EXECUTIVE SUMMARY

NV5, Inc. (NV5) has completed a Phase I Environmental Site Assessment (ESA) of a proposed construction work area (the "Site") associated with campus upgrades planned for the Roosevelt Elementary School campus, located at 801 Montana Avenue in the City of Santa Monica, Los Angeles County, California. The ESA was performed in conformance with the scope and limitations of ASTM E1527-21 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or adjacent to the Site. If identified, these issues are considered recognized environmental conditions (RECs).

Site and Vicinity Description

The Roosevelt Elementary School is located at 801 Montana Avenue in Santa Monica, Los Angeles County, California. The school campus is located on a single parcel of land identified by Los Angeles County Tax Assessor's Parcel Number 4280-022-900. The Site consists of an approximate 1.6-acre portion on land located on the southeastern portion of the campus, where future construction activities are planned.

The Site is located within an area developed for commercial and residential use. Current uses of adjoining properties include: the remainder of the Roosevelt Elementary School campus to the northwest; 9th Street, followed by residential homes and medical offices to the northeast; Montana Avenue, followed by Pavilion's grocery store, Panda Express restaurant, and Horchata Mexican Food & Bakery restaurant to the southeast; and Lincoln Boulevard, followed by a vacant multi-tenant commercial building and residential homes to the southwest.

Site Use and History

This Site is currently developed with landscaped areas, playgrounds, and five classroom buildings (two permanent structures and three portable classroom buildings). Review of available historical resources indicate that the Site was first developed with the original Roosevelt Elementary School classroom structures, landscaped area, and playground areas between 1928 and 1938. The original classroom structures were expanded to their present size in the early 1950s. Between the mid-1960s and early 1980s, the present-day portable classroom buildings were constructed. The Site has continually been used for educational use since initial development.

Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the Environmental Professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the Environmental Professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. No data gaps were identified by NV5 during this assessment.

Conclusions and Recommendations

No evidence of a Historical REC (HREC) or Controlled REC (CREC) in connection with the Site was identified during this assessment. The following evidence of a REC and potential Vapor Encroachment Condition (VEC) was identified:

• The southeastern adjoining property (800 Montana Avenue) was previously developed with an on-property drycleaning business (Raintree Cleaners) that operated from 1983 to 1997. While no records of previous releases were identified for this facility, based on the facility's proximity to the Site, the former drycleaner is considered to represent a REC and potential VEC.

Regulatory database records and historical records indicate that the southwestern adjoining
property (729 Montana Avenue) was previously developed with a gasoline and oil service station
from 1936 to 1992. A release from an underground storage tank (UST) at this facility was
reported on July 28, 1988, which impacted soil and groundwater. The cleanup status history
indicates that remediation began on June 18, 1990, and a case closure/no further action status
was issued on September 3, 1996.

According to groundwater monitoring data obtained from the Los Angeles Regional Water Quality Control Board (LARWQCB), the shallowest groundwater in the vicinity of the Site is approximately 120 to 130 feet below ground surface and flows towards the southwest (away from the Site). Groundwater sampled at a monitoring well located in Lincoln Boulevard (between the Site and this facility) did not identify concentrations of detectable petroleum hydrocarbons.

Based on the closure status of the past release, down-gradient position, and available groundwater sampling documentation, this listing is not considered to represent an REC. However, based on the facility's proximity to the Site, this facility is considered to represent a potential VEC.

• Multiple former gasoline/automotive repair facilities and dry-cleaning businesses, located within 1/8 mile of the Site, have previously operated along Montana Avenue. While no records of spills, leaks, or releases of hazardous substances of petroleum products have been reported at these facilities, based on their proximity to the Site, they are considered to represent potential VECs.

Environmental Conditions of Note

• Based on the age of historical and current structures on the Site, arsenic (naturally occurring and/or from pesticide use), lead-based paint, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

Recommendations

Soil vapor sampling at the Site is recommended to assess the potential for subsurface VOC vapor migration from nearby former gasoline stations/automotive repair facilities and dry-cleaning businesses. Shallow soil sampling is also recommended to assess the potential for impact from building related chemicals of concern (arsenic, lead, polychlorinated biphenyls, and pesticides).

1 INTRODUCTION

NV5, Inc. (NV5) completed a Phase I Environmental Site Assessment (ESA) of a proposed construction work area associated with campus upgrades planned for the Roosevelt Elementary School campus located at 801 Montana Avenue in the City of Santa Monica, Los Angeles County, California (Site). The assessment was conducted to evaluate the environmental condition of the Site and performed to the industry standard that would satisfy one of the requirements for qualification under the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-21, and the United States Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1. 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-21;
- 2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices
- for All Appropriate Inquiries (40 CFR Part 312); and

This Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of hazardous substances or petroleum products that may affect the Site. The assessment is not intended to assure clear title to the Site in question. The sole purpose of investigation into Site title records is to ascertain a historical basis of prior land use and environmental liens. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendation provided, and observations and conditions that existed on the date and time of the Site visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

3 SITE SETTING

3.1 Topography

The 2018 United States Geological Survey (USGS), "Topanga, CA" 7.5 Minute Topographic Quadrangle map of the Site and surrounding vicinity was reviewed. The elevation of the Site is approximately 173 feet above mean sea level (msl). The Site and surrounding topography slopes towards the south. A copy of the USGS 7.5 Minute Topographic Map is included in Appendix B.

3.2 Regional Geology and Hydrology

The following description of regional geology and hydrology was developed based on regional information presented in the site-specific Environmental Data Resources (EDR) Radius Map Report (the "EDR Report", 2023).

According to United States Department of Agriculture (USDA) soil data published in the EDR Report, soils underlying the Site are classified as urban land. Soils of this type are a mixture of clayey, silty, sandy, and gravelly loam (Appendix B).

According to groundwater monitoring data provided by the Los Angeles Regional Water Quality Control Board (LARWQCB) for a former Leaking Underground Storage Tank (LUST) investigation at the southwestern adjoining property across Lincoln Boulevard (729 Montana Avenue), the shallowest groundwater in the vicinity of the Site is approximately 120 to 130 feet below ground surface and flows towards the southwest.

3.3 Flood Plain

According to Federal Emergency Management Agency flood plain data presented in the EDR Report, the Site is not located withing the boundaries of a 100-year or 500-year flood zone (EDR, 2023). The EDR Report is presented as Appendix B.

3.4 Wetlands

According to map data published on the United States Department of Fish and Wildlife (USFW) National Wetlands Inventory, no wetlands are mapped on the Site. A screenshot is provided in Appendix C.

3.5 Water Bodies

No water bodies were observed on or adjacent to the Site during the Site reconnaissance.

3.6 Oil and Gas Wells

According to the State of California, Department of Conservation, Geologic Energy Management Division (CalGEM) oil and gas well finder map (WellSTAR), no oil/gas wells were identified on the Site.

4 CLIENT/USER-PROVIDED INFORMATION

NV5 considers the client to be the 'User' of our assessment, defined in ASTM Practice E1527-21 as "the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property". A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The User has specific obligations for completing a successful application of this practice.

The EPA All Appropriate Inquiry Rule (40 CFR Part 312) and ASTM E1527-21 § 6 requires the User to answer certain questions related to the Site in order to obtain certain LLPs from CERCLA liability. To facilitate this process, NV5 provided the client with a User Questionnaire, which is presented in Appendix F. A summary of the required questions and client responses is provided below.

4.1 Title Records

Title records were not provided to NV5 by the Client/User for review. NV5 subcontracted EDR to search title records for the Site back to 1980 for evidence of environmental lines or activity use limitations (deed restrictions) recorded against the Site. The EDR Lien and AUL report is presented in Appendix D.

No deeds for the Site were identified in records searched between 1980 and the present. The current owner of the Site was identified as the Santa Monica Unified School District.

4.2 Clean-Up Liens

No knowledge of any clean-up liens against the Site were reported by the Client/User. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any environmental liens for the Site (Appendix D).

4.3 Activities and Use Limitations

No knowledge of any activities and use limitations against the Site were reported by the Client/User. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any activities and use limitations for the Site (Appendix D).

4.4 Specialized Knowledge

No specialized knowledge identifying evidence of a REC was disclosed by the Client/User during this assessment.

4.5 Commonly Known Information

No commonly known information identifying evidence of a REC was disclosed by the Client/User during this assessment.

4.6 Previous Environmental Assessments

The Client provided NV5 with a copy of a previous Phase I ESA prepared for the entire Roosevelt Elementary School Campus. The report is summarized below, and portions of the report are presented in Appendix F.

Phase I Environmental Site Assessment Report – Roosevelt Elementary School, 801 Montana Avenue, Santa Monica, California. Prepared for the Santa Monica Malibu Unified School District. Prepared by NV5. Dated April 15, 2022.

This assessment was prepared for the entire Roosevelt Elementary School Campus. At the time of this assessment, the school and surrounding properties were developed with the present-day improvements. No evidence of an REC, CREC, HREC, or VEC in connection with the Site was identified during the assessment. However, NV5 noted that based on the age of historical and current structures at the campus, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used, and therefor, there is a potential for these compounds to be present in the shallow soils onsite. NV5 recommended conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed previously.

5 RECORDS REVIEW

5.1 Governmental Databases

NV5 contracted EDR to perform a radius search of governmental databases for this project. The distribution of listed sites with respect to the Site is tabulated and mapped in the EDR Report, which can

be found in Appendix B. The reader is referred to the table, which can be found near the front of EDR's report.

NV5 conducted a review of the above-referenced database reports and provides the following findings based on sites that have the potential to impact the Site, with respect to the inferred southwesterly groundwater flow direction. Our findings are based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within unsaturated soil for a significant distance. Although a hazardous substance or petroleum product can migrate in groundwater in a generally down-gradient direction, there are limitations to this interpretation such as groundwater depth, soil lithology and other subsurface barriers.

5.1.1 Site Database Findings

EDR's report identified the site address, as summarized below.

Facility Name & Address	Roosevelt Elementary School/SMMUSD-Roosevelt Elementary/Southwest Engineering Inc 801 Montana Avenue Santa Monica, California	Site
Database(s) Listed: ECHO, HWTS, HWTS HAZNET, RCRA NONGEN/NLR		
The Site address was listed on the ECHO database; however, no violations were identified. According to the two HWTZ HAZNET database listings, this facility disposed of; 3.2 tons of asbestos containing waste in 1994 and 0.23 tons of asbestos containing waste in 2014. The RCRA NONGEN/NLR database listings indicated that this facility is not listed as a handler of nonhazardous or hazardous waste.		

5.1.2 Adjoining Property Database Findings

EDR's report identified several of the adjoining properties, as summarized as follows:

	Facility Name & Address	713 9 th Street Homeowners 713 9 th Street Apt 3 Santa Monica, California	Northeastern Adjoining Property
--	-------------------------------	---	------------------------------------

Database(s) Listed: EDR HIST AUTO

This property is listed on the EDR HIST AUTO database identifying the "9th Street Homeowners Association" as a gasoline station between 2003 and 2005. Site reconnaissance confirmed that this address is a residential home and not a commercial facility or gasoline station. Therefore, this listing appears to be erroneous and not considered a REC.

FacilityJay Gordon MDName &901 Montana Avenue Suite CAddressSanta Monica, California	Northeastern Adjoining Property
--	------------------------------------

Database(s) Listed: RCRA NONGEN/NLR

According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of September of 2016. The business is reported to be a freestanding ambulatory surgical and emergency center. No violations or releases are reported. This listing is not considered to represent a REC.

Southeastern Adjoining Property

Name &	820 Montana Avenue	
Address	Santa Monica, California	Adjoining Property

Database(s) Listed: RCRA NONGEN/NLR, HWTS, CERS HAZ WASTE, HAZNET, CERS

According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of January of 2019 and July of 2019. The CERS HAZ WASTE listing reports this facility as a hazardous waste generator under CERS ID 10173605. The HAZNET listing reports that this facility disposed of 0.84 tons of asbestos containing waste in 2006. The CERS listing reports that this facility failed to have a business plan readily available to personnel of the business or the unified program facility with responsibilities for emergency response or training per the Santa Monica Fire Department in November of 2017. The facility returned to compliance in February of 2019. This listing also shows that the facility failed to provide training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of 3 years in October of 2019. Based on the lack of evidence suggesting a release of hazardous materials and/or petroleum products has occurred at this facility, these listings are not considered to represent an REC.

According to the EDR HIST AUTO database, this facility was reported be a gasoline and automobile service station from 1933 to 1936. Review of historical aerial photographs and Sanborn Fire Insurance maps do not appear to depict the presence of an automotive service station or gasoline station at this property around this time. If present, it does not appear that this business operated for an extended period of time and the property has subsequently been redeveloped multiple times since the time period in question. This listing is not considered to represent an REC.

began on July 28, 1988, remediation began on June 18, 1990, and the case was closed on September 3, 1996.

According to groundwater monitoring data provided by the LARWQCB, the shallowest groundwater in the vicinity of the Site is approximately 120 to 130 feet below ground surface and flows towards the southwest (away from the Site). Groundwater sampled at a monitoring well located in Lincoln Boulevard (between the Site and this facility) did not identify concentrations of detectable petroleum hydrocarbons.

Based on the closure status of the past release, down-gradient position, and available groundwater sampling documentation, this listing is not considered to represent an REC. However, based on the facility's proximity to the Site, these listings represent a potential VEC.

Facility Name & Address	Jordan Chas K 900 Montana Avenue Santa Monica, California	Eastern Adjoining Property
-------------------------------	---	-------------------------------

Database(s) Listed: EDR HIST AUTO

This facility is located across the intersection of 9th Street and Montana Avenue from the Site. According to the EDR HIST AUTO database, the property was previously developed with a gasoline station between 1948 and 1954. No releases are reported from this facility and the property was redeveloped into a banking facility in 1964.

Based on the lack of evidence suggesting a release from this former facility occurred, this listing is not considered to represent an REC. However, based on the facility's proximity to the Site, this listing is considered to represent a potential VEC.

5.1.3 General Vicinity Database Findings

EDR's report identified multiple off-site facilities within applicable ASTM search radii. NV5 considered all of the listed sites unlikely to impact the Site, based upon factors including (but not limited to):

- The nature of the listing;
- The use of the facility;
- When the facility was listed and its current listed status;
- The developmental density of the setting;
- The distance between the listed facilities and the Site as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions;
- The presence of intervening drainage divides; and/or
- The inferred groundwater movement.

6 NON-SCOPE CONSIDERATIONS

Per the authorized scope of work, items beyond the scope of ASTM E 1527-21 were not addressed as part of this assessment.

7 VAPOR ENCROACHMENT SCREENING

ASTM E1527 requires the Environmental Professional to evaluate the potential for vapor encroachment of chemicals of concern (COC) onto the Site, and to determine if such vapor encroachment constitutes evidence of a REC on the Site. The E1527 Standard Practice does not specifically state the methods that must be used to screen for potential vapor encroachment issues. However, ASTM has developed a separate Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM E2600-22), which outlines an ASTM E1527 compliant methodology to conduct vapor encroachment screening that was used for this assessment as described below.

7.1 VES Methodology

The goal of conducting Vapor Encroachment Screening (VES) is to identify a vapor encroachment condition (VEC), which is defined as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the Site caused by the release of vapors from contaminated soil and/or groundwater either on or near the Site. If a VEC is identified, the Environmental Professional must determine whether the VEC represents evidence of a REC on the Site under the context of the Phase I ESA Standard Practice. It should be noted that the identification of a VEC on the Site does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Site is likely. The Environmental Professional will identify the VEC as a REC where the potential for vapor migration into structures is considered likely, or where the contaminant concentrations in the soil, groundwater, or soil vapors on the Site are significant and likely to result in enforcement against on-site or off-site responsible parties.

The VES utilizes information regarding the potential presence of releases on or near the Site that were collected as a normal part of the Phase I ESA process, such as governmental database records, review of governmental files, historical data sources, etc. The VES Standard Guide requires the Environmental Professional to search for potential sites of concern within specific search radii. The area of concern search radius is 1,760 feet (1/3 mile) for non-petroleum-impacted sites and 528 feet (1/10 miles) for petroleum-impacted sites. The default search distances may be expanded or reduced in the upgradient, downgradient, or cross-gradient directions by the Environmental Professional based on experience in the local area and applying professional judgment to factors such as where a well-defined regional groundwater flow direction is identified, or whether other geologic features such as low permeability soils or hydrogeologic boundaries such as rivers or streams exist which would tend to limit the potential for migration of groundwater or vapors in a particular direction.

7.2 VES Search Results

NV5 identified several sites of potential concern within the VES search radii, including a former adjoining gasoline station, former adjoining drycleaner, and multiple nearby former gasoline stations/automotive repair facilities and drycleaning businesses located along Montana Avenue. Based on the proximity of these facilities to the Site and the inherent environmental risk associated with such businesses, a VEC cannot be ruled out.

8 FINDINGS

Based on the Site reconnaissance, review of historical and available documents, and interviews, NV5 finds the following:

8.1 Current Site Activities

This Site is currently developed with landscaped areas, playgrounds, and five classroom buildings (including three portable classroom buildings).

8.2 Historical Site Activities

Review of available historical resources indicate that the Site was first developed with the original Roosevelt Elementary School classroom structures, landscaped area, and playground areas between 1928 and 1938. The original classroom structures were expanded to their present size in the early 1950s. Between the mid-1960s and early 1980s, the present-day portable classroom buildings were constructed. The Site has continually been used for educational use since initial development in the 1930s.

8.3 Off-Site Activities

The Site is located within an area developed for commercial and residential use. Current uses of adjoining properties include: the remainder of the Roosevelt Elementary School campus to the northwest; 9th Street, followed by residential homes and medical office to the northeast; Montana Avenue, followed by Pavilion's grocery store, Panda Express restaurant, and Horchata Mexican Food & Bakery restaurant to the southeast; and Lincoln Boulevard, followed by a vacant multi-tenant commercial building and residential homes to the southwest.

8.4 Data-Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the Environmental Professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the Environmental Professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. No data gaps were identified by NV5 during this assessment.

9 CONCLUSIONS AND RECOMMENDATIONS

NV5 completed a Phase I ESA of a proposed construction work area associated with campus upgrades planned for the Roosevelt Elementary School campus located at 801 Montana Avenue in the City of Santa Monica, Los Angeles County, California (Site). The ESA was performed in conformance with the scope and limitations of the ASTM E1527-21 standard. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or to the Site.

Conclusions

No evidence of a HREC or CREC in connection with the Site was identified during this assessment. The following evidence of a REC and potential VEC was identified:

- The southeastern adjoining property (800 Montana Avenue) was previously developed with an on-site drycleaning business (Raintree Cleaners) that operated from 1983 to 1997. While no releases are reported at this facility, based on the facility's proximity to the Site, the former drycleaner is considered to represent a REC and potential VEC.
- Regulatory database records and historical records indicated that the southwestern adjoining property (729 Montana Avenue) was previously developed with a gasoline and oil service station from 1936 to 1992 a leak from a UST at this facility was discovered on July 28, 1988, which

impacted soil and groundwater. The cleanup status history shows that the case began on July 28, 1988, remediation began on June 18, 1990, and the case was closed on September 3, 1996.

According to groundwater monitoring data obtained from the LARWQCB, the shallowest groundwater in the vicinity of the Site is approximately 120 to 130 feet below ground surface and flows towards the southwest (away from the Site). Groundwater sampled at a monitoring well located in Lincoln Boulevard (between the Site and this facility) did not identify concentrations of detectable petroleum hydrocarbons.

Based on the closure status of the past release, down-gradient position, and available groundwater sampling documentation, this listing is not considered to represent an REC. However, based on the facility's proximity to the Site, this facility is considered to represent a potential VEC.

 Multiple former gasoline/automotive repair facilities and dry-cleaning businesses, located within 1/8 mile of the Site, have previously operated along Montana Avenue. While no records of spills, leaks, or releases of hazardous substances of petroleum products have been reported at these facilities, based on their proximity to the Site, they are considered to represent potential VECs.

Environmental Conditions of Note

 Based on the age of historical and current structures on the Site, arsenic (naturally occurring and/or from pesticide use), lead-based paint, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

Recommendations

Soil vapor sampling at the Site is recommended to assess the potential for subsurface VOC vapor migration from nearby former gasoline stations/automotive repair facilities and dry-cleaning businesses. Shallow soil sampling is also recommended to assess the potential for impacts from building related chemicals of concern (arsenic, lead, polychlorinated biphenyls, and pesticides).

10 QUALIFICATIONS AND SIGNATURE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the All-Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/24/2023 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/24/2023 has revealed that there are

2 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs. The Resource Conservation and Recovery Act Information System

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different

systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- Groundwater flow direction, and
 Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

	LOCATION	GENERAL DIRECTION

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS) The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS) Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Environmental Lien and AUL Search 1980

The EDR Environmental Lien and AUL Search 1980 report provides results from a search of available land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address and/or parcel information to:

- search for parcel number and/or legal description
- search for ownership information filed between 1980 and the most current publicly available date
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for environmental encumbering instrument(s) filed between 1980 and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business. Please contact EDR at 1-800-352-0050 with any questions or comments.

Property Archives, LLC researched and compiled the land title information contained in this EDR Environmental Lien and AUL Search 1980 report on behalf of EDR.

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Bus iness directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EXECUTIVE SUMMARY

Alta Environmental DBA NV5 (NV5) has completed a Phase I Environmental Site Assessment (ESA) of the Roosevelt Elementary School located at 801 Montana Avenue, Santa Monica, Los Angeles County, California (Site). The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or adjacent to the Site. These issues are considered recognized environmental conditions (RECs).

Site Location and Use

The Site is located at 801 Montana Avenue in Santa Monica, Los Angeles County, California. The property consists of a single parcel of land that totals approximately 6.0 acres in size. The Site can be identified by Los Angeles County Tax Assessor Parcel Number (APN): 4280-022-900. The Site is located within an area that is primarily mixed commercial and residential use. Current uses of adjoining properties include residential developments to the northwest, northeast, and southwest, and commercial developments to the northeast, and southwest.

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

The Site was undeveloped prior to 1918. Between 1918 and 1928, the Site was developed for limited residential use. By 1938, the Site was redeveloped with an Elementary School. The school was subsequently expanded throughout the 1940's and 1950's. Additional classroom expansion occurred in the 1990's bringing the campus into its current configuration.

Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify a significant data gap.

Vapor Encroachment Conditions (VEC)

A Tier 1 vapor encroachment screen (VES) for potential chemicals of concern (COC) was completed for the Site. The assessment was based on the ASTM published Standard Guide E 2600-15. The purpose of the VES was to evaluate for the potential for a vapor encroachment condition (VEC) which is the presence or likely presence of COC vapors in subsurface soils at the Site caused by the release of vapors from contaminated soil or groundwater on or near the Site. The results of the VES did not identify evidence of a potential VEC in connection with the Site.

Conclusions and Recommendations

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, however, based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

NV5 recommends conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

1 INTRODUCTION

The purpose of this assessment was to evaluate the environmental condition of the site as part of the District's environmental review standards in order to comply with the California Environmental Quality Act (CEQA) and Title V of the California Education Code. The assessment was performed to the standards to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner, or bona fide prospective purchaser under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1. 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13;
- 2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312); and
- 3. 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

This report was prepared exclusively for use by the Santa Monica-Malibu Unified School District. This report may not be relied upon by any other person or entity without NV5's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. NV5 cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services.

1.1 Objectives

NV5's objective for this environmental assessment was to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site. The assessment was done to meet ASTM Standard Practice E1527-13.

The assessment provided herein was determined based on the following:

- 1. Current and past property uses and occupancies;
- 2. Current and past uses of hazardous substances;
- 3. Waste management and disposal activities that could have caused releases or threatened releases of hazardous substances;
- 4. Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances;
- 5. Engineering controls;
- 6. Institutional controls; and
- 7. Evaluation of properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

1.2 Services

NV5 performed the following services to assess the property:

- 1. Reviewed historical sources of information;
- 2. Searched for recorded environmental clean-up liens;

- 3. Reviewed Federal, State, Tribal, and local government records;
- 4. Visually inspected the site and the adjoining sites;
- 5. Evaluated any specialized knowledge or experience on the part of the purchaser;
- 6. Determined commonly known or reasonably ascertainable information about the property; and
- Evaluated properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

1.3 Assumptions

NV5 has assumed the following for the purposes of this assessment:

- 1. Information provided during any interview (written or oral) was accurate and correct;
- 2. Database information reviewed was accurate and correct;
- 3. Historical information reviewed was accurate and correct;
- 4. Information reviewed at any governmental agency was accurate and correct;
- Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data or well data from adjacent sites, are assumed based on contours depicted on the United States Geological Survey (USGS) Topographic Maps; and
- 6. The property has been correctly and accurately identified by the client, client representatives, property contact, property owner, and/or property representatives.

1.4 Limitations

This assessment is limited to the standards set forth in ASTM Standard Practice E1527-13. This assessment specifically excludes assessment of the following:

- 1. Asbestos and asbestos-containing building materials;
- 2. Biological agents;
- 3. Cultural and historic resources;
- 4. Ecological resources;
- 5. Endangered species;
- 6. Health and safety;
- 7. Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment;
- 8. Industrial hygiene;
- 9. Lead-Based Paint;
- 10. Lead in Drinking Water;
- 11. Mold;
- 12. Radon;
- 13. Regulatory compliance; and
- 14. Wetlands.

Considerations identified by ASTM as beyond the scope of a Phase I Environmental Site Assessment (ESA) may affect business environmental risk at a given property. These environmental issues or conditions may warrant assessment based on the type of property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13; and therefore, not addressed during this assessment.

Per the authorized scope of work, specific client requested items beyond the scope of ASTM E-1527-13 were addressed as part of this assessment (Section 6.0). These items included several items, listed on the following page, that address specific California Department of Education (CDE) requirements for school construction.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluation. The conclusions presented in this report are based solely on the services described herein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling of any kind was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical or physical analyses have been performed during this Phase I ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted. As applicable, NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. NV5 makes no warranty, express or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

This Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. The assessment is not intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use and environmental liens. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.5 Terms

The following terms are used in this report:

- "Immediate site vicinity" refers to properties adjacent to the Site that share a common boundary with the Site; and

- "Site vicinity" refers to the area within an approximate 1-mile radius of the property.
- "Recognized Environmental Conditions" (RECs) The presence or likely presence of any hazardous substances or petroleum products in, on, at or to a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment, or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.
- "Controlled Recognized Environmental Condition" (CREC) A recognized environmental condition resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls,* or *engineering controls*). A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.
- "Historical Recognized Environmental Condition" (HREC) A past *release* of any *hazardous* substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).
- "Migrate/migration" For the purposes of this practice, "migrate" and "migration" refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.
- "Hazardous Substances" The term "hazardous substance" is used here in general accordance with its use as defined in the following regulations:

 - -- Superfund Amendment and Reauthorization Act (SARA) of 1986, as amended.

The terms "material," "waste," and "substances" are used interchangeably, and no legal distinction is implied between the terms as used herein. The words "impact" or "impacted" are used to mean the effect or result of a release of a hazardous substance that could result in a hazardous waste being present at the property. Search distances for government agency lists were those designated by the ASTM Standard E 1527-13.

3.1 Topographic

The 2018 United States Geological Survey (USGS), [Beverly Hills] 7.5 Minute Topographic Quadrangle map of the Site and surrounding vicinity was reviewed. The elevation of the property is approximately 179 feet above mean sea level. Topography was observed to slope slightly in a southerly direction during the site reconnaissance. A copy of the USGS 7.5 Minute Topographic Quadrangle Map is included in Appendix B.

3.2 Regional Geology and Hydrology

The following description of regional geology and hydrology was developed based on regional information presented on the EDR GeoCheck report (2022) and Regional Water Quality Control Board's online *Geotracker* database.

According to United States Department of Agriculture (USDA) soil data published in the EDR GeoCheck report, soils underlying the Site are classified as urban land. Soils of this type are a mixture of clayey, silty, sandy, and gravelly loam (Appendix B).

According to groundwater monitoring data provided by the Los Angeles Regional Water Quality Control Board (LARWQCB) for a former Leaking Underground Storage Tank (LUST) investigation at the southwestern adjoining property across Lincoln Boulevard (729 Montana Avenue). The shallowest

groundwater in the vicinity of the Site is approximately 120 to 130 feet below ground surface and flows towards the southwest.

3.3 Flood Plain

According to Federal Emergency Management Agency flood plain data presented in the site-specific Environmental Data Resources (EDR) Geocheck Report, the Site is not located within a 100-year or 500-year flood zone (EDR, 2021). The EDR Report is presented as Appendix B.

3.4 Wetlands

According to map data published on the United States Department of Fish and Wildlife (USFW) National Wetlands Inventory (<u>https://www.fws.gov/wetlands/data/mapper.html</u>), No wetlands are mapped on the subject or adjoining properties (Appendix C).

3.5 Water Bodies

No water bodies were observed on the subject or adjoining properties.

3.6 Oil and Gas Wells

According to the State of California, Department of Conservation, Geologic Energy Management Division (CalGEM) oil and gas well finder map (WellSTAR), no oil/gas wells were identified on the Site.

4 USER-PROVIDED INFORMATION

Information obtained during the interview process is presented in the following sections.

4.1 Title Records

Title records were not provided by the site user representative. Chain of Title Records were obtained by NV5 and are presented in Appendix D. The current owner is listed as Santa Monica-Malibu Unified School District. No vesting deeds prior to 1940 were found during a search of Los Angeles County Recorder's and Assessor's offices.

4.2 Clean-Up Liens

No knowledge of any clean-up liens against the Site was reported by those interviewed. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any environmental liens for the Site (Appendix D).

4.3 Activities and Use Limitations

No knowledge of site-specific activities or use limitations recorded against the Site were reported by those interviewed. Furthermore, according to the EDR Lien and AUL Search report, no Activity and Use Limitations are identified for the Site (Appendix D).

4.4 Specialized Knowledge

No specialized knowledge identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

4.5 Commonly Known Information

No commonly known information identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

4.6 Previous Environmental Assessments

The client did not provide NV5 with copies of a previous environmental assessment reports for the Site. Copies of a recent property survey of the Site were provided and are included in Appendix F.

5 RECORDS REVIEW

5.1 Governmental Databases

NV5 contracted EDR to perform a radius search of governmental databases for this project. The distribution of listed sites with respect to the Site is tabulated and mapped in EDR's Radius Map Report, which can be found in Appendix B. The reader is referred to the table, which can be found near the front of EDR's report.

NV5 conducted a review of the above-referenced database reports and provides the following findings based on sites that have the potential to impact the Site, with respect to the inferred southeasterly groundwater flow direction. Our findings are based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within unsaturated soil for a significant distance. Although a hazardous material can migrate in groundwater in a generally down-gradient direction, there are limitations to this interpretation such as groundwater depth, soil lithology and other subsurface barriers.

5.1.1 Site Database Findings

EDR's report did identify the Site address, as summarized below:

Facility Name & Address	Roosevelt Elementary School/SMMUSD-Roosevelt Elementary/Southwest Engineering Inc 801 Montana Avenue Santa Monica, California	Site
Database(s) Listed: ECHO, HWTS, HWTS HAZNET, RCRA NONGEN/NLR		

The Site address was listed on the ECHO database; however, no violations were identified. According to the two HWTZ HAZNET database listings, this facility disposed of; 3.2 tons of asbestos containing waste in 1994 and 0.23 tons of asbestos containing waste in 2014. The RCRA NONGEN/NLR database listings indicated that this facility is not listed as a handler of nonhazardous or hazardous waste.

5.1.2 Adjoining Property Database Findings

EDR's report identified multiple adjoining properties. The details of these listings are presented below.

Facility Name & Address	John Manvel Inc 903 Alta Avenue Santa Monica, California	Northern Adjoining Property
Database(s) Listed: HIST CLEANER		

Facility Name & Address	John Manvel Inc 903 Alta Avenue Santa Monica, California	Northern Adjoining Property
This property is listed on the EDR HIST CLEANER database for a city directory listing for "Artco Drapery		
Cleaners" in 1998. Site reconnaissance confirmed that this address is a residential home and not a commercial facility. Therefore, this listing appears to be erroneous and not considered an REC.		

Facility Name & Address	713 9 th Street Homeowners 713 9 th Street Apt 3 Santa Monica, California	Northeastern Adjoining Property

Database(s) Listed: EDR HIST AUTO

This property is listed on the EDR HIST AUTO database identifying the "9th Street Homeowners Association" as a gasoline station between 2003 and 2005. Site reconnaissance confirmed that this address is a residential home and not a commercial facility or gasoline station. Therefore, this listing appears to be erroneous and not considered an REC.

Database(s) Listed: RCRA NONGEN/NLR

According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of September of 2016.

Database(s) Listed: RCRA NONGEN/NLR, HWTS, CERS HAZ WASTE, HAZNET, CERS

According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of January of 2019 and July of 2019. The CERS HAZ WASTE listing reports this facility as a hazardous waste generator under CERS ID 10173605. The HAZNET listing reports that this facility disposed of 0.84 tons of asbestos containing waste in 2006. The CERS listing reports that this facility failed to have a business plan readily available to personnel of the business or the unified program facility with responsibilities for emergency response or training per the Santa Monica Fire Department in November of 2017. The facility returned to compliance in February of 2019. This listing also shows that the facility failed to provide training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of 3 years in October of 2019.

Facility Name & Address	Maywhort E A 801 Lincoln Boulevard Santa Monica, California	Southeastern Adjoining Property

Database(s) Listed: EDR HIST AUTO

According to the EDR HIST AUTO database, this facility was reported be a gasoline and automobile service station from 1933 to 1936. Review of historical aerial photographs and Sanborn Fire Insurance maps do not appear to depict the presence of an automotive service station or gasoline station at this property around this time. If present, it does not appear that this business operated for an extended

Facility Name & Address	Maywhort E A 801 Lincoln Boulevard Santa Monica, California	Southeastern Adjoining Property
period of time and the property has subsequently been redeveloped multiple times since the time period		
in question. This listing is not considered to represent an REC.		

Facility	Raintree Cleaners of Santa Monica	Southeastern
Name &	800 Montana Avenue	
Address	Santa Monica, California	Adjoining Property

Database(s) Listed: DRYCLEANERS, EDR HIST CLEANERS, RCRA-SQG, FINDS, ECHO

According to these database listings, this facility was reported to operate as a drycleaner from 1983 to 1997 and is a small quantity generator of halogenated solvents. No violations were found.

This facility is located across Montana Avenue from the Site and is located hydraulically cross-gradient with respect to groundwater flow. Based on the lack of evidence of a past release and its location with respect to the Site, it is not considered to represent an REC.

Facility Name &	Shell Oil Co/Suleiman Elias Munakash/Dressier A F 729 Montana Avenue	Southwestern Adjoining Property
Address	Santa Monica, California	Adjoining Property

Database(s) Listed: HIST UST, SWEEPS UST, CA FID UST, RCRA-SQG, FINDS, ECHO, LUST, CORTESE, HIST CORTESE, CERS, EDR HIST AUTO

According to these listings, this facility operated as a gasoline and oil service station from 1936 to 1992 and was a small quantity generator of ignitable waste and benzene. Three 8,000-gallon USTs and one 550-gallon waste oil tank were installed in 1965 and a fourth 8,000-gallon UST was installed in 1970. All five USTs were made of 1/4-inch carbon steel. The listings show that a leak from a UST was discovered on July 28, 1988, which impacted soil and groundwater. The cleanup status history shows that the case began on July 28, 1988, remediation began on June 18, 1990, and the case was closed on September 3, 1996.

According to groundwater monitoring data provided by the LARWQCB, the shallowest groundwater in the vicinity of the Site is approximately 120 to 130 feet below ground surface and flows towards the southwest (away from the Site). Groundwater sampled at a monitoring well located in Lincoln Boulevard (between the Site and this facility) did not identify concentrations of detectable petroleum hydrocarbons.

Based on the closure status of the past release, down-gradient position, and separation distance of this facility with respect to the Site, this listing is not considered to represent an REC.

5.1.3 General Vicinity Database Findings

EDR's report identified multiple off-site facilities within applicable ASTM search radii. NV5 considered all of the listed sites unlikely to impact the subject site, based upon factors including (but not limited to):

- The nature of the listing;
- The use of the site;
- When the site was listed and its current listed status;
- The developmental density of the setting;
- The distance between the listed and subject sites as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions;
- The presence of intervening drainage divides; and/or
- The inferred groundwater movement.

5.2 Regional Agency Offices

NV5 submitted information requests to the various county and regional agencies that may have records with regard to environmentally-oriented concerns affecting the Site, in accordance with ASTM E1527-13 requirements. Should significant records be identified at a later date, an addendum to this report will be issued. Documentation obtained from regulatory agency requests is presented in Appendix C.

7 VAPOR ENCROACHMENT SCREENING

ASTM E1527-13 requires the Environmental Professional to evaluate the potential for vapor encroachment of chemicals of concern (COC) onto the Site, and to determine if such vapor encroachment constitutes evidence of a REC on the Site. The E1527-13 Standard Practice does not specifically state the methods that must be used to screen for potential vapor encroachment issues. However, ASTM has developed a separate Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM E2600-15), which outlines an ASTM E1527-13-compliant methodology to conduct vapor encroachment screening.

7.1 VES Methodology

The goal of conducting Vapor Encroachment Screening (VES) is to identify a vapor encroachment condition (VEC), which is defined as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the Site caused by the release of vapors from contaminated soil and/or groundwater either on or near the Site. If a VEC is identified, the environmental professional must determine whether the VEC represents evidence of a REC on the Site under the context of the Phase I ESA Standard Practice. It should be noted that the identification of a VEC on the Site does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Site is likely. The environmental professional will identify the VEC as a REC where the potential for vapor migration into structures is considered likely, or where the contaminant concentrations in the soil, groundwater, or soil vapors on the Site are significant and likely to result in enforcement against on-site or off-site responsible parties.

The VES utilizes information regarding the potential presence of releases on or near the Site that were collected as a normal part of the Phase I ESA process, such as governmental database records, review of governmental files, historical data sources, etc. The VES Standard Guide requires the environmental professional to search for potential sites of concern within specific search radii. The area of concern search radius is 1,760 feet (1/3 mile) for non-petroleum contaminated sites and 528 feet (1/10 miles) for petroleum contaminated sites. The default search distances may be expanded or reduced in the upgradient, downgradient, or cross-gradient directions by the environmental professional based on experience in the local area and applying professional judgment to factors such as where a well-defined regional groundwater flow direction is identified, or whether other geologic features such as low permeability soils or hydrogeologic boundaries such as rivers or streams exist which would tend to limit the potential for migration of groundwater or vapors in a particular direction.

7.2 VES Search Results

NV5 identified several sites of potential concern within the VES search radii, based on our review of governmental database records, regulatory agency files, and historical resources referenced in Section 5.3. However, based on our review of available information, none of these sites appear to represent a VEC in connection with the Site.

8 FINDINGS

Based on the site reconnaissance, review of historical and available documents, and interviews, NV5 finds the following:

8.1 Current Site Activities

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

8.2 Historical Site Activities

The Site was developed for limited residential use between 1918 and 1928. By 1938, the Site was redeveloped with an Elementary School. The school was subsequently expanded throughout the 1940's and 1950's into its present-day configuration.

8.3 Off-Site Activities

The Site is located within an area primarily for mixed commercial and residential use. Current uses of adjoining properties include residential developments to the northwest, northeast, and southwest, and commercial developments to the northeast, southeast, and southwest.

8.4 Data-Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify a significant data gap.

9 CONCLUSIONS AND RECOMMENDATIONS

NV5 completed a Phase I ESA of the Roosevelt Elementary School located at 801 Montana Avenue in Santa Monica, California. The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site.

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, however, based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

NV5 recommends conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

10 QUALIFICATIONS AND SIGNATURE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.
