Appendix A:

Notice of Preparation (NOP) and Comments Received on the NOP

NOTICE OF PREPARATION OF AN EIR AND SCOPING MEETING FOR THE PROPOSED INFINITE 131 PROJECT

To: Agencies, Organizations, and Interested Parties

From: City of South San Francisco, Economic and Community Development Department

Subject: Notice of Preparation (NOP) of an Environmental Impact Report (EIR) in Compliance with Title 14, Sections 15082(a), 15103, and 15375 of the California Code of Regulations (CCR; Title 14, Chapter 3 of the CCR is described herein as the California Environmental Quality Act (CEQA) Guidelines). The City of South San Francisco (City) is the Lead Agency under CEQA for the proposed project identified below. The City will prepare an EIR for the proposed project identified below:

Project Title: Infinite 131 Project. The project location and a summary of the project description are included below and on the following pages.

Current Environmental Review: To ensure that the proposed project is fully analyzed under CEQA, a Focused EIR will be prepared in compliance with Title 14, Section 15161 of the CCR. An Initial Study checklist is being prepared to supplement the Focused EIR analysis. In accordance with CEQA requirements, all environmental topic areas will be addressed between the Focused EIR and Initial Study Checklist.

As discussed below, the proposed project consists of the construction of the proposed Infinite 131 project, the construction of off-site transportation and circulation improvements to accommodate traffic generated by the Infinite 131 project, and the redesignation and rezoning of five parcels north of the Infinite 131 project site (collectively, the proposed project). The EIR will provide a project-level analysis of the proposed Infinite 131 project and off-site transportation and circulation improvements, pursuant to Section 15161 of the CEQA Guidelines, and a program-level analysis of the redesignation and rezoning of the five off-site parcels, pursuant to Section 15168 of the CEQA Guidelines. The EIR may be relied on by other agencies, including the San Francisco Bay Conservation and Development Commission as a Responsible Agency pursuant to Section 15381 of the CEQA Guidelines, for purposes of approving aspects of the proposed project within those agencies' respective jurisdictions. The proposed project is further described below.

Agency/Public Comments: The City requests your comments regarding the scope and content of the environmental review to be conducted for the proposed project. Normally, State law requires that your response be received no later than thirty (30) days after receipt of this notice. However, given the Thanksgiving Holiday, the City will accept written comments on this NOP between November 1, 2023, and December 8, 2023. Please send your comments by email to **billy.gross@ssf.net** or by mail to:

City of South San Francisco
Department of Economic and Community Development
Attn: Billy Gross, Principal Planner
315 Maple Avenue
South San Francisco, CA 94080

Scoping Meeting: Pursuant to Public Resources Code Section 21083.9 and Sections 15206 and 15082 of the CEQA Guidelines, the Lead Agency also hereby gives notice of a public scoping meeting on this project to receive comments on the scope of the EIR. The Lead Agency will conduct a virtual scoping meeting on Tuesday, November 28, 2023, beginning at 1:30 PM, via webinar and telephone conference line. During the scoping meeting, agencies,

organizations, and the public will have an opportunity to submit comments. The scoping meeting will include a presentation providing an overview of the project and the CEQA process, followed by a question and answer session for online and phone attendees. Please note that comments are limited to three minutes per speaker.

To access the scoping meeting webinar, please use this link from your computer, tablet or smartphone:

https://ssf-net.zoom.us/j/85288004565?pwd=TVFCOVdxY2t3ejYzbUVVMHpHSU1BUT09

You may need to install the Zoom app on your device prior to the meeting:

https://zoom.us/download

You can also dial in to the meeting using your phone:

United States (Toll Free): 1 (669) 444-9171

Meeting ID: 852 8800 4565

Passcode: 439429

You can also find your local dial-in number at the following link:

https://ssf-net.zoom.us/u/kIRhgGH0H

Please note that there are three ways to comment during the meeting:

1. ***Send a comment via email to billy.gross@ssf.net.*** City staff will monitor emails during the meeting and an email comment received during the meeting will be read into the record. Your email should be limited so that it complies with the 3-minute time limitation for public comment.
2. ***Call the Planning Division Hotline at (650) 829-4669.*** Voice Messages will be monitored during the meeting and read into the record. Your voicemail should be limited so that it complies with the 3-minute time limitation for public comment.
3. ***Submit a comment via the "chat" function in the Zoom meeting app.*** City staff will monitor the chat, and will read comments and questions into the record.

EIR Process: An Initial Study is being prepared that considers all applicable environmental topic areas in Appendix G of the CEQA Guidelines. Following the close of the NOP comment period, a Focused Draft EIR will be prepared for topics where the Initial Study analysis identifies a potential for a significant impact to occur. The Draft EIR will take into consideration NOP comments. In accordance with CEQA Guidelines Section 15105(a), the Draft EIR will be released for public review and comment for the required 45-day review period. Following the close of the public review period, the City will prepare a Final EIR that will include responses to all substantive comments received on the Draft EIR. The Draft EIR and Final EIR will be considered by City decision-makers in making the decision to certify the EIR and to approve or deny the components of the proposed project subject to review and approval by the City. If certified by the City, the EIR may be relied on by other agencies for purposes of carrying out portions of the proposed project within their respective jurisdictions.

Project Location & Existing Conditions: The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the City of South San Francisco (see Figure 1, Project Location), and is identified as Assessor's Parcel Number (APN) 015-113-210. The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. There are approximately 475 existing employees on the project site. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees. The southern part of the project site also includes a portion of the shoreline band within the jurisdiction of the San Francisco Conservation and Development Commission (BCDC), adjacent to the navigable slough that feeds into the San Bruno Canal south of the project site. In addition, the project site is approximately 1-mile northwest of San Francisco International Airport (SFO).

The project site is designated in the City of South San Francisco's (City's) Zoning Code and in the *Shape SSF 2040 General Plan* (General Plan) and *Lindenville Specific Plan* (Specific Plan) as Mixed Industrial High (MIH). A General Plan, Specific Plan, and Zoning Amendment are anticipated as part of the proposed project to ensure policy consistency.

Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot are north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, the navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of the San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along the San Bruno Canal.

Project Description:

Proposed Project. The proposed project includes the construction of new research and development (R&D) and amenity uses with a maximum anticipated total building area of up to approximately 1.7 million square feet. The proposed project would demolish all existing on-site uses and construct six buildings (I131S A, I131S B, I131S C, I131S D, I131N A, and 131N B) collectively referred to as the I131N buildings and I131S buildings, with approximately 1,632,000 square feet of R&D uses and approximately 68,000 square feet of amenity uses. Building heights would range from two to six stories, with the maximum building height being 113 feet 6 inches to the top of the rooftop appurtenances. In addition, the proposed project would include two parking garages, associated with the I131N buildings and the I131S buildings, as well as surface parking. The I131N parking garage would be approximately 551,631 square feet and approximately 100 feet tall. It would include three levels of below-grade parking, as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 square feet and include two levels of below-grade parking. In total, the proposed project would provide approximately 3,049 parking spaces, including 114 surface parking spaces. The proposed buildings would be tied together through a cohesive network of landscaping and open space. Two central courtyards, that would provide approximately 115,130 square feet of open space, would be located along the interior of the project site, and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections. The proposed project would also include associated utility and circulation improvements. The proposed project would require General Plan, Specific Plan and Zoning Code amendments to change the existing land use and zoning designations from Mixed Industrial High (MIH) to Business Technology Park High (BTP-H) and allow development of the R&D campus.

Off-site Transportation and Circulation Improvements: The proposed project may require off-site transportation and circulation improvements to accommodate traffic that would be generated by the proposed project. Such improvements could include new traffic signals, crosswalks, sidewalks, bikeways, and driveway connections along Terminal Court, Shaw Road, and/or Produce Avenue. A local transportation analysis is currently underway which will identify the specific types and locations of improvements that would be needed. The potential environmental effects that could occur from constructing the necessary improvements will be evaluated in the Draft EIR.

Off-Site Redesignation Area. In addition to the General Plan, Specific Plan, and Zoning Code amendments required for the proposed project, the project would also require additional amendments to the General Plan, Specific Plan, and Zoning Code to redesignate five parcels north of the project site across Terminal Court located at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (APNs 015-113-350, 015-113-290, 015-113-340, 015-113-330, 015-113-320). The five off-site redesignation parcels are currently designated as Mixed Industrial High (MIH) under the General Plan, Specific Plan, and Zoning Code, and would be redesignated to BTP-H, consistent with the proposed land use and zoning for the project site. The five parcels are approximately 7.28- acres and are currently comprised of a large Park N' Fly surface parking lot and a Shell gas station. The purpose of the off-site redesignation parcels is to ensure that future development is cohesive and consistent with the development proposed as part of the project. The proposed project does not include the construction of any new uses or any other type of development within the five parcels as part of the redesignation, and existing uses would be maintained. Therefore, no direct impacts on the environment would occur. However, the analysis in the Draft EIR will evaluate the reasonably foreseeable indirect impacts that could result from the proposed off-site redesignation parcels. Future development within the five parcels, should it occur, would be subject to additional environmental review in accordance with CEQA, potentially tiering from the analysis for the off-site redesignation parcels in the EIR.

Probable Environmental Impacts:

It is anticipated that the following CEQA environmental issue areas are likely to result in potentially significant impacts and therefore will be addressed in the Focused EIR: Air Quality, Greenhouse Gas Emissions, Cultural Resources, Noise, and Transportation. The following remaining environmental issue areas are anticipated to not result

in potentially significant impacts and therefore will be evaluated and scoped out from further review in the Initial Study Checklist: Aesthetics, Agriculture and Forestry Resources, Biological Resources, Energy, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Population and Housing, Public Services, Recreation, Tribal Cultural Resources, Utilities and Service Systems, and Wildfire. The Focused EIR will provide a discussion indicating the reasons why these topics are not evaluated in detail in accordance with CEQA Guidelines Section 15128.

In accordance with Section 15130 of the CEQA Guidelines, the Draft EIR will evaluate cumulative impacts of the project, including the effects of other past, present, and reasonably foreseeable projects in the vicinity. Per Section 15126.6 of the CEQA Guidelines, the EIR will also identify and evaluate a range of reasonable alternatives to the proposed project, including a No Project Alternative.

Re: 2023110023, Infinite 131 Project, San Mateo County

Dear Mr. Gross:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Cody.Campagne@nahc.ca.gov.

Sincerely,

Cody Campagne

Ref: Gas and Electric Transmission and Distribution

Dear Billy Gross,

Thank you for submitting the Infinite 131 Project plans for our review. PG&E will review the submitted plans in relationship to any existing Gas and Electric facilities within the project area. If the proposed project is adjacent/or within PG&E owned property and/or easements, we will be working with you to ensure compatible uses and activities near our facilities.

Attached you will find information and requirements as it relates to Gas facilities (Attachment 1) and Electric facilities (Attachment 2). Please review these in detail, as it is critical to ensure your safety and to protect PG&E's facilities and its existing rights.

Below is additional information for your review:

1. This plan review process does not replace the application process for PG&E gas or electric service your project may require. For these requests, please continue to work with PG&E Service Planning: https://www.pge.com/en_US/business/services/building-and-renovation/overview/overview.page.

2. If the project being submitted is part of a larger project, please include the entire scope of your project, and not just a portion of it. PG&E's facilities are to be incorporated within any CEQA document. PG&E needs to verify that the CEQA document will identify any required future PG&E services.

3. An engineering deposit may be required to review plans for a project depending on the size, scope, and location of the project and as it relates to any rearrangement or new installation of PG&E facilities.

Any proposed uses within the PG&E fee strip and/or easement, may include a California Public Utility Commission (CPUC) Section 851 filing. This requires the CPUC to render approval for a conveyance of rights for specific uses on PG&E's fee strip or easement. PG&E will advise if the necessity to incorporate a CPUC Section 851filing is required.

This letter does not constitute PG&E's consent to use any portion of its easement for any purpose not previously conveyed. PG&E will provide a project specific response as required.

Sincerely,

Plan Review Team
Land Management

Attachment 1 – Gas Facilities

There could be gas transmission pipelines in this area which would be considered critical facilities for PG&E and a high priority subsurface installation under California law. Care must be taken to ensure safety and accessibility. So, please ensure that if PG&E approves work near gas transmission pipelines it is done in adherence with the below stipulations. Additionally, the following link provides additional information regarding legal requirements under California excavation laws: https://www.usanorth811.org/images/pdfs/CA-LAW-2018.pdf

1. Standby Inspection: A PG&E Gas Transmission Standby Inspector must be present during any demolition or construction activity that comes within 10 feet of the gas pipeline. This includes all grading, trenching, substructure depth verifications (potholes), asphalt or concrete demolition/removal, removal of trees, signs, light poles, etc. This inspection can be coordinated through the Underground Service Alert (USA) service at 811. A minimum notice of 48 hours is required. Ensure the USA markings and notifications are maintained throughout the duration of your work.

2. Access: At any time, PG&E may need to access, excavate, and perform work on the gas pipeline. Any construction equipment, materials, or spoils may need to be removed upon notice. Any temporary construction fencing installed within PG&E's easement would also need to be capable of being removed at any time upon notice. Any plans to cut temporary slopes exceeding a 1:4 grade within 10 feet of a gas transmission pipeline need to be approved by PG&E Pipeline Services in writing PRIOR to performing the work.

3. Wheel Loads: To prevent damage to the buried gas pipeline, there are weight limits that must be enforced whenever any equipment gets within 10 feet of traversing the pipe.

Ensure a list of the axle weights of all equipment being used is available for PG&E's Standby Inspector. To confirm the depth of cover, the pipeline may need to be potholed by hand in a few areas.

Due to the complex variability of tracked equipment, vibratory compaction equipment, and cranes, PG&E must evaluate those items on a case-by-case basis prior to use over the gas pipeline (provide a list of any proposed equipment of this type noting model numbers and specific attachments).

No equipment may be set up over the gas pipeline while operating. Ensure crane outriggers are at least 10 feet from the centerline of the gas pipeline. Transport trucks must not be parked over the gas pipeline while being loaded or unloaded.

4. Grading: PG&E requires a minimum of 36 inches of cover over gas pipelines (or existing grade if less) and a maximum of 7 feet of cover at all locations. The graded surface cannot exceed a cross slope of 1:4.

5. Excavating: Any digging within 2 feet of a gas pipeline must be dug by hand. Note that while the minimum clearance is only 24 inches, any excavation work within 24 inches of the edge of a pipeline must be done with hand tools. So to avoid having to dig a trench entirely with hand tools, the edge of the trench must be over 24 inches away. (Doing the math for a 24 inch

wide trench being dug along a 36 inch pipeline, the centerline of the trench would need to be at least 54 inches [24/2 + 24 + 36/2 = 54] away, or be entirely dug by hand.)

Water jetting to assist vacuum excavating must be limited to 1000 psig and directed at a 40° angle to the pipe. All pile driving must be kept a minimum of 3 feet away.

Any plans to expose and support a PG&E gas transmission pipeline across an open excavation need to be approved by PG&E Pipeline Services in writing PRIOR to performing the work.

6. Boring/Trenchless Installations: PG&E Pipeline Services must review and approve all plans to bore across or parallel to (within 10 feet) a gas transmission pipeline. There are stringent criteria to pothole the gas transmission facility at regular intervals for all parallel bore installations.

For bore paths that cross gas transmission pipelines perpendicularly, the pipeline must be potholed a minimum of 2 feet in the horizontal direction of the bore path and a minimum of 24 inches in the vertical direction from the bottom of the pipe with minimum clearances measured from the edge of the pipe in both directions. Standby personnel must watch the locator trace (and every ream pass) the path of the bore as it approaches the pipeline and visually monitor the pothole (with the exposed transmission pipe) as the bore traverses the pipeline to ensure adequate clearance with the pipeline. The pothole width must account for the inaccuracy of the locating equipment.

7. Substructures: All utility crossings of a gas pipeline should be made as close to perpendicular as feasible (90° +/- 15°). All utility lines crossing the gas pipeline must have a minimum of 24 inches of separation from the gas pipeline. Parallel utilities, pole bases, water line ‘kicker blocks’, storm drain inlets, water meters, valves, back pressure devices or other utility substructures are not allowed in the PG&E gas pipeline easement.

If previously retired PG&E facilities are in conflict with proposed substructures, PG&E must verify they are safe prior to removal. This includes verification testing of the contents of the facilities, as well as environmental testing of the coating and internal surfaces. Timelines for PG&E completion of this verification will vary depending on the type and location of facilities in conflict.

8. Structures: No structures are to be built within the PG&E gas pipeline easement. This includes buildings, retaining walls, fences, decks, patios, carports, septic tanks, storage sheds, tanks, loading ramps, or any structure that could limit PG&E’s ability to access its facilities.

9. Fencing: Permanent fencing is not allowed within PG&E easements except for perpendicular crossings which must include a 16 foot wide gate for vehicular access. Gates will be secured with PG&E corporation locks.

10. Landscaping: Landscaping must be designed to allow PG&E to access the pipeline for maintenance and not interfere with pipeline coatings or other cathodic protection systems. No trees, shrubs, brush, vines, and other vegetation may be planted within the easement area. Only those plants, ground covers, grasses, flowers, and low-growing plants that grow unsupported to a maximum of four feet (4’) in height at maturity may be planted within the easement area.

11. Cathodic Protection: PG&E pipelines are protected from corrosion with an “Impressed Current” cathodic protection system. Any proposed facilities, such as metal conduit, pipes, service lines, ground rods, anodes, wires, etc. that might affect the pipeline cathodic protection system must be reviewed and approved by PG&E Corrosion Engineering.

12. Pipeline Marker Signs: PG&E needs to maintain pipeline marker signs for gas transmission pipelines in order to ensure public awareness of the presence of the pipelines. With prior written approval from PG&E Pipeline Services, an existing PG&E pipeline marker sign that is in direct conflict with proposed developments may be temporarily relocated to accommodate construction work. The pipeline marker must be moved back once construction is complete.

13. PG&E is also the provider of distribution facilities throughout many of the areas within the state of California. Therefore, any plans that impact PG&E’s facilities must be reviewed and approved by PG&E to ensure that no impact occurs which may endanger the safe operation of its facilities.

Attachment 2 – Electric Facilities

It is PG&E's policy to permit certain uses on a case by case basis within its electric transmission fee strip(s) and/or easement(s) provided such uses and manner in which they are exercised, will not interfere with PG&E's rights or endanger its facilities. Some examples/restrictions are as follows:

1. Buildings and Other Structures: No buildings or other structures including the foot print and eave of any buildings, swimming pools, wells or similar structures will be permitted within fee strip(s) and/or easement(s) areas. PG&E's transmission easement shall be designated on subdivision/parcel maps as "**RESTRICTED USE AREA – NO BUILDING."**

2. Grading: Cuts, trenches or excavations may not be made within 25 feet of our towers. Developers must submit grading plans and site development plans (including geotechnical reports if applicable), signed and dated, for PG&E's review. PG&E engineers must review grade changes in the vicinity of our towers. No fills will be allowed which would impair ground-to-conductor clearances. Towers shall not be left on mounds without adequate road access to base of tower or structure.

3. Fences: Walls, fences, and other structures must be installed at locations that do not affect the safe operation of PG&'s facilities. Heavy equipment access to our facilities must be maintained at all times. Metal fences are to be grounded to PG&E specifications. No wall, fence or other like structure is to be installed within 10 feet of tower footings and unrestricted access must be maintained from a tower structure to the nearest street. Walls, fences and other structures proposed along or within the fee strip(s) and/or easement(s) will require PG&E review; submit plans to PG&E Centralized Review Team for review and comment.

4. Landscaping: Vegetation may be allowed; subject to review of plans. On overhead electric transmission fee strip(s) and/or easement(s), trees and shrubs are limited to those varieties that do not exceed 10 feet in height at maturity. PG&E must have access to its facilities at all times, including access by heavy equipment. No planting is to occur within the footprint of the tower legs. Greenbelts are encouraged.

5. Reservoirs, Sumps, Drainage Basins, and Ponds: Prohibited within PG&E's fee strip(s) and/or easement(s) for electric transmission lines.

6. Automobile Parking: Short term parking of movable passenger vehicles and light trucks (pickups, vans, etc.) is allowed. The lighting within these parking areas will need to be reviewed by PG&E; approval will be on a case by case basis. Heavy equipment access to PG&E facilities is to be maintained at all times. Parking is to clear PG&E structures by at least 10 feet. Protection of PG&E facilities from vehicular traffic is to be provided at developer's expense AND to PG&E specifications. Blocked-up vehicles are not allowed. Carports, canopies, or awnings are not allowed.

7. Storage of Flammable, Explosive or Corrosive Materials: There shall be no storage of fuel or combustibles and no fueling of vehicles within PG&E's easement. No trash bins or incinerators are allowed.

8. Streets and Roads: Access to facilities must be maintained at all times. Street lights may be allowed in the fee strip(s) and/or easement(s) but in all cases must be reviewed by PG&E for proper clearance. Roads and utilities should cross the transmission easement as nearly at right angles as possible. Road intersections will not be allowed within the transmission easement.

9. Pipelines: Pipelines may be allowed provided crossings are held to a minimum and to be as nearly perpendicular as possible. Pipelines within 25 feet of PG&E structures require review by PG&E. Sprinklers systems may be allowed; subject to review. Leach fields and septic tanks are not allowed. Construction plans must be submitted to PG&E for review and approval prior to the commencement of any construction.

10. Signs: Signs are not allowed except in rare cases subject to individual review by PG&E.

11. Recreation Areas: Playgrounds, parks, tennis courts, basketball courts, barbecue and light trucks (pickups, vans, etc.) may be allowed; subject to review of plans. Heavy equipment access to PG&E facilities is to be maintained at all times. Parking is to clear PG&E structures by at least 10 feet. Protection of PG&E facilities from vehicular traffic is to be provided at developer's expense AND to PG&E specifications.

12. Construction Activity: Since construction activity will take place near PG&E's overhead electric lines, please be advised it is the contractor's responsibility to be aware of, and observe the minimum clearances for both workers and equipment operating near high voltage electric lines set out in the High-Voltage Electrical Safety Orders of the California Division of Industrial Safety (https://www.dir.ca.gov/Title8/sb5g2.html), as well as any other safety regulations. Contractors shall comply with California Public Utilities Commission General Order 95 (http://www.cpuc.ca.gov/gos/GO95/go_95_startup_page.html) and all other safety rules. No construction may occur within 25 feet of PG&E's towers. All excavation activities may only commence after 811 protocols has been followed.

Contractor shall ensure the protection of PG&E's towers and poles from vehicular damage by (installing protective barriers) Plans for protection barriers must be approved by PG&E prior to construction.

13. PG&E is also the owner of distribution facilities throughout many of the areas within the state of California. Therefore, any plans that impact PG&E's facilities must be reviewed and approved by PG&E to ensure that no impact occurs that may endanger the safe and reliable operation of its facilities.

Subject: Infinite 131 Project - SCH Number 2023110023

[**NOTICE:** This message originated outside of City of South San Francisco -- **DO NOT CLICK** on **links** or open **attachments** unless you are sure the content is safe.]

Dear Billy Gross,

The California Geological Survey (CGS) has received the Notice of Preparation of a Focused Draft Environmental Impact Report (DEIR) for the Infinite 131 Project in South San Francisco. This email conveys the following recommendations from CGS concerning geologic issues related to the project area:

1. Liquefaction Hazards

The entire project area is located within an earthquake zone of required investigation (ZORI) for liquefaction mapped by CGS. The DEIR and supporting documents should address this hazard as it relates to the design ofthe proposed structures. Additional information is available at the links below:
https://maps.conservation.ca.gov/cgs/EQZApp/app/
https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps

2. Ground Shaking Hazards

The project area is not located in an Earthquake Fault Zone mapped by CGS. However, several active faults are nearby, and the site could be subject to significant ground shaking. The DEIR and supporting documents shouldaddress this hazard as it relates to the design of the proposed structures. Additional information about ground shaking hazard can be obtained at the following sites:
https://usgs.maps.arcgis.com/apps/webappviewer/index.html?id=14d2f75c7c4f4619936dac0d14e1e468
https://earthquake.usgs.gov/scenarios/catalog/bssc2014/

If you have any additional comments or questions, please feel free to call or email.

Thank you,
Judy Zachariasen

Hi Billy,

Similar to the Infinite 101 project, we would request that a site management plan be approved by this office prior to issuance of a grading or building permit.

Thank you

Jacob Madden, PG

Re: Infinite 131 Project
131 Terminal Court, South San Francisco, CA 94080

Dear Billy:

Thank you for giving us the opportunity to review the subject plans. The proposed Infinite 131 Project is within the same vicinity of PG&E's existing facilities that impact this property.

The Infinite 131 Project proposes new buildings and land uses over existing PG&E easements and facilities on the subject property. Said easements are for the operation and maintenance of a gas distribution main and a line of overhead poles. Said easements do not allow for the construction of any building or other structure within the easement areas and provide PG&E the right to trim any trees along the easements whenever considered necessary. The applicant may submit an application to PG&E's Service Planning department at www.pge.com/cco should any of PG&E's existing easements or facilities be found in conflict with the Infinite 131 Project. All relocations are completed at applicant expense. No buildings will be permitted to be constructed within any existing PG&E easement. Please see the attached landscaping guides to further design landscaping around any PG&E facilities on the subject property. Landscaping must be compliant with said guides to promote the continued safe operation of the existing gas distribution main and overhead pole line. Please provide fully engineered site plans to PGEPlanReview@pge.com for review when available.

Please contact the Building and Renovation Center (BRSC) for facility map requests by calling 1-877-743-7782 and PG&E's Service Planning department at www.pge.com/cco for any modification or relocation requests, or for any additional services you may require.

As a reminder, before any digging or excavation occurs, please contact Underground Service Alert (USA) by dialing 811 a minimum of 2 working days prior to commencing any work. This free and independent service will ensure that all existing underground utilities are identified and marked on-site.

If you have any questions regarding our response, please contact me at Justin.Newell@pge.com.

Sincerely,

Pacific Gas and Electric Company

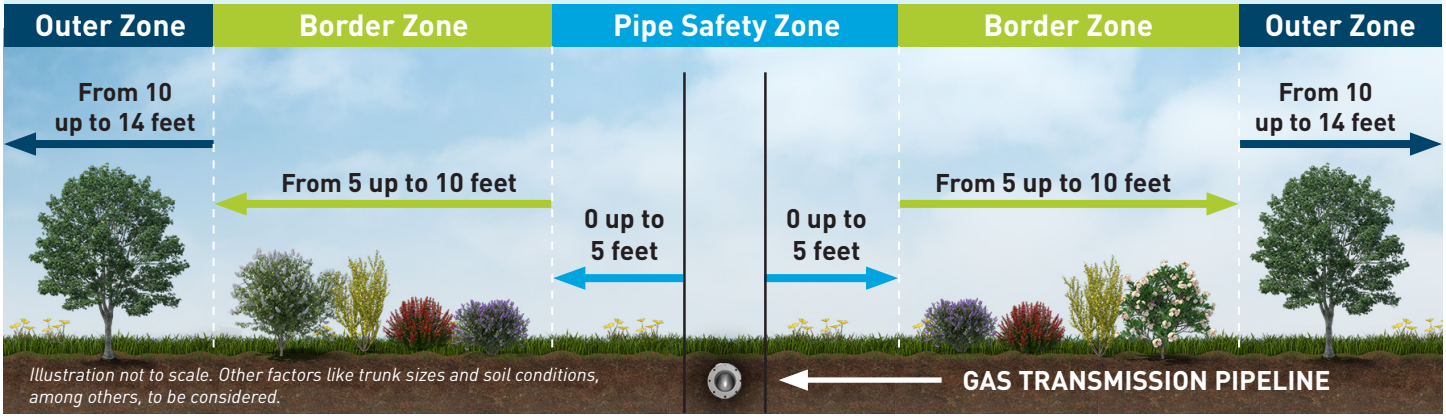
Gas Transmission Vegetation Management

Guide to Safe Landscaping Near Gas Pipelines

For the safety of our customers and communities, we regularly inspect the area above and around the natural gas transmission pipeline for any trees or plants that could block emergency access for safety crews or potentially damage the pipe.

Many types of low-growing vegetation including lawns, flower beds and shrubs with non-woody stems work well in the area above the underground pipeline. Smaller trees, large shrubs and plants with a trunk less than eight inches in diameter at full maturity are permitted from five up to 10 feet from the edge of the pipeline. To check if a gas transmission pipeline runs on or near your property, visit **pge.com/pipelinelocations**.

Any tree planted within 10 feet could pose a safety concern and may need to be removed.



Be Safe. Dig Safe. Before you begin any landscaping work, always call 811 at least two business days in advance. With one call to 811, PG&E will send a crew that can mark our underground gas and electric facilities for free before you begin work, helping you plan a safe project.

Frequently Asked Questions

Why is a small newly planted tree a safety concern?

Depending on the species and the potential size of the tree when it is full grown, it may be identified as a safety risk and need to be removed. While the tree may not pose an access concern while it is a sapling, when it is full grown, it can block access in an emergency or for critical maintenance work. The pipeline could also be damaged as the tree grows.

I planted according to your Guide to Safe Landscaping. Why does my tree now need to be removed?

Crews regularly walk the area above the pipeline to look for new structures or vegetation that may pose a safety concern. They also re-inspect trees and brush that were previously left in place to ensure they don't develop into a safety concern.

If any of these conditions change, we may need to work with the property owner to remove the tree.

Below is a sample of water-wise plant types that are safe in certain locations near a pipeline. Scan the code for more safe planting tips.

Pipe Safety Zone

Typically from 0 up to 5 feet on either side of the edge of the pipe. Lawns, flowers, low-profile grasses and low-growing herbaceous plants are permitted within the Pipe Safety Zone.

- Beach Aster *(Erigeron glaucus)*
- Bird's Foot Fern *(Pellaea mucronate)*
- Blue-Eyed Grass *(Sisyrinchium bellum and cvs.)*
- Buckwheat *(Eriogonum spp.)*
- California Fuchsia *(Epilobium canum)*
- California Mugwort *(Artemisia douglasiana)*
- Coast Sunflower *(Encelia californica)*
- Coyote Mint *(Monardella villosa)*
- Deer Weed *(Acmispon glaber)*
- Douglas Iris *(Iris douglasiana)*
- Lilac Verbena *(Glandularia lilacina and cvs.)*
- Matilija Poppy *(Romneya coulteri)*
- Perennial Hollyhock *(Alcea rosea and cvs.)*
- Pink Santa Barbara Daisy *(Erigeron x moerheimii)*
- Purple Needlegrass *(Stipa pulchra)*
- Sand Aster *(Lessingia filaginifolia and cvs.)*
- Sonoma Sage *(Salvia sonomensis and cvs.)*
- Western Marsh Rosemary *(Limonium californicum)*
- Yarrow *(Achillea millefolium and cvs.)*
- Yerba Buena *(Clinopodium douglasii)*

Pipe Border Zone

Typically from 5 up to 10 feet from the edge of the pipe. Small to medium shrubs with a trunk or main branch less than 8 inches in diameter at full maturity are permitted within the Border Zone. Diameter is measured at chest height.

- Aloe *(Aloe spp. (CA native and non-native))*
- Apache Plume *(Fallugia paradoxa)*
- Blue Jeans Ceanothus *(Ceanothus "Blue Jeans")*
- California Wild Rose *(Rosa californica)*
- Chaparral Honeysuckle *(Lonicera interrupta (shade))*
- Coastal Bush Lupine *(Lupinus arboreus)*
- Concha Ceanothus *(Ceanothus "Concha")*
- Coyote Brush *(Baccharis pilularis consanguinea)*
- Elderberry *(Sambucus spp.)*
- Hillside Gooseberry *(Ribes californicum)*
- Manzanita (shrub) *(Arctostaphylos hookeri (shrub cvs.))*
- Mountain Blue Curls *(Trichostema parishii)*
- Ninebark *(Physocarpus capitatus)*
- Pitcher Sage *(Lepechinia calycina)*
- Purple Sage *(Salvia leucophylla and cvs.)*
- Shrub Live Oak *(Quercus turbinella)*
- Tree Mallow *(Malva assurgentiflora and cvs. (Lavatera assurgentiflora))*
- Tree Poppy *(Dendromecon rigida)*
- Woolly Yerba Santa *(Eriodictyon tomentosum)*
- Yellow Penstemon *(Keckiella antirrhinoides)*

Outer Zone

Typically from 10 up to14 feet from the edge of the pipe. Large shrubs and small trees with a trunk less than 36 inches in diameter at full maturity are permitted within the Outer Zone, however, it's recommended to plant trees even further away from the pipeline. Diameter is measured at chest height.

- American Arborvitae *(Thuja occidentalis 'Fastigata')*
- Australian Willow *(Gijera parviflora)*
- White Alder *(Alnus rhombifolia)*
- Blue Blossom *(Ceanothus thyrsiflorus)*
- Chinese Pistache *(Pistacia chinensis)*
- Coral Gum *(Eucalyptus torquata)*
- Crape Myrtle *(Lagerstroemia hybrids)*
- Desert Willow *(Chilopsis linearis)*
- Flowering Dogwood *(Cornus florida)*
- Flowering Plum *(Prunus ceraifera 'Krauter Vesuvius')*
- Japanese Persimmon *(Diospyros kaki)*
- Lily Magnolia *(Magnolia liliflora)*
- New Zealand Christmas Tree *(Metrosideros excelsa)*
- Ray Hartman Ceanothus *(Ceanothus 'Ray Hartman')*
- Red Buckeye *(Aesculus pavia)*
- Smoke Tree *(Cotinus coggygria Purpureus')*
- Swan Hill Olive *(Olea eruopaea 'Swan Hill')*
- Toyon *(Heteromeles arbutifolia)*
- Trident Maple *(Acer buergeranum)*
- Western Redbud *(Cercis occidentalis)*

Please note that this list includes recommended plant species suited for most California climate zones and is not all-inclusive. Consult your local nursery for more information. If there is an electric power line on or near your property, there may be additional planting restrictions.

To learn more about PG&E's gas safety programs, visit **pge.com/gasveg**.
You can contact us at **1-800-259-6277** or **gasveg@pge.com**.

"PG&E" refers to Pacific Gas and Electric Company, a subsidiary of PG&E Corporation. ©2023 Pacific Gas and Electric Company. All rights reserved. CCC-0722-5446. 04/13/2023

Trees and shrubs for power line-friendly landscaping

Bay Area and Inland

At Pacific Gas and Electric Company (PG&E), our most important responsibility is the safety of our customers and the communities we serve.

As part of that responsibility, we created this guide to help you select the right trees and shrubs when planting near power lines. Planting the right tree in the right place will help promote fire safety, reduce power outages and ensure beauty and pleasure for years to come.

Plan before you plant 1

How to plant and care for your tree 4

Key characteristics of recommended small trees 6

Keeping the lights on and your community safe 17

Plan before you plant

Consider these questions for successful planting:

1. What types of utility lines are near you?

Planting restrictions for trees and other vegetation vary widely for different types of utility lines—electric transmission lines, electric distribution lines and gas pipelines.

2. Are you planting in a high fire-threat area?

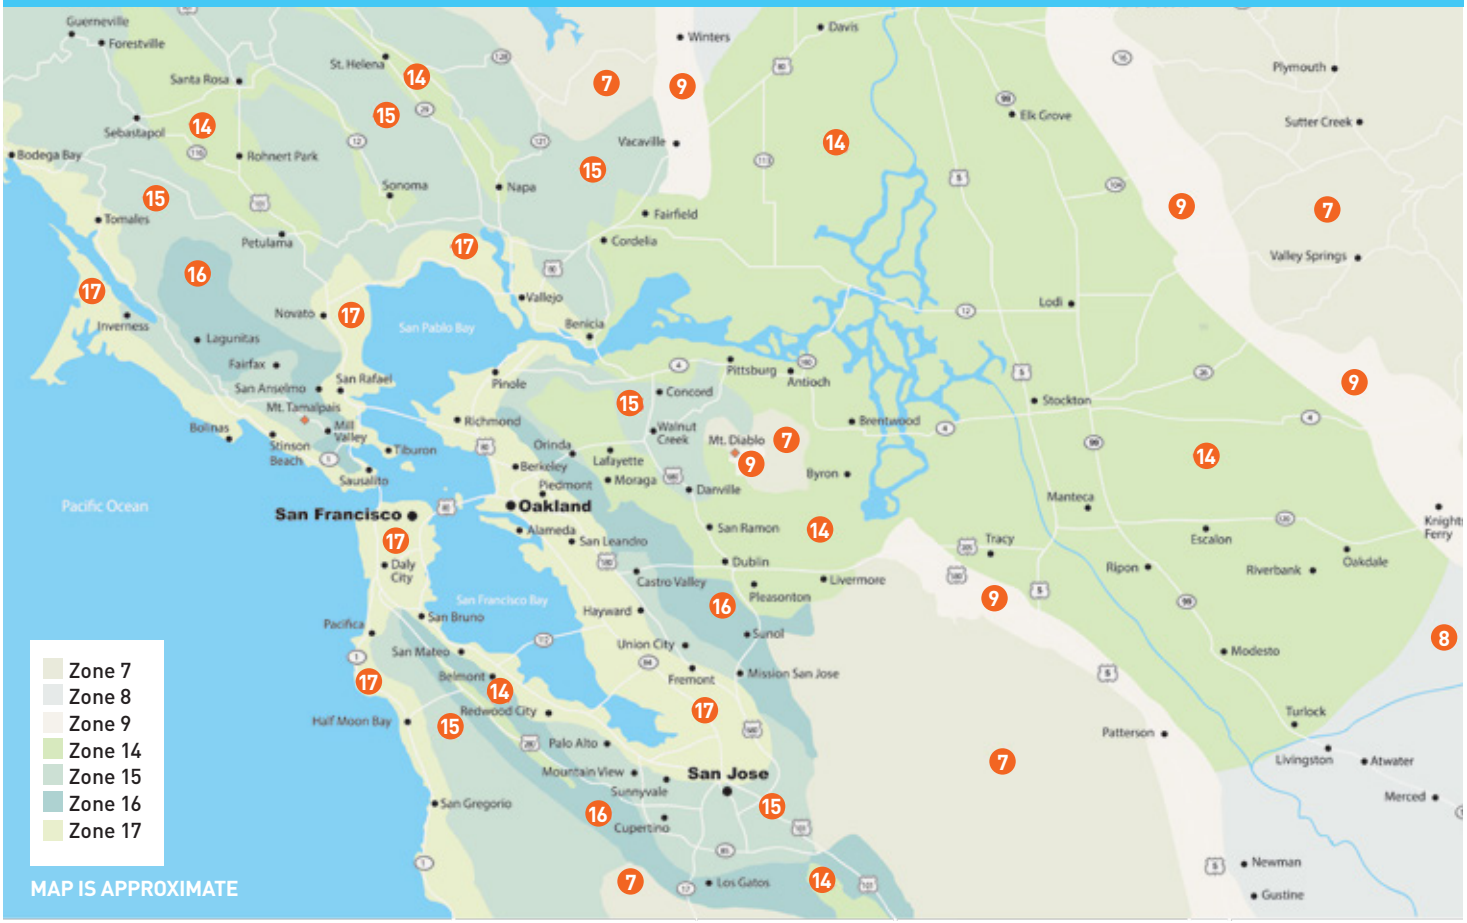
If you live in an area designated as high fire threat by the California Public Utilities Commission (CPUC), you can take steps to help reduce wildfire risks.

3. Are there any underground utility lines?

To avoid contact with underground utilities, **call 811** at least two working days before digging. Workers will visit your property free of charge to mark the location of gas lines or other underground utilities so you can avoid them.

Learn which plants will thrive in your region. Refer to the *Sunset Western Garden Book* map below to find your planting zone.

Bay Area and Inland Climate Zones: 7–9 and 14–17



Planting with fire safety in mind

You can help reduce wildfire risks by choosing the right plants, trees and shrubs and by following new vegetation and fire safety standards that require greater clearances between trees, limbs and power lines.

Create defensible space

In addition to maintaining a safe distance between trees and power lines, we recommend fire-resistant plants in high fire-threat areas. Their purpose is to replace important plants for wildlife in areas where brush and tree removal can leave an area bare.

Fire-resistant plant features include:

- High moisture content
- Minimal buildup of dry vegetation
- Fewer branches and leaves
- Slow growing
- Stems, leaves or needles that are not oily or waxy

To learn more about high fire-threat areas visit **cpuc.ca.gov/FireThreatMaps**

A Planting outside of high fire-threat areas

Planting restrictions for trees and other vegetation vary widely for different types of utility power lines—electric transmission, electric distribution and gas pipelines. Please consider the following when planting near:

Distribution power lines: Select only small trees that will grow no taller than 25 feet at maturity.

Transmission power lines: Plant only low-growing shrubs under the wire zone and only grasses within the area directly below the tower. Along the border of the transmission line right-of-way, plant only small trees no taller than 10 feet.

B Planting within high fire-threat areas

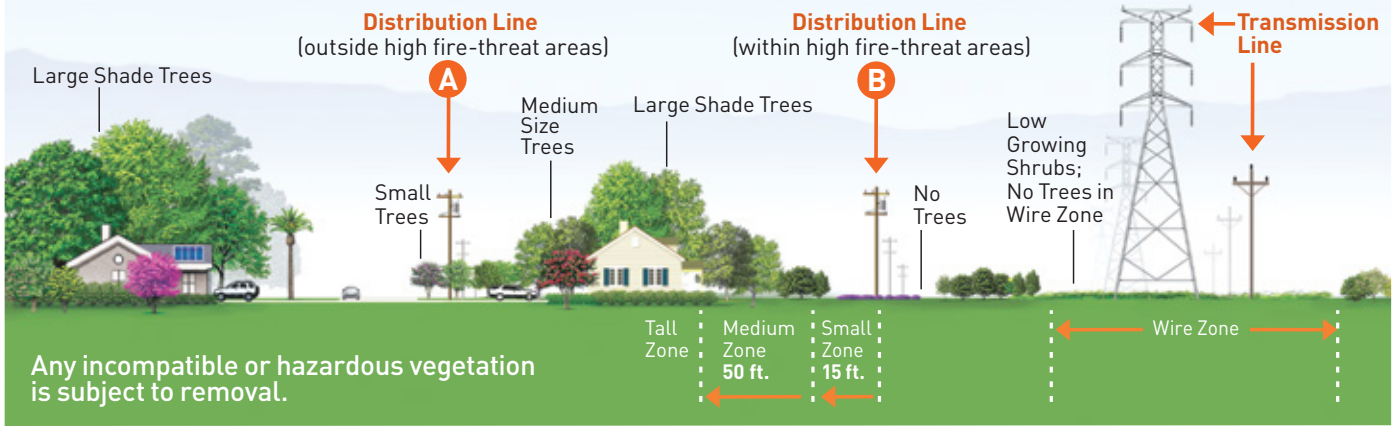
You play a vital role to ensure that the right tree is safely planted in the right place. This planting guide will help you select a species of tree and appropriate planting location that is compatible with our safety clearances.

Small zone: Within 15 feet of the pole, plant only low-growing plants less than 12 inches at maturity that have high moisture and low sap content.

Medium zone: From 15 to 50 feet of the pole, plant trees no taller than 40 feet at maturity.

Tall zone: At least 50 feet away from the pole, plant trees taller than 40 feet at maturity.

Avoid Conflicts with Power Lines—Plant the Right Tree in the Right Place



Proper tree and site selection

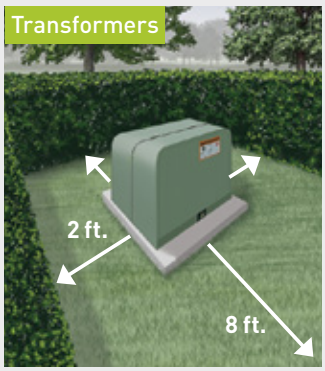
Always consider tree size when planting where space is limited—near power lines, in narrow side yards or close to buildings.

Small trees that grow no taller than 20 feet are the right choice.

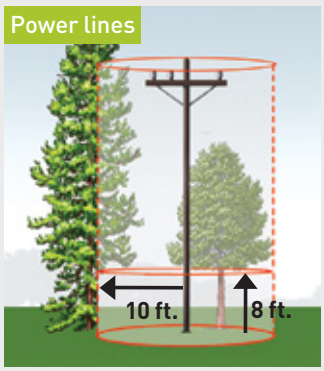
1. When planting near distribution lines in high fire-threat areas, plant only low-growing, fire resistant shrubs.
2. Small flowering trees or shrubs add interest and beauty to the landscape and may attract butterflies and hummingbirds.
3. Many small tree species add curb appeal and help improve your neighborhood.
4. Small trees produce fruit or nuts that attract birds and other wildlife.
5. Small trees create hedges for privacy or screening.
6. Small trees add interest and beauty to small spaces.

When planting, you should AVOID:

1. Blocking vision at street corners. Plant at least 10 feet from the curb at corners.
2. Planting too close to sidewalks, streets or driveways.



Planting closer than 8 feet from the front and 2 feet from the back and sides of pad-mounted transformers.



Planting within 10 feet of the base of utility poles and allowing vegetation that can grow more than 8 feet above the ground.

Safety tip for planting

Know what's below

To remain safe while planting trees, shrubs or flowers, **call 811 at least two days before digging.** Workers will visit your property free of charge to mark the location of gas lines or other underground utilities so you can avoid them.

How to plant and care for your tree

1. **Prepare the planting area.** Mark an area several times wider than the root ball diameter. Loosen this area to about the depth of the root ball.

2. **Dig the hole.** Shallow is better than deep. Ensure the sides of the hole are rough and uneven. In hard soils, a rough edge to the hole helps new roots grow out into the surrounding soil.

3. **Place the tree in the hole.** The trunk flare should be at or just above the soil surface. Planting too deep is the most common mistake since soil above the trunk flare causes the bark to rot.
   - **For containerized trees**, gently remove the container from root ball. Don't pull by the trunk. Loosen roots with finger tips and prune away damaged or circling roots.
   - **For balled and burlapped trees**, rest the root ball in the center of the hole. Reshape the hole if necessary so the tree will be straight and at the proper level. Carefully, remove the burlap and any other material away from the sides and top of the root ball.

4. **Loosen the soil near the trunk.** Find the trunk flare, which should be visible at the top of the root ball. If the trunk flare is not visible, remove soil from the top of the root ball until it is visible.

5. **Tree adjustments.** Stand back and look at the tree before putting soil back into the hole. Careful adjustments can be made at this time to the planting height and the direction the branches face without seriously harming the roots.

6. **Do not add fertilizer at time of planting.** Do not add compost or other material to the hole. Fertilizer may be added at the drip line of the tree after the first year if poor growth is experienced. Follow fertilizer manufacturer's instructions; too much will injure or kill the tree.

7. **Fill the hole with original soil around the tree.** Gently backfill the hole using one-third of the soil at a time. Break up dirt clods and remove any grass, weeds or rocks. Lightly pack the soil with the shovel handle to remove air pockets. Do not stamp on or compress soil heavily. The best soil for root growth has spaces for both air and water, but not large air pockets. Refill and pack again until soil is even with top of root ball. The trunk flare should be slightly above the soil. Water thoroughly.
   - **For trees not planted in a lawn,** construct a small earthen dam or berm, less than four inches tall, with excess soil just outside of the root ball zone. This will help hold water until it soaks into the soil, rather than letting it run off. The berm is temporary while your tree becomes established and, in most cases, should be removed two years after planting.

8. **Cover the entire loosened area of soil.** Use three to four inches of mulch. Keep mulch away from the trunk of the tree to prevent disease.

9. **Stake only if tree stability is a problem.** Staking is a temporary measure to allow the trunk to develop strength. The sooner the stakes and ties are removed the stronger your tree will be. If staked, typically this should be one to two years and no longer than three. Reddy Stakes are the easiest to use and are available from your local nursery.

10. **Water:** New trees need about 1 inch of water per week for about two years. This is true for all trees including native and drought tolerant. Be careful not to drown the roots; they need air to grow as well. Water slowly by hand.

A. Dig hole no deeper than root ball.

B. Bottom of root ball on firm soil.

C. Top of root ball level with or slightly above ground.

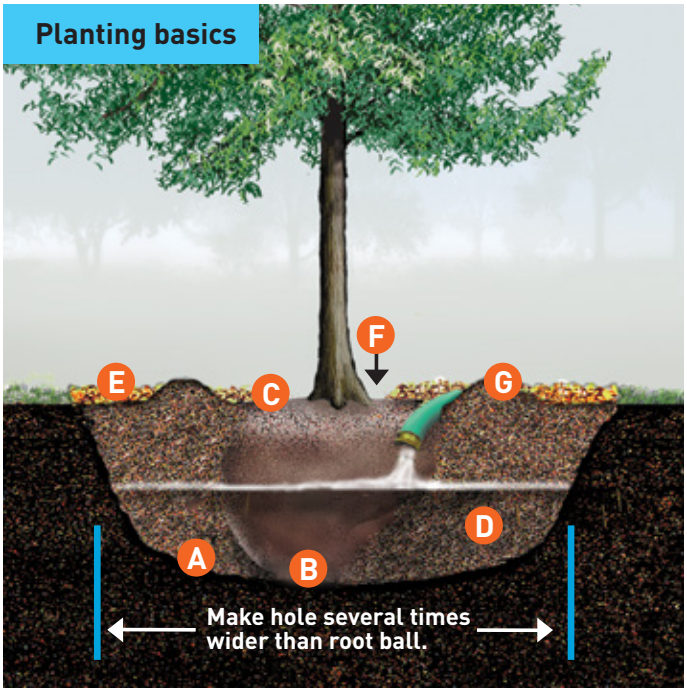
D. Backfill with original soil, tamping gently and watering briefly when filling hole.

E. Mulch 3–4 inches deep in circle around tree.

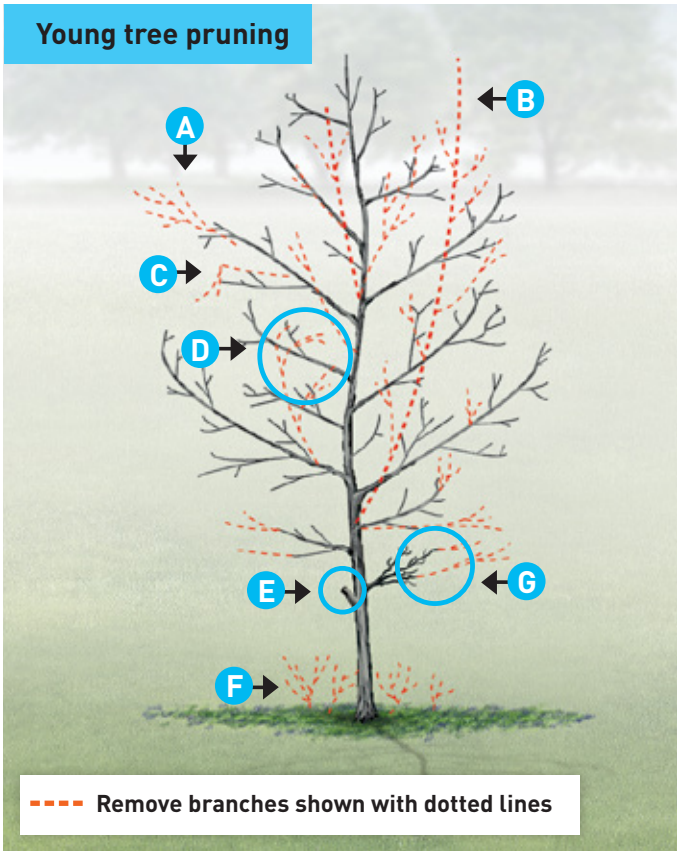
F. Keep mulch away from trunk.

G. If not planting in a lawn, build a soil dam 3–4 feet from trunk.

Planting basics



Young tree pruning



A. Remove limbs that extend beyond the natural crown of the tree.

B. Remove competing stems to develop a single trunk.

C. Remove dead, broken or crossing limbs.

D. Remove limbs that turn inward towards the trunk.

E. Do not leave branch stubs.

F. Remove root suckers and sprouts.

G. Shorten low branches to develop trunk thickness.

Key characteristics of recommended small trees

(Reference zone map on page 1)

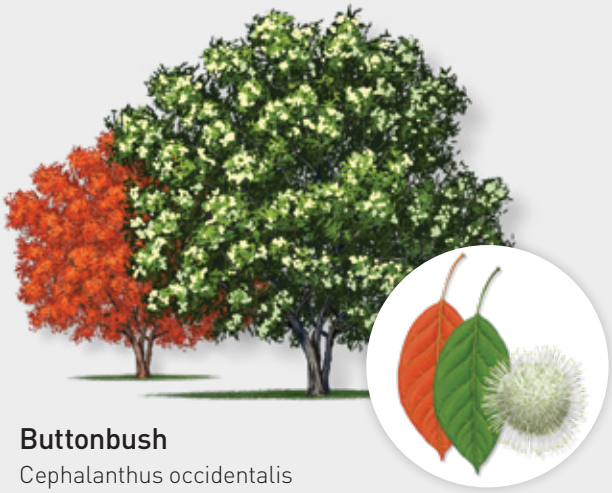
Weeping Bottlebrush

Callistemon viminalis

A beautiful tropical tree that produces scarlet blossoms March through July, this tree attracts hummingbirds and is drought tolerant. It is ideal for creating high hedges that screen views. Not suitable for windy areas or near the street. Grows well in restricted soil space.

Mature height: 25 feet. Zones 8–9, 14–17.
EVERGREEN

Fire-resistant FULL SUN–PARTIAL SHADE



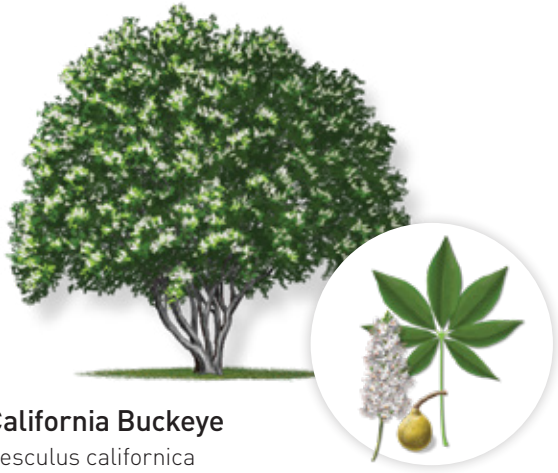
Buttonbush

Cephalanthus occidentalis

Produces unusual flowers that smell like honey and attract butterflies and hummingbirds. Its seeds provide wildlife food, especially for ducks, and its thick foliage provides habitat for many wetland birds. Useful for naturalizing wet areas.

Mature height: 20 feet. Zones 7–9, 14.
DECIDUOUS, CALIFORNIA NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE



California Buckeye

Aesculus californica

This tree, native to the dry slopes of the Coast Ranges and Sierra Nevada foothills, makes an excellent choice for low water use areas. In spring, fragrant, cream-colored flower plumes transform it into a giant candelabra. Following winter leaf drop, its silvery bark creates an interesting silhouette.

Mature height: 25 feet. Zones 7–9, 14–17.
DECIDUOUS, CALIFORNIA NATIVE

Fire-resistant FULL SUN–PARTIAL SHADE

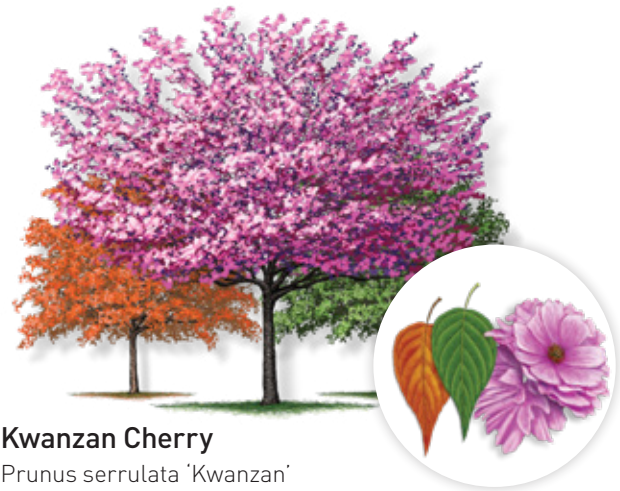
Camellia Reticulata

Camellia reticulata

The main decorative feature is its spectacular flowers, which bloom January through May. This tree is very susceptible to cold. It develops better form and heavier foliage in open ground. Good for shrub borders and screens.

Mature height: 20 feet. Zones 7–9, 14–17.
EVERGREEN

Fire-resistant PARTIAL–FULL SHADE



Kwanzan Cherry

Prunus serrulata 'Kwanzan'

A beautiful decorative flowering tree with yellow fall color, this cherry does not bear fruit. Often used near a patio or as a specimen away from lawn grass competition, this tree is not suitable for planting near the street.

Mature height: 25 feet. Zones 7, 14–17.
DECIDUOUS

Fire-resistant FULL SUN–PARTIAL SHADE

Cordia

Cordia boissieri

Wild olive is a native North American evergreen tree reportedly close to extinction. White flowers appear year-round and olive-like fruit attracts birds and other wildlife. Good near a deck or patio, in sidewalk cutouts and as a street tree.

Mature height: 20 feet. Zones 8–9, 14–17.
EVERGREEN, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE

Cockspur Coral Tree

Erythrina crista-galli

This beautiful, showy tree, which boasts brilliant red and fragrant flowers in spring, attracts hummingbirds. It is widely planted as a street or garden tree.

Mature height: 20 feet. Zones 7–9, 14–17.
DECIDUOUS

NOT fire-resistant FULL SUN

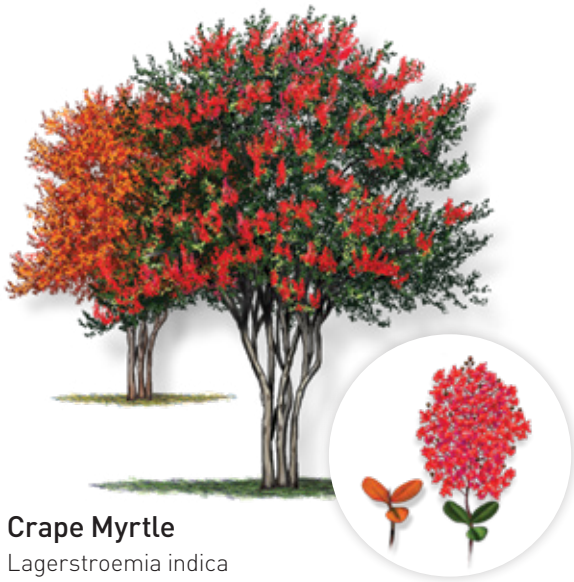
Hopa Crabapple

Malus hopa

Grown for its adaptability, fragrant flowers and attractive, brightly colored fruit, this tree creates a warm glow of color each spring. It bears edible fruit and attracts wildlife. Good for sidewalk cutouts and as a street tree.

Mature height: 25 feet. Zones 7–9, 14–17.
DECIDUOUS

NOT fire-resistant FULL SUN–PARTIAL SHADE



Crape Myrtle

Lagerstroemia indica

This is among the longest blooming trees in existence, with striking summer color and attractive fall foliage. It is a favorite small tree for landscaping. It is drought tolerant and well suited as a buffer near a street, deck or patio.

Mature height: 25 feet. Zones 7–9, 12–14.
DECIDUOUS

NOT fire-resistant FULL SUN

Dragon Tree

Dracaena draco

Native to the Canary Islands, this palm-like, tropical tree grows slowly and can live for hundreds of years. It is drought tolerant and makes a dramatic statement in landscaping. It is a good choice for coastal areas since it tolerates salty spray and soils.

Mature height: 25 feet. Zones 16–17.
EVERGREEN

NOT fire-resistant PARTIAL SHADE

Weeping Dogwood

Cornus florida

This is one of the most popular decorative trees and earliest springtime bloomers. It produces a non-edible fruit that attracts butterflies, birds and other wildlife. Use dogwood as a framing or background tree.

Mature height: 25 feet. Zones 7–9, 14–16.
DECIDUOUS

NOT fire-resistant PARTIAL–FULL SHADE

Fringe Tree

Chionanthus virginicus

One of the most beautiful small trees when in full bloom, its purple-blue fruits attract many birds and other wildlife. Famous for its sweet but not overpowering fragrance, it is most commonly used as a free standing decorative tree.

Mature height: 25 feet. Zones 15–17.
DECIDUOUS, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE

Golden Ball Lead Tree

Leucaena retusa

Bright yellow powder-puff blossoms appear April through October. They are prominent after heavy rain and attract butterflies and wildlife. It seeds itself, spreads rapidly and is drought tolerant. Good as an accent tree in a shrub border or backyard garden.

Mature height: 25 feet. Zones 7–9, 14–17.

EVERGREEN, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN

Washington Hawthorn

Crataegus phaenopyrum

The small white, abundant flowers in spring are followed by orange to red fruit that lasts until winter and attracts birds. The fall leaf color is striking orange and red. Well suited for creating a barrier or as a street tree.

Mature height: 25 feet. Zones 7–9, 14–17.

DECIDUOUS, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN

Pineapple Guava

Feijoa sellowiana

Hardiest of the subtropic trees, it blossoms in spring and produces fruit in late summer and early fall. Both flowers and fruit are edible and attract birds and bees. The plants can be pruned into a small tree or a hedge.

Mature height: 20 feet. Zones 7–9, 14–17.

EVERGREEN

NOT fire-resistant FULL SUN–PARTIAL SHADE

Yaupon Holly

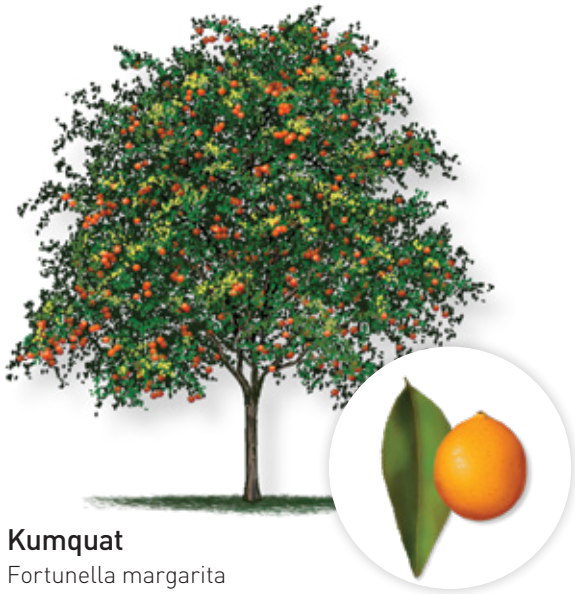
Ilex vomitoria

Tiny white flowers, which appear in spring, attract bees for several weeks. Bright red berries appear fall through winter and attract wildlife. Commonly used as a trimmed hedge, screen or windbreak. Well suited as a topiary.

Mature height: 20 feet. Zones 7–9, 14–17.

EVERGREEN, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE



Kumquat

Fortunella margarita

Fragrant flowers, which blossom in late spring, attract butterflies and become fruit that look like tiny oranges in the fall. Great ornamental element in a landscape.

Mature height: 25 feet. Zones 8–9, 14–17.

EVERGREEN

NOT fire-resistant FULL SUN

Bronze Loquat

Eriobotrya deflexa

Small white, fragrant flowers appear in spring followed by small, inedible fruits. Leaves are a bright red-bronze or coppery color. Well suited as a decorative tree near the street or a shade tree for a patio or deck.

Mature height: 25 feet. Zones 7–9, 14–17.

EVERGREEN

NOT fire-resistant FULL SUN–PARTIAL SHADE

Lemon Tree

Citrus limon

Dark green foliage and pure white, extremely fragrant blossoms make citrus a popular garden choice for frost-free locations. Juicy, fragrant edible fruit ripens in fall and winter. Well suited for shade or as a screen.

Mature height: 25 feet. Zones 8–9, 14–17.

EVERGREEN

Fire-resistant FULL SUN

Little Gem Magnolia

Magnolia grandiflora x 'little gem'

Fragrant white blossoms open to perfume the entire garden in late spring and turn into fuzzy brown cones with bright red seeds, which are used by a variety of wildlife. Well suited for a screen or hedge.

Mature height: 20 feet. Zones 7–9, 14-17.

EVERGREEN

NOT fire-resistant FULL SUN

Saucer Magnolia

Magnolia x soulangeana

Blooms open late winter to early spring producing a display of large white flowers shaded in pink. Can be used near a patio or deck. Best used as a stand-alone specimen in a sunny spot.

Mature height: 25 feet. Zones 7–9, 14–17.

DECIDUOUS

NOT fire-resistant FULL SUN–PARTIAL SHADE

Amur Maple

Acer ginnala

Its main decorative value is in its brilliant red fall foliage and pink/red-winged fruit. It is well suited as a patio tree, hedge or screen.

Mature height: 25 feet. Zones 7–9, 14–16.

DECIDUOUS

NOT fire-resistant FULL SUN–PARTIAL SHADE

Manzanita

Arctostaphylos manzanita

Popular for shiny red or mahogany colored bark, its pink to white flowers attract wildlife and provide nectar to butterflies and hummingbirds. It is very drought tolerant and looks green even in the hottest, driest part of the summer. Good for hillside covers, background plantings and screens.

Mature height: 20 feet. Zones 7–9, 14–17.

EVERGREEN, CALIFORNIA NATIVE

Fire-resistant FULL SUN–PARTIAL SHADE

Japanese Maple

Acer palmatum

Famous for its striking display of fall color when leaves turn brilliant shades of scarlet, yellow or orange, it is one of the most beautiful small trees for the landscape. Well suited as an accent tree.

Mature height: 25 feet. Zones 7–9, 14–17.

DECIDUOUS

NOT fire-resistant PARTIAL–FULL SHADE

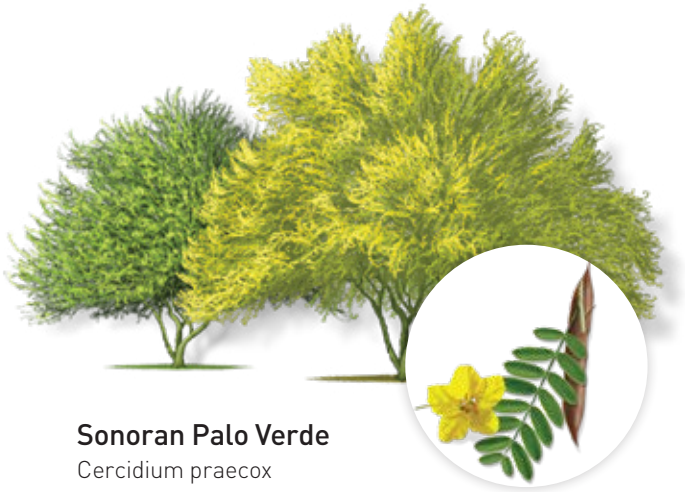
Rattan Palm

Rhapis humilis

A hardy, slow growing and graceful-looking palm variety, it is especially well suited as a dense screen or hedge or accent tree.

Mature height: 20 feet. Zones 16–17.
EVERGREEN

NOT fire-resistant PARTIAL–FULL SHADE



Sonoran Palo Verde

Cercidium praecox

Valued for its yellow floral display in spring, this plant is attractive to bees, butterflies and birds. It does well in arid climates and is tough and trouble-free. Well suited for streetscape plantings or as an accent tree.

Mature height: 20 feet. Zones 14–17.
DECIDUOUS, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN

Pinyon Pine

Pinus edulis

This rugged conifer is best known for its edible pine nuts. This pine grows slowly and does not overwhelm the surrounding area. It is more drought and wind tolerant than other pines. It provides good cover for wildlife. The tree works well in small, dry gardens and can be used to screen unwanted views, as a windbreak or an accent tree.

Mature height: 25 feet. Zones 7–9, 14–17.
EVERGREEN, CALIFORNIA NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE

Purple-Leaf Plum

Prunus cerasifera 'Newport'

Very popular for its unusual changing leaf color, which starts out ruby red, then turns reddish-purple, and finally greenish-bronze. The small white to light pink blossoms are followed by a crop of small, edible purple fruit. Often used as a decorative landscape element, it is good near patios and decks. Only plant the smaller 'Newport' or 'Thundercloud' varieties near power lines.

Mature height: 25 feet. Zones 7–9, 14–17.
DECIDUOUS

Fire-resistant FULL SUN–PARTIAL SHADE

Eastern Redbud

Cercis canadensis

Blossoms appear all over the tree in spring followed by beans, which provide food for hummingbirds and other wildlife. Not suitable as a street tree but well suited as an accent plant.

Mature height: 25 feet. Zones 7–9, 14–17.
DECIDUOUS, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE

American Smoke Tree

Cotinus obovatus

Long flowers have a fluffy, grayish-buff appearance resembling a cloud. One of the best plants for fall color with orange, purple, red and yellow leaves. Best used in a shrub border or as a patio or accent tree.

Mature height: 25 feet. Zones 7–9, 14–17.
DECIDUOUS, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE

Tangelo

Citrus reticulata x citrus maxima

Fragrant white flowers appear March through April and attract honeybees and butterflies. Edible, orange-colored fruit matures September through December. The best fruit is produced in warm summer areas. Well suited as an ornamental accent tree.

Mature height: 25 feet. Zones 8–9, 14–15.
EVERGREEN

Fire-resistant FULL SUN

Tasmanian Tree Fern

Dicksonia antarctica

Best known and hardiest of tree ferns, it has a dark brown trunk and dark green, lacy fronds that arch five to seven feet. Easy to transplant and establish, it makes a beautiful accent tree for a tropical effect or can be a backdrop to other plants.

Mature height: 20 feet. Zones 8–9, 14–17.
EVERGREEN

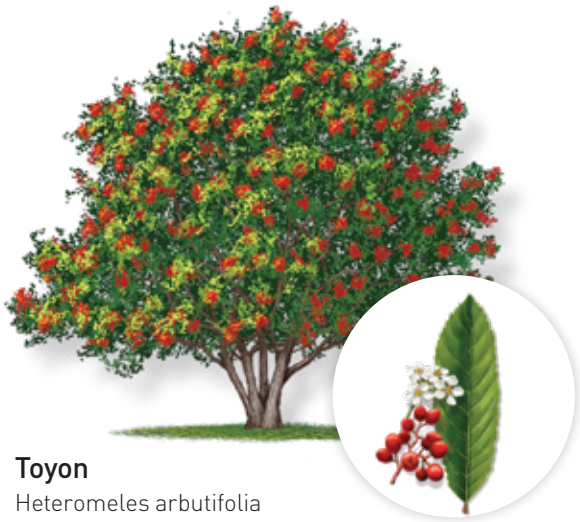
NOT fire-resistant PARTIAL–FULL SHADE

Tea Tree
Leptospermum petersonii

Leaves have a strong lemon scent and when dried are used to make tea. Small white flowers bloom in spring to early summer. This is a fast-growing plant well suited for hedges, screening unwanted views or as a windbreak.

Mature height: 20 feet. Zones 14–17.
EVERGREEN

NOT fire-resistant FULL SUN–PARTIAL SHADE

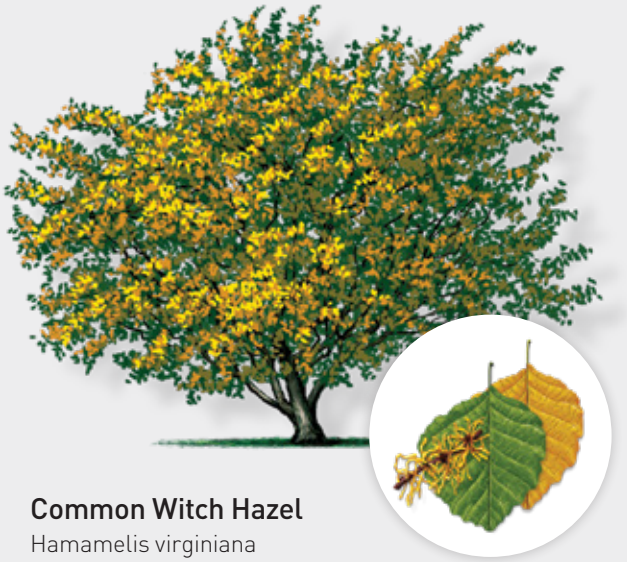


Toyon
Heteromeles arbutifolia

Also known as "Christmas Berry" or "California Holly," this evergreen is native to California Coast Ranges and is great in butterfly and bird gardens. Drought resistant and low maintenance, it blooms in summer and bears beautiful red berries in winter. It is well suited for hedges, screens for unwanted views or as an accent tree.

Mature height: 25 feet. Zones 7–9, 14–17.
EVERGREEN, CALIFORNIA NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE



Common Witch Hazel
Hamamelis virginiana

The bark of this slow growing, drought tolerant plant is the source of the liniment witch hazel. It has bright foliage and yellow and red bloom clusters in the fall. It is well suited for borders and naturalistic, shady areas.

Mature height: 25 feet. Zones 7–9, 14–16.
DECIDUOUS, NORTH AMERICAN NATIVE

NOT fire-resistant FULL SUN–PARTIAL SHADE

IMPORTANT NOTE: This guide makes recommendations for planting small trees near distribution lines only.

Near or under transmission lines, plant only low-growing shrubs. Any incompatible vegetation is subject to removal.

If you are not sure if a power line is distribution or transmission, please call us at **1-800-743-5000**.

The following is a guide to small trees suitable near distribution power lines in areas that are not at high risk for wildfire. Work with your local nursery to identify other suitable plants for your specific planting zone.

Common/Scientific name	Mature ht.	Growth/yr.	Soil	Wildlife attraction and flower facts
Bottlebrush, Weeping Callistemon viminalis	25 feet	36 inches	Wet–Dry	Hummingbirds, screening, drought tolerant. **RED FLOWERS**
Buckeye, California** Aesculus californica	25 feet	24 inches	Moist–Dry	Hummingbirds, provides screening, blooms in spring. **WHITE, FRAGRANT FLOWERS**
Buttonbush** Cephalanthus occidentalis	20 feet	24–36 inches	Wet–Moist	Hummingbirds, butterflies, wildlife habitat. **CREAM OR WHITE, FRAGRANT FLOWERS**
Camellia Reticulata Camellia reticulata	20 feet	12–24 inches	Moist	Decorative, provides screening, not suitable for cold environment. **PINK, RED FLOWERS**
Cherry, Kwanzan Prunus serrulata 'Kwanzan'	25 feet	24 inches	Moist	Fall color, no fruit, not suitable for street planting. **PINK OR ROSE, FRAGRANT FLOWERS**
Cockspur Coral Tree Erythrina crista-galli	20 feet	24 inches	Moist–Dry	Hummingbirds, good for streets and gardens. **PINK OR RED, FRAGRANT FLOWERS**
Cordia* Cordia boissieri	20 feet	24 inches	Moist–Dry	Birds and wildlife, good for streets and patios. **YELLOW OR WHITE, FRAGRANT, YEAR-ROUND FLOWERS**
Crabapple, 'Hopa' Malus 'hopa'	25 feet	36 inches	Moist	Wildlife, edible fruit, good for streets and sidewalk cutouts. **RED OR ROSE, FRAGRANT FLOWERS**
Crape Myrtle Lagerstroemia indica	25 feet	24 inches	Moist–Dry	Long blooming period, fall color, good for narrow lawns, drought tolerant. **RED, PINK, PURPLE OR WHITE FLOWERS**
Dogwood, Weeping Cornus florida	25 feet	24 inches	Moist	Butterflies and wildlife, blooms in early spring. **WHITE, FRAGRANT FLOWERS**
Dragon Tree Dracaena draco	25 feet	12 inches	Moist	Slow growing, long lasting, drought tolerant. **CHARTREUSE OR WHITE FLOWERS**
Fringe Tree* Chionanthus virginicus	25 feet	12 inches	Moist	Birds and wildlife, decorative free-standing tree. **GREEN OR WHITE, FRAGRANT FLOWERS**
Golden Ball Lead Tree* Leucaena retusa	25 feet	12–36 inches	Well Drained	Butterflies and wildlife, accent tree, drought tolerant. **YELLOW FLOWERS**
Guava, Pineapple Feijoa sellowiana	20 feet	24 inches	Moist–Dry	Birds and bees, blooms in spring, edible flower and fruit. **PURPLE, RED OR WHITE FLOWERS**
Hawthorn, Washington* Crataegus	25 feet	24 inches	Moist–Dry	Wildlife, good screen or street tree. **WHITE FLOWERS**
Holly, Yaupon* Ilex vomitoria	20 feet	24 inches	Moist	Bees and wildlife, good hedge or screen. **TINY, WHITE FLOWERS**
Kumquat Fortunella margarita	25 feet	24 inches	Moist	Butterflies, edible fruit, decorative. **WHITE, FRAGRANT FLOWERS**

Chart continued on next page

Common/Scientific name	Mature ht.	Growth/yr.	Soil	Wildlife attraction and flower facts
Lemon Tree Citrus limon	25 feet	24 inches	Moist	Edible fruit, good for shade or screening. **WHITE, FRAGRANT FLOWERS**
Loquat, Bronze Eriobotrya deflexa	25 feet	36 inches	Moist	Birds and wildlife, good for patios and decks. **WHITE, FRAGRANT FLOWERS**
Magnolia, Little Gem Magnolia grandiflora x 'little gem'	20 feet	12 inches	Moist	Wildlife, provides a dense screen. **WHITE, FRAGRANT FLOWERS**
Magnolia, Saucer Magnolia x soulangeana	25 feet	24 inches	Moist	Birds. **PINK, PURPLE OR WHITE, FRAGRANT FLOWERS**
Manzanita** Arctostaphylos manzanita	20 feet	12–24 inches	Moist–Dry	Butterflies, hummingbirds and wildlife, colorful bark. **PINK OR WHITE FLOWERS**
Maple, Amur Acer ginnala	25 feet	12–24 inches	Moist–Dry	Fall color, good for patios and decks, hedge or screen. **YELLOW, FRAGRANT FLOWERS**
Maple, Japanese Acer palmatum	25 feet	12–24 inches	Moist–Well Drained	Fall color, good as accent tree. **PURPLE FLOWERS**
Palm, Rattan Rhapis humilis	20 feet	12 inches	Moist	Good screen or hedge, decorative, drought tolerant. **INCONSPICUOUS FLOWERS**
Palo Verde, Sonoran* Cercidium praecox	20 feet	36 inches	Moist–Dry	Bees, butterflies and birds, smooth green bark, blooms in spring, drought tolerant. **YELLOW FLOWERS**
Pine, Pinyon** Pinus edulis	25 feet	12 inches	Moist–Dry	Wildlife habitat, edible seeds, drought and wind tolerant. **INCONSPICUOUS FLOWERS**
Plum, Purple-Leaf Prunus cerasifera 'Newport'	25 feet	24 inches	Moist	Winter and spring floral display, edible fruit, self-sowing. **PINK OR WHITE, FRAGRANT FLOWERS**
Redbud, Eastern* Cercis canadensis	25 feet	36 inches	Moist	Hummingbirds and wildlife. **PINK OR ROSE FLOWERS**
Smoke Tree, American* Cotinus obovatus	25 feet	12–24 inches	Well Drained	Fall color. **PINK OR WHITE, SMOKE-LIKE EFFECT FLOWERS**
Tangelo Citrus reticulata x citrus maxima	25 feet	24 inches	Moist	Bees and butterflies, blooms in spring, edible fruit. **WHITE, FRAGRANT FLOWERS**
Tasmanian Tree Fern Dicksonia antarctica	20 feet	12 inches	Moist	Cold tolerant, easy to transplant and establish, good as an accent. **NO FLOWERS**
Tea Tree Leptospermum petersonii	20 feet	24 inches	Moist–Dry	Fragrant leaves, good for hedges, screening and as a windbreak. **WHITE FLOWERS**
Toyon** Heteromeles arbutifolia	25 feet	12–24 inches	Moist–Dry	Butterflies, hummingbirds and wildlife, drought tolerant. **WHITE FLOWERS**
Witch Hazel, Common* Hamamelis virginiana	25 feet	12–24 inches	Moist	Fall foliage and flowers, drought tolerant. **YELLOW, FRAGRANT FLOWERS**

*North American Native
**California Native

Keeping the lights on and your community safe

At PG&E our most important responsibility is the safety of our customers and the communities we serve. We know how much trees mean to our communities, and we are committed to helping you ensure the right trees are located in the right places to help reduce wildfire risks and improve public safety.

Every year, we inspect each segment of **approximately 100,000 miles** of overhead power lines, with some locations patrolled multiple times a year. We prune or remove **1.4 million trees annually** and work to address dead and dying trees in areas affected by drought.

By planting the right tree in the right place, you can help reduce fire hazards, promote safety and reduce the risk of damage to properties and power lines.

For more information regarding tree planting near power lines or gas pipelines and to download a copy of this booklet, please visit: **pge.com/righttreerightplace**.

To verify the type of utility line near you, schedule an appointment with our tree care professionals or request gas pipeline planting information, please call **1-800-743-5000**.

Subject: ***NOP Comments: Draft Environmental Impact Report for the Infinite 131 Project, South San Francisco, California***

San Francisco International Airport (SFO or the Airport) staff have reviewed the Notice of Preparation (NOP) of the Draft Environmental Impact Report (DEIR) for the Infinite 131 Project (the Proposed Project), located in the City of South San Francisco (City). We appreciate this opportunity to provide comments on the NOP.

As described in the NOP, the Proposed Project is located on an approximately 17.67-acre site, identified as Assessor's Parcel Number 015-113-210. The site is currently occupied by a produce market facility (the Golden Gate Produce Terminal) and surface parking.

The Proposed Project consists of demolishing all existing structures and uses on the site and constructing six buildings containing a total of approximately 1,632,000 square feet of research and development (R&D) space and approximately 68,000 square feet of amenity space. The buildings would range in height from two stories to six stories, with the tallest building being about 114 feet tall (measured from ground level to the top of the rooftop appurtenances). A total of about 3,049 parking spaces would be provided through a combination of surface parking and two parking garages. The Proposed Project would also include two central courtyards that would provide a total of approximately 115,130 square feet of open space as well as utility and circulation improvements (e.g., new traffic signals, sidewalks, crosswalks, bikeways, and driveways connections).

Airport Influence Areas

The Proposed Project site is within two Airport Influence Areas (AIAs): Area A – Real Estate Disclosure Area (all of San Mateo County) and Area B – Policy/Project Referral Area (a smaller subarea in the northern part of San Mateo County), as defined by the *Comprehensive Airport Land Use Compatibility Plan for the Environs of San Francisco International Airport* (SFO ALUCP). Within Area A, the real estate disclosure requirements of state law apply (see attachment). A property owner offering a property for sale or lease must disclose the presence of planned or existing airports within two miles of the property. Within Area B, the Board of Directors of the City/County Association of Governments of San Mateo County, acting as the designated Airport Land Use Commission (ALUC), shall review proposed land use policy actions, including new general plans, specific plans, zoning ordinances, plan amendments and rezonings, and land development proposals (see attachment). The real estate disclosure requirements in Area A also apply in Area B.

AIRPORT COMMISSION CITY AND COUNTY OF SAN FRANCISCO

LONDON N. BREED *MAYOR* | MALCOLM YEUNG *PRESIDENT* | EVERETT A. HEWLETT, JR. *VICE PRESIDENT* | JANE NATOLI | JOSE F. ALMANZA | MARK BUELL | IVAR C. SATERO *AIRPORT DIRECTOR*

DocuSign Envelope ID: 2A18F83F-5084-4659-92C0-17338BB1BE55

SFO ALUCP Policies

The southern end of the Proposed Project site is within the 65 decibel Community Noise Equivalent Level (CNEL) contour. However, the Proposed Project does not include any land uses that are identified as conditionally compatible or not compatible in Table IV-1: Noise/Land Use Compatibility Criteria, of the SFO ALUCP. The Proposed Project site is outside of all safety compatibility zones. Therefore, the Proposed Project would not appear to be inconsistent with the Noise and Safety Compatibility Policies adopted in the SFO ALUCP.

As described in Exhibit IV-17 of the SFO ALUCP (see attachment), the critical aeronautical surfaces at the Proposed Project are at an elevation of approximately 130 feet above mean sea level (AMSL).[1] The elevation of the Proposed Project site ranges from about 8.5 feet to about 12.5 feet AMSL. The buildings would range in height from two stories to six stories, and the tallest building would be about 114 feet tall (an elevation of about 126.5 feet AMSL), which would be lower than the elevation of the lowest critical aeronautical surface. The Proposed Project would not appear to be inconsistent with Airspace Protection Policy AP-3 (Maximum Compatible Building Height) of the SFO ALUCP, subject to the issuance of a Determination of No Hazard from the Federal Aviation Administration (FAA) for any proposed structures (see below), and determinations from the City/County Association of Governments of San Mateo County as the designated ALUC.

However, this presumption is based on limited information as the site plan included in the NOP does not specify the exact location of the tallest building or provide its elevation AMSL. The project description and figures in the DEIR should specify the elevation AMSL of each building, and the DEIR analysis of the Proposed Project's impacts related to hazards and hazardous materials should discuss the Proposed Project's consistency with Airspace Protection Policy AP-3 of the SFO ALUCP.

This evaluation does not waive the requirement for the Proposed Project sponsor to undergo Federal Aviation Administration airspace review as described in 14 Code of Federal Regulations Part 77 for both (1) the permanent structures and (2) any equipment taller than the permanent structures required to construct those structures.

The NOP states that "the proposed buildings would be tied together through a cohesive network of landscaping and open space," with two central courtyards providing approximately 115,130 square feet of open space. Landscaping for the proposed courtyards has the potential to attract wildlife. To ensure compliance with Airspace Protection Policy AP-4 (Other Flight Hazards Are Incompatible), the Airport suggests that the sponsor consider planting low-lying vegetation/brush of a non-seeding variety that does not provide cover or shelter for wildlife and trees that provide minimal roosting opportunities for birds.

* * *

The Airport appreciates your consideration of these comments. If I can be of assistance, please do not hesitate to contact me at (650) 821-6678 or at nupur.sinha@flysfo.com.

[1] The elevation above mean sea level is defined from the origin of the North American Vertical Datum of 1988.

4.2 Airport Influence Area (AIA)

The AIA for SFO includes two parts: Area A and Area B. Area A is the larger of the two areas and encompasses all of San Mateo County. Area B lies within Area A and includes land exposed to aircraft noise above CNEL 65 dB or lying below critical airspace.

Area A, depicted on **Exhibit IV-1**, includes the entire county, all of which is overflown by aircraft flying to and from SFO at least once per week at altitudes of 10,000 feet or less above mean sea level (MSL). (Appendix L explains the rationale for defining the AIA Area A boundary.)

Area B of the AIA, depicted on **Exhibit IV-2**, is based on a combination of the outer boundaries of the noise compatibility and safety zones, the 14 CFR Part 77 conical surface, and the TERPS approach and One-Engine Inoperative (OEI) departure surfaces.[1] As depicted on Exhibit IV-2, the Area B boundary has been adjusted to follow streets, highways, and corporate boundaries to make it easier to identify and implement. See **Exhibit IV-3** for a close-up view of the northwestern half of Area B and **Exhibit IV-4** for a close-up view of the southeastern half.

The following AIA policies (IP) shall apply to the ALUCP.

IP-1 AIRPORT INFLUENCE AREA A – REAL ESTATE DISCLOSURE AREA

Within Area A, the real estate disclosure requirements of state law apply. Section 11010 of the Business and Professions Code requires people offering subdivided property for sale or lease to disclose the presence of all existing and planned airports within two miles of the property.[2] The law requires that, if the property is within an "airport influence area" designated by the airport land use commission, the following statement must be included in the notice of intention to offer the property for sale:

NOTICE OF AIRPORT IN VICINITY

This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

[1] On the northwest side, the Area B boundary corresponds to the 800-foot elevation line of the TERPS approach surface and the OEI departure surface. On the southeast side, the Area B boundary corresponds with the transitional surfaces rising from the flat, central portion of the TERPS surface having an elevation of 210 feet MSL. See Exhibits IV-17 and IV-18 for a detailed depiction of the airspace surfaces.

[2] California Business and Professions Code, Section 11010(b)(13).

IP-2 AIRPORT INFLUENCE AREA B – POLICY/PROJECT REFERRAL AREA

Within Area B, the Airport Land Use Commission (the C/CAG Board) shall exercise its statutory duties to review proposed land use policy actions, including new general plans, specific plans, zoning ordinances, plan amendments and rezonings, and land development proposals. The real estate disclosure requirements in Area A also apply in Area B. For the purposes of this policy, parcels along the edge of the Area B Boundary that are split by the boundary shall be considered as fully being within Area B.

Portions of unincorporated San Mateo County and the following municipalities are located within Area B:

- Daly City – small part of the city in the Serramonte area
- Colma –the entire town
- Pacifica – north and northeast of the city
- South San Francisco – all but north and west sides of the city
- San Bruno – all but northwest corner of the city
- Millbrae – the entire city
- Burlingame – the entire city
- Hillsborough – the northern part of the town, north of Chateau Drive
- San Mateo – a few blocks in the City of San Mateo
- Foster City – the northern part of the City
- Unincorporated San Mateo County: California Golf Club, Country Club Park, Burlingame Hills, and San Francisco International Airport

The following special districts are located within Area B of the AIA:

- North San Mateo County Sanitation District
- Peninsula Health Care District
- San Mateo County Flood Control District
- San Mateo County Harbor District
- San Mateo County Mosquito & Vector Control District
- Westborough County Water District

The following school districts and community college district are located within Area B:

- Bayshore Elementary School District
- Brisbane Elementary School District
- Burlingame Elementary School District

- Pacifica School District
- San Bruno Park Elementary School District
- San Mateo County Community College District
- San Mateo Foster City Elementary School District
- San Mateo Union High School District
- South San Francisco Elementary School District

4.3 Noise Compatibility Policies

The airport noise compatibility policies described in this section have a two-fold purpose:

1. To protect the public health, safety, and welfare by minimizing the exposure of residents and occupants of future noise-sensitive development to excessive noise.

2. To protect the public interest in providing for the orderly development of SFO by ensuring that new development in the Airport environs complies with all requirements necessary to ensure compatibility with aircraft noise in the area. The intent is to avoid the introduction of new incompatible land uses into the Airport's "noise impact area" so that the Airport will continue to be in compliance with the State Noise Standards for airports (California Code of Regulations, Title 21, Sections 5012 and 5014).[3]

The following noise compatibility policies (NP) shall apply to the ALUCP.

NP-1 NOISE COMPATIBILITY ZONES

For the purposes of this ALUCP, the projected 2020 CNEL noise contour map from the Draft Environmental Assessment for the Proposed Runway Safety Area Program shall define the boundaries within which noise compatibility policies described in this Section shall apply.[4] **Exhibit IV-5** depicts the noise compatibility zones. More detail is provided on **Exhibit IV-6**. The zones are defined by the CNEL 65, 70 and 75 dB contours.

[3] In 2002, the San Mateo County Board of Supervisors declared that the Airport had eliminated its "noise impact area," as defined under state law -- California Code of Regulations, Title 21, Sections 5012 and 5014.

[4] URS Corporation and BridgeNet International. *Draft Environmental Assessment, Proposed Runway Safety Area Program, San Francisco International Airport*, June 2011.

DocuSign Envelope ID: 2A18F83F-5084-4659-92C0-17338BB1BE55

and associated with human disease of varying severity.

b. Biosafety Level 3 practices, safety equipment, and facility design and construction are applicable to clinical, diagnostic, teaching, research, or production facilities in which work is done with indigenous or exotic agents with a potential for respiratory transmission, and which may cause serious and potentially lethal infection.

c. Biosafety Level 4 practices, safety equipment, and facility design and construction are applicable for work with dangerous and exotic agents that pose a high individual risk of life-threatening disease, which may be transmitted via the aerosol route and for which there is no available vaccine or therapy.

4.5 Airspace Protection

The compatibility of proposed land uses with respect to airspace protection shall be evaluated in accordance with the policies set forth in this section. These policies are established with a twofold purpose:

1. To protect the public health, safety, and welfare by minimizing the public's exposure to potential safety hazards that could be created through the construction of tall structures.

2. To protect the public interest in providing for the orderly development of SFO by ensuring that new development in the Airport environs avoids compromising the airspace in the Airport vicinity. This avoids the degradation in the safety, utility, efficiency, and air service capability of the Airport that could be caused by the attendant need to raise visibility minimums, increase minimum rates of climb, or cancel, restrict, or redesign flight procedures.

4.5.1 FEDERAL REGULATIONS REGARDING TALL STRUCTURES

14 Code of Federal Regulations (CFR) Part 77, *Safe, Efficient Use and Preservation of the Navigable Airspace*, governs the FAA's review of proposed construction exceeding certain height limits, defines airspace obstruction criteria, and provides for FAA aeronautical studies of proposed construction. **Appendix F** describes the FAA airspace review process and the extent of FAA authority related to airspace protection.

4.5.2 PART 77, SUBPART B, NOTIFICATION PROCESS

Federal regulations require any person proposing to build a new structure or alter an existing structure with a height that would exceed the elevations described in CFR Part 77, Subpart B, Section 77.9, to prepare an FAA Form 7460-1, *Notice of Proposed Construction or Alteration*, and submit the notice to the FAA. The regulations apply to buildings and other structures or portions of structures, such as mechanical equipment, flag poles, and other projections that may exceed the aforementioned elevations.

DocuSign Envelope ID: 2A18F83F-5084-4659-92C0-17338BB1BE55

Exhibit IV-10 depicts the approximate elevations at which the 14 CFR Part 77 notification requirements would be triggered; see **Exhibit IV-11** for a close-up view of the northern half and **Exhibit IV-12** for a close-up view of the southern half of the area. These exhibits are provided for informational purposes only. Official determinations of the areas and elevations within which the federal notification requirements apply are subject to the authority of the FAA. The FAA is empowered to require the filing of notices for proposed construction based on considerations other than height. For example, in some areas of complex airspace and high air traffic volumes, the FAA may be concerned about the potential for new construction of any height to interfere with electronic navigation aids. In these areas, the FAA will want to review all proposed construction projects.

The FAA has developed an on-line tool for project sponsors to use in determining whether they are required to file a Notice of Proposed Construction or Alteration. Sponsors of proposed projects are urged to refer to this website to determine whether they are required to file Form 7460-1 with the FAA:

https://oeaaa.faa.gov/oeaaa/external/gisTools/gisAction.jsp?action=showNoNoticeRequiredToolForm

4.5.3 AIRSPACE MAPPING

Part 77, Subpart C, establishes obstruction standards for the airspace around airports including approach zones, conical zones, transitional zones, and horizontal zones known as "imaginary surfaces." **Exhibit IV-13** depicts the Part 77 Civil Airport Imaginary Surfaces at SFO. The imaginary surfaces rise from the primary surface, which is at ground level immediately around the runways. The surfaces rise gradually along the approach slopes associated with each runway end and somewhat more steeply off the sides of the runways. The FAA considers any objects penetrating these surfaces, whether buildings, trees or vehicles travelling on roads and railroads, as obstructions to air navigation. Obstructions may occur without compromising safe air navigation, but they must be marked, lighted, and noted on aeronautical publications to ensure that pilots can see and avoid them.

Close-up views of the north and south sides of the Part 77 surfaces are provided in **Exhibit IV-14** and **Exhibit IV-15**, respectively. Additionally, **Exhibit IV-16** provides an illustration of the outer approach and transitional surfaces located on the southeast side of the Part 77 surfaces.

Together with its tenant airlines, SFO has undertaken a mapping effort to illustrate the critical aeronautical surfaces that protect the airspace required for multiple types of flight procedures such as those typically factored into FAA aeronautical studies, as shown on **Exhibit IV-17** and **Exhibit IV-18**. These aeronautical surfaces include those established in accordance with FAA Order 8260.3B, *U.S. Standard for Terminal Instrument Procedures (TERPS)*, and a surface representing the airspace required for One-Engine Inoperative (OEI) departures from Runway 28L (to the west through the San Bruno Gap).[16] The exhibits depict the lowest elevations from the combination of the OEI procedure surface and all TERPS surfaces. The surfaces are defined with Required Obstacle Clearance (ROC) criteria to ensure safe separation of aircraft using the procedures from the underlying obstacles. Any proposed structures penetrating these surfaces are likely to receive Determinations of Hazard (DOH) from the FAA through the 7460-1 aeronautical study process. These surfaces indicate the maximum height at which structures can be considered compatible with Airport operations.

[16] See Appendix F, Section F.3.2 for a discussion of one-engine inoperative procedures.

Notes:

1. This map is intended for informational and conceptual planning purposes, generally representing the aeronautical surfaces considered most critical by San Francisco International Airport (SFO) and its constituent airlines. It does not represent actual survey data, nor should it be used as the sole source of information regarding compatibility with airspace clearance requirements in the development of data for an FAA Form 7460-1, Notice of Proposed Construction or Alteration. SFO does not certify its accuracy, information, or title to the properties contained in this plan. SFO does make any warrants of any kind, express or implied, in fact or by law, with respect to boundaries, easements, restrictions, claims, overlaps, or other encumbrances affecting such properties.

2. This map does not replace the FAA's obstruction evaluation / airport airspace analysis (OE/AAA) review process. Proposing construction at elevations and heights that are lower than the critical aeronautical surfaces shown on this map, (a) does not relieve the construction sponsor of the obligation to file an FAA Form 7460-1, and (b) does not ensure that the proposal will be acceptable to the FAA, SFO, air carriers, or other agencies or stakeholders. SFO, San Mateo County, and local authorities having jurisdiction reserve the right to re-assess, review, and seek modifications to projects that may be consistent with this critical aeronautical surfaces map but that through the FAA OE/AAA process are found to have unexpected impacts to the safety or efficiency of operations at SFO.

DocuSign Envelope ID: 2A18F83F-5084-4659-92C0-17338BB1BE55

Exhibit IV-19, which is provided for information purposes only, depicts a profile view of the lowest critical airspace surfaces along the extended centerline of Runway 10L-28R – the TERPS Obstacle Departure Procedure (ODP) surface, representing standard all-engines departures, and the approximate OEI surface developed by SFO through independent study in consultation with the airlines serving SFO. The exhibit also shows the terrain elevation beneath the airspace surfaces and various aircraft approach and departure profiles, based on varying operating assumptions. The exhibit illustrates a fundamental principle related to the design of airspace protection surfaces. The surfaces are always designed below the actual aircraft flight profile which they are designed to protect, thus providing a margin of safety. Note that the ODP climb profile is above the ODP airspace surface, and the OEI climb profile is above the OEI airspace surface.

4.5.4 AIRSPACE PROTECTION POLICIES

The following airspace protection policies (AP) shall apply to the ALUCP.

AP-1 COMPLIANCE WITH 14 CFR PART 77, SUBPART B, NOTICE OF PROPOSED CONSTRUCTION OR ALTERATION

AP-1.1 Local Government Responsibility to Notify Project Sponsors

Local governments should notify sponsors of proposed projects at the earliest opportunity to file Form 7460-1, *Notice of Proposed Construction or Alteration*, with the FAA for any proposed project that would exceed the FAA notification heights, as shown approximately on Exhibit IV-10. Under Federal law, it is the responsibility of the project sponsor to comply with all notification and other requirements described in 14 CFR Part 77. This requirement applies independent of this ALUCP.

AP-1.2 FAA Aeronautical Study Findings Required Before Processing Development Application

The sponsor of a proposed project that would exceed the FAA notification heights, as shown approximately on Exhibit IV-10, shall present to the local government permitting agency with his or her application for a development permit, a copy of the findings of the FAA's aeronautical study, or evidence demonstrating that he or she is exempt from having to file an FAA Form 7460-1. It is the responsibility of the local agency to consider the FAA determination study findings as part of its review and decision on the proposed project.

AP-2 COMPLIANCE WITH FINDINGS OF FAA AERONAUTICAL STUDIES

Project sponsors shall be required to comply with the findings of FAA aeronautical studies with respect to any recommended alterations in the building design and height and any recommended marking and lighting of their structures for their proposed projects to be deemed consistent with this ALUCP.

DocuSign Envelope ID: 2A18F83F-5084-4659-92C0-17338BB1BE55

AP-3 MAXIMUM COMPATIBLE BUILDING HEIGHT

In order to be deemed consistent with the ALUCP, the maximum height of a new building must be the lower of (1) the height shown on the SFO critical aeronautical surfaces map (Exhibits IV-17 and IV-18), or (2) the maximum height determined not to be a "hazard to air navigation" by the FAA in an aeronautical study prepared pursuant to the filing of Form 7460-1.

For the vast majority of parcels, the height limits established in local zoning ordinances are lower than the critical airspace surfaces. In those cases, the zoning district height regulations will control. Compliance with the zoning district height and the SFO critical aeronautical surfaces map, however, does not relieve the construction sponsor of the obligation to file a FAA Form 7460-1 *Notice of Proposed Construction or Alteration*, if required, and to comply with the determinations resulting from the FAA's aeronautical study.

For a project to be consistent with this ALUCP, no local agency development permits shall be issued for any proposed structure that would penetrate the aeronautical surfaces shown on Exhibits IV-17 and IV-18 or the construction of which **has not** received a Determination of No Hazard from the FAA, or which would cause the FAA to increase the minimum visibility requirements for any instrument approach or departure procedure at the Airport.

AP-4 OTHER FLIGHT HAZARDS ARE INCOMPATIBLE

Proposed land uses with characteristics that may cause visual, electronic, or wildlife hazards, particularly bird strike hazards, to aircraft taking off or landing at the Airport or in flight are incompatible in Area B of the Airport Influence Area. They may be permitted only if the uses are consistent with FAA rules and regulations. Proof of consistency with FAA rules and regulations and with any performance standards cited below must be provided to the Airport Land Use Commission (C/CAG Board) by the sponsor of the proposed land use action.

Specific characteristics that may create hazards to aircraft in flight and which are incompatible include:

(a) Sources of glare, such as highly reflective buildings or building features, or bright lights, including search lights or laser displays, which would interfere with the vision of pilots making approaches to the Airport.

(b) Distracting lights that that could be mistaken by pilots on approach to the Airport for airport identification lighting, runway edge lighting, runway end identification lighting, or runway approach lighting.

(c) Sources of dust, smoke, or water vapor that may impair the vision of pilots making approaches to the Airport.

(d) Sources of electrical interference with aircraft or air traffic control communications or navigation equipment, including radar.

(e) Land uses that, as a regular byproduct of their operations, produce thermal plumes with the potential to rise high enough and at sufficient velocities to interfere with the control of aircraft in

DocuSign Envelope ID: 2A18F83F-5084-4659-92C0-17338BB1BE55

flight. Upward velocities of 4.3 meters (14.1 feet) per second at altitudes above 200 feet above the ground shall be considered as potentially interfering with the control of aircraft in flight.[17]

(f) Any use that creates an increased attraction for wildlife, particularly large flocks of birds, that is inconsistent with FAA rules and regulations, including, but not limited to, FAA Order 5200.5A, *Waste Disposal Sites On or Near Airports*, FAA Advisory Circular 150/5200-33B, *Hazardous Wildlife Attractants On or Near Airports*, and any successor or replacement orders or advisory circulars. Exceptions to this policy are acceptable for wetlands or other environmental mitigation projects required by ordinance, statute, court order, or Record of Decision issued by a federal agency under the National Environmental Policy Act.

4.5.5 iALP AIRSPACE TOOL

In consultation with C/CAG, SFO developed the iALP Airspace Tool, a web-based, interactive tool to evaluate the relationship of proposed buildings with the Airport's critical airspace surfaces. The iALP Airspace Tool is designed to assist planners, developers, and other interested persons with the implementation of the airspace protection policies of the SFO ALUCP. The tool helps users determine: (1) the maximum allowable building height at a given site, and/or (2) whether a building penetrates a critical airspace surface, and by how much, given the proposed building height.

A more detailed description of the iALP Airspace Tool and a tutorial explaining how to use it is presented in **Appendix J**. Use of this tool, however, does not relieve a project sponsor of the duty to comply with all federal regulations, including the obligation to file Form 7460-1, Notice of Proposed Construction or Alteration, with the FAA.

[17] This is a threshold established by the California Energy Commission in its review of power plant licensing applications. See *Blythe Solar Power Project: Supplemental Staff Assessment, Part 2*,. CEC-700-2010-004-REV1-SUP-PT2, July 2010. California Energy Commission. Docket Number 09-AFC-6, p. 25. This criterion is based on guidance established by the Australian Government Civil Aviation Authority (Advisory Circular AC 139-05(0), June 2004). The FAA's Airport Obstructions Standards Committee (AOSC) is studying this matter but has not yet issued specific guidance.

Subject: Infinite 131 Project, Notice of Preparation of a Draft Environmental Impact Report, SCH No. 2023110023, City of South San Francisco, San Mateo County

Dear Mr. Gross:

The California Department of Fish and Wildlife (CDFW) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report (EIR) from the City of South San Francisco (City) for the Infinite 131 Project (Project).

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is a **Trustee Agency** with responsibility under the California Environmental Quality Act (CEQA) for commenting on projects that could impact fish, plant, and wildlife resources (Pub. Resources Code, § 21000 et seq.; Cal. Code Regs., tit. 14, § 15386). CDFW is also considered a **Responsible Agency** if a project would require discretionary approval, such as a permit pursuant to the California Endangered Species Act (CESA) or Native Plant Protection Act (NPPA), the Lake and Streambed Alteration (LSA) Program, and other provisions of the Fish and Game Code that afford protection to the state's fish and wildlife trust resources. Pursuant to our authority, CDFW has the following concerns, comments, and recommendations regarding the Project.

PROJECT DESCRIPTION AND LOCATION

The proposed Project consists of the demolition of approximately 126,750 square feet (sf) of industrial and operational uses that are currently occupied by the Golden Gate Produce Terminal, along with approximately 116,572 sf of open-air structures (e.g., loading docks, trash compactor areas), on a 17.67-acre site identified as Assessor's Parcel Number (APN) 015-113-210. The proposed Project would construct

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

approximately 1.7 million sf of research-and-development uses and amenities within six buildings, ranging from two to six stories, and two parking garages that are above and below ground level. The proposed Project would also amend the General Plan, Specific Plan, and Zoning Code to redesignate five parcels north of the Project site across Terminal Court, APNs 015-113-350, 015-113-290, 015-113-340, 015-113-330, and 015-113-320, to be consistent with the proposed land use and zoning for the Project site.

The Project site is located in the City of South San Francisco, at 131 Terminal Court, South San Francisco, CA 94080, Latitude 37.64577, Longitude -122.40729, APNs: 015-113-210, 015-113-350, 015-113-290, 015-113-340, 015-113-330, and 015-113-320.

The CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000 et seq.) require that the EIR incorporate a full Project description, including reasonably foreseeable future phases of the Project, that contains sufficient information to evaluate and review the Project's environmental impact (CEQA Guidelines, §§ 15124 & 15378). Please include a complete description of the following Project components in the Project description:

- Land use changes resulting from, for example, rezoning certain areas;
- Footprints of permanent Project features and temporarily impacted areas, such as staging areas and access routes;
- Area and plans for any proposed buildings/structures, ground-disturbing activities, fencing, paving, stationary machinery, landscaping, and stormwater systems;
- Operational features of the Project, including level of anticipated human presence (describe seasonal or daily peaks in activity, if relevant), artificial lighting/light reflection, noise, traffic generation, and other features; and
- Construction schedule, activities, equipment, and crew sizes.

REGULATORY REQUIREMENTS

California Endangered Species Act and Native Plant Protection Act

Please be advised that a CESA Incidental Take Permit (ITP) must be obtained if the Project has the potential to result in "take" of plants or animals listed under CESA or NPPA, either during construction or over the life of the Project. Under CESA, "take" means "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." (Fish & G. Code, § 86). If the Project will impact CESA listed species, such as those identified in **Attachment 1**, early consultation is encouraged, as significant modification to the Project and mitigation measures may be required in order to obtain a CESA ITP. CDFW's issuance of an ITP is subject to CEQA and to facilitate Permit

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

issuance, any such Project modifications and mitigation measures must be incorporated into the EIR's analysis, discussion, and mitigation monitoring and reporting program.

CEQA requires a Mandatory Finding of Significance if a project is likely to substantially restrict the range or reduce the population of a threatened or endangered species (Pub. Resources Code, §§ 21001, subd. (c) & 21083; CEQA Guidelines, §§ 15380, 15064, & 15065). In addition, pursuant to CEQA, the Lead Agency cannot approve a project unless all impacts to the environment are avoided or mitigated to less-than-significant levels, or the Lead Agency makes and supports findings of overriding consideration for impacts that remain significant despite the implementation of all feasible mitigation. Findings of Overriding Consideration (FOC) under CEQA, however, do not eliminate the Project proponent's obligation to comply with the Fish and Game Code.

Lake and Streambed Alteration

An LSA Notification, pursuant to Fish and Game Code sections 1600 et. seq., is required for Project activities affecting lakes or streams and associated riparian habitat. Notification is required for any activity that will substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank including associated riparian or wetland habitat; or deposit or dispose of material where it may pass into a river, lake or stream. Work within ephemeral streams, washes, watercourses with a subsurface flow, and floodplains are generally subject to notification requirements. CDFW may not execute the final LSA Agreement until it has considered the final EIR and complied with its responsibilities as a responsible agency under CEQA.

Fully Protected Species

Fully protected species may not be taken or possessed at any time and no licenses or permits may be issued for their take, except for collecting these species for necessary scientific research, management, or relocation of a fully protected bird species for the protection of livestock. Take of any fully protected species is prohibited, and CDFW cannot authorize their take in association with a general project except under the provisions of a Natural Communities Conservation Plan (NCCP), Fish and Game Code section 2081.7, a Restoration Management Permit, or a Memorandum of Understanding for scientific research purposes. "Scientific Research" does not include an action taken as part of specified mitigation for a project, as defined in section 21065 of the Public Resources Code.

ENVIRONMENTAL SETTING

The draft EIR should provide sufficient information regarding the environmental setting ("baseline") to understand the Project's, and its alternatives (if applicable), potentially significant impacts on the environment (CEQA Guidelines, §§ 15125 & 15360).

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

CDFW recommends that the CEQA document prepared for the Project provide baseline habitat assessments for special-status plant, fish and wildlife species located and potentially located within the Project area and surrounding lands, including, but not limited to, all rare, threatened, or endangered species (CEQA Guidelines, § 15380). The EIR should describe aquatic habitats, such as wetlands or waters of the U.S. or state, and any sensitive natural communities or riparian habitat occurring on or adjacent to the Project site (for sensitive natural communities see: https://wildlife.ca.gov/Data/VegCAMP/NaturalCommunities#sensitive%20natural%20communities), and any stream or wetland set back distances the City may require. Fully protected, threatened, or endangered, candidate, and other special-status species that are known to occur, or have the potential to occur in or near the Project site, include, but are not limited to, those listed in **Attachment 1**.

Habitat descriptions and the potential for species occurrence included in the EIR should include robust information from multiple sources: aerial imagery, historical and recent survey data, field reconnaissance, scientific literature and reports, U.S. Fish and Wildlife Service's (USFWS) Information, Planning, and Consultation System, California Aquatic Resources Inventory, and findings from "positive occurrence" databases such as California Natural Diversity Database (CNDDB). Only with sufficient data and information from the habitat assessment, can the City adequately assess which special-status species are likely to occur on or near the Project site, and whether they could be impacted by the Project.

CDFW recommends that prior to Project implementation, surveys be conducted for special-status species with potential to occur, following recommended survey protocols if available. Survey and monitoring protocols and guidelines are available at: https://www.wildlife.ca.gov/Conservation/Survey-Protocol.

Botanical surveys for special-status plant species, including those with a California Rare Plant Rank (CRPR) (http://www.cnps.org/cnps/rareplants/inventory/)[1], must be conducted during the blooming period within the Project area and adjacent habitats that may be indirectly impacted by, for example, changes to hydrological conditions, and require the identification of reference populations. More than one year of surveys may be necessary based on environmental conditions. Please refer to CDFW protocols for surveying and evaluating impacts to special-status plants available at: https://www.wildlife.ca.gov/Conservation/Plants.

[1] CRPR 1B plants are considered rare, threatened, or endangered in California and elsewhere. Further information on CRPR ranks is available in CDFW's *Special Vascular Plants, Bryophytes, and Lichens List* (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109383&inline) and on the California Native Plant Society website (https://www.cnps.org/rare-plants/cnps-inventory-of-rare-plants).

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

IMPACT ANALYSIS AND MITIGATION MEASURES

The draft EIR should discuss all direct and indirect impacts (temporary and permanent) that may occur with implementation of the Project (CEQA Guidelines, § 15126.2). This includes evaluating and describing impacts such as:

- Land use changes that would reduce open-space or agricultural land uses and increase residential or other land use involving increased development;
- Encroachments into riparian habitats, wetlands or other sensitive areas;
- Potential for impacts to special-status species;
- Loss or modification of breeding, nesting, dispersal and foraging habitat, including vegetation removal, alternation of soils and hydrology, and removal of habitat structural features (e.g., snags, roosts, vegetation overhanging banks);
- Permanent and temporary habitat disturbances associated with ground disturbance, noise, lighting, reflection, air pollution, traffic or human presence; and
- Obstruction of movement corridors, fish passage, or access to water sources and other core habitat features related directly to Project construction and indirectly through water supply impacts to stream resources resulting from Project implementation.

The draft EIR should also identify existing and reasonably foreseeable future projects in the Project vicinity, disclose any cumulative impacts associated with these projects, determine the significance of each cumulative impact, and assess the significance of the project's contribution to each impact (CEQA Guidelines, §15355). Although a project's impacts may be insignificant individually, its contributions to a cumulative impact may be considerable; a contribution to a significant cumulative impact – e.g., reduction of available habitat for a special-status species – should be considered cumulatively considerable without mitigation to minimize or avoid the impact.

The CEQA Guidelines direct the City, as the Lead Agency, to consider and describe in the EIR all feasible mitigation measures to avoid and/or mitigate potentially significant impacts of the Project on the environment based on comprehensive analysis of the direct, indirect, and cumulative impacts of the Project (CEQA Guidelines, §§ 15021, 15063, 15071, 15126.2, 15126.4 & 15370). This should include a discussion of impact avoidance and minimization measures for special-status species, which are recommended to be developed in early consultation with CDFW, USFWS, and the National Marine Fisheries Service. These measures can then be incorporated as

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

enforceable Project conditions to reduce potential impacts to biological resources to less-than-significant levels.

COMMENTS AND RECOMMENDATIONS

COMMENT 1: Riparian Setbacks

Issue: The Project has the potential to encroach into the riparian zone from development of a new research and development building. Encroachment into the riparian zone can negatively impact sensitive riparian and aquatic species through reduction of habitat and decreased water quality. The Project could cause altered channel bed material mobilization and distribution and increased channel scour, which could affect native fish, aquatic organisms, and riparian communities. The Project's construction and operation activities could also cause significant alteration of substrate and increased stream sedimentation that could disrupt or deter fish spawning, other aquatic fauna reproduction, and impair aquatic habitat diversity.

Evidence impact would be significant: Riparian vegetation, and associated floodplains, provide many essential benefits to stream and aquatic species habitat, including thermal protection, cover, and large woody debris (Moyle 2002, CDFW 2007). Development adjacent to the riparian zone can result in fragmentation of riparian habitat and decreases in native species abundance and biodiversity (Davies et al. 2001, Hansen et al. 2005, CDFW 2007). Riparian buffers help keep pollutants from entering adjacent waters through a combination of processes including dilution, sequestration by plants and microbes, biodegradation, chemical degradation, volatilization, and entrapment within soil particles. Narrow riparian buffers are considerably less effective in minimizing the effects of adjacent development than wider buffers (Castelle et al. 1992, Brosofske et al. 1997, Dong et al. 1998, Kiffney et al. 2003, Moore et al. 2005).

Recommendation 1: CDFW recommends the Project establish and the draft EIR incorporate riparian buffer zones to limit development and vegetation clearing to outside of and away from riparian areas. CDFW is available to consult with the City to determine appropriate site-specific riparian buffers to reduce impacts to sensitive species and riparian habitat to less-than-significant. At a minimum, CDFW recommends a 50-foot riparian buffer as measured from the top of streambank to the nearest Project infrastructure.

Recommendation 2: CDFW recommends the Project perform an assessment to determine if bank stabilization is necessary. If the assessment determines that bank stabilization is necessary to protect existing infrastructure, CDFW recommends that it 1) does not include concrete, 2) limits the amount of rock or other hardscape, and 3) focuses on a bioengineered approach with appropriate native plantings.

COMMENT 2: San Francisco Garter Snake

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

Issue: The Project is located less than one mile north of one of the largest remaining populations of San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), a state and federally listed as endangered species and a state fully protected species (CNDDB 2023, USFWS 2020). The Project is immediately adjacent to a channel that may provide habitat for San Francisco garter snake. Project activities could disturb or remove vegetation adjacent to the channel leading to injury or mortality of San Francisco garter snake. In addition, vehicles and heavy equipment operating at the Project site could run over basking San Francisco garter snake, causing injury or mortality.

Evidence Impact would be significant: The San Francisco garter snake is an endemic snake with a highly limited range in the San Francisco Peninsula. They are threatened by loss of habitat from agricultural, commercial, and urban development, illegal collection by reptile breeders, and decline of their prey species, California red-legged frog (*Rana draytonii*) (USFWS 2007, USFWS 2020). Project activities could cause injury or mortality of San Francisco garter snakes if they are present at or near the Project site, which could result in a substantial reduction in the San Francisco garter snake population.

Recommendation 1: CDFW recommends that the draft EIR provide a detailed San Francisco garter snake habitat assessment at and near the Project site, including identification of upland sites for basking; rodent burrows for shelter; and slow, flowing aquatic habitat, such as streams and low-lying marshes, for feeding and reproduction. A qualified biologist should conduct the habitat assessment prior to initiating Project activities.

A qualified biologist is an individual who holds a bachelor's degree from an accredited university and: 1) is knowledgeable in San Francisco garter snake and other relevant species' life histories and ecology, 2) can correctly identify relevant species, 3) has conducted field surveys for relevant species, 4) is familiar with relevant survey protocols, and 5) is knowledgeable of state and federal laws regarding the protection of sensitive species.

Recommendation 2: If the habitat assessment described above identifies potentially suitable San Francisco garter snake habitat at or near the Project site, the draft EIR should identify whether the habitat can be avoided and how take of San Francisco garter snake will be avoided. The draft EIR should incorporate avoidance measures, in coordination with CDFW, as appropriate.

ENVIRONMENTAL DATA

CEQA requires that information developed in EIRs and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations (Pub. Resources Code, § 21003, subd. (e)). Accordingly,

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

please report any special-status species and natural communities detected during Project surveys to CNDDB. The CNDDB online field survey form and other methods for submitting data can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The types of information reported to CNDDB can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Plantsand-Animals.

FILING FEES

CDFW anticipates that the proposed Project will have an impact on fish and/or wildlife, and assessment of filing fees is necessary to defray the costs of CDFW's review under CEQA (Fish & G. Code, § 711.4; Pub. Resources Code, § 21089). Fees are payable upon filing of the Notice of Determination by the Lead Agency.

If you have any questions, please contact Wesley Stokes, Senior Environmental Scientist (Supervisory), at (707) 339-6066 or Wesley.Stokes@wildlife.ca.gov.

Sincerely,

DocuSigned by:

DocuSign Envelope ID: 02F1D91C-9F25-4B5B-89AB-030BE2200CBA

ATTACHMENT 1: Special-Status Species

Species Name	Common Name	Status
Thamnophis sirtalis tetrataenia	San Francisco garter snake	FE, SE, FP
Rana draytonii	California red-legged frog	FT, SSC
Rana boylii **pop. 1**	foothill yellow-legged frog - north coast DPS	SSC
Rallus obsoletus obsoletus	California Ridgway's rail	FE, SE, FP
Spirinchus thaleichthys	longfin smelt	ST, FC
Acipenser medirostris **pop. 1**	green sturgeon – southern DPS	FT
Corynorhinus townsendii	Townsend’s big-eared bat	SSC
Lasiurus cinereus	hoary bat	NM

FE = federally listed as endangered under the Endangered Species Act (ESA); FT = federally listed as threatened under ESA; FC = candidate for federal listing under ESA; ST = state listed as threatened under CESA; SE = state listed as endangered under CESA; SC = state candidate for listing as endangered under CESA; FP = state fully protected under Fish and Game Code; SSC = state Species of Special Concern; SR = protected under the NPPA of 1977; CRPR = California Rare Plant Rank; DPS = Distinct Population Segment; NM = nongame mammal protected pursuant to Fish and Game Code section 4150.

Billy Gross, Principal Planner
City of South San Francisco
315 Maple Avenue
South San Francisco, CA 94080

Re: Infinite 131 Project – Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)

Dear Billy Gross:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Infinite 131 Project. We are committed to ensuring that impacts to the State's multimodal transportation system and to our natural environment are identified and mitigated to support a safe, sustainable, integrated and efficient transportation system.

The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities. The following comments are based on our review of the November 2023 NOP.

Project Understanding
The proposed project would demolish approximately 126,750 square feet (s.f.) of industrial and operational uses along with approximately 116,572 s.f. of open-air structures. In its place, the proposed project would construct approximately 1.7 million s.f. of research-and-development (R&D) uses and amenities within six buildings, along with two parking garages and additional surface parking. This project site is in vicinity of US-101.

Aeronautics
One of the goals of the Caltrans Aeronautics Program, is to assist cities, counties, and Airport Land Use Commissions or their equivalent (ALUC), to understand and comply with the State Aeronautics Act pursuant to the California Public Utilities Code (PUC), Section 21001 et seq.

The proposed project is in the Airport Influence Area B of the San Francisco International Airport, established by the San Mateo County ALUC pursuant to Section 21675(c). Therefore, the proposed project shall adhere to the safety and land use criteria and restrictions defined in the Airport Land Use Compatibility Plan formed by the ALUC pursuant to the PUC, Section 21674 and Section 21676 and is subject to review authority by the ALUC.

As this proposed project calls for amendments of the General Plan, Specific Plan, and Zoning Code, per the California Public Utilities Code Section 21001 et seq. relating to the State Aeronautics Act, Section 21676(b) prior to the amendment of a general plan…within the planning boundary established by the airport land use commission pursuant to Section 21675, the local agency shall first refer the proposed action to the commission.

The proposed project should also be reviewed to comply with 14 CFR Part 77 Conical Surface standards, Terminal Instrument Procedures (TERPS) Approach and One Engine Inoperative (OEI) Departure Surfaces, and Community Noise Equivalent Level (CNEL) Contours noise compatibility in applicable areas if necessary.

An Airport Land Use Compatibility Plan (ALUCP) is crucial in minimizing noise nuisance and safety hazards around airports while promoting the orderly development of airports, as declared by the California Legislature. A responsibility of the ALUC is to assess potential risk to aircraft and persons in airspace and people occupying areas within the vicinity of the airport.

Travel Demand Analysis
With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans assesses Transportation Impact Studies, please review Caltrans' Transportation Impact Study Guide (*link*).

If the project meets the screening criteria established in the City's adopted Vehicle Miles Traveled (VMT) policy to be presumed to have a less-than-significant VMT impact and exempt from detailed VMT analysis, please provide justification to support the exempt status in alignment with the City's VMT policy. Projects that do not meet the screening criteria should include a detailed VMT analysis in the DEIR, which should include the following:

- VMT analysis pursuant to the City's guidelines. Projects that result in automobile VMT per capita above the threshold of significance for existing (i.e. baseline) city-wide or regional values for similar land use types may indicate a significant impact. If necessary, mitigation for increasing VMT should be identified. Mitigation should

support the use of transit and active transportation modes. Potential mitigation measures that include the requirements of other agencies such as Caltrans are fully enforceable through permit conditions, agreements, or other legally-binding instruments under the control of the City.

- A schematic illustration of walking, biking and auto conditions at the project site and study area roadways. Potential traffic safety issues to the State Transportation Network (STN) may be assessed by Caltrans via the Interim Safety Guidance *(link)*.

- The project's primary and secondary effects on pedestrians, bicycles, travelers with disabilities and transit performance should be evaluated, including countermeasures and trade-offs resulting from mitigating VMT increases. Access to pedestrians, bicycle, and transit facilities must be maintained.

Hydrology
Any floodplain impacts must be documented and mitigated, please provide floodplain analysis report. Any additional floodplain impacts on existing adjacent properties must be explained; and please ensure that any increase in storm water runoff to State Drainage Systems or Facilities be treated, contained on project site, and metered to preconstruction levels.

Equitable Access
If any Caltrans facilities are impacted by the project, those facilities must meet American Disabilities Act (ADA) Standards after project completion. As well, the project must maintain bicycle and pedestrian access during construction. These access considerations support Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users.

Encroachment Permit
Please be advised that any permanent work or temporary traffic control that encroaches onto Caltrans' ROW requires a Caltrans-issued encroachment permit. As part of the encroachment permit submittal process, you may be asked by the Office of Encroachment Permits to submit a completed encroachment permit application package, digital set of plans clearly delineating Caltrans' ROW, digital copy of signed, dated and stamped (include stamp expiration date) traffic control plans, this comment letter, your response to the comment letter, and where applicable, the following items: new or amended Maintenance Agreement (MA), approved Design Standard Decision Document (DSDD), approved encroachment exception request, and/or airspace lease agreement. Your application package may be emailed to D4Permits@dot.ca.gov.

To obtain information about the most current encroachment permit process and to download the permit application, please visit Caltrans Encroachment Permits *(link)*.

Lead Agency
As the Lead Agency, the City is responsible for all project mitigation, including any needed improvements to the State Transportation Network (STN). The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Melissa Hernandez, Associate Transportation Planner, via LDR-D4@dot.ca.gov. For future early coordination opportunities or project referrals, please contact LDR-D4@dot.ca.gov.

Sincerely,

YUNSHENG LUO
Branch Chief, Local Development Review

Chapter 1
Introduction

1.1 Background

US 131 Terminal Court Owner, LLC (project sponsor), is proposing construction and operation of the Infinite 131 Project (proposed project), which would include demolition of approximately 126,750 square feet (sf) of industrial and operational uses that are currently occupied by the Golden Gate Produce Terminal, along with approximately 116,572 sf of open-air structures (e.g., loading docks, trash compactor areas), on a 17.67-acre site (i.e., the project site). In its place, the proposed project would construct approximately 1.7 million sf of research-and-development (R&D) uses and amenities within seven buildings, ranging from one to six stories, along with two parking garages and additional surface parking. Landscaping would also be provided. The proposed amenities, which would include a day-care center, fitness center, restaurant, conference rooms, and lobbies, would be located on the ground-floor level of the R&D buildings and accessible from a network of interconnected pathways as well as central courtyards. The proposed project would require general plan, specific plan, and zoning code amendments to change the existing land use and zoning designations from Mixed Industrial High (MIH) to Business Technology Park High (BTP-H) and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (off-site redesignation parcels), which are currently designated and zoned as MIH, would also seek general plan, specific plan, and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of redesignation of these parcels.

1.2 CEQA Review of the Project

This initial study has been prepared by the project's lead agency, the City of South San Francisco (City), in conformance with the provisions of the California Environmental Quality Act (CEQA) and 14 California Code of Regulations, Chapter 3 (CEQA Guidelines). The lead agency is the public agency with principal responsibility for carrying out or approving a project. Environmental checklists, as included in this initial study, are prepared for projects that are subject to environmental review under CEQA. The information, analysis, and conclusions contained in the environmental checklist are the basis for deciding whether an environmental impact report (EIR), a negative declaration, or a mitigated negative declaration should be prepared. As indicated later, the City has determined that an EIR is required.

1.3 Scope and Content of the Checklist

As permitted by the CEQA Guidelines, this initial study checklist has referenced numerous technical studies, analyses, previously certified environmental documentation, and planning documents, which have been incorporated by reference. Information from the documents has been briefly summarized in the appropriate section(s). The relationship between the incorporated part of the referenced document and the draft EIR has also been described, as appropriate.

The environmental impacts of the proposed project are analyzed in this initial study checklist with the appropriate degree of specificity, in accordance with CEQA Guidelines Section 15146.

This checklist evaluates the potential impacts of the proposed project on the following areas:

- Aesthetics
- Agriculture and forestry resources
- Air quality
- Biological resources
- Cultural resources
- Energy
- Geology, soils, and paleontological resources
- Greenhouse gas emissions
- Hazards and hazardous materials
- Hydrology and water quality
- Land use and planning
- Mineral resources
- Noise
- Population/housing
- Public services
- Recreation
- Transportation
- Tribal cultural resources
- Utilities and service systems
- Wildfire

1.3.1 Project-Level Analysis

Potential impacts associated with construction and operation of the proposed project, as well as construction of the off-site transportation and circulation improvements needed to accommodate traffic generated by the proposed project, are analyzed at a project level in this initial study. These components of the proposed project have been developed with the level of certainty necessary to allow for a detailed analysis of the environmental impacts associated with their implementation. The level of detail in this initial study for an analysis of the environmental impacts associated with the proposed project matches the level of detail available in the draft plans for the proposed project, per CEQA Guidelines Section 15145. Additional studies pertaining to air quality, noise, transportation, and other areas have been prepared for this initial study to provide detailed information about the project's potential impacts on the environment.

1.3.2 Program-Level Analysis

Potential impacts associated with redesignating the off-site redesignation parcels are assessed programmatically because no developments have been proposed in the area. Rather, the parcels would be redesignated as BTP-H, consistent with the zoning designation for the project site, to facilitate future development consistent with the uses proposed for the project site. Future projects proposed at the off-site redesignation parcels would be required to prepare additional environmental documentation in order to comply with CEQA. They would also be subject to the programmatic mitigation measures identified in this initial study and EIR.

1.3.3 Cumulative Analysis

Cumulative impacts are two or more individual effects that, when considered together, are considerable or capable of compounding or increasing environmental impacts. The individual effects may be changes resulting from a single project or changes from a number of separate projects. Cumulative impacts are the impacts of a project in combination with other closely related past, present, and reasonably foreseeable and probable future projects (CEQA Guidelines Section 15355 [a][b]). The following factors are considered in determining the level cumulative analysis:

- Similar Environmental Impacts – A relevant project contributes to effects on resources that would also be affected by a proposed project. A relevant future project is defined as one that is "reasonably foreseeable," such as a project with an application on file at the approving agency or a project with approved funding.
- Geographic Scope and Location – A relevant project is within the geographic area where effects could combine. The geographic scope varies on a resource-by-resource basis. For example, the geographic scope for evaluating cumulative effects on air quality consists of the affected air basin, while the geographic scope for evaluating cumulative effects on traffic typically consists of the roadways within the region that could carry additional vehicles as a result of the net new vehicle miles traveled associated with a proposed project.
- Timing and Duration of Implementation – The timing of effects associated with activities for a relevant project (e.g., short-term construction or demolition, long-term operations) would very likely coincide with the timing of the related effects of a proposed project.

CEQA Guidelines Section 15130(b)(1) sets forth two primary approaches for the analysis of cumulative impacts. The analysis can be based on (1) a list of past, present, or probable future projects with related impacts that could combine with those of a proposed project or (2) a summary of projections contained in a general plan or related planning document. The cumulative impact analysis in this initial study checklist generally employs either the list-based approach or a projections approach, depending on which approach appropriately captures the cumulative context for the individual resource topic being analyzed. Cumulative analyses for topics that tend to be highly localized (e.g., biological resources, cultural resources, geology and soils) use a list-based approach, which includes anticipated nearby future projects in the project vicinity (i.e., within approximately 0.5 mile of the project site). Other impacts can affect existing conditions on a citywide or regional scale (e.g., air quality, greenhouse gas emissions, public services, population growth). These topics employ a projections approach for evaluating cumulative impacts.

Cumulative Projects within 0.5-Mile Radius

The projects considered for the list-based approach are listed below and mapped in Figure 1-1. Generally, these are projects for which applications have been filed with the City, as of the date of publication of the notice of preparation for the proposed project (November 1, 2023), and/or projects that the City has otherwise determined are reasonably foreseeable. The following projects are located within a 0.5-mile radius of the project site:

1. **101 Terminal Court:** Construction of approximately 696,000 sf of R&D/amenity uses within two six-story buildings, along with a seven-story parking garage and landscaping on an 8.69-acre site (*entitled September 2023; construction date to be determined*).
2. **124 Airport Boulevard and 100 Produce Avenue:** Construction of a seven-story residential building with 294 apartments on a 2.56-acre site at 124 Airport Boulevard and a seven-story residential building with 186 apartments on a 1.56-acre site at 100 Produce Avenue (*entitled January 2022; construction date to be determined*).
3. **40 Airport Boulevard**: Construction of an eight-story residential building with 292 units and two levels of parking on a 1.63-acre site (*entitled August 2022; construction date to be determined*).
4. **7 South Linden Avenue**: Construction of a five-story residential building with 558 apartment units on a 4.22-acre site (*entitled March 2023; construction date to be determined*).
5. **Railroad Avenue Townhomes**: Construction of a residential project consisting of 73 townhomes on a 2.04-acre site (*currently under review*).
6. **100 East Grand Avenue**: Construction of a new R&D campus, consisting of a 10-story building, an eight-story building, and an eight-story parking garage on a 5.04-acre site (*entitled October 2022; construction date to be determined*).
7. **120 East Grand Avenue**: Construction of a new R&D campus, consisting of an 11-story building, a five-story building, an amenity building, and a five-story parking garage on a 4.5-acre site (*entitled May 2023; construction date to be determined*).
8. **175 Sylvester Road**: Construction of a new R&D campus, consisting of one 10-story building, one 8-story building, and one 9-level parking garage on a 4.74-acre site (*currently under review*).
9. **Southline Master Plan Project (located at 30 Tanforan Avenue):** Construction of six office/R&D buildings (up to seven stories high) totaling approximately 2.8 million sf, along with development of a parking garage, below-grade parking, site amenities, and open space and landscaping on a 26-acre site (*Phase I entitled July 2022 and currently under construction; completion date to be determined*).

Cumulative Projects within City of South San Francisco

For purposes of the cumulative analysis regarding historic resources, fire protection, police protection, library services, and childcare services, the list of reasonably foreseeable projects has been expanded beyond a 0.5-mile radius to include all reasonably foreseeable development within the city limits because the city is the cumulative context for those environmental topics. According to the Shape SSF 2040 General Plan Update EIR (General Plan EIR) and the Lindenville Specific Plan Addendum (Specific Plan Addendum), reasonably foreseeable development in the city by 2040 will include residential, mixed, and non-residential uses, along with other types of uses. As shown in

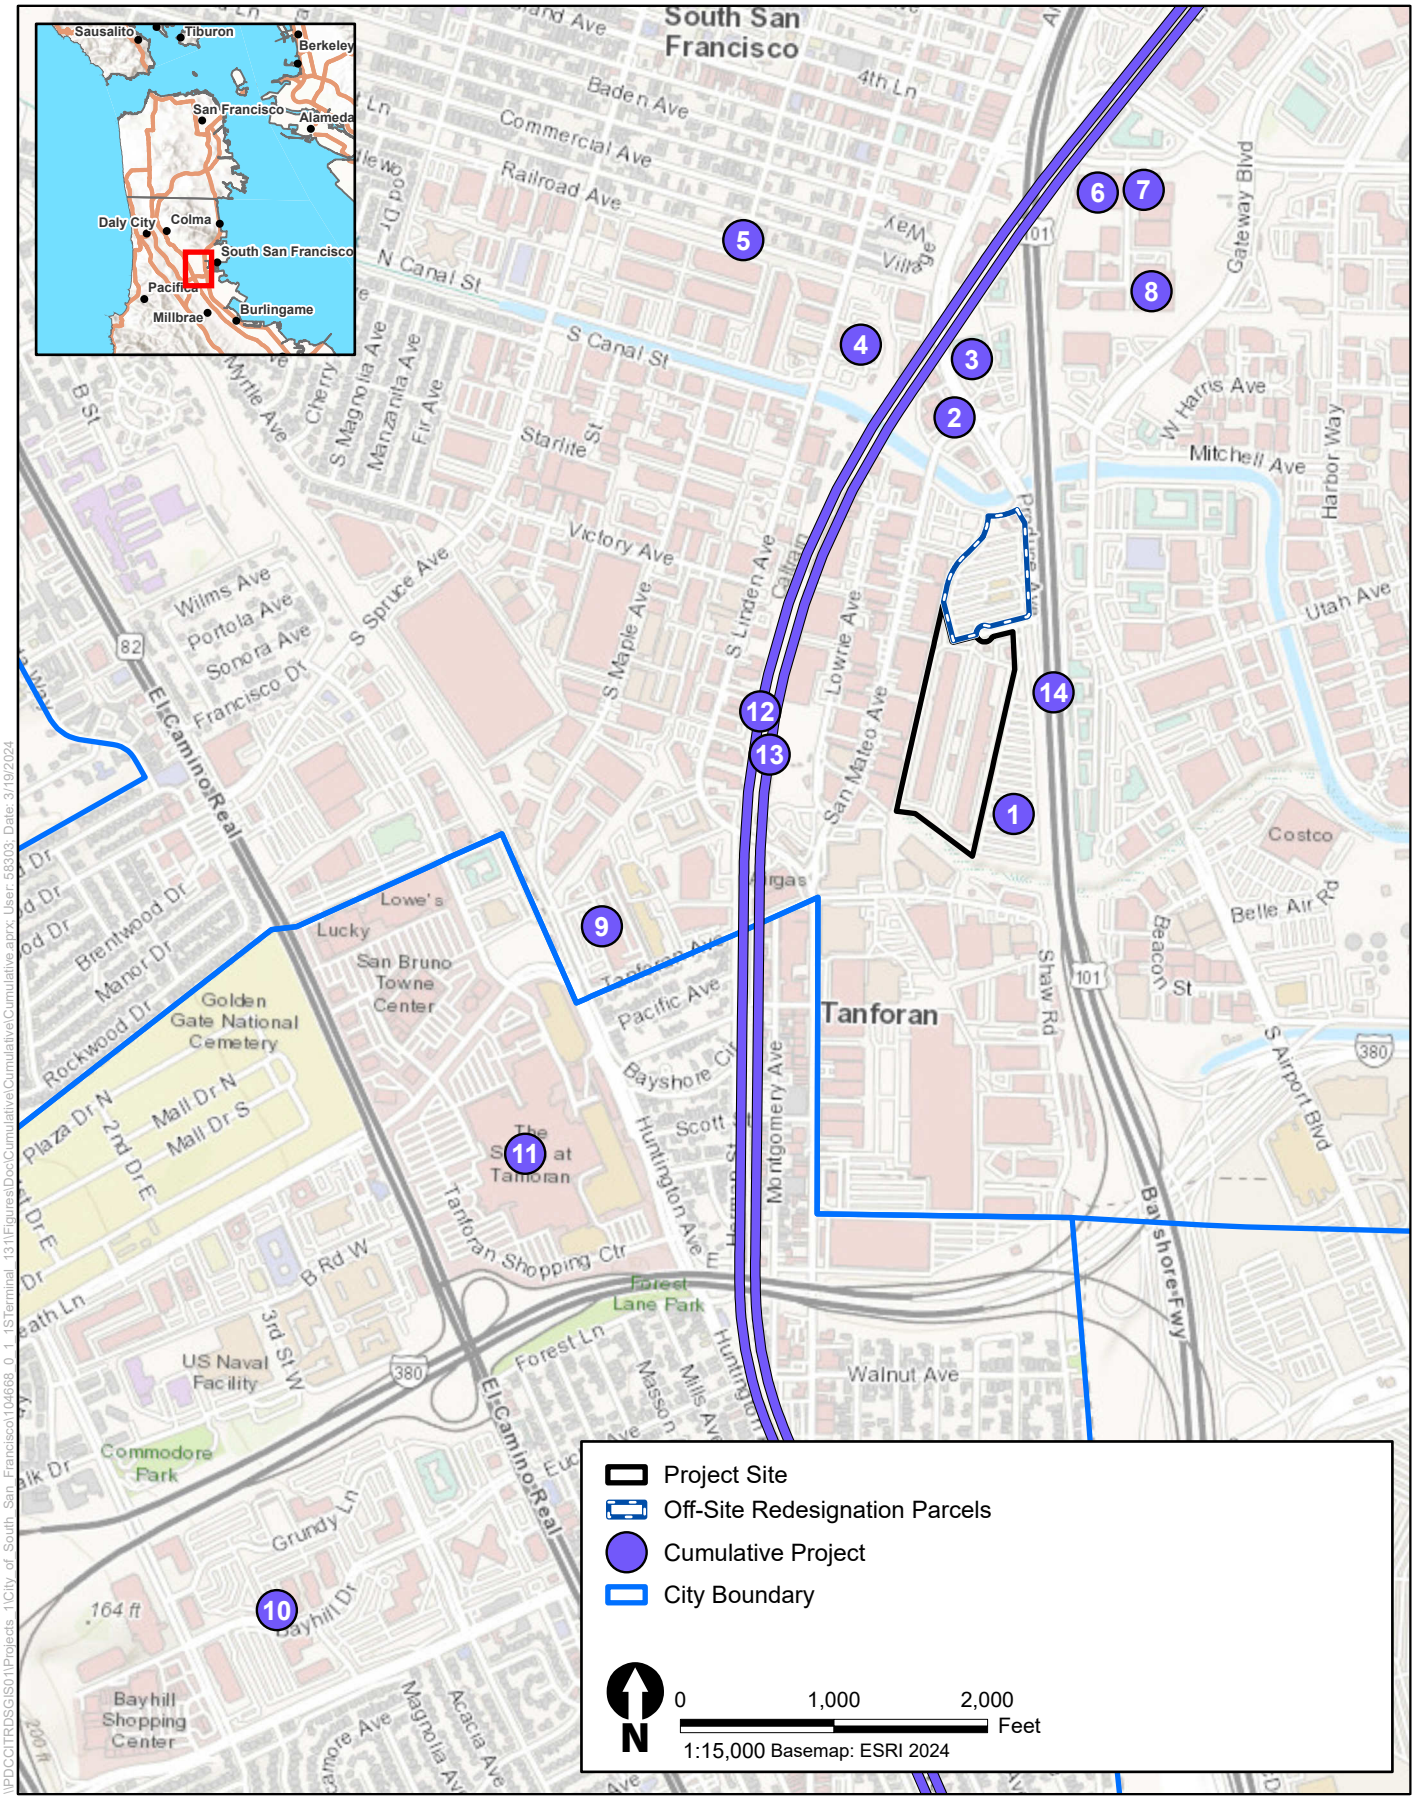

Figure 1-1
Cumulative Project Locations

[this page left blank intentionally]

Table 4.1-1, if total buildout under the Shape SSF 2040 General Plan (General Plan) and Lindenville Specific Plan were to occur, it would result in a projected 59,296,988 sf of non-residential/mixed/other uses, 38,960 residential units, 137,809 employees, and 107,205 residents.

Table 4.1-1. Total Buildout Projected under the General Plan and Lindenville Specific Plan

	General Plan (2040 buildout)[a]	Lindenville Specific Plan (plus addendum)[b]	Total Buildout (general plan plus Lindenville)
Non-Residential/Mixed/Other Uses (sf)	58,988,056	308,932	**59,296,988 sf**
Residential (dwelling units)	38,959 units	1 unit	**38,960 units**
Employment (employees)	137,557	252	**137,809 employees**
Population (residents)	107,203	2	**107,205 residents**

sf = square feet

Other Cumulative Projects

Although it is outside a 0.5-mile radius of the project site, the Bayhill Specific Plan and Tanforan projects are reasonably foreseeable large development projects in San Bruno. Given the scale of the Bayhill Specific Plan and Tanforan projects, as well as the potential for both projects to share certain overlapping local and regional transportation infrastructure, the Bayhill Specific Plan and Tanforan projects have been added to the cumulative traffic model used in the cumulative transportation analysis in Section 4.6, *Transportation and Circulation.* As such, the Bayhill Specific Plan and Tanforan projects are also included in the cumulative analysis of mobile-source air emissions in Section 4.2, *Air Quality*, and the cumulative analysis of traffic-generated noise in Section 4.5, *Noise and Vibration*, both of which include cumulative traffic volumes.

10. **Bayhill Specific Plan:** The Bayhill Specific Plan would allow for the development of up to 2.46 million net new sf of office uses and up to 573 multi-family residential units on a 92.2-acre site. The first phase of development, referred to as the Phase I development, would construct two new buildings with 440,000 sf of office space, along with a subgrade parking structure and transportation and circulation improvements *(Phase I entitled July 2022 and currently under construction; anticipated construction completion date: 2028).*

11. **Tanforan Project:** The Tanforan Project would redevelop a 44-acre site, which is currently occupied by The Shops at Tanforan Shopping Center. In its place, the Tanforan Project would construct a transit-oriented, mixed-use village with approximately 250,000 sf of new and relocated retail space; approximately 1,000 multi-family residential units; approximately 711,000 sf of life sciences laboratory and office uses; an approximately 14,500 sf amenity building; and a parking garage. In addition, the existing Century at Tanforan movie theater would be remodeled and incorporated into the project; the existing Target store would be relocated to a new retail building in the western portion of the project site *(currently under review).*

In addition to adjusting for the Bayhill Specific Plan and Tanforan projects, the forecasts for cumulative transportation conditions were adjusted to reflect other reasonably foreseeable projects that could affect cumulative traffic, including operation of 12 trains per hour in each direction during peak periods along the Caltrain railroad corridor, a reasonably foreseeable condition that could result with the California High-Speed Rail Project (described below) and the Caltrain business plan's adopted service vision (i.e., operating eight trains per hour in each direction during peak periods).

For purposes of the cumulative noise and vibration analysis in Section 4.5, *Noise and Vibration*, three additional projects were considered in the cumulative analysis, given their proximity to the project site and their potential to combine with the proposed project and result in cumulative noise and vibration impacts. These projects are the Caltrain Peninsula Corridor Electrification Project, which would include cosntruction along the Caltrain right-of-way (ROW) and an increase in the number of trains along the ROW; the California High-Speed Rail Project, which would include the installation of four quadrant safety gates at the Linden Avenue crossing, approximately 0.20 mile west of the project site, and an increase in the number of trains along the ROW; and the US Highway 101/Produce Avenue Interchange Project, which would include a new U.S. 101 overcrossing, extending from the Utah Avenue/South Airport Boulevard intersection to San Mateo Avenue.

12. **Caltrain Peninsula Corridor Electrification Project:** The project consists of converting Caltrain from diesel-hauled to electric-multiple-unit trains for service between the 4th and King Street station in the city of San Francisco and the Tamien station in the city of San José, a total distance of 51 miles. The project would require the installation of 130 to 150 single-track miles of overhead contact system for the distribution of electrical power to the new electric rolling stock (*currently under construction; anticipated completion date: fall 2024*).
13. **California High-Speed Rail Project:** Phase I of the high-speed rail system would extend from the city of San Francisco to the city of Los Angeles; this is currently scheduled for completion by 2033. Specifically, the section from San Francisco to San José, which would be in proximity to the project site, would include approximately 43 to 49 miles of mixed existing train infrastructure and new high-speed rail infrastructure, passing through San Francisco, San Mateo, and Santa Clara Counties. This segment would include installation of four quadrant safety gates at the Linden Avenue crossing, approximately 0.20 mile west of the project site, and an increase in the number of trains along the ROW (*Final EIR/Environmental Impact Statement for the San Francisco to San José segment was certified and approved by the California High-Speed Rail Authority's Board of Directors in August 2022; anticipated construction date: 2033*).
14. **US Highway 101/Produce Avenue Interchange Project:** The project would include a new U.S. 101 overcrossing, extending from the Utah Avenue/South Airport Boulevard intersection to San Mateo Avenue (referred to as the Utah Avenue extension). The intersections at South Airport Boulevard/Utah Avenue and San Mateo Avenue/Utah Avenue would be reconstructed to include turning lanes and connect to the new overcrossing. The Airport Boulevard/Produce Avenue/San Mateo Avenue intersection would be reconfigured. The project would include bike lanes and sidewalks on the overcrossing and signalized crosswalks and bike lanes at the affected intersections (*Final EIR/Environmental Assessment with Finding of No Significant Impact was released by the California Department of Transportation in February 2023 and approved by the California Transportation Commission in March 2023; construction date to be determined*).

1.4 Incorporation by Reference

CEQA allows information from other public documents by reference. This initial study incorporates by reference information or analysis from the following adopted plans and supporting environmental documents, which were developed by the City as part of its planning process.

- *Shape SSF 2040 General Plan* (General Plan)—adopted October 2022; amended September 2023
- *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan, City of South San Francisco, San Mateo County, California* (General Plan EIR)—June 2022; State Clearinghouse No. 20210120064
- *Final Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan, City of South San Francisco, San Mateo County, California* (General Plan EIR)—September 2022; State Clearinghouse No. 20210120064
- *Lindenville Specific Plan* (Specific Plan)—adopted September 2023
- *Lindenville Specific Plan Addendum* (Specific Plan Addendum)—September 2023

As required by CEQA Guidelines Section 15150, where an EIR or initial study uses incorporation by reference, the incorporated part of the reference shall be briefly summarized or described. Where information from the above-listed documents is incorporated into this initial study, the incorporated information is briefly summarized or described in the corresponding section in Chapter 3, *Environmental Impacts Checklist*.

1.5 Checklist Organization

This initial study checklist is organized in chapters and appendices, as described below.

- **Chapter 1,** *Introduction*, includes a brief overview of the project, the environmental review process, and the scope, content, and organization of the checklist.
- **Chapter 2,** *Project Description*, includes a comprehensive description of the project.
- **Chapter 3,** *Environmental Impacts Checklist*, includes an evaluation of the resource topics outlined in Section 1.3, *Scope and Content of the Checklist*. For each impact identified, a level of significance is determined using the following classifications:
  - *Potentially significant impact* is appropriate if there is substantial evidence that an effect would be significant or an established threshold would be exceeded. If one or more "potentially significant impact" determinations are made, then the relevant topics will be analyzed further in the EIR.
  - *Less than significant with mitigation* is appropriate when impacts would be potentially significant but implementation of mitigation measures from the specific plan addendum or general plan EIR, which would be a required condition of approval, would reduce impacts to a level of less than significant.
  - *Less than significant* applies when a proposed project would affect, or be affected by, the environment, but based on sources cited in the report, the impact would not have an adverse effect and would not exceed established thresholds.
  - *No impact* denotes situations in which there would be no adverse effect on the environment. Referenced sources show that the impact would not apply to the proposed project.
- **Chapter 4,** *Report Preparation*, includes a list of staff members who contributed to preparation of the checklist.
- **Appendices**[1]

Chapter 2
Project Description

2.1 Project Overview

US 131 Terminal Court Owner, LLC (project sponsor), is proposing construction and operation of the Infinite 131 Project (proposed project), which would include demolition of approximately 126,750 square feet (sf) of industrial and operational uses that are currently occupied by the Golden Gate Produce Terminal, along with approximately 116,572 sf of open-air structures (e.g., loading docks, trash compactor areas), on a 17.67-acre site (i.e., the project site). In its place, the proposed project would construct approximately 1.7 million sf of research-and-development (R&D) uses and amenities within seven buildings, ranging from one to six stories, along with two parking garages and additional surface parking. Landscaping would also be provided. The proposed project would require general plan, specific plan, and zoning code amendments to change the existing land use and zoning designations from Mixed Industrial High (MIH) to Business Technology Park High (BTP-H) and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (off-site redesignation parcels), which are currently designated and zoned as MIH, would also seek general plan, specific plan and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of redesignation of these parcels.

2.2 Project Location and Physical Setting

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco (Figure 2-1). The project site is identified as assessor's parcel number (APN) 015-113-210. Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot is north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough[1] that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The southern part of the project site also includes a portion of the shoreline band jurisdiction of the San Francisco Bay Conservation and Development Commission (BCDC) adjacent to the navigable slough. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO).

Access to the project site is provided via Terminal Court from Produce Avenue. The topography of the project site is relatively flat, approximately 6 feet above mean sea level.[2] There is little to no on-site landscaping, and there are no existing trees on the project site.[3]

---

1 The navigable slough is a remnant tidal channel that cuts through a commercial district in the city of South San Francisco. The slough is connected to San Francisco Bay. (ESA. 2019. *Navigable Slough Flood Management Study, Prepared for County of San Mateo, City of South San Francisco, and City of San Bruno*. Available: https://oneshoreline.org/wp-content/uploads/2020/06/Navigable-Slough-Flood-Management-Study.pdf. Accessed: April 12, 2023).

2 Haley & Aldrich, Inc. 2022. *ASTM Phase I Environmental Site Assessment 131 Terminal Court, South San Francisco*. April 2022.

3 HMH Engineers. 2022. *Terminal 131 Certified Tree Inventory*. July 27, 2022.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. The project site consists of two warehouse buildings and a smaller administrative building, totaling approximately 126,750 sf. In addition, the site is also developed with approximately 116,572 sf of open-air structures, including loading docks and trash compactors, associated with operations of the Golden Gate Produce Terminal. The existing warehouse and administrative buildings were constructed by 1962, the loading dock adjacent to the east warehouse building was constructed between approximately 1981 and 1987, and a large free-standing loading dock was constructed between approximately 2002 and 2005. There are approximately 475 existing employees on the project site. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees.

The off-site redesignation parcels are north of the project site, across Terminal Court, at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (APNs 015-113-350, 015-113-290, 015-113-340, 015-113-330, 015-113-320). The off-site redesignation parcels currently comprise a large Park N' Fly surface parking lot and a Shell gas station. Collectively, the off-site redesignation parcels cover approximately 7.28 acres.

2.3 Existing Land Use and Zoning Designations

The city of South San Francisco is organized as several geographic areas, referred to as *planning sub-areas*, including the Lindenville Planning Sub-Area, as identified in the *Shape SSF 2040 General Plan* (General Plan) adopted in October 2022. The project site and the off-site redesignation parcels are located in the Lindenville Planning Sub-Area, an approximately 400-acre area in the central southern portion of the city between U.S. 101 and South Spruce Avenue, adjacent to the Downtown Sub-Area. The Lindenville Planning Sub-Area comprises largely industrial, business, food processing, manufacturing, and warehousing uses. The General Plan's Planning Sub-Areas Element does not impose density or height standards separate from those found in the General Plan's Land Use Element. According to the General Plan, the Lindenville Planning Sub-Area aims to preserve business and industrial uses while strengthening its economic base, which includes a large number of small businesses and a high share of area jobs, by retaining a large portion of its land area for service, transportation, and industrial uses.[4]

The Lindenville Specific Plan (Specific Plan), adopted in September 2023, establishes the planning framework for the Lindenville Planning Sub-Area. Under the Specific Plan, both the project site and off-site redesignation parcels are designated as MIH, which allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. Figure 2-2 illustrates the existing land use designations for the project site, the off-site redesignation parcels, and the surrounding area under the Lindenville Specific Plan.

The project site and off-site redesignation parcels are designated in the City of South San Francisco's (City's) Zoning Code as MIH. As established in the City's Zoning Code, the maximum building height allowed under the existing MIH zoning designation is 65 feet. The base maximum permitted floor area ratio (FAR) under the MIH zoning designation is 0.4, but increases may be permitted, up to a total FAR of 2.0, for all permitted uses. However, R&D facilities under this zoning designation may have a maximum allowed FAR of 0.5, provided they follow the

Figure 2-2
Existing General Plan Land use Designations

requirements of the City's Community Benefits Program, as outlined in Chapter 20.395 of the City's Municipal Code. In addition, as required under the MIH designation, truck docks, loading areas, and service areas must be located at the rear or interior side of buildings and must be screened so that they are not visible from surrounding public streets, including highways. However, as described in more detail below in Section 2.7, *General Plan, Specific Plan, and Zoning Code Amendments*, the proposed project would require General Plan, Specific Plan, and zoning amendments.

Figure 2-3 illustrates the existing zoning designations for the project site, the off-site redesignation parcels, and the surrounding area.

2.4 Project Objectives

The project sponsor identified the following objectives for the proposed project:

- Redevelop the property with R&D, biotechnology, and office uses in a secure and integrated campus setting.
- Create an iconic, inspiring, and dynamic gateway presence along U.S. 101 with high visibility.
- Incorporate a building and landscape design that sets a unique identity within the city.
- Utilize a shifting and articulated building massing that creates visual, desirable, and usable amenities, including outdoor terraces for tenants.
- Provide an activated landscape area that, in addition to being pedestrian friendly, encourages walking and biking, interaction, and collaboration and provides a wide range of opportunities for wind-protected outdoor activities.
- Integrate sustainable strategies to advocate an energy-efficient and performative design, including water-saving strategies.
- Provide a highly efficient and flexible workplace with daylight for interior spaces and outward views of the surrounding areas.
- Provide a positive fiscal impact on the local economy through the creation of jobs, enhancement of property values, support for local transportation infrastructure, and the generation of property tax and development fees.
- Provide well-designed, flexible buildings and floor plates that can accommodate a variety of tenants to ensure the proposed project will be responsive to market conditions and demands.

2.5 Project Components

The project proposes demolition of all existing uses on the project site (i.e., warehouse buildings, administrative building, open-air structures) and construction of R&D uses and an on-site amenity space. Overall, the proposed project would construct approximately 1.7 million sf of new uses across seven buildings. As detailed in Table 2-1, this breaks down to approximately 1,632,000 sf of R&D uses and approximately 72,050 sf of amenity uses. The buildings would be tied together through landscaping and open space to create a sustainable campus environment with improved pedestrian and bicyclist circulation and access, as depicted in Figure 2-4. Building heights would range from one to six stories, with the maximum building height being 113 feet, 6 inches. In addition, the proposed project would include two parking garages, associated with

Table 2-1. Summary of Proposed Land Uses

Building	R&D (sf)	Conference (sf)	Fitness Center (sf)	Restaurant (sf)	Day Care (sf)	Total (sf)	Maximum Height[a]
I131S	824,000	4,000	0	2,000	0	830,000	6 stories (113 feet, 6 inches)
I131S (amenity building)	0	13,000	20,000	17,000	0	50,000	2 stories (32 feet, 0 inches)
I131N	808,000	4,000	0	8,000	0	820,000	6 stories (113 feet, 6 inches)
Day-care Center	0	0	0	0	4,050	4,050	1 story (16 feet, 0 inches)
Total	***1,632,000***	***21,000***	***20,000***	***27,000***	***4,050***	***1,704,050***	***113 feet, 6 inches***

Notes:
[a] The building height is measured to the top of rooftop appurtenances.

the I131N building and I131S building. The I131N parking garage would be approximately 551,631 sf in area and approximately 100 feet tall. It would include three below-grade levels of parking as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 sf in area and include two levels of below-grade parking.

The I131S A, I131S B, and I131S C buildings, collectively referred to as the I131S building, would have a total area of approximately 830,000 sf and be six stories tall, or approximately 114 feet. The I131S building would include entrance lobbies on the ground floor, with R&D uses across all building levels. In addition, approximately 4,000 sf of conference space and 2,000 sf of restaurant/cafe space would also be located on the ground floor of the building. The I131S building would incorporate outdoor terraces on multiple levels of the proposed buildings for use by building tenants. In addition , the proposed project would incorporate an approximately 50,000 sf amenity building, the I131S amenity building, which would be located in the central courtyard adjacent to the I131S building. The amenity building would be two stories (approximately 32 feet), with approximately 17,000 sf of restaurant space, approximately 20,000 sf for the fitness center, and approximately 13,000 sf of conference space. The proposed fitness center would be available for use by the public and the proposed project's tenants.

The I131N building (i.e., buildings I131N A and I131N B) would be north of the site and immediately adjacent to the I131S building. The I131N building would have an area of approximately 820,000 sf and be six stories tall, or approximately 114 feet. The I131N building would also include 808,000 sf of R&D uses that would be spread out across all levels of the proposed buildings. The ground floor of the I131N building would include a lobby, approximately 4,000 sf of conference space, and 8,000 sf of restaurant/cafe space. In addition, the I131N building would also incorporate outdoor terraces on multiple levels for use by the building tenants.

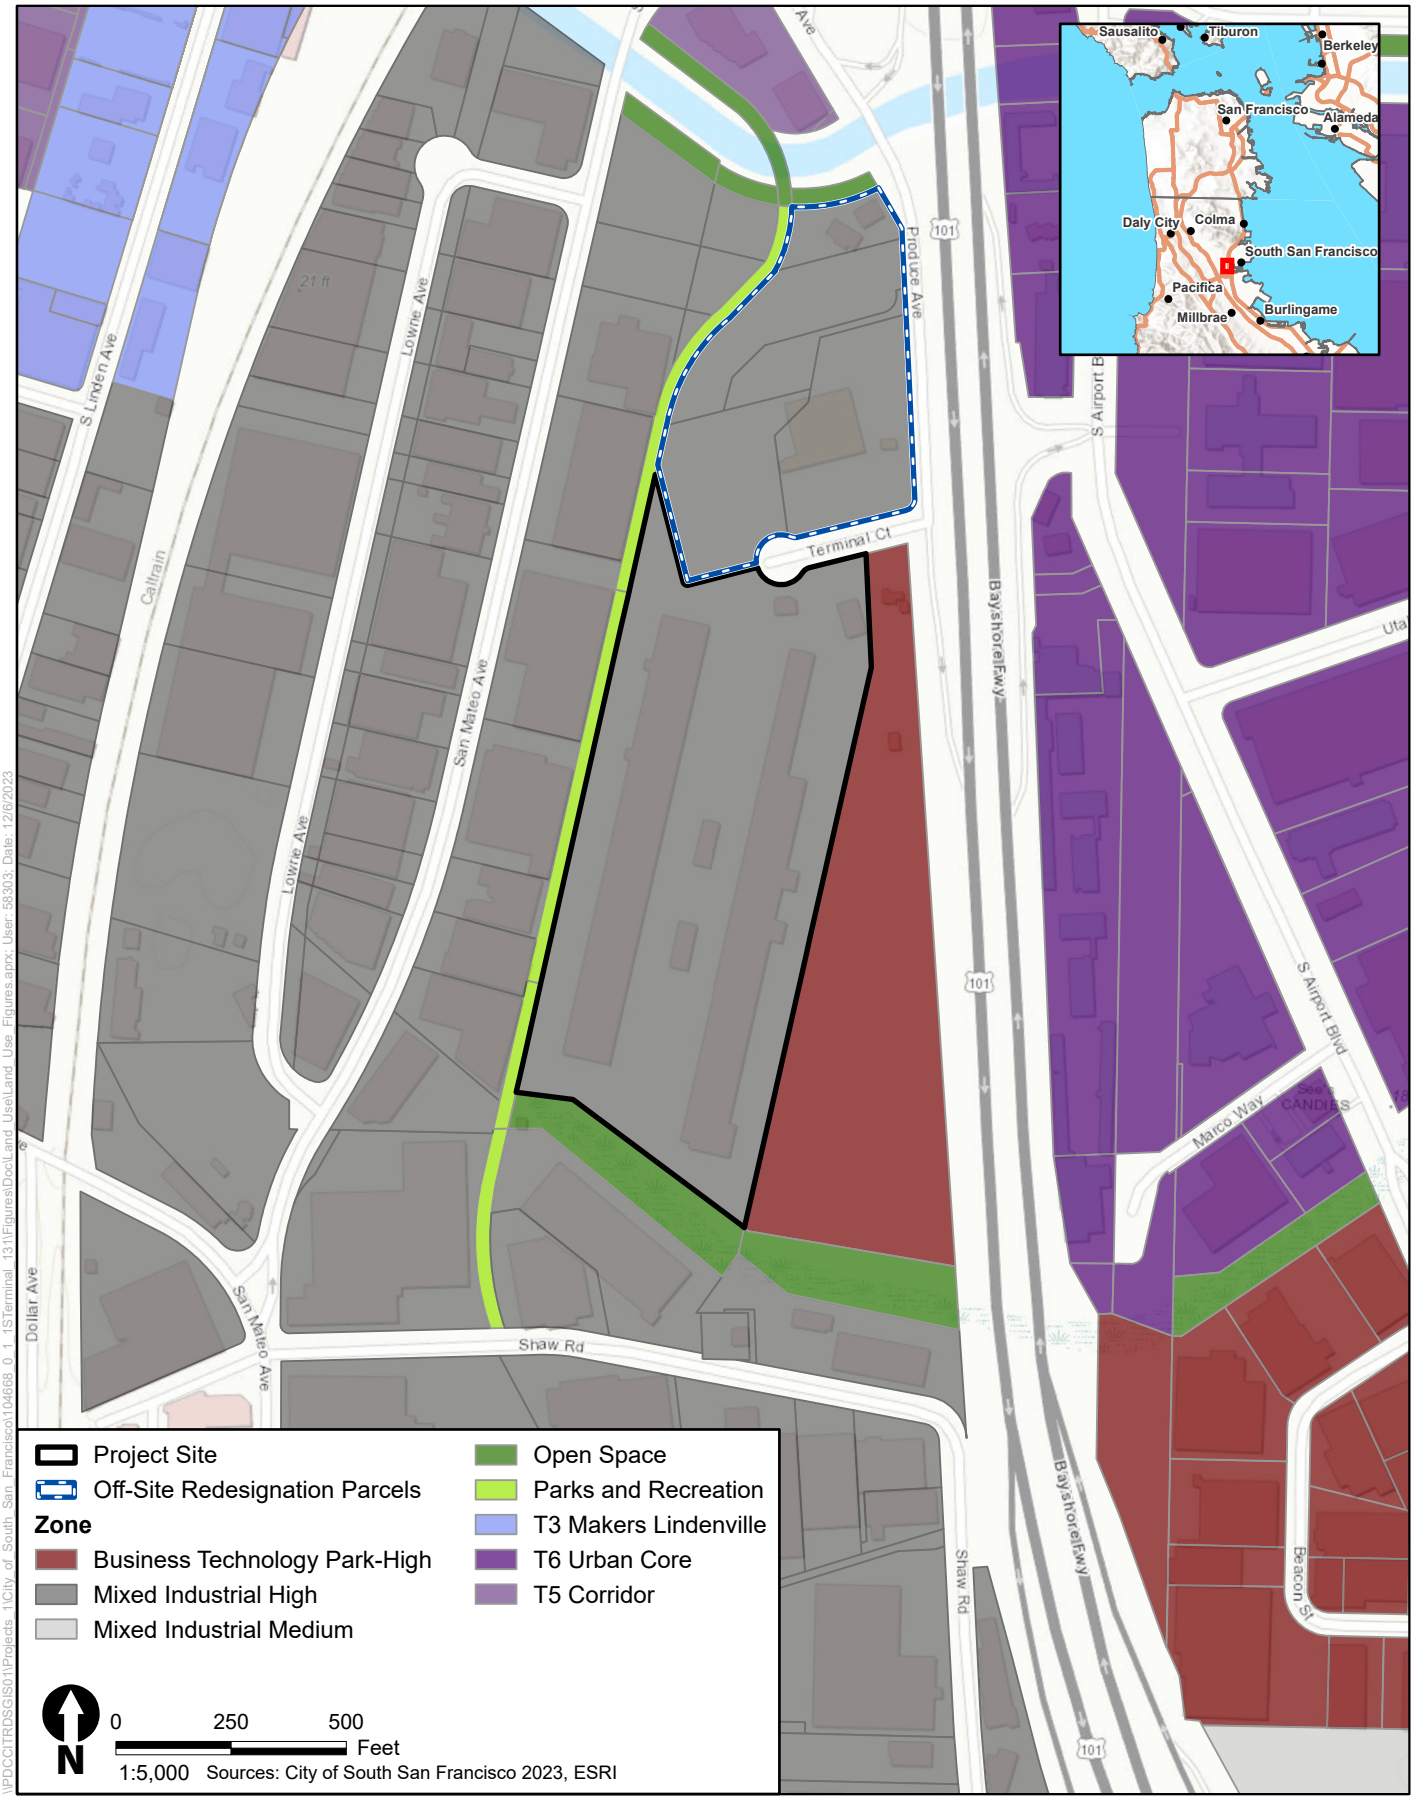

Figure 2-3
Existing Zoning Designation

Graphics ... 104668 (2-14-2024) JC

Figure 2-4
Conceptual Site Plan

The proposed project would provide a day-care center north of the I131N parking garage in the northwestern portion of the project site. The day-care center would have an area of approximately 4,050 sf and be one story, or approximately 16 feet. In addition to the proposed day-care center building, approximately 4,950 sf of outdoor play areas would be provided and protected with fencing; the surrounding landscaping and trees would be minimal. The proposed day-care center would have nine employees and accommodate up to 50 children. It would be operational Monday through Friday and be open to employees of the proposed project as well as the public.

A total of twenty-four 500-kilowatt (kW) emergency generators would be provided on the project site, which would be used in the event of power grid failure. Of the 24 generators, 18 of them would be located outdoors, at grade, and in service yards in acoustic enclosures. The remaining six emergency generators would be located inside of the I131N building on the ground floor in a separate generator room. Generators would be tested monthly, most likely on weekends or during non-business operating hours. Generator testing would take place within designated hours when noise restrictions are not an issue.

The upper floors of the proposed I131N and I131S buildings, not including the amenity building (i.e., I131S D) and day-care center, would provide direct views to San Francisco Bay, Sign Hill Park, San Bruno Mountain, and the hills west of Interstate 280; views of the landscaped courtyards below would also be provided. As stated previously, the buildings would be linked together through a cohesive network of landscaping and open space. The two central landscaped courtyards would be located along the interior of the project site and framed by the shape of the proposed I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections as well as outdoor amenities. The proposed project would include approximately 115,130 sf of open space in the courtyards, which would be publicly accessible, providing space for outdoor work, recreation, and socializing through the use of seat walls, paved areas, turf, as well as shade structures.

2.5.1 Site Access, Circulation, and Parking

As depicted in Figure 2-4, vehicular access to the project site would be provided via a driveway on Terminal Court and a right-of-way connection from the southwestern portion of the project site to Shaw Road, to the south, through an existing access easement. Internal roads would be configured to circle the I131N building and the entire project site in a loop formation, providing access to buildings, parking, and on-site amenities. The proposed project would provide a total of 2,976 parking spaces. The I131N parking garage would be west of the I131N A and I131N B buildings. It would include 1,378 parking spaces in three levels of below-grade parking and nine levels of above-grade parking, along with 20 surface parking spaces. The I131S parking garage would be located beneath the I131S building. It would provide 1,538 parking spaces, along with 40 surface parking spaces.

Approximately six surface parking spaces and 50 garage parking spaces would be Americans with Disabilities Act (ADA) compatible. In addition, per the California Green Building Standards Code, commonly referred to as CALGreen, approximately 45 percent of the total number of parking spaces (i.e., approximately 1,339 spaces) would be electric-vehicle (EV) capable to accommodate future installation of EV chargers. Of the approximately 1,339 spaces, 33 percent (or approximately 442 spaces) would be provided with EV charging stations.

Street improvements along Terminal Court and the right-of-way connection to Shaw Road would include new curbs, landscaping, and sidewalks. The proposed project would also include pedestrian pathways along the exterior and throughout the interior of the project site to provide connections between the buildings and the courtyards. A total of 176 bicycle parking spaces would be provided throughout the site, consisting of 149 long-term bicycle parking spaces and 27 short-term bicycle parking spaces. The short-term bicycle parking spaces would be located near the lobby entrances to the proposed buildings. The long-term bicycle parking spaces, as well as showers, would be provided on the ground floor of the I131N and I131S buildings and within a bicycle storage room in the parking garage.

Dedicated access to the project site for emergency vehicles would be provided via Terminal Court and the Shaw Road connection. The proposed project would allow emergency vehicle access to all buildings through the proposed roadway network within the project site. The project site would include 20- to 26-foot-wide fire lanes around the perimeter of the project site, providing access to each building, as well as the I131N parking garage.

Although not proposed as part of the project, the project sponsor may, in the future, purchase up to 2 acres of undetermined industrial zoned land fronting San Mateo Boulevard and build an aboveground parking structure to serve the proposed project. This land could provide an additional access and/or egress point to the project site for a more dispersed traffic flow. Such an improvement, if pursued, would be subject to California Environmental Quality Act (CEQA) review. It is not evaluated as part of the proposed project.

2.5.2 Transportation Demand Management

The proposed project would require submittal of a Transportation Demand Management (TDM) plan to the Planning Division for review and approval as part of the entitlement process, per the requirements of the City Municipal Code and General Plan. A TDM plan is intended to reduce the amount of traffic generated by new development, manage congestion, and promote the efficient use of the existing transportation network through the adoption of TDM measures and ongoing monitoring and reporting in accordance with the City's TDM Ordinance (Chapter 20.400). The proposed project's TDM plan lays out measures to reduce peak-hour travel demand and encourage alternative modes of transportation to reduce single-occupant vehicle use. The specific measures are still preliminary but are anticipated to include:

- **On-site Amenities for Bicycle and Pedestrian Access—**The project would provide new connections and on-site circulation paths with pedestrian walkways between all core buildings, bicycle routes through the site, and a new trail along the navigable slough that would connect to Shaw Road. The project would provide short-term and long-term bicycle parking spaces in various locations throughout the project site, bicycle repair areas, and showers and changing rooms.
- **Shuttle Service to Caltrain and Bay Area Rapid Transit (BART) –** The TDM Plan would provide first-/last-mile shuttle service to the San Bruno BART station and South San Francisco Caltrain station.
- **Carpooling and Vanpooling Programs and Parking –** The TDM Plan would ensure that employer tenants would offer carpool and vanpool programs that would include subsidies or other monetary incentives, dedicated carpool and vanpool parking, as well as ride-matching services to help facilitate shared trips. Elements of the carpool program, such as ride-matching, would be provided in partnership with Commute.org.

- **Telecommuting and Flexible Work Schedules –** The TDM Plan would encourage employers to allow telecommuting at least one day per week to reduce the overall number of trips. In addition, when employees commute to work, employers would encourage flexible work schedules to shift travel outside of peak hours.
- **Fully Subsidized Transit Passes –** The TDM Plan would offer transit passes or subsidies, which would be implemented through either a direct voucher program provided by the property manager or through lease terms that would obligate employers to provide subsidies.
- **Other TDM Plan Features –** The TDM Plan would include a range of features, such as on-site amenities, including dining, fitness, and conference facilities, as well as active transportation gap closures and transit capital improvements.

As required by the South San Francisco Municipal Code, the TDM Plan would include requirements for monitoring and auditing the performance of the measures, which may be revised or amended as needed to meet TDM performance objectives. Implementation of the TDM Plan would be monitored annually and adjusted accordingly, if necessary, in order to meet required alternative-use goals. Leases for all tenants would include provisions regarding the mandatory TDM measures and appointment of a TDM coordinator, who may be shared among multiple tenants.

2.5.3 Lighting

Lighting would include canopy-mounted linear lighting as well as linear LED uplight-type wall-mounted units on the exterior of the buildings and at building entrances. Exterior pole-mounted fixtures would be provided in open space areas, vehicular circulation areas, and other hardscaped areas. In addition, low-level pedestrian lighting would be provided along pedestrian pathways and the terrace areas. All exterior lighting would conform to the City Zoning Code, Section 20.300.009, *Lighting and Illumination*.

2.5.4 Building Design and Sustainability Features

As stated previously, the proposed project would be designed so that the buildings would be tied together through landscaping and open space. Specifically, the proposed project would incorporate two central courtyards located along the interior of the project site and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections and the available outdoor amenities. In addition, the proposed amenities, including the day-care center, fitness center, restaurant/cafe, conference rooms, and lobbies, on the ground-floor level of each of the R&D buildings would be accessible from a network of interconnected pathways as well as through the central courtyards.

As depicted in Figure 2-5, the proposed buildings would have primarily glass façades, thereby bringing an abundance of natural light into each building. Building exteriors would also incorporate combinations of unitized curtain walls, glass storefronts, and aluminum panels evoke a modern aesthetic. The proposed buildings would have metal-panel parapets to screen the rooftop mechanical equipment. The I131N parking garage would be constructed out of materials similar to those on the proposed buildings, including perforated metal panels, aluminum panels, painted concrete, and clear glazed glass.

The proposed project would incorporate sustainability features to reduce energy consumption, water consumption, and waste generation. In addition, it would achieve, at a minimum, a Leadership in Energy and Environmental Design (LEED), version 4.1, Building Design and Construction (BD+C) Core and Shell Gold rating as well as WELL v2 Core certification.[5] Proposed sustainability measures would include an all-electric building design; on-site renewable energy in the form of rooftop photovoltaic (PV) panels; a high-performance building envelope and heating, ventilation, and air-conditioning (HVAC) systems; ultra-efficient WaterSense-labeled flush and flow fixtures; low-water demand native and/or adapted vegetation with efficient irrigation systems; on-site recycling and composting facilities; and EV charging infrastructure. Proposed design elements, such as pedestrian circulation improvements, bicycle parking, and TDM measures, would encourage alternative forms of transportation. In addition, the proposed project would be designed to be consistent with the City's Municipal Code and CALGreen. For construction and demolition, 100 percent of all inert solids (i.e., building materials) and 65 percent of non-inert solids (i.e., all other materials) would be recycled as required by the City under Chapter 15.60 of the City's Municipal Code.

The proposed project would also be designed to conserve resources and protect water quality through the management of stormwater runoff using low-impact development (LID) methods, where feasible. This approach implements engineered controls to allow stormwater filtering, storage, and flood control. Bioretention basins, flow-through planters, Silva Cell units, and other site design features to manage stormwater runoff flows and reduce stormwater pollution would be located throughout the project site.

2.5.5 Landscaping

As discussed above, there are no trees on the project site and little to no vegetation. All vegetation would be removed prior to project construction. The proposed project would include a landscape plan to compensate for the removal of vegetation and enhance the overall development. The landscape plan would include planting trees on-site, in accordance with the City Tree Preservation Ordinance (Chapter 13.30). Upon project buildout, 659 trees would be provided within the courtyard areas, surface parking lot, and along the roadways. Landscaped areas would include a mix of native and adapted vegetation with a low water demand; a minimum of 80 percent would be native vegetation. The proposed trees and all other landscaping would be planted in compliance with City regulations.

2.5.6 Employees

Upon project completion, there would be a total of 3,787 employees, consisting of approximately 3,778 R&D employees and nine day-care center employees.[6] The net increase in on-site employment would amount to approximately 3,312 employees.

---

5 The WELL Building Standards are performance-based building standards for measuring and monitoring features within the built environment that may affect human health through air, water, light, and other concepts. The standards provide ways for buildings to be designed to improve human comfort and enhance health and wellness within the built environment.

6 The estimated number of employees is based on data provided by the project applicant, which assumes that average square footage per R&D employee would be 450, consistent with the General Plan EIR employee generation rate assumptions. The estimated number of employees associated with the proposed restaurant and fitness center is accounted for in the estimate of the number of employees associated with the proposed R&D uses.

Figure 2-5
Rendering from U.S. 101 (Bayshore Freeway)

[this page left blank intentionally]

2.5.7 Utilities

The project site is serviced by existing public utility easements for water, wastewater, stormwater, electric, telecommunications, and waste and recycling services. New on-site facilities would be connected to new services through the installation of new localized connections. Any expansion or increase in the capacity of off-site infrastructure would occur as required by the utility providers. Detailed descriptions of the proposed utility infrastructure are provided below.

2.5.7.1 Water Supply

The city is served by the California Water Service Company (Cal Water). Specifically, the city is in the service area of Cal Water's South San Francisco District, which includes South San Francisco, Colma, a small portion of Daly City, and Broadmoor. The Cal Water South San Francisco District utilizes both groundwater from the Westside Basin as well as imported surface water purchased from the San Francisco Public Utilities Commission (SFPUC).

On-site water system improvements would include the pipes, valves, fire hydrants, meters and submeters, and backflow preventers needed to serve the proposed uses. The proposed project would include an extension to the 12-inch public main in Terminal Court. The extension would loop around the site and provide connections to building laterals for domestic water and fire water, irrigation, and fire hydrant needs. The proposed project assumes a 4-inch private lateral for domestic water and a minimum 8-inch pipe for the private fire lateral. The main points of connection for the water line would be the new 8-inch water main that would be implemented as part of development at the 101 Terminal Court adjacent to the project site, and the existing 12-inch public water main in Terminal Court. An option that would loop into a Shaw Road connection is being explored as well. However, such an option is not part of the project evaluated in the environmental impact report (EIR) and therefore would be subject to future CEQA review if pursued.

2.5.7.2 Wastewater

The City owns and maintains the sanitary sewer system and related infrastructure within public rights-of-way. The collected wastewater is conveyed to the South San Francisco Water Quality Control Plant (WQCP) adjacent to San Francisco Bay on Colma Creek. Proposed sewer system improvements would include a new 18-inch sanitary sewer main through the southwest corner of the site to a 21-inch main on Shaw Road to support the proposed project. Proposed on-site sewer pipes would be between 4 and 18 inches in diameter and connect to the upsized sewer main beneath the navigable slough.

2.5.7.3 Stormwater

The City owns and maintains the storm drainage infrastructure within public rights-of-way. For the majority of the project site, storm drain lines would follow the existing drainage pattern and outfall into the adjacent slough. Oversized underground pipes would treat water, help store water, and control flows prior to discharge to the adjacent slough. On the northern portion of the site, smaller areas would drain to the City's municipal separate storm sewer system on Terminal Court. On-site storm drain improvements would include the installation of bioretention ponds, flow-through planters, and Silva Cell units to provide LID treatment on the project site. The proposed stormwater pipes would be between 6 and 12 inches in diameter. New connections would connect to an existing 12-inch storm drain main in Terminal Court.

2.5.7.4 Dry Utilities

Pacific Gas and Electric (PG&E) provides both electricity and natural gas services to the city. As a California Public Utilities Commission–regulated public utility in the state of California, PG&E owns, operates, and maintains above- and belowground electric and natural gas facilities in the city, including substations. The city is also served by both wired and wireless telecommunications from numerous providers, including AT&T, Comcast, Viasat, and T-Mobile.[7] The project proposes the installation of new connections for dry utility service. All electrical and telecommunication utilities would be connected to existing electrical and telecommunication utilities. The proposed project would not include any new connections for natural gas, which would not be used by the project.

2.5.7.5 Solid Waste

The South San Francisco Scavenger Company and Blue Line Transfer provide solid waste disposal services citywide, including garbage and recycling services.[8] The South San Francisco Scavenger Company transports all solid waste to the Blue Line Transfer facility at 500 East Jamie Court where solid waste is processed, treated, and transported to other disposal facilities. The Blue Line Transfer facility has a permitted capacity of 2,400 tons per day.[9] Any trash remaining after the usable materials have been separated at the transfer facility are transported to the Corinda Los Trancos (Ox Mountain) Sanitary Landfill or the Newby Island Sanitary Landfill.

The project site would continue to be served by the South San Francisco Scavenger Company and Blue Line Transfer. State law requires trash to be collected in three separate streams: waste, mixed recycling, and compost, in accordance with Assembly Bill (AB) 341, AB 1826, and Senate Bill (SB) 1383. The City requires further separation of mixed recycling into paper, containers, and cardboard.

The proposed project would comply with City requirements. Trash from proposed buildings would be collected in five different streams, including waste, recyclables, and compostable materials. Recyclable materials would be further sorted into paper, container, and cardboard types of materials. The proposed project would have two central trash locations per building, for a total of four. The trash areas would be adjacent to the loading areas and connected to the service elevators.

2.6 Project Construction

The proposed project would be constructed in eight phases, including demolition of the warehouse buildings, administrative building, and open air structures. After receipt of the building permit, construction of the proposed project is anticipated to take approximately 5 years, with construction on the southern portion of the project site beginning in March 2026 and ending in October 2028 and construction on the northern portion of the project site beginning in November 2028 and ending in May 2031. The phases of construction would consist of (1) rough

[7] BroadBandNow. 2023. *Business Internet Providers in South San Francisco, California*. Available: https://broadbandnow.com/business/California/South-San-Francisco. Accessed: April 12, 2023.

[8] South San Francisco Scavenger Company. n.d. *About Us*. Available: https://ssfscavenger.com/about-us/. Accessed: June 3, 2024.

[9] California Department of Resources Recycling and Recovery. 2024. *Blue Line MRF and TS*. Available: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/1598?siteID=3259. Accessed: June 3, 2024.

grading and site demolition, (2) deep foundation installation, (3) foundation installation, (4) superstructure construction, (5) building enclosure construction, (6) interior buildout, (7) sitework, and (8) final building inspections.

Demolition, grading, and excavation would generate approximately 40,214 cubic yards (cy) of material, including removed fencing, building materials, concrete, soil, and asphalt. In addition, during demolition and grading, approximately 70,000 cy of soil would be imported for site preparation.[10] The proposed project would excavate to a depth of approximately 3 to 7 feet below the ground surface for utility work. The average level of the project site is 6 feet above sea level. The maximum depth of excavation would be 5 feet below sea level for the sanitary sewer main upgrade.

The haul route for demolition materials would be U.S. 101, with trucks traveling from the project site either northbound or southbound. Trucks using the northbound haul route would exit the project site, travel from Produce Avenue to Mitchell Avenue, then continue to South Airport Boulevard and the on-ramp located off the boulevard. Trucks using the southbound haul route would exit the project site, then make a right turn from Terminal Court to the Produce Avenue on-ramp. The haul route for deliveries or trucks returning to the project site would be in the opposite direction.

The hours of construction would be stipulated by the City Building Division. The project contractor would be required to comply with Section 8.32.050 of the City Municipal Code (i.e., the City Noise Ordinance), which includes regulations related to noise generated by construction. Project construction would typically occur Monday through Friday between 8:00 a.m. and 8:00 p.m., although some work is anticipated to occur on Saturdays between 9:00 a.m. and 8:00 p.m. or on Sundays between 10:00 a.m. and 6:00 p.m. Approximately 172 instances of nighttime or early-morning construction work may occur (e.g., drilling work, steel erection, concrete pouring). Drilling and steel erection, with use of a crane, may begin as early as 5:00 a.m. to 6:00 a.m. The drilling and crane work would take place during these early morning hours over an estimated 40 days and 105 days, respectively. Concrete pouring may occur during nighttime or early-morning hours, with approximately 5 nights of concrete pours potentially starting between 12:00 a.m. and 2:00 a.m. and an additional 22 nights between 4:00 a.m. and 6:00 a.m. Construction is not anticipated to occur on legal holidays.

Project construction would use, on average, approximately 1,303,405 gallons (or 4 acre-feet) of water per year over the approximately 5-year construction period. Dewatering may be required during project construction, depending on the weather at the time of construction. A stormwater pollution prevention plan (SWPPP) would be implemented during project construction. Furthermore, an approximately 15-foot buffer would be incorporated between construction work areas in the southern portion of the project site and the top of the bank of the navigable slough.

[10] To provide a conservative estimate, the analysis of construction impacts on air quality, noise, and transportation in Sections 4.2, *Air Quality*; 4.5, *Noise and Vibration*; and 4.6, *Transportation and Circulation*, assume that 170,000 cy of soil would be imported.

2.7 General Plan, Specific Plan, and Zoning Code Amendments

As described above, the project site is currently designated as MIH under the General Plan, Lindenville Specific Plan, and City Zoning Code. In order to construct and operate the proposed project, a General Plan, Specific Plan, and City Zoning Code amendment would be required to redesignate the site as BTP-H. The BTP-H land use designation allows for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan describes the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

As currently written, City Zoning Code Section 20.040.009.A.4, Excluded from Floor Area in Calculating FAR, states that active ground-floor uses in a new mixed-use or nonresidential development east of 101 and in the T4C, T4M, and T5C zoning districts can be excluded from FAR calculations, provided that the nonresidential uses are active and open to the general public. Excluded uses from FAR calculations in these zoning districts include, but are not limited to, childcare facilities, personal services, retail establishments, full-service or limited-service restaurants, and similar active uses. The proposed project would amend City Zoning Code Section 20.040.009.A.4 to add BTP-H zoning districts within the Lindenville Planning Sub-Area to the covered zoning districts so that the proposed day-care center would be excluded from FAR calculations. With this amendment, the proposed project would be within the allowable FAR for the BTP-H zoning designation, as described in more detail in the following paragraph.

As established in the City Zoning Code, under the BTP-H zoning designation, the maximum surface area covered by structures (i.e., lot coverage) is limited to 60 percent, with a minimum of 15 percent of the site made up of landscaping. The base maximum permitted FAR under the BTP-H zoning designation is 0.5, but increases may be permitted, up to a total FAR of 2.0, for uses such as R&D facilities or development meeting specific TDM, off-site improvement, or design standards. In addition, the zoning ordinance provides specific exceptions to FAR limitations for projects, based on a Community Benefits Program (see City Municipal Code Chapter 20.395). The proposed project would have a FAR of 2.0, consistent with the requirements of the BTP-H zoning designation.

In addition to the above General Plan and City Zoning Code amendment for the Infinite 131 project site, the proposed project would include additional amendments to the General Plan, Specific Plan and City Zoning Code to redesignate five parcels north of the project site, across Terminal Court, at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (APNs 015-113-350, 015-113-290, 015-113-340, 015-113-330, 015-113-320). The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan and City Zoning Code; they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. Further, the redesignation of these parcels would be consistent with Specific Plan Policy LU-5.2, *Golden Gate Produce Terminal and Park N' Fly sites*, which encourages parcel assemblage of the Park N' Fly site (160 Produce Avenue) and the Golden Gate Produce Terminal site (131 Terminal Court) to encourage

developers to create a master plan and an appropriate environmental analysis for office and R&D uses on the site. As stated above, the five parcels total approximately 7.28 acres and currently comprise a large Park N' Fly surface parking lot and a Shell gas station.

The purpose of the off-site redesignation parcels is to ensure that future development is cohesive and consistent with the development proposed as part of the project. Because the project sponsor does not own the five off-site redesignation parcels, the proposed project would not include the construction of any new uses on the off-site redesignation parcels. Therefore, no direct impacts on the environment would occur. However, the analysis in Chapter 4 of the EIR evaluates the reasonably foreseeable indirect impacts that could result from the proposed off-site redesignation parcels. Future development within the five parcels would be subject to environmental review in accordance with CEQA, potentially tiering from the analysis for the off-site redesignation parcels in the EIR.

Figure 2-6 and Figure 2-7 illustrate the proposed land use and zoning designations for the project site, off-site redesignation parcels, and the surrounding area.

2.8 Required Permits and Approvals

Implementation of the proposed project would require certain entitlements and approvals from the City and other agencies. Table 2-2 lists the entitlements and approvals, which would be subject to review and approval by the City and other agencies, required for the proposed project.

Table 2-2. Required Permits and Approvals for the Proposed Project

Agency	Permit/Review Required
City of South San Francisco	Planning Commission and City Council: ● General Plan Amendments ● Specific Plan Amendments ● Zoning Code Amendments ● Design Review ● TDM Plan Approval ● Subdivision Map ● Development Agreement Engineering Division: ● Grading Permit(s) ● Encroachment Permit(s) ● Site Plan Check ● Hauling Permit(s) Building Division: ● Building Permit(s) ● Certificate of Occupancy Other: ● Fire Code Compliance
California Department of Transportation*	● Encroachment Permit
California Regional Water Quality Control Board*	● Clean Water Act Section 402 National Pollutant Discharge Elimination System General Construction Stormwater Permit and Stormwater Pollution Prevention Plan
Bay Area Air Quality Management District	● Stationary-Source Permit (Authority to Construct and Permit to Operate) for Generators or Similar Equipment
City/County Association of Governments, Airport Land Use Commission	● Determination of Consistency with the Airport Land Use Compatibility Plan for the Environs of San Francisco International Airport
Federal Aviation Administration	● Notice of Proposed Construction and Alteration and Federal Aviation Administration Determination per Code of Federal Regulations Title 14, Part 77.9
Bay Conservation and Development Commission*	● Permit for Work in the shoreline band pursuant to McAteer-Petris Act Government Code Sections 66600 to 66684

*A responsible agency.

Chapter 3
Environmental Checklist

Pursuant to Public Resources Code Section 21061 and California Environmental Quality Act (CEQA) Guidelines 15150, this analysis incorporates by reference the Shape SSF 2040 General Plan Update Environmental Impact Report (General Plan EIR) and the Lindenville Specific Plan (Specific Plan) Addendum. Where information is incorporated by reference, the information is briefly described or summarized (CEQA Guidelines Section 15150[c]). Refer to Chapter 1 of this environmental impact report (EIR) for the location where the General Plan EIR and Specific Plan Addendum are available for public inspection.

3.1 Aesthetics

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
1. AESTHETICS: Except as provided in Public Resources Code Section 21099, Would the project:					
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☐	☒
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒	☐
d) Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	☐	☐	☐	☒	☐

3.1.1 Setting

The project site is located on the west side of the U.S. 101 corridor, within the Lindenville Specific Plan area, which is characterized as a low-density industrial area with large blocks of industrial and warehouse buildings of varying sizes, paved parking, and minimal landscaping. The style of buildings within the Specific Plan area is predominantly utilitarian, with concrete, metal, and stucco façades. Land uses surrounding the project site include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot are north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. In addition, the project site is approximately 1 mile west of San Francisco Bay (Bay) and

0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The southern part of the project site includes a portion of the shoreline band jurisdiction of the San Francisco Bay Conservation and Development Commission (BCDC) adjacent to the navigable slough. The project site is also approximately 1 mile northwest of San Francisco International Airport (SFO).

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market, and associated surface parking. The site consists of two warehouse buildings and a smaller administration building. The site is also developed with open-air structures, including loading docks and trash compactors, which are associated with operations at the Golden Gate Produce Terminal. The topography of the project site is relatively flat, approximately 6 feet above mean sea level.[1] There is little to no on-site landscaping, and there are no trees on the project site.[2]

The off-site redesignation parcels are north of the project site, across Terminal Court, at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue. The off-site redesignation parcels currently comprise a large Park N' Fly surface parking lot and a Shell gas station.

3.1.2 Discussion

Pursuant to Public Resources Code Section 21061 and CEQA Guidelines 15150, this analysis incorporates by reference the General Plan EIR and the Specific Plan Addendum. Where information is incorporated by reference, the information is briefly described or summarized (CEQA Guidelines Section 15150[c]). Refer to Chapter 1 of this EIR for the location where the General Plan EIR and Specific Plan Addendum are available for public inspection.

3.1.2.1 Scenic Vistas

In the vicinity of the project site, views of the South San Francisco hillside sign, Sign Hill, San Bruno Mountain, and the Coast Range are visible in the background when facing north or west. However, the Lindenville Specific Plan area is relatively flat, resulting in limited views. These elevated features are viewed mainly through channelized view corridors (i.e., areas between buildings and vegetation in the immediate foreground). Visual resources to the east, such as the Bay and the Bay Trail along San Bruno Canal, are generally not visible from the vicinity of the project site because of the flat topography, distance, and intervening structures that provide visual separations. Similarly, the project site is not visible from the Bay or the Bay Trail. The project site and its surroundings are not considered scenic vistas or scenic resources. Therefore, the obstruction of background views from the surrounding areas and adjacent roadways would not affect scenic vistas or scenic resources.

Nearby areas with higher elevations, such as the site for the South San Francisco hillside sign, Sign Hill, and San Bruno Mountain, provide vistas of the city, the Bay, and the surrounding region. The project site is partially visible from these areas; however, the project site is viewed as a minor element in the expansive views, which encompass the urbanized setting of South San Francisco, the surrounding cities, and SFO, with the Bay in the middleground and the Coast Range and the East Bay Hills in the background. The height of the proposed buildings (i.e., a maximum of 113 feet 6 inches to the top of the rooftop appurtenances) would not substantially affect these views because of the

[1] Haley & Aldrich, Inc. 2022. *ASTM Phase I Environmental Site Assessment 131 Terminal Court, South San Francisco*. April 2022.

[2] HMH Engineers. 2022. *Terminal 131 Certified Tree Inventory*. July 27, 2022.

distance between the viewers and the project site. In addition, the proposed buildings would be viewed as a small component in the vast expanse of these views. Furthermore, the proposed buildings would not obstruct views of the Bay, sky, or the Coast Range as seen from higher elevations.

Although the proposed building heights would be greater than those of the buildings immediately adjacent to the project site, they would be generally consistent with the multi-story buildings in the downtown area adjacent to U.S. 101, which have a maximum height of 85 feet. The proposed project would continue the pattern of mid-rise building development along the west side of the U.S. 101 corridor. The proposed building heights would not substantially affect vistas because of the distance between the viewers and the project site; the superior position of viewers relative to the project site (i.e., at a higher elevation); the built-out, urban nature of the city; and the vast expanse of these views. Therefore, the proposed project would have a less-than-significant impact on scenic vistas.

The development application for the proposed project will be reviewed under the design review procedures in Chapter 20.480 (*Design Review*) of the City of South San Francisco (City) Zoning Ordinance, including Section 20.480.006 (*Design Review Criteria*), which specifically states that a site that is subject to design review shall be graded and developed with due regard for the natural terrain, aesthetic quality, and landscaping so as not to impair the environmental quality in the area. In addition, the proposed project would be required to comply with policies and actions of the Shape SSF 2040 General Plan (General Plan) that are designed to protect view corridors, scenic resources, and natural features. The proposed project would adhere to City standards, ensuring that impacts on scenic vistas would remain ***less than significant***.

3.1.2.2 Scenic Resources within a State Scenic Highway

The proposed project would not be located adjacent to, or in view of, a designated state scenic highway or corridor. The closest designated scenic highway is Interstate (I) 280, which is approximately 1.7 miles west of the project site. State Route (SR) 35, which is 2.5 miles to the west, is eligible for designation as a state scenic highway. Most of the views of South San Francisco from these corridors are shielded by trees and buildings. Because of the distance, the project site is not visible from any portion of I-280 or SR-35. Therefore, ***no impact*** related to scenic resources within a state scenic highway or corridor would occur.

3.1.2.3 Visual Character

The following discussion evaluates the proposed project's consistency with key regulations governing scenic quality. For purposes of this evaluation, a conflict with applicable zoning and other regulations governing scenic quality would occur if the proposed project were to introduce a new visible element that would be inconsistent with regulations governing the overall scenic quality, scale, and character of surrounding development. The new element would need to be consistent with the City General Plan policies, Lindenville Specific Plan, City Zoning Ordinance, and City Municipal Code. This analysis considers consistency with City General Plan policies, Specific Plan policies, zoning, the land use designation, and City Municipal Code regulations governing scenic quality.

General Plan

Per the General Plan, key components of quality building design involve using sustainable, long-lasting building materials; orienting buildings toward streets to create inviting spaces; and designing buildings that reflect local history. The General Plan seeks to facilitate a building design

that creates walkable and inviting spaces by locating parking behind buildings, allowing for outdoor plazas and dining areas, and locating building frontages in proximity to the sidewalk edge, where appropriate. The General Plan includes the relevant policies listed below that would assist in reducing or avoiding impacts from the proposed project related to visual quality.

Policy LU-5.2 requires high-quality designs and development standards for research-and-development (R&D) companies that support a mix of larger higher-intensity campuses. The proposed project would demolish all existing on-site uses (i.e., industrial and operational uses associated with the Golden Gate Produce Terminal, along with open-air structures) and construct an R&D campus. The R&D uses and amenities would be constructed within seven buildings, ranging from one to six stories, along with two parking garages and additional surface parking. As shown in Figures 3.1-1 through 3.1-3, buildings would be tied together through landscaping and open spaces to create a sustainable campus environment.

Policy LU-9.2 encourages distinctive architecture and elements that add visual interest to buildings to enhance people's perceptions of South San Francisco as an interesting and inviting place. The proposed buildings would have primarily glass façades. Building exteriors would incorporate combinations of unitized curtain walls, glass storefronts, and aluminum panels to evoke a modern aesthetic. The proposed buildings would have metal-panel parapets to screen the rooftop mechanical equipment. The I131N parking garage would be constructed out of materials similar to those on the proposed buildings, including perforated metal panels, aluminum panels, painted concrete, and clear glazed glass. The buildings, as depicted in Figures 3.1-1 through 3.1-3, would include distinctive architecture to provide visual interest, as seen from U.S. 101 and adjacent streets.

Policy LU-8.8 maintains and protects unique public views of the city, the Bay, and local landmarks from major thoroughfares and hillside open spaces. Public views from scenic vistas and scenic resources are analyzed in Sections 3.1.1.1 and 3.1.1.2, above. There are no trees at the project site and little to no vegetation or other scenic resources. In addition, there are no scenic resources within the immediate vicinity. Although a navigable slough is located immediately south of the project site, this is not identified as a scenic resource in the City's General Plan. However, the project site is visible from major throughfares, such as U.S. 101, and other public viewing areas, such as Shaw Road. Although these locations are not considered scenic views or unique public views, the proposed buildings would be highly visible and would partially block views of scenic resources, as seen from the aforementioned areas.

As shown in Figure 3.1-1 (existing conditions), there are unobstructed views of the project site from southbound U.S. 101 as well as northbound U.S. 101. In addition, motorists traveling northbound have views of scenic resources such as Sign Hill, the South San Francisco hillside sign, and San Bruno Mountain in the background beyond the site. Motorists traveling southbound have views of the Coast Range in the background beyond the site. As depicted in Figure 3.1-1 (proposed conditions), the proposed buildings at the project site would be visible from U.S. 101 and considerably taller than the existing development in the immediate area. However, the proposed landscaping, which would be visible along the eastern perimeter, would soften the proposed project's appearance and reduce its visual contrast with the surrounding landscape. In addition, although the proposed buildings would obstruct the majority of views of Sign Hill, the South San Francisco hillside sign, San Bruno Mountain, and the Coast Range from this segment of the U.S. 101 corridor, U.S. 101 is not a designated scenic route. The freeway is highly traveled; however, motorists have only fleeting views of the project site because of the speeds permitted on U.S. 101 and because users of U.S. 101

[this page left blank intentionally]

typically direct their attention to the freeway ahead rather than views from the freeway. The views of the project site from U.S. 101 do not constitute unique public views, and motorists on U.S. 101 are not considered sensitive viewers.

As shown in Figures 3.1-2 and 3.1-3 (existing conditions), because of the flat topography, existing features on the majority of the project site are visible only from San Mateo Avenue and Shaw Road (i.e., from certain viewpoints between intervening buildings and vegetation). However, highly channelized views of San Bruno Mountain are available between buildings and vegetation when facing north on Shaw Road. The new buildings under the proposed project would be visible from San Mateo Avenue and Shaw Road (Figures 3.1-2 and 3.1-3 [proposed conditions]) and would block the majority of the existing background views of San Bruno Mountain. However, Shaw Road is in an industrial area that is surrounded by warehouse buildings and U.S. 101 and not considered a unique public view.

Policy SA-32.5 requires landscaping buffers and other buffers to reduce noise, visual, and air quality impacts associated with U.S. 101. As shown in Figure 3.1-1 (proposed conditions), dense landscaping would be provided along the eastern perimeter of the project site, within view of U.S. 101. This would provide a buffer between the proposed buildings and U.S. 101 to reduce noise, visual, and air quality impacts associated with the freeway.

Policy LU-8.4 requires new development to add street trees, as well as other attractive landscaping, along streets and public spaces to provide shade and contribute positively toward public health outcomes and climate mitigation and adaptation. The proposed project would include trees along the perimeter of the project site, creating a visual buffer between the project site and the surrounding areas.

The proposed project would be consistent with the policies outlined in the General Plan. Therefore, the proposed project would be consistent with applicable policies in the General Plan that govern scenic quality in an urbanized area, resulting in ***less-than-significant*** impacts.

Lindenville Specific Plan

The Lindenville Specific Plan, adopted in September 2023, establishes the planning framework for the Lindenville Planning Sub-Area. The Specific Plan includes design and development standards and policies that can be applied to redevelop the area from a strictly industrial area to an area with a diverse mix of land uses with high-quality designs, open spaces, and blue-green infrastructure that still retains its industrial uses. Chapter 4, *Design and Development Standards*, of the Specific Plan contains development standards specific to the Specific Plan area, based on the character area and zoning districts, which define the “look and feel” of each character area. Specific Plan Policy DD-2.1 encourages buildings of various heights and sizes, Policy DD-2.2 encourages tall buildings to provide distinct open space, Policy DD-2.3 requires a visually interesting façade, Policy DD-2.4 facilitates high-quality architecture to create a coherent place, and Policy DD-3.2 requires dedication of new public park and open spaces. As described in more detail above, the proposed project would be consistent with these policies, which are similar to those presented in the General Plan. In addition, the City’s design review process would ensure that future developments would be consistent with the applicable City regulations governing scenic quality. Furthermore, under the Specific Plan, the project site would be designated as Mixed Industrial High (MIH), which would allow for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses.

In order to construct and operate the proposed project, a Specific Plan Amendment would be required to redesignate the site as BTP-H. Upon implementation of the Specific Plan Amendment, the proposed project would be consistent with applicable regulations and policies in the Specific Plan that govern scenic quality, resulting in ***less-than-significant*** impacts.

Zoning Ordinance

The City Zoning Ordinance contains architectural guidelines, design review criteria, lot and development standards, landscaping requirements, and other regulations for various land uses in order to promote aesthetic quality within the city and protect scenic views. In particular, Chapter 20.480 (*Design Review*) establishes procedure for design review, ensuring that development supports General Plan policies that preserve the scale and character of established neighborhoods and that scenic vistas are protected. Section 20.480.006 (*Design Review Criteria*) identifies the criteria by which the design review board, chief planner, planning commission, or City Council evaluates applications and ensures that they conform to the policies of the General Plan, as well as any applicable specific plan, and are consistent with other policies or guidelines the City Council may adopt.

The project site is designated in the City's Zoning Code as MIH. As established in the City's Zoning Code, the maximum building height allowed under the existing MIH zoning designation is 65 feet. A City Zoning Code amendment would be required for the proposed project to redesignate the site as BTP-H. The BTP-H land use designation allows for high-density corporate headquarters, R&D facilities, and office uses. The land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters. The proposed project would include an R&D facility that would encourage a campus environment, with proposed buildings linked together through a network of landscaping elements and open space. Therefore, upon implementation of the City Zoning Code amendment, the proposed project would be consistent with applicable regulations in the zoning ordinance that govern scenic quality, resulting in ***less-than-significant*** impacts.

Municipal Code – Tree Preservation Ordinance

The City Municipal Code also contains rules and regulations related to visual character. Chapter 13.30 (*Tree Preservation*) requires the City, the private property owner, and/or project applicant to preserve, protect, and plant trees in order to preserve the scenic beauty of the city. The proposed project would include a landscape plan to compensate for the removal of vegetation and enhance the overall development. The landscape plan would include planting trees on-site, in accordance with the City Tree Preservation Ordinance. Upon project buildout, 659 trees would be provided within the courtyard areas, surface parking lot, and along the roadways. Landscaped areas would include a mix of native and adapted vegetation with low water demand; a minimum of 80 percent would be native vegetation. The proposed trees and all other landscaping would be planted in compliance with City regulations. Therefore, the proposed project would be consistent with applicable regulations in the City Municipal Code that govern scenic quality, resulting in ***less-than-significant*** impacts.

Climate Action Plan

The Climate Action Plan includes actions that would improve the visual character of the city. Specifically, implementation of Action CS 2.1 would expand the canopy cover to reach the goals of the Urban Forest Master Plan,[3] which would improve the visual character of the city. As discussed above, there are no trees, or other vegetation, on the project site. However, upon project buildout, 659 trees would be provided within the courtyard areas, in the surface parking lot, and along the roadways. The proposed trees would serve to expand the overall canopy cover, thereby helping to improve visual character within the city. Therefore, the proposed project would be consistent with applicable actions in the Climate Action Plan that govern scenic quality, resulting in ***less-than-significant*** impacts.

3.1.2.4 Light and Glare

Any new source of project-related light or glare that would adversely affect daytime or nighttime views in the area would be regarded as a significant environmental impact. Lighting at the project site would include canopy-mounted linear lights as well as linear LED uplight-type wall-mounted units on the exterior of the buildings and at building entrances. Exterior pole-mounted fixtures would be provided in open space areas, vehicular circulation areas, and other hardscaped areas. In addition, low-level pedestrian lighting would be provided along pathways and in terrace areas. All exterior lighting would conform to the City Zoning Code, Section 20.300.009, *Lighting and Illumination*. The Specific Plan also includes Policy OS-3.4, which requires development to mitigate lighting impacts by integrating "dark sky" best practices. Chapter 5.7.9, *Exterior Lighting*, prohibits lighting designs that could provide a visual hazard for aircraft, requires lighting near habitat areas to illuminate only areas of human use, and requires development projects to complete studies for exterior lighting. The project site is not near any light-sensitive receptors. The site is surrounded by transportation infrastructure, including U.S. 101. Therefore, the proposed project would not result in a substantial new off-site source of light or glare, resulting in a ***less-than-significant*** impact.

3.1.2.5 Cumulative Impacts

According to the evaluation above, the project would result in either a less-than-significant impact or no impact. However, cumulative impacts could occur when project impacts combine with impacts from nearby cumulative development. In particular, the Infinite 101 Project, which would be immediately adjacent to the project site to the east, could result in cumulative changes to the visual setting. The Infinite 101 Project would block the majority of the views of the proposed project from U.S. 101, but in general, the two projects would have a similar design and similar scale, height, and massing. Similar to the proposed project, any new projects, including the Infinite 101 Project, would be required to comply with design review regulations and policies identified in the analysis above within the City Municipal Code, Zoning Ordinance, and General Plan. Therefore, the proposed project in combination with other development projects would not result in a significant cumulative impact related to aesthetics. Cumulative impacts would be ***less than significant***.

[3] The City of South San Francisco Urban Forest Master Plan (UFMP), adopted in 2020, serves as a guide for managing, enhancing, and growing South San Francisco's urban forest and community tree resources. The UFMP includes short-term actions and long-range planning goals to promote sustainability, species diversity, and greater canopy cover throughout South San Francisco.

3.1.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The proposed project does not include the construction of any new uses on the off-site redesignation parcels.

The BTP-H land use designation was created to encourage campus-like environments for future development that is similar and consistent with development in the area. Although the new zoning would allow for taller buildings to be constructed in the future (65 feet under the MIH land use designation compared to height restrictions consistent with Federal Aviation Administration [FAA] regulations in the BTP-H land use designation), the allowance for taller buildings at the redesignation parcels would be consistent with that of the immediately surrounding properties. Future development on the redesignation parcels would be subject to the City's design review process (City Municipal Code Chapter 20.480, *Design Review*), which would ensure that developments would be consistent with relevant City design policies and include high-quality designs that preserve or enhance existing visual resources and scenic vistas. In addition, future development would be subject to City Municipal Code Section 20.300.009, which establishes regulations to minimize sky brightness, glare, light trespass across property lines, and disruptions to nocturnal ecosystems, and the California Energy Code (Title 24), which regulates designs for lighting, such as maximum power and brightness, shielding, and sensor controls to turn lights on and off. The future development of the redesignation parcels would also be required to adhere to the policies in the Specific Plan. For these reasons, implementation of the redesignation parcels would result in ***less-than-significant*** impacts related to scenic vistas, visual resources, plans, and policies governing scenic quality as well as light and glare. No further evaluation in an EIR is required.

3.2 Agriculture and Forestry Resources

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
2. AGRICULTURE AND FORESTRY RESOURCES: **In determining whether impacts on agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts on forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forestland, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project, and the forest carbon measurement methodology provided in forest protocols adopted by the California Air Resources Board.**					
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220[g]), timberland (as defined by Public Resources Code Section 4526), or timberland zoned for timberland production (as defined by Government Code Section 51104[g]).	☐	☐	☐	☐	☒
d) Result in the loss of forestland or conversion of forestland to non-forest use?	☐	☐	☐	☐	☒
e) Involve other changes in the existing environment that, due to their location or nature, could result in non-agricultural use or the conversion of forestland to non-forest use?	☐	☐	☐	☐	☒

3.2.1 Setting

The California Department of Conservation maps the project site as "Urban and Built-Up" or "Other Land."[4] The department defines Urban and Built-Up land as "land occupied by structures with a building density of at least one unit to 1.5 acres, or approximately six structures to a 10-acre parcel. This land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes." The Department of Conservation defines Other Land as "land not included in any other mapping category. Common examples include low-density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry, or aquaculture facilities; strip mines, borrow pits; and water bodies smaller than 40 acres. Vacant and nonagricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as Other Land."[5] Neither of these designations falls under the

[4] California Department of Conservation. 2022. *California Important Farmland Finder*. Available: https://maps.conservation.ca.gov/DLRP/CIFF/. Accessed: November 7, 2023.

[5] California Department of Land Conservation. 2024. *Important Farmland Categories*. Available: https://www.conservation.ca.gov/dlrp/fmmp/Pages/Important-Farmland-Categories.aspx. Accessed: June 3, 2024.

"important farmland" umbrella (i.e., Prime Farmland, Unique Farmland, Farmland of Statewide Importance [Farmland]). No existing agricultural or forestry land uses occur within the city, and no portion of the city is designated as an agricultural or forestry resource by the City or the State of California (State).[6] The City does not have any active Williamson Act contracts.[7]

3.2.2 Discussion

The project site and all surrounding lands within the city are identified as Urban and Built-up Land by the California Department of Conservation, with no "important farmland" (i.e., Farmland). Consequently, there is no potential for the project to result in the conversion of important farmland to nonagricultural uses, and no land within the project site is agricultural land under a Williamson Act or Farmland Security Zone contract. Because there is currently no livestock grazing at the project site, there would be no impact related to the conversion of Farmland to non-agricultural use. In addition, the project site is not zoned for forestland, timberland, or timberland production under the General Plan, Specific Plan, or City Zoning Code. Because there is no forestland on the project site, there would be no impact related to the conversion of forestland to non-forestland uses. The proposed project would result in ***no impact*** on agriculture and forestry resources.

3.2.3 Cumulative

According to the evaluation above, the project would have no impact on agricultural or forestry resources. Therefore, when combined with cumulative development evaluated in the General Plan EIR and the Specific Plan Addendum, no new cumulative impacts would occur. The proposed project in combination with other development projects would not result in a significant cumulative impact related to agricultural or forestry resources. There would be no additional cumulative impacts.

3.2.4 Off-Site Redesignation Parcels

The proposed project would require amendments to the General Plan and Specific Plan and an associated zone change from MIH to BTP-H for the off-site redesignation parcels. The purpose of the off-site redesignation is to ensure that future development is similar to and consistent with the development proposed as part of the project. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

[6] California Department of Conservation. 2022. *California Important Farmland Finder*. Available: https://maps.conservation.ca.gov/DLRP/CIFF/. Accessed: June 3, 2024.

[7] California Department of Conservation. 2023. *California Williamson Act Enrollment Finder*. Available: https://maps.conservation.ca.gov/dlrp/WilliamsonAct/App/index.html. Accessed: June 3, 2024.

As discussed in the Specific Plan Addendum and General Plan EIR, which are incorporated by reference, agricultural and forestry resources do not occur within the Specific Plan area; therefore, there would be no impacts on agricultural and forestry resources. Furthermore, no lands within city boundaries are under a Williamson Act contract. The redesignation of five off-site parcels from MIH to BTP-H would not change the above conclusions because the same lands would be disturbed—lands that are not currently used for agricultural or forestry activities. Therefore, there would be ***no impact*** on agricultural and forestry resources as a result of the off-site redesignation parcels, and no further evaluation in an EIR is required.

3.3 Air Quality

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
3. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:					
a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐	☐
b) Result in a cumulatively considerable net increase in any criteria pollutant for which the project region is in non-attainment status under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐	☐
d) Result in other emissions (such as those leading to odors) that would adversely affect a substantial number of people?	☐	☐	☐	☐	☒

The proposed project is an R&D project. It does not include any land uses that are known to generate substantial odors, such as wastewater treatment plants, sanitary landfills, transfer stations, composting facilities, petroleum refineries, asphalt batch plants, chemical manufacturing facilities, fiberglass manufacturing facilities, auto body shops, rendering plants, and coffee roasting facilities. During construction, diesel exhaust from construction equipment would generate odors. However, construction-related odors would be temporary and would not persist upon project completion. Operation of the proposed project, which is a typical urban land use, is not anticipated to create significant sources of new odors. Thus, odors would not be expected to occur as a result of operation of the proposed project. Therefore, ***no impact*** would occur with respect to checklist question 3(d). This topic will not be addressed in the EIR.

Construction vehicles and equipment used during project construction would generate criteria air pollutants and ozone precursors, including reactive organic gases (ROGs), nitrogen oxide (NO_X), carbon monoxide (CO), and particulate matter. Construction of the project would also generate toxic air contaminants (TACs), including diesel particulate matter (DPM). During operation of the project, project-generated vehicle trips would generate criteria air pollutant emissions, and emergency generator testing would generate toxic air contaminants (TACs). Therefore, construction and operation of the project would have the potential to result in significant impacts with respect to checklist questions 3(a), 3(b), and 3(c). These topics will be analyzed in the EIR.

3.4 Biological Resources

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
4. BIOLOGICAL RESOURCES: Would the project:					
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒	☐
c) Have a substantial adverse effect on federally protected wetlands, as defined by Section 404 of the Clean Water Act (including, but not limited to, marshes, vernal pools, coastal areas) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒	☐
f) Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☐	☒

3.4.1 Setting

Much of the city of South San Francisco is already urbanized, and the amount of vacant land is limited. As stated in the City's General Plan, the most prevalent land use in South San Francisco is residential (occupying 39.8 percent of the land area), followed by industrial and R&D (29.5 percent); parks, open spaces, and common greens (9.9 percent); and public/institutional (6.6 percent); there are only about 153 acres of vacant land (about 3.4 percent of the city).

The project site is located within the Pacific Flyway, which extends from Alaska to Patagonia; the Pacific Flyway is one of four major flyways in North American used by migratory birds for their annual migrations. Naturally occurring open space in proximity to the project site includes San Bruno Mountain State and County Park, 3 miles to the north; San Francisco Bay, 1 mile to the east, and Crestmoor Canyon, 3.35 miles to the southwest. In addition, a north–south running strip of fragmented open space belonging to SFO (known as the West of Bayshore Subarea to the Airport Planning Department) is 1.59 miles southeast of the project site.

The 17.67-acre project site is completely developed with buildings and pavement within a predominantly urbanized area. There is little to no on-site landscaping, and there are no existing trees on the project site.[8] The site is bounded by Terminal Court, preceding the Park 'N Fly parking lot to the north; a pay booth, maintenance garage, and surface parking lot to the east; a navigable slough[9] that feeds into San Bruno Canal to the south; and commercial and industrial development to the west. Because the project site is completely developed, it does not contain natural land cover, protected wetlands/waters,[10] riparian habitat, or other sensitive natural communities.[11] There are no water features or waterways on the project site.

Although the project site is developed, some natural resource features are located nearby. A navigable slough is located immediately south of the site, and Colma Creek, a perennial stream in a concrete-lined channel, is approximately 0.27 mile north of the site. The slough is connected to San Bruno Canal and Colma Creek, which empties into San Francisco Bay approximately 1 mile east of the project site.

The biological resources impact analysis is based on a desktop review and evaluation of the following sources:

- A California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB)[12] species list query for the project site and 1-mile buffer area;
- A California Native Plant Society (CNPS)[13] species list query for the U.S. Geological Survey (USGS) South San Francisco (3712264) 7.5-minute series quadrangle;
- A U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC)[14] query for the project site;
- The arborist memorandum for Terminal 131, July 27, 2022;[15]
- The City General Plan Draft EIR;[16]

3.4.2 Discussion

3.4.2.1 Impacts on Special-Status Species

Because the project site is completely developed and no natural land cover or sensitive natural communities are present on the site, special-status wildlife species are not anticipated to occur on the site, with the exception of resident and migratory nesting birds protected under State law (California Fish and Game Code Sections 3503, 3503.5 and 3513) and federal law (e.g., Migratory Bird Treaty Act) and bats protected under State law (California Fish and Game Code Section 4150). Queries of the CNDDB, CNPS, and IPaC regarding special-status species with potential to occur in the region are included in Appendix J.[20] There is no potential habitat for special-status plants or special-status fish within the project site, but there is suitable habitat in the navigable slough south of the project site for four species, although two have low potential to occur. The majority of species listed in the queries have low or no potential to occur on or in immediate proximity to the project site because it is outside the species' range, lacks habitat for these species, and/or the surrounding dense urban development acts as a barrier between potential habitat and the site.

Longfin smelt (*Spirinchus thaleichthys*), a fish species designated as threatened by CDFW, and green sturgeon (*Acipenser medirostris*), a fish species designated as threatened by USFWS, have the potential to occur in the navigable slough south of the project site because this aquatic habitat is within the known range for the species. The proposed project would not result in direct impacts on longfin smelt or green sturgeon because no aquatic habitat is located on the project site; however, the potential exists for the proposed project to indirectly affect water quality in the navigable slough. Indirect impacts on aquatic habitats could occur because of impacts on water quality.

As discussed in more detail in Section 3.10, *Hydrology and Water Quality*, local drainage is managed by storm drain infrastructure. The proposed project would be required to comply with local and State regulations that call for implementation of best management practices (BMPs) to protect water quality during construction and operation. In addition, an approximately 15-foot buffer would be incorporated between construction work areas in the southern portion of the project site and the top of the bank of the navigable slough. Futhermore, discharges from storm drains to surface waters would be in compliance with waste discharge requirements. Temporary

[18] U.S. Environmental Protection Agency. 2023. *WATERS GeoViewer*. Available: https://www.epa.gov/waterdata/waters-geoviewer. Accessed: October 13, 2023.

[19] Google Earth Pro. 2023. Aerial imagery: 131 Terminal Court, 37°38'38.98"N and 122°24'30.84"W. Accessed: October 13, 2023.

[20] Peregrine falcon (*Falcon peregrinus*) is not included in Appendix J because Senate Bill No. 147, Chapter 59, which was approved by the governor and took effect on July 10, 2023, removed this species from the fully protected speices list. Although the species is no longer designated as a fully protected species by CDFW, the species is protected under state and federal laws that protect birds and raptors.

dewatering is anticipated during construction; however, no permanent dewatering would be required during operation. Groundwater that fails to meet water quality standards would be treated prior to discharge or hauled off-site for treatment and disposal. Because there would be no direct impacts on longfin smelt or green sturgeon and water quality would be protected with implementation of local and State regulations, the proposed project's impact on longfin smelt and green sturgeon would be less than significant.

California Ridgway's rail (*Rallus longirostris obsoletus*) and salt marsh harvest mouse (*Reithrodontomys raviventris*) are species designated as endangered by USFWS and endangered and fully protected by CDFW. Althought suitable habitat for California Ridgway's rail and salt marsh harvest mouse is present in the navigable slough located south of the project site, the habitat is considered marginal; these species are considered to have low potential to occur for a combination of factors, including the small amount of suitable habitat in the slough, the slough being surrounded by development with high human disturbance, the distance to high-quality habitat, the fragmentation of the slough, the lack of CNDDB occurrences, and the presence of a feral cat colony in the area. On February 27, 2024, an ICF senior wildlife biologist conducted a site visit to document land cover and assess habitat for special-status species related to the navigable slough. During the survey, the biologist was able to observe the slough from the southern boundary of the project site and from the existing road located at the slough's western boundary. It was observed that the habitat in the navigable slough is salt marsh; the dominate vegetation in the slough channel is pickleweed (*Salicornia pacifica*) with scattered gumplants (*Grindelia* sp.). Non-native species dominate the upland slough banks, including a mix of pampas grass (*Cortaderia selloana*), fennel (*Foeniculum vulgare*), french broom (*Genista monspessulana*), ice plant (*Carpobrotus edulis*), wild radish (*Raphanus sativus*), hairy cat's ear (*Hypochaeris radicata*), mallow (*Malva* sp.), and non-native grasses; the south bank has non-native trees, including ngaio tree *(Myoporum laetum*).

The marsh and unvegetated channel between the north and south high-water marks in the section of slough south of the project site is approximatly 60 feet at its widest; there is no more than 45 feet of upland on the north side of the slough and 25 feet on the south side of the slough. The slough is surrounded by dense urban uses on all sides. Higher-quality habitat for species is approximately 0.87 mile (4,576 feet) east of where Colma Creek empties into San Francisco Bay;[21] between the project site and the bay, the slough is partially framented by double concrete culverts and a single concrete culvert under U.S. 101 and South Airport Boulveard, respectively. No CNDDB occurrences for California Ridgway's rail and salt marsh harvest mouse are recorded at or near the project site. There is only one CNDDB occurrence for California Ridgway's rail within 1 mile of the project; occurrence #44, approximately 1 mile (radius) in size, is associated with marshes along the open bay 0.8 mile east of the project site where suitable higher-quality habitat is present for this species. There are no CNDDB occurrences for salt marsh harvest mouse within 10 miles of the project; the nearest occurrence (#57) is more than 10 miles southeast of the project site where suitable higher-quality habitat is present for this species. In addition to these factors that reduce the potential for these species to occur in the slough, an active Purrfect Catch Foundation feral cat feeding station is just outside the southeast corner of the project site near the slough; multiple bowls with food and water were present during the site visit. Feral cats are predators of California Ridgway's rail and salt marsh harvest mouse, and cat food left at feeding stations can attract additional predators, including rats, skunks, raccoons, and opossums.

[21] Google Earth Pro. 2023. Aerial imagery: 131 Terminal Court, 37°38'38.98"N and 122°24'30.84"W. Accessed: October 13, 2023.

Because the navigable slough is salt marsh habitat, freshwater species, including San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), have no potential to occur on the project site or in the navigable slough. Individual and population habitat needs for San Francisco garter include amphibian prey (e.g., red-legged frogs, treefrogs, other tertiary prey items), freshwater habitat with dense aquatic vegetation, upland habitat, and hibernacula.[22] In the navigable slough south of the project site, there is no freshwater habitat and limited upland habitat and hibernacula. Although three extant CNDDB occurrences (# 9, #13, and #55) overlap the project site and the navigable slough, the occurrences are not specific, approximately 7.5 miles by 17 miles in size. Information in CNDDB regarding occurrence #9 describes the location to be more than 4 miles southwest of the project site where suitable habitat for this species is present. Information in CNDDB regarding occurrence #13 and #55 did not provide further location details but described the presence of suitable habitat at each occurrence location. Freshwater marsh and ponds with adjacent grassland scrub, grassland fields, and trees are detailed in CNDDB related to occurrence #13, and a freshwater pond with scrub and trees is detailed in CNDDB related to occurrence #55. Because these habitat features are not present in the navigable slough south of the project area, it is deduced that occurrences #13 and #15 are not associated with the slough.

There is little to no on-site landscaping, and there are no existing trees on the project site.[23] However, the existing on-site structures, as well as landscaping (e.g., trees, shrubs, ornamental grasses) near the project site, could provide suitable nesting habitat for migratory birds and raptors, which, as described above, are protected under State and federal law. The proposed project would remove all on-site structures. If nests are present on-site or in the surrounding area and eggs, nestlings, or nesting individuals are harmed or killed during structure removal or substantially affected by construction noise or nighttime lighting during operation, a significant impact could occur. Trees and structures within or near the project site could also provide suitable roosting habitat for bats, which are protected under State law, although limited foraging habitat surrounds the project site. If bats are present in existing structures within the project site and structure removal results in disturbance, direct mortality, or roost site abandonment, as well as reduced reproductive success, a significant impact could occur.

In accordance with Mitigation Measure BIO-1, Special-Status Species, Migratory Birds, and Nesting Birds, from the General Plan EIR, the project would be required to retain a qualified biologist to conduct pre-construction surveys for nesting birds and roosting bats. If nesting birds or roosting bats are identified on the project site or in an area that could be disturbed during project construction, measures would be identified to avoid or minimize impacts on the individuals. With implementation of this measure, which would be enforced through project conditions of approval, impacts on nesting birds and roosting bats would be ***less than significant with mitigation***.

3.4.2.2 Impacts on Riparian Habitat or Other Sensitive Natural Communities

No riparian habitat or other sensitive natural community is present on the project site. The limited landscaping on the project site is not considered part of a sensitive natural community. The closest areas with potential for sensitive natural communities are the wetland habitats associated with the navigable slough, approximately 25 feet south of the project site.

---

[22] U.S. Fish and Wildlife Service. 2020. *Species Status Assessment for the San Francisco Gartersnake* (Thamnophis sirtalis tetrataenia). Version 1.0, May, Sacramento, CA. Available: https://ecos.fws.gov/ServCat/DownloadFile/171618. Accessed: February 27, 2024.

[23] HMH Engineers. 2022. *Terminal 131 Certified Tree Inventory*. July 27, 2022.

The proposed project would not result in any direct impacts on sensitive natural communities; however, indirect impacts on potential sensitive natural communities could occur because of impacts on water quality. As described in Section 3.4.2.1, above, and Section 3.10.1, below, there would be no direct impacts on sensitive natural communities or riparian habitat because water quality would be protected through compliance with local and State regulations. In addition, an approximately 15-foot buffer would be incorporated between construction work areas in the southern portion of the project site and the top of the bank of the navigable slough. Therefore, the proposed project's impact on sensitive natural communities would be ***less than significant***.

3.4.2.3 Impacts on State or Federally Protected Wetlands

No federally protected wetlands or other jurisdictional waters are present on the project site. The nearest jurisdictional waters to the project site are Colma Creek and the navigable slough, which are north and south of the project site, respectively. Colma Creek is a perennial stream that empties into San Francisco Bay, with headwaters in San Bruno Mountain State Park. Colma Creek is approximately 0.27 mile north of the project site, and the portion of the creek closest to the project site is contained within a concrete channel. The navigable slough south of the project site is an estuarine wetland approximately 25 feet south of the project site. The navigable slough passes through a culvert under the Bayshore Freeway and then empties into San Bruno Canal before joining Colma Creek, approximately 0.3 mile downstream from San Bruno Canal.

The proposed project would not result in any direct impacts on Colma Creek or the navigable slough. Nonetheless, the potential exists for the proposed project to indirectly affect water quality. However, as described in Section 3.4.2.1, above, and Section 3.10.1, below, because there would be no direct impacts on jurisdictional waters or wetlands, and because water quality would be protected through compliance with local and State regulations, the proposed project's impact on potentially protected wetlands would be ***less than significant***.

3.4.2.4 Impacts on Wildlife Movement and Native Wildlife Nursery Sites

No wetlands or running waters are present on the project site; therefore, the proposed project would not affect fish movement. All project activities would occur within an already-developed footprint. Any common urban-adapted species that currently move through the project site would continue to be able to do so following construction. Should non-nesting birds be on the project site when disturbance occurs, they could readily vacate the site and relocate to other areas.

Wildlife corridors are described as pathways or habitat linkages that connect discrete areas of natural open space that would otherwise be separated or fragmented by topography, changes in vegetation, or other natural or man-made obstacles, such as those associated with urbanization. The project site does not occur between areas of natural open space; the nearest open space is more than 2,800 feet southeast of the project site. Nonetheless, the project site is within the Pacific Flyway, a bird migratory route, and the likelihood exists for trees on the project site to be used by migratory birds. In addition, the likelihood exists for structures on the project site to be used by birds and bats as nursery sites. Should the proposed project interfere substantially with the movement of wildlife or impede the use of native wildlife nursery sites, a significant impact could occur. In addition, a north–south running strip of fragmented open space belonging to SFO (known as the West of Bayshore Subarea to the Airport Planning Department) is 0.8 mile southeast of the project site.

As described above, impacts on nesting migratory birds and bats would be minimized through implementation of Mitigation Measure BIO-1 from the General Plan EIR, and compliance with existing lighting regulations. Operation of the proposed project would include the use of new lighting and structures with potentially reflective surfaces. The new lighting and the new surfaces on the building could misdirect or confuse migratory birds or bats, resulting in disruption with respect to natural behavioral patterns and possible injury or death from exhaustion or collisions with buildings. The potential for these types of impacts could be heightened because of the proposed project's location within the Pacific Flyway and proximity to San Francisco Bay. Impacts on migratory birds and bats from proposed buildings and increased lighting levels could be significant. However, impacts would be minimized through implementation of Mitigation Measure BIO-1, which would require surveys for special-status species and be enforced through project conditions of approval. In addition, City Zoning Ordinance Section 20.300.008 includes lighting and illumination regulations that minimize artificial sky brightness, glare, and potential disruptions to nocturnal ecosystems. With implementation of Mitigation Measure BIO-1 and compliance with existing lighting regulations, impacts on migratory birds due to operation of the proposed project would be ***less than significant with mitigation***.

3.4.2.5 Conflicts with Local Policies or Ordinances Protecting Biological Resources

City Tree Preservation Ordinance No. 1271-2000, City Municipal Code Chapter 13.30, defines a "protected tree" as:

- Any tree of the following species with a circumference of 75 inches or more when measured 54 inches above natural grade: blue gum (*Eucalyptus globulus*), black Acacia (*Acacia melanoxylon*), Myoporum (*Myoporum laetum*), sweetgum (*Liquidambar styraciflua*), glossy privet (*Lingustrum lucidum*), and Lombardy poplar (*Populus nigra*);
- Any heritage tree of the following species with a circumference of 30 inches or more when measured at 54 inches above natural grade: California bay (*Umbellaria californica*), oak (*Quercus* spp.), cedar (*Cedrus* spp.), California buckeye (*Aesculus californica*), Catalina ironwood (*Lyonothamnus floribundus* var. *asplenifolius*), strawberry tree (*Arbutus* spp.), Mayten (*Maytenus boaria*), and little gem dwarf southern Magnolia (*Magnolia grandiflora*);
- Any tree, other than the species listed above with a circumference of 48 inches or more when measured 54 inches above natural grade;
- A tree, or stand of trees, with a designation based on a finding that it is unique and of importance to the public because of its unusual appearance, location, or historical significance; or
- A stand of trees where each tree is dependent upon the others for survival.

According to the arborist memorandum (Appendix K),[24] no trees are documented on the project site; therefore, no protected trees would be removed. There would be no impact with respect to the City's Tree Preservation Ordinance.

[24] HMH Engineers. 2022. *Terminal 131 Certified Tree Inventory Memorandum*. July 27, 2022.

Since certification of the General Plan EIR, the City adopted a bird-safe design ordinance, City Municipal Code Chapter 20.310.002, in accordance with Action ES-2.2.1 of the General Plan, which calls for the City to develop a bird safe design ordinance to minimize the adverse effects on native and migratory birds and require new development east of U.S. 101 to incorporate design measures. The ordinance includes bird-safe glazing requirements that pertain to the first 60 feet of a building's height for buildings within 300 feet of an Urban Bird Refuge (UBR) as well as buildings with uninterrupted glass segments 24 square feet or larger.

The City has not identified any UBRs within city limits, and the City Municipal Code does not contain any guidelines or criteria for defining a UBR. However, based on guidelines from other nearby jurisdictions, such as the City of San Francisco, a UBR is typically defined as an open space that is 2 acres or larger and dominated by vegetation, vegetated landscaping, forests, meadows, grassland, wetlands, or open water. Using this definition, the navigable slough south of the project site could be considered a UBR. The slough is approximately 3.32 acres, including the channel, bank, and related upland area, from its western boundary southwest of the project site to U.S. 101/Bayshore Freeway southeast of the project site.

The I131N A, I131N B, day-care center, and I131S A buildings, as well as the I131N parking garage, would not be subject to the City bird-safe design ordinance because they would be more than 300 feet from the UBR. The amenity building's south-facing façade would be approximately 300 feet from the UBR but would be mostly obstructed from the UBR by the I131S B and I131S C buildings, in addition to the planned landscaping between I131S B and I131S C buildings and south of the amenity building. Therefore bird-safe design requirements would not be necessary for the amenity building because there would be no direct line of sight between the UBR and this building.

Additional buildings within 300 feet of the UBR include the I131S B and I131S C buildings. The proposed project would incorporate ultra-violet hatched/fritted glazing for up to 60 feet of the height of the I131S B and I131S C buildings. Specifically, glazing would be incorporated on the south- and east-facing façades of the I131S B building and the south-, east-, and west-facing façades of the I131S C building within direct line of sight of the UBR, in accordance with similar bird-safe design requirements from other nearby jurisdictions (see Appendix L, Bird-Safe Design Strategy). Because there would be no direct line of sight between the UBR and the north- and northeast-facing façades of the I131S B building or the north façade of the I131S C building, bird-safe design requirements would not be necessary on these façades.

Because there are no trees on the site and the project would comply with the City-adopted bird-safe design ordinance, the proposed project would not conflict with any local policies or ordinances that protect biological resources, and impacts would be ***less than significant.***

3.4.2.6 Conflict with an Adopted Habitat Conservation Plan or Natural Community Conservation Plan

The project site is not part of, or near, an area covered by an adopted or proposed habitat conservation plan (HCP) or natural community conservation plan (NCCP) or any other local, regional, or State HCP. The nearest area covered by an HCP is San Bruno Mountain, which is approximately 4 miles north of the project site. Therefore, the proposed project would not conflict with the provisions of an adopted HCP, NCCP, or other approved local, regional, or State HCP, and ***no impact*** would occur.

3.4.2.7 Cumulative Impacts

As stated above, the proposed project would result in no impact, a less-than-significant impact, or a less-than-significant impact with mitigation. However, new cumulative impacts could occur when combined with other nearby cumulative development. In particular, the Infinite 101 Project, which would be immediately adjacent to the project site to the east, could result in cumulative changes to biological resources.

The adjacent project would demolish a small vehicle maintenance garage, pay booth, and surface parking and construct approximately 700,000 square feet of life sciences and R&D and amenity space within two six-story buildings. As an R&D use, the Infinite 101 Project would most likely have biological resource impacts similar to those of the proposed project. Similar to the site for the proposed project, the Infinite 101 project site contains development with limited landscaping; therefore, habitat for candidate, sensitive, or special-status species is marginal. In addition, similar to the proposed project, buildings and lighting on the Infinite 101 project site may cause bird strikes. Therefore, as with the proposed project, the Infinite 101 Project could have an impact on nesting special-status and migratory bird species. However, the Infinite 101 Project would also be subject to the requirements of wildlife protection laws, including the California Endangered Species Act, Migratory Bird Treaty Act, and the California Fish and Game Code, as well as wildlife protection policies and provisions and the mitigation measures identified in the General Plan and City Municipal Code. Therefore, the proposed project in combination with other development projects would not result in a significant cumulative impact related to biological resources. Cumulative impacts would be ***less than significant***.

3.4.3 Off-Site Redesignation Parcels

The proposed project would require amendments to the General Plan and Specific Plan and an associated zone change from MIH to BTP-H for the off-site redesignation parcels. The purpose of the off-site redesignation is to ensure that future development is similar to and consistent with the development proposed as part of the project. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

The setting and land cover (i.e., developed with buildings and pavement) at the off-site redesignation parcels are similar to the setting and land cover on the project site, except that there is ornamental vegetation on-site, including trees. Similar to the project site, a waterway is located just south of the off-site redesignation parcels, and Colma Creek is located to the north.

No riparian habitat or other sensitive natural communities, and no federally protected wetlands or other jurisdictional waters, are present within the off-site redesignation parcels; therefore, future development in the off-site redesignation parcels would have no impact. The off-site redesignation parcels are not part of, or near, an area covered by an adopted or proposed HCP or NCCP or any other local, regional, or State HCP. Therefore, future development in the off-site redesignation

parcels would have no impact. No wetlands or running waters are present on the off-site redesignation parcels; therefore, future development in the off-site redesignation parcels would have no impact on fish movement.

If future development in the off-site redesignation parcels would require tree removal, compliance with the City Tree Preservation Ordinance (No. 1271-2000) would be required. In addition, future development on the parcels would also be required to comply with the City's bird-safe design ordinance, City Municipal Code Chapter 20.310.002; therefore, impacts related to local policies or ordinances that protect biological resources would be less than significant.

Similar to the project, future development under the BTP-H zoning designation within the off-site redesignation parcels could affect special-status species, as well as the movement of wildlife, and impede the use of native wildlife nursery sites. Impacts on special-status species would be less than significant through implementation of Mitigation Measure BIO-1 from the General Plan EIR, or other types of similar measures enforced through conditions of approval, and compliance with the California Building Standards Code (Title 24, Building Energy Efficiency Standards). Impacts on wildlife movement and native wildlife nursery sites would also be less than significant through implementation of Mitigation Measure BIO-1 and compliance with existing lighting regulations, as described in City Zoning Ordinance Section 20.300.008. Therefore, through implementation of Mitigation Measure BIO-1 and compliance with the City Tree Preservation Ordinance, the City's bird-safe design ordinance, the California Building Standards Code, and existing lighting regulations (City Zoning Ordinance Section 20.300.008), which would be enforced through project conditions of approval, impacts associated with the off-site redesignation would be less than significant. No further evaluation in an EIR is required.

3.5 Cultural Resources

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
5. CULTURAL RESOURCES: Would the project:					
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☒	☐	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☒	☐	☐	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒	☐

Under CEQA, human remains are protected under the definition of archaeological materials, which applies to "any evidence of human activity." Public Resources Code Section 5097 has specific stop-work and notification procedures to follow when Native American human remains are inadvertently discovered during excavation and construction. Section 7050.5 of the California Health and Safety Code sets forth provisions related to the treatment of human remains, including the treatment of human remains found in locations other than a dedicated cemetery, and the responsibilities of the coroner. These requirements apply to all construction projects within the city, which includes the

proposed project. Furthermore, the General Plan includes policies and actions to reduce impacts on archaeological resources, including human remains. Policy ES-11.1, Identification of Tribal Cultural Resources, requires the City to identify, preserve, and protect tribal cultural resources, traditional cultural landscapes, sacred sites, places, features, and objects, including historic or prehistoric ruins, burial grounds, cemeteries, and ceremonial sites, in consultation or coordination with the appropriate Native America tribe(s). Policy ES-11.1 further requires appropriate treatment of Native American and other human remains discovered during project construction. Implementation of policies and actions in the General Plan, as well as compliance with adopted State, federal, and local regulations for the protection of archaeological resources and human remains, would ensure that future development under the proposed project would result in a less-than-significant impact on human remains. Therefore, a ***less-than-significant*** impact would occur with respect to checklist question 5(c). This topic will not be addressed in the EIR.

Construction of the proposed project would include demolition of the Golden Gate Produce Terminal, a produce market previously determined eligible for listing in the National Register of Historic Places under Criterion A for its association with the development of the South San Francisco Industrial Park and the produce industry in the San Francisco Bay Area.[25] As such, the produce terminal qualifies as a historical resource under CEQA, as defined in CEQA Section 21084.1 and CEQA Guidelines Section 15064.5(a)(3). Therefore, construction of the project would have the potential to result in a significant impact with respect to checklist question 5(a). Impacts on the Golden Gate Produce Terminal will be evaluated in a focused EIR. In addition, one previously identified archaeological resource, P-41-000051, was identified on the project site. There is the potential for archaeological resources, including P-41-000051, to be encountered during project construction. If archaeological resources are encountered during project-related ground disturbance, a substantial adverse change in the significance of a historical resource could occur from its demolition, destruction, relocation, or alteration, and the significance of the resource could be materially impaired, as defined in CEQA Guidelines Section 15064.5(b)(1). Therefore, construction of the project would have the potential to result in significant impact with respect to checklist question 5(b). Impacts on archaeological resources will be analyzed in the EIR.

3.6 Energy

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
6. ENERGY: Would the project:					
a) Result in potentially significant environment impact due to the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?	☐	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒	☐

3.6.1 Setting

Electricity

Grid electricity and natural gas service in South San Francisco are provided by Pacific Gas and Electric Company (PG&E). PG&E is a publicly traded utility company that, under contract with the California Public Utilities Commission, generates, purchases, and distributes energy. PG&E's service territory covers 70,000 square miles, roughly extending north to south from Eureka to Bakersfield and east to west from the Sierra Nevada to the Pacific Ocean. PG&E's electricity distribution system consists of 106,681 circuit miles of electric distribution lines and 18,466 circuit miles of interconnected transmission lines.[26]

PG&E electricity is generated from a combination of sources, such as coal-fired power plants, nuclear plants, and hydroelectric dams, along with newer sources such as wind turbines and photovoltaic plants, or "solar farms." "The grid," or bulk electric grid, is a network of high-voltage transmission lines that link power plants to the PG&E system. The distribution system, comprising lower-voltage secondary lines, is at the street and neighborhood level. It consists of overhead or underground distribution lines, transformers, and individual service "drops" that connect to individual customers. The existing electrical system in the project area consists of overhead and underground facilities.

In addition to its base plan, PG&E has two options, known as Solar Choice and Regional Renewable Choice options, that give customers the option of purchasing power from solar or other renewable resources. One Solar Choice option provides up to 50 percent of a customer's energy from solar resources; the other option provides up to 100 percent of a customer's energy from solar resources. The Regional Renewable Choice option allows customers to purchase renewable energy from a specific project within PG&E's service area for anywhere from 25 to 100 percent of their energy use.[27] In addition, in 2016, South San Francisco joined Peninsula Clean Energy (PCE) to receive additional renewable power. PCE's power comes from a mix of various sources, including solar, wind,

[26] Pacific Gas and Electric Company. 2023. *Company Profile.* Available: https://www.pge.com/en_US/about-pge/company-information/profile/profile.page. Accessed: November 5, 2023.

[27] Pacific Gas and Electric Company. 2023. *Which Renewable Option Is Best for You?* Available: https://www.pge.com/en_US/small-medium-business/energy-alternatives/private-solar/solar-choice-rates/solar-choice-plans-for-businesses.page. Accessed: November 6, 2023.

geothermal, biomass and biowaste, and hydroelectric generation resources. PCE delivers power to its customers from existing PG&E utility infrastructure. PCE allows customers to choose between two different electricity options, ECOplus, with 50 percent of a customer's electricity from renewable resources and 100 percent clean energy resources, and ECO100, with 100 percent from renewable and carbon-free resources.[28] In 2022, San Mateo County consumed a total of 4,177 million kilowatts of electricity. In the county, electricity was consumed primarily by the non-residential sector (62 percent), followed by the residential sector (38 percent).[29]

Natural Gas

PG&E's natural gas (i.e., methane) delivery system includes 42,000 miles of natural gas distribution pipelines and 6,700 miles of transmission pipelines.[30] The system is operated under an inspection and monitoring program in real time on a 24-hour basis, with leak inspections, surveys, and patrols continuously taking place along the pipelines. Gas delivered by PG&E originates in gas fields in California, the Southwest, the Rocky Mountains, and Canada.[31] Transmission pipelines send natural gas from the fields and storage facilities; these large pipes are under high pressure. The smaller distribution pipelines deliver gas to individual businesses or residences.

In San Mateo County, a total of 204 million therms of natural gas were consumed in 2022 (the most recent year for which data are available). In 2022, natural gas in the county was consumed primarily by the residential sector (56 percent), followed by the non-residential sector (44 percent).[32]

Project Site

As stated previously, PG&E provides natural gas and electricity to South San Francisco, including the project site, through its right-of-way for electric and natural gas lines. The project site is served by both natural gas and electric infrastructure provided by PG&E.

3.6.2 Discussion

3.6.2.1 Result in the Wasteful, Inefficient, or Unnecessary Consumption of Energy Resources

Construction

Construction activities associated with the proposed project would result in temporary use and consumption of energy resources on the project site. Construction energy would include the electricity used to power electric construction equipment and deliver water to the construction site,

[28] Peninsula Clean Energy. 2023. *Energy Choices.* Available: https://www.peninsulacleanenergy.com/energy-choices/. Accessed: November 6, 2023.

along with the gasoline and diesel fuel used to transport workers and drive haul trucks to and from construction sites or operate off-road equipment. It is estimated that construction of the proposed project would use approximately 14,352 megawatt hours of electricity, 294,367 gallons of gasoline, and 461,884 gallons of diesel fuel over the entire construction period. No natural gas would be used during project construction. Construction energy consumption would cease once construction of the proposed project is complete; therefore, such consumption is considered short term. In addition, in accordance with Chapter 15.60 of the City Municipal Code, 100 percent of all inert solids (i.e., building materials) and 65 percent of non-inert solids (i.e., all other materials) would be recycled as required by the City during project construction and demolition, which would result in energy reductions. Construction would not result in the wasteful, inefficient, or unnecessary consumption of energy resources. The impact would be ***less than significant.***

Operation

Energy would also be required to heat and cool the proposed buildings, provide indoor and outdoor lighting, and move water/wastewater. The proposed project would consume energy during normal day-to-day operations associated with the proposed R&D uses, including the use of personal and mass transit vehicles by employees and visitors/guests when traveling to and from the project site, which would require energy in the form of gasoline, diesel, and/or electricity. It is estimated that operation of the proposed buildings would use approximately 58,870,875 kilowatt hours of electricity and 661,508 gallons of diesel fuel per year. Vehicle trips during project operations would require approximately 1,266,966 gallons of gasoline, 141,281 gallons of diesel, 7,214 gallons of natural gas, and 13,862 gallons of fuel for plug-in hybrids.

As described in Chapter 2, *Project Description*, the proposed project would incorporate sustainability features to reduce energy consumption, water consumption, and waste generation. The proposed project would achieve, at a minimum, a Leadership in Energy and Environmental Design (LEED), version 4.1, Building Design and Construction (BD+C) Core and Shell Gold rating as well as WELL v2 Core Gold certification.[33] Proposed sustainability measures would include an all-electric building design; the use of on-site renewable energy from rooftop photovoltaic (PV) panels, which would generate approximately 1,766,130 kilowatt hours of electricity per year; a high-performance building envelope and heating, ventilation, and air-conditioning (HVAC) system; ultra-efficient WaterSense-labeled flush and flow fixtures; low-water-demand native and/or adapted vegetation with efficient irrigation systems; on-site recycling and composting facilities; and electric-vehicle charging infrastructure. In addition, the proposed project would implement transportation demand management (TDM) measures to reduce the number of trips generated to and from the project site (see Appendix I), which would reduce the consumption of energy resources such as vehicle fuel. As such, the use of energy resources during project operation would not be considered wasteful, inefficient, or unnecessary.

Because of the proposed project's size and location within an urban setting, build-out of the proposed project would not significantly increase energy demand within the service territory and would not require new energy facilities. The proposed project would be required by law to adhere to California Code of Regulations Title 24, the California Green Building Standards Code (CALGreen),

[33] The WELL building standards are performance-based building standards for measuring and monitoring features within the built environment that may affect human health through air, water, light, and other concepts. The standards provide ways for buildings to be designed to improve human comfort and enhance health and wellness within the built environment.

as well as adopted City energy conservation ordinances and regulations. Furthermore, the proposed project would be required to implement relevant policies from the City's Climate Action Plan, which are geared toward reducing operational greenhouse gas (GHG) emissions. This would indirectly reduce energy consumption (see the discussion in Section 3.8, *Greenhouse Gas Emissions*). Accordingly, with implementation of adopted State and City energy conservation measures, the proposed project would result in a ***less-than-significant*** impact with respect to the wasteful, inefficient, or unnecessary consumption of energy resources.

3.6.2.2 Conflict with or Obstruct a State or Local Plan for Renewable Energy or Energy Efficiency

As discussed above, the proposed project would encourage implementation of sustainability and transportation features and be required to comply with State and local renewable energy and energy efficiency plans. Therefore, the proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency, and the impact would be ***less than significant***.

3.6.2.3 Cumulative Impacts

Continued growth throughout PG&E's service area could contribute to ongoing increases in demand for electricity and natural gas. These anticipated increases would be countered, in part, as State and local requirements related to renewable energy become more stringent and energy efficiency increases. Therefore, it is anticipated that future energy users will become more efficient and less wasteful over time. In addition, similar to the proposed project, cumulative development projects would most likely include sustainability and transportation features that would reduce energy consumption and increase renewable energy generation. Furthermore, with adherence to the General Plan and Climate Action Plan policies and actions, the City Municipal Code and Zoning Ordinance, and standards of each applicable jurisdiction within the PG&E service area, as well as State, regional, and local policies to reduce energy consumption and increase energy efficiency, cumulative impacts would be less than significant. Therefore, the proposed project, in combination with development from cumulative projects, would not result in a significant cumulative impact related to energy. Cumulative impacts would be ***less than significant***.

3.6.3 Off-Site Redesignation Parcels

The proposed project would require amendments to the General Plan and Specific Plan and an associated zone change from MIH to BTP-H for the off-site redesignation parcels. The purpose of the off-site redesignation is to ensure that future development is similar to and consistent with the development proposed as part of the project. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

Similar to the proposed project, future development under the BTP-H designation could include life sciences and R&D office space, which would most likely have energy impacts similar to those of the project. Similar to the proposed project, future development at the off-site redesignation parcels would most likely include features that would reduce energy consumption and increase renewable energy generation and be required to comply with all adopted State and local renewable energy and energy efficiency regulations and plans. Future development at the off-site redesignation parcels would not result in a significant impact related to energy. Therefore, energy impacts associated with the off-site redesignation parcels would be ***less than significant.*** No further evaluation in an EIR is required.

3.7 Geology and Soils

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact

iv. Landslides?	☐	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable as a result of the project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒	☐
e) Have soils that would be incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	☐	☐	☐	☒	☐

3.7.1 Setting

The project site is located in the Coast Ranges Geomorphic Province, a portion of coastal California characterized by northwest-trending mountain ridges and a valley running parallel to the San Andreas Fault Zone. Typically, bedrock within the province consists of Tertiary marine sedimentary deposits and volcanic rock. Bedrock beneath the project site ranges from at least 100 feet below ground surface (bgs) at the northern edge of the project site to at least 250 bgs at the southern edge where contact with the Colma Formation has been mapped. The site is underlain by Quaternary surficial deposits of artificial fill over a tidal flat.[34] The presence of

[34] Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 3.

liquefiable soils is generally higher in the eastern part of the city. The California Geological Survey has mapped the site as within a Seismic Hazard Zone with potential for liquefaction.[35] Although not located within an Earthquake Fault Zone, the project site is located in a seismically active region of California. Active faults, including the San Andreas, San Gregorio, and Hayward-Rodgers faults, are located within 3 miles of the site.

3.7.2 Discussion

A preliminary geotechnical report was prepared for the proposed project by Haley & Aldrich to analyze potential project impacts. The following discussion is based on the *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, which is included as Appendix M.

3.7.2.1 Rupture of a Known Earthquake Fault

The major active faults closest to the project site are the San Andreas, San Gregorio, and Hayward-Rodgers faults, the latter being the closest, at less than 3 miles from the project site. The proposed project is not located within an Earthquake Fault Zone, and no known active or potentially active faults exist on the site.[36] Therefore, the risk of surface faulting and secondary ground failure is low. In addition, the proposed project would adhere to local codes, General Plan policies, and Specific Plan polices regarding earthquakes. Therefore, this impact is considered ***less than significant***.

3.7.2.2 Strong Seismic Ground Shaking

The 2014 Working Group on California Earthquake Probabilities at the USGS, in coordination with the California Geological Survey and Southern California Earthquake Center, predicted a 72 percent chance of a magnitude 6.7 or greater earthquake occurring in the San Francisco Bay Area in 30 years (i.e., before 2044). The project site is located in a seismically active region of the state. The area has been designated as Zone VIII, which corresponds to "very strong" ground shaking.[37] Therefore, the project site could experience very strong seismic shaking during a major earthquake.[38]

The proposed project would be required to comply with California Building Code requirements and City Municipal Code requirements, including design specifications for building foundations and structures that would enable them to withstand strong seismic ground shaking. With adherence to the California Building Code and City Municipal Code requirements, project-related impacts would be ***less than significant***.

38 Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 4.

3.7.2.3 Seismically Related Ground Failure, Including Liquefaction

Liquefaction

The potential for liquefaction is generally higher in the eastern part of the city. The project site would be located within a Liquefaction Zone,[39] and the potential for on-site liquefaction to occur across the site, within the upper 50 feet bgs, is considered moderate to high. This is due to the presence of silty sand and sandy silt, which were identified between approximately 18 and 80 feet bgs, especially from 18 to 30 feet bgs where the medium-dense to dense silty sand resides.[40] The preliminary geotechnical investigation recommended supporting the proposed project on deep foundations (e.g., Tubex and auger-cast piles), extending to at least 45 to 60 feet bgs. Compliance with the recommendations in the preliminary geotechnical investigation would be enforced as a condition of approval for the proposed project. Furthermore, the proposed project would implement Action CR-4.41 of the General Plan, which requires future projects to prepare site-specific geotechnical reports and implement their recommendations. Compliance with geotechnical report recommendations, as well as City Municipal Code policies, would reduce impacts related to liquefaction to a ***less-than-significant*** level.

Lateral Spreading

Lateral spreading occurs when extensive ground cracking and settlement move toward a free face such as a slope or creek channel. It is commonly associated with liquefiable soils. Areas at risk of lateral spreading in South San Francisco are primarily those along streams and waterfronts.[41]

The proposed project would be located near a free face (San Bruno Canal) at the southern edge of the project site. The preliminary geotechnical investigation estimated that lateral spreading could be in the range of 30 to 130 inches and recommended that detailed analysis be presented during the design-level phase of the proposed project.[42] Per the City Zoning Ordinance, this analysis would be reviewed and approved by the City engineer, and the proposed project would comply with any necessary recommendations. Therefore, through compliance with the recommendations of the design-level geotechnical investigation, which would be a condition of approval and implement Action CR-4.41 of the General Plan, as well as the City Zoning Ordinance, impacts related to lateral spreading would be ***less than significant***.

3.7.2.4 Landslides

Landslides occur when the stability of a slope changes from a stable to an unstable condition. The stability of a slope is affected by the following factors: inclination, material type, moisture content, orientation of layering, and vegetative cover. In general, steeper slopes are less stable than more gently inclined ones.

---

[39] First Carbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments and Climate Action Plan, City of South San Francisco, San Mateo County, California*. State Clearinghouse Number 2021020064. Exhibit 3.6-5, Liquefaction Potential.

[40] Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 5.

[41] First Carbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments and Climate Action Plan, City of South San Francisco, San Mateo County, California*. State Clearinghouse Number 2021020064. p. 3.6-22.

[42] Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 7.

The Project Site is located in an area designated as having moderate incidence of landslide susceptibility.[43] However, the topography of the project site is relatively flat,[44] and the preliminary geotechnical investigation did not identify landslides as a geotechnical issue that would affect design and construction. Therefore, through adherence to applicable City Municipal Code and City Zoning Ordinance sections, as well as General Plan policies and actions, impacts related to landslide risks would be ***less than significant***.

3.7.2.5 Result in Substantial Soil Erosion or Loss of Topsoil

Projects that expose surface soils create the potential for erosion from wind and stormwater runoff. The potential for erosion increases if a project is located on a steep or windy site or if construction occurs during the rainy season.

The proposed project would disturb more than 1 acre of soil on the 17.67-acre site and therefore must comply with the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (Construction General Permit), which would require preparation of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP would include BMPs to control erosion and sediments during construction. In addition, the proposed project would abide by Chapter 15.08 of the City Municipal Code, which includes drainage and erosion control requirements, and Section 14.04.132, which requires measures that call for minimizing land disturbance and impervious surfaces.[45] Therefore, through adherence to permit requirements and City Municipal Code sections, impacts related to erosion and a loss of topsoil would be ***less than significant***.

3.7.2.6 Result in On- or Off-site Landslide, Lateral Spreading, Subsidence, Liquefaction, or Collapse

The potential for on-site liquefaction at the project site is considered moderate to high.[46] The proposed project's preliminary geotechnical investigation determined that the potential for cyclic densification at the project site is low.[47] In addition, the preliminary geotechnical investigation determined that the site is underlain by soft Young Bay Mud, which is highly compressible. New fill and a building pad could result in up to 5.5 inches of settlement.[48]

Recommendations for deep foundations, as well as Tubex piles and auger-cast piles, are provided in the preliminary geotechnical investigation to minimize impacts related to settlement, along with landslides, lateral spreading, and liquefaction. In addition, site-specific soil and geologic reports,

---

43 First Carbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments and Climate Action Plan, City of South San Francisco, San Mateo County, California*. State Clearinghouse Number 2021020064. Exhibit 3.6-2, Landslide Potential.

47 Haley & Aldrich, Inc. 2022. P *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 7.

48 Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 9.

which would be reviewed by the City engineer, would be required by California Building Code and City Municipal Code sections for projects in areas that are susceptible to instability. Preparation of the design-specific geotechnical report would be a condition of approval for the proposed project, and implementation of its recommendations would be required by Action CR-4.41 of the General Plan. Therefore, through adherence to permit requirements and City Municipal Code sections, as well as the recommendations provided in the preliminary geotechnical investigation impacts related to locating the proposed project on an unstable geologic unit or soil would be ***less than significant***.

3.7.2.7 Expansive Soil

Projects in areas with expansive soils may require special building foundations or grade preparation, such as the removal of problematic soils and replacement with engineered soils. Expansive soils are generally located in the central portion of the city, not in the eastern portion, which is primarily artificial fill.

The proposed project's preliminary geotechnical investigation determined that near-surface native soils consisted of clayey gravel, silty sand, lean clay, and clayey sand with or without gravel, all of which have very low to low expansive potential.[49] Because expansivity would be low and the proposed project would adhere to City Municipal Code, City Zoning Ordinance, and California Building Code rules and regulations, impacts related to expansive soils would be ***less than significant***.

3.7.2.8 Soils that Would Be Incapable of Adequately Supporting the Use of Septic Tanks or Alternative Wastewater Disposal Systems

The proposed project would connect to the City's sanitary sewer system. Proposed sewer system improvements would include a new 18-inch sanitary sewer main through the southwest corner of the project site that would connect to a 21-inch main on Shaw Road to support the proposed project. Proposed on-site sewer pipes would be between 4 and 18 inches in diameter and connect to the upsized sewer main beneath the navigable slough. No septic tanks or alternative wastewater disposal systems would be necessary. Therefore, the proposed project would result in ***no impact*** related to soils that would be incapable of supporting septic tanks or alternative wastewater disposal systems.

3.7.2.9 Paleontological Resources or Unique Geological Features

The Merced Formation and the Colma Formation, which underlie portions of the city, are known to be potentially fossiliferous. The preliminary geotechnical investigation prepared for the proposed project by Haley & Aldrich determined that the project site is underlain by the Colma Formation, between 45 and 65 feet bgs.[50] The preliminary geotechnical investigation recommended extending deep foundations and piles into the Colma Formation. The proposed project would be subject to a project condition of approval that implements General Plan EIR Mitigation Measure GEO-6.

[49] Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 7.

[50] Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California*, p. 12.

In accordance with Mitigation Measure GEO-6 from the General Plan EIR, the project would be required to perform or provide paleontological monitoring for all proposed excavations in the Colma Formation and Merced Formation. Should significant paleontological resources (e.g., bones, teeth, well-preserved plant elements) be unearthed, project activities shall be diverted at least 15 feet from the discovered paleontological resources until a professional vertebrate paleontologist has assessed such discovered resources. With implementation of this measure, which would be enforced through project conditions of approval, impacts related to paleontological resources would be ***less than significant with mitigation***.

3.7.2.10 Cumulative Impacts

In general, a project's potential impacts related to geology and soils are individual and localized, depending on the project site and underlying soils. Each structure will have different levels of excavation, cut-and-fill work, and grading, which would affect local geologic conditions in different ways. Therefore, the geographic context for geology and soils is site specific.

The cumulative projects would be required to go through environmental and regulatory review and comply with the California Building Code. Each project would also be required to have a site-specific geotechnical investigation performed, which would provide design recommendations to reduce each project's impacts. Similar seismic safety standards and conditions of approval would apply to the reasonably foreseeable future projects. For these reasons, the proposed project in combination with other past, present, and reasonably foreseeable future projects would not result in a significant cumulative geology and soils impact. The cumulative impact would be ***less than significant***. No mitigation is required.

3.7.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The proposed project does not include the construction of any new uses on the off-site redesignation parcels.

Although the off-site redesignation parcels are not located within an Earthquake Fault Zone, major active faults are close to the project site, including the San Andreas, San Gregorio, and Hayward-Rodgers faults, the latter being within 3 miles of the parcels. The parcels are located in an area designated as Zone VIII, which corresponds to "very strong" ground shaking; therefore, future development on the parcels would be subject to very strong ground shaking during a seismic event. The parcels are also located within a Liquefaction Zone, and the potential exists for on-site liquefaction to affect future development on the parcels. The potential for lateral spreading exists at the five off-site redesignation parcels because free faces, such as Colma Creek, are located nearby. Landslide susceptibility is expected to be low at the parcels and would most likely not affect future development. Impacts related to erosion, the placement of structures on unstable soils or geologic

units, or paleontological resources would be analyzed within the context of a specific geological report and environmental review prepared for any future project. Such issues are not known at this time. However, policies and requirements included in the General Plan Update, City Municipal Code, and City Zoning Ordinance, as well as the California Building Code, would apply to any future development on the five off-site redesignation parcels, which could minimize impacts related to geology and soils. Therefore, impacts related to geology and soils associated with the off-site redesignation would be **less than significant.** No further evaluation in an EIR is required.

3.8 Greenhouse Gas Emissions

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
8. GREENHOUSE GAS EMISSIONS: Would the project:					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐	☐

Construction vehicles and equipment used during project construction would generate GHGs, including carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). During operation, project-generated vehicle trips and emergency generator testing would also generate GHG emissions from the combustion of fossil fuels. In addition, the use of electricity, landscaping equipment, and water on the site and the generation of solid waste and wastewater would also generate GHG emissions during operations. Furthermore, the generation of GHG emissions could result in a conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. Therefore, construction and operation of the project would have the potential to result in significant impacts with respect to checklist questions 3.8(a) and 3.8(b). These topics will be analyzed in the EIR.

3.9 Hazards and Hazardous Materials

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
9. HAZARDS AND HAZARDOUS MATERIALS: Would the project:					
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒	☐
c) Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	☐	☐	☐	☐	☒
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment?	☐	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☐	☒

3.9.1 Setting

Site-specific Phase I and Phase II Environmental Site Assessments (ESAs) were conducted for the project site in April and May 2022 by Haley & Aldrich; the ESAs are included in Appendix N.[51] The following sections summarize each report's findings.

[51] Haley Aldrich, Inc. 2022. *ASTM Phase I Environmental Site Assessment, 131 Terminal Court, South San Francisco, California.* Final. 0204962-001. Walnut Creek, CA. Prepared for US Terminal Court Owner, LLC Greenwood Village, Colorado; Haley Aldrich. 2022. *Phase II Environmental Investigation Results, 131 Terminal Court, South San Francisco, California.* Final. 0204962-000. Walnut Creek, CA. Prepared for US Terminal Court Owner, LLC Greenwood Village, Colorado.

3.9.1.1 Phase I ESA

The objective of the Phase I ESA was to assess whether recognized environmental conditions (RECs), historical RECs (HRECs), and controlled RECs (CRECs) were identified and associated with the project site. No RECs or HRECs were noted; however, one CREC was identified. The CREC was associated with a former fueling facility that had been located in the northern portion of the property. When in operation, the former commercial fueling facility consisted of two dispenser islands and three underground storage tanks, or USTs (one 6,000-gallon diesel tanks and two 10,000-gallon gasoline tanks). In 2014, San Mateo County Environmental Health (SMCEH) issued a case closure letter for the site; however, hydrocarbon-affected soil and groundwater were allowed to remain on-site. The affected media was in the vicinity of the former fueling facility and allowed to remain under the Low-Threat UST Case Closure Policy.[52] The Phase I ESA noted that future redevelopment, a change in land use, or the removal of soil and/or groundwater from the site would require notification of SMCEH. In addition, one "potential environmental concern" was identified in connection with the site. According to the Phase I ESA, an easement for an active, non-highly volatile liquid (HVL) pipeline is located along the east side of the site. No documented releases were identified associated with this feature, however, the Phase I ESA determined that there is potential for future releases.

3.9.1.2 Phase II ESA

The Phase II ESA investigation consisted of advancing five borings at specific locations within the site and collecting soil and/or groundwater samples. The assessment's intent was to determine whether the soils to be encountered during future construction activities would require special on-site handling and off-site disposal, whether groundwater generated from construction dewatering would require special treatment prior to discharge or disposal, and whether the remaining soil and groundwater concentrations would pose a vapor intrusion risk. The Phase II ESA findings were the following related to soil and groundwater:

Soil

- Total petroleum hydrocarbons-diesel range organics (TPH-DROs) and TPH-gasoline range organics (TPH-GROs) were detected at concentrations greater than laboratory reporting limits but below their respective commercial/industrial environmental screening levels, or ESLs (in two soil borings, noted in the report as HA-12 and HA-13).
- Select volatile organic compounds (VOCs) were detected at concentrations greater than laboratory reporting limits but below commercial/industrial ESLs. These constituents were detected in shallow soil samples collected from boring location HA-12.
- Arsenic was detected at concentrations exceeding the commercial/industrial ESL of 0.31 milligrams per kilogram (mg/kg). However, all but three of the detected concentrations were below the background arsenic concentration accepted by the Regional Water Quality Control Board (RWQCB) for San Francisco Bay Area soil.

[52] The policy applies to petroleum UST sites subject to Chapter 6.7 of the Health and Safety Code. The policy establishes both general and media-specific criteria. If both the general and applicable media-specific criteria are satisfied, then the leaking UST case is generally considered to present a low threat to human health, safety, and the environment and considered appropriate for closure pursuant to Health and Safety Code Section 25296.10.

- Total chromium was detected in all six soil samples at concentrations ranging from 40 to 110 mg/kg.
- Lead was detected in five of the six soil samples at concentrations ranging from 4.5 to 300 mg/kg. Soil generated in the vicinity of HA-17 would very likely be characterized as California hazardous waste if excavated for off-site disposal.
- Zinc was detected in all six soil samples at concentrations ranging from 28 to 2,900 mg/kg. However, soil would very likely be characterized as non-hazardous waste if excavated for off-site disposal.
- Additional metals detected at concentrations greater than laboratory reporting limits and below their respective commercial/industrial ESLs included antimony, barium, beryllium, cobalt, copper, mercury, nickel, selenium, and vanadium.

Groundwater

TPH-DRO and TPH-GRO were detected in one boring (HA-12) at concentrations of 2,300 micrograms per liter (µg/L) and 16,000 µg/L, respectively. No commercial/industrial ESL exists for these constituents. In addition, select VOCs were detected in groundwater samples collected from boring location HA-12 at concentrations greater than laboratory reporting limits but below commercial/industrial vapor intrusion ESLs.

Asbestos, Lead, and PCB Sampling and Analysis

In addition to the Phase I and Phase II ESAs, asbestos, lead, and polychlorinated biphenyl (PCB) sampling and analysis were conducted in April 2022 by Sol Environmental.[53] At the time of the sampling, the site consisted of an entry gate/guard shack, a site administrative building, a stand-alone island, concrete dock, a storage/maintenance building, and two separate terminals (denoted as A and B in the report). Samples were collected and tested for asbestos, PCBs, and lead from accessible areas, including the interiors, exteriors, and roofs. Asbestos was identified in Terminals A and B and the administrative building. In addition, lead-based paint was identified in Terminals A and B. All PCB samples resulted in concentrations below regulated and reportable levels.

3.9.2 Discussion

3.9.2.1 Routine Hazardous Materials Use

Construction

Project construction would involve the routine transport, use, and disposal of hazardous materials such as solvents, paints, oils, grease, and caulking. Such transport, use, and disposal must comply with applicable requirements and regulations, such as the regulations set forth by the City, EPA, the Occupational Safety and Health Administration (OSHA), U.S. Department of Transportation (DOT), Department of Toxic Substances Control (DTSC), California Department of Transportation (Caltrans), California Highway Patrol (CHP), local Certified Unified Program Agency (CUPA), and Bay

[53] Sol Environmental. 2022. *Executive Summary Letter Report, Evaluation – Asbestos, Lead, and PCBs, Sampling and Analysis, 131 Terminal Court, South San Francisco, CA.* Final. 22-428. Walnut Creek, CA. Prepared for US Terminal Court Owner, LLC.

Area Air Quality Management District (BAAQMD). Although solvents, paints, oils, grease, and caulking would be transported, used, and disposed of during the construction phase, these materials, which would be handled on a temporary basis, are typically used in construction projects and would not represent the routine transport, use, and disposal of acutely hazardous materials. Any spills or releases involving these materials would be expected to be small, localized, and cleaned up as they occur. Therefore, project construction would not create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials during construction, and this impact would be ***less than significant***.

Operation

Because of the nature of R&D uses, the possibility exists for hazards related to the handling of hazardous materials. Any R&D tenant who handles hazardous materials would be required to adhere to all applicable federal, State, and local regulations for qualifying hazardous materials, seek consultation with SMCEH, and apply for applicable permits for any regulated substances that may pose a threat to public health and safety or the environment because of their highly toxic, flammable, or explosive nature. Tenants must comply with the safety procedures mandated by applicable federal, State, and local laws and regulations (e.g., Resource Conservation and Recovery Act, California Hazardous Waste Control Law, principles prescribed by the U.S. Department of Health Services) to ensure that risks resulting from the routine use of hazardous materials and disposal of hazardous wastes remain less than significant. In addition, registration of the hazardous materials through the SMCEH Hazardous Material Business Plan Program would be required to ensure safe and responsible handling of those qualifying materials. In addition, the City requires building spaces to be designed to handle intended office and R&D uses through the use of sprinklers, alarms, vents, and secondary containment structures, in accordance with the guidelines set forth in the City's Fire Code (City Municipal Code Section 15.24010, which adopts the California Fire Code by reference, along with additional local amendments). Compliance with State and local regulations would ensure that buildings would be equipped with safety devices, including sprinklers and alarms, to minimize potential impacts from the presence of hazardous materials. Prior to issuance of a certificate of occupancy for completed structures, the City would require a final inspection from the South San Francisco Fire Department (SSFFD) to ensure that all building systems were in conformance with the City Fire Code and National Fire Protection Association requirements.

The proposed project would also involve operation of a day-care center with an outdoor play area. The day-care center would be located in a building that would be separate from the proposed R&D uses. Hazardous materials used during operation of the day-care center would consist of common maintenance materials, including cleansers, solvents, and paints. These materials would be handled and stored in small quantities, and releases would most likely be small and cleaned up soon after they occur.

Landscape maintenance on the project site would require the use of a wide variety of commercial products that are formulated with hazardous materials (e.g., fuels, cleaners and degreasers, solvents, paints, lubricants, adhesives, sealers, pesticides/herbicides). Such materials are considered common and are unlikely to be stored or used in large quantities. Any spills involving these materials would be small and localized and cleaned up as they occur. Finally, compliance with Caltrans regulations would ensure that all necessary safety precautions would be taken during the transport of hazardous materials during all phases of the proposed project.

Mandatory compliance with all applicable federal, State, and local regulations pertaining to the routine use, storage, transport, and disposal of hazardous materials would ensure that the proposed project would not create a significant hazard for the public or the environment during operation, and this impact would be ***less than significant***.

3.9.2.2 Upset and Accident Conditions Involving Hazardous Materials

As previously discussed, site-specific Phase I and Phase II ESAs were conducted for the project site. According to the Phase II ESA, soil conditions are not expected to affect future redevelopment, and the soils are not likely to be characterized as hazardous waste, with a limited exception in the vicinity of boring HA-17. Also, the Phase II ESA noted that arsenic concentrations are above background concentrations. Furthermore, groundwater sampling results indicated a potential vapor intrusion risk in the vicinity of boring HA-12, located in the area of the former fueling station. Analytical results did not indicate that historical releases were affecting the soil or groundwater related to an on-site pipeline. Based on these findings, the Phase II ESA included the following recommendations, which would be incorporated as part of the proposed project prior to and during construction activities:

- If future occupiable structures are proposed in the vicinity of soil boring HA-12,[54] additional subsurface soil vapor and groundwater characterization and potential vapor intrusion mitigation measures could be required. As shown in Figure 2-4, the lobby to the I131N A building would be in the area of HA-12 and subject to mitigation requirements.
- Dewatering activities would be required to comply with the applicable publicly owned treatment works and NPDES permit requirements and include treatment measures, given the affected groundwater conditions identified in the vicinity of boring HA-12. Groundwater impacts appear to be limited to the area around boring HA-12 and were not considered a risk with respect to off-site migration.
- A Site Management Plan (SMP) and Health and Safety Plan (HASP), to outline soil handling procedures, should be implemented during construction. According to the Phase II ESA, if excavation and/or grading activities are to be performed in the vicinity of soil boring HA-17, further site-specific health and safety measures would be required.
- Sampling of soil generated and stockpiled for off-site disposal may be required for future waste profiling.
- SMCEH must be notified during any proposed change in land use or removal of soil and groundwater within or near the former USTs located at the northern end of the site.

Asbestos, lead, and PCB sampling and analysis were conducted on-site in April 2022. Asbestos was identified in Terminals A and B and the administrative building. Lead-based paint was identified in Terminals A and B. Based on these findings, the asbestos, lead, and PCB sampling and analysis included the following recommendations, which would be incorporated as part of the proposed project prior to demolition activities:

[54] Soil boring HA-12 was advanced to 5 feet below ground surface in the northernmost extent of the site, at the approximate location (and/or downgradient) of former USTs.

Asbestos and Lead

- Because of the size of and complexity of the facility, a complete walkthrough of all areas should be conducted by parties/subcontractors bidding on demolition/renovation services to properly identify all materials and associated quantities.
- Preparation and implementation of asbestos and lead management plans to address the asbestos and lead materials identified by the inspection process.
- Removal and abatement efforts shall be performed in accordance with a site-specific specification for work to address asbestos and lead.
- Post-abatement inspection and air clearance sampling shall be performed to measure the efficacy of the abatement and decontamination effort.

Asbestos

- The removal and disposal of asbestos-containing materials (ACMs [greater than 1 percent asbestos]) shall be performed in accordance with the California Division of Occupational Safety and Health, known as Cal/OSHA, 8 California Code of Regulations (CCR) 1529, Asbestos in Construction Standard. Waste disposal and notification requirements shall be performed in accordance with the National Emissions Standards for Hazardous Air Pollutants (NESHAP), Toxic Substances. Control Act (TSCA), and BAAQMD regulations.
- All personnel who may disturb and/or remove ACMs must be notified of the presence of the asbestos and must don appropriate personal protective disposable suits; must be trained in accordance with 8 CCR 1529, Asbestos in Construction; and must utilize respirators with high-efficiency particulate air (HEPA) filters and other personal protective equipment (PPE).
- The removal and/or disturbance, disposal, and transport of ACM is regulated by and should adhere to applicable regulations of the EPA, BAAQMD, Cal/OSHA, OSHA, and DTSC.
- The removal and disposal of ACMs shall be performed by a Contractors State License Board– (CSLB-) licensed and Division of Occupational Safety and Health– (DOSH-) registered abatement contractor.
- The removal of more than 100 square feet of regulated ACM (RACM)/friable asbestos material requires BAAQMD notification. The disturbance of any amount of material requires a 24-hour Cal/OSHA notification. Both agencies should be notified as needed.

With implementation of the Phase II ESA recommendations as well as the asbestos, lead, and PCB sampling and analysis recommendations, which would be enforced through existing legal requirements, uniformly applied development policies and standards, and/or project conditions of approval, potential impacts associated with upset and accident conditions involving the release of hazardous materials would be ***less than significant***.

3.9.2.3 Exposure to Schools

The proposed project would provide a day-care center. There are no schools within 0.25 mile of the project site. The closest school is the All-Souls Catholic School at 479 Miller Avenue in South San Francisco, approximately 0.77 mile northwest of the project site. ***No impact*** associated with hazardous emissions within 0.25 mile of an existing school would occur.

3.9.2.4 Cortese List Sites

According to the Phase I ESA, a CREC was identified, associated with a former fueling facility in the northern portion of the site. The former fueling facility was also identified by the Phase I ESA as a Cortese List site. As mentioned, SMCEH issued a case closure letter for the site in 2014; however, hydrocarbon-affected soil and groundwater were allowed to remain on-site. It was noted in the Phase I ESA that proposed future redevelopment, a change in land use, or the removal of soil and/or groundwater from the site would require notification of SMCEH. As noted under Section 3.9.2.2, *Upset and Accident Conditions Involving Hazardous Materials,* soil in the vicinity of boring HA-17 and groundwater/soil vapor in the vicinity of boring HA-12 has the potential to expose construction personnel and the surrounding environment to contaminated media. However, with implementation of the Phase II ESA recommendations summarized in Section 3.9.2.2, *Upset and Accident Conditions Involving Hazardous Materials,* potential impacts associated with exposure to contaminated media from a site on the Cortese List would be ***less than significant***.

3.9.2.5 Airport Hazards

The SFO Airport Land Use Compatibility Plan (ALUCP) requires all residential development within Area A, which is the entirety of San Mateo County, to provide real estate disclosures. Within Area B, the City/County Association of Governments (C/CAG) is responsible for reviewing proposed land use policy actions, including new general plans, specific plans, zoning ordinances, plan amendments, rezoning proposals, and land development proposals. As such, development could expose people residing or working in the area to a safety hazard or excessive noise because of proximity to SFO.

The project site is within Airport Influence Area B of the SFO ALUCP and required to comply with policies and actions concerning interior noise levels and maximum building heights, as included in the General Plan, Specific Plan, and City Municipal Code and Zoning Ordinance. In addition, because the proposed project is within Area B, consultation with the C/CAG and FAA would be required prior to project construction. This includes determining the need to file form 7460-I, Notice of Proposed Construction or Alteration, with the FAA, which is for any project that would exceed FAA notification heights, as shown on ALUCP Exhibit IV-10, and complying with the FAA aeronautical study findings. With the 7460-I filing, the FAA then undertakes an aeronautical study for the project and issues a "determination of no hazard" or a "determination of hazard." A determination of hazard is made when a project would cause an obstruction to air navigation, resulting in a substantial aeronautical impact. The project would, therefore, require a consistency determination with the ALUCP to comply with FAA regulations regarding height. The project applicant would be required to receive a determination of no hazard to air navigation as a condition of approval for a building permit for the proposed project. Therefore, impacts would be ***less than significant***.

3.9.2.6 Impairment of Emergency Response or Emergency Evacuation Plans

The proposed project would not include any permanent changes to existing public roadways that provide emergency access to the project site or surrounding area. During construction, it is possible that construction activity could affect emergency response or evacuation plans due to temporary construction barricades or other roadway obstructions that could impede emergency access on-site. However, compliance with City requirements regarding circulation and access during construction would minimize potential impacts associated with emergency response times.

Vehicle trips generated by the proposed project would represent a small percentage of overall daily and peak-hour traffic on roadways and freeways surrounding the project site; the increase in project-generated vehicle trips would not introduce or exacerbate conflicts for emergency vehicles traveling near the project site. The proposed project would not include features that would alter emergency vehicle access routes or roadway facilities, and emergency services vehicles would continue to have access to all facilities throughout the city. In addition, dedicated access to the project site for emergency vehicles would be provided via Terminal Court and the Shaw Road connection and would allow emergency vehicle access to all buildings through the proposed roadway network within the project site. Moreover, the project site would include 20- to 26-foot-wide fire lanes around the perimeter of the site, providing access to each building, as well as the I131N parking garage. Furthermore, R&D tenants who handle hazardous materials would be required to adhere to all applicable regulations, including a Hazardous Materials Release Response Plan coordinated with SMCEH and SSFFD. Adherence to the aforementioned regulations and plans would ensure that any response and evacuation in the event of an emergency would not be impaired. As such, the proposed project would not impair implementation of or interfere with an adopted emergency response plan or emergency evacuation plan. Impacts would be ***less than significant.***

3.9.2.7 Wildland Fires

The project site is in a densely developed portion of South San Francisco; it is not in a Fire Hazard Severity Zone (FHSZ) in a State Responsibility Area (SRA) or a Very High Fire Hazard Severity Zone (VHFHSZ) in a local, State, or federal responsibility area. Moreover, the area surrounding the project site generally lacks the features that normally elevate wildland fire risks (e.g., dry vegetation, steep hills). Because the project site is in a densely developed area of the city and not within or near an FHSZ or VHFHSZ (and away from wildlands), and because the proposed project would comply with all policies and regulation in the General Plan related to wildfire, this impact would be ***less than significant***.

3.9.2.8 Cumulative Impacts

The cumulative geographic context for hazards and hazardous materials consists of the project site and nearby properties in the immediate vicinity. In general, only projects occurring in the immediate vicinity to the project are considered because of the limited potential impact area associated with a release of hazardous materials into the environment. Reasonably foreseeable projects in the project's surroundings could result in construction impacts related to the routine transport, disposal, or handling of hazardous materials; intermittent use and transport of petroleum-based lubricants, solvents, and fuels; and transport of affected soil to and from sites. However, hazardous waste generated during construction of any project would be collected, properly characterized for disposal, and transported in compliance with all applicable regulations. In addition, affected sites under development would undergo remediation with oversight from applicable State and local agencies, effectively reducing the amount of contaminants found in the cumulative project area.

Hazardous materials are strictly regulated by local, State, and federal laws. Specifically, these laws are designed to ensure that hazardous materials do not result in a gradual increase in toxins in the environment. For each of the reasonably foreseeable projects under consideration, various project-specific measures, such as those identified for the proposed project, would be

implemented as a condition of development approval to mitigate risks associated with exposure to hazardous materials. For these reasons, the project in combination with other past, present, and reasonably foreseeable future projects would not result in a significant cumulative hazard or hazardous materials impact. Therefore, the project's contribution to cumulative impacts ***would not be significant.***

3.9.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The proposed project would not include the construction of any new uses on the off-site redesignation parcels.

No construction, or media disturbance, would occur as a result of redesignation, and thus, no potential impacts related to hazards and hazardous materials would occur. An environmental review would occur prior to future redevelopment, and environmental conditions would be addressed as they are identified. Hazardous waste generated during construction would be properly characterized and transported in compliance with all applicable regulations. Affected sites with the potential to affect future projects within these parcels would undergo remediation with oversight from applicable State and local agencies. Because the off-site redesignation parcels are adjacent to the project analyzed above, similar considerations would be made with respect to the location of sensitive receptors, such as schools, and airports; emergency response and wildfire hazards would also be considered. Impacts would be ***less than significant***.

3.10 Hydrology and Water Quality

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
10. HYDROLOGY AND WATER QUALITY Would the project:					
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☐	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:	☐	☐	☐	☒	☐
i. Result in a substantial erosion or siltation on- or off-site;	☐	☐	☐	☒	☐
ii. Substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site;	☐	☐	☐	☒	☐
iii. Create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒	☐
iv. Impede or redirect floodflows?	☐	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒	☐

3.10.1 Setting

The project site is within the Colma Creek watershed and the larger San Francisco Bay watershed.[55,56] The San Francisco Bay watershed includes areas surrounding San Francisco Bay, which drain into San Francisco Bay. The State Water Quality Control Board (SWRCB) and the RWQCB monitor water quality in the Bay Area. These agencies oversee implementation of NPDES stormwater discharge permits. The SWRCB has implemented a NPDES Construction General Permit for the State of California (Order 2022-0057-DWQ). Dischargers whose projects disturb 1 or more

[55] Givler, R.W., J.M. Sowers, and P. Vorster. 2006. *Creek & Watershed Map of Daly City and Vicinity*. Oakland Museum of California, Oakland, CA, 1:25,800 scale.

[56] Esri. 2023. *Watershed Boundary Dataset HUC 10s*. Available: https://icf-eandp.maps.arcgis.com/home/webmap/viewer.html?useExisting=1. Accessed: October 12, 2023.

acres of soil are required to obtain coverage under the Construction General Permit. Furthermore, the Construction General Permit requires a SWPPP to be prepared prior to commencement of construction.

A navigable slough[57] that drains into San Bruno Canal is south of the project site. Colma Creek is approximately 0.27 mile north of the project site and north of the off-site redesignation parcels. Several sections of Colma Creek are restrained by concrete flood control walls and raised above street level. Both Colma Creek and San Bruno Canal flow to Lower San Francisco Bay, which is approximately 1 mile east of the project site. There are no surface waters at the project site. Colma Creek is impaired for trash. Lower San Francisco Bay is impaired for chlordane; dichlorodiphenyltrichloroethane (DDT); dieldrin; dioxin compounds; furan compounds; invasive species; mercury; PCBs, including dioxin-like PCBs; and trash.[58]

The City participates in the San Mateo Countywide Pollution Prevention Program (SMCWPPP) and is required to implement low-impact development (LID) BMPs under NPDES Permit No. CAS612008, Order No. Order R2-2022-0018, adopted May 11, 2022. This NPDES permit is also known as the Municipal Regional Permit (MRP). Provision C.3 of the MRP is directly applicable to the project. This provision allows permittees to include appropriate source-control, site-design, and stormwater treatment measures in new development as well as redevelopment projects to address both soluble and insoluble stormwater runoff pollutant discharges and prevent increases in runoff flows from both new development and redevelopment projects. This goal is to be accomplished primarily through implementation of LID techniques. LID practices include source-control BMPs, site-design BMPs, and stormwater treatment BMPs on-site or at a joint stormwater treatment facility.

Storm drainage infrastructure on the project site consists of multiple discharge points. The site is split into three major sections and one minor section, each with a discharge point into the slough south of the site. The sections are separated by the two existing buildings on the project site. East of the project site, water is conveyed through 12-inch reinforced concrete pipes (RCPs) and discharged directly into the slough through a 15-inch RCP. Runoff is received predominantly in the central section, which collects stormwater from north of the buildings and the area between the buildings. Storm drainage infrastructure in the central section increases from 15- to 18-inch diameters as the system nears the outfall and discharges directly into the slough. Stormwater west of the project site sheet flows to catch basins and discharges directly into the slough through a 12-inch RCP. A small area in the northwest corner of the site collects stormwater through three catch basins and conveys runoff through 12-inch RCPs in the northeast direction, then discharges directly into the slough. The existing 18-inch outfall pipes are planned to be upgraded to 42-inch RCPs.[59]

---

[57] The navigable slough is a remnant tidal channel that cuts through a commercial district in the city of South San Francisco. The slough is connected to San Francisco Bay. (ESA. 2019. *Navigable Slough Flood Management Study, Prepared for County of San Mateo, City of South San Francisco, and City of San Bruno*. [59] Ware, Malcomb. 2023. *Stormwater Drainage Description T131.*

The project site is within the Westside Groundwater Basin, which is designated as a Very Low Priority Area, per the Sustainable Groundwater Management Act.[60] The South Westside Basin Groundwater Management Plan established a goal for the area that would ensure a sustainable, high-quality, reliable water supply at a fair price through local groundwater management for beneficial uses.[61] The City is part of the South Westside Basin Groundwater Management Plan, which is a voluntary groundwater management plan. Groundwater is expected to be encountered as shallow as approximately 1 foot bgs.[62] Actual groundwater levels fluctuate seasonally with variations in rainfall, temperature, and other factors.

The navigable slough experiences daily tidal exchanges. High tidal levels may result in water overtopping the banks.[63] Portions of the project site are within a Federal Emergency Management Agency (FEMA) 100-year flood zone, Zone AE, which has a base flood elevation of 10 feet, as shown in Figure 3.10-1. However, other portions of the project site are outside of the 100-year flood zone and within FEMA Zone X (shaded), which are areas subject to inundation by a moderate flood event (i.e., 0.2 percent annual chance).[64]

3.10.2 Discussion

3.10.2.1 Water Quality

Construction of the project would involve ground-disturbing activities, such as demolition and excavation. Construction activities have the potential to result in runoff that contains sediment and other pollutants, which could degrade water quality if not properly controlled. Sources of pollution associated with construction include chemical substances from construction materials as well as hazardous or toxic materials, such as fuels. As described in Section 3.9, the project would be subject to State and federal hazardous material laws and regulations, which would minimize the risk of affecting the quality of surface water and groundwater. More than 1 acre of soil would be affected by the project; therefore, the project would be subject to the Construction General Permit. Furthermore, the project would be required to comply with the MRP. Erosion control measures are required in the Construction General Permit and the MRP. These requirements include preparation and implementation of a SWPPP that contains BMPs. The purpose of the SWPPP is to identify potential sources of sediment and other pollutants and specify BMPs to ensure that potential adverse erosion, siltation, and contamination impacts do not occur during construction activities. Implementation of a SWPPP with BMPs would control erosion and protect water from potential contaminants in stormwater runoff from the construction site. BMPs may include damp street sweeping; appropriate covers, drains, and storage precautions for outdoor material storage areas; temporary cover for disturbed surfaces; and sediment basins or traps, earthen dikes or berms, silt fences, check dams, soil blankets or mats, covers for stock piles, or other BMPs to trap sediments. Such BMPs would help to protect surface water and groundwater quality. Construction impacts would be ***less than significant***.

FEMA Flood Zones

[this page left blank intentionally]

Pollutants in stormwater runoff from urban development, such as the project, have the potential to violate water quality standards if the types and amounts are not adequately reduced. Stormwater runoff from the types of urban uses that would be facilitated by project approval is regulated under the MRP. Project design plans include the installation of bioretention ponds and Silva Cell units to provide LID treatment on the project site. The storm drain would use LID areas as well as oversized underground pipes to treat, help store water, and control flows prior to discharge to the adjacent slough. The applicant would be required to submit the SMCWPPP checklist to the City to show compliance with NPDES regional permit requirements. BMPs included in site designs and plans for the project would be reviewed by the City's engineering staff to ensure appropriateness and adequate design capacity prior to permit issuance. The San Francisco Bay RWQCB has incorporated requirements in the MRP to protect water quality and approved the SMCWPPP, which is in compliance with the NPDES Municipal Stormwater Permit. The City's review and permitting process would ensure that the permit's waste discharge requirements would not be violated by the project. For these reasons, the project would not violate water quality standards or waste discharge requirements during operation, including standards and requirements regarding surface water and groundwater quality. Operational impacts would be ***less than significant***.

3.10.2.2 Groundwater Supply and Recharge

Construction could require dewatering of groundwater due to the shallow groundwater table. Groundwater is expected to be encountered as shallow as approximately 1 foot bgs.[65] The proposed project would excavate from approximately 3 to 7 feet bgs. In the event that groundwater is encountered during construction, dewatering would be conducted on a one-time, temporary basis during the construction phase. It would not result in a significant impact on groundwater recharge or depletion of groundwater supplies. Construction-related dewatering activities, including handling/discharging water, monitoring, and reporting, would comply with the Construction General Permit and RWQCB dewatering requirements. Accordingly, impacts on groundwater supplies and groundwater recharge during project construction would be ***less than significant.***

The proposed project would increase the pervious surface area by approximately 18 percent. The increase in pervious surface area would increase infiltration and recharge of the underlying aquifer. It would also reduce the amount of precipitation running into storm sewers or nearby surface waters. In addition, native and/or adapted vegetation and other landscape features, including trees, would provide opportunities for improved groundwater infiltration. Landscaped spaces would allow for an increase in groundwater recharge. New vegetation zones would slow water, allowing water to percolate into the ground, thereby providing increased benefits related to groundwater recharge. Furthermore, the proposed project would not substantially interfere with groundwater recharge because it would not increase groundwater demand or decrease the size of groundwater recharge areas. In addition, operation of the proposed project would not utilize groundwater supplies. Therefore, the project would not substantially deplete groundwater supplies or impede sustainable groundwater management of the basin. The project's impact would be ***less than significant***.

[65] Haley & Aldrich, Inc. 2022. *Preliminary Geotechnical Engineering Recommendations, 131 Terminal Court, South San Francisco, California.* File No. 0204962-001. May.

3.10.2.3 Drainage and Flooding

Project-related earth-disturbing activities such as grading and stockpiling could result in short-term water quality impacts associated with soil erosion and subsequent sediment transport. Sediment transport to local drainage facilities could result in reduced stormflow capacity and localized ponding or flooding during storm events. During construction, stormwater drainage patterns could be temporarily altered. However, the proposed project would implement BMPs, as required in the project SWPPP, to minimize the potential for erosion or siltation in nearby storm drains and temporary changes in drainage patterns during construction. During construction, erosion control measures would be implemented, as required by the SWPPP. Construction BMPs, such as sediment basins and traps, filter berms, and diversion berms, would capture and infiltrate small amounts of sheet flow such that off-site runoff from the construction site would not increase, ensuring that drainage patterns would not be significantly altered. Erosion and stormwater control measures, such as silt fences, staked straw wattles, or geofabric, as required by the Construction General Permit, would also limit site runoff during construction and would not alter stormwater drainage patterns. BMPs would be implemented to control construction site runoff and minimize the amount of water from entering a disturbed area as well as reduce the discharge of pollution to the storm drain system. In addition, construction equipment would be placed appropriately around the site to minimize impeding or redirecting floodflows. Therefore, construction of the proposed project would not substantially alter the existing drainage pattern of the area in a manner that would result in substantial erosion or siltation or increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. Therefore, project construction would not result in an exceedance of drainage system capacities, and the associated impact would be ***less than significant.***

For the majority of the project site, storm drain lines would outfall into the adjacent slough. Oversized underground pipes would treat and control flows prior to discharge to the slough. On the lower portions of the site, smaller areas would drain to the City's municipal separate storm sewer system within Terminal Court. On-site storm drain improvements would include the installation of bioretention ponds, flow-through planters, and Silva Cell units to provide LID treatment on the project site and convey water to storage pipes. Water would be released at the designed flow rate. The proposed stormwater pipes would be between 6 and 12 inches in diameter. New connections would connect to an existing 12-inch storm drain main in Terminal Court. The site would be segmented into nine drainage management areas (DMAs) to collect, treat, store, and discharge stormwater runoff. Storage pipes would connect to existing outfalls and ultimately discharge to the slough. Implementation of the project would alter existing drainage patterns on the site with the construction of new buildings; however, stormwater flows would ultimately flow to existing stormwater drains. In addition, the proposed project would increase the amount of pervious surface. Landscaped areas would include a mix of native (i.e., minimum of 80 percent) and adapted vegetation with a low water demand. Upon project buildout, 659 trees would be provided within the courtyard areas, at the surface parking lot, and along the roadways. Landscaped and vegetated areas would provide stormwater treatment and manage stormwater runoff. Overall, the amount of stormwater that would be discharged with implementation of the project would decrease compared to existing conditions. The project would include stormwater treatment controls, in compliance with the requirements of Provision C.3 of the MRP.

The City owns and maintains the storm drainage infrastructure within public rights-of-way. These facilities discharge to San Mateo County flood control facilities. To comply with FEMA requirements and combat future sea-level rise and flooding, the site would be raised to at least 13 feet; structures

would be designed with first-floor elevations of 14 feet. Fill would be placed to raise existing grades and allow structures to meet the natural grade; as a result, structures would be outside of the floodplain. A flood-proofing certificate would be submitted to the City. The site would file for a Letter of Map Revision-Based on Fill (LOMR-F) and would not be required to pay flood insurance.[66] Through compliance with State and local regulations, as well as implementation of BMPs, the project would not contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems, provide additional sources of polluted runoff, or impede or redirect floodflows. Therefore, impacts would be ***less than significant***.

3.10.2.4 Pollutant Release Due to Project Inundation

The project site is not subject to flooding from tsunami or seiche. The project site is not within a tsunami inundation zone.[67] Conditions with the project would be similar to existing conditions and would not increase the potential for site inundation. Seiche can occur in an enclosed or partially enclosed body of water, such as a lake or reservoir. There are no large bodies of fresh water, such as reservoirs or lakes, in the project vicinity. Although San Francisco Bay is a large and open body of water, there is no immediate risk of seiche. Large waves, both sea and swell, generated in the Pacific Ocean undergo considerable refraction and diffraction upon passing through the Golden Gate, resulting in greatly reduced heights by the time they reach the project site. Therefore, there is no risk of seiche that would affect the project site. Portions of the project site are located within a FEMA 100-year flood zone.[68] However, to reduce the risk of a pollutant release associated with a flood hazard, the project would comply with the requirements of local water quality programs and associated municipal stormwater NPDES permits as well as municipal separate storm sewer system and MRP permits to manage flood risks and water quality. Conformance with these requirements would ensure that any risk of a release of pollutants due to inundation associated with a flood hazard, tsunami, or seiche zone would be minimized. Furthermore, water quality control and drainage features, such as bioretention basins and Silva Cell units, would reduce pollutant releases and control flows. Oversized underground pipes would treat and control flows prior to discharge to the adjacent slough. The project site would not release pollutants due to inundation associated with a flood hazard, tsunami, or seiche. The impact would be ***less than significant***.

3.10.2.5 Conflict or Obstruct a Water Resource Management Plan

Project construction and operation would comply with local, State, and federal regulations, including the NPDES Construction General Permit, Basin Plan, MRP, and City and San Mateo County Municipal Codes. Commonly practiced BMPs such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, and/or sandbag dikes, as required by these regulations, would be implemented to control construction site runoff and reduce the discharge of pollutants to storm drain systems from stormwater and other nonpoint-source runoff. As part of compliance with permit requirements, such as SWPPP requirements, implementation of water quality control measures and BMPs would ensure that water quality

[66] Schaff & Wheeler. 2022. *Terminal 131 Sea-Level Rise Design Considerations Memorandum*. November 21.

[67] California Department of Conservation. 2022. *Tsunami Hazard Area Map, San Mateo County*. Produced by the California Geological Survey and the California Governor's Office of Emergency Services. Mapped at multiple scales.

[68] Federal Emergency Management Agency. 2019. *FEMA's National Flood Hazard Layer (NFHL) Viewer, FIRM Panel 06081C0043F*. Available: https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id=8b0adb51996444d4879338b5529aa9cd Accessed: October 13, 2023.

standards would be achieved, including the water quality objectives that protect designated beneficial uses of surface and groundwater, as defined in the Basin Plan. Construction runoff would also have to be in compliance with the appropriate water quality objectives for the region. The NPDES Construction General Permit requires stormwater discharges to not contain pollutants that cause or contribute to an exceedance of any applicable water quality objectives or water quality standards, including designated beneficial uses. Therefore, the project would not obstruct implementation of a water quality control plan.

Groundwater dewatering is anticipated during project construction. However, dewatering would be conducted on a temporary basis during the construction phase and would not result in a significant impact on groundwater recharge or result in depletion of groundwater supplies. Groundwater would not be used during construction activities. Compared to existing conditions, there would be no change in the volume of groundwater use. Landscaping and pervious areas throughout the project site would allow groundwater recharge. Therefore, the project would not obstruct implementation of a sustainable groundwater management plan. In addition, the project would comply with City General Plan policies, which require the protection of groundwater resources, as required by a sustainable groundwater management plan. Therefore, construction and operation of the project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. This impact would be ***less than significant***.

3.10.2.6 Cumulative Impacts

As evaluated above, no new significant impacts have been identified for the project. Therefore, when combined with the cumulative development evaluated in the General Plan EIR and Specific Plan Addendum, no new cumulative impacts would occur. However, new cumulative impacts could occur when combined with cumulative development not evaluated in the General Plan EIR or the Specific Plan Addendum. Future development projects would be required to go through environmental and regulatory review and comply with the City's LID measures, Construction General Plan, and SWPPP requirements and have a site-specific investigation performed, which would provide design recommendations to reduce the project-related impacts. In addition, future projects would also be required to comply with General Plan policies and actions, City Municipal Code and Zoning Ordinance requirements, as well as State and regional regulations governing water quality. For these reasons, the proposed project in combination with future cumulative projects would not result in a significant cumulative hydrology and water quality impact. Therefore, cumulative impacts would be ***less than significant***.

3.10.3 Off-Site Redesignation Parcels

The proposed project would require amendments to the General Plan and Specific Plan and an associated zone change from MIH to BTP-H for the off-site redesignation parcels. The purpose of the off-site redesignation is to ensure that future development is similar to and consistent with the development proposed as part of the project. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing,

distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

The project proposes to redesignate five adjacent off-site parcels from MIH to BTP-H to bring them into conformance with the proposed zoning on the project site. The off-site redesignation parcels are within the Colma Creek watershed and the larger San Francisco Bay watershed as well as the Westside Groundwater Basin. As discussed in the General Plan EIR, future development (including redevelopment of existing developed sites) that disturbs 1 acre or more of soil must obtain permit coverage under the Construction General Permit. A SWPPP, as required by the Construction General Permit, must describe site erosion and sediment controls, maintenance responsibilities, and non-stormwater management controls. The General Plan Update and City Municipal Code also include policies and regulations to protect water quality and groundwater resources. Therefore, rezoning to BTP-H would not have the potential to result in future development that would violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. BTP-H uses would incorporate LID measures to treat stormwater, consistent with other future development uses in the area. Future uses developed within the BTP-H zone would also maximize infiltration and rainwater retention and minimize impacts on groundwater recharge, as required by the General Plan Update, City Municipal Code, and City Zoning Ordinance. Off-site redesignation parcels would also comply with mandatory NPDES permit requirements related to managing stormwater flows and discharges. Similar to the project site, portions of the off-site redesignation parcels are located within a FEMA 100-year flood zone. Future uses developed within the BTP-H zone would be subject to City engineer approval of all drainage plans, ensuring that the rate or amount of surface runoff would not result in flooding and that stormwater drainage systems would not be exceeded. Therefore, hydrology and water quality impacts associated with the off-site redesignation parcels would be ***less than significant.*** No further evaluation in an EIR is required.

3.11 Land Use and Planning

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
11. LAND USE AND PLANNING Would the project:					
a) Physically divide an established community?	☐	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒	☐

3.11.1 Setting

The city of South San Francisco is organized as several geographic areas, referred to as *planning sub-areas*, including the Lindenville Planning Sub-Area, as identified in the General Plan adopted in October 2022. The project site and the off-site redesignation parcels are located in the Lindenville Planning Sub-Area, an approximately 400-acre area in the central southern portion of the city between U.S. 101 and

South Spruce Avenue, adjacent to the Downtown Sub-Area. The Lindenville Planning Sub-Area comprises largely industrial, business, food processing, manufacturing, and warehousing uses. The General Plan's Planning Sub-Areas Element does not impose density or height standards separate from those found in the General Plan's Land Use Element. According to the General Plan, the Lindenville Planning Sub-Area aims to preserve business and industrial uses while strengthening its economic base, which includes a large number of small businesses and a high share of area jobs, by retaining a large portion of its land area for service, transportation, and industrial uses.

The Lindenville Specific Plan, adopted in September 2023, establishes the planning framework for the Lindenville Planning Sub-Area. Under the Specific Plan, both the project site and off-site redesignation parcels are designated as MIH, which allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. Figure 2-2 illustrates the existing land use designations for the project site, the off-site redesignation parcels, and the surrounding area under the Lindenville Specific Plan.

The project site and off-site redesignation parcels are designated in the City Zoning Code as MIH. As established in the City Zoning Code, the maximum building height allowed under the existing MIH zoning designation is 65 feet. The base maximum permitted floor area ratio (FAR) under the MIH zoning designation is 0.4, but increases may be permitted, up to a total FAR of 2.0, for all permitted uses. However, R&D facilities under this zoning designation may have a maximum allowed FAR of 0.5, provided they follow the requirements of the City Community Benefits Program, as outlined in Chapter 20.395 of the City Municipal Code. In addition, as required under the MIH designation, truck docks, loading areas, and service areas must be located at the rear or interior side of buildings and must be screened so that they are not visible from surrounding public streets, including highways. Figure 2-3 illustrates the existing zoning designations for the project site, the off-site redesignation parcels, and the surrounding area.

Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot are north of the project site, a large surface parking lot and Bayshore Freeway are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. In addition, the project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The southern part of the project site also includes a portion of the shoreline band jurisdiction of the BCDC adjacent to the navigable slough. The project site is also approximately 1 mile northwest of SFO.

3.11.2 Discussion

3.11.2.1 Divide an Established Community

The project site comprises one parcel at 131 Terminal Court in South San Francisco (refer to Figure 2-1) and is zoned MIH under the City General Plan and Zoning Code. Surrounding land uses include industrial and commercial uses and open space (described above); there are no residential land uses around the proejct site. The project would replace the existing Golden Gate Produce Terminal, which consists of two warehouse buildings, a smaller administrative building, open-air structures, and surface parking, with new R&D uses, amenity space, and multi-story parking. Therefore, the project would not change the nature of the land uses or physically divide an established community. The impact would be ***less than significant***.

3.11.2.2 Conflict with a Land Use Plan, Policy, or Regulation Adopted for the Purpose of Avoiding or Mitigating an Environmental Effect

As described above, the project site is currently designated as MIH under the General Plan, Lindenville Specific Plan, and City Zoning Code. The project proposes a General Plan, Specific Plan, and City Zoning Code amendment to redesignate the site as BTP-H. The BTP-H land use designation allows for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan describes the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

As established in the City Zoning Code, under the BTP-H zoning designation, the maximum surface area covered by structures (i.e., lot coverage) is limited to 60 percent, with a minimum of 15 percent of the site made up of landscaping. The base maximum permitted FAR under the BTP-H zoning designation is 0.5, but increases may be permitted, up to a total FAR of 2.0, for uses such as R&D facilities or development meeting specific TDM, off-site improvement, or design standards. In addition, the zoning ordinance provides specific exceptions to FAR limitations for projects under a Community Benefits Program (see City Municipal Code Chapter 20.395).

As currently written, City Zoning Code Section 20.040.009.A.4*., Excluded from Floor Area in Calculating FAR*, states that active ground-floor uses in a new mixed-use or nonresidential development east of 101 and in the T4C, T4M, and T5C zoning districts can be excluded from FAR calculations, provided that the nonresidential uses are active and open to the general public. Excluded uses from FAR calculations in these zoning districts include, but are not limited to, childcare facilities, personal services, retail establishments, full-service or limited restaurants, and similar active uses. The proposed project would amend City Zoning Code Section 20.040.009.A.4 to add BTP-H zoning districts within the Lindenville Planning Sub-area to the covered zoning districts so that the proposed day-care center would be excluded from FAR calculations. With this amendment, the proposed project would be within the allowable FAR for the BTP-H zoning designation. The proposed project would construct approximately 1.7 million square feet of new R&D and amenity space across seven buildings, resulting in a project FAR of 2.0, consistent with the requirements of the BTP-H zoning designation but with specific exceptions.

The project is located within the Lindenville Planning Sub-Area as well as SFO Land Use Compatibility Plan Zone 3. The Lindenville Planning Sub-Area aims to preserve small businesses and industrial uses while strengthening its economic base by retaining a large portion of its land area for service, transportation, and industrial uses. To support development and use in this area, the General Plan includes goals and policies that encourage redevelopment and infrastructure improvements in the Lindenville Planning Sub-Area. Relevant goals and policies from the Specific Plan for the proposed project include the those listed below.

Goal LU-3: The City supports businesses through City programs and the retention of a core area of light industrial and service uses that provide jobs for South San Francisco residents.

Policy LU-3.3: Minimize Land Use Compatibility Conflicts. Minimize land use compatibility conflicts that discourage attraction and retention of production, distribution, and service and repair businesses in areas zoned for industrial use.

Policy LU-3.4: Buffer Residential Neighborhoods from Industrial Uses. Buffer heavy and light industrial uses, such as general services, light manufacturing, and storage uses, from residential neighborhoods.

Policy LU-3.6: Encourage Lot Assembly. Encourage lot assembly to allow businesses to grow and expand in Lindenville.

Policy LU-5.2: Golden Gate Produce Terminal and Park 'N Fly Sites. Encourage parcel assemblage of the Park 'N Fly site (160 Produce Avenue) and the Golden Gate Produce Terminal site (131 Terminal Court) and encourage developers to create a master plan and appropriate environmental analysis for office and R&D uses on the site.

Policy LU-6.2: Open Space Benefits. Require nonresidential developers to provide accessible open space in exchange for additional building height allowance.

Goal DD-3: New developments in Lindenville provide healthy places for people to live and work by mitigating potential noise, air quality, and odor impacts from industrial land uses, U.S. 101 and Interstate 380, and aircraft.

Policy DD-3.1: Land Use Compatibility. Require screening, air filtration, and sound abatement to reduce visual and sensory impacts from nearby generators of noise, odor, and sound.

Policy DD-3.2: Open Space Access. Provide ample opportunity for residents to live active lifestyles by requiring dedications of new public park and open spaces and private common spaces.

Policy DD-3.4: Ecological Design. Design new development to support a healthy and biodiverse environment through landscape and planting designs, reductions in impervious coverage, green roofs, and other site and building design strategies. Support design strategies at grade, on the podium, and on the roof.

Policy DD-3.5: Sustainable Development. Decarbonize new developments with low embodied carbon materials, renewable energy generation, and resource efficient design (energy, water, and waste) through development standards and incentives for higher performing new developments.

Policy DD-3.6: Future Conditions. Ensure that new and/or substantial construction is planned and designed to accommodate future conditions for the life of the project through implementation of the flood plain/sea-level rise overlay (see Chapter 20.180).

Policy OS-1.1: Create a Connected Network. Establish a network of parks and open spaces that provide spaces for active and passive recreation for residents, workers, and other district populations with a neighborhood park, linear park, mini parks and plazas, and greenways and trails.

Policy OS-4.1: Promote Different Open Space Types. Leverage a mix of public and privately owned publicly accessible (POPA) open space to provide sufficient open space for the district.

Goal MOB-1: Multi-modal travel options are readily available and offer equal levels of comfort.

Policy MOB 2.1: Connect Bicyclists and Pedestrians to Lindenville. Complete low-stress bicycle and pedestrian connections to the Centennial Way Trail, Bay Trail, and the Colma Creek Greenbelt.

Policy MOB 3.3: Prioritize Pedestrian and Bike Access. Require property owners to prioritize pedestrian and bicycle access in site designs in the mixed-use and office corridors and de-emphasize vehicle access using design, wayfinding, and building amenities.

Policy I-3.4: Sustainable Development Practices. Encourage sustainable development practices for development projects to reduce the demands on the water supply and sanitary sewers systems, including the use of recycled water indoors, installation of localized blackwater systems, and incorporation of regenerative and high-efficiency landscape practices that reduce water and energy use, along with increased building efficiency beyond City standards.

The project's goals and components associated with developing 1.7 million square feet of R&D uses and amenities, including new landscaping, sustainability features, and pedestrian access routes, support the above-listed Specific Plan goals and policies, as discussed throughout this initial study checklist. The Specific Plan does not impose density or height standards separate from those found in the General Plan's Land Use Element. By increasing the density of development and use at the site, the project further supports the sub-area goals.

The project site is approximately 1 mile northwest of SFO and partially within Airport Influence Area B of the ALUCP, which includes noise, height/airspace protection, safety, and overflight compatibility criteria and policies, as outlined in the SFO ALUCP. Please refer to Section 3.9, *Hazards and Hazardous Materials*, and 3.13, *Noise and Vibration*, for additional discussion of the proposed project's consistency with the SFO ALUCP. The project would require a determination of consistency with the ALUCP. The project would also be required to comply with FAA regulations for height. This includes determining the need to file form 7460-I, Notice of Proposed Construction or Alteration, with the FAA. With the 7460-I filing, the FAA undertakes an aeronautical study of the project and determines whether to issue a determination of no hazard or a determination of hazard. The project would require an ALUCP consistency determination to comply with FAA regulations for height. The project applicant would be required to receive a determination of no hazard to air navigation as a condition of approval for a building permit for the proposed project.

As mentioned in Chapter 2, *Project Description*, the southern portion of the project site is adjacent to the navigable slough; it contains a portion of the 100-foot shoreline band within the jurisdiction of the BCDC. Because a portion of the project site is within 100 feet of the navigable slough, project-related work within the 100-foot shoreline band would be subject to the McAteer-Petris Act, thereby requiring a permit from BCDC. The McAteer-Petris Act allows BCDC to issue or deny permits for work that would place fill, extract material, or change the use of any land, water, or structure within the area of its jurisdiction, in conformance with San Francisco Bay Plan policies and McAteer-Petris Act requirements. The permit would be reviewed and approved by BCDC to ensure that the proposed project, as well as all project-related activities within the shoreline band, would be consistent with the requirements of the San Francisco Bay Plan and McAteer-Petris Act. The project applicant would be required to secure a BCDC permit as a condition of approval for the proposed project's building permit. Furthermore, the Active South City Plan, General Plan, and Lindenville Specific Plan identify a Class I bicycle and pedestrian trail crossing at U.S. 101 to connect the Bay Trail with Shaw Road, with an eventual extension to the Centennial Way Trail via a grade-separated Caltrain crossing. A shared Class I/IV bicycle and pedestrian pathway, providing access to the navigable slough along the southern and western portions of the project site, would be constructed as part of the development proposed adjacent to the project site at 101 Terminal Court project. Although no bicycle and pedestrian pathway is proposed along the southern and western portions of the project site as part of the proposed project, the proposed project would not preclude completion of the pathway as part of the 101 Terminal Court project, or the bicycle and pedestrian bridge across U.S. 101, consistent with General Plan Policy MOB-2.1.3 and as identified in the Active South City Plan.

Overall, the project would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Impacts would be ***less than significant***.

3.11.2.3 Cumulative Impacts

As evaluated above, no new impacts have been identified for the project. Therefore, when combined with the cumulative development, no new cumulative impacts would occur.

Development under the proposed project would occur in an urbanized area. Similarly, most cumulative development under the General Plan, including reasonably foreseeable projects, would take place in urbanized areas as infill development and not require significant land use changes that would create land use conflicts, nor would they divide existing communities. In addition, future development would be subject to the land use plans, policies, and regulations of the applicable jurisdiction. Therefore, cumulative impacts would be ***less than significant***.

3.11.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation.

The purpose of the off-site redesignation parcels is to ensure that future development is similar to and consistent with the development proposed as part of the project. The proposed project would not include the construction of any new uses on the off-site redesignation parcels. As addressed under Section 3.11.2.2, by redesignating these off-site parcels, the project supports Specific Plan Policy LU-5.2, which encourages parcel assemblage for the Park 'N Fly site (160 Produce Avenue) and the Golden Gate Produce Terminal site (131 Terminal Court) and creation of a master plan for office and R&D development on the combined parcels. Future land uses could be R&D and would be consistent with the project site overall; that is, future development proposals would be reviewed for consistency with applicable plans, thereby avoiding future land use inconsistencies. Overall, land use impacts related to the amendments for these five parcels would be similar to those identified for the proposed project, and impacts would be ***less than significant.*** Further review in an EIR is not required***.***

3.12 Mineral Resources

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
12. MINERAL RESOURCES: Would the project:					
a) Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?	☐	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☐	☒

3.12.1 Setting

There are no known mineral resources within South San Francisco, according to the California Department of Conservation.[69] The California Geological Survey Mineral Resource Zones and Resource Sectors map classifies as the project site as MRZ-1, an area "where adequate information indicates that no significant mineral deposits are present" or "where it is judged that little likelihood exists for their presence."[70]

3.12.2 Discussion

There are no known mineral resources within the project vicinity. The project site is categorized as MRZ-1; it is not located in an area used or available for extraction of a regionally important mineral resource. Therefore, no impacts on mineral resources of statewide or regional significance would occur. In addition, neither the project site nor the surrounding area is identified as an area containing mineral resources of local significance; therefore, there would be ***no impact*** on mineral resources.

3.12.2.1 Cumulative Impacts

The project would have no impact on mineral resources. Therefore, when combined with the cumulative development evaluated in the General Plan EIR and the Lindenville Specific Plan Addendum, no new cumulative impacts would occur. Therefore, the proposed project in combination with other development projects would not result in a significant cumulative impact related to mineral resources. and there would be no additional cumulative impacts.

[69] California Geological Survey. 2022. *CGS Information Warehouse: Mineral Land Classification*. Available: https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc. Accessed: June 3, 2024.

[70] California Geological Survey. 1987. *Special Report 146 – Mineral Land Classification: Aggregate Materials in the San Francisco-Monterey Bay Area, Part II: Classification of Aggregate Resource Areas, South San Francisco Bay Production – Consumption Region.* Available: ftp://ftp.consrv.ca.gov/pub/dmg/pubs/sr/SR_146-2/SR_146-2_Text.pdf. Accessed: June 3, 2024.

3.12.3 Off-Site Redesignation Parcels

The proposed project would require amendments to the General Plan and Specific Plan and an associated zone change from MIH to BTP-H for the off-site redesignation parcels. The purpose of the off-site redesignation is to ensure that future development is similar to and consistent with the development proposed as part of the project. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

As discussed in the Specific Plan Addendum and General Plan EIR, which are incorporated by reference, there would be no impacts on mineral resources because such resources do not occur within the Specific Plan area. Furthermore, there are no mineral resource recovery sites within the boundaries of South San Francisco. Redesignation of the five off-site parcels from MIH to BTP-H would not change this conclusion because the same lands would be disturbed, lands that are not currently used for any mining or other mineral extraction activities. Therefore, there would be ***no impact*** on mineral resources as a result of the off-site redesignation parcels. No further evaluation in an EIR is required.

3.13 Noise

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
13. NOISE: Would the project:					
a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies?	☒	☐	☐	☐	☐
b) Generate excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒	☐

Regarding noise impacts related to public airports or private air strips, the closest airport to the project site is SFO, which is approximately 1 mile to the southeast. Portions of the project site fall within the 65 A-weighted decibel (dBA) noise contour for this airport, according to the 2012 Comprehensive Airport Land Use Compatibility Plan for the Environs of San Francisco International Airport. No portion of the project site is within the 70 or 75 dBA community noise equivalent level (CNEL) noise contours.[71] Land uses proposed under the project include commercial, office, and/or R&D land uses. The 2012 ALUCP designates commercial and industrial/production land uses as compatible with all airport-related noise levels, according to Table IV-1, Noise/Land Use Compatibility Criteria, of the ALUCP document.[72] Although residential land uses are designated as conditionally compatible within the 65 dBA CNEL contour, no residential land uses are proposed as part of the project. Therefore, the project would not conflict with the land use restrictions for the 65 dBA noise contour in the ALUCP. Impacts related to aircraft noise would be ***less than significant***, and this topic will not be addressed in the EIR.

Construction vehicles and equipment used during project construction would generate noise and vibration. In addition, during operation of the project, project-generated vehicle trips would increase traffic and associated traffic noise along nearby roadway segments, and mechanical equipment and project emergency generators (during testing) would result in operational noise. Therefore, construction and operation of the project would have the potential to result in significant impacts with respect to checklist questions 13(a) and 13(b). These topics will be analyzed in the EIR.

[71] City/County Association of Governments of San Mateo County. 2012. *Comprehensive Airport Land Use Compatibility Plan for the Environs of San Francisco International Airport.* November. Redwood City, CA. Available: https://ccag.ca.gov/wp-content/uploads/2014/10/Consolidated_CCAG_ALUCP_November-20121.pdf. Accessed: March 10, 2023.

[72] Ibid.

3.14 Population and Housing

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
14. POPULATION AND HOUSING: Would the project:					
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☐	☒

3.14.1 Setting

3.14.1.1 Population and Housing

South San Francisco had a population of 63,484 as of 2022[73] and a total of 22,495 housing units as of 2021.[74] According to the General Plan EIR, the population is expected to increase to approximately 107,203 and 38,959 housing units by 2040. The City's Housing Element reports that the city needs to increase housing by 3,956 units in order to meet California Department of Housing and Community Development (HCD) Regional Housing Needs Assessment (RHNA) estimates.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market, and associated surface parking. The project site consists of two warehouse buildings and a smaller administrative building, totaling approximately 126,750 square feet. In addition, the site is also developed with approximately 116,572 square feet of open-air structures, including loading docks and trash compactors, associated with operations at the Golden Gate Produce Terminal. There is currently no housing on the project site.

3.14.1.2 Employment

The city and adjacent areas contain regional employment centers and major thoroughfares. The city's economy supports jobs and businesses in areas such as biomedical technologies, digital technologies, manufacturing, distribution, hospitality, and household-serving retail services. According to the General Plan EIR, there are 95,260 jobs in the city, a number that is projected to

[73] U.S. Census Bureau. 2023. *QuickFacts*. Available: https://www.census.gov/quickfacts/southsanfrancisco citycalifornia. Accessed: June 12, 2024.

[74] FirstCarbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan City of South San Francisco, San Mateo County, California.* State Clearinghouse Number 2021020064. .

increase to 137,557 by 2040.[75] The Specific Plan Addendum accounted for future development at the project site under the MIH land use designation for the Specific Plan area, which would see 11,775 new residents and 23,366 employees upon build-out of the Specific Plan. The project site is currently occupied by the Golden Gate Produce Terminal, a produce market that employs approximately 475 people.

3.14.2 Discussion

The project is located within the Lindenville Planning-Sub Area, which comprises mostly industrial, business, food processing, manufacturing, and warehousing uses. The project site is currently zoned MIH, which allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. As mentioned above, the existing use on site is a produce market; no housing is currently on the site. The project would consist of demolishing industrial and operational uses on a 17.67-acre site at the Golden Gate Produce Terminal. In its place, the proposed project would construct approximately 1.7 million square feet of R&D uses and amenities within seven buildings, ranging from one to six stories, along with two parking garages, additional surface parking, and landscaping. The project would require General Plan, Specific Plan and zoning code amendments to change the existing land use and zoning designation from MIH and to BTP-H and allow development of the R&D campus.

3.14.2.1 Construction

Construction-related job opportunities due to the proposed project are not expected to result in any substantial population growth in the area. The work requirements of most construction projects are highly specialized so that construction workers remain at a job site only for the time frame during which their specific skills are needed. In addition, the construction workers would very likely be supplied from the region's labor pool and would not be likely to relocate. As such, significant housing or population impacts would not result from construction of the project. Therefore, there would be no construction-related population growth impacts. Therefore, ***no impact*** would occur.

3.14.2.2 Operation

Infrastructure

The proposed project would be located on a developed parcel (i.e., warehouse buildings, administrative building, open-air structures) and be considered in-fill redevelopment. The project site is served by existing water, wastewater, stormwater, natural gas, electric, telecommunications, and waste and recycling services. New on-site facilities would be connected to new services through the installation of new localized connections. An expansion or an increase in capacity for off-site infrastructure would occur as required by the utility providers. In addition, the proposed project would not include the extension of area roadways. Because the proposed infrastructure would be sized to meet the needs of the proposed project, it would not lead to unplanned indirect population growth or the need for additional housing beyond that expected to be generated by the proposed project. This impact would be ***less than significant***.

[75] FirstCarbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan City of South San Francisco, San Mateo County, California.* State Clearinghouse Number 2021020064.

Employees

The proposed project would be located on an existing developed site in an urbanized area; it would not include the construction of any housing units. The proposed project would construct approximately 1.7 million square feet of R&D and amenity space. Because no housing is proposed as part of the project, there would be no direct population and housing impacts on the city.

Operation of the proposed project would generate indirect population growth because the new R&D campus would increase employment by approximately 3,787 (3,778 R&D employees and nine day-care center employees), a net increase of 3,312. Because the project would redesignate the project site from MIH to BTP-H, the project would result in additional employees under the BTP-H designation compared with the number of employees assumed in the General Plan and Specific Plan. Under the MIH designation, using an employee generation rate of one employee per 741 square foot of MIH space,[76] the project site could result in 1,039 employees.[77] As mentioned previously, the project would generate 3,778 employees, resulting in 2,739 additional employees not accounted for in the General Plan or Specific Plan projections.

Employment impacts are largely social and economic impacts, and CEQA establishes that social and economic impacts are not considered significant impacts unless they contribute to, or are caused by, physical impacts on the environment (Public Resources Code Section 21080). Thus, the proposed project's additional employment growth not evaluated or considered in the General Plan and Specific Plan is not, in and of itself, a significant impact on the environment. As discussed above, project employees would not directly create significant impacts related to population or housing demand. Other potential impacts that could result from the new employees on the project site, including impacts related to vehicle travel, are evaluated throughout this Initial Study and the EIR. Refer to Section 4.2, *Air Quality*, Section 4.5, *Noise*, and Section 4.6, *Transportation and Circulation*, of the Draft EIR and Section 3.11, *Land Use and Planning*, Section 3.15, *Public Services*, and Section 3.19, *Utilities and Service Systems*, of this Initial Study.

Although housing is not proposed, the increase in the number of employees in the area could generate a need for housing. The proposed project would result in a demand for 938 housing units,[78] given the project's 3,312 additional employees. However, according to the City's Housing Element, 3,581 housing units[79] are currently in the pipeline and expected to be built by 2040, which would accommodate the increased growth in employment in the city. Not all employees would live within South San Francisco. Other nearby jurisdictions have adopted Housing Elements that plan for housing to meet their Regional Housing Needs Allocation, which is each jurisdiction's share of the region's housing needs. This regional housing need is determined by the State using population projections, vacancy rate, overcrowding, and other factors. As a result, with the City and other jurisdictions planning for growth in their Housing Elements, this level of additional employees

[76] As part of the analysis conducted for the General Plan EIR, it was assumed that the transportation analysis zone (TAZ) that the project site falls in would be approximately 73.50 acres (or 3,201,660 square feet) and result in approximately 4,138 employees. Using these numbers, the TAZ would result in an employee generation rate of one employee per 741 square feet (i.e., 3,201,660 square feet/4,138 employee = one employee/741 square feet).

[77] The project site is approximately 17.67 acres or approximately 769,705.2 square feet. Assuming the employee generation rate of one employee/741 square feet, the project site under the MIH designation could result in approximately 1,039 employees (i.e., 769,705.2 square feet/741 square feet = 1,039 employees).

[78] Based on the city's jobs-to-housing ratio of 3.53 jobs per housing unit.

[79] City of South San Francisco. 2023. *South San Francisco Housing Element 2023–2031.* Available: https://shapessf.com/the-housing-element/. Accessed: June 12, 2024.

would not result in additional physical impacts from unplanned growth. The proposed project would also very likely employ existing workers within the region because the existing city and county workforce already has workers who support R&D. In addition, the proposed project would be required to pay the commercial linkage fee under Chapter 8.69 of the City Municipal Code, which would contribute to the development of affordable housing in other locations within the city. Therefore, the proposed project would not lead to unplanned housing or employment growth. The population impacts would be ***less than significant.***

Displacement

No displacement of substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere, would occur with the project because no housing exists on-site, nor is housing proposed. ***No impact*** would occur.

3.14.2.3 Cumulative Impacts

As evaluated above, impacts from the project would be less than significant. Development under the project would occur in an urbanized area. Similarly, most cumulative development under the General Plan, Specific Plan, and reasonably foreseeable projects would take place in urbanized areas as infill development and not result in cumulative impacts on population and housing because the projects would be considered planned growth projected by the City in anticipation of future development. Therefore, when combined with the cumulative development evaluated in the General Plan EIR and the Specific Plan Addendum, no new cumulative impacts would occur. In addition, the project would also be an infill project. It would connect to existing infrastructure that already serves the project site and would not need to extend infrastructure that could result in unplanned growth. Therefore, the proposed project in combination with other development projects would not result in a significant cumulative impact related to population and housing. Cumulative impacts would be ***less than significant.***

3.14.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The proposed project does not include the construction of any new uses on the off-site redesignation parcels.

The purpose of the off-site redesignation parcels is to ensure that future development is similar to and consistent with the development proposed as part of the project. The proposed project would not include the construction of any new uses on the off-site redesignation parcels and would not result in any direct impacts related to population and housing. However, future development of the off-site parcels would result in population and housing impacts similar to those of the proposed project and would generate a similar number of employees. The employees could be accommodated through the housing growth envisioned in the City's General Plan and Housing Element and other

similar plans in nearby jurisdictions, consistent with regional growth projections. In addition, future development at the off-site redesignation parcels would be subject to project-specific CEQA review, which would ensure that population and housing impacts from future employees would be adequately evaluated and mitigated, as appropriate. Overall, population impacts related to the amendments for the five parcels would be similar to those identified for the proposed project. Therefore, population and housing impacts associated with the off-site redesignation parcels would be ***less than significant.*** No further evaluation in the EIR is required.

3.15 Public Services

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
15. PUBLIC SERVICES: Would the project:					
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services: • Fire protection? • Police protection? • Schools? • Parks? • Other public facilities?	☐	☐	☐	☒	☐

3.15.1 Setting

The SSFFD provides fire suppression and prevention services, emergency medical services, and urban and marine search-and-rescue services. Other responsibilities involve hazardous materials, public education, and disaster preparedness. The nearest fire station to the project site is Fire Station 62, located at 249 Harbor Way, approximately 0.5 mile to the northeast. The staff includes 87 full-time-equivalent firefighters and emergency medical employees and 4.68 hourly and contract employees. The SSFFD aims to have the first apparatus vehicle on the scene of an emergency within 7 minutes and 30 seconds of a call, which includes 4 minutes for travel time.[80]

The South San Francisco Police Department (SSFPD) provides police protection services throughout the city, with the exception of unincorporated county areas, which are under the jurisdiction of the San Mateo County Sheriff's Office. The SSFPD has 84 sworn and 35 civilian positions and is divided into two

[80] FirstCarbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan, City of South San Francisco, San Mateo County, California.* State Clearinghouse Number 2021020064.

divisions: Operations and Services.[81] The SSFPD operates out of a single station at 1 Chestnut Avenue. This station, constructed in late 2021, also serves as a backup Emergency Operations Center. A substation at 329 Miller Avenue, with limited hours of operation, provides space for officers to write reports and take breaks. As of 2023, SSFPD's response time to Priority 1 (emergency) calls averaged 6 minutes and 21 seconds; nonemergency Priority 2 and 3 calls averaged 18 minutes and 23 seconds and 41 minutes and 36 seconds, respectively.[82] The SSFPD considers these response times acceptable. There currently is no standard response time, nor is there any obligated standard to measure against. With a population of about 63,484 in the city as of 2022, the SSFPD has a current service ratio of 1.3 sworn officers per 1,000 residents.[83]

The South San Francisco Unified School District (SSFUSD) provides kindergarten through 12th-grade education to South San Francisco residents and portions of Daly City and San Bruno. The SSFUSD operates nine elementary schools (K–5), four middle schools (6–8), three high schools (two for 9–12 students and one continuation high school), and one adult education program.[84] Total enrollment in the SSFUSD is approximately 8,000, with a student-to-teacher ratio of 20:1.[85] In addition, the SSFUSD facilitates a child development program that offers a full-day licensed preschool at three sites within the city. Out of the nine public elementary schools within the SSFUSD, five are located within the city limits. However, South San Francisco residents can apply to transfer to another school located outside of the city limits but within the SSFUSD.

The South San Francisco Public Library provides free public library and literacy services at three facilities: the Main Library, the Grand Avenue Branch Library, and the Community Learning Center. The community learning center is nearest to the project site, at approximately 1 mile northwest. In addition, a new library would be incorporated as part of the City's proposed Community Civic Campus. This would include a science and technology center, children's and teen learning area, and adult learning area.[86]

3.15.2 Discussion

3.15.2.1 Fire Protection, Police Protection, and Emergency Medical Services

Policy SA-22.7 requires the City to coordinate with the SSFFD and SSFPD to ensure that public services will be able to accommodate the growth associated with new development in Lindenville. In addition, all development projects in South San Francisco are required to pay a public safety impact fee, in accordance with Chapter 8.75 of the City Municipal Code, to ensure funding for adequate

[86] City of South San Francisco. 2021. *Community Civic Campus—Library, Parks & Recreation and Community Theater/Council Chamber*. Available: http://www.communitycivicampus.net/index.php/projects/library-parks-rec. Accessed: November 8, 2023.

personnel, equipment, and facilities and meet the increased demand generated by new development. Any new development would be subject to payment of the public safety impact fee and reviewed by the City for compliance with the policies and actions of the General Plan and the City Municipal Code; therefore, physical effects on the environment from the construction of new or expanded public service facilities would not be expected to occur.

The proposed project would construct new R&D and amenity buildings on the project site, which is already developed and currently being served by the SSFFD and SSFPD. As described in Chapter 2, *Project Description*, dedicated access to the project site for emergency vehicles would be provided via Terminal Court and the Shaw Road connection. The proposed project would allow emergency vehicle access to all buildings through the proposed roadway network within the project site. The project site would include 20- to 26-foot-wide fire lanes around the perimeter of the project site, providing access to each building. In addition, the proposed project would be required to comply with all applicable fire and safety codes required in the City's Municipal Code. Furthermore, the proposed project would be subject to the public safety impact fee, which supports public services personnel, equipment, and facility maintenance, to offset potential impacts from additional demand generated by the proposed project. Therefore, the impact would be ***less than significant***.

3.15.2.2 Public Schools

The General Plan includes policies and actions to ensure that public schools keep pace with the additional demand generated by new development. Specifically, Policy SA-22.7 requires the City to coordinate with the SSFUSD to ensure that public services will be able to accommodate the growth associated with new development in Lindenville. In addition, all development projects in South San Francisco are required to pay the school impact fee, in accordance with Senate Bill (SB) 50, to provide funds to SSFUSD. Any new development would be subject to payment of the school impact fee and reviewed by the City for compliance with the policies and actions of the General Plan and the City Municipal Code; therefore, physical effects on the environment from the construction of new or expanded public school facilities would not be expected to occur.

Because the proposed project would include the development of R&D/amenity uses, not residential uses, it would not directly result in the generation of new students who would enroll in the SSFUSD. However, the proposed project would be subject to SB 50 school impact fees, as established by the Leroy F. Greene School Facilities Act of 1998. These fees support facility maintenance to offset potential impacts from additional use. Section 65996 of the State Government Code notes that payment of the school impact fees established by SB 50, which may be required by any State or local agency, is deemed to constitute full and complete mitigation for school impacts from development. In addition, as part of the proposed project, an approximately 4,050-square-foot day-care center would be provided on-site. The day-care center would include an approximately 4,950-square-foot outdoor play area that would be protected with fencing; the surrounding landscaping and trees would be minimal. The proposed day-care center would accommodate up to 50 children and be open to employees of the proposed project as well as the public. Therefore, this impact would be ***less than significant***.

3.15.2.3 Libraries

The General Plan includes policies and actions to ensure that library facilities keep pace with new development. These policies include Policy LU-1.4, which requires the City to maintain and expand public facilities that support the community, including libraries, particularly in neighborhoods that lack such resources, and Policy ECS-7.1, which requires the City to ensure that adequate library

services, staffing levels, and facilities are maintained for all residents. In addition, Policy ECS-7.7 requires the City to develop customer service surveys, which will be used to evaluate library programs and events. In addition, all development projects in South San Francisco are required to pay a library impact fee, in accordance with Chapter 8.74 of the City Municipal Code, to provide funds for the City's library services and facilities. Any new development would be subject to payment of the library impact fee and reviewed by the City for compliance with the policies and actions of the General Plan and the City Municipal Code; therefore, physical effects on the environment from the construction of new or expanded library facilities would not be expected to occur. In addition, development would be required to pay library impact fees, in accordance with Chapter 8.74 of the City Municipal Code; therefore, the project would not result in significant adverse effects related to library facilities. The impacts of the proposed project would be ***less than significant***.

3.15.2.4 Cumulative Impacts

As evaluated above, impacts from the project would be less than significant. Therefore, when combined with the cumulative development evaluated in the General Plan EIR and the Lindenville Specific Plan Addendum, no new cumulative impacts would occur. Development facilitated by the General Plan or Specific Plan would be required to pay library impact fees, in accordance with Chapter 8.74 of the City Municipal Code, and participate in ongoing coordination with SSFFD and SSFPD; therefore, future development would not result in significant adverse effects related to library facilities. The proposed project in combination with other development projects would not result in a significant cumulative impact related to public service impacts. Cumulative impacts would be ***less than significant***.

3.15.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation.

Similar to the proposed project, future development under the BTP-H designation could include life sciences and R&D office space, which would most likely have impacts on public services similar to those of the proposed project. As such, future development at the off-site redesignation parcels would be subject to a SSFUSD development impact fee, based on the square footage of each project. In addition, future development at the parcels would be subject to payment of the public safety impact fee and library impact fee. Furthermore, future development at the off-site redesignation parcels would be required to comply with the same policies and actions provided in the General Plan and City Municipal Code, as described in the sections above, which would ensure that public service providers would be able to accommodate growth generated by any new development at the off-site redesignation parcels. Therefore, public services impacts associated with the off-site redesignation parcels would be ***less than significant***. No further evaluation in the EIR is required.

3.16 Recreation

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
16. RECREATION: Would the project:					
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒	☐
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☐	☐	☐	☒	☐

3.16.1 Setting

As of 2022, 316 acres of developed parklands, open space, and joint use facilities were within the city limits. This includes improved parkland (131 acres), open space (108 acres), and joint use facilities (77 acres). The City retains joint use agreements with public agencies like the SSFUSD, PG&E, San Francisco Public Utilities Commission (SFPUC), and Bay Area Rapid Transit (BART) to allow residents access to additional improved parkland and open space. The City also maintains an additional 30 to 40 acres for rights-of-way or other open space. The City maintains 10 indoor recreational facilities and numerous outdoor facilities for sports, social gatherings, camps, and classes. These indoor facilities include the Community Civic Campus (opens 2023), Municipal Services Building, Joseph A. Fernekes Recreation Building, Roberta Cerri Teglia Center (formerly Magnolia Center), Orange Pool, Paradise Valley Recreation Center, Siebecker Center, Terrabay Gymnasium, Alice Peña Bulos Community Center (formerly Westborough Recreation Building), Westborough Preschool, and Community Learning Center, which is jointly operated with the library.[87]

The Quimby Act, a 1965 State law, allows local governments to impose a requirement for the dedication of land or the payment of in-lieu fees, or both, for park and recreational purposes as a condition of approval for a tentative map or parcel map (see Government Code Section 66477 et seq.) The basic premise is that new development brings in more residents and creates a special impact on park and recreational resources. The Quimby Act also contains specific procedures for calculating, collecting, and spending in-lieu fees; it also requires the return of fees when the fees have not been committed to park and recreational facilities. These fees are distinguished from the Mitigation Fee Act (California Government Code Section 66000 et seq.). The Quimby Act also sets a maximum community per capita standard for park and recreational facilities of 5 acres per 1,000 residents for which park and recreational land dedications and fees may be imposed under the act. The fees collected through the Quimby regulations offset developmental impacts by providing park and recreational facilities that will serve new residents.

[87] FirstCarbon Solutions. 2022. *Draft Program Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan City of South San Francisco, San Mateo County, California.* State Clearinghouse Number 2021020064.

3.16.2 Discussion

The proposed project would include approximately 115,130 square feet of open space in the courtyards, which would be publicly accessible, providing space for outdoor work, recreation, and socializing through the use of seat walls, paved areas, turf, and shade structures. In addition, outdoor terraces would be incorporated on multiple levels of the proposed buildings for use by building tenants. Furthermore, development facilitated by the proposed project would be required to pay park and recreation impact fees in accordance with Chapter 8.67 of the City Municipal Code, as discussed above. Therefore, the proposed project would not result in significant adverse effects related to parks and recreational facilities, and impacts would be ***less than significant***.

3.16.2.1 Cumulative Impacts

As evaluated above, impacts from the project would be less than significant. Therefore, when combined with the cumulative development evaluated in the General Plan EIR and the Lindenville Specific Plan Addendum, no new cumulative impacts would occur. Future development would be required to pay park and recreation impact fees in accordance with Chapter 8.67 of the City Municipal Code, as discussed above, in addition to providing more open space per other City Municipal Code and Zoning Code requirements. Therefore, the proposed project in combination with other development projects would not result in a significant cumulative impact related to recreational, and cumulative impacts would be ***less than significant***.

3.16.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation.

Similar to the proposed project, future development under the BTP-H designation could include life sciences and R&D office space, which would most likely have recreational impacts similar to those of the proposed project. As such, future development at the off-site redesignation parcels would be subject to the payment of the park and recreation impact fee, in accordance with Chapter 8.67 of the City Municipal Code. In addition, future development at the parcels would very likely incorporate open space and/or amenity uses as part of the future projects' designs, which would provide recreational opportunities for future employees and the public on-site. Furthermore, future development at the off-site redesignation parcels would be required to comply with the same policies and actions provided in the General Plan and City Municipal Code, as described in the sections above, which would ensure that parks and recreational facilities would be able to accommodate growth generated by any new development at the off-site redesignation parcels. Therefore, recreational impacts associated with the off-site redesignation parcels would be ***less than significant***. No further evaluation in the EIR is required.

3.17 Transportation

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
17. TRANSPORTATION: Would the project:					
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☒	☐	☐	☐	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☒	☐	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐	☐
d) Result in inadequate emergency access?	☒	☐	☐	☐	☐

Vehicles used during project construction would generate vehicle trips. In addition, the approximately 1.7 million square feet of R&D and amenity uses would generate vehicle trips from project-generated employees during operational activities. Furthermore, the project design and the generation of vehicle trips could result in a conflict with an applicable circulation plan, policy, or regulation; result in inadequate emergency access; or substantially increase hazards due to design features. Therefore, construction and operation of the project would have the potential to result in significant impacts with respect to checklist questions 3.17(a), 3.17(b), 3.17 (c), and 3.17(d). These topics will be analyzed in the EIR.

3.18 Tribal Cultural Resources

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
18. TRIBAL CULTURAL RESOURCES: Would the project:					
e) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is:					
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k), or	☐	☐	☐	☒	☐
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒	☐

3.18.1 Setting

Tribal cultural resources were originally identified as a distinct CEQA environmental category with adoption of Assembly Bill (AB) 52 in September 2014. For all projects that are subject to CEQA with a notice of preparation (NOP), notice of negative declaration, or mitigated negative declaration received on or after July 1, 2015, AB 52 requires the lead agency on a proposed project to consult with the geographically affiliated California Native American tribes. The legislation creates a broad new category of environmental resources, tribal cultural resources, that must be considered under CEQA. AB 52 requires a lead agency to consider not only the resource's scientific and historical value but also whether it is culturally important to a California Native American tribe.

AB 52 defines tribal cultural resources as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are included in or determined to be eligible for inclusion in the California Register of Historical Resources (CRHR) or a local register of historical resources, as defined in Public Resources Code Section 5020.1(k), or determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to the criteria of Public Resources Code Section 5024.1(c) (CEQA Section 21074).

California SB 18 (Government Code Section 65352.3), established in September 2004, requires local governments to consult with California Native American tribes prior to preparing or amending both general plans (as defined in California Government Code Section 65300 et seq.) and specific plans (as defined in Government Code Section 65450 et seq.). The purpose of this consultation is to include California Native American tribes early in the planning process and allow for the identification and protection of cultural resources. This process also allows cultural resources to be considered during the broad-scale local and regional planning process rather than at a project level.

SB 18 requires that local governments notify appropriate tribes, as identified by the Native American Heritage Commission (NAHC), prior to the adoption or amendment of a general plan or specific plan. Tribes then have 90 days from the receipt of notification to request consultation (Government Code Section 65352.3). Prior to the adoption or substantial amendment of a general plan or specific plan, local governments must refer the proposed action to the appropriate tribes, as identified by the NAHC, regardless of whether previous consultation has taken place. Local governments must allow a 45-day comment period (Government Code Section 65352) and provide notice of a public hearing to all tribes that filed a written request for such notice at least 10 days prior to the hearing (Government Code Section 65092).

In accordance with AB 52 and SB 18, the NAHC was contacted on June 20, 2023, and asked to conduct a search of its Sacred Lands File and provide a list of California Native American tribes that have a cultural affiliation with the geographic area where the project site is located. On July 7, 2023, the NAHC indicated that the search of its Sacred Lands File was negative for sacred lands in the vicinity of the project site and provided a list of eight tribal representatives. On September 27, 2023, the City sent letters to the eight individuals identified by the NAHC. The letters included a brief description of the proposed project, the results of a literature record search, project location maps, and a request for comments, concerns, or knowledge regarding sacred lands or heritage sites in the project area. The following tribes were contacted:

- Amah Mutsun Tribal Band of Mission San Juan Bautista
- Costanoan Rumsen Carmel Tribe
- Indian Canyon Mutsun Band of Costanoan
- Muwekma Ohlone Indian Tribe of the San Francisco Bay Area
- The Ohlone Indian Tribe
- Wuksache Indian Tribe/Eshom Valley Band

No requests for consultation were received from the Native American tribes. Appendix F contains the letter that was sent from the NAHC and a record of the City's communication with Native American tribes.

3.18.2 Discussion

The *Archaeological Resources Study for the Infinite 131 Project* was prepared by ICF to analyze potential project impacts. The following discussion is based on the technical report. The *Archaeological Resources Study for the Infinite 131 Project* is confidential and not for public release because it contains the locations of archaeological sites. Distribution and access should be restricted to those with a need to know. In addition, development in the city, including the proposed project, would be required to comply with General Plan Policies ES-10.5, ES-11.1, and ES-11.3.

Policy ES-10.5, *Discovery of Significant Historic or Prehistoric Archaeological Artifacts*. If construction or grading activities result in the discovery of significant historic or prehistoric archaeological artifacts, then all work within 100 feet of the discovery shall cease, the Economic and Community Development Department shall be notified, and the resources shall be examined by a qualified archaeologist for appropriate protection and preservation measures; work may resume only when appropriate protections are in place and approved by the Economic and Community Development Department.

Policy ES-11.1, Identification of Tribal Cultural Resources. Encourage the identification, preservation, and protection of tribal cultural resources, traditional cultural landscapes, sacred sites, places, features, and objects, including historic or prehistoric ruins, burial grounds, cemeteries, and ceremonial sites, in consultation or coordination with the appropriate Native America tribe(s) and ensure appropriate treatment of Native American and other human remains discovered during project construction.

Policy ES-11.3, Conduct Tribal Consultation during Development Review. Consult with local Native American tribes to identify, evaluate, and appropriately address tribal cultural resources and tribal sacred sites through the development review process.

3.18.2.1 Impacts on Tribal Cultural Resources

The potential exists for previously undiscovered tribal cultural resources to be encountered during grading, excavation, or other ground-disturbing activities associated with the proposed project. As discussed above, to determine the sensitivity of the project site with respect to Native American resources, the NAHC and local Native American groups were consulted in accordance with AB 52, but no tribes responded. The records search conducted at the Northwest Information Center (NWIC) found that one Native American archaeological site was located within or adjacent to the project area, although subsequent testing suggests that this resource was incorrectly mapped and may not be within the project area. However, should archaeological deposits that qualify as tribal cultural resources be encountered during project excavation, any impacts on these potential unanticipated discoveries would be avoided through compliance with General Plan Policies ES-10.5 and ES-11.1. Based on the presumed incorrect mapping results and compliance with federal, State, and General Plan policies that protect tribal cultural resources, the proposed project would result in ***less-than-significant*** impacts on tribal cultural resources.

3.18.2.2 Cumulative Impacts

With adherence to federal, State, and local laws and policies that protect tribal cultural resources, cumulative impacts on tribal cultural resources would be less than significant. As evaluated above, no new impacts have been identified for the project. Therefore, cumulative impacts on tribal cultural resources would be ***less than significant***.

3.18.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density

corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The proposed project would not include the construction of any new uses on the off-site redesignation parcels.

Similar to the proposed project, future development under the BTP-H designation could include life sciences and R&D office space, which would most likely result in similar amounts and types of ground disturbing activities, and have similar impacts on tribal cultural resources as the proposed project. As such, future development under the off-site redesignation parcels would be subject to the same federal and State regulations protecting tribal cultural resources, including AB 52 consultation, as necessary. Furthermore, future development would be required to comply with the same policies in the General Plan, as described above for the proposed project, which would ensure that any potential impacts to tribal cultural resources would be avoided. Therefore, impacts associated with the off-site redesignation would be ***less than significant*** and no further evaluation in an EIR is required.

3.19 Utilities and Service Systems

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
19. UTILITIES AND SERVICE SYSTEMS: Would the project:					
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental environment?	☐	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒	☐
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒	☐

3.19.1 Setting

3.19.1.1 Water Supplies

South San Francisco is served by the California Water Service Company (Cal Water) and located in Cal Water's South San Francisco service area, which includes South San Francisco, Colma, a small portion of Daly City, and Broadmoor. The Cal Water South San Francisco District utilizes both groundwater from the Westside Basin and imported surface water purchased from the SFPUC. An existing 12-inch public water main is located within Terminal Court.

3.19.1.2 Wastewater

The City owns and maintains its sanitary sewer system and infrastructure within public rights-of-way. The collected wastewater is conveyed to the South San Francisco Water Quality Control Plant (WQCP) located adjacent to San Francisco Bay on Colma Creek. This facility provides secondary wastewater treatment for the cities of South San Francisco, San Bruno, and Colma. During dry weather conditions, the WQCP has a peak flow capacity of 13 million gallons per day (mgd), which is increased to a peak capacity of 62 mgd during wet-weather conditions.[88] It receives an average dry-weather flow of approximately 9 mgd; the average peak wet-weather flow can exceed 60 mgd.[89] The plant last experienced flows that exceeded peak wet-weather capacity on December 31, 2022.[90] An existing 8-inch sanitary sewer main runs underneath the navigable slough south of the project site.

3.19.1.3 Stormwater

The City owns and maintains the storm drainage infrastructure within public rights-of-way. For the majority of the project site, storm drain lines would outfall into the adjacent slough. On the lower portions of the site, smaller areas would drain to the City's municipal separate storm sewer system within Terminal Court, which contains an existing 12-inch storm drain main.

3.19.1.4 Electrical, Natural Gas, and Telecommunication Facilities

PG&E provides both electricity and natural gas services to the city. As a California Public Utilities Commission–regulated public utility in the state of California, PG&E owns, operates, and maintains above- and belowground electric and natural gas facilities in the city, including substations, through public utility easements. The city is also served by both wired and wireless telecommunications from numerous providers, including AT&T, Comcast, Viasat, and T-Mobile.

89 City of South San Francisco. 2023. *Water Quality Control Plant. Treatment Process*. Available: https://www.ssf.net/departments/public-works/water-quality-control-plant/treatment-process. Accessed October 30, 2023.

90 City of South San Francisco 2023. *Water Quality Control Plant.* Public Notification. Available: https://www.ssf.net/departments/public-works/water-quality-control-plant/public-notification. Accessed October 30, 2023.

3.19.1.5 Solid Waste

The South San Francisco Scavenger Company and Blue Line Transfer provide solid waste disposal services citywide, including garbage and recycling services.[91] The South San Francisco Scavenger Company transports all solid waste to the Blue Line Transfer facility at 500 East Jamie Court where solid waste is processed, treated, and transported to other disposal facilities. The Blue Line Transfer facility has a permitted capacity of 2,400 tons per day.[92] Any trash remaining after the usable materials have been separated at the transfer facility are transported to the Corinda Los Trancos (Ox Mountain) Sanitary Landfill or the Newby Island Sanitary Landfill. The project site would continue to be served by the South San Francisco Scavenger Company and Blue Line Transfer.

3.19.2 Discussion

3.19.2.1 Relocation or Construction of New or Expanded Facilities

Water Facilities

As described in Chapter 2, *Project Description*, on-site water system improvements would include the pipes, valves, fire hydrants, meters and submeters, and backflow preventers needed to serve the proposed uses. The proposed project would include an extension to the 12-inch public main within Terminal Court. The extension would loop around the site and provide connections to building laterals for domestic water and fire water, irrigation, and fire hydrant needs. The proposed project assumes a 4-inch private lateral for domestic water and an 8-inch pipe (minimum) for the private fire lateral would be required. The main points of connection for the water line would be the new 12-inch water main that would be implemented as part of development at 101 Terminal Court, adjacent to the project site, and the existing 8-inch public water main within Terminal Court. In addition, the proposed project would incorporate sustainability features to reduce water consumption, including ultraefficient WaterSense-labeled flush and flow fixtures and low-water-demand native and/or adapted vegetation with efficient irrigation systems.

Construction of the proposed water infrastructure improvements would have the potential to cause significant adverse environmental effects, such as fugitive dust generation, noise generation, sedimentation, and erosion. The proposed utility expansions are part of the project description, and the potential impacts that would result from construction of these facilities are evaluated throughout this initial study and in the EIR. Therefore, the project would not require or result in the relocation or construction of new or expanded water facilities beyond the facilities already included in the project description and evaluated in this initial study and EIR, the construction or relocation of which could cause significant environmental effects. This impact would be ***less than significant***. No mitigation is required.

[91] South San Francisco Scavenger Company. n.d. *About Us*. Available: https://ssfscavenger.com/about-us/. Accessed: October 30, 2023.

[92] California Department of Resources Recycling and Recovery. 2023. *Blue Line MRF and TS*. Available: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/1598?siteID=3259. Accessed: October 30, 2023.

Wastewater Facilities

Proposed sewer system improvements would include a new 18-inch sanitary sewer main through the southwest corner of the project site to a 21-inch main to support the proposed project. Proposed on-site sewer pipes would be between 4 and 18 inches in diameter and connect to the upsized sewer main beneath the navigable slough. In addition, the proposed project would incorporate sustainability features to reduce wastewater consumption, including ultraefficient WaterSense-labeled flush and flow fixtures.

Construction of the proposed wastewater infrastructure improvements would have the potential to cause significant adverse environmental effects such as fugitive dust generation, noise generation, sedimentation, and erosion. The proposed utility expansions are a part of the project description, and the potential impacts that would result from construction of these facilities are evaluated throughout this initial study and in the EIR. Therefore, the project would not require or result in the relocation or construction of new or expanded wastewater facilities beyond the facilities already included in the project description and evaluated in this initial study and EIR, the construction or relocation of which could cause significant environmental effects. This impact would be ***less than significant***. No mitigation is required.

Stormwater Facilities

On-site storm drain improvements would include the installation of bioretention ponds, flow-through planters, and Silva Cell units to provide LID treatment on the project site. The proposed stormwater pipes would be between 6 and 12 inches in diameter. New connections would connect to an existing 12-inch storm drain main within Terminal Court. The proposed project would also be designed to conserve resources and protect water quality through the management of stormwater runoff using LID methods, where feasible. This approach would implement engineered controls to allow stormwater filtering, storage, and flood control. Bioretention basins, flow-through planters, Silva Cell units, and other site design features to manage stormwater runoff flows and reduce stormwater pollution would be located throughout the project site.

Construction of the proposed stormwater infrastructure improvements would have the potential to cause significant adverse environmental effects such as fugitive dust generation, noise generation, sedimentation, and erosion. The proposed utility expansions are a part of the project description, and the potential impacts that would result from construction of these facilities are evaluated throughout this initial study and in the EIR. Therefore, the project would not require or result in the relocation or construction of new or expanded stormwater facilities beyond the facilities already included in the project description and evaluated in this initial study and EIR, the construction or relocation of which could cause significant environmental effects. This impact would be ***less than significant***. No mitigation is required.

Electrical, Natural Gas, and Telecommunication Facilities

The project proposes the installation of new connections for dry utility service. All electrical and telecommunication utilities would be connected to existing electrical and telecommunication utilities. The proposed project would not include any new connections for natural gas, which would not be used by the project. In addition, it would achieve, at a minimum, a LEED, version 4.1,

BD+C Core and Shell Gold rating as well as WELL v2 Core certification.[93] Proposed sustainability measures would include an all-electric building design; on-site renewable energy in the form of rooftop photovoltaic (PV) panels; a high-performance building envelope and heating, ventilation, and air-conditioning (HVAC) systems; and EV charging infrastructure, all of which would reduce the project's energy consumption.

Construction of the proposed electrical and telecommunication infrastructure improvements would have the potential to cause significant adverse environmental effects such as fugitive dust generation, noise generation, sedimentation, and erosion. The proposed utility expansions are a part of the project description, and the potential impacts that would result from construction of these facilities are evaluated throughout this initial study and in the EIR. Therefore, the project would not require or result in the relocation or construction of new or expanded electrical and telecommunication facilities beyond the facilities already included in the project description and evaluated in this initial study and EIR, the construction or relocation of which could cause significant environmental effects. This impact would be ***less than significant***. No mitigation is required.

3.19.2.2 Water Supply

A water supply assessment (WSA) was prepared for the proposed project by Cal Water to analyze potential project impacts. The following discussion is based on the WSA, which is included as Appendix O.

After adjusting for existing water use at the site (i.e., 5.5 acre-feet per year [afy]), the incremental increase in water demand associated with the proposed project at full build-out and full occupancy is estimated to be 345 afy. However, in accordance with Cal Water's Development Offset Program, the project sponsor would be required to pay a special facilities fee of $15,400 per acre-foot to offset the net water demand increase. This would be used to fund accelerated water supply projects and expanded customer conservation programs that would result in no net increase in water demand in Cal Water's South San Francisco (SSF) District. Therefore, the proposed project would be required to offset its net demand increase, which would be calculated prior to establishing a new water service connection. The project would not be expected to result in a net increase in water demand in Cal Water's SSF District.

Regarding water supply availability, it is projected that available water supplies would be able to meet water demand under normal-year hydrologic conditions through 2045, inclusive of the proposed project. However, in drought periods, shortfalls of up to 53 percent would be possible if the "worst-case" supply scenario is realized (i.e., the Bay-Delta Plan Amendment is implemented as written). In response to anticipated future dry-year shortfalls, Cal Water has developed a Water Shortage Contingency Plan (WSCP) that systematically identifies ways in which the SSF District can reduce water demand during dry years. The overall reduction goals in the WSCP are established for six drought stages, with shortfalls ranging from 10 percent to more than 50 percent.

Cal Water is also striving to increase the water supply portfolio for the SSF, Mid-Peninsula, and Bear Gulch Districts through (1) investment in water conservation, (2) participation in the Regional Groundwater Storage and Recovery Project and the Regional Water Recycling Project, and (3)

[93] The WELL building standards are performance-based building standards for measuring and monitoring features within the built environment that may affect human health through air, water, light, and other concepts. The standards provide ways for buildings to be designed to improve human comfort and enhance health and wellness within the built environment.

development of a regional water supply reliability study, using integrated resource planning practices to create a long-term supply reliability strategy through 2050 for Cal Water districts in the Bay Area. Therefore, the WSA concludes that, through supply augmentation and implementation of demand management measures to offset the proposed project's estimated net new demand, consistent with Cal Water's Development Offset Program, the proposed project would not affect water supply reliability within the SSF District. Based on currently available information and conservative estimates of projected demand, Cal Water expects to be able to meet all future demands within its existing SSF District service area, as well as the Mid-Peninsula and Bear Gulch Districts, inclusive of the proposed project, in normal hydrologic years. The shortfalls that are currently projected during dry years will be addressed through planned implementation of the SSF District WSCP. In addition, Cal Water and other regional agencies are pursuing development of additional water supplies to improve the regional water system and SSF District supply reliability. Therefore, project-related impacts on water supply would be ***less than significant.*** No mitigation is required.

3.19.2.3 Wastewater Treatment Capacity

The proposed project would increase wastewater demand within the project site due to the intensification of land uses. According to the project sponsor, the proposed project would generate 5,975 tons per year (4.47 million gallons per year, or 0.01 mgd) of wastewater. As stated above, during dry weather conditions, the WQCP has a peak flow capacity of 13 mgd of wastewater, which is increased to a peak capacity of 62 mgd during wet-weather conditions.[94] With the proposed project's increase in wastewater of 0.01 mgd, the WQCP would have adequate capacity to accommodate the increase. The project's water conservation policies, as noted above in Section 3.19.2.1, *Relocation or Construction of New or Expanded Facilities*, could also result in proportionate reductions in the project's wastewater generation. Lastly, the proposed project would be consistent with the City's sewer capacity charge through its fee contribution, ensuring that wastewater treatment capacity would be maintained. Based on the above, project-related impacts on wastewater treatment capacity would be ***less than significant.*** No mitigation is required.

3.19.2.4 Solid Waste

The proposed project would increase solid waste generation within the project site from the intensification of land uses. Upon project completion, there would be approximately 3,787 employees on-site. Based on the solid waste generation rate identified by the California Department of Resources Recycling and Recovery (CalRecycle) for the city (5 pounds per capita per day for employees),[95] the project's employees would generate 18,935 pounds of solid waste per day (or 9.5 tons per day). This equates to approximately 2,480 tons of solid waste per year.[96] According to the General Plan, the four landfills that serve the city have a combined remaining capacity of 43.43

[94] Carollo Engineers. 2011. *South San Francisco/San Bruno Water Quality Control Plant Facility Plan Update*. April. Available: https://www.ssf.net/home/showdocument?id=1330. Accessed: October 26, 2023.

[95] California Department of Resources Recycling and Recovery. 2019. *Disposal Rate Calculator – South San Francisco*. Available: https://www2.calrecycle.ca.gov/LGCentral/AnnualReporting/DisposalRateCalculator. Accessed: September 24, 2023.

[96] 9.5 tons per day × 261 working days per year = 2,480 tons per year.

million cubic yards.[97] Therefore, this capacity would be more than enough to accommodate the solid waste generated by the proposed project. In addition, State law requires the collection of trash in three separate streams: waste, mixed recycling, and compost, in accordance with the requirements of AB 341, AB 1826, and SB 1383. The City requires further separation of mixed recycling into paper, containers, and cardboard. The proposed project would comply with City requirements. Trash from the proposed buildings would be collected in five different streams, including waste, recyclables, and compostable materials. Recyclable materials would be further sorted into paper, container, and cardboard types of materials. The proposed project would have two central trash locations per building, for a total of four. The trash areas would be adjacent to the loading areas and connected to the service elevators. For construction and demolition, 100 percent of all inert solids (i.e., building materials) and 65 percent of non-inert solids (i.e., all other materials) would be recycled as required by the City under Chapter 15.60 of the City Municipal Code. These requirements and regulations would reduce the amount of solid waste produced by construction and operation of the proposed project.

Based on the above, project-related impacts related to solid waste would be ***less than significant.*** No mitigation is required.

3.19.2.5 Cumulative Impacts

The geographic context for analysis of cumulative impacts related to utilities and service systems is the service area of the utility provider and the cumulative projects. The geographic context for cumulative impacts related to wastewater treatment is the wastewater treatment facility service area. With regard to water facilities and storm drainage, the geographic context would be the city. The geographic context for cumulative impacts related to solid waste is the service areas of the landfills serving the project site. In addition, the geographic context for cumulative impacts related to electricity is PG&E's service area in Northern California.

The cumulative projects would be required to go through environmental and regulatory review and comply with the City's regulations and policies regarding utility connections, water conservation, solid waste recycling, and energy conservation. In addition, cumulative projects would be required to demonstrate that sufficient capacity exists at the WQCP and nearby landfills or provide mitigation. For these reasons, the proposed project in combination with other past, present, and reasonably foreseeable future projects would not result in a significant cumulative impact on utilities and service systems. The cumulative impact would be ***less than significant***. No mitigation is required.

3.19.3 Off-Site Redesignation Parcels

The proposed project would require amendments to the General Plan and Specific Plan and an associated zone change from MIH to BTP-H for the off-site redesignation parcels. The purpose of the off-site redesignation is to ensure that future development is similar to and consistent with the development proposed as part of the project. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D

[97] First Carbon Solutions. 2022. *Final Program Environmental Impact Report, General Plan Update, Zoning Code Amendments, and Climate Action Plan, City of South San Francisco, San Mateo County, California*. State Clearinghouse Number 2021020064.

facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation. The BTP-H land use designation was created to encourage campus-like environments for offices, R&D facilities, and corporate headquarters.

Future development of the off-site redesignation parcels would be required to demonstrate the availability of water suppliers to service the development, as required and applicable, in the form of will-serve letters or, for larger projects, preparation of a water supply assessment, per SB 610. If additional facilities are constructed, separate environmental analysis will be required. Future development of the off-site redesignation parcels would be located within the urban framework of the city and near existing wastewater infrastructure. General Plan Update policies and actions would ensure that the future development of the off-site redesignation parcels would continue to comply with State and federal regulatory requirements related to water and wastewater. As such, future development of the off-site redesignation parcels would not result in the need to construct or expand water or wastewater collection and treatment facilities.

In accordance with City requirements, future development of the off-site redesignation parcels would be required to install on-site storm drainage infrastructure that would detain stormwater and release runoff at a rate no greater than the pre-development condition of the project site. In addition, future development of the off-site redesignation parcels would not be expected to require or result in new or expanded electricity, natural gas, or telecommunications facilities beyond those already planned. Therefore, impacts related to the relocation or construction of new or expanded facilities would be ***less than significant***.

In accordance with City requirements, future development of the off-site redesignation parcels would be required to connect to the municipal sewer system. The two wastewater treatment plants serving the city have a combined capacity of 23.3 mgd and currently have additional dry-weather capacity of approximately 14.6 mgd. The amount of wastewater generated by future development of the off-site redesignation parcels would be substantially less than the remaining capacity of the treatment plants. Therefore, although future development of the off-site redesignation parcels would result in an increase in the demand for wastewater collection and treatment, the wastewater collection systems and treatment plants would have sufficient capacity to support new this future development. Therefore, impacts related to wastewater collection and treatment would be ***less than significant.***

Future development of the off-site redesignation parcels would increase the generation of solid waste (both temporary construction and permanent operation waste), which could exceed State or local standards, exceed local infrastructure capacity, or otherwise impair the attainment of solid waste reduction goals. However, in accordance with City requirements, future development of the off-site redesignation parcels would be served by solid waste, recycling, and green waste services provided by the City's franchise hauler (City Municipal Code Chapter 8.16). Furthermore, future development of the off-site redesignation parcels would be required to abide by and be consistent with federal, State, and local statutes and regulations related to solid waste, including the California Health and Safety Code, CCR, California Public Resources Code, and City General Plan and Municipal Code. Therefore, the impact would be ***less than significant.*** No further evaluation in an EIR is required.

3.20 Wildfire

Environmental Issue Area	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
20. WILDFIRE: Would the project:					
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☐	☒
b) Due to slopes, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure, such as roads, fuel breaks, emergency water sources, power lines, or other utilities, that may exacerbate fire risk or result in temporary or ongoing impacts on the environment?	☐	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☐	☒

3.20.1 Setting

South San Francisco is not in an SRA or a Local Responsibility Area (LRA) FHSZ. The city is identified as a non-VHFHSZ within an LRA and adjacent to land identified as a moderate to high FHSZ within an SRA at San Bruno Mountain State Park. Land identified as a high FHSZ within an SRA is approximately 0.75 mile south of San Bruno Mountain State Park.

Although there is no very high, high, or moderate FHSZ within city limits, Sign Hill Park, in the northern part of the city between the Paradise Valley/Terrabay and Sign Hill sub-areas, is susceptible to wildfires.[98] The park is approximately 1.5 miles from the project site.

The California Department of Forestry and Fire Protection (CAL FIRE) provides varying levels of emergency services in 36 of the California's 58 counties through contracts with local governments, including the City. In addition, the SSFFD provides fire suppression and prevention services, emergency medical services, and urban and marine search-and-rescue services. Other responsibilities involve hazardous materials, public education, and disaster preparedness. The SSFFD has firefighters and paramedics in five different fire stations throughout the city. Personnel are dispatched to a variety of incidents, including structure fires, hazardous material incidents, medical calls, and traffic accidents. The nearest fire station to the project site is Fire Station 62, located at 249 Harbor Way, approximately 0.5 mile to the northeast. For additional details regarding emergency service facilities, response areas, and response times, please see Section 3.15, *Public Services*.

[98] FirstCarbon Solutions. 2022. *Program Environmental Impact Report General Plan Update, Zoning Code Amendments, and Climate Action Plan City of South San Francisco, San Mateo County, California.*

3.20.2 Discussion

The project site is not located in an FHSZ in an SRA or a VHFHSZ in an LRA. The project site and all surrounding areas are located within an LRA, which is not identified as a moderate, high, or very high FHSZ. The area surrounding the project site is generally developed; it lacks the features that normally elevate wildland fire risks (e.g., dry vegetation, steep hills). Because the project site is not located within or near an SRA or a VHFHSZ, and because the proposed project would comply with the South San Francisco Fire Code (Sections 15.24.101.1 and 15.24.5001.1 of the City Municipal Code) as well as architectural and developmental review requirements of the SSFFD, this impact would be ***less than significant***.

3.20.2.1 Cumulative Impacts

As evaluated above, impacts from the project would be less than significant. Therefore, when combined with the cumulative development evaluated in the General Plan EIR and the Specific Plan Addendum, no new cumulative impacts would occur. Therefore, the proposed project in combination with other development projects would not result in a significant cumulative impact related wildfire. Cumulative impacts would be ***less than significant***.

3.20.3 Off-Site Redesignation Parcels

The five off-site redesignation parcels are currently designated as MIH under the General Plan, Specific Plan, and City Zoning Code. However, they would be redesignated BTP-H, consistent with the proposed land use and zoning designation for the project site. The MIH designation currently allows for development of a wide range of warehousing, manufacturing, processing, service commercial, and storage and distribution uses. The redesignation would allow for high-density corporate headquarters, R&D facilities, and office uses. More specifically, the General Plan and Specific Plan describe the permitted uses for BTP-H as incubator research, prototype manufacturing, testing, repairing, packaging, publishing, and printing, along with office and R&D uses. Warehousing, distribution, manufacturing, retail services, personal services, and grocery and hotel uses are also permitted under this designation.

The proposed project would not include the construction of any new uses on the off-site redesignation parcels. Future R&D uses would be subject to the South San Francisco Fire Code (Sections 15.24.101.1 and 15.24.5001.1 of the City Municipal Code) and the architectural and developmental review requirements of the SSFFD. Implementation of the redesignation parcels would not result in additional wildfire impacts. Therefore, impacts would remain ***less than significant.***

3.21 Mandatory Findings of Significance

		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
a.	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b.	Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
c.	Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

The discussion of biological resources in Section 3.4, above, shows that, with adherence to project conditions of approval and mitigation, the proposed project would not significantly affect any habitats, plant or animal communities, or threatened or endangered species. The discussion of cultural resources in Section 3.5, above, shows that the proposed project may significantly affect historic resources and archaeological resources; this will be discussed further in the EIR. The discussion of tribal cultural resources in Section 3.18, above, shows that the proposed project would not significantly affect tribal cultural resources. The discussion of geology and soils in Section 3.7, above, shows that, with adherence to project conditions of approval and mitigation, the proposed project would not significantly affect paleontological resources or unique geologic features.

The initial study checklist has addressed cumulative impacts under each environmental topic and determined that cumulative impacts related to biological resources and tribal cultural resources would be less than significant. For all other topics, the initial study supports a determination that the proposed project, in combination with reasonably foreseeable projects, would not result in significant cumulative impacts. The EIR will address potential impacts, including cumulative impacts, related to air quality, cultural resources, GHG emissions, noise, and transportation. These topics, along with plans and policies, other CEQA topics, and alternatives, will be evaluated in the EIR.

Chapter 1
Introduction

The purpose of this air quality and greenhouse gas (GHG) technical report is to identify air quality and GHG impacts that may be associated with the Infinite 131 Project (proposed project). The analysis provided in this report evaluates the potential for construction and operation of the proposed project to result in significant impacts on air quality and GHG emissions. The report includes a description of the environmental setting for the proposed project, including existing conditions and applicable laws and regulations. It also documents the assumptions, methodologies, and findings used to evaluate air quality and GHG impacts. The project is subject to environmental review pursuant to the California Environmental Quality Act (CEQA). It is anticipated that the City of South San Francisco (City), the lead agency for the project, will use this technical report to inform the proposed project's CEQA analysis.

1.1 Project Description

The Infinite 131 project site is in the city of South San Francisco. U.S. 101 is to the east, Terminal Court to the north, a navigable slough[1] to the south, and existing commercial and industrial development to the west. An existing parking lot and on-site structures would be demolished and replaced with new research-and-development (R&D) and amenity uses. Overall, the proposed project would construct approximately 1.7 million square feet (sf) of R&D and amenity uses within seven buildings, ranging from one to six stories. The south portion of the project (I131S) would be constructed first, followed immediately by the construction of the north portion of the project (I131N). In addition, a 551,631 sf parking garage would be incorporated at I131N, and a 453,034 sf parking garage would be incorporated at I131S.

The I131N buildings would have an area of approximately 820,000 sf and include approximately 808,000 sf of R&D uses, 4,000 sf of conference space, and 8,000 sf of restaurant space. An approximately 4,050 sf day-care center would be located north of the I131N buildings. The I131S buildings would be immediately adjacent to the I131N buildings on the south side and have an area of approximately 830,000 sf. The buildings would include approximately 824,000 sf of R&D uses, 4,000 sf of conference space, and 2,000 sf of restaurant space. In addition, the proposed project would incorporate an approximately 50,000 sf amenity building that would include 17,000 sf of restaurant space, 20,000 sf for a fitness center, and 13,000 sf of conference space. There would also be twenty-four 500-kilowatt (kW) emergency generators with Tier 2 engines on the project site. Of the 24 generators, 18 of them would be located at grade within acoustic enclosures in outdoor service yards. The remaining six emergency generators would be located on the ground floor inside the I131N building in a separate generator room.

All project buildings would be tied together through landscaping and open space, creating pedestrian- and bike-friendly connections throughout the campus. A shared internal road would provide vehicular access to the garage, surface parking areas, and loading areas. It would also provide access for fire

[1] The navigable slough is a remnant tidal channel that cuts through a commercial district in South San Francisco and connects to San Francisco Bay (ESA. 2019. *Navigable Slough Flood Management Study, Prepared for County of San Mateo, City of South San Francisco, and City of San Bruno*. Available: https://oneshoreline.org/wp-content/uploads/2020/06/Navigable-Slough-Flood-Management-Study.pdf. Accessed: April 12, 2023).

vehicles. A center landscaped courtyard along the interior of the project site would be framed by the shape of the buildings to prioritize the pedestrian experience and outdoor amenities. Vehicular access to the project site would be provided via a driveway on Terminal Court and a right-of-way connection in the southwest portion of the project site. Shaw Road, to the south, could be accessed from an existing easement.

Figure 1 shows the conceptual site plan for the proposed project.

Chapter 2
Air Quality

2.1 Regulatory Setting

This section provides a summary of the regulatory setting for the proposed project. It discusses the federal, State of California (California), regional, and local regulations that are applicable.

The federal Clean Air Act (CAA) and its subsequent amendments form the basis for the nation's air pollution control effort. The U.S. Environmental Protection Agency (EPA) is responsible for implementing most aspects of the CAA. A key element of the CAA, the National Ambient Air Quality Standards (NAAQS), pertains to criteria pollutants. The CAA delegates enforcement of the NAAQS to the states. In California, the California Air Resources Board (CARB) is responsible for enforcing air pollution regulations and ensuring the NAAQS and California Ambient Air Quality Standards (CAAQS) are met. CARB, in turn, delegates regulatory authority for stationary sources and other air quality management responsibilities to local air agencies. The Bay Area Air Quality Management District (BAAQMD) is the local air agency for the project site.

The sections that follow provide more detailed information on the federal, State, and local air quality regulations that apply to the proposed project.

2.1.1 Federal

Criteria Air Pollutants

National Ambient Air Quality Standards

EPA has been charged with implementing national air quality programs. EPA's air quality mandates draw primarily from the federal CAA, which was enacted in 1963. The most recent major amendments were made by Congress in 1990. The CAA required EPA to establish the NAAQS for six common air pollutants that are found all over the United States; these are referred to as *criteria air pollutants*. EPA has established primary and secondary NAAQS for the following criteria air pollutants: ozone, carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), respirable particulate matter (PM) with an aerodynamic diameter of 10 micrometers or less (PM_{10}), fine PM with an aerodynamic diameter of 2.5 micrometers or less ($PM_{2.5}$), and lead. The NAAQS are shown in Table 1. The primary standards protect public health, and the secondary standards protect public welfare. The CAA also required each state to prepare a State Implementation Plan (SIP) for attaining and maintaining the NAAQS. The federal CAA Amendments of 1990 added requirements for states with nonattainment areas to revise their SIPs to incorporate additional control measures for reducing air pollution. California's SIP is modified periodically to reflect the latest emissions inventories, planning documents, and rules and regulations for the air basins, as reported by their jurisdictional agencies. EPA is responsible for reviewing all SIPs to determine whether they conform to the mandates of the CAA and its amendments and whether implementation would achieve air quality goals. If EPA determines a SIP is inadequate, the agency may prepare a federal implementation plan that imposes additional control measures. If an approvable SIP is not submitted or implemented within the mandated time frame, sanctions may be applied to transportation funding as well as stationary air pollution sources in the air basin.

Table 1. National and California Ambient Air Quality Standards

Criteria Pollutant	Averaging Time	California Standards	National Standards[a]	
			Primary	Secondary
Ozone	1 hour	0.09 ppm	None[b]	None[b]
	8 hours	0.070 ppm	0.070 ppm	0.070 ppm
Particulate matter (PM_{10})	24 hours	50 μg/m³	150 μg/m³	150 μg/m³
	Annual mean	20 μg/m³	None	None
Fine particulate matter ($PM_{2.5}$)	24 hours	None	35 μg/m³	35 μg/m³
	Annual mean	12 μg/m³	12.0 μg/m³	15 μg/m³
Carbon monoxide (CO)	8 hours	9.0 ppm	9 ppm	None
	1 hour	20 ppm	35 ppm	None
Nitrogen dioxide (NO_2)	Annual mean	0.030 ppm	0.053 ppm	0.053 ppm
	1 hour	0.18 ppm	0.100 ppm	None
Sulfur dioxide (SO_2)[c]	Annual mean	None	0.030 ppm	None
	24 hours	0.04 ppm	0.014 ppm	None
	3 hours	None	None	0.5 ppm
	1 hour	0.25 ppm	0.075 ppm	None
Lead	30-day average	1.5 μg/m³	None	None
	Calendar quarter	None	1.5 μg/m³	1.5 μg/m³
	3-month average	None	0.15 μg/m³	0.15 μg/m³
Sulfates	24 hours	25 μg/m³	None	None
Visibility-reducing particles	8 hours	—[d]	None	None
Hydrogen sulfide (H_2S)	1 hour	0.03 ppm	None	None
Vinyl chloride	24 hours	0.01 ppm	None	None

Source: CARB 2016.

a. National standards are divided into primary and secondary standards. *Primary standards* are intended to protect public health, whereas *secondary standards* are intended to protect public welfare and the environment.

b. The federal 1-hour standard of 12 parts per hundred million was in effect from 1979 through June 15, 2005. The revoked standard is referenced because it was employed for such a long period and is a benchmark for SIPs.

c. The annual and 24-hour NAAQS for SO_2 applied for only 1 year after designation of the new 1-hour standard in those areas that were previously in nonattainment for the 24-hour and annual NAAQS.

d. The CAAQS for visibility-reducing particles is defined by an extinction coefficient of 0.23 per kilometer—visibility of 10 miles or more due to particles when relative humidity is less than 70 percent (CARB 2021c).

CAAQS = California Ambient Air Quality Standards; NAAQS = National Ambient Air Quality Standards; ppm = parts per million; μg/m³ = micrograms per cubic meter.

Corporate Average Fuel Economy Standards for Light-Duty Passenger Vehicles

The National Highway Traffic Safety Administration (NHTSA) Corporate Average Fuel Economy (CAFE) standards require substantial improvements in fuel economy and reductions in emissions of criteria air pollutants and precursors, as well as GHGs, from all light-duty vehicles sold in the United States (NHTSA 2021). On August 2, 2018, NHTSA and EPA proposed an amendment to the fuel efficiency standards for passenger cars and light trucks and established new standards for model years 2021 through 2026. On September 19, 2019, NHTSA and EPA issued a final action on the One National Program Rule, which is considered Part One of the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule and a precursor to the proposed fuel efficiency standards, withdrawing California's

CAA preemption waiver to set state-specific standards.[2] EPA reinstated California's authority under the CAA to implement its own GHG emissions standards and sales mandate regarding zero-emission vehicles on March 9, 2022.[3] On December 19, 2021, NHTSA finalized its vehicle efficiency standards rule to reach a projected industry-wide target of 40 miles per gallon by 2026, an approximately 25 percent increase over the prior SAFE rule.[4]

Emission Standards for On-Road Heavy-Duty Vehicles

EPA has established a series of increasingly strict emission standards for new heavy-duty bus and truck engines. Emissions from heavy-duty trucks are managed by regulations and emission limits implemented at the federal, state, and local levels. In December 2000, EPA signed the Heavy-Duty Highway Rule, which reduces emissions from on-road, heavy-duty diesel trucks by establishing a series of increasingly strict emission standards for new engines. Manufacturers were required to produce new diesel vehicles that meet PM and nitrogen oxide (NO_X) emission standards, beginning with model year 2007; the phase-in period was 2007 to 2010. The phase-in was based on a percentage-of-sales basis, with 50 percent from 2007 to 2009 and 100 percent in 2010. Requirements apply to engines installed in vehicles with a gross vehicle weight rating (GVWR) above 14,000 pounds as well as some engines installed in vehicles with a GVWR between 8,500 and 14,000 pounds.

Emission Standards for Non-Road Diesel Engines

To reduce emissions from non-road diesel equipment, EPA established a series of increasingly strict emission standards for new non-road diesel engines, referred to as *off-road diesel engines*. Tier 1 standards were phased in on newly manufactured equipment from model years 1996 through 2000, depending on the engine horsepower category. Tier 2 standards were phased in on newly manufactured equipment from model years 2001 through 2006. Tier 3 standards were phased in on newly manufactured equipment from model years 2006 through 2008. Tier 4 standards, which require advanced emission-control technology, were phased in from model years 2008 through 2015.

Hazardous Air Pollutants and Toxic Air Contaminants

Toxic air contaminants (TACs), or, in federal parlance, hazardous air pollutants (HAPs), are a defined set of airborne pollutants that may pose a present or potential hazard to human health. A TAC is defined as an air pollutant that may cause or contribute to an increase in mortality or serious illness or pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health, even at low concentrations.

---

[2] The One National Program Rule enables EPA and NHTSA to provide nationwide uniform fuel economy and GHG vehicle standards by 1) clarifying that federal law preempts state and local tailpipe GHG standards, 2) affirming NHTSA's statutory authority to set nationally applicable fuel economy standards, and 3) withdrawing California's CAA preemption waiver to set State-specific standards.

[3] California, 22 other states, the District of Columbia, and two cities filed suit against Part One of the SAFE Vehicles Rule on September 20, 2019 (*California et al. v. United States Department of Transportation et al.,* 1:19-cv-02826, U.S. District Court for the District of Columbia). On December 12, 2021, NHTSA repealed the SAFE Vehicles Rule, Part One.

[4] EPA and NHTSA published final rules to amend and establish national carbon dioxide (CO_2) and fuel economy standards on April 30, 2020 (Part Two of the SAFE Vehicles Rule) (85 *Federal Register* 24174). The revised rule changes the national fuel economy standards for light-duty vehicles from 46.7 to 40.4 miles per gallon in future years. California, 22 other states, the District of Columbia filed a petition for review of the final rule on May 27, 2020.

A wide range of sources, from industrial plants to motor vehicles, emit TACs. The health effects associated with TACs are quite diverse and generally assessed locally rather than regionally. TACs can cause long-term health effects, such as cancer, birth defects, neurological damage, asthma, bronchitis, or genetic damage, or short-term acute affects, such as watery eyes, respiratory irritation (a cough), runny nose, throat pain, and headaches.

For evaluation purposes, TACs are separated into carcinogens and noncarcinogens, based on the nature of the physiological effects associated with exposure to the pollutant. Carcinogens are assumed to have no safe threshold below which health impacts would not occur. This contrasts with criteria air pollutants for which acceptable levels of exposure can be determined and for which ambient standards have been established (Table 1). The cancer risk from TACs is expressed as the excess cancer cases per million exposed individuals, typically over a lifetime of exposure.

2.1.2 State

Criteria Air Pollutants

CARB is the agency responsible for coordinating and overseeing State and local air pollution control programs in California and implementing the California Clean Air Act (CCAA). The CCAA required CARB to establish the CAAQS. Specifically, the CCAA established the CAAQS for the same criteria air pollutants for which EPA established the NAAQS, along with sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing PM. The CAAQS are summarized in Table 1. In most cases, the CAAQS are more stringent than the NAAQS. The differences in the NAAQS and the CAAQS are generally explained by the health-effects studies considered during the standard-setting process and the interpretation of the studies. In addition, the CAAQS incorporate a margin of safety to protect sensitive individuals.

In California, EPA has delegated the authority to prepare SIPs to CARB, which, in turn, has delegated that authority to individual air districts. Traditionally, CARB has established air quality standards, maintained oversight authority in air quality planning, developed programs for reducing emissions from motor vehicles, developed air emission inventories, collected air quality and meteorological data, and approved SIPs. The CCAA requires all local air districts in the state to endeavor to attain and maintain the CAAQS by the earliest date practical. It specifies that local air districts should focus particular attention on reducing emissions from transportation and area-wide sources. The CCAA substantially adds to the authority and responsibilities of the air districts. Specifically, it designates air districts as lead air quality planning agencies, requires air districts to prepare air quality plans, and grants air districts the authority to implement transportation control measures. The CCAA also emphasizes the control of "indirect and area-wide sources" of air pollutant emissions and gives local air pollution control districts explicit authority to regulate indirect sources of air pollution and establish traffic control measures.

Truck and Bus Regulation

To reduce emissions of NO_X and other criteria pollutants, as well as diesel particulate matter (DPM), from diesel-fueled vehicles, CARB adopted the Truck and Bus Regulation in 2008. This regulation applies to any diesel-fueled vehicle, as well as any dual-fuel or alternative-fuel diesel vehicle, that travels on public highways, in yard trucks with on-road engines, or in yard trucks with off-road engines used for agricultural operations. It also applies to school buses and vehicles with a GVWR above 14,000 pounds. The purpose of the regulation is to require nearly all trucks and buses

registered in the state to have a 2010 or newer engine by 2023. Compliance schedules have been established for lighter vehicles (GVWR of 14,000–26,000 pounds) and heavier vehicles (GVWR of more than 26,001 pounds) (CARB 2021b). As of January 1, 2020, only vehicles that meet the requirements of the Truck and Bus Regulation are allowed to register with the California Department of Motor Vehicles.

Carl Moyer Program

The Carl Moyer Memorial Air Quality Standards Attainment Program (Carl Moyer Program) is a voluntary program that offers grants to owners of heavy-duty vehicles and equipment. The program is a partnership between CARB and the local air districts throughout the state to reduce air pollution emissions from heavy-duty engines. The air districts administer the Carl Moyer Program locally.

Toxic Air Contaminants

California regulates TACs primarily through the Tanner Act (Assembly Bill [AB] 1807) and the Hot-Spots Act (AB 2588). The Tanner Act (AB 1807) created California's program to reduce exposures to air toxics. CARB defines TACs as air pollutants that may cause or contribute to an increase in mortality or serious illness or pose a present or potential hazard to human health. CARB has formally identified more than 200 substances and groups of substances as TACs (CARB 2022c). Direct exposure to these pollutants has been shown to cause cancer, birth defects, damage to the brain and nervous system, and respiratory disorders. The Hot-Spots Act (AB 2588) supplements the AB 1807 program by requiring a statewide air toxics inventory, notification of people exposed to a significant health risk, and facility plans to reduce these risks. The California Office of Environmental Health Hazard Assessment (OEHHA) is required to develop guidelines for health risk assessments (HRAs) under the Air Toxics Hot-Spots Program. These guidelines provide the scientific basis for the values used to assess the risk associated with exposure to emissions from facilities and new sources (OEHHA 2015).

In August 1998, CARB identified particulate emissions from diesel-fueled engines as TACs. In September 2000, CARB approved a comprehensive diesel risk reduction plan to reduce emissions from both new and existing diesel-fueled engines and vehicles. As an ongoing process, CARB reviews air contaminants and identifies those classified as TACs. CARB also continues to establish new programs and regulations to control TACs, including DPM, as appropriate.

CARB has adopted diesel exhaust control measures and more stringent emissions standards for various transportation-related mobile sources of emissions, including transit buses and off-road diesel equipment (e.g., tractors, generators). Over time, the replacement of older vehicles will result in a vehicle fleet that produces substantially lower levels of TACs. Mobile-source emissions of TACs (e.g., benzene, 1,3-butadiene, DPM) have been reduced significantly over the last decade and will be reduced further in California through a progression of regulatory measures (e.g., low-emission vehicle, clean fuel, and Phase II reformulated gasoline regulations) and control technologies. It is expected that DPM concentrations will continue to decline. Adopted regulations are also expected to continue to reduce formaldehyde emissions emitted by cars and light-duty trucks. As emissions are reduced, it is expected that risks associated with exposure to the emissions will also be reduced.

CARB developed multiple air toxic control measures to address specific mobile- and stationary-source categories that can have an impact on the public health of communities. The measures focused on reducing public exposure to DPM and TACs from mobile sources, such as commercial trucks, buses, solid waste collection vehicles, and cargo handling equipment at ports. The Airborne

Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling (California Code of Regulations [CCR] Title 13, Section 2485) requires heavy-duty trucks with a GVWR greater than 10,000 pounds not to idle the primary engine for more than 5 minutes at any given time or operate an auxiliary power system for more than 5 minutes within 100 feet of a restricted area.

2.1.3 Local

Bay Area Air Quality Management District

At the local level, the responsibilities of air quality districts include overseeing stationary-source emissions, approving permits, maintaining emissions inventories, maintaining air quality stations, overseeing agricultural burning permits, and reviewing air quality–related sections of environmental documents required by CEQA. The air quality districts are also responsible for establishing and enforcing local air quality rules and regulations that address the requirements of federal and State air quality laws and ensuring that the NAAQS and the CAAQS are met.

The proposed project falls under the jurisdiction of BAAQMD, which has local air quality jurisdiction over projects in the San Francisco Bay Area Basin (SFBAAB), including San Mateo County. BAAQMD developed advisory emissions thresholds to assist CEQA lead agencies in determining the level of significance of a project's emissions; the thresholds are outlined in BAAQMD's 2022 *California Environmental Quality Act Air Quality Guidelines* (CEQA Air Quality Guidelines) (BAAQMD 2023a). In April 2023, BAAQMD released updated CEQA Air Quality Guidelines; however, the emissions thresholds specified in the updated guidelines are the same as those in the 2017 guidelines.[5] BAAQMD has also adopted air quality plans to improve air quality, protect public health, and protect the climate; these include the 2017 Clean Air Plan: Spare the Air, Cool the Climate (2017 Clean Air Plan) (BAAQMD 2017).

The 2017 Clean Air Plan, adopted by BAAQMD on April 19, 2017, updates the prior 2010 Bay Area ozone plan and outlines feasible measures to reduce ozone; provides a control strategy to reduce PM, air toxics, and GHGs in a single integrated plan; and establishes the emissions control measures to be adopted or implemented. The 2017 Clean Air Plan contains the primary goals outlined below; consistency with these goals is evaluated in this section.

- **Protect Air Quality and Health at the Regional and Local Scale.** Attain all State and national air quality standards, and eliminate disparities among Bay Area communities in the cancer health risk from TACs.
- **Protect the Climate**. Reduce Bay Area GHG emissions to 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The 2017 Clean Air Plan is the most current applicable air quality plan for the air basin. Consistency with this plan is the basis for determining whether the project would conflict with or obstruct implementation of an air quality plan.

In addition to air quality plans, BAAQMD also adopts rules and regulations to improve existing and future air quality. The proposed project may be subject to the district rules outlined below.

[5] Bay Area Air Quality Management District. 2023. *California Environmental Quality Act Air Quality Guidelines.* Available: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa-guidelines-2022/ceqa-guidelines-chapter-0-cover-page-pdf.pdf?la=en. Accessed: May 9, 2023.

- Regulation 2, Rule 2 (New Source Review)—This regulation contains requirements for best available control technology and emission offsets.
- Regulation 2, Rule 5 (New Source Review of TACs)—This regulation outlines guidance for evaluating TAC emissions and their potential health risks.
- Regulation 6, Rule 1 (PM)—This regulation restricts emissions of PM darker than a 1 on the Ringlemann Chart to less than 3 minutes in any 1 hour.
- Regulation 7 (Odorous Substances). This regulation establishes general odor limitations on odorous substances and specific emission limitations on certain odorous compounds.
- Regulation 8, Rule 3 (Architectural Coatings). This regulation limits the quantity of reactive organic gas (ROG) in architectural coatings.
- Regulation 9, Rule 6 (NO_X Emissions from Natural Gas–Fired Boilers and Water Heaters). This regulation limits emissions of NO_X generated by natural gas–fired boilers.
- Regulation 9, Rule 8 (Stationary Internal-Combustion Engines). This regulation limits emissions of NO_X and CO from stationary internal-combustion engines of more than 50 horsepower.
- Regulation 11, Rule 2 (Hazardous Pollutants – Asbestos Demolition, Renovation, and Manufacturing). This regulation, which incorporates EPA's asbestos National Emissions Standards for Hazardous Air Pollutants regulations, controls emissions of asbestos to the atmosphere during demolition, renovation, and transport activities.

City of South San Francisco

The following air quality-related goals from the *Shape South San Francisco 2040 General Plan* (General Plan) are applicable to the proposed project (City of South San Francisco 2022a):

Goal CR-6: A city prepared for the combined impacts of extreme heat and poor air quality.

Goal LU-1: Create complete neighborhoods where residents can access most of their everyday needs within a short walk, bike, or transit trip.

Goal CHEJ-3: South San Francisco neighborhoods near highways and industrial uses have improved air quality.

Goal ES-1: The City supports nature in South San Francisco to encourage healthy ecosystems, improve air and water quality, improve public health, and adapt to a changing climate.

Goal MOB-3: South San Francisco proactively manages traffic and parking demand.

Goal MOB-4: South San Francisco's land use and transportation actions reduce vehicle miles traveled (VMT) and greenhouse gas emissions.

Goal PE-4: Infrastructure investments support job access and job growth and address climate hazards affecting South San Francisco businesses.

Goal SA-3: The City promotes new residential, mixed-use, and employment uses to add business patrons and residents and create a sustainable and thriving downtown while maintaining a scale and character that is complementary to existing uses.

Goal SA-27: There are safe, comfortable, and accessible pedestrian and bicycle facilities that connect people to downtown, El Camino, and East of 101.

Lindenville Specific Plan

The following air quality–related goals from the Lindenville Specific Plan are applicable to the proposed project (City of South San Francisco 2023):

Goal DD-1: The Mixed-Use Neighborhood, South Spruce Avenue Corridor, and South Linden Avenue Arts and Makers District have a network of safe, walkable streets and pathways to access key destinations and open spaces.

Goal DD-3: New developments in Lindenville provide healthy places for people to live and work by mitigating potential noise, air quality, and odor impacts from industrial land uses, U.S. 101 and Interstate 380, and aircraft.

Goal MOB-1: Multi-modal travel options are readily available and offer equal levels of comfort.

Goal MOB-2: There are high-quality connections to downtown, El Camino, East of 101, and regional destinations for all modes.

Goal MOB-3: Lindenville's transportation offerings and streetscape design support a vibrant mixed-use district.

Goal I-1: The development, management, and maintenance of infrastructure in Lindenville is driven by the ability to optimize the efficiency and effectiveness of each system and achieve the performance required to meet the City's sustainability goals.

Goal I-2: Lindenville invests in sustainable and resilient infrastructure and practices to illustrate leadership.

Goal I-5: The City increases reliance on local energy systems to ensure adequate utility provisioning for new potential users.

2.2 Existing Setting

2.2.1 Topography and Meteorology

Although the primary factors that determine air quality are the locations of air pollutant sources and the pollutants emitted from those sources, meteorological conditions and topography are also important factors. Atmospheric conditions, such as wind speed, wind direction, and air temperature gradients, interact with the physical features of the landscape to determine the movement and dispersal of air pollutants. Unique geographic features throughout the state define 15 air basins with distinctive regional climates. The air quality study area for the proposed project is on the San Francisco Peninsula in the SFBAAB.

The peninsula region of the San Francisco Bay Area extends from the area northwest of San José to the Golden Gate. The Santa Cruz Mountains, part of the Pacific Coast Ranges, extend up the center of the peninsula, with elevations exceeding 2,000 feet at the south end, then gradually decreasing to 500 feet in South San Francisco where the mountain range terminates. On the west side of the mountains lie small coastal towns, such as Half Moon Bay and Pacifica, that, due to coastal ocean upwelling and northwest winds, experience a high incidence of cool, foggy weather in the summer. On the east side of the mountain range lie the larger cities. Cities in the southeastern peninsula experience warmer temperatures and few foggy days because the marine layer, with an average depth of 1,700 feet, is blocked by the 2,000-foot ridge to the west. At the north end of the peninsula lies San Francisco. Because most of the topography of San Francisco is below 200 feet, the marine layer is able to flow across most of the city, making its climate cool and windy.

The Santa Cruz Mountains exhibit a partial blocking effect in South San Francisco, which keeps summertime maximum temperatures slightly higher than they are on the coast. For example, in Half Moon Bay and San Francisco, average maximum daily summertime temperatures are in the mid-60s, while maximum temperatures for South San Francisco range from 65 degrees Fahrenheit (°F) to 75°F (National Oceanic and Atmospheric Administration [NOAA] 2023). Conversely, large temperature gradients are not seen in the minimum temperatures. Average minimum temperatures at Half Moon Bay are about 43°F in winter and 50°F to 52°F in summer. The east peninsula, near South San Francisco, reports winter minimum temperatures of 40°F and summer minimum temperatures of 52°F to 55°F (NOAA 2023).

Annual average wind speeds range from 5 to 10 miles per hour (mph) throughout the peninsula. The tendency is for the higher wind speeds to be found along the peninsula's west coast. However, winds on the east side can also be high in certain areas because low-lying areas in the mountain range, at San Bruno Gap and Crystal Springs Gap, commonly allow the marine layer to pass across the peninsula.

The prevailing winds are westerly along the peninsula's west coast. Individual sites can show significant differences, however. For example, Fort Funston, in western San Francisco County, shows a southwest wind pattern, while Pillar Point in San Mateo County, to the south, shows a northwest wind pattern. Sites on the east side of the mountains also show a westerly pattern, although their wind patterns are influenced by local topographic features. That is, a rise in elevation of a few hundred feet will induce a flow around a feature instead of over it during stable atmospheric conditions. This can change the wind pattern by as much as 90 degrees over short distances. On mornings without a strong pressure gradient, areas on the east side of the peninsula often experience an easterly flow in the surface layer, induced by an upslope flow on east-facing slopes and the bay breeze. The bay breeze is rarely seen after noon because the stronger sea breeze dominates the flow pattern.

On the peninsula, there are two important gaps in the Santa Cruz Mountains. The larger of the two is the San Bruno Gap, extending from Fort Funston on the ocean side to San Francisco International Airport on the bay side. Because the gap is oriented in the same northwest-to-southeast direction as the prevailing winds, and because the elevations along the gap are under 200 feet, marine air is easily able to penetrate into the bay.

The other gap in the Santa Cruz Mountains is the Crystal Springs Gap, along Highway 92 in the area between Half Moon Bay and San Carlos. The low point is 900 feet; however, elevations of 1,500 feet are found north and south of the gap. As the sea breeze strengthens on summer afternoons, the gap permits maritime air to pass across the mountains. Its cooling effect is commonly experienced from San Mateo to Redwood City.

Rainfall amounts on the east side of the peninsula are somewhat lower than on the west side, with San Francisco and Redwood City reporting an average of 19.5 inches per year. On the west side, Half Moon Bay reports 25 inches per year. Areas in the Santa Cruz Mountains are significantly higher, especially west of the ridge line, due to induced condensation from orographic lifting, proximity to a moisture source, and fog drip.

Air pollution potential is highest along the southeastern portion of the peninsula. This area is protected from the high winds and fog associated with the marine layer. Emissions density is relatively high, and pollutant transport from upwind sites is possible. In San Francisco, to the north, pollutant emissions are high, but winds are generally strong enough to carry the pollutants away before they can accumulate.

2.2.2 Criteria Air Pollutants

The discussion below summarizes the primary and secondary criteria air pollutants of key concern. In general, primary pollutants are directly emitted into the atmosphere, and secondary pollutants are formed by chemical reactions in the atmosphere.

Ozone

Ozone, the main ingredient in urban smog, is not emitted directly into the air but, rather, created by chemical reactions between hydrocarbons and NO_X, both byproducts of the internal-combustion engine, in the presence of sunlight. ROGs, as defined by CARB, include all hydrocarbons, except those exempted by CARB, that contribute to smog formation, whereas volatile organic compounds (VOCs), as defined by EPA, include all hydrocarbons, except those exempted by EPA. Generally speaking, ROGs and VOCs are similar but not identical; although the terms are used interchangeably, ROG is used for purposes of this analysis. There are no separate NAAQS or CAAQS for ROG. Carcinogenic forms of ROGs are TACs (e.g., benzene).

ROGs consists of compounds made up primarily of hydrogen and carbon atoms. Internal combustion associated with motor vehicles is the major source of hydrocarbons. Other sources of ROGs are emissions associated with the use of paints and solvents, the application of asphalt paving, and the use of household consumer products, such as aerosols.

The two major forms of NO_X are nitric oxide (NO) and NO_2. NO is a colorless, odorless gas formed from atmospheric nitrogen and oxygen when combustion takes place under high temperatures and/or high pressure. NO_2 is an irritating, reddish-brown gas formed by the combination of NO and oxygen. In addition to serving as an integral participant in ozone formation, NO_X also directly acts as an acute respiratory irritant and increases susceptibility to respiratory pathogens.

Ozone poses a higher risk to those who already suffer from respiratory diseases (e.g., asthma), children, older adults, and people who are active outdoors. Exposure to ozone at certain concentrations can make breathing more difficult, cause shortness of breath and coughing, inflame and damage the airways, aggregate lung diseases, increase the frequency of asthma attacks, and cause chronic obstructive pulmonary disease. Studies show associations between short-term ozone exposure and nonaccidental mortality, including deaths from respiratory issues. Studies also suggest that long-term exposure to ozone may increase the risk of respiratory-related deaths (EPA 2022b). The concentration of ozone at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least-responsive individual after a 2-hour exposure to 400 parts per billion of ozone and a 50 percent decrease in forced airway volume in the most responsive individual. Although the results vary, evidence suggests that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum ozone concentration reaches 80 parts per billion (EPA 2022c).

In addition to human health effects, ozone has been tied to crop damage, typically in the form of stunted growth, leaf discoloration, cell damage, and death. Ozone can also act as a corrosive or oxidant, resulting in property damage, along with the degradation of rubber products and other materials.

Carbon Monoxide

CO is a colorless, odorless, and toxic gas produced by incomplete combustion of carbon substances, such as gasoline or diesel fuel. CO is considered a local pollutant because it tends to accumulate in the air locally. The primary adverse health effect associated with CO is interference with normal oxygen transfer to the blood, which may result in tissue oxygen deprivation. Exposure to CO at high concentrations can also cause fatigue, headaches, confusion, dizziness, and chest pain. There are no ecological or environmental effects for ambient CO (CARB 2019).

Particulate Matter

PM consists of finely divided solids or liquids, such as soot, dust, aerosols, fumes, and mists. Two forms of fine particulates are now recognized: respirable coarse particles with an aerodynamic diameter of 10 micrometers or less, or PM_{10}, and respirable fine particles with an aerodynamic diameter of 2.5 micrometers or less, or $PM_{2.5}$. Particulate discharge into the atmosphere results primarily from industrial, agricultural, construction, and transportation activities. However, wind on arid landscapes also contributes substantially to local particulate loading. PM is considered both a local and a regional pollutant.

Particulate pollution can be transported over long distances and may adversely affect humans, especially people who are naturally sensitive or susceptible to breathing problems (i.e., asthmatics). Numerous studies have linked PM exposure to premature death in people with preexisting heart or lung disease. Other symptoms of exposure may include nonfatal heart attacks, irregular heartbeats, aggravated asthma, decreased lung function, and increased respiratory symptoms. Depending on composition, PM_{10} and $PM_{2.5}$ can also affect water quality and acidity, deplete soil nutrients, damage sensitive forests and crops, affect ecosystem diversity, and contribute to acid rain (EPA 2022a).

Sulfur Dioxide

SO_2 is a colorless, irritating gas with a rotten egg smell, primarily formed from the combustion of fossil fuels containing sulfur. SO_2 is considered a local pollutant because it tends to accumulate in the air locally. High concentrations of SO_2 can result in temporary breathing impairment for asthmatic children and adults who are active outdoors. Short-term exposure of asthmatic individuals to elevated SO_2 levels during moderate activity may result in breathing difficulties that can be accompanied by symptoms like wheezing, chest tightness, or shortness of breath. Other effects that have been associated with longer-term exposures to high concentrations of SO_2, in conjunction with high levels of PM, include aggravation of existing cardiovascular disease, respiratory illness, and alterations in lung defenses. SO_2 also is a major precursor to $PM_{2.5}$, which is a significant health concern and a main contributor to poor visibility (see also the discussion of health effects of PM, above).

Lead

Lead is a naturally existing metal that can be a constituent of air, water, and the biosphere. Lead is considered a local pollutant because it tends to accumulate in the air locally. This highly toxic metal, used for many years in everyday products, has been found to lead to a range of health effects, from behavioral problems and learning disabilities to seizures and death. Effects on children's nervous systems are one of the primary health risk concerns from lead. When lead is present in high concentrations, children can even suffer irreversible brain damage and death. Children 6 years old and under are most at risk because their bodies are growing quickly.

Since the 1980s, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or limited in consumer products. Gasoline-powered automobile engines were a major source of airborne lead through the use of leaded fuels; however, the use of leaded fuel has been mostly phased out. Since then, ambient lead levels have dropped dramatically.

Other Criteria Pollutants

CARB has also established CAAQS for hydrogen sulfide (H_2S), sulfates, vinyl chloride, and visibility-reducing particles. These pollutants are not addressed by federal standards. Below is a summary of these pollutants and a description of their physical properties, health and other effects, sources, and the extent of the problems.

Hydrogen sulfide emissions often are associated with geothermal activity, oil and gas production, refining, sewage treatment plants, and confined animal-feeding operations. H_2S in the atmosphere would most likely oxidize into SO_2, which can lead to acid rain. At low concentrations, H_2S may cause dizziness, headaches, and irritation to the eyes, mucous membranes, and respiratory system. In high concentrations, H_2S is extremely hazardous (i.e., 800 parts per million can cause death), especially in enclosed spaces. The Occupational Safety and Health Administration (OSHA) has primary responsibility for regulating workplace exposure to H_2S.

Sulfates are another particulate product that results from the combustion of sulfur-containing fossil fuels; however, the majority of ambient sulfates are formed in the atmosphere. When SO_2 comes in contact with oxygen, it precipitates out into sulfates. Data collected in the Mojave Desert Air Basin have demonstrated that levels of sulfates are significantly lower than the health standards. The health effects associated with SO_2 and sulfates, more commonly known as sulfur oxides, include respiratory illnesses, decreased pulmonary disease resistance, and aggravation of cardiovascular diseases. When acidic pollutants and particulates are also present, SO_2 tends to have an even more toxic effect. Increased PM derived from SO_2 emissions also contributes to impaired visibility. In addition to particulates, sulfur trioxide and sulfate ions are precursors to acid rain; sulfur oxides and NO_X are the leading precursors to acid rain, which can lead to corrosion on human-made structures and cause acidification in water bodies.

Visibility-reducing particles consist of PM generated from a variety of natural and human-made sources. These can vary greatly in shape, size, and chemical composition. Some haze-causing particles (e.g., windblown dust and soot) are directly emitted into the air, whereas others are formed in the air from the chemical transformation of gaseous pollutants (e.g., sulfates, nitrates, organic carbon particles), which are the major constituents of fine PM. These fine particles, caused largely by the combustion of fuel, can travel hundreds of miles and cause visibility impairment. California has been labeled "unclassified" for visibility—CARB has not established a method for measuring visibility with the precision and accuracy needed to designate areas attainment or nonattainment.

Vinyl chloride is a colorless, sweet-smelling gas at ambient temperature. Landfills, publicly owned treatment works, and polyvinyl chloride production facilities are the major identified sources of vinyl chloride emissions in California. Polyvinyl chloride can be fabricated into several products, such as pipes, pipe fittings, and plastics. In humans, epidemiological studies of occupationally exposed workers have linked vinyl chloride exposure to development of liver angiosarcoma, a rare cancer, and have suggested a relationship between exposure and lung and brain cancers.

2.2.3 Local Criteria Pollutant Monitoring Data

A number of ambient air quality monitoring stations are located in the SFBAAB to monitor progress toward air quality standards attainment of the NAAQS and the CAAQS. There are no monitoring stations in San Francisco, but there is one monitoring station in San Francisco at 10 Arkansas Street, which is approximately 8 miles from the project site. Recent air quality monitoring results from the nearest monitoring station (Arkansas Street in San Francisco) are summarized in Table 2. The data represent air quality conditions from the last 3 years with a complete dataset available (2020–2022). As indicated in Table 2, the Arkansas Street monitoring station has experienced infrequent violations of State and federal air quality standards during this time period.

Table 2. Ambient Air Quality Monitoring Data from San Francisco-Arkansas Monitoring Station

Pollutant Standards	2020	2021	2022
Ozone			
Maximum 1-hour concentration (ppm)	0.088	0.074	0.070
Maximum 8-hour concentration (ppm)	0.055	0.054	0.060
Number of days standard exceeded[b]			
CAAQS 1-hour standard (> 0.09 ppm)	0	0	0
CAAQS 8-hour standard (> 0.070 ppm)	0	0	0
NAAQS 8-hour standard (> 0.075 ppm)	0	0	0
Carbon Monoxide (CO)			
Maximum 8-hour concentration (ppm)	1.6	0.9	1.0
Maximum 1-hour concentration (ppm)	1.8	1.2	1.5
Number of days standard exceeded[b]			
NAAQS 8-hour standard (> 9 ppm)	0	0	0
CAAQS 8-hour standard (> 9.0 ppm)	0	0	0
NAAQS 1-hour standard (> 35 ppm)	0	0	0
CAAQS 1-hour standard (> 20 ppm)	0	0	0
Nitrogen Dioxide (NO_2)			
State maximum 1-hour concentration (ppb)	47	49	46
State second-highest 1-hour concentration (ppb)	47	42	43
Annual average concentration (ppb)	8	7	8
Number of days standard exceeded[b]			
CAAQS 1-hour standard (180 ppb)	0	0	0
Particulate Matter (PM_{10})[a]			
National maximum 24-hour concentration (µg/m^3)	102.3	32.2	34.2
National second-highest 24-hour concentration µg/m^3)	58.0	26.4	28.5
State maximum 24-hour concentration µg/m^3)	105.0	33.0	36
State second-highest 24-hour concentration µg/m^3)	59.0	27.0	30
National annual average concentration µg/m^3)	12.0	8.2	7.7
State annual average concentration (µg/m^3)	23.3	16.1	*

Pollutant Standards	2020	2021	2022
Number of days standard exceeded[b]			
NAAQS 24-hour standard (> 150 µg/m³)	0	0	0
CAAQS 24-hour standard (> 50 µg/m³)	2	0	0
Particulate Matter ($PM_{2.5}$)			
National maximum 24-hour concentration (µg/m³)	147.3	22.4	29.0
National second-highest 24-hour concentration (µg/m³)	123.1	21.7	29.0
State maximum 24-hour concentration (µg/m³)	147.3	22.4	29.0
State second-highest 24-hour concentration (µg/m³)	123.1	21.7	29.0
National annual average concentration (µg/m³)	10.5	7.1	6.7
State annual average concentration (µg/m³)	10.5	*	6.8
Number of days standard exceeded[b]			
NAAQS 24-hour standard (> 35 µg/m³)	8	0	0

Source: California Air Resources Board 2021; U.S. Environmental Protection Agency 2021.

[a] Data for particulate matter (PM_{10}) were unavailable from the Redwood City monitoring station or anywhere else in San Mateo County; therefore, the data were taken from the San José – Jackson Street monitoring station in Santa Clara County.

[b] An exceedance is not necessarily a violation.

CAAQS = California Ambient Air Quality Standards; NAAQS = National Ambient Air Quality Standards; ppm = parts per million; ppb = parts per billion; µg/m³ = micrograms per cubic meter; * = data not available.

2.2.4 Attainment Designations

Local monitoring data, as included in Table 2, are used to designate areas as nonattainment, maintenance, attainment, or unclassified areas for the NAAQS and the CAAQS. The four designations are further defined as follows:

- **Nonattainment**. Assigned to areas where monitored pollutant concentrations violate the standard in question.
- **Maintenance**. Assigned to areas where monitored pollutant concentrations exceeded the standard in question in the past but are no longer in violation of that standard.
- **Attainment**. Assigned to areas where pollutant concentrations meet the standard in question over a designated period of time.
- **Unclassified**. Assigned to areas where data are inadequate for determining whether a pollutant is violating the standard in question.

Table 3 summarizes the attainment status for San Mateo County with regard to the NAAQS and the CAAQS. For ozone and $PM_{2.5}$, the county is in nonattainment for the federal standards, while, for PM_{10}, the county is in nonattainment for the State standard only.

Table 3. Federal and State Attainment Status for San Mateo County

Criteria Pollutant	Federal Designation	State Designation
Ozone (8-hour)	Marginal Nonattainment	Nonattainment
CO	Attainment	Attainment
PM_{10}	Attainment	Nonattainment
$PM_{2.5}$	Moderate Nonattainment	Nonattainment
NO_2	Attainment	Attainment
SO_2	Attainment	Attainment
Lead	Attainment	Attainment
Sulfates	(No Federal Standard)	Attainment
Hydrogen Sulfide	(No Federal Standard)	Unclassified
Visibility	(No Federal Standard)	Unclassified

Source: California Air Resources Board 2022e; U.S. Environmental Protection Agency 2023.
CO = carbon monoxide; NO_2 = nitrogen dioxide; $PM_{2.5}$ = particulate matter with a diameter less than or equal to 2.5 microns; PM_{10} = particulate matter with a diameter less than or equal to 10 microns; SO_2 = sulfur dioxide.

2.2.5 Toxic Air Contaminants

Although ambient air quality standards have been established for criteria pollutants, no ambient standards exist for TACs. Many pollutants are identified as TACs because of their potential to increase the risk of developing cancer or because of their acute or chronic health risks. For TACs that are known or suspected carcinogens, CARB has consistently found that there are no levels or thresholds below which exposure is risk free. Individual TACs vary greatly in the risks they present. At a given level of exposure, one TAC may pose a hazard that is many times greater than another. TACs are identified and their toxicity studied by OEHHA.

Diesel Particulate Matter

DPM is generated by diesel-fueled equipment and vehicles. Within the Bay Area, BAAQMD has found that, of all controlled TACs, emissions of DPM are responsible for about 85 percent of the total ambient cancer risk (BAAQMD 2023a). Short-term exposure to DPM can cause acute irritation (e.g., eye, throat, and bronchial), neurophysiological symptoms (e.g., lightheadedness and nausea), and respiratory symptoms (e.g., cough and phlegm). EPA has determined that diesel exhaust is "likely to be carcinogenic to humans by inhalation" (EPA 2003).

Type II Laboratory Toxic Air Contaminants

According to the HRA conducted by Yorke Engineering for the University of California, Davis 2017 Long-Range Development Plan, a Type II general biological sciences laboratory is known to emit a variety of TAC emissions (Yorke Engineering 2018). These TAC emissions would occur from the use of the different solvents, preservatives, acids, and other chemicals typically found in a laboratory setting.

Naturally Occurring Asbestos

Asbestos is the name given to several naturally occurring fibrous silicate minerals. Before the adverse health effects of asbestos were identified, asbestos was widely used as insulation and fireproofing in buildings; however, it can still be found in some older buildings. It is also found in its natural state in rock or soil. The inhalation of asbestos fibers into the lungs can result in a variety of adverse health effects, including inflammation of the lungs, respiratory ailments (e.g., asbestosis, which is scarring of lung tissue that results in constricted breathing), and cancer (e.g., lung cancer and mesothelioma, which is cancer of the linings of the lungs and abdomen).

2.2.6 Odors

Offensive odors can be unpleasant and lead to citizen complaints to local governments and air districts. According to the *Air Quality and Land Use Handbook* (CARB 2005), land uses associated with odor complaints typically include sewage treatment plants, landfills, recycling facilities, manufacturing plants, and agricultural operations. CARB provides recommended screening distances for siting new receptors near existing odor sources.

2.3 Impacts and Mitigation Measures

2.3.1 Methodology

Criteria pollutant emissions generated by construction activities were quantified using the California Emissions Estimator Model (CalEEMod), version 2022.1 (CAPCOA 2022). Assumptions related to construction activity and scheduling (i.e., construction phase start and end dates) were based on project-specific information provided by the project sponsor as well as model defaults where project-specific information was not available.

Construction

Construction of the south and north buildings would occur in separate stages but begin with a demolition/abatement phase that would involve construction activities on the entirety of the project site. Construction on the southern portion of the project site would occur during eight phases.

- Phase 1: Rough grading/site demolition (includes site clearing, shoring, grading, and mass excavation),
- Phase 2: Deep foundations,
- Phase 3: Foundations,
- Phase 4 Superstructure,
- Phase 5: Building enclosure,
- Phase 6: Interior buildout,
- Phase 7: Sitework, and
- Phase 8: Start-up/building commissioning and final inspections.

Immediately following the completion of construction on the southern portion of the project site, construction on the northern portion would begin, with the same phases.

Each phase would have a discrete start and end date. Based on input from the project sponsor, the analysis assumes that construction would occur 5 days a week, Monday through Friday. The construction assumptions for the project are summarized below. In addition, the data used in the construction analysis are provided in Attachment A of this report.

- **Heavy-Duty Construction Equipment**. The project sponsor provided information regarding the number of pieces of equipment, fuel type, engine tier, and hours per day for each phase of construction. Some equipment would be electrically powered, including the scissor lifts and manlifts. All construction equipment would be equipped with a Tier 4 Final engine, except for electrical equipment, which does not produce direct emissions. In addition, a diesel-powered drill rig would have a Tier 3 engine.
- **Construction Workers' Vehicle Trips**. Calculations of emissions from workers' vehicles were based on the CalEEMod default number for daily workers per phase, the number of trips per day (i.e., two one-way trips per worker), trip length (i.e., 12 miles one way), and fleet mix (e.g., light-duty autos and light-duty trucks) (CAPCOA 2022). Emissions were calculated in CalEEMod, which uses Emissions Factor 2021 (EMFAC2021) (CARB 2021a).
- **Construction Vendor Truck Trips**. Calculations of emissions from vendors' trucks were based on the number of daily vendors per phase, as provided by the project sponsor; the number of trips per day (i.e., two one-way trips), trip length (i.e., 8 miles one way), and fleet mix (e.g., heavy-heavy duty trucks, medium-heavy-duty trucks), then calculated in CalEEMod.
- **Construction Haul Truck Trips**. Calculations of emissions from haul trucks were based on the total number of haul trucks per phase, as provided by the project sponsor, for the rough grading/site demolition, deep foundations, foundations, superstructure, and building enclosure phases. Trip lengths and fleet mix (e.g., heavy-heavy duty trucks) were also considered. The total number of truck trips for each construction phase was calculated by multiplying the number of daily trips by the number of days for the construction phase.
- **Paving**. Paving activities would result in emissions of ROG from off-gassing. Each day, 0.5 acre on the project site would be paved during the sitework phase, resulting ultimately in a total paved area of about 71 acres.
- **Architectural Coating**. Architectural coating activities would also result in emissions of ROG from off-gassing. The activities would take place during the building enclosure and interior buildout phases.
- **Earthmoving**. Earthmoving activities would result in emissions of PM dust. Earthmoving would involve grading a maximum of 1.5 acres per day during the first phase (rough grading/site demolition) and 0.25 acre per day during the sitework phase. Soil would be both exported and imported during the rough grading/site demolition phase.
- **Demolition**. Demolition and removal of the existing structure would result in emissions of PM dust. A maximum of 25,000 sf of the existing structure would be demolished per day and exported off-site during the demolition phase.

It was assumed that BAAQMD Basic Construction Mitigation Measures would be implemented. The measures applicable to the proposed project are as follows (BAAQMD 2023a):

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 mph.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
- All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
- Unpaved roads providing access to sites located 100 feet or more from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
- Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The air district's general air pollution complaints number shall also be visible to ensure compliance with applicable regulations.

Operations

Operations of the project would generate emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ that could result in long-term air quality effects. Existing uses at the project site generate emissions of the same pollutants. The methodologies used to estimate criteria pollutant emissions resulting from operation of the project as well as existing uses are described below.

Criteria pollutant emissions from motor vehicles associated with development of the project were evaluated using CalEEMod, which uses emission factors from EMFAC2021, along with estimates of VMT provided by the transportation consultants for the project.

For operational energy use, CalEEMod estimates criteria pollutant emissions from the on-site combustion of natural gas but not from electricity consumption. The project sponsor provided electricity consumption estimates for the proposed uses; CalEEMod default values were used for the existing uses. Because existing uses on the site are all electric and the proposed buildings would be all electric, there would be no direct energy-related emissions.

Area-source emissions would result from the reapplication of architectural coatings as part of ongoing building maintenance, the use of consumer products, and the use of landscaping equipment. CalEEMod default values were used for both the proposed uses and existing uses.

Stationary-source emissions would result from the testing of 24 diesel-powered emergency generators with a 671-horsepower rating. Each generator was assumed to operate 150 hours per year during scheduled testing.

Health Risk Analysis

An HRA was prepared to quantify the levels of exposure from emissions of TACs and $PM_{2.5}$ at sensitive receptors and future on-site receptors from both project construction and operation. The HRA methods are described below. All HRA modeling assumptions and results can be found in Appendix A.

DPM and $PM_{2.5}$

The project would generate DPM and $PM_{2.5}$ emissions during construction and operations. Because the project would introduce DPM and $PM_{2.5}$ emissions in an area near existing sensitive receptors, an HRA was conducted in accordance with BAAQMD guidelines. The HRA uses the most recent air dispersion model, AERMOD (version 23132),[6] from EPA; the cancer and chronic risk assessment values for DPM provided by OEHHA; and assumptions for model inputs recommended in BAAQMD's *Air Quality Guidelines,* Appendix E (BAAQMD 2023b). The HRA, which applies the most recent guidance and calculation methods from OEHHA's *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Risk Assessments* (OEHHA 2015), consists of three parts: an emissions inventory, air dispersion modeling, and risk calculations. A description of each part is provided below.

Emissions Inventory

The emissions inventory includes DPM and $PM_{2.5}$ emissions from construction and operations. During construction, off-road equipment and on-road trucks would generate DPM emissions. The construction $PM_{2.5}$ inventory consists of $PM_{2.5}$ emissions from equipment, fugitive dust generated from the on-site movement of soil, and exhaust from trucks and construction workers' vehicles on roadways.

The operational DPM inventory includes $PM_{2.5}$ emissions from testing the emergency generators. The operational $PM_{2.5}$ inventory consists of $PM_{2.5}$ emissions from diesel sources, fugitive dust from vehicles traveling to and from the site on roadways, and exhaust from vehicles, both gasoline and diesel powered, traveling to and from the site.

Air Dispersion Modeling

The HRA used EPA's AERMOD model to model annual average DPM and $PM_{2.5}$ concentrations at existing and future on-site receptors. Modeling inputs, including emission rates and source characteristics (e.g., release height, stack diameter, plume width), were based on guidance provided by OEHHA, BAAQMD, and the South Coast Air Quality Management District (SCAQMD).[7]

The project site is located near the San Francisco International Airport monitoring station, which collects meteorological data. The AERMET data, provided by BAAQMD, represents 2013 through 2017 monitoring.[8]

Available: https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models#aermod. Accessed: February 22, 2024.

7 Certain information necessary for modeling, such as source parameters (e.g., source heights), is not available from BAAQMD but is provided by SCAQMD. These parameters do not depend on a project's geographic location and are appropriate for use in areas outside of SCAQMD's jurisdiction.

8 Bay Area Air Quality Management District. 2022. *AERMOD-Ready Meteorological Data*. November. Available: https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/ceqa-tools/ceqa-modeling-data. Accessed: December 2022.

Construction

On-site construction emissions from off-road equipment were characterized as a polygon area source that outlines the footprint of the two different development areas (Infinite 131 South and North). A release height of 5.0 meters represented exhaust emissions, and a release height of 0.9 meter represented on-site fugitive dust emissions. The release height represents the height above the ground at which pollutants are emitted. On-road travel emissions from haul and vendors' trucks (for DPM and $PM_{2.5}$) as well as construction workers' vehicles (for $PM_{2.5}$) were characterized as line volume sources with a release height of 3.4 meters. Line volume sources represent a series of individual volumes sources.

To account for the plume rise associated with mechanically generated air turbulence from construction emissions for the AERMOD run, the initial vertical dimension of the area source was modeled at 4.7 meters for exhaust and 0.8 meter for fugitive dust; for the line volume sources, the initial vertical dimension was 3.2 meters. Plume rise is the height that pollutants rise above a release height. For exhaust, plume rise occurs because of the temperature of the exhaust gas and because exhaust gas temperatures can be high, which causes the plume to rise. For dust, plume rise accounts for the mechanical entrainment of dust in the wheels of equipment and trucks. Emissions from off-road equipment were assumed to be generated throughout the construction footprint. Emissions from off-site trucks were modeled along the road segments adjacent to the construction footprint.

Modeling Domain and Receptor Network

The modeling of emissions from construction activities was based on typical construction hours and days (i.e., 8 hours per day, 5 days per week). The urban dispersion option was used in the analysis because the project site is in an urban area. In addition, the surrounding areas are developed with buildings and paved surfaces that can influence how pollutants are dispersed in the area.

Off-site sensitive receptors were modeled in AERMOD at individual work sites in all directions within at least 1,000 feet of the project site using a 20- by 20-meter receptor grid. On-site sensitive receptors were modeled at the locations of the future buildings in the two different development areas. Worker receptors were modeled at the Infinite 131 South building. Receptors were given a height of 1.5 meters to represent the average human breathing zone, consistent with BAAQMD guidance.[9]

Operations

Operations would generate DPM and $PM_{2.5}$ from vehicle travel and the testing of the twenty-four 671-horsepower EPA Tier 3 emergency generators. For the $PM_{2.5}$ analysis, on-road travel emissions from delivery trucks, buses, and other vehicles accessing the site were characterized as line-volume sources, with release heights of 0.9 meter for fugitive dust emissions and 3.4 meters for exhaust emissions. To account for plume rise associated with mechanically generated air turbulence from operational emissions for the AERMOD run, the initial vertical dimension for the line-volume sources was set as 3.2 meters for exhaust and 0.8 meter for fugitive dust.

[9] Bay Area Air Quality Management District. 2022. *Air Quality Guidelines Appendix E: Recommended Methods For Screening and Modeling Local Risks and Hazards*. Available: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa-guidelines-2022/appendix-e-recommended-methods-for-screening-and-modeling-local-risks-and-hazards_final-pdf.pdf?rev=b8917a27345a4a629fc18fc8650951e4&sc_lang=en. Accessed: January 10, 2023.

Similar to construction, the urban dispersion option considered the project site's characteristics. Off-site sensitive receptors were modeled in AERMOD at individual work sites in all directions within 1,000 feet of the project site using a 20- by 20-meter receptor grid. On-site sensitive receptors were modeled at the locations of the future buildings in the two different areas. Day-care receptors were modeled for the day-care building; worker receptors were modeled for the buildings in I131N and I131S. Receptors were given a height of 1.5 meters to represent the average human breathing zone, consistent with BAAQMD guidance.[10]

Health Risk Exposure Estimation

The risk calculations incorporate OEHHA's age sensitivity factors, which account for increased sensitivity to carcinogens during early-in-life exposure. The approach for estimating cancer risk from long-term inhalation, including exposure to carcinogens, requires calculating a range of potential doses and multiplying by cancer potency factors in units corresponding to the inverse dose to obtain a range of cancer risks. For cancer risk, the risk for each age group is calculated using the appropriate daily breathing rates, age sensitivity factors, and exposure durations. The cancer risks calculated for individual age groups are summed to estimate the cancer risk for each receptor. Chronic cancer and chronic and acute hazard risks were calculated using values from OEHHA's 2015 HRA guidance.[11]

2.3.2 Thresholds of Significance

This analysis first considers whether the proposed project would conflict with the most recent air quality plan (BAAQMD 2017). Specifically, the impact analysis evaluates whether the project would support the primary goals of the 2017 Clean Air Plan, including applicable control measures, and whether it would disrupt or hinder implementation of any control measures. Secondly, the calculated regional criteria pollutant emissions are compared to BAAQMD's project-level thresholds (BAAQMD 2023a). BAAQMD's thresholds, as summarized in Table 4, are recommended by the agency to evaluate the significance of a project's regional criteria pollutant emissions. According to BAAQMD, projects with emissions in excess of the thresholds shown in Table 4 would be expected to have a significant cumulative impact on regional air quality because an exceedance of the thresholds is anticipated to contribute to NAAQS and CAAQS violations.

Localized Project-Generated Criteria Pollutant Emissions (Carbon Monoxide and Particulate Matter) and Air Toxics (Diesel Particulate Matter)

Localized pollutants generated by a project can be deposited near the emissions source, potentially affecting the nearby population. Although these pollutants dissipate with distance, emissions from individual projects can result in direct and material health impacts on adjacent sensitive receptors. The localized pollutants of concern that would be generated by the project are CO, PM, and DPM. The applicable thresholds for each pollutant are described below.

[10] Ibid.

[11] Office of Environmental Health Hazard Assessment. 2015. *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Risk Assessments.* February. Available: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf. Accessed: April 15, 2021.

Table 4. BAAQMD Project-Level Regional Criteria Pollutant Emissions Thresholds

Analysis	Thresholds
Regional Criteria Pollutants (Construction)	• Reactive Organic Gases: 54 pounds/day • Nitrogen Oxides: 54 pounds/day • Particulate Matter: 82 pounds/day (exhaust only); compliance with best management practices (fugitive dust) • Fine Particulate Matter: 54 pounds/day (exhaust only); compliance with best management practices (fugitive dust)
Regional Criteria Pollutants (Operations)	• Reactive Organic Gases: Same as construction • Nitrogen Oxides: Same as construction • Particulate Matter: 82 pounds/day • Fine Particulate Matter: 54 pounds/day

Source: Bay Area Air Quality Management District 2023.

Carbon Monoxide

Heavy traffic congestion can contribute to high levels of CO. Individuals exposed to such "hot spots" may have a greater likelihood of developing adverse health effects. BAAQMD has adopted screening criteria that provide a conservative indication of whether project-generated traffic would cause a potential CO hot spot. If the screening criteria are not met, a quantitative analysis, through site-specific dispersion modeling of project-related CO concentrations, would not be necessary. A project would not cause localized violations of the CAAQS for CO if the BAAQMD's CO screening criteria, summarized below, are met (BAAQMD 2023a).

- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., a tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).
- The project would be consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, the regional transportation plan, and local congestion management agency plans.

BAAQMD does not consider construction-generated CO to be a significant pollutant of concern because construction activities typically do not generate substantial quantities of this particular pollutant (BAAQMD 2023a).

Particulate Matter

BAAQMD adopted an incremental $PM_{2.5}$ concentration-based significance threshold in which a "substantial" contribution at the project level for an individual source is defined as total (i.e., exhaust and fugitive) $PM_{2.5}$ concentrations exceeding 0.3 microgram per cubic meter ($\mu g/m^3$). In addition, BAAQMD considers projects to have a cumulatively considerable $PM_{2.5}$ impact if sensitive receptors are exposed to $PM_{2.5}$ concentrations from local sources within 1,000 feet, including existing sources, project-related sources, and reasonably foreseeable future sources, that exceed 0.8 $\mu g/m^3$ (BAAQMD 2023a).

Diesel Particle Matter

DPM has been identified as a TAC. It is particularly concerning because long-term exposure can lead to cancer, birth defects, and damage to the brain and nervous systems. BAAQMD has adopted incremental cancer and hazard thresholds to evaluate receptor exposure to single sources of DPM emissions. The "substantial" DPM threshold defined by BAAQMD is exposure of a sensitive receptor to an individual emissions source, resulting in an excess cancer risk level of more than 10 in 1 million or a non-cancer (i.e., chronic or acute) hazard index greater than 1.0. BAAQMD also considers projects to have a cumulatively considerable DPM impact if they contribute to DPM emissions that, when combined with cumulative sources within 1,000 feet of sensitive receptors, result in excess cancer risk levels of more than 100 in 1 million or a hazard index greater than 10.0. (BAAQMD 2023a).

Asbestos

BAAQMD considers a project to have a significant impact if it does not comply with the applicable regulatory requirements outlined in BAAQMD's Regulation 11, Rule 2.

Odors

BAAQMD and CARB have identified several types of land uses as being commonly associated with odors, such as landfills, wastewater treatment facilities, and animal processing centers (BAAQMD 2023; CARB 2005). BAAQMD's CEQA Air Quality Guidelines recommend that project analyses identify the locations of existing and planned odor sources and include policies to reduce potential odor impacts in the project area (BAAQMD 2023a).

2.3.3 Project Impacts

Applicable Air Quality Plan Consistency

The CAA requires a SIP or an air quality control plan to be prepared for areas where air quality violates the NAAQS. The SIP sets forth the strategies and pollution control measures that states will use to attain the NAAQS. The CCAA requires attainment plans to demonstrate a 5 percent per year reduction in nonattainment air pollutants or their precursors, averaged every consecutive 3-year period, unless an approved alternative measure of progress is developed. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

Consistency with the Bay Area 2017 Clean Air Plan

As described above, the current air quality attainment plan for the SFBAAB is BAAQMD's 2017 Clean Air Plan, which defines control strategies to reduce emissions and ambient concentrations of air pollutants; safeguards public health by reducing exposure to air pollutants that pose the greatest health risk, with an emphasis on protecting the communities most heavily affected by air pollution; and reduces GHG emissions to protect the climate. According to the BAAQMD CEQA Air Quality Guidelines, the determination of 2017 Clean Air Plan consistency should consider the following for project-level analyses.

- Does the project support the primary goals of the air quality plan?

The primary goals of the 2017 Clean Air Plan are

- **Protect Air Quality and Health at the Regional and Local Scale**: Attain all State and national air quality standards and eliminate disparities among Bay Area communities in the cancer health risk from TACs; and
- **Protect the Climate**: Reduce Bay Area GHG emissions to 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050.

The proposed project would support the primary goals of the 2017 Clean Air Plan because it would redevelop a site with two-story industrial buildings and a large parking lot and densify the area through the construction of multi-story R&D buildings. Furthermore, the nearest bus stop is within 0.5 mile, at Herman Street and Pacific Avenue, which would encourage future employees to use public transportation.

The proposed project would include other features that would support a sustainable building design and a reduction in GHG emissions. Specifically, the proposed project would install a photovoltaic (PV) roof canopy and provide continuous bike and pedestrian access throughout the campus. Furthermore, the proposed project would comply with all applicable City and State measures, including Title 24, Part 6, of the California Energy Code, the baseline standard requirements for energy efficiency.

- Does the project include applicable control measures from the air quality plan?

To meet the primary goals, the 2017 Clean Air Plan recommends specific control measures and actions. These control measures are grouped into various categories that include stationary-source measures, mobile-source measures, and transportation control measures. The 2017 Clean Air Plan recognizes that community design dictates individual travel mode and that a key long-term control strategy to reduce emissions of criteria pollutants, air toxics, and GHGs from motor vehicles is to channel future Bay Area growth into vibrant urban communities where goods and services are close at hand and people have a range of viable transportation options. To that end, the 2017 Clean Air Plan includes control measures that are aimed at reducing air pollution in the SFBAAB.

The proposed project would support TR9, Bicycle and Pedestrian Access and Facilities, because it would improve conditions for walking and biking by providing on-site bicycle racks/lockers, providing long-term bicycle racks for workers, and orienting buildings to be sidewalk-facing, with multiple pedestrian entrances. In addition, the proposed project would support TR22, Construction, Freight, and Farming Equipment, because all off-road construction equipment associated with the project would include either electric or equipped with Tier 3 or Tier 4 engines.

The proposed project would also support TR2, Trip Reduction Programs, because it would comply with the City's Transportation Demand Management (TDM) ordinance to reduce operational VMT and related criteria pollutants, along with air toxics and GHG emissions.

Finally, the proposed project would support TCM-D3, Local Land Use Strategies, because it would replace an existing parking structure and two-story industrial buildings with an employment center located within 0.5 mile of the nearest bus stop, at Herman Street and Pacific Avenue. This would encourage future employees to use public transportation.

- Does the project disrupt or hinder implementation of any air quality plan control measures?

The proposed project does not hinder implementation of any control measures in the 2017 Clean Air Plan. Rather, the project supports and includes TR9, Bicycle and Pedestrian Access, and TCM-D3, Local Land Use Strategies. Other control measures are not applicable to the project, such as those involving stationary sources or those that are policies for BAAQMD to adopt. Although the measures are not applicable, the project would not hinder the measures from being implemented.

Conclusion

Based on the discussion above, the proposed project would support the primary goals of the 2017 Clean Air Plan, would incorporate all applicable control measures, and would not disrupt or hinder implementation of any control measures. Thus, the proposed project would not conflict with or obstruct implementation of the 2017 Clean Air Plan.

Mass Emissions of Criteria Air Pollutant Impacts

The mass emissions thresholds developed by BAAQMD to assess the potential for a project to violate local air quality standards or contribute to an air quality standard violation correlate with the planned increases in air pollutant emissions assumed in the 2017 Clean Air Plan. According to the BAAQMD, projects with emissions in excess of the thresholds would be expected to have a significant cumulative impact on regional air quality because an exceedance of the thresholds is anticipated to contribute to CAAQS and NAAQS violations.

Construction Impacts

Project construction has the potential to create air quality impacts through the use of heavy-duty construction equipment, along with construction workers' vehicle trips, on-road truck trips, paving operations, and the application of architectural coatings. In addition, fugitive dust emissions would result from removal of the existing structures and earthmoving activities. However, emissions may vary substantially, depending on the level of activity, length of the individual construction activity, the types of equipment, number of personnel, and soil moisture content.

Construction-related emissions for the proposed project have been calculated using the methods described above. To evaluate construction emissions, it was assumed that the BAAQMD's fugitive dust control measures would be implemented, as required for all development occurring within BAAQMD's jurisdiction, as well as the City's standard conditions of approval.[12] Estimated construction emissions for the project assume implementation of the measures, as summarized by year in Table 5. Emissions are presented for each year of construction to capture the sum of emissions from the multiple activity categories occurring within the same year.

[12] The City's standard conditions of approval related to dust include Condition 12 ("The construction and permitted use on the property shall be so conducted as to reduce to a minimum any noise vibration or dust resulting from the operation"), and Condition 15 ("Prior to any on-site grading, a grading permit shall be obtained from the City Engineer").

Table 5. Average Daily Construction Criteria Pollutant Emissions from the Proposed Project (pounds per day)[a,b]

Construction Year (and building)	ROG	NO_X	PM_{10} Exhaust	$PM_{2.5}$ Exhaust
2026 (I131S)	2	18	< 1	< 1
2027 (I131S)	20	14	< 1	< 1
2028 (I131S & I131N)	8	9	< 1	< 1
2029 (I131N)	8	16	< 1	< 1
2030 (I131N)	19	12	< 1	< 1
2031 (I131N)	2	3	< 1	< 1
BAAQMD threshold	54	54	82	54
Exceeds threshold?	No	No	No	No

[a.] Emissions are rounded to the nearest whole number.
[b.] The modeling output files are included in Appendix A of this report.

As shown in Table 5, emissions would be below the BAAQMD threshold for all pollutant emissions for all years. As noted above, best management practices during construction activities would be implemented in accordance with BAAQMD guidelines as well as the City's standard conditions of approval.

Operational Impacts

Operation of the proposed project would generate emissions from area, mobile, energy, stationary, and laboratory sources. Each of these sources was included in the quantification of the project's long-term operational emissions, as described below.

Stationary-, Mobile-, and Area-Source Emissions

The proposed project would result in stationary-source emissions from operation of 24 emergency diesel generators, which would be used in the event of power grid failure. The generators would use Tier 2 engines. Mobile-source emissions would be generated from daily employee trips to and from the project site. Area-source emissions would occur from the use of consumer products, architectural coatings, and landscaping equipment. Lastly, laboratory operations would emit fugitive ROG emissions. Daily unmitigated operational emissions are shown in Table 6 and compared to the applicable BAAQMD thresholds.

The net effect of the proposed project is determined by calculating operational emissions from the existing land uses to be replaced by the proposed project and subtracting those from the proposed project's estimated operational emissions. Table 6 shows existing land use emissions, the proposed project's unmitigated emissions, and the difference between the two, which is the net effect of the proposed project.

Table 6. Average Daily Net Operational Criteria Pollutant Emissions (pounds per day)[a,b,c]

Source	ROG	NO_X	PM_{10}	$PM_{2.5}$
Existing Land Uses				
Area sources	< 1	—	—	—
Energy sources[c]	—	—	—	—
Mobile sources	2	2	4	1
Total Existing	**2**	**2**	**4**	**1**
Unmitigated Proposed Project				
Area sources	51	—	—	—
Energy sources[d]	—	—	—	—
Mobile sources	19	18	73	19
Stationary sources	11	30	2	2
Laboratory sources	12	—	—	—
Vegetation	< -1	<-1	< -1	< -1
Total Project	**93**	**48**	**74**	**20**
Net Project Emissions	**91**	**46**	**70**	**19**
BAAQMD threshold	54	54	82	82
Exceeds threshold?	Yes	No	No	No

a. Emissions are rounded to the nearest whole number.
b. The modeling output files are included in Appendix A of this report.
c. Exceedances of the thresholds are underlined.
d. Because existing uses on the site are all electric and the proposed buildings would be all electric, there would be no direct energy-related emissions

As shown in Table 6, unmitigated daily ROG emissions would exceed BAAQMD's threshold, but no other pollutants would exceed the thresholds. For ROG, the threshold would be exceeded by approximately 37 pounds per day. Area-source emissions, as shown in Table 6, contribute the largest quantity of emissions (51 pounds per day). These emissions are primarily from the use of consumer products, such as cleaning products, within the buildings. Other area sources of ROG emissions include landscaping equipment and off-gassing from architectural coatings (i.e. paint). Mobile, stationary, and laboratory sources generate lesser quantities of ROG emissions but still contribute to the exceedance. To reduce emissions of ROG, the project sponsor would need to implement the measures outlined below.

- **Measure AQ-1: Require Low-VOC Coatings during Project Operation.** The project sponsor shall require contractors, as a condition of contract, to reduce construction-related fugitive ROG emissions by ensuring that low-VOC coatings with a VOC content of 50 grams per liter or less are used during operation.
- **Measure AQ-2: Require Low-VOC Cleaning Supplies.** The project sponsor shall provide educational resources for tenants concerning zero- or low-VOC cleaning products. Prior to receipt of any certificate of final occupancy, the project sponsor shall work with the City of South San Francisco to develop the electronic correspondence to be distributed by email to new commercial tenants regarding a requirement to purchase cleaning products that generate less than the typical VOC emissions.

- **Measure AQ-3: Require Use of Zero-Emission Landscape Equipment.** The project sponsor shall provide educational resources for tenants concerning zero-emission landscape equipment. The project sponsor, as a condition of contract, shall require all tenants to use only electric landscaping equipment throughout project operation to reduce ROG, NOX, PM10, and PM2.5 emissions.

With implementation of these measures ROG emissions would be reduced because the products used, such as coatings and cleaning products, would result in less off-gassing of ROG compared to typical products. In addition, ROGs and other pollutants from combustion associated with landscaping equipment would be eliminated through the use of zero-emission equipment.

Table 7 shows existing land use emissions as well as the project's emissions with the measures above implemented.

Table 7. Average Daily Net Operational Criteria Pollutant Emissions with Measures Implemented (pounds per day)[a,b,c]

Source	ROG	NO_X	PM_{10}	$PM_{2.5}$
Existing Land Uses				
Area sources	< 1	—	—	—
Energy sources[c]	—	—	—	—
Mobile sources	2	2	4	1
Total Existing	**2**	**2**	**4**	**1**
Mitigated Proposed Project				
Area sources	36	—	—	—
Energy sources[c]	—	—	—	—
Mobile sources	19	18	73	19
Stationary sources	11	30	2	2
Laboratory sources	12	—	—	—
Vegetation	< -1	< -1	<-1	< -1
Total Project	**78**	**48**	**74**	**20**
Net Project Emissions	**76**	**46**	**70**	**19**
BAAQMD threshold	54	54	82	82
Exceeds threshold?	Yes	No	No	No

a. Emissions are rounded to the nearest whole number.
b. The modeling output files are included in Appendix A of this report.
c. Exceedances of the thresholds are underlined.

As shown in Table 7, net emissions of ROG would still exceed BAAQMD's threshold with the measure implemented. Area sources would still contribute approximately 36 pounds of ROG per day. There are no additional measures to reduce these emissions further. As such, operation of the proposed project would generate ROG emissions in excess of BAAQMD's numeric thresholds.

Community Risk Impacts

Criteria Air Pollutants

Adverse health effects induced by regional criteria pollutants, such as ozone precursors and PM, generated by the project are highly dependent on a multitude of interconnected variables (e.g., cumulative concentrations, local meteorology and atmospheric conditions, the number and character of exposed individuals [e.g., age, gender]). Ozone precursors (ROG and NO_X) contribute to the formation of ground-borne ozone on a regional scale. Emissions of ROG and NO_X generated in one area may not equate to a specific ozone concentration in that same area. Similarly, some types of particulate pollution may be transported over long distances or formed through atmospheric reactions. As such, the magnitude and locations of specific health effects from exposure to increased ozone or regional PM concentrations are the product of emissions generated by numerous sources throughout a region as opposed to a single individual project. Moreover, exposure to regional air pollution does not guarantee that an individual will experience an adverse health effect. As discussed above, there are large individual differences in the intensity of symptomatic responses to air pollutants. These differences are influenced, in part, by the underlying health condition of an individual, which cannot be known.

Models and tools have been developed to correlate regional criteria pollutant emissions to potential community health impacts. Although models are capable of quantifying ozone and secondary PM formation and associated health effects, these tools were developed to support regional planning and policy analysis and have limited sensitivity to small changes in criteria pollutant concentrations induced by individual projects.

As discussed above, BAAQMD's regional thresholds consider existing air quality concentrations and attainment or nonattainment designations under the NAAQS and CAAQS. The NAAQS and CAAQS are informed by a wide range of scientific evidence that demonstrates that there are known safe concentrations of criteria pollutants. Although BAAQMD recognizes that air quality is a cumulative problem, it considers projects that generate criteria pollutant and ozone precursor emissions that fall below the thresholds to be minor in nature; therefore, such projects would not adversely affect air quality to the extent that the health-protective NAAQS or CAAQS would be exceeded.

Regional emissions generated by a project could increase photochemical reactions and the formation of tropospheric ozone and secondary PM, which, at certain concentrations, could lead to increased incidences of specific health consequences. The project would result in ROG emissions that would exceed the thresholds of significance; thus, the criteria pollutant applicable to potential health effects would be ozone because ROG is considered an ozone precursor that results in ozone formation after being emitted. Ozone is a secondary air pollutant produced in the atmosphere through a complex series of photochemical reactions involving ROG (and NO_X) in the presence of sunlight.

Quantitative analysis of health outcomes resulting from emissions from a large project in San José has demonstrated that the individual project contribution toward health outcomes is minimal relative to background occurrences . For that project, the highest emissions of ROG, NO_X, PM_{10}, and $PM_{2.5}$ were 389 pounds per day, 258 pounds per day , 237 pounds per day , and 56 pounds per day (ESA 2020), respectively, which are substantially higher levels of emissions compared with the proposed project's emissions. In addition, the proposed project would not result in a threshold exceedance with respect to ROG emissions. The health outcomes for the project in San José were found to be a very small proportion of background incidences (ESA 2020); thus, any health outcomes for the proposed project would very likely be even smaller and much less than the background occurrences.

Diesel Particulate Matter and Localized $PM_{2.5}$

DPM is a carcinogen emitted by diesel internal-combustion engines. Project-related construction activities would generate DPM (i.e., PM_{10} exhaust from diesel vehicles)[13] from off-road equipment and heavy-duty trucks. $PM_{2.5}$ exhaust and fugitive dust emissions would be generated from off-road equipment, on-site material movement, and on-road travel by heavy-duty trucks and workers' vehicles. Operational sources of $PM_{2.5}$ exhaust and fugitive dust emissions would be generated by emergency generators and employees' vehicles.

Health impacts from exposure to DPM include cancer risks and chronic non-cancer risks. The HRA for the proposed project, which was conducted using the methods described above, includes an evaluation of annual concentrations of DPM emissions and $PM_{2.5}$ emissions from exhaust and fugitive dust sources. Table 8 presents the maximum construction and operational health risks resulting from exposure to DPM and $PM_{2.5}$ for worker and day-care receptors within 1,000 feet of the project site. Annual PM2.5 concentrations are also presented. For worker receptors, the cancer risk values reflect an exposure duration of 5 years for construction and 20 years for operations. For future day-care receptors who will be on-site after construction is completed, the cancer risk values represent 5 years of operations.

Table 8. Estimated Project-Level Health Risk Results

Receptor Type	Cancer Risk (cases per million)[a]	Hazard Index: Non-Cancer Chronic Risk[b]	Hazard Index: Non-Cancer Acute Risk[b]	Annual $PM_{2.5}$ Concentrations ($\mu g/m^3$) [b]
Worker (cancer risk MEI)[c]	9.8	0.10	0.01	0.40
Worker ($PM_{2.5}$ concentration MEI)	4.9	0.10	0.01	0.49
Day care (cancer risk MEI)	3.2	0.01	0.01	0.06
Day care ($PM_{2.5}$ concentration MEI)	2.7	0.01	0.01	0.07
BAAQMD significance threshold	**10**	**1.0**	**1.0**	**0.3**
Exceeds threshold?	***No***	***No***	***No***	***Yes***

Notes:

$\mu g/m^3$ = micrograms per cubic meter; $PM_{2.5}$ = particulate matter with an aerodynamic diameter of 2.5 or less

a. For worker receptors, the evaluation of cancer risk was modeled for an exposure duration of 5 years for construction and 20 years for operation. For day-care receptors, the evaluation of cancer risk was modeled for an exposure duration of 5 years for operation.

b. Non-cancer chronic hazard index and annual $PM_{2.5}$ concentrations were based solely on annual construction and operational emissions. Non-cancer acute hazard index concentrations were based on 1-hour operational emissions.

c. MEI = maximally exposed individual

As shown in Table 8, the cancer risk and the hazard index values would not exceed BAAQMD thresholds for either worker or day-care receptors. The highest cancer risk, 9.8 cases per million, which would occur during construction at the locations of worker receptors, would be below the threshold of 10 cases per million. The highest hazard index value (0.1) would also occur during construction at the locations of worker receptors and be well below the threshold of 1.0. However, annual $PM_{2.5}$ concentrations would exceed the BAAQMD threshold of 0.3 $\mu g/m^3$. The highest value would be approximately 0.5 $\mu g/m^3$, which would be the result of dust and exhaust generated during

[13] Per BAAQMD guidance, PM_{10} exhaust is used as a surrogate for DPM.

construction that could affect workers. For day-care receptors, the $PM_{2.5}$ concentrations are much lower because those receptors would be exposed only to operational sources of $PM_{2.5}$, which would generate fewer emissions than construction sources at the locations of day-care receptors. Accordingly, sensitive worker receptors would be exposed to substantial concentrations of $PM_{2.5}$ during construction. To reduce $PM_{2.5}$ concentrations during construction, the project sponsor would need to implement the measure outlined below.

Measure AQ-4: Implement Construction Mitigation Measures to Reduce Dust Emissions. The project sponsor shall require all construction contractors to implement the dust-reducing measures listed below, which are based on BAAQMD's Basic Best Management Practices for Construction-Related Fugitive Dust Emissions but include more stringent measures to obtain greater reductions. The project sponsor shall provide documentation to the City of South San Francisco that the construction measures have been reflected in all construction contracts prior to the commencement of project construction activities.

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, unpaved access roads) shall be watered at least three times per day to maintain a minimum soil moisture of 12 percent. Moisture content can be verified by lab samples or a moisture probe.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. Paved roads shall otherwise be swept once per month.
- All vehicle speeds on unpaved roads shall be limited to 15 mph.
- Paving of all roadways, driveways, and sidewalks shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading, unless seeding or soil binders are used.
- All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
- All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
- Unpaved roads providing access to sites located 100 feet or more from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
- A publicly visible sign shall be posted with the name and telephone number of the person to contact at the City regarding dust complaints. That person shall respond and take corrective action within 48 hours. The air district's phone number shall also be visible to ensure compliance with applicable regulations.

Table 9 presents the maximum construction and operational health risks resulting from exposure to DPM and $PM_{2.5}$ for worker and day-care receptors within 1,000 feet of the project site with implementation of measures to reduce fugitive dust emissions during construction.

Table 9. Estimated Project-Level Health Risk Results with Measures Implemented

Receptor Type	Cancer Risk (cases per million)[a]	Hazard Index: Non-Cancer Chronic Risk[b]	Hazard Index: Non-Cancer Acute Risk[b]	Annual $PM_{2.5}$ Concentrations ($\mu g/m^3$)[b]
Worker (cancer risk MEI)[c]	9.8	0.10	0.01	0.31
Worker ($PM_{2.5}$ concentration MEI)	2.4	0.01	0.01	0.46
Day care (cancer risk MEI)	3.2	0.01	0.01	0.06
Day care ($PM_{2.5}$ concentration MEI)	2.7	0.01	0.01	0.07
BAAQMD significance threshold	**10**	**1.0**	**1.0**	**0.3**
Exceeds threshold?	***No***	***No***	***No***	***Yes***

Notes:

$\mu g/m^3$ = micrograms per cubic meter; $PM_{2.5}$ = particulate matter with an aerodynamic diameter of 2.5 or less

a. For worker receptors, the evaluation of cancer risk was modeled for an exposure duration of 5 years for construction and 20 years for operation. For day-care receptors, the evaluation of cancer risk was modeled for an exposure duration of 5 years for operation.

b. Non-cancer chronic hazard index and annual $PM_{2.5}$ concentrations were based solely on annual construction and operational emissions. Non-cancer acute hazard index concentrations were based on 1-hour operational emissions.

c. MEI = maximally exposed individual

Although the emissions modeling includes implementation of construction mitigation measures to reduce dust, as shown in Table 9, $PM_{2.5}$ emissions would result in concentrations that could nevertheless exceed the BAAQMD threshold. Without implementation of dust reduction measures, the maximum $PM_{2.5}$ concentration, as shown in Table 8, would result from construction activities; however, with the reduction measures implemented, construction concentrations would be reduced and the annual concentration during operations would become the maximum value.

The worker receptor MEI for operational $PM_{2.5}$ is at a location different from than for construction $PM_{2.5}$. The primary reason for the exceedance is the proximity of worker receptors to sources of $PM_{2.5}$ from Project-operations (i.e., on-road vehicle trips to and from the site). The worker receptors who would be exposed to the $PM_{2.5}$ concentration exceedance would be those at the adjacent site east of the Infinite 101 site. The distance between workers at the adjacent site and operations of the proposed project would be minimal and would not allow pollutant concentrations to disperse. As such, exceedance of the threshold would be largely due to the proximity of the receptors. No additional measures have been identified to avoid this exceedance.

Laboratory TACs

Project buildings could have wet laboratory uses that could, depending on the specific use, generate emissions at building vents. Although the exact emissions and TACs that could occur are unknown, examples of common TACs from laboratories include benzene, t-butyl alcohol, chloroform, ethanol, and formaldehyde. The precise use of the new laboratory space is unknown at this time; however, this assessment conservatively assumes that 50 percent of the new buildings could have laboratories with up to 816,000 sf of wet laboratory space. However, during the permitting phase of development, new stationary TAC sources would be required to comply

with BAAQMD rules and regulations, thereby ensuring compliance with best available control technology for toxics (if appropriate). The regulations could include emissions limits and/or emissions control technologies appropriate for the specific source. Operational emissions of laboratory-generated TACs are included in the health risk results shown in Table 8. Such emissions would not expose sensitive receptors to substantial pollutant concentrations.

Localized Carbon Monoxide Impacts

Continuous engine exhaust may elevate localized CO concentrations, resulting in hot spots. Receptors exposed to these CO hot spots may have a greater likelihood of developing adverse health effects. CO hot spots are typically observed at heavily congested intersections where a substantial number of gasoline-powered vehicles idle for prolonged durations throughout the day. The BAAQMD's screening criteria for CO hot spots is 44,000 vehicles per hour at affected intersections and 24,000 vehicles per hour at affected intersections where vertical or horizontal mixing is limited (i.e., a tunnel).

To use BAAQMD's quantitative screening criteria for evaluating CO hot spots, a project must be consistent with an applicable congestion management program (CMP). The project would not conflict with the applicable CMP because none of the study intersections are part of the CMP network. Thus, BAAQMD quantitative screening values are used to evaluate the project's potential to create CO hot spots.

Peak-hour traffic volume data for intersections in the project area, as provided by the traffic engineers and included in Appendix A, indicate that traffic volumes at all intersections would be below both the 44,000- and 24,000-vehicle-per-hour criteria. As a result, the additional vehicle trips associated with the project would not result in a localized violation of the CAAQS for CO.

Asbestos

Asbestos is a naturally occurring mineral that was previously used in building construction because of its heat resistance and strong insulating properties. Exposure to asbestos, however, has been shown to cause many disabling and fatal diseases, including lung cancer, mesothelioma, and pleural plaques. Demolition of the existing hardscape (i.e., asphalt and concrete) as well as buildings on the project site may expose workers and nearby receptors to asbestos if the material was used during construction of the original hardscape and buildings. However, the construction contractor would be required to comply with BAAQMD Regulation 11, Rule 2, Asbestos, Demolition, Renovation, and Manufacturing. The purpose of this rule is to control emissions of asbestos to the atmosphere during demolition and building renovation. Because the contractor would be required to control asbestos emissions according to BAAQMD regulations, receptors would not be exposed to substantial asbestos risks.

Odor Impacts

Offensive odors rarely cause physical harm, but they can be unpleasant and lead to considerable distress among the public. This distress often generates citizen complaints to local governments and air districts. According to CARB's 2005 *Air Quality and Land Use Handbook*, land uses associated with odor complaints typically include sewage treatment plants, landfills, recycling facilities, manufacturing plants, and agricultural operations (CARB 2005). CARB provides recommended screening distances for siting new receptors near existing odor sources. The project would not site any new sensitive receptors near an existing odor source because the

project would not include sensitive land uses (e.g., schools or residences). BAAQMD's Regulation 7 (Odorous Substances) establishes general odor limitations for odorous substances and specific emissions limitations for certain odorous compounds.

The proposed project would be constructed on land that has been designated Business Technology Park-High. The project, an R&D center, is a land use that is not typically associated with odor complaints, according to CARB's *Air Quality and Land Use Handbook*. During construction, diesel-powered equipment, exhaust from haul vehicles, and architectural coatings may generate temporary odors. During operations, emergency generator testing may also result in temporary odors. Both equipment- and generator-related odors would be temporary and would dissipate rapidly as a function of distance. Compared with existing odor sources in the vicinity of the project site, including the industrial land uses, odors from project operations would be similar to current conditions. The proposed project would comply, as applicable, with BAAQMD's Regulation 7, which limits emissions of odorous compounds from all non-exempt entities within BAAQMD's jurisdiction. Accordingly, construction and operation of the project is not expected to create objectionable odors that would affect a substantial number of people.

2.3.4 Cumulative Impacts on Air Quality

According to BAAQMD's CEQA Air Quality Guidelines, combined risk levels should be determined for all TAC sources within 1,000 feet of a project site and compared to BAAQMD's cumulative health risk thresholds (BAAQMD 2023a).

Existing TAC sources and the proposed project's construction emissions could contribute to a cumulative health risk for sensitive receptors near the project site. BAAQMD's inventory of stationary health risks was used to estimate the level of health risk from existing stationary sources in combination with the proposed project's contributions. Geographic information system (GIS) raster files provided by BAAQMD were used to estimate roadway and railway emissions (BAAQMD 2023b). The methods used to estimate project-related TAC emissions and health risks are described above under *Methodology*, with further details in Attachment B.

The results of the cumulative impact assessment are summarized in Table 10, which shows the health risk values for the proposed project's maximally affected receptors as well as the health risk contributions from existing sources. The results in Table 10 include implementation of measures to reduce dust emissions during construction, as described above, and the table is divided into separate sections for the two types of receptors as well as health risks and $PM_{2.5}$ concentrations. If one worker receptor, for example, experiences the highest cancer risk, the full modeling results for that receptor are presented in the table. However, if a different worker receptor experiences the highest $PM_{2.5}$ concentration, the full modeling results for that receptor are also presented. The sum of the proposed project's health risk values and existing background health risk values is compared to BAAQMD cumulative thresholds. Additional data on individual background contributions from existing sources are included in Attachment B.

Table 10. Cumulative Health Risks at Maximally Affected Receptors with Measures Implemented

Source	Cancer Risk (per million)	Non-Cancer Chronic Hazard Index	Non-Cancer Acute Hazard Index	Annual $PM_{2.5}$ Concentration ($\mu g/m^3$)
Maximally Affected Receptor for Worker Cancer Risk

BAAQMD cumulative thresholds	100	10	10	0.8
Exceeds thresholds?	*No*	*No*	*No*	***Yes***

Notes:
Totals may not add up because of rounding.
$\mu g/m^3$ = micrograms per cubic meter; $PM_{2.5}$ = particulate matter with an aerodynamic diameter of 2.5 or less

As shown in Table 10, existing stationary, roadway, and railway sources in combination with the proposed project would not exceed BAAQMD cumulative thresholds for cancer risk or the hazard index. The highest values for cancer risk and the hazard index are 51 in 1 million and 0.23, respectively, for the maximally affected receptor, well below the BAAQMD cumulative thresholds of 100 in 1 million for cancer risk and 10 for the hazard index. However, annual $PM_{2.5}$ concentrations would exceed BAAQMD's cumulative threshold of 0.8 $\mu g/m^3$ for both types of receptors. The highest value for existing plus project-related $PM_{2.5}$ concentrations would be approximately 9.91 $\mu g/m^3$ at the maximally affected worker receptor, although other analyzed maximally affected receptors (i.e., the maximally affected worker receptors for health risks) would also be exposed to an exceedance of BAAQMD's cumulative threshold of 0.8 $\mu g/m^3$. Accordingly, worker and day-care sensitive receptors would be exposed to substantial cumulative concentrations of $PM_{2.5}$.

The primary reason for the exceedances is the high level of ambient $PM_{2.5}$ emissions generated by two facilities within 1,000 feet of the project site, the Granite Rock Company at 1321 Lowrie Avenue and Central Concrete Supply at 1305 San Mateo Avenue, even though the maximally affected receptors would be at least 860 feet from the two facilities. The contribution from the project would be substantially less than the contribution from the existing stationary sources; however, as discussed for project-level impacts, the contribution of the project alone would exceed BAAQMD's project-level threshold. Therefore, the health risks associated with TACs emitted by the proposed project in combination with health risks associated with existing TAC sources would result in a cumulatively considerable local health risk at worker and day-care receptors near the project site.

Chapter 3
Greenhouse Gases and Climate Change

3.1 Regulatory Setting

GHG emissions are addressed by the plans, policies, laws, and regulations of various federal, State, regional, and local government agencies, as presented in greater detail below.

3.1.1 Federal

Several federal executive orders (EOs) related to GHG emissions and climate resiliency have been signed by President Biden. EO 13990, signed in January 2021, set a national goal to achieve a 50 to 52 percent reduction in economy-wide net GHG pollution from 2005 levels by 2030. In addition, EO 14057, signed in December 2021, requires federal agencies to develop strategic processes for achieving, among other things, carbon-free electricity by 2030 and 100 percent zero-emission vehicle acquisitions by 2035. President Biden has also signed two bills, the Infrastructure Investment and Jobs Act (2021) and Inflation Reduction Act (2022), that provide funding for infrastructure improvements to reduce GHG emissions and bolster resilience to climate change. Despite these actions, there is currently no federal law regarding GHG emissions or a legislatively mandated national GHG reduction target.

Vehicle Emissions Standards

NHTSA and EPA set CAFE standards that require substantial improvements in fuel economy and reductions in GHG emissions generated by passenger cars and light-duty trucks sold in the United States. On August 2, 2018, NHTSA and EPA proposed amendments to the current fuel efficiency standards for passenger cars and light-duty trucks as well as new standards for model years 2021 through 2026. Under the SAFE Vehicles Rule, current 2020 standards would be maintained through 2026.

On September 19, 2019, NHTSA and EPA issued a final action on the One National Program Rule, which is considered Part One of the SAFE Vehicles Rule and a precursor to the proposed fuel efficiency standards, withdrawing California's CAA preemption waiver to set state-specific standards.[14] EPA reinstated California's authority under the CAA to implement its own GHG emission standards and zero-emission vehicles sales mandate on March 9, 2022.[15]

[14] The One National Program Rule enables NHTSA and EPA to provide nationwide uniform fuel economy and GHG vehicle standards by 1) clarifying that federal law preempts state and local tailpipe GHG standards, 2) affirming NHTSA's statutory authority to set nationally applicable fuel economy standards, and 3) withdrawing California's CAA preemption waiver to set state-specific standards.

[15] California, 22 other states, the District of Columbia, and two cities filed suit against Part One of the SAFE Vehicles Rule on September 20, 2019 (*California et al. v. United States Department of Transportation et al.,* 1:19-cv-02826, U.S. District Court for the District of Columbia). On December 12, 2021, NHTSA repealed the SAFE Vehicles Rule, Part One.

On December 19, 2021, NHTSA finalized its vehicle efficiency standards rule to reach a projected industry-wide target of 40 miles per gallon by 2026, an approximately 25 percent increase over the prior SAFE rule.[16]

3.1.2 State

Statewide GHG Emission Targets and the Climate Change Scoping Plan

The State has adopted legislation to address various aspects of climate change and GHG emissions mitigation. Much of this legislation establishes a broad framework for the State's long-term GHG reduction and climate change adaptation program. Senate Bill (SB) 32 requires the State to reduce emissions to 40 percent below the 1990 level by 2030. AB 1279 requires California to achieve net-zero GHG emissions (i.e., reach a balance between the GHGs emitted and removed from the atmosphere) no later than 2045 and maintain net-negative GHG emissions from then on. It also mandates an 85 percent reduction in statewide anthropogenic GHG emissions (from 1990 levels) by 2045. SB 1203 requires State agencies to achieve net-zero GHG emissions resulting from their operations no later than 2035, or as soon thereafter as feasible.

The State's plan to reach the aforementioned targets is presented in periodic scoping plans. CARB adopted the 2017 Climate Change Scoping Plan (2017 Scoping Plan) in November of that year to meet the GHG reduction requirement set forth in SB 32 (CARB 2017a). It proposed continuing the major aspects of the previous scoping plan, including cap-and-trade regulation; low-carbon fuel standards; more efficient cars and trucks, as well as freight operations; and the Renewables Portfolio Standard (RPS). Reductions in methane (CH_4) emissions from agricultural and other wastes were also proposed. In December 2022, CARB adopted its Final 2022 Scoping Plan Update for Achieving Carbon Neutrality (2022 Scoping Plan), which identifies a technologically feasible, cost-effective, equity-focused path for achieving carbon neutrality by 2045, pursuant to AB 1279 (CARB 2022a). The plan also assesses the State's progress toward meeting the GHG emissions reduction goal called for in SB 32.

The State has also passed more detailed legislation to address GHG emissions associated with industrial sources, transportation, water conservation, building energy, solid waste, electricity generation, and energy consumption, as summarized below.

Legislation Addressing Electricity Generation

The State passed legislation that requires increasing use of renewables to produce electricity for consumers. California utilities are required to generate 33 percent of their electricity from renewables by 2020 (SB X1-2 of 2011), 52 percent by 2027 (California RPS Program [SB 100 of 2018]), 60 percent by 2030 (also SB 100 of 2018), and 100 percent by 2045 (also SB 100 of 2018). SB 1020 also requires State agencies to rely on 100 percent renewable energy and zero-carbon resources for their own facilities by 2030.

[16] NTHSA and EPA published final rules to amend and establish national carbon dioxide (CO_2) and fuel economy standards on April 30, 2020 (Part Two of the SAFE Vehicles Rule) (85 *Federal Register* 24174). The revised rule changes the national fuel economy standards for light-duty vehicles, decreasing from 46.7 to 40.4 miles per gallon in future years. California, 22 other states, the District of Columbia filed a petition for review of the final rule on May 27, 2020.

California Energy Efficiency Standards for Residential and Nonresidential Buildings—Green Building Code, Title 24 Update

The energy consumption of new residential and non-residential buildings in California is regulated by CCR Title 24, Part 6, Building Energy Efficiency Standards (California Energy Code), and Part 11, California Green Building Standards Code (CALGreen). The California Energy Commission (CEC) updates the California Energy Code every 3 years with more stringent design requirements to reduce energy consumption, resulting in lower GHG emissions.

In August 2021, the CEC adopted the 2022 Building Energy Efficiency Standards, which took effect on January 1, 2023 (CEC 2021). The 2022 non-residential standards establish combined solar PV and battery standards for select businesses, establish new efficiency standards for commercial greenhouses, and improve efficiency standards for the building envelope, internal systems, and grid integration equipment.

Fuel Efficiency Standards for Light-Duty Passenger Vehicles

AB 1493 of 2002 (Pavley I) required CARB to develop and implement regulations to reduce automobile and light-truck GHG emissions. These stricter emissions standards began with the 2009 model year. Additional strengthening of the Pavley standards (referred to previously as *Pavley II* and now referred to as the *Advanced Clean Cars* measure) was adopted for vehicle model years 2017–2025 in 2012. Together, the two standards were expected to increase average fuel economy to roughly 54.5 miles per gallon by 2025.

In August 2022, CARB board members voted to approve the Advanced Clean Cars II proposal, which should dramatically reduce emissions from passenger cars in model years 2026 through 2035. This will require an increasing proportion of new vehicles to be zero-emission vehicles, with the goal being to have 100 percent of new vehicles sold by 2035 to be zero-emission vehicles (CARB 2022f).[17]

CARB also adopted the Advanced Clean Truck Regulation to accelerate a large-scale transition to zero-emission medium- and heavy-duty vehicles. The regulation requires zero-emission medium- and heavy-duty vehicles to be an increasing percentage of total annual vehicle sales in California between 2024 and 2035. By 2035, zero-emission truck/chassis sales will need to be 55 percent of Class 2b–3 truck sales, 75 percent of Class 4–8 straight truck sales, and 40 percent of truck-tractor sales. By 2045, every new medium- and heavy-duty truck sold in California will need to be a zero-emission truck. Large employers, including retailers, manufacturers, brokers, and others, are required to report information about shipments and shuttle services to ensure they purchase available zero-emission trucks for their fleets.

Low-Carbon Fuel Standard

CARB adopted the low-carbon fuel standard (LCFS) in 2007 to reduce the carbon intensity of California's transportation fuels. The LCFS applies to fuels used by on-road motor vehicles and off-road vehicles, including construction equipment.

[17] California Air Resources Board. 2022f. *Proposed Advanced Clean Cars II Regulations: All New Passenger Vehicles Sold in California to Be Zero Emissions by 2035*. Available: https://ww2.arb.ca.gov/our-work/programs/advanced-clean-cars-program/advanced-clean-cars-ii. Accessed: January 30, 2023.

Note that the majority of the emissions benefits due to the LCFS come from the production cycle (i.e., upstream emissions) of the fuel rather than the combustion cycle (i.e., tailpipe). As a result, LCFS-related reductions are not included in this analysis of combustion-related emissions of carbon dioxide (CO_2).

Regional Land Use and Transportation Planning Requirements

In addition to regulations that address tailpipe emissions and transportation fuels, the State Legislature has passed regulations to address the number of miles driven in light-duty passenger vehicles. Since the passage of SB 375 in 2008, CARB has required metropolitan planning organizations (MPOs) to adopt plans that show reductions in GHG emissions from passenger cars and light trucks in their respective regions between 2020 and 2035 (CARB 2018). If regions develop integrated land use, housing, and transportation plans that meet the SB 375 targets, new projects in the regions can be relieved of certain CEQA review requirements.

CEQA Requirements to Assess Vehicle Miles Traveled

Under SB 743 of 2013, the Governor's Office of Planning and Research (OPR) proposed changes to the State CEQA Guidelines to require CEQA transportation analyses to move away from focusing on vehicle delay and level of service (LOS) and instead focus on VMT. The intent behind SB 743 is to integrate and balance congestion management, infill development, active transportation with GHG emissions reductions. These changes were adopted by the California Natural Resources Agency, resulting in the addition of Section 15064.3. In support of these changes, OPR published its *Technical Advisory on Evaluating Transportation Impacts in CEQA*, which recommends that the transportation impact of a project be based on whether a project would generate a level of VMT per capita (or VMT per employee) that would be 15 percent lower than that of existing development in the region. OPR's technical advisory explains that this criterion is consistent with Section 21099 of the California Public Resources Code, which states that criteria for determining significance must "promote the reduction in greenhouse gas emissions" (OPR 2017). This metric replaces the use of delay and LOS to measure transportation-related impacts.

Short-Lived Climate Pollutant Strategy

In 2014, SB 605 directed CARB, in coordination with other State agencies and local air districts, to develop the comprehensive Short-Lived Climate Pollutant (SLCP) Reduction Strategy. In 2016, SB 1383 directed CARB to approve and implement the strategy to achieve the following reductions in SLCPs:

- 40 percent reduction in CH_4 relative to 2013 levels by 2030,
- 40 percent reduction in hydrofluorocarbon (HFC) gases relative to 2013 levels by 2030, and
- 50 percent reduction in anthropogenic black carbon relative to 2013 levels by 2030.

SB 1383 also establishes the following targets for reducing organic waste in landfills, as well as CH_4 emissions from dairy and livestock operations, as follows:

- 50 percent reduction in organic waste disposal relative to 2014 levels by 2020,
- 75 percent reduction in organic waste disposal relative to 2014 levels by 2025, and
- 40 percent reduction in CH_4 emissions from livestock and dairy manure management operations relative to the livestock and dairy sectors' 2013 levels by 2030.

CARB and the California Department of Resources Recycling and Recovery (CalRecycle) have developed regulations to achieve the organic waste reduction goals under SB 1383. In January and June 2019, CalRecycle proposed new and amended regulations to CCR Title 14 and Title 27. Among other things, the regulations set forth minimum standards for organic waste collection, hauling, and composting. The final regulations took effect on January 1, 2022.

CARB adopted the SLCP Reduction Strategy in March 2017 as a framework for achieving the CH_4, HFC, and anthropogenic black carbon reduction targets set by SB 1383. The SLCP Reduction Strategy includes 10 measures to reduce SLCPs, which fit within a wide range of ongoing planning efforts throughout the state, including CARB's and CalRecycle's proposed rulemaking on organic waste diversion.

3.1.3 Local

Metropolitan Transportation Commission

Metropolitan Transportation Commission (MTC) is the MPO for the nine counties that make up the Bay Area and the SFBAAB, which includes South San Francisco. The first per capita GHG emissions reduction targets for the SFBAAB were 7 percent by 2020 and 15 percent by 2035 from 2005 levels. However, the per capita GHG emissions reductions targets for the SFBAAB have been revised to 10 percent by 2020 and 19 percent by 2035 (CARB 2018). MTC adopted a Sustainable Communities Strategy (SCS) as part of its Regional Transportation Plan (RTP) for the SFBAAB in 2021, known as Plan Bay Area 2050 (MTC; ABAG 2021). Plan Bay Area 2050 includes transportation and environmental strategies that support active and shared modes of travel combined with a transit-supportive land use pattern that places housing near transportation centers. Implementation of these strategies are forecast to lower the share of Bay Area residents who drive to work alone from 50 percent in 2015 to 33 percent in 2050. This would lead to a 20 percent decrease in GHG emissions compared to 2005, thereby meeting the State mandate of a 19 percent decrease in GHG emissions by 2050.

Bay Area Air Quality Management District

BAAQMD is the primary agency responsible for addressing air quality concerns in the San Francisco Bay Area, including San Mateo County. Its role is discussed further in Chapter 2, *Air Quality*. BAAQMD also recommends methods for analyzing project-related GHGs in CEQA analyses as well as multiple GHG reduction measures for land use development projects.

In April 2023, BAAQMD adopted the 2022 CEQA Air Quality Guidelines, which include new climate impact thresholds that address the statewide GHG target established by SB 32 and the eventual goal of carbon neutrality by 2045 (e.g., EO B-55-18) (BAAQMD 2023a). The guidelines also look at how project and plan-level CEQA analyses should evaluate the significance of climate impacts, based on evolving case law. The BAAQMD 2022 CEQA Air Quality Guidelines update the CEQA GHG thresholds from the 2017 CEQA Air Quality Guidelines, which were not consistent with the statewide GHG target established by SB 32. In summary, the updated thresholds emphasize (1) avoiding wasteful electricity usage and developing fossil fuel infrastructure in new buildings that will be in place for decades and thus conflict with carbon-neutrality goals by 2045; (2) complying with the CALGreen Tier 2 electric-vehicle (EV) requirements and per-capita reductions in VMT, consistent with SB 743; and (3) ensuring consistency with a qualified GHG emissions reduction strategy (also known as a Climate Action Plan [CAP]). BAAQMD also provided

an appendix to the 2022 CEQA Air Quality Guidelines, the *Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans* (BAAQMD Justification Report), which explains why its thresholds and approach to analysis for project-level impacts under CEQA are supported by substantial evidence.

City of South San Francisco Climate Action Plan

The City CAP was adopted in 2022 to reduce community and municipal GHG emissions. The CAP is a roadmap that outlines a path for the City to use to achieve its community-wide per-service-population GHG emissions reduction goal of 40 percent below 1990 levels by 2030, 80 percent below 1990 levels by 2040, and carbon neutral by 2045 (City of South San Francisco 2022b). The CAP features 62 recommended GHG emissions reduction measures within seven sectors of community and municipal operations: clean energy, built environment (new and existing), transportation and land use, solid waste, water and wastewater, carbon sequestration and natural systems, and city leadership).

Shape South San Francisco 2040 General Plan

The following GHG-related goals from the *Shape South San Francisco 2040 General Plan* (General Plan) (City of South San Francisco 2022a) are applicable to the proposed project:

Goal CP-1: A carbon neutral community by 2045.

Goal CP-2: A resilient and fossil fuel free energy system.

Goal CP-3: Green buildings are the standard in South San Francisco for new construction and major renovations.

Goal CP-6: The City continues to divert organics from landfill in accordance with State targets.

Goal CR-1: The City proactively advances community resilience and is prepared for all hazards, including climate disruption.

Goal CR-2: A resilient community that protects existing and future development and people from sea level rise and flooding.

Goal ES-1: The City supports nature in South San Francisco to encourage healthy ecosystems, improve air and water quality, improve public health, and adapt to a changing climate.

Goal ES-5: Landscape design standards for new development enhance habitat quality, reduce water use, and support a diverse ecosystem.

Goal MOB-4: South San Francisco's land use and transportation actions reduce vehicle miles traveled (VMT) and greenhouse gas emissions.

Goal PE-4: Infrastructure investments support job access, job growth, and address climate hazards impacting South San Francisco businesses.

Goal SA-27: There are safe, comfortable, and accessible pedestrian and bicycle facilities that connect people to Downtown, El Camino, and East of 101.

Lindenville Specific Plan

The following greenhouse gas-related goals from the *Lindenville Specific Plan* are applicable to the proposed project (City of South San Francisco 2023):

Goal DD-1: The Mixed Use Neighborhood, South Spruce Avenue Corridor and South Linden Avenue Arts and Makers District have a network of safe, walkable streets and pathways to access key destinations and open spaces.

Goal DD-3: New developments in Lindenville provide healthy places for people to live and work by mitigating potential noise, air quality, and odor impacts from industrial land uses, U.S. 101 and Interstate 380, and aircraft.

Goal MOB-1: Multi-modal travel options are readily available and offer equal levels of comfort.

Goal MOB-2: There are high-quality connections to Downtown, El Camino, East of 101, and regional destinations for all modes.

Goal MOB-3: Lindenville's transportation offerings and streetscape design support a vibrant mixed-use district.

Goal I-1: The development, management, and maintenance of infrastructure in Lindenville is driven by the ability to optimize the efficiency and effectiveness of each system, and to achieve the performance required to meet the City's sustainability goals.

Goal I-2: Lindenville invests in sustainable and resilient infrastructure and practices to illustrate leadership.

Goal I-5: The City increases reliance on local energy systems to ensure adequate utility provisioning for new potential users.

Transportation Demand Management Ordinance

The City's TDM ordinance requires projects to incorporate measures to reduce the number of trips generated and achieve goals related to the use of alternative modes. According to the ordinance, projects that are categorized as Tier 4 projects (i.e., office and R&D uses with at least 400,000 sf of gross floor area) must implement trip reduction measures with a total worth of at least 50 points, based on the City Planning Department's table of measures and point values; implement annual monitoring to ensure a maximum of 50 percent of employees commuting while driving alone; and implement annual monitoring of a site-specific trip cap.[18] The ordinance also requires an annual employee mode-share survey at the project site to ensure that desired transportation mode shares are achieved. Where the mode share target is not achieved, City officials may require program modifications to increase alternative mode share or impose administrative penalties.

[18] South San Francisco, California, Municipal Code § 20.400.

3.2 Existing Setting

3.2.1 Physical Scientific Basis of GHG and Climate Change

Certain gases in the Earth's atmosphere, classified as GHGs, play a critical role in determining the Earth's surface temperature. Solar radiation enters the atmosphere from space. A portion of the radiation is absorbed by the Earth's surface, and a smaller portion of this radiation is reflected toward space. The absorbed radiation is then emitted from Earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. The Earth has a much lower temperature than the sun; therefore, the Earth emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the *greenhouse effect*, is responsible for maintaining a habitable climate on Earth.

Prominent GHGs that contribute to the greenhouse effect are CO_2, CH_4, nitrous oxide (N_2O), HFCs, perfluorocarbons (PFCs), and sulfur hexafluoride. These six gases are also identified as GHGs in Section 15364.5 of the State CEQA Guidelines. Human-caused emissions of these GHGs in excess of natural ambient concentrations are found to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the Earth's climate, known as *global climate change* or *global warming*. It is "extremely likely" that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in GHG concentrations and other anthropogenic forcing (Intergovernmental Panel on Climate Change [IPCC] 2014).

Since the Industrial Revolution (1760–1840), increases in fossil-fuel combustion and deforestation have exponentially increased concentrations of GHGs in the atmosphere. Rising atmospheric concentrations of GHGs in excess of natural levels enhance the greenhouse effect, which contributes to global warming of the Earth's lower atmosphere. This warming induces large-scale changes in ocean circulation patterns, precipitation patterns, global ice cover, biological distributions, and other changes to the Earth's system, which are collectively referred to as *climate change*.

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas most pollutants with localized air quality effects have relatively short atmospheric lifetimes (approximately 1 day), GHGs have long atmospheric lifetimes (1 year to several thousand years). GHGs persist in the atmosphere long enough to be dispersed around the globe. Although the lifetime of any GHG molecule depends on multiple variables and cannot be determined with any certainty, it is understood that more CO_2 is emitted into the atmosphere than is removed from the atmosphere (i.e., *sequestered*) by ocean uptake, vegetation, and other forms of sequestration. Of the total annual human-caused CO_2 emissions, approximately 55 percent are estimated to be sequestered through ocean and land uptake every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remain stored in the atmosphere (IPCC 2013).

No single project alone would measurably contribute to an incremental change in the global average temperature or global or local climates or microclimates. From the standpoint of CEQA, GHG impacts relative to global climate change are inherently cumulative.

3.2.2 Principal Greenhouse Gases

The principle anthropogenic (human-made) GHGs are CO_2, CH_4, N_2O, and fluorinated compounds, including sulfur hexafluoride, HFCs, and PFCs. The primary GHGs that would be emitted by project-related construction and operations are CO_2, CH_4, N_2O, and HFCs. The principal characteristics of these pollutants are discussed below.

- **Carbon Dioxide (CO_2)** enters the atmosphere through the burning of fossil fuels (e.g., oil, natural gas, coal); it also comes from solid waste, trees and wood products, and respiration. CO_2 also results from chemical reactions (e.g., those associated with cement manufacturing). CO_2 is sequestered when it is absorbed by plants as part of the biological carbon cycle.
- **Methane (CH_4)** is emitted during the production and transport of coal, natural gas, and oil. CH_4 also results from livestock emanations, agricultural practices, and the decay of organic waste in municipal solid-waste landfills.
- **Nitrous Oxide (N_2O)** is emitted during agricultural and industrial activities as well as the combustion of fossil fuels and solid waste.
- **Hydrofluorocarbons (HFCs)** are synthetic gases that are used primary for refrigeration, air-conditioning, and other purposes; they replace ozone-depleting substances**.**

Methods have been set forth to describe emissions of GHGs in terms of a single gas to simplify reporting and analysis. The most commonly accepted method for comparing GHG emissions is the global warming potential (GWP) methodology defined by the IPCC (IPCC 2007). IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of carbon dioxide equivalent (CO_2e), which compares the gas in question to that of the same mass of CO_2 (which has a GWP of 1, by definition). The GWP values used in this report are based on the IPCC Fourth Assessment Report and the United Nations Framework Convention on Climate Change reporting guidelines, as defined in Table 11 (IPCC 2007). The Fourth Assessment Report GWP values are consistent with those used in CARB's 2021 California GHG inventory (CARB 2022d) and the *2022 Scoping Plan for Achieving Carbon Neutrality* (CARB 2022a).

Table 11. Lifetimes, Global Warming Potentials, and Atmospheric Abundances of Select GHGs

Gas	GWP (100 years)	Lifetime (years)[a]
CO_2	1	50–200
CH_4	25	9–15
N_2O	298	121
HFCs	124 -14,800	1-270

Sources: IPCC 2007; CARB 2022d; CARB 2020.
[a.] Defined as the half-life of the gas.
CO_2 = carbon dioxide; CH_4 = methane; GHG = greenhouse gas; GWP = global warming potential; HFCs = hydrofluorocarbons; N_2O = nitrous oxide.

CARB recognizes the importance of reducing emissions of SLCPs, as described in the *Regulatory Setting*, to achieve the State's overall climate-change goals. SLCPs have atmospheric lifetimes on the order of a few days to a few decades, and their relative climate-forcing impacts, when measured in terms of how they heat the atmosphere, can be tens, hundreds, or even thousands of times greater than those of CO_2 (CARB 2017b). Given their short-term lifespan and warming

impact, SLCPs are measured in terms of CO_2e, using a 20-year time period. The use of GWPs with a time horizon of 20 years captures the importance of SLCPs and gives a better perspective as to the speed at which emission controls will affect the atmosphere relative to CO_2 emission controls. The SLCP Reduction Strategy, as discussed in the *Regulatory Setting*, addresses CH_4, HFC gases, and anthropogenic black carbon. CH_4 has lifetime of 12 years and a 20-year GWP of 72. HFC gases have lifetimes of 1.4 to 52 years and a 20-year GWP of 437 to 6,350. Anthropogenic black carbon has a lifetime of a few days to weeks and a 20-year GWP of 3,200 (CARB 2017b).

3.2.3 Greenhouse Gas Inventory

A GHG inventory is a quantification of all GHG emissions within a selected physical and/or economic boundary. GHG inventories can be performed on a large scale (e.g., for global and national entities) or on a small scale (e.g., for a particular building or person). Although many emissions are difficult to evaluate, several agencies have developed tools to quantify emissions from certain sources.

As discussed previously, GHG emissions are attributable in large part to human activities. The total GHG inventory for California in 2021 was 381.3 million metric tons of carbon dioxide equivalent (CARB 2022b). Table 12 summarizes the GHG inventory for California.

Table 12. Statewide Greenhouse Gas Emissions by Economic Sector for 2021[a]

Sector	Percent
Transportation	39
Industrial	22
Electricity generation (in state)	11
Electricity generation (imports)	5
Agriculture	8
Residential	8
Commercial	6

Sources: CARB 2022a.
[a.] The total emissions inventory for California in 2021 was 381.3 million metric tons of carbon dioxide equivalent.

According to the breakdown shown in Table 12, the commercial sector in California accounts for approximately 6 percent of the state's GHG emissions.

3.3 Impacts and Mitigation Measures

3.3.1 Methodology

Construction Activities

Construction GHG emissions were quantified using the same methods described above for the analysis of criteria pollutant emissions. Electricity would be consumed by construction equipment and mobile offices, amounting to 2,392 megawatt hours (MWh) for each year of construction, based on input from the project sponsor (Metz pers. comm.). Peninsula Clean Energy provides

electrical service to the project site. Since 2021, Peninsula Clean Energy has provided 100 percent carbon-free electricity to its customers; as such, there would be no indirect GHG emissions from the use of electricity during construction.

Operations

Operational GHG emissions were generally quantified using the same methods described above for the analysis of criteria pollutant emissions. However, further assumptions were necessary to evaluate potential emissions associated with indirect electricity consumption, water consumption, and solid waste generation. Assumptions related to operational activity were based on project-specific information provided by the project sponsor. Additional operational assumptions unique to the analysis of GHG emissions are provided below.

Energy

Based on input from the project sponsor, the project would consume approximately 58,885,593 kWh of electricity each year (Metz pers. comm.). This estimate includes electricity usage associated with project buildings and the enclosed parking garage.

Water and Wastewater

Water consumption requires electricity to supply, pre-treat, and distribute the water prior to being consumed and treat wastewater subsequent to being consumed. The electricity consumed for these water processes results in indirect GHG emissions. Based on information from the project sponsor, approximately 9,521,808 gallons of water per year would be used indoors and 1,952,414 gallons of water per year would be used outdoors (Metz pers. comm.).

Waste

Based on input from the project sponsor, the project would generate approximately 1,352 tons of landfilled waste per year, resulting in fugitive GHG emissions during decomposition of the waste once it is deposited in a landfill (Metz pers. comm.).

3.3.2 Thresholds of Significance

State CEQA Guidelines Section 15064 and relevant portions of Appendix G recommend that a lead agency consider a project's consistency with relevant adopted plans and discuss any inconsistencies with applicable regional plans, including plans to reduce GHG emissions. Under Appendix G of the State CEQA Guidelines, implementation of a project would result in a cumulatively considerable contribution to climate change if it would:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment or
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

The following discussion describes the relevant GHG thresholds that would be applicable to the project.

Compliance with BAAQMD GHG Thresholds for Land Use Projects

Construction

BAAQMD's CEQA Air Quality Guidelines do not identify a GHG emission threshold for construction-related emissions. Instead, the CEQA Air Quality Guidelines recommend that GHG emissions from construction be quantified and disclosed and that a determination regarding the significance of the GHG emissions be made with respect to whether a project would be consistent with emission reduction goals. BAAQMD further recommends incorporation of best management practices to reduce GHG emissions during construction, as feasible and applicable.

Operation

According to the CEQA Air Quality Guidelines, BAAQMD recommends that land use projects use the approach endorsed by the California Supreme Court in *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) (62 Cal. 4th 204), which specifies that a project must evaluate its effect on California's efforts to meet the State's long-term climate goals. As the California Supreme Court held in that case, a project that meets the State's long-term climate goals can be found to have a less-than-significant impact on climate change under CEQA. Specifically, if a project contributes a "fair share"[19] toward what will be required to achieve long-term climate goals, then a reviewing agency can find that the impact will not be significant because the project will help to solve the problem of global climate change (62 Cal. 4th 220–223). Applying this approach, BAAQMD has found that a new land use development project being built today needs to incorporate the design elements shown in Table 13 to do its fair share toward meeting the SB 32 target for 2030 and the goal of carbon neutrality by 2045. If a project incorporates the design elements listed in Table 13 (Threshold Option A) or is consistent with a local GHG reduction strategy under Section 15183.5 of the State CEQA Guidelines (Threshold Option B), then it will contribute a portion to what will be necessary to achieve California's long-term climate goals (i.e., its fair share) and will not result in a cumulatively considerable contribution to global climate change. If a project does not incorporate the design elements and is not consistent with a local GHG reduction strategy, then it should be found to be a project with a significant climate impact because it will hinder the State's efforts to address climate change.

The City's CAP does not meet the criteria for tiering under State CEQA Guidelines Section 15183.5(b); therefore, Threshold Option B cannot be used. Thus, this analysis evaluates consistency with BAAQMD's threshold for land use projects by comparing this project to Threshold Option A, as stated in Table 13.

[19] BAAQMD defines "fair share" as the design elements that need to be incorporated into a project to lay the foundation for achieving carbon neutrality by 2045. These design elements are elements that the project has influence or control over. For example, becoming carbon neutral by 2045 will require California's electrical power generators to shift to 100 percent carbon-free energy resources, which is not something that can be controlled through the design of new land use projects and would not be a part of a project's fair share. Other sources that would not be part of the "fair share" are vehicle fleet mix and indirect off-site emissions (e.g., CH_4 emissions from wastewater or solid waste).

Table 13. BAAQMD GHG Thresholds for Land Use Projects

Thresholds for Land Use Projects (Must Include A or B)
A. Projects must include, at a minimum, the following project design elements: 1. Buildings a. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development). b. The project will not result in any wasteful, inefficient, or unnecessary electrical usage, as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines. 2. Transportation a. Achieve compliance with EV requirements in the most recently adopted version of CALGreen Tier 2. b. Achieve a reduction in project-generated VMT to a level below the regional average, consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent), or meet a locally adopted SB 743 VMT target, reflecting the recommendations provided in OPR's Technical Advisory on Evaluating Transportation Impacts in CEQA: i. Residential projects: 15 percent below existing VMT per capita, ii. Office projects: 15 percent below existing VMT per employee, and iii. Retail projects: no net increase in existing VMT.
B. Projects must be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

Source: Bay Area Air Quality Management District 2023.

Compliance with Regulatory Programs

This analysis also discusses the project's compliance with regulatory programs designed to reduce GHG emissions from particular activities (e.g., transportation, water usage). To the extent that the project's design features comply with or exceed the regulations adopted by CARB or other State agencies, the City could rely on this compliance to show that the proposed project would reduce emissions consistent with statewide legislation. This includes an analysis of the project's consistency with the City's CAP (City of South San Francisco 2022b). The CAP is not a qualified GHG reduction strategy that can be used for tiering purposes and, therefore, is not used to determine the significance of project emissions. However, this analysis evaluates the project's consistency with the CAP for informational purposes.

Stationary-Source Threshold

BAAQMD recommends a threshold of 10,000 metric tons (MT) CO_2e for stationary sources (BAAQMD 2023a). This threshold is intended to capture 95 percent of GHG emissions from new permit applications. It would do so by capturing only large, significant projects; permit applications with emissions above the threshold of 10,000 $MTCO_2e$ account for less than 10 percent of stationary-source permit applications (BAAQMD 2023a). The emergency generators included as part of the proposed project would be permitted sources, and as such, BAAQMD's threshold of 10,000 $MTCO_2e$ is appropriate for analyzing the significance of emissions from the generators.

3.3.3 Impact Analysis

Emissions of Greenhouse Gases Generated during Construction and Operation that May Have a Significant Impact on the Environment

Construction Emissions

Construction activities would generate emissions of CO_2, CH_4, N_2O and HFCs from mobile and stationary construction equipment as well as employees' vehicles and haul trucks. Based on available information provided by the project sponsor, construction would begin with a demolition phase, with construction activities occurring on the entirety of the project site. Then, construction of the south portion of the project would begin, with eight main phases. Immediately following completion of the south portion of the project, construction of the north portion would begin, with the same phasing as that of the south portion. Construction of the project would begin in January 2026 and be completed by May 2031, lasting approximately 65 months. Construction modeling outputs and detailed assumptions are included in Appendix A. The estimated construction emissions for the project are summarized by year in Table 14, below.

Table 14. Estimated GHG Emissions from Project Construction (metric tons per year)[a]

Construction Year	CO_2	CH_4	N_2O	HFCs	CO_2e
2026 (I131S)	1,808	< 1	< 1	< 1	1,860
2027 (I131S)	1,743	< 1	< 1	< 1	1,763
2028 (I131S & N)	1,316	< 1	< 1	< 1	1,342
2029 (I131N)	1,605	< 1	< 1	< 1	1,629
2030 (I131N)	1,729	< 1	< 1	< 1	1,746
2031 (I131N)	295	< 1	< 1	< 1	299
Total	**8,497**	**< 1**	**< 1**	**< 1**	**8,639**

CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; HFC = hydrofluorocarbon; CO_2e = carbon dioxide equivalent, including the relative warming capacity (i.e., GWP) of each GHG

As shown in Table 14, it is estimated that construction of the project would generate approximately 8,639 $MTCO_2e$ over the entire construction period. The emissions generated during construction of the project would result primarily from the use of diesel-powered construction equipment (e.g., excavators) and on-road vehicles (e.g., haul trucks, workers' vehicles). Construction emissions would cease once construction of the project is complete and, therefore, are considered short term. Furthermore, the project sponsor would implement best management practices, as outlined in Section 6.3 of the CEQA Air Quality Guidelines (BAAQMD 2023a) and listed below.

- Use zero-emission and hybrid-powered equipment to the greatest extent possible, particularly if emissions are occurring near sensitive receptors or within a Bay Area Air Quality Management District–designated Community Air Risk Evaluation (CARE) area or Assembly Bill 617 community.[20]
- Require all diesel-fueled off-road construction equipment to be equipped with U.S. Environmental Protection Agency Tier 4 Final engines or better.

[20] The Project site is not located within a CARE or AB 617 community.

- Require all on-road heavy-duty trucks to be zero emissions or meet the most stringent model-year emissions standard where feasible.
- Minimize idling time, either by shutting equipment off when not in use or reducing the time of idling to no more than 2 minutes. Provide clear signage that posts this requirement for workers at the entrances to the site.
- Use California Air Resources Board–approved renewable diesel fuel in off-road construction equipment and on-road trucks where feasible.
- Use U.S. Environmental Protection Agency SmartWay-certified trucks for deliveries and equipment transport where feasible.
- Require all construction equipment to be maintained and properly tuned in accordance with the manufacturer's specifications.
- Where grid power is available, prohibit portable diesel engines and provide electrical hook-ups for electric tools, such as saws, drills, and compressors; use electric tools whenever feasible.
- Where grid power is not available, use alternative fuels, such as propane or solar electrical power, for generators at construction sites whenever feasible.
- Encourage and provide carpools, shuttle vans, transit passes, and/or secure bicycle parking to construction workers and offer meal options on-site or shuttles to nearby meal destinations for construction employees.
- Reduce electricity use in the construction office by using LED bulbs, powering off computers every day, and replacing heating and cooling units with more efficient ones.
- Minimize energy used during site preparation by deconstructing existing structures to the greatest extent feasible.
- Recycle or salvage nonhazardous construction and demolition debris, with a goal of recycling at least 15 percent more, by weight, than the diversion requirement in Title 24.
- Use locally sourced or recycled materials for construction (goal of at least 20 percent, based on cost of building materials and volume of roadway, parking lot, sidewalk, and curb materials).
- Use low-carbon concrete, minimize the amount of concrete used, and produce concrete on-site where feasible if it is more efficient than transporting ready-mix.
- Develop a plan to efficiently use water for adequate dust control because substantial amounts of energy can be consumed by pumping water.
- Include all requirements in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply compliant on- or off-road construction equipment prior to any ground-disturbing and construction activities.

The City Municipal Code promotes redirection of recyclable materials generated during construction away from landfills (Chapter 15.60) and requires all project applicants to submit a recycling management plan to estimate the volume of debris generated during construction and the estimated amount of debris that would be sent to the landfill. Furthermore, Section 15.62 of the City Municipal Code requires the City to encourage contractors to make every structure planned for demolition available for deconstruction, salvage, and recovery prior to demolition and recover the maximum feasible amount of salvageable designated recyclable and reusable materials prior to demolition.

Operational Emissions

Area, energy, water, and waste emissions were estimated using CalEEMod. Area sources include gas-powered landscaping equipment. Energy sources are typically associated with the combustion of natural gas as well as the use of electricity. Water consumption results in indirect GHG emissions from the conveyance and treatment of water, and waste generation results in fugitive CH_4 and N_2O emissions from decomposition of organic matter. Net emissions associated with the project were estimated by subtracting emissions associated with existing land uses from emissions associated with proposed land uses.

Table 15 shows existing land use emissions, proposed project emissions, and the difference between the two, which is the net impact of the proposed project. The area-source emissions in Table 15 assume implementation of Measure AQ-3, Require Use of Zero-Emission Landscape Equipment, which was proposed to reduce ROG emissions, as explained in Section 2.3.3. This would also reduce GHG emissions. The operational modeling outputs and detailed assumptions are included in Appendix A.

Table 15. Annual Net Operational Greenhouse Gas Emissions (metric tons per year)

Source	CO_2	CH_4	N_2O	HFCs	CO_2e
Existing Land Uses					
Area Sources	—	—	—		—
Energy Use[a]	—	—	—		—
Mobile Sources	723	<1	<1	< 1	734
Solid Waste Generation	—	1	—	—	35
Water Use	—	1	<1	—	31
Total Existing On-site Operational Emissions (per year)	*723*	*2*	*<1*	*< 1*	*800*
Proposed Project					
Area Sources[a]	—	—	—	< 1	14
Energy Use[b]	—	—	—	—	—
Mobile Sources	11,823	< 1	< 1	< 1	11,953
Stationary Sources	919	< 1	< 1	—	922
Solid Waste Generation	—	12	—	—	301
Water Use	—	< 1	< 1	—	10
Vegetation	-56	—	—	—	-56
Total Project On-Site Operational Emissions (per year)	*12,687*	*13*	*< 1*	*< 1*	*13,145*
Net Project Emissions	**11,963**	**10**	**< 1**	**< 1**	**12,345**

CH_4 = methane; CO_2 = carbon dioxide; CO_2e = carbon dioxide equivalent; N_2O = nitrous oxide; HFCs = hydrofluorocarbons

a. Area sources include refrigerants.

b. The existing project site is currently receiving on-site electricity from on-site renewables or Peninsula Clean Energy, which means there are no energy-related emissions. Peninsula Clean Energy uses 100 percent renewable sources to generate electricity. The proposed project would have all-electric buildings that would receive electricity from on-site renewables or Peninsula Clean Energy, indicating that there would be no energy-related emissions.

As shown in Table 15, the proposed project would result in approximately 13,145 $MTCO_2e$ per year. Net emissions associated with the project were estimated by subtracting emissions associated with existing land uses from proposed land uses. Net project emissions would total 12,346 $MTCO_2e$ per year. As discussed above, BAAQMD's GHG threshold is centered around design elements rather than a quantitative bright-line threshold. Nevertheless, this analysis presents quantified GHG emissions for project operations.

BAAQMD land use GHG thresholds are established to ensure that projects meet their "fair share" contribution and help the State meet its long-term climate goals (SB 32 and EO B-55-18). BAAQMD has identified design elements and metrics that, if achieved by a project, represent a fair share as to contributing to long-term State goals. These design elements and metrics include not incorporating natural gas infrastructure in the project design, not wasting electricity, promoting EV use and charging consistent with CALGreen Tier 2 requirements, and, lastly, reducing VMT in accordance with the 2017 Scoping Plan. The proposed project's consistency with these requirements is discussed in Table 16.

Table 16. Project Consistency with the BAAQMD GHG Land Use Thresholds (Option A)

Sector	BAAQMD Threshold Option A (refer to Table 12)	Project Consistency
Buildings	a) The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).	**Consistent.** The proposed project would not include natural gas infrastructure in its design. It would therefore be consistent with this BAAQMD requirement.
	b) The project will not result in any wasteful, inefficient, or unnecessary electrical usage, as determined by the analysis required under CEQA Section 21100(b)(2) and Section 15126.2(b) of the State CEQA Guidelines.	**Consistent.** The proposed project would pursue Leadership in Energy and Environmental Design (LEED) certification. As part of its design, the proposed project would include a PV solar system. Furthermore**,** the new building would be built under current or later CALGreen codes, which would result in at least 30 percent less energy usage compared with commercial buildings that were designed to meet the 2016 CALGreen code. This reduction would be achieved primarily through a transition to high-efficiency lighting. As such, the proposed project would not waste energy and would be consistent with this BAAQMD requirement.
Transportation	a) Achieve compliance with electric-vehicle requirements in the most recently adopted version of CALGreen Tier 2.	**Consistent.** The proposed project would meet the CALGreen Tier 2 nonresidential voluntary requirement (i.e., 45 percent of all spaces to be EV capable and 33 percent of the EV spaces to have electric-vehicle supply equipment [EVSE]). As such, the proposed project would be consistent with this BAAQMD requirement.

Sector	BAAQMD Threshold Option A (refer to Table 12)	Project Consistency
Transportation	b) Achieve a reduction in project-generated vehicle miles traveled (VMT) to a level below the regional average, consistent with the current version of the California Climate Change Scoping Plan, or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research Technical Advisory on Evaluating Transportation Impacts in CEQA: i. Residential projects: 15 percent below the existing VMT per capita, ii. Office projects: 15 percent below the existing VMT per employee, and iii. Retail projects: no net increase in existing VMT.	**Consistent.** The proposed project, which would be a nonresidential project, would develop a new R&D building and parking lot near residential and commercial uses, thereby reducing the demand for travel by single-occupancy vehicles. In addition, the project area is served by public transit. The proposed project would develop and implement a TDM plan consistent with the City's TDM ordinance, with measures that would reduce vehicle traffic in and around the project site. Also, the proposed project's bicycle and pedestrian facilities would help reduce the demand for travel in single-occupancy vehicles. In total, through its design and TDM plan, the proposed project would achieve a reduction in VMT of 29.5 percent relative to unmitigated conditions, which is more than the 28 percent reduction needed to reduce existing regional VMT by 15 percent. This reduction would achieve the BAAQMD threshold regarding a VMT reduction (i.e., 15 percent below existing VMT per employee). The proposed project would be consistent with this BAAQMD requirement.

Source: BAAQMD 2022b.

As demonstrated in Table 16, the project would meet all BAAQMD requirements; therefore, the proposed project would be consistent with BAAQMD Threshold Option A.

Consistency with Applicable Plans, Policies, and Regulations Adopted for the Purpose of Reducing GHG Emissions

At the local level, the City's CAP is the plan for reducing GHG emissions. At the state level, the 2022 Scoping Plan is State's plan for reducing GHG emissions. The project's consistency with the City CAP and the scoping plan is assessed here to determine the significance of this impact. In addition, the project's consistency with BAAQMD's 2017 Clean Air Plan and Plan Bay Area 2050/SB 375 is also evaluated.

Consistency with the City of South San Francisco's Climate Action Plan

The City adopted a CAP in 2022 to reduce community and municipal GHG emissions associated with General Plan buildout. The CAP is a roadmap that outlines a path for achieving carbon neutrality by 2045, reducing emissions 40 percent by 2030 and 80 percent by 2040, equitably mitigating and addressing the impacts of climate change, and realizing the co-benefits of climate mitigation actions that help create a sustainable community. The CAP features 62 recommended GHG emissions reduction measures within seven sectors of community and municipal operations: clean energy,

built environment, transportation and land use, solid waste, waste and wastewater, carbon sequestration and natural systems, and city leadership. The proposed project's operational emissions are discussed by sector and evaluated for CAP consistency.[21]

Transportation and Land Use Emissions

As shown in Table 15, emissions associated with net mobile sources would amount to approximately 11,219 $MTCO_2e$ per year. The TDM plan includes 13 measures that would be implemented to reduce the number of trips. The measures include subsidizing transit passes for employees, establishing carpool or vanpool programs, and providing bicycle storage and shower and locker facilities. In addition, the CAP has nine transportation and land use measures. Although many of the measures require action on the City's part to create policies and incentive programs, the proposed project supports the measures that are considered applicable, as evaluated in Table 17, below.

Table 17. Consistency of the Project with the City of South San Francisco's Transportation and Land Use Measures

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
TL 2.1: Trip CAP on East of 101	Implement an East of 101 area trip cap with triennial monitoring and corrective actions if exceeded to manage the number of vehicles entering the area.	No	This measure is a City action and would not be applicable to the proposed project, which is not located in the East of 101 area.	N/A
TL 2.2: TDM Program	Implement, monitor, and enforce compliance with the City's TDM Ordinance	Yes	The proposed project would be required to achieve a 50 percent non-drive-alone mode share and be compliant with an on-site trip cap, both to be monitored annually, which is consistent with the City's TDM Ordinance.	Yes
TL 2.3: Improve Curb Management	Evaluate the current and best use of curb space in the city's activity centers and repurpose space to maximize people served (i.e., for loading, bikeways, bike parking, bus lanes, EV charging, or parklets).	No	This measure is a City action and would not be applicable to the proposed project.	N/A

[21] The proposed project is not compared to the city leadership measures because the measures are applicable only to City municipal buildings.

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
TL 2.4: Parking Demand Management Strategy	Incorporate maximum parking requirements for new residential and office/R&D projects.	Yes	The proposed project would provide 2,976 parking spaces. Of these, 2,434 spaces would be for primarily R&D uses, consistent with the City's maximum allowable parking supply (i.e., 1.5 spaces per 1,000 sf).	Yes
TL 2.5: Development along Transit Corridors	For all new land use and transportation projects, adhere to the City's VMT analysis guidelines and qualitatively assess the project's effect on multimodal access. Use the development review process to identify opportunities to enhance bicycle, pedestrian, and transit connectivity.	Yes	The proposed project has a TDM plan with 13 measures that are designed to reduce the number of trips and VMT. In addition, the project would provide first-mile/last-mile shuttles to the San Bruno Bay Area Rapid Transit (BART) station and South San Francisco Caltrain station. The project sponsor would establish new routes, with at least one vehicle dedicated to each route and service at least every 15 minutes during the AM and PM peak periods. Shuttles would be free and open to the public. Implementation of the TDM plan would reduce project VMT by 29.5 percent relative to unmitigated conditions, bringing it in line with the City's VMT per-capita reduction goal of 15 percent below the regional average.	Yes
TL 2.6: Complete Streets Policy	Ensure that all roadway and development projects are designed and evaluated to meet the needs of all street users and that development projects contribute to multimodal improvements in proportion to their potential impacts on vehicle miles traveled. Develop Capital Improvement Program prioritization criteria,	Yes	The proposed project would provide continuous bike and pedestrian access throughout the campus, which would support this measure's goal that calls for designing projects that meet the needs of all street users.	Yes

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
	including equity considerations for SB 1000 neighborhoods, to strategically advance multimodal complete streets projects. All capital improvements and development projects incorporate bicycle and pedestrian improvements identified in the Active South City Plan, such as trails, bikeways, bicycle detection at traffic signals, high-visibility crosswalks, and pedestrian-oriented site plans.			
TL 2.7: Free Local Bus Service	Develop a dedicated funding source or leverage private sector contributions to fund the South City shuttle and free bus service for South City residents.	No	This measure is a City action and not applicable to the proposed project.	N/A
TL 2.8: Improve Transit Station Access	Leverage public-private partnerships to increase transit ridership and improve transit station access by incorporating first-mile/last-mile bus, shuttle, and active transportation connections between employment hubs and regional transit stations.	No	This measure is a City action and not applicable to the proposed project.	N/A
TL 2.9: Scale Transit Service Levels	Continue collaboration with Caltrain, San Mateo County Transit District (SamTrans), Water Emergency Transportation Authority (WETA), and shuttle providers to scale service levels in growing areas and leverage private sector subsidies of transit fares to support BART, Caltrain, SamTrans, and WETA ridership.	No	This measure is a City action and not applicable to the proposed project.	N/A

Note:
N/A = not applicable

Federal, State, and local regulatory efforts target three elements of emissions reduction: vehicle fuel efficiency, the carbon content of fuels, and VMT. Most adopted programs and regulations focus on fuel efficiency (e.g., CAFE standards, Pavley standard) and the carbon intensity of transportation fuels (e.g., LCFS). Vehicle electrification is also rapidly becoming part of the State's approach to reducing mobile-source emissions (e.g., Title 24). The proposed project would not include any features that would conflict with these programs. Rather, it would implement a TDM plan that would reduce the number of trips and VMT. A recent CARB assessment makes clear that the State is "not on track to meet greenhouse gas reductions expected under SB 375." SB 743 is intended to close the VMT and emissions reduction gap. There is therefore a nexus between SB 743 and State goals to reduce mobile-source GHG emissions. In response to SB 743, OPR released its technical advisory on evaluating transportation impacts under CEQA in December 2018. The advisory indicates that "achieving 15 percent lower per capita (residential) or per employee (office) VMT than existing development is both generally achievable and is supported by evidence that connects this level of reduction to the state's emissions goals." This reduction goal is consistent with recent CARB (2019) analysis, which demonstrates that a 14.3 percent reduction in VMT per capita by 2050 (compared to a 2015–2018 average) would be needed statewide to meet the GHG planning goals.

The proposed project would implement a TDM plan that would achieve a gross VMT reduction of approximately 30 percent. This would align with the City's VMT per-capita reduction target of 15 percent below the regional average, which is designed to meet statewide VMT reduction goals. Therefore, it would not conflict with the State's long-term emissions reduction trajectory for mobile sources.

Area Emissions

As shown in Table 15, emissions associated with net area sources would amount to approximately 14 $MTCO_2e$ per year. The CAP does not include measures specific to area-source emissions. In addition, there are no relevant measures in the scoping plan for landscaping equipment. A transition away from fossil-fuel equipment will be needed to achieve carbon neutrality by 2045. The proposed project supports this with Measure AQ-3, which requires the use of zero-emission landscaping equipment. This is consistent with the scoping plan's overall goal of reducing emissions from fossil-fuel landscaping equipment.

Energy Emissions

As shown in Table 15, the proposed project would not generate emissions associated with energy sources. The proposed project would have all-electric buildings and receive electricity from on-site renewables or renewable sources from Peninsula Clean Energy, which means that there would be no energy-related emissions. The City CAP has seven energy measures, all of which require action on the City's part, such as creating policies and incentive programs. The proposed project supports the applicable measures, as evaluated in Table 18, below.

Table 18. Consistency of the Project with the City of South San Francisco's Energy Measures

Measure	Description of Measure	Applicable?	Project Implementation	Consistent?
CE 1.1: Adopt Solar Reach Code for Nonresidential Buildings	Require the construction of any new nonresidential conditioned space of 5,000 sf or more, or the conversion of unconditioned space 5,000 sf or more, to meet a minimum of 50 percent of modeled building electricity needs with on-site renewable energy sources, as feasible. To calculate 50 percent of building electricity needs for the new conditioned space, the applicant shall calculate building electricity use as part of the Title 24 compliance process. Total electricity use shall include total use for the new conditioned space, excluding process energy.	Yes	The proposed project would contract with PCE, which would provide electricity from renewable sources. The project site currently offsets building electricity needs by 3 percent with the incorporation of solar canopies and other energy-efficient design features. The proposed project would continue to work with its consultant, Atelier Ten, to achieve an offset of 5 percent, if feasible. Achieving more than a 5 percent offset with on-site renewable energy sources (e.g., solar canopies, wind turbines, energy-efficient design features) may not be feasible with life science and R&D uses due to the equipment plug loads, fans and pumps, and space heating required for laboratory buildings. The proposed project would be consistent with this measure.	Yes
CE 1.2: Streamline Permitting and Approval Processes for Battery Storage Systems	Establish a streamlined approval process for battery storage systems and reduce or eliminate permitting fees to encourage the addition of battery storage.	No	This measure is an action the City will perform and does not apply to this project.	N/A

Measure	Description of Measure	Applicable?	Project Implementation	Consistent?
CE 1.3: Streamline PV System Permitting and Approval	Establish a streamlined PV system permitting and approval process to encourage the addition of solar PV systems.	No	This measure is an action the City will perform and does not apply to this project.	N/A
CE 1.4: Develop a Program to Provide Energy Resilience through Backup Energy Systems, Microgrids, and Other Measures	Provide energy resilience through backup energy systems, microgrids, and other measures that serve the community during emergency events, particularly disadvantaged communities; consider creating a financial incentive program for existing and new solar/battery backup system installations.	No	This measure is an action the City will perform and does not apply to this project.	N/A
CE 1.5: Work with Pacific Gas and Electric (PG&E) to Minimize the Impacts of Public Safety Power Shutoffs	Work with PG&E to minimize the impacts of Public Safety Power Shutoffs and prevent utility shutoffs during extreme heat events.	No	This measure is an action the City will perform and does not apply to this project.	N/A
CE 1.6: Explore Community-Scale Solar and Other Renewable Energy Implementation	Explore opportunities to install community-scale solar PV or other renewable energy systems, including biogas, to support local energy resiliency and provide renewable energy to disadvantaged communities.	No	This measure is an action the City will perform and does not apply to this project.	N/A
CE 2.1: Achieve and Maintain 95 Percent Participation in PCE 100 Percent Renewable Energy Tier	Maintain City membership in PCE and continue to work to maintain a minimum of 95 percent of private-owner participation in PCE.	No	This measure is an action the City will perform and does not apply to this project.	N/A

Note:
N/A = not applicable

Solid Waste Emissions

As shown in Table 15, emissions associated with solid waste sources would amount to approximately 266 $MTCO_2e$ per year. The CAP has six solid waste measures, most of which require action on the City's part to create policies and incentive programs. Two of the measures evaluated in Table 18 are applicable to the project.

Table 19. Consistency of the Project with the City of South San Francisco's Solid Waste Measures

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
SW 1.1: Zero-Waste Plan	Adopt an SB 1383–compliant zero-waste plan for municipal operations and the community that includes mandatory residential and commercial recycling and collection of organics/food waste, mandatory commercial edible food recovery program (per memorandum of understanding with San Mateo County Office of Sustainability), and updated trash enclosure space and access requirements, based on hauler recommendations, to accommodate all waste streams (e.g., recycling, trash, organics).	Yes	Although this measure is an action item for the City, the proposed project will have recycling containers in the utility yard and organic waste services, which supports the City's goal to increase participation in recycling and organic waste programs.	Yes
SW 1.2: SSF Scavenger Partnership	Continue to work with SSF Scavenger to ensure implementation of waste reduction targets.	No	This measure is an action item for the City and is not applicable to the proposed project.	N/A
SW 1.3: Waste Reduction Compliance Pathways	Establish compliance pathways and enforcement mechanisms for mandatory diversion of organics and food waste.	Yes	Although this measure is an action item for the City, the proposed project would provide organics/composting waste services, which supports the City's goal to divert organics from the landfill.	Yes
SW 1.4: Educational Outreach about Waste Diversion	Develop education and technical assistance programs to help all residents and businesses to compost and recycle.	No	This measure is an action item for the City and is not applicable to the proposed project.	N/A
SW 1.5: Waste Rate Structures	Explore modifying waste rate structures to encourage efficiency in future franchise agreements.	No	This measure is an action item for the City and is not applicable to the proposed project.	N/A
SW 1.6: City Green Purchasing Program	Establish a green purchasing program for City of South San Francisco municipal operations.	No	This measure is an action item for the City and is not applicable to the proposed project.	N/A

Note:
N/A = not applicable

The features described above (e.g., recycling, organic waste collection) are consistent with the scoping plan's overall goal of reducing waste emissions and its specific strategy to avoid landfill CH_4 emissions by reducing the disposal of landfill waste and organics. In addition, these features would comply with AB 341's mandatory recycling requirement and support the State's recycling goal.

Water and Wastewater Emissions

As shown in Table 15, emissions associated with net water and wastewater sources would amount to approximately 21 $MTCO_2e$ per year. The CAP has seven measures related to the water and wastewater sector. Although all measures require action on the City's part to create policies and incentive programs, the proposed project supports one measure that is considered applicable, as evaluated in Table 20.

Table 20. Consistency of the Project with the City of South San Francisco's Water and Wastewater Measures

Measure	Description of Measure	Applicable?	Project Implementation	Consistent?
WW 1.1: Landscaping Water Requirements	Achieve greater water use reductions than those of the Water-Efficient Landscape Ordinance by requiring all landscapes to obtain a landscape permit, decreasing the size threshold to capture all landscape renovations, and adding prescriptive irrigation plant lists or water budget requirements.	No	This measure is an action the City will perform and does not apply to the proposed project.	N/A
WW 1.2: Alternative Water Sources	Explore options at the South San Francisco – San Bruno Water Quality Control Plant for delivering non-potable, recycled water for cooling towers, processes, and irrigation in East of 101 (e.g., flow-pipe water). Maximize available non-potable water reuse from the Orange Park stormwater capture project at Orange Memorial Park, Centennial Way, and the new Civic Campus.	No	This measure is an action the City will perform and does not apply to the proposed project.	N/A
WW 1.3: Promote Greywater Systems	Create a streamlined permit process for laundry-to-landscape greywater systems.	No	This measure is an action the City will perform and does not apply to the proposed project.	N/A

Measure	Description of Measure	Applicable?	Project Implementation	Consistent?
WW 1.4: Landscaping Plant List	Develop a plant list and a landscaping palette for efficiency and for habitat/wildlife for new development and landscape retrofits.	No	This measure is an action the City will perform and does not apply to the proposed project.	N/A
WW 1.5: Install Smart Meters	Partner with the California Water Service to install smart water meters throughout the city.	No	This measure is an action the City will perform and does not apply to the proposed project.	N/A
WW 2.1: Indoor Water Efficiency Standards	Require high-efficiency fixtures in all new construction and major renovations that are comparable to CALGreen Tier 1 or 2 standards.	Yes	The project would use high-efficiency fixtures, which would be comparable to CALGreen Tier 1 or 2 standards.	Yes
WW 2.2: Promote Available Rebates	Promote available water conservation rebates from the Bay Area Regional Energy Network, California Water Service, and other sources, focusing resources in the most disadvantaged communities.	No	This measure is an action the City will perform and does not apply to the proposed project.	N/A

Note:
N/A = not applicable

The proposed project would include several water conservation features. Furthermore, it would be required to comply with all applicable City and State water conservation measures for both indoor and outdoor applications, including Title 24, Part 6, the California Energy Code baseline standards for energy efficiency, as based on the 2022 Energy Efficiency Standards and CALGreen. The features would be consistent with the scoping plan's overall goal of reducing emissions associated with water delivery and would support ongoing regulatory programs (e.g., SB X7-7, Title 24) that aim to reduce GHG emissions associated with conveying and distributing water.

Carbon Sequestration and Natural Systems

The CAP has four carbon sequestration and natural system measures. Three of these measures require action on the City's part; one measure is applicable to the proposed project, as evaluated in Table 21.

Table 31. Consistency of the Project with the City of South San Francisco Carbon Sequestration and Natural Systems Measures

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
CS 1.1: Carbon Farming	Explore compost application on available acres of appropriate open space.	No	This measure is an action for the City to take; it is not applicable to this project.	N/A
CS 2.1: Public Tree Planting	Expand the canopy cover to reach the goals of the Urban Forest Master Plan and increase environmental benefits, prioritizing disadvantaged communities and connected wildlife corridors.	Yes	The project would plant 662 trees in the central courtyard, surface parking area, and terrace areas and along the western and southern perimeters of the project site, thereby expanding the tree canopy, thereby helping to achieve the goals of the Urban Forest Master Plan.	Yes
CS 2.2: Tree Standards for New Development	For nonresidential and residential new construction, require Silva Cells and a soil compaction plan for tree growth; require the preservation and addition of trees on private property in residential neighborhoods through design review where appropriate. Incorporate Parks and Recreation urban forest personnel in the review process.	Yes	The proposed project would incorporate Silva Cells and a soil compaction plan for tree growth where appropriate.	Yes
CS 3.1: Colma Creek Restoration	Enhance Colma Creek as an ecological corridor by restoring 5 miles of creek ecologies and creating transitional habitat zones to build resilience and ecosystem services. Protect and expand existing marsh and wetland habitat to improve water quality, adapt to climate change, and provide habitat for wildlife.	No	This measure is an action for the City to take; it is not applicable to this project.	N/A

Note:
N/A = not applicable

Built Environment

The CAP has two built-environment measures that focus on new construction and 10 built-environment measures that focus on existing buildings. Because the proposed project would demolish all existing structures on the site, Table 22 compares the proposed project to only the measures pertaining to new construction. Although the project would include emergency generators, Measure BE 1.8, Transition to Carbon-Free Backup Power, is included below to show that the project would still be consistent with the City's CAP because Measure BE 1.8 does not indicate that new development can have only carbon-free backup generators.

Table 22. Consistency of the Project with the City of South San Francisco Built Environment – New Construction Measures

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
BNC 1.1: Improve the Energy Efficiency of New Construction	Provide a combination of financial and development process incentives (e.g., expedited permitting, increases in floor area ratios) to encourage new development to exceed the Title 24 energy efficiency standard.	No	This is an action for the City and does not apply to the proposed project.	N/A
BNC 2.1: Adopt an All-Electric Reach Code for Nonresidential New Construction	Implement a residential all-electric reach code and adopt an all-electric reach code for nonresidential new construction. Exempt occupancies must install electric building systems (e.g., space and water heating equipment) where feasible. Until the adoption of the nonresidential all-electric reach code, require any new nonresidential conditioned space of 5,000 sf or more, or the conversion of unconditioned space of 5,000 sf or more, to comply with CALGreen Tier 2 energy efficiency requirements to exceed mandatory energy efficiency requirements by 20 percent or more. For additions to existing development of 5,000 sf or more, CALGreen Tier 2 shall be calculated as part of the Title 24 compliance	Yes	The proposed project would have all-electric buildings.	Yes

Measure Category	Description of Measure	Applicable?	Project Implementation	Consistent?
	process. Existing building space that has already been permitted shall not be subject to CALGreen Tier 2 requirements.			
BE 1.8: Transition to Carbon-Free Backup Power	Work with PG&E and PCE to transition backup generators from diesel to carbon-free sources, including battery storage systems.	No	This is an action for the City and does not apply to the proposed project.	N/A

Note:
N/A = not applicable

Consistency with Senate Bill 32 (including the CARB 2022 Scoping Plan)

SB 32 outlines the State's GHG emissions reduction targets for 2030. Although not legislatively adopted, EO S-03-05 establishes the State's long-term goal to reduce GHG emissions 80 percent from 1990 levels by 2050. AB 1279 sets a more ambitious State goal of net-zero GHG emissions by 2045 and an 80 percent reduction in anthropogenic emissions from 1990 levels by 2045.

In 2008 and 2014, CARB adopted the original scoping plan and first update, respectively, as a framework for achieving AB 32. The scoping plan and first update outline a series of technologically feasible and cost-effective measures to reduce statewide GHG emissions. CARB adopted the 2022 Scoping Plan in July of that year to assess progress toward the statutory 2030 target while laying out a path to achieving carbon neutrality no later than 2045. CARB's 2022 Scoping Plan outlines the main strategies for keeping California on track and able to meet its SB 32 GHG reduction target (i.e., reduce GHG emissions to at least 40 percent below 1990 levels by 2030), achieve carbon neutrality by 2045, and reduce anthropogenic emissions to 85 percent below 1990 levels (CARB 2022a). Regarding project-level GHG analyses, Appendix D to CARB's 2022 Scoping Plan, Local Actions, notes:

> When jurisdictions have a CEQA-qualified CAP, an individual project that complies with the strategies and actions within a CEQA-qualified CAP can tier and streamline its project-specific CEQA GHG analysis to make a determination "that a project's incremental contribution to a cumulative [GHG] effect is not cumulatively considerable" (State CEQA Guidelines Sections 15064.4 (b)(3) and 15183.5).

As discussed above in the *Consistency with the City of South San Francisco's Climate Action Plan* section, the City's 2022 CAP does not satisfy the tiering requirements established in Section 15183.5 of the State CEQA Guidelines and therefore cannot be used to determine the significance of an individual project's GHG emissions. As indicated in Appendix D to CARB's 2022 Scoping Plan, the City's CAP, while not qualified for tiering, incorporates various measures pertaining to transportation electrification, VMT reductions, and building decarbonization. As described above, the project would be consistent with all required and applicable measures of the City's CAP.

Appendix D to CARB's 2022 Scoping Plan, Local Actions, also identifies key project attributes that empirical evidence has shown to reduce operational GHG emissions while simultaneously advancing fair housing. CARB concludes that "[r]esidential and mixed-use projects that have all of the key project attributes in Table 3 [Key Residential and Mixed-Use Project Attributes that Reduce GHGs] should accommodate growth in a manner consistent with State GHG reduction and equity

prioritization goals" (CARB 2022a). Although this project does not include residential uses, it is a mixed-used non-residential project. As such, this analysis also evaluates the project's consistency with the scoping plan–identified key project attributes to provide a comprehensive assessment of the project's GHG impact. The project's consistency with these attributes is discussed in Table 23.

Table 23. Project Consistency with the CARB 2022 Scoping Plan Key Project Attributes

Project Attribute	Project Consistency
Transportation Electrification	
Provides EV charging infrastructure that, at a minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval.	**Consistent**. Currently, the most ambitious voluntary standard in the CALGreen code would be the voluntary Tier 2 nonresidential standard (i.e., 45 percent of all spaces to be EV capable and 33 percent of the EV spaces to have EVSE). The project would meet the voluntary Tier 2 nonresidential standard for EV charging infrastructure under the 2022 CALGreen code. As such, the project would be consistent with this attribute.
VMT Reduction	
Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer).	**Consistent**. The project proposes infill mixed-use development in an existing urbanized area, thereby supporting local, regional, and State mobility and GHG reduction objectives to reduce VMT and infrastructure costs. As such, the project would be consistent with this attribute.
Does not result in the loss or conversion of natural and working lands.	**Consistent**. The project site is in an existing urbanized area and currently occupied by industrial buildings and a paved surface parking lot. As such, the project would not result in the loss or conversion of natural or working lands and would be consistent with this attribute.
Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre) or is in proximity to existing transit stops (within a half mile) or satisfies more detailed and stringent criteria specified in the region's SCS.	**Consistent**. The project site is within a 0.5 mile of an existing bus stop at Herman Street and Pacific Avenue. In addition, the project would provide first-mile/last-mile shuttles to the San Bruno BART station and South San Francisco Caltrain station. The project sponsor would establish new routes, with at least one vehicle dedicated to each route and service at least every 15 minutes during the AM and PM peak periods. Shuttles would be free and open to the public. As such, the project would be consistent with this attribute because it would facilitate connections to major transit services.
Reduces parking requirements by eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet) or providing a residential parking supply at a ratio of less than one parking space per dwelling unit or, for multi-family residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit.	**Consistent**. The proposed project would provide 2,976 parking spaces. Of these, 2,434 spaces would be used primarily for R&D uses. This would be below the City's maximum allowable parking ratio of 1.5 spaces per 1,000 sf. Because the project would provide less parking than the maximums set forth in the City Code, the project would be consistent with this attribute.

Project Attribute	Project Consistency
At least 20 percent of units included are affordable to lower-income residents.	**N/A**. The project is a nonresidential project. This attribute does not apply to the project.
Results in no net loss of existing affordable units.	**Consistent**. The project site is currently occupied by industrial buildings and a paved surface parking lot. The project would therefore not result in a net loss in existing affordable units and would be consistent with this attribute.
Building Decarbonization	
Uses all-electric appliances without natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking.	**Consistent**. The project would build all-electric buildings; natural gas would not be used. As such, the project would be consistent with this attribute.

Source: CARB 2022a.

As discussed above in Table 23, the project would incorporate all scoping plan–identified key project attributes. The project's consistency with the scoping plan–identified key project attributes provides further evidence that the project would not conflict with implementation of CARB's 2022 Scoping Plan or attainment of the statewide GHG targets for 2030 and 2045 mandated by SB 32 and AB 1279, respectively. As such, the project would be consistent with the City's CAP and align with the GHG emissions reduction strategies outlined in CARB's 2022 Scoping Plan.

Plan Bay Area 2050/California Senate Bill 375

Plan Bay Area 2050 is consistent with SB 375, which requires MTC to adopt an SCS that outlines policies to reduce per capita GHG emissions from automobiles and light trucks. Environment and transportation are two of four elements discussed in MTC's Plan Bay Area 2050 (MTC; ABAG 2021). Both of these elements comprise a set of strategies that aim to reduce both VMT and emissions. The strategies include a mix of measures that encourage compact growth patterns, alternative transportation, transit, mobility and access, network expansion, and transportation investment.

It is estimated that the project would generate up to 10,110 daily vehicle trips. To reduce VMT and associated emissions, the project would improve conditions for walking and biking by providing on-street bicycle racks/lockers, as well as long-term bicycle racks for workers, and orienting buildings so as to be sidewalk facing, with multiple pedestrian entrances. The proposed project would be an infill development. This would involve redevelopment and densification of the site. In addition, the project would be near local transit lines and routes that provide safe and convenient access for bicyclists and pedestrians, thereby encouraging alternative transportation modes. Overall, the project would incorporate 13 TDM features, which are anticipated to reduce gross VMT by approximately 29.5 percent relative to unmitigated conditions. This reduction in gross VMT would make the project consistent with the City's VMT per capita reduction target of 15 percent below the regional average, which is designed to meet statewide VMT reduction goals.

These policies would support alternative transportation within the community, which could help reduce VMT and per capita GHG emissions from passenger vehicles, consistent with Plan Bay Area 2050.

Other State Regulations

As discussed above in the analysis of consistency with SB 32, systemic changes would be required at the state level to achieve statewide future GHG reduction goals. Regulations such as the SB 100–mandated 100 percent carbon-free RPS by 2045; implementation of the State's SLCP Reduction Strategy, including forthcoming regulations for composting and organics diversion; and future updates to the State's Title 24 standards, including requirements for net-zero energy, will be necessary to attain the magnitude of reductions required by the State's goals. The proposed project would be required to comply with these regulations in new construction (e.g., in the case of updated Title 24 standards) or be directly affected by the outcomes (e.g., energy consumption would be less carbon intensive with the increasingly stringent RPS). Unlike the scoping plans, which explicitly call for additional emissions reductions from local governments and new projects, none of these State regulations identify specific requirements or commitments for new development beyond what is already required by existing regulations or will be required in forthcoming regulation. Therefore, for the foreseeable future, the proposed project would not conflict with any state-level regulations pertaining to GHGs in the post-2020 era.

Conclusion

The proposed project would be consistent with and support all applicable measures from the CAP. In addition, as noted above, the project would be consistent with BAAQMD Threshold Option A. With respect to mobile sources, the proposed project would achieve the City's VMT reduction target, ensuring that the proposed project would be consistent with relevant regulatory programs, such as SB 743, that expressly aim to reduce VMT. In addition, the project would be consistent with CARB's 2022 Scoping Plan–identified key project attributes applicable to the project.[22] The project would also comply with Plan Bay Area 2050, the applicable regional plan for reducing mobile-source emissions in the San Francisco Bay Area. Therefore, the project would not conflict with State, regional, or local plans designed to achieve the GHG reduction goals mandated by SB 32 and AB 1279 for 2030 and 2045, respectively.

3.3.4 Cumulative Greenhouse Gas Impacts

Climate change is a global problem, and GHG impacts are inherently cumulative. This is because GHGs contribute to the global phenomenon that is climate change, regardless of where they are emitted. Climate change is the result of the individual contributions of countless past, present, and future sources.

[22] Although this analysis determines the project's alignment with CARB's 2022 Scoping Plan, based on its consistency with the City's CAP, the project's consistency with the scoping plan–identified key attributes provides further evidence that the project would not conflict with implementation of CARB's 2022 Scoping Plan or attainment of the statewide GHG targets for 2030 and 2045 mandated by SB 32 and AB 1279, respectively.

I131 North - Construction & Operation - 2/7/2024 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Rough Grading/Site Demo (2028) - Unmitigated

3.2. Rough Grading/Site Demo (2028) - Mitigated

3.3. Deep Foundations (2028) - Unmitigated

3.4. Deep Foundations (2028) - Mitigated

3.5. Deep Foundations (2029) - Unmitigated

3.6. Deep Foundations (2029) - Mitigated

3.7. Foundations (2029) - Unmitigated

3.8. Foundations (2029) - Mitigated

3.9. Superstructure (2029) - Unmitigated

3.10. Superstructure (2029) - Mitigated

3.11. Superstructure (2030) - Unmitigated

3.12. Superstructure (2030) - Mitigated

3.13. Building Enclosure (2030) - Unmitigated

3.14. Building Enclosure (2030) - Mitigated

3.15. Sitework (2030) - Unmitigated

3.16. Sitework (2030) - Mitigated

3.17. Sitework (2031) - Unmitigated

3.18. Sitework (2031) - Mitigated

3.19. Interior Buildout (2029) - Unmitigated

3.20. Interior Buildout (2029) - Mitigated

3.21. Interior Buildout (2030) - Unmitigated

3.22. Interior Buildout (2030) - Mitigated

3.23. Startup/Inspections (2030) - Unmitigated

3.24. Startup/Inspections (2030) - Mitigated

3.25. Startup/Inspections (2031) - Unmitigated

3.26. Startup/Inspections (2031) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	I131 North - Construction & Operation - 2/7/2024
Construction Start Date	11/1/2028
Operational Year	2032
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	4.60
Precipitation (days)	37.8
Location	131 Terminal Ct, South San Francisco, CA 94080, USA
County	San Mateo
City	South San Francisco
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1292
EDFZ	1
Electric Utility	Peninsula Clean Energy
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Research & Development	808	1000sqft	18.5	808,000	65,634	0.00	—	—
General Office Building	4.00	1000sqft	0.09	4,000	325	0.00	—	—
Enclosed Parking with Elevator	552	1000sqft	12.7	551,631	0.00	0.00	—	—
Parking Lot	52.0	Space	0.47	0.00	0.00	0.00	—	—
High Turnover (Sit Down Restaurant)	8.00	1000sqft	0.18	8,000	650	0.00	—	—
Day-Care Center	4.05	1000sqft	0.09	4,050	328	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-12	Sweep Paved Roads
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	LL-1	Replace Gas Powered Landscape Equipment with Zero-Emission Landscape Equipment
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e

Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	3.88	22.5	20.6	82.7	0.10	0.36	109	109	0.34	18.2	18.4	—	21,370	21,370	1.11	1.02	27.0	21,590

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.92	annual days of extreme heat
Extreme Precipitation	9.00	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	17.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.52

AQ-PM	32.9
AQ-DPM	94.6
Drinking Water	54.0
Lead Risk Housing	79.7
Pesticides	0.00
Toxic Releases	37.7
Traffic	80.8
Effect Indicators	—
CleanUp Sites	98.9
Groundwater	99.7
Haz Waste Facilities/Generators	99.9
Impaired Water Bodies	87.0
Solid Waste	97.2
Sensitive Population	—

Low Birth Weights	53.2
Socioeconomic Factor Indicators	—
Education	60.6
Housing	43.3
Linguistic	57.8
Poverty	54.4
Unemployment	64.5

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Economic	—
Above Poverty	65.03272167
Employed	87.75824458
Median HI	74.04080585

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	83.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Peninsula Clean Energy would be energy provider. Building would be all electric.
Construction: Construction Phases	Applicant provided info.
Construction: Off-Road Equipment	Applicant provided info.
Construction: Off-Road Equipment EF	EF for electric equipment entered manually.
Construction: Dust From Material Movement	Applicant provided info.
Construction: Demolition	Applicant provided info - existing square footage of all buildings.
Construction: Trips and VMT	Worker trips = default; 2 "buggies" per phase except last three phases operating less than 10 miles a day.
Construction: On-Road Fugitive Dust	2023 BAAQMD guidance - change silt load to 0.5
Construction: Architectural Coatings	Arch coating phase will most likely occur during interior buildout.
Construction: Paving	Applicant provided info.
Construction: Electricity	Applicant provided info.
Operations: Generators + Pumps EF	Generators will be Tier 2. Used BAAQMD 2023 Guidance, which explains defaults are Tier 2 values.
Operations: Energy Use	Applicant provided info.
Operations: Water and Waste Water	Applicant provided info.
Operations: Solid Waste	Applicant Provided Info.
Operations: Emergency Generators and Fire Pumps	Applicant provided info
Operations: Vehicle Data	Applicant provided information.

I131 South - Construction and Operation - 2/7/2024 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Building & Demo/Abatement (2026) - Unmitigated

3.2. Building & Demo/Abatement (2026) - Mitigated

3.3. Rough Grading/Site Demo (2026) - Unmitigated

3.4. Rough Grading/Site Demo (2026) - Mitigated

3.5. Deep Foundations (2026) - Unmitigated

3.6. Deep Foundations (2026) - Mitigated

3.7. Foundations (2026) - Unmitigated

3.8. Foundations (2026) - Mitigated

3.9. Superstructure (2026) - Unmitigated

3.10. Superstructure (2026) - Mitigated

3.11. Superstructure (2027) - Unmitigated

3.12. Superstructure (2027) - Mitigated

3.13. Building Enclosure (2027) - Unmitigated

3.14. Building Enclosure (2027) - Mitigated

3.15. Building Enclosure (2028) - Unmitigated

3.16. Building Enclosure (2028) - Mitigated

3.17. Sitework (2028) - Unmitigated

3.18. Sitework (2028) - Mitigated

3.19. Interior Buildout (2027) - Unmitigated

3.20. Interior Buildout (2027) - Mitigated

3.21. Interior Buildout (2028) - Unmitigated

3.22. Interior Buildout (2028) - Mitigated

3.23. Startup/Inspections (2028) - Unmitigated

3.24. Startup/Inspections (2028) - Mitigated

3.25. Decommissioning (2057) - Unmitigated

3.26. Decommissioning (2057) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	I131 South - Construction and Operation - 2/7/2024
Construction Start Date	1/1/2026
Operational Year	2028
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	4.60
Precipitation (days)	37.8
Location	131 Terminal Ct, South San Francisco, CA 94080, USA
County	San Mateo
City	South San Francisco
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1292
EDFZ	1
Electric Utility	Peninsula Clean Energy
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Research & Development	824	1000sqft	18.9	824,000	66,934	0.00	—	—
High Turnover (Sit Down Restaurant)	19.0	1000sqft	0.44	19,000	1,543	0.00	—	—
General Office Building	17.0	1000sqft	0.39	17,000	1,381	0.00	—	—
Enclosed Parking with Elevator	453	1000sqft	10.4	453,034	0.00	0.00	—	—
Parking Lot	62.0	Space	0.56	0.00	0.00	0.00	—	—
Health Club	20.0	1000sqft	0.46	20,000	1,625	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-12	Sweep Paved Roads
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	LL-1	Replace Gas Powered Landscape Equipment with Zero-Emission Landscape Equipment
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.92	annual days of extreme heat
Extreme Precipitation	9.00	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	17.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A

Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.52
AQ-PM	32.9
AQ-DPM	94.6
Drinking Water	54.0
Lead Risk Housing	79.7
Pesticides	0.00
Toxic Releases	37.7
Traffic	80.8
Effect Indicators	—
CleanUp Sites	98.9
Groundwater	99.7
Haz Waste Facilities/Generators	99.9
Impaired Water Bodies	87.0
Solid Waste	97.2
Sensitive Population	—
Asthma	68.9
Cardio-vascular	48.4
Low Birth Weights	53.2
Socioeconomic Factor Indicators	—
Education	60.6
Housing	43.3

Linguistic	57.8
Poverty	54.4
Unemployment	64.5

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	65.03272167
Employed	87.75824458
Median HI	74.04080585
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	83.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Peninsula Clean Energy would be energy provider. Building would be all electric.
Construction: Construction Phases	Applicant provided info.
Construction: Off-Road Equipment	Applicant provided info.
Construction: Off-Road Equipment EF	EF for Pumps <25 HP were entered manually as well as electric equipment.
Construction: Dust From Material Movement	Applicant provided info.
Construction: Demolition	Applicant provided info - existing square footage of all buildings.
Construction: Trips and VMT	Worker trips = default; 2 "buggies" for all phases except last three operating less than 10 miles a day.
Construction: On-Road Fugitive Dust	2023 BAAQMD guidance - change silt load to 0.5
Construction: Architectural Coatings	Arch coating phase will most likely occur during interior buildout.
Construction: Paving	Applicant provided info.
Construction: Electricity	Applicant provided info.
Operations: Energy Use	Applicant provided info.
Operations: Water and Waste Water	Applicant provided info.
Operations: Solid Waste	Applicant provided info.
Operations: Generators + Pumps EF	Generators will be Tier 2. Used BAAQMD 2023 Guidance, which says default factors are Tier 2 values.

Operations: Emergency Generators and Fire Pumps	Applicant provided info.
Operations: Vehicle Data	Applicant provided information.

Appendix D:

Air Quality and Greenhouse Gas Modeling Files

Air Quality Modeling Files and Calculations

Terminal 131 - Existing Uses Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Terminal 131 - Existing Uses
Operational Year	2023
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	4.60
Precipitation (days)	37.8
Location	Terminal Ct, South San Francisco, CA 94080, USA
County	San Mateo
City	South San Francisco
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1292
EDFZ	1
Electric Utility	Peninsula Clean Energy
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.14

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Light Industry	127	1000sqft	0.00	0.00	0.00	—	—	—

Parking Lot	117	1000sqft	2.68	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.92	annual days of extreme heat
Extreme Precipitation	9.00	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	17.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A

Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.52
AQ-PM	32.9
AQ-DPM	94.6
Drinking Water	54.0
Lead Risk Housing	79.7
Pesticides	0.00

Linguistic	57.8
Poverty	54.4
Unemployment	64.5

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	65.03272167
Employed	87.75824458
Median HI	74.04080585
Education	—
Bachelor's or higher	46.97805723
High school enrollment	100
Preschool enrollment	45.37405364
Transportation	—
Auto Access	59.70742974
Active commuting	58.00076992

Social	—
2-parent households	88.6179905
Voting	71.10227127
Neighborhood	—
Alcohol availability	29.00038496
Park access	52.72680611
Retail density	91.04324394
Supermarket access	82.92056974
Tree canopy	62.40215578
Housing	—
Homeownership	71.67971256
Housing habitability	43.62889773
Low-inc homeowner severe housing cost burden	60.7596561
Low-inc renter severe housing cost burden	17.45155909
Uncrowded housing	55.74233286
Health Outcomes	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	83.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	I131 North - Construction & Operation - 2/7/2024
Construction Start Date	11/1/2028
Operational Year	2032
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	4.60
Precipitation (days)	37.8
Location	131 Terminal Ct, South San Francisco, CA 94080, USA
County	San Mateo
City	South San Francisco
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1292
EDFZ	1
Electric Utility	Peninsula Clean Energy
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Research & Development	808	1000sqft	18.5	808,000	65,634	0.00	—	—
General Office Building	4.00	1000sqft	0.09	4,000	325	0.00	—	—
Enclosed Parking with Elevator	552	1000sqft	12.7	551,631	0.00	0.00	—	—
Parking Lot	52.0	Space	0.47	0.00	0.00	0.00	—	—
High Turnover (Sit Down Restaurant)	8.00	1000sqft	0.18	8,000	650	0.00	—	—
Day-Care Center	4.05	1000sqft	0.09	4,050	328	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-12	Sweep Paved Roads
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	LL-1	Replace Gas Powered Landscape Equipment with Zero-Emission Landscape Equipment
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.92	annual days of extreme heat
Extreme Precipitation	9.00	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	17.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.52

AQ-PM	32.9
AQ-DPM	94.6
Drinking Water	54.0
Lead Risk Housing	79.7
Pesticides	0.00
Toxic Releases	37.7
Traffic	80.8
Effect Indicators	—
CleanUp Sites	98.9
Groundwater	99.7
Haz Waste Facilities/Generators	99.9
Impaired Water Bodies	87.0
Solid Waste	97.2
Sensitive Population	—
Asthma	68.9
Cardio-vascular	48.4
Low Birth Weights	53.2
Socioeconomic Factor Indicators	—
Education	60.6
Housing	43.3
Linguistic	57.8
Poverty	54.4
Unemployment	64.5

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Economic	—
Above Poverty	65.03272167
Employed	87.75824458
Median HI	74.04080585
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	83.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Peninsula Clean Energy would be energy provider. Building would be all electric.
Construction: Construction Phases	Applicant provided info.
Construction: Off-Road Equipment	Applicant provided info.
Construction: Off-Road Equipment EF	EF for electric equipment entered manually.
Construction: Dust From Material Movement	Applicant provided info.
Construction: Demolition	Applicant provided info - existing square footage of all buildings.
Construction: Trips and VMT	Worker trips = default; 2 "buggies" per phase except last three phases operating less than 10 miles a day.
Construction: On-Road Fugitive Dust	2023 BAAQMD guidance - change silt load to 0.5
Construction: Architectural Coatings	Arch coating phase will most likely occur during interior buildout.
Construction: Paving	Applicant provided info.
Construction: Electricity	Applicant provided info.
Operations: Generators + Pumps EF	Generators will be Tier 2. Used BAAQMD 2023 Guidance, which explains defaults are Tier 2 values.
Operations: Energy Use	Applicant provided info.
Operations: Water and Waste Water	Applicant provided info.
Operations: Solid Waste	Applicant Provided Info.
Operations: Emergency Generators and Fire Pumps	Applicant provided info
Operations: Vehicle Data	Applicant provided information.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	I131 South - Construction and Operation - 2/7/2024
Construction Start Date	1/1/2026
Operational Year	2028
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	4.60
Precipitation (days)	37.8
Location	131 Terminal Ct, South San Francisco, CA 94080, USA
County	San Mateo
City	South San Francisco
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1292
EDFZ	1
Electric Utility	Peninsula Clean Energy
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Research & Development	824	1000sqft	18.9	824,000	66,934	0.00	—	—
High Turnover (Sit Down Restaurant)	19.0	1000sqft	0.44	19,000	1,543	0.00	—	—
General Office Building	17.0	1000sqft	0.39	17,000	1,381	0.00	—	—
Enclosed Parking with Elevator	453	1000sqft	10.4	453,034	0.00	0.00	—	—
Parking Lot	62.0	Space	0.56	0.00	0.00	0.00	—	—
Health Club	20.0	1000sqft	0.46	20,000	1,625	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-12	Sweep Paved Roads
Area Sources	AS-1	Use Low-VOC Cleaning Supplies
Area Sources	LL-1	Replace Gas Powered Landscape Equipment with Zero-Emission Landscape Equipment
Area Sources	AS-2	Use Low-VOC Paints

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.92	annual days of extreme heat
Extreme Precipitation	9.00	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	17.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A

Extreme Precipitation	3	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	3	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.52
AQ-PM	32.9
AQ-DPM	94.6
Drinking Water	54.0
Lead Risk Housing	79.7
Pesticides	0.00
Toxic Releases	37.7
Traffic	80.8
Effect Indicators	—
CleanUp Sites	98.9
Groundwater	99.7
Haz Waste Facilities/Generators	99.9
Impaired Water Bodies	87.0
Solid Waste	97.2
Sensitive Population	—

2016 Voting	55.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	83.0
Healthy Places Index Score for Project Location (b)	75.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Peninsula Clean Energy would be energy provider. Building would be all electric.
Construction: Construction Phases	Applicant provided info.
Construction: Off-Road Equipment	Applicant provided info.
Construction: Off-Road Equipment EF	EF for Pumps <25 HP were entered manually as well as electric equipment.
Construction: Dust From Material Movement	Applicant provided info.
Construction: Demolition	Applicant provided info - existing square footage of all buildings.
Construction: Trips and VMT	Worker trips = default; 2 "buggies" for all phases except last three operating less than 10 miles a day.
Construction: On-Road Fugitive Dust	2023 BAAQMD guidance - change silt load to 0.5
Construction: Architectural Coatings	Arch coating phase will most likely occur during interior buildout.
Construction: Paving	Applicant provided info.
Construction: Electricity	Applicant provided info.
Operations: Energy Use	Applicant provided info.
Operations: Water and Waste Water	Applicant provided info.
Operations: Solid Waste	Applicant provided info.
Operations: Generators + Pumps EF	Generators will be Tier 2. Used BAAQMD 2023 Guidance, which says default factors are Tier 2 values.

Operations: Emergency Generators and Fire Pumps	Applicant provided info.
Operations: Vehicle Data	Applicant provided information.

Unmitigated
