Eval Notes: INSPECTOR COMMENTS On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by John Williams, inbound supervisor. Walked throughout the facility. Observed hazardous waste storage areas. EPA ID# CAL000425022 Hazardous waste is kept in the warehouse area. Facility is a distribution warehouse and generates very little waste from damages that happen in transit or within the warehouse. Satellite accumulation and generator status was discussed with Danielle and John. Containers were closed and properly labeled. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan is posted in the break rooms. The dumpster was observed, no signs of dumping. Ownership and employee count were confirmed; owner is Elliot Auto Supply Co and the employee count is around 140 employees.

| Potential Contaminants of Concern: | Alcohols, 1,1,1-Trichloroethane (TCA), Acetone, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE) |
| Site History: | The Kester Solder facility manufactured solder alloys and fluxes from 1968 to 2002, when operations ceased. The facility stored hazardous materials in containers, aboveground storage tanks (ASTs), and four underground storage tanks (USTs). The building housed a manufacturing area, offices, warehouse, shipping and receiving room, laboratory, and chemical mixing and storage room. An NFA for soil was issued to Northrop Grumman on December 17, 2010. Northrop Grumman is preparing a work plan for an ISCO injection pilot test (2018) to remediate the 1,4-dioxane hot spots at the Site. |

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: On April 3, 2001 on a cold overcast day, Regional Board staff Marc Brown and Michelle Beckwith conducted a routine compliance inspection of the above referenced facility. The two were met by the facility's Plant Manager, who produced the SWPPP and training records for review. The SWPPP had several areas of concern: The sampling method indicated

**STEPHAN CHEMICAL COMPANY (Continued)** **1000345123**

the sample would be collected within 30 minutes of the storm's onset instead of the 1 hour of discharge requirement. Several other small areas of the plan were noted and corrected during its review. A walkthrough inspection of the facility revealed that most of the exposed areas of the facility are secondarily contained. All storm water falling on this portion of the property is plumbed to the central waste water treatment plant on site prior to being discharged to the POTW. There were some areas that had signs of material spills, however, the way the containment is set up at this facility, no area is a threat to flowing off site during storm activities. Last documented employee training was 1//27/00.

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facilities SWPPP needs to be updated.- Several spills were noted around the facility.- All industrial process are currently contained on the site by secondary containment bumps and a dyke system around the entire facility.- The water is then transferred to a holding tank and discharged to the sanitary sewer. The inspection started at 1045 and ended at 1130. Weather conditions were clear sky 80 degrees.- Also, I asked Tom to resubmit their annual report with signatures.

| Eval Type: | Industrial Storm Water Compliance Evaluation |
| Eval Notes: | On April 3, 2001 on a cold overcast day, Regional Board staff Marc Brown and Michelle Beckwith conducted a routine compliance inspection of the above referenced facility. The two were met by the facility's Plant Manager, who produced the SWPPP and training records for review. The SWPPP had several areas of concern: The sampling method indicated the sample would be collected within 30 minutes of the storm's onset instead of the 1 hour of discharge requirement. Several other small areas of the plan were noted and corrected during its review. A walkthrough inspection of the facility revealed that most of the exposed areas of the facility are secondarily contained. All storm water falling on this portion of the property is plumbed to the central waste water treatment plant on site prior to being discharged to the POTW. There were some areas that had signs of material spills, however, the way the containment is set up at this facility, no area is a threat to flowing off site during storm activities. Last documented employee training was 1//27/00. |

| Eval Type: | Industrial Storm Water Compliance Evaluation |
| Eval Notes: | The facilities SWPPP needs to be updated.- Several spills were noted around the facility.- All industrial process are currently contained on the site by secondary containment bumps and a dyke system around the entire facility.- The water is then transferred to a holding tank and discharged to the sanitary sewer. The inspection started at 1045 and ended at 1130. Weather conditions were clear sky 80 degrees.- Also, I asked Tom to resubmit their annual report with signatures. |

| Eval Type: | Industrial Storm Water Compliance Evaluation |
| Eval Notes: | On April 3, 2001 on a cold overcast day, Regional Board staff Marc Brown and Michelle Beckwith conducted a routine compliance inspection of the above referenced facility. The two were met by the facility's Plant Manager, who produced the SWPPP and training records for review. The SWPPP had several areas of concern: The sampling method indicated the sample would be collected within 30 minutes of the storm's onset instead of the 1 hour of discharge requirement. Several other small areas of the plan were noted and corrected during its review. A walkthrough inspection of the facility revealed that most of the exposed areas of the facility are secondarily contained. All storm water falling on this portion of the property is plumbed to the central waste water treatment plant on site prior to being discharged to the POTW. There were some areas that had signs of material spills, however, the way the containment is set up at this facility, no area is a threat to flowing off site during storm activities. Last documented employee training was 1//27/00. |

| Eval Type: | Industrial Storm Water Compliance Evaluation |
| Eval Notes: | The facilities SWPPP needs to be updated.- Several spills were noted around the facility.- All industrial process are currently contained on the site by secondary containment bumps and a dyke system around the entire facility.- The water is then transferred to a holding tank and discharged to the sanitary sewer. The inspection started at 1045 and ended at 1130. Weather conditions were clear sky 80 degrees.- Also, I asked Tom to resubmit their annual report with signatures. |

| Potential Media Affected: | Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor |
| Potential Contaminants of Concern: | Not reported |
| Site History: | The Site overlies the Orange County North Basin regional groundwater plume, a comingled plume with known contamination from VOCs and other contaminants. Historical subsurface investigations at the Site identified VOCs in soil and groundwater that match several of the compounds present in the regional groundwater plume. In March 2018, RWQCB submitted an Oversight Cost Reimbursement for Site Cleanup Program request to the Eddie R Fischer Revocable Trust to recover reasonable expenses for overseeing the investigation of illegal discharges, contaminated properties,and other unregulated releases |

that may adversely affect the State of California s waters. RWQCB stated that available historical information indicates that waste discharges at the Site may have impacted, or threatened to impact, beneficial groundwater zones beneath the Site. RWQCB requested that the Eddie R Fischer Revocable Trust cooperate with additional Site investigation requirements to ascertain the nature and extent of Site impacts and potential contributions to regional groundwater impacts.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

This facility was placed into the CAL ARP inspection program last year for sodium cyanide and cadmium oxide for tank #6. Since then, Kryler has decided to reduce the tank volume to 99 gallons. Lab tests showed the concentrations for NaCn @ 14 oz/gal and CDOx @ 4 oz/gal. This calculates out to 86 lbs of NaCN and 25 lbs. of CDOx. Tank volume was verified during the inspection. Both chemicals are below the TQ and therefore this site is not subject to the CAL ARP inspection program. RUR to remove this from the OCHCA inspection |

Eval Notes: Regional Board staff conducted a compliance inspection of the above facility on October 16, 2019. Staff arrived on site at 10:00am and met with Mr. Chet Krygier, LRP. The SWPPP and training records were reviewed. Both the SWPPP and training records were dated May 2019. The facility is part of the Metal Finishing Association of Southern CA compliance group. Two storm events were collected in the 2018-2019 reporting year and all parameters are currently at baseline. A site walk was conducted and the facility collects samples from 2 outfalls. The facility is utilizing two addresses in the complex; 1217 and 1225. The site walk started at 1217 E. Ash Ave. Housekeeping is conducted daily. Hazardous materials are stored in a bermed secondary containment and empty drums are stored outdoors. Paints are stored indoors in a flammable cabinet. The air compressors and scrubber are housed under a permanent storm-resistant shelter. The second part of the facility is located at 1225 E. Ash Ave; two buildings over to the east. A boneyard of industrial materials and empty drums were observed in this area. Empty storage containers were also observed, and Mr. Krygier explained the containers are stored upside down until used. Tarps were observed nearby. Staff ended the inspection at 11:20am and no violations were observed.

| Eval Notes: | FA0027330 Kryler Corp. 1217 E. Ash Ave. Fullerton, CA 92831 On site to conduct the annual RCRA LQG hazardous waste inspection. Permission to inspect granted by Kryler/Krygier Jr. During the HW inspection, I determined that the facility has on site: 220 lbs of sodium cyanide. It is exempt from CAL ARP because it is not in a dust form. 50 lbs of cadmium oxide. It is exempt from CAL ARP because it is not in a dust form and is < 100 lbs. A 336 gallon cadmium plating tank (tank # 6) which currently has 16 oz/gallon of sodium cyanide and 5.5 oz/gallon |

of cadmium oxide. This calculates to 336 lbs of sodium cyanide and 115 lbs of cadmium oxide in this tank. Both of these chemicals exceed the 100 lbs reporting limit for the California Accidental Release Prevention Program (CAL ARP). You may either submit a RiskManagement Plan (RMP) within 1 year (4-7-2015) or you may reduce your plating tank to < 100 lbs of cadmium oxide and sodium cyanide (each).

Eval Notes: On site for the annual Hazardous Waste (HW) inspection. Permission to inspect granted by Kryler/Chet Kreiger. This facility is a RCRA Large Quantity Generator (LQG). All HWs are hauled away on a 90 day cycle. Manifests were on site and reviewed. OK. Confirmed in HWTS. All HW tanks/totes/drums were properly labeled and stored closed. No leaks. **NOTE** the rear alley way (rear of 500 block of S. Raymond) had a noticeable amount of powder in the alley. It appears to originate from the auto repair shops and not Kryler. Notified FFD for storm water issues. EPA ID # is correct. Annual training held 5-2015. OC Sanitation District permit is valid. HMBEP has been submitted to FFD but not yet reviewed. Review of facility trash dumpster and facility perimeter were made. No dumping of HW. All wet floors were clean and dry. Updated OCHCA database with CNC machine coolant.

| Eval Notes: | The company is a plater. The company belongs to a group monitoring, MFASC. The company conducts sampling every 2 years. Review of the AR showed all constituents below benchmark values. All the production activities were performed indoor. The SWPPP was old. Staff asked the contact to review and update the plan at least once a year. An etchant drum was found near the door that could pose a risk of leaking to the ground outside. Two containers of a colored liquid were found with no secondary containment. Two buckets of colored mop water were placed outside. The contact said that he would move these two containers and the etchant drum inside. The other two containes would be picked up by a wastehauler. Staff asked that the sampling point be changed to a corner point near their back gate to make sure that the sample representing the runoff from the facility. Staff asked the contact to mail in the photos of the site after the defificencies were fixed. By mailing in the pictures, the facility can avoid to have an NOV issued. The contact agreed to do that. |

Eval Notes: Regional Board staff conducted a compliance inspection of the above facility on October 16, 2019. Staff arrived on site at 10:00am and met with Mr. Chet Krygier, LRP. The SWPPP and training records were reviewed. Both the SWPPP and training records were dated May 2019. The facility is part of the Metal Finishing Association of Southern CA compliance group. Two storm events were collected in the 2018-2019 reporting year and all parameters are currently at baseline. A site walk was conducted and the facility collects samples from 2 outfalls. The facility is utilizing two addresses in the complex; 1217 and 1225. The site walk started at 1217 E. Ash Ave. Housekeeping is conducted daily. Hazardous materials are stored in a bermed secondary containment and empty drums are stored outdoors. Paints are stored indoors in a flammable cabinet. The air compressors and scrubber are housed under a permanent storm-resistant shelter. The second part of the facility is located at 1225 E. Ash Ave; two buildings over to the east. A boneyard of industrial materials and empty drums were observed in this area. Empty storage containers were also observed, and Mr. Krygier explained the containers are stored upside down until used. Tarps were observed nearby. Staff ended the inspection at 11:20am and no violations were observed.

Krygier. This facility was placed into the CAL ARP inspection program last year for sodium cyanide and cadmium oxide for tank #6. Since then, Kryler has decided to reduce the tank volume to 99 gallons. Lab tests showed the concentrations for NaCn @ 14 oz/gal and CDOx @ 4 oz/gal. This calculates out to 86 lbs of NaCN and 25 lbs. of CDOx. Tank volume was verified during the inspection. Both chemicals are below the TQ and therefore this site is not subject to the CAL ARP inspection program. RUR to remove this from the OCHCA inspection database.

Eval Notes: Regional Board staff conducted a compliance inspection of the above facility on October 16, 2019. Staff arrived on site at 10:00am and met with Mr. Chet Krygier, LRP. The SWPPP and training records were reviewed. Both the SWPPP and training records were dated May 2019. The facility is part of the Metal Finishing Association of Southern CA compliance group. Two storm events were collected in the 2018-2019 reporting year and all parameters are currently at baseline. A site walk was conducted and the facility collects samples from 2 outfalls. The facility is utilizing two addresses in the complex; 1217 and 1225. The site walk started at 1217 E. Ash Ave. Housekeeping is conducted daily. Hazardous materials are stored in a bermed secondary containment and empty drums are stored outdoors. Paints are stored indoors in a flammable cabinet. The air compressors and scrubber are housed under a permanent storm-resistant shelter. The second part of the facility is located at 1225 E. Ash Ave; two buildings over to the east. A boneyard of industrial materials and empty drums were observed in this area. Empty storage containers were also observed, and Mr. Krygier explained the containers are stored upside down until used. Tarps were observed nearby. Staff ended the inspection at 11:20am and no violations were observed.

cadmium and type I/II anodizing. Reviewed manifests over the last 3 years. All Hazardous wastes (HW) managed under manifest every 90 days. Most HW drums/totes were properly labeled. See violations. Training is monthly. Krygier Jr. is the only staff who handle the HWs. Two other staff have been recently trained. Weekly review of HW storage areas reviewed and OK. Perimeter is fenced and clean. Municipal trash was reviewed and had only normal trash, no HW. Biennial report on file. FFD HMBEP on site. OC Sanitation permit is on site. Facility does not treat any HWs, all are hauled away under manifest.

| Eval Notes: | FA0027330 Kryler Corp. 1217 E. Ash Ave. Fullerton, CA 92831 On site to conduct the annual RCRA LQG hazardous waste inspection. Permission to inspect granted by Kryler/Krygier Jr. During the HW inspection, I determined that the facility has on site: 220 lbs of sodium cyanide. It is exempt from CAL ARP because it is not in a dust form. 50 lbs of cadmium oxide. It is exempt from CAL ARP because it is not in a dust form and is < 100 lbs. A 336 gallon cadmium plating tank (tank # 6) which currently has 16 oz/gallon of sodium cyanide and 5.5 oz/gallon of cadmium oxide. This calculates to 336 lbs of sodium cyanide and 115 lbs of cadmium oxide in this tank. Both of these chemicals exceed the 100 lbs reporting limit for the California Accidental Release Prevention Program (CAL ARP). You may either submit a RiskManagement Plan (RMP) within 1 year (4-7-2015) or you may reduce your plating tank to < 100 lbs of cadmium oxide and sodium cyanide (each). |

| Eval Notes: | On site for the annual Hazardous Waste (HW) inspection. Permission to inspect granted by Kryler/Chet Kreiger. This facility is a RCRA Large Quantity Generator (LQG). All HWs are hauled away on a 90 day cycle. Manifests were on site and reviewed. OK. Confirmed in HWTS. All HW tanks/totes/drums were properly labeled and stored closed. No leaks. **NOTE** the rear alley way (rear of 500 block of S. Raymond) had a noticeable amount of powder in the alley. It appears to originate from the auto repair shops and not Kryler. Notified FFD for storm water issues. EPA ID # is correct. Annual training held 5-2015. OC Sanitation District permit is valid. HMBEP has been submitted to FFD but not yet reviewed. Review of facility trash dumpster and facility perimeter were made. No dumping of HW. All wet floors were clean and dry. Updated OCHCA database with CNC machine coolant. |

| Eval Notes: | The company is a plater. The company belongs to a group monitoring, MFASC. The company conducts sampling every 2 years. Review of the AR showed all constituents below benchmark values. All the production activities were performed indoor. The SWPPP was old. Staff asked the contact to review and update the plan at least once a year. An etchant drum was found near the door that could pose a risk of leaking to the ground outside. Two containers of a colored liquid were found with no secondary containment. Two buckets of colored mop water were placed outside. The contact said that he would move these two containers and the etchant drum inside. The other two containes would be picked up by a wastehauler. Staff asked that the sampling point be changed to a corner point near their back gate to make sure that the sample |

representing the runoff from the facility. Staff asked the contact to mail in the photos of the site after the defificencies were fixed. By mailing in the pictures, the facility can avoid to have an NOV issued. The contact agreed to do that.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

PERMITTING ACTIVITY: Permit Renewal Process Technical review for the permit renewal application began on March 10, 2021. The First Notice of Deficiency (NOD) was issued on June 4, 2021 and June 15, 2021. The Department of Toxic Substances Control (DTSC) is currently waiting for the Facility's response to the First NOD that is due on October 22, 2021. Once the response is received, DTSC will review the response and the revised permit renewal application for technical completeness. Pursuant to California Code of Regulations, title 22, section 66270.51(b), operations at the Facility will continue under its current Hazardous Waste Facility Permit dated June 15, 2011, until the effective date of a new permit. FACILITY DESCRIPTION/HISTORY Kinsbursky Brothers Supply, Inc. began operations in 1977. The facility is permitted to store, treat, and transfer hazardous waste. The facility is categorized as a large treatment and storage facility. The facility reclaims batteries, catalytic converters, and waste solder. It also recovers precious metals from scrap electronic and electrical parts, silver chips, sludge and from metal bearing solution. The facility treats and stores hazardous waste and handles universal waste. It occupies approximately 2.4 acres of land in a heavy industrial zoned area of Orange County. PERMITTING REGULATORY DESCRIPTION/HISTORY Kinsbursky s first hazardous waste facility permit was issued in 1989. In 1998, the permit was renewed for 10 years. The current hazardous waste facility permit was issued on June 14, 2011 and will expire on June 14, 2021. The facility is authorized to operate 12 hazardous waste management units to store and treat lead and non-lead acid batteries, catalytic converters media, lead plates, and precious metals. The 12 hazardous waste management units include the Lead Acid Battery Processing System; Lead Acid Battery Container and Lead Plate Drying Area; Tanks and Containers; Filter Press; Automated Lead Acid B

| Due Date: | 05/30/2017 |
| Comments: | Administratively closed Unit 5 Automated Lead Acid Battery Breaking Processing System and Unit 11 Automated Alkaline Battery Breaking Processing System. These units were proposed for construction in the permit issued June 2011. Kinsbursky Brothers asked to administratively close these units due to lack of funding to construct the units. The permit was modified by removing Units 5 and 11. |
