project area. Due to this and the Projects proximity to the bank of the San Diego River, there is an increased potential that Project associated ground disturbance will impact

unanticipated archaeological resources. Dudek recommends full-time archaeological and Native American monitoring during initial ground disturbance for this Project. If disturbed sediments (e.g., fill) or other sediments and formations are identified that do not have the potential to contain archaeological resources, then monitoring may be reduced or terminated.

4.2 Mitigation Measures

The following mitigation measures (MM) would reduce the potential for impacts on archaeological resources.

MM-CUL-1

In order to mitigate impacts to cultural resources to a level that is less than significant, procedures for proper treatment of unanticipated archaeological finds must comply with the California Environmental Quality Act (CEQA) Guidelines. Adherence to the following requirements during initial earth-disturbing activities will assure the proper treatment of unanticipated archaeological or Native American cultural material:

1. An archaeological monitor and a Kumeyaay Native American monitor shall be present full-time during all initial ground-disturbing activities. If proposed project excavation later present evidence suggesting a decrease in cultural sensitivity, the monitoring schedule can be reduced pending archaeological, Native American, and City consultation.
2. In the event that there is an unanticipated discovery of potentially significant archaeological resources, the archaeological monitor, Native American monitor, construction or other personnel shall have the authority to divert or temporarily halt ground disturbance operations within at least 50 feet (dependent on characteristics of the discovery) in the area of the find. Construction activities may continue in other areas but should be redirected a safe distance from the find. The archaeological monitor shall evaluate and minimally document isolates and clearly non-significant deposits in the field. If the discovery is evaluated and found to be significant under CEQA and avoidance is not feasible, additional work such as data recovery may be warranted. A data recovery plan shall be developed by the qualified archaeologist in consultation with the City and Native American representatives, if applicable. Ground disturbance can continue only after the resources has been properly mitigated and with approval by the City.

MM-CUL-2

In order to mitigate impacts to human remains to a level that is less than significant, procedures for proper treatment of unanticipated discoveries must comply with the California Environmental Quality Act (CEQA) Guidelines. In the event of discovery of unanticipated human remains, personnel shall comply with Public Resources Code Section 5097.98, CEQA Section 15064.5, and Health and Safety Code Section 7050.5 during earth-disturbing activities:

1. If any human remains are discovered, the construction personnel or the appropriate representative shall contact the County Coroner and the City. Upon identification of human remains, no further disturbance shall occur in the area of the find until the County Coroner has made the necessary findings as to origin. If the remains are determined to be of Native American origin, the Most Likely Descendant, as identified by the Native American Heritage Commission, shall be contacted by the property owner or their representative in order to

determine proper treatment and disposition of the remains. The immediate vicinity where the Native American human remains are located is not to be damaged or disturbed by further development activity until consultation with the Most Likely Descendant regarding their recommendations as required by California Public Resources Code Section 5097.98 has been conducted. California Public Resources Code Section 5097.98, CEQA Section 15064.5 and Health & Safety Code Section 7050.5 shall be followed.

Should you have any questions relating to this report and its findings, please do not hesitate to contact me at 760.557.0998 or rbakhtiary@dudek.com.

Re: Santee Warehouse - Dudek No. 15138 Project, San Diego County

Dear Mr. DeCarlo:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were positive. Please contact the tribes on the attached list for more information. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

1 Viejas Grade Rd.
Alpine, CA 91901

Subject: Information Request for the Santee Warehouse Project in the City of Santee, CA, San Diego County, California

Dear Mr. Christman,

A private developer proposes the development of a currently paved lot into a warehouse in the City of Santee, CA. The area falls within unsectioned land of Township 15S/ Range 1W of the El Cajon, CA 1:24,000 USGS maps (Figure 1).

The Native American Heritage Commission conducted a Sacred Lands file search. The results were negative. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed project. This letter does not constitute formal government to government consultation pursuant to Assembly Bill 52.

If you have any information or concerns pertaining to such information, please contact me.

Respectfully,

Matthew H. DeCarlo

Subject: Information Request for the Santee Warehouse Project in the City of Santee, CA, San Diego County, California

Dear Mr. Welch,

A private developer proposes the development of a currently paved lot into a warehouse in the City of Santee, CA. The area falls within unsectioned land of Township 15S/ Range 1W of the El Cajon, CA 1:24,000 USGS maps (Figure 1).

The Native American Heritage Commission conducted a Sacred Lands file search. The results were negative. I am writing as part of the cultural inventory process in order find out if you, or your tribal community, have any knowledge of cultural resources or places that may be impacted by the proposed project. This letter does not constitute formal government to government consultation pursuant to Assembly Bill 52.

If you have any information or concerns pertaining to such information, please contact me.

Respectfully,

Matthew H. DeCarlo

RE: Santee Warehouse Project in the City of Santee, Ca San Diego County

Dear Matthew De Carlo,

The Sycuan Band of the Kumeyaay Nation cultural Resource Center and Museum has reviewed your request for information in regards to Santee Warehouse Project in the City of Santee, CA; San Diego County. This letter constitutes our response on behalf of Sycuan Tribal Chairman Cody Martinez.

We have consulted our maps and determined the project described is not within the boundaries of the recognized Sycuan Indian Reservation. However, The Kumeyaay Nation is recognized by Feral statutes under the 9th District courts and by State of California joint assembly resolution, RJR-60 Kumeyaay (Goldberg), which outlines boundaries of the Kumeyaay Nation.

We have determined it is within the boundaries of the territory Sycuan considers its Traditional Use Area (TUA). Santee and map you provided is located in the territory identified as Kumeyaay, and is near know locations of Kumeyaay Cultural resources. If there are surveys, site visits or ground disturbances of any sort planned, Sycuan asserts a qualified Kumeyaay Monitor be present.

In all cases, when the Native American Heritage Commission states "there are no records of sacred sites in the project area" the NAHC will always refer lead agencies to the respective Native American Tribe because the a NAHC is only aware of general information and are not the experts on each California Tribe. Please note, if they haven't been listed with the NAHC, it doesn't mean they are not there.

We urge you to contact the other respective Kumeyaay Bands of this area if you have not done so already. (i.e. Barona, Viejas, San Pasqual) Given their closer proximity to the area they may have knowledge of sensitive cultural resources and or sites that have not been made public. While the project may be located in an area that has been previously disturbed or developed, numerous examples can be shared to show there still is a possibility unknown, yet significant cultural resources will be encountered during ground disturbance activities.

*Please note the Sycuan Cultural Resource Center and Museum has had some recent department restructuring and along with Tribal Chairman Martinez, the person of contact for these future matters will include:

Sycuan Cultural Resource Center & Museum

Appendix F
Historical Assessment

March 2025

HISTORICAL ASSESSMENT
OF THE
10990 NORTH WOODSIDE AVENUE PROPERTY
SANTEE, CALIFORNIA 92071

Executive Summary

This Historical Assessment was prepared at the request of North Palisade Partners in order to determine the potential historical significance of a former drive-in theatre/motion picture (film) complex, previously known as the "Santee Drive-In Theatre," (the "Former Drive-In Theatre") located at 10990 North Woodside Avenue in the City of Santee, California (the "Property"), according to National Register of Historic Places and California Register of Historical Resources designation criteria. The study was prepared in order to determine the potential significance of the Property in conjunction with environmental review of the "Palisade Santee Commerce Center Project" ("Project") under the California Environmental Quality Act ("CEQA"). The Former Drive-In Theatre has ceased operations.

The Former Drive-In Theatre on the Property consists of eight (8) main components: two (2) drive-in motion picture screens (Screen #1 and Screen #2); one (1) Concessions Building; two (2) parking lots (one for each movie screen); two (2) Ticket Booths; and one (1) Entrance Sign. The site was originally developed in 1962 with the construction of the Entrance Sign, Concessions Building, Screen #1 and parking lot. It was later expanded c.1976 with the construction of Screen #2 and parking lot, the Ticket Booths, and ancillary storage sheds. The identities of the architects, designers, and/or builders responsible for the construction of the structures are not known. Sometime between 1964-1967, the Property became used once a week, during the day, as the "Santee Swap Meet." Over the years, the Property has not been substantially modified and/or altered from that of its original design/construction, but it has naturally deteriorated over time. Today, the site functions as an open, surface parking lot.

Despite its unremarkable and undistinguished appearance, and the fact that the site no longer functions as a drive-in theatre, historical research indicates that the Former Drive-in Theatre on the Property could be architecturally significant under National Register of Historic Places Criterion C (Design/Construction) and California Register of Historical Resources Criterion 3 (Design/Construction) for its type, period, and method of 1960s-1970s drive-in movie theatre construction. As one of only two remaining drive-in movie theatres in San Diego County which displays character-defining features associated with drive-in movie theatre architecture, this Historical Assessment conservatively determines that the Former Drive-in Theatre on the Property is eligible for listing on the National Register of Historic Places and California Register of Historical Resources at the local level of significance.

Accordingly, the Former Drive-in Theatre on the Property is conservatively assumed to be a historical resource under CEQA, and therefore, mitigation measures have been

recommended, including Historic American Building Survey (HABS) documentation; an interpretative historic display; relocation and rehabilitation of the Entrance Sign as specified below, and funding for local historical preservation efforts. Although these measures have been proposed to preserve the history and architectural significance of the Former Drive-In Theatre, they will not mitigate the Project impact of demolition to a less-than-significant level under CEQA.

The conservative assumptions and determinations made in this Historical Assessment are made in the interest of a conservative CEQA analysis of the proposed demolition of the Former Drive-In Theatre on the Property as part of the Project. Other recent CEQA determinations involving the demolition of other drive-in theatres in the State of California have concluded that those drive-in theatres are not historical resources under CEQA. For example, the Hi-Way Drive-In Theatre in the City of Santa Maria, the Mission Drive-In Theatre in the City of Montclair, and the Mission Drive-In Theatre (later renamed the Valley Drive-In Theatre) in the City of Oceanside, all of which were built in the 1950s or 1960s, were all deemed to be ineligible for historic designation at the local, state and national levels.[1]

Introduction

Report Organization

This Historical Assessment was prepared in order to determine the potential historical and/or architectural significance of the Former Drive-In Theatre on the Property. The Former Drive-In Theatre on the Property was constructed between 1962-1976, and therefore, it is between 48-62 years of age. Sometime between 1964-1967, the site became used as the "Santee Swap Meet." Since structures that are at least 45 years of age may be considered potential historical resources under CEQA, the Former Drive-In Theatre on the Property was researched and evaluated as a potential historical resource in accordance with National Register of Historic Places (national) criteria California Register of Historical Resources (state) criteria by Scott A. Moomjian, Esq., Historic Property Consultant, from May 2023-January 2024.

This Historical Assessment includes a Title Page; Table of Contents; Executive Summary; Introduction (Report Organization; Project Area; Project Personnel); Project Setting (Physical Project Setting; Project Area and Vicinity; Historical Overview of the Santee community; Property History; and Drive-In Movie Theatres); Methods and Results (Archival Research; Field Survey; and Description Of Surveyed Resources with current photographs); Significance Evaluation; Findings and Conclusions; Bibliography; and Appendices. The Appendices consist of Photographs; San Diego County Commercial-Industrial Building Records; Regional Site Location Map; Project Site Location Map; Aerial Map with Identified Structures/Objects; California Department of Parks & Recreation (DPR) Inventory Forms; and Report Preparer Qualifications (Resume).

[1] See the City of Santa Maria Environmental Checklist/Initial Study for the Peoples Self Help Residential Project dated August 2021; the City of Montclair Draft Environmental Impact Report for the Mission Boulevard and Ramona Avenue Business Park Project dated January 2022; and the City of Oceanside Final Supplemental Environmental Impact Report for the Ocean Kamp Project dated July 2022.

Project Area

The Property is located in the City of Santee, California. It is defined as Assessor's Parcel Number 381-070-52-00. The Property consists of a 13.43-acre lot and contains the Former Drive-In Theatre which was originally built in 1962 and expanded in 1976. The site largely consists of eight (8) main components: two (2) drive-in motion picture screens (Screen #1 and Screen #2); one (1) Concessions Building; two (2) parking lots (one for each movie screen); two (2) Ticket Booths; and one (1) Entrance Sign.

The motion picture screens, and parking lots, are located along the northwest and southeast property elevations; the Concessions Building is located toward the center of the property, the Ticket Booths are located along the east elevation of the parcel, and the Entrance Sign is located toward the southeast elevation. Today, the site serves as an open, surface parking lot.

The Property is located in a built, suburban environment along North Woodside Avenue. It is bounded by the San Diego River to the north, the former drive-in driveway to the east and west, and by Wheatlands Avenue to the west. The area in and around the Property includes industrial uses, while residential development exists just north of the San Diego River. State Route (SR) 67 is also located south of the Property.

The surrounding neighborhood was largely developed beginning around the 1960s. Such development has continued to the present day. The original neighborhood setting in and around the Property generally consisted of open, undeveloped land, as well some with agricultural uses. Over the years, the surrounding area has experienced substantial change, particularly with the construction of newer and larger residential development, as well as the remodeling of existing buildings. Commercial and industrial uses have also proliferated throughout the area. Overall, architectural styles in and around the Property are generally Modern and/or Contemporary, expressed in a vernacular or utilitarian nature.

Project Personnel

Project personnel included Scott A. Moomjian, Esq., Historic Property Consultant, who conducted the field survey, archival research, and prepared the final report with its findings and conclusions.

Project Setting

Physical Project Setting

The Property is located in the City of Santee, California. The physical setting largely developed beginning around the 1960s. Such development has continued to the present day. The original neighborhood setting in and around the Property generally consisted of open, undeveloped land, as well some with agricultural uses. Over the years, the surrounding area has experienced substantial change, particularly with the construction of

newer and larger residential development, as well as the remodeling of existing buildings. Commercial and industrial uses have also proliferated throughout the area. Overall, architectural styles in and around the Property are generally Modern and/or Contemporary, expressed in a vernacular or utilitarian nature.

Project Area and Vicinity

The overall area in and around the Property is residential, commercial, and industrial and consists of a variety of different single and multi-story buildings. The original neighborhood area in and around the Property generally consisted of open, undeveloped land, as well some with agricultural uses. Over the years, the surrounding area has experienced substantial change, particularly with the construction of newer and larger residential development, as well as the remodeling of existing buildings. Commercial and industrial uses have also proliferated throughout the area. Overall, architectural styles in and around the Property are generally Modern and/or Contemporary, expressed in a vernacular or utilitarian nature.

Study Area

The study area for the Project is the geographic area within which the Project may directly or indirectly cause changes to the character of a historic resource, which has been limited to the Property. Considerations used to justify the delineation of the study area include the following: (1) The area of direct physical effect, including ground disturbing activities, would be limited to construction activities within the Property; (2) Nearby properties do not appear to have been previously evaluated for historic significance and would not be affected by any of the proposed construction activities on the Property; and (3) There are no reasonably foreseeable Project activities that would occur later in time or that would be farther removed in distance that could indirectly affect historic resources.

History of Santee

The City of Santee is located in eastern San Diego County. The area was called several different names before it became known as “Santee” in 1893. Originally, the land was inhabited by the Kumeyaay tribe of Native Americans who resided on the banks of the San Diego River in the village of “Sinyeweche” (the present-day area of “Santee”). The Kumeyaay dominated the land until the arrival of the Spanish in 1779. At the direction of Father Junipero Serra, the Kumeyaay constructed the Old Mission Dam for the nearby Mission de Alcala. During this period, the land was divided among the Spanish soldiers as payment for their services, and the Native Americans were gathered to live at the Mission. In 1822, the Mission system was disbanded by the Mexican government and during the 1840s, American settlers arrived in California.

In 1870, George A. Cowles migrated to California from Florida. In 1877, he purchased 4,000 acres of land in the Santee area, in which he planted vineyards, pomegranate and magnolia trees. At this time, the Cuyamaca Railroad ran through the area and the local

station became known as "Cowles Station" due to its proximity to the vineyard and orchards owned by Cowles. The surrounding area soon became known as "Cowleston." After the death of George Cowles death in 1887, his wife, Jennie, married realtor and surveyor, Milton Santee. Several years later, Jennie Cowles Santee named the early post office "Santee," and by 1893, the town name was changed to Santee. Similarly, the Cowles School, established in 1891, and the Cowles School District subsequently changed their names to Santee as well.

In 1885, Hosmer P. McKoon purchased 9,543 acres of land in the Santee area for his "Fanita Ranch" (named after his wife, Fannie). However, over the next few years McKoon sold segments of the ranch to new arrivals, including 7,000 acres to the Scripps family in 1898. The Scripps used the ranch to raise cattle and built a country resort for their family. Like much of the rest of San Diego County during this period, Santee's economy was based in agriculture and ranching. Farms, such as the Edgemoor Stock Farm (established in 1908), drove the local economy and contributed to the city's rural identity. In 1914, the opening of the Panama Canal resulted in an increase in shipping ports in San Diego County that led to more growth in the surrounding areas. However, little growth came to San Diego during the early twentieth century.

In 1941, the United States' entry into the Second World War increased military activity on the West Coast and brought new development to Santee during the 1940s. The federal government used 2,300 acres of the Fanita Ranch as military training grounds, and the Marine Corps Base, Camp Pendleton, was established north of Santee. The wartime demand for manufacturing transformed San Diego County's industry and it became home to various aircraft and ship manufacturing as well as military training.

During the mid-twentieth century, Santee's economy increased, and the city became home to a variety of industries. After the war, Santee's agricultural industry had significantly decreased, and it began to suburbanize. Residential development in the area was built for military and worker housing during World War II, and the population rapidly increased. In 1967, the Las Colinas Detention Facility opened as a juvenile facility, and in 1979, it was converted to an adult women's institution to serve as the primary facility for women prisoners in San Diego County. The establishment of the detention center introduced employment opportunities in the local area and served as a catalyst for further population growth. Such rapid growth created concern about the character of the community, so Santee residents created the San Diego County Santee Citizen's Planning Committee. The committee was officially recognized by the San Diego County Board of Supervisors in December 1968, and it has continued to serve as a local land-use and planning advisory board to the county planning commission and the Board of Supervisors. In 1974, the Committee secured approval of the Santee Community Plan which acted as the area's General Plan until the Santee General Plan was adopted in 1984. In 1980, the citizens of Santee voted to incorporate in order to gain local control over the development of their city, and the creation of the General Plan was their first goal.

Santee's rapid population increase resulted in the need for more recreation and entertainment services. In 1974, two regional parks were established in the city-- Mission

Trails Regional Park and Santee Lakes Regional Park. Additionally, more commercial development and entertainment venues followed. During the late twenty-first century, much of Santee's economy has focused upon the hospitality and entertainment sectors, as well as health care assistance, retail trade, and educational services. Since the 1980s, the City has continued to grow, reaching a population of approximately 54,000 residents in 2020. Since this time, Santee has worked toward protecting and enhancing the San Diego River, expanded its park system, and boasts major commercial centers.

Property History

Historical research indicates that the property on which the Former Drive-In Theatre is today located was acquired by partners John Elliot Forte and Walt Long in 1958. Inspection of a 1953 historic aerial photograph of the property indicates that it was originally part of a larger agricultural area. Forte and Long labored on the construction of the drive-in for approximately four years before its grand opening on September 26, 1962. The identities of the designer, architect, and/or builder could not be ascertained. The facility was advertised as "California's Newest, Most Modern Drive-In Theatre" with an opening night that featured a sky diving exhibition before a screening of "The Horizontal Lieutenant" with Jim Hutton, Paula Prentiss, and Jack Carter, and "Ride The High Country" with Randolph Scott and Joel McCrea. Sometime between 1964-1967, the drive-in site also operated as the "Santee Swap Meet," once a week (on Sunday) during the day. In addition, during the mid-1970s, the Property became the subject of controversy by showing X-rated films to the public.

Inspection of a 1964 historic aerial photograph depicts the Property as a developed site with an unpaved driveway leading north from Woodside Avenue, then jogging west toward an unpaved, rectangular parking lot. A parking lot with semi-circular rows of sloped parking spaces and mounted speakers, and Screen #1, is visible at the northwest corner of the property. Similarly, the Entrance Sign is visible along the driveway, and a rectangular-shaped building, the Concessions Building, is visible at the center of the property. By 1966, no discernable changes are visible to the site. From 1966 onward, the Property and the surrounding area display no ascertainable changes until 1971.

In 1971, the southeastern half of the Property and the driveway leading from North Woodside Avenue appear to have been paved with sloping parking spots arranged in semi-circular rows, while the northwestern half of the property remained unpaved. By 1978, the Property had been entirely paved and the parking orientation divided and rearranged to accommodate the addition of Screen #2 at the southwestern corner of the Property. Parking for each screen was oriented in semi-circular rows of sloping parking spaces facing the direction of each respective screen. Fencing around the southwest side of the Property had delineated the parking lots for each of the screens. In addition, the Property included an addition to the northern portion of the site, and a driveway with two ticket booths had been constructed along the east boundary of the parcel. The driveway and ticket booths support a new entry orientation, turning the previous entrance into an exit. Historic aerial photographs from 1978 onward indicate that the Property had not experienced any substantial modifications or alterations.

Between 1962-2020, Forte and Long owned the Property, although Long and his son, Mike, managed the drive-in together. In 2020, the Long family retired, and management of the Property was subsequently taken over by the Forte family. The Former Drive-In Theatre on the Property continued under the operation of the Forte family until it closed on December 31, 2023. Historical research was unable to identify any further information related to the Long and Forte families.

History of Drive-In Theaters

Roadside commercial and entertainment properties emerged as major, landscape-altering trends in the twentieth century in California and throughout the United States. As automobiles and driving became integrated with American life in 1910 and the 1930s, new commercial property types emerged to cater specifically to automobile users. These included motel and motor courts, drive-through markets, restaurants, fast-food stands, strip malls, automobile-oriented signage, and gas stations, among others. Eventually, entertainment property types also adapted to the automobile user. Because automobile users could travel outside the urban center, entertainment businesses could feasibly set up larger properties in remote, suburban locations that could be accessed from the highways. Such properties included miniature golf courses, restaurants, and the drive-in movie theater.

While there were outdoor showings of motion pictures since at least the 1910s, the idea for the drive-in movie theatre was developed by Richard M. Hollingshead, Jr. of New Jersey during the early 1930s. During the Great Depression, people were reluctant to part with their automobiles, and movies kept them entertained. Hollingshead combined the two and opened the first drive-in movie theater in Camden, New Jersey in 1933. He also obtained a patent for his idea in May 1933, which is consistent with drive-in theaters through the present-day: a location in a field; proximity to a highway; a screen facing the field, shielded by a wind-resistant screen-housing structure; a series of inclined ramps for automobile parking, arranged in row radiating out in a semi-circle around the screen; and a projection booth. The drive-in theater trend immediately spread. The second drive-in, Shankweiler's opened in Orefields, Pennsylvania in 1934 as did the Pacific Drive-In (later the Pico Drive-In), which was the first drive-in movie theater to open in Los Angeles. There was some initial backlash by owners of indoor theaters, but most opposition had been cleared by the Second World War.

Drive-in theater popularity grew after World War II due to many factors. Veterans returning from the war were relocating to the suburbs and having families. Drive-in theaters were popular with families that had children because of the freedom within a private car and isolation from other patrons (a crying baby would not disturb an entire audience). In addition, technology improved in the late 1940s at drive-in theaters with the advent of in-car speakers. During the 1950s, Cinemascope screens were invented, which allowed for wide-screen film viewing. As a result, drive-in theaters became immensely popular from 1946 through the late 1950s. In 1940, just over 50 drive-in theatres operated, and by 1950, over 1,700 were in existence throughout the country.

Drive-in theater business models also added amenities to appear more child-friendly, including adding playground equipment, swimming pools, diaper and baby bottle services, and on-site entertainment and attractions such as miniature golf courses and petting zoos. In 1958, the number of drive-in theaters peaked at 4,063. This year also marked the peak in both attendance and in annual new construction. However, by the late 1960s, drive-in theater construction was in decline. This was caused by several factors, including limitations presented by seasonal operation, increased home television ownership, and suburban sprawl. Most drive-ins were initially located in rural areas away from city lights and pressures to develop. However, as suburban sprawl moved into spaces on the margins of cities, drive-ins were seen as an inefficient use of space. During the 1970s and 1980s, many drive-in theaters closed. Those that remained through the 1980s and 1990s had to complete with the "multiplexes," which were theaters that hosted multiple screens, rather than being limited to one or two indoor auditoriums. While many drive-in movie theaters were divided into two or four screens, they could not compete with the 18 and 24-screen multiplexes of the 1990s. Further, the development of the VCR system made it more appealing to stay at home and watch movies without paying for a film in the drive-in. To make up for lost revenue, drive-ins began losing their family-friendly atmosphere by showing exploitation films like slasher horrors as well as adult content. The decline was also attributable to more economically viable use of drive-in theater land.

Today, there are over 300 drive-in theatres still in operation across the United States. The states of Ohio, New York, and Pennsylvania have the most drive-ins (with each state having approximately 30 left). By contrast, Hawaii, North Dakota, Wyoming, Alaska, Delaware, and Louisiana no longer have any that are still in business.

Historical research indicates that, at its height, San Diego County was once home to over fifteen (15) drive-in theatres, of which most began operations during the mid-to-late 1950s. By 1986, several drive-in theatres had closed, including the "Alvarado" on El Cajon Boulevard, the "Big Sky" in Chula Vista, the "Del Mar" off Interstate 5, and the "Pacific" at Balboa and Mission Bay Drive, due to the popularity of direct-to-television (cable) viewing, the availability of large, in-home television display systems, and the value of large plots of land and their redevelopment potential. In later years, other drive-in theatres closed, such as the "Ace" in Lemon Grove at Broadway and Imperial (1986); the "Aero" in El Cajon (1999); the "Harbor" in National City (2003); and the "Mission" (later known as the "Valley") in Oceanside (c.2016/2020).

Within San Diego County, in addition to the Property, one drive-in still exists and operates as the "South Bay Drive-In" located at 2170 Coronado Boulevard, San Diego. Opened in 1958, this is San Diego's last remaining operating drive-in. The site has three screens and also functions as a swap meet.

Historical research indicates that character-defining features of drive-in movie theater property types include those features inside the property and on the perimeter of the property (much like a traditional indoor auditorium theater). Such features include sloped semi-circular parking spaces arranged in rows; screen towers with wind-resistant framing;

a centrally located clubhouse or concession stand which featured refreshments and restrooms; a projection tower (which may or may not be located atop the clubhouse or concession stand); and mounted speakers at individual parking spaces or around the lot. Perimeter features include ticket booths; long entrance driveways to reduce automobile traffic; oversized, double-sided, often pole-mounted marquee sign (intended to be read from passing cars); theater name signs (which may be themed, or neon lit); and fencing or landscaping as visual barrier from the street.

Methods and Results

Archival Research

The archival research for this Historical Assessment included, but was not necessarily limited to, obtaining the Commercial-Industrial Building Records from the San Diego County Assessor's/Recorder's Office; building permit application research at the City of Santee building records department; Sanborn Fire Insurance Maps, vertical files, and the *San Diego Union* index and newspaper articles at the San Diego Public Library, California Room; the San Diego History Center archives and photographic collection; and photographic collection; local, state, and federal inventories/surveys/database material; personal research/archival material in possession of Scott A. Moomjian, Esq.; standard and authoritative sources related to local history, architecture, and building development information; online information/documentation related to the history of drive-in theatres, and drive-in theatres throughout the San Diego County region; and online newspaper articles and historic aerial photographs.

Field Survey

The field survey work was conducted by Scott A. Moomjian, Esq. on June 21, 2023. An intensive inspection of the Property, including all the exterior areas, as well as the surrounding neighborhood, were undertaken during this time. The Property was recorded on the appropriate DPR 523 forms according to instructions and publications produced by the California Office of Historic Preservation (See Attachment D).

Description of Surveyed Resources

The Property consists of Modern Contemporary style, former drive-in theatre/motion picture (film) complex with undistinguished and unremarkable physical characteristics. Today, the Property functions as an open, surface parking lot. Located on an irregularly shaped parcel, the Property was originally developed in 1962 with subsequent additions built during the mid-1970s. When originally developed, the Property was unpaved and contained an Entrance Sign at the driveway entrance, Screen #1, and the Concessions Building located toward the center of the site. In addition, semi-circular rows of sloped parking spaces were arranged around the front-facing (southeast) side of Screen #1 and around the Concessions Building. Sometime between 1964-1967, the Property became used once a week, during the day, as the "Santee Swap Meet."

During the mid-1970s, Screen #2 was added at the southeast corner of the Property and the parking lot was divided into two separate parking lots arranged in semi- circular rows with sloped parking spaces for each screen. In addition, the Property was paved with asphalt, there was an addition of a driveway with two ticket booths along the eastern and northern boundaries of the Property, as well as two ancillary supply sheds, and corrugated metal fencing which separated the two parking lots for each of the screens. Landscaping includes shrubbery and rows of trees along the north and south boundaries of the Property.

Entrance Sign (1962)

Built in 1962, the Entrance Sign is located on the west side of the Property's driveway entrance. Of metal and wood construction, the sign has neon tubing outlining the word "Santee," with a star on atop the sign. The sign also includes a wood letterboard for movie showings. Access to the letterboard is made by a wooden platform encased by a low, wire fence at the base of the letterboard. Modifications to the Entrance Sign over the years include replacement of the neon (date unknown), and the addition of "Swap Meet" signage (date unknown). The Entrance Sign remained in use until the Former Drive-In Theatre ceased operation. The sign remains in place, however, overall, the sign appears to be in poor condition.

Concessions Building (1962)

Built in 1962, the Concessions Building is located at the center of the Property between the parking areas for Screen #1 and Screen #2. Designed in an unremarkable Modern Contemporary style, the building is utilitarian in nature and irregular in shape. It is one and one-half stories in height, with a flat roof with minimal eave overhang. The exterior consists of smooth stucco. Restrooms are located on the southeastern half of the building with concessions located in the northwestern half. A projection room sits atop the second story. The structure has single-panel wood doors at the northeast and southwest elevations. These doors provide access to the first story accommodations, with projecting stucco walls obscuring the restroom entrances. In addition, a wood staircase along the northwest (rear) elevation provides access to a single-panel wood door on the second story landing. Fenestration is irregular in shape and includes aluminum sliding windows on northeast, southwest, northwest, and southeast (primary) elevations of the second story. Two square projection windows with metal coverings are visible on the northwest and southeast second story elevations. Modifications to the building over the years include the addition of an air conditioning unit along the northeast and southwest elevations (date unknown); the addition of roof floodlights (date unknown); the addition of signage (date unknown); the addition of a security screen on the northwest (rear) elevation window (date unknown); and the addition of a projection window on the southeast second-story elevation (c.1976). Overall, the structure appears to be in fair condition.

Screen #1 and Parking Lot (1962)

Screen #1 is located at the northwestern property boundary of the property and was constructed in 1962. It is made of corrugated metal with a metal framing and metal

supports along the bottom. The southeast (front) side of the screen is painted white with a strip of black along the bottom where the metal supports are located. The parking for the screen is paved with asphalt and features sloped parking spaces arranged in semi-circular rows around the southeast (front) side. The paving for this area occurred c.1976. Overall, this structure appears to be in fair condition.

Screen #2 and Parking Lot (c.1976)

Screen #2 is located at the southeastern property boundary corner of the property and was constructed c.1976. It is made of corrugated metal with a metal framing and metal supports along the bottom. The northwest (front) side of the screen is painted white with a strip of black along the bottom where the metal supports are located. The parking for the screen is paved with asphalt and features sloped parking spaces arranged in semi-circular rows around the northwest (front) side. A corrugated metal fence encases the parking lot for Screen #2 as well as two ancillary sheds which are located southwest of the Concession Building. Overall, this structure appears to be in fair condition.

Ticket Booths (c.1976)

Two ticket booths, built c.1976, are located along the eastern property boundary at the end of the main driveway. The ticket booths are rectangular in shape with flat roofs and slight eave overhang. Built of corrugated metal with corrugated plastic signs atop each of their south elevations, they have partially glazed doors with aluminum sliding windows at their east and west elevations. Fenestration is grouped and includes aluminum casement windows on each of their south, east, and west elevations. Modifications to the structures over the years include the addition of signage on their south (main) elevations (dates unknown). Overall, the structures appear to be in fair condition.

Ancillary Storage Sheds (c.1976)

Two ancillary storage sheds are located west of the Concessions Building. Historic aerial photographs indicate that they were added onsite c.1976. The sheds are aligned with the placement of the fencing to further enclose the parking lot for Screen #2. Overall, the structures appear to be in fair condition.

Significance Evaluation

Application of Local Register (Santee) Significance Criteria

The City of Santee does not maintain a local register of historic resources. As a result, the Property was not evaluated under local significance criteria. Nevertheless, the City of Santee General Plan serves to guide the City's future development. This is accomplished through objectives and policies that serve as a long-term guide for physical, economic, and environmental growth. The Conservation Element of the Santee General Plan addresses water resources, land resources, archaeological and cultural resources, biological resources, and open space. Section 4.3 of the Conservation Element discusses

archaeological, cultural, and historic resources known to be within the City, and does not include the Former Drive-In Theatre on the Property. The goal of the Conservation Element is to conserve open space, natural, and cultural resources.

According to Conservation Element Objective 8.0 (Preserve significant cultural resources) and Policy 8.1, the City "shall require either the preservation of significant historic or prehistoric sites, or the professional retrieval of artifacts prior to the development of a site, consistent with the provisions of the California Environmental Quality Act. Preservation may include various measures including avoidance, preservation in place, incorporation into open space, or covering or capping. The type of preservation would depend upon the nature and significance of the archaeological resource and the practical requirements of the proposed land use."

In this manner, evaluation of the Property in accordance with National and California Register significance criteria, as well under CEQA with proposed mitigation measures, achieves consistency with the City of Santee General Plan.

Application of National Register Significance Criteria

When evaluated within its historic context, a property must be shown to be significant for one or more of the four Criteria for Evaluation–A, B, C, or D. The Criteria describes how properties are significant for their association with important events or persons, for their importance in design or construction, or for their information potential. In addition, a property must not only be shown to be significant under the National Register criteria, but it also must have integrity.

National Register Criterion A: Event

To be considered for listing under Criterion A, a property must be associated with one or more events important in the defined historic context.

The event or trends must clearly be important within the associated context. Mere association with historic events or trends is not enough, in and of itself, to qualify under Criterion A: the property's specific association must be considered important as well.

The Property does not qualify under National Register Criterion A: Event at either the local, state, or national levels. Historical research failed to identify any important events associated with the Property over the course of its existence.

National Register Criterion B: Person

Criterion B applies to properties associated with individuals whose specific contributions to history can be identified and documented.

Persons "significant in our past" refers to individuals whose activities are demonstrably important within a local, State, or national historic context. The criterion is generally

restricted to those properties that illustrate (rather than commemorate) a person's important achievements. The persons associated with the property must be individually significant within a historic context. Significant individuals must be directly associated with the nominated property. Properties eligible under Criterion B are usually those associated with a person's productive life, reflecting the time period when he or she achieved significance. Speculative associations are not acceptable. Documentation must make clear how the nominated property represents an individual's significant contributions. A property must retain integrity from the period of its significant historic associations. Architects are often represented by their works, which are eligible under Criterion C.

The Property does not qualify under National Register Criterion B: Person at either the local, state, or national levels. No historical evidence was identified which indicates that the original developers of the Property, John Elliot Forte and Walt Long, nor any of the successors in interest in the Forte family were individuals whose activities are demonstrably important within a local, State, or national historic context. Further, historic research indicates that no other owners, or occupants associated with the Property performed any activities, achievements or contributions which were demonstrably important within the City, state, or nation. As a result, the theatre business, including the individuals responsible for its operation(s), does not meet the criteria for historic significance. Therefore, the Former Santee Drive-In Theatre does not qualify under National Register Criterion B.

National Register Criterion C: Design/Construction

Properties may be eligible under Criterion C if they embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction. Properties which embody the distinctive characteristics of a type, period, or method of construction refer to the way in which a property was conceived, designed, or fabricated by a people or culture in past periods of history. Distinctive characteristics are the physical features or traits that commonly recur in individual types, periods, or methods of construction. To be eligible, a property must clearly contain enough of those characteristics to be considered a true representative of a particular type, period, or method of construction.

A master is a figure of generally recognized greatness in a field, a known craftsman of consummate skill, or an anonymous craftsman whose work is distinguishable from others by its characteristic style and quality. The property must express a particular phase in the development of the master's career, an aspect of his or her work, or a particular theme in his or her craft.

Embodying The Distinctive Characteristics Of A Type, Period, Or Method Of Construction—Modern Contemporary Architecture

The Property does not qualify under National Register Criterion C: Design/Construction on the basis of its Modern Contemporary architecture at either the local, state, or national levels.

In June 2006, the City of San Diego received a grant through the Certified Local Government (CLG) program to prepare a city-wide thematic context statement for Modernist resources in San Diego. This "San Diego Modernism Historic Context Statement" ("Modernism Context Statement") was finalized in October 2007, and was financed, in part, with Federal funds from the National Park Service, Department of the Interior, through the California Office of Historic Preservation (OHP). It was specifically designed to address "the regional and local emergence of Modern architecture in San Diego; the architects, builders and other individuals significant in the development of Modernism in San Diego; as well as the property types and sub-styles which characterize San Diego Modernism and the criteria which should be applied to evaluate those resources and establish significance."

The stated purpose of the Modernism Context Statement is to "assist in the identification, evaluation and preservation of significant historic buildings, districts, sites and structures associated with the Modernism movement in San Diego from 1935 to 1970" and was created to better understand "Modern era resources and the types of resources that are significant to the history and development of San Diego." The Modernism Context Statement has been utilized to evaluate potential historical resources constructed from 1935-1970 within the San Diego Region, and specifically utilized in historical evaluations accepted by the County of San Diego, City of San Diego and City of Del Mar. The Modernism Context Statement "[uses] an approach based upon current professional methodology standards and procedures established by the National Park Service, the California Office of Historic Preservation, and preservation professionals." Therefore, although the City of Santee has not formally adopted the Modernism Context Statement, it serves as an appropriate regional tool by which to evaluate Modernist resources within the City.

Accordingly, the Modernism Context Statement is appropriate for use in evaluating the potential historic significance of the Property because:

1) The Modernism Context Statement was intended to guide evaluations within the region rather than being restricted to San Diego City limits. The Modernism Context Statement was prepared by the City of San Diego utilizing Federal funds from the National Park Service, Department of the Interior, through the California Office of Historic Preservation (OHP) as a regional and local tool to evaluate Modern Architecture in the San Diego.
2) This is the most regionally specific guide for evaluating Modern Architecture. There are no alternative guides or documents that offer better or more specific guidance than this one for evaluating Modern Architecture in the San Diego region.

Under the Modernism Context Statement, the Property was designed and constructed in the Modern Contemporary style between 1962-1976. The site no longer functions as a drive-in theatre. Today, it serves as an open, surface parking lot. An examination of the Property under the Modernism Context Statement indicates that it does not qualify under National Register Criterion C: Design/Construction on the basis of its Modern Contemporary architecture at either the local, state, or national levels.

Modernism Context Statement—General Characteristics Of The Modern Contemporary Style

According to the Modernism Context Statement, Modern Contemporary style structures were generally constructed between 1955-1965. They employed the latest styles and materials including such modern features as interior courtyards, aluminum framed windows, sliding-glass doors, and attached carports or garages. Some also included upgrades to basic model units, allowing a homeowner to customize their property. In addition to residential construction, Modern Contemporary buildings also included commercial structures and streetscapes. These buildings display many of the same design features as Contemporary style homes, such as angular massing, varied materials use, and unusual roof forms.

The Property possesses unremarkable and undistinguished physical characteristics, as well as only limited, general characteristics associated with the Modern Contemporary architectural style. These include aluminum-framed windows located on the Concessions Building and Ticket Booths, and angular massing on the Concessions Building. The remaining structures and/or objects constructed as part of the Property lack varied materials used in their construction and unusual roof forms. Based upon the foregoing, therefore, the Property does not possess an abundance of general characteristics indicative of Modern Contemporary construction as detailed in the Modernism Context Statement.

Modernism Context Statement—Primary-Character Defining Features

According to the Modernism Context Statement, there are three (3) "Primary" Character-Defining features of Modern Contemporary construction. The following Primary character-defining features noted in the Modernism Context Statement have been specifically applied to the Property, accordingly:

1. Strong roof forms, including flat, gabled, shed or butterfly, typically with deep overhangs.

The Property, including its structures and objects, lack strong roof forms with deep eave overhangs. Therefore, the Property does not possess this Primary Character-Defining feature of Modern Contemporary construction.

2. Large windows, often aluminum framed.

The Property contains aluminum framed windows on its Concessions Building and Ticket Booths. Therefore, the Property possesses this Primary Character-Defining feature of Modern Contemporary construction.

3. Non-traditional exterior finishes, including vertical wood siding, concrete block, stucco, flagstone and mullion-free glass.

The Property, including its structures and objects, feature exteriors composed of stucco and/or metal. Vertical wood siding, concrete block, flagstone, and mullion-free glass are lacking. Therefore, the Property does not possess this Primary Character-Defining feature of Modern Contemporary construction.

Summary: Of the three Primary Character-Defining features of Modern Contemporary construction expressed in the Modernism Context Statement, the Property possesses one of these features—aluminum framed windows.

Modernism Context Statement—Secondary Character-Defining Features

According to the Modernism Context Statement, there are eight (8) "Secondary" Character-Defining features of Modern Contemporary construction. The following Secondary character-defining features noted in the Modernism Context Statement have been specifically applied to the Property, accordingly:

1. Angular massing.

The Property features angular massing only on the Concessions Building. Therefore, the Property possesses this Secondary Character-Defining feature of Modern Contemporary construction.

2. Sunshades, screens or shadow block accents.

The Property, including its structures and objects, does not feature any sunshades, screens, or shadow block accents. Therefore, the Property does not possess this Secondary Character-Defining feature of Modern Contemporary construction.

3. Attached garages or carports for homes.

The Property is not residential in nature. Therefore, this Secondary Character-Defining feature of Modern Contemporary construction is not applicable.

4. Split-level design, especially on sloped residential sites.

The Property does not feature a split-level design on a sloped residential site. Therefore, this Secondary Character-Defining feature of Modern Contemporary construction is not applicable.

5. Horizontally oriented commercial buildings.

The Property, including its structures and objects, contain both horizontal and vertical elements. The Property contains two large horizontally oriented motion picture screens (Screens #1 and #2). Therefore, the Property possesses this Secondary Character-Defining feature of Modern Contemporary construction.

6. Distinctive triangular, parabolic or arched forms.

The Property does not feature any triangular, parabolic or arched forms. Therefore, the Property does not possess this Secondary Character-Defining feature of Modern Contemporary construction.

7. "Eyebrow" overhangs on commercial buildings; and

The Property does not have any "eyebrow" overhangs. Therefore, the Property does not possess this Secondary Character-Defining feature of Modern Contemporary construction.

8. Integrated, stylized signage on commercial buildings.

The Property contains integrated, stylized signage along its Entrance Sign. Therefore, the Property possesses this Secondary Character-Defining feature of Modern Contemporary construction.
Summary: Of the six applicable Secondary Character-Defining features of Modern Contemporary construction expressed in the Modernism Context Statement, the Property possesses three of these features—angular massing, horizontal orientation, and integrated, stylized signage.

Modernism Context Statement—Evaluation Criteria

In evaluating the potential significance and eligibility for designation of Modern Contemporary properties, the Modernism Context Statement notes the following:

•*"While this style was relatively popular in San Diego tract construction, many of these homes and buildings have been extensively remodeled diminishing their level of integrity and reducing the abundance of good examples from this sub-style substantially."*

The Property is located within the Santee community and has not been substantially modified and altered over the years. The Property retains a sufficient degree of original integrity.

•*"…Houses [buildings] may still poses [sic. possess] significance due to their association with a potential master architect."*

The Property does not possess significance due to an association with a potential "master architect." Historical research did not ascertain the identity of the architects and/or designers responsible for the design/construction.

• *"Good examples of this style that retain a high degree of integrity should therefore be considered for individual designation, especially if…associated with a significant architect. Due to the somewhat limited supply of unaltered examples, retention of all character defining features may not be necessary for listing, if comparative analysis demonstrates that the building retains a relatively high degree of integrity compared to other extant examples."*

The Property retains original integrity, however, it lacks a majority of Primary and Secondary Character-Defining features of the Modern Contemporary architectural style.

• *"The Contemporary style was widely used on major streets and boulevards such as El Cajon Boulevard in North Park, Girard Avenue in La Jolla, Washington Street in Mission Hills, and Rosecrans Boulevard in Point Loma. Buildings in these areas exemplify the style with long horizontal massing, extensive use of glass windows to open the interior space as to the street, updated Moderne elements such as "eyebrow" overhangs, and minimal architectural details on the façade….Signage for Contemporary commercial buildings that is original to the structure should be considered as part of the resource."*

The Property is a former commercial complex, located along a street which is typically associated with Modern Contemporary commercial buildings.

In summary, the Property does not possess a majority of the General, Primary, or Secondary Character-Defining features of Modern Contemporary construction to be considered a true, representative example which is significant under the Modernism Context Statement. The Property does not meet the potential significance and eligibility criteria for designation under the Modernism Context Statement. As such, the Property does not embody the distinctive characteristics of type, period, or method of Modern Contemporary construction.

<u>Embodying The Distinctive Characteristics Of A Type, Period, Or Method Of Construction—Drive-In Theatre Architecture</u>

The Former Drive-In Theatre on the Property could qualify under National Register Criterion C: Design/Construction on the basis of its drive-in theatre architecture at the local level of significance.

The Former Drive-In Theatre on the Property was originally constructed in 1962 at a time when the drive-in, as a recreational and entertainment venue, was popular across the United States. This popularity allowed the Former Drive-In Theatre on the Property to expand in 1976. Although many other drive-ins across the country closed during this period, the Santee Drive-In Theatre remained open until December 2023. Today, it functions as an open, surface parking lot. Within San Diego County, another drive-in theatre remains—

the South Bay Drive-In, located at 2170 Coronado Boulevard, San Diego which was built in 1958 and is still operating.

In its current appearance, albeit unremarkable and undistinguished, the Former Drive-In Theatre on the Property retains a number of character-defining features associated with drive-in movie theater architecture. These include its sloped semi-circular parking spaces arranged in rows; twin movie screens; centrally-located concession stand with attached, first floor refreshment area and restrooms, and second floor projection tower; ticket booths; long entry area (driveway); oversized, pole-mounted marquee sign with neon tubing; and fencing around the property perimeter. In this manner, the Former Drive-In Theatre on the Property, including its structures and parking lots, embody the distinctive characteristics of a type, period, and method of 1960s-1970s drive-in movie theatre construction, and retains a sufficient degree of original integrity. As a result, the Former Drive-In Theatre on the Property is architecturally significant and could qualify under National Register Criterion C: Design/Construction, as has been conservatively determined for purposes of this Historical Assessment.

Representing The Work Of A Master

The Property does not qualify under National Register Criterion C: Design/Construction at either the local, state, or national levels on the basis of its architects, designers, or builders. Historical research could not ascertain the identities of the architect, designers and/or builders responsible for the design/construction of the Property, including its structures and/or objects. In any event, the Property does not possess any remarkable or distinguished physical features which may reflect the work of a master architect, designer, builder, or craftsman. Consequently, the Property does not represent the work of a master.

Possessing High Artistic Values

The Property does not qualify under National Register Criterion C: Design/Construction as a Property which possesses high artistic values. The Property does not articulate a particular concept of design to the extent that an aesthetic ideal is expressed.

National Register Criterion D: Information Potential

Property may be eligible under Criterion D if they have yielded, or may be likely to yield, information important in prehistory or history.

The Property does not qualify under National Register Criterion D: Information Potential as the Property has not yielded, and is likely not to yield, information important in terms of history or prehistory.

Application of California Register of Historical Resources Significance Criteria

The California Register of Historical Resources was consciously designed on the model of the National Register. While the eligibility criteria of the two programs are similar, there are differences between them. When evaluated within its historic context, a property must

be shown to be significant for one or more of the four Criteria for Evaluation–1, 2, 3, or 4. The Criteria describes how properties are significant for their association with important events or persons, for their importance in design or construction, or for their information potential. In addition, a property must not only be shown to be significant under the California Register criteria, but it also must have integrity. Historical resources eligible for listing in the California Register must meet one of the significance criteria described above and retain enough of their historic character or appearance to be recognizable as historical resources and convey the reasons for their significance.

California Register Criterion 1: Event

To be considered for listing under Criterion 1, a property must be associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

The event or trends must clearly be important within the associated context. Mere association with historic events or trends is not enough, in and of itself, to qualify under Criterion 1: a property's specific association must be considered important as well.

The Property does not qualify under California Register Criterion 1: Event at either the local, state, or national levels. Historical research failed to identify any important events associated with the Property over the course of its existence.

California Register Criterion 2: Person

To be considered for listing under Criterion 2, a property must be associated with the lives of persons important in our past.

This Criterion applies to properties associated with individuals whose specific contributions to history can be identified and documented. Persons "significant in our past" refers to individuals whose activities are demonstrably important within a local, state, or national historic context. The criterion is generally restricted to those properties that illustrate (rather than commemorate) a person's important achievements. The persons associated with the property must be individually significant within a historic context. Significant individuals must be directly associated with the nominated property. Property eligible under Criterion 2 are usually those associated with a person's productive life, reflecting the time period when he or she achieved significance. Speculative associations are not acceptable. Documentation must make clear how the nominated property represents an individual's significant contributions. A property must retain integrity from the period of its significant historic associations. Architects are often represented by their works, which are eligible under Criterion 3.

The Property does not qualify under California Register Criterion 2: Person at either the local, state, or national levels. No historical evidence was identified which indicates that the original developers of the Property, John Elliot Forte and Walt Long, nor any of the successors in interest in the Forte family were individuals whose activities are

demonstrably important within a local, State, or national historic context. Further, historic research indicates that no other owners, or occupants associated with the Property performed any activities, achievements or contributions which were demonstrably important within the City, state, or nation. As a result, the theatre business, including the individuals responsible for its operation(s), does not meet the criteria for historic significance. Therefore, the Former Santee Drive-In Theatre does not qualify under California Register Criterion 2.

California Register Criterion 3: Design/Construction

Properties may be eligible under Criterion 3 if they embody the distinctive characteristics of a type, period, region, or method of construction; represent the work of an important, creative individual; or possess high artistic values.

Properties which embody the distinctive characteristics of a type, period, or method of construction refer to the way in which a property was conceived, designed, or fabricated by a people or culture in past periods of history. Distinctive characteristics are the physical features or traits that commonly recur in individual types, periods, or methods of construction. To be eligible, a property must clearly contain enough of those characteristics to be considered a true representative of a particular type, period, or method of construction.

A master is a figure of generally recognized greatness in a field, a known craftsman of consummate skill, or an anonymous craftsman whose work is distinguishable from others by its characteristic style and quality. A property must express a particular phase in the development of the master's career, an aspect of his or her work, or a particular theme in his or her craft.

Embodying The Distinctive Characteristics Of A Type, Period, Or Method Of Construction—Modern Contemporary Architecture

The Property does not qualify under California Register Criterion 3: Design/Construction on the basis of its Modern Contemporary architecture at either the local, state, or national levels.

In June 2006, the City of San Diego received a grant through the Certified Local Government (CLG) program to prepare a city-wide thematic context statement for Modernist resources in San Diego. This "San Diego Modernism Historic Context Statement" ("Modernism Context Statement") was finalized in October 2007, and was financed, in part, with Federal funds from the National Park Service, Department of the Interior, through the California Office of Historic Preservation (OHP). It was specifically designed to address "the regional and local emergence of Modern architecture in San Diego; the architects, builders and other individuals significant in the development of Modernism in San Diego; as well as the property types and sub-styles which characterize San Diego Modernism and the criteria which should be applied to evaluate those resources and establish significance."

The stated purpose of the Modernism Context Statement is to "assist in the identification, evaluation and preservation of significant historic buildings, districts, sites and structures associated with the Modernism movement in San Diego from 1935 to 1970" and was created to better understand "Modern era resources and the types of resources that are significant to the history and development of San Diego." The Modernism Context Statement has been utilized to evaluate potential historical resources constructed from 1935-1970 within the San Diego Region "using an approach based upon current professional methodology standards and procedures established by the National Park Service, the California Office of Historic Preservation, and preservation professionals." Therefore, although the City of Santee has not formally adopted the Modernism Context Statement, it serves as an appropriate regional tool by which to evaluate Modernist resources within the City.

Under the Modernism Context Statement, the Property was designed and constructed in the Modern Contemporary style between 1962-1976. An examination of the Property under the Modernism Context Statement indicates that it does not qualify under National Register Criterion C: Design/Construction on the basis of its Modern Contemporary architecture at either the local, state, or national levels.

Modernism Context Statement—General Characteristics Of The Modern Contemporary Style

According to the Modernism Context Statement, Modern Contemporary style structures were generally constructed between 1955-1965. They employed the latest styles and materials including such modern features as interior courtyards, aluminum framed windows, sliding-glass doors, and attached carports or garages. Some also included upgrades to basic model units, allowing a homeowner to customize their property. In addition to residential construction, Modern Contemporary buildings also included commercial structures and streetscapes. These buildings display many of the same design features as Contemporary style homes, such as angular massing, varied materials use, and unusual roof forms.

The Property possesses unremarkable and undistinguished physical characteristics, as well as only limited, general characteristics associated with the Modern Contemporary architectural style. These include aluminum-framed windows located on the Concessions Building and Ticket Booths, and angular massing on the Concessions Building. The remaining structures and/or objects constructed as part of the Property lack varied materials used in their construction and unusual roof forms. Based upon the foregoing, therefore, the Property does not possess an abundance of general characteristics indicative of Modern Contemporary construction as detailed in the Modernism Context Statement.

Modernism Context Statement—Primary-Character Defining Features

According to the Modernism Context Statement, there are three (3) "Primary" Character-Defining features of Modern Contemporary construction. The following Primary

character-defining features noted in the Modernism Context Statement have been specifically applied to the Property, accordingly:

1. Strong roof forms, including flat, gabled, shed or butterfly, typically with deep overhangs.

The Property, including its structures and objects, lack strong roof forms with deep eave overhangs. Therefore, the Property does not possess this Primary Character-Defining feature of Modern Contemporary construction.

2. Large windows, often aluminum framed.

The Property contains aluminum framed windows on its Concessions Building and Ticket Booths. Therefore, the Property possesses this Primary Character-Defining feature of Modern Contemporary construction.

3. Non-traditional exterior finishes, including vertical wood siding, concrete block, stucco, flagstone and mullion-free glass.

The Property, including its structures and objects, feature exteriors composed of stucco and/or metal. Vertical wood siding, concrete block, flagstone and mullion-free glass are lacking. Therefore, the Property does not possess this Primary Character-Defining feature of Modern Contemporary construction.

Summary: Of the three Primary Character-Defining features of Modern Contemporary construction expressed in the Modernism Context Statement, the Property possesses one of these features—aluminum framed windows.

<u>Modernism Context Statement—Secondary Character-Defining Features</u>

According to the Modernism Context Statement, there are eight (8) "Secondary" Character-Defining features of Modern Contemporary construction. The following Secondary character-defining features noted in the Modernism Context Statement have been specifically applied to the Property, accordingly:

1. Angular massing.

The Property features angular massing only on the Concessions Building. Therefore, the Property possesses this Secondary Character-Defining feature of Modern Contemporary construction.

2. Sunshades, screens or shadow block accents.

The Property, including its structures and objects, does not feature any sunshades, screens, or shadow block accents. Therefore, the Property does not possess this Secondary Character-Defining feature of Modern Contemporary construction.

3. Attached garages or carports for homes.

The Property is not residential in nature. Therefore, this Secondary Character-Defining feature of Modern Contemporary construction is not applicable.

4. Split-level design, especially on sloped residential sites.

The Property does not feature a split-level design on a sloped residential site. Therefore, this Secondary Character-Defining feature of Modern Contemporary construction is not applicable.

5. Horizontally oriented commercial buildings.

The Property, including its structures and objects, contain both horizontal and vertical elements. The Property contains two large horizontally oriented motion picture screens (Screens #1 and #2). Therefore, the Property possesses this Secondary Character-Defining feature of Modern Contemporary construction.

6. Distinctive triangular, parabolic or arched forms.

The Property does not feature any triangular, parabolic or arched forms. Therefore, the Property does not possess this Secondary Character-Defining feature of Modern Contemporary construction.

7. "Eyebrow" overhangs on commercial buildings; and

The Property does not have any "eyebrow" overhangs. Therefore, the Property does not possess this Secondary Character-Defining feature of Modern Contemporary construction.

8. Integrated, stylized signage on commercial buildings.

The Property contains integrated, stylized signage along its Entrance Sign. Therefore, the Property possesses this Secondary Character-Defining feature of Modern Contemporary construction.

Summary: Of the six applicable Secondary Character-Defining features of Modern Contemporary construction expressed in the Modernism Context Statement, the Property possesses three of these features—angular massing, horizontal orientation, and integrated, stylized signage.

Modernism Context Statement—Evaluation Criteria

In evaluating the potential significance and eligibility for designation of Modern Contemporary properties, the Modernism Context Statement notes the following:

•*"While this style was relatively popular in San Diego tract construction, many of these homes and buildings have been extensively remodeled diminishing their level of integrity and reducing the abundance of good examples from this sub-style substantially."*

The Property is located within the Santee community and has not been substantially modified and altered over the years. The Property retains a sufficient degree of original integrity.

•*"…Houses [buildings] may still poses [sic. possess] significance due to their association with a potential master architect."*

The Property does not possess significance due to an association with a potential "master architect." Historical research did not ascertain the identity of the architects and/or designers responsible for the design/construction of the Property.

•*"Good examples of this style that retain a high degree of integrity should therefore be considered for individual designation, especially if…associated with a significant architect. Due to the somewhat limited supply of unaltered examples, retention of all character defining features may not be necessary for listing, if comparative analysis demonstrates that the building retains a relatively high degree of integrity compared to other extant examples."*

The Property retains original integrity; however, it lacks a majority of Primary and Secondary Character-Defining features of the Modern Contemporary architectural style.

•*"The Contemporary style was widely used on major streets and boulevards such as El Cajon Boulevard in North Park, Girard Avenue in La Jolla, Washington Street in Mission Hills, and Rosecrans Boulevard in Point Loma. Buildings in these areas exemplify the style with long horizontal massing, extensive use of glass windows to open the interior space as to the street, updated Moderne elements such as "eyebrow" overhangs, and minimal architectural details on the façade….Signage for Contemporary commercial buildings that is original to the structure should be considered as part of the resource."*

The Property is a former commercial complex, located along a street which is typically associated with Modern Contemporary commercial buildings.

In summary, the Property does not possess a majority of the General, Primary, or Secondary Character-Defining features of Modern Contemporary construction to be considered a true, representative example which is significant under the Modernism Context Statement. The Property does not meet the potential significance and eligibility criteria for designation under the Modernism Context Statement. As such, the Property does not embody the distinctive characteristics of type, period, or method of Modern Contemporary construction.

<u>Embodying The Distinctive Characteristics Of A Type, Period, Or Method Of Construction—Drive-In Theatre Architecture</u>

The Former Drive-In Theatre on the Property could qualify under California Register Criterion 3: Design/Construction on the basis of its drive-in theatre architecture at the local level of significance.

The Former Drive-In Theatre on the Property was originally constructed in 1962 at a time when the drive-in, as a recreational and entertainment venue, was popular across the United States. This popularity allowed the Property to expand in 1976. Although many other drive-ins across the country closed during this period, the Santee Drive-In Theatre remained open until December 2023. Today, it functions as an open, surface parking lot. Within San Diego County, another drive-in theatre remains—the South Bay Drive-In, located at 2170 Coronado Boulevard, San Diego which was built in 1958 and is still in operation.

In its current appearance, albeit unremarkable and undistinguished, the Former Drive-In Theatre on the Property retains a number of character-defining features associated with drive-in movie theater architecture. These include its sloped semi-circular parking spaces arranged in rows; twin movie screens; centrally-located concession stand with attached, first floor refreshment area and restrooms, and second floor projection tower; ticket booths; long entry area (driveway); oversized, pole-mounted marquee sign with neon tubing; and fencing around the property perimeter. In this manner, the Property, including its structures and parking lots, embody the distinctive characteristics of a type, period, and method of 1960s-1970s drive-in movie theatre construction, and retains a sufficient degree of original integrity. As a result, the Former Drive-In Theatre on the Property is architecturally significant and could qualify under California Register Criterion 3: Design/Construction, as has been conservatively determined for purposes of this Historical Assessment.

Work of an Important, Creative Individual

The Property does not qualify under California Register Criterion 3: Design/Construction at either the local, state, or national levels on the basis of its architects, designers, or builders. Historical research could not ascertain the identities of the architect, designers and/or builders responsible for the design/construction of the Property, including its structures and/or objects. In any event, the Property does not possess any remarkable or distinguished physical features which may reflect the work of an important, creative individual.

Possessing High Artistic Values

The Property does not qualify under California Register Criterion 3: Design/Construction as a property which possesses high artistic values. The Property does not articulate a particular concept of design to the extent that an aesthetic ideal is expressed.

California Register Criterion 4: Information Potential

Properties may be eligible under Criterion 4 if they have yielded, or may be likely to yield, information important in prehistory or history.

The Property does not qualify under California Register Criterion 4: Information Potential as it has not yielded, and is not likely to yield, information important in terms of history or prehistory.

Integrity Evaluation

In addition to determining the significance of a property under state and national criteria, a property must also possess integrity. Integrity is defined by the National Register of Historic Places as the "ability of a Property to convey and maintain its significance." Historic properties either retain integrity or they do not. Within the concept of integrity, the National Register recognizes seven aspects or qualities, that, in various combinations, define integrity. These are location, design, setting, materials, workmanship, feeling, and association. To retain historic integrity, a property will always possess several, and usually most, of the aspects. The retention of specific aspects of integrity is paramount for a property to convey its significance.

Integrity is defined by the California Register of Historical Resources as the "authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance." Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Alterations over time to a resource or historic changes in use may themselves have historical, cultural, or architectural significance.

Location

Location is defined as "the place where the historic property was constructed or the place where the historic event occurred."

The Property, including its structures and objects, was constructed in its original location between 1962-1976. As such, the Property retains its location element for integrity purposes.

Design

Design is defined as the "combination of elements that create the form, plan, space, structure, and style of a property."

The Property, including its structures and objects, has not been substantially modified and/or altered from that of its original appearance. The overall original combination of elements that create its form, plan, space, structure, and style have not been compromised. As such, the Property retains its design element for integrity purposes.

Setting

Setting is defined as the physical environment of a historic property.

The Property, including its structures and objects, has been located on the same parcel since its construction between 1962-1976. At the time the Property was first developed, the surrounding area was primarily open and/or agricultural in nature. Between 1964-1976, residential, commercial, and industrial development in the surrounding area substantially increased. Over the years, the setting has been further compromised by new residential, commercial, and industrial development. Therefore, the setting is no longer primarily undeveloped and/or agricultural in nature, as it was prior to site development and, therefore, the Property no longer retains its original setting element for integrity purposes.

Materials

Materials are defined as "the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property."

The vast majority of the materials which today exist in the Property, including its structures and objects, are largely original. Consequently, the Property retains its original materials element for integrity purposes.

Workmanship

Workmanship is as "the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory."
As with the materials discussion above, the vast majority of the workmanship that has gone into the construction of the Property, including its structures and objects, is original. Consequently, the Property retains its original workmanship element for integrity purposes.

Feeling

Feeling is defined as "a property's expression of the aesthetic or historic sense of a particular period of time."
In its current appearance, the Property, including its structures and objects, conveys and evokes an aesthetic, original sense of past time or place (i.e. 1962-1976 drive-in theatre feeling). As a result, the Property retains its original feeling element for integrity purposes.

Association

Association is defined as "the direct link between an important historic event or person and a historic property."

The Property, including its structures and objects, is not directly linked to any important historic events or individuals. As a result, the Property does not possess an associative element for integrity purposes.

Findings and Conclusions

Impacts Discussion

The present study has conservatively determined that the Former Drive-In Theatre on the Property is architecturally significant under state and national significance criteria because the Property embodies the distinctive characteristics of drive-in movie theatre construction from the 1960s and 1970s. These elements include:

a) Sloped semi-circular parking spaces arranged in rows
b) Twin movie screens
c) Centrally-located concession stand with attached first floor refreshment area and restrooms;
d) Second floor projection tower;
e) Ticket booths;
f) Long entry area (driveway);
g) Oversized, pole-mounted marquee sign with neon tubing;
h) Fencing around the property perimeter;
i) A sufficient degree of original integrity

While the individual elements of the Property are unremarkable and undistinguished in their appearance, the Property as a whole retains the character-defining features of a drive-in theater and remains largely unaltered since its original construction. Consequently, it is conservatively assumed to be a historical resource under CEQA (California Public Resources Code §5024.1).

This study examined other drive-in theatres that had either been slated for development or demolished and was unable to identify any other drive-in theatres that had been determined to meet the criteria for designation as a historical resource under CEQA. As an example, the Hi-Way Drive-In Theatre located in Santa Maria was not evaluated for historic significance by the lead agency, presumably because significant portions of the original improvements, such as ticket booths and concessions stands, had been demolished prior to the evaluation.

In another case, the Mission Tiki Drive-In Theatre in the City of Montclair was found not to be a historic resource because it had been converted into a Tiki/Polynesian themed drive-in, and its original architectural characteristics had been significantly altered. Last, in the City of Oceanside, the site of the former Valley Drive-In was evaluated under an EIR, which merely noted that the theater had been partially demolished at the time of the EIR's preparation.

Because this Property embodies the distinctive characteristics of a drive-in theater and remains largely unaltered since its original construction, it has been determined to qualify as a historic resource. This study was unable to identify any precedent indicating that a drive-in theater possessing the aforementioned elements and maintaining its original integrity would not qualify as such. While it may be theoretically possible to find an

alternative determination, the absence of relevant precedent necessitated a conservative finding that this Property does, in fact, constitute a historical resource under CEQA.

The Palisade Santee Commerce Center Project proposes to remove all existing structures and parking lots on the Property. In addition, the Project proposes the construction of one industrial/warehouse building (approximately 301,145 square feet), 10,000 square feet of office space, as well as associated improvements including loading docks, trailer stalls, passenger vehicle parking spaces, and street, sidewalk, and landscape improvements. Therefore, demolition of the Former Drive-In Theatre on the Property as part of proposed Project, has been conservatively assumed to cause a substantial, adverse change in the significance of an historical resource under CEQA, pursuant to California Public Resources Code §21084.1 and §f5020.1(q).

Again, the conservative assumptions and determinations made in this Historical Assessment are made in the interest of a conservative CEQA analysis of the proposed demolition of the Former Drive-In Theatre on the Property as part of the Project. Other recent CEQA determinations involving the demolition of other drive-in theatres in the State of California have concluded that those drive-in theatres are not historical resources under CEQA. As noted above, the Hi-Way Drive-In Theatre in the City of Santa Maria, the Mission Drive-In Theatre in the City of Montclair, and the Mission Drive-In Theatre (later renamed the Valley Drive-In Theatre) in the City of Oceanside, all of which were built in the 1950s or 1960s, were all deemed to be ineligible for historic designation at the local, state and national levels.[2]

Application of CEQA

Public Resources Code

CEQA (California Public Resources Code §21084.1) provides that any project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. Public Resources Code Section §5020.1(q) defines "substantial adverse change" as demolition, destruction, relocation, or alteration such that the significance of the historical resource would be impaired. According to Public Resources Code Section §5024.1, an historical resource is a resource that is listed in, or determined to be eligible for listing in, the California Register of Historical Resources. A resource may be listed as an historical resource in the California Register if it meets any of the following National Register of Historic Places criteria: 1) is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; 2) is associated with the lives of persons important in our past; 3) embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or 4) has yielded, or may likely yield information important in prehistory or history. In addition, an historical resource is a resource that is listed in, or

[2] See the City of Santa Maria Environmental Checklist/Initial Study for the Peoples Self Help Residential Project dated August 2021; the City of Montclair Draft Environmental Impact Report for the Mission Boulevard and Ramona Avenue Business Park Project dated January 2022; and the City of Oceanside Final Supplemental Environmental Impact Report for the Ocean Kamp Project dated July 2022.

determined to be eligible for listing in, the California Register of Historical Resources; a resource that is included in a local register of historical resources; or is identified as significant in an historical resource survey if that survey meets specified criteria.

a) Event Association:

The Property does not qualify under event association as a resource which is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. Historical research indicates that the Property was never associated with any event or events that have made a significant contribution to California's history and cultural heritage.

b) Individual Association:

The Property does not qualify under individual association as a resource which is associated with the lives of persons important in our past. None of the original developers, owners, or occupants identified with the Property performed any activities, achievements or contributions which were demonstrably important within the City, state, or nation.

c) Design/Construction:

The Property embodies the distinctive characteristics of a type, period, and method of drive-in movie theatre construction during the 1960s-1970s. The Property does not represent the work of an important creative individual or possess high artistic values.

d) Information Potential:

The Property does not qualify under information potential as a resource which has yielded, or may likely yield, information important in prehistory or history.

As a resource which could be significant on the basis of its design/construction, the Former Drive-In Theatre on the Property is conservatively determined to be eligible for listing in the National Register of Historic Places and the California Register of Historical Resources and is conservatively assumed to be a historical resource under CEQA (Public Resources Code Section §5024.1).

CEQA Guidelines

According to CEQA Guidelines §15064.5(a)(3), a lead agency can find a resource historic under CEQA if the resource has been determined to be significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided that the determination is supported by substantial evidence in light of the whole record.

CEQA Guidelines §15064.5(a)(3) provides that generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for

listing on the California Register of Historical Resources (Pub. Res. Code §5024.1), including where the resource embodies the distinctive characteristics of a type, period, region, or method of construction. As explained in more detail above, the Former Drive-In Theatre has been conservatively determined to embody the distinctive characteristics of a type, period, and method of drive-in movie theatre construction during the 1960s-1970s.

Mitigation Measures

As a resource which has been conservatively determined to be significant on the basis of its design/construction, the Former Drive-In Theatre on the Property is conservatively determined herein to be eligible for listing in the National Register of Historic Places and the California Register of Historical Resources and is therefore conservatively assumed to be a historical resource under CEQA for purposes of this Historic Assessment and environmental review of the Project under CEQA. Since the Palisade Santee Commerce Center Project proposes demolition of the Former Drive-In Theatre on the Property, including its structures and parking lots, this undertaking has been conservatively assumed to cause a substantial adverse change in the significance of a historical resource under CEQA.

The below feasible mitigation measures have therefore been recommended to preserve the history and architectural significance of the Former Drive-In Theatre. In this context, recordation of the history of the Former Drive-In Theatre serves a legitimate archival purpose. However, the following measures will not reduce the proposed impact of demolition of the Former Drive-In Theatre on the Property to a less-than-significant level under CEQA. The impact would remain significant and unavoidable.

(I) Historical American Building Survey (HABS)

Prior to the issuance of a demolition permit, the Applicant shall submit a Historic American Buildings Survey (HABS) Level II to the City of Santee for review and approval. This mitigation measure will provide an in-depth record of the Property's current state, including high-resolution photographs, detailed architectural drawings, and text explaining the drawings and photographs. The (HABS) Level II survey will help preserve a visual and documented history of the Property that may otherwise be lost after demolition. The submitted documentation not only serves to memorialize the Property for future generations but also allows for a future public appreciation of the Property's significance within the community.

The HABS documentation shall explicitly illustrate the significance of the Santee Drive-In Theatre for archival purposes, as specified below. The HABS will be made available for archival storage to the San Diego County Public Library, the San Diego History Center, and the City of Santee. The HABS shall include the following:

A. Drawings. The HABS documentation shall include measured drawings, including a Site Plan, Elevations, and known Construction Details prepared for the following

structures/objects: Entrance Sign; Concessions Building; Movie Screens; and Ticket Booths.

B. Photographs. The HABS documentation shall include professional-quality photographic documentation of the Entrance Sign; Concessions Building; Movie Screens; and Ticket Booths prior to any construction on the Property. The photographs should be 35-millimeter black-and-white photographs; 4x6-inch standard format; taken of all four structure/object exterior elevations; and be of archival quality and easily reproducible. Once the HABS documentation is deemed complete, one set of original HABS photographs shall be submitted for archival storage to the San Diego County Public Library, the San Diego History Center, and the City of Santee.

C. Written History & Description. The HABS documentation shall include a written history and description of the Santee Drive-In Theatre, developed in accordance with standards and format meeting the Department of the Interior's National Park Service requirements. The history will begin with a statement of significance supported by the development of the architectural and historical context in which the site was originally constructed and subsequently evolved. The written history will also include an architectural description and bibliographic information. The written history and description will also include a methodology section specifying the name of the researcher, date of research, and sources consulted.

(II) Interpretative Display.

Interpretative Display. Prior to the issuance of the certificate of occupancy for the Project, the Applicant shall work with the City of Santee to create an approximately 24-inch by 48-inch metal plaque or display outlining the history of the Santee Drive-In Theatre, including events and activities associated with the site.

The Applicant shall submit a plan to the City showing the location, size and content of the Interpretive Display. Upon request, the interpretive material shall be made available to schools, museums, archives and curation facilities, libraries, nonprofit organizations, the public, and other interested agencies. Prior to issuance of the certificate of occupancy for the Project, the Interpretive Display shall be installed by the Applicant on the Property or at the new location of the Entrance Sign, as described below. If the Interpretive Display is located on the Property, the Applicant shall record a covenant indicating that the property owner is responsible for implementing the long-term management of the Interpretive Display. If, at the City's discretion, the Interpretive Display is located on off-site property owned by the City, the City shall assume long-term management of the Interpretive Display.

The interpretive display is intended to be placed near the final location of the Entrance Sign, which, as described under Mitigation Measure (III), will either be preserved on-site or relocated to an off-site location. By situating the interpretative display in proximity to the Entrance Sign, the public will be able to gain a deeper understanding of the significance of the Santee Drive-In Theatre, its role in the community, and its history while enjoying

the visual backdrop of the Entrance Sign. The combination of the interpretive display and the Entrance Sign will provide visual interest to the community while providing a written context to serve as an educational resource for the community.

(III) Relocation & Rehabilitation Of The Entrance Sign.

Rehabilitation & Relocation of the Entrance Sign. The City and the Applicant may mutually agree to either preserve the Entrance Sign on the Property or relocate it to a City-owned property within the Arts and Entertainment neighborhood. Prior to the issuance of a demolition permit for the Project, the Applicant shall submit a plan to the City of Santee for approval to rehabilitate and temporarily store the Entrance Sign, which consists of the neon tubing outlining the word "Santee," the neon star, and the marquee. The plan, which is to be approved by the City, shall include information and details related to the rehabilitation, temporary storage and ultimate location of the Entrance Sign. Rehabilitation and storage of the Entrance Sign will be undertaken by the Applicant in a manner consistent with the Secretary of the Interior's Standards or other applicable industry standards . If the Entrance Sign is located on the Property, the Applicant shall record a covenant indicating that the property owner is responsible for implementing the long-term management of the Entrance Sign. If the Entrance Sign is located on off-site property owned by the City, the City shall assume long-term management of the Entrance Sign. If the City elects to require the Applicant to place the Entrance Sign and/or interpretative display on a City-owned off-site property, and the City, despite the Applicant's commercially reasonable efforts and through no fault of the Applicant, fails to provide the necessary authorization for the Applicant to begin the relocation of the Entrance Sign prior to the issuance of a Certificate of Occupancy for the project, the City shall not withhold the issuance of the Project's Certificate of Occupancy. Prior the issuance of a Certificate of Occupancy, the City and the Applicant shall mutually determine to reinstall the rehabilitated Entrance Sign at an appropriate location on the project site that is visible to the public from Woodside Avenue with recordation of a covenant by the Applicant indicating that the property owner is responsible for implementing the long-term management of the Entrance Sign. Alternatively, the City and the Applicant shall mutually determine an extended temporary storage plan for the sign with a security from the Applicant to complete the relocation after issuance of the Certificate of Occupancy or an Applicant provided funding mechanism for the City to complete this work.

The Entrance Sign is one of the most recognizable visual elements of the Santee Drive-In Theatre. Preserving this sign as a tangible, physical object ensures that the history of the Drive-In Theatre remains in order to be appreciated and viewed by the public. The Entrance Sign will provide a direct nexus to the history of the Drive-in Theatre and as outlined in Mitigation Measure (II), and the Entrance Sign will be complemented by an Interpretive Display. Together, the Entrance Sign and the Interpretive Display will provide historical context, detailing the Drive-In Theatre's history.

(IV) Historical Preservation Funding.

Historical Preservation Funding. In the event the Interpretive Display and Entrance Sign are relocated to City property, the City will be responsible for the long-term management of the Interpretive Display and Entrance Sign. Accordingly, if the Interpretive Display and Entrance Sign are located on City property or moved off of the Project site, after the Applicant completes the rehabilitation, storage, and relocation, the Applicant shall provide a donation to the City of Santee in the amount of $7,500 (seven thousand five hundred dollars) which is intended to fund the long-term management of the interpretive display and Entrance Sign by the City.

Summary Conclusion

The Former Drive-In Theatre on the Property consists of eight (8) main components: two (2) drive-in motion picture screens (Screen #1 and Screen #2); one (1) Concessions Building; two (2) parking lots (one for each movie screen); two (2) Ticket Booths; and one (1) Entrance Sign. The site was originally developed in 1962 with the construction of the Entrance Sign, Concessions Stand, and Screen #1 and parking lot. It later expanded c.1976 with the construction of Screen #2 and parking lot, the Ticket Booths, and ancillary storage sheds. The identities of the architects, designers, and/or builders responsible for the construction of the structures is not known, and the Modern Contemporary style of the structures is unremarkable. Sometime between 1964-1967, the Property became used once a week, during the day, as the "Santee Swap Meet." Over the years, the Former Drive-In Theatre on the Property has not been substantially modified and/or altered from that of its original design/construction, but it has naturally deteriorated over time. Today, the Property serves as an open, surface parking lot.

Historical research indicates that the Former Drive-In Theatre on the Property could be architecturally significant under National Register of Historic Places Criterion C (Design/Construction) and California Register of Historical Resources Criterion 3 (Design/Construction) for its type, period, and method of 1960s-1970s drive-in movie theatre construction. Although the Former Drive-In Theatre on the Property is unremarkable and undistinguished, it displays character-defining features associated with drive-in movie theatre architecture, and as a result, the Former Drive-In Theatre on the Property has conservatively been determined to be eligible for listing on the National Register of Historic Places and California Register of Historical Resources at the local level of significance.

As a Property which has conservatively been deemed to be eligible for listing in the National and California Registers, it is conservatively assumed to be a historical resource under CEQA, and therefore, mitigation measures have been recommended including Historic American Building Survey (HABS) documentation; an interpretative display; relocation and rehabilitation of the Entrance Sign as specified above, and funding for the long-term management of the interpretive display and Entrance Sign by the City (if applicable; otherwise the donation will be used to fund other local historic preservation efforts). Although these measures have been proposed to preserve the history and

architectural significance of the Former Drive-In Theatre, they will not mitigate the Project impact of demolition to a less-than-significant level under CEQA.

Again, the conservative assumptions and determinations made in this Historical Assessment are made in the interest of a conservative CEQA analysis of the proposed demolition of the Former Drive-In Theatre on the Property as part of the Project. Other recent CEQA determinations involving the demolition of other drive-in theatres in the State of California have concluded that those drive-in theatres are not historical resources under CEQA. For example, the Hi-Way Drive-In Theatre in the City of Santa Maria, the Mission Drive-In Theatre in the City of Montclair, and the Mission Drive-In Theatre (later renamed the Valley Drive-In Theatre) in the City of Oceanside, all of which were built in the 1950s or 1960s, were all deemed to be ineligible for historic designation at the local, state and national levels.[3]

RE: **Updated Geotechnical Engineering Investigation** - Proposed Industrial Warehouse Development - Located at 10229 N. Woodside Drive, in the City of Santee, California

Dear Mr. Jacobs:

Pursuant to your request, this firm has performed an Updated Geotechnical Engineering Investigation for the above referenced project in accordance with your approval of our proposal dated September 1, 2022. The purpose of this investigation is to evaluate the geotechnical conditions of the subject site and to provide recommendations for the proposed industrial warehouse development. Additional reports were provided by this firm to address City of Santee - Geotechnical Plan Check Review Sheets and have been incorporated into this geotechnical study.

The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration and sampling; 3) laboratory testing; 4) soil infiltration testing; 5) engineering analysis of field and laboratory data; 6) preparation of a geotechnical engineering report. It is the opinion of this firm that the proposed development is feasible from a geotechnical standpoint provided that the recommendations presented in this report are followed in the design and construction of the project.

1.0 Project Description

It is proposed to construct an industrial warehouse development consisting of 294,045 square feet building as shown on the attached Site Plan by Herdman Architecture and Design, dated November 2023. The proposed concrete tilt-up structure will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, screen walls, hardscape and landscaping. It is assumed that the proposed grading for the development will include cut and fill procedures on the order of a few feet to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

2.0 Site Description

The 13.66-acre subject property is located within the north 10900 block and north side of Woodside Drive, west of Mission Park Place, in the City of Santee. The generally flag-shaped parcel is slightly elongated in an east to west direction with topography of the relatively level property descending from gradually from a south to north direction on the order of a few feet. The parcel is occupied by Santee Drive-In Theatre with a few small buildings and surrounding asphalt pavement. The San Diego River is located approximately 150 to 200 feet north of the subject site. The project site is elevated about 25 to 30 feet in height and gradually descends from property line at an overall gradient of 6 to 1 (horizontal to vertical) towards the river.

3.0 Site Exploration

The investigation consisted of the placement of nine (9) subsurface exploratory borings by a truck mounted hollow stem auger to depths ranging between 5 and 50 feet and three (3) CPT soundings to a depth of 50 feet below current ground elevations. The explorations were visually classified and logged by a field engineer. An on-field computer generated CPT log provides output data with the penetration resistance values and inferred soil description. The locations of the previous borings and recent CPT soundings are shown on the Geologic Map.

The exploratory borings revealed the existing earth materials to consist of fill and alluvium soil. Detailed descriptions of the subsurface conditions are listed on the boring logs in Appendix A. It should be noted that the transition from one soil type to another as shown on the boring logs is approximate and may in fact be a gradual transition. The soils encountered are described as follows:

Fill (Af): A man-made fill classifying as a brown, fine to coarse grained, silty SAND with occasional small gravel was encountered to a depth ranging from 1 to 2 feet below ground surface. These soils were noted to be medium dense and moist.

Natural (Qoa): An undisturbed alluvial soil classifying as a light brown, medium to coarse grained, SAND to a brown fine to coarse grained, slightly silty to silty SAND was encountered beneath the fill soils. These native soils were observed to be medium dense and damp to wet.

The overall engineering characteristics of the earth material were relatively uniform with each excavation. Groundwater was encountered at a depth of 23 and 24 feet below existing ground surface.

4.0 Laboratory Tests

Relatively undisturbed samples of the subsurface soils were obtained to perform laboratory testing and analysis for direct shear, consolidation tests, and to determine in-place moisture/densities. These relatively undisturbed ring samples were obtained by driving a thin-walled steel sampler lined with one-inch long brass rings with an inside diameter of 2.42 inches into the undisturbed soils. Bulk bag samples were obtained in the upper soils for expansion index tests and maximum density tests.

Standard penetration tests were obtained by driving a steel sampler unlined with an inside diameter of 1.5 inches into the soils. This standard penetrometer sampler was driven a total of eighteen inches with blow counts tallied every six inches. Blow count data is given on the Boring Logs in Appendix A. All test results are included in Appendix B, unless otherwise noted.

4.1 **Field Moisture Content** (ASTM: D 2216) and the dry density of the ring samples were determined in the laboratory. This data is listed on the logs of explorations.

4.2 **Sieve analyses** (ASTM: D 422-63) and the percent by weight of soil finer than the No. 200 sieve (ASTM: 1140) were performed on selected soil samples. These results are shown later within the body of this report.

4.3 **Maximum Density tests** (ASTM: D 1557) were performed on typical samples of the upper soils. Results of these tests are shown on Table I.

4.4 **Expansion Index tests** (ASTM: D 4829) were performed on remolded samples of the upper soils to determine expansive characteristics. Results of these tests are provided on Table II.

4.5 **Atterberg Limits** (ASTM: D 4318) consisting of liquid limit, plastic limit and plasticity index were performed on representative soil samples. Results are shown on Table III.

4.6 **Corrosion tests** consisting of sulfate, pH, resistivity and chloride analysis to determine potential corrosive effects of soils on concrete and underground utilities. Test results are provided on Table III.

4.7 **R-Value test** per California Test Method 301 was performed on a representative sample, which may be anticipated to be near subgrade to determine pavement design. Results are provided within the pavement design section of the report.

4.8 **Direct Shear tests** (ASTM: D 3080) were performed on undisturbed and/or remolded samples of the subsurface soils. The test is performed under saturated conditions at loads of 1,000 lbs./sq.ft., 2,000 lbs./sq.ft., and 3,000 lbs./sq.ft. with results shown on Plates A and B.

4.9 **Consolidation tests** (ASTM: D 2435) were performed on undisturbed samples to determine the differential and total settlement which may be anticipated based upon the proposed loads. Water was added to the samples at a surcharge of one KSF and the settlement curves are plotted on Plates C to E.

5.0 Seismicity Evaluation

The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely. The site is situated in an area of high regional seismicity and the nearest fault is located about 15 kilometers from the site. Ground shaking originating from earthquakes along other active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults.

The seismic design acceleration parameters for the project site are provided on the following page based on the ASCE/SEI 7-16 American Society of Civil Engineers (ASCE) website, https://asce7hazardtool.online/. The seismic design report is attached is Appendix C

Seismic Design Acceleration Parameters

Latitude	32.848
Longitude	-116.959
Site Class	D
Risk Category	II
Mapped Spectral Response Acceleration	S_S = 0.766 S_1 = 0.282
Adjusted Maximum Acceleration	S_{MS} = 1.194
Design Spectral Response Acceleration Parameters	S_{DS} = 0.610
Peak Ground Acceleration	PGA_M = 0.417

Use of these values is dependent on requirements of ASCE 7-16, 11-4.8, Exception 2 that requires the value of the seismic response coefficient C_s be determined by Equation 12.8.2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either 12.8-3 for $T_L \geq T \geq 1.5T_s$ or Equation 12.8-4 for $T > T_L$. Computations and verification of these conditions is referred to the structural engineer.

6.0 Liquefaction Evaluation

The site is expected to experience ground shaking and earthquake activity that is typical of Southern California area. It is during severe ground shaking that loose, granular soils below the groundwater table can liquefy. Based upon information shown on the "County of San Diego Hazard Mitigation Planning Map" dated 2009, the subject site is situated within an area of liquefaction. A review of the exploratory boring log and the laboratory test results on selected soil samples obtained indicate the following soil classifications, field blowcounts and amounts of fines passing through the No. 200 sieve.

Field Blowcount and Gradation Data

Boring No.	Classification	Blowcounts (blows/ft)	Relative Density	% Passing No. 200 Sieve
B-3 @ 5'	SW	7	Medium Dense	5
B-3 @ 10'	SW	12	Medium Dense	5
B-3 @ 15'	SW	12	Medium Dense	3
B-3 @ 20'	CL	12	Medium Stiff	64
B-3 @ 25'	SW	20	Dense	4
B-3 @ 30'	SW	20	Very Dense	4
B-3 @ 35'	SW	31	Very Dense	3
B-3 @ 40'	SW	37	Very Dense	3
B-3 @ 45'	SW	32	Very Dense	5
B-3 @ 50'	SW	33	Very Dense	8

Groundwater was encountered at a depth of 23 and 24 feet below ground surface. A nearby groundwater monitoring well located approximately 1.5 miles to the northeast from the subject site noted a groundwater depth ranging between 18 and 22 feet below ground surface measured between May 2016 and August 2022.

Our updated liquefaction evaluation was performed using a CPT-1, CPT-2A and CPT-3 output data due to a local Magnitude 6.9 earthquake with an historical high groundwater depth of 20 feet. The estimated seismic settlements are listed below based on a Peak Ground Acceleration of 0.42g with our calculations given in Appendix B.

Location	Seismic Settlement
CPT-1	7/8"
CPT-2A	5/8"
Boring B-3	7/8"
CPT-3	7/8"

Very dense sands were encountered at depths of 36 to 44 feet in the CPT soundings. The seismic settlements should be 7/8 inch or less in the building pad area. Differential settlements would be on the order of ¼ inch over a 50 feet (horizontal) distance. Our seismic settlement calculations are included in Appendix C.

7.0 Infiltration Characteristics

The proposed infiltration chamber system is located towards the back of the property as shown on the attached Geologic Map. The field exploration consisted of three (3) exploratory borings by a truck mounted hollow stem auger to depths of 10 feet below ground surface (bgs) to determine the subsurface soil conditions. The borings encountered surficial fill underlain by alluvial deposits consisting of a brown, medium to coarse grained silty to slightly silty SAND with occasional gravel. These soils were noted to be medium dense and damp to moist. The location of the exploratory borings are shown on the attached Site Plan. Detailed description of the subsurface soils is shown on the attached logs in Appendix A.

Infiltration tests were performed in accordance with the County of San Diego BMP Design Manual Appendix D – Geotechnical Engineer Analysis dated September 15, 2020 with field infiltration rates calculated using the Porchet Method (aka Inverse Borehole Method). The borings consisted of six-inch diameter test holes. A three-inch diameter perforated PVC casing with solid end cap was installed in the borings and then surrounded with gravel materials to prevent caving.

The infiltration holes were carefully filled with clean water and refilled after two initial readings. Based upon the initial rates of infiltration at each location, test measurements were measured at selected maximum intervals thereafter. Measurements were obtained by using an electronic tape measure with 1/16-inch divisions and timed with a stopwatch.

Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following field infiltration rates which do not include a factor of safety. The drainage disposal system shall utilize design infiltration rates based on the safety factor required by the county standard. Calculations are based on the Porchet Method and are provided in Appendix D.

Boring/Test No.	Depth	Soil Classification	Field Infiltration Rate
TH-1	10'	Silty SAND	50 in/hr
TH-2	10'	Silty SAND	150 in/hr
TH-3	10'	Silty SAND	150 in/hr

Groundwater was encountered at a depth of 23 and 24 feet below ground surface. A nearby groundwater monitoring well located approximately 1.5 miles to the northeast from the subject site noted a groundwater depth ranging between 18 and 22 feet below ground surface measured between May 2016 and August 2022.

All systems must meet the latest city and/or county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements. It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

8.0 Conclusions and Recommendations

Based upon our evaluations, the proposed development is acceptable from a geotechnical engineering standpoint. By following the recommendations and guidelines set forth in our report, the structures will be safe from excessive settlements under the anticipated design loadings and conditions. The proposed development shall meet all requirements of the City Building Ordinance and will not impose any adverse effect on existing adjacent structures.

The following recommendations are based upon soil conditions encountered in our field investigation; these near-surface soil conditions could vary across the site. Variations in the soil conditions may not become evident until the commencement of grading operations for the proposed development and revised recommendations from the geotechnical engineer may be necessary based upon the conditions encountered.

It is recommended that site inspections be performed by a representative of this firm during all grading and construction of the development to verify the findings and recommendations documented in this report. Any unusual conditions which may be encountered in the course of the project development may require the need for additional study and revised recommendations.

8.1 Site Grading Recommendations

Any vegetation and/or demolition debris shall be removed and hauled from proposed grading areas prior to the start of grading operations. Existing vegetation shall not be mixed or disced into the soils. Any removed soils may be reutilized as compacted fill once any deleterious material or oversized materials (in excess of eight inches) is removed. Grading operations shall be performed in accordance with the attached *Specifications for Placement of Compacted Fill.*

8.1.1 Removal and Recompaction Recommendations

All disturbed soils and/or fill (about 1 to 2 feet below ground surface) shall be removed to competent native material (relative compaction > 90%), the exposed surface scarified to a depth of 12 inches, brought to within 2% of optimum moisture content and compacted to a minimum of 90% of the laboratory standard (ASTM: D 1557) prior to placement of any additional compacted fill soils, foundations, slabs-on-grade and pavement. Grading shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

It is possible that isolated areas of undiscovered fill not described in this report are present on site; if found, these areas should be treated as discussed earlier. A diligent search shall also be conducted during grading operations in an effort to uncover any underground structures, irrigation or utility lines. If encountered, these structures and lines shall be either removed or properly abandoned prior to the proposed construction.

Any imported fill material should be preferably soil similar to the upper soils encountered at the subject site. All soils shall be approved by this firm prior to importing at the site and will be subjected to additional laboratory testing to assure concurrence with the recommendations stated in this report.

If placement of slabs-on-grade and pavement is not completed immediately upon completion of grading operations, additional testing and grading of the areas may be necessary prior to continuation of construction operations. Likewise, if adverse weather conditions occur which may damage the subgrade soils, additional assessment by the soils engineer as to the suitability of the supporting soils may be needed.

Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase. Adequate drainage away from the structures, pavement and slopes should be provided at all times.

8.1.2 Fill Blanket Recommendations

Due to the potential for differential settlement of foundations placed on compacted fill and native materials, it is recommended that all foundations including floor slab areas be underlain by a uniform compacted fill blanket at least two feet in thickness. This fill blanket shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

8.2 Shrinkage and Subsidence

Results of our in-place density tests reveal that the soil shrinkage will be on the order of 10 to 15% due to excavation and recompaction, based upon the assumption that the fill is compacted to 92% of the maximum dry density per ASTM standards. Subsidence should be 0.2 feet die to earthwork operations. The volume change does not include any allowance for vegetation or organic stripping, removal of subsurface improvements, or topographic approximations. Although these values are only approximate, they represent our best estimate of lost yardage, which will likely occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field testing the actual equipment and grading techniques should be conducted.

8.3 Temporary Excavations

Temporary unsurcharged excavations in the existing site materials may be made at vertical inclinations up to 3 feet in height unless cohesionless soils are encountered. In areas where soils with little or no binder are encountered, where adverse geological conditions are exposed, or where excavations are adjacent to existing structures, shoring or flatter excavations may be required. The temporary cut slope gradients given above do not preclude local raveling and sloughing. Additional recommendations regarding specific excavations may be provided once typical detail sections are made available.

All excavations shall be made in accordance with the requirements of the geotechnical engineer, CAL-OSHA and other public agencies having jurisdiction. Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase.

8.4 Foundation Design

All foundations for the proposed building may be designed utilizing the following allowable bearing capacities for an embedded depth of 18 inches into approved engineered fill with the corresponding widths:

Allowable Bearing Capacity (psf)		
Width (feet)	Continuous Foundation	Isolated Foundation
1.5	2000	2500
2.0	2075	2575
4.0	2075	2875
6.0	2500	3000

The bearing value may be increased by 500 psf for each additional foot of depth in excess of the 18-inch minimum depth, up to a maximum of 4,000 psf. A one-third increase may be used when considering short-term loading and seismic forces. Any foundations located along property line may utilize an allowable bearing capacity of 1,500 psf and embedded into competent native soils. A representative of this firm shall inspect all foundation excavations prior to pouring concrete.

8.5 Settlement Analysis

Resultant pressure curves for the consolidation tests are shown on Plates C to E. Computations utilizing these curves and the recommended allowable soil bearing capacities reveal that the foundations will experience settlements on the order of ¾ inch and differential settlements of less than ¼ inch.

8.6 Lateral Resistance

The following values may be utilized in resisting lateral loads imposed on the structure. Requirements of the California Building Code should be adhered to when the coefficient of friction and passive pressures are combined.

Coefficient of Friction - 0.40

Equivalent Passive Fluid Pressure = 250 lbs./cu.ft.

Maximum Passive Pressure = 2,500 lbs./cu.ft.

The passive pressure recommendations are valid only for approved compacted fill soils or competent native materials.

8.7 **Retaining Wall Design Parameters**

Active earth pressures against retaining walls will be equal to the pressures developed by the following fluid densities. These values are for **approved granular backfill material** placed behind the walls at various ground slopes above the walls.

Surface Slope of Retained Materials (Horizontal to Vertical	Equivalent Fluid Density (lb./cu.ft.)
Level	30
5 to 1	3●
4 to 1	3●
4 to 1	40
5 to 1	4●

Any applicable short-term construction surcharges and seismic forces should be added to the above lateral pressure values. An equivalent fluid pressure of 45 pcf may be utilized for the restrained wall condition with a level grade behind the wall.

The seismic-induced lateral soil pressure for walls greater than 6 feet may be computed using a triangular pressure distribution with the maximum value at the top of the wall. The maximum lateral pressure of (20 pcf) H where H is the height of the retained soils above the wall footing should be used in final design of retaining walls. Sliding resistance values and passive fluid pressure values may be increased by 1/3 during short-term wind and seismic loading conditions.

All walls shall be waterproofed as needed and protected from hydrostatic pressure by a reliable permanent subdrain system. The granular backfill to be utilized immediately adjacent to retaining walls shall consist of an approved select granular soil with a sand equivalency greater than 30.

This backfill zone of free draining material shall consist of a wedge beginning a minimum of one horizontal foot from the base of the wall extending upward at an inclination of no less than ¾ to 1 (horizontal to vertical).

8.8 Slab Design

All concrete slabs shall be a minimum of six inches in thickness in the proposed warehouse areas and four inches in office and hardscape placed on approved subgrade soils. Additional reinforcement requirements and an increase in thickness of the slabs-on-grade may be necessary based upon proposed loading conditions in the structures and should be evaluated further by the project engineers and/or architect.

A vapor retarder (10-mil minimum thickness) should be utilized in areas which would be sensitive to the infiltration of moisture. This retarder shall meet requirements of ASTM E 96, *Water Vapor Transmission of Materials* and ASTM E 1745, *Standard Specification for Water Vapor Retarders used in Contact with Soil or Granular Fill Under Concrete Slabs.* The vapor retarder shall be installed in accordance with procedures stated in ASTM E 1643, *Standard practice for Installation of Water Vapor Retarders used in Contact with Earth or Granular Fill Under Concrete Slabs.*

The moisture retarder may be placed directly upon compacted subgrade soils conditioned to near optimum moisture levels, although one to two inches of sand beneath the membrane is desirable. The subgrade upon which the retarder is placed shall be smooth and free of rocks, gravel or other protrusions which may damage the retarder. Use of sand above the retarder is under the purview of the structural engineer; if sand is used over the retarder, it should be placed in a dry condition.

8.9 Pavement Section Design

The table on the following page provides a preliminary pavement design based upon an R-Value of 78 for the subgrade soils for the proposed pavement areas. Final pavement design may need to be based on R-Value testing of the subgrade soils near the conclusion of site grading to assure that these soils are consistent with those assumed in this preliminary design. *The recommendations are based upon estimated traffic loads. Client should submit any other anticipated traffic loadings to the geotechnical engineer, if necessary, so that pavement sections may be reviewed to determine adequacy to support the proposed loadings.*

Type of Traffic	Traffic Index	Asphalt (in.)	Base Material (in.)
Automobile Parking Stalls	4.0	4.0	4.0
Light Vehicle Circulation Areas	5.5	5.5	5.5
Heavy Truck Access Areas	7.0	4.0	8.0

Any concrete slab-on-grade in pavement areas shall be a minimum of seven inches in thickness and may be placed on approved subgrade soils. All pavement areas shall have positive drainage toward an approved outlet from the site. Drain lines behind curbs and/or adjacent to landscape areas should be considered by client and the appropriate design engineers to prevent water from infiltrating beneath pavement. If such infiltration occurs, damage to pavement, curbs and flow lines, especially on sites with expansive soils, may occur during the life of the project.

Any approved base material shall consist of a Class II aggregate or equivalent and should be compacted to a minimum of 95% relative compaction. All pavement materials shall conform to the requirements set forth by the City of Santee. The base material; and asphaltic concrete should be tested prior to delivery to the site and during placement to determine conformance with the project specifications. A pavement engineer shall designate the specific asphalt mix design to meet the required project specifications.

8.10 **Utility Trench and Excavation Backfill**

Trenches from installation of utility lines and other excavations may be backfilled with on-site soils or approved imported soils compacted to a minimum of 90% relative compaction. All utility lines shall be properly bedded with clean sand having a sand equivalency rating of 30 or more. This bedding material shall be thoroughly water jetted around the pipe structure prior to placement of compacted backfill soils.

8.11 **Corrosion Design Criteria**

Representative samples of the surficial soils, typical of the subgrade soils expected to be encountered within foundation excavations and underground utilities were tested for corrosion potential. The minimum resistivity value obtained for the samples tested is representative of an environment that may be severely corrosive to metals. The soil pH value was considered mildly acidic and may not have a significant effect on soil corrosivity. Consideration should be given to corrosion protection systems for buried metal such as protective coatings, wrappings or the use of PVC where permitted by local building codes.

According to Table 4.3.1 of ACI 318 Building Code and Commentary, these contents revealed negligible sulfate concentrations. Therefore, a Type II cement according to latest CBC specifications may be utilized for building foundations at this time. It is recommended that additional sulfate tests be performed at the completion of site grading to assure that the as graded conditions are consistent with the recommendations stated in this design. Corrosion test results may be found on the attached Table IV.

8.12 **Expansive Soil**

If expansive soils are encountered, special attention should be given to the project design and maintenance. The attached *Expansive Soil Guidelines* should be reviewed by the engineers, architects, owner, maintenance personnel and other interested parties and considered during the design of the project and future property maintenance.

9.0 Closure

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavations. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected to unfavorable conditions are encountered during construction phase. It is the responsibility of the owner to ensure that all information within this report is submitted to the Architect and appropriate Engineers for the project.

A preconstruction conference should be held between the developer, general contractor, grading contractor, city inspector, architect, and geotechnical engineer to clarify any questions relating to the grading operations and subsequent construction. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,
NORCAL ENGINEERING

SPECIFICATIONS FOR PLACEMENT OF COMPACTED FILL

Excavation

Any existing low-density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Geotechnical Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557).

In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

Material for Fill

The on-site soils or approved import soils may be utilized for the compacted fill provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Geotechnical Engineering firm a minimum of 72 hours prior to importation of site.

Placement of Compacted Fill Soils

The approved fill soils shall be placed in layers not excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2% of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Geotechnical Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every 2 feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Geotechnical Engineering firm.

Grading Observations

The controlling governmental agencies should be notified prior to commencement of any grading operations. This firm recommends that the grading operations be conducted under the observation of a Soils Engineering firm as deemed necessary. A 24-hour notice must be provided to this firm prior to the time of our initial inspection.

Observation shall include the clearing and grubbing operations to assure that all unsuitable materials have been properly removed; approve the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished grade and designate areas of overexcavation; and perform field compaction tests to determine relative compaction achieved during fill placement. In addition, all foundation excavations shall be observed by the Geotechnical Engineering firm to confirm that appropriate bearing materials are present at the design grades and recommend any modifications to construct footings.

EXPANSIVE SOIL GUIDELINES

The following expansive soil guidelines are provided for your project. The intent of these guidelines is to inform you, the client, of the importance of proper design and maintenance of projects supported on expansive soils. ***You, as the owner or other interested party, should be warned that you have a duty to provide the information contained in the soil report including these guidelines to your design engineers, architects, landscapers and other design parties in order to enable them to provide a design that takes into consideration expansive soils.***

In addition, you should provide the soil report with these guidelines to any property manager, lessee, property purchaser or other interested party that will have or assume the responsibility of maintaining the development in the future.

Expansive soils are fine-grained silts and clays which are subject to swelling and contracting. The amount of this swelling and contracting is subject to the amount of fine-grained clay materials present in the soils and the amount of moisture either introduced or extracted from the soils. Expansive soils are divided into five categories ranging from "very low" to "very high". Expansion indices are assigned to each classification and are included in the laboratory testing section of this report. *If the expansion index of the soils on your site, as stated in this report, is 21 or higher, you have expansive soils.* The classifications of expansive soils are as follows:

Classification of Expansive Soil*

Expansion Index	Potential Expansion
0-20	Very Low
21-50	Low
51-90	Medium
91-130	High
Above 130	Very High

*From Table 18A-I-B of California Building Code (1988)

When expansive soils are compacted during site grading operations, care is taken to place the materials at or slightly above optimum moisture levels and perform proper compaction operations. Any subsequent excessive wetting and/or drying of expansive soils will cause the soil materials to expand and/or contract. These actions are likely to cause distress of foundations, structures, slabs-on-grade, sidewalks and pavement over the life of the structure. ***It is therefore imperative that even after construction of improvements, the moisture contents are maintained at relatively constant levels, allowing neither excessive wetting or drying of soils.***

Evidence of excessive wetting of expansive soils may be seen in concrete slabs, both interior and exterior. Slabs may lift at construction joints producing a trip hazard or may crack from the pressure of soil expansion. Wet clays in foundation areas may result in lifting of the structure causing difficulty in the opening and closing of doors and windows, as well as cracking in exterior and interior wall surfaces. In extreme wetting of soils to depth, settlement of the structure may eventually result. Excessive wetting of soils in landscape areas adjacent to concrete or asphaltic pavement areas may also result in expansion of soils beneath pavement and resultant distress to the pavement surface.

Excessive drying of expansive soils is initially evidenced by cracking in the surface of the soils due to contraction. Settlement of structures and on-grade slabs may also eventually result along with problems in the operation of doors and windows.

Projects located in areas of expansive clay soils will be subject to more movement and "hairline" cracking of walls and slabs than similar projects situated on non-expansive sandy soils. There are, however, measures that developers and property owners may take to reduce the amount of movement over the life the development. The following guidelines are provided to assist you in both design and maintenance of projects on expansive soils:

- Drainage away from structures and pavement is essential to prevent excessive wetting of expansive soils. Grades should be designed to the latest building code and maintained to allow flow of irrigation and rain water to approved drainage devices or to the street. Any "ponding" of water adjacent to buildings, slabs and pavement after rains is evidence of poor drainage; the installation of drainage devices or regrading of the area may be required to assure proper drainage. Installation of rain gutters is also recommended to control the introduction of moisture next to buildings. Gutters should discharge into a drainage device or onto pavement which drains to roadways.

- Irrigation should be strictly controlled around building foundations, slabs and pavement and may need to be adjusted depending upon season. This control is essential to maintain a relatively uniform moisture content in the expansive soils and to prevent swelling and contracting. Over-watering adjacent to improvements may result in damage to those improvements. NorCal Engineering makes no specific recommendations regarding landscape irrigation schedules.

- Planting schemes for landscaping around structures and pavement should be analyzed carefully. Plants (including sod) requiring high amounts of water may result in excessive wetting of soils. Trees and large shrubs may actually extract moisture from the expansive soils, thus causing contraction of the fine-grained soils.

- Thickened edges on exterior slabs will assist in keeping excessive moisture from entering directly beneath the concrete. A six-inch thick or greater deepened edge on slabs may be considered. Underlying interior and exterior slabs with 6 to 12 inches or more of non-expansive soils and providing presaturation of the underlying clayey soils as recommended in the soil report will improve the overall performance of on-grade slabs.

- Increase the amount of steel reinforcing in concrete slabs, foundations and other structures to resist the forces of expansive soils. The precise amount of reinforcing should be determined by the appropriate design engineers and/or architects.

- Recommendations of the soil report should always be followed in the development of the project. Any recommendations regarding presaturation of the upper subgrade soils in slab areas should be performed in the field and verified by the Soil Engineer.

COMPONENT PROPORTIONS

DESCRIPTIVE TERMS	RANGE OF PROPORTION
Trace	1 - 5%
Few	5 - 10%
Little	10 - 20%
Some	20 - 35%
And	35 - 50%

COMPONENT DEFINITIONS

COMPONENT	SIZE RANGE
Boulders	Larger than 12 in
Cobbles	3 in to 12 in
Gravel	3 in to No 4 (4.5mm)
Coarse gravel	3 in to 3/4 in
Fine gravel	3/4 in to No 4 (4.5mm)
Sand	No. 4 (4.5mm) to No. 200 (0.074mm)
Coarse sand	No. 4 (4.5 mm) to No. 10 (2.0 mm)
Medium sand	No. 10 (2.0 mm) to No. 40 (0.42 mm)
Fine sand	No. 40 (0.42 mm) to No. 200 (0.074 mm)
Silt and Clay	Smaller than No. 200 (0.074 mm)

MOISTURE CONTENT

DRY	Absence of moisture, dusty, dry to the touch.
DAMP	Some perceptible moisture; below optimum
MOIST	No visible water; near optimum moisture content
WET	Visible free water, usually soil is below water table.

RELATIVE DENSITY OR CONSISTENCY VERSUS SPT N -VALUE

COHESIONLESS SOILS		COHESIVE SOILS

MEMORANDUM

To:	Marni Borg, Principal Environmental Planner, City of Santee
From:	Michael Williams, Ph.D.
Subject:	Paleontological Resources Memorandum – Palisade Santee Commerce Center Project
Date:	July 6, 2023 (Revised May 20, 2024)
cc:	Sarah Siren, Kristen Stoner, Dudek
Attachment:	A: San Diego Natural History Museum Records Search Results

Dudek is providing this memo after completing a review of the potential for impacts to paleontological resources during construction activities for the Palisade Santee Commerce Center Project (Project or proposed Project), located in the City of Santee, San Diego County, California. The City of Santee (City) is the lead agency and responsible for compliance with the California Environmental Quality Act (CEQA). This paleontological resources study included a paleontological resources records search conducted by the San Diego Natural History Museum (SDNHM), in addition to a review of published geological maps and paleontological literature. Dudek conducted this paleontological resources study in accordance with CEQA and guidelines from the Society of Vertebrate Paleontology (SVP 2010).

Project Location and Description

The proposed Project site is located on 13.66 acres at 10990 Woodside Avenue North (Woodside Avenue N.) in Santee, California. The Project site falls within Section 23 of Township 15 South, Range 1 West of the El Cajon, California 7.5-minute Quadrangle and encompasses one Assessor Parcel Number (APN): 381-070-52-00 (Figure 1). The Project site contains the Santee Drive-In Theatre, an access road that extends to Woodside Avenue N., some landscaping, and an undeveloped area located along the northern boundary of the parcel. The Project area is bound by industrial uses to the east, west, and south, and the San Diego River to the north. Residential areas are located just north of the San Diego River. No change to current site zoning and land use designation are proposed.

The Project would redevelop the site for the construction of one warehouse building (280,000 to 300,000 square feet), including office and mezzanine and approximately 42 dock-hi doors; parking spaces; improvements to internal roadways, driveway access, and Woodside Avenue North frontage; automated gates equipped with knox boxes; and landscaping. This scope of work assumes project development would extend to the undeveloped northern boundary of APN 381-070-52-00 and that Project access would be limited to the driveway access at Woodside Avenue N.

Regulatory Framework

California Environmental Quality Act

CEQA Guidelines require that all private and public activities not specifically exempted be evaluated against the potential for environmental damage, including effects to paleontological resources. Paleontological resources, which are limited, nonrenewable resources of scientific, cultural, and educational value, are recognized as part of the environment under these state guidelines. This study satisfies project requirements in accordance with CEQA (13 PRC, 2100 et seq.) and Public Resources Code Section 5097.5 (Stats 1965, c 1136, p. 2792). This analysis also complies with guidelines and significance criteria specified by the Society of Vertebrate Paleontology ([SVP] 2010).

Paleontological resources are explicitly afforded protection by CEQA, specifically in Section VII(f) of CEQA Guidelines Appendix G, the "Environmental Checklist Form," which addresses the potential for adverse impacts to "unique paleontological resource[s] or site[s] or … unique geological feature[s]." This provision covers fossils of significant importance – remains of species or genera new to science, for example, or fossils exhibiting features not previously recognized for a given animal group – as well as localities that yield fossils significant in their abundance, diversity, preservation, and so forth. Further, CEQA provides that generally, a resource shall be considered "historically significant" if it has yielded or may be likely to yield information important in prehistory (PRC 15064.5 [a][3][D]). Paleontological resources would fall within this category. The PRC, Chapter 1.7, sections 5097.5 and 30244 also regulates removal of paleontological resources from state lands, defines unauthorized removal of fossil resources as a misdemeanor, and requires mitigation of disturbed sites.

Geological and Paleontological Setting

The proposed Project site lies within the Peninsular Ranges Geomorphic Province (California Geological Survey 2002). This province extends from the tip of the Baja California Peninsula to the Transverse Ranges (the San Gabriel and San Bernardino Mountains) and includes the Los Angeles Basin, offshore islands (Santa Catalina, Santa Barbara, San Nicholas, and San Clemente), and continental shelf. The eastern boundary is the Colorado Desert Geomorphic Province (California Geological Survey 2002; Morton and Miller 2006). The ancestral Peninsular Ranges were formed by uplift of plutonic igneous rock resulting from the subduction of the Farallon Plate underneath the North American Plate during the latter portion of the Mesozoic era (approximately 90 to 125 million years ago [mya]) (Abbott 1999).

Todd (2004) mapped the geology of the El Cajon 7.5-minute Topographic Quadrangle map, which includes the Project site, at a scale of 1:100,000. According to this mapping, the Project site is mapped as Holocene to late Pleistocene (< 11,700 years ago to approximately 129,000 years ago; Cohen et al. [2023]) Quaternary alluvium and colluvium undivided deposits (map unit Qu), which generally consists of silty, graded fine to medium grained sand with silt and clay. The geotechnical report prepared for the Project documented in their boring logs asphalt and fill ranging from 1 to 2 feet below the ground surface, followed by alluvial deposits from 3 to approximately 50 feet below the ground surface, which was the maximum depth explored.

Holocene to Pleistocene alluvial and colluvial deposits generally have low paleontological sensitivity at the surface because of their young age; however, because the age of sediments increases with depth below the ground surface,

the paleontological sensitivity may increase from the surface to the subsurface, where middle Holocene (approximately 5,000 years ago) to Pleistocene sediments can be found.

Paleontological Records Search

A paleontological records search request covering the Project site and a one-mile radius buffer was sent to the San Diego Natural History Museum (SDNHM) on April 7, 2023, and the results were received on April 21, 2023. According to the records search results, no paleontological localities are documented within the Project site boundaries and there were no documented localities within the one-mile buffer area surrounding the Project. The SDNHM indicated that the Holocene to late Pleistocene deposits present on the surface of the Project site are likely underlain by early Cretaceous (approximately 126 mya) intrusive igneous rocks that have no paleontological sensitivity. Therefore, a paleontological mitigation program was not recommended.

Findings and Recommendations

No paleontological resources were identified within the Project site as a result of the institutional records search, and desktop geological and paleontological review, and the Project site is not anticipated to be underlain by unique geologic features. Areas of the Project site underlain by Holocene to Pleistocene alluvial and colluvial deposits have low paleontological sensitivity but may increase at depth. In the event that intact paleontological resources are located beneath the Project site, ground-disturbing activities associated with construction of the Project, such as grading during site preparation and large diameter drilling (more than 2 feet diameter), have a low potential to destroy a unique paleontological resource or site. Without mitigation, the potential damage to paleontological resources during construction would be a potentially significant impact. However, upon implementation of **MM-CUL_1**, impacts would be reduced to below the level of significance. Impacts of the project are considered less than significant with mitigation incorporated during construction.

MM-CUL-3 Inadvertent Discovery. In the event that paleontological resources (e.g., fossils and associated data) are exposed during construction activities for the project, all construction work occurring within 50 feet of the find shall immediately stop until a qualified paleontologist meeting the professional standards of the Society of Vertebrate Paleontology can evaluate the significance of the find and determine whether or not additional study is warranted. If the discovery is clearly not significant, the qualified paleontologist may document the find and allow work to continue. If the discovery proves potentially significant under CEQA, additional work such as preparation of a paleontological treatment plan and paleontological monitoring may be warranted at the direction and discretion of the qualified paleontologist.

Should you have any questions relating to this report and its findings please contact Michael Williams (mwilliams@dudek.com).

RE: Paleontological Records Search – PN15138 Santee Warehouse Project

Dear Mr. Collins:

This letter presents the results of a paleontological records search conducted for the Santee Warehouse Project (Project), located in the City of Santee in southwestern San Diego County, California. The Project is bound to the north by Los Coches Creek and to the east, south, and west by commercial development. The Project site also includes a driveway connecting the parcel to North Woodside Avenue (Figure 1).

Methods

A review of published geological maps covering the Project site and surrounding area was conducted to determine the specific geologic units underlying the Project site. Each geologic unit was subsequently assigned a paleontological resource sensitivity (Deméré and Walsh, 1993). In addition, a search of the paleontological collection records housed at the San Diego Natural History Museum (SDNHM) was conducted in order to determine if any documented fossil collection localities occur within the Project site or in the immediate surrounding area.

Results

Published geological reports (e.g., Todd, 2004) covering the Project area indicate that the proposed Project has the potential to impact Holocene-age alluvial deposits and Early Cretaceous-age intrusive igneous rocks. These geologic units and their paleontological sensitivity are summarized below. The SDNHM does not have any recorded fossil localities that lie within one mile of the Project site.

Young alluvial flood plain deposits – Late Pleistocene- to Holocene-age (less than approximately 129,000 years old) young alluvial flood plain deposits underlie the northern margin of the Project site at the surface. These deposits consist of unconsolidated sandy, silty, or clay-bearing alluvium deposited by the action of recently active streams. These deposits are assigned a low paleontological sensitivity based on their relatively young geologic age and lack of recorded fossil collection localities (Deméré and Walsh, 1993).

Alluvial deposits, undivided – Late Pleistocene- to Holocene-age (less than approximately 129,000 years old) undivided alluvial deposits underlie the majority of the Project site at the surface. These deposits consist of mixed alluvial and colluvial sediments. These deposits are assigned a low paleontological sensitivity based on their relatively young geologic age and lack of recorded fossil collection localities (Deméré and Walsh, 1993).

Intrusive igneous rocks – Early Cretaceous-age (approximately 126 million years old) intrusive igneous rocks (specifically, granitoid rocks) likely underlie the Project site in the subsurface. These rocks comprise part of the northern end of the Peninsular Ranges Batholith. Plutonic igneous rocks do not preserve fossils because they crystallize at extremely high temperatures and pressures

several miles below the earth's surface. Consequently, these rocks are assigned no paleontological sensitivity.

Summary and Recommendations

As discussed above, the Project site is underlain by young surficial deposits assigned a low paleontological sensitivity at the surface and non-fossil-bearing intrusive igneous rocks assigned no paleontological sensitivity in the subsurface. Construction-related earthwork activities (e.g., grading, trenching) are not anticipated to result in significant impacts to paleontological resources, and therefore paleontological monitoring is not recommended during construction of this Project.

If you have any questions concerning these findings, please feel free to contact me at kmueller@sdnhm.org.

Sincerely,

Kirstin Mueller
Assistant Report Writer
San Diego Natural History Museum

Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Santee, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your due diligence efforts to acquire the Site. The Site has been assigned Assessor's Parcel Number 3810-705-200 and measures approximately 13.38-acres containing the Santee Drive In Theatre. The Santee Swap Meet also utilizes the Site on weekends. Historically, the Site was used for agriculture until the 1950's.

The Site is relatively flat with an elevation of approximately 355 feet above mean sea level (msl) with a regional slope to the west southwest. The Site is located in the City of Santee, San Diego County and is set in an industrial use area located on the north side on North Woodside Avenue.

The Site is bound:

- to the north by the San Diego River;
- on the east by an auto body shop (10996 N. Woodside Ave.) auto detailing shop (9444 Mission Park Pl.), specialty heating and furnace manufacturer (11015 Mission Park Pl.), and a steel fabricator (9484 Mission Park Pl.);
- to the south by an auto body shop (10910 Wheatlands Ave.), auto supply shop (10928 Wheatlands Ave.), a machine shop (10940 Wheatlands Ave.), and a brewery/distillery (10960 Wheatlands Ave.); and,
- to the west by a metal fabricator (9425 Wheatlands Ct.) and two multitenant warehouses (9435 and 9437 Wheatlands Ct.).

Key findings of the Phase I ESA are as follows:

- The Site was first seen to have been agricultural land as late as the 1950's until the drive-in theatre was developed at the Site in mid-1960's. The Site was portrayed as vacant land as early as 1893 in the topographic map review. The Site remains in use as a drive-in theatre and swap meet today;
- The Site vicinity was also noted with vacant and agricultural land since the earliest records. Industrial and residential development in the Site vicinity was first seen in 1964. Since this time, the immediate Site vicinity has been observed with

industrial development with the exception of the San Diego River, north adjacent to the Site, as well as peripheral residential development. The Site vicinity remains in these uses today;

- During the Site reconnaissance, HMC observed the drive-in theatre/swap meet facility. A small amount of chemical storage for the maintenance for the Site was observed. The most notable observation included diminimus staining on asphalt surfaces. The stains appeared to result from leaking vehicles parked at the facility as well as food and drinks spills;
- Based on the review of the available regulatory information, the Site is located in an area with a history of industrial uses since the 1960's. Facilities in the Site vicinity were noted to use and store chemicals without evidence of release with the exception of a closed case for a release of oil from the east adjacent facility known as Western Construction Components. The case was closed in 1997;
- Per the findings of this investigation, it is HMC's opinion that there is a low likelihood of a vapor intrusion condition at the Site; and,
- Given the age of the structure at the Site, ACMs and/or LBPs may be present at the Site.

Conclusions

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 10990 North Woodside Avenue in Santee, California. **No RECs, CRECs, or HRECs were identified at the Site**. The staining observed at the Site was de minimis to minor and considered an "issue of note".

While not RECs per ASTM definitions, ACMs and/or LBPs may present a hazard at the Site.

Recommendations

Based on the findings of this ESA, HMC recommends:

- The Owner and/or current tenant remove all chemicals, equipment, and vehicles from the Site prior to a transfer of property; and,
- Conduct ACM and LBP surveys at the Site, prior to any activities that may disturb suspect materials.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

10990 North Woodside Avenue Santee, California 92071

1. INTRODUCTION

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Santee, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your due diligence efforts to acquire the Site. The Site has been assigned Assessor's Parcel Number 3810-705-200 and measures approximately 13.38-acres containing the Santee Drive In Theatre. The Santee Swap Meet also utilizes the Site on weekends. Historically, the Site was used for agriculture until the 1950's.

The Site is relatively flat with an elevation of approximately 355 feet above mean sea level (msl) with a regional slope to the west southwest. The Site is located in the City of Santee, San Diego County and is set in an industrial use area located on the north side on North Woodside Avenue.

1.1. Objective

In accordance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Site.

A Recognized Environmental Condition "means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM Standard Practice E1527-13). Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquires (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S. Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-13 is consistent with the Standards and Practices for AAI and is compliant with the statutory criteria for AAI.

1.2. Scope of Services, Methodology and Limitations

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-13.

The scope of work for this ESA included the following activities:

- A Site walk to document the current condition of the Site and neighboring facilities.
- Review of a regulatory database report.
- Review of previously prepared reports for the Site.
- Submittal of questionnaires to the current Owner and User of the report.
- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file review requests concerning the Site and suspect off-Site sources at the State of California Regional Water Quality Control Board (RWQCB) and Department of Toxic Substances Control (DTSC) websites.
- Public records requests submitted to the City of Santee.
- Public records requests submitted to by the San Diego County Department of Environmental Health.

- Public records requests submitted to the San Diego County Air Pollution Control District.

- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

2. SITE DESCRIPTION

2.1. Site Setting

The Site is an approximately 13.38-acres parcel. The Site is relatively flat with an elevation of approximately 355 feet above mean sea level (msl) with a regional slope to the west southwest. The Site is located in the City of Santee, San Diego County and is set in an industrial use area located on the north side on North Woodside Avenue.

The Site is bound:

- to the north by the San Diego River;
- on the east by an auto body shop (10996 N. Woodside Ave.) auto detailing shop (9444 Mission Park Pl.), specialty heating and furnace manufacturer (11015 Mission Park Pl.), and a steel fabricator (9484 Mission Park Pl.);
- to the south by an auto body shop (10910 Wheatlands Ave.), auto supply shop (10928 Wheatlands Ave.), a machine shop (10940 Wheatlands Ave.), and a brewery/distillery (10960 Wheatlands Ave.); and,
- to the west by a metal fabricator (9425 Wheatlands Ct.) and two multitenant warehouses (9435 and 9437 Wheatlands Ct.).

Utilities in the Site vicinity are provided by:

- Water: Padre Dam Municipal Water District
- Electricity: San Diego Gas & Electric
- Gas: San Diego Gas & Electric
- Sewer: Padre Dam Municipal Water District

2.2. Regional Geology and Hydrogeology

The Site lies within the San Diego River Valley Groundwater Basin which consists of alluvium deposited by the San Diego River and its tributaries. The basin is surrounded by contacts with semi-permeable rocks of the Eocene Poway Group, impermeable Cretaceous crystalline rock, and impermeable Jurassic to Cretaceous Santiago Peak volcanic rocks. Average annual precipitation ranges from 11 to 15 inches.

Quaternary alluvial deposits forms the principal water-bearing unit within the basin. The most productive portions of the alluvium are the well-sorted sands located in buried river channels, along with a layer of coarse gravel near the base of the aquifer. This gravel is thickest adjacent Moreno Valley. Well logs indicate the alluvium has more silt and clay present west of the town of Santee. In more productive parts of the alluvium, wells yield up to 2,000 gallons per minute. Alluvium thickness exceeds 200 feet near Lakeside but typically is about 70 feet. Specific yields range from 5 to 22 percent in the alluvium.

A groundwater monitoring report for a nearby facility reported groundwater to have been measured between approximately 29 and 33 feet bgs. Groundwater flow direction has been reported to the west southwest at a hydraulic gradient ranging between approximately 0.001 and 0.004 feet per foot.

3. INTERVIEWS AND USER PROVIDED INFORMATION

The User of this report is North Palisade Partners who is looking to acquire the Site and would be considered a “User” of the report per ASTM definitions. We requested all available information from the User.

3.1. Title Records

A Preliminary Title Report (PTR) prepared by Chicago Title Company dated September 21, 2022 was provided to HMC for review. The PTR stated that Title was vested in The Forte Family Limited Partnership, a California limited partnership, as to Parcels 1, 2, 3, 4 and 5; and, John E. Forte, Trustee under Declaration of Trust dated April 29, 1981, as to Parcel 6. The PTR included information regarding tax obligations, mortgage liens, easements for various utilities and related matters but did not contain any information of an environmental nature.

3.2. User Knowledge

We interviewed Mr. William Jacobs of North Palisade Partners who indicated that his firm has no previous knowledge or experience with the Site and is unaware of any chemical spills, releases, or ongoing environmental matters. He indicated that they are paying full market value for the Site.

3.3. Owner/Occupant Knowledge

Mr. Troy Taylor, Project Scientist for HMC, conducted an interview with Mr. Ted Eiter, Groundskeeper of the Santee Drive In Movie Theater/ Swap Meet, during the Site reconnaissance portion of this ESA (Section 5). Mr. Eiter was unaware of any suspect uses, chemical spills, releases, or other adverse environmental matters. A recreational vehicle was located at the Site which Mr. Eiter indicated was connected to the sewer.

3.4. Environmental Liens or Activity and Use Limitations

To the best of HMC's knowledge and after review of the information provided by third parties, no environmental liens or AULs were found to be on record for the Site.

4. SITE USE AND HISTORY

Past usage of the Site was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Review of the Sanborn Map collection indicates that Sanborn Maps were not produced for the Site.

4.1. Aerial Photograph Review

Aerial photographs covering the Site were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1949 through 2016. Copies of the aerial photographs are included in Appendix B. A summary of the observations noted from the aerial photographs are as follows:

1949-53	The Site was first seen with agricultural fields. The Site vicinity was seen with agricultural fields in all directions with the San Diego River immediately north of the Site. The San Diego River was noted to be dry.
1964	The Site was first seen to have been developed into the drive-in movie theater present today. The northwestern screen and the projector house/snack bar was observed. Two industrial buildings were first seen approximately 500 feet east of the Site. A residential

	neighborhood was first seen approximately 600 feet southeast of the Site.
1966	No significant changes were observed at the Site. Two additional industrial buildings were noted immediately east of the Site. A small amount of surface water was seen in the river area slightly northeast of the Site. The 67 Freeway was first seen south of the Site.
1970	No significant changes were observed at the Site. One additional industrial building was noted immediately east of the Site. The San Diego River was noted to be full.
1979	No significant changes were observed at the Site. The land west and southwest of the Site was seen to have been cleared and building pads graded.
1985	No significant changes were observed at the Site. Approximately 17 industrial buildings were first seen west and southwest of the Site.
1989	No significant changes were observed at the Site. Additional industrial development was seen west and southwest of the Site with residential development beyond, beginning at approximately 0.25-mile from the Site
1996-2016	No significant changes were observed at the Site or Site vicinity with the exception of some additional industrial development in the Site vicinity.

4.2. Topographic Maps

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall Site history. Although, no specific observations were made from the review of these maps. The drive-in theatre was first mapped in 1967.

4.3. Sanborn Maps

Sanborn maps are maps that were created for the insurance industry to document site activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a site. While they were prepared for insurance underwriting and were not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a site. Sanborn maps were not reported to have been generated for the Site.

4.4. EDR City Directory Review

EDR performed a search of the City Directory records for the Site addresses provided at the initiation of this Phase I ESA and nearby properties at approximately five-year intervals.

26811 W. 5th St.	
Year	**Use**
1971-2017	Santee Drive In Theatre Santee Swap Meet

4.5. Summary

The Site was first seen to have been agricultural land as late as the 1950's until the drive-in theatre was developed at the Site in mid-1960's. The Site was portrayed as vacant land as early as 1893 in the topographic map review. The Site remains in use as a drive-in theatre and swap meet today.

The Site vicinity was also noted with vacant and agricultural land since the earliest records. Industrial and residential development in the Site vicinity was first seen in 1964. Since this time, the immediate Site vicinity has been observed with industrial development with the exception of the San Diego River, north adjacent to the Site, as well as peripheral residential development. The Site vicinity remains in these uses today.

5. PRIOR INVESTIGATIONS

To the best of HMC's knowledge, no prior investigations have been conducted at the Site.

6. SITE RECONNAISSANCE

Mr. Troy Taylor of HMC conducted a Site and Site vicinity reconnaissance on October 4, 2022. The reconnaissance was conducted in order to identify visible evidence of RECs at the Site and to assess possible conditions off-Site that may impact the Site. Mr. Taylor was granted access to the Site by Mr. Eiter but was otherwise unaccompanied during the Site reconnaissance.

The Site was observed to be an asphalt paved lot with a two story snack bar and projector house in the approximate center of the Site, projector screens located in the northwest and southeast, and ticket booths in the east. Two storage containers were located west

of the snack bar and one below the southeastern screen. A recreational vehicle (RV) trailer and maintenance equipment were also stored beneath the southeast screen. The RV was noted with sanitary waste piping which was connected to the sewer.

Chemicals observed at the Site included cleaning supplies, asphalt resurfacing material, gasoline, lubricants, and paint. Staining was observed on the asphalt surfaces at the Site, some noted to likely be from leaky vehicles parked at the drive-in and/or swap meet. Some stains observed were likely the result of food and drink spills by theatre/swap meet patrons. The oil stains ranged from de minimis to minor.

Given the age of the Site, asbestos containing materials and lead based paint may be present at the Site. It is recommended that surveys for these materials are conducted at the Site, prior to any activities that may disturb suspect materials.

Selected photographs illustrating the Site and nearby off-Site conditions are included in Appendix A. Summaries of the Site and observations are detailed below.

Description and Use of Site:	The Site was noted to be a drive-in movie theatre and swap meet facility.
Underground and Aboveground Storage Tanks:	No evidence of UST or AST uses were observed at the Site.
Hazardous Materials, Hazardous Wastes or Petroleum Products:	Chemicals observed at the Site included cleaning supplies, asphalt resurfacing material, gasoline, lubricants, and paint.
Drains, Drain Lines, and Sumps:	Drainage features observed at the Site included typical sanitary receptors as well as floor drains and floor sinks in the snack bar area.
Pits, Ponds, Lagoons	These features were not observed at the Site.
Industrial Wastewater:	Industrial wastewater was not observed to be generated during the Site reconnaissance however it is assumed that wastewater is generated during food preparation activities in the snack bar.

Stains:	De minimis to minor oil staining was observed on the asphalt surfaces of the Site. Stains related to food and drink spills were also seen.
Wells:	No wells were observed at the Site.
Transformers:	A drop transformer was observed on the first floor of the snack bar with no evidence of a release.
Other Features:	Suspect ACMs and LBP may be present at the Site.

6.1. Site Vicinity

The Site is bound:

- to the north by the San Diego River;
- on the east by an auto body shop (10996 N. Woodside Ave.) auto detailing shop (9444 Mission Park Pl.), specialty heating and furnace manufacturer (11015 Mission Park Pl.), and a steel fabricator (9484 Mission Park Pl.);
- to the south by an auto body shop (10910 Wheatlands Ave.), auto supply shop (10928 Wheatlands Ave.), a machine shop (10940 Wheatlands Ave.), and a brewery/distillery (10960 Wheatlands Ave.); and,
- to the west by a metal fabricator (9425 Wheatlands Ct.) and two multitenant warehouses (9435 and 9437 Wheatlands Ct.).

From a visual perspective, there were no threats assessed from off-Site facilities.

7. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Site. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-13 standard. The database search includes over 70 federal, state, local, and proprietary records. A complete copy of this report is included in Appendix B.

7.1. Database Records Concerning the Target Property

The Site was not listed with records in the databases searched as part of the EDR Radius research.

7.2. Database Records Concerning the Site Vicinity

We reviewed the database report for off-Site potential sources within the relevant search distance. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Site:

- Distance from the Site,
- Location from the Site with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed)

Groundwater was reported to generally flow to the west southwest in the Site vicinity, therefore facilities located adjacent to or to the east northeast were further considered. Only those facilities judged using these factors are discussed below. The following presents a summary of our findings:

Location	Address	Dist.	Dir.	Lists	REC	RATIONALE
C&H Auto Body & Paint	10996 Woodside Ave. N.	103'	SE	CERS HAZ WASTE EMI CERS HWTS RCRA LISTINGS	NO	This automotive repair facility was reported as a RCRA generator without specific details. There were no records indicating chemical releases.
DS Fibertech Corporation	11015 Mission Park Pl.	170'	E	RCRA LISTINGS	NO	The facility was noted as a furnace and oven manufacturer. No evidence of suspect chemical use or chemical releases were found in the records.
Ketema Process Co., c/o Baker Process	9884 Mission Park Place	306'	ENE	ENVIROSTOR	NO	This facility was listed in the records with tiered permitting per a DTSC Phase I investigation and no action was required in 1998. There was no information for the tiered permitting however no releases or violations were reported.

Altech Machining Inc.	11000 N. Woodside Ave.	282'	ESE	HMMD SAN DIEGO CERS HAZ WASTE CERS RCRA LISTINGS	NO	This machining and manufacturing facility was noted with waste streams that included hydrocarbons solvents stored between two tanks. It was not indicated if the tanks were above or below ground. There were no records of releases of chemicals.
Western Construction Components	9884 Mission Park Place	306'	ENE	CPS-SLIC HMMD SAN DIEGO EMI HAZNET NPDES CIWQS CERS HWTS RCRA LISTINGS FINDS ECHO SAN DIEGO CO. SAM CERS HAZ WASTE RCRA NONGEN/NLR	NO	This facility was reported as a metal fabrication facility. A clean-up was conducted at this facility for releases of oil reported to only have affected soil. The case was overseen by the San Diego County Local Oversight Program and the RWQCB. The case was closed in 1997. No documents of the clean-up were available in the RWQCB Geotracker case file. Since this time this facility was reported with waste streams including hydrocarbon and oxygenated solvents as well as acidic solutions with metals. No additional reports of releases were found.

Orphan Sites

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map the site. No orphan sites identified in the EDR Radius report appear to be in the Site vicinity and/or of a location or nature to have adversely affected the Site.

7.3. Summary of Off-Site Issues

Based on the review of the available regulatory information, the Site is located in an area with a history of industrial uses since the 1960's. Facilities in the Site vicinity were noted to use and store chemicals without evidence of release with the exception of a closed case for a release of oil from the east adjacent facility known by Western Construction Components. The case was closed in 1997.

8. LOCAL AGENCY AND OTHER RECORDS REVIEW

8.1. Tribal Records

The Site is not located in a tribal area therefore there were no tribal records to review.

8.2. Oil and Gas Wells

The State of California Department of Conservation, Geologic Energy Management Division (CalGEM) online mapping website was reviewed for the location of active, plugged, or abandoned oil and gas wells in the vicinity of the Site. No oil or gas wells were listed as having been drilled on-Site. The nearest oil and gas well is an idle well located approximately 13,400 feet north of the Site.

8.3. State of California

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on or off-Site facilities that are being remediated under either RWQCB or DTSC oversight. No active cases were listed on these databases that were not listed in the EDR review.

HMC has also submitted public records requests to both agencies. No records were found by the RWQCB. The DTSC is still processing our PRR at the time of the issuance of this report.

8.4. San Diego County Department of Environmental Health

A public records request was submitted to the offices of the San Diego County DEH. The SDC DEH provided records of geotechnical boring conducted at the Site from 2008 and 2009. None of the records reported stained or odorous soil and stated no chemical analyses were completed. The records reported groundwater encountered between 23 and 24 feet.

8.5. City of San Diego

A public records request was submitted to the City of San Diego. The city reported no records for the Site.

8.6. San Diego County Air Pollution Control District

A public records request was submitted to the SDCAPCD. No records for the Site were found by the agency.

9. VAPOR INTRUSION, ASBESTOS AND OTHER CONCERNS

9.1. Vapor Intrusion

Per the findings of this investigation, it is HMC's opinion that there is low potential for a vapor intrusion condition at the Site.

9.2. Asbestos Containing Materials

Given the age of the structure at the Site, ACMs may be present at the Site.

9.3. Lead Based Paint

Given the age of the structure at the Site, LBPs may be present at the Site.

9.4. Radon

The Site is listed as being located in Zone 3 with regards to radon indicating that radon maybe present at concentrations less than 2 pico curies / liter.

9.5. Mold

No evidence of microbial growth was observed at the Site.

10. SUMMARY OF ESA FINDINGS

Key findings of the Phase I ESA are as follows:

- The Site was first seen to have been agricultural land as late as the 1950's until the drive-in theatre was developed at the Site in mid-1960's. The Site was portrayed as vacant land as early as 1893 in the topographic map review. The Site remains in use as a drive-in theatre and swap meet today;
- The Site vicinity was also noted with vacant and agricultural land since the earliest records. Industrial and residential development in the Site vicinity was first seen in 1964. Since this time, the immediate Site vicinity has been observed with industrial development with the exception of the San Diego River, north adjacent to the Site, as well as peripheral residential development. The Site vicinity remains in these uses today;
- During the Site reconnaissance, HMC observed the drive-in theatre/swap meet facility. A small amount of chemical storage for the maintenance for the Site was observed. The most notable observation included diminimus staining on asphalt

surfaces. The stains appeared to result from leaking vehicles parked at the facility as well as food and drinks spills;

- Based on the review of the available regulatory information, the Site is located in an area with a history of industrial uses since the 1960's. Facilities in the Site vicinity were noted to use and store chemicals without evidence of release with the exception of a closed case for a release of oil from the east adjacent facility known as Western Construction Components. The case was closed in 1997;
- Per the findings of this investigation, it is HMC's opinion that there is a low likelihood of a vapor intrusion condition at the Site; and,
- Given the age of the structure at the Site, ACMs and/or LBPs may be present at the Site.

11. DATA GAPS

The DTSC was still processing HMC's public records requests at the time of this report.

12. CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 10990 North Woodside Avenue in Santee, California. **No RECs, CRECs, or HRECs were identified at the Site**. The staining observed at the Site was de minimis to minor and considered an "issue of note".

While not RECs per ASTM definitions, ACMs and/or LBPs may present a hazard at the Site.

13. RECOMMENDATIONS

Based on the findings of this ESA, HMC recommends:

- The Owner and/or current tenant remove all chemicals, equipment, and vehicles from the Site prior to a transfer of property; and,
- Conduct ACM and LBP surveys at the Site, prior to any activities that may disturb suspect materials.

14. QUALIFICATIONS

Mark S. Cousineau, NREP

Mr. Mark S. Cousineau, principal with HMC, has a diverse professional background in environmental management, which includes working as a generator, regulator, consultant, and corporate advisor in hazardous waste and other environmental issues.

Mr. Cousineau's technical background is focused in the area of overseeing large-scale environmental investigations and regulatory compliance management related to site assessments, subsurface investigations, facility surveys, and site remediation. To projects such as these, Mr. Cousineau brings expertise in evaluating complex sites and developing solutions to solve the technical, operational, regulatory, financial and timing issues. In addition, Mr. Cousineau routinely assists clients in developing environmental business plans for single assets and multi-site real estate portfolios and has designed and implemented several tenant audit programs involving the proactive management of environmental risk caused by on-site commercial and industrial tenant activities.

Mr. Cousineau has provided litigation support and has served, as a court-appointed expert on environmental issues, is a Member of the National Registry of Environmental Professionals, holds a M.S. in Environmental Sciences from California State University Fullerton and a B.S. in Chemistry from University California San Diego.

As signatory to this report, I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess the property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Mark Cousineau, NREP
Principal

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hazard Management Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Project NPP - 10990 Woodside Ave. N.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 4831-4C78-880B

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Hazard Management Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

EXECUTIVE SUMMARY

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---------- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing
AST ---------- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---------- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---------- Voluntary Cleanup Priority Listing
VCP ---------- Voluntary Cleanup Program Properties

Lists of state and tribal brownfield sites

BROWNFIELDS ---------- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---------- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT ---------- Waste Management Unit Database
SWRCY ---------- Recycler Database
HAULERS ---------- Registered Waste Tire Haulers Listing
INDIAN ODI ---------- Report on the Status of Open Dumps on Indian Lands
ODI ---------- Open Dump Inventory
DEBRIS REGION 9 ---------- Torres Martinez Reservation Illegal Dump Site Locations
IHS OPEN DUMPS ---------- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---------- Delisted National Clandestine Laboratory Register
SCH ---------- School Property Evaluation Program
CDL ---------- Clandestine Drug Labs
San Diego Co. HMMD ---------- Hazardous Materials Management Division Database
Toxic Pits ---------- Toxic Pits Cleanup Act Sites
US CDL ---------- National Clandestine Laboratory Register
AQUEOUS FOAM ---------- Former Fire Training Facility Assessments Listing
PFAS ---------- PFAS Contamination Site Location Listing

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

CA FID UST ---- Facility Inventory Database
CERS TANKS ---- California Environmental Reporting System (CERS) Tanks

Local Land Records

LIENS ---- Environmental Liens Listing
LIENS 2 ---- CERCLA Lien Information
DEED ---- Deed Restriction Listing

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System
CHMIRS ---- California Hazardous Material Incident Report System
LDS ---- Land Disposal Sites Listing
MCS ---- Military Cleanup Sites Listing
SPILLS 90 ---- SPILLS 90 data from FirstSearch

Other Ascertainable Records

DOD ---- Department of Defense Sites
SCRD DRYCLEANERS ---- State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR ---- Financial Assurance Information
EPA WATCH LIST ---- EPA WATCH LIST
2020 COR ACTION ---- 2020 Corrective Action Program List
TSCA ---- Toxic Substances Control Act
TRIS ---- Toxic Chemical Release Inventory System
SSTS ---- Section 7 Tracking Systems
ROD ---- Records Of Decision
RMP ---- Risk Management Plans
RAATS ---- RCRA Administrative Action Tracking System
PRP ---- Potentially Responsible Parties
PADS ---- PCB Activity Database System
ICIS ---- Integrated Compliance Information System
FTTS ---- FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
MLTS ---- Material Licensing Tracking System
COAL ASH DOE ---- Steam-Electric Plant Operation Data
COAL ASH EPA ---- Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER ---- PCB Transformer Registration Database
RADINFO ---- Radiation Information Database
HIST FTTS ---- FIFRA/TSCA Tracking System Administrative Case Listing
DOT OPS ---- Incident and Accident Data
CONSENT ---- Superfund (CERCLA) Consent Decrees
INDIAN RESERV ---- Indian Reservations
FUSRAP ---- Formerly Utilized Sites Remedial Action Program
UMTRA ---- Uranium Mill Tailings Sites
LEAD SMELTERS ---- Lead Smelter Sites
US AIRS ---- Aerometric Information Retrieval System Facility Subsystem
US MINES ---- Mines Master Index File
ABANDONED MINES ---- Abandoned Mines
FINDS ---- Facility Index System/Facility Registry System
DOCKET HWC ---- Hazardous Waste Compliance Docket Listing

ECHO ---- Enforcement & Compliance History Information
UXO ---- Unexploded Ordnance Sites
FUELS PROGRAM ---- EPA Fuels Program Registered Listing
CA BOND EXP. PLAN ---- Bond Expenditure Plan
CUPA Listings ---- CUPA Resources List
DRYCLEANERS ---- Cleaner Facilities
EMI ---- Emissions Inventory Data
ENF ---- Enforcement Action Listing
Financial Assurance ---- Financial Assurance Information Listing
HAZNET ---- Facility and Manifest Data
ICE ---- ICE
HWP ---- EnviroStor Permitted Facilities Listing
HWT ---- Registered Hazardous Waste Transporter Database
MINES ---- Mines Site Location Listing
MWMP ---- Medical Waste Management Program Listing
NPDES ---- NPDES Permits Listing
PEST LIC ---- Pesticide Regulation Licenses Listing
PROC ---- Certified Processors Database
UIC ---- UIC Listing
UIC GEO ---- UIC GEO (GEOTRACKER)
WASTEWATER PITS ---- Oil Wastewater Pits Listing
WDS ---- Waste Discharge System
WIP ---- Well Investigation Program Case List
MILITARY PRIV SITES ---- MILITARY PRIV SITES (GEOTRACKER)
PROJECT ---- PROJECT (GEOTRACKER)
WDR ---- Waste Discharge Requirements Listing
SAN DIEGO CO LOP ---- Local Oversight Program Listing
CIWQS ---- California Integrated Water Quality System
CERS ---- CERS
NON-CASE INFO ---- NON-CASE INFO (GEOTRACKER)
OTHER OIL GAS ---- OTHER OIL & GAS (GEOTRACKER)
PROD WATER PONDS ---- PROD WATER PONDS (GEOTRACKER)
SAMPLING POINT ---- SAMPLING POINT (GEOTRACKER)
WELL STIM PROJ ---- Well Stimulation Project (GEOTRACKER)
HWTS ---- Hazardous Waste Tracking System
MINES MRDS ---- Mineral Resources Data System

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State

Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/25/2022 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within

approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 52 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 05/11/2022 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ARMY CAMP (SANTEE)		SSW 1/2 - 1 (0.757 mi.)	T106	805

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 06/21/2022 has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

WHITTAKER CORP (Continued) **1000421648**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans

CALIFORNIA CRAFTED MARBLE (DBA CCM ENTERPRISES) (Continued) **1006093808**

to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RISK AND TECHNOLOGY REVIEW
HAZARDOUS AIR POLLUTANT MAJOR
OSHA ESTABLISHMENT

AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

AMETEK, INC SANTEE DIV (Continued) **1008194585**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110070726666

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Source: CERS,

Site ID: 106953
Site Name: HYDRAULIC ELECTRIC COMPONENT SUPPLY INC
Violation Date: 01-15-2020
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 01/20/2020. Inspection Sequence ID:6334243
Violation Division: San Diego County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 106953
Site Name: HYDRAULIC ELECTRIC COMPONENT SUPPLY INC
Violation Date: 02-26-2016
Citation: HSC 6.11 25404.1 - California Health and Safety Code, Chapter 6.11, Section(s) 25404.1
Violation Description: Failure to obtain and/or maintain an active hazardous waste generator permit.
Violation Notes: Returned to compliance on 02/26/2016. Inspection Sequence ID:5427192
Violation Division: San Diego County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Chemical Name: Non-RCRA Red Dye Waste
Common Name: Non-RCRA Red Dye Waste
Case Number: Not reported

Record ID: DEH2008-HUPFP-209130
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2019-HWAST-0195123
Trade Secret: N
Hazardous Material Type: Not reported
Last Updated: 2021-09-14T02:40:26.000
Chemical Name: Methanol / Naptha Waste
Common Name: Methanol / Naptha Waste
Case Number: Not reported

CERS HAZ WASTE:
Name: STRATEDGE CORPORATION
Address: 9424 ABRAHAM WAY
City,State,Zip: SANTEE, CA 92071

Year: 2016
Gepaid: CAL000340945
TSD EPA ID: CAT000613976
CA Waste Code: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.)
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.10842

Year: 2016
Gepaid: CAL000340945
TSD EPA ID: CAD044429835
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 1.5846

Year: 2015
Gepaid: CAL000340945
TSD EPA ID: CAT000613976
CA Waste Code: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.)
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.20433

Year: 2015
Gepaid: CAL000340945
TSD EPA ID: CAD044429835
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.125

Year: 2015
Gepaid: CAL000340945
TSD EPA ID: CAT000613976
CA Waste Code: 134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.21

Year: 2015
Gepaid: CAL000340945
TSD EPA ID: CAD044429835

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
