No additional parties may use the information contained in this report without obtaining the written permission of Roux or the User. Roux' duties and obligations extend to the User and to no other party. Roux' duties and obligations to the User are not transferable to persons, corporations, or organizations without the express written consent of the User and Roux. The User may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Roux will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

This Phase I ESA report must be read and interpreted as a whole and can only be considered representative of the conditions of the Site as of the date of our site reconnaissance described herein. Roux makes no representation whatsoever concerning the condition of the Site beyond the date of our site reconnaissance described herein. Individual sections and appendices of this report are dependent on the balance of this report, and on the terms, conditions, and stipulations contained in the proposal and written amendments accepted by Roux.

2. Site Description

2.1 Site Location and Description

Site Information	
Street Address(es)	14143-14273 Washington Avenue
City	City of San Leandro
County	Alameda County
State	California
Location	Situated along the west side of Washington Avenue, north of the intersection with 143rd Street.
Assessor's Parcel Number (APN)	As shown on Figure 2: • Parcel 1: 77B-1222-3-3 – associated with current addresses 14143 and 14143-A Washington Ave. • Parcel 2: 77B-1222-4-3 – associated with current address 14173 Washington Ave. • Parcel 3: 77B-1222-5-3 – associated with former address 14193 Washington Ave. • Parcel 4: 77B-1222-6-15 – associated with former address 14251 Washington Ave. • Parcel 5: 77B-1222-6-17– associated with current address 14273 Washington Ave. • Parcel 6: 77B-1222-6-18 – associated with current address 14273 Washington Ave. • Parcel 7: 77B-1222-6-19 – associated with current address 14273 Washington Ave.
Site Acreage (per City of San Leandro Zoning)	3.48 acres
Site Occupant(s)	• Residence and Zermeno's Custom Ironwork at Parcel 1 • Residential at Parcel 2 • Vacant property at Parcels 3 through 7
Onsite Operations	Parcels 1 and 2 are residential and also occupied by Zermeno's Custom Ironwork. Now vacant, the most recent tenant at 14273 Washington Avenue was Apollo Motorhome Holidays, an RV rental and storage facility, which included a vehicle wash area, reception/office area and maintenance garage.
Description of Onsite Structures	As shown on Figure 2: • Building A – Office and Shop for former RV rental operation • Building B – Wash area for former RV rental operation • Building C – Residence and detached garage at 14173 Washington Avenue • Building D – Residence at 14143 Washington Avenue • Building E – Zermeno's facility consisting of several simple metal structures and containers at 14143-A Washington Avenue
Site Paving	Concrete and asphalt in moderate to poor condition. Bare soil in areas of Parcels 1 and 2.

Site Information	
Site Grading	Graded to drain at a gentle slope roughly to the southeast
Site Vicinity	Mixed commercial/industrial with limited residential

Refer to Section 5.0 for a detailed description of the current condition of the Site and operations.

2.2 Vicinity General Characteristics

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table.

Direction from Site	Improvements / Use (Addresses)
North	Light industrial operations including S&S Automotive, Pro-Smog Complete Auto Repair, and San Leandro Auto Upholstery
Northeast	Washington Avenue followed by light industrial operations including Island Auto Towing and Auto Repair
East	Washington Avenue followed by Larson Bro's Lumber and Public Storage
South/Southeast	Clarks Home and Garden with a storage yard containing masonry, stone, rocks mulch and other landscaping materials
Southwest	Railroad followed by industrial operations including A Beacon Roofing Supply Company and City of San Leandro Public Works. Further southwest is residential neighborhood
West	Railroad followed by a light industrial business park containing multiple distribution warehouses

2.3 Past Use of the Site

Roux performed a review of historical sources including topographic maps (Appendix B), aerial photographs (Appendix C), and city directories (Appendix E) obtained from Environmental Data Resources, Inc. (EDR).

Based on this review, the Site was initially undeveloped as early as 1899, although the Western Pacific Railroad line and present-day Washington Avenue are mapped to the west and east of the Site location, respectively. The Site was first developed with at least two rural residences in 1939 and an additional two rural residences by 1946 (Parcels 1, 2 and 3). During this period between the 1930s through the early 1960s, it appears that portions of the Site, specifically the southern portion, were possibly used for limited agricultural purposes. City directory listings for the Site during this time indicate the occupants were private citizens. In the late 1990s, the former residence at Parcel 3 appears to have been demolished and was eventually paved over. Two historical residences remain on Site at Parcels 1 and 2. Located behind the residence on Parcel 1 is Zermeno's Custom Ironworks, which has reportedly been operating on Site since the early 2000s.

By the mid-1960s, the Site was developed with two new structures in the southeast portion of the Site along Washington Avenue. Building A, the office and repair shop structure was constructed in the southeast corner and was originally associated with San Leandro Rental Services or United Rentals (which encompassed Parcels 3, 5, 6 and 7 at the address 14273 Washington Avenue) starting in 1965 to circa 2002. A second

smaller structure was constructed on Parcel 4 (address 14251 Washington Avenue) and was associated with the Big C Tavern, a cocktail lounge/bar, from approximately 1965 to 1999. This structure on Parcel 4 was reportedly demolished in 2001 and the property was then utilized by the equipment rental operations.

The Site appeared to transition to the RV rental operations around 2009; which occupied the majority of the Site, with the exceptions of Parcels 1 and 2. At the time of the Site reconnaissance, the 14273 Washington Avenue portion of the Site was vacant.

2.4 Physical Setting

Roux obtained and reviewed published, reasonably ascertainable information concerning the physical setting of the Site. The following is a summary of the information reviewed from those physical setting sources.

Physical Setting Summary	
United States Geological Survey (USGS) Topographic Map	San Leandro, California Quadrangle
Approximate Site Elevation / Source	39 feet above mean sea level (msl) / San Leandro, California (2012) 7.5-minute quadrangle topographic map published by the USGS
Nearest Surface Water Features / Approximate Distance	Chabot Lake is situated approximately 2.3 miles east of the Site and the San Francisco Bay is situated approximately 2.5 miles west of the Site.
Regional Geology / Source	The Site is located in the San Francisco Bay Region, which is comprised of alluvial and marine sediments including Bay Mud, the Merritt Sand and Younger and Older Alluvium / Phase I ESA – 295 139th Avenue, San Leandro (Basics, 2015)
Site Topography / Source	Generally flat with a gradual slope to the southeast / Site observation and USGS topographic map
Hydrogeological Region / Source	Located in the East Bay Plain of the Coast Ranges physiographic province. The East Bay Plain is an area of flat alluvial lowlands and bay and tidal marches lying between the bedrock hills of the Diablo Range to the east and San Francisco Bay to the west. Near the Site area, the eastern boundary of the plain is located along the Hayward fault, which is at the base of the Diablo Range escarpment, about a mile to the northeast. / *Report of Well Installation – Palace Garage 14336 Washington Avenue, San Leandro, CA 94566* (ALLCAL, 2000).
Depth to Groundwater / Source	Approximately 18 to 20 feet bgs / Phase I ESA – 295 139th Avenue, San Leandro (Basics, 2015) Groundwater was encountered at approximately 19 feet bgs in the 1997 investigation by ALLCAL (ALLCAL, 1997) Groundwater was encountered at approximately 17-20 feet bgs in the March 2021 Limited Phase II Investigation conducted by Roux (Roux, 2021)
Groundwater Gradient Direction / Source	West-southwest / Groundwater monitoring data for multiple nearby sites

Physical Setting Summary	
Onsite Soil	Previous investigations on Site have generally described conditions as clayey silt and sandy silt. Soils encountered during the March 2021 Limited Phase II Investigation conducted by Roux were generally comprised of clay and poorly graded sand, fine to medium grain in size (Roux, 2021) Investigations performed at a nearby Site (219 139th Avenue to the north) reported silty clays to approximately 5 feet bgs, followed by sandy-clays to approximately 10 feet bgs; and followed by silty clays to approximately 18 feet bgs. A sand layer was encountered at approximately 18 to 22 feet; followed by sandy clay to approximately 50 feet bgs / Phase I ESA – 295 139th Avenue, San Leandro (Basics, 2015)

3. Sources of Information

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; a walkover survey of the Site and adjoining properties; in-person discussions with User and tenant personnel; a review of records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and other records available from commercial and online sources.

3.1 Historical Sources

To help understand the history of the Site and past land uses, historical sources were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. The sources and locations within the Appendices are provided in the table below.

EDR Historical Sources		
Historical Range	**Source**	**Appendix**
1899 - 2016	U.S. Geological Survey Topographic Maps	B
1939 - 2016	EDR Aerial Photographs "Decade Package" Google Earth	C
No Available Coverage	EDR "Certified Sanborn® Map Report"	D
1950 - 2017	EDR "City Directory Image Report"	E

3.2 Site Reconnaissance

Roux conducted three separate Site reconnaissance visits for the Site: February 9, 2021; February 12, 2021; and August 11, 2021. On February 9,2021, Roux personnel observed the interiors of all structures, with the exception of some shop areas that were part of the Zermeno's facility due to safety precautions. During the visit, Roux interacted with the Seller/Owner representative, Mr. Tom Damaschino. Roux personnel revisited the Site on February 12, 2021 and was provided access to the operations present at 14143-A Washington Avenue, currently Zermeno's Custom Ironworks. Mr. Al Zermeno, owner of Zermeno Custom Ironworks, provided access to the rear portion of Parcel 1. Both Mr. Damaschino and Mr. Zermeno provided limited information regarding recent operation of the Site, which is referenced, as appropriate, throughout the remainder of this Phase I ESA report and provided permission for Roux to document the Site reconnaissance with photographs. On August 11, 2021 Roux personnel toured the Site again to investigate potential changes that might have occurred with Site operations since the last Site reconnaissance on February 12 in order to finalize the Phase I ESA Report with Site information collected within the past 180 days.

3.3 Regulatory Agencies

Roux contacted governmental agencies for reasonably ascertainable information concerning environmental conditions at the Site. Roux contacted or reviewed information from the agencies provided in the following table. Refer to Appendix G – Regulatory Records Documentation for copies of the records reviewed. A summary of the information gathered from the regulatory agencies is provided in the table and details regarding the records were incorporated into applicable sections as noted.

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
Federal				
U.S. Environmental Protection Agency (EPA) – Envirofacts	8/30/2021	N/A	Apollo Motorhome Holidays – Handler ID: CAC003076712	3.3.1
U.S EPA MyProperty Database	8/30/2021	N/A	Apollo Motorhome Holidays – Registry ID: 110065372723 San Leandro Rental – Registry ID: 110065204727 Zermenos Custom Ironworks – Registry ID: 110065417686	3.3.1
National Pipeline Mapping System (NPMS) Online Database	8/31/2021	N/A	An active natural gas pipeline travels along Washington Avenue adjacent to the Site. Pipeline ID 11176.	
State				
State Water Resources Control Board (SWRCB): GeoTracker Online Database	8/31/2021	N/A	The Site contains a listing for San Leandro Rental and is listed as a leaking underground storage tank (LUST) Cleanup Site (GeoTracker ID T0600101191) that was completed/closed as of 7/8/1997. Records provided include documents pertaining to the testing and removal of former USTs on Site.	3.3.2
SWRCB: Storm Water Multiple Application and Report Tracking System (SMARTS) Online Database	8/31/2021	N/A	The Site contains a former listing for United Rentals (WDID 2011018349). The status of the stormwater permit for the Site is shown as Terminated.	3.3.6
Department of Toxic Substances Control (DTSC)	8/31/2021	Pending	A response has not been received as of this report date.	
DTSC: EnviroStor Online Database	8/31/2021	N/A	No records were associated with the Site.	
DTSC: Hazardous Waste Tracking System (HWTS) Online Database	8/31/2021	N/A	Several documents tracked the types and quantities of hazardous waste transported off Site for disposal between 1995 and 2013.	3.3.3

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
California Air Resources Board (CARB)	2/2/2021 8/31/2021	2/5/2021 Pending	Roux conducted a records request in February 2021 and no records were associated with the Site. The records request was re-submitted in August 2021 and an updated response has not been received as of this report date.	
California Office of Environmental Health Hazard Assessment (OEHHA)	2/2/2021 8/31/2021	2/15/2021 Pending	Roux conducted a records request in February 2021 and no records were associated with the Site. The records request was re-submitted in August 2021 and an updated response has not been received as of this report date.	
California EPA (CalEPA) Regulated Site Portal	8/31/2021	N/A	San Leandro Rental – Source System ID T0600101191 Apollo Motorhome Holidays – Source System ID 10159957 Zermenos Custom Ironworks – Source System ID 10630429	3.3.2 3.3.7 3.3.7
CalEPA CalRecycle	2/2/2021 8/31/2021	2/8/2021 Pending	Roux conducted a records request in February 2021 and no records were associated with the Site. The records request was re-submitted in August 2021 and an updated response has not been received as of this report date.	
CalEPA CalRecycle Solid Waste Information System (SWIS) Online Database	8/31/2021	N/A	No records were associated with the Site.	
State of California Department of Conservation: Division of Oil, Gas and Geothermal Resources (DOGGR) Online Database	8/31/2021	N/A	No on-site or nearby oil wells identified.	
County / Regional				
San Francisco Bay Regional Water Quality Control Board (SFB RWQCB)	2/2/2021 8/31/2021	2/9/2021 Pending	Roux conducted a records request in February 2021 and no records were associated with the Site. The records request was re-submitted in August 2021 and an updated response has not been received as of this report date.	
Bay Area Air Quality Management District (BAAQMD)	2/2/2021 8/31/2021	2/10/2021 9/2/2021	The User and BAAQMD provided BAAQMD-related documents for the Site including permits to operate.	3.3.4
BAAQMD Facility Information Detail (FIND) Online Database	8/31/2021	N/A	No records were associated with the Site.	
Alameda County Public Works Agency	2/3/2021	2/3/2021	No records were associated with the Site as the parcels are within the jurisdiction of the City of San Leandro.	

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
City / Local				
City of San Leandro: Various Departments	2/2/2021 8/31/2021	2/9/2021 8/31/2021	The City allowed Roux to review several records associated with the Site. Pertinent records are discussed below.	3.3.5
Alameda County Department of Environmental Health (ACDEH) – Land and Water Protection – Onsite Wastewater Treatment Systems (OWTS)	2/3/2021 8/31/2021	2/5/2021 Pending	ACDEH provided two *Waste Tire Survey & Inspection Report Survey Forms* dated 11/24/2010 that indicate the United Rentals tenant ceased operations and the new tenant, Apollo RV Rentals has opened at 14273 Washington Ave. The reviewed documents do not indicate an environmental concern. A records request was resubmitted in August 2021 for the period between February 2021 and August 2021 and an updated response has not been received as of this report date.	

3.3.1 USEPA Envirofacts and MyProperty Databases

Previous occupant at 14273 Washington Avenue, Apollo Motorhome Holidays (ID 110065372723) was identified in the CA-ENVIROVIEW system for the hazardous waste program and in the RCRA Information System for hazardous waste generation. Previous occupant San Leandro Rental (ID 110065204727), was identified in the CA-ENVIROVIEW system for a LUST case, discussed below.

The current occupant at 14143 Washington Ave, Zermeno's Custom Ironworks (ID 110065417686) was identified in the CA-ENVIROVIEW system.

3.3.2 SWRCB: GeoTracker Online Database

The Site contains a listing for San Leandro Rental (GeoTracker ID T0600101191), which was a LUST Cleanup Site. The case is reported as *Completed – Case Closed as of 7/8/1997.* Two document packages were available on GeoTracker and contain several documents related to the removal of USTs including laboratory reports, permits, diagrams and leak tests. These GeoTracker-provided documents are included in Appendix G.

In addition to documents reviewed on GeoTracker, Roux reviewed records provided by the Client and from the City of San Leandro, as discussed below in Section 3.3.5. Given the various, and often redundant, sources regarding former USTs on the Site, Roux has provided a historical summary of each known UST in this section.

Records indicate that the City of San Leandro Fire Department (SLFD) was the lead regulatory agency responsible for UST permitting and removals, with the SFB RWQCB as the secondary agency.

Tank #1 – a 1,000-gallon diesel UST installed in 1964 along with a dispenser and pump at a location adjacent to the sidewalk of Washington Avenue and south of the former Big C Lounge. This location was north of the western portion of Building A and was installed by San Leandro Rentals. Tank #1 was removed on January 7, 1991 by Scott Company. It is reported that soil samples were collected from the floor of the tank excavation and analyzed for total petroleum hydrocarbons as diesel (TPH-d) and for benzene, toluene, ethylbenzene, and xylenes (BTEX). Soil contamination was detected and as a result, an Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report was filed with the SLFD. On January 17, 1991, the contaminated soil was excavated to a depth of about 20 feet (width of excavation is unknown) and soil samples collected from the excavation floor detected TPH-d at concentrations up to 1,000 ppm. Following this work, no further remedial work was conducted, the excavation was closed and excavated contaminated soil was stockpiled at the rear of the property. This area was re-excavated in April 1992 by J. Quarle & Associates (Quarle). The new excavation reached a size of about 50 by 70 feet, however, the depth of this excavation is unknown. Confirmation soil samples collected by Quarle in June, 1992 detected TPH-gasoline (TPH-g) and TPH-d at concentrations up to 100 ppm and 1,300 ppm, respectively. Excavated soil was stockpiled on Site and the excavation was backfilled with imported material.

Tank #2 – a 1,000-gallon diesel UST installed by San Leandro Rentals closer to Building A along with a new dispenser island and two service pumps in 1971. In addition, a new vent and product line were connected to Tank #1. Records indicate that the pump and island at Tank #1 was removed around this time.

Tank #3 – a 5,000-gallon gasoline UST installed adjacent to Tank #2 and connected to the existing pump network in 1974. This tank was also installed by San Leandro Rentals.

Tanks #2 and #3 were removed by Quarle on April 7, 1992. The underground piping that led to former Tank #1 was also removed. Confirmation soil samples were collected from both tank excavations and the pipeline trench and analyzed for TPH-g, TPH-d and BTEX. It is reported that the results from these confirmation samples were nondetectable, with the exception of 460 ppm TPH-d in the soil sample collected in the pipeline trench adjacent to the Tank #1 excavation area, leading to the excavation discussed above. The excavation pits and pipeline trench were backfilled on April 10, 1992. Approximately 2,450 cubic yards of excavated soil were disposed of at either Redwood Landfill Inc. located in Novato, California or at Altamont Landfill and Resource Recovery Facility located in Livermore, California.

Although available records on GeoTracker do not provide closure documents, other records reviewed show that the SFB RWQCB provided a Closure Letter for three of the four USTs dated June 17, 1997 which states, "no further action related to the underground tank release is required". The City of San Leandro, the lead agency, recommended closure of the LUST case to the SFB RWQCB in a letter dated June 11, 1997.

Tank #4 – a reported 550-gallon waste oil UST was located behind Building A along the southern property line. Roux has not reviewed any records indicating when this specific UST was installed and has only reviewed records of its removal in 1998 by Quarle. The Underground Tank Removal letter prepared by Quarle is summarized in Section 7.2 below, but Roux has not reviewed any documentation indicating that this specific UST, Tank #4, received formal regulatory closure from either the SLFD or the SFB RWQCB.

3.3.3 DTSC HWTS

San Leandro Rental (CAL000060805), formerly located at 14273 Washington Avenue, generated the following wastes: aqueous solution with organic residues (code 134) in 1995; waste oil and mixed oil (code 221) in 1995, 1996 and 1999; and "other empty containers greater than or equal to 30 gallons" (code 512) in 1998. The total hazardous waste generated by San Leandro Rental was less than three tons. San Leandro Rental was also associated with ID numbers CAC000544944 and CAL000188243, although no additional information on generated waste was provided.

United Rentals Inc #053 (CAL000171535), formerly located at 14273 Washington Avenue, generated the following wastes: waste oil and mixed oil (code 221) in 2008; unspecified oil-containing waste (code 223) in 2004; off-spec, aged or surplus organics (code 331) in 2008; and other organic solids (code 352) in 2004, 2005 and 2008. Federal RCRA waste codes categorized waste generated in 2008 as ignitable, chromium, lead, and methyl ethyl ketone (MEK). The total hazardous waste generated by United Rentals ranged from less than 1 ton to 1.2 tons. United Rentals was also listed with ID number CAC001087592; although no additional information on generated waste was provided.

Apollo Motorhome Holidays, LLC (CAC003076712), formerly located at 14273 Washington Avenue, is listed for a temporary ID, although no additional information on generated waste was provided.

Apollo Motorhome Holiday (CAL000373875), formerly located at 14273 Washington Avenue, is listed for a permanent ID, although no additional information on generated waste was provided.

R.L. Stevens Company (CAC002739079), formerly located at 14273 Washington Avenue, generated hydrocarbon solvents (code 213) in 2013. The total hazardous waste generated by R.L. Stevens Company did not exceed 0.5 tons. According to federal RCRA waste codes, 0.4587 tons of benzene was generated in 2013. Additional records reviewed suggest that the 2,000-gallon split tank AST on Site was emptied out in 2013; thus, this listing is likely associated with that activity.

No information indicating a release or mismanagement of the hazardous waste was identified in the DTSC HWTS database.

3.3.4 BAAQMD

The User provided Roux with a BAAQMD Authority to Construct Permit (Application 22626) dated June 25, 1991 for a 2,000-gallon aboveground split tank with one 1,000-gallon gasoline tank and one 1,000-gallon diesel tank. This permit was provided to San Leandro Rental. This AST is still present on Site but it is not being utilized.

3.3.5 City of San Leandro

The User provided Roux with a series of records pertaining to the Site, including documents from the City of San Leandro. The City of San Leandro also responded to the public records request and provided Roux personnel access to review several documents related to current and former Site tenants. Multiple records reviewed were from the City of San Leandro Environmental Services Section and the SLFD. Below are bullet summaries of pertinent records reviewed from the City of San Leandro for the specific addresses. Specific records are provided in Appendix G – Regulatory Records Documentation.

14273 Washington Ave (Parcels 3-7)

- 1964 – Documents and a diagram indicating that a new 1,000-gallon gasoline UST (Tank #1) and pump will be installed north of the eastern portion of Building A, near the Washington Avenue entrance.

- 1971 – Documents and a diagram indicating that a new 1,000-gallon UST (Tank #2) and new dispenser island with two pumps will be installed closer to Building A.

- 1974 - Documents from the SLFD indicating the installation of a new 5,000-gallon UST (Tank #3) to be connected to the existing fuel island is in 1974.

- 1982 - Approval from the City of San Leandro, dated March 10, 1982, for the installation of one propane tank.

- Periodic Fire Safety Inspection Reports from the late 1970s to early 1990s

- 1992 – Permit for the removal of Tanks #2 and #3

- 1997 - Request for Case Closure Letter prepared by the City of San Leandro and dated June 11, 1997. In this letter, the City recommends that “no further action be required at 14273 Washington and the Regional Board formally close this case with a case closure letter”. This closure was for the two 1,000-gallon USTs and the one 5,000-gallon UST. The SFB RWQCB subsequently provided a Closure Letter for San Leandro Rental dated June 17, 1997 which states, “no further action related to the underground tank release is required”.

- 2003 – City of San Leandro Environmental Services Division Complaint/Illicit Discharge/Spill Report. A compliant was filed by US EPA with the statement “stormwater discharge on-going”. US EPA received a complaint from Sergio Lopez alleging an illegal stormwater discharge from United Rentals located at 14273 Washington Ave. A follow up inspection was scheduled for the week after the complaint was filed. Two sources of discharge were identified during the inspection: one in front of the property and the other toward the rear from truck and vehicle washing.

- 2012 – Facility Site Map from an Emergency Response/Contingency plan that provides storm drain locations throughout the Site.

- 2013 - Documents from 2013 indicating that the 2,000-gasllon split tank AST was emptied, cleaned and closed out.

- 2014 – City of San Leandro Environmental Services Division Complaint/Illicit Discharge/Spill Report. A complaint was filed by the Public Works Streets Staff with the statement “Sampling manhole in landscaping overflowing”. The source of the spill is identified as lateral blockage with grit from Apollo Motorhomes located at 14273 Washington Ave. The lift station for washrack discharge was plugged with grit, backing up wastewater discharge and overflowing out a wetwell into landscaping. Soapy water was observed in the landscaping.

- 2015 - Facility Closure documents from 2015 indicating that Apollo had outsourced all oil services on their vehicles since at least early 2014.

- 2018 – California Environmental Reporting System (CERS) application for Apollo Motorhome Holidays (CERS ID 10159957) for the propane AST.

- Hazardous materials and Waste CUPA Registration forms for Apollo Motorhome Holidays from Feb 2020 to March 2010.

- 2020 - Correspondence in late 2020 between the City of San Leandro Environmental Services with Apollo regarding closure of the propane AST. It does not appear that formal closure was provided by Apollo Motorhome Holidays.

For 14251 Washington Avenue (Parcel 4)

- 2001 - Permits indicating that the former structure, Big C Lounge, was demolished around 2001.

- Periodic Fire Safety Inspection reports for the former Big C Lounge.

- No records indicating an environmental concern were found related to this address and the former Big C Lounge.

For 14143-A Washington Avenue (Parcel 1)

- CUPA Registration forms or notice of delinquent payments for the Zermeno’s facility from March 2015 to Feb 2020.

- September 2015 Inspection Report by the City of San Leandro Environmental Services Division stated that there is a spray painting area but reported “ no signs of over spray on the ground”.

3.3.6 SWRCB: Storm Water Multiple Application and Report Tracking System (SMARTS) Online Database

Previous occupant at 14273 Washington Avenue, United Rentals (WDID 201I018349) was identified in the SMARTS system for an industrial stormwater permit. The stormwater permit status is listed as Terminated with a status date of 01/29/2009. The basis of termination is listed as “Closed Facility” and all closure, moving and clean-up activities have been completed.

3.3.7 California EPA Regulated Site Portal

Current occupant at 14143 Washington Avenue, Zermenos Custon Ironworks (CERS ID 10630429), is listed as a chemical storage facility in the California Environmental Reporting System. The facility has a start date of 05/29/2015 in this system with no listed end date. The chemicals listed for this tenant are oxygen, liquefied petroleum gas, carbon dioxide, argon mixed with carbon dioxide, compressed argon, and acetylene.

Previous occupant at 14273 Washington Avenue, Apollo Motorhome Holidays (CERS ID 10159957), is listed as a chemical storage facility in the California Environmental Reporting System. The facility has a start date of 7/10/2013 in this system with no listed end date. The database includes record of a compliance inspection from 10/15/2020 for Hazardous Materials Release Response Plans with the note “Site is vacant. No notice to CUPA.”. The chemical listed for this tenant is propane.

3.4 Government Databases

To document potential sources of contamination at or near the Site, a government records search was conducted by EDR. The search included local, state, and federal records for the Site and for other properties within ASTM-standard distances of the Site. The records search is summarized in Section 8.0 and a copy of “The EDR Radius Map™ Report with GeoCheck®,” dated August 12, 2021, is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were “current,” i.e., had been updated within 90 days prior to the search date.

3.5 User Provided Information

ASTM E1527-13 provides that the User perform certain tasks. The purpose of this section is to present select User-provided information that can assist in identifying possible *recognized environmental conditions* in connection with the Site. According to ASTM E1527-13, these tasks do not require the technical expertise of an environmental professional and the environmental professional generally does not perform these tasks. Roux administered a questionnaire to the User at the beginning of this Phase I ESA to assist them with these tasks. The following sections outline the parts of the questionnaire that the User completed.

3.5.1 Environmental Liens or Activity and Use Limitations

The User indicated that they have no knowledge regarding environmental liens or activity and use limitations (engineering/institutional controls) with respect to the Site.

3.5.2 Specialized Knowledge

The User did not report any specialized knowledge related to the Site, not otherwise addressed. The User provided several documents related to the Site, included but not limited to legal agreements, deeds, regulatory inspections reports, tank permits/documents, previous investigation reports and site maps.

3.5.3 Valuation Reduction for Environmental Issues

The User indicated that they have no knowledge regarding valuation reduction for environmental issues.

3.5.4 Commonly Known or Reasonably Ascertainable Information

The User did not have any knowledge regarding commonly known or reasonable ascertainable information about the Site not otherwise addressed in this Report.

3.5.5 Obvious Indicators of the Presence or Likely Presence of Contamination of the Site

The User did not have any knowledge regarding commonly known or reasonable ascertainable information about the Site not otherwise addressed in this Report.

4. Site History

This section documents the history of the Site and describes current conditions and existing or former environmental features.

4.1 Site History

The history of the Site and, to a lesser extent, the surrounding area, including previous land use, has been compiled based on information from the exhaustive list of sources provided in Section 3.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
Predevelopment History				
Pre-1900	1899	Historical Topographic Map: Hayward (15-minute)	The approximate location of the Site is undeveloped land.	The Western Pacific Railroad line is present to the west, running southeast to northwest. An unnamed road in the location of present-day Washington Avenue is present to the east. The largest area of development is to the north and southeast.
1910s	1915	Historical Topographic Map: Hayward (15-minute)	The approximate location of the Site is undeveloped land.	Same as previous topographic map description. There is a second railroad line, also labeled *Western*, that is present to the east of the Site.
1920s	No Sources Available			
Initial Site Development				
1930s	1939	EDR Aerial Photograph	There are two residential structures visible on Site, one in the northernmost portion and one in the center (near Parcel 3). Surrounding land on Site appears to possibly be used for limited agricultural purposes.	Much of the adjacent and surrounding property is agricultural use with rural residences. The Western Pacific Railroad is present to the west of the Site.
1940s	1947	Historical Topographic Map: San Leandro (7.5-minute)	The Site location is bounded by the Western Pacific Railroad on the west and Washington Avenue on the east. There are four squares indicating structures located along the eastern side of the Site. These markings resemble structures observed in the 1939 aerial photograph.	The vicinity has seen significant development to the north, east and south of the Site.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
	1946	EDR Aerial Photograph	There appears to be two new residences, for a total of four, situated between the two original residences observed in the 1939 aerial photograph. The southernmost portion of the Site appears to be agricultural, although there are a few rows of trees around the residences.	Same as previous aerial photograph description.
1950s	1948/1950	Historical Topographic Map: San Leandro (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description. The present day 880 Freeway is mapped to the west of the Site.
	1958	EDR Aerial Photograph	Conditions are similar to those described in the previous aerial photograph. There appear to be four distinct residences on Site with the southern portion possibly being used for limited agricultural use.	There is increased development in the vicinity, particularly on the property adjacent south of the Site.
	1959	Historical Topographic Map: San Leandro (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
		EDR City Directory	City directory listings for this decade list what appear to be private citizens at the addresses 14143, 14173. 14193 and 14205 Washington Avenue.	N/A
Commercial Development				
1960s	1963	EDR Aerial Photographs	Conditions are similar to those described in the previous aerial photograph. Land in the southern portion of the Site is disturbed and does not appear to be utilized for agricultural purposes.	There is increased development in the vicinity, particularly on the property adjacent east of the Site.
		EDR City Directory	City directory listings for this decade have listed what appear to be private citizens at the addresses 14143, 14173. 14193 and 14205 Washington Avenue between 1960 and 1965. In 1965, there are new listings for San Leandro Rental Services at 14273 Washington Avenue and Big C Tavern at 14251 Washington Avenue.	N/A

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
	1964/1965	Historical Records	The first UST, a 1,000-gallon diesel tank (Tank #1) is installed along with a pump and island near the Site entry from Washington Avenue, located outside the northeast corner of present-day Building A.	N/A
	1968	EDR Aerial Photographs	Available imagery is unclear; however, all four previous residences appear to be present on Site. The southernmost portion of the Site is blurry, and it is unclear if new structures associated with the equipment rental service and Big C Tavern have been constructed.	Same as previous aerial photograph description.
		Historical Topographic Map: San Leandro (7.5-minute)	In addition to the four black square indicating the four residences, there is a new marking in the southern portion of the Site that likely represents the building associated with San Leandro Rentals (present day Building A).	Same as previous topographic map description. The former Pacific railroad line to the east is being renovated to the rapid transit line.
1970s	1971/1972	Historical Records	A new 1,000-gallon UST (Tank #2) and pump island with two pumps is installed closer to Building A. Tank #1 remains in the ground but the former pump and island are removed. A vent and product line is installed between Tank #1 and Tank #2.	N/A
	1973	Historical Topographic Map: San Leandro (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description. The Western Pacific Railroad is still present along the western boundary of the Site.
	1974	Historical Records	A new 5,000-gallon UST (Tank #3) is installed near Tank #2, just north of Building A.	N/A
		EDR Aerial Photographs	There are three residences still present on Site and located in the northeast portion (Parcels 1, 2 and 3). The northwest portion of the Site now appears vacant and not maintained as part of the adjacent residences. Visible in the south portion of the Site is Building A, the office/shop building for the equipment rental operations and a small structure, identified as Big C Tavern in supporting documents (Parcel 4). Pavement around the Big C Tavern is asphalt for parking. The pavement throughout the remainder of the Site	Property adjacent to the north and south are developed with the structures resembling present-day conditions. Much of the surrounding property remains light industrial and commercial operations. There is a new railroad spur emanating from the Western Pacific Railroad line that services the property to the west of the Site.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
			appears to be asphalt and concrete with various equipment being staged on Site. Additional documents showed that a UST was located outside the southeast corner of the Big C Tavern structure. This aerial photograph shows a concrete patch in the area of this former UST.	
		City Directory	The City Directory for this decade lists private citizens at the address 14143 Washington Avenue. Big C Cocktail Lounge is listed in 1970 and 1975 at 14251 Washington Avenue and San Leandro Rental Services is listed in 1970 at 14273 Washington Avenue.	N/A
1980s	1980	Historical Topographic Map: San Leandro (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	1982	EDR Aerial Photographs	While the image provide for this photograph is blurry, the conditions appear the same as the previous aerial photograph. It does appear that the land in the northwest portion behind the residences is being utilized by the equipment rental tenant.	Same as previous aerial photograph description.
		City Directory	The City Directory for this decade lists the Big C Cocktail Lounge (or similar) at 14251 Washington Avenue and San Leandro Rental Services (or similar) at 14273 Washington Avenue	N/A
1990s	1991	Historical Records	Tank #1 is removed.	N/A
	1992	Historical Records	Tanks #2 and #3 are removed, as is the piping that led to former Tank #1. Excavation activities are conducted around the former Tank #1 area.	N/A
	1993	EDR Aerial Photograph	Same as previous aerial photograph description. Historical documents show that soil was stockpiled in the northwest corner as a result of UST removals. These soil stockpiles are visible in this aerial photograph.	Same as previous aerial photograph description.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
	1998	Historical Records	Tank #4, a 550-gallon waste oil UST located south of Building A, is removed.	
		EDR Aerial Photograph	The majority of the Site appears to be consistent with the previous aerial description; however, one residence on Parcel 3 appears to have been demolished.	The vicinity generally appears consistent with present day conditions, primarily commercial and industrial property.
	1996	Historical Topographic Map: San Leandro (7.5-minute)	There are no markings on Site indicating structures or other features.	Same as previous topographic map description.
		City Directory	The City Directory for this decade lists private citizens at the addresses 14143, 14173 and 14193 Washington Avenue. A one-time listing of Falcon Lumber & Wholesale Inc. is listed in 1992 at the address 14193 Washington Avenue. Big C Cocktail Lounge (or similar) is listed at 14251 Washington Avenue and San Leandro Rental Service is listed at 14273 Washington Avenue.	N/A
2000s	2005	EDR Aerial Photograph	The structure on Parcel 4 in the southeast portion formerly occupied by the Big C Lounge is no longer present. The area formerly occupied by a residence (Parcel 3, 14193 Washington Avenue) in the northern portion appears to be paved with concrete. There is evidence that the San Leandro Rental Service tenant has equipment staged throughout the majority of the Site (Parcels 3 through 7).	Same as previous aerial photograph description.
	2009	EDR Aerial Photograph	The Site resembles present-day conditions with Building A (office/shop structure) in the southeast corner, Building B (garage) in the center, and Buildings C and D (residential structures on Parcels 1 and 2). Now being stored on Site are RVs, consistent with the former tenant. At the northernmost residence, 14143 Washington Avenue, there are additional sheds (labeled Building E on Figure 2) located in the western portion of this Parcel 1.	Same as previous aerial photograph description.

Summary of Historical Sources				
Decade	**Year**	**Source**	**Site Description**	**Vicinity Description**
		City Directory	The City Directory for this decade lists private residences at the addresses 14143, 14173 and 14205 Washington Avenue. A new listing for 14143 Washington Avenue is Zermeno's Custom Ironworks, a current tenant. United Rentals is listed in 2000 and 2002 for the address 14273 Washington Avenue.	N/A
2010s	2012	Historical Topographic Map: San Leandro (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	2012	EDR Aerial Photograph	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	2016	EDR Aerial Photograph	The Site resemble current conditions, which are the same as the previous aerial photograph description.	Same as previous aerial photograph description.
		City Directory	The City Directory for this decade lists private residences at the addresses 14143 and 14173 Washington Avenue, but also lists Zermino [sic] Iron Works as a tenant at 14143 Washington Ave. There are no listings for the RV rental tenant.	N/A
	2020	Google Earth	A June 2020 Google Earth image shows the Site empty of previously observed RVs.	N/A

5. Current Site Conditions

Roux representatives conducted a reconnaissance of the Site and surrounding areas on February 9, 2021. During the Site visit, Roux representatives Mr. Richard Maxwell and Ms. Jessica Aguayo met with Mr. Tom Damaschino, the Seller/Owner representative. Roux revisited the Site on February 12, 2021 and spoke with Mr. Al Zermeno about the facility located in the western portion of Parcel 1 (14143 Washington Avenue). Roux also visually and/or physically observed adjoining properties from reasonably accessible locations on the Site and public thoroughfares. During the site reconnaissance, the weather was cloudy, and the temperature was approximately 62° Fahrenheit. The following sections summarize observations during the inspection. Roux was granted permission by Mr. Damaschino and Mr. Zermeno to document the Site Reconnaissance with photographs. These photographs are provided in Appendix I.

During the Site visit, Mr. Damaschino suggested that the current Owner, Mr. Victor Baldi, would be able to answer several questions about the Site history. Roux presented a series of questions in email to Mr. Baldi, through the representative Mr. Damaschino on February 17, 2021. Roux received responses to several of the questions posed and those responses are incorporated throughout this Report.

Roux conducted a third Site visit on August 11, 2021 to confirm that Site operations and conditions had not substantially changed since the last reconnaissance prior to finalization of the Phase I ESA report.

5.1 Site Reconnaissance

For the purposes of this discussion, the Site is currently divided into the following three separate areas 1) Parcel 1 – 14143 Washington Avenue; 2) Parcel 2 – 14173 Washington Avenue; and 3) Parcels 3 to 7 – 14273 Washington Avenue.

Parcel 1 – 14143 Washington Avenue

This portion of the Site contains a single family residence located at the front (eastern portion) along Washington Avenue. The residence is a single-story wooden structure. In the rear portion of this parcel is Zermeno's Custom Ironworks, at the address 14143-A Washington Avenue. Mr. Zermeno, the resident and owner, stated that he has been at the property and doing ironwork for more than 20 years. The ironwork operation generally includes taking raw metal and converting it into metal fences. The facility consists of a series of simple metal roof structures and storage containers along with a small office building. The flooring, both inside and outside the buildings, consisted of a combination of concrete flooring and bare soil.

Roux observed miscellaneous paints, cleaners, and lubricating/cutting oils, all in consumer commodity sized containers throughout the facility. Housekeeping was observed to be generally poor in regard to secondary containment and proper storage of chemicals. Also observed were multiple saws, compressed air cylinders of various sizes for acetylene and oxygen, cables, multiple compressors (at least one in use and others unused), ladders, pieces of metal fence, and other miscellaneous tools and equipment. Roux observed approximately 40-50 empty 55-gallons drums that Mr. Zermeno stated were former milk or "butteroil" drums that are delivered to the Site empty and he modifies to make barbeques out of them.

Parcel 2 – 14173 Washington Avenue

This portion of the Site contains a single family residence located at the front (eastern portion) along Washington Avenue and separate garage structure in the rear (western portion). The garage structure appeared to be utilized for vehicle/equipment maintenance and storage. Roux observed an end-dump trailer parked in the driveway on pavers. Isolated spots of staining, presumably from parking of the residence's

vehicles, were observed in this driveway. An RV was parked in the rear and appears to be utilized as a semi-permanent living/work space and Roux observed sanitary wastewater discharged from the RV in the yard.

Parcels 3 to 7 – 14273 Washington Avenue

This portion of the Site is currently vacant as the most recent tenant, Apollo RVs. Building A located in the southeast portion contains a garage in the eastern half, likely used for vehicle and equipment maintenance, that is accessible from the front by four large roll up doors. The western half of Building A is a two-story structure that includes office space, a reception area, and a break/dining room. The north (front) side of Building a has an awning that was formerly the location of a fuel dispenser island serviced by Tanks #1, #2 and #3.

A second structure, Building B, is located in the center of the Site and is a tall metal-sided structure formerly used for washing the RVs. There is a large drain in the middle of the structure that leads to an oil and water separator located on the east side of the structure.

Roux observed two ASTs located outside the northwest corner of Building A. One is a split-tank 2,000-gallon (1,000-gallon oil and 1,000-gallon diesel) AST and the other is an approximately 500-gallon propane tank. Neither of these ASTs are actively used.

The majority of this Site is paved concrete in moderate to poor condition with many areas of the pavement cracked and uneven. Limited areas of staining were observed. Several large asphalt patched areas were observed indicating previous disturbances and are likely the result of deteriorating concrete that was repaired.

Also observed were several concrete features including a depressed loading dock and several retaining curbs/walls along the western boundary (Photos 35 and 36) and two concrete berms located along the south side of Building A (Photos 25). According to Mr. Baldi, the previous tenant United Rentals used the retaining walls to store sand and gravel that were part of a portable batch plant for making concrete. Mr. Baldi also identified the concrete berms at the south side of Building A as former support for an aboveground waste oil tanks. Roux has not seen any other documentation regarding those potential ASTs, and they appear to be different aboveground tanks than the waste oil UST (Tank #4) that was removed from this area in 1998.

The Site is bounded by rod iron fencing, metal chain link fencing and masonry walls. Other features observed include light poles, storm drains, traffic bollards, garbage bins and a safe.

5.2 Phase I ESA Observations

During Site reconnaissance, Roux personnel attempt to identify any environmental features that may be relevant in the context of the Phase I ESA. The features identified are summarized in the table below. Any such features are discussed in the following subsections.

Feature	Observed on the Site	Observed on an Adjacent Property	Not Observed at the Site or Adjacent Property
Areas of stressed vegetation			X
Areas which receive flood or storm water from potentially contaminated areas	X		
Air Compressors	X		

Feature	Observed on the Site	Observed on an Adjacent Property	Not Observed at the Site or Adjacent Property
Chemical Storage	X		
Drainage Swales and Culverts			X
Discharge Areas			X
Discolored or Spill Areas			X
Drums (55 Gallons or Larger)	X		
Electrical Transformers		X	
Former Agricultural Applied Pesticide Area			X
Hydraulic Lifts			X
Incinerators			X
Irregular Pavement Features	X		
Landfills or Landfarms			X
Loading and Unloading Areas	X		
Non-Contact Cooling Water Discharge			X
Oil-Water Separator(s)	X		
Open Areas Away from Production Areas			X
Process Area Sinks and Piping			X
Rail Cars/Railroad Spurs		X	
Septic Systems Leach Fields or Seepage Pits			X
Silos			X
Sprayfields			X
Storm Sewer and Spill Containment Collection System			X
Storm Water Detention Pond			X
Surface Impoundments and Lagoons			X
Underground / Aboveground Storage Tanks and Associated Piping	X		
Vapor Intrusion	X		
Waste Piles			X

5.2.1 Areas which Receive Flood or Storm Water from Potential Contaminated Areas

Multiple storm drains were observed throughout the paved areas of Parcels 3 through 7. Evidence of improper discharge was not observed in the vicinity of these features during the Site reconnaissance; however, the historical storage of equipment and vehicles throughout the Site may have resulted in releases (such as oil leaks from parked vehicles) being washed into these drainage systems during storm events. Mr. Baldi noted that gray/black water from the RVs were disposed of off-Site at a local facility called Trailer Haven in San Leandro. Based on the lack of information indicating a specific non-stormwater discharge and limited staining observed throughout the pavement, this feature is not considered to represent a significant environmental concern.

5.2.2 Air Compressors

Roux observed air compressors in the garage areas of 14273 and 14173 Washington Avenue and in the rear portion of 14143 Washington Avenue. None of these air compressors were in use at the time of the Site reconnaissance. Small amounts of hydraulic fluid may be stored within these pieces of equipment. No staining or other evidence of a release were observed in the vicinities of each compressor. Based on the lack of information indicated a chemical release, these features are not considered to represent a significant environmental concern.

5.2.3 Chemical Storage

Roux observed current chemical storage in the garages and workshop areas of 14143 and 14173 Washington Avenue. Motor vehicle fuels, propane canisters, lubricant/cutting oils, parts cleaners, miscellaneous paints, and other miscellaneous chemicals were observed primarily in consumer commodity sized containers. Roux observed limited staining of concrete in many areas where these chemicals were stored and in general, housekeeping was observed to be poor without secondary containment and open containers. In general, spills and releases from residential operations and vehicles parked on Site would likely be considered de minimis considering the quantities involved with the residence at 14117 Washington Avenue.

Considering the long term (20+ years) operation of Zermeno's Custom Ironworks that has likely included the consistent storage and use of lubricants, oils, paints and potential solvents, in addition to the relatively poor housekeeping, bare soil, drum storage, vehicle storage and maintenance, the potential risk for sustained leaks or spills of chemicals is considered higher. As a result, this facility is considered a REC in the context of this Phase I ESA.

5.2.4 Drums

Roux observed an estimated 30 to 40 55-gallon drums in the rear (western) portion of Parcel 1 behind the Zermenos facility. According to Mr. Zermeno, these drums were delivered to the Site empty and he cuts them in half and converts them into barbeques for sale. These drums are not considered to represent a significant environmental concern.

5.2.5 Electrical Transformers

Roux did not observe any electrical transformers located on-Site but did observe a pole-mounted transformer on the power poles located along Washington Avenue. Electricity to the Site appears to be provided from the power poles located off Site.

Roux did observe an emergency transfer switch located in the garage area of 14273 Washington Avenue. No staining was observed around this feature and Roux does not consider it to represent a significant environmental concern.

5.2.6 Irregular Pavement Features

Roux observed an irregular concrete cut and patch feature located at the entry of the western most roll-up door in the garage of Building A (See Photo 22). Mr. Baldi identified this area was damaged by the previous equipment rental company while testing jack hammers and was repaired.

Also observed on Site were four areas where asphalt replaced the surrounding concrete pavement. Two of these asphalt areas are located north of the western portion of Building A, one is located in the southwest corner of the Site, and the other is located in the northwest corner of the Site. It is suspected that these asphalt patches are the result of repairs to damaged or deteriorating concrete.

5.2.7 Loading and Unloading Areas

Located along the western edge of the Site is a depressed loading dock. There was no standing water in this dock and Roux did not observe any drains. The purpose of this depressed dock is unknown, and it appears that it was only utilized by the former equipment rental tenants and not the RV rental tenant. Based on the lack of information indicating a chemical release, this feature is not considered to represent a significant environmental concern.

5.2.8 Oil-Water Separator

Roux observed an oil-water separator adjacent to the east of Building B, the maintenance garage. The oil-water separator was not opened for inspection at the time of the Site reconnaissance and no information was provided by the current tenant regarding its operation. Available records and historical aerials indicate that Building B was installed around 2007 and the oil-water separator was likely installed at the same time. Given the likely presence of petroleum products within the oil-water separator, it is considered a REC in the context of this Phase I ESA as discussed in Section 9.1 below.

5.2.9 Railroads

An active and historical railroad is present outside the western boundary of the Site. Historical records reviewed indicate that this railroad has been present since pre-1900. Soils along rail ways are often contaminated with levels of heavy metals, TPH, PCBs, and/or chlorinated pesticides and herbicides. Given that the railroad appears to have always been located off-Site, but within approximately 50 feet of the western boundary, this railroad is not considered a REC in the context of this Phase I.

5.2.10 Underground / Aboveground Storage Tanks and Associated Piping

Based on a review of available records provided by the Client and downloaded from GeoTracker, four USTs previously existed on the Site. Figure 2 provides the approximate locations of each former UST.

Summaries of the installation, removal, confirmation sampling and soil excavation activities related to these USTs are provided in Sections 3.3.2 and Section 7.0.

Summary of Underground Storage Tanks								
Tank ID	Status	Year Installed	Year Removed	Capacity (gallons)	Product Stored	Location	Construction	Secondary Containment
#1	Removed	Circa 1964	1991	1,000	Diesel	North of the eastern end of Building A.	Steel	Unknown
#2	Removed	1971	1992	1,000	Diesel	North of the western end of the Building A	Steel	Unknown
#3	Removed	Circa 1974	1992	5,000	Gasoline	North of the western end of the Building A	Steel	Unknown
#4	Removed	Unknown	1998	550	Waste Oil	Alleyway behind Building A, along south boundary of Site	Steel	Unknown

Summary of Aboveground Storage Tanks						
Status	Year Installed	Approximate Capacity (gallons)	Product Stored	Location	Construction	Secondary Containment
Inactive	1991	2,000 split tank	Diesel and Gasoline	Outside the northwest corner of Building A	Steel (Trusco Supervault™)	Metal beam
Inactive	Circa 1982	Est. 550	Propane	Outside the northwest corner of Building A	Steel	None

Available records reviewed suggest that both ASTs have been inactive since the mid-2010s and that the gasoline/diesel AST was cleaned out in 2013. It is unknown if the propane AST has been emptied. Significant staining or evidence of a release was not observed at either AST. No drains or other subsurface conduits were observed in the immediate vicinity. Bulk storage on-Site does not constitutes a REC in the context of this Phase I ESA.

5.3 Vapor Intrusion

Roux performed a vapor migration/intrusion pathway assessment. Operation of multiple USTs at the Site during the equipment rental operations constitutes a known source for potential vapor intrusion. Adjoining and nearby properties (specifically former LUST sites to the southwest and southeast) may also constitute possible sources for vapor intrusion.

6. Adjoining and Nearby Properties

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table. Selected adjoining and nearby properties are shown in Figure 2. Adjoining and nearby properties with potential environmental concerns are described in subsections below as needed.

Direction from Site	Improvements / Use (Addresses)	Environmental Concerns Identified
North	Light industrial operations including S&S Automotive, Pro-Smog Complete Auto Repair, and San Leandro Auto Upholstery	While not considered an environmental concern, S&S Automotive is discussed in Section 8.1.2.
Northeast	Washington Avenue followed by light industrial operations including Island Auto Towing and Auto Repair	While not considered an environmental concern, Island Auto Towing and Auto Repair is discussed in Section 8.1.2.
East	Washington Avenue followed by Larson Bro's Lumber and Public Storage	While not considered an environmental concern, Larson Bro's Lumber is discussed in Section 8.1.2.
Southeast	Clarks Home and Garden with a storage yard containing masonry, stone, rocks mulch and other landscaping materials	While not considered an environmental concern based on the closed LUST case, Clarks Home and Garden is discussed in Section 8.1.2.
Southwest	Railroad followed by industrial operations including A Beacon Roofing Supply Company and City of San Leandro Public Works. Further southwest is residential neighborhood	The railroad is not considered an environmental concern in the context of this Phase I ESA.
West	Railroad followed by a light industrial business park containing multiple distribution warehouses	The railroad is not considered an environmental concern in the context of this Phase I ESA.

6.1 Adjoining Property

A former patio construction tenant, TE Brown Inc and Morgan Brothers Patios, was located on the parcel immediately adjacent to the southeast at the address 14301-14305 Washington Avenue. A brief history of the LUST case, related investigations, and potential subsurface contamination are discussed in depth in Section 8.1.2.

Roux did not identify any other current adjoining properties that represent a significant environmental concern to the Site. Specific details on adjoining properties listed on regulatory databases are provided in Section 8.1.2.

6.2 Nearby Property

As discussed in Section 8.1.2, historical and current properties containing potential environmental concerns are identified.

7. Summary of Key Previous Investigations

The following sections provide a summary of previous environmental investigations conducted at the Site.

7.1 Report of Soil and Groundwater Investigation (ALLCAL, 1997)

Roux reviewed a Report of Soil and Groundwater Investigation prepared by ALLCAL Environmental and dated May 14, 1997. This report was prepared for Mr. Victor Baldi Jr. of San Leandro Rental. It appears that the purpose of this report was to investigate soil and groundwater conditions at the Site, 14273 Washington Ave, following removal of three USTs and ultimately obtain site closure of the Site from the SLFD and SFB RWQCB.

This report provided a history of the three USTs (Tanks #1, #2 and #3) removed from the Site, as summarized from information provided by San Leandro Rental and from files maintained by the SLFD. Summaries of each former UST removal are provided above in Section 3.3.2.

ALLCAL submitted a Workplan for this investigation to the SLFD for their approval in April 1997. The investigation included five (5) borings to total depths of approximately 25 feet bgs, with soil samples collected from depths of 13 and 18 feet bgs and a grab groundwater sample from each boring. All soil and groundwater samples were analyzed for TPH-g, TPH-d, BTEX and Methyl tert-butyl ether (MTBE) by McCampbell Analytical, Inc. in Pacheco, California. This report and a figure showing the former UST and sample locations is provided in Appendix H.

ALLCAL reported that the laboratory analysis results for the soil samples were all non-detect, with the exception of the 18 foot sample from SB-5, which had a detection of TPH-d (8.3 ppm). ALLCAL reported that the TPH-g, BTEX and MTBE were nondetectable for all grab groundwater samples with the exception of xylenes at three locations ranging from 0.63 to 1.0 parts per billion (ppb).

TPH-d was detected in the groundwater samples from borings SB-2, SB-4 and SB-5 at concentrations ranging from 90 to 2,800 ppb. It was noted that not enough water sample was collected from the boring of SB-3 for chemical analysis for TPH-d.

ALLCAL concluded their report by recommending site closure be granted by the SLFD because: 1) the primary sources of contamination to soil and groundwater, the three former USTs and approximately 2,450 cubic yards of soil were removed and there is no evidence that sufficient product remains in the soil; 2) the mass of remaining fuel plumes will be “cleaned-up by passive bioremediation processes”; and 3) the “results of the investigation suggest there are no significant soil or groundwater BTEX plumes at the subject site, if any” (ALLCAL, 1997).

This report appears to have resulted in the Site receiving Case Closure for its LUST listing as of 7/8/1997. Given that these three USTs were removed and received regulatory closure, they are considered a hREC in the context of this Phase I.

7.2 Underground Tank Removal (J. Quarle & Associates, 1998)

Roux reviewed an Underground Tank Removal letter report prepared by Quarle and dated September 1998. This report was prepared for Mr. Vic Baldi. This letter report documented the removal of one 550-gallon waste oil tank (Tank #4) located along the southern boundary of the Site in the alleyway behind 14273

Washington Avenue (Building A). The tank was excavated and removed from the property on August 31, 1998 under the direction of the SLFD, Hazardous Materials Division (HMD). One confirmation sample was taken from the below the excavation and analyzed for TPH, BTEX, MTBE, halogenated volatile organic compounds (VOCs) and metals. As reported by Quarle, the results for the confirmation sampling were non-detect for the TPH, BTEX, MTBE, and halogenated VOC analysis and below applicable screening levels for the metals analysis.

This letter report states that the test results were faxed to Mr. Carl Buche of the SLFD MHD and, "Mr. Buche gave verbal authorization for the excavation to be backfilled" and the excavation was backfilled on September 10, 1998 with four yards of base rock. Roux has not reviewed documentation that this UST received any regulatory closure from the SFB RWQCB or if any such closure was required.

Given that this specific UST, Tank #4, does not appear to have received formal regulatory closure, it is considered a REC in the context of this Phase I.

7.3 Limited Phase II Subsurface Investigation Report (Roux, 2021)

Roux conducted a Limited Phase II Subsurface Investigation for FIRT to investigate the three RECs and one hREC identified in this Phase I ESA. The investigation also included an asbestos containing material (ACM) and other regulated materials investigation at the Site. The results of the Limited Phase II Subsurface Investigation did not identify conditions directly related to the RECs that indicate significant subsurface contamination resulting from these facilities. The ACM and other regulated materials survey identified building materials in all structures on Site that should be properly addressed by appropriately qualified professionals prior to renovation or demolition activities. The Limited Phase II Subsurface Investigation Report is included in Appendix H.

8. Database Records Review

8.1 Standard Environmental Record Sources

According to ASTM Standard E1527-13, the purpose of reviewing regulatory records is to obtain and review records that will help identify *recognized environmental conditions* in connection with the Site. In addition, some records to be reviewed pertain not only to the Site, but also to properties within an additional "approximate minimum search distance" in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The basis of the "approximate minimum search distance" is the Site boundary.

Roux retained EDR of Shelton, Connecticut to provide an ASTM Radius Map Report (EDR Report) for this Site. This report is a computerized search of select state and federal environmental databases that identify various properties with a record of environmental activity. Roux reviewed the report and summarized the relevant findings in the following sections. A copy of the compiled EDR Report has been included as Appendix F. The EDR report includes a detailed description of each of the databases searched, providing a summary of the type of information provided by each.

The following section describes the findings of the database search. Roux used professional judgement in determining which EDR-listed sites to include in the narrative of this report. Facilities adjoining the Site were included due to their proximity to the Site and the potential for surface water discharges (e.g., storm water runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater. Sites with listings indicative of a release (e.g., SHWS, LUST, RELEASE) are likewise discussed below. Nonadjacent facilities with database listings not necessarily indicative of a release (hazardous waste generator, FINDS, ECHO, NPDES, HAZNET, AST, or UST) will not be discussed unless considered potentially relevant in context of the Phase I ESA.

8.1.1 Site (Target Property)

Zermeno's Custom Ironworks, located on Parcel 1 at 14143 Washington Avenue, was identified in the California Environmental Reporting System (CERS) and FINDS databases. Zermeno's Custom Ironworks was listed as a chemical storage facility under oversight of the City of San Leandro. No violations were noted in the database and no release cases or other significant environmental concerns were noted in the provided documents.

San Leandro Rental, formerly located on Parcels 3 to 7 at 14273 Washington Avenue, was identified in the LUST, RGA LUST, CORTESE, SWEEPS UST, HWTS, HAZNET, and FINDS databases. According to the listings, San Leandro Rental operated three USTs, consisting of one 5,000-gallon gasoline tank and two 1,000-gallon diesel tanks. Additional records have identified a fourth former UST, a 550-gallon waste oil tank. Refer to Section 3.3.2 for discussion of records pertaining to the former tanks and closed LUST case for the Site. According to the HWTS and HAZNET listings, San Leandro Rental generated waste oil and mixed oil, aqueous solution with total organic residues less than 10 percent, and other empty containers 30 gallons or more. The remaining listings are associated with hazardous waste generation, former UST operation, or the LUST case. No pertinent information was provided in these databases that are not already included in this report.

United Rentals Inc. #053, formerly located on Parcels 3 to 7 at 14273 Washington Avenue, was identified in the HWTS, HAZNET, WDS, and CIWQS databases. Wastes generated by this tenant include waste oil and

mixed oil, off-specification, aged or surplus organics, and other organic solids. According to the WDS listing, United Rentals was an industrial facility with a continuous or seasonal discharge under Waste Discharge Requirements. The WDS facility status is listed as active though this operator no longer operates at the Site. According to the CIWQS listing, United Rentals was issued an industrial stormwater permit in 2003 with termination of the storm water permit in 2009. Based on the lack of information indicating a release of hazardous substances or petroleum products, these listings are not expected to represent a significant environmental concern.

Apollo Motorhome Holidays, LLC, located on Parcels 3 to 7 at 14273 Washington Avenue, was identified in the CERS, RCRA NONGEN/NLR, FINDS, ECHO, and HWTS databases. No hazardous wastes were listed, and no violations were noted. Based on the lack of information indicating significant hazardous waste generation, these listings are not expected to represent a significant environmental concern.

R. L. Stevens Company, located in Parcels 3 to 7 at 14273 Washington Avenue, was identified in the HWTS and HAZNET databases. This tenant reportedly generated hydrocarbon solvent wastes. No additional pertinent information was provided. Based on the lack of information indicating a release of hazardous substances or petroleum products, these listings are not expected to represent a significant environmental concern.

8.1.2 Adjoining and Nearby Properties

Discussions of adjoining and nearby properties of potential environmental concern are provided below.

- **TE Brown Inc and Morgan Brothers Patios (14301-14305 Washington Avenue)**, located adjacent to the southeast, were identified in the HIST UST, SWEEPS UST, CA FID UST, LUST, CORTESE, HIST CORTESE, and CERS databases. According the GeoTracker database, a release of gasoline was remediated and closed under oversight of the City of San Leandro. GeoTracker records indicate a 350-gallon gasoline tank was removed in 1991 and confirmation sampling identified elevated TPH-g and BTEX in soil. In 2004, two soil samples were collected in the approximate location of the tank excavation and analyzed for TPH-g, BTEX, and MTBE. TPH-g was reported at a maximum concentration of 72 milligrams per kilogram (mg/kg) at 15 feet bgs. BTEX and MTBE were not detected above reporting limits. Groundwater grab samples were collected from the same locations and analyzed for TPH-g, BTEX, and MTBE. TPH-g was reported at a maximum concentration of 25,000 micrograms per liter (µg/L). Other constituents identified include toluene at 17 µg/L, ethylbenzene at 930 µg/L, and xylenes at 420 µg/L. No other constituents of concern were reported in groundwater. According to the case closure summary prepared by the City of San Leandro, the groundwater impact was “limited” and soil impact was “negligible”. No further action was required by the City of San Leandro and case closure was issued in 2005. During the Site reconnaissance, Roux did not observe any indications of subsurface investigation at the former UST facility, such as patched borings or monitoring well vaults. Absent any additional information, Roux does not consider the former UST facility to be an environmental concern in the context of the Phase I ESA.

- **Miracle Auto Painting (14141 Washington Avenue),** located adjacent to the northwest, was identified in the HWTS and HAZNET databases for generation of oxygenated solvents and unspecified solvent mixture wastes. Specifically documented years of generation included in the EDR report are 1983 through 1985. No release cases or other significant environmental concerns were noted.

- **S & S Automotive (14127 Washington Avenue)**, located adjacent to the northwest, was identified in the RCRA NONGEN/NLR, CERS, and CERS HAZ WASTE. According to the CERS listing, several waste labeling and administrative violations related to hazardous or universal waste records and management were identified and were later corrected. These listings appear to be associated with

the hazardous waste handling part of auto repair operations and are not expected to represent a significant environmental concern.

- **Island Auto & Body Repair Inc. and Miracle Auto Painting (14140 Washington Avenue)**, located adjacent to the northeast**,** were identified in the RCRA NONGEN/NLR, RCRA-SQG, FINDS, ECHO HWTS, HAZNET, ECHO, EMI, CERS, and CERS HAZ WASTE databases. Island Auto & Body Repair was issued several notices of violation for hazardous waste labeling, improper waste storage/management, administrative and housekeeping violations that were later corrected. There is no indication of a specific release or spill of hazardous materials at this off-Site location; therefore, this listing and these violations are not expected to represent a significant environmental concern. Miracle Auto Painting was identified as a small quantity generator and air emissions site. No violations were noted. These listings appear to be associated with hazardous waste handling and operations of permitted equipment as part of auto repair/maintenance operations and are not expected to represent a significant environmental concern.

- **Larson Brothers Lumber (14200 Washington Avenue)**, located adjacent to the northeast, was identified in the LUST, CORTESE, HIST CORTESE, CERS, CA FID UST, SWEEPS UST, HAZNET, HWTS, RCRA-SQG, FINDS, and ECHO databases. According to information obtained from the SWRCB GeoTracker online database, a release of gasoline was remediated and closed under oversight of the City of San Leandro (ID T0600100814). According to the *Site Closure Summary* (dated June 2015), one 1,000-gallon gasoline tank was removed from the site and confirmation soil samples identified MTBE at 0.097 mg/kg and lead at 9.7 mg/kg. TPH-g and BTEX was not detected above reporting limits. Based on the low concentrations identified, the City of San Leandro determined that no further action was required and issued closure. Based on the relative distance to the Site, regulatory status, and media impacted (soil only), this nearby release case is not expected to represent a significant environmental concern.

- **Ronin Product Development Labs (14130 Washington Avenue)**, located adjacent to the northeast, was identified in the RCRA NONGEN/NLR database. No hazardous wastes violations were noted. No release cases or other significant environmental concerns were noted.

- **Engel Holdings Inc DBA Cabrillo Hoist, also listed as Superior Gunite (14160 Washington Avenue)**, located adjacent to the northeast, was identified in the RCRA NONGEN/NLR, HWTS, HAZNET, CERS HAZ WASTE, and CERS databases. No hazardous waste violations were noted. No release cases or other significant environmental concerns were noted.

- **City of San Leandro Public Works Center, Alameda County HHW Program (14200 Chapman Road)**, located adjacent to the southwest, was identified in the RCRA NONGEN/NLR, UST, SWEEPS UST, HIST UST, CA FID UST, CERS HAZ WASTE, CERS TANKS, and CERS databases. No hazardous wastes were identified in the RCRA listing. According to the UST listings, this site has been equipped with six tanks, including two 20,000-gallon gasoline tanks, one 12,000-gallon gasoline tank, one 12,000-gallon diesel tank, one 550-gallon waste oil tank, and one 550-gallon unspecified fuel tank. According to the CERS listings, one kerosene UST was removed in 2015. Information indicating removal of UST systems was not identified. Based on the information reviewed by Roux, the former UST facility has not been the subject of subsurface investigation and no documented releases have been reported. Based on the relative distance to the Site and hydrogeologically down-gradient location, this nearby release case is not expected to represent a significant environmental concern.

- **295 139th Avenue**, located approximately 270 feet to the northwest, was identified in the Alameda County CS and CPS-SLIC databases. According to the GeoTracker database, a release of petroleum hydrocarbons and VOCs is currently being assessed under oversight of the Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program (LOP). According to the most recent report (dated June 2017), the closest groundwater sampling location to the Site,

identified as SB-5, is located approximately 300 feet to the north-northwest and was last sampled in 2017. Groundwater sampling identified PCE at 5.9 µg/L at SB-5 in 2017. Soil sampling was also conducted at SB-5 in 2017; however, TPH concentrations reported were low (less than 50 mg/kg). Based on the most recent sampling information, relative distance to the Site, and hydrogeologically cross-gradient location, this nearby release case is not expected to represent a significant environmental concern.

- **DWA Plume – San Leandro (Groundwater Contamination)**, mapped approximately 800 feet to the east of the Site, was identified in the RESPONSE, ENVIROSTOR, and HIST CAL-SITES databases. Records available on the DTSC EnviroStor online database indicate this release site is located near 1799 Factor Avenue, approximately one mile west-southwest of the Site. The neighboring residential area to the southeast (along Cedar Avenue) was identified as an operable unit. According to EnviroStor records, a hydrogen release compound injection site associated with the release case was located along 139th Avenue, approximately 700 feet northeast of the Site. Based on the relative distance to the release area (approximately one mile), this nearby listing is not expected to represent a significant environmental concern.

8.1.3 Orphan Sites

The EDR Report includes a section addressing "Orphan Sites." Orphan sites are sites, which, due to incomplete geographic location data, incomplete address information or incorrect address information, cannot be plotted correctly. The database report identified five unmapped facilities.

- **City of San Leandro – Washington Station (14000 Block, Washington)** was identified in the FINDS, ECHO, and RCRA-SQG databases as a stormwater pumping station. The NAICS description code is for a sewage treatment facility. No release cases, violations, or other significant environmental concerns were noted.

- **City of San Leandro Dept Environmental Services (Intersection of Washington Avenue and Interstate 880)** was identified in the HAZNET and HWTS databases for generation of contaminated soils from site cleanup. No release cases or other significant environmental concerns were noted.

- **San Leandro Investors Group (Perauta Ave/San Leandro Blvd)** was identified in the CPS-SLIC database. This site appears to be located at the intersection of Peralta Avenue and San Leandro Boulevard, approximately 1.75 miles northwest of the Site. Based on the relative distance, this listing is not expected to represent a significant environmental concern.

- **Washington Ave Improvements Project (Washington Avenue & Lewelling Boulevard)** was identified as a CIWQS listing for an inactive stormwater permit. No release cases or other significant environmental concerns were noted

9. Findings

Roux has performed this Phase I ESA in general compliance with the scope and limitations of ASTM Standard Practice E1527-13. Roux separated the findings of this assessment into the following four categories: *recognized environmental conditions*, *controlled recognized environmental conditions*, *historical recognized environmental conditions* and *other environmental features*.

9.1 Data Gaps

During conduct of this ESA, the following data gaps, as defined in ASTM Standard E1527-13 were identified:

- The timing of the report did not allow for all contacted agencies to respond to the most recent records requests issued. This data gap is not considered significant due to sufficient information available from previous records requests, environmental reports, the EDR report, and city, county, and state websites.

9.2 Recognized Environmental Conditions

Based on the information obtained through the performance of this ESA and the March 2021 Limited Phase II Subsurface Investigation, Roux did not identify RECs in connection with the current and historical operations at the Site or adjacent properties.

9.3 Controlled Recognized Environmental Conditions

Roux did not identify known or suspected cRECs in connection with the current and historical operations at the Site.

9.4 Historical Recognized Environmental Conditions

Roux identified the following hRECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the hRECs are shown in Figure 2.

hREC 1 – Custom Ironwork Facility. Located in the western half of Parcel 1, at the address 14143-A Washington Avenue, is the facility Zermeno's Custom Ironworks (Building E on Figure 2). Consisting of several simple metal structures, this facility primarily produces iron gates and fences. According to Mr. Al Zermano, owner and resident at 14143 Washington Avenue, he has been conducting ironwork at the Site for over 20 years. The flooring, both inside and outside the buildings, consisted of a combination of concrete flooring and bare soil. Roux observed miscellaneous paints, cleaners, and lubricating/cutting oils, all in consumer commodity sized containers throughout the facility. Housekeeping was observed to be generally poor in regard to secondary containment and proper storage of chemicals. Also observed were multiple saws, compressed air cylinders of various sizes, cables, multiple inactive compressors, stock metal, and other miscellaneous tools and equipment. Considering the long term (20+ years) operation that has likely included the storage and use of lubricants, oils, paints and potential solvents, in addition to the relatively poor housekeeping, bare soil, drum storage, vehicle storage and maintenance, this facility was determined to pose a potential concern in relation to the Site. The March 2021 Limited Phase II Subsurface Investigation addressed this area and did not indicate subsurface contamination resulting from this item; therefore, this facility is considered an hREC in the context of this Phase I ESA

hREC 2 – Oil-water Separator. Roux observed a below-ground oil-water separator located south of Building B. It is estimated that this feature was installed along with Building B around 2007. Wastewater from the former wash station in Building B likely entered a floor drain in the wash bay and was discharged into the oil-water separator prior to being discharged into the municipal sewer system. The oil-water separator was not opened for inspection at the time of the Site reconnaissance and no significant staining was observed around the feature. Historical waste fluids including motor vehicle fuels, new and used engine oil, hydraulic oil, coolant, battery acid, power steering fluid, and other fluids may have been discharged into the oil-water separator during washing activities. Wastewater processed in the oil-water separator would potentially be impacted with petroleum-related products and VOCs, and therefore there is a reasonable likelihood that a release could have occurred. The March 2021 Limited Phase II Subsurface Investigation addressed this area and did not indicate subsurface contamination resulting from this item; therefore, this facility is considered an hREC in the context of this Phase I ESA

hREC 3 – Former UST without Regulatory Closure. Of the four former USTs known to have existed on Site, reviewed records indicated that three of the four USTs received regulatory closure. One UST, a reported 550-gallon waste oil tank located along the southern boundary behind Building A, was removed in 1998 under the oversight of the SLFD. Confirmation soil samples from this excavation were non-detect for TPH, BTEX, MTBE and halogenated VOCs and below applicable screening levels for metals. Roux did not review a formal closure letter from the SLFD or the SFB RWQCB for this tank; however, the Underground Tank Removal letter prepared by Quarle stated that the confirmation soil results were faxed to Mr. Carl Buche of the SLFD and, “Mr. Buche gave verbal authorization for the excavation to be backfilled” (Quarle, 1998). The March 2021 Limited Phase II Subsurface Investigation addressed this area and did not indicate subsurface contamination resulting from this item; therefore, this facility is considered an hREC in the context of this Phase I ESA

hREC 4 – Former USTs with Regulatory Closure. Three USTs, including two 1,000-gallon diesel tanks and one 5,000-gallon gasoline tank, were removed from the Site in 1991 and 1992. These USTs were utilized by the former San Leandro and United Rentals operations, likely to fill rental equipment and fleet vehicles. Historical records reviewed showed that these three USTs, referred to as Tanks #1, #2 and #3 in this Report, were removed under the oversight of the SLFD, and subsequently received regulatory closure from the SLFD and the SFB RWQCB in 1997. Upon removal of Tank #1 in 1991, contaminated soil was excavated to a depth of about 20 feet bgs and confirmation soil samples from the floor of this excavation detected TPH-d at concentrations up to 1,000 ppm. Following removal of Tanks #2 and #3 and a former pipeline trench in 1992, confirmation soil samples were generally non-detectable, with the exception of TPH-d at 460 ppm from a location in the pipeline trench adjacent to former location of Tank #1. As a result of this detection, additional excavation activities were conducted around the former Tank #1 area in 1992. The excavation reached the size of approximately 50 by 70 feet. The depth of this excavation is unknown. Final soil samples from this excavation sidewall detected TPH-g and TPH-d at concentrations up to 100 ppm and 1,300 ppm, respectively. The excavation was then backfilled. A soil and groundwater investigation conducted by ALLCAL in 1997 around the areas of these former USTs concluded that, “the results of this investigation suggest there are no significant soil or groundwater BTEX plumes at the subject site, if any”. This report noted that there were residual concentrations of TPH-g and TPH-d of 100 ppm and 1,300 ppm, respectively, and TPH-d was detected in groundwater at a maximum concentration of 2,800 ppb (ALLCAL, 1997). This investigation resulted in Site closure by the City of San Leandro and then the SFB RWQCB. Additionally, the March 2021 Limited Phase II Subsurface Investigation did not indicate subsurface contamination resulting from these facilities; therefore, this facility is considered an hREC in the context of this Phase I ESA.

9.5 Limited Phase II Subsurface Investigation

Roux conducted a Limited Phase II Subsurface Investigation for FIRT in March 2021 to investigate concerns identified in the initial Site walk and document review related to this Phase I ESA. The investigation also included an asbestos containing material (ACM) and other regulated materials investigation at the Site. The results of the Limited Phase II Subsurface Investigation did not identify conditions directly related to the concerns that indicate significant subsurface contamination resulting from these facilities. The ACM and other regulated materials survey identified building materials in all structures on Site that should be properly addressed by appropriately qualified professionals prior to renovation or demolition activities. The Limited Phase II Subsurface Investigation Report is included in Appendix H.

11. Signature Of Environmental Professional

Roux performed this assessment in accordance with the generally accepted practices for environmental assessments at the time of implementation. Roux made a reasonable effort to ensure that the information presented in this report is materially complete and accurate.

Roux completed a Phase I ESA in general compliance with the scope and limitations of ASTM Practice E1527-13 of the commercial/residential property located at 14143-14273 Washington Avenue, San Leandro, California 94578.

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312” and,

“We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

Roux performed this Phase I ESA by, or under direct supervision of, the undersigned environmental professionals.

Respectfully Submitted,

ROUX ASSOCIATES, INC.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Inquiry # 6617648.2	Contact: Caelan Murphy

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 85EE-46A3-9B31

PO # NA

Project Washington Ave - San Leandro

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 85EE-46A3-9B31

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America

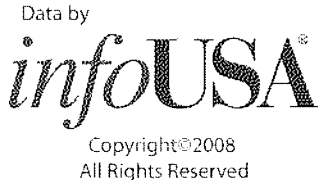
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 7

RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 9 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 17 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within

approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 8 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 6 HIST Cal-Sites sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 12 SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 26 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

APOLLO MOTORHOME HOLIDAYS, LLC (Continued) **1023248819**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	04-18-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	1) Reactivate EPA ID #CAL000371233 (1358 sent to DTSC 4/9/18). 2) Make a hazardous waste determination for liquid in the 55G drums stored near the outdoor waste enclosure and the 5G containers near gun cleaner. Dispose of hazwaste immediately and provide disposal documents w/in 30 days. 3) Properly label used oil, antifreeze, used oil filters: The hazwaste label affixed to the 180 gallon used oil tank did not have accumulation start date. Two hazwaste labels affixed

ISLAND AUTO (Continued) **S121771179**

to the wall of the enclosure had accumulation and disposal dates but no identifying information. Used oil filter drum requires label that reads "drained used oil filters" and the accumulation start date. 4) Label empty 55DMs as "empty" and manage within one year. 5) Unlabeled 5G containers in parking lot identified as waste paint/thinner; some metal containers deteriorated. Dispose of hazwaste immediately and provide disposal document w/in 30 days.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 145314
Site Name: Public Works Service Center
Violation Date: 02-02-2018
Citation: 23 CCR 16 2662(c)(1)(B) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2662(c)(1)(B)
Violation Description: Failure to install corrosion protection for USTs and/or failure of the field-installed cathodic protection system to meet the consensus standards.
Violation Notes: Returned to compliance on 08/07/2018. STP sump cardboard tubes failed & need replacement
Violation Division: San Leandro City
Violation Program: UST
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-02-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: No changes. Hazardous waste shed at the northern end of the lot looked OK. They retain the same tracking system. All containers throughout the site are in good condition and are properly labeled. They continue to keep hazardous waste records indefinitely. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-02-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last complete CERS submittal was on 6/20/17. They additionally made a facility and hazardous material inventories submittal on 1/19/18. They have a new contractor who is going to make all their future CERS submittals. Their present CERS submittals are complete and accurate. Hazardous material storage looked OK with all good containers, sealed, and labeled. No violations were observed.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-02-2018

PUBLIC WORKS SERVICE CENTER (Continued) **U001598524**

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	(A) The cardboard tubes used to isolate UST STP components and native soil are failing or have failed. T-1, OK; T-2, failing; T-3, failing; T-4 has failed. They need to be replaced with something that will work. I have suggested they switch to fiberglass sump material. (1) All UDCs were clean and dry. (2) All UDC sensors were properly positioned and tested OK. They shut off the individual STP and shut off power to the dispenser. (3) All monthly 0.2 gph tests were documented on the history report. (4) All spill buckets tested OK. (5) DO book OK. All monthly reports with attached monthly histories were present. They were keeping DO reports all the way back to 2003. (6) DO training documented. The new contact is much more familiar with his responsibilities. (7) The ATG probes were tested for high level and tested OK. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	UST
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-03-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	(1) The four remaining sumps' barriers remain in good condition with no backfill coming in contact with the STP or any other tank structures. (2) All monthly 0.2 gph tests were documented on the UST history printout. (3) All UDC sensors caused shutoff of the individual STPs. (4) All spill buckets passed their tests. (5) The DO log is up to date with all records present. (6) Training was documented. The new contact has received training from the DO. (7) The ATG probes tested OK. (8) All UDCs were clean and dry. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	UST
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-03-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Storage in the hazardous waste shed continues to look OK. Individual items are logged in and tracked to disposal. Other hazardous waste OK with proper containers, labeling, and sealed. They are keeping records indefinitely. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-03-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last CERS submission was on 3/18/16 and their next is due by 3/18/17. The current CERS submission is accurate and complete. No violations were observed.

Eval Program:	HMRRP
Eval Source:	CERS

PUBLIC WORKS SERVICE CENTER (Continued) **U001598524**

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-09-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	(1) The kerosene tank was removed on 9/28/15. (2) All four remaining USTs have a barrier installed preventing backfill from coming into contact with the individuals STPs (see I:\\pictures\\Corpyard UST Sumps). (3) All monthly 0.2 gph tests were documented on the history printout. (4) UDC sensors shut off the dispensers. (5) All spill buckets passed their tests. (6) The DO log is up to date. All monthly inspections are up to date. (7) The last annual training was done on 11/12/15. (8) the ATG probes tested OK. (9) All UDCs were clean and dry. No violations were observed.

Eval Date:	02-15-2019
Violations Found:	No

PUBLIC WORKS SERVICE CENTER (Continued) **U001598524**

Eval Type:	Routine done by local agency
Eval Notes:	(1) The STP sumps had their waxed cardboard tubes replaced with fiberglass tubes on 8/7/18. They are holding up with no problems observed. (2) All monthly 0.2 gph tests were done and documented in the past year. (3) All UDC sensors were properly positioned and tested OK. All UDCs were clean and dry. (4) All spill buckets tested OK. (5) Overfill test done during test. All went into alarm by 90%; I observed level listed on Veeder-Root panel as each went into alarm. All ATG probes have been tested annually before the October 2018 requirement. (6) The DO log is OK with all required monthly reports on file from before October 2017. (7) New DO requirements went over with facility contact. (8) All USTs and piping (all single-walled) are scheduled to be removed and replaced in 2020. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	UST
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-15-2019
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last CERS HMBP submittals were on 3/12/18 and 4/11/18. They are accurate and complete. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Other/Unknown
Eval Date:	05-01-2005
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Kerosene UST temporary closure activities observed. 1) Pumped out tank with dispenser, filled 1 & 2/3 of 55 gal drums. 2) Disconnected dispenser pump from piping and locked out electrical. 3) Locked UST fill cap.
Eval Division:	San Leandro City
Eval Program:	UST
Eval Source:	CERS
Eval General Type:	Other/Unknown
Eval Date:	09-28-2015
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	The kerosene UST was removed. The UST was mostly clean, but there was some contamination along the northeast upper corner of the UST. There was also some contamination in the pea gravel. The UST was anchored to a concrete slab. The native ground sample was taken near the northeast section of the slab (closest to the contamination). The piping run was 20 feet, but two samples were taken as some of the pea gravel seemed contaminated. All native samples looked clean with no odor. 1010 - pipeline run = 20’ 0"; 1015 - 0% LEL, 20.9% oxygen; 1055 - 8’ 8" UST sample; 1103 - 4’ 6" piping sample near building; 1109 - 5’ 0" piping sample near pit; 1130 - pea gravel sample (sampler insured some contaminated gravel was included; biased).

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status:	Completed - Case Closed
Status Date:	06/05/2018
Case Worker:	MD
RB Case Number:	01-1133
Local Agency:	ALAMEDA COUNTY LOP
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	RO0000208
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Benzene, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Toluene, Xylene
Site History:	Not all historic documents for the fuel leak case may be available on GeoTracker. Additional documents can be viewed over the Internet on the Alameda County Department of Environmental Health website (http://www.acgov.org/aceh/lop/ust.htm). Both databases should be reviewed to obtain a complete history. In February 1991 a UST, a

PALACE GARAGE (Continued) **S102434931**

dispenser, and associated piping was removed from the subject site. Overexcavation (4 5 cubic yards) is documented to have occurred thereafter. Four soil bores were installed in February 1999, three additional soil bores in March 1999, and an additional eight in July 1999. Soil and grab groundwater samples were collected to help characterize the site. Three wells were installed in May 2000, and a fourth well was installed in December 2002, along with another soil bore. Groundwater monitoring has occurred intermittently since December 2002. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: http://ehgis.acgov.org/dehpublic/dehpublic.jsp.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area looked okay. All containers were properly marked and the hazardous waste labels including generation start dates were filled out. Manifest, receipts, and other records are being kept. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS was on 9/3/14; next annual due by 9/3/15. No changes. Inventory okay. They were instructed to include all elements in their next CERS submittal. No violations were observed.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their were two unusual alarms in past year; diesel sump & gasoline sump; 11/30/14 & 2/8/15 respectively; both noted on DO log; both were rain water in sump. All sensors properly placed at the beginning and the end of the inspection; all sensors tested okay; fail safe, sensor out, and e-stop all tested okay; all sumps and UDCs were dry; both line leak detectors tested okay; DO log okay; UST forms on CERS. No violations were observed.
Eval Division: San Leandro City
Eval Program: UST
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: (1) All sensors were properly positioned at the beginning and the end of the inspection. (2) All sensors tested OK. (3) All LLDs tested OK. (4) All sumps and UDCs were dry and clean. (4) Fail safe, sensor out, and e-stop tested OK. (5) One unusual alarm in the past year on 1/19/16. It was noted on the DO and maintenance logs. It was water

RODGERS TRUCKING CO (Continued) **S104241988**

intrusion into the sump. (6) DO log complete with all monthly inspection reports along with printed set ups and alarm histories. Training logged. No violations were observed.
Eval Division: San Leandro City
Eval Program: UST
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area looked clean and orderly. All containers were in good condition, labeled properly including generation start dates, and properly sealed. Secondary containment was in good condition and it was dry within it. They are keeping manifest copies, receipts and associated paperwork indefinitely. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS submittal was on 9/3/15. The submittal was accurate. They are fully aware of CERS submittal requirements. No violations were observed.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-04-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area remains unchanged. It is covered and has secondary containment. The secondary containment was clean and dry. All containers in it were in good condition, sealed, and labeled. They continue to keep their hazardous waste records indefinitely and they were readily available. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-04-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS HMBP submittal on on 8/29/17 and the next annual is due by 8/29/17. This was gone over with the facility contact. Their HMBP is fully developed and accurate. No discrepancies were identified.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection

RODGERS TRUCKING CO (Continued) **S104241988**

Eval Date:	06-04-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	(1) All sumps and UDCs were clean and dry. (2) All sensors were properly positioned at the beginning and the end of the inspection. (3) All sensors tested OK. (4) Fail safe and sensor out tested OK. (5) All spill buckets tested OK. (6) The diesel line leak detector tested OK. (7) The unleaded line leak detector failed its initial test. It was adjusted once and it then tested OK. (8) L-2 diesel annular sensor alarms, 3 total, on 9/27/17. Sensor was replaced and tested OK and alarm cleared. It was noted on monthly DO report along with fix. (9) L-6 unleaded STP alarms on 4/6/18, 3/1/18, and 1/8/18. All due to rainwater intrusion. Water removed and alarms cleared. All alarms were noted on monthly DO report along with fix. (10) DO facility training documented. (11) All monthly DO reports present with attached alarm histories. No other UST deficiencies were observed.
Eval Division:	San Leandro City
Eval Program:	UST
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-05-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	The hazardous waste are remains unchanged. It is covered, has secondary containment, and is clean and dry. All containers were in good condition and labeled. The labels are getting worn though. They are retaining their hazardous waste records indefinitely. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-05-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last CERS HMBP submittal was on 8/25/16. They also made two CERS UST submittals on 9/22/16 and 10/20/16. The HMBP submittal is accurate. They have been making CERS submittals since 6/9/13. No HMBP violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-05-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	(1) Their last annual UST monitoring system certification was done on 6/1/16. This annual UST monitoring system certification was done on 6/5/17 and is overdue by four days. (2) Spill buckets verified to hold at least 5 gallons & tested Ok. (4) All sensors properly positioned at beginning and end of inspection. (5) Drop tube flapper valves OK. (6) All sensors tested OK. (7) Both line leak detectors tested OK. (8) Diesel annular sensor alarms on 5/4/17 and 5/1/17. Maintenance response found condensation. Dried and cleared. Note: tank is

RODGERS TRUCKING CO (Continued) **S104241988**

fiberglass. Noted on DO record and maintenance log. (9) Fail safe, sensor out, and e-stop tested OK. (10) All DO reports present along with histories. Training documented. (11) All sumps and UDCs clean and dry. (12) Secondary containment testing with no violations. Next due 6/5/20. No other violations were observed.

Eval Division: San Leandro City
Eval Program: UST
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area looked okay. It is covered and the secondary containment area was clean and dry. All containers were in good condition, sealed, and labeled. Hazardous waste records are kept indefinitely. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS HMBP submittal was on 9/18/18. It was full and complete. Their next submittal is due by 9/18/19 and was documented on the 6/5/19 inspection report. No HMBP violations were observed.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-05-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: (1) All sumps and UDCs were clean and dry. (2) All sensors were properly positioned at the beginning and the end of the inspection. (3) All sensors tested OK. (4) The unleaded line leak detector needed adjustment to pass. The facility contact was told that an additional failure in the future would require the LLD to be replaced. The diesel LLD passed on its first attempt. (5) Both spill buckets passed their tests and both verified to hold 5 gallons. (6) The overfill test was done on this day. Both USTs use flapper valves. The diesel flapper actuated at 93% full and the unleaded actuated by 95% full. (7) The only unusual alarms in the past were all with L6, unleaded STP sump. They were all caused by rainwater intrusion and were all documented with fix on applicable DO monthly report. (8) DO facility training documented. (9) All DO monthly inspection records since 1/26/16. (10) Fail safe and sensor out tested OK. (11) No UST violations.

Eval Program: UST
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-06-2014
Violations Found: No

RODGERS TRUCKING CO (Continued) **S104241988**

Eval Type:	Routine done by local agency
Eval Notes:	Fully up on CERS. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-06-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Sensors placed properly at the beginning and the end of the monitoring system cert. All sensors tested OK. LLDs tested OK. Fail safe, sensor out, and e-stop all tested OK. All sumps and UDCs were dry. Secondary containment tested also with all results OK. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	UST
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-06-2014
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Hazardous waste label was faded and unreadable. It was filled out before the end of the inspection. No other violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-30-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	All hazardous wastes have been removed from the site. The hazardous waste tanks were empty and were marked empty. The main hazardous waste area was very clean with no spillage within the bermed secondary containment area. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-30-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last CERS HMBP submittal was done on 8/28/19. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-30-2020
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	(1) All sumps and UDCs were clean and dry. (2) All sensors were properly positioned at the beginning and the end of the inspection.

RODGERS TRUCKING CO (Continued) **S104241988**

(3) All sensors tested OK and they were tagged. (4) Fail safe and sensor out tested OK. (5) The line leak detectors tested OK. (6) Both spill buckets passed their tests and contain five gallons of liquid. (7) The first overfill test was done on 6/5/19 and the next test is due by 10/13/21. (8) The only unusual alarms in the past year were L6, unleaded STP sump, 12/7/19 @ 0345 & 11/30/19 @ 1148; water intrusion, noted on DO report along with repair. (9) DO facility training was documented. (10) DO book OK; all records present since 1/26/16. (11) Secondary containment testing done today. One malfunction; diesel line from diesel tank to front dispenser failed - it would not hold vacuum. No other violations were observed.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Date:	09/30/2013
Comments:	DTSC oversight cost estimate for fiscal year 2013/2014

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	PRP Identification Memorandum
Completed Date:	01/10/2019
Comments:	The memorandum documents the potentially-responsible parties (PRPs) identified for the DWA Plume. Of the 14 sites and study areas within the footprint of the regional groundwater plume, DTSC identified PRPs for four sites: Singer Friden, Century Plating, Cintas Corporation, and Hudson I.C.S. DTSC recovered $6.5 million for past and future costs related to the Singer Friden site. The data suggest that the contaminants at three sites do not impact the regional groundwater plume. If additional sources for the regional groundwater plume are identified in the future, it may be appropriate to pursue cost recovery from additional PRPs. At this time, however, there are no additional PRPs to pursue.

DWA PLUME (Continued) **S101272669**

Inc. The Contract scope of work consists of preparing and implementing a workplan for in situ bioremediation by groundwater injection and performing pre- and post-injection groundwater monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 10/21/2011
Comments: Workplan for groundwater sampling approved.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 03/13/2002
Comments: Approved RAW for the contamination located next to 2481 San Leandro Boulevard which requires the excavation and offsite disposal of soil contaminated with TCE and PCE.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/12/2002
Comments: Completed RA. Between August 1 and August 26, 2002, DTSC's contractor conducted a removal action using state funds at the San Leandro Source Area. Approximately 500 cubic yards of soil contaminated with volatile organic compounds (VOCs) primarily trichloroethene (TCE) and tetrachloethene (PCE) was excavated from the following locations: 1) the 1600 square foot area adjacent to San Leandro Boulevard (to a depth of 7 feet), and 2) the 100 square foot area extending into San Leandro Boulevard (to a depth of 15 feet).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 08/04/2005
Comments: Workplan to conduct soil gas investigation at the residential area accepted.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/09/2006
Comments: Soil gas investigation found elevated tetrachloroethene(PCE) soil gas concentrations in the vicinity of Monterey Boulevard which appear to correlate with high PCE concentrations in groundwater. The report recommends addition soil gas investigation and possible treatment of groundwater to reduce concentrations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/29/1995
Comments: Hydrogeology of Central San Leandro Remedial Investigation of the Regional Groundwater Contamination, San Leandro Plume.

Completed Area Name: San Leandro Residential Area

DWA PLUME (Continued) **S101272669**

Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 03/09/2006
Comments: Volatile organic compounds are present in the residential area and are comparable to 2003 results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/22/2014
Comments: Site visit during soil vapor probe installation and soil vapor sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 03/09/2006
Comments: VOCS are still present in the San Leandro Residential area at concentrations comparable to the historical data.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 04/11/2006
Comments: volatile organic compounds (VOCS) are still present in the DWA Plume Residential area at concentrations comparable to the historical data.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 07/20/2006
Comments: VOCS are still present in the San Leandro Residential area at concentrations comparable to the historical data.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 02/28/1995
Comments: Public Participation Plan for the San Leandro Plume approved.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/20/2004
Comments: Pilot Study was completed at 2 locations in San Leandro Boulevard area using HRC and DHE bacteria. One location was in the Cherry Street and the other location was in the Hudson SIte.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/20/2004
Comments: Pilot Study was completed using HRC and DHE bacteria to treat groundwater at 2 locations in the DWA plume. One location was in the high PCE area in the residential area and the other location was near Aladdin Street near U.S. Can Site.

DWA PLUME (Continued) **S101272669**

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/10/2005
Comments: Groundwater sampling completed.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 02/27/2006
Comments: Groundwater Sampling completed.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/30/2006
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on May 4, 2006. PDBs were retrieved after equilibration on May 22, 2006.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/25/2003
Comments: Tetrachloroethene (PCE) concentrations are 1 to 2 orders of magnitude less downgradient of the high PCE concentration area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/29/1995
Comments: Groundwater sampling was conducted at 41 locations in the indutrial area of San Leandro. Trichloroethylene, tetrachloroethylene and cis-1,2-dichloroethylene were detected.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/30/2001
Comments: 25 cone penetrometer tests were conducted in the toe of the plume. Tetrachloroethene and trichloroethene were detected.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/09/2001
Comments: Seven monitoring wells in the residential area were sampled. Tetrachloroethene and trichloroethene and were detected in some wells. Not reported

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 05/19/2006
Comments: DTSC prepared HRC injection workplan to inject HRC and HRC-X at 2 locations in San Leandro Residential Area.

DWA PLUME (Continued) **S101272669**

Completed Area Name:	San Leandro Boulevard Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Fact Sheets
Completed Date:	01/31/2002
Comments:	Fact Sheet for Draft RAW for soils

Completed Area Name:	San Leandro Boulevard Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	01/31/2002
Comments:	Public Notice for Draft RAW for Soils

Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	07/19/2006
Comments:	HRC Injection completed.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	12/13/1989
Comments:	The purpose of this investigation was to evaluate the regional hydrogeologic conditions in the San Leandro area so that data collected at the 1465 Factor Avenue and 750 139th Avenue Sites can be evaluated within a larger hydrogeologic context.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	10/13/1989
Comments:	The Investigations indicate the presence of volatile organic compounds in shallow groundwater beneath the vicinity of the 750 139th Avenue Site. Groundwater in the intermediate-depth zone was impacted at one location. Several metals (barium, cadmium, chromium, and lead) were also present at levels drinking water standards.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	11/17/1987
Comments:	A plume of volatile organics exists in the shallow groundwater beneath 750 139th Avenue. The source of contamination is unknown and probably is not located at 750 139th Avenue.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	11/20/1987
Comments:	Evaluation of the soil gas investigation results indicates one and possibly two areas of volatile organic compounds and total hydrocarbon soil gas contamination near 750 139th Avenue.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	01/20/1993

DWA PLUME (Continued) **S101272669**

Comments:	Upper groundwater is contaminated with chlorinated volatile organic compounds at a number of locations throughout the study area. The data show that the contaminated groundwater has migrated and is continuing to migrate off-site areas to the west/southwest.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	07/23/1993
Comments:	Cone Penetrometer Testing, Hydropunch Groundwater Sampling, and Coordinated Monitoring Well Sampling results are presented in this report. Evaluation of this data is included in the Remedial investigation report.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	12/29/1993
Comments:	The Investigations indicate the presence of volatile organic compounds in shallow groundwater, primarily trichloroethene (TCE) and tetrachloethene (PCE). Shallow groundwater plume was more than a mile wide and two miles long. The plume is commingled plume with multiple source areas.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	04/28/1995
Comments:	Groundwater sampling was conducted at 34 locations in the residential area of San Leandro. Trichloroethylene, tetrachloroethylene and cis-1,2-dichloroethylene were detected.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	10/20/1995
Comments:	Seven monitoring wells were installed in the residential area. Soil volatile organic compound (VOC)concentrations were below regulatory levels. VOCs were detected in groundwater. Soil gas and ambient air sample had some detections of VOCs and these data will be used in the risk assessment.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Risk Assessment Report
Completed Date:	04/01/1997
Comments:	All estimated cancer and non-cancer risks for human receptors were within acceptable risk range. This risk estimate assumes that the shallow groundwater will not be used for domestic purposes.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fact Sheets
Completed Date:	09/01/1988
Comments:	The fact sheet describes activities associated with Phase II remedial investigations at 750 139th Avenue and 1465 Factor Avenue Sites.

DWA PLUME (Continued) **S101272669**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 10/01/1991
Comments: The fact sheet provides information about well water testing in San Leandro.

Completed Area Name: Century Plating Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 06/22/2006
Comments: DTSC prepared HRC Injection Work Plan.

Completed Area Name: Century Plating Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 08/31/2006
Comments: BDI Injection was completed.

Completed Area Name: Century Plating Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 10/11/2006
Comments: Completion report approved which documents the activities relating to the injection of Hydrogen Releasing Compound and BDI bacteria.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 09/15/2006
Comments: Completion report approved which documents the activities relating to the injection of Hydrogen Releasing Compound.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 01/10/2007
Comments: DTSC prepared an amendment to the HRC injection Workplan for BDI bacteria injection.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 01/19/2007
Comments: Fieldwork completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 09/06/2006
Comments: This site (2700 Merced Street) is located within the DWA Plume and volatile organic compounds (VOCs) above drinking water standards has been detected in groundwater.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report

DWA PLUME (Continued) **S101272669**

Completed Date: 08/05/2004
Comments: Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/11/2003
Comments: Four Monitoring wells were installed in the toe of the DWA Plume area and 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 09/19/2003
Comments: Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: San Leandro Toe of the Plume

Completed Document Type: Monitoring Report
Completed Date: 02/11/2004
Comments: Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 05/11/2004
Comments: Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 02/13/2007
Comments: Amend the existing workplan to add monitoring of 10 wells in the residential area and 4 wells in the toe of the Plume.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 4 and 6, 2007. PDBs were retrieved after equilibration on April 27, 2007 from monitoring wells within the DWA Plume Residential Area.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 27, 2007. PDBs were retrieved after equilibration on July 28, 2007 from monitoring wells within the DWA Plume Residential and Toe of the Plume areas.

DWA PLUME (Continued) **S101272669**

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/17/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on July 18, 2007. PDBs were retrieved after equilibration on October 17, 2007 from monitoring wells within the DWA Plume Residential Area.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 01/15/2008
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on October 17, 2007. PDBs were retrieved after equilibration on January 17, 2008 from monitoring wells within the DWA Plume Residential and Toe of the Plume areas.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 4 and 6, 2007. PDBs were retrieved after equilibration on April 27, 2007 from monitoring wells within the DWA Plume Toe of the Plume area

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/17/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on July 18, 2007. PDBs were retrieved after equilibration on October 17, 2007 from monitoring wells within the DWA Plume Toe of the Plume area.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 07/16/2007
Comments: Results of the post BDI injection ground water sampling event indicate that PCE concentrations in most wells are still fluctuating within the historical ranges. However, R-1 and MW-R51, showed significant decreases of PCE concentrations after the HRC/BDI injections and significant increases in cis-1,2-DCE concentrations. Increase in cis-1,2 DCE concentrations, whcih is a daughter product of dechlorination of PCE, indicates active ongoing dechlorination in wells R1 and MW-R51, which can be directly related to the injection of HRC and BDI.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/26/2007
Comments: Results of the post BDI injection ground water sampling event indicate that PCE concentrations in most wells are still fluctuating within the historical ranges. However, R-1 and MW-R51, showed

DWA PLUME (Continued) **S101272669**

significant decreases of PCE concentrations after the HRC/BDI injections and significant increases in cis-1,2-DCE concentrations.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 12/17/2007
Comments: Results appear to be consistent with previous results showing significant decreases in parent compounds and increases in daughter products.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 03/27/2008
Comments: Results appear to be consistent with previous results showing significant decreases in parent compounds and increases in daughter products.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/27/2012
Comments: Groundwater monitoring was conducted in the DWA plume and overall VOC concentrations are in a decreasing trend, except for PCE in the residential area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/08/2014
Comments: Remedial Investigation Report summarizes previous environmental and hydrogeologic investigations, removal action workplans, or remedial action plans, treatability studies and provide recommendations for next steps and future work.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 04/28/2015
Comments: Risk was evaluated regarding use of groundwater for irrigation and for recreational uses. The risk evaluation indicates that water can be used for irrigation, but should not be used for recreational uses such as swimming pools.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 09/11/2014
Comments: Groundwater monitoring workplan outlines activities to further characterize the VOC-impacted DWA Plume

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 10/14/2014
Comments: Soil Vapor Sampling Work Plan (Work Plan) for the DWA Plume located

DWA PLUME (Continued) **S101272669**

within the DWA Plume Study Area in San Leandro, California. The purpose of this Work Plan is to further characterize soil vapor conditions in the DWA Plume through sampling and laboratory analysis of select volatile organic compounds (VOCs).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/07/2016
Comments: Workplan to conduct indoor air sampling in 20 homes in the Cedar Avenue area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 10/13/2014
Comments: Work notice to inform the local community about soil gas sampling in the DWA Plume area located between Washington Avenue, Floresta Boulevard, Marina Boulevard and the San Francisco Bay in San Leandro, CA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/11/2015
Comments: Shallow soil vapor samples are elevated in several locations, follow up is required and will include additional sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/11/2015
Comments: Groundwater concentrations are consistent with historical concentrations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 07/23/2015
Comments: Workplan addresses follow up sampling of soil gas and groundwater based on previous investigation results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 08/07/2015
Comments: Work notice for additional soil gas sampling in three areas of the DWA plume

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/20/2015
Comments: Report documents supplemental soil gas sampling conducted during 2015. One new hot spot area identified and recommended for indoor air sampling.

Completed Date:	02/28/2018
Comments:	Resampling fieldwork completed on 2/28/2018.

Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	03/30/2018
Comments:	Report presents results of indoor air sampling events in November 2017 and February 2018. Sampling events were conducted in a portion of the residential area of the DWA Plume in the Cedar Avenue vicinity (the Residential Area).

Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Workplan
Completed Date:	02/20/2019
Comments:	The purpose of the Soil Vapor and Groundwater Sampling Work Plan (Work Plan) is to define the lateral extent of the elevated soil vapor that was detected in 2015 in the Cedar Avenue vicinity and to investigate groundwater contamination in the same area. The Work Plan presents the site background, scope of work, data evaluation and reporting, and anticipated schedule.

Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	12/03/2019
Comments:	Primary volatile organic compounds (VOCs) concentrations in the grab groundwater samples are generally consistent with the conceptualization of the regional DWA Plume as presented in the 2015 Groundwater Monitoring Report and historical concentrations. Groundwater concentrations do not correlate well with soil vapor concentrations in the collocated boreholes. The site-specific groundwater/soil vapor correlation for tetrachloroethene and trichloroethene concentrations varies over several order of magnitude for the different boreholes; hence, establishing a uniform site-specific attenuation factor is not recommended.

Completed Area Name:	PROJECT WIDE

Completed Document Type:	Other Report
Completed Date:	09/26/2019
Comments:	Historical San Leandro Sandborn Maps were scanned into PDF format and saved in the DTSC server (M Drive)
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Assessment/Site Inspection Report (PA/SI)
Completed Date:	12/11/2019
Comments:	According to the information provided, the current building structure was constructed in the late 1970 s and it has been used for food processing by Saag s since that time. There were no historical records or other indications of the storage or use of significant quantities of hazardous materials at the Property. Groundwater monitoring event conducted as part of the Phase II investigation shows that volatile organic chemicals (VOCs)-impacted groundwater migrating onto the Property derive from upgradient source areas of the DWA Plume (regional VOC-impacted groundwater plume), consistent with the historical groundwater data.

Completed Document Type: State/Federal Funded Site Contract
Completed Date: 07/15/2011
Comments: Contract 10-T1146 with URS for groundwater monitoring.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 12/15/2006
Comments: Contract for BDI Injection and groundwater monitoring

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 12/20/2006
Comments: Work order issued to conduct BDI Injections and groundwater monitoring.

Completed Area Name: PROJECT WIDE

DWA PLUME (Continued) **S101272669**

Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 07/18/2011
Comments: Work order for sampling of existing wells (Cover letter incorrectly dated June 18 instead of July 18, 2011).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 05/21/2014
Comments: Contract 13-T3787 WO1 authorizes activities for groundwater and soil gas investigation at the DWA Plume Residential Area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 06/19/2014
Comments: Contract 13-T3787 WO 1 for groundwater and soil gas monitoring in the DWA Plume Residential Area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date: 02/18/2014
Comments: CFA signed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/12/2013
Comments: Phase 1 ESA, Phase One Inc., January 2013 and Phase 2, Groundwater Investigation, Phase One Inc., March 2013 review revealed no evidence of a release at this site. Groundwater contamination underneath property is related to the DWA Plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/30/2013
Comments: DTSC oversight cost estimate for fiscal year 2013/2014

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: PRP Identification Memorandum
Completed Date: 01/10/2019
Comments: The memorandum documents the potentially-responsible parties (PRPs) identified for the DWA Plume. Of the 14 sites and study areas within the footprint of the regional groundwater plume, DTSC identified PRPs for four sites: Singer Friden, Century Plating, Cintas Corporation, and Hudson I.C.S. DTSC recovered $6.5 million for past and future costs related to the Singer Friden site. The data suggest that the contaminants at three sites do not impact the regional groundwater plume. If additional sources for the regional groundwater plume are identified in the future, it may be appropriate to pursue cost recovery from additional PRPs. At this time, however, there are no additional PRPs to pursue.

DWA PLUME (Continued) **S101272669**

Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 03/23/2018
Comments: Fully-executed contract dated 3/23/2018.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 07/20/2018
Comments: DTSC issued Work Order No. 1 under Contract 17-T4438 to Apex Companies, Inc. The activities to be performed under the Work Order are for the purpose of better defining the lateral extent of groundwater and soil gas plumes encroaching on the DWA Plume Residential Area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date: 03/23/2018
Comments: Fully-executed Contract 17-T4437 between the Department of Toxic Substances Control and the Engineering/Remediation Resources Group, Inc. The Contract scope of work consists of preparing and implementing a workplan for in situ bioremediation by groundwater injection and performing pre- and post-injection groundwater monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 10/21/2011
Comments: Workplan for groundwater sampling approved.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 03/13/2002
Comments: Approved RAW for the contamination located next to 2481 San Leandro Boulevard which requires the excavation and offsite disposal of soil contaminated with TCE and PCE.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/12/2002
Comments: Completed RA. Between August 1 and August 26, 2002, DTSC's contractor conducted a removal action using state funds at the San Leandro Source Area. Approximately 500 cubic yards of soil contaminated with volatile organic compounds (VOCs) primarily trichloroethene (TCE) and tetrachloethene (PCE) was excavated from the following locations: 1) the 1600 square foot area adjacent to San Leandro Boulevard (to a depth of 7 feet), and 2) the 100 square foot area extending into San Leandro Boulevard (to a depth of 15 feet).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 08/04/2005

DWA PLUME (Continued) **S101272669**

Comments:	Workplan to conduct soil gas investigation at the residential area accepted.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	03/09/2006
Comments:	Soil gas investigation found elevated tetrachloroethene(PCE) soil gas concentrations in the vicinity of Monterey Boulevard which appear to correlate with high PCE concentrations in groundwater. The report recommends addition soil gas investigation and possible treatment of groundwater to reduce concentrations.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported

Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	07/20/2006
Comments:	VOCS are still present in the San Leandro Residential area at concentrations comparable to the historical data.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported

DWA PLUME (Continued) **S101272669**

Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 02/28/1995
Comments: Public Participation Plan for the San Leandro Plume approved.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/20/2004
Comments: Pilot Study was completed at 2 locations in San Leandro Boulevard area using HRC and DHE bacteria. One location was in the Cherry Street and the other location was in the Hudson SIte.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/20/2004
Comments: Pilot Study was completed using HRC and DHE bacteria to treat groundwater at 2 locations in the DWA plume. One location was in the high PCE area in the residential area and the other location was near Aladdin Street near U.S. Can Site.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/10/2005
Comments: Groundwater sampling completed.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 02/27/2006
Comments: Groundwater Sampling completed.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/30/2006
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on May 4, 2006. PDBs were retrieved after equilibration on May 22, 2006.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/25/2003
Comments: Tetrachloroethene (PCE) concentrations are 1 to 2 orders of magnitude less downgradient of the high PCE concentration area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/29/1995
Comments: Groundwater sampling was conducted at 41 locations in the indutrial area of San Leandro. Trichloroethylene, tetrachloroethylene and cis-1,2-dichloroethylene were detected.

Completed Area Name: San Leandro Toe of the Plume

DWA PLUME (Continued) **S101272669**

Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/30/2001
Comments: 25 cone penetrometer tests were conducted in the toe of the plume. Tetrachloroethene and trichloroethene were detected.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/09/2001
Comments: Seven monitoring wells in the residential area were sampled. Tetrachloroethene and trichloroethene and were detected in some wells. Not reported

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 05/19/2006
Comments: DTSC prepared HRC injection workplan to inject HRC and HRC-X at 2 locations in San Leandro Residential Area.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 01/31/2002
Comments: Fact Sheet for Draft RAW for soils

Completed Area Name: San Leandro Boulevard Area

Comments: Public Notice for Draft RAW for Soils

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/19/2006
Comments: HRC Injection completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/13/1989
Comments: The purpose of this investigation was to evaluate the regional hydrogeologic conditions in the San Leandro area so that data collected at the 1465 Factor Avenue and 750 139th Avenue Sites can be evaluated within a larger hydrogeologic context.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 10/13/1989
Comments: The Investigations indicate the presence of volatile organic compounds in shallow groundwater beneath the vicinity of the 750 139th Avenue Site. Groundwater in the intermediate-depth zone was impacted at one location. Several metals (barium, cadmium, chromium, and lead) were also present at levels drinking water standards.

DWA PLUME (Continued) **S101272669**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/17/1987
Comments: A plume of volatile organics exists in the shallow groundwater beneath 750 139th Avenue. The source of contamination is unknown and probably is not located at 750 139th Avenue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/20/1987
Comments: Evaluation of the soil gas investigation results indicates one and possibly two areas of volatile organic compounds and total hydrocarbon soil gas contamination near 750 139th Avenue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 01/20/1993
Comments: Upper groundwater is contaminated with chlorinated volatile organic compounds at a number of locations throughout the study area. The data show that the contaminated groundwater has migrated and is continuing to migrate off-site areas to the west/southwest.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/23/1993
Comments: Cone Penetrometer Testing, Hydropunch Groundwater Sampling, and Coordinated Monitoring Well Sampling results are presented in this report. Evaluation of this data is included in the Remedial investigation report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/29/1993
Comments: The Investigations indicate the presence of volatile organic compounds in shallow groundwater, primarily trichloroethene (TCE) and tetrachloethene (PCE). Shallow groundwater plume was more than a mile wide and two miles long. The plume is commingled plume with multiple source areas.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/28/1995
Comments: Groundwater sampling was conducted at 34 locations in the residential area of San Leandro. Trichloroethylene, tetrachloroethylene and cis-1,2-dichloroethylene were detected.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 10/20/1995
Comments: Seven monitoring wells were installed in the residential area. Soil

DWA PLUME (Continued) **S101272669**

volatile organic compound (VOC)concentrations were below regulatory levels. VOCs were detected in groundwater. Soil gas and ambient air sample had some detections of VOCs and these data will be used in the risk assessment.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 04/01/1997
Comments: All estimated cancer and non-cancer risks for human receptors were within acceptable risk range. This risk estimate assumes that the shallow groundwater will not be used for domestic purposes.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 09/01/1988
Comments: The fact sheet describes activities associated with Phase II remedial investigations at 750 139th Avenue and 1465 Factor Avenue Sites.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 10/01/1991
Comments: The fact sheet provides information about well water testing in San Leandro.

Completed Area Name: Century Plating Area

Completed Date: 10/11/2006
Comments: Completion report approved which documents the activities relating to the injection of Hydrogen Releasing Compound and BDI bacteria.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 09/15/2006
Comments: Completion report approved which documents the activities relating to the injection of Hydrogen Releasing Compound.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 01/10/2007

DWA PLUME (Continued) **S101272669**

Comments:	DTSC prepared an amendment to the HRC injection Workplan for BDI bacteria injection.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	01/19/2007
Comments:	Fieldwork completed.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	09/06/2006
Comments:	This site (2700 Merced Street) is located within the DWA Plume and volatile organic compounds (VOCs) above drinking water standards has been detected in groundwater.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	08/05/2004
Comments:	Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	06/11/2003
Comments:	Four Monitoring wells were installed in the toe of the DWA Plume area and 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	09/19/2003
Comments:	Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	02/11/2004
Comments:	Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	05/11/2004
Comments:	Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Workplan
Completed Date:	02/13/2007

DWA PLUME (Continued) **S101272669**

Comments: Amend the existing workplan to add monitoring of 10 wells in the residential area and 4 wells in the toe of the Plume.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 4 and 6, 2007. PDBs were retrieved after equilibration on April 27, 2007 from monitoring wells within the DWA Plume Residential Area.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 27, 2007. PDBs were retrieved after equilibration on July 28, 2007 from monitoring wells within the DWA Plume Residential and Toe of the Plume areas.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/17/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on July 18, 2007. PDBs were retrieved after equilibration on October 17, 2007 from monitoring wells within the DWA Plume Residential Area.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 01/15/2008
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on October 17, 2007. PDBs were retrieved after equilibration on January 17, 2008 from monitoring wells within the DWA Plume Residential and Toe of the Plume areas.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 4 and 6, 2007. PDBs were retrieved after equilibration on April 27, 2007 from monitoring wells within the DWA Plume Toe of the Plume area

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/17/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on July 18, 2007. PDBs were retrieved after equilibration on October 17, 2007 from monitoring wells within the DWA Plume Toe of the Plume area.

DWA PLUME (Continued) **S101272669**

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 07/16/2007
Comments: Results of the post BDI injection ground water sampling event indicate that PCE concentrations in most wells are still fluctuating within the historical ranges. However, R-1 and MW-R51, showed significant decreases of PCE concentrations after the HRC/BDI injections and significant increases in cis-1,2-DCE concentrations. Increase in cis-1,2 DCE concentrations, whcih is a daughter product of dechlorination of PCE, indicates active ongoing dechlorination in wells R1 and MW-R51, which can be directly related to the injection of HRC and BDI.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/26/2007
Comments: Results of the post BDI injection ground water sampling event indicate that PCE concentrations in most wells are still fluctuating within the historical ranges. However, R-1 and MW-R51, showed significant decreases of PCE concentrations after the HRC/BDI injections and significant increases in cis-1,2-DCE concentrations.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 12/17/2007
Comments: Results appear to be consistent with previous results showing significant decreases in parent compounds and increases in daughter products.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 03/27/2008
Comments: Results appear to be consistent with previous results showing significant decreases in parent compounds and increases in daughter products.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/27/2012
Comments: Groundwater monitoring was conducted in the DWA plume and overall VOC concentrations are in a decreasing trend, except for PCE in the residential area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/08/2014
Comments: Remedial Investigation Report summarizes previous environmental and hydrogeologic investigations, removal action workplans, or remedial action plans, treatability studies and provide recommendations for next steps and future work.

DWA PLUME (Continued) **S101272669**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 04/28/2015
Comments: Risk was evaluated regarding use of groundwater for irrigation and for recreational uses. The risk evaluation indicates that water can be used for irrigation, but should not be used for recreational uses such as swimming pools.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 09/11/2014
Comments: Groundwater monitoring workplan outlines activities to further characterize the VOC-impacted DWA Plume

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 10/14/2014
Comments: Soil Vapor Sampling Work Plan (Work Plan) for the DWA Plume located within the DWA Plume Study Area in San Leandro, California. The purpose of this Work Plan is to further characterize soil vapor conditions in the DWA Plume through sampling and laboratory analysis of select volatile organic compounds (VOCs).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/07/2016
Comments: Workplan to conduct indoor air sampling in 20 homes in the Cedar Avenue area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 10/13/2014
Comments: Work notice to inform the local community about soil gas sampling in the DWA Plume area located between Washington Avenue, Floresta Boulevard, Marina Boulevard and the San Francisco Bay in San Leandro, CA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/11/2015
Comments: Shallow soil vapor samples are elevated in several locations, follow up is required and will include additional sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/11/2015
Comments: Groundwater concentrations are consistent with historical concentrations.

Completed Area Name: PROJECT WIDE

DWA PLUME (Continued) **S101272669**

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 07/23/2015
Comments: Workplan addresses follow up sampling of soil gas and groundwater based on previous investigation results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 08/07/2015
Comments: Work notice for additional soil gas sampling in three areas of the DWA plume

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/20/2015
Comments: Report documents supplemental soil gas sampling conducted during 2015. One new hot spot area identified and recommended for indoor air sampling.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 02/28/2018
Comments: Resampling fieldwork completed on 2/28/2018.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/30/2018
Comments: Report presents results of indoor air sampling events in November 2017 and February 2018. Sampling events were conducted in a portion of the residential area of the DWA Plume in the Cedar Avenue vicinity (the Residential Area).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 02/20/2019
Comments: The purpose of the Soil Vapor and Groundwater Sampling Work Plan (Work Plan) is to define the lateral extent of the elevated soil vapor that was detected in 2015 in the Cedar Avenue vicinity and to investigate groundwater contamination in the same area. The Work Plan presents the site background, scope of work, data evaluation and reporting, and anticipated schedule.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/03/2019
Comments: Primary volatile organic compounds (VOCs) concentrations in the grab groundwater samples are generally consistent with the conceptualization of the regional DWA Plume as presented in the 2015 Groundwater Monitoring Report and historical concentrations. Groundwater concentrations do not correlate well with soil vapor concentrations in the collocated boreholes. The site-specific

DWA PLUME (Continued) **S101272669**

groundwater/soil vapor correlation for tetrachloroethene and trichloroethene concentrations varies over several order of magnitude for the different boreholes; hence, establishing a uniform site-specific attenuation factor is not recommended.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 06/16/2018
Comments: Contract 17-T4438 authorizes activities required to perform a volatile organic carbon source delineation investigation in the Residential Area of the DWA Plume in San Leandro.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Litigation Support
Completed Date: 04/16/2020
Comments: Disallowance decision letter provides DTSC s Contract Manager reasons regarding the September 6, 2019 dispute concerning Contract 17-T4438 Work Order 1 Invoice 207595 disallowance in accordance with Section 12 of Exhibit D of the Contract 17-T4438.

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment/Site Inspection Report (PA/SI)
Completed Date: 12/11/2019
Comments: According to the information provided, the current building structure was constructed in the late 1970 s and it has been used for food processing by Saag s since that time. There were no historical records or other indications of the storage or use of significant quantities of hazardous materials at the Property. Groundwater monitoring event conducted as part of the Phase II investigation shows that volatile organic chemicals (VOCs)-impacted groundwater migrating onto the Property derive from upgradient source areas of the DWA Plume (regional VOC-impacted groundwater plume), consistent with the historical groundwater data.

Background Info:	DTSC was conducting six site specific investigations in San Leandro. Investigations at these sites indicated that a regional shallow groundwater contamination exist. A Public Health Advisory was issued, advising residents not to use private wells for domestic purposes unless tested regularly. Contaminants of primary concern are trichloroethylene(TCE), perchloroethylene(PCE), dichloroethylene and related compounds. They as well as metals and nitrate have all been found above the state drinking water standards. Domestic water is supplied by East Bay Municipal Utility District. However, up to 2000 private wells may exist in San Leandro. In 1993 and 1995 DTSC conducted a series of investigations and determined the extent of the plume to be 1 mile wide and 2 miles long. DTSC is conducting a number of in-situ pilot studies to evaluate techniques to treat the underlying groundwater. groundwater. For site specific information see 1465 Factor Avenue, Hudson I.C.S., 750 139th Avenue Site, Singer Friden, Staefa, U.S. Can Company, Former Transcon Lines Site, Simmons Site, Dana Corporation Site, Cintas Corporation Site and Century Plating.

CA BOND EXP. PLAN:

Reponsible Party:	DETAILED SITE EXPENDITURE PLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Currently there are no identifiable responsible parties (RPs). Therefore, Bond funds are being used to investigate and remediate the site. If during the investigation responsible parties are identified, DHS will pursue appropriate enforcement actions.
Site Description:	The One Hundered Thirty-Ninth Street site is a contaminated shallow aquifer.
Hazardous Waste Desc:	Chemicals found onsite include trichloroethene (TCE) and tetrachloroethene (PCE).
Threat To Public Health & Env:	Ground water is the pathway for contaminant migration. Numerous private wells present possible routes of exposure. Potential receptors for exposure to ground water contaminants include residents of San Leandro who have shallow water wells on their property.
Site Activity Status:	The site is currently undergoing remedial investigation. Monitoring wells and stratigraphic borings will be installed.

Site History:	The Embarcadero Cove site is an old industrial site located on the Oakland waterfront. Much of the early history of the site is uncertain, including the filling of the site and the dates and nature of its earliest occupants and usages. The Port of Oakland has leased the site to a number of industrial operations including several oil companies and wood treating operations. The site was leased to petroleum handling companies before 1954, including Ventura Oil and Texas Company (Texaco), and used for storage, handling, and blending of motor fuels and lubricants and drum cleaning and reconditioning. In 1955, the site was then leased to Wood Treating Chemical Company and Associated Sales and Supplies, and used for storing and formulating wood preservatives (primarily pentachlorophenol) and agricultural chemicals. The Wood Treating Chemical Company subleased the site between 1963 and 1965 to Garrity Company, Inc. before being fully leased by the Port of Oakland in 1966. Garrity's operation included the handling of agricultural chemicals including pentachlorophenol, wood preservatives, pesticides, and herbicides. After 1970, all the buildings on the site were demolished.

Background Info:	Cintas Corporation site is located at 777 139th Avenue, San Leandro, Alameda County. From February 1971 and 1983, Ross Rental Services leased the property and established a clothes-cleaning operation using tetrachloroethylene (PCE). Operation equipment included two 100-pound dry cleaning units. In 1983, Cintas Corporation acquired the business and converted all clothes cleaning operations to a water-wash laundry without the dry cleaning units. Trichloroethylene (TCE), PCE and oil grease were detected in soil during removal of gasoline and waste oil tanks in May 1986.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	08/04/2004
Comments:	Approved RAW for the underlying groundwater contamination. Data indicates that contamination is breaking down. Therefore, final remedy will include institutional controls and groundwater monitoring. Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation / Feasibility Study
Completed Date:	04/28/2003
Comments:	Approved RI/FS for groundwater. Data indicates that contamination is breaking down.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	06/29/1998
Comments:	Completed RA. Soil Vapor Extraction System working well. 21 cubic yards of excavated soil containing tetrachloroethylene were disposed offsite. Soil vapor extraction system operating at 140 standard cubic feet per minute.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	06/26/1997
Comments:	The recommended removal action was a combination excavation and Offsite disposal for the areas outside of the building and soil vapor extraction using horizontal wells for areas inside the building.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Participation Plan / Community Relations Plan
Completed Date:	02/28/1995
Comments:	Public Participation Plan for San Leandro approved.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Plan
Completed Date:	04/12/2005
Comments:	Groundwater will be monitored semi annually at 7 monitoring wells according to approved Groundwater Monitoring Plan.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Design
Completed Date:	04/08/2005
Comments:	Workplan for installation of downgradient monitoring well approved.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	10/24/2005

CINTAS CORPORATION (Continued) **S101624159**

Comments:	Approved the installation of one new downgradient well and the first semi-annual report.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	03/17/2000
Comments:	Approved closure of the SVE system. The confirmation soil sampling results indicated that operation of the SVE system reduced VOC concentrations in soil below the site cleanup level in all tested locations. Estimated 187 pounds of VOCs were removed during the 19 months period of operation.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction
Completed Date:	09/25/2006
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation & Maintenance Order/Agreement
Completed Date:	05/19/2006
Comments:	DTSC fully executed the O & M agreement with Cintas Corporation for the operation and maintenance of the monitoring wells at the Site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	10/02/2006
Comments:	Site Certified with ongoing operation and maintenance. Monitoring wells will continue to be monitored to confirm natural attenuation of contaminants.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	08/04/2004
Comments:	Notice of Exemption for groundwater RAW
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Initial Study/ Neg. Declaration
Completed Date:	06/26/1997
Comments:	Approved RAW which requires installation of two horizontal soil vapor extraction wells under the building and excavation of contaminated soil near sewer line outside of the building. A negative declaration was prepared for this project.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	12/22/1992
Comments:	Issued I&SE Order to the 139th Avenue Sites to Cintas Corporation and property owners.
Completed Area Name:	PROJECT WIDE

CINTAS CORPORATION (Continued) **S101624159**

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 01/11/2016
Comments: DTSC approval letter for further subsurface vapor characterization.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/24/2015
Comments: A total of 23 soil vapor samples were collected and analyzed for this investigation. Three compounds (primarily PCE) exceeded Tier 1 ESLs in 16 of the samples across the Site (Figure 4). At three of the 23 sample locations, PCE also exceeded Commercial ESLs; the highest concentration (28,000 8g/m3) was found outside of the building in the rear parking area, possibly indicative of a localized spill area that could be readily addressed. The other two detections were within one order of magnitude of the Commercial ESL. The widespread presence of PCE in soil vapor across the Site is likely related to known soil and groundwater contamination underlying the majority of the Site. These findings suggest soil vapor impacts are not severe. Such impacts could potentially pose a risk to indoor air quality that may require management over the long term with an appropriately-designed vapor mitigation system. DTSC agrees with these recommendtions

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/21/2015
Comments: Completed GW monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/12/2016
Comments: Report meeting the requirements for annual groundwater sampling as part of the site Operations and Maintenance Agreement. The current monitoring network consists of three onsite and three offsite wells. Wells were analyzed for total petroleum hydrocarbons and volatile organic compounds. Concentrations of contaminants of concern were consistent with historic data trends. Report was approved by DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/03/2016
Comments: Work being undertaken in accordance with Workplan for Evaluation of Vapor Intrusion Pathway approved by DTSC January 11, 2016. Trenching was done to investigate a magnetic anomaly. Soil gas sampling will occur 2-3 weeks after trenching to allow subsurface conditions to stabilize.

Completed Area Name: PROJECT WIDE

Address: 1111 139TH AVE
City,State,Zip: SAN LEANDRO, CA 94578
Site ID: 33156
CERS ID: 10444270
CERS Description: Hazardous Waste Generator

CERS:
Name: GHIRARDELLI CHOCOLATE
Address: 1111 139TH AVE
City,State,Zip: SAN LEANDRO, CA 94578
Site ID: 33156
CERS ID: 10444270
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 33156
Site Name: Ghirardelli Chocolate
Violation Date: 11-04-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 11/04/2015. Missing hazardous materials inventories
Violation Division: San Leandro City
Violation Program: HMRRP
Violation Source: CERS

Site ID: 33156
Site Name: Ghirardelli Chocolate
Violation Date: 07-19-2017

GHIRARDELLI CHOCOLATE (Continued) **S121762293**

Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 07/19/2017. Haz waste label contents only says waste
Violation Division:	San Leandro City
Violation Program:	HW
Violation Source:	CERS

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	07-19-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last full CERS submittal was on 10/18/16. Their next annual submittal is due by 10/18/17. There are some small changes needed in the emergency response plan - see response plan red notes attached to inspection report. There are also two trade secret inventories that need to be changed to not trade secret. One is for acrylic paint and the other is for FG - lubricating oil (page 6 line 3 and page 15 line 3 respectively). None of these changes require a HMBP submittal within 30 days. No other violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	07-19-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	(1) Keeping hazardous waste paperwork indefinitely. (2) Tracking manifests to ensure they receive signed off TSDF copies. They understand exception reporting requirements. (3) One drum had only "Waste" written under contents/composition. They were instructed on proper labeling requirements and not to use trade names such as isophore. (4) All hazardous waste drums were properly sealed, labeled, in excellent condition, inside, and on spill containment pallets. The spill containment pallets were clean and dry. (5) They had two used oil drums with screw in funnels in place. The lids were both down and latched. (6) ER plan okay, but a couple check boxes probably should be checked. They were instructed on the require changes. (7) They are an SQG. They are not required to have someone HAZWOPER trained, but it is highly recommended. No other violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-04-2015
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	All hazardous waste containers are kept indoors and on spill pallets. All were properly sealed and all had properly filled out hazardous

Evaluation:

Eval General Type:	Compliance Evaluation Inspection

GHIRARDELLI CHOCOLATE CO (Continued) **1000206507**

Eval Date:	10-02-2018
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	The site manufactures and packages chocolate candy. The site has outdoor storage of sugar in silos, unloading and loading areas for raw materials and product. Housekeeping is good in the outdoor industrial areas. Check housekeeping and keep bins closed when not in use in the contractor and recycling bin areas. Improve leak, drip and spill control best management practices where trucks and forklifts park. The inspection was prompted by a late annual report. Water Board staff discussed the issue with Benoit Girodie, Manager of engineering and maintenance. The required notices of non compliance were sent to the facility. The facility is working on obtaining the necessary information and submitting the annual report.

Environmental Interest/Information System:
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

GHIRARDELLI CHOCOLATE CO (Continued) **1004442086**

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date: 12/29/1992
Comments: Issued I&SE Order to the 139th Avenue Sites requiring further remedial investigation and cleanup.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/14/1997
Comments: Completed removal action. Three soil vapor extraction wells were installed, the yard has been paved, 80 cubic yards of contaminated soil were excavated and disposed, and a new floor slab was installed in the building.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 02/15/1996
Comments: Removal Action Workplan approved which requires the removal of several soil hotspots in the building by excavation, and installation of a vapor barrier floor. In the Yard area, 3-5 Soil Vapor Extraction wells was installed to lower concentrations of VOCs at depth in the soils. The yard will also be paved as part of the removal action. The extraction system is expected to operated for approximately 6 months.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 02/28/1995
Comments: Public Participation Plan for the San Leandro Plume approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 09/30/1992
Comments: U.S. EPA removed drums of chemicals, contaminated equipment, and debris from the building and adjoining yard. Six inches of surface soil, contaminated primarily with metals, was removed from the yard and a private well was closed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 01/20/1995
Comments: RI found that soil and groundwater is contaminated with VOCs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 10/19/1995
Comments: Investigation found soil, soil gas and groundwater contaminated with tetrachloroethelene (PCE).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 05/30/1997

CENTURY PLATING COMPANY INC (Continued) **1000483604**

Comments:	Approximately 30 lbs of volatile organic compounds (VOC) were removed by the soil vapor extraction system (SVE). Confirmation soil samples showed that VOCs were below the clean up goals. SVE was removed from the site and wells were abandoned.

Background Info:	plating shop at this location for approximately 8 years. At that time, Century was shut down by local authorities for noncompliance with fire and building codes and for unpermitted discharges to the sanitary sewer. Subsequently, U.S. EPA removed drums of chemicals, contaminated equipment, and debris from the building and adjoining yard. Six inches of surface soil, contaminated primarily with metals, was removed from the yard and a private well was closed. Soil under the building was contaminated with solvents and metals and was believed to be the source of groundwater contamination in the area. Groundwater samples had detected perchloroethene and trichlorethene above the drinking water standards. The plume migrating from this Site is part of the commingled plume which has been named DWA Plume. The groundwater investigation of this site will be carried out as part of the investigation of the San Leandro Plume. Please also review that profile report for further information. Century Plating Company, Inc. operated a plating and machine shop at 1124 139th Avenue from about 1973 until October 1991. Prior to Century Plating, Inc., Paddy O'Chrome operated a

Description: Century Plating Company, Inc. operated a plating and machine shop at 1124 139th Avenue from about 1973 until October 1991. Prior to Century Plating, Inc., Paddy O'Chrome operated a plating shop at this location for approximately 8 years. At that time, Century was shut down by local authorities for noncompliance with fire and building codes and for unpermitted discharges to the sanitary sewer. The Site is located within a regional groundwater contamination located in the central area of the City of San Leandro. (See DWA Plume, Envirostor Ref. 01990002)

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	08-19-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	No changes. Their household collected hazardous waste is mostly in the center of the main processing building. Their site generated hazardous waste are mostly kept in the hazardous waste near the southeastern corner of their facility. The shop/maintenance area has the remaining site generated hazardous wastes. Most haz wastes are kept in ASTs, but there is also drained used oil drums. The containers were free of loose hazardous wastes. All containers were labeled and all generation start dates were filled out. They are maintaining hazardous waste area logs. They are keeping hazardous waste related records indefinitely. The facility contact has a spread she that she uses to tract all hazardous waste shipments, TSDF arrivals, and receipt of of paperwork (TSDF signed manifest copies). No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	08-19-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last CERS submittal was on 8/18/16. It did not include an emergency response/contingency plan. The last plan submitted was on 2/23/16. The approved submissions had next reporting due dates of 2/23/17 to remind the business that a full CERS submission including the emergency response/contingency plan will be due by that date. This was also discussed with the facility contact and she acknowledge the requirement for future submissions. Note: her other facility located at 577 Aladdin Ave. San Leandro had an overdue emergency response contingency plan that was noted as a violation. The rest of the plan looked good and the emergency response/contingency plan also looked good. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	10-07-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Hazardous waste tanks are inspected daily and hazardous waste areas are inspected at least weekly. All hazardous waste labels were OK. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	10-07-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	The last CERS submission was on 2/25/14. The facility contact was made aware of the annual submission being due on 2/25/15. No violations

ALAMEDA COUNTY INDUSTRIES (Continued) **S108197038**

	were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-16-2015
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	The hazardous waste areas were neat and wastes were properly segregated. All hazardous waste containers were properly marked, secure, and in good condition. They are keeping manifests indefinitely. The area was cleaned and they are looking at the areas more than weekly. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-16-2015
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last CERS submittal was on 3/20/15; their next annual submittal is due by 3/20/16. The facility contact is fully aware of CERS and submittal requirements. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	12-06-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Household hazardous wastes are now kept outdoors in a separate hazardous material containment shed. There is another shed next to it that the site's hazardous wastes are kept in. Same storage practices in the two sheds. Wastes were all properly labeled and contained. They are keeping hazardous waste records indefinitely. They are still tracking all hazardous waste shipments to ensure they get all their copies and that disposal is complete. They now about the reporting requirements if a manifest copy is late. No violations were observed.
Eval Division:	San Leandro City
Eval Program:	HW
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	12-06-2017
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Their last full HMBP CERS submittal was on 6/29/17. It is fully developed, complete, and accurate. The facility contact understands that they must make an annual submittal including all major elements. No violations were observed.
Eval Division:	San Leandro City

ALAMEDA COUNTY INDUSTRIES (Continued) **S108197038**

Affiliation Phone: (510) 577-3401

Name: ALAMEDA COUNTY INDUSTRIES
Address: 610 ALADDIN AVE
City,State,Zip: SAN LEANDRO, CA 94577
Site ID: 3876
CERS ID: 204845
CERS Description: Industrial Facility Storm Water

Violations:
Site ID: 3876
Site Name: Alameda County Industries
Violation Date: 07-02-2007
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Late Report
Violation Notes: Failure to submit the 2006-2007 Annual Report by 7/1/07
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: No changes. Their household collected hazardous waste is mostly in the center of the main processing building. Their site generated hazardous waste are mostly kept in the hazardous waste near the southeastern corner of their facility. The shop/maintenance area has the remaining site generated hazardous wastes. Most haz wastes are kept in ASTs, but there is also drained used oil drums. The containers were free of loose hazardous wastes. All containers were labeled and all generation start dates were filled out. They are maintaining hazardous waste area logs. They are keeping hazardous waste related records indefinitely. The facility contact has a spread she that she uses to tract all hazardous waste shipments, TSDF arrivals, and receipt of of paperwork (TSDF signed manifest copies). No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS submittal was on 8/18/16. It did not include an emergency response/contingency plan. The last plan submitted was on 2/23/16. The approved submissions had next reporting due dates of 2/23/17 to remind the business that a full CERS submission including the emergency response/contingency plan will be due by that date. This was also discussed with the facility contact and she acknowledge the requirement for future submissions. Note: her other facility located at 577 Aladdin Ave. San Leandro had an overdue emergency response contingency plan that was noted as a violation. The rest of the plan looked good and the emergency response/contingency plan also looked good. No violations were observed.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	11/07/1997
Comments:	Order issued to the current owners/operators.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	03/13/2002
Comments:	DTSC determined that no further action is needed at the site due to the declining concentrations in groundwater and because all potential sources have been removed from the site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Other Report
Completed Date:	10/28/1996
Comments:	Underground tanks were removed, soil excavated and stockpiled on site, soil samples collected and analyzed for hydrocarbons and VOCs. The soil pile was areated and used as backfill. Groundwater sampling conducted in 4 wells. TCE and PCE were detected in groundwater up to 92 ug/l and 2200 ug/l respectively.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	05/21/1999

TRANSCON LINES (Continued) **S101630334**

Comments: VOCs were sampled in 4 on site wells and TCE was detected from 396 ug/l to 548 ug/l in the wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/28/1992
Comments: Phase I investigation identified the possible presence of hazardous materials at site and additional work was recommended.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/25/1993
Comments: The existing diesel underground storage tanks may have leaked. Approximately 3,000 cubic yards of diesel affected soil are present at the site. Groundwater at the site is contaminated with trichloroethylene which may be migrating from upgradient sites.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/01/1989
Comments: Soil and groundwater investigation conducted which found subsurface diesel and waste oil contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/13/1995
Comments: Five underground tanks were removed.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	04/19/1996
Comments:	Issued I&SE Order to three Responsible Parties. The current owners and past owner/operators, US Can Company and the Sherwin Williams Company. The order requires investigation of the site which is within the San Leandro Plume.

U. S. CAN COMPANY SITE (Continued) **S102002464**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/31/2006
Comments: Based on the review of current and historical data, the site does not appear to currently have a source of hazardous substances which is contributing to groundwater contamination and does not appear to pose a current threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Report
Completed Date: 08/20/2018
Comments: This letter documents the destruction of five monitoring wells (MW-1, MW-5, MW-6, MW-7, and MW-8) and the protection of one well (MW-2) at the Site. Monitoring well MW-6 was to be protected, however, well functionally was compromised. Monitoring well MW-6 was abandoned following the same procedures as to other wells. Following the completion of the redevelopment activities, the Site owner will consult with the DTSC regarding the replacement of well MW-6 and the rehabilitation of well MW-2.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Completion Report
Completed Date: 03/26/2021
Comments: MW-2 rehabilitation and MW-6R installation survey data, and MW-6R completion report included. MW-6R installed at an accessible area at the Site. If necessary, DTSC may collect discrete groundwater samples from this well. MW-6R s above-ground surface completions met the 2014 DTSC Well Design and Construction for Monitoring Groundwater at Contaminated Sites. MW-2 rehabilitated with flush mounted well box.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 11/05/2020
Comments: MW-6R installed at an accessible area to allow DTSC to collect groundwater samples from the well, if necessary. MW-6R s above-ground surface completions met the 2014 DTSC Well Design and Construction for Monitoring Groundwater at Contaminated Sites. MW-2 was rehabilitated with flush mounted well box.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/16/2017
Comments: Response to request to close unused wells at the US CAN Site. DTSC agrees to the proper closure of any well located on the Site with the exception of MW-2 and MW-6 which were sampled in 2014, and which DTSC needs to continue to use to monitor the regional groundwater plume known as the DWA Plume. DTSC will continue to periodically need access to these wells to collect groundwater elevation and samples for analysis.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

U. S. CAN COMPANY SITE (Continued) **S102002464**

Completed Document Type: Remedial Investigation Report
Completed Date: 10/28/1997
Comments: The highest upper zone TCE concentration was 440 ug/l. The highest lower zone TCE concentration was 630 ug/l, significantly lower than the 1989 concentrations.

Background Info: The site consists of a 130,000 square foot building on 7 acres of land. In 1957, Sherwin-Williams manufactured metal cans and containers. Solvents were used as part of that process. In 1983, the facility was sold to U. S. Can Company, who continued to use the same processes to manufacture metal cans and containers. U.S. Can Company added an aerosol can manufacturing operation. The manufacturing facility closed in 1989. The building is used for warehousing. Investigations found that both the soil and groundwater at the Site were contaminated with dichloroethane,

U. S. CAN COMPANY SITE (Continued) **S102002464**

dichloroethylene, and tetrachloroethylene. A limited soil hot spot was removed and a sump was closed in place. The site is located within a regional groundwater plume located in Central San Leandro. Groundwater contamination will be addressed as part of the regional plume (see site ID 01990002).

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/03/2000
Comments: Based on sampling data, DTSC issued a letter requiring no further action for soils at the Site since the soil contamination appears to be not related ot the site. DTSC will conduct a soil removal under the DWA Plume project. Semiannual groundwater monitoring will continue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 10/31/1988
Comments: Further investigation recommended for groundwater.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/12/2001
Comments: Based on the results of the Groundwater Monitoring Report dated 3/01/01, DTSC determined that groundwater monitoring at the site would no longer be necessary.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/19/1999
Comments: Highest PCE in soil was detected at 2.2 mg/kg at 4' bgs and higest TCE also was detected at 0.41 mg/kg at 6' bgs at the same location near the San Leandro Blvd. Three moniroing wells were also sampled.

Completed Area Name: PROJECT WIDE

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Amendment - Order/Agreement
Completed Date: 12/18/1998
Comments: DTSC and Ninyo & Moore signed an amendment to the VCA which allows work to continue under Chapter 6.5 of the Health and Safety Code.

STAEFA CO (Continued) **S112856670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 06/12/1998
Comments: Entered into a new VCA with new property owner, Ninyo & Moore. VCA is for review of investigation report prepared as part of property transfer evaluation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 03/28/1996
Comments: DTSC and Staefa entered into an Agreement to investigate soil contamination at the site. Based on the results of the investigation, a determination will be made regarding the site's contribution to the Regional groundwater plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 02/12/1988
Comments: Site was brought to DTSC when STAEFA discovered soil and groundwater contamination on property while attempting to sell property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Consultation
Completed Date: 06/30/1997
Comments: Consultative services under the VCA completed. DTSC believes additional work is required at the site based on the data presented in the investigation report.

Completed Date: 03/01/2001
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/19/1996
Comments: 21 parts per million of tetrachloro ethene was found 10 feet below the ground suface in the city right of way next to the property. Concentrations of PCE onsite in the top 3 feet of soil near this area are up to 1.3 ppm. Groundwater concentrations of PCE are also elevated near this sampling location. Also, in a different area of the site, a downgradient monitoring well had significantly higher concentrations than the upgradient hydropunch samples.

Completed Area Name: PROJECT WIDE

STAEFA CO (Continued) **S112856670**

Completed Sub Area Name:	Not reported
Completed Document Type:	Phase 1
Completed Date:	10/03/1988
Comments:	The report concludes that there is no evidence of significant historic chemical usage or storage at the Site and chemicals detected on site in soils and groundwater originated off the Site and do not appear to be related to Staefa activities at the Site.

Completed Document Type: Fieldwork
Completed Date: 09/08/2020
Comments: Five (5) junction box vaults welded on September 2020 Two (2) within the Sandpiper Townhome Complex s streets, one (1) just outside the Washington Avenue access gate to the complex, and two (2) along Washington Avenue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 12/04/2020
Comments: Site-Specific Protection Plan (SPP) provides instructions to field staff on how to implement Alameda County Shelter in Place Order and Face Coverings Order. SSP includes COVID-19 precautionary measures by informing (i) individual control measures and screenings; (ii) cleaning and disinfecting protocols; (iii) schedule for disinfecting high traffic areas and commonly used surfaces; (iv) physical distancing guidelines; (v) notification requirements of COVID-19 positive case and (vi) training requirements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 12/16/2020
Comments: Singer Friden Covid-19 Plan for SSDS O&M Plan (COVID-19 H&S Plan) provides sufficient information to meet State of California Executive Order N 33-20, Alameda County Order of the Health Officer No. 20-21 requirements and the minimum requirements listed on the DTSC COVID-19 Contractor Plan Reviews, version 1.0.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 03/06/2021
Comments: Fact Sheet informs the Sandpiper community about the status of environmental investigations planned at the former Singer Friden facility (Site) The Site is currently in the operation and maintenance phase of work. Supplemental environmental investigations are planned and necessary to help the DTSC better evaluate the implementation of additional cleanup measures at the Site. When implemented, additional cleanup measures will stop or reduce vapor intrusion of chemicals coming from soil and groundwater at the Site. These measures will improve indoor air quality of residences and protect human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 06/10/2020
Comments: First and Second Five-Year Review Reports Revised Update Fact Sheet provides a status of environmental cleanup efforts conducted at the former Singer Friden facility (Site) from March 2001 to May 2012. The Site is currently in the operation and maintenance phase of work, which requires DTSC to review available data every five years. The purpose of a Five-Year Review is to evaluate the implementation and performance of a remedy to determine if it is or will be protective

SINGER FRIDEN (Continued) **S101272670**

of human health and the environment.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/26/2020
Comments: Groundwater monitoring fieldwork activities and COVID-19 precautionary measures implemented as planned.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 03/18/2021
Comments: Work Plan outlines the tasks to be performed during installation of three double-nested groundwater monitoring wells and one triple-nested soil gas monitoring well at the former Singer Friden Facility (Site). The project objective is to expand the Site s monitoring well network to further evaluate the nature and extent of volatile organic compounds (VOCs) in groundwater, soil, and soil gas throughout the Site. The Work Plan only discusses groundwater monitoring well installation. Installation of soil gas monitoring wells is described in the Site s soil gas investigation work plan (Soil Gas Investigation Work Plan, Sandpiper Townhome Complex, Former Singer Friden Facility, 2350/2450 Washington Avenue, San Leandro, California. July 2019).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/05/2020
Comments: Supplemental Groundwater Monitoring Well Location Evaluation Report (Report) provides construction design recommendations to install three dual completion groundwater monitoring well at three distinct locations at the site. Construction design recommendations are based on August/September 2019 soil gas sampling results which indicated the presence of volatile organic compounds in areas where groundwater has not been routinely monitored.

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/29/2013
Comments: 109,500 gallons of water was treated during the July 2013 reporting period. The system operated in compliance with the NPDES permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/03/2013
Comments: Technical Memorandum summarizes the August 2013 soil vapor well sampling event at the Site. The work was conducted under Work Order No. 001 of Contract No. 09-T9128 A3. Soil vapor data continues to show trichloroethene concentrations up to 200 micrograms per liter in the investigated soil vapor monitoring wells.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/17/2013
Comments: August 2013 report indicates system shutdown on 8/10 due to power failure, ERRG responded 8/22. 56,900 gallons were treated in August 2013. Discharge was in compliance with the NPDES permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/01/2005
Comments: The treatment system removed an estimated 7.14 pounds of VOCs, and discharged 5,930,700 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/04/2005
Comments: 1,261,700 gallons of water was treated during July 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/01/2005
Comments: 1,815,700 gallons of water was treated during May 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/30/2005
Comments: 2,050,800 gallons of water was treated during May 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 08/15/2005
Comments: The purpose of the Workplan is to evaluate the potential for migration of volatile organic compounds (VOCs) into the indoor air of residential units at the Site. This will be accomplished by taking soil gas samples from ten (10) locations across the Site. Following the implementation of the Workplan, a Five-Year Report will be prepared, which will summarize the soil gas sampling results and will evaluate the effectiveness of the Site groundwater treatment and monitoring system, including capture zone analysis and recommendations for future Site activities.

Completed Area Name: PROJECT WIDE

Completed Document Type: 5 Year Review Reports
Completed Date: 05/18/2012
Comments: According to the data reviewed, the remedy is functioning as intended by the RAP; however, VOCs in the soil gas is not addressed with the current remedy, therefore additional assessment needs to be done to address the soil gas in the central portion of the Site. The GWTS has significantly reduced the VOC concentrations in the ground water; however the leveling off of VOC concentration trends in the past several years suggests that ground water extraction with the current system alone will take many years of operation to achieve MCLs at the Site, especially in the FGU-shallow. Enhanced in-situ bioremediation pilot studies were effective in reducing VOC concentrations in

SINGER FRIDEN (Continued) **S101272670**

groundwater, therefore, targeted in-situ methods will be effective in reducing the areas of highest VOC concentration and monitored natural attenuation (MNA) can replace active remediation for eventual MCL attainment.

Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/07/2010
Comments: A total of 2,544,300 gallons of water was treated by the system during the discharge period from September 28, 2010, to October 26, 2010.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/24/2010
Comments: A total of 2,086,500 gallons of water was treated by the system during the discharge period from October 26, 2010, to November 30, 2010.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/08/2011
Comments: A total of 1,388,600 gallons of water was treated by the system during the discharge period from November 30, 2010 to January 3, 2011. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/08/2011
Comments: A total of 690,200 gallons of water was treated by the system during the discharge period from January 3, 2011, to February 1, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/25/2011
Comments: A total of 1,061,600 gallons of water was treated by the system during the discharge period from February 1, 2011 to March 1, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/28/2011
Comments: A total of 1,370,400 gallons of water was treated by the system during the discharge period from March 1, 2011 to April 1, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/13/2011
Comments: A total of 1,438,100 gallons of water was treated by the system during the discharge period from April 1, 2011 to May 3, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report

SINGER FRIDEN (Continued) **S101272670**

Completed Date: 08/09/2011
Comments: A total of 878,800 gallons of water was treated by the system during the discharge period from May 3, 2011 to May 24, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/09/2011
Comments: A total of 1,573,000 gallons of water was treated by the system during the discharge period from May 24, 2011 to June 30, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/30/2010
Comments: The treatment system removed an estimated 5.8 lbs pounds of VOCs, and discharged 7,607,300 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/15/2011
Comments: The total volume of treated water for the fourth quarter 2010 and during 2010 was 6,019,400 gallons and 26,940,500 gallons, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/07/2011
Comments: The total volume of treated water for the first quarter 2011 was 3,122,200 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/16/2011
Comments: The total volume of treated water for the second quarter 2011 was 3,889,900 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 06/13/2011
Comments: Workplan to conduct in-situ injections at 2 locations approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/30/2011
Comments: Injections completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 03/19/2012

SINGER FRIDEN (Continued) **S101272670**

Comments: The effectiveness of the 3DMe injection pilot study and the extent and concentration of the contaminant plume near extraction wells EW-6 and EW-8 were evaluated over two post-injection quarterly groundwater monitoring events. Multiple lines of evidence of improved anaerobic or reducing conditions and degradation of chlorinated VOCs were noted. Continued groundwater monitoring will be required to assess ongoing performance.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 06/13/2011
Comments: Work Notice for In-situ injections at two locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/07/2011
Comments: A total of 1,300,200 gallons of water was treated by the system during the discharge period from June 30, 2011 to August 2, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/31/2011
Comments: A total of 1,032,000 gallons of water was treated by the system during the discharge period from August 2, 2011 to August 31, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/09/2011
Comments: A total of 776,700 gallons of water was treated by the system during the discharge period from August 31, 2011 to October 3, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2011
Comments: A total of 1,082,100 gallons of water was treated by the groundwater treatment system during the discharge period from October 3, 2011 to October 31, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 01/27/2012
Comments: A total of 1,125,700 gallons of water was treated by the groundwater treatment system during the discharge period from October 31, 2011 to November 29, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 01/27/2012
Comments: A total of 1,050,600 gallons of water was treated by the groundwater treatment system during the discharge period from November 29, 2011

SINGER FRIDEN (Continued) **S101272670**

to January 3, 2012.

Completed Area Name: PROJECT WIDE

Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2012
Comments: A total of 597,400 gallons of water was treated by the groundwater treatment system during the discharge period from January 3, 2012 to January 31, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2012
Comments: A total of 691,300 gallons of water was treated by the groundwater treatment system during the discharge period from January 31, 2012, to February 27, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/24/2012
Comments: A total of 658,700 gallons of water was treated by the groundwater treatment system during the discharge period from February 27, 2012, to March 30, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/26/2012
Comments: A total of 747,100 gallons of water was treated by the groundwater treatment system during the discharge period from March 30, 2012, to May 1, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/19/2012
Comments: A total of 197,500 gallons of water was treated by the groundwater treatment system during the discharge period from May 1, 2012, to June 1, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/08/2012
Comments: 170,700 gallons of water was processed through the remediation system during the June 2012

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/05/2012
Comments: 165,700 gallons treated this reporting period.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: Operation and Maintenance Report
Completed Date: 12/15/2011
Comments: The total volume of treated water for the third quarter 2011 was 3,108,900 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/16/2012
Comments: The total volume of treated water for the fourth quarter 2011 and during 2011 was 3,258,400 gallons and 13,379,400 gallons, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/24/2012
Comments: The total volume of treated water for the first quarter 2011 was 1,947,400 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/16/2012
Comments: 2nd Quarter 2012 NPDES and GWM Reports

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/19/2012
Comments: The Groundwater extraction system operated in compliance with the NPDES permit and treated 146,000 gallons of groundwater this quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/11/2013
Comments: The groundwater extraction treatment system operated in compliance with the NPDES discharge permit. The total volume treated in the fourth quarter was 290,200 gallons, removing 0.103 kilograms of VOC's. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/09/2011
Comments: No volatile organic compounds were detected in any of the 4 deep wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/01/2011
Comments: Soil gas field work completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: Site Characterization Workplan
Completed Date: 11/30/2011
Comments: Soil Gas Work Plan to conduct soil gas sampling at 2 depths at 6 locations approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 01/27/2012
Comments: Soil gas sampling results are significantly higher than previous sampling event. Indoor air will be tested as the next step.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 02/13/2012
Comments: Indoor air sampling will be conducted inside the pool house and outdoor air samples will be collected near the pool house and at an upgradient location.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 04/05/2012
Comments: According to the indoor air results, the screening level cancer risks are: 2.2 x 10-6 for PCE and 4.3 x 10-6 for TCE (using the new toxicity criterion for TCE). Since vinyl chloride has been detected in soil gas, assuming vinyl chloride (VC) could be present in indoor air at its reporting limit of 0.042 ug/m3, the risk for vinyl chloride would be 1.4 x 10-6. The cumulative risk for TCE, PCE and VC is 7.9 x 10-6, still within the acceptable risk range. However, sub surface soil gas source remediation need to be conducted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/09/2013
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 103,100 gallons of water was processed through the remediation system during the September 2013 reporting period from August 29 to October 1, 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2013
Comments: The GWTS was operated and discharge was in compliance with the NPDES permit this quarter. VOC’s in the influent were around 100 ppb and non-detect in the effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2013
Comments: 80,900 gallons of water was processed through the remediation system during the October 2013 reporting period from October 1 to November 1, 2013.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	12/16/2013
Comments:	WTS operates in compliance with the NPDES permit. Volume treated this month was 74,900m gallons.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	01/16/2014
Comments:	The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 54,899 gallons of water was processed through the remediation system during the December 2013 reporting period from December 1 to December 31, 2013.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	03/06/2014
Comments:	Soil vapor results consistent with historical values, VOCs detected TCE, PCE Vinyl Chloride and DCE. Well SVM-2A the shallow motioning well was sampled but the sample is suspect due to purging problems.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	02/04/2014
Comments:	The report summarizes the annual 2013 groundwater monitoring data collected at the Site. The results were within historic ranges for chlorinated volatile organic compounds. Naturally-occuring parameters were also measured for use in design of future remedies such as insitu-bioremediation.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	02/13/2014
Comments:	The total volume of treated water for the fourth quarter 2013 and during the 2013 monitoring period was 210,400 and 838,000 gallons, respectively. The total volume treated since the remediation system began operation on May 4, 2001, was 191,435,406 gallons.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	02/28/2014
Comments:	The GWTS operated in compliance with the NPDES permit.

Completed Date: 08/14/2014
Comments: Groundwater treatment system continues to treat low volumes of water

SINGER FRIDEN (Continued) **S101272670**

with consistent concentrations of VOC's in the influent and non-detect results in effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/23/2013
Comments: Based on a comparison of VOC concentrations measured during previous sampling events with concentrations measured during the semiannual 2013 event, VOC concentrations have generally decreased over time. However, VOC concentrations in many of the Site s wells have fluctuated over time and are likely due to one or more of the following conditions: seasonal variation of groundwater elevations, changing groundwater flow dynamics as extraction well pumps are turned off or on, and redistribution of dissolved contaminant mass over time. Additionally, enhanced in-situ bioremediation pilot tests in the areas of wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Completed Document Type: Operation and Maintenance Report
Completed Date: 07/19/2016
Comments: Follow up sampling on June 20, 2016 (after SSDs were dried out) in Unit 002 found reduced levels of tetrachloroethene.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 01/21/2015
Comments: Notice for winter round of indoor air sampling at Sandpiper Condominiums.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/12/2018
Comments: Groundwater monitoring had not been performed at the Site since 2015. Comparison of results from the second quarter 2018 groundwater monitoring event with historical data show that the volatile organic compounds (VOC) tetrachloroethene, trichloroethene and vinyl chloride have remained undetectable (< 0.5 micrograms per liter) in samples collected from the deep and intermediate zone aquifer, while results from the shallow aquifer show that the concentrations of these VOCs have stabilized, decreased or increased over time. The reasons for

SINGER FRIDEN (Continued) **S101272670**

this different behavior in the shallow aquifer are likely phenomena associated with historical in-situ remediation efforts implemented at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/14/2018
Comments: The 2018 groundwater monitoring event was completed. The depth to groundwater was measured in 20 monitoring wells. Groundwater samples were collected from the 20 monitoring wells and 9 former extraction wells using passive diffusion bags. Volatile organic compound (VOC) concentrations reported during past groundwater sampling events were compared to those detected during the 2018 event. The comparison indicated that VOC concentrations have generally stabilized or decreased; however, VOC concentrations in may of the Site wells have fluctuated over time.

Completed Date: 05/20/2020
Comments: Correspondence provides response to a Sandpiper Townhome Complex s resident about environmental hazard disclosure requirements of properties located in the Sandpiper Townhome Complex. Due to confidentially, correspondence s addressee information is redacted.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 05/18/2017
Comments: One indoor air sample were collected at Unit 006. Based on the indoor air sampling results, all primary VOCs (TCE, PCE and VC) were found at a concentration lower than the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 012
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: One indoor air sample was collected from Unit 012 s bathroom. Based on the indoor air sampling results, trichloroethene and tetrachloroethene were found at levels above the residential air screening levels.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/20/2020
Comments: Correspondence and consent form sent to Sandpiper Townhome Complex residents offering indoor air sampling on a voluntary basis

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 001
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two samples were collected from Unit 001. One sample (indoor air sample) was collected from Unit 001 bathroom. The second sample (effluent sample) was collected outside at the sub-slab depressurization system s exhaust pipe. Based on the October 2019 indoor air sampling results, none of the chemicals of concern was found at your residence indoor air with concentrations above the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 01/29/2019
Comments: DTSC letter conveying indoor air sampling results to resident. Based on the December 2018 and historical indoor air quality testing results, the fan system has been effective in maintaining the TCE indoor air concentration in the Unit 007 below residential screening levels. PCE indoor air concentrations have been above the DTSC residential screening level; however, the fan system has been effective in keeping the exposure, risk from PCE in indoor air at Unit 007 within the acceptable cancer risk range.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 06/17/2020
Comments: Contract 19-T4790 with RMD. Contract scope of work consist of two tasks. Task 1 - Technical Consultative Services and Task 2 - Environmental Noise Assessment for Soil Vapor Extraction System

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 010
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two indoor air samples were collected from Unit 010 bathroom. The two indoor air samples consisted of one primary and one duplicate sample. The duplicate sample was used to confirm the validity of the primary sample results. Based on the indoor air sampling results, trichloroethene was found at a concentration above the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 004
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Three samples were collected from Unit 004. Two samples (indoor air) were collected from Unit 004 s bathroom and living room. The third

SINGER FRIDEN (Continued) **S101272670**

sample (effluent sample) was collected outside at the sub-slab depressurization system s exhaust pipe. Based on the October 2019 indoor air sampling results, only the chemical of concern vinyl chloride was found at your residence indoor air with concentrations above the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: A total of five samples were collected at Unit 0007. Two indoor air samples were collected from Unit 007 s bathroom and kitchen. Two effluent samples were collected at Unit 007 s fan system s exhaust pipes along the rear southwestern exterior wall of your home, and the northeastern wall of your home s garage. One ambient air sample was collected at Unit 007 s back yard. Based on the October 2019 indoor air sampling results, the only chemical of concern found at Unit 007 with concentrations above the residential air screening level (0.46 micrograms per cubic meter [g/m3]) was tetrachloroethene.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 013
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: One indoor air sample was collected from Unit 013 s bathroom. Based on the indoor air sampling results, none of the primary chemicals of concern (trichloroethene, tetrachloroethene and vinyl chloride) was found at your residence s indoor air above the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Pilot Study involved collection soil vapor, sub-slab vapor and indoor air samples before and after the application of Land Science Technologies Retro-Coat on the exposed concrete slab foundation of Unit 009.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Correspondence
Completed Date: 08/15/2017
Comments: Two indoor samples were collected at Unit 009. One indoor air sample was collected when the residence was unoccupied and HVAC off, and the second sample was collected under normal occupancy and HVAC on. Under normal occupancy and HVAC operation, all primary VOCs were below DTSC’s health-based screening levels. The results while the house was unoccupied and HVAC off (i.e. no air exchange) do not indicate a need for an active vapor mitigation system

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: State/Federal Funded Site Contract
Completed Date: 10/12/2020
Comments: Contract 17-T4306 A1 extended until October 31, 2021

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 011
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two indoor air samples were collected from Unit 011 s bathroom. The two indoor air samples consisted of one primary and one duplicate sample. The duplicate sample was used to confirm the validity of the primary sample results. Based on the indoor air sampling results, trichloroethene was found at a concentration above the residential air screening level.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 10/01/2018
Comments: Contract 14-T3902 expired on September 30, 2018. DTSC issued a stop work letter for Engineering/Remediation Resources Group, Inc. to immediately cease all work under the this contract and to submit a final invoice.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 04/08/2021
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 02/25/2020
Comments: Soil gas analytical results for the 70 soil gas samples collected from the 35 nested soil gas monitoring wells installed for this project indicate widespread detections of trichloroethene (TCE) and tetrachloroethene (PCE) across the Site on both investigated depths, 5 and 15 feet below ground surface. The potential indoor air concentrations resulting from measured soil gas concentrations were calculated by considering a generic attenuation factor of 0.03. The results indicate that predicted indoor air concentrations of PCE and TCE may exceed the residential air screening levels in the vicinity of most of the soil gas monitoring wells. The risks of volatile organic compounds vapor intrusion (VI) into nearby buildings may also be augmented by the presence of preferential VI pathways such as subsurface utility corridors and cracks in concrete building foundations. These results indicate that further investigation of site conditions is warranted to further evaluate potential risks to human health at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 07/30/2019
Comments: The Soil Gas Investigation Workplan provides the means and methods to conduct a soil gas investigation for volatile organic compounds at the Site and was developed based on guidelines provided by the 2015 DTSC Advisory for Active Soil Gas Investigations.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Fieldwork
Completed Date: 08/21/2018
Comments: Passive indoor air sampling deployment and building survey.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 008
Completed Document Type: Monitoring Report
Completed Date: 09/14/2018
Comments: This letter report summarizes the air sampling event performed on May 29 through June 5, 2018 at Unit 008 within the Sandpiper Townhouse Complex. The tetrachloroethene (PCE) concentration detected during the May 2018 event was similar to the concentrations detected during the May and December 2017 air sampling events. The concentrations have not changed significantly since the sub-slab depressurization system was installed in October 2017. ERRG, DTSC's contractor, recommended in the report that a variable speed fan or second fan be installed to increase suction and reduce PCE concentrations in indoor air.

Completed Document Type: Fieldwork
Completed Date: 12/19/2018
Comments: Site reconnaissance with DTSC SM and GSU staff.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Monitoring Report
Completed Date: 01/29/2019
Comments: This letter report summarizes the air sampling event performed from November 13, 2017, through December 13, 2018, at Unit 007 within the Sandpiper Townhouse Complex at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 02/27/1996
Comments: During installation of the extraction and treatment system conveyance piping in December 1995, potentially contaminated soil was encountered adjacent to the excavation for the vault box in the intersection of Heathrow Place and Cornwall Way. Pursuant to Task Order No. 2-085-11.0-200251 issued under contract No. 91-T0085, DTSC retained URS Consultants, Inc. (URS) to perform a soil removal action at the Singer Friden site. Soil excavation extended to approximately 5 feet below grade surface. The soil quantity to be removed was estimated to be approximately 25 cubic yards. The excavation was backfilled on February 11 and 12, 1996. Class 2 gravel fill was placed in the excavation in approximately 8-inch lift and compacted with a hand-held Wacker. Final grading and asphalting was completed on February 14, 1996.

Completed Document Type: Fieldwork
Completed Date: 12/18/2020
Comments: Fieldwork activities completed on December 18, 2020

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 06/11/2018
Comments: The work plan describes the permitting and utility locate activities, pilot study sampling activities, Land Science Technologies Retro-Coat application, waste management procedures, and reporting requirements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 01/27/2020
Comments: Third Five-Year Review (FYR) Report consisted of a review of relevant documents, including operation and maintenance records, pilot study reports and monitoring data from June 2012 to July 2018. From June 2013 to June 2015, the groundwater sampling frequency changed from quarterly to a semi-annual basis. Seventeen wells were sampled in the spring of each year and 21 wells in the fall. After June 2015, groundwater monitoring did not resume until the groundwater monitoring event in May 2018. Third FYR Report recommended the following: i) Conduct an additional soil gas survey at the Site. ii) Prepare an amendment to 1996 RAP to: (a) change the selected groundwater remedy for the Site from groundwater extraction and treatment to enhanced in-situ bioremediation; and (b) add soil vapor

SINGER FRIDEN (Continued) **S101272670**

extraction (SVE) and treatment as part of the remedy to address volatile organic compounds (VOC)-impacted soil gas. iii) Install an SVE system to extract soil gas from portions of the Site where soil gas surveys reported soil gas concentrations above federal and state screening levels. iv) Conduct groundwater sampling in the Site s monitoring well network on a semi-annual basis. v) Implement enhanced in-situ bioremediation at hot spots areas of the VOC-impacted groundwater plume and at areas downgradient of the hot spots areas. vi) Implement an expanded groundwater sampling protocol as needed to monitor enhanced in-situ bioremediation effectiveness. vii) Conduct groundwater monitoring in the intermediate (INZ-1, INZ-2 and INZ-3) and deep (DW-1, DW-2 and DW-3) zone aquifers on a semi-annual basis. viii) Conduct groundwater sampling in drinking water wells in areas immediately down-gradient and adjacent to the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 03/15/2019
Comments: Letter report summarizes the 2018 fourth quarter groundwater monitoring data collected at the former Singer-Friden Facility (site). Primary chemicals of concern (COCs) concentrations and other volatile organic compounds reported during previous sampling events were compared with concentrations reported during the November 2018 sampling event. As there was a 3-year gap between groundwater monitoring events of 2015 and 2018, additional groundwater monitoring events are needed to establish trends in primary COC concentrations within the appropriate statistical confidence levels for the wells screened in the site s hydrogeological units.

Completed Document Type: Fieldwork
Completed Date: 09/13/2019
Comments: Field work (indoor air quality samples) completed on 9/13/2019. Three residences (Units 010, 012 and 013) were sampled.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/18/2019
Comments: October 2019 Indoor Air Quality Sampling Event completed on October 18, 2019. Thirteen samples were collected as following: * Six primary and one duplicate indoor air quality samples. * Five effluent samples. * One ambient air sample.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/17/2019
Comments: A combination of geophysical methods was used to meet the objectives of the subsurface geophysical surveys as described in the 2019 Subsurface Geophysical Survey workplan. The selected geophysical survey methods were electromagnetic line locating, metal detection, ground penetrating radar, and total field magnetic. The selected geophysical methods used in each of the five survey areas at former Singer-Friden Site depended on the nature of the suspected targets and the available site access. Subsurface geophysical surveys results identified notable evidence of subsurface features at the central portion of Cornwall Way across the Sandpiper Townhome Complex s Pool House. These subsurface features are likely a shallow backfilled catch basin and a buried metallic object. Subsurface geophysical surveys did not identify notable evidence of subsurface features at the other four survey areas.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/21/2020
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients

SINGER FRIDEN (Continued) **S101272670**

between the four water-bearing zones at the Site. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the June 2020 sampling event. Analytical results indicate that VOC concentrations have largely stabilized or decreased over time, with occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions and (2) redistribution of the dissolved contaminant mass in saturated porous media over time. Additionally, enhanced in-situ bioremediation pilot tests conducted in the areas near to the wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 10/17/2019
Comments: According to the First Semiannual 2019 Groundwater Monitoring Report, volatile organic compound (VOC) concentrations have generally stabilized or decreased over time when compared to previous sampling events results. However, VOC concentrations have shown occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions, (2) removal of the groundwater treatment system, and (3) redistribution of dissolved contaminant mass in the saturated porous media over time.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/17/2019
Comments: Second Semiannual 2019 Groundwater Monitoring Event occurred according to sampling schedule (every December).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 02/25/2020
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2019 sampling event. Analytical results indicate that VOC concentrations have generally stabilized or decreased over time. However, VOC concentrations have shown occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions, (2) removal of the groundwater treatment system, and (3) redistribution of the dissolved contaminant mass in saturated porous media over time. Additionally, enhanced in-situ bioremediation pilot tests in the areas of wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/28/1991
Comments: RI report indicates shallow groundwater has significant VOC contamination, soil samples do not show high levels of contaminants, and soil vapor samples have elevated concentrations of VOCs and ambient air quality samples showed similar values to the background levels in San Leandro.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 02/28/1991
Comments: A briefing package has been prepared and a public meeting was held to present groundwater, soil and air quality testing that was conducted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 10/03/1988
Comments: Preliminary Assessment evaluated the chemicals used at the Singer Friden plant, waste collection systems at the plant and potential migration pathways of chemicals from the plant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/01/2005
Comments: The treatment system removed an estimated 6.97 pounds of VOCs, and

SINGER FRIDEN (Continued) **S101272670**

discharged 5,742,300 gallons of treated groundwater into the San Leandro storm sewer system.

Comments: Postcard sent to local community informing about a Community Update

SINGER FRIDEN (Continued) **S101272670**

Workshop that will be held at local community center on February 29, 2020.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 02/21/2020
Comments: A community update workshop will be held at local community center on February 29, 2020. DTSC will discuss the following: August 2019 soil gas investigation and September/October 2019 indoor air testing results of certain residences; Future indoor air quality testing and steps that local residents can take to maintain personal and environmental health.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 011
Completed Document Type: Technical Report
Completed Date: 04/07/2020
Comments: Unit 011 Foundation Inspection Report summarizes the visual inspection of the concrete slab foundation performed on February 7, 2019, at Unit 011 within the Sandpiper Townhouse Complex at the Former Singer Friden Facility.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 012
Completed Document Type: Technical Report
Completed Date: 04/07/2020
Comments: Unit 012 Foundation Inspection Report summarizes the visual inspection of the concrete slab foundation performed on February 7, 2019, at Unit 012 within the Sandpiper Townhouse Complex at the Former Singer Friden Facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 09/08/2020
Comments: Five (5) junction box vaults welded on September 2020 Two (2) within the Sandpiper Townhome Complex s streets, one (1) just outside the Washington Avenue access gate to the complex, and two (2) along Washington Avenue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 12/04/2020
Comments: Site-Specific Protection Plan (SPP) provides instructions to field staff on how to implement Alameda County Shelter in Place Order and Face Coverings Order. SSP includes COVID-19 precautionary measures by informing (i) individual control measures and screenings; (ii) cleaning and disinfecting protocols; (iii) schedule for disinfecting high traffic areas and commonly used surfaces; (iv) physical distancing guidelines; (v) notification requirements of COVID-19 positive case and (vi) training requirements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan

SINGER FRIDEN (Continued) **S101272670**

Completed Date: 12/16/2020
Comments: Singer Friden Covid-19 Plan for SSDS O&M Plan (COVID-19 H&S Plan) provides sufficient information to meet State of California Executive Order N 33-20, Alameda County Order of the Health Officer No. 20-21 requirements and the minimum requirements listed on the DTSC COVID-19 Contractor Plan Reviews, version 1.0.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 03/06/2021
Comments: Fact Sheet informs the Sandpiper community about the status of environmental investigations planned at the former Singer Friden facility (Site) The Site is currently in the operation and maintenance phase of work. Supplemental environmental investigations are planned and necessary to help the DTSC better evaluate the implementation of additional cleanup measures at the Site. When implemented, additional cleanup measures will stop or reduce vapor intrusion of chemicals coming from soil and groundwater at the Site. These measures will improve indoor air quality of residences and protect human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 06/10/2020
Comments: First and Second Five-Year Review Reports Revised Update Fact Sheet provides a status of environmental cleanup efforts conducted at the former Singer Friden facility (Site) from March 2001 to May 2012. The Site is currently in the operation and maintenance phase of work, which requires DTSC to review available data every five years. The purpose of a Five-Year Review is to evaluate the implementation and performance of a remedy to determine if it is or will be protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 06/10/2020
Comments: Third Five-Year Review Report Fact Sheet provides a status update of environmental cleanup efforts conducted at the former Singer Friden facility (Site) from June 2012 to July 2018. The Site is currently in the operation and maintenance phase of work, which requires DTSC to review available data every five years. The purpose of a Five-Year Review is to evaluate the implementation and performance of a remedy to determine if it is or will be protective of human health and the environment.

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: Fieldwork
Completed Date: 06/26/2020
Comments: Groundwater monitoring fieldwork activities and COVID-19 precautionary measures implemented as planned.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 03/18/2021
Comments: Work Plan outlines the tasks to be performed during installation of three double-nested groundwater monitoring wells and one triple-nested soil gas monitoring well at the former Singer Friden Facility (Site). The project objective is to expand the Site s monitoring well network to further evaluate the nature and extent of volatile organic compounds (VOCs) in groundwater, soil, and soil gas throughout the Site. The Work Plan only discusses groundwater monitoring well installation. Installation of soil gas monitoring wells is described in the Site s soil gas investigation work plan (Soil Gas Investigation Work Plan, Sandpiper Townhome Complex, Former Singer Friden Facility, 2350/2450 Washington Avenue, San Leandro, California. July 2019).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/05/2020
Comments: Supplemental Groundwater Monitoring Well Location Evaluation Report (Report) provides construction design recommendations to install three dual completion groundwater monitoring well at three distinct locations at the site. Construction design recommendations are based on August/September 2019 soil gas sampling results which indicated the presence of volatile organic compounds in areas where groundwater has not been routinely monitored.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 04/16/2014
Comments: Contract to conduct indoor air sampling fully executed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date: 03/13/2014
Comments: Contract Fiscal Approval (CFA) 09 T9128 for indoor air sampling at the Singer Friden site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 08/14/2014
Comments: Contract signed for ERRG to develop a demolition plan for the GWTS in case the property owner gives a 30 day vacate notice.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 04/27/2015
Comments: Notification of Change in DTSC Project Manager

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date: 07/25/2014
Comments: Contract Fiscal Approval (CFA) of Contract 13-T3826 for preparation of a workplan to demolish the groundwater extraction treatment system. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 01/07/2015
Comments: Work order amended to add winter sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 04/16/2015
Comments: Work order amendment to include certification of installation for sub-slab systems.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 11/06/2014
Comments: Work order authorizes continued operation of the groundwater extraction treatment system, groundwater monitoring, soil vapor monitoring, sub-slab installations at the Singer site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type:	Correspondence
Completed Date:	04/07/2015
Comments:	All tasks are complete under this contract.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date:	04/21/2015
Comments:	Amendment to add 6 additional sub-slab systems.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Contract
Completed Date:	05/29/2015
Comments:	Contract amendment for the installation of 6 sub-slab systems. Locations are to be determined.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Work Order
Completed Date:	03/30/2015
Comments:	Work order amendment to authorize installation of variable speed fan.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Contract Fiscal Approval (CFA)
Completed Date:	07/25/2014
Comments:	Contract Fiscal Approval (CFA) of Contract 13-T3826 for demolishing the groundwater extraction treatment system.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Contract
Completed Date:	11/04/2014
Comments:	Contract 14-T3902 authorizes activities required to operate and maintain the groundwater extraction treatment system.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Work Order
Completed Date:	11/03/2015
Comments:	Work order issued for sub-slab system installation, GWTS O&M and GWTS Demolition.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Pilot Study/Treatability Workplan
Completed Date:	10/22/2012
Comments:	Soil Vapor Extraction Pilot Study Workplan describes extraction well placement and construction details. Sampling for Volatile Organic soil gas is included to prepare design of extraction system.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Pilot/Treatability Study Report
Completed Date:	05/20/2013
Comments:	Report documents the soil vapor extraction (SVE) pilot study

SINGER FRIDEN (Continued) **S101272670**

conducted in November/December 2012. The purpose of the pilot study was to evaluate the effectiveness of SVE in one of the areas with the highest concentrations of chlorinated volatile organic compounds (VOCs) in soil gas; primarily, trichloroethene (TCE).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 08/22/2013
Comments: The update to the Public Participation Plan includes responses from community members and an updated mailing list.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/09/2012
Comments: August Monthly O and M Report 113,000 gallons treated this month.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/15/2012
Comments: System operated as required with 146, 000 gallons treated. Effluent limits were met.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/04/2012
Comments: 108,200 gallons of water were processed through the remediation system during the October 2012. They system was operated in compliance with the NPDES permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/20/2012
Comments: 97,900 gallons of water was processed through the remediation system during the November 2012 reporting period. All treated water met the NPDES permit limits.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/08/2013
Comments: The groundwater treatment system was operated in compliance with the NPDES permit and met all effluent limitations. 84,100 gallons were treated in December 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/26/2013
Comments: The Groundwater Treatment system treated 64,700 gallons for the month of January 2013 and no breakthrough was observed. VVOC samples were Non-detect in the effluent.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/02/2013
Comments: Groundwater Extraction system operated within normal range, 60,000 gasllons were treated in February.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/02/2013
Comments: 111,000 gallons treated this month.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/03/2013
Comments: System is shut down due to problems with the liquid granulated carbon gauge.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/02/2013
Comments: GWTS operating at minimal flows, in compliance with NPDES permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/15/2013
Comments: 62,320 gallons of water was processed through the remediation system during the June 2013 reporting period from June 4 to June 28, 2013

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/17/2013
Comments: The groundwater treatment system operated in compliance with the NPDES permit and treated 236,000 gallons this quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/19/2013
Comments: GWTS is operating in compliance with the NPDES permit. VOC concentrations remain near 100 ppb in the influent and non-detect in the effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/05/2012
Comments: All fieldwork completed, site returned to previous condition.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice

SINGER FRIDEN (Continued) **S101272670**

Completed Date:	08/27/2014
Comments:	Public Notice informing Sandpiper Townhome Complex community about meeting to be held on August 20, 2014, to explain the results of the indoor air sampling, proposed next steps in addressing this issue and answering questions from the public.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Work Notice
Completed Date:	10/26/2012
Comments:	Work Notice was ditributed to all homeowners in the subdivision, posted and placed on the HOA website.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Design - Preliminary/Intermediate
Completed Date:	09/16/2013
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	08/29/2013
Comments:	109,500 gallons of water was treated during the July 2013 reporting period. The system operated in compliance with the NPDES permit.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	10/03/2013
Comments:	Technical Memorandum summarizes the August 2013 soil vapor well sampling event at the Site. The work was conducted under Work Order No. 001 of Contract No. 09-T9128 A3. Soil vapor data continues to show trichloroethene concentrations up to 200 micrograms per liter in the investigated soil vapor monitoring wells.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	09/17/2013
Comments:	August 2013 report indicates system shutdown on 8/10 due to power failure, ERRG responded 8/22. 56,900 gallons were treated in August 2013. Discharge was in compliance with the NPDES permit.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	04/01/2005
Comments:	The treatment system removed an estimated 7.14 pounds of VOCs, and discharged 5,930,700 gallons of treated groundwater into the San Leandro storm sewer system.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	08/04/2005
Comments:	1,261,700 gallons of water was treated during July 2005.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/01/2005
Comments: 1,815,700 gallons of water was treated during May 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/30/2005
Comments: 2,050,800 gallons of water was treated during May 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 08/15/2005
Comments: The purpose of the Workplan is to evaluate the potential for migration of volatile organic compounds (VOCs) into the indoor air of residential units at the Site. This will be accomplished by taking soil gas samples from ten (10) locations across the Site. Following the implementation of the Workplan, a Five-Year Report will be prepared, which will summarize the soil gas sampling results and will evaluate the effectiveness of the Site groundwater treatment and monitoring system, including capture zone analysis and recommendations for future Site activities.

Completed Area Name: PROJECT WIDE

Completed Date:	05/18/2012
Comments:	According to the data reviewed, the remedy is functioning as intended by the RAP; however, VOCs in the soil gas is not addressed with the current remedy, therefore additional assessment needs to be done to address the soil gas in the central portion of the Site. The GWTS has significantly reduced the VOC concentrations in the ground water; however the leveling off of VOC concentration trends in the past several years suggests that ground water extraction with the current system alone will take many years of operation to achieve MCLs at the Site, especially in the FGU-shallow. Enhanced in-situ bioremediation pilot studies were effective in reducing VOC concentrations in groundwater, therefore, targeted in-situ methods will be effective in reducing the areas of highest VOC concentration and monitored natural attenuation (MNA) can replace active remediation for eventual MCL attainment.

Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2012
Comments: A total of 597,400 gallons of water was treated by the groundwater treatment system during the discharge period from January 3, 2012 to January 31, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2012
Comments: A total of 691,300 gallons of water was treated by the groundwater treatment system during the discharge period from January 31, 2012, to February 27, 2012.

Completed Area Name: PROJECT WIDE

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/24/2012
Comments: A total of 658,700 gallons of water was treated by the groundwater treatment system during the discharge period from February 27, 2012, to March 30, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/26/2012
Comments: A total of 747,100 gallons of water was treated by the groundwater treatment system during the discharge period from March 30, 2012, to May 1, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/19/2012
Comments: A total of 197,500 gallons of water was treated by the groundwater treatment system during the discharge period from May 1, 2012, to June 1, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/08/2012
Comments: 170,700 gallons of water was processed through the remediation system during the June 2012

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/05/2012
Comments: 165,700 gallons treated this reporting period.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/15/2011
Comments: The total volume of treated water for the third quarter 2011 was 3,108,900 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/16/2012
Comments: The total volume of treated water for the fourth quarter 2011 and during 2011 was 3,258,400 gallons and 13,379,400 gallons, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/24/2012
Comments: The total volume of treated water for the first quarter 2011 was 1,947,400 gallons.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/16/2012
Comments: 2nd Quarter 2012 NPDES and GWM Reports

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/19/2012
Comments: The Groundwater extraction system operated in compliance with the NPDES permit and treated 146,000 gallons of groundwater this quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/11/2013
Comments: The groundwater extraction treatment system operated in compliance with the NPDES discharge permit. The total volume treated in the fourth quarter was 290,200 gallons, removing 0.103 kilograms of VOC's. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/09/2011
Comments: No volatile organic compounds were detected in any of the 4 deep wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/01/2011
Comments: Soil gas field work completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 11/30/2011
Comments: Soil Gas Work Plan to conduct soil gas sampling at 2 depths at 6 locations approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 01/27/2012
Comments: Soil gas sampling results are significantly higher than previous sampling event. Indoor air will be tested as the next step.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 02/13/2012
Comments: Indoor air sampling will be conducted inside the pool house and outdoor air samples will be collected near the pool house and at an upgradient location.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 04/05/2012
Comments: According to the indoor air results, the screening level cancer risks are: 2.2 x 10-6 for PCE and 4.3 x 10-6 for TCE (using the new toxicity criterion for TCE). Since vinyl chloride has been detected in soil gas, assuming vinyl chloride (VC) could be present in indoor air at its reporting limit of 0.042 ug/m3, the risk for vinyl chloride would be 1.4 x 10-6. The cumulative risk for TCE, PCE and VC is 7.9 x 10-6, still within the acceptable risk range. However, sub surface soil gas source remediation need to be conducted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/09/2013
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 103,100 gallons of water was processed through the remediation system during the September 2013 reporting period from August 29 to October 1, 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2013
Comments: The GWTS was operated and discharge was in compliance with the NPDES permit this quarter. VOC's in the influent were around 100 ppb and non-detect in the effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2013
Comments: 80,900 gallons of water was processed through the remediation system during the October 2013 reporting period from October 1 to November 1, 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/16/2013
Comments: WTS operates in compliance with the NPDES permit. Volume treated this month was 74,900m gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 01/16/2014
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 54,899 gallons of water was processed through the remediation system during the December 2013 reporting period from December 1 to December 31, 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report

SINGER FRIDEN (Continued) **S101272670**

Completed Date: 03/06/2014
Comments: Soil vapor results consistent with historical values, VOCs detected TCE, PCE Vinyl Chloride and DCE. Well SVM-2A the shallow motioning well was sampled but the sample is suspect due to purging problems.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/04/2014
Comments: The report summarizes the annual 2013 groundwater monitoring data collected at the Site. The results were within historic ranges for chlorinated volatile organic compounds. Naturally-occuring parameters were also measured for use in design of future remedies such as insitu-bioremediation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/13/2014
Comments: The total volume of treated water for the fourth quarter 2013 and during the 2013 monitoring period was 210,400 and 838,000 gallons, respectively. The total volume treated since the remediation system began operation on May 4, 2001, was 191,435,406 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/28/2014
Comments: The GWTS operated in compliance with the NPDES permit.

Completed Date: 04/07/2014
Comments: 79,500 gallons of water was processed through the remediation system during the March 2014 reporting period from February 28, 2014 to March 31,2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/14/2014
Comments: The total volume of treated water for the first quarter 2014 was 188,400 gallons. The total volume treated since the remediation system operation began was 191,623,806 gallons. 0.09 kg VOC were removed in the first quarter 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/16/2014

SINGER FRIDEN (Continued) **S101272670**

Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 26,700 gallons of water was processed through the remediation system during the May 2014 reporting period from May 1, 2014 to May 30, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/08/2014
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 69,700 gallons of water was processed through the remediation system during the April 2014 reporting period from March 31, 2014 to May 1, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/16/2014
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 43,600 gallons of water was processed through the remediation system during the June 2014 reporting period from May 30, 2014 to June 30, 2014. Discharge was in compliance with the NPDES permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/18/2014
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 17,900 gallons of water was processed through the remediation system during the July 2014 reporting period from June 30, 2014 to July 31, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/14/2014
Comments: Groundwater treatment system continues to treat low volumes of water with consistent concentrations of VOC’s in the influent and non-detect results in effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/23/2013
Comments: Based on a comparison of VOC concentrations measured during previous sampling events with concentrations measured during the semiannual 2013 event, VOC concentrations have generally decreased over time. However, VOC concentrations in many of the Site s wells have fluctuated over time and are likely due to one or more of the following conditions: seasonal variation of groundwater elevations, changing groundwater flow dynamics as extraction well pumps are turned off or on, and redistribution of dissolved contaminant mass over time. Additionally, enhanced in-situ bioremediation pilot tests in the areas of wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Field Order
Completed Date: 07/29/2014
Comments: Field order to allow relocation of one or more residents in the Sandpiper Townhomes into temporary housing.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 12/30/2014
Comments: Contract 13-T3786 A-1 adds indoor air sampling activity.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 07/06/2016
Comments: Contract extension until June 30, 2017

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 08/21/2014
Comments: Contract 14-T3865 WO 01 to authorize demolition of groundwater treatment system at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Access Agreement
Completed Date: 09/02/2014
Comments: Access Agreement to residential properties within Sandpiper Townhome Complex

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 06/21/2017
Comments: Contract amendment to add money and extend the contract through September 30, 2018. Work includes continued groundwater monitoring and as-needed installation of sub-slab systems.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 02/13/2017
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 04/23/2018
Comments: Work Order issued for semiannual groundwater monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/30/2018
Comments: Dundee Homeowners Association approval for DTSC to install

SINGER FRIDEN (Continued) **S101272670**

remediation systems at residences within the Sandpiper Condominium Complex

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 002
Completed Document Type: Correspondence
Completed Date: 08/15/2017
Comments: One indoor air sample were collected at Unit 002. Based on the indoor air sampling results, tetrachloroethene was found at a concentration above the residential air screening level.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 10/10/2018
Comments: Contract 17-T4416 Work Order No, 1 was fully executed on October 10, 2018. The Work Order directs ERRG to perform indoor air and sub-slab depressurization system effluent sampling; install floor sealant and air sealing in a residence to determine the effectiveness in reducing volatile organic compound concentrations and prepare a work documenting the work; and conduct operation and maintenance of sub-slab depressurization systems installed at individual residences; conduct semi-annual groundwater monitoring; and prepare and implement a workplan for a soil gas survey.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Post HARP Form
Completed Date: 06/06/2019
Comments: Hazard Appraisal and Recognition Plan Post Site Visit conducted on June 5, 2019 to verify proposed soil gas monitoring well locations.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 09/17/2018
Comments: Informational letter indicating the new assigned project manager.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Request for Tribal Outreach
Completed Date: 06/18/2019
Comments: The Native American Heritage Commission conducted a search of the Sacred Land File with negative results for the area of the Singer Friden Site in San Leandro (Site). Letters were mailed to the seven Tribal contacts identified and included two maps locating the Site as attachments. The DTSC Office of Environmental Equity (OEE) received no requests for consultation regarding this Site. Thus, DTSC OEE considered he Tribal outreach and engagement completed and approved proceeding with the planned site investigation activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 01/16/2019
Comments: Post card inviting local residents to participate in an Open House event. During this event DTSC will provide results of an indoor air

SINGER FRIDEN (Continued) **S101272670**

monitoring survey conducted at their homes and explain the performance of the sub slab depressurization systems installed in homes.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 002
Completed Document Type: Correspondence
Completed Date: 09/17/2018
Comments: Informational letter indicating the new assigned project manager.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 005
Completed Document Type: Correspondence
Completed Date: 09/17/2018
Comments: Informational letter indicating the new assigned project manager.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/19/2015
Comments: NPDES Report submitted to RWQCB per the permit requirements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/10/2015
Comments: The total volume of treated water for the second quarter of 2015 was 43,700 gallons. The total volume treated since the remediation system began operation on May 4, 2001, was 191,966,606 gallons. The system operated in compliance with requirements of NPDES VOC and Fuel General Permit No. NPDES Permit No. CAG912002, Order No. R2-2012-0012. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/20/2015
Comments: Report was prepared by ERRG on behalf of DTSC. The Report documents locations where samples were collected. Analytical results to document compliance with discharge requirements for system flow and mass removal data; and operational status of the treatment system and observations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/20/2015
Comments: Groundwater Extraction and Treatment Plant Demolition complete. Site restored.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 11/06/2015
Comments: Work Notice issued for GWTS Demolition.

Completed Area Name: PROJECT WIDE

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	02/24/2016
Comments:	Final NPDES Report fro Groundwater extraction and Treatment System
Completed Area Name:	Indoor Air - MULTIPLE SITES
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	05/31/2016
Comments:	March 2016 indoor air sampling and SSD diagnostic. Elevated moisture was found in all SSDs.
Completed Area Name:	Indoor Air - MULTIPLE SITES
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	07/19/2016
Comments:	Follow up sampling on June 20, 2016 (after SSDs were dried out) in Unit 002 found reduced levels of tetrachloroethene.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	01/21/2015
Comments:	Notice for winter round of indoor air sampling at Sandpiper Condominiums.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	09/12/2018
Comments:	Groundwater monitoring had not been performed at the Site since 2015. Comparison of results from the second quarter 2018 groundwater monitoring event with historical data show that the volatile organic compounds (VOC) tetrachloroethene, trichloroethene and vinyl chloride have remained undetectable (< 0.5 micrograms per liter) in samples collected from the deep and intermediate zone aquifer, while results from the shallow aquifer show that the concentrations of these VOCs have stabilized, decreased or increased over time. The reasons for this different behavior in the shallow aquifer are likely phenomena associated with historical in-situ remediation efforts implemented at the Site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	05/14/2018
Comments:	The 2018 groundwater monitoring event was completed. The depth to groundwater was measured in 20 monitoring wells. Groundwater samples were collected from the 20 monitoring wells and 9 former extraction wells using passive diffusion bags. Volatile organic compound (VOC) concentrations reported during past groundwater sampling events were compared to those detected during the 2018 event. The comparison indicated that VOC concentrations have generally stabilized or decreased; however, VOC concentrations in may of the Site wells have fluctuated over time.
Completed Area Name:	Indoor Air

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Unit 009
Completed Document Type: Fieldwork
Completed Date: 06/04/2018
Comments: Indoor air sampling completed in unit prior to proceeding with Retro Coat pilot study.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 11/15/2019
Comments: Letter report describes the activities conducted to implement a membrane coating (Retro-Coat) pilot study (Pilot Study) at the Unit 009, Former Singer-Friden Facility. Letter report describes findings of the Pilot Study.

Completed Area Name: Indoor Air

Completed Document Type: Correspondence
Completed Date: 09/17/2018
Comments: Informational letter indicating the new assigned project manager.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 03/16/2018
Comments: Fully-executed Contract 17-T4416 between DTSC and Engineering/Remediation Resource Group, Inc. to conduct indoor air monitoring, install floor sealant and sub-slab depressurization systems, perform groundwater injection and pre- and post-injection soil gas and groundwater monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 09/27/2018
Comments: Contract 17-T4416 Amendment 1 fully executed. The Amendment adds additional activities, including groundwater monitoring, a soil gas survey, delineation o the volatile organic compound plume using a membrane interface probe, operation and maintenance of a sub-slab depressurization system installed at individual residences at the Site, and indoor air monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 01/23/2020
Comments: Work Order Amendment to Engineering/Remediation Resources Group to perform building foundation inspection in up to 25 townhome units at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 08/26/2019
Comments: Revised HARP reviewed by DTSC IH and approved by DTSC IH and Unit Chief.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 01/24/2019
Comments: December 22, 2017 Certification Letter will be updated with information from 2018 activities at Unit 007, including: (1) Crack sealing of exposed concrete slab within living quarters of the unit;

SINGER FRIDEN (Continued) **S101272670**

(2) Changing out one of the two SSDS fans to a variable speed fan; (3) Installation of additional fan noise dampening materials; and (4) Post SSDS modification indoor air sample results.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 008
Completed Document Type: Correspondence
Completed Date: 01/24/2019
Comments: February 1, 2018 Certification Letter will be updated with information from 2018 activities at Unit 008, including: (1) Changing out the SSDS fan to a variable speed fan; and (2) Post SSDS modification indoor air sample results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/20/2020
Comments: Correspondence provides response to a Sandpiper Townhome Complex s resident about environmental hazard disclosure requirements of properties located in the Sandpiper Townhome Complex. Due to confidentially, correspondence s addressee information is redacted.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 05/18/2017
Comments: One indoor air sample were collected at Unit 006. Based on the indoor air sampling results, all primary VOCs (TCE, PCE and VC) were found at a concentration lower than the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 012
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: One indoor air sample was collected from Unit 012 s bathroom. Based on the indoor air sampling results, trichloroethene and tetrachloroethene were found at levels above the residential air screening levels.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/20/2020
Comments: Correspondence and consent form sent to Sandpiper Townhome Complex residents offering indoor air sampling on a voluntary basis

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 001
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two samples were collected from Unit 001. One sample (indoor air sample) was collected from Unit 001 bathroom. The second sample (effluent sample) was collected outside at the sub-slab depressurization system s exhaust pipe. Based on the October 2019 indoor air sampling results, none of the chemicals of concern was found at your residence indoor air with concentrations above the residential air screening level.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 01/29/2019
Comments: DTSC letter conveying indoor air sampling results to resident. Based on the December 2018 and historical indoor air quality testing results, the fan system has been effective in maintaining the TCE indoor air concentration in the Unit 007 below residential screening levels. PCE indoor air concentrations have been above the DTSC residential screening level; however, the fan system has been effective in keeping the exposure, risk from PCE in indoor air at Unit 007 within the acceptable cancer risk range.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 06/17/2020
Comments: Contract 19-T4790 with RMD. Contract scope of work consist of two tasks. Task 1 - Technical Consultative Services and Task 2 - Environmental Noise Assessment for Soil Vapor Extraction System

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 010
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two indoor air samples were collected from Unit 010 bathroom. The two indoor air samples consisted of one primary and one duplicate sample. The duplicate sample was used to confirm the validity of the primary sample results. Based on the indoor air sampling results, trichloroethene was found at a concentration above the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 004
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Three samples were collected from Unit 004. Two samples (indoor air) were collected from Unit 004 s bathroom and living room. The third sample (effluent sample) was collected outside at the sub-slab depressurization system s exhaust pipe. Based on the October 2019 indoor air sampling results, only the chemical of concern vinyl chloride was found at your residence indoor air with concentrations above the residential air screening level.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: A total of five samples were collected at Unit 0007. Two indoor air samples were collected from Unit 007 s bathroom and kitchen. Two effluent samples were collected at Unit 007 s fan system s exhaust pipes along the rear southwestern exterior wall of your home, and the northeastern wall of your home s garage. One ambient air sample was collected at Unit 007 s back yard. Based on the October 2019 indoor air sampling results, the only chemical of concern found at Unit 007 with concentrations above the residential air screening level (0.46 micrograms per cubic meter [g/m3]) was tetrachloroethene.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name:	Indoor Air
Completed Sub Area Name:	Unit 013
Completed Document Type:	Correspondence
Completed Date:	01/13/2020
Comments:	One indoor air sample was collected from Unit 013 s bathroom. Based on the indoor air sampling results, none of the primary chemicals of concern (trichloroethene, tetrachloroethene and vinyl chloride) was found at your residence s indoor air above the residential air screening level.

Completed Area Name:	Indoor Air
Completed Sub Area Name:	Unit 009
Completed Document Type:	Correspondence
Completed Date:	01/13/2020
Comments:	Pilot Study involved collection soil vapor, sub-slab vapor and indoor air samples before and after the application of Land Science Technologies Retro-Coat on the exposed concrete slab foundation of Unit 009.

Completed Area Name:	Indoor Air
Completed Sub Area Name:	Unit 009
Completed Document Type:	Correspondence
Completed Date:	08/15/2017
Comments:	Two indoor samples were collected at Unit 009. One indoor air sample was collected when the residence was unoccupied and HVAC off, and the second sample was collected under normal occupancy and HVAC on. Under normal occupancy and HVAC operation, all primary VOCs were below DTSC's health-based screening levels. The results while the house was unoccupied and HVAC off (i.e. no air exchange) do not indicate a need for an active vapor mitigation system

Completed Area Name:	Indoor Air
Completed Sub Area Name:	Unit 006
Completed Document Type:	Correspondence
Completed Date:	09/06/2017
Comments:	One indoor air sample were collected at Unit 006. Based on the indoor air sampling results, tetrachloroethene was found at a concentration above the residential air screening level.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Work Order
Completed Date:	07/09/2020
Comments:	Contract 19-T4790 Work Order # 1 with RMD. Work Order #1 scope of work consists of (i) Review, analyze, and comment on existing data. (ii) Evaluate environmental noise emission from proposed Soil Vapor Extraction (SVE) system; and (iii) Propose environmental noise emission reduction measures for SVE systems to be installed.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Field Order
Completed Date:	07/25/2019
Comments:	Field Order No 1 includes maintenance and noise dampening to be conducted at the former groundwater extraction treatment system vaults that are still in place at the Singer Friden site.

Completed Date:	02/25/2020
Comments:	Soil gas analytical results for the 70 soil gas samples collected from the 35 nested soil gas monitoring wells installed for this project indicate widespread detections of trichloroethene (TCE) and tetrachloroethene (PCE) across the Site on both investigated depths, 5 and 15 feet below ground surface. The potential indoor air concentrations resulting from measured soil gas concentrations were calculated by considering a generic attenuation factor of 0.03. The results indicate that predicted indoor air concentrations of PCE and TCE may exceed the residential air screening levels in the vicinity

SINGER FRIDEN (Continued) **S101272670**

of most of the soil gas monitoring wells. The risks of volatile organic compounds vapor intrusion (VI) into nearby buildings may also be augmented by the presence of preferential VI pathways such as subsurface utility corridors and cracks in concrete building foundations. These results indicate that further investigation of site conditions is warranted to further evaluate potential risks to human health at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 07/30/2019
Comments: The Soil Gas Investigation Workplan provides the means and methods to conduct a soil gas investigation for volatile organic compounds at the Site and was developed based on guidelines provided by the 2015 DTSC Advisory for Active Soil Gas Investigations.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Fieldwork
Completed Date: 08/21/2018
Comments: Passive indoor air sampling deployment and building survey.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 008
Completed Document Type: Monitoring Report
Completed Date: 09/14/2018
Comments: This letter report summarizes the air sampling event performed on May 29 through June 5, 2018 at Unit 008 within the Sandpiper Townhouse Complex. The tetrachloroethene (PCE) concentration detected during the May 2018 event was similar to the concentrations detected during the May and December 2017 air sampling events. The concentrations have not changed significantly since the sub-slab depressurization system was installed in October 2017. ERRG, DTSC's contractor, recommended in the report that a variable speed fan or second fan be installed to increase suction and reduce PCE concentrations in indoor air.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 09/18/2018
Comments: Waste manifest of excavation spoils from installation of a sub-slab depressurization system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/23/2015
Comments: The Indoor Air Sampling Report is not available on the EnviroStor because it contains confidential information. The public may review a bounded copy of the Report at the DTSC Berkeley Office File Room (Public Repository). Confidential information will be redacted before the Report become available for public review.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: Fieldwork
Completed Date: 12/19/2018
Comments: Site reconnaissance with DTSC SM and GSU staff.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Monitoring Report
Completed Date: 01/29/2019
Comments: This letter report summarizes the air sampling event performed from November 13, 2017, through December 13, 2018, at Unit 007 within the Sandpiper Townhouse Complex at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 02/27/1996
Comments: During installation of the extraction and treatment system conveyance piping in December 1995, potentially contaminated soil was encountered adjacent to the excavation for the vault box in the intersection of Heathrow Place and Cornwall Way. Pursuant to Task Order No. 2-085-11.0-200251 issued under contract No. 91-T0085, DTSC retained URS Consultants, Inc. (URS) to perform a soil removal action at the Singer Friden site. Soil excavation extended to approximately 5 feet below grade surface. The soil quantity to be removed was estimated to be approximately 25 cubic yards. The excavation was backfilled on February 11 and 12, 1996. Class 2 gravel fill was placed in the excavation in approximately 8-inch lift and compacted with a hand-held Wacker. Final grading and asphalting was completed on February 14, 1996.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/04/2019
Comments: Letter report summarizes operation and maintenance activities performed in November and December of 2018 on the sub-slab depressurization systems at the Former Singer-Friden Facility.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 008
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/09/2019
Comments: Letter report documents sub-slab depressurization system design, installation, and modifications at Unit 008 at the Former Singer-Friden Facility.

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 007
Completed Document Type: Operation and Maintenance Report
Completed Date: 05/09/2019
Comments: Letter report documents sub-slab depressurization system design, installation, and modifications at Unit 007 at the Former Singer-Friden Facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice

SINGER FRIDEN (Continued) **S101272670**

Completed Date: 08/01/2019
Comments: Work Notice informing the community about the upcoming subsurface geophysical survey (geophysical survey) and soil gas investigation that will be conducted in the Singer Friden, Sandpiper Townhome Complex. Geophysical survey and soil gas investigation activities are scheduled from August 19, 2019 to September 6, 2019 between the hours of 8:00 A.M. and 5:00 P.M., weather permitting.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/18/2020
Comments: Fieldwork activities completed on December 18, 2020

Completed Area Name: Indoor Air
Completed Sub Area Name: Unit 009
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 06/11/2018
Comments: The work plan describes the permitting and utility locate activities, pilot study sampling activities, Land Science Technologies Retro-Coat application, waste management procedures, and reporting requirements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 01/27/2020
Comments: Third Five-Year Review (FYR) Report consisted of a review of relevant documents, including operation and maintenance records, pilot study reports and monitoring data from June 2012 to July 2018. From June 2013 to June 2015, the groundwater sampling frequency changed from quarterly to a semi-annual basis. Seventeen wells were sampled in the spring of each year and 21 wells in the fall. After June 2015, groundwater monitoring did not resume until the groundwater monitoring event in May 2018. Third FYR Report recommended the following: i) Conduct an additional soil gas survey at the Site. ii) Prepare an amendment to 1996 RAP to: (a) change the selected groundwater remedy for the Site from groundwater extraction and treatment to enhanced in-situ bioremediation; and (b) add soil vapor extraction (SVE) and treatment as part of the remedy to address volatile organic compounds (VOC)-impacted soil gas. iii) Install an SVE system to extract soil gas from portions of the Site where soil gas surveys reported soil gas concentrations above federal and state screening levels. iv) Conduct groundwater sampling in the Site s monitoring well network on a semi-annual basis. v) Implement enhanced in-situ bioremediation at hot spots areas of the VOC-impacted groundwater plume and at areas downgradient of the hot spots areas. vi) Implement an expanded groundwater sampling protocol as needed to monitor enhanced in-situ bioremediation effectiveness. vii) Conduct groundwater monitoring in the intermediate (INZ-1, INZ-2 and INZ-3) and deep (DW-1, DW-2 and DW-3) zone aquifers on a semi-annual basis. viii) Conduct groundwater sampling in drinking water wells in areas immediately down-gradient and adjacent to the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 03/15/2019

SINGER FRIDEN (Continued) **S101272670**

Comments:	Letter report summarizes the 2018 fourth quarter groundwater monitoring data collected at the former Singer-Friden Facility (site). Primary chemicals of concern (COCs) concentrations and other volatile organic compounds reported during previous sampling events were compared with concentrations reported during the November 2018 sampling event. As there was a 3-year gap between groundwater monitoring events of 2015 and 2018, additional groundwater monitoring events are needed to establish trends in primary COC concentrations within the appropriate statistical confidence levels for the wells screened in the site s hydrogeological units.
Completed Area Name:	Indoor Air
Completed Sub Area Name:	Unit 004
Completed Document Type:	Monitoring Report
Completed Date:	07/10/2019
Comments:	Letter report summarizes air sampling event performed from February 26 through February 27, 2019, at Unit 004 within the Sandpiper Townhouse Complex at the Former Singer-Friden Facility.
Completed Area Name:	Indoor Air
Completed Sub Area Name:	Unit 006
Completed Document Type:	Monitoring Report
Completed Date:	07/10/2019
Comments:	Letter report summarizes air sampling event performed from February 26 through February 28, 2019, at Unit 006 within the Sandpiper Townhouse Complex at the Former Singer-Friden Facility.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Workplan
Completed Date:	07/17/2019
Comments:	The subsurface geophysical survey workplan describes activities to assess for historical subsurface features. Survey activities will be conducted at five areas across the Site. Survey activities consist of a combination of magnetometry, electromagnetic terrain conductivity, metal detector, and ground penetrating radar methods .
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Health & Safety Plan
Completed Date:	07/23/2019
Comments:	The Site-Specific Health and Safety Plan provides essential information about hazards associated the Site, defines protocols necessary for protecting on-site personnel from the hazards associated with soil vapor investigation activities, and establishes site safety and health policies and procedures.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	09/04/2019
Comments:	Soil Gas Investigation Subsurface Geophysical Survey field work activities completed on September 4, 2019.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork

SINGER FRIDEN (Continued) **S101272670**

Completed Date:	09/13/2019
Comments:	Field work (indoor air quality samples) completed on 9/13/2019. Three residences (Units 010, 012 and 013) were sampled.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	10/18/2019
Comments:	October 2019 Indoor Air Quality Sampling Event completed on October 18, 2019. Thirteen samples were collected as following: * Six primary and one duplicate indoor air quality samples. * Five effluent samples. * One ambient air sample.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	10/17/2019
Comments:	A combination of geophysical methods was used to meet the objectives of the subsurface geophysical surveys as described in the 2019 Subsurface Geophysical Survey workplan. The selected geophysical survey methods were electromagnetic line locating, metal detection, ground penetrating radar, and total field magnetic. The selected geophysical methods used in each of the five survey areas at former Singer-Friden Site depended on the nature of the suspected targets and the available site access. Subsurface geophysical surveys results identified notable evidence of subsurface features at the central portion of Cornwall Way across the Sandpiper Townhome Complex s Pool House. These subsurface features are likely a shallow backfilled catch basin and a buried metallic object. Subsurface geophysical surveys did not identify notable evidence of subsurface features at the other four survey areas.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	08/21/2020
Comments:	Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the June 2020 sampling event. Analytical results indicate that VOC concentrations have largely stabilized or decreased over time, with occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions and (2) redistribution of the dissolved contaminant mass in saturated porous media over time. Additionally, enhanced in-situ bioremediation pilot tests conducted in the areas near to the wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	10/17/2019
Comments:	According to the First Semiannual 2019 Groundwater Monitoring Report, volatile organic compound (VOC) concentrations have generally

SINGER FRIDEN (Continued) **S101272670**

stabilized or decreased over time when compared to previous sampling events results. However, VOC concentrations have shown occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions, (2) removal of the groundwater treatment system, and (3) redistribution of dissolved contaminant mass in the saturated porous media over time.

Completed Area Name: PROJECT WIDE

Background Info:	The Singer Company (and its predecessors-in-interest, Friden, Inc.; FRD, Inc.; and Friden Calculating Machine Co., Inc.) owned and operated a manufacturing facility (20 acres) that produced sewing machines and parts, adding machines, computers, data processing equipment, mailroom equipment, and printing machines. The known operation of this site was from 1941 to 1977.
Comments Date:	01261998
Comments:	Completed Design of treatment facility, based on 300 gallons per

RB Case Number:	43s1034
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/29/2006
Comments: Although the fire and explosion in 1962 could have released VOCs at the Site, review of limited data available does not confirm a significant release. Since down-gradient VOC concentrations appear to be decreasing according to the Hudson data, it is likely that there is no VOC source currently at the IPC Site. Therefore, no further action is recommended for this Site.

Potential Contaminants of Concern:	Other Metal, Diesel, Total Petroleum Hydrocarbons (TPH), Waste Oil / Motor / Hydraulic / Lubricating
Site History:	Nelson Stud Welding leased the facility in 1965 to manufacture and distribute welding studs. In 1969, Nelson Stud Welding became a division of TRW. The welding studs were manufactured from low carbon steel and involved a lathing operation that generated waste products such as cutting oils and metal shavings which were stored in drums. Small quantities of solvents used to clean tools were stored in containers inside) the building. The former storage pen was used to store and maintain diesel generators as well as to store the drums containing cutting oils and metal shavings (Appendix A; Photograph 1). The storage pen was unpaved until 1988 when it was covered with asphalt. The drums were typically stored for several weeks before being transported off site by a recycler. During storage, cutting oil leaked from some of the drums onto the unpaved ground. In addition, diesel fuel was spilled during maintenance of the diesel generators. Drums were also stored along the eastern and southern fence lines. Minor spills may have occurred at these locations. The rear service yard may also have been used occasionally for storage of diesel generators and drums containing metal shavings. TRW ceased manufacturing operations in 1985 but continued using the site as a sales and distribution facility. In 1988, several inches of surface soil from the storage pen were excavated and transported off site and the pen was paved with asphalt. TRW vacated the facility in December 1993. The facility has been occupied by Bay Cryogenics, Inc. and L&L Lift, Inc. since May 1994.

if remediation conducted without DTSC oversight is protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 08/29/2002
Comments: The property intends to be developed into an auto dealer. The San Francisco Bay Regional Water Quality Control Board has approved a soil management plan for the site and is requiring a deed restriction and asphalt cap to prevent exposure to the contaminants. In August 2002, DTSC confirmed that a deed restriction has been recorded on the properties by RWQCB and that no further action is needed for the site provided that the properties continue to comply with the RWQCB requirements.

Completed Date: 11/29/2004
Comments: DTSC entered into a School Cleanup Agreement (Docket Number HSA-A 04/05-007-Amended) with the San Leandro Unified School District (Proponent). The purposes of this Agreement are: a) for the Proponent to develop, and implement a Response Action(s), and other associated activities, under the oversight of DTSC in an effort to satisfy statutory and regulatory requirements, and satisfactorily mitigate environmental impacts at the site and receive site certification, and b) for DTSC to obtain reimbursement from the Proponent for oversight costs and c) to enable the Proponent to integrate and expedite the site cleanup and project finance and construction processes by seeking and obtaining all CDE and Office of Public School Construction final approvals and State Allocation Board School Facility Program apportionment for a project at the site prior to completion of the required Response Action(s), and d) to establish the terms of Proponent's obligation to complete all DTSC required investigations and/or Response Action(s).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Environmental Oversight Agreement
Completed Date: 07/13/2004
Comments: EOA signed. DTSC entered into an Environmental Oversight Agreement (Docket Number HSA-A 04/05-007) with the San Leandro Unified School District to provide oversight for a Preliminary Endangerment Assessment for the proposed Jefferson Elementary School.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 05/21/2004
Comments: DTSC approved the Phase I with a PEA required deterimnation.

4493 ft. **Site 1 of 2 in cluster V**

Relative: **Lower**
Actual: **21 ft.**

CA BOND EXP. PLAN:

Reponsible Party:	DETAILED SITE EXPENDITURE PLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Bond funds will be used to investigate and possibly remediate the site. DHS has elected to continue the hazardous waste investigation, in the vicinity of 1465 Factor Avenue, San Leandro, even though multiple PRPs may be present. Following the collection of definitive information concerning responsibility, DHS will pursue enforcement actions, recover its costs, and require the responsible parties to implement the RAP. This site has not been identified as an NPL site, nor does it appear to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.
Site Description:	The Factor Avenue site is a contaminated shallow aquifer.
Hazardous Waste Desc:	Chemicals found on the site include: cyanide at 120 parts per billion (ppb); 1-1-Dichloroethylene (DCE) at 524 ppb; and 1,1-and 1,2-Dichloroethane (DCA) at 7.4 and 4.8 ppb, respectively; trans 1-2-dichloroethylene at 2110 ppb; 1,1-trichloroethane at321 ppb; trichloroethylene (TCE) at 2215 ppb; tetrachloroethylene (PCE) at 263 ppb; benzene at 7.19 pp); and toluene at 2.0 ppb.
Threat To Public Health & Env:	Ground water is a pathway for contaminant migration. Numerous private wells present possible route of exposure to humans. Residents of San Leandro who have shallow wells on their property are potential receptors for exposure to contaminants in ground water. The residents of record owning wells have been advised of possible exposures, in the event affected wells are used for drinking water.
Site Activity Status:	The site is currently undergoing Phase II remedial investigation. Monitoring wells and stratigraphic borings will be installed. Following the Phase II work, DHS will prepare an intial endangerment assessment. East Bay MUD (EBMUD) has required the installation of back flow devices on all residences situated on parcels with water wells, whether or not the water is used for drinking.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 11/01/1985
Comments: The site was discovered in 1985 by Lincon Properties during a property transfer evaluation at 1465 Factor Avenue.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date: 03/11/1997
Comments: ORDER - An Imminent and Substantial Endangement and Remedial Action Order was issued to Simmons Company and Orton Development.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/06/2003
Comments: DTSC determined that no further action was needed at the site due to the declining concentrations of contaminants in groundwater. In April 2004, seventeen wells (on-site and off-site) were closed. The Site is located within a regional groundwater contamination problem located in the central area of the City of San Leandro.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/03/1998
Comments: Investigation report completed. Low concentrations of dichloroethylene, trichloroethylene, and tetrachloroethylene were detected in soil. Groundwater contamination above the drinking water standards for dichloroethylene, trichloroethylene, and tetrachloroethylene was also detected in the onsite wells, both shallow and deeper, and the nearby wells south of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/01/1987
Comments: This soil gas investigation indicated that shallow groundwater contamination is widespread through the study area, but was inconclusive concerning the boundaries of the contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/01/1987
Comments: Investigations identified volatile organic compunds exceeding the California drinking water standards in the shallow groundwater. A review of the neighboring industries has revealed that chlorinated

SIMMONS - SOILS (Continued) **S102008255**

solvents have been used by adjacent businesses for many years.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 10/23/1987
Comments: The shallow groundwater is contaminated with volatile organic compounds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/03/1989
Comments: The presence of volatile organic compounds, particularly 1,l-dichloroethene (DCE), l,l,l-trichloroethane (TCA), TCE, and tetrachloroethene (PCE), in shallow groundwater was confirmed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/15/1987
Comments: 6 soil samples and 3 groundwater samples were analyzed for volatile organic compounds VOCs). VOCs detected in soil were below regulatory levels. The VOCs in groundwater which were above drinking water standards appear to coming from upgraident offsite source.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date: 12/11/1997
Comments: Order issued to Dana Corporation and the property owner.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 11/15/2013
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 09/01/1998
Comments: Soil samples analyzed in potential source areas did not detect any volatile organic compounds (VOCs). The highest 1,1-dichloroethene (DCE), trichloroethene (TCE), tetrachloroethene (PCE) and 1,1,1 trichloroethane (TCA) detected in groundwater at the site were 204 ppb, 67 ppb, 17 ppb and 19 ppb respectively. These concentration were slightly above the upgradient boundary concentrations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/16/2006
Comments: Based on the review of current and historical data, the site does not appear to currently have a source of hazardous substances which is contributing to groundwater contamination and does not appear to pose a current threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/26/1993
Comments: 4 soil samples and 2 grab groundwater samples were analyzed for volatile organic compounds (VOCs), oil and grease (O & G), and total extractable hydrocarbons (TEH) at 2 locations. All soil sample results were below regulatory levels. DCE, TCE and PCE concentrations detected in the shallow groundwater were above the maximum contaminant levels (MCLs)

For Commercial Reuse: 0
For Industrial Reuse: 0
For Residential Reuse: 0
Unknown Type: 0
Alternate Address: 2799 MILLER STREET
Alternate City,St,Zip: SAN LEANDRO, CA 94577
Background Info: The Site is located on approximately 0.7-acre parcel of land and consists of a one-story building. In or about 1963, the Site was developed for Dana Corporation to assemble and repair heavy-duty truck transmissions. Degreasing agents such as carbon tetrachloride, trichloroethene and 1, 1, 1-trichloroethane were used. From 1987 to 1994, Westates Mechanical Contractors, Inc. (Westates) occupied the Site. Westates used trichloroethane. A 1998 site investigation found low concentrations of tetrachloroethylene, toluene and xylene were detected in the site soil. Dichloroethane, dichloroethylene, trichloroethylene, and tetrachloroethylene were found above the drinking water standard. The Site is located within a regional groundwater contamination problem located in the central area of the City of San Leandro.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

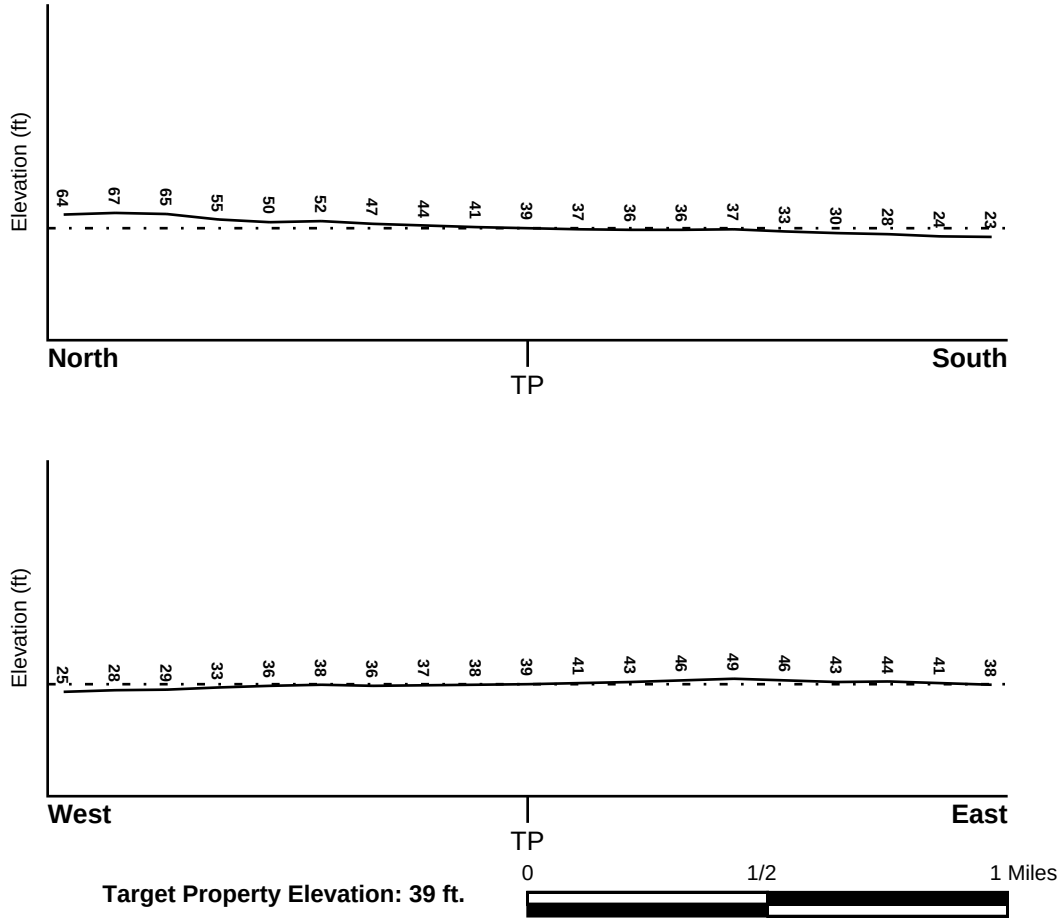
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 39 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06001C0259G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06001C0258G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN LEANDRO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Clear Lake

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	25 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Danville

Soil Surface Texture: silty clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	20 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
2	20 inches	53 inches	silty clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
3	53 inches	79 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

DELINQUENT CUPA REGULATORY PROGRAM FEES

Zermeno's Custom Ironworks, 14143-A Washington Avenue

This notice is being sent to all San Leandro business owners and property owners as landlord of said regulated business due to seriously delinquent Certified Unified Program Agency (CUPA) regulatory program fees.

Pursuant to Section 1-12-600(f) of the San Leandro Municipal Code, the City has authority to assess delinquent amounts against the property owner. These assessments, if not paid, become a lien on the real property and appear on the 2019/20 property tax bill. **To prevent this tax lien, the amount due must be paid in full no later than 12:00 p.m., on Monday, July 8, 2019.**

The City has made numerous attempts to collect the delinquent amount to no avail. We are, therefore, giving notice that the City will proceed with an assessment of a lien against the real property for the unpaid CUPA amounts attached.

The names of regulated business owners and associated property owners having delinquent assessments and the amount due will appear on the list of **delinquent accounts to be considered by the City Council at a public hearing on Monday, July 15, 2019.** The hearing will be held at 7:00 p.m. in the City Council Chambers, 835 East 14th Street, San Leandro. The purpose of this hearing is to receive testimony regarding the unpaid CUPA assessments becoming a lien on the real property.

If you have any questions regarding this bill, please call Tiffany Treece, Environmental Protection Specialist, at (510) 577-6031. For questions regarding the July 15, 2019 public hearing, contact Mary Ann Perini, Budget & Compliance Manager, at (510) 577-3324. If the amount due is paid in full by Monday, July 8, 2019, no further action will be taken by the City.

Sincerely,

David Baum

Zermeno's Custom Iron Works
14143-A Washington Avenue
San Leandro, CA 94578

Dear Alejandra Zermeno:

SUBJECT: Reminder Notice - 2019-2020 CUPA Registration Fee

Your CUPA registration payment is now overdue (account #27226). In order to comply with annual CUPA registration requirements, please pay by May 31, 2019 the balance due as reflected on the May, 2019 statement mailed to you by our Finance Department. Upon receipt of your payment, Environmental Services will issue the required CUPA Registration covering the period from March, 2019 through February, 2020.

Failure to pay the CUPA Registration fee will result in the City proceeding with an assessment of a lien against the property for the amount owing.

If you have questions or need additional information, please contact the Finance Department at (510) 577-3382 or Environmental Services at (510) 577-3401.

Thank you.

Sincerely,

Tiffany Treece
Environmental Protection Specialist

NOTICE OF DELINQUENT CUPA REGULATORY PROGRAM FEES

Zermeno's Custom Ironworks, 14143-A Washington Avenue

This notice is being sent to all San Leandro business owners and property owners as landlord of said regulated business due to seriously delinquent Certified Unified Program Agency (CUPA) regulatory program fees.

Pursuant to Section 1-12-600(f) of the San Leandro Municipal Code, the City has authority to assess delinquent amounts against the property owner. These assessments, if not paid, become a lien on the real property and appear on the 2017/18 property tax bill. **To prevent this tax lien, the amount due must be paid in full no later than 12:00 p.m., on Monday, July 10, 2017.**

The City has made numerous attempts to collect the delinquent amount to no avail. We are, therefore, giving notice that the City will proceed with an assessment of a lien against the real property for the unpaid CUPA amounts attached.

The names of regulated business owners and associated property owners having delinquent assessments and the amount due will appear on the list of **delinquent accounts to be considered by the City Council at a public hearing on Monday, July 17, 2017**. The hearing will be held at 7:00 p.m. in the City Council Chambers, 835 East 14th Street, San Leandro. The purpose of this hearing is to receive testimony regarding the unpaid CUPA assessments becoming a lien on the real property.

If you have any questions regarding this bill, please call Tiffany Treece, Environmental Protection Specialist, at (510) 577-6031. For questions regarding the July 17, 2017 public hearing, contact Mary Ann Perini, Budget & Compliance Manager, at (510) 577-3324. If the amount due is paid in full by Monday, July 10, 2017, no further action will be taken by the City.

Sincerely,

David Baum

Dear Alejandra Zermeno:

SUBJECT: Reminder Notice - 2017-2018 CUPA Registration Fee

Your CUPA registration payment is now overdue (account #27226). In order to comply with annual CUPA registration requirements, please pay by May 31, 2017 the balance due as reflected on the May, 2017 statement mailed to you by our Finance Department. Upon receipt of your payment, Environmental Services will issue the required CUPA Registration covering the period from March, 2017 through February, 2018.

Failure to pay the CUPA Registration fee will result in the City proceeding with an assessment of a lien against the property for the amount owing.

If you have questions or need additional information, please contact the Finance Department at (510) 577-3382 or Environmental Services at (510) 577-3401.

Thank you.

Sincerely,

Tiffany Treece

Submitted on 5/29/2015 by *Alvaro Zermeo* of Zermenos Custom Ironworks (San Leandro, CA)

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	Yes

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	No

Hazardous Waste

Is your facility a Hazardous Waste Generator?	No
Does your facility treat hazardous waste on-site?	No
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	No
Does your facility consolidate hazardous waste generated at a remote site?	No
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	No
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	No
Is your facility a Household Hazardous Waste (HHW) Collection site?	No

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	No
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	No
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	No

Additional Information

No additional comments provided.

CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS)

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID #	A1. CERS ID	A2. DATE OF PLAN PREPARATION/REVISION
01-007-101381	10630429	5/29/2015

BUSINESS NAME *(Same as Facility Name or DBA - Doing Business As)* 3.
Zermeno's Custom Ironworks

BUSINESS SITE ADDRESS 103.
14143 Washington Ave, Unit A

BUSINESS SITE CITY 104.		ZIP CODE 105.
San Leandro	CA	94578

TYPE OF BUSINESS (e.g., Painting Contractor) A3.	INCIDENTAL OPERATIONS (e.g., Fleet Maintenance) A4.
Mfg Architectural & Oranamental Metal Work	Installation contractor

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING: (Check all that apply) A5.

☒ 1. HAZARDOUS MATERIALS; ☐ 2. HAZARDOUS WASTES

B. INTERNAL RESPONSE

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR VIA: (Check all that apply) B1.

☒ 1. CALLING PUBLIC EMERGENCY RESPONDERS (i.e., 9-1-1)
☐ 2. CALLING HAZARDOUS WASTE CONTRACTOR
☐ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

C. EMERGENCY COMMUNICATIONS, PHONE NUMBERS AND NOTIFICATIONS

Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator (or his/her designee when the Emergency Coordinator is on call) shall:

1. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
2. Notify appropriate local authorities (i.e., call 9-1-1).
3. Notify the California Emergency Management Agency at (800) 852-7550.

Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall notify the California Department of Toxic Substances Control (DTSC), the local Unified Program Agency (UPA), and the local fire department's hazardous materials program that the facility is in compliance with requirements to:

1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR VIA: (Check all that apply) C1.

☒ 1. VERBAL WARNINGS; ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☒ 3. TELEPHONE;
☐ 4. PAGERS; ☐ 5. ALARM SYSTEM; ☐ 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY: (Check all that apply) C2.

☒ 1. VERBAL WARNINGS; ☐ 2. PUBLIC ADDRESS OR INTERCOM SYSTEM; ☒ 3. TELEPHONE;
☐ 4. PAGERS; ☐ 5. ALARM SYSTEM; ☐ 6. PORTABLE RADIO

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions, and preventing and mitigating associated harm to persons, property, and the environment.) D1.

- ☒ 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- ☐ 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- ☐ 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- ☐ 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- ☐ 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- ☐ 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- ☒ 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- ☒ 8. STOP PROCESSES AND/OR OPERATIONS;
- ☐ 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- ☒ 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- ☒ 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- ☒ 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- ☒ 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- ☐ 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- ☒ 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- ☒ 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- ☐ 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- ☐ 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- ☒ 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- ☐ 21. OTHER (Specify): D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- ☐ 1. BELLS;
- ☐ 2. HORNS/SIRENS;
- ☒ 3. VERBAL (I.E., SHOUTING);
- ☐ 4. OTHER (Specify): E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

Washington Ave entrance sidewalk

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation. E4.

☒ EVACUATION ROUTE MAP(S) POSTED AS REQUIRED

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following) F1.

- ☒ 1. HAVE BEEN DETERMINED NOT NECESSARY; *or* F2.
- ☐ 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify):

Rev. 06/27/11

G. EMERGENCY EQUIPMENT

Check all boxes that apply to list emergency response equipment available at the facility and identify the location(s) where the equipment is kept and the equipment's capability, if applicable. [e.g. ☒ CHEMICAL PROTECTIVE GLOVES | Spill response kit | One time use, Oil & solvent resistant only.]

TYPE	EQUIPMENT AVAILABLE	LOCATION	CAPABILITY *(If applicable)*
Safety and First Aid	1. ☐ CHEMICAL PROTECTIVE SUITS, APRONS, OR VESTS	G1 / G2	G3
	2. ☐ CHEMICAL PROTECTIVE GLOVES	G4	G5
	3. ☐ CHEMICAL PROTECTIVE BOOTS	G6	G7
	4. ☒ SAFETY GLASSES / GOGGLES / SHIELDS	G8 Shop area	G9
	5. ☐ HARD HATS	G10	G11
	6. ☐ CARTRIDGE RESPIRATORS	G12	G13
	7. ☐ SELF-CONTAINED BREATHING APPARATUS (SCBA)	G14	G15
	8. ☒ FIRST AID KITS / STATIONS	G16 Shop & Office area	G17
	9. ☐ PLUMBED EYEWASH FOUNTAIN / SHOWER	G18	G19
	10. ☐ PORTABLE EYEWASH KITS	G20	G21
	11. ☐ OTHER	G22	G23
	12. ☐ OTHER	G24	G25

	35. ☐ OTHER	G70	G71

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases / spills due to earthquake-related motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS: (Check all that apply) H1.	LOCATIONS (e.g., shop, outdoor shed, forensic lab)
☒ 1. HAZARDOUS MATERIALS / WASTE STORAGE AREA	Gas cylinder storage & use areas in shop and on vehicles H2.
☐ 2. PROCESS LINES / PIPING	H3.
☐ 3. LABORATORY	H4.
☐ 4. WASTE TREATMENT AREA	H5.

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS: (Check all that apply) H6.	LOCATIONS
☒ 1. SHELVES, CABINETS AND RACKS	Shop & office H7.
☐ 2. TANKS (EMERGENCY SHUTOFF)	H8.
☒ 3. PORTABLE GAS CYLINDERS	Shop areas and vehicles H9.
☒ 4. EMERGENCY SHUTOFF AND/OR UTILITY VALVES	see site map H10.
☐ 5. SPRINKLER SYSTEMS	H11.
☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane dispensing tank)	H12.

I. EMPLOYEE TRAINING

Explanation of Requirement: Employee training is required for all employees handling hazardous materials and hazardous wastes in day-to-day or clean-up operations including volunteers and/or contractors. Training must be:

- Provided within 6 months for new hires;
- Amended as necessary prior to change in process or work assignment;
- Given upon modification to the Emergency Response / Contingency Plan, and updated/refreshed annually for all employees.

Required content includes all of the following:

- Material Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Fire hazards of materials / processes;
- Conditions likely to worsen emergencies;
- Coordination of emergency response;
- Notification procedures;
- Applicable laws and regulations;
- Communication and alarm systems;
- Personal protective equipment;
- Use of emergency response equipment (e.g. Fire extinguishers, respirators, etc.);
- Decontamination procedures;
- Evacuation procedures;
- Control and containment procedures;
- UST monitoring system equipment and procedures (if applicable).

INDICATE HOW EMPLOYEE TRAINING PROGRAM IS ADMINISTERED (Check all that apply) I1.

☐ 1. FORMAL CLASSROOM; ☒ 2. VIDEOS; ☒ 3. SAFETY / TAILGATE MEETINGS;

☐ 4. STUDY GUIDES / MANUALS (Specify): _____ I2.

☐ 5. OTHER (Specify): _____ I3.

☐ 6. NOT APPLICABLE BECAUSE FACILITY HAS NO EMPLOYEES

Large Quantity Generator (LQG) Training Records: Large quantity hazardous waste generators (i.e., who generate more than 270 gallons/1,000 kilograms of hazardous waste per month) must retain written documentation of employee hazardous waste management training sessions which includes:

- A written outline/agenda of the type and amount of both introductory and continuing training that will be given to persons filling each job position having responsibility for the management of hazardous waste (e.g., labeling, manifesting, compliance with accumulation time limits, etc.).
- The name, job title, and date of training for each hazardous waste management training session given to an employee filling such a job position; and
- A written job description for each of the above job positions that describes job duties and the skills, education, or other qualifications required of personnel assigned to the position.
- Current employee training records must be retained until closure of the facility.
- Former employee training records must be retained at least three years after termination of employment.

J. LIST OF ATTACHMENTS

(Check one of the following) J1.

☒ 1. NO ATTACHMENTS ARE REQUIRED; *or*

☐ 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

K. SIGNATURE / CERTIFICATION

Certification: Based on my inquiry of those individuals responsible for obtaining the information, I certify under penalty of law that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete, and that a copy is available on site.

14143-A Washington Avenue
San Leandro, CA 94578

Dear Alejandra Zermeno:

SUBJECT: Hazardous Materials Business Plan (HMBP)
ANNUAL SUBMITTAL OVERDUE

California Health & Safety Code sections 25508(a)(1) and 25508.2 require that your HMBP be reviewed and all elements submitted annually on the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov

Your HMBP submittal is overdue and your facility is in violation of the above referenced citations.

To assist you, enclosed are step-by-step instructions for resubmitting your HMBP. If you have questions or need assistance, please contact me at 510-577-6027 or jyun@sanleandro.org.

Thank you.

Sincerely,

Jason Yun
Environmental Protection Specialist

INSPECTION REPORT

Date: 9/18/15	**Time:** 0800	**Inspector:** Camp
Business Name: Zermeno's Custom Ironworks		
Contact: Alvaro "Al" Zermeno		**Title:** Owner
Business Address: 14143 Washington Av, Unit A		**Phone:** 510-614-2900

Reason for Inspection: Routine **Class:** N/A

Inspected Manufacturing Facilities:	Yes	Copies of all MSDS on file:	Yes
Inspected Process Used:	Yes	Inspected Spill Prevention Procedures:	Yes
Inspected Pretreatment Facilities:	N/A	Self Monitoring Procedures:	N/A
Inspected Substances Discharged:	No	Inspected Laboratory Procedures:	N/A
Inspected Chemical Storage:	Yes	Follow-Up Required:	No
Drainage:	Yes	Enforcement:	Yes
Inspected Waste Manifest:	N/A	Slug Control Plan Evaluated	N/A

Inspection Notes:

Initial routine inspection for CUPA Hazardous Materials Business Plan, CA Fire Code and Stormwater Industrial programs. Minor fire code violation, need to post an NFPA 704 Placard on exterior of facility.

Looked up the NFPA placard numbers-letters and provided. Have reduced the large number of empty compressed gas bottles by returning to supplier. Bottles in two storage locations match Inventory. Normal ornamental metal operations are all indoors except some incidental spray painting. Spray painting area has no signs of over spray on ground. BMPs in place to use magnets and collect all the small bits of scrap metal. Provided information on paint care program for recycling of unusable paint in cans, recycling empty aerosol cans as scrap metal and if need to do a one-time clean up to dispose of unusable/nonfunctioning aerosol cans to clean up storage trailer. Paint cans in trash were all empty and dried.
Does not generate any hazardous waste as part of routine operations.

Facility is within Ora Loma Sanitary District jurisdiction for pretreatment and solid waste services.

see storm water report also.

Description of Violation	Description of Violation
1. Hazardous Materials Reporting	___ g. Provide ___ extinguisher(s) with a min. rating of _____
___ a. Submit a Hazardous Materials Business Plan (HMBP)	___ h. Service fire extinguishers (annual service required)
___ b. Revise existing HMBP: _____	___ i. Post "No Smoking" signs
___ c. Submit a SQ Hazardous Materials and Waste Registration	**5. Hazardous Waste Requirements**
___ d. Submit a CUPA Programs Registration	___ a. Obtain an EPA ID number for your facility
___ e. Submit permit/registration fees of $ _____	___ b. File an On-site Hazardous Waste Treatment Notification
___ f. Submit Material Safety Data Sheets (MSDS)	___ c. Discontinue illegal treatment/recycling
2. Storage Requirements	___ d. HW transporter and TSDF must have EPA ID number
___ a. Relocate hazardous materials/waste storage area	___ e. Determine if _____ is hazardous waste
___ b. Separate incompatible materials by 20 feet/noncombustible partition/separate storage cabinets	___ f. Properly label hazardous waste containers
___ c. Provide secondary containment for _____	___ g. Hazardous waste must be disposed of within _____ days of the accumulation start date
___ d. Properly label/store/recycle empty containers	___ h. Inspect container storage area weekly
___ e. Provide approved flammable liquids storage cabinet	___ i. Inspect tank system and surrounding area daily
___ f. Store unused chemicals in approved storage cabinets	___ j. Contaminated rags must be sent to an approved laundry
___ g. Properly secure compressed gas cylinders	___ k. Properly label and manage used oil filters
___ h. Reduce volume of regulated materials in storage area	___ l. Properly label and manage damaged batteries
___ i. Secure hazardous materials/waste storage area	___ m. CESQG may transport hazardous waste to HHW facility
___ j. Store contaminated rags in approved container with lid	**6. Emergency Response Plan and Procedures**
___ k. Containers in poor condition/transfer contents	___ a. Prepare/revise emergency response plan/contingency plan
___ l. Hazardous material/waste incompatible with container	___ b. Emergency Coordinator must be familiar with plan
___ m. Maintain _____ ft. clearance from combustibles	___ c. Post emergency call list by phone (SQG/CESQG)
___ n. Label tanks with chemical name and hazards	**7. Recordkeeping and Reporting**
3. Dispensing, Use and Mixing Requirements	___ a. Inadequate hazardous waste manifesting procedures
___ a. Provide approved dispensing system	___ b. Retain hazardous waste manifests for 3 years
___ b. Provide bonding and grounding for containers	___ c. Retain Land Disposal Restriction certificates for 3 years
___ c. Relocate dispensing, mixing area	___ d. Retain hazardous waste analyses for 3 years
___ d. Containers must be closed or sealed except during transfer	___ e. Retain milkrun receipts for 3 years
4. General Facility Requirements	___ f. Retain training records for 3 years
___ a. Clean secondary containment/maintain in dry state	___ g. Submit SB14 reports to DTSC (LQGs)
___ b. Discontinue discharge of hazardous materials/wastes	___ h. Submit biennial recyclable materials report (LQGs/SQGs)
___ c. Provide/maintain spill control supplies	**8. Personnel Training**
___ d. Maintain adequate aisle space in _____	___ a. Provide emergency response training annually
___ e. Clean up spills and leaks immediately	___ b. Train new employees within 6 months of hire
☒ f. Post NFPA 704 (diamond) placards at required locations	___ c. Maintain adequate training documentation on-site

Comments: _____

All minor violations listed above must be corrected within 30 days. Within 5 days of correcting all violations, sign below and return a signed copy to this office. Additional comments or other violations are listed in the attached inspection reports. The facility is subject to re-inspection at any time.

I have corrected all of the minor violations noted above.

Facility Name: Zermeno's Custom Ironworks
Address: 14143 Washington
Manager: Alvaro "Al" Zermeno
Person Contacted: same
Phone: 510-614-2900
SIC Code(s): _____ _____ _____
No. of Employees: _____

EBMUD Account #	Account type	Average Monthly Usage

Spec Bldg: ○ Yes ◉ No

Haz Mat: HMBP

Haz Waste: N/A

Referal:

Storm Water: ○ NOI ○ Refer to Regional Board ◉ Not Required

Industry Type:
☒ Offices ☐ Restaurant
☐ Warehousing ☒ Manufacturing
☒ Services ☐ Construction
☐ Government ☐ Retail

Other: _____

Describe if manufacturing or service: Create custom wrought iron fences / fixtures and installation

The facility is equipped with:
☐ Sewer monitoring structure(s)
☐ On site sewer manhole
☐ Off site sewer manhole
☒ None or not ascertainable

Remarks:
Steel & Iron stock stored inside secured containers. Office and collection of several small shop buildings behind SFR. Un-sprinklered. Small propane gas filed forge box in stand open on both ends to allow heating sections of longer stock for twisting or shaping. Cutting torch and one of two welders in use. Gas storage exceeds 200 CF HMBP registration quantitiee; includes propane, acetylene, oxygen, carbon dioxide, argon and argon/carbon dioxide mix. Made a quick inventory and set appointment to meet with Alejandra "Alex" next Friday to do CERS training and assist with initial CERS setup/data entry.
No records on HWTS. Does not generate any hazardous waste as part of normal operations.

Does the facility discharge any material (including cooling water) to municipal sewer system other than domestic sanitary wastes? If yes, describe under remarks. ○ Yes ◉ No

Is the facility equipped with sanitary sewer inlets other than normal sanitary facilities (such as floor drains, tank overflows, process waste streams, sumps, etc.)? ○ Yes ◉ No

Date: 5/22/15 **Time:** 13:30

Reported By: Camp

Follow Up: ◉ Yes ○ No

Request for Reimbursement

Attached is a request to the Regional Water Quality Control Board to close your leaking underground storage tank case. The Regional Board should be sending you a case closure letter in the near future. No further work will be required in regard to your former tanks.

Upon closing out your file I noticed that we had not received a deposit to cover the City's oversight costs. Money is normally drawn from the deposit for actual time spent reviewing your consultant's reports, overseeing field activities, and preparing the closure recommendation. During the course of this project my staff incurred costs of $300.00.

It has always been my policy to not delay projects over permit fees and charges, to minimize oversight costs, and to minimize the bureaucratic side of the oversight process. I hope that you found our services timely and reasonable.

Please send a check for $300 to this office as soon as possible made payable to the City of San Leandro. If you have any questions, please call me at (510) 577-3331.

Sincerely,

LUST oversight
#3316

SLUFC #		NATURE OF VIOLATION	REMARKS
		1. ELECTRICAL:	
85.106a	___ a.	Discontinue use of extension cords in lieu of permanent wiring.	Please repair emergency shutoff switch for Gas + Diesel tanks.
85.106c	___ b.	Remove extension cords run through openings or attached in series.	
85.106c	___ c.	Remove extension cords placed under rugs, furniture, or where subject to damage.	
85.104	___ d.	Maintain wiring in good condition and protect from damage.	
		2. EXITS:	
12.106d	___ a.	Remove all other locks or latches from doors with panic hardware. Done 10-12-94	
12.104	___ b.	Remove obstruction from exits, aisles, corridors, and stairways.	
12.106c	___ c.	Unlock all exit doors during business hours.	
12.110	___ d.	Provide lighting for corridors, stairways, and exterior exitways.	
12.111	___ e.	EXIT signs. ___ Install ___ Repair	
10.602	___ f.	Remove obstruction(s) and alterations from fire doors.	
		3. FIRE EXTINGUISHERS:	
10.505	___ a.	Provide ___ extinguisher(s) of a _____ minimum rating. 3D.	Service and tag extinguishers as needed.
10.505	___ b.	Mount extinguishers where readily available, with top not higher than 5 feet.	
10.505	___ c.	Post signs indicating location where extinguishers are not readily visible. Done 10-12-94	
10.505	X d.	Service and tag (by State Licensee) each extinguisher annually or after use.	
		4. FIRE PROTECTION INSTALLATIONS:	
10.105	___ a.	Maintain access to, and operation of standpipes, fire hose, and sprinkler FDC and control valves.	
10.507.1	___ b.	Provide approved central alarm station monitoring of all control valves and flow devices.	Please secure propane tanks with chains.
14.108	___ c.	Test waterflow & tamper alarms bi-monthly and maintain records. Done 10-12-94	
10.504	___ d.	Inspect sprinkler system quarterly and maintain records.	
10.504	___ e.	Provide 5 year certification for sprinkler/standpipe system. Attach tag to riser and send copy of certification to Fire Department offices.	
10.504	___ f.	Identify sprinkler valves and secure in an open position.	
10.504	___ g.	Provide spare sprinklers (6 minimum) and sprinkler wrench in box.	
10.504	___ h.	Replaced damaged, corroded or painted sprinkler heads.	
10.504	___ i.	Remove decorations or other attachments from sprinkler system components.	
10.504	___ j.	Provide sprinkler coverage to all areas throughout the premises.	
10.513e	___ k.	Inspect and service hood and duct extinguishing system over cooking equipment semi-annually and after use. Done 10-12-94	Discontinue use of extension cord in lieu of permanent wiring in small engine shop.
		5. FIRE ALARM SYSTEMS	
14.108	___ a.	Maintain fire alarm system in operable condition, test monthly and maintain records.	
		6. FLAMMABLE LIQUIDS	
79.202	___ a.	Class I, II, & III-A liquids in excess of exempt amounts shall be stored in approved storage cabinets or room.	
79.105	___ b.	Remove flammable liquids not stored in original container or approved safety containers.	
79.202a	___ c.	Remove flammable liquids not used for maintenance in assembly building, offices, apartments and motels.	
79.201d	___ d.	Remove all flammable liquids that are stored near exits, stairways, & exit corridors.	
79.802	___ e.	Inside dispensing of Class I & II liquids shall not exceed exempt amounts outside of approved mixing & handling room.	
79.802	___ f.	Inside dispensing of Class III liquids in excess of 80 gallons is prohibited outside of approved mixing and handling room. Done 10-12-94	Halon extinguisher in computer room needs service.
79.802c	___ g.	Discontinue gravity dispensing from containers exceeding 5 gallons or provide approved pump taking suction from the top.	
79.802e	___ h.	Provide static electrical bonding and grounding for all dispensing operations.	
79.113	___ i.	Discontinue the discharge of flammable and combustible liquids into drains or on the ground.	
		7. HEAT PRODUCING APPLIANCES	
11.303b	___ a.	Remove combustible storage from heater, electrical or mechanical rooms.	
11.404	___ b.	Provide 30 inch clearance between heat producing appliance and combustible materials.	
		8. HOUSEKEEPING (INTERIOR)	
11.302	___ a.	Remove all combustible waste material or store such materials to ensure that they do not create a fire hazard.	
10.513e	___ b.	Clean grease filters and hood & duct systems over cooking appliances.	
		9. RUBBISH (OUTSIDE ACCUMULATION)	
11.302	___ a.	Remove rubbish, weeds, litter, etc., OR store in noncombustible containers.	
		10. SMOKING AND OPEN FLAMES	
11.502	___ a.	Post and enforce "NO SMOKING" signs: _____	
11.502	___ b.	Provide ash trays, sand receptacles, butt cans, etc. where smoking is allowed.	
		11. STORAGE	
12.104	___ a.	Remove storage from exits, aisles, corridors and on or under stairways.	
11.303	___ b.	Arrange storage in an orderly manner and provide for exiting and Fire Department access.	
11.303b	___ c.	Remove storage to 18 inches below level of sprinklers.	
11.303b	___ d.	Reduce storage height to at least 2 feet below ceiling.	
74.107	___ e.	Secure and identify all compressed gas cylinders.	
10.601	___ f.	Keep attic access and scuttle openings closed at all times.	
		12. PERMITS REQUIRED

85.104	X d. Maintain wiring in good condition and protect from damage.	OK 11-11-92
	2. EXITS:	
12.104b	___a. Remove all other locks or latches from doors with panic hardware.	
12.103a	___b. Remove obstruction from exits, aisles, corridors, and stairways.	
12.104b	___c. Unlock all exit doors during business hours.	
12.107	___d. Provide lighting for corridors, stairways, and exterior exitways.	
12.108	___e. EXIT signs. ___ Install ___ Repair	
10.402	___f. Remove obstruction(s) and alterations from fire doors.	
	3. FIRE EXTINGUISHERS:	
10.301	___a. Provide ___ extinguisher(s) of a _____ minimum rating.	
10.301	___b. Mount extinguishers where readily available, with top not higher than 5 feet.	
10.301	___c. Post signs indicating location where extinguishers are not readily visible.	
10.302	___d. Service and tag (by State Licensee) each extinguisher annually or after use.	
	4. FIRE PROTECTION INSTALLATIONS:	
10.302	___a. Maintain access to, and operation of standpipe, fire hose, and sprinkler FDC and control valves.	
10.306.1	___b. Provide approved central alarm station monitoring of all control valves and flow devices.	
10.302	___c. Test waterflow & tamper alarms bi-monthly and maintain records.	
10.302	___d. Inspect sprinkler system quarterly and maintain records.	
10.302	___e. Provide 5 year certification for sprinkler/standpipe system. Attach tag to riser and send copy of certification to Fire Department offices.	
10.302	___f. Identify sprinkler valves and secure in an open position.	
10.302	___g. Provide spare sprinklers (6 minimum) and sprinkler wrench in box.	
10.302	___h. Replaced damaged, corroded or painted sprinkler heads.	
10.302	___i. Remove decorations or other attachments from sprinkler system components.	
10.302	___j. Provide sprinkler coverage to all areas throughout the premises.	
10.313c	___k. Inspect and service hood and duct extinguishing system over cooking equipment semi-annually and after use.	
	5. FIRE ALARM SYSTEMS	
14.106a	___a. Maintain fire alarm system in operable condition, test monthly and maintain records.	
	6. FLAMMABLE LIQUIDS	
79.201	___a. Class I, II, & III-A liquids in excess of 10 Gallons shall be stored in approved storage cabinets.(Mercantile exempted-allowed 2 gal. per square ft)	
79.104	___b. Remove flammable liquids not stored in original container or approved safety containers.	
79.201e	___c. Remove flammable liquids not used for maintenance in assembly building, offices, apartments and motels.	
79.201d	___d. Remove all flammable liquids that are stored near exits, stairways, & exit corridors.	
79.802	___e. Inside dispensing of Class I & II liquids from approved containers in excess of 5 gallons(10 gal. total) is prohibited outside of approved mixing & handling room.	
79.802	___f. Inside dispensing of Class III liquids in excess of 60 gallons is prohibited outside of approved mixing and handling room.	
79.802b	___g. Discontinue gravity dispensing from containers exceeding 5 gallons or provide approved pump taking suction from the top.	
79.802d	___h. Provide static electrical bonding and grounding for all dispensing operations.	
79.802e	___i. Discontinue the discharge of flammable and combustible liquids into drains or on the ground.	
	7. HEAT PRODUCING APPLIANCES	
11.203c	___a. Remove combustible storage from heater, electrical or mechanical rooms.	
11.404d	___b. Provide clearance between heat producing appliance and combustible materials.	
	8. HOUSEKEEPING (INTERIOR)	
11.202	___a. Remove all combustible waste material or store such materials to ensure that they do not create a fire hazard.	
10.313c	___b. Clean grease filters and hood & duct systems over cooking appliances.	
	9. RUBBISH (OUTSIDE ACCUMULATION)	
11.201	___a. Remove rubbish, weeds, litter, etc., OR store in noncombustible containers.	
	10. SMOKING AND OPEN FLAMES	
13.101	___a. Post and enforce "NO SMOKING" signs: _____	
13.101	___b. Provide ash trays, sand receptacles, butt cans, etc. where smoking is allowed.	
	11. STORAGE	
12.103	___a. Remove storage from exits, aisles, corridors and on or under stairways.	
11.203	___b. Arrange storage in an orderly manner and provide for exiting and Fire Department access.	
10.302	___c. Remove storage to 18 inches below level of sprinklers.	
11.203b	___d. Reduce storage height to at least 2 feet below ceiling.	
74.507	___e. Secure and identify all compressed gas cylinders.	
11.406	___f. Keep attic access and scuttle openings closed at all times.	
	12. PERMITS REQUIRED	
4.108	___ _____	ID COVER PLATE MIDDLE SHOP AREA

Gentlemen:

Approval is hereby granted to install one (1) propane tank as indicated on attached drawing.

1) Provide no less than 5 feet clearance between building and location of the tank.

2) Install crash post as shown on the drawing

3) Provide seismic anchoring for the tank

4) Obtain required permits for the electrical hookup from the Public Works Department

FIRE DEPARTMENT

"Smoke Detectors Save Lives"

May 6, 1982

Mr. Victor Bald
San Leandro Rental
14273 Washington Ave.
San Leandro, Ca 94578

Dear Mr. Bald:

A fire safety inspection on May 4, 1982 at the above facility revealed the following conditions are in violation of the San Leandro Uniform Fire Code:

1. The forklift propane cylinders shall be moved away from the west end of the building and stored in a more remote area. The gas cylinders shall be secured to prevent the accidental tipping over of the cylinders and resultant damage.

2. The operation of the circuit breakers shall not be inhibited in any manner, per the San Leandro Electrical Code (tape shall be removed).

3. Gasoline storage shall be limited to a one gallon approved type container when stored in the building.

4. The location of each fire extinguisher shall be conspicuously posted with an approved sign.

5. Durable, permanently affixed signs shall be provided to locate and designate the gasoline pump shutoff switch. The signs shall state "Emergency Pump Shutoff Located Inside" and "Emergency Pump Shutoff."

6. Spray painting operations shall be discontinued unless a proper ventilation system is installed in a spray area.

Corrections shall be made within 15 days of the date of this letter, after which time the premises will be reinspected for compliance.

If you have any questions, please contact us at 577-3317 or 577-3318.

Very truly yours,

Harold L. Hamilton, Fire Chief

Stephen V. Mikinka, Battlion Chief

Comments and Recommendations:

1. PROPANE CANNISTERS NEXT to BUILDING. RECOMMEND AWAY FROM WINDOW AND ANCHOR AS TO KEEP UPRIGHT. (PORTABLE BOTTLES FOR FORKLIFTS)
2. REMOVE TAPE FROM BREAKER SWITCHES
3. EXTINGUISHER NEED SIGNS.
4. GAS STORED IN BUILDING IN NON-APPROVED CANS
5. DISCONTINUE SPRAY PAINTING IN SHOP AREA.
6. NO EMERGENCY FUEL PUMP SWITCH OR SIGN IN SIGHT OF ISLAND LATEX PAINTS.

1) The forklift propane cylinders should be moved away from the west end of the building and stored in a more remote area. The gas cylinders shall be secured to prevent the accidental tipping over of the cylinders and resultant damage.

2) The tape used over the electrical circuit breakers shall be removed and the operation of the circuit breakers shall not be inhibited in any manner per the S.L. Electrical Code.

3) Gasoline storage shall be limited to one gallon container of the approved type when stored in the building.

4) #5

5) ~~Recommend~~ Durable, permanently affixed signs shall be provided to locate ~~the~~ and designate the gasoline pump shut off switch. The signs shall state, "EMERGENCY PUMP SHUTOFF LOCATED INSIDE" and "EMERGENCY PUMP SHUTOFF."

6.) Spray painting operations shall be discontinued unless proper ventilation system is installed in a spray area.

December 28, 1979

Mr. Victor Baldi
San Leandro Rental Service
14273 Washington Ave.
San Leandro, Ca 94578

Dear Mr. Baldi:

A fire safety inspection on December 6, 1979 at the above premises revealed that the following conditions are in violation of the San Leandro Uniform Fire Code:

1. The use of extension cords shall be discontinued throughout premises. Appliances shall be relocated and plugged directly into existing electrical outlets or permanent wiring outlets shall be installed per the San Leandro Electrical Code.

2. The wiring in the storage area shall be brought up to the San Leandro Electrical Code specifications. For information on codes and permits, contact electrical inspector at 577-3420.

3. The junction boxes in storage area shall be provided with approved cover plates.

Corrections shall be made within 15 days of the date of this letter, after which time the premises will be reinspected for compliance.

If you have any questions, please contact us at 577-3317 or 577-3318.

tion Procedure Regarding
ROUND TANK Installations
(SUBMERGIBLE PUMP)

First Inspection:

1. Tank or tanks will be inspected by the Fire Department before any back filling operations are started.
2. For the purpose of lifting and handling, "cat eyes" must be welded to tanks.
3. Inspection of condition of tanks:
   a. Damage to tanks
   b. Any scaling or damage to protective covering of tank
4. Back fill to be sand, firmly tamped, which shall extend one (1) foot beyond the tank in all directions.

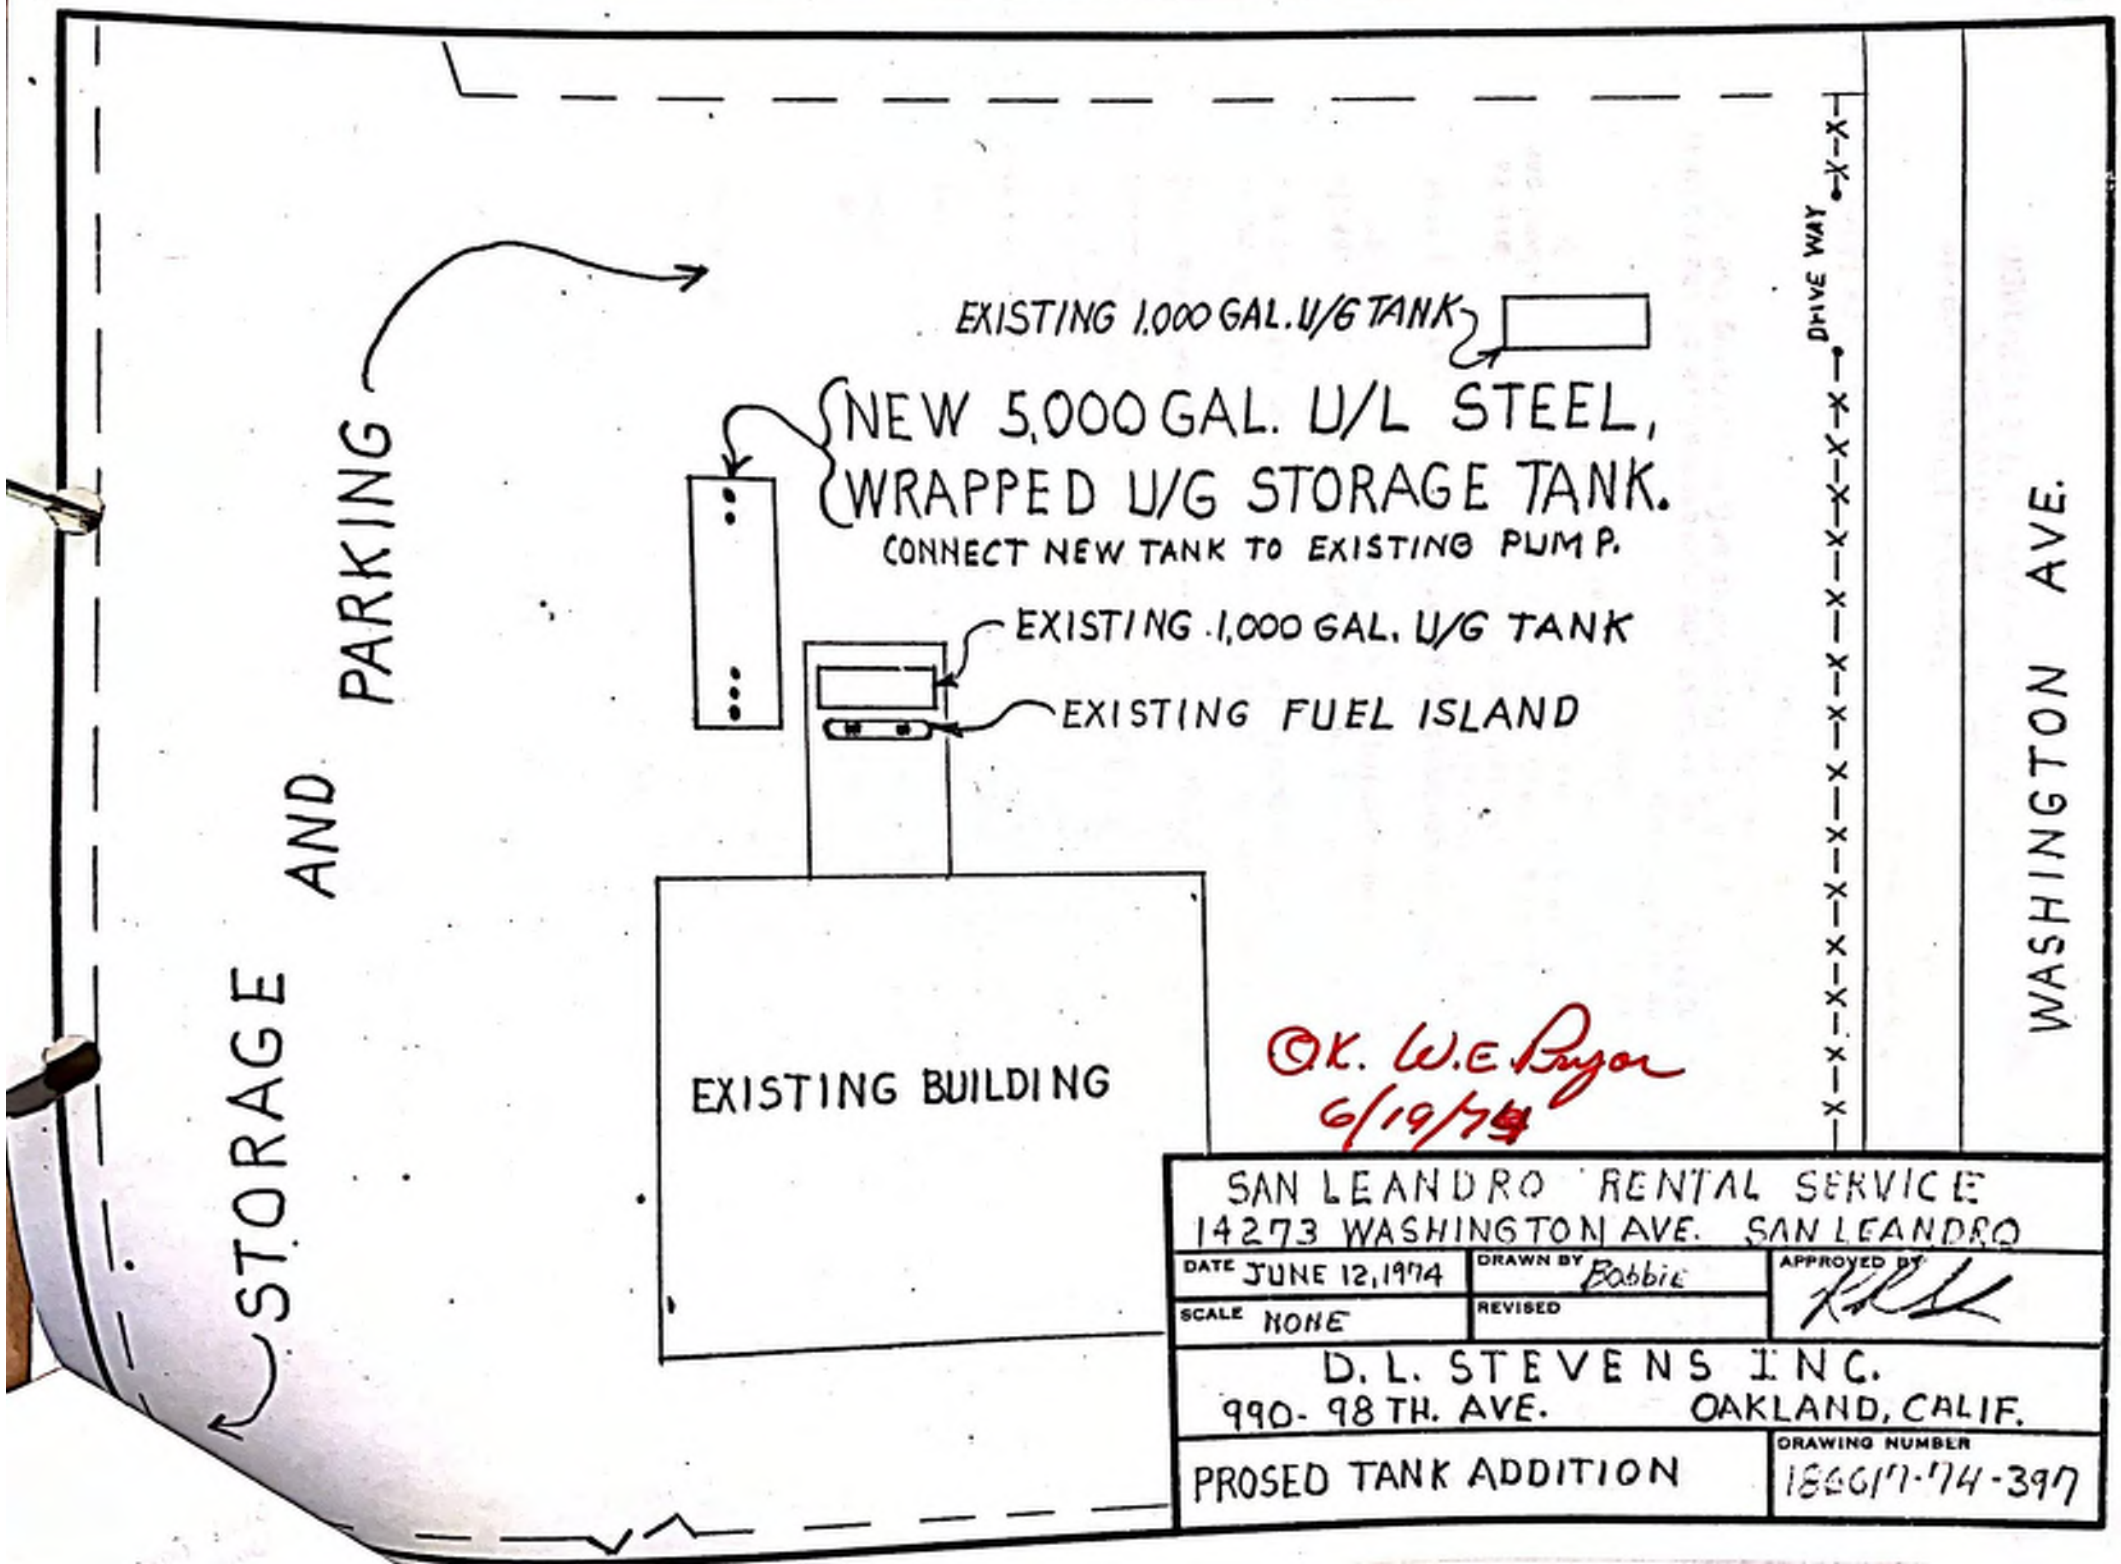
Second Inspection:

1. Inspection of piping is required before covering. A notification shall be given to the Fire Chief, who shall, himself, or through an authorized member of the department, inspect and give his approval or disapproval thereof.
2. Tank and piping are to be given a hydrostatic test or a pressure test using a Mercury gauge. (Mercury gauge to be furnished by installer)

Date June 20, 1974 Name SAN LEANDRO RENTAL SERVICE

Location 14273 Washington Avenue

Remarks in regard to this installation: (notes are also added to the plans received)



1. Full buoyancy of completely empty tanks should be calculated to see if anchorage or weight is needed to hold the tanks securely in place at the high-water table of this area.
2. Vent piping shall not terminate less than 3 feet measuring horizontally or vertically in any window or other building opening or header, and 18" above wall or highest part of building.
3. "NO SMOKING" - "STOP MOTOR" signs, of contrasting color, shall be located so that they are visible from either side of the island.
4. Where vehicular traffic over tank is expected, as a measure of safety tanks are to be covered with reinforced concrete at least 6" in thickness which shall extend one foot beyond the outline of tanks in all directions.
5. We recommend one 15# CO^2 fire extinguisher, or equal, at island.
6. Approved safety shutoff valve at each dispenser.
7. Approved safety shutoff valve at each pump.
8. In order to expedite this installation, we request the representative of the company doing the work to notify the San Leandro Fire Department before starting the job and to go over the underground storage regulations.
9. Plumbing permit for tanks at Public Works Office.

FIRE DEPARTMENT

SLFD Form FP-5 (2)
9/17/67 - 250

SAN LEANDRO FIRE DEPARTMENT

(2)

Inspection Procedure Regarding
Underground Tank Installations
(Above ground pump)

First Inspection:

1. Tank or tanks will be inspected by the Fire Department before any back filling operations are started.
2. For the purpose of lifting and handling, "cat eyes" must be welded to tanks.
3. Inspection of condition of tanks:
   a. Damage to tanks.
   b. Any scaling or damage to protective covering of tank.
4. Back fill to be sand, firmly tamped, which shall extend one (1) foot beyond the tank in all directions.

Second Inspection:

1. Inspection of piping is required before covering. A notification shall be given the Fire Chief, who shall himself or through an authorized member of the department, inspect and give his approval or disapproval thereof.
2. Tank and piping to be given a hydrostatic test or a pressure test using a Mercury gauge. (Mercury gauge to be furnished by installers)

- -

Date November 18, 1971

Name SAN LEANDRO RENTAL

Location 14273 Washington Avenue

Remarks in regard to this installation: (notes are also added to the plans received)

1. Full buoyancy of completely empty tanks should be calculated to see if anchorage or weight is needed to hold the tanks securely in place at the high-water table of this area.

2. Vent piping shall not terminate less than 3 feet measuring horizontally or vertically in any window or other building opening or header, and 18" above wall or highest part of building.

3. "NO SMOKING", "STOP MOTOR", signs of contrasting color shall be located so that they are visible from either side of the island.

4. Where vehicular traffic over tank is expected, as a measure of safety tanks are to be covered with reinforced concrete at least 6" in thickness which shall extend one foot beyond the outline of tanks in all directions.

5. We recommend one 15# CO-2 fire extinguisher, or equal, at island.

6. In order to expedite this installation, we request the representative of the company doing the work to notify the San Leandro Fire Department before starting the job and to go over the underground storage regulations.

7. Plumbing permit for tanks at Public Works Office.

Leak Report Filed 9/14/88

September 27, 1988

Mr. Victor Baldi, Sr.
San Leandro Rental Service
14273 Washington Avenue
San Leandro, CA 94578

REPORT

Dear Mr. Baldi:

Enclosed are the test results from the precision tests we conducted on your underground tanks this past weekend. Identification of the tanks is shown on the enclosed sketch.

Tank #1, your 5000 gallon unleaded gasoline tank, shows a calculated leak rate of 0.047 gallons per hour, which is within the rate allowed by regulatory standards. This tank is certified tight.

Tank #2, the 1000-gallon diesel tank located at the pump island, produced test results showing a leak rate of 0.020 gallons per hour, which is well within regulatory limits. This tank is certified tight.

Tank #3, the 1000-gallon diesel tank located at the front gate to your yard, shows a calculated leak rate of 0.035 gallons per hour. This rate is well within regulatory limits and the tank is certified tight.

A minimal amount of water (1/2 inch) was found in Tank #1. We recommend that you take steps to keep surface water from entering the fill riser.

This report and the enclosed copies of our data sheets and level recorder charts should be all that you need to obtain renewed permits for your tanks.

If you have any questions, please call us at your convenience.

Sincerely,

Jack de Celle

Jack de Celle

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	Yes

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	No

Hazardous Waste

Is your facility a Hazardous Waste Generator?	No
Does your facility treat hazardous waste on-site?	No
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	No
Does your facility consolidate hazardous waste generated at a remote site?	No
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	No
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	No
Is your facility a Household Hazardous Waste (HHW) Collection site?	No

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	No
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	No
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	No

Additional Information

No additional comments provided.

Emergency Response/Contingency Plan

The following items are elements of a comprehensive emergency response/contingency plan that meets state requirements. Please ensure that your present plan or the one that you will prepare has all the elements listed below. Small facilities with simple operations may complete the plan below to comply with the requirement for a written emergency response plan. Please submit a copy of this plan or your present plan with the HMBP.

I. Facility Information:

Facility Name: Apollo Motorhomes	Phone: 510-614-8224
Address: 14273 Washington Ave.	
City: San Leandro	Zip: 94578

II. Emergency Coordinators:

Primary Coordinator	Secondary Coordinator
Name: Joe Silveira	Name:
Title: Branch Manager	Title:
Work Phone: 510-614-8224	Work Phone:
After hours Phone: 510-229-0070	After hours Phone:

VI. Evacuation Information:

Evacuation Announcement	___Bell ✓PA System ___Horn ✓Shouting Other_____
Evacuation Route	✓Map Other_____
Assembly Area	Location: Behind Wash Bay
Re-entry Procedures	

VII. Emergency Procedures:

Emergency Coordinator Responsibilities:

1. Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:

a. Identify the character, exact source, amount, and aerial extent of any released hazardous materials.

b. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g. the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.)*.

c. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.

d. Notify appropriate local authorities *(i.e., call 911)*.

e. Notify the State Office of Emergency Services at 1-800-852-7550.

f. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.

g. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

2. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:

a. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.

b. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

c. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.

d. Notify the Cal/EPA's Department of Toxic Substances Control and the City of San Leandro–Environmental Services Division that the facility is in compliance with requirements 2-a and 2-b, above.

Special site specific procedures:

Emergency	Response Action
Hazardous Material & Hazardous Waste Spills/Releases:	911
Fire	911
Explosion	911
Earthquake (identify areas requiring immediate inspection)	LPG Tank and Empty Fuel Tank Waste Storage
Other	

Date: 5-29-12

EMPLOYEE TRAINING PLAN

The HMBP must include a training plan that is reasonable and appropriate for the size of the business and the nature of the hazardous materials/wastes its employees handle. The training program shall take into account the responsibilities of the employees and it shall include provisions for ensuring that all personnel receive initial and refresher training.

The following list of training requirements and training records are elements of a comprehensive emergency response training plan that meets state requirements. Please ensure that your present plan or the one that you will prepare has all the elements listed below. Small facilities with simple operations may complete the plan below to comply with the requirement for a written emergency response plan. Please submit a copy of this plan or your present plan with the HMBP.

Indicate those elements covered by your emergency response plan by marking the appropriate boxes in the left column.

	All employees are trained to do the following procedures, as appropriate:
☑	1. Initiate, activate, or recognize internal alarms and other emergency announcements.
☑	2. Notify internal or on-site emergency responders listed in the emergency response/contingency plan.
☑	3. Notify agencies listed in the emergency response/contingency plan.
☑	4. Locate and review contents of written emergency response/contingency plan.
☑	5. Initiate, conduct, or follow evacuation procedures as described in the emergency response/contingency plan.

	Hazardous materials/waste handlers are additionally trained in the following subjects:
☑	1. Safe methods for handling and storage of hazardous materials and hazardous waste.
☑	2. Locations and proper use of personal protective equipment.
☑	3. Locations and proper use of fire and spill control equipment.
☑	4. Specific hazards of each chemical or waste to which they may be exposed including pathways of exposure. (i.e. skin absorption, inhalation, ingestion, or radiation)
☑	5. Follow emergency procedures for chemical/waste spills, earthquake, fire, and/or medical emergencies as described in the emergency response/contingency plan.
☑	6. Hazardous waste handlers/managers are also trained annually in all aspects of hazardous waste management specific to their job duties (e.g. accumulation time, labeling, uniform hazardous waste manifests, container inspections, storage area inspections, etc.)

	Members of the Emergency Response Team are additionally trained for the following activities: *[29CFR 1910.120 (p)(8)(iii)]*
☐	1. Personnel rescue procedures.
☐	2. Shutdown of operations.
☐	3. Liaison with emergency response agencies.
☐	4. Use, maintenance, and replacement of emergency response equipment.
☐	5. Emergency response drills are conducted, at least *[specify frequency]* [ ] times a year.
☐	6. Refresher training provided at least annually.

	Employee training and other records maintained at the facility. These include the following: *(Note: The following list does not necessarily include every type of record required to be maintained by your facility.)*
☑	1. Training records for each employee (date and duration of training, subject matter covered, instructor, etc.).
☑	2. Training records of current and former employees. *(Training records retained until facility closure for all current employees. Training records are retained for at least 3 years after the employee's termination date for all former employees)*
☑	3. Description of introductory and continuing training programs for each employee classification.
☑	4. Current emergency response, contingency, and/or spill response plan (for underground and/or aboveground tanks)
☑	5. Description and documentation of emergency response drills.
☑	6. Reportable and/or recordable hazardous material/waste accidental release records.
☑	7. Hazardous material/waste storage area inspection records. *(At least weekly for hazardous waste areas.)*
☑	8. Hazardous waste tanks daily inspection records.
☑	9. Inspection procedures for identified earthquake sensitive areas and systems in the facility.

Instructions: Federal and State laws require that you annually review your HMBP and chemical inventory statement. Please check the appropriate box below and return this form and any changes, if applicable, to Environmental Services at the address provided below.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION FORM

Pursuant to Section 25503.3(c) of California Health and Safety Code (H&SC), the Hazardous Materials Business Plan (HMBP) certification described below is hereby submitted for the following facility:

Facility Name: Apollo Motorhome Holidays

Facility Street Address: 14273 Washington Blvd., San Leandro CA 94578

Date of Current HMBP: _____

I certify that: ***(Check the appropriate box.)***

☒ I have personally reviewed the Hazardous Materials Business Plan currently on file with your agency and it is complete and accurate (please see below).

- The information contained in the most recently submitted HMBP is complete, accurate, and up-to-date;
- There has been no change in the quantity of any hazardous material as reported in the most recently submitted Non-Waste Hazardous Materials Inventory forms;
- The facility has not begun handling any hazardous material in an HMBP reportable quantity which is not currently listed in the Hazardous Materials Inventory;
- The most recently submitted HMBP contains the information required by Section 11022 of Title 42 of the Code of Federal Regulations;
- There have been no substantial changes in the facility's hazardous materials operations which would require revision of the current HMBP.

☐ Revisions to the Hazardous Materials Business Plan are necessary. The HMBP as revised is being implemented. A copy of the revisions is enclosed with this Certification.

OWNER/OPERATOR CERTIFICATION: I hereby certify under penalty of law that based upon my inquiry of those individuals responsible for obtaining the information reported above, I believe that the submitted information is true, accurate, and complete. I understand that a revised HMBP must be submitted within 30 days of any change in this facility's storage or handling of hazardous materials which would require updating of the HMBP.

Hazardous Materials and Waste (CUPA) Registration

March 1, 2010 - February 28, 2011

Facility: Apollo
Address: 14273 washington

Customer #: 21133
Fees Paid: $433.23
Date Paid: 5/20/10

You are currently registered for the following CUPA programs:

Hazardous Material Class	Quantity Range	Hazardous Material Class	Quantity Range
Combustible Liquid	1	NonFlammable Gas	0
Corrosive	0	Organic Peroxide	0
Explosive	0	Oxidizer	0
Flammable Gas	0	Poisonous Gas	0
Flammable Liquid	0	Poisonous Material	0
Flammable Solid	0	Radioactive	No
Misc. Haz Mat	0		

Hazardous Waste Generator Class	SQG
Number of Underground Storage Tanks	0
On-Site Hazardous Waste Treatment Registration	No
Accidental Release Program Facility Registration	No
Above Ground Petroleum Storage Tank Program Registration	No

CESQG: (Conditionally Exempt Small Quantity Generator) - generates less than 100 kilograms (27 gallons or 220 pounds) of hazardous waste per month.

SQG: (Small Quantity Generator) - generates more than 100 kilograms (27 gallons or 220 pounds), but less than 1,000 kilograms (270 gallons or 2,200 pounds) of hazardous waste per month.

LQG: (Large Quantity Generator) - generates more than or equal to 1,000 kilograms (270 gallons or 2,200 pounds) of hazardous waste per month.

PBR: Permit by Rule **CA**: Conditionally Authorized **CE**: Conditionally Exempt

Quantity Range 1: Less than 500 lbs, 55 gal, or 2,000 cubic feet at STP
Quantity Range 2: 500 lbs, 55 gal, or 2,000 cu ft @ STP to 5,000 lbs, 550 gallons, or 20,000 cu ft @ STP
Quantity Range 3: 5,000 lbs, 550 gal, or 20,000 cu ft @ STP to 50,000 lbs, 5,500 gal, or 200,000 cu ft @ STP
Quantity Range 4: 50,000 lbs, 5,500 gal, or 200,000 cu ft @STP to 500,000 lbs, 55,000 gal, or 2,000,000 cu ft@ STP
Quantity Range 5: Greater than or equal to 500,000 lbs, 55,000 gal, or 2,000,000 cu ft @ STP

Hi Danielle,

I took the attached photo this morning. The propane tank is onsite. The second attachment is the propane inventory registered to Apollo. Please complete the third attachment, the Facility Closure Form and send with it the paperwork from the propane company that verifies that the tank was emptied and the material removed from the site.

Thank you,

Hi Tiffany,

I've run this by our Corporate Branch supervisor and I'm afraid no one seems to know what this is or what information should be included?

The propane company came and shut everything down and removed the tank I believe.

1. Hazardous Materials Reporting

__a. Submit an HMBP to CERS: http://cers.calepa.ca.gov	HSC 6.95 25505 - 25508
__b. Update / recertify existing HMBP on CERS	HSC 6.95 25508.1-.2

2. Hazardous Waste (HW) Generator Requirements

__a. Make hazardous waste determination for_____	22CCR66262.11
__b. Obtain/reactivate EPA ID number for your facility	66262.12
__c. Accumulation time of _____ days exceeded	66262.34(a)(b)(d)
__d. Obtain a Hazardous Waste Treatment Permit	HSC25404.1.1
__e. Discontinue illegal treatment/recycling	HSC25201(a)
__f. Transporter and/or disposal facility not authorized	66263.41/HSC25163/25189.5a
__g. CESQG may transport hazardous waste to HHW	HSC25218

3. Container Requirements

__a. Properly label hazardous waste containers	66262.31/.34(f)
__b. Relocate Satellite Accumulation container at/near point of generation; dispose within 90 days of filling drum	66262.34(e)(1)-(2)
__c. Maintain adequate aisle space for HW containers	66262.34(d)(2)/66265.35
__d. Containers in poor condition/transfer contents	66262.34(d)(2)/66265.171
__e. Hazardous material/waste incompatible with container	66262.34(d)(2)/66265.172
__f. Close or seal HW containers except during transfer	66262.34(d)(2)/66265.173
__g. Inspect HW container storage area weekly	66262.34(d)(2)/66265.174
__h. Separate incompatible HW via dike, berm, wall	66262.34(d)(2)/66265.17(b)/.177
__i. Store ignitable/reactive HW 50' from property line	66265.176
__j. Label empty containers; manage within 1 year	66261.7/.7(f)
__k. Label/manage used oil filters; dispose within 1 year	66266.130
__l. Label/manage damaged lead-acid batteries	66266.81
__m. Store, label and recycle excluded recyclable material	HSC25143.2/.9

4. Tank Requirements

__a. Obtain HW tank integrity assessment/exemption	66265.192(a)(h)(k)(j)
__b. Provide secondary containment for tank system	66265.193
__c. Provide tanks with spill/overfill prevention controls	66265.194
__d. Inspect tank system and surrounding area daily;	66262.34(d)(2)/66265.195(a)
__e. Maintain written daily tank inspection logs	66265.195(c)
__f. Respond to leak/spill; discontinue discharge	66265.196
__g. Label tanks with chemical name and hazards	CFC5003.5/5703.5

5. Universal Waste (UW)

__a. Dispose of UW to approved destination facility	66273.31(a)
__b. Label/mark containers with type of UW	66273.34
__c. Recycle UW within 1 year of generation/receipt	66273.35
__d. Retain UW shipment records for 3 years	66273.39
__e. Properly manage UW aerosol cans	HSC25201.16(e)-(f)

6. Contingency Plan/Site Safety

__a. Prepare and submit a complete contingency plan	66265.51/.52
__b. Maintain copy of contingency plan at facility	66265.53
__c. Revise contingency plan	66265.54
__d. Secure HW storage area or post warning sign	66265.14
__e. Post emergency call list by phone (SQG/CESQG)	66262.34(d)(2)/40CFR262.34(d)(5)(iii)
__f. Maintain facility in a manner that minimizes risk of fire, explosion and releases of hazardous waste	66262.34(d)(2)/66265.31/17(a)
__g. Provide emergency and spill control equipment	66262.34(d)(2)/66265.32
__h. Test / maintain emergency and spill control equipment	66262.34(d)(2)/66265.33
__i. Provide portable fire extinguisher(s); service annually	66265.32/906.1/19CCR575.1

7. Reporting and Recordkeeping

__a. Hazardous waste shipped without properly completed manifest/Bill of Lading (BOL)/consolidated manifest	66262.20/.23(a)
__b. Submit manifest "generator copy" to DTSC	66262.23(a)(4)
__c. Retain hazardous waste manifest/BOL/consolidated manifest/TSDF copies for 3 years	66262.40(a)/HSC25160.2
__d. Retain hazardous waste analyses for 3 years	66262.40(c)
__e. Complete exception reporting *(TSDF signed copy not received within 35 days of waste shipment)*	66262.42
__f. Retain Land Disposal Restriction certificates for 3 yrs.	66268.7(a)
__g. Submit Source Reduction Plan (SB14) reports to DTSC	67100/HSC25244
__h. Submit biennial onsite recycling report (>100Kg/mo.)	HSC25143.10
__i. Submit Biennial Report to State and maintain onsite	66262.40(b)/.41

8. Personnel Training

__a. Provide training program for employees (LQG)	66265.16(a)
__b. Train new employees within 6 months of hire	66265.16(b)
__c. Provide emergency response training annually	66265.16(c)
__d. Maintain adequate training documentation on-site	66265.16(d)
__e. Retain training records on-site (former employee;3 yrs.)	66265.16(e)
__f. SQG/CESQG: employees must be familiar with waste handling and emergency procedures	66262.34(d)(2)/ 40CFR262.34(d)(5)(iii)

9. California Fire Code (CFC) Requirements

__a. Hazardous material storage exceeds maximum allowable quantity (MAQ); reduce volume/use storage cabinet	5003.1.1(1)-(4)/5704.3.4
__b. Indoor use/dispensing/mixing exceeds MAQ	5705.3.5.1-.5705.3.5.3
__c. Liquid storage cabinets must meet construction stand.	5704.3.2
__d. Store flam/comb liquid >10 gallons in flam cabinet *(liquids for maintenance/operation of building equipment)*	5704.3.4.4
__e. Provide approved dispensing system	5705.2
__f. Provide bonding and grounding for containers	5705.3.2
__g. Secure compressed gas cylinders	5303.5.3
__h. Secure hazardous materials storage area	5003.9.2
__i. Post NFPA 704 (diamond) placard	5003.5
__j. Maintain clearance from combustible materials	5704.2.6
__k. Separate incompatible materials by 20'/non-combustible partition /approved storage cabinet	5704.2.6/5003.9.8
__l. Store contaminated rags in approved container with lid	304.3.1
__m. Post "No Smoking" signs	5003.7.1
__n. Relocate outdoor flam liquid containers/portable tanks	5704.4.2
__o. Provide secondary containment for hazardous material	5004.2.2/5005.2.1.4

Comments: Service fire extinguishers. HMBP updated and current in CERS. Fuel AST is empty and out of service (propane is sole hazardous material). No waste generated (service is outsourced). No violations noted.

All violations listed above must be corrected within ____ days. Within 5 days of correcting all violations, sign below and return a signed copy to this office. The facility is subject to re-inspection at any time. *By signing below, I certify that I have corrected all violations noted above.*

Description of Violation

1. Hazardous Materials Reporting
___ a. Submit a Hazardous Materials Business Plan (HMBP)
___ b. Revise existing HMBP: _____
___ c. Submit a SQ Hazardous Materials and Waste Registration
___ d. Submit a CUPA Programs Registration
___ e. Submit permit/registration fees of $ _____
___ f. Submit Material Safety Data Sheets (MSDS)

2. Storage Requirements
___ a. Relocate hazardous materials/waste storage area
___ b. Separate incompatible materials by 20 feet/noncombustible partition/separate storage cabinets
___ c. Provide secondary containment for _____
___ d. Properly label/store/recycle empty containers
___ e. Provide approved flammable liquids storage cabinet
___ f. Store unused chemicals in approved storage cabinets
___ g. Properly secure compressed gas cylinders
___ h. Reduce volume of regulated materials in storage area
___ i. Secure hazardous materials/waste storage area
___ j. Store contaminated rags in approved container with lid
___ k. Containers in poor condition/transfer contents
___ l. Hazardous material/waste incompatible with container
___ m. Maintain _____ ft. clearance from combustibles
___ n. Label tanks with chemical name and hazards

3. Dispensing, Use and Mixing Requirements
___ a. Provide approved dispensing system
___ b. Provide bonding and grounding for containers
___ c. Relocate dispensing, mixing area
___ d. Containers must be closed or sealed except during transfer

4. General Facility Requirements
___ a. Clean secondary containment/maintain in dry state
___ b. Discontinue discharge of hazardous materials/wastes
___ c. Provide/maintain spill control supplies
___ d. Maintain adequate aisle space in _____
___ e. Clean up spills and leaks immediately
___ f. Post NFPA 704 (diamond) placards at required locations

Description of Violation

___ g. Provide ___ extinguisher(s) with a min. rating of _____
___ h. Service fire extinguishers (annual service required)
___ i. Post "No Smoking" signs

5. Hazardous Waste Requirements
___ a. Obtain an EPA ID number for your facility
___ b. File an On-site Hazardous Waste Treatment Notification
___ c. Discontinue illegal treatment/recycling
___ d. HW transporter and TSDF must have EPA ID number
___ e. Determine if _____ is hazardous waste
___ f. Properly label hazardous waste containers
___ g. Hazardous waste must be disposed of within _____ days of the accumulation start date
___ h. Inspect container storage area weekly
___ i. Inspect tank system and surrounding area daily
___ j. Contaminated rags must be sent to an approved laundry
___ k. Properly label and manage used oil filters
___ l. Properly label and manage damaged batteries
___ m. CESQG may transport hazardous waste to HHW facility

6. Emergency Response Plan and Procedures
___ a. Prepare/revise emergency response plan/contingency plan
___ b. Emergency Coordinator must be familiar with plan
___ c. Post emergency call list by phone (SQG/CESQG)

7. Recordkeeping and Reporting
___ a. Inadequate hazardous waste manifesting procedures
___ b. Retain hazardous waste manifests for 3 years
___ c. Retain Land Disposal Restriction certificates for 3 years
___ d. Retain hazardous waste analyses for 3 years
___ e. Retain milkrun receipts for 3 years
___ f. Retain training records for 3 years
___ g. Submit SB14 reports to DTSC (LQGs)
___ h. Submit biennial recyclable materials report (LQGs/SQGs)

8. Personnel Training
___ a. Provide emergency response training annually
___ b. Train new employees within 6 months of hire
___ c. Maintain adequate training documentation on-site

Comments: All maintence has been outsourced. No hazardous waste generated. Only hazardous material is propane. Relocate fire extinguisher per bulletin. Fire extinguisher servicing is current (Dec. 2014). HMBP is current in CERS.

l.rumble@apollorv.com

All minor violations listed above must be corrected within ____ days. Within 5 days of correcting all violations, sign below and return a signed copy to this office. Additional comments or other violations are listed in the attached inspection reports. The facility is subject to re-inspection at any time.

I have corrected all of the minor violations noted above.

I did receive it, thank you. I checked with the finance department and they said that rather than issue a new invoice, they will credit the account for the Hazardous Waste Generator fee line item of $306. So go ahead and pay the CUPA bill using the revised total of $255 ($220 for hazardous materials storage—propane, and the $35 State fee).

Hi Maureen,

Attached is the program closure form we discussed to close out Apollo from the hazardous waste generator program now that you are outsourcing the activities that had generated hazardous waste. Please complete the attached form and email it back to me with a scan of the paperwork from your final waste haul. I will then notify the finance department to issue a revision to Apollo's CUPA billing. Let me know if you have any questions. Thank you.

RE: Notice of Non-compliance with Hazardous Materials Reporting
California Environmental Reporting System (CERS)

A recent review of CERS indicates your facility is not in compliance with state law requiring electronic submission of hazardous materials reporting at http://cers.calepa.ca.gov/. This office has sent several reminders and information to assist you in meeting the requirement.

If you submitted a paper Hazardous Materials Business Plan in 2012, your electronic resubmittal is due on its anniversary date in 2013. If you have unsubmitted drafts in CERS or have submittals that were not accepted, please complete the submittal process.

If you do not have access to a computer, a computer work station is available in our office. If you need assistance, we can provide it over the phone, in our office, or at your place of business. We wish to work with you to avoid the penalty process.

In the event that registration and required submittals have not been made by **October 1, 2013**, Environmental Services staff will conduct a compliance site visit and assess a site visit fee in the amount of **$263** per Title 6, Chapter 4 of the San Leandro Administrative Code.

If you need assistance or have questions, please contact your assigned Environmental Services Specialist directly or call our main number at 510-577-3401 and we will be pleased to help you.

Sincerely,

John Camp
Environmental Services Supervisor

REF: Gas Tank Closure (Above Ground)
V.B. Enterprise
14273 Washington Ave.
San Leandro, CA. 94577

This is a letter of notification that the existing 1,000 Gallon above ground gasoline tank will be closed down and put out of service.

The tanks have been emptied of all product. The piping will be plugged off and made out of service. The vent line will be left intact.

Please remove this unit from your rolls.

Tank closure will be completed by:
R.L. Stevens Company
P.O. Box 361
San Leandro, CA. 94577

Please confirm your receipt of this letter so we may close our file.

Thank You, Bob Stevens

Generator certifies that it has established a program to reduce the volume or quantity & toxicity of the hazardous waste to the degree determined by generator to be economically practicable.

I hereby certify that I have read and have the authority to bind the above listed generator to the terms on the reverse side of this form.

IMPORTANT NOTICE REGARDING THE DISPOSITION OF YOUR OIL.

Per California Health and Safety Code Section 25250.9, Evergreen hereby advises customer that customer's shipment of used oil may be transported to a facility that is required to comply with federal regulations applicable to management of used oil, but that is not required to comply with the more stringent requirements applicable to hazardous waste management facilities. California facilities that handle or process used oil are required to meet those more stringent requirements, and some out-of-state facilities that process used oil also meet those requirements. These include more stringent leak detection and prevention requirements, engineering certifications of tank integrity, and financial assurances for closure and accidental releases. It is lawful to send used oil to out-of-state facilities that comply only with federal used oil management standards and not these more stringent requirements. This notification is for information purposes only.

INSPECTION REPORT

Date: 8/15/13	**Time:** 1230	**Inspector:** Treece
Business Name: Apollo Motorhomes		
Contact: Joe Silveira		**Title:** Branch Manager
Business Address: 14273 Washington Av		**Phone:** 510-614-8224

Reason for Inspection: **Class:**

Inspected Manufacturing Facilities:		Copies of all MSDS on file:	
Inspected Process Used:		Inspected Spill Prevention Procedures:	
Inspected Pretreatment Facilities:		Self Monitoring Procedures:	
Inspected Substances Discharged:		Inspected Laboratory Procedures:	
Inspected Chemical Storage:		Follow-Up Required:	
Drainage:		Enforcement:	
Inspected Waste Manifest:		Slug Control Plan Evaluated	

Inspection Notes:

Site visit to verify closure of AST (split tank 1,000 gallons capacity each side - diesel/gasoline). R.L. Stevens Co. had Evergreen Oil pump out residual fuel in tank (one drum each) and locked out fills. They will mark tank "empty". The tank will remain onsite out of service. The current tenant, Apollo Motorhomes, does not want to use the tank, but the property owner wants tank to remain onsite should a future tenant wish to recommission it.

Water:	Industrial Waste Discharged:
Water Metering:	Hazardous Materials: Yes
Sample Site:	If Other (Specify):

INSPECTION REPORT

Date: 5/29/12	**Time:** 10:30	**Inspector:** Camp
Business Name: Apollo Motorhome Holidays		
Contact: Joe Silveira		**Title:** Branch Manager
Business Address: 14273 Washington Av		**Phone:** 510-614-8224

Reason for Inspection: Routine **Class:** N/A

Inspected Manufacturing Facilities:	N/A	Copies of all MSDS on file:	Yes
Inspected Process Used:	Yes	Inspected Spill Prevention Procedures:	Yes
Inspected Pretreatment Facilities:	N/A	Self Monitoring Procedures:	N/A
Inspected Substances Discharged:	N/A	Inspected Laboratory Procedures:	N/A
Inspected Chemical Storage:	Yes	Follow-Up Required:	No
Drainage:	Yes	Enforcement:	No
Inspected Waste Manifest:	Yes	Slug Control Plan Evaluated	N/A

Inspection Notes:

Routine inspection for CUPA, Fire Code and Stormwater programs. Violation for missing HMBP submittal. Completed Forms provided during inspection. No change in business operations. Bulk LPG tank ok. Emergency shut off visible and signage ok. Fire Extingusher in place. No change in shop area. Used oil drum and used filter drum on secondary containment pallet in corner of shop. Minor mainteance on rental fleet. No change in washrack, covered and enclosed on three sides.

Split 2000 gallon AST (1000 gal diesel & 1000 gal gasoline; owned by property owner BALDI VICTOR D & BETTY M TRS; is still out of service and empty. Assest on site that property owner is maintaining BAAQMD permit active. Dispenser nozzles are locked out. Need to also pad lock the fill port spill bucket covers and label the tanks "MT" in big letters to be exempt from APSA inventory and requirements. Tank has been empty since United Rentals closed and Apollo has never used.

Branch Manager speaking with Planning about possiibly modifying business to include service of private owned motorhomes and storage of private motorhomes. Also wants to look into installing an onsite dump station rather than keep sending them to trailer haven. Provided contact informaiton for Oro Loma Sanitary District as site is in their service area.

Description of Violation

1. Hazardous Materials Reporting
- X a. Submit a Hazardous Materials Business Plan (HMBP)
- ___ b. Revise existing HMBP: _____
- ___ c. Submit a SQ Hazardous Materials and Waste Registration
- ___ d. Submit a CUPA Programs Registration
- ___ e. Submit permit/registration fees of $ _____
- ___ f. Submit Material Safety Data Sheets (MSDS)

2. Storage Requirements
- ___ a. Relocate hazardous materials/waste storage area
- ___ b. Separate incompatible materials by 20 feet/noncombustible partition/separate storage cabinets
- ___ c. Provide secondary containment for _____
- ___ d. Properly label/store/recycle empty containers
- ___ e. Provide approved flammable liquids storage cabinet
- ___ f. Store unused chemicals in approved storage cabinets
- ___ g. Properly secure compressed gas cylinders
- ___ h. Reduce volume of regulated materials in storage area
- ___ i. Secure hazardous materials/waste storage area
- ___ j. Store contaminated rags in approved container with lid
- ___ k. Containers in poor condition/transfer contents
- ___ l. Hazardous material/waste incompatible with container
- ___ m. Maintain _____ ft. clearance from combustibles
- ___ n. Label tanks with chemical name and hazards

3. Dispensing, Use and Mixing Requirements
- ___ a. Provide approved dispensing system
- ___ b. Provide bonding and grounding for containers
- ___ c. Relocate dispensing, mixing area
- ___ d. Containers must be closed or sealed except during transfer

4. General Facility Requirements
- ___ a. Clean secondary containment/maintain in dry state
- ___ b. Discontinue discharge of hazardous materials/wastes
- ___ c. Provide/maintain spill control supplies
- ___ d. Maintain adequate aisle space in _____
- ___ e. Clean up spills and leaks immediately
- ___ f. Post NFPA 704 (diamond) placards at required locations

Description of Violation

- ___ g. Provide ___ extinguisher(s) with a min. rating of _____
- ___ h. Service fire extinguishers (annual service required)
- ___ i. Post "No Smoking" signs

5. Hazardous Waste Requirements
- ___ a. Obtain an EPA ID number for your facility
- ___ b. File an On-site Hazardous Waste Treatment Notification
- ___ c. Discontinue illegal treatment/recycling
- ___ d. HW transporter and TSDF must have EPA ID number
- ___ e. Determine if _____ is hazardous waste
- ___ f. Properly label hazardous waste containers
- ___ g. Hazardous waste must be disposed of within _____ days of the accumulation start date
- ___ h. Inspect container storage area weekly
- ___ i. Inspect tank system and surrounding area daily
- ___ j. Contaminated rags must be sent to an approved laundry
- ___ k. Properly label and manage used oil filters
- ___ l. Properly label and manage damaged batteries
- ___ m. CESQG may transport hazardous waste to HHW facility

6. Emergency Response Plan and Procedures
- ___ a. Prepare/revise emergency response plan/contingency plan
- ___ b. Emergency Coordinator must be familiar with plan
- ___ c. Post emergency call list by phone (SQG/CESQG)

7. Recordkeeping and Reporting
- ___ a. Inadequate hazardous waste manifesting procedures
- ___ b. Retain hazardous waste manifests for 3 years
- ___ c. Retain Land Disposal Restriction certificates for 3 years
- ___ d. Retain hazardous waste analyses for 3 years
- ___ e. Retain milkrun receipts for 3 years
- ___ f. Retain training records for 3 years
- ___ g. Submit SB14 reports to DTSC (LQGs)
- ___ h. Submit biennial recyclable materials report (LQGs/SQGs)

8. Personnel Training
- ___ a. Provide emergency response training annually
- ___ b. Train new employees within 6 months of hire
- ___ c. Maintain adequate training documentation on-site

Comments: HMBP completed on-site
No other violations noted

All minor violations listed above must be corrected within ____ days. Within 5 days of correcting all violations, sign below and return a signed copy to this office. Additional comments or other violations are listed in the attached inspection reports. The facility is subject to re-inspection at any time.

I have corrected all of the minor violations noted above.

San Leandro, CA 94578

Dear Joe Silvera:

SUBJECT: Reminder Notice - 2010-2011 CUPA Registration Fee

Your CUPA registration payment is now overdue (account #21133). In order to comply with annual CUPA registration requirements, please pay by May 27, 2010 the balance due as reflected on the May, 2010 statement mailed to you by our Finance Department. For your convenience, the Finance Department now accepts in-person payments by major credit card except American Express.

Upon receipt of your payment, Environmental Services will issue you the required CUPA Registration form covering the period from March, 2010 through February, 2011.

If you have questions or need additional information, please contact the Finance Department at (510) 577-3382 or Environmental Services at (510) 577-3401.

Thank you.

Sincerely,

John Camp
Environmental Services Supervisor

SAN LEANDRO RENTAL
14273 WASHINGTON AVENUE

Dear Mike:

On April 7, 1992 J. Quarle' & Associates, Inc. removed two underground storage tanks and approximately forty feet of pipeline.

This pipeline had serviced a 1,000 gallon diesel tank located directly east of the fuel island. This tank was removed in 1991 by Scott Company. Review of San Leandro Rentals documentation pertaining to the 1991 tank removal show that some contaminated soil still remained. This fact coupled with the results of the sample taken adjacent to the former tank location (460 ppm) has prompted the owners to choose to excavate the affected soils.

It is anticipated that excavation will be slightly larger than the original and possibly twenty feet deep. We expect to encounter ground water near this depth. Excavated soils will be separated clean backfill vis a vis native clean or contaminated. Samples of spoils piles as well as sidewall and water samples will be analyzed for TPH Diesel and BTEX.

A minimum of one sample will be taken from each sidewall at the interface with ground water, a grab sample from the groundwater and one sample from each fifty yards of excavated soil.

The work is scheduled to begin Monday April 27, 1992 and should take two or three days to complete. Sampling will be performed by JQ&A personnel and sample analysis will be performed by Sequoia Analytical's mobile lab if scheduling permits.

Sincerely,

J. QUARLE' & ASSOCIATES, INC.

Jack Quarle', President

Enclosure

	01	007	000507	02

PERMIT NUMBER	PERMIT APPROVED BY/DATE	PERMIT EXPIRATION DATE

FORM B (9-90) THIS FORM MUST BE ACCOMPANIED BY A PERMIT APPLICATION - FORM A, UNLESS A CURRENT FORM A HAS BEEN FILED.

FCR0334B-R4

INSTRUCTIONS FOR COMPLETING FORM "B"

GENERAL INSTRUCTIONS:

1. One FORM "B" shall be completed for each tank for all NEW PERMITS, PERMIT CHANGES, REMOVALS and/or any other TANK INFORMATION CHANGE.
2. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
3. Please type or print clearly all requested information.
4. Use a hard point writing instrument, you are making 3 copies.

TOP OF FORM: "MARK ONLY ONE ITEM"

1. Mark an (X) in the box next to the item that best describes the reason the form is being completed.
2. Indicate the DBA or Facility name where the tank is installed.

I. TANK DESCRIPTION - COMPLETE ALL ITEMS - IF UNKNOWN - SO SPECIFY

A. Indicate owners tank ID # - If there is a tank number that is used by the owner to identify the tank (ex. AB70789).
B. Indicate the name of the company that manufactured the tank (ex. ACME TANK MFG.).
C. Indicate the year the tank was installed (ex. 1987).
D. Indicate the tank capacity in gallons (ex. 25,000 or 10,000 etc.).

II. TANK CONTENTS

A. 1. If MOTOR VEHICLE FUEL, check box 1 and complete items B & C.
2. If not MOTOR VEHICLE FUEL, check the appropriate box in section A and complete items B & D.
B. Check the appropriate box.
C. Check the type of MOTOR VEHICLE FUEL (if box 1 is checked in A).
D. Print the chemical name of the hazardous substance stored in the tank and the C.A.S.#. (Chemical Abstract Service number), if box 1 is NOT checked in A.

III. TANK CONSTRUCTION - MARK ONE ITEM ONLY IN BOX A, B, C & D

1. Check only one item in TYPE OF SYSTEM, TANK MATERIAL, INTERIOR LINING and CORROSION PROTECTION.
2. If OTHER, print in the space provided.

IV. PIPING INFORMATION

1. Circle A if above ground; circle U if underground; and circle both if applicable.
2. If UNKNOWN, circle; or if OTHER, print in space provided.
3. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirement for the piping.

V. TANK LEAK DETECTION

1. Indicate the LEAK DETECTION system(s) used to comply with the monitoring requirements for the tank.

VI. INFORMATION ON TANK PERMANENTLY CLOSED IN PLACE

1. ESTIMATED DATE LAST USED - MONTH/YEAR (January, 1988 or 01/88).
2. ESTIMATED QUANTITY of HAZARDOUS SUBSTANCE remaining in the tank (in Gallons).
3. WAS TANK FILLED WITH INERT MATERIAL? Check 'Yes' or 'NO'.

APPLICANT MUST SIGN AND DATE THE FORM AS INDICATED.

INSTRUCTION FOR THE LOCAL AGENCIES

The state underground storage tank identification number is composed of the two digit county number, the three digit jurisdiction number, the six digit facility number and the six digit tank number. The county and jurisdiction numbers are predetermined and can be obtained by calling the State Board (916)739-2421. The facility number must be the same as shown in form "A". The tank number may be assigned by the local agency; however, this number must be numerical and cannot contain an alphabet. If the local agency prefers the State Board to assign the tank number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS.

Attention: Michael Bakaldin

Gentlemen:

Please find enclosed paperwork concerning the tank removal at San Leandro Rental.

This tank was removed on 1/7/91. The tank was in good condition and was intact upon removal.

The site was sampled at the direction of Michael Bakaldin of the San Leandro Fire Department.

After sampling analysis was completed, San Leandro Rental over excavated to just above the top of the water table, and resampled the site with the hopes of removing the existing contamination.

The results still showed levels of 1000 ppm of TPH as diesel in the soil. The excavation was backfilled and the existing stockpiles moved to the far end of the facility. Treatment methods are currently being considered by San Leandro Rental.

This site has two additional tanks that are to be removed at a later date. Additional site work will be done in conjunction with the removal of the additional tanks.

San Leandro Rental Co. is currently handling all phases of this work.

Should you have any questions concerning the tank removal, I can be contacted at 834-2333, extension 3379.

Very truly yours,

SCOTT CO. OF CALIFORNIA

Subject: Analytical Results for 3 Soil Sample(s)
Identified as: San Leandro Rental
Received: 01/07/91
Purchase Order: 106231-58833-72-7001

Dear Mr. Groh:

Analysis of the sample(s) referenced above has been completed. This report is written to confirm results communicated on January 8, 1991 and describes procedures used to analyze the samples.

Sample(s) were received in brass sleeves that were sealed with aluminum foil and plastic endcaps. Each sample was transported and received under documented chain of custody and stored at 4 degrees C until analysis was performed.

Sample(s) were analyzed using the following method(s):

"BTEX" (EPA Method 8020/Purge-and-Trap)
"TPH as Diesel,Motor Oil,Jet/Kerosene" (Mod. 8015/Extraction)

Please refer to the following table(s) for summarized analytical results and contact us if you have questions regarding procedures or results. The chain-of-custody document is enclosed.

REPORT

January 23, 1990

Mr. Victor Baldi, Sr.
San Leandro Rental Service
14273 Washington Avenue
San Leandro, CA 94578

Dear Mr. Baldi:

This letter constitutes a formal report on the test results generated by your underground tanks at the above location:

Tank #1: Your 5,000-gallon unleaded gasoline tank, showed a calculated leak rate of -0.035 gallons/hour, which is within the regulatory limits. Tank #1 is certified tight.

Tank #2: Your 1000-gallon diesel tank located at the pump island shows a calculated leak rate of -0.001 gallons per hour. These results are within regulatory limites. Tank #2 is certified tight.

Tank #3: Your 1000-gallon diesel tank located at the front gate to your yard, showed a calculated leak rate of -0.003 gallons per hour. These results are within regulatory limits. The tank is certified tight.

A trace of water was found in the bottom of tank #2. Weather protect should be added to all three vents where they are terminated at the pump island.

Copies of this report and of the data sheets and recorder charts are being sent to the Alameda Dept. of Environmental Heath. If they require any permitting acticity from you they will write to you.

Sincerely,

Jack de Celle

INSTRUCTIONS

EMERGENCY
Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

LOCAL AGENCY ONLY
To avoid duplicate notification pursuant to Health and Safety code Section 25180.7, a designated government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY
Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY
Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

SITE LOCATION
Enter information regarding the tank facility. At a minimum, you must provide the facility name and full address.

IMPLEMENTING AGENCIES
Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES INVOLVED
Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT
Provide information regarding the discovery and abatement of the leak.

SOURCE/CAUSE
Indicate source(s) of leak. Check box(es) indicating cause of leak.

CASE TYPE
Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS
Indicate the category which best describes the current status of the case. Check one box only. The respons should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil. Descriptions of options follow:

No Action Taken - No action has been taken by responsible party beyond initial report of leak.
Leak Being Confirmed - Leak suspected at site, but has not been confirmed.
Preliminary Site Assessment Workplan Submitted - workplan/proposal requested of/submitted by responsible party to determine whether ground water has been, or will be, impacted as a result of the release.
Preliminary Site Assessment Underway - implementation of workplan.
Pollution Characterization - responsible party is in the process of fully defining the extent of contamination in soil and ground water and assessing impacts on surface and/or ground water.
Remediation Plan - remediation plan submitted evaluating long term remediation options. Proposal and implementation schedule for appropriate remediation options also submitted.
Cleanup Underway - implementation of remediation plan.
Post Cleanup Monitoring in Progress - periodic ground water or other monitoring at site, as necessary, to verify and/or evaluate effectiveness of remedial activities.
Case Closed - regional board and local agency in concurrence that no further work is necessary at the site.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION
Indicate which action have been used to cleanup or remediate the leak. Descriptions of options follow:

Cap Site - install horizontal impermeable layer to reduce rainfall infiltration.
Containment Barrier - install vertical dike to block horizontal movement of contaminant.
Excavate and Dispose - remove contaminated soil and dispose in approved site.
Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).
Remove Free Product - remove floating product from water table.
Pump and Treat Groundwater - generally employed to remove dissolved contaminants.
Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.
Replace Supply - provide alternative water supply to affected parties.
Treatment at Hookup - install water treatment devices at each dwelling or other place of use.
Vacuum Extract - use pumps or blowers to draw air through soil.
Vent Soil - bore holes in soil to allow volatilization of contaminants.
No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.

SIGNATURE - Sign the form in the space provided.

DISTRIBUTION
If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies intact to your local tank permitting agency for distribution.

1. Original - Local Tank Permitting Agency
2. State Water Resources Control Board, Division of Loans and Grants, Underground Storage Tank Program, P.O. Box 944212, Sacramento, CA 94244-2120
3. Regional Water Quality Control Board
4. County Board of Supervisors or designee to receive Proposition 65 notifications.
5. Owner/responsible party.

COMMENTS

COMMENTS: ~~XXXXX~~ WELLS FARGO BANK (TRINDY LEAHY) CALLED REGARDINGTHE ABOVE MENTIONED BUSINESS PULLED THE FILE AND OBTAINED THE FOLLOWING INFORMATION. SEE ATTACHED PAPERS.

THE PIPING HAS BEEN REPAIRED AND THE TANKS RETESTED. AWAITING THE PAPERWORK. TEST DATED 4/15/87 INDICATES .056 GPH CALCULATED LEAK RATE. THE TANKS WERE INSTALLED IN 1972 AND THIS WAS THE ONLY TANK/PIPING TEST. PERMITS BEING FILLED OUT FOR UNDERGROUND COMPLIANCE.

COMPLETE AND ATTACH A CLEANUP TRACKING REPORT IF ANY CLEANUP WORK OR PLANNING HAS STARTED

UTC 05 (10/85)

INSTRUCTIONS

1. GENERAL

In box titled "EMERGENCY", indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

In space provided, enter state tank ID number if known. State ID numbers have been assigned to all tanks that are on file with the State Water Resources Control Board. Enter today's date in the box titled "Report Date". Enter local and Regional Water Quality Control Board case numbers if known. Enter the US EPA facility number if applicable.

2. REPORTED BY

Enter your name, telephone number and address. Indicate which party you represent, and provide company or agency name.

3. RESPONSIBLE PARTY

Enter the name, telephone number, contact person, and address of the party responsible for the leak, or mark unknown. For tank leaks, the responsible party would normally be the tank owner.

4. SITE LOCATION

Enter information regarding the tank facility and surrounding area. If a known tank or facility is not involved, enter general location of the contamination site as best possible; i.e., street, city, county, zip, cross street, and type of area.

5. IMPLEMENTING AGENCIES

Enter names of the local agency, Regional Board and/or Toxic Substances Control Division (TSCD) regional office involved and a contact person and telephone number for each.

6. SUBSTANCES INVOLVED

Enter the CAS number(s) (if known), name(s), and quantities lost of all hazardous substances involved. Attach an extra sheet if more than two substances are involved. Be as specific as possible.

7. DISCOVERY/ABATEMENT

Provide information regarding the discovery and abatement of the discharge. More than one box may be checked in the sections titled "How Discovered" and "Method Used To Stop Discharge" if appropriate.

8. SOURCE/CAUSE

Indicate source(s) of discharge. Provide details on tank age; capacity and material if a tank is involved. Check box(es) indicating cause of discharge. More than one box may be checked if appropriate.

9. RESOURCES AFFECTED/AT RISK

In section titled "RESOURCES AFFECTED" indicate whether any of the resources listed have been affected ("YES"), will not be affected ("NO"), or may be affected ("THREATENED") by the release. Check "UNKNOWN" if unsure of the status of a resource. Specify any unlisted resources which are, or may be, involved under "OTHER". The same instructions apply to the section titled "WATER SUPPLIES AFFECTED." Give the number of water wells affected or threatened, if known. Provide the name of the groundwater basin underlying the site, if known, in the space provided.

10. COMMENTS

Use this space to elaborate on any aspects of the incident. Comments on cleanup work or planning or related investigations should be reported on a separate Cleanup Tracking Report.

11. SIGNATURE

Sign the form in the space provided.

DISTRIBUTION

Hand deliver or mail copies of the form as follows:

Dear Victor:

Here are the test results from the tanks tested on April 14 and 15. Tank identification is shown on the attached sketch.

Tank #1, the 5000 gallon U.L. gasoline tank, had a calculated leak rate of -.056 gph. This is slightly above the regulatory standards. Leaks were visible at the suction piping under the pump and at the vapor return riser. I am confident that the test results would have been within regulatory limits had these leaks not been present.

chopped off cement. Tight pipe.

Tanks #2 and #3, the 1000 gallon diesel tanks, both produced test results within the regulatory standards. Tank #2 had a calculated leak rate of +.009 gph; Tank #3 had a calculated leak rate of -.022 gph. The diesel tanks are certified tight.

Partially completed permit applications for the diesel tanks are enclosed. Sections I, II and III remain for you to complete. Your signature is required under Section VIII.

Significant amounts of water were found in Tank #1 and #2 of 3¼ inches and one-half inch, respectively. Tank #3 only showed 1/8 inch of water. I recommend that the water be removed from Tank #1 and #2, and that measures be implemented to protect surface drainage from entering the fill risers.

Please feel free to call me if you wish to discuss details further.

Sincerely,

Howard Harlan

Howard E. Harlan, P.E.

14273 Washington Avenue
San Leandro, CA 94578

REPORT

Dear Mr. Baldi:

Enclosed are the test results from the precision tests we conducted on your underground tanks this past weekend. Identification of the tanks is shown on the enclosed sketch.

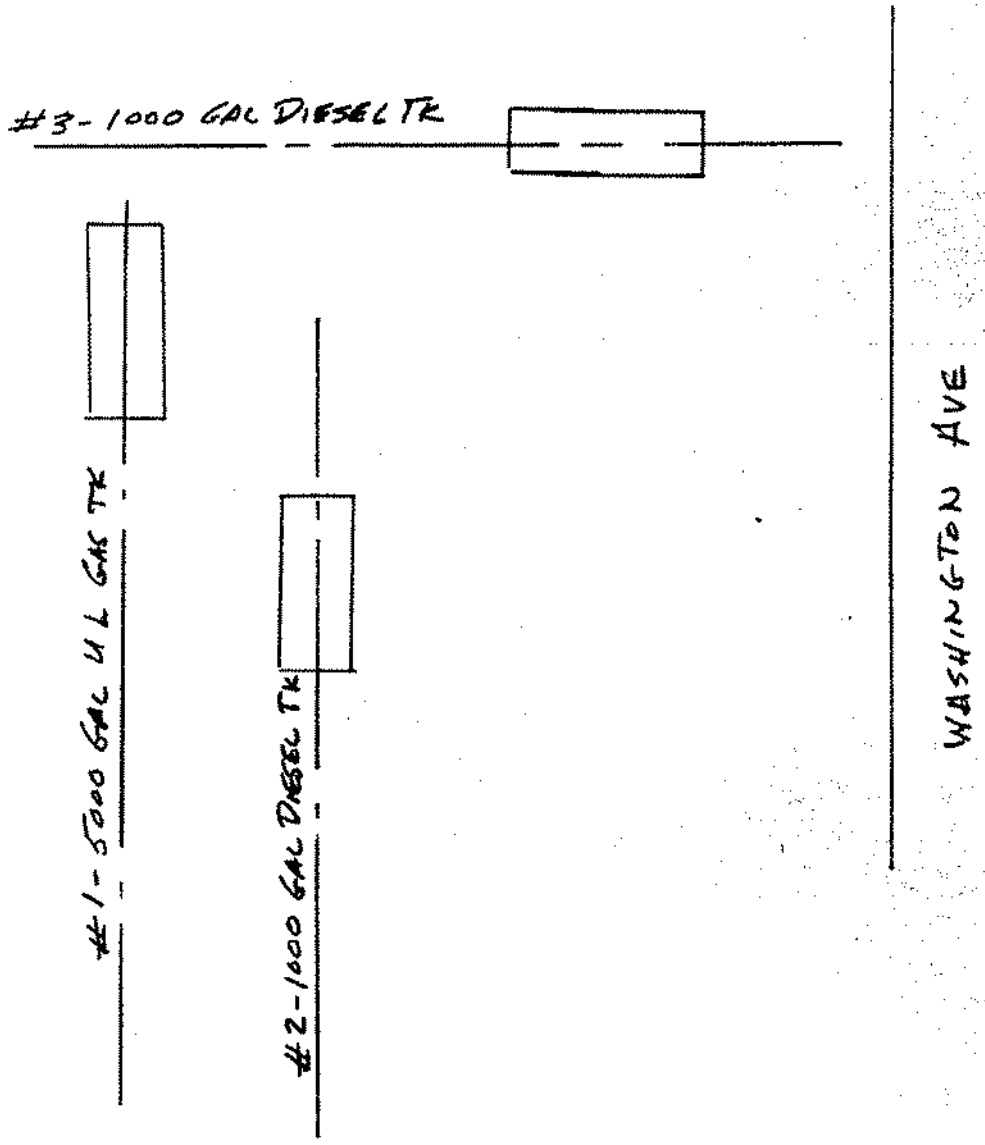
Tank #1, your 5000 gallon unleaded gasoline tank, shows a calculated leak rate of 0.047 gallons per hour, which is within the rate allowed by regulatory standards. This tank is certified tight.

Tank #2, the 1000-gallon diesel tank located at the pump island, produced test results showing a leak rate of 0.020 gallons per hour, which is well within regulatory limits. This tank is certified tight.

Tank #3, the 1000-gallon diesel tank located at the front gate to your yard, shows a calculated leak rate of 0.035 gallons per hour. This rate is well within regulatory limits and the tank is certified tight.

A minimal amount of water (1/2 inch) was found in Tank #1. We recommend that you take steps to keep surface water from entering the fill riser.

This report and the enclosed copies of our data sheets and level recorder charts should be all that you need to obtain renewed permits for your tanks.



If you have any questions, please call us at your convenience.

Sincerely,

Jack de Celle

Mr. Victor Baldi
San Leandro Rentals
14273 Washington Avenue
San Leandro, CA 94577

Dear Mr. Baldi:

Approval of Workplan for Soil and Groundwater Investigation at 14273 Washington

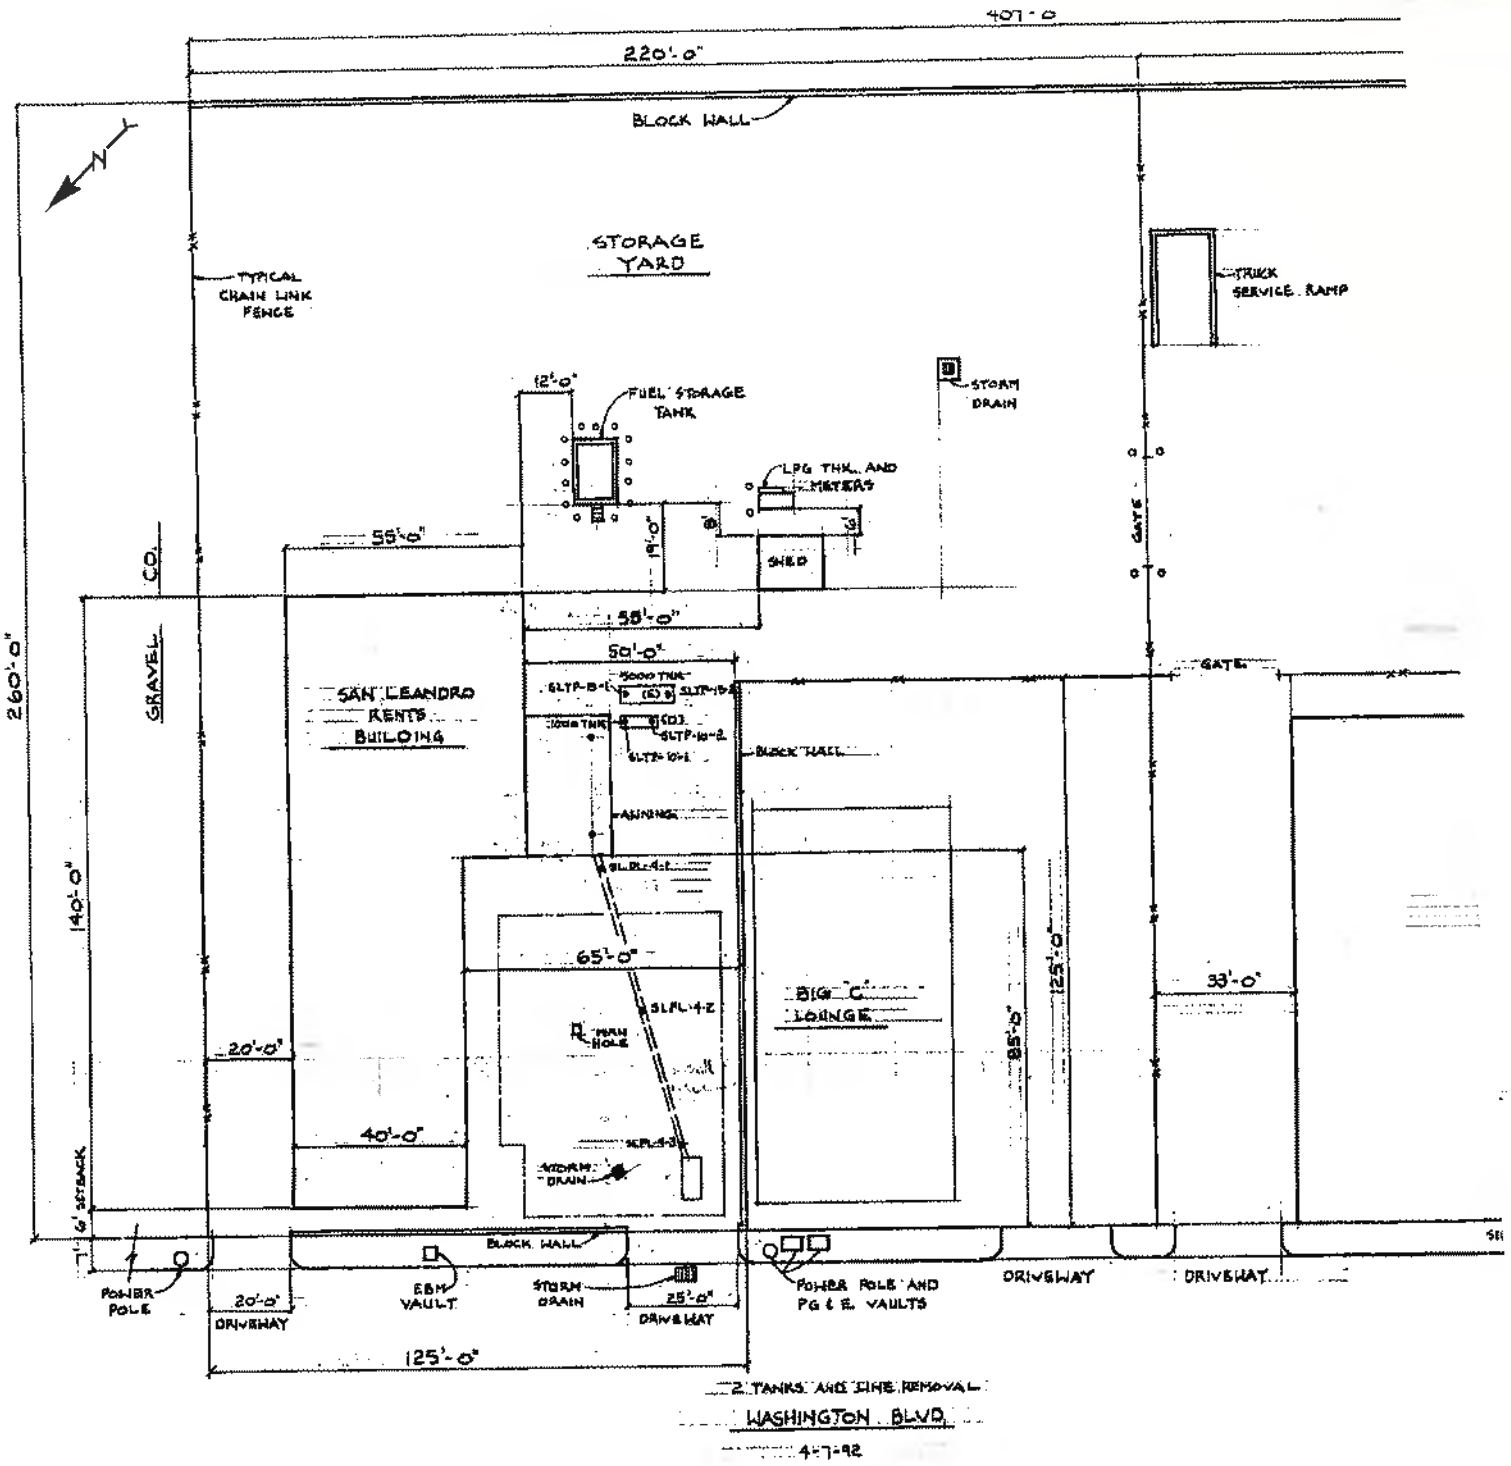
The Hazardous Materials Division has reviewed ALLCAL's above referenced workplan, dated April 3, 1997. The workplan is approved subject to the following condition:

1. That this office be notified at least 48 hours prior to the start of field work.

The City of San Leandro will oversee all remedial activities at your site. A check for $300 must be submitted to this office to pay for staff time associated with review of reports and oversight of this project. The deposit will be placed into an account from which money will be drawn at the rate of $60 per hour for time spent on this project. At the end of this project all unused funds will be returned to you.

Our goal is to assist you in quickly and efficiently investigating your site and taking you through the process of obtaining sign-off from the state. At the completion of this project, this office will prepare a report to the Regional Water Quality Control Board petitioning that your site be issued case closure. Upon approval, the state will issue a case closure letter to you stating that no further work will be required at the site.

If you have any questions, please call me at (510) 577-3331.



Sincerely,

Michael Bakaldin
Hazardous Materials Coordinator

City of San Leandro
Civic Center, 835 E. 14th Street
San Leandro, California 94577

June 11, 1997

Mr. Kevin Graves
California Regional Water Quality Control Board
San Francisco Bay Region
2101 Webster Street, Suite 500
Oakland, CA 94612

Dear Mr. Graves:

Request for Case Closure at 14273 Washington, San Leandro, CA

This is a request for case closure for San Leandro Equipment Rental Service at 14273 Washington Avenue. The case closure is required based on the presence of the site in the Regional Board's leaking underground storage tank database.

Attached is a site closure summary which summarizes the underground storage tank removal, soil remediation, and soil and groundwater investigation activities at the site. Based on the results of the soil and groundwater investigation, the City of San Leandro recommends that no further action be required at 14273 Washington and that the Regional Board formally close this case with a case closure letter.

If you have any questions, please call me at (510) 577-3331.

Sincerely,

Michael Bakaldin
Hazardous Materials Coordinator

MAXIMUM POLLUTANT CONCENTRATIONS-BEFORE AND AFTER CLEANUP

	Before	After	Before	After		Before	After	Before	After
POLLUTANT	Soil (ppm)		Water (ppb)		POLLUTANT	Soil (ppm)		Water (ppb)	
TPH (Gas)	ND	100	NT	ND	TPH (Diesel)	5,200	1,300	NT	5,200
Benzene	0.12	ND	NT	ND	MTBE	NT	ND	NT	ND
Toluene	0.18	ND	NT	ND					
Ethylbenzene	0.015	ND	NT	ND					
Xylene	0.035	ND	NT	ND					

Comments: Between 1991 and 1992 two diesel USTs and one gasoline UST were removed from the yard of the equipment rental shop. Post-removal soil sampling indicated the presence of diesel contamination in the soil. Overexcavation of the contaminated soil occurred in two phases in 1991 and 1992. A total of 2,400 cubic yards of soil was overexcavated from underneath the former USTs. Based on field observations during the overexcavation activities the contamination was limited to the capillary fringe zone. As a result, the excavation was backfilled and paved over. In 1997, five exploratory soil boring were drilled around the former tank pit using direct push technology. Soil and groundwater samples were collected from each boring. The results of the investigation indicated that the only groundwater contaminant was diesel. Please see the attached figures and tables for a complete summary of all sampling locations and sampling results.

No further investigation or remediation is recommended at 14273 Washington for the following reasons:

1. All vadose zone contamination was removed from the property. Diesel contamination only remains in the capillary fringe and saturated zones at 18 to 20 feet bgs.

2. BTEX and MTBE are not present in the soil or groundwater.

3. The levels of TPHdiesel found in the groundwater do not represent a threat to water quality.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per Regional Board Basin Plan? **Yes**		
Does completed corrective action protect potential beneficial uses per Basin Plan? **Yes**		
Does corrective action protect public health for current land use? **Yes**

Subject: Closure Letter for San Leandro Rental,
14273 Washington Street, San Leandro, CA

Dear Mr. Baldi:

This letter confirms the completion of site investigation and remedial action for the underground storage tank(s) formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquires concerning the former underground storage tank(s) are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground tank release is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations .

Please contact our office if you have any questions regarding this matter.

Sincerely,

for Loretta K. Barsamian
Executive Officer

1.0 INTRODUCTION

The subject site is San Leandro Rental located at 14273 Washington Avenue in San Leandro, California 94578. The site's contact person is Mr. Victor D. Baldi Jr.; telephone number (510) 357-5900. This report documents a soil and groundwater investigation conducted under the direction of Allcal Property Services, Inc. (ALLCAL), located in Hayward, California.

This report is prepared under contract to San Leandro Rental.

2.0 BACKGROUND

The following background regarding tank closures and soil remediation, at the subject site, is summarized from information provided by San Leandro Rental and from files maintained by the City of San Leandro Fire Department (SLFD).

2.1 Tank Closures and Soil Remediation

On January 7, 1991, a 1,000-gallon diesel tank was removed by Scott Company of California (Scott) from a location adjacent to the sidewalk of Washington Avenue and the site's property boundary with Big "C" Lounge (see Figure 1). After removing the tank, soil samples were collected from the floor of the tank excavation and analyzed for total petroleum hydrocarbons as diesel (TPHD) and for benzene, toluene, ethylbenzene, and xylenes (BTEX). Because contamination was detected, an Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report was filed with the SLFD. On January 17, 1991, the contaminated soil was excavated by San Leandro Rental to a depth of about 20 feet (just above groundwater); soil samples collected from the floor of the overexcavated pit detected TPHD at concentrations of up to 1,000 parts per million (ppm). No further remedial work was conducted. The excavation was closed and the excavated contaminated soil was stockpiled at the rear of the property.

On April 7, 1992, a second 1,000-gallon diesel tank and a 5,000-gallon gasoline tank were removed by J. Quarle' & Associates (Quarle'). The tanks were located across from the present day office (see Figure 1). Quarle' also removed underground piping that led to the tank removed earlier by Scott. Soil samples were collected from each tank excavation and from the pipeline trench and analyzed for total petroleum hydrocarbons as gasoline (TPHG), TPHD, and BTEX. On April 10, 1992, the above two tank excavations and pipeline trench were backfilled. Analytical results from the above soil samples were nondetectable, with the exception of 460 ppm TPHD detected in a pipeline trench soil sample collected adjacent to the former tank removed by Scott.

On April 27, 1992, Quarle' began re-excavating the tank pit closed by Scott and overexcavating contaminated soil associated with the former piping. The resultant excavation reached a size of about 50 by 70 feet (see Figure 1). Final soil samples collected by Quarle'

on June 3 and 17, 1992, from the excavation's sidewall adjacent to the shop, detected TPHG and TPHD of up to 100 ppm and 1,300 ppm, respectively (see Figure 1). Excavated soil was stockpiled at the rear of the property. By the end of June, 1992, Quarle' had backfilled the excavation with material imported by Alviso Rock.

2.2 Disposal of Stockpiled Soil

All excavated soil, about 2,450 cubic yards (cyds), was disposed of either at Redwood Landfill Inc. located in Novato, California or at Altamont Landfill and Resource Recovery Facility located in Livermore, California (Altamont Landfill).

Quarle' sampled and arranged for disposal of about 750 cyds of stockpiled soil to Redwood Landfill. Acceptance by Redwood Landfill required that the gasoline and diesel contaminated soil be sampled at the rate of four separate samples, composited into one by the analyzing laboratory, for each 100 cyds and that the soil pass acceptance limits for TPHG, BTEX, TPHD, and organic lead. Laboratory analyses were conducted by McCampbell Analytical, Inc. and Sequoia Analytical located in Pacheco, California and Redwood City, California, respectively.

The remainder of the soil, about 1,700 cyds, was sampled by Ned Pepper Inc. and disposed of at Altamont Landfill. Acceptance by Altamont Landfill required that representative sampling of gasoline and diesel contaminated soil be conducted per Test Methods for Evaluation of Solid Waste, Volume II: EPA Field Manual, Physical/Chemical Method, Chapter 9, and that the soil pass acceptance limits for TPHG, BTEX, TPHD, and lead. The method of representative sampling by Ned Pepper Inc. has not been determined. Laboratory analyses were conducted by Sparger Technology, Inc., located in Sacramento, California.

3.0 SOIL AND GROUNDWATER INVESTIGATION

As a further investigation of gasoline and diesel contamination of the vadose zone soil and groundwater, ALLCAL directed the drilling of 5 exploratory soil borings for the collection and analysis of soil and "grab" groundwater samples.

The following work was conducted:

- Submitted an April 3, 1997, workplan to the SLFD for their comment and approval.

- Obtained a soil boring permit from the Alameda County Flood Control and Water Conservation District, Water Resources Management Zone 7 (Zone 7); notified Underground Service Alert; and subcontracted an underground utility

locator to minimize the potential of encountering buried utilities or other metal objects while drilling the soil borings.

- Drilled 5 exploratory soil borings.
- Collected soil samples from each boring at depths of about 13 and 18 feet for logging of the soil profile and for chemical analysis.
- Collected a "grab" groundwater sample from each boring for chemical analysis.
- Analyzed all soil and groundwater samples for TPHG, TPHD, BTEX, and MTBE, with the exception of boring SB-3 in which the groundwater sample volume was not enough for analysis for TPHD.
- Sealed all borings to ground surface with neat Portland cement.
- Prepared this report.

Details of the above work are presented below.

3.1 Prefield Activities

Prior to drilling the exploratory soil borings, ALLCAL: (1) obtained a soil boring permit from Zone 7 (see Appendix A), (2) visited the site to mark the locations of the proposed borings and notified Underground Service Alert, (3) subcontracted an underground utility locator to "clear" each boring location, and (4) gave 48 hours notice to the SLFD prior to drilling the borings.

3.2 Locations of Exploratory Soil Borings

Five exploratory soil borings (SB-1 through SB-5) were drilled at the approximate locations shown in Figure 1. The locations were chosen based on drill rig accessibility, distance from the former excavation, and the approximate direction of regional groundwater flow. Direction of regional groundwater flow was obtained from Woodward-Clyde Consultants' December 29, 1993, report of HYDROGEOLOGY OF CENTRAL SAN LEANDRO AND REMEDIAL INVESTIGATION OF REGIONAL GROUNDWATER CONTAMINATION, SAN LEANDRO PLUME, SAN LEANDRO, CALIFORNIA, VOLUME I.

3.3 Soil and Groundwater Sampling

The following discusses soil boring and sampling procedures. See Appendix B for ALLCAL's sample handling procedures, quality assurance and quality control procedures, and waste handling and decontamination procedures.

(1) Soil Boring and Soil Sampling Procedures

Borings SB-1 and SB-2 were drilled to total depths of 25 feet and borings SB-3, SB-4, and SB-5 were drilled to total depths of 24 feet. Groundwater was encountered in all borings at a depth of about 19 feet.

All borings were drilled with the small diameter (1.5-inch), direct-push technology, Geoprobe System,. Soil samples were collected from each boring at depth intervals of about 12.0 to 14.0 feet and 17.0 to 19.0 feet. From these intervals, samples were collected for chemical analyses at depths of about 13.0 to 13.5 feet and 18.0 to 18.5 feet. The soil was collected by hydraulically pushing a closed, 2-foot long sampler, containing an acetate liner, to the chosen sample depth. Then, the sampler was remotely opened and pushed 2 feet to receive a core of soil. After filling the sampler with soil, the sampler was retrieved and the soil was examined for contamination and construction of lithologic logs, and a portion selected for chemical analysis.

To minimize the potential for cross-contamination, the sampler was washed with Alconox detergent and rinsed with distilled water between sampling events.

After each boring was drilled to its final depth, a "grab" groundwater sample was collected for chemical analysis. Groundwater samples were collected by inserting a 4-foot long stainless steel screened casing to the bottom of the boring and allowing time for groundwater to enter the casing. "Grab" water samples were collected by the inertia method which used polyethylene tubing with a miniature stainless steel check valve attached at the end. The check valve, with attached tubing, was lowered into the water column and moved up and down to force water past the check valve and into the tubing. The check valve allowed water to enter the tubing but not exit downward; consequently, water filled the tubing until it reached ground surface where it was decanted into containers for preservation for chemical analysis.

Groundwater yield was low in boring SB-3 and the volume of water collected was only sufficient for analysis for TPHG, BTEX, and MTBE.

After all samples were collected, each boring was sealed to grade with neat cement.

The soil in each boring was logged according to the Unified Soil Classification System by a California Registered Geologist and exploratory boring logs were constructed (see Appendix C).

Drill cuttings and rinsate are stored on site in 5-gallon pails labeled to show contents, date stored, suspected contaminant, expected date of removal, company name, contact person, and telephone number. Maintenance of the pails and their contents is the responsibility of San Leandro Rental.

(2) Sample Handling Methods

Soil samples were examined for apparent contamination based on field-screening criteria that included visible staining and hydrocarbon odors. No apparent soil contamination was detected in any soil samples. Samples selected for chemical analysis were preserved in acetate liners with no headspace by quickly covering the open ends with Teflon sheeting and capping them with plastic end-caps. The samples were labeled to show site name, project number, date, time, sample name, depth collected, and sampler name; sealed in quart-size plastic bags; and stored in an iced-cooler.

"Grab" groundwater samples were stored in laboratory provided, 1-liter, amber bottles and 40-milliliter, HCL-preserved VOAs having Teflon-lined plastic caps. Each sample was labeled and stored as above.

(3) Chemical Analyses

All soil and groundwater samples were delivered under chain-of-custody to California Department of Health Services certified McCampbell Analytical, Inc., located in Pacheco, California, for chemical analysis for TPHD, TPHG, BTEX, and MTBE by EPA Methods GCFID, 3550/8015, GCFID 5030/8015, 8020, and 8020, respectively.

3.4 Results of Chemical Analyses

Soil Samples

Results of chemical analyses for all soil samples were nondetectable, with the exception of the sample collected at the depth of 18.0 to 18.5 feet in the boring of SB-5 in which TPHD was detected at a concentration of 8.3 ppm; the laboratory noted that the contaminant appeared to be aged diesel.

"Grab" Groundwater Samples

TPHG, BTEX, and MTBE were nondetectable in all "grab" groundwater samples, with the exception of xylenes detected in the samples from the borings of SB-1, SB-3, and SB-4 at concentrations of .77 ppb, 1.0 ppb, and .63 ppb, respectively.

TPHD was detected in the water samples from the borings of SB-2, SB-4, and SB-5 at concentrations of 90 ppb, 510 ppb, and 2,800 ppb, respectively. Not enough water sample was collected from the boring of SB-3 for chemical analysis for TPHD.

The laboratory reported that all water samples contained greater than 5% volume of sediment and the TPHD was either unmodified or weakly modified diesel or significant diesel range compounds with no recognized pattern.

Results of soil and groundwater chemical analyses are summarized in Table 1 and documented with a certified analytical report and chain-of-custody in Appendix D.

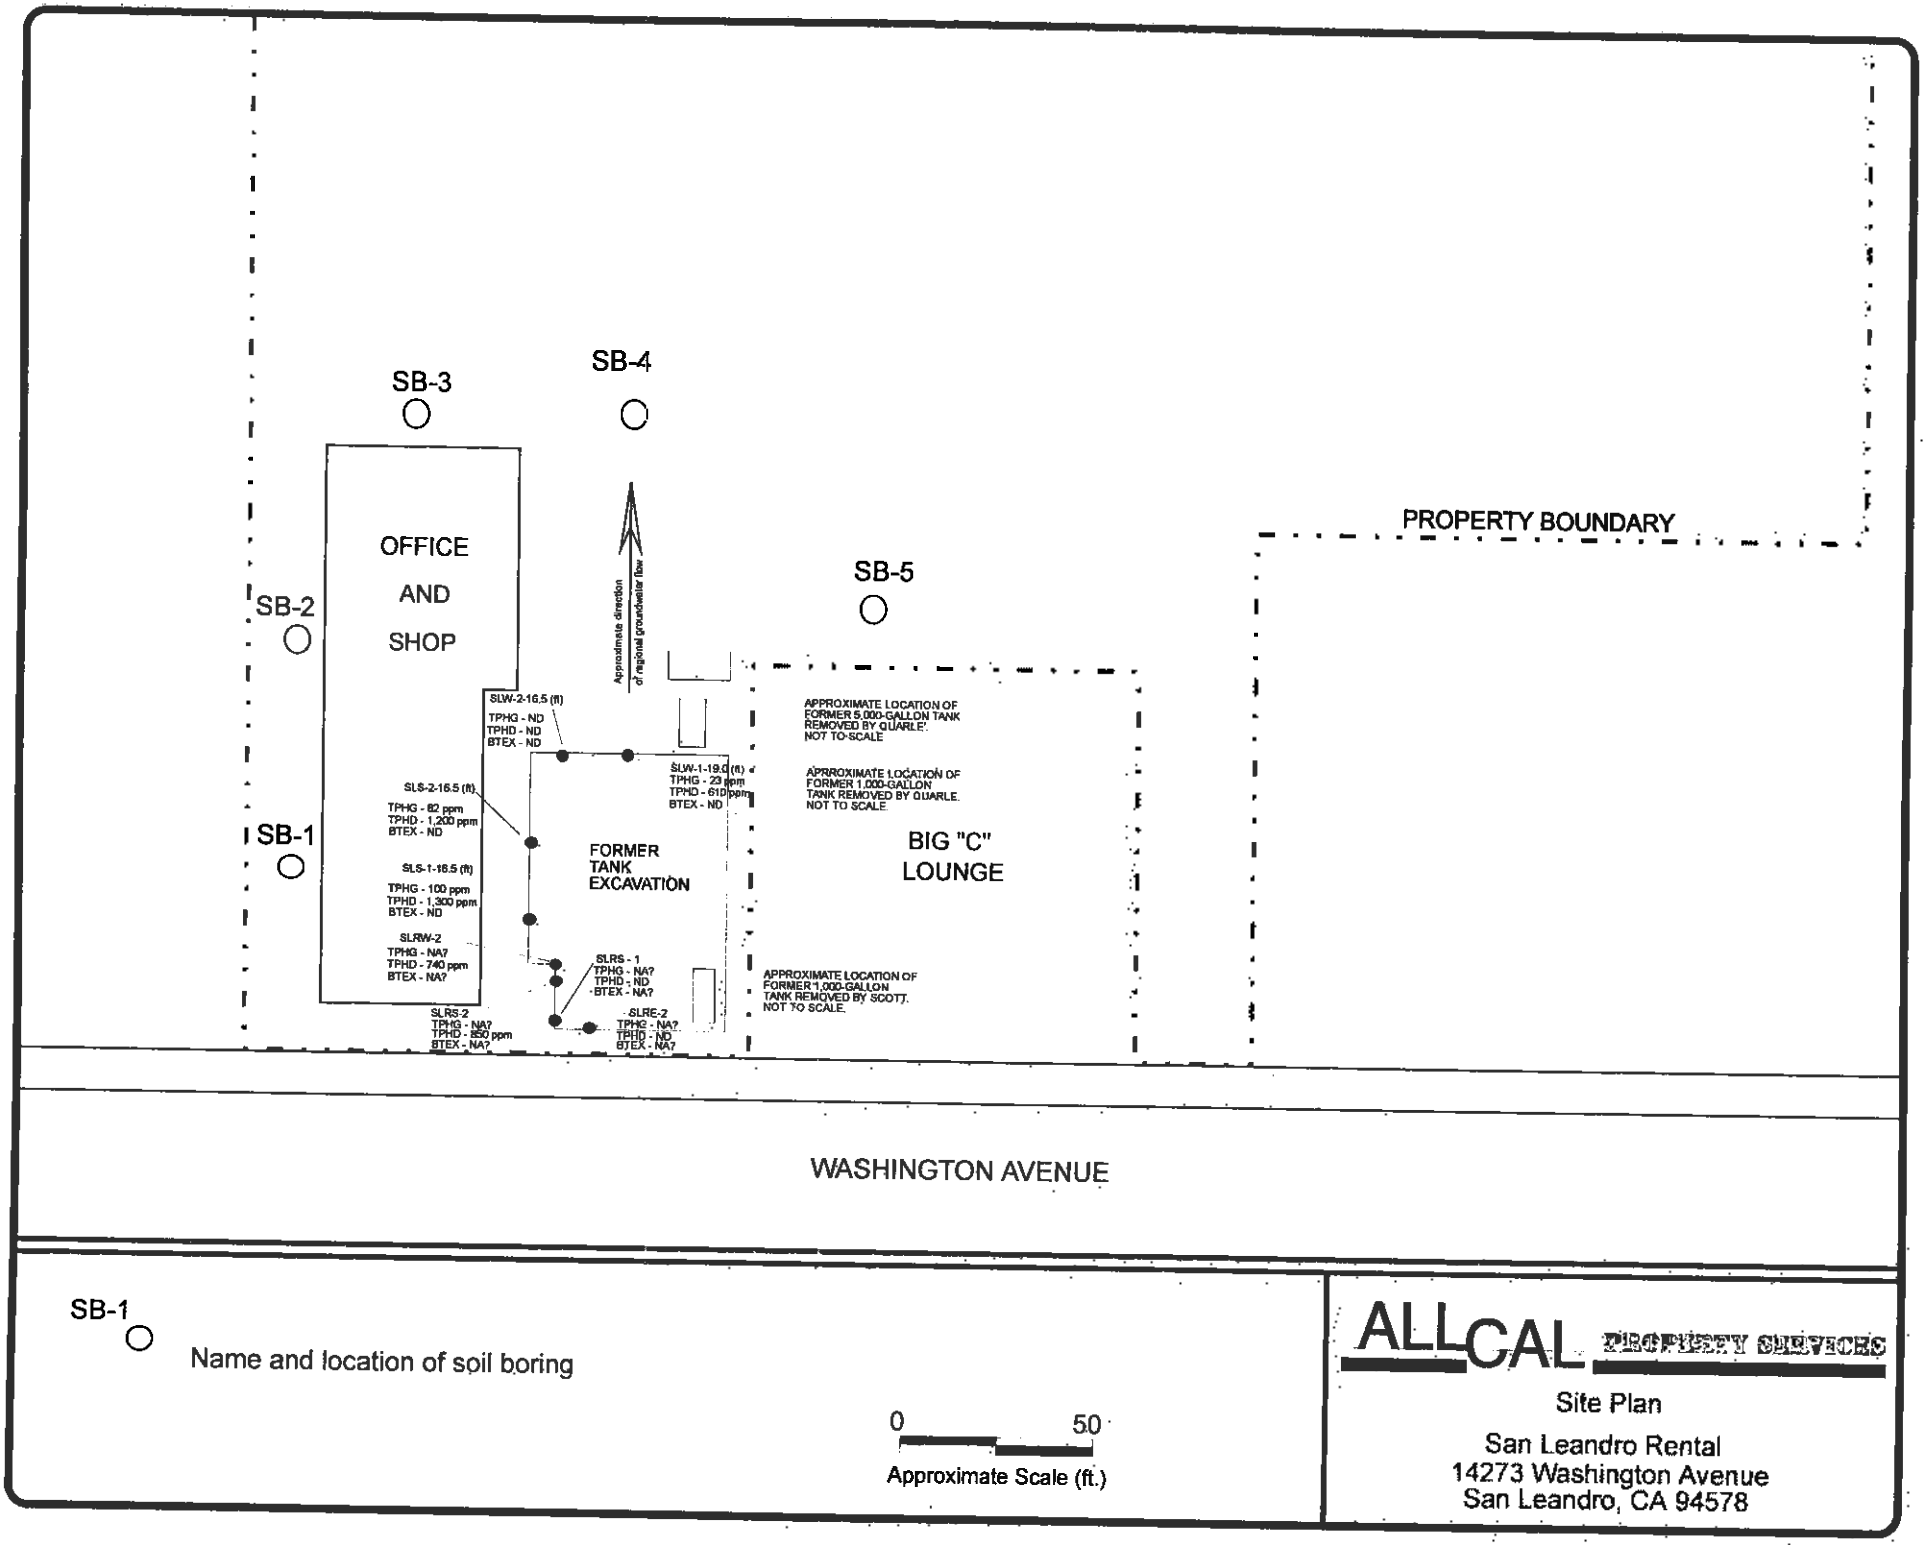
4.0 RECOMMENDATION

ALLCAL recommends site closure be granted by the SLFD for the following reasons:

(1) The underground fuel tanks, the primary source of contamination to the soil and groundwater, and about 2,450 cyds (in place) of fuel contaminated soil, a secondary source of contamination, have been removed. The former excavation has been closed with imported clean backfill material and the ground surface has been capped with a concrete surface having no cracks or leaks through which surface water may enter to leach residual soil contamination into the groundwater or clean soil or to allow for vapor emissions.

There is no evidence that sufficient product remains in the soil to move as leachate, vapor, or by gravity flow to further degrade groundwater quality or result in a significant threat to human health or the environment.

(2) The mass of the remaining fuel plumes in the soil and groundwater will eventually be cleaned-up by passive bioremediation processes. Passive bioremediation is demonstrated to be presently working based on the detection of aged diesel and the complete lack of BTEX chemicals, with the exception of trace concentrations of xylenes in "grab" groundwater samples collected from soil borings SB-1 through SB-5.



(3) The results of this investigation suggest there are no significant soil or groundwater BTEX plumes at the subject site, if any. If plumes exist on the site between the sampling locations, they would be of limited aerial extent and are apparently stabilized.

Although residual concentrations of TPHG and TPHD up to 100 ppm and 1,300 ppm, have been detected in the soil at the former tank excavation and TPHD has been detected up to 2,800 ppb in the groundwater of boring SB5, the ASTM Standard Guide for Risk-based Corrective Action Applied at Petroleum Release Sites says: "TPH analyses should not be used for risk assessment because the general measure of TPH provides insufficient information about the amounts of individual chemical(s) of concern present."

5.0 LIMITATIONS

This report is based on laboratory analyses of soil and groundwater samples. The chemical analytical results for the samples are considered applicable to that location from which they were collected. The conclusions contained herein are based on the field observations, analytical data, and professional judgement which is in accordance with current standards of professional practice. Representations made of soil and groundwater conditions between sample locations are extrapolations based on professional opinions and judgements and accepted industry practice. No warranty is expressed or implied. The extent of testing and data collection directly affects the statistical confidence level of all work performed. As a practical matter, to reach or even approach a 100 percent statistical level would be prohibitively expensive.

The findings and conclusions of this report are valid as of the present time; however, the passing of time could change the conditions of the subsurface due to natural processes or the influence of man. Accordingly, the findings of this report may be invalidated, wholly or partly, by changes beyond ALLCAL's control. Therefore, this report should not be relied upon after an extended period of time without being reviewed by a Civil Engineer or Registered Geologist.

PERMIT NUMBER 97256
LOCATION NUMBER _____

PERMIT CONDITIONS

Circled Permit Requirements Apply

A. GENERAL
(1.) A permit application should be submitted so as to arrive at the Zone 7 office five days prior to proposed starting date.
2. Submit to Zone 7 within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report or equivalent for well Projects, or drilling logs and location sketch for geotechnical projects.
(3.) Permit is void if project not begun within 90 days of approval date.

B. WATER WELLS, INCLUDING PIEZOMETERS
1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specially approved. Minimum seal depth for monitoring wells is the maximum depth practicable or 20 feet.

(C.) GEOTECHNICAL. Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material. In areas of known or suspected contamination, tremied cement grout shall be used in place of compacted cuttings.

D. CATHODIC. Fill hole above anode zone with concrete placed by tremie.

E. WELL DESTRUCTION. See attached.

Approved Wyman Hong Date 25 Apr 97

APPENDIX B

SAMPLE HANDLING PROCEDURES

QUALITY ASSURANCE AND QUALITY CONTROL PROCEDURES

WASTE HANDLING AND DECONTAMINATION PROCEDURES

SAMPLE HANDLING PROCEDURES

Soil and groundwater samples will be packaged carefully to avoid breakage or contamination and will be delivered to the laboratory in an iced-cooler. Sample bottle/sleeve lids will not be mixed. All sample lids will stay with the original containers.

Samples will be stored in iced-coolers to maintain custody, control temperature, and prevent breakage during transportation to the laboratory. Ice, blue ice, or dry ice (dry ice will be used for preserving soil samples collected for the Alameda County Water District) will be used to cool samples during transport to the laboratory. Water samples will be cooled with crushed ice. In the Alameda County Water District, water samples will be buried in the crushed ice with a thermometer, and the laboratory will be requested to record thermometer temperature at the time of receipt.

Each sample will be identified by affixing a label on the container(s). This label will contain the site identification, sample identification number, date and time of sample collection, and the collector's initials.

Soil samples collected in brass or stainless-steel tubes will be preserved by covering the ends with Teflon tape and capping with plastic end-caps. The tubes will be labeled, sealed in quart-size bags, and placed in an iced-cooler for transport to the laboratory.

All groundwater sample containers will be precleaned and will be obtained from a State Department of Health Services certified analytical laboratory.

A chain-of-custody form will be completed for all samples and accompany the sample cooler to the laboratory. All sample transfers will be documented in the chain-of-custody. All field personnel are personally responsible for sample collection and the care and custody of collected samples until the samples are transferred or properly dispatched.

The custody record will be completed by the field technician or professional who has been designated as being responsible for sample shipment to the appropriate laboratory. The custody record will include the following information: site identification, name of person collecting the sample(s), date and time sample(s) were collected, type of sampling conducted (composite/grab), location of sampling station, number and type of containers used, and signature of the person relinquishing samples to another person with the date and time of transfer noted.

QUALITY ASSURANCE AND QUALITY CONTROL PROCEDURES

The overall objectives of the field sampling program include generation of reliable data that will support development of a remedial action plan. Sample quality will be checked by the use of proper sampling, handling, and testing methods. Additional sample quality control methods may include the use of background samples, equipment rinsate samples, and trip and field blanks. Chain-of-custody forms, use of a qualified laboratory, acceptable detection limits, and proper sample preservation and holding times also provide assurance of accurate analytical data.

A quality assurance and quality control (QA/QC) program may be conducted in the field to ensure that all samples collected and field measurements taken are representative of actual field and environmental conditions and that data obtained are accurate and reproducible. These activities and laboratory QA/QC procedures are described below.

Field Samples: Additional samples may be taken in the field to evaluate both sampling and analytical methods. Three basic categories of QA/QC samples that may be collected are trip blanks, field blanks, and duplicate samples.

Trip blanks are a check for cross-contamination during sample collection, shipment, and laboratory analysis. They are water samples that remain with the collected samples during transportation and are analyzed along with the field samples to check for residual contamination. Analytically confirmed organic-free water will be used for organic parameters and deionized water for metal parameters. Blanks will be prepared by the laboratory supplying the sample containers. The blanks will be numbered, packaged, and sealed in the same manner as the other samples. One trip blank will be used for each sample set of less than 20 samples. At least 5% blanks will be used for sets greater than 20 samples. The trip blank is not to be opened by either the sample collectors or the handlers.

The field blank is a water sample that is taken into the field and is opened and exposed at the sampling point to detect contamination from air exposure. The water sample is poured into appropriate containers to simulate actual sampling conditions. Contamination due to air exposure can vary considerably from site to site.

The laboratory will not be informed about the presence of trip and field blanks, and false identifying numbers will be put on the labels.

Duplicate samples are identical sample pairs (collected in the same place and at the same time), placed in identical containers. For soils, adjacent sample liners will be analyzed. For the purpose of data reporting, one is arbitrarily designated the sample, and the other is designated as a duplicate sample. Both sets of results are reported to give an indication of the precision of sampling and analytical methods.

The laboratory's precision will be assessed without the laboratory's knowledge by labeling one of the duplicates with false identifying information. Data quality will be evaluated on the basis of the duplicate results.

Laboratory QA/QC: Execution of a strict QA/QC program is an essential ingredient in high-quality analytical results. By using accredited laboratory techniques and analytical procedures, estimates of the experimental values can be very close to the actual value of the environmental sample. The experimental value is monitored for its precision and accuracy by performing QC tests designed to measure the amount of random and systematic errors and to signal when correction of these errors is needed.

The QA/QC program describes methods for performing QC tests. These methods involve analyzing method blanks, calibration standards, check standards (both independent and the United States Environmental Protection Agency-certified standards), duplicates, replicates, and sample spikes. Internal QC also requires adherence to written methods, procedural documentation, and the observance of good laboratory practices.

WASTE HANDLING AND DECONTAMINATION PROCEDURES

Decontamination: Any drilling, sampling, or field equipment that comes into contact with soil or groundwater will be decontaminated prior to its use at the site and after each incident of contact with the soil or groundwater being investigated. Decontamination is essential to obtain samples that are representative of environmental conditions and to accurately characterize the extent of soil and groundwater contamination. Hollow-stem auger flights, the drill bit, and all other soil boring devices will be steam-cleaned between the drilling of each boring.

All sample equipment, including the split-spoon sampler and brass or stainless-steel tubes, will be cleaned by washing with trisodium phosphate or Alconox detergent, followed by rinsing with tap water. Where required by specific regulatory guidelines, a nonphosphate detergent will be used.

Waste Handling: Waste materials generated during site characterization activities will be handled and stored as hazardous waste and will be stored on site in appropriately labeled containers. Waste materials anticipated include: excavated soil, drill cuttings, development and purge water, water generated during aquifer testing, water generated during decontamination, and used personnel protection equipment such as gloves and Tyvek. The site owner will be responsible for providing the storage containers and will be responsible for the disposal of the waste materials. Drill cuttings from individual borings will be stored separately in drums or covered by plastic sheeting, and the appropriate disposal procedure will be determined by the site owner following receipt of the soil sample analytical results. Storage containers will be labeled to show material stored, known or suspected contaminant, date stored, expected removal date, company name, contact, and telephone number.

UNDERGROUND TANK REMOVAL
14273 WASHINGTON AVENUE, SAN LEANDRO

Dear Vic:

The purpose of this letter report is to document the removal of one 500-gallon waste oil tank at the subject site.

Activities began on August 29, 1998 with the breaking and removal of a concrete slab over the tank. The tank was excavated and removed from the property on August 31, 1998, under the direction of Carl Buche, City of San Leandro Fire Department, Hazardous Materials Division. Ecology Control Industries (ECI) transported the tank for recycling at their Richmond facility.

J. Quarle' & Associates personnel took one soil sample from 2 feet under the tank, per the direction of Mr. Buche. This sample was submitted to Priority Environmental Labs, tested for Gasoline/BTEX with MTBE, Oil, and Grease, Diesel, EPA 418.1 and EPA 8010 and CAM 17 metals.

Test results were faxed to this office and to Mr. Buche on September 9, 1998. Mr. Buche gave verbal authorization for the excavation to be backfilled and on September 10, this was done using four yards of base rock.

This project was completed on September 15, 1998, with the replacement of the concrete slab over the former tank site.

Attached are the test results, uniform waste manifest and recycling certificate for the tank.

Please give us a call if we can be of further service.

Sincerely,

J. QUARLE' & ASSOCIATES, INC.

Jack Quarle', President

TEST METHOD VISUAL GASTECH/1314 SMPN LAST PRODUCT UO

This is to certify that I have personally determined that this tank is in accordance with the American Petroleum Institute and have found the condition to be in accordance with its assigned designation. This certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

TANK SIZE 550 GALLON TANK CONDITION SAFE FOR FIRE

REMARKS: OXYGEN 20.9% LOWER EXPLOSIVE LIMIT LESS THAN 0.1% ERICKSON, INC. HERBY CERTIFIES THAT THE ABOVE NUMBERED TANK HAS BEEN CUT OPEN, PROCESSED, AND THEREFORE DESTROYED AT OUR PERMITTED HAZARDOUS WASTE FACILITY.

ERICKSON, INC. HAS THE APROPRIATE PERMITS FOR, AND HAS ACCEPTED THE TANK SHIPPED TO US FOR PROCESSING.

In the event of any physical or atmospheric changes affecting the gas-free conditions of the above tanks, or if in any doubt, immediately stop all hot work and contact the undersigned. This permit is valid for 24 hours if no physical or atmospheric changes occur.

STANDARD SAFETY DESIGNATION

SAFE FOR MEN: Means that in the compartment or space so designated (a) The oxygen content of the atmosphere is at least 19.5 percent by volume; and that (b) Toxic materials in the atmosphere are within permissable concentrations; and (c) In the judgment of the Inspector, the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Inspector's certificate.

SAFE FOR FIRE: Means that in the compartment so designated (a) The concentration of flammable materials in the atmosphere is below 10 percent of the lower explosive limit; and that (b) In the judgment of the Inspector, the residues are not capable of producing a higher concentration that permitted under existing atmospheric conditions in the presence of fire and while maintained as directed on the Inspector's certificate, and further, (c) All adjacent spaces have either been cleaned sufficiently to prevent the spread of fire, are satisfactorily inerted, or in the case of fuel tanks, have been treated as deemed necessary by the Inspector.

The undersigned representative acknowledges receipt of this certificate and understands the conditions and limitations under which it was issued.

Patricia Collins — Dave Soto

REPRESENTATIVE TITLE INSPECTOR

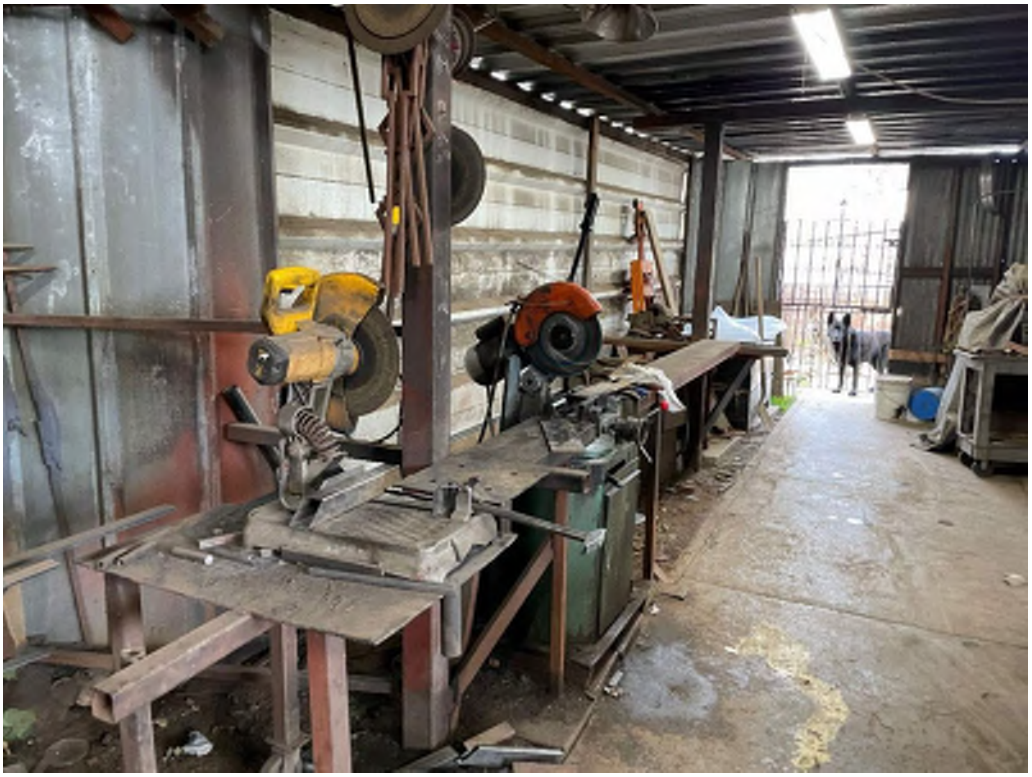
APPENDIX I

Photographic Log

I-1. View of residence at 14143 Washington Avenue (Parcel 1) (02/09/2021).

I-2. Zermeno's Custom Ironworks at 14143-A Washington Avenue (02/09/2021).



I-3. Vehicle being worked on in the Zermeno's facility yard (02/09/2021).

I-4. Stock metal material and example of the simple metal structure that makes up the Zermeno's facility (02/09/2021).

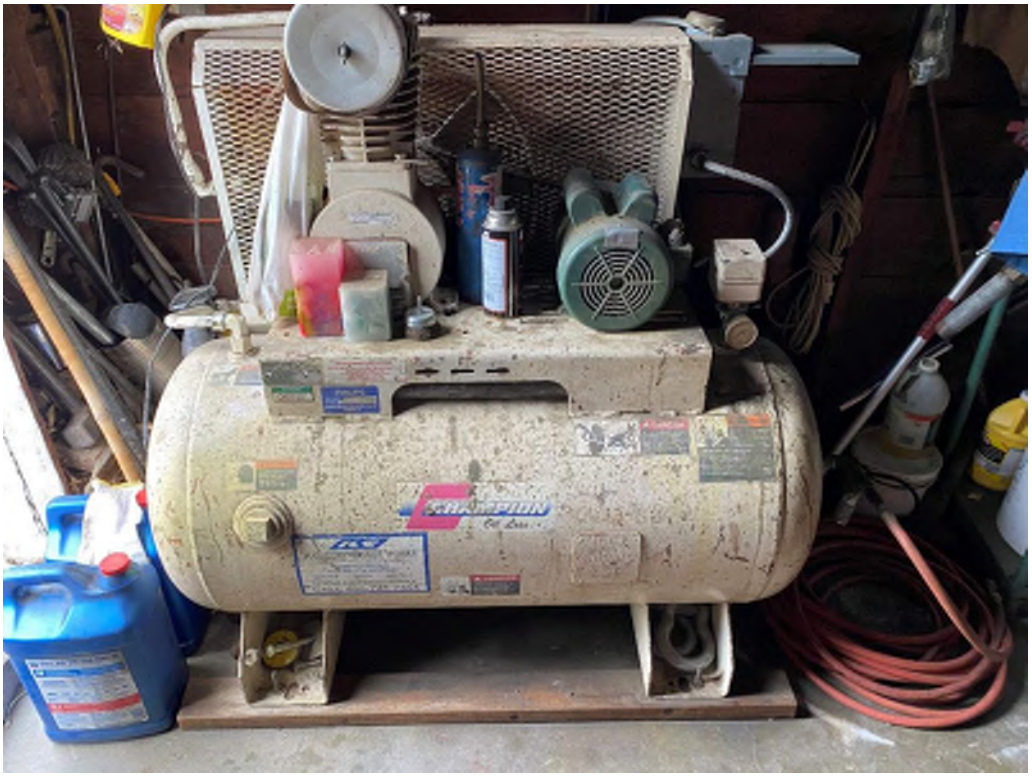
I-5. Propane powered forklift in the Zermeno's facility (02/09/2021).

I-6. Work space of the Zermeno's facility (02/09/2021).

I-7. Empty canisters, tubing and propane tanks in the Zermeno's facility (02/09/2021).

I-8. Production area with a metal fence in the Zermeno's facility (02/09/2021).

I-9. Storage unit with miscellaneous chemicals and stock metal at the Zermeno's facility (02/09/2021).

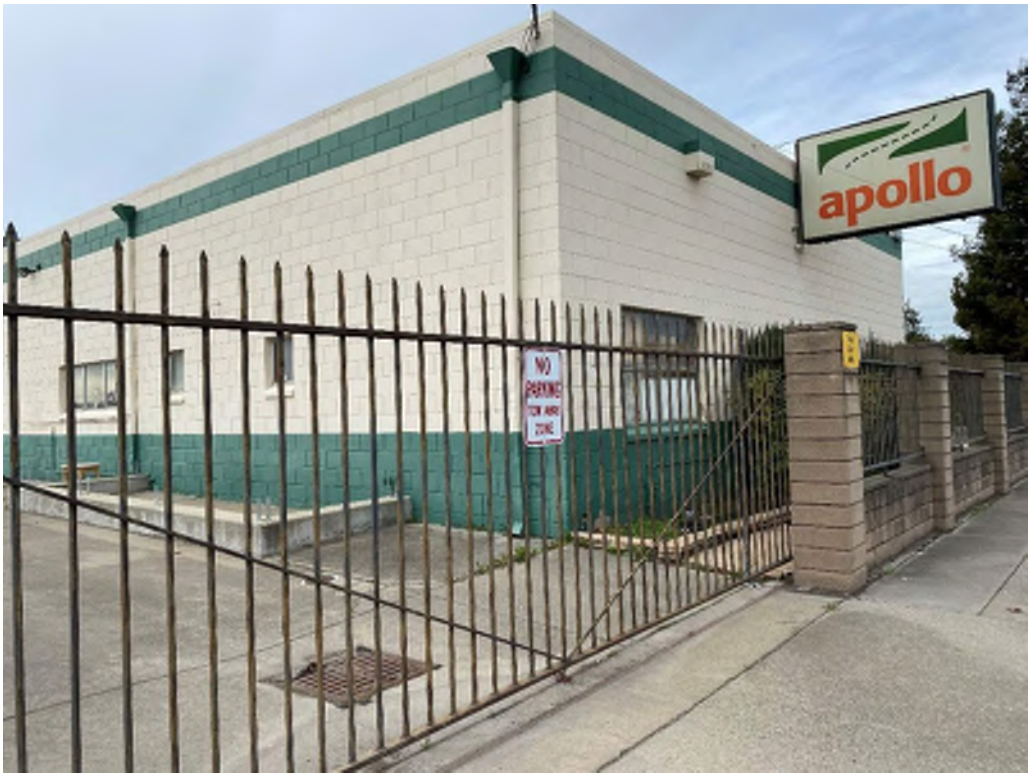


I-10. Several empty 55-gallon drums located at the back (west) end of Parcel 1 (02/09/2021).

I-11. Driveway of the residence at 14173 Washington Avenue, Parcel 2 (02/09/2021).

I-12. Backyard garage and trailer on Parcel 2 (02/09/2021).

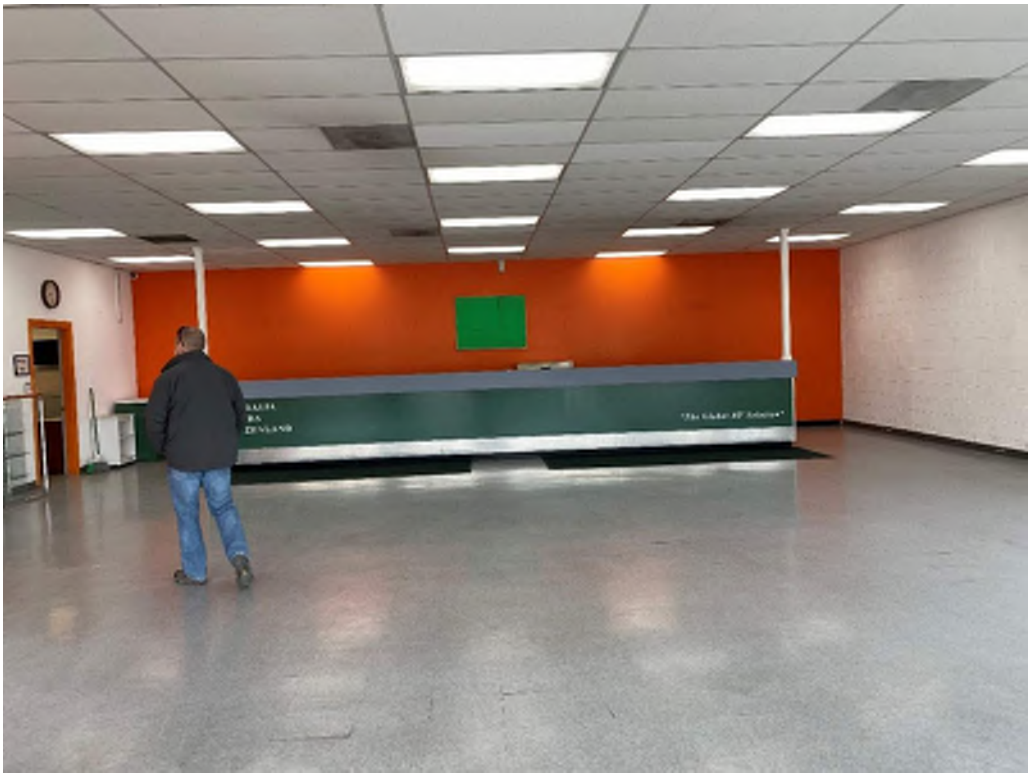
I-13. Air compressor in the garage space of Parcel 2 (02/09/2021).



I-14. Miscellaneous chemicals being stored in the garage on Parcel 2 (02/09/2021).

I-15. Inside the trailer located on Parcel 2 (02/09/2021).

I-16. West portion of Parcel 2 looking east at the garage and residence (02/09/2021).



I-17. Southeast corner of Building A at 14273 Washington Avenue (02/09/2021).

I-18. Eastern half of Building A, which is garage space (02/09/2021).

I-19. Western half of Building A, which contains retail and office space. This awning once covered a fuel dispenser island (02/09/2021).

I-20. Reception area inside Building A (02/09/2021).

I-21. Inside the garage space of Building A (02/09/2021).

I-22. Inside the garage space of Building A. Concrete patch observed is reportedly the result of damage to the slab from former operations testing jack hammers (02/09/2021).

I-23. Compressor and electrical panels, including an Emergency Shut Off switch (02/09/2021).

I-24. Southern boundary of the Site behind Building A. Former location of Tank #4 (02/09/2021).

I-25. Concrete berms reportedly supported waste oil ASTs (02/09/2021).

I-26. Vault located behind Building A. Contents are unknown (02/09/2021).

I-27. Current 2,000-gallon split tank UST, now empty (02/09/2021).

I-28. View looking east, the 2,000-gallon AST and approximately 500-gallon propane AST are in view. (02/09/2021).

I-29. Building B, the wash pad for former RV tenant (02/09/2021).

I-30. Rear side of Building B, the oil-water separator is present in the fore-ground (02/09/2021).

I-31. Garbage enclosure located adjacent to the propane AST (02/09/2021).

I-32. Stormwater drains and electrical outlets located north of Building A (02/09/2021).

I-33. Asphalt patch area north of Building A (02/09/2021).

I-34. Depressed truck ramp located along the western boundary of the Site (02/09/2021).

I-35. Former material storage areas located along western boundary of Site (02/09/2021).

I-36. Former material storage areas located along western boundary of Site (02/09/2021).

I-37. View looking southeast at the Site (02/09/2021).

I-38. Asphalt patch area in the northern portion of the Site (02/09/2021).

I-39. View of Parcel 3, used as parking (02/09/2021).

I-40. Example of a drain outlet observed throughout the Site (02/09/2021).

I-41. View of adjacent property to the northeast (02/09/2021).

I-42. View of adjacent property to the north (02/09/2021).

I-43. View of adjacent property to the south (02/09/2021).

I-44. View of sidewalk along Washington Avenue, Parcel 1 on the right (02/09/2021).

I-45. View of at 14143 Washington Avenue (08/11/2021).

I-46. Driveway of the residence at 14173 Washington Avenue (08/11/2021).

I-47. Southeast corner of Building A at 14273 Washington Avenue (08/11/2021).

I-48. View looking west, the 2,000-gallon AST and approximately 500-gallon propane AST are in the rear left view. The rear side of Building B and the oil-water separator in the fore-ground are seen in the far right corner. (08/11/2021).

I-47. View looking west to the north of Building B (08/11 /2021).

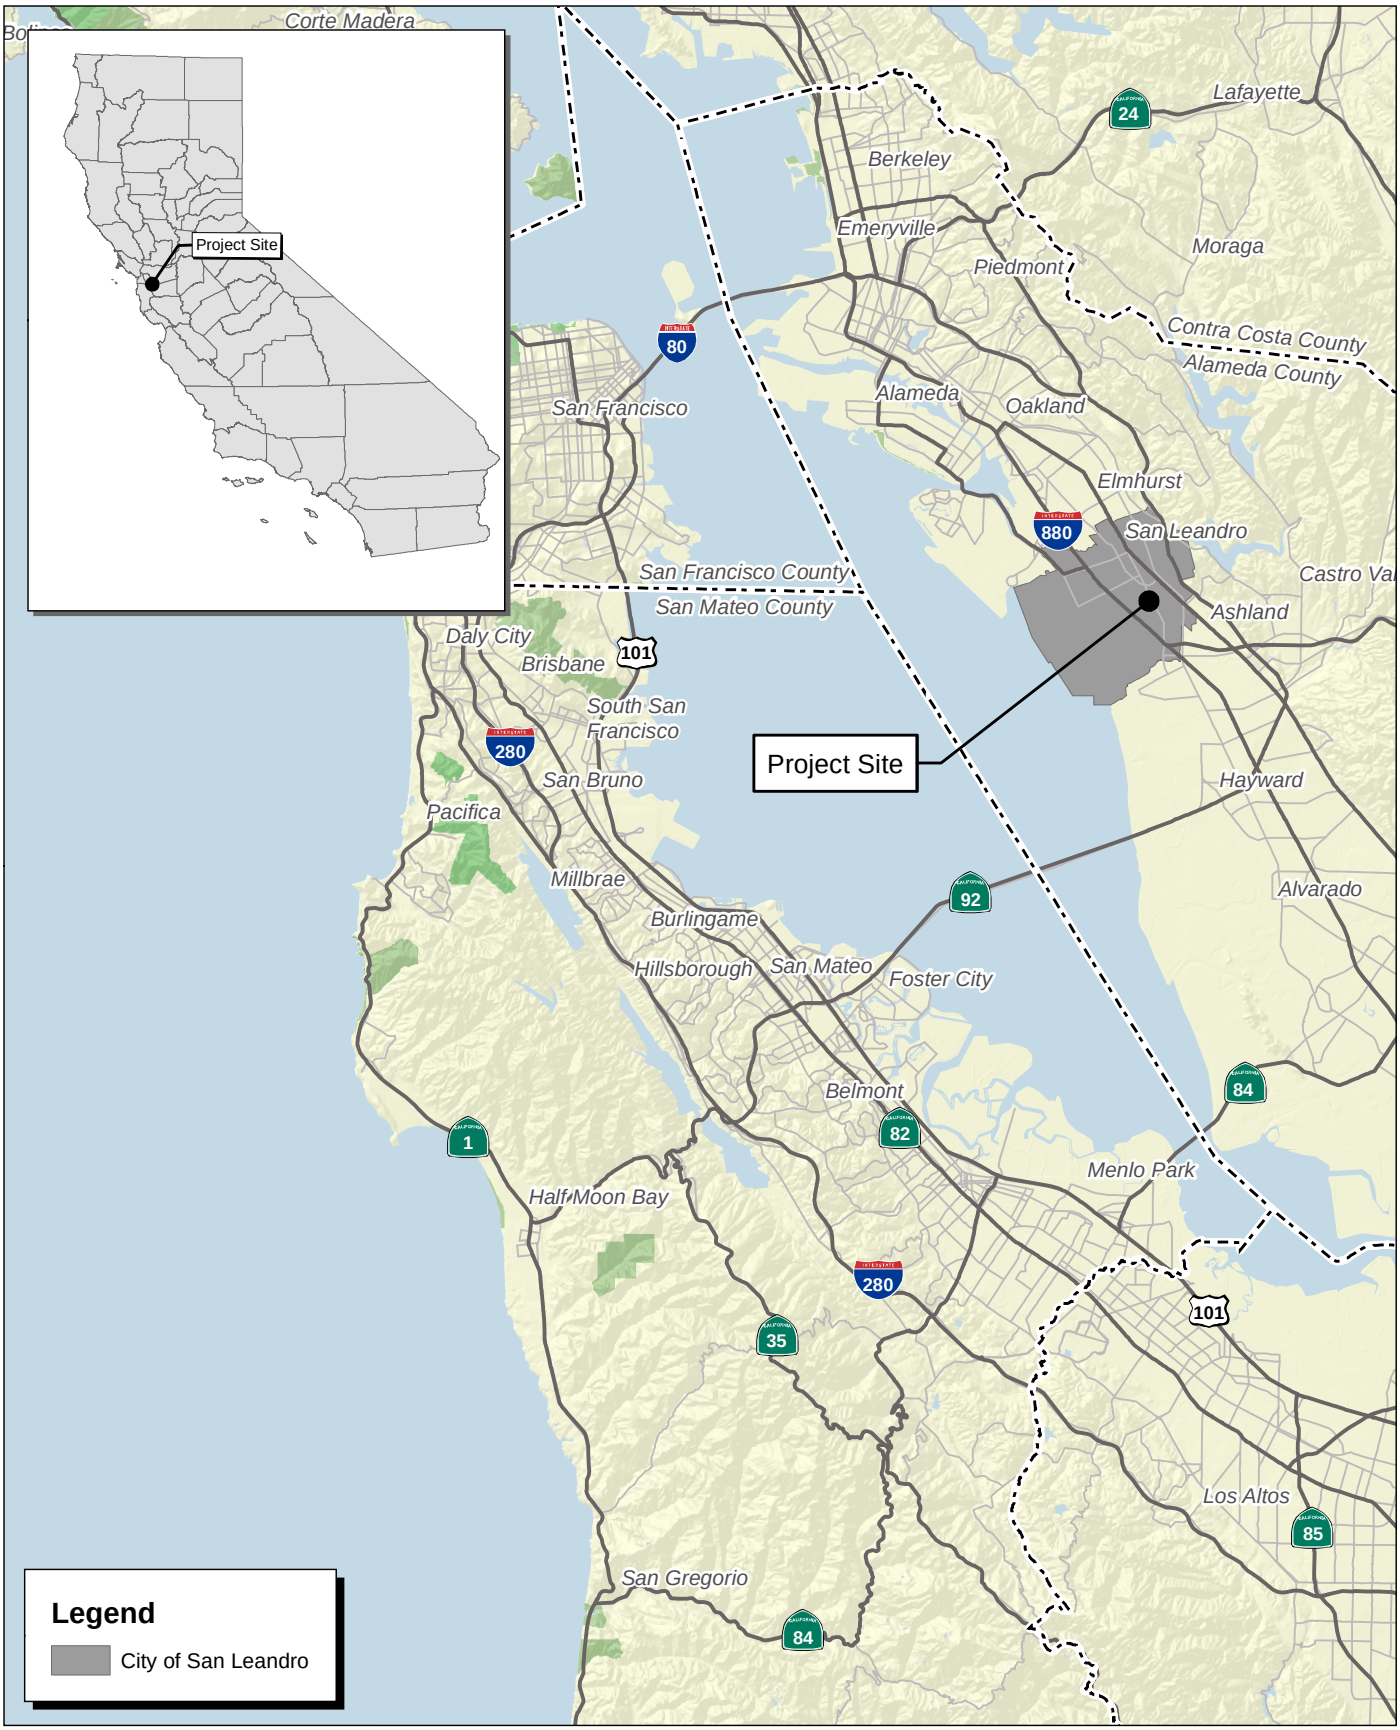
SECTION 1: INTRODUCTION

1.1 - Purpose of Analysis and Study Objectives

This Noise Impact Analysis Report has been prepared by FirstCarbon Solutions (FCS) to determine and document the off-site and on-site noise impacts associated with the proposed San Leandro Washington Avenue Warehouse Project (proposed project). The following is provided in this report:

- A description of the study area, project site, and proposed project.
- Information regarding the fundamentals of noise and vibration.
- A description of the local noise guidelines and standards.
- A description of the existing noise environment.
- An analysis of the potential short-term, construction-related noise and vibration impacts from the proposed project.
- An analysis of long-term, operations-related noise and vibration impacts from the proposed project.

1.2 - Project Summary



1.2.1 - Site Location

The 3.45-acre project site is located in the City of San Leandro (City), in Alameda County, California. The regional location map is shown in Exhibit 1. The project site is bounded by Washington Avenue to the east, 139th Avenue to the north, and railroad tracks to the south and west. As part of the proposed project, the existing three buildings at the site would be demolished and the existing debris would be removed from the site. (Note: since the following analysis was completed, the buildings were damaged in a fire and have been demolished. This does not change the conclusions of this report.) The local vicinity map is shown in Exhibit 2.

1.2.2 - Project Description

The project proposes to combine six parcels into one lot with a total area of 3.45 acres. The project applicant, First Industrial Realty Trust, Inc., proposes to develop a 52,269-square-foot building, which includes 5,000 square feet of office uses and 47,269 square feet of warehouse use on the project site. The proposed project would include 64 automobile parking stalls, five truck parking stalls, as well as 15 dock-high doors and two drive-in doors in the rear of the building. The site shall be fully landscaped and irrigated. The site would accommodate the required automobile and bike parking, trash enclosure, and off-street loading spaces in the truck court, which would be located on the south side of the property and secured with a fence and gate to allow for truck ingress/egress. The building would be constructed with concrete tilt walls and a hybrid roof deck for a Type III-B construction and fully sprinklered. Access to the project site consists of a proposed curb-cut at the northwest corner of the site to allow for automobile and fire truck ingress/egress, while truck access would be located on the northeast corner of the project site. The site plan is shown in Exhibit 3.

SECTION 2: NOISE AND VIBRATION FUNDAMENTALS

2.1 - Characteristics of Noise

Noise is generally defined as unwanted or objectionable sound. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, or when it has adverse effects on health. The effects of noise on people can include general annoyance, interference with speech communication, sleep disturbance, and in the extreme, hearing impairment. Noise effects can be caused by pitch or loudness. *Pitch* is the number of complete vibrations or cycles per second of a wave that result in the range of tone from high to low; higher-pitched sounds are louder to humans than lower-pitched sounds. *Loudness* is the intensity or amplitude of sound.

Sound is produced by the vibration of sound pressure waves in the air. Sound pressure levels are used to measure the intensity of sound and are described in terms of decibels. The decibel (dB) is a logarithmic unit, which expresses the ratio of the sound pressure level being measured to a standard reference level. The 0 point on the dB scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Changes of 3 dB or less are only perceptible in laboratory environments. Audible increases in noise levels generally refer to a change of 3 dB or more, as this level has been found to be barely perceptible to the human ear in outdoor environments. Only audible changes in existing ambient or background noise levels are considered potentially significant.

The human ear is not equally sensitive to all frequencies within the audible sound spectrum, so sound pressure level measurements can be weighted to better represent frequency-based sensitivity of average healthy human hearing. One such specific “filtering” of sound is called “A-weighting.” A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies that are audible to the human ear. Because decibels are logarithmic units, they cannot be added or subtracted by ordinary arithmetic means. For example, if one noise source produces a noise level of 70 dB, the addition of another noise source with the same noise level would not produce 140 dB; rather, they would combine to produce a noise level of 73 dB.

As noise spreads from a source, it loses energy so that the farther away the noise receiver is from the noise source, the lower the perceived noise level. Noise levels diminish or attenuate as distance from the source increases based on an inverse square rule, depending on how the noise source is physically configured. Noise levels from a single-point source, such as a single piece of construction equipment at ground level, attenuate at a rate of 6 dB for each doubling of distance (between the single-point source of noise and the noise-sensitive receptor of concern). Heavily traveled roads with few gaps in traffic behave as continuous line sources and attenuate roughly at a rate of 3 dB per doubling of distance.

2.1.1 - Noise Descriptors

There are many ways to rate noise for various time periods, but an appropriate rating of ambient noise affecting humans also accounts for the annoying effects of sound. Equivalent continuous sound level (L_{eq}) is the total sound energy of time-varying noise over a sample period. However, the predominant rating scales for human communities in the State of California are the L_{eq} and Community Noise Equivalent Level (CNEL) or the day-night average level (L_{dn}) based on dBA. CNEL is the time-varying noise over a 24-hour period, with a 5 dBA weighting factor applied to the hourly L_{eq} for noises occurring from 7:00 p.m. to 10:00 p.m. (defined as relaxation hours) and a 10 dBA weighting factor applied to noise occurring from 10:00 p.m. to 7:00 a.m. (defined as sleeping hours). L_{dn} is similar to the CNEL scale but without the adjustment for events occurring during the evening hours. CNEL and L_{dn} are within 1 dBA of each other and are normally exchangeable. The noise adjustments are added to the noise events occurring during the more sensitive hours.

Other noise rating scales of importance when assessing the annoyance factor include the maximum noise level (L_{max}), which is the highest exponential time-averaged sound level that occurs during a stated time period. The noise environments discussed in this analysis are specified in terms of maximum levels denoted by L_{max} for short-term noise impacts. L_{max} reflects peak operating conditions and addresses the annoying aspects of intermittent noise.

2.1.2 - Noise Propagation

From the noise source to the receiver, noise changes both in level and frequency spectrum. The most obvious is the decrease in noise as the distance from the source increases. The manner in which noise reduces with distance depends on whether the source is a point or line source, as well as ground absorption, atmospheric conditions (wind, temperature gradients, and humidity) and refraction, and shielding by natural and manmade features. Sound from point sources, such as an air conditioning condenser, a piece of construction equipment, or an idling truck, radiates uniformly outward as it travels away from the source in a spherical pattern.

The attenuation or sound drop-off rate is dependent on the conditions of the land between the noise source and receiver. To account for this ground-effect attenuation (absorption), two types of site conditions are commonly used in noise models: soft-site and hard-site conditions. Soft-site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. For point sources, a drop-off rate of 7.5 dBA per each doubling of the distance (dBA/DD) is typically observed over soft ground with landscaping, as compared with a 6 dBA/DD drop-off rate over hard ground such as asphalt, concrete, stone, and very hard packed earth. For line sources, such as traffic noise on a roadway, a 4.5 dBA/DD is typically observed for soft-site conditions compared to the 3 dBA/DD drop-off rate for hard-site conditions. Table 1 briefly defines these measurement descriptors and other sound terminology used in this section.

Table 1: Sound Terminology

Term	Definition
Sound	A vibratory disturbance created by a vibrating object which, when transmitted by pressure waves through a medium such as air, can be detected by a receiving mechanism such as the human ear or a microphone.
Noise	Sound that is loud, unpleasant, unexpected, or otherwise undesirable.
Ambient Noise	The composite of noise from all sources near and far in a given environment.
Decibel (dB)	A unitless measure of sound on a logarithmic scale, which represents the squared ratio of sound pressure amplitude to a reference sound pressure. The reference pressure is 20 micropascals, representing the threshold of human hearing (0 dB).
A-Weighted Decibel (dBA)	An overall frequency-weighted sound level that approximates the frequency response of the human ear.
Equivalent Noise Level (L_{eq})	The average sound energy occurring over a specified time period. In effect, L_{eq} is the steady-state sound level that in a stated period would contain the same acoustical energy as the time-varying sound that actually occurs during the same period.
Maximum and Minimum Noise Levels (L_{max} and L_{min})	The maximum or minimum instantaneous sound level measured during a measurement period.
Day-Night Level (DNL or L_{dn})	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the A-weighted sound levels occurring between 10:00 p.m. and 7:00 a.m. (nighttime).
Community Noise Equivalent Level (CNEL)	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added to the A-weighted sound levels occurring between 7:00 p.m. and 10:00 p.m. and 10 dB added to the A-weighted sound levels occurring between 10:00 p.m. and 7:00 a.m.
Source: Compiled by FirstCarbon Solutions (FCS) 2022.	

2.1.3 - Traffic Noise

The level of traffic noise depends on the three primary factors: (1) the volume of the traffic, (2) the speed of the traffic, and (3) the number of trucks in the flow of traffic. Generally, the loudness of traffic noise is increased by heavier traffic volumes, higher speeds, and greater number of trucks. Vehicle noise is a combination of the noise produced by the engine, exhaust, and tires. Because of the logarithmic nature of noise levels, a doubling of the traffic volume (assuming that the speed and truck mix do not change) results in a noise level increase of 3 dBA. Based on the Federal Highway

Administration (FHWA) community noise assessment criteria, this change is "barely perceptible." For reference, a doubling of perceived noise levels would require an increase of approximately 10 dBA. The truck mix on a given roadway also has an effect on community noise levels. As the number of heavy trucks increases and becomes a larger percentage of the vehicle mix, adjacent noise levels increase.

2.1.4 - Stationary Noise

A stationary noise producer is any entity in a fixed location that emits noise. Examples of stationary noise sources include machinery, engines, energy production, and other mechanical or powered equipment and activities such as loading and unloading or public assembly that may occur at commercial, industrial, manufacturing, or institutional facilities. Furthermore, while noise generated by the use of motor vehicles over public roads is preempted from local regulation, the use of these vehicles is considered a stationary noise source when operated on private property such as at a construction-site, a truck terminal, or warehousing facility.

The effects of stationary noise depend on factors such as characteristics of the equipment and operations, distance and pathway between the generator and receptor, and weather. Stationary noise sources may be regulated at the point of manufacture (e.g., equipment or engines), with limitations on the hours of operation, or with provision of intervening structures, barriers, or topography.

Construction activities are a common source of stationary noise. Construction-period noise levels are higher than background ambient noise levels but eventually cease once construction is complete. Construction is performed in discrete steps, each of which has its own mix of equipment and, consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on each construction-site and, therefore, would change the noise levels as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. Table 2 shows typical noise levels of construction equipment as measured at a distance of 50 feet from the operating equipment.

Table 2: Typical Construction Equipment Maximum Noise Levels, L_{max}

Type of Equipment	Impact Device? (Yes/No)	Specification Maximum Sound Levels for Analysis (dBA at 50 feet)

2.1.5 - Noise from Multiple Sources

Because sound pressure levels in decibels are based on a logarithmic scale, they cannot be added or subtracted in the usual arithmetical way. Therefore, sound pressure levels in decibels are logarithmically added on an energy summation basis. In other words, adding a new noise source to an existing noise source, both producing noise at the same level, will not double the noise level. Instead, if the difference between two noise sources is 10 dBA or more, the louder noise source will dominate, and the resultant noise level will be equal to the noise level of the louder source. In general, if the difference between two noise sources is 0–1 dBA, the resultant noise level will be 3 dBA higher than the louder noise source, or both sources if they are equal. If the difference between two noise sources is 2–3 dBA, the resultant noise level will be 2 dBA above the louder noise source. If the difference between two noise sources is 4–10 dBA, the resultant noise level will be 1 dBA higher than the louder noise source.

2.2 - Characteristics of Groundborne Vibration and Noise

Groundborne vibration consists of rapidly fluctuating motion through a solid medium, specifically the ground, which has an average motion of zero and in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. The effects of groundborne vibration typically only causes a nuisance to people, but in extreme cases, excessive groundborne vibration has the potential to cause structural damage to buildings. Although groundborne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Groundborne noise is an effect of groundborne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

Several different methods are used to quantify vibration amplitude such as the maximum instantaneous peak in the vibrations velocity, which is known as the peak particle velocity (PPV) or the root mean square (rms) amplitude of the vibration velocity. Because of the typically small amplitudes of vibrations, vibration velocity is often expressed in decibels–denoted as LV–and is based on the reference quantity of 1 microinch per second. To distinguish these vibration levels referenced in decibels from noise levels referenced in decibels, the unit is written as "VdB."

Although groundborne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. When assessing annoyance from groundborne vibration, vibration is typically expressed as rms velocity in units of decibels of 1 microinch per second, with the unit written in VdB. Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. Human perception to vibration starts at levels as low as 67 VdB. Annoyance due to vibration in residential settings starts at approximately 70 VdB.

Off-site sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible groundborne noise or vibration. Construction activities, such as blasting, pile driving and operating heavy earthmoving equipment, are common sources of groundborne vibration. Construction vibration impacts on building structures are generally assessed in terms of PPV. Typical vibration source levels from construction equipment are shown in Table 3.

Table 3: Vibration Levels of Construction Equipment

Construction Equipment	PPV at 25 Feet (inches/second)	rms VdB at 25 Feet
Water Trucks	0.001	57
Scraper	0.002	58

Pile Driver (impact-upper range)	1.518	112

Notes:
PPV = peak particle velocity
rms = root mean square
VdB = vibration in decibels
Source: Compilation of scientific and academic literature, generated by the Federal Transit Administration (FTA) and Federal Highway Administration (FHWA).

The propagation of groundborne vibration is not as simple to model as airborne noise. This is because noise in the air travels through a relatively uniform medium, while groundborne vibrations travel through the earth, which may contain significant geological differences. Factors that influence groundborne vibration include:

- **Vibration source:** Type of activity or equipment, such as impact or mobile, and depth of vibration source;
- **Vibration path:** Soil type, rock layers, soil layering, depth to water table, and frost depth; and
- **Vibration receiver:** Foundation type, building construction, and acoustical absorption.

Among these factors that influence groundborne vibration, there are significant differences in the vibration characteristics when the source is underground compared to at the ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration problems at large distance from the source. Factors such as layering of the soil and depth to the water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils. There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-

waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation.

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil type, but it has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests. The vibration level (calculated below as PPV) at a distance from a point source can generally be calculated using the vibration reference equation:

$$PPV = PPV_{ref} * (25/D)^n \text{ (in/sec)}$$

Where:

PPV_{ref} = reference measurement at 25 feet from vibration source
D = distance from equipment to property line
n = vibration attenuation rate through ground

According to Section 7 of the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual, an "n" value of 1.5 is recommended to calculate vibration propagation through typical soil conditions.[1]

[1] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

SECTION 3: REGULATORY SETTING

3.1 - Federal Regulations

3.1.1 - United States Environmental Protection Agency

In 1972, Congress enacted the Noise Control Act. This Act authorized the United States Environmental Protection Agency (EPA) to publish descriptive data on the effects of noise and establish levels of sound "requisite to protect the public welfare with an adequate margin of safety." These levels are separated into health (hearing loss levels) and welfare (annoyance levels) categories, as shown in Table 4. The EPA cautions that these identified levels are not standards because they do not take into account the cost or feasibility of the levels.

For protection against hearing loss, 96 percent of the population would be protected if sound levels are less than or equal to an $L_{eq(24)}$ of 70 dBA. The EPA activity and interference guidelines are designed to ensure reliable speech communication at about 5 feet in the outdoor environment. For outdoor and indoor environments, interference with activity and annoyance should not occur if levels are below 55 dBA and 45 dBA, respectively.

Table 4: Summary of EPA Recommended Noise Levels to Protect Public Welfare

Effect	Level	Area
Hearing loss	$L_{eq}(_{24}) \leq$ 70 dB	All areas.
Outdoor activity interference and annoyance	$L_{dn} \leq$ 55 dB	Outdoors in residential areas, farms, and other outdoor areas where people spend widely varying amounts of time and other places in which quiet is a basis for use.
	$L_{eq}(_{24}) \leq$ 55 dB	Outdoor areas where people spend limited amounts of time, such as school yards, playgrounds, etc.
Indoor activity interference and annoyance	$L_{eq} \leq$ 45 dB	Indoor residential areas.
	$L_{eq}(_{24}) \leq$ 45 dB	Other indoor areas with human activities such as schools, etc.

Notes:
dB = decibel
L_{dn} = day/night average sound level
L_{eq} = equivalent continuous sound level
(24) signifies an L_{eq} duration of 24 hours.
Source: United States Environmental Protection Agency (EPA). 1978. Protective Noise Levels, EPA 550/9-79-100. November.

3.1.2 - Federal Transit Administration

The FTA has established industry accepted standards for vibration impact criteria and impact assessment. These guidelines are published in its Transit Noise and Vibration Impact Assessment Manual.[2]

The FTA guidelines include thresholds for construction vibration impacts for various structural categories as shown in Table 5.

Table 5: Federal Transit Administration Construction Vibration Impact Criteria

Building Category	PPV (in/sec)	Approximate VdB
I. Reinforced—Concrete, Steel or Timber (no plaster)	0.5	102
II. Engineered Concrete and Masonry (no plaster)	0.3	98
III. Non-engineered Timber and Masonry Buildings	0.2	94
IV. Buildings Extremely Susceptible to Vibration Damage	0.12	90

Notes:
PPV = peak particle velocity
VdB = vibration measured as rms velocity in decibels of 1 microinch per second
Source: Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

3.2 - State Regulations

The State of California has established regulations that help prevent adverse impacts to occupants of buildings located near noise sources. Referred to as the "State Noise Insulation Standard," it requires buildings to meet performance standards through design and/or building materials that would offset any noise source in the vicinity of the receptor. State regulations include requirements for the construction of new hotels, motels, apartment houses, and dwellings other than detached single-family dwellings that are intended to limit the extent of noise transmitted into habitable spaces. These requirements are found in the California Code of Regulations, Title 24 (known as the Building Standards Administrative Code), Part 2 (known as the California Building Standards Code [CBC]), Appendix Chapters 12 and 12A. For limiting noise transmitted between adjacent dwelling units, the noise insulation standards specify the extent to which walls, doors, and floor-ceiling assemblies must block or absorb sound. For limiting noise from exterior noise sources, the noise insulation standards set an interior standard of 45 dBA CNEL in any habitable room with all doors and windows closed. In addition, the standards require preparation of an acoustical analysis demonstrating the manner in which dwelling units have been designed to meet this interior standard, where such units are proposed in an area with exterior noise levels greater than 60 dBA CNEL.

The proposed project does not include any type of residential development. Therefore, these standards are not applicable to the proposed project. However, the State has established land use compatibility guidelines for determining acceptable noise levels for specified land uses, including

[2] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

industrial type land uses such as the proposed project, which the City has adopted as described below.

3.3 - Local Regulations

The City of San Leandro addresses noise in the Noise Element of its General Plan.[3]

City of San Leandro General Plan

The City of San Leandro adopted its General Plan in September of 2016. The General Plan Noise Element serves as a guideline for compliance with the State's Noise Insulation Standards, with the objective being to minimize the exposure of community residents to excessive noise.

The City of San Leandro has adopted land use compatibility guidelines, as shown in Chart 7-2 of the General Plan. The City has designated the land use for the project site as Industrial (IND), therefore the land use category that applies to the proposed project is industrial, manufacturing, utilities, and agriculture. Under this designation, noise environments with ambient noise levels up to 75 dBA CNEL are considered "normally acceptable." Noise environments with ambient noise levels from 70 dBA to 80 dBA CNEL are considered "conditionally acceptable" for this type of land use; however, under this circumstance, new construction or development should be undertaken only after a detailed analysis of the noise reduction requirement is made and needed noise insulation features included in the design.

The City's Noise Element contains the following policies that are applicable to the proposed project:

Policy EH-7.4 Degradation of Ambient Noise Levels. If a neighborhood is well within acceptable noise standards, do not automatically allow noise levels to degrade to the maximum tolerable levels shown in Chart 7-2. A project's noise impacts should be evaluated based on the potential for adverse community response, as well as its conformance to the adopted standards. For the California Environmental Quality Act (CEQA) purposes, an increase of 3 dB L_{dn} should generally be considered a significant adverse impact.

Policy EH-7.9 Vibration Impacts. Limit the potential for vibration impacts from construction and ongoing operations to disturb sensitive uses such as housing and schools.

Policy EH-8.7 Sound Wall Design. Where sound walls are used, encourage aesthetically pleasing and innovative designs and require citizen input in the siting and design process. Require future sound wall engineering and acoustical design studies to address and mitigate the potential for displacement of sound from impacted properties to other properties further away from the noise source.

[3] City of San Leandro.2016. City of San Leandro 2035 General Plan. Noise Element. Website: https://www.sanleandro.org/332/General-Plan#:~:text=The%20City%20of%20San%20Leandro,period%20from%202015%20through%202035. Accessed April 11, 2022.

City of San Leandro Municipal Code

The City of San Leandro's Municipal Code[4] has established limits on permissible hours of construction for any construction work or related activity adjacent to or across a street of right-of-way from residential use, except between the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday, and 8:00 a.m. to 7:00 p.m. on Saturday and Sunday, and no construction is permitted on federal holidays. Upon approval, a permit will otherwise allow an exception as stated in the Noise Element of the City of San Leandro's Municipal Code 4-1-1125, Exceptions.

[4] City of San Leandro. 2021. San Leandro Municipal Code, Article 11 Noise. Website: https://library.qcode.us/lib/san_leandro_ca/pub/municipal_code/item/title_4-chapter_4_1-article_11?view=all#title_4-chapter_4_1-article_11-4_1_1100. Accessed April 11, 2022.

SECTION 4: EXISTING NOISE CONDITIONS

The proposed project site is located within the City of San Leandro, in Alameda County, California. Surrounding the project site are industrial transition land uses to the north, public/institutional land uses to the west across the railroad tracks, industrial transition land uses to the south, and industrial transition land uses to the east. The dominant noise source in the project vicinity is noise from traffic on local roadways and railroad noise adjacent to the project site.

Railroad Noise

The three Union Pacific Railroad corridors that cross San Leandro also affect adjacent uses. Data from the Federal Railroad Administration indicates that more than 50 trains a day pass through the City. Passing trains are among the loudest noise sources in the City, ranging up to 95 dBA L_{max} at 100 feet. Train horns may be even louder, approaching 110 dBA at 100 feet.[5]

Traffic Noise

Existing traffic noise levels along selected roadway segments in the project vicinity were modeled using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108). The daily traffic volumes were obtained from the traffic analysis prepared for the proposed project by Kittelson & Associates.[6] The traffic volumes described here correspond to the existing without project conditions traffic scenario as described in the transportation analysis. The model inputs and outputs—including the 60 dBA, 65 dBA, and 70 dBA CNEL noise contour distances—are provided in the Appendix of this document. A summary of the modeling results is shown in Table 6. Existing traffic noise levels on Washington Avenue adjacent to the project site are approximately 73 dBA CNEL as measured at 50 feet from the centerline of the outermost travel lane.

Table 6: Existing Traffic Noise Levels

Roadway Segment	Approximate ADT	Centerline to 70 CNEL (feet)	Centerline to 65 CNEL (feet)	Centerline to 60 CNEL (feet)	CNEL (dBA) 50 feet from Centerline of Outermost Lane
Washington Avenue–San Leandro Boulevard to 139th Avenue	15,600	97	208	449	73.6
Washington Avenue–139th Avenue to 143rd Avenue	16,200	102	215	460	72.3
Washington Avenue–143rd Avenue to Halcyon Drive	17,400	107	225	483	72.6

SECTION 5: THRESHOLDS OF SIGNIFICANCE AND IMPACT ANALYSIS

5.1 - Thresholds of Significance

According to CEQA Guidelines Appendix G, to determine whether impacts related to noise and vibration are significant environmental effects, the following questions are analyzed and evaluated.

Would the proposed project:

a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

b) Generate excessive groundborne vibration or groundborne noise levels?

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

5.2 - Substantial Noise Increase in Excess of Standards

5.2.1 - Construction Noise Impacts

For purposes of this analysis, a significant impact would occur if construction activities would result in a substantial temporary increase in ambient noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. The City of San Leandro Municipal Code has established limits on permissible hours of construction for any construction work or related activity adjacent to or across a street of right-of-way from residential use, except between the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday, and 8:00 a.m. to 7:00 p.m. on Saturday and Sunday, and no construction is permitted on federal holidays.

Noise impacts from construction activities associated with the proposed project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities.

Construction-related Traffic Noise

Noise impacts from construction activities associated with the proposed project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities. One type of short-term noise impact that could occur during project construction would result from the increase in traffic flow on local streets, associated with the transport of workers, equipment, and materials to and from the project site. The transport of workers and construction equipment and materials to the project site would incrementally increase noise levels on access roads leading to the site. Because workers and

construction equipment would use existing routes, noise from passing trucks would be similar to existing vehicle-generated noise on these local roadways. Typically, a doubling of the Average Daily Traffic (ADT) hourly volumes on a roadway segment is required in order to result in an increase of 3 dBA in traffic noise levels; which, as discussed in the characteristics of noise discussion above, is the lowest change that can be perceptible to the human ear in outdoor environments. As shown in Table 6, there are 16,200 existing average daily trips on the roadway segment adjacent to the project site (which is the segment that would experience the greatest concentration of project construction trips). Project-related construction trips would not come even close to doubling these average daily traffic volumes along any roadway segment in the project vicinity. For this reason, short-term intermittent noise from construction trips would not be expected to result in a perceptible increase in hourly- or daily-average traffic noise levels in the project vicinity. Therefore, short-term construction-related noise impacts associated with the transportation of workers and equipment to the project site would be less than significant.

Construction Equipment Operational Noise

The second type of short-term noise impact is related to noise generated during construction on the project site. Construction is completed in discrete steps, each of which has its own mix of equipment and, consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. Table 2 lists typical construction equipment noise levels, based on a distance of 50 feet between the equipment and a noise receptor. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings. Impact equipment such as pile drivers are not expected to be used during construction of this project.

The site preparation phase, which includes excavation and grading of the site, tends to generate the highest noise levels because the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery and compacting equipment, such as bulldozers, draglines, backhoes, front loaders, roller compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings.

Construction of the project is expected to require the use of scrapers, bulldozers, water trucks, haul trucks, and pickup trucks. Based on the information provided in Table 2, the maximum noise level generated by each scraper is assumed to be 85 dBA L_{max} at 50 feet from this equipment. Each bulldozer would also generate 85 dBA L_{max} at 50 feet. The maximum noise level generated by graders is approximately 85 dBA L_{max} at 50 feet.

The closest residential land uses are single-family residences located approximately 520 feet southwest of the project site boundaries. These residences are shielded from the project site by an existing 8-foot high sound wall. At this distance and assuming minimal shielding by the existing sound wall, relative worst-case maximum construction noise levels would attenuate to below 59 dBA

L_{max}, with relative worst-case hourly average construction noise levels attenuating to below 55 dBA L_{eq} at this receptor. These reasonable worst-case noise levels, when averaged for full day of construction would result in a 24-hour average noise level of 52 dBA L_{dn}. The calculation spreadsheet with the detailed modeling assumptions is included in the appendix.

Although there could be a relatively high single-event noise exposure potential causing an intermittent noise nuisance, the effect of construction activities on longer-term (hourly or daily) ambient noise levels would be small. However, construction activities could result in a temporary increase in ambient noise levels in the project vicinity that could result in annoyance or sleep disturbance of nearby sensitive receptors. Therefore, limiting construction activities to the daytime hours would reduce the effects of noise levels produced by these activities on longer-term (hourly or daily) ambient noise levels and would reduce the potential for noise-related annoyance or sleep disturbances at nearby sensitive receptors. The proposed project will comply with the City's noise ordinance which restricts construction activities to the daytime hours of between 7:00 a.m. and 7:00 p.m. on weekdays, or between 8:00 a.m. and 7:00 p.m. on Sunday and Saturday.

As shown in Table 6, documented existing traffic noise levels along Washington Avenue adjacent to the project site average at least 72 dBA L_{dn} at 50-feet from the centerline of the outermost travel lane. The nearest residential receptors are located approximately 280 feet from the centerline of Washington Avenue. At this distance noise levels from traffic on Washington Avenue would attenuate to approximately 58 dBA L_{dn}. Therefore, daytime construction noise levels would not exceed existing traffic noise levels as measured at this nearest sensitive receptor and would not result in a substantial temporary increase in daytime ambient noise levels.

Therefore, construction noise levels would not result in a substantial temporary increase in ambient noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies receptors. Therefore, temporary construction noise impacts would be less than significant.

5.2.2 - Mobile Source Operational Noise Impacts

A significant impact would occur if implementation of the proposed project would result in a substantial increase in traffic noise levels compared with traffic noise levels existing without the project. The City of San Leandro considers an increase of 3 dBA as a significant adverse impact in ambient noise levels. As noted in the characteristics of noise discussion, audible increases in noise levels generally refer to a change of 3 dBA or more, as this level has been found to be barely perceptible to the human ear in outdoor environments. A change of 5 dBA is considered the minimum readily perceptible change to the human ear in outdoor environments. Therefore, for purposes of this analysis, an increase of greater than 3 dBA above existing traffic noise levels would be considered a substantial permanent increase in traffic noise levels.

Traffic noise levels along selected roadway segments in the project vicinity were modeled using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108). Site-specific information is entered, such as roadway traffic volumes, roadway active width, source-to-receiver distances, travel speed, noise source and receiver heights, and the percentages of automobiles, medium trucks, and heavy trucks

that the traffic is made up of throughout the day, among other variables. The daily traffic volumes were obtained from the traffic analysis prepared for the project by Kittelson & Associates.[7] The traffic volumes described here, which correspond to the traffic scenarios analyzed in the traffic study, include the Existing, Existing Plus Project, Opening Year No Project, and Opening Year Plus Project conditions. The model inputs and outputs—including the 60 dBA, 65 dBA, and 70 dBA CNEL noise contour distances—are provided in the Appendix of this document. Table 7, shows the traffic noise levels as measured at 50 feet from the centerline of the outermost travel lane.

Table 7: Traffic Noise Increase Summary

Roadway Segment	Existing (dBA) CNEL	Existing Plus Project (dBA) CNEL	Increase over Existing (dBA)	Cumulative (Year 2035) No Project (dBA) CNEL	Cumulative (Year2035) Plus Project (dBA) CNEL	Increase over Opening Year No Project (dBA)
Washington Avenue–San Leandro Boulevard to 139th Avenue	73.6	73.6	<0.1	74.9	74.9	<0.1
Washington Avenue–139th Avenue to 143rd Avenue	72.3	72.3	<0.1	73.5	73.5	<0.1
Washington Avenue–143rd Avenue to Halcyon Drive	72.6	72.6	<0.1	73.8	73.8	<0.1

Notes:
dBA = A-weighted decibel
CNEL = Community Noise Equivalent Level
Source: FirstCarbon Solutions (FCS) 2022.

As shown in Table 7, implementation of the proposed project would result in a 0.0 decibel increase in traffic noise levels on roadway segments adjacent to the project site where the highest concentration of project trips would occur. This is due to the minimal project ADT generation compared to existing traffic volumes on Washington Avenue. Therefore, impacts from project-related traffic noise levels would be less than significant.

5.2.3 - Stationary Source Operational Noise Impacts

A significant impact would occur if operational noise levels generated by stationary noise sources at the project site would result in a substantial permanent increase in ambient noise levels in excess of any of the City's noise standards. According to the City's General Plan, an increase of 3 dBA L_{dn} should be considered a significant adverse impact.

The proposed project would generate noise from truck delivery, loading and unloading activities at commercial loading areas; parking lot activities, which includes people conversing, doors shutting, engine startup, and slow-moving vehicles; and from new exterior mechanical equipment sources,

[7] Kittelson & Associates. 2022. San Leandro 14143 Washington Avenue Industrial Traffic Impact Analysis. May.

such as rooftop ventilation systems on proposed commercial uses. Potential impacts from these noise sources are discussed below.

Truck Loading Activities

Noise would be also generated by truck loading and unloading activities at the loading docks along the southern, western, and northern sides of the proposed building. Typical noise levels from truck loading and unloading activity range from 70 dBA to 80 dBA L_{max} as measured at 50 feet. These maximum noise level range includes noise from associated truck loading/unloading activity, including trucks maneuvering, truck trailer loading, truck trailer unloading, backup alarms or beepers, and truck docking noise.

The nearest noise-sensitive receptors to the proposed truck loading areas are single-family residences located southwest of the project site on Monogram Street. The proposed loading docks would be located approximately 650 feet from this closest sensitive receptor and are shielded from the project site by an existing 8-foot high sound wall. A reasonable worst-case analysis is to assume these activities would occur for a 24-hour period. Because of distance attenuation and minimal shielding provided by the sound wall, noise levels from truck loading and unloading activities would result in a reasonable worst-case 24-hour average noise level of 56 dBA L_{dn} as measured at the nearest sensitive receptors. The calculation spreadsheet with the detailed modeling assumptions is included in the appendix.

As shown in Table 7, documented existing traffic noise levels along Washington Avenue adjacent to the project site average at least 72 dBA L_{dn} at 50-feet from the centerline of the outermost travel lane. The nearest residential receptors are located approximately 280 feet from the centerline of Washington Avenue. At this distance noise levels from traffic on Washington Avenue would attenuate to approximately 58 dBA L_{dn}.

Therefore, noise levels from truck loading and unloading activities would not exceed existing background noise levels as measured at the nearest residential receptor. Thus, noise levels from truck loading and unloading activities would not generate a substantial temporary or permanent increase in ambient noise levels in the project vicinity in excess of standards established in the local general plan or noise ordinance, and the impact would be less than significant.

Parking Lot Activities

Typical parking lot activities include people conversing, doors shutting, and vehicles idling which generate noise levels ranging from approximately 60 dBA to 70 dBA L_{max} at 50 feet. These activities are expected to occur sporadically throughout the day, as visitors and staff arrive and leave parking lot areas at the project site.

The nearest noise-sensitive receptor to proposed parking areas are single-family residences located southwest of the project site on Monogram Street. The proposed parking areas would be located approximately 560 feet from this closest sensitive receptor and are shielded from the project site by an existing 8-foot high sound wall. A reasonable worst-case analysis is to assume these activities would occur for a 24-hour period. Because of distance attenuation and minimal shielding provided by

the sound wall; noise levels generated from typical parking lot activity would result in a reasonable worst-case 24-hour average noise level of 44 dBA L_{dn} at the nearest sensitive receptors. The calculation spreadsheet with the detailed modeling assumptions is included in the appendix.

As noted previously, documented existing traffic noise from traffic on Washington Avenue would average 58 dBA L_{dn} as measured at the nearest residential receptor.

Therefore, noise levels from project-related parking lot activity would not exceed existing background noise levels as measured at the nearest residential receptor. Therefore, noise levels from parking lot activity would not generate a substantial temporary or permanent increase in ambient noise levels in the project vicinity in excess of standards established in the local general plan or noise ordinance, and the impact would be less than significant.

Mechanical Equipment Operations

At the time of preparation of this analysis, details were not available pertaining to the proposed rooftop mechanical ventilation systems for the project; therefore, a reference noise level for typical rooftop mechanical ventilation systems was used. Noise levels from commercially available rooftop mechanical ventilation equipment range from 50 dBA to 60 dBA L_{eq} at a distance of 25 feet.

The nearest noise-sensitive receptor to proposed rooftop mechanical ventilation equipment are single-family residences located southwest of the project site. The proposed rooftop mechanical ventilation equipment would be located approximately 725 feet from this closest sensitive receptor. Because these units would be mounted on the roof, some of them could have a direct line of sight to the nearest residential receptor and, therefore, no shielding reduction would be assumed for the existing 8-foot high sound wall. A reasonable worst-case analysis is to assume these activities would occur for a 24-hour period. Because of distance attenuation and minimal shielding provided by the sound wall; noise levels generated from rooftop mechanical ventilation equipment operations would result in a reasonable worst-case 24-hour average noise level of 38 dBA L_{dn} at the nearest sensitive receptors. The calculation spreadsheet with the detailed modeling assumptions is included in the appendix.

As noted previously, documented existing traffic noise from traffic on Washington Avenue would attenuate to 58 dBA L_{dn} as measured at the nearest residential receptor.

Therefore, noise levels from rooftop mechanical ventilation equipment operations would not exceed existing background noise levels as measured at the nearest residential receptor. Therefore, noise levels from mechanical ventilation equipment operations would not generate a substantial temporary or permanent increase in ambient noise levels in the project vicinity in excess of standards established in the local general plan or noise ordinance, and the impact would be less than significant.

5.3 - Groundborne Vibration/Noise Levels

This section analyzes both construction and operational groundborne vibration and noise impacts. Groundborne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. Vibrating objects in contact with the ground radiate vibration waves through various

soil and rock strata to the foundations of nearby buildings. Groundborne noise is generated when vibrating building components radiate sound, or noise generated by groundborne vibration. In general, if groundborne vibration levels do not exceed levels considered to be perceptible, then groundborne noise levels would not be perceptible in most interior environments. Therefore, this analysis focuses on determining exceedances of groundborne vibration levels.

A significant impact would occur if the project would generate groundborne vibration or groundborne noise levels in excess of established standards. The City of San Leandro has not adopted criteria for groundborne vibration impacts. Therefore, for purposes of this analysis, the FTA's vibration impact criteria are utilized. The FTA has established industry accepted standards for vibration impact criteria and impact assessment. These guidelines are published in its Transit Noise and Vibration Impact Assessment Manual.[8] These guidelines are summarized in Table 5.

5.3.1 - Short-term Construction Vibration Impacts

Of the variety of equipment used during construction, the large vibratory rollers that are anticipated to be used in the site preparation phase of construction would produce the greatest groundborne vibration levels. Large vibratory rollers produce groundborne vibration levels ranging up to 0.201 inch per second (in/sec) PPV at 25 feet from the operating equipment.

The nearest off-site receptor to the project construction footprint is a lumber store, located northwest of the project site. The façade of this closest structure would be located approximately 70 feet from the proposed project site where the heaviest construction equipment would potentially operate. At this distance, groundborne vibration levels would range up to 0.04 PPV from operation of the types of equipment that would produce the highest vibration levels. This is well below the FTA's Construction Vibration Impact Criteria of 0.2 PPV for this type of structure – non-engineered timber and masonry buildings. Therefore, project construction activities would not generate groundborne vibration or groundborne noise levels in excess of established standards and the impact of short-term groundborne vibration associated with construction to off-site receptors would be less than significant.

5.3.2 - Operational Vibration Impacts

Implementation of the project would not include any new permanent sources that would expose persons in the project vicinity to groundborne vibration levels that could be perceptible without instruments at any existing sensitive land use in the project vicinity. Additionally, there are no active sources of groundborne vibration in the project vicinity that would produce vibration levels that would be perceptible without instruments within the project site. Therefore, the project would not generate groundborne vibration or groundborne noise levels in excess of established standards and there would be no impact related to operational groundborne vibration.

[8] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

5.4 - Excessive Noise Levels from Airport Activity

A significant impact would occur if the proposed project would expose people residing or working in the project area to excessive noise levels for a project located in the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport.

The nearest public airport to the project site is the Oakland International Airport, located approximately 3.3 miles northwest of the project site. According to the airport's noise exposure map, the project site is located outside of the 60 dBA CNEL airport noise contours.[9] While aircraft noise is occasionally audible on the project site from aircraft flyovers, aircraft noise associated with nearby airport activity would not expose people residing or working near the project site to excessive noise levels. Therefore, implementation of the project would not expose persons residing or working in the project vicinity to noise levels from airport activity that would be in excess of normally acceptable standards for the proposed land use development, and no impact would occur.
