Attention: Ms. Johanna Crooker

Subject: **Phase I Environmental Site Assessment and Limited Phase II Site Assessment; 10±-Acre Parcel of Agricultural Land, Assessor Parcel Number (APN) 0167-061-01, 1160 W. Pioneer Avenue, East of 210 Freeway and South of W. Domestic Avenue, City of Redlands, San Bernardino County, California**

Dear Ms. Crooker:

Petra Geosciences, Inc. (Petra) is presenting herein our Phase I Environmental Site Assessment for the subject property. This assessment has been conducted in accordance with our revised Proposal No. 21-315P, dated July 21, 2021, and in general conformance with the scope and limitations of the standards set forth in the American Society for Testing and Materials (ASTM) Practice E 1527-13 and the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312.

This opportunity to be of service to you is sincerely appreciated. Please do not hesitate to call this office if you have questions pertaining to this report.

Respectfully submitted,

PETRA GEOSCIENCES, INC.

Jonathan Cain
Senior Associate Geologist

Siamak Jafroudi, PhD
Senior Principal Engineer

EXECUTIVE SUMMARY

PHASE I ENVIRONMENTAL SITE ASSESSMENT AND LIMITED PHASE II ASSESSMENT

10±-Acre Parcel of Agricultural Land
Assessor Parcel Number (APN) 0167-061-01
1160 W. Pioneer Avenue
East of 210 Freeway and South of W. Domestic Avenue
City of Redlands, San Bernardino County, California

INTRODUCTION

The information presented in this report includes the results of our recent site reconnaissance, a review of pertinent literature, and recent federal, state, and local government agency records. Our field reconnaissance was performed by Mr. Sepi Jafroudi, Environmental Assistant, with data gathering and compilation performed by Mr. Jonathan Cain, Senior Associate Geologist, with oversight by Dr. Siamak Jafroudi, President and Principal Engineer.

SITE DESCRIPTION AND GENERAL INFORMATION

1. The subject site is located at 1160 W. Pioneer Avenue in the city of Redlands, San Bernardino County, California. No physical markers differentiated the site boundary. A site location map is included as Figure 1.

2. The rectangular shaped site is comprised of approximately 10±-acres of vacant land with Assessor Parcel Number (APN) 0167-061-01. The site slopes gently to the north with existing elevations on the order of approximately 1,276± feet above mean sea level (msl) along the south portion of the site, to 1,267± feet above msl along the north portion of the site.

3. Vehicular access to the subject property is via W. Pioneer Avenue along the south or W. Domestic Avenue which is an unimproved dirt road along the northern boundary of the site. A drainage bounds the western edge of the subject property, with the 210 Freeway easement beyond. Vacant land and an orchard bound the site along the east with Citrus Valley High School beyond.

4. Based on information obtained during this assessment, the site appears to have been used for cultivated orchards since at least 1930 until sometime between/during 1994 and 2002. Sometime between/during 1994 and 2002 the orchards have been removed from the site and the site has remained vacant land to present. Historical information reviewed during this assessment includes aerial photographs (dating back to 1930), USGS topographical maps (dating back to 1899), environmental lien search and interviews. EDR indicates that fire insurance maps covering the target property were not found.

5. Dumped household trash was observed in several areas of the site and included plastic bags, plastic bottles, cans, pans, wood, cardboard and other miscellaneous household trash along with windblown trash. There were no visible signs of this debris containing hazardous substances, however, the trash was not disturbed.

6. One water well was observed near the southwest portion of the subject property; however, it is unclear if this well is within the subject property. The well pumps water to a concrete underground irrigation distribution box which then distributes the water to underground concrete irrigation lines. A second concrete irrigation structure was observed within the southeast portion of the site.

7. Three wooden power poles with overhead lines were located along the southwest portion of the subject property. Three pole-mounted transformers are located on the last pole adjacent to the water well.

8. There was no evidence of sumps, pits, pools, or lagoons identified during our site reconnaissance.

9. No sites were identified in our search of various government agency database records, which appear to have adversely impacted the soils, groundwater or soil vapor beneath the subject parcels at this time; however, the subject property is located within the Crafton-Redlands Plume boundary, a groundwater plume with known trichloroethylene (TCE) contamination. Although the boundary of the plume varies in publications, groundwater monitoring wells associated with the plume extends from the former Lockheed Martin facility (1500 Crafton Avenue) in northeast Redlands (approximately 4.5 miles east-southeast of the subject property) west to beyond the 215 Freeway/Interstate 10 interchange.

   Groundwater monitoring wells associated with the Crafton-Redlands Groundwater Plume are mapped throughout the Redlands area. The Lockheed Martin Nested Monitoring Wells Dearborn MW-A/B/C was identified as key sentry wells to down-gradient production wells in the Bunker Hill Groundwater Basin. Statistical analysis of 30-31 samples collected (2008-2015) from each of the 3 Dearborn wells reported an average perchlorate concentration of 5.0 micrograms per liter (µg/L) in Dearborn A; 10 µg/L in Dearborn B; and 7.8 µg/L in Dearborn C. Maximum concentrations overall ranged from 9.7 to 22 µg/L. Statistical trends reported that perchlorate concentrations are decreasing in Dearborn Wells B and C, and stable in Dearborn Well A. For comparison purposes, the Maximum Contaminant Level (MCL) for perchlorate is 6 µg/L. TCE concentrations were listed as non-detect (ND) in 30-31 samples. For TCE the MCL is 5 µg/L.

   In 2015 and 2016 three monitoring wells were sampled and reported: Williams Well (Pioneer Street), COR Orange Street (Orange Street) and COR#31-A (Texas Street south of San Bernardino Avenue). Results of TCE and perchlorate analytical results reported that groundwater monitoring wells mapped in the vicinity of the subject property did not contain TCE concentrations at or above the Maximum Contaminant Level (MCL) of 5 micrograms per liter (µg/L) in 2015 through 2018. Additionally, these wells were not reported to contain perchlorate concentrations at or above the MCL of 6 µg/L, except COR#31-A in 2015. Wells containing contaminant levels above MCLs appear to be located south of San Bernardino Avenue.

   Although groundwater beneath the site has been impacted, based on the 2015 and 2016 measured depths to groundwater (greater than 100-200 feet below grade [fbg]), the concentrations of contaminants are reported to be sufficiently low (below MCLs in close proximity to the site) as to not present a health risk to future residents. Further, because of the known presence of groundwater contamination, the Regional Water Quality Control Board will more than likely not identify future site owners as Responsible Parties. Strict definition of the Crafton-Redlands plume warrants it to be labeled as a Controlled Recognized Environmental Condition (see definition below); however, depth to groundwater and decreasing contamination levels below drinking water Maximum Contaminant Levels (MCLs), the plume underlying the site is considered as a de minimis condition.

LIMITED PHASE II ENVIRONMENTAL SITE ASSESSMENT

Based on the use of the site for agriculture purposes from at least 1930 until sometime between/during 1994 and 2002, Petra conducted a Limited Phase II Site Assessment to evaluate shallow, near surface, site soils.

To evaluate soil residues within the site, a total of 10 direct-push borings (DP-1 through DP-10) were advanced to a depth of 3.5 feet below ground surface (bgs) utilizing a direct-push rig. Soil samples were collected from depths of 0.5 foot, 1.5, and 3.0 feet. The 0.5-foot samples were discretely analyzed for Organochlorine Pesticides (OCPs) according to Environmental Protection Agency (EPA) Test Method 8081A and Title 22 Metals according to EPA Method 6010B/7471A. Twenty percent (2) of the samples were tested for Chlorinated Herbicides using EPA Method 8151A. The remaining deeper soil samples were placed on hold by the laboratory for future testing in the event elevated levels of the aforementioned constituents were detected.

In addition, two (2) hand grab soil samples were collected below the three pole mounted transformers within the southwest portion of the site. The samples were tested for Polychlorinated Biphenyls (PCB's) using EPA Method 8082.

All soil samples analyzed during this assessment were analyzed by Enviro-Chem, Inc. (ECI) in Pomona, California. ECI is accredited by the California Environmental Protection Agency, Department of Health Services Environmental Laboratory Accreditation Program (ELAP). Analyses were requested on a chain-of-custody record. Below is a discussion of the laboratory results.

Organochlorinated Pesticides

Ten (10) discreet and two (2) duplicate soil samples collected at a depth of 0.5 foot were tested for Organochlorinated Pesticides (OCPs) according to EPA Method 8081A. Fifteen (10) samples contained concentrations of 4-4'DDE that ranged from 0.024 milligrams per kilograms (mg/kg) to 0.524 (mg/kg). All detectable concentrations of DDE were found to be below the USEPA Region 9 Regional Screening Level (RSL) of 2.0 mg/kg for DDE residential use soils.

Three (3) samples contained concentrations of 4,4'-DDT ranging from 0.107 milligrams per kilograms (mg/kg) to 0.211 mg/kg. All detectable concentrations of DDT were found to be below the USEPA Region 9 Regional Screening Level (RSL) of 1.9 mg/kg for DDT residential use soils.

No other OCP analytes were reported at concentrations above the laboratory detection limit. The laboratory test results are listed within Table 1 and copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Chlorinate Herbicides

Twenty percent of the samples (2) analyzed for Organochlorinated Pesticides (OCPs), were also analyzed for Chlorinated Herbicides. No detectable levels of Chlorinated Herbicides were present in the samples analyzed at a depth of 0.5 foot. Laboratory test results are listed within Table 1 and copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Title 22 Metals

Ten (10) discreet and two (2) duplicate soil samples collected at a depth of 0.5 foot were tested for CAM Title 22 Metals using EPA Method 6010B/7471. Detected levels of barium, chromium, cobalt, copper, lead, mercury, nickel, vanadium and zinc were reported below their respective Regional Screening Levels (RSLs) for residential use soil (US EPA, 2021).

Arsenic was reported in 5 of the samples analyzed ranging from 0.518 milligrams per kilogram (mg/kg) to 0.930 mg/kg which are considered below background levels. Generally accepted research by California EPA Department of Toxic Substances Control (DTSC) scientists (Chernoff, Bosan and Oudiz, 2008), a concentration of 12.0 mg/kg is considered a useful screening tool for background levels of arsenic. The "term" background collectively refers to both naturally occurring and anthropogenic concentrations in shallow soils. For comparison, USEPA Regional Screening Levels (RSLs) were evaluated for arsenic residues in soil pertaining to residential land use. An RSL of 0.68 mg/kg was reported for inorganic arsenic (USEPA, 2021). The screening level is associated with anthropogenic (i.e., manmade) conditions which do not appear to exist within the subject property. A summary of test results is provided in Table II. Copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Polychlorinated Biphenyls (PCB's)

Two discreet soil samples were collected below the three pole mounted transformers within the southwest portion of the site. The samples were tested for Polychlorinated Biphenyls (PCB's) using EPA Method 8082. Sample results were reported as Non-Detect (ND). A summary of test results is provided in Table III. Copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If

the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site evaluation, and/or action.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations, institutional controls* or *engineering controls*).

We have performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the 10±-Acre Parcel of Agricultural Land, Assessor Parcel Number (APN) 0167-061-01, 1160 W. Pioneer Avenue, East of 210 Freeway and North of Domestic Avenue, in the City of Redlands, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in the section titled *Data Failures and Data Gaps* of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property, except for the following:

- The subject property is located within the Crafton-Redlands Plume boundary, a groundwater plume with known trichloroethylene (TCE) contamination. Strict definition of the Crafton-Redlands plume warrants it to be labeled as a Controlled Recognized Environmental Condition; however, based on 2015 and 2016 measured depths to groundwater (greater than 100-200 feet below grade [fbg]), the concentrations of contaminants are reported to be sufficiently low (below MCLs in close proximity to the site) as to not present a health risk to future residents. Further, because of the known presence of groundwater contamination and the source, the Regional Water Quality Control Board will more than likely not identify future site owners Responsible Parties. As a result, the plume underlying the site is considered a de minimis condition.

SITE CONSIDERATIONS

Items, if presented below, are not considered recognized environmental conditions in accordance with ASTM 1527-13. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

- One water well was observed near the southwest portion of the subject property, however, it is unclear if this well is within the subject property. In the event the well is not intended for future use, it is recommended that the well be abandoned in accordance with the California Well Standards as published by the California Department of Water Resources (Bulletin 74-81 and 74-90), with oversight provided by the appropriate agencies.

- The well pumps water to a concrete underground irrigation distribution box which then distributes the water to underground concrete irrigation lines. If these are encountered during clearing and grubbing or future grading and development, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

- Three pole mounted transformers were adjacent the well. No staining was observed on or in the soils below the transformers. If the transformers are to be removed, it is recommended that the removal be completed by a licensed contractor or the utility company responsible for the transformer.

- It is unknown if there are any septic tanks or leach fields on the site. If any are encountered during site development, it is recommended that they be removed in accordance with current regulations.

- It is recommended that all vegetation, debris and trash encountered on the site be removed and disposed in accordance with current local regulations.

1160 W. Pioneer Avenue,
East of 210 Freeway and South of W. Domestic Avenue,
City of Redlands, San Bernardino County, California

INTRODUCTION

The information presented in this report includes the results of our recent field reconnaissance, a review of various federal, state, and local government agency records, and a review of historic aerial photographs and topographic maps for the site vicinity. This report includes a summary of our findings, our opinion as to the current environmental condition of the site, and recommendations for additional work, if needed.

Purpose

This Phase I Environmental Site Assessment (ESA) was conducted to determine if any recognized environmental conditions exist on the subject site. Recognized environmental conditions are defined by the American Society for Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site.

This assessment is also intended to satisfy the requirement for conducting all appropriate inquiries into the previous ownership and uses of a property for the purposes of meeting the all appropriate inquiries provisions necessary to qualify for certain landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

We have performed this assessment in conformance with the scope and limitations of the standards set forth in the ASTM Practice E 1527-13 and the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312.

Involved Parties

This report was prepared by Petra Geosciences, Inc. (Petra), at the request of Meritage Homes for their exclusive use. Use of this report or reliance thereon by other parties or projects is not authorized. The report may not be suitable for other parties or other purposes.

SCOPE OF ASSESSMENT

The scope of this assessment included the following:

1. Performing a site reconnaissance to identify the current conditions and land use of the subject site and adjoining properties, which included noting the visual evidence of prior uses of the subject site and adjoining properties. The site reconnaissance included an observation of the site surface, building and structure interiors, and the site perimeter.

2. Researching historical land use of the subject site and vicinity by reviewing available historical aerial photographs, United States Geologic Survey (USGS) topographic maps, fire insurance maps, city directories, local building department records, local planning department records and other reasonably ascertainable maps and data.

3. Performing a limited literature review of local and regional geological conditions as they pertain solely to commenting of recognized environmental conditions for the site.

4. Conducting a search for environmental liens and Activities and Use Limitations (AULs) for the property.

5. Obtaining and reviewing a search of pertinent federal, state, and local regulatory agency databases concerning environmental conditions on and in the vicinity of the site. As specified in the ASTM and AAI standards, the following databases were searched using, at a minimum, the recommended search radius:

    - *Federal National Priority List (NPL) site list,*
    - *Federal Delisted NPL site list,*
    - *Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site list,*
    - *Federal CERCLIS- No Further Remedial Action Planned (CERC-NFRAP) site list,*
    - *Federal Resource Conservation and Recovery Act Information (RCRA) Corrective Action Report (CORRACTS) facilities list,*
    - *Federal RCRA non-CORRACTS Treat, Store and Dispose (RCRA-TSD) facilities list,*
    - *Federal RCRA generators list,*
    - *Federal institutional control/engineering control registries,*
    - *Federal Emergency Response Notification System (ERNS) list,*
    - *State and tribal lists of hazardous waste sites identified for investigation or remediation including: State- and tribal-equivalent NPL, State, and tribal-equivalent CERCLIS lists,*
    - *State and tribal landfill and/or solid waste disposal site lists,*
    - *State and tribal leaking storage tank lists,*
    - *State and tribal registered storage tank lists,*
    - *State and tribal institutional control/engineering control registries,*
    - *State and tribal voluntary cleanup sites, and*
    - *State and tribal Brownfield sites.*

    In the interest of thoroughness, numerous non-ASTM and non-AAI required databases were also searched. These databases are listed and discussed in the database search included within this report.

6. Contacting and interviewing knowledgeable persons, such as property owners, managers, and representatives of local government agencies regarding historical site use and current site conditions, if possible.

7. Evaluating the presence of recognized environmental conditions at the subject site through observation and research of reasonably ascertainable records. Recognized environmental conditions may include the presence of hazardous materials, petroleum products, underground storage tanks, above ground storage tanks, drums, chemical containers, polychlorinated biphenyls (PCB's), liquid or solid wastes, oil wells, and areas indicative of potential contamination including stained soils and/or pavement, stressed vegetation, monitoring wells, drains, sumps, pits, ponds, lagoons, and odors.

8. Preparing a report presenting the results of our Phase I ESA.

Unless listed above, this assessment does not include any testing or sampling of materials (such as an assessment for the potential presence of methane or radon, asbestos, lead-based paint, or the sampling and testing of soil, air, soil vapor, surface water, or groundwater). This assessment does not include evaluating the site for the presence of wetlands, regulatory compliance, or other items beyond the scope of ASTM E 1527-13 or 40 CFR Part 312, nor is it an assessment for vapor intrusion as defined by ASTM E 2600-15.

SITE OVERVIEW

The subject site is located at 1160 W. Pioneer Avenue in the city of Redlands, San Bernardino County, California. According to the California Department of Conservation, Geologic Energy Management Division (CalGEM) Online Mapping System (2021), the site is located within Township 01 South, Range 03 West, Section 16, San Bernardino Base and Meridian. A site location map is included as Figure 1.

The rectangular shaped site is comprised of approximately 10±-acres of vacant land with Assessor Parcel Number (APN) 0167-061-01. The site slopes gently to the north with existing elevations on the order of approximately 1,276± feet above mean sea level (msl) along the south portion of the site, to 1,267± feet above msl along the north portion of the site. Vehicular access to the subject property is via W. Pioneer Avenue along the south or W. Domestic Avenue which is an unimproved dirt road along the northern boundary of the site. A drainage bounds the western edge of the subject property, with the 210 Freeway easement beyond. Vacant land and an orchard bound the site along the east with Citrus Valley High School beyond. Light to moderate vegetation covers the site with several mature trees along the south and east boundaries of the site. A plan showing the configuration of the subject property is included as Figure 2.

PREVIOUS LAND USE

Based on information obtained during this assessment, the site appears to have been used for cultivated orchards since at least 1930 until sometime between/during 1994 and 2002. Sometime between/during 1994 and 2002 the orchards have been removed from the site and the site has remained vacant land to present. Historical information reviewed during this assessment includes aerial photographs (dating back to 1930), USGS topographical maps (dating back to 1899), environmental lien search and interviews. EDR indicates that fire insurance maps covering the target property were not found.

PREVIOUS REPORTS

No previous environmental reports for the subject site were provided to Petra for review during this assessment. However, during Petra's review of potential environmental concerns associated with facilities in close proximity to the subject parcels, it was noted that groundwater monitoring wells associated with the Crafton-Redlands Groundwater Plume were mapped on the State Regional Water Resources Control Board's GeoTracker website in the vicinity of Pioneer Street (approximately 1,200 feet east-southeast),Texas Street (approximately 3,200 feet southeast) and Orange Street (approximately 4,250 feet northeast). In addition to these wells, multiple monitoring wells were mapped throughout the Redlands area. Data has shown that the source of the groundwater plume is the Lockheed Environmental Systems Tech Company (formerly Lockheed Martin Facility at 1500 Crafton Avenue, Redlands, California). This facility is mapped approximately 4.5 miles east-southeast of the subject property. A summary of reports by Tetra Tech, Inc. are provided below.

Tetra Tech, Inc., 2015*:*

This document presents a revision to the ongoing groundwater monitoring of trichloroethene (TCE) and perchlorate associated with the Crafton-Redlands plume, located in the eastern and central portion of the Bunker Hill Groundwater Basin in San Bernardino, California. There are three monitoring wells in the vicinity of the subject property: Williams Well (Pioneer Street), COR Orange Street (Orange Street) and COR#31-A (Texas Street south of San Bernardino Avenue).

Williams Well is screened for groundwater sampling at a depth of 158-388 feet below the ground surface. Well COR Orange Street is screened for groundwater sampling at a depth of 153-490 feet below the ground surface. Well COR#31-A is screened for groundwater sampling at a depth of 480-700 feet below the ground surface.

Statistical analysis of samples collected from the Williams Well reported non-detect concentrations of perchlorate and Trichloroethene (TCE). Well COR Orange Street reported an average concentration of 1.8 micrograms per liter (µg/L) perchlorate and non-detect for TCE. In Well COR#31-A, the maximum concentration of perchlorate was listed as 25 µg/L and the average as 15 µg/L. The average concentration for TCE was reported as 0.56 µg/L and 1.4 µg/L as the maximum level. Statistical trends reported that

perchlorate concentrations are decreasing in Williams Well and COR#31-A, and increasing in Well Orange Street. For comparison purposes, the Maximum Contaminant Level (MCL) for perchlorate is 6 µg/L. For TCE the MCL is 5 µg/L.

Lockheed Martin Corporation, 2017:

This report summarizes activities performed in the fourth quarter 2016. Groundwater monitoring activities associated with the Crafton-Redlands plume project are performed in accordance with the Regional Water Quality Control Board (RWQCB)-approved 2015 groundwater management plan (GMP). The 2015 GMP describes the approach to monitor the trichloroethene (TCE) and perchlorate plumes in the eastern and central portions of the Bunker Hill Groundwater Basin. The 2015 GMP is designed to monitor groundwater quality at potable, agricultural and monitoring well locations.

In accordance with the Plume Characterization Monitoring Plan, monitoring well sampling included collection of groundwater samples from the above identified wells located in the central portion of the Bunker Hill Groundwater Basin. Samples were analyzed for perchlorate and Volatile Organic Compounds (VOC's) including TCE. Results are provided in the data report by Tetra Tech, Inc. (dated January 17, 2017) summarized below.

Tetra Tech, Inc., 2017:

The purpose of this water supply monitoring plan is to monitor groundwater quality, specifically trichloroethene (TCE) and perchlorate concentrations at water supply wells owner by water purveyors in the Bunker Hill Groundwater Basin.

Well COR#31-A, with a reported depth of groundwater as 228 feet below the ground surface, was not required to be sampled for this quarterly monitoring report (semi-annual sampling). Well COR Orange Street, with a reported groundwater depth of 188 feet, reported non-detect levels of perchlorate. TCE sampling was not required (semi-annual sampling). No information was provided for the Williams Well.

Petra reviewed monitoring reports from 2018 and found no new data for the Williams Well and Well COR#31-A. Well COR Orange Street reported non-detect levels of perchlorate during sampling in the fourth quarter 2018 (Tetra Tech, 2019).

ENVIRONMENTAL SETTING

The following section provides an overview of the regional and local geologic setting and includes information pertaining to groundwater conditions in the vicinity of the subject site. Geotechnical hazard information (faults, landslides, etc.) is not part of this assessment. This section does not constitute a geotechnical evaluation of the subject site and should not be taken as such.

Geology

Geologically, the site lies within the northern portion of the Peninsular Ranges Geomorphic Province (CGS, 2002). The Peninsular Range Province extends from the tip of Baja California north to the Transverse

Ranges Geomorphic Province and is characterized by northwest trending mountain ranges separated by subparallel fault zones. The San Bernardino Mountains, located north of the site, provides the boundary between the Peninsula Range Province and the Transverse Ranges Province. In general, the province is underlain primarily of plutonic rock of the Southern California Batholith. The Peninsular Range Geomorphic Province is generally characterized by alluviated basins and elevated erosion surfaces.

Published geologic maps of the area indicate that the site and surrounding alluvial areas are underlain by Middle Holocene-age Young axial-valley deposits – Unit 3 (Matti, J.C., et al, 2003). These soils are described as slightly too moderately consolidated silt, sand and gravel deposits. The site is not within an Alquist-Priolo Earthquake Fault Zone (Bryant and Hart, 2007).

Surface Water

No surface water was observed within the property during our site reconnaissance.

Groundwater

The site is located within the Bunker Hill (8-002.06) Groundwater Basin. The site and vicinity is located within the upper Santa Ana Valley Basin of the South Coast Hydrologic Region (California Department of Water Resources, [CDWR], 2003). In general, groundwater depth varies within the area and though flow direction specifically beneath the subject property is unknown, it is reasonable to estimate flow to follow regional topography from east to the west – northwest. The high groundwater depth within the site vicinity, between 1973 and 1983, is reported as 100 feet below the ground surface (Matti and Carson, 1991).

Groundwater depths in wells located in the vicinity of the subject property were reviewed on the California Department of Water Resources website (DWR, 2021). There appears to be no wells mapped within the property. The closest well in alluvial areas is located west of the property, and reports depths of greater than 100 feet since 1987. The memorandum documenting this inquiry is included in Appendix B.

Groundwater in the central portion of the Bunker Hill Groundwater Basin occurs under unconfined water table conditions; however, groundwater along the western portion occurs under confined conditions (Tetra Tech, 2015). The basin contains three hydro stratigraphic units defined as containing productive water-bearing units. In the central basin (where the subject site is located), groundwater flow within the middle aquifer is in a southwesterly direction towards Colton Narrows. The Basin boundary between the Bunker Hill and Colton-Rialto is the San Jacinto Fault. Colton Narrows is an alluvium and gouge filled notch within

the fault zone that allows surface water and shallow groundwater to exit the Bunker Hill Basin and enter the Colton-Rialto Basin. Deeper groundwater is inhibited from flowing through the fault zone.

RESULTS OF ASSESSMENT

The results of our site reconnaissance and observation of adjacent sites, agency database review, and historical land use study are presented in the following sections.

Site Observation

Petra conducted a reconnaissance of the subject site on July 27, 2021. Site photographs are included in Appendix A. Our site observations are summarized below.

Site Description and General Information

- The subject site is located at 1160 W. Pioneer Avenue in the city of Redlands, San Bernardino County, California. No physical markers differentiated the site boundary. A site location map is included as Figure 1.

- The rectangular shaped site is comprised of approximately 10±-acres of vacant land with Assessor Parcel Number (APN) 0167-061-01. The site slopes gently to the north with existing elevations on the order of approximately 1,276± feet above mean sea level (msl) along the south portion of the site, to 1,267± feet above msl along the north portion of the site.

- Vehicular access to the subject property is via W. Pioneer Avenue along the south or W. Domestic Avenue which is an unimproved dirt road along the northern boundary of the site. A drainage bounds the western edge of the subject property, with the 210 Freeway easement beyond. Vacant land and an orchard bound the site along the east with Citrus Valley High School beyond.

- Based on information obtained during this assessment, the site appears to have been used for cultivated orchards since at least 1930 until sometime between/during 1994 and 2002. Sometime between/during 1994 and 2002 the orchards have been removed from the site and the site has remained vacant land to present. Historical information reviewed during this assessment includes aerial photographs (dating back to 1930), USGS topographical maps (dating back to 1899), environmental lien search and interviews. EDR indicates that fire insurance maps covering the target property were not found.

- Dumped household trash was observed in several areas of the site and included plastic bags, plastic bottles, cans, pans, wood, cardboard and other miscellaneous household trash along with windblown trash. There were no visible signs of this debris containing hazardous substances, however, the trash was not disturbed.

- One water well was observed near the southwest portion of the subject property; however, it is unclear if this well is within the subject property. The well pumps water to a concrete underground irrigation distribution box which then distributes the water to underground concrete irrigation lines. A second concrete irrigation structure was observed within the southeast portion of the site.

- Three wooden power poles with overhead lines were located along the southwest portion of the subject property. Three pole-mounted transformers are located on the last pole adjacent to the water well.

- There was no evidence of sumps, pits, pools, or lagoons identified during our site reconnaissance.

- No sites were identified in our search of various government agency database records, which appear to have adversely impacted the soils, groundwater or soil vapor beneath the subject parcels at this time; however, the subject property is located within the Crafton-Redlands Plume boundary, a groundwater plume with known trichloroethylene (TCE) contamination. Although the boundary of the plume varies in publications, groundwater monitoring wells associated with the plume extends from the former Lockheed Martin facility (1500 Crafton Avenue) in northeast Redlands (approximately 4.5 miles east-southeast of the subject property) west to beyond the 215 Freeway/Interstate 10 interchange.

  Groundwater monitoring wells associated with the Crafton-Redlands Groundwater Plume are mapped throughout the Redlands area. The Lockheed Martin Nested Monitoring Wells Dearborn MW-A/B/C was identified as key sentry wells to down-gradient production wells in the Bunker Hill Groundwater Basin. Statistical analysis of 30-31 samples collected (2008-2015) from each of the 3 Dearborn wells reported an average perchlorate concentration of 5.0 micrograms per liter (µg/L) in Dearborn A; 10 µg/L in Dearborn B; and 7.8 µg/L in Dearborn C. Maximum concentrations overall ranged from 9.7 to 22 µg/L. Statistical trends reported that perchlorate concentrations are decreasing in Dearborn Wells B and C, and stable in Dearborn Well A. For comparison purposes, the Maximum Contaminant Level (MCL) for perchlorate is 6 µg/L. TCE concentrations were listed as non-detect (ND) in 30-31 samples. For TCE the MCL is 5 µg/L.

  In 2015 and 2016 three monitoring wells were sampled and reported: Williams Well (Pioneer Street), COR Orange Street (Orange Street) and COR#31-A (Texas Street south of San Bernardino Avenue). Results of TCE and perchlorate analytical results reported that groundwater monitoring wells mapped in the vicinity of the subject property did not contain TCE concentrations at or above the Maximum Contaminant Level (MCL) of 5 micrograms per liter (µg/L) in 2015 through 2018. Additionally, these wells were not reported to contain perchlorate concentrations at or above the MCL of 6 µg/L, except COR#31-A in 2015. Wells containing contaminant levels above MCLs appear to be located south of San Bernardino Avenue.

  Although groundwater beneath the site has been impacted, based on the 2015 and 2016 measured depths to groundwater (greater than 100-200 feet below grade [fbg]), the concentrations of contaminants are reported to be sufficiently low (below MCLs in close proximity to the site) as to not present a health risk to future residents. Further, because of the known presence of groundwater contamination, the Regional Water Quality Control Board will more than likely not identify future site owners as Responsible Parties. Strict definition of the Crafton-Redlands plume warrants it to be labeled as a Controlled Recognized Environmental Condition (see definition below); however, depth to groundwater and decreasing contamination levels below drinking water Maximum Contaminant Levels (MCLs), the plume underlying the site is considered as a de minimis condition.

Adjacent Site and Vicinity Observations

The property is situated in an area of residential, commercial and open space/undeveloped land use. Our observations are noted below:

North To the north of the subject site is W. Domestic Avenue, with agricultural fields and the Santa Ana River beyond.

West To the west of the site is a drainage channel and the 210 Foothill Freeway, with commercial development beyond.

South To the south of the subject site is Pioneer Avenue, with vacant land beyond.

East To the east of the subject site is Citrus Valley High School, with Texas Street, vacant land and residential development beyond.

Limited Phase II Environmental Site Assessment

Based on the use of the site for agriculture purposes from at least 1930 until sometime between/during 1994 and 2002, Petra conducted a Limited Phase II Site Assessment to evaluate shallow, near surface, site soils.

On July 30, 2021, Petra collected representative soil samples from ten (10) borings (DP-1 through DP-10) advanced to a depth of 3.5 feet below ground surface (bgs) utilizing a direct-push rig. Soil samples were collected from depths of 0.5 foot, 1.5, and 3.0 feet. All soil samples collected from the 0.5-foot depth were discretely analyzed for Organochlorine Pesticides (OCPs) according to Environmental Protection Agency (EPA) Test Method 8081A and Title 22 Metals according to EPA Method 6010B/7471A. Twenty percent (2) of the samples were tested for Chlorinated Herbicides using EPA Method 8151A. The remaining deeper soil samples were placed on hold by the laboratory for future testing in the event elevated levels of the aforementioned constituents were detected.

In addition, two (2) hand grab soil samples were collected below the three pole mounted transformers within the southwest portion of the site. The samples were tested for Polychlorinated Biphenyls (PCB's) using EPA Method 8082.

To prevent cross-contamination, all sampling equipment was washed with a Liquinox and water solution, followed by a water rinse, prior to introduction into the subsurface and between sample locations. A site plan detailing the approximate location of the direct push borings is included as Figure 3.

All soil samples analyzed during this assessment were analyzed by Enviro-Chem, Inc. (ECI) in Pomona, California. ECI is accredited by the California Environmental Protection Agency, Department of Health Services Environmental Laboratory Accreditation Program (ELAP). Sample security was maintained and documented using sample labels and chain-of-custody records. Copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Government Agency Database Research

A search of federal, state, and local government listings was performed by Environmental Data Resources, Inc. (EDR) for the purposes of this report. The search radius used for all government databases meets or exceeds the standard search distance adopted by ASTM and AAI.

Results of Agency Records Search

A data search of the various government agency records listed in Appendix B revealed no listings for the subject site. The EDR report shows seven surrounding sites, some with multiple listings, within the requested search radii. Two orphan sites (sites with inadequate address information to be mapped by EDR) were identified during the agency database search. Refer to the EDR Report in Appendix C for the search radii completed for this assessment.

The linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) are used as a reasonable screening tool for groundwater and vapor migration to identify a recognized environmental condition (REC) associated with the subject site (ASTM, 2015; Buonicore, 2014). For contaminated sources (such as a dry cleaner with a PCE release or a gas station with a leaking underground storage tank releasing BTEX) located up-gradient of the Target Property (TP), the focus would be on those contaminated sites within the AOC distance of 1,760 feet. The AOC search distance in the cross-gradient quadrant is reduced from 1,760 feet to 365 feet and the AOC for contaminated sites down-gradient from the TP is reduced from 1,760 feet to 100 feet. A copy of the plan showing the AOC boundaries can be found in Appendix B. A brief description of the sites listed in the EDR report, which are of potential concern due to the nature of the listing or their proximity to the site (within the AOC), is provided below:

Site 7: Kens Morse, 880 W. Pioneer Ave., Redlands, CA 92374: This site is listed between 1/8- to 1/4-mile east-southeast of and at a higher elevation than the subject site. This site is listed on the Resource Conservation and Recovery Act Information, NonGen (RCRA NonGen / NLR) database. No violations or evaluations are reported. Based on the lack of recorded violations or evaluations, this listing does not currently appear to represent a recognized environmental condition with regards to the subject site at this time.

Site 8, New High School No. 3, Texas Street/W. Pioneer Avenue, Redlands, CA 92374: This site (Citrus Valley High School) is listed ¼ to 1/2 of a mile east of, and at a higher elevation than the subject site and is listed on the State- and tribal – equivalent CERCLIS (ENVIROSTOR), School Property Evaluation Program (SCH) and CalEPA Regulated Site Portal (CERS) databases. The site type is for school investigation with the Department of Toxic Substance Control (DTSC) as the lead agency for site mitigation and brownfield reuse program due to past use for agricultural. The site status is currently reported as a "No Further Action" site with a status date of 04/19/2007. Based on the oversight agency granting No Further Action, this listing does not currently appear to represent a recognized environmental condition with regards to the subject site.

All site listings in the EDR report do not currently appear to represent a recognized environmental condition with regards to the subject site, due to the nature of the listings, the oversight agency having granted no further action, the site being outside the AOC from the subject site, their distance from the subject site and/or depth to contamination.

Orphan Sites

Orphan sites are those that the database search was not able to locate due to lack of complete address information. Two orphan site was listed in the EDR report. One Orphan listing is for Alabama Street and Pioneer Avenue. This intersection is over 2,000 feet west of and down gradient of the subject site. The other Orphan listing was related to the Crofton-Redlands Area Bunker Hill Ground Water Sub-B which is discussed previously under the heading for Groundwater.

Local Agencies

Petra reviewed information held by the agencies listed below during the course of this assessment.

San Bernardino County

The San Bernardino County Department of Environmental Health maintains Environmental Case Listings related to hazardous waste permits, underground storage tanks and tank cleanup sites. Records held by this agency were accessed by EDR during the government database search. No listings for the subject site were reported by EDR.

California Regional Water Quality Control Board

The California Regional Water Quality Control Board-Santa Ana Region (RWQCB) maintains records of leaking underground storage tank sites and groundwater cleanups for sites in the Santa Ana Region. Records held by the RWQCB were accessed by EDR during the government database search. No listings for the subject site were reported by EDR.

GeoTracker

The GeoTracker website maintains a record of environmental data for regulated facilities in California. Based upon our internal review, no database listings for the subject site were reported on GeoTracker. The Crafton-Redlands Groundwater Plume was mapped underlying the subject property. This plume is discussed in the *Previous Reports* section above. The memorandum documenting this inquiry is included in Appendix B.

California Department of Conservation, Geologic Energy Management Division (CalGEM)

According to the California Department of Conservation, Geologic Energy Management Division (CalGEM, 2021), there are no active or abandoned oil, or gas wells located on the subject site, and the subject site is not within the boundaries of an oil field. Further, there were no indications of any such wells found during our reconnaissance of the subject site. A copy of the review is included in Appendix B.

Department of Toxic Substances Control

The online database EnviroStor (DTSC, 2021), which provides records on LUSTs, SLICs, Priority cleanup sites and states sites, is maintained by the Department of Toxic Substances Control (DTSC). No database listings for the subject site were reported on EnviroStor. The memorandum documenting this inquiry is included in Appendix B.

The Crafton-Redlands Area was identified on the Envirostor database map, at a distance of approximately 4 miles east of the subject property. Although not within a typical radius distance search area, this facility has affected groundwater in the Bunker Hill sub-basin which underlies the subject property. The site is an area of groundwater contamination consisting of approximately 19 square miles. In the past 6 years, the city of Redlands has taken 6 domestic wells offline due to TCE, tetrachloroethane (PCE) and dibromochloropropane (DCBP) contamination. There is no known exposure at this time. The RWQCB and Lockheed Martin have conducted investigations in an effort to identify the source of contamination. One source may be an old burn pit at the Lockheed Martin facility. Additional information regarding this plume is discussed in the *Previous Reports* section above. The memorandum documenting this inquiry is included in Appendix B.

National Pipeline Mapping System

Petra reviewed the National Pipeline Mapping System (NPMS, 2021) public viewer website for gas transmission pipelines and hazardous liquid trunklines on or close to the subject property. Due to security purposes, close-up map views are not available. According to the information reviewed, no pipelines appear to be located on the subject property or immediately adjacent. A copy of this map is included in Appendix B.

Vapor Migration

Standard revisions presented in ASTM E1527-13, considers the assessment of vapor migration similar to that of groundwater contamination. As a result, Petra reviewed documentation regarding surrounding sites near the subject property with known soil and groundwater contamination to preliminarily evaluate potential areas of concern for vapor migration/encroachment onto the subject property. An area of concern typically includes active or abandoned gas stations and dry cleaners, industrial facilities, and hazardous waste disposal and landfill facilities with known or suspected soil and/or groundwater contamination.

In the absence of specific criteria within ASTM Standard E1527-13, Petra considered the linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) as a reasonable screening tool for vapor migration to identify a recognized environmental condition (REC) associated with the subject site (ASTM, 2010; Buonicore, 2014).

For vapor encroachment to represent a potential for vapor intrusion to structures within the subject property, vapors must have a pathway to create an indoor air quality condition (i.e., Recognized Environmental Condition). Petra assessed the potential for vapor migration onto the subject property from the Crafton-Redlands Groundwater Plume. A Fourth Quarter 2016 Data Report (Tetra Tech, Inc., 2017), referred to the

purpose of the report to monitor groundwater quality, specifically trichloroethene (TCE) and perchlorate concentrations at water supply wells owned by water purveyors in the Bunker Hill Groundwater Basin. Results indicated three monitoring wells in relative proximity to the subject property were sampled and reported: Well COR Orange Street is mapped near the north end of Orange Street (south side of the Santa Ana River); Williams Wells mapped west of the intersection of Pioneer Street and Texas Street; and COR#31-A located on Texas Street south of San Bernardino Avenue. Results of TCE and perchlorate analytical results reported that groundwater monitoring wells mapped in the vicinity of the subject property did not contain TCE concentrations at or above the Maximum Contaminant Level (MCL) of 5 micrograms per liter (µg/L). Additionally, these wells were not reported to contain perchlorate concentrations at or above the MCL of 6 µg/L. Based upon the depth to groundwater (which is greater than 100-200 feet below grade [fbg]) and the concentrations of contaminants which have been reported to be sufficiently low as to not present a health risk to future residents, The Crafton-Redlands plume is not considered to represent a concern in regards to vapor encroachment on to the subject site at this time.

No other surrounding sites have been identified during this assessment which would appear to represent a concern in regards to vapor encroachment on to the subject site at this time.

Evaluation of Records Search Results

In summary, no sites were identified in our search of various government agency database records, which appear to have impacted the soils beneath the subject site at this time. The subject site, however, is geographically located within the Crafton-Redlands Plume boundary, a trichloroethylene (TCE) groundwater plume. The Crafton-Redlands plume is located in the eastern and central portion of the Bunker Hill Groundwater Basin in San Bernardino County, California. Although groundwater beneath the subject property has been reportedly impacted by known contaminants, the depth to groundwater (greater than 100-200 feet below grade [fbg]) and the concentrations of contaminants are sufficiently low as to not present a health risk to future residents. As a result, the Crafton-Redlands plume represents a de minimis condition to the subject property at this time.

Results of Aerial Photo Analysis

Although aerial photographs can often be a valuable source of information in the assessment of historical land usage, it should be understood that information extrapolated from photographic images is strictly interpretation and not necessarily fact. For this reason, it may not be appropriate to draw conclusions regarding previous site activities based solely upon aerial photographic analysis.

In order to provide a complete updated assessment of historical land usage on and in the vicinity of the subject site, aerial photographs with coverage of the subject site and vicinity were obtained from EDR and viewed by a representative of this firm. Photographs from the years 1930, (1938), 1949, 1953, 1959, 1966, 1968, 1975, 1985, 1989, 1994, 2002, 2006, 2009, 2012, and 2016 were provided by EDR. Also, aerial photographs (i.e., Google Earth®) from 2017 to 2021 have been reviewed for this assessment. A summary of the information obtained during the aerial photograph review follows. Copies of the aerial photographs obtained from EDR are included in Appendix C.

The 1938 photograph is incorrect and not a photograph of the subject site. Therefore, the 1938 photograph has been excluded in the following paragraphs.

1930 Photograph

In the 1930 photographs the site was developed as cultivated orchards. Structures are visible within the site, one structure along the southeast property boundary and the several close together along the southwest property boundary. The surrounding area is also being utilized as cultivated orchards with rural residences throughout the areas. W. Domestic Avenue and W. Pioneer Avenue appear as dirt roads.

1949, 1953, 1959, 1966, 1968 and 1975 Photographs

In the 1949, 1953, 1959, 1966, 1968 and 1975 photographs, the site appears generally the same as in the prior photograph except the single structure along the southwest property boundary has been removed. The surrounding areas appear generally the same as in the prior photograph.

1985, 1989, and 1994 Photographs

In the 1985, 1989 and 1994 photographs, the subject site appears generally the same as in the prior photograph and remained developed with cultivated orchards. The surrounding areas are also appear generally the same as in the prior photograph with the exception of some orchards have gone fallow and the 210 Freeway has been constructed just west of the subject site. Also, roads throughout the area have been improved. Starting in the 1989 photograph, residential tract development is visible southeast of the subject site.

2002 Photograph

In the 2002 photograph, the orchards have been removed from the subject site. Throughout the surrounding areas several more orchards have gone fallow, and the 210 Freeway continues to be improved.

2006 Photograph

In the 2006 photograph, the subject site appears generally the same as in the prior photograph except for the structures being removed from the southwest portion of the site. Orchards continue to be removed throughout the surrounding areas.

2009 Photograph

In the 2009 photograph, the subject site appears generally the same as in the prior photograph. Orchards continue to be removed throughout the surrounding areas. Citrus Valley High School and Citrus Valley H.S.U.S. Baseball Academy are under construction to the east of the subject site. A commercial building appears northwest of the site and west of the 210 Freeway.

2012 and 2016 Photographs

In the 2012 and 2016 photographs, the subject site appears generally the same as in the prior photograph. Construction for Citrus Valley High School and Citrus Valley H.S.U.S. Baseball Academy appears complete. Commercial development continues west of the 210 Freeway.

Google Earth Imagery 2017 and 2021

The site appears generally the same as in the previous photograph until 4/2021. Commercial development continues west of the 210 Freeway. Residential tract development has expanded south and east of Citrus Valley High School and Citrus Valley H.S.U.S. Baseball Academy.

Historical USGS Topographic Maps

Petra reviewed the historical USGS topographic maps of the site and vicinity (Anaheim Quadrangle) provided by EDR (Target Quad's: 1899, 1901, 1954, 1967, 1973, 1980, 1988, 1996 and 2012. No land use is shown for the subject site on the historical topographic maps for 1899, 1901 and 2012. The site was depicted as developed with orchards in historical topographic maps from 1954 through 1996. These maps generally support observations made from the aerial photographs reviewed. Copies of the maps reviewed are provided in Appendix C.

Environmental Liens & Activity and Use Limitations

Environmental Liens and Activity and Use Limitations (AUL) indicate restrictions on a property, which may represent a recognized environmental condition for the subject site. A search for Environmental Liens and AULs was conducted by EDR as part of this assessment. The Assessor Parcel Number (APN) used for this search was 0167-061-01-000. The results from this search indicated that there were no recorded

Environmental Liens or AULs listed for the APN within the subject site. A Grant Deed was provided and show the title is vested in James Song and Chia Lien Chiang (also known as Grace Song), Co-Trustees of the Song family Trust with date recorded April 4, 2018. A copy of the lien and AUL search reports are provided in Appendix C.

Fire Insurance Maps

Fire Insurance Maps provide information on structure locations and operations, which were present at the time of the survey. These maps were completed for most major cities and metropolitan areas, dating from 1867, and provide information into past usage of buildings and how commercial and industrial zoning has changed over time. Sanborn™ Fire Insurance maps were requested for this assessment. EDR reports that fire insurance maps covering the target property were not found. The memorandum documenting this inquiry is included in Appendix C.

City Directory Abstract

City Directories provide information for a specific address at a specific time. A search of city directories, dating back to 1965 was conducted by EDR for this assessment. The search was conducted for the target property street and cross streets. No listings, which would indicate a potential concern for the subject site based on the name of the listing, was included in the EDR-City Directory Image Report. A copy of this search is presented in Appendix C.

EDR Property Tax Map Report

Petra reviewed EDR's Property Tax Map report which includes information on boundaries for the parcels within the site along with parcel identification numbers. A copy of the EDR report is provided in Appendix C.

Building Permits

Building Permit data provides information to identify current and/or former operations and structures/features which may represent a recognized environmental condition for the subject site. A search of building permits was conducted by EDR for this assessment. There were no permits found for the target property and no permits found for the adjoining property which would indicate a potential environmental concern for the subject site based on the name of the listing. A copy of this search is presented in Appendix C.

Interviews

An owner interview with someone knowledgeable of the site has not been completed as of the date of this report. If any new information is attained that may differ from the conclusions in this report an addendum to this report will be issued.

Client Knowledge

In compliance with AAI, Petra sent a Client Questionnaire to the client, Ms. Johanna Crooker, Forward Planning Manager with Meritage Homes, regarding her knowledge of the subject site. A brief summary of the pertinent questions is provided below.

1. According to Ms. Crooker, she is not aware of any environmental clean-up liens against the property that are filed or recorded under federal, tribal, state of local law.

2. According to Ms. Crooker, she has not conducted a search of any environmental cleanup liens against the property that are filed or recorded in a registry.

3. According to Ms. Crooker, she is not aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place on or for the site, and/or have been filed or that environmental cleanup liens against the property that are filed or recorded under federal, tribal, state of local law.

4. According to Ms. Crooker, as the user of the Phase I ESA, she does not have specialized knowledge or experience related to the property or nearby properties.

5. According to Ms. Crooker, she is aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of hazardous materials/chemical releases or threatened releases. Ms. Crooker acknowledged agriculture.

6. According to Ms. Crooker, she is not aware of any specific chemicals present currently or previously on the site.

7. According to Ms. Crooker, she does not know of any obvious indicators that point to the presence or likely presence of contamination at the property.

A copy of the complete client questionnaire is provided in Appendix D.

Data Failures and Data Gaps

In the event that data failures and/or data gaps are identified, the Environmental Professional (EP) will endeavor to comment on the significance of those data gaps. However, the EP cannot, and does not warrant or guarantee that no significant events, releases, or conditions arose, during periods such as data gaps.

Petra reviewed several sources for historical information regarding the subject site. These sources included a government agency database search, a city directory search, a review of historical aerial photographs and historical USGS topographic maps, fire insurance maps and interviews with people knowledgeable about the site. Some of the gaps between aerial photographs and topographic maps exceeded 10 years and EDR reports that fire insurance maps covering the target property were not found. An owner interview with someone knowledgeable of the site has not been completed as of the date of this report.

Data failures/data gaps exist in the historic information reviewed. These gaps are due to the limited resources available, which are reasonably ascertainable and practically reviewable in the local area. It is our opinion, however, that if additional historic information were to become available, it is not likely to change the conclusions or recommendations of this assessment.

DISCUSSION OF POTENTIAL ENVIRONMENTAL CONCERNS

The following discussions of potential environmental concerns are presented to inform the client as to the existence, or lack thereof, of recognized environmental conditions present on the subject site.

Regulatory Actions

Based upon a search of available federal, state, and local records, no known current regulatory action is pending with respect to the subject site at this time.

Adjacent and Nearby Properties

In summary, no sites were identified in our search of various government agency database records, which appear to have impacted the soils beneath the subject site at this time. The subject site, however, is geographically located within the Crafton-Redlands Plume boundary, a trichloroethylene (TCE) groundwater plume. The Crafton-Redlands plume is located in the eastern and central portion of the Bunker Hill Groundwater Basin in San Bernardino County, California. Although groundwater beneath the subject property has been impacted, the depth to groundwater (greater than 100-200 feet below grade [fbg]) and the concentrations of contaminants are sufficiently low as to not present a health risk to future residents. The Crafton-Redlands plume represents a de minimis condition to the subject site at this time.

Polychlorinated Biphenyls (PCB's)

Polychlorinated biphenyls (PCB's) are historically linked to electrical equipment, such as capacitors and transformers, due to their physical and chemical characteristics. PCB's, persistent in the environment, are known to accumulate in organisms and the food chain.

Any electrical equipment (i.e., transformers, capacitors, and fluorescent light fittings) containing dielectric insulating fluids or coolants, manufactured prior to 1976, should be considered to potentially contain PCB's. PCB's may also be found in older lubricating oils, cutting oils, hydraulic fluids, paints, sealants, and flame retardants (UNEP, 2002).

Three wooden power poles with overhead lines were located along the southwest portion of the subject property. Three pole-mounted transformers were observed on the last pole adjacent to the water well.

Do to the apparent age of the transformers they may contain PCB's; Therefore, two discreet soil samples were collected below the three pole mounted transformers. The samples were tested for Polychlorinated Biphenyls (PCB's) using EPA Method 8082. Sample results were reported as Non-Detect (ND). A summary of test results is provided in Table III. Copies of the official laboratory reports and chain-of-custody records are included in Appendix F. As a result, PCB's do not appear to be a concern within the subject site. If the transformer are to be removed, it is recommended that the removal be completed by a licensed contractor or the utility company responsible for the transformer.

Underground Fuel Storage Tanks

No information has been obtained during this assessment, which would indicate fuel underground storage tanks (UST's) to be located on the subject site currently. Further, no surface indications of UST's were observed on the subject site during the site reconnaissance.

Aboveground Fuel Storage Tanks

No information has been obtained during this assessment, which would indicate above ground fuel storage tanks (ASTs) to be located on the subject site currently.

Storm Water/Waste Water Discharge

At this time, storm water discharge from the site appears to be limited to surface water runoff. No obvious sign of waste water discharge was observed during the site reconnaissance.

Pesticide and Herbicide Residues

Based on the use of the site for agriculture purposes from at least 1930 until sometime between/during 1994 and 2002, Petra conducted a Limited Phase II Site Assessment to evaluate shallow, near surface, site soils.

To evaluate soil residues within the site, a total of 10 direct-push borings (DP-1 through DP-10) were advanced to a depth of 3.5 feet below ground surface (bgs) utilizing a direct-push rig. Soil samples were collected from depths of 0.5 foot, 1.5, and 3.0 feet. The 0.5-foot samples were discretely analyzed for Organochlorine Pesticides (OCPs) according to Environmental Protection Agency (EPA) Test Method 8081A and Title 22 Metals according to EPA Method 6010B/7471A. Twenty percent (2) of the samples were tested for Chlorinated Herbicides using EPA Method 8151A. The remaining deeper soil samples were placed on hold by the laboratory for future testing in the event elevated levels of the aforementioned constituents were detected.

All soil samples analyzed during this assessment were analyzed by Enviro-Chem, Inc. (ECI) in Pomona, California. ECI is accredited by the California Environmental Protection Agency, Department of Health Services Environmental Laboratory Accreditation Program (ELAP). Analyses were requested on a chain-of-custody record. Below is a discussion of the laboratory results.

Organochlorinated Pesticides

Ten (10) discreet and two (2) duplicate soil samples collected at a depth of 0.5 foot were tested for Organochlorinated Pesticides (OCPs) according to EPA Method 8081A. Fifteen (10) samples contained concentrations of 4-4'DDE that ranged from 0.024 milligrams per kilograms (mg/kg) to 0.524 (mg/kg). All detectable concentrations of DDE were found to be below the USEPA Region 9 Regional Screening Level (RSL) of 2.0 mg/kg for DDE residential use soils.

Three (3) samples contained concentrations of 4,4'-DDT ranging from 0.107 milligrams per kilograms (mg/kg) to 0.211 mg/kg. All detectable concentrations of DDT were found to be below the USEPA Region 9 Regional Screening Level (RSL) of 1.9 mg/kg for DDT residential use soils.

No other OCP analytes were reported at concentrations above the laboratory detection limit. The laboratory test results are listed within Table 1 and copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Chlorinate Herbicides

Twenty percent of the samples (2) analyzed for Organochlorinated Pesticides (OCPs), were also analyzed for Chlorinated Herbicides. No detectable levels of Chlorinated Herbicides were present in the samples analyzed at a depth of 0.5 foot. Laboratory test results are listed within Table 1 and copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

As a result of the Limited Phase II soil sample results, pesticides and herbicide residues do not appear to represent a recognized environmental condition with regards to the subject site.

Asbestos-Containing Materials

No potential asbestos-containing materials were observed on the site and no information was found which indicated the use, storage, or disposal of asbestos-containing materials on the site. However, a concrete underground irrigation distribution box was observed during our site reconnaissance. This irrigation distribution box receives water from a well and then distributes the water to underground concrete irrigation lines. If these concrete irrigation lines are encountered during clearing and grubbing or future grading and development, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

Lead-Based Paints

No potential lead-based materials were observed on the site and no information was found which indicated the use, storage, or disposal of lead-based paint on the site.

Landfills

The EDR report has one orphan site listing for Alabama Street and Pioneer Avenue. This site is listed on the Solid Waste Information System (SWF/LF) database. Orphan sites are those that the database search was not able to locate due to lack of complete address information.

The intersection of Alabama Street and Pioneer Avenue is over 2,000 feet west of and down gradient of the subject site. Therefore, landfills do not appear to represent a recognized environmental condition with regards to the subject site.

Water Supplies

One water well was observed near the southwest portion of the subject property, however, it is unclear if this well is within the subject property. In the event the well is not intended for future use, it is recommended that the well be abandoned in accordance with the California Well Standards as published by the California Department of Water Resources (Bulletin 74-81 and 74-90), with oversight provided by the appropriate agencies.

Waste Generation and Storage

No readily detectable waste generation and storage was observed onsite during our site reconnaissance.

FINDINGS

General Site Information

1. The subject site is located at 1160 W. Pioneer Avenue in the city of Redlands, San Bernardino County, California. No physical markers differentiated the site boundary. A site location map is included as Figure 1.

2. The rectangular shaped site is comprised of approximately 10±-acres of vacant land with Assessor Parcel Number (APN) 0167-061-01. The site slopes gently to the north with existing elevations on the order of approximately 1,276± feet above mean sea level (msl) along the south portion of the site, to 1,267± feet above msl along the north portion of the site.

3. Vehicular access to the subject property is via W. Pioneer Avenue along the south or W. Domestic Avenue which is an unimproved dirt road along the northern boundary of the site. A drainage bounds the western edge of the subject property, with the 210 Freeway easement beyond. Vacant land and an orchard bound the site along the east with Citrus Valley High School beyond.

4. Based on information obtained during this assessment, the site appears to have been used for cultivated orchards since at least 1930 until sometime between/during 1994 and 2002. Sometime between/during 1994 and 2002 the orchards have been removed from the site and the site has remained vacant land to present. Historical information reviewed during this assessment includes aerial photographs (dating back to 1930), USGS topographical maps (dating back to 1899), environmental lien search and interviews. EDR indicates that fire insurance maps covering the target property were not found.

5. Dumped household trash was observed in several areas of the site and included plastic bags, plastic bottles, cans, pans, wood, cardboard and other miscellaneous household trash along with windblown trash. There were no visible signs of this debris containing hazardous substances, however, the trash was not disturbed.

6. One water well was observed near the southwest portion of the subject property; however, it is unclear if this well is within the subject property. The well pumps water to a concrete underground irrigation distribution box which then distributes the water to underground concrete irrigation lines. A second concrete irrigation structure was observed within the southeast portion of the site.

7. Three wooden power poles with overhead lines were located along the southwest portion of the subject property. Three pole-mounted transformers are located on the last pole adjacent to the water well.

8. There was no evidence of sumps, pits, pools, or lagoons identified during our site reconnaissance.

9. No sites were identified in our search of various government agency database records, which appear to have adversely impacted the soils, groundwater or soil vapor beneath the subject parcels at this time; however, the subject property is located within the Crafton-Redlands Plume boundary, a groundwater plume with known trichloroethylene (TCE) contamination. Although the boundary of the plume varies in publications, groundwater monitoring wells associated with the plume extends from the former

Lockheed Martin facility (1500 Crafton Avenue) in northeast Redlands (approximately 4.5 miles east-southeast of the subject property) west to beyond the 215 Freeway/Interstate 10 interchange.

Groundwater monitoring wells associated with the Crafton-Redlands Groundwater Plume are mapped throughout the Redlands area. The Lockheed Martin Nested Monitoring Wells Dearborn MW-A/B/C was identified as key sentry wells to down-gradient production wells in the Bunker Hill Groundwater Basin. Statistical analysis of 30-31 samples collected (2008-2015) from each of the 3 Dearborn wells reported an average perchlorate concentration of 5.0 micrograms per liter (µg/L) in Dearborn A; 10 µg/L in Dearborn B; and 7.8 µg/L in Dearborn C. Maximum concentrations overall ranged from 9.7 to 22 µg/L. Statistical trends reported that perchlorate concentrations are decreasing in Dearborn Wells B and C, and stable in Dearborn Well A. For comparison purposes, the Maximum Contaminant Level (MCL) for perchlorate is 6 µg/L. TCE concentrations were listed as non-detect (ND) in 30-31 samples. For TCE the MCL is 5 µg/L.

In 2015 and 2016 three monitoring wells were sampled and reported: Williams Well (Pioneer Street), COR Orange Street (Orange Street) and COR#31-A (Texas Street south of San Bernardino Avenue). Results of TCE and perchlorate analytical results reported that groundwater monitoring wells mapped in the vicinity of the subject property did not contain TCE concentrations at or above the Maximum Contaminant Level (MCL) of 5 micrograms per liter (µg/L) in 2015 through 2018. Additionally, these wells were not reported to contain perchlorate concentrations at or above the MCL of 6 µg/L, except COR#31-A in 2015. Wells containing contaminant levels above MCLs appear to be located south of San Bernardino Avenue.

Although groundwater beneath the site has been impacted, based on the 2015 and 2016 measured depths to groundwater (greater than 100-200 feet below grade [fbg]), the concentrations of contaminants are reported to be sufficiently low (below MCLs in close proximity to the site) as to not present a health risk to future residents. Further, because of the known presence of groundwater contamination, the Regional Water Quality Control Board will more than likely not identify future site owners as Responsible Parties. Strict definition of the Crafton-Redlands plume warrants it to be labeled as a Controlled Recognized Environmental Condition (see definition below); however, depth to groundwater and decreasing contamination levels below drinking water Maximum Contaminant Levels (MCLs), the plume underlying the site is considered as a de minimis condition.

LIMITED PHASE II ENVIRONMENTAL SITE ASSESSMENT

Based on the use of the site for agriculture purposes from at least 1930 until sometime between/during 1994 and 2002, Petra conducted a Limited Phase II Site Assessment to evaluate shallow, near surface, site soils.

To evaluate soil residues within the site, a total of 10 direct-push borings (DP-1 through DP-10) were advanced to a depth of 3.5 feet below ground surface (bgs) utilizing a direct-push rig. Soil samples were collected from depths of 0.5 foot, 1.5, and 3.0 feet. The 0.5-foot samples were discretely analyzed for Organochlorine Pesticides (OCPs) according to Environmental Protection Agency (EPA) Test Method 8081A and Title 22 Metals according to EPA Method 6010B/7471A. Twenty percent (2) of the samples were tested for Chlorinated Herbicides using EPA Method 8151A. The remaining deeper soil samples were

placed on hold by the laboratory for future testing in the event elevated levels of the aforementioned constituents were detected.

In addition, two (2) hand grab soil samples were collected below the three pole mounted transformers within the southwest portion of the site. The samples were tested for Polychlorinated Biphenyls (PCB's) using EPA Method 8082.

All soil samples analyzed during this assessment were analyzed by Enviro-Chem, Inc. (ECI) in Pomona, California. ECI is accredited by the California Environmental Protection Agency, Department of Health Services Environmental Laboratory Accreditation Program (ELAP). Analyses were requested on a chain-of-custody record. Below is a discussion of the laboratory results.

Organochlorinated Pesticides

Ten (10) discreet and two (2) duplicate soil samples collected at a depth of 0.5 foot were tested for Organochlorinated Pesticides (OCPs) according to EPA Method 8081A. Fifteen (10) samples contained concentrations of 4-4'DDE that ranged from 0.024 milligrams per kilograms (mg/kg) to 0.524 (mg/kg). All detectable concentrations of DDE were found to be below the USEPA Region 9 Regional Screening Level (RSL) of 2.0 mg/kg for DDE residential use soils.

Three (3) samples contained concentrations of 4,4'-DDT ranging from 0.107 milligrams per kilograms (mg/kg) to 0.211 mg/kg. All detectable concentrations of DDT were found to be below the USEPA Region 9 Regional Screening Level (RSL) of 1.9 mg/kg for DDT residential use soils.

No other OCP analytes were reported at concentrations above the laboratory detection limit. The laboratory test results are listed within Table 1 and copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Chlorinate Herbicides

Twenty percent of the samples (2) analyzed for Organochlorinated Pesticides (OCPs), were also analyzed for Chlorinated Herbicides. No detectable levels of Chlorinated Herbicides were present in the samples analyzed at a depth of 0.5 foot. Laboratory test results are listed within Table 1 and copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Title 22 Metals

Ten (10) discreet and two (2) duplicate soil samples collected at a depth of 0.5 foot were tested for CAM Title 22 Metals using EPA Method 6010B/7471. Detected levels of barium, chromium, cobalt, copper, lead, mercury, nickel, vanadium and zinc were reported below their respective Regional Screening Levels (RSLs) for residential use soil (US EPA, 2021).

Arsenic was reported in 5 of the samples analyzed ranging from 0.518 milligrams per kilogram (mg/kg) to 0.930 mg/kg which are considered below background levels. Generally accepted research by California EPA Department of Toxic Substances Control (DTSC) scientists (Chernoff, Bosan and Oudiz, 2008), a concentration of 12.0 mg/kg is considered a useful screening tool for background levels of arsenic. The "term" background collectively refers to both naturally occurring and anthropogenic concentrations in shallow soils. For comparison, USEPA Regional Screening Levels (RSLs) were evaluated for arsenic residues in soil pertaining to residential land use. An RSL of 0.68 mg/kg was reported for inorganic arsenic (USEPA, 2021). The screening level is associated with anthropogenic (i.e., manmade) conditions which do not appear to exist within the subject property. A summary of test results is provided in Table II. Copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

Polychlorinated Biphenyls (PCB's)

Two discreet soil samples were collected below the three pole mounted transformers within the southwest portion of the site. The samples were tested for Polychlorinated Biphenyls (PCB's) using EPA Method 8082. Sample results were reported as Non-Detect (ND). A summary of test results is provided in Table III. Copies of the official laboratory reports and chain-of-custody records are included in Appendix F.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site evaluation, and/or action.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent,

or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial. Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

We have performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the 10±-Acre Parcel of Agricultural Land, Assessor Parcel Number (APN) 0167-061-01, 1160 W. Pioneer Avenue, East of 210 Freeway and North of Domestic Avenue, in the City of Redlands, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in the section titled *Data Failures and Data Gaps* of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property, except for the following:

- The subject property is located within the Crafton-Redlands Plume boundary, a groundwater plume with known trichloroethylene (TCE) contamination. Strict definition of the Crafton-Redlands plume warrants it to be labeled as a Controlled Recognized Environmental Condition; however, based on 2015 and 2016 measured depths to groundwater (greater than 100-200 feet below grade [fbg]), the concentrations of contaminants are reported to be sufficiently low (below MCLs in close proximity to the site) as to not present a health risk to future residents. Further, because of the known presence of groundwater contamination and the source, the Regional Water Quality Control Board will more than likely not identify future site owners Responsible Parties. As a result, the plume underlying the site is considered a de minimis condition.

SITE CONSIDERATIONS

Items, if presented below, are not considered recognized environmental conditions in accordance with ASTM 1527-13. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

- One water well was observed near the southwest portion of the subject property, however, it is unclear if this well is within the subject property. In the event the well is not intended for future use, it is recommended that the well be abandoned in accordance with the California Well Standards as published by the California Department of Water Resources (Bulletin 74-81 and 74-90), with oversight provided by the appropriate agencies.

- The well pumps water to a concrete underground irrigation distribution box which then distributes the water to underground concrete irrigation lines. If these are encountered during clearing and grubbing or future grading and development, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

- Three pole mounted transformers were adjacent the well. No staining was observed on or in the soils below the transformers. If the transformers are to be removed, it is recommended that the removal be completed by a licensed contractor or the utility company responsible for the transformer.

- It is unknown if there are any septic tanks or leach fields on the site. If any are encountered during site development, it is recommended that they be removed in accordance with current regulations.

- It is recommended that all vegetation, debris and trash encountered on the site be removed and disposed in accordance with current local regulations.

LIMITATIONS

This assessment is based upon the project as described and the environmental data obtained from the field reconnaissance and research performed as outlined in this report. This report has not been prepared for use by parties or projects other than those named or described in this report, additional studies may be required.

Since our assessment is based upon a review of available data, visual assessment of the site, and laboratory testing, the conclusions presented herein are professional opinions. These opinions have been derived in accordance with current standards of practice, and no warranty is expressed or implied.

This firm's evaluation of previous reports and/or subconsultant reports focuses on the completeness of the information presented in the document, in accordance with applicable rules and regulations, and does not include the establishment of data sufficiency or accuracy.

QUALIFICATIONS

Resumes for the staff who contributed to this report are presented in Appendix E.

"We the undersigned declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualification based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Respectfully submitted,

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 11 North. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3 #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from digital orthophotography collected by the U.S. Department of Agriculture Farm Service Agency. This imagery was flown in 2005 and was produced with a 1-meter ground sample distance.

This map may reflect more detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- **ZONE A** — No Base Flood Elevations determined.
- **ZONE AE** — Base Flood Elevations determined.
- **ZONE AH** — Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- **ZONE AO** — Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- **ZONE AR** — Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- **ZONE A99** — Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- **ZONE V** — Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- **ZONE VE** — Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- **ZONE X** — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- **ZONE X** — Areas determined to be outside the 0.2% annual chance floodplain.
- **ZONE D** — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

* Referred to the North American Vertical Datum of 1988

- A — A — Cross section line
- B — B — Transect line
- 87°07'45", 32°22'30" — Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere
- 7678000 N — 1000-meter Universal Transverse Mercator grid values, zone 11N
- 600000 FT — 5000-foot grid ticks: California State Plane coordinate system, zone V (FIPSZONE 0405), Lambert Conformal Conic projection
- DX5510 X — Bench mark (see explanation in Notes to Users section of this FIRM panel)
- M1.5 — River Mile

MAP REPOSITORY

EFFECTIVE DATE OF COUNTYWIDE FLOOD INSURANCE RATE MAP
March 18, 1996

EFFECTIVE DATES OF REVISIONS TO THIS PANEL
August 28, 2008 - to update corporate limits; to change Base Flood Elevations and Special Flood Hazard Areas; to update map format; to add roads and road names; and to incorporate previously issued Letters of Map Revision.

For community map revision history prior to countywide mapping, refer to the Community Map History table located in the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your Insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GOLDEN STATE FC LLC EPA ID:: CAR000272989	27517 PIONEER AVE	WSW 1/8 - 1/4 (0.159 mi.)	B5	31

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

REDLANDS FARMING COM Facility Id: 36350019 Status: Refer: Other Agency	780 WEST SAN BERNARD	ESE 1/2 - 1 (0.539 mi.)	9	53

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 04/19/2021 has revealed that there are 2 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

AMAZON.COM SERVICES,	***27517 PIONEER AVE***	***WSW 1/8 - 1/4 (0.159 mi.)***	***B6***	***35***

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EXECUTIVE SUMMARY

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORTON AIR FORCE BAS		NNW 1/2 - 1 (0.965 mi.)	0	9

San Bern. Co. Permit: San Bernardino County Fire Department Hazardous Materials Division.

A review of the San Bern. Co. Permit list, as provided by EDR, and dated 05/19/2021 has revealed that there are 4 San Bern. Co. Permit sites within approximately 0.25 miles of the target property.

Violation Date: 08-18-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 09/04/2020. Observed (1) 1 yard bin containing electronic waste, which the facility is managing as universal waste. This item was not disclosed in the hazardous materials inventory submitted via CERS on 06/05/2020. Update the "maximum daily amount" of the disclosed hazardous materials inventory items to correlate with the total storage capacity of any hazardous materials or hazardous waste stored on site. Update the "largest container size" of the disclosed hazardous materials inventory items to correlate with the largest capacity of a container utilized to store the hazardous materials or hazardous waste. CORRECTIVE ACTION: Submit an accurate and complete hazardous materials inventory into the California Environmental Reporting System (CERS).
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SONG PROPERTY
1160 W. PIONEER AVENUE
REDLANDS, CA 92374

TARGET PROPERTY COORDINATES

Latitude (North):	34.0829 - 34° 4' 58.44''
Longitude (West):	117.1994 - 117° 11' 57.84''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	481603.3
UTM Y (Meters):	3771171.0
Elevation:	1272 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630631 REDLANDS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

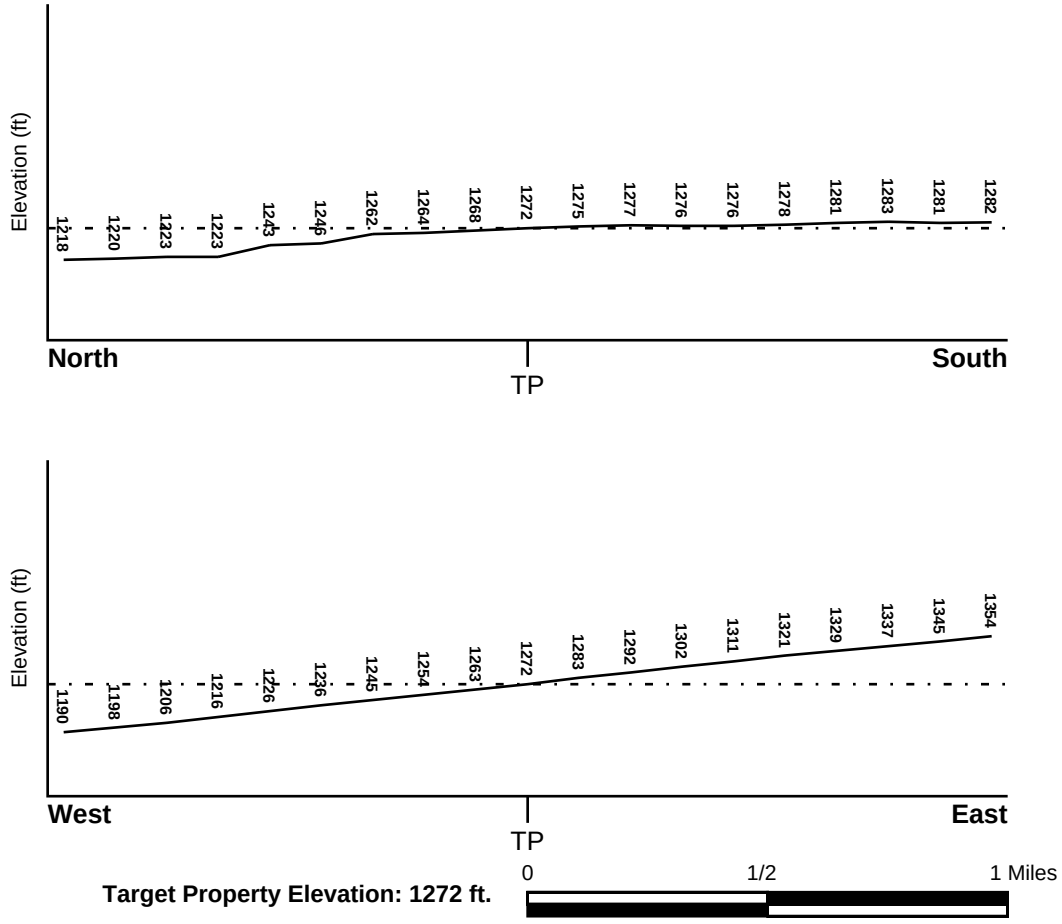

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8704H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8702H	FEMA FIRM Flood data
06071C8708H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HANFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6
2	11 inches	59 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Petra Geotechnical Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Grant Deed

Title of Document

Pursuant to Senate Bill 2 – Building Homes and Jobs Act (GC Code Section 27388.1), effective January 1, 2018, a fee of seventy-five dollars ($75.00) shall be paid at the time of recording of every real estate instrument, paper, or notice required or permitted by law to be recorded, except those expressly exempted from payment of recording fees, per each single transaction per parcel of real property. The fee imposed by this section shall not exceed two hundred twenty-five dollars ($225.00).

Reason for Exemption:

- ☐ Exempt from fee per GC 27388.1, recorded in connection with a transfer subject to the imposition of documentary transfer tax (DTT), or
- ☐ Exempt from fee per GC 27388.1, recorded in connection with a transfer of real property that is a residential dwelling to an owner-occupier, or
- ☒ Exempt from fee per GC 27388.1, recorded in connection with a transfer that was subject to documentary transfer tax which was paid on document recorded previously on March 30, 2018 (date) as document number 2018-0112719 of Official Records. (Cap. $225.00)
- ☐ Exempt from fee per GC 27388.1, fee cap of $225.00 reached, and/or
- ☐ Exempt from fee per GC 27388.1, not related to real property

Failure to include an exemption reason will result in the imposition of the $75.00 Building Homes and Jobs Act fee. Fees collected are deposited to the State and may not be available for refund.

THIS COVER SHEET ADDED TO PROVIDE ADEQUATE SPACE FOR RECORDING INFORMATION
($3.00 Additional Recording Fee Applies)

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Petra Geotechnical Inc on Jul 19, 2021.

TARGET PROPERTY

1160 W. Pioneer Avenue
Redlands, CA 92374

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

W PIONEER AVE

27630 W PIONEER AVE

Date:	**12/12/2006**
Permit Type:	**BCM**
Description:	**INSTALLATION OF EQUIP CABINETS, AND 6 ANTENNAS AT AN EXISTING CELL SITE**
Permit Description:	**B-Commercial Miscellaneous**
Work Class:	
Proposed Use:	
Permit Number:	B06-02047
Status:	VOID
Valuation:	$50,000.00
Contractor Company:	
Contractor Name:	

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

APPENDIX D

INTERVIEWS

PETRA GEOSCIENCES, INC.
40880 County Center Dr., Suite R, Temecula, CA * (951) 600-9271 * (951) 719-1499

PHASE I USER/CLIENT QUESTIONNAIRE

The purpose of this questionnaire is to obtain information from the client regarding the Property.

Date Sent to Client: September 9, 2021 Date Received from Client September 9, 2021

A. SITE INFORMATION

1. Property Name/APN: 0167-061-01-0000

2. Location (If a map is available, please include it): 1160 Pioneer Ave., Redlands, CA (see attached map)

3. Why is the Phase I required? (Development as a residential parcel, protection from CERCLA liability, etc?): Development as a residential parcel

4. Is there an Interview Contact for this job? (A current owner, operator, or someone with knowledge of the history and/or processes occurring at the site). ☐ Yes ☑ No

   If yes, please provide the following information:
   Person to be interviewed: _____
   Title/Company: _____
   Phone number and/or email address: _____
   _____

5. Do you have any reports for this job (such as previous Phase I's, biology reports, cultural resource reports, geotechnical reports, etc.) ☐ Yes ☑ No

   If yes, please provide them for Petra to review. *Date Received from Client*_____

6. As part of our assessment, Petra contacts local agencies to obtain miscellaneous information about the project site such as previous investigations, zoning, and flood zone. Do you have any current restrictions regarding Petra contacting these agencies?
   ☐ Yes ☑ No

   If yes, please contact us to discuss further.

B. SITE ACESS

1. Does Petra have access to the property at this time? ☑ Yes ☐ No

2. Are there any access restrictions such as a locked gate or required insurance forms? No
   _____

3. Is there a site manager that Petra needs to contact prior to visiting the site? No_____
   _____

PETRA GEOSCIENCES, INC.
40880 County Center Dr., Suite R, Temecula, CA * (951) 600-9271 * (951) 719-1499

C. LANDOWNER LIABILITY PROTECTIONS

In order to qualify for one of the Landowner Liability Protections offered by the Small Business liability Relief and Brownfields Revitalization of 2001 (the "Brownfields Amendments"), the client must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. Are you aware of any environmental clean-up liens against the property that are filed or recorded under federal, tribal, state, or local law? (40 CFR 312.25) ☐ Yes ☑ No

   If no, have you or will you conduct a search for any environmental cleanup liens against the property that are filed or recorded in a registry? ☐ Yes ☑ No

   If yes, please provide Petra with this information. _____
   _____
   _____

   If no, do you require Petra to complete this task? ☑ Yes ☐ No

2. Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place on or for the site and/or have been filed or that environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law? (40 CFR 312.25) ☐ Yes ☑ No

   If no, have you or will you conduct a search for any AULs against the property that are filed or recorded in a registry? ☐ Yes ☑ No

   If yes, please provide Petra with this information. _____
   _____
   _____

   If no, do you require Petra to complete this task? ☑ Yes ☐ No

3. As the user of this Environmental Site Assessment, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the potential chemicals and processes used by this type of business?

   ☐ Yes ☑ No

   If yes, please provide Petra with this information. _____
   _____
   _____

PETRA GEOSCIENCES, INC.
40880 County Center Dr., Suite R, Temecula, CA * (951) 600-9271 * (951) 719-1499

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? ☐ Yes ☑ No

   If you conclude that there is a difference, have you considered whether the lower purchase price is because of any environmental concerns are known or believed to be present at the property?
   ☐ Yes ☐ No

   If yes, please provide Petra with that information. _____

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of hazardous materials/chemical releases or threatened releases? For example,

   A. Do you know the past uses of the property? ☑ Yes ☐ No

   If yes, please provide Petra with the information. Agricultural

   B. Do you know of specific chemicals that are present or once were present at the property?
   ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

   C. Do you know of spills or other chemical releases that have taken place at the property?
   ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

   D. Do you know of any environmental cleanups that have taken place at the property or adjacent properties? ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

6. As the user of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?
   ☐ Yes ☑ No

   If yes, please provide Petra with the information. _____

RESUMES

JONATHAN CAIN

MR. JONATHAN CAIN
Title: Senior Project Geologist

EDUCATION
BS, Geology, Radford University, Radford, Virginia

Mr. Cain has been in the field of Engineering Geology since 1984. As a project manager he has supervised field personnel and coordinated outside services for implementing geologic and geotechnical investigations for numerous new and/or forensic (distress) site evaluations. His projects have included geotechnical evaluations of hillside and flatland sites, landslide and fault evaluations along with evaluation of damages caused by consolidation or expansive soil conditions and moisture emissions through concrete slabs. Mr. Cain has also managed and conducted numerous environmental projects with special emphasis on Phase I Environmental Site Assessments and Phase II Soil and Groundwater Assessments for vacant, residential and commercial properties.

SELECT PROJECT EXPERIENCE

Environmental Investigations
- Phase I and Limited Phase II investigation, March 2012, KB Homes, Hollywood Beverly Christian Church, Hollywood
- Phase I and Phase II Investigation, January 2012, Meridian Land Development, Casa Blanca Ranch, Yucaipa
- Limited Phase II near-surface soil investigation, September 2011, Long Beach Unified School District, Newcomb Academy, Long Beach
- Limited Phase II near-surface soil investigation, September 2011, Long Beach Unified School District, Roosevelt Elementary School, Long Beach
- Phase I site assessment, July 2011, Castle & Cooke, Lake Elsinore Outlet Mall, Lake Elsinore
- Phase I site assessment, November 2010, Carlsbad Volvo Dealership, Carlsbad
- Phase I site assessment, August 2010; TRS Consultants, Shadow Run Project, Pauma Valley
- Phase I site assessment and report preparation, August 2010; Ryland Homes, Alberhill Ranch Project, City of Lake Elsinore
- Phase I site assessment and report preparation, August 2010; KB Home, Paradiso Project, Indio
- Phase I site assessment, July 2010; Meritage Homes, Rancho 23 Project, Rancho Cucamonga
- Limited Phase II site assessment, July 2010; TRS Consultants, Brisa Del Mar Project, Bonsall

Forensic Distress Investigations
- Big Rock Mesa Landslide, Malibu
- Via Allegre Landslide, San Clemente
- Leighton Street Landslide, Oahu, Hawaii
- Temple Hills Landslide, Laguna Beach
- Crown Cove Landslide, Laguna Beach
- Avenida de Santiago Landslide, Anaheim Hills

JONATHAN CAIN

Public Agency
- Ocean Beach Bikeway Extension, City of San Diego, San Diego

Educational Facility
- Extensive Fault Investigations, Mt. San Jacinto College Community College District, Menifee

Entertainment/Hospitality
- Design of Soldier-Pile Retaining Wall for Proposed Casino/Resort/Hotel, Jamul Band of Indians, Jamul

Transportation
- Geotechnical Investigation, Mariposa Avenue Bridge and Corrine Way Bridge, Tract 22100, KB Home Costal, Inc., Mockingbird Canyon Area, Riverside County
- Geotechnical Investigation, Nordahl Road Bridge, City of Escondido, San Diego County
- Ocean Beach Bikeway Extension, City of San Diego, San Diego County

Mass Grading
- Sweetwater Ranch Development, Classic Pacific Homes, French Valley Area, Riverside County
- Centex Hemet Development, Centex Homes, City of Hemet, Riverside County
- Bridle Creek Development, William Lyon Homes, Inc., Mockingbird Canyon Area, Riverside County
- Alicante Development, KB Home Costal, Inc., Mockingbird Canyon Area, Riverside County
- Nandina Limited Edition Estate Homes, Flatiron Land Company, Inc., Mockingbird Canyon Area, Riverside County
- Artisan San Jacinto, Artisan Communities, City of San Jacinto, Riverside County

Residential
- Geotechnical Investigation, Approximately 9.5-Acre Site, Darling Development Group, Mockingbird Canyon Area, Riverside County
- Geotechnical Investigation, Approximately 45.6-Acre Site, Pelican Homes, Cajalco Road, Lake Mathews Area, Riverside County
- Geotechnical Investigation, Approximately 40.5-Acre Site, Vista Ranch Development LLC, Woodcrest Area, Riverside County
- Geotechnical Investigation, Proposed Borrow Area Adjacent Tract 31118, Classic Pacific Homes, French Valley Area, Riverside County California
- Geotechnical Investigation, Gavalin Hills, Baker & Baker, Lake Mathews Area, Riverside County

SIAMAK JAFROUDI

DR. SIAMAK JAFROUDI
President
Principal-in-Charge

EDUCATION
PhD, Geotechnical Engineering, 1983,
UC Davis
MS, Civil Engineering, 1978, UC Davis

REGISTRATIONS
Civil Engineering, California, PE 36641
Geotechnical Engineer, California, GE 2024
Environmental Assessor, REA 01655

PROFESSIONAL SUMMARY
Dr. Jafroudi has over 34 years of professional experience in geotechnical engineering. His area of specialization is “material characterization” in relation to slope stability evaluation, liquefaction analysis, pavement design, collapse potential, earth retaining structures and earthquake engineering. Dr. Jafroudi’s experience encompasses the design and supervision of a multitude of soil mechanics laboratory tests and drilling programs. With a broad range of project experience, he has served as a Principal Engineer on several key projects for such clients as school, university and college districts, public agencies; transportation agencies; residential and commercial developers, as well as private sector clients.

Acquiring a doctorate degree in Geotechnical Engineering as well as a Master of Science degree in Civil Engineering, Dr. Jafroudi maintains extensive working knowledge and experience with respect to these challenging fields. Dr. Jafroudi is a Registered Geotechnical Engineer (GE), a Registered Environmental Assessor (REA), and is registered in Civil Engineering (PE), all in the state of California. Additionally, he is an active member of the American Society of Civil Engineers, the Earthquake Engineering Research Institute and California Geotechnical Engineering Association.

SELECTED PROJECT EXPERIENCE

Environmental Site Assessments
- KB Homes, Hollywood Beverly Christian Church, Hollywood
- Castle & Cooke, Lake Elsinore Outlet Mall, Lake Elsinore
- Covina Transit Plaza, Foothill Transit, Covina
- First Street Bridge Widening, Los Angeles County
- Overland Street Bridge Improvements, Los Angeles County
- 801 Office Tower, Mani Brothers, Los Angeles
- Harmony Grove Site Acquisition, New Urban West, San Diego County
- Site Acquisitions, County of Los Angeles Office of Education, Los Angeles
- Eleven Projects, City of Mission Viejo, Mission Viejo
- Site Acquisitions, Paramount USD, Paramount
- Site Acquisitions, Santa Ana USD, Santa Ana
- Site Acquisition, Nevis Construction, Chino Hills
- Site Acquisitions, Moreno Valley USD, Moreno Valley
- Corona Farms, Confidential Client, Corona
- Amusement Park, Confidential Client, Orange County
- Nursery Site, Confidential Client, Sylmar

Dear Mr. Cain:

The **analytical results** for the soil samples, received by our laboratory on September 8, 2021, are attached. The samples were received intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager
