Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Date:	06/25/1986

SUN CHEMICAL CORPORATION (Continued) **S106981240**

Comments:	Completed RA. The RA consisted of excavation and disposal of contaminated soil, hazardous fluids, contaminated debris, steel tanks and piping. 279 yards of contaminated soil, 10,404 gallons of hazardous liquids, 10 steel tanks and piping were removed from the site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	01/22/1987
Comments:	Completed Site Screening. Site inspection samplings in 1981 revealed elevated levels of lead, cyanide and zinc. Groundwater analyses did not indicate any contamination above drinking water standards.

Completed Document Type:	5 Year Review Reports
Completed Date:	12/14/2016
Comments:	DTSC personnel conducted a site inspection on February 11, 2016 as part of the Five-Year Review, which was performed because contaminated soil remains on the Site above levels that would allow for unrestricted land use. Based on site conditions observed during the site inspection, DTSC concluded that the selected remedy for the Site remains protective of human health and the environment.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/14/2008
Comments: Cracks observed during the inspection should be repaired immediately.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/10/2016
Comments: DTSC staff performed annual inspection on February 11, 2016. Lead remains in soil at the site at concentrations that do not allow for unrestricted use. The lead-impacted soil is contained under the concrete pavement and buildings on the site. An area of the concrete pavement was observed during the inspection that requires repair. Also, vegetation and sediment were observed in a storm drain should be removed. Based on the inspection, DTSC concluded the selected remedial action remains protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 01/31/2017
Comments: DTSC’s personnel performed an annual cap inspection on January 17, 2017. During the inspection, areas of cracking and deterioration were observed on the surface of the concrete. However, no soil underneath was exposed and no evidence of any activities prohibited by the Land Use Covenant was observed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/06/2018
Comments: DTSC personal conducted an annual site inspection on January 12, 2018

SUN CHEMICAL CORPORATION (Continued) **S106981240**

and verified compliance with the restrictions and requirements of the Land Use Covenant.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Sun Chemical and U.A. Local 38 Pension Trust Funds are the responsible parties. The RPs funded the characterization and remedial action at this site. State

SUN CHEMICAL CORPORATION (Continued) **S100833558**

	Bond funds were used for oversight of the RP's activities. DHS will seek cost recovery for its direct costs including staff costs and overhead related to the project.
Site Description:	This site is a former print ink manufacturing facility. Soil contamination has been identified onsite. Tanks and sumps containing oily and ink wastes are also onsite.
Hazardous Waste Desc:	Heavy metals including lead, zinc and barium, as well as cyanide comple1xes are present in sumps and soils. The hazards associated with these wastes and contaminants have been eliminated by removal of the liquids and sludges; removal of tanks, sumpsand piping; cleanup of residues on floors and other surfaces of the building; and excavation and redisposal of contaminated soils from the site.
Threat To Public Health & Env:	Peak concentrations of contaminants in the ground water are below applicable drinking water requirements. Ground water monitoring sampling continued until September, 1987. The monitoring wells were destroyed in December, 1987, following limited pumping of one well to remove the remaining ink.
Site Activity Status:	The responsible parties conducted removal of the liquids and sludges and sumps and piping in the early part of 1986. The site was fully characterized in mid 1987. DHS certified that the site was remediated in November, 1987.

Violation Source: CERS,

Site ID: 40063
Site Name: JMB CONSTRUCTION, INC
Violation Date: 05-09-2017
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 09/15/2017. Facility needs to re-activate EPA ID #.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 40063
Site Name: JMB CONSTRUCTION, INC
Violation Date: 05-09-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 06/06/2017. Facility needs to document above ground petroleum tank inspection on a monthly basis. Facility needs to create an inspection form/log to document such inspections for tanks that contain petroleum product (new or used). All containers container containing used oil have to be labeled and closed (i.e. no used oil will spill out if the container is knocked over). This includes the trash can used to catch used oil from the oil filter crusher and the oil pan. Another option is label these kind of container EMPTY DAILY and making sure the content is emptied on a daily basis. There were two 5 gallon water jars that were used to store waste diesel. Either emptied the waste diesel into appropriate containers or label and close the containers.

Eval Notes:	facility has a 750 Above ground storage tank for used oil. Facility crushes fuel filters and separate metal from paper filters. There were 3 used oil pick up in 2016. An electrician came to the facility late last year changing out fluorescent lights. The electrician took away the burned out light tubes. Facility has a oil water clarifier. Mr. Dower stated someone works at the airport for JMB takes the sludge for JMB. I advise JMB must keep a record of such pick up. For the most part the basin is used to catch dirt.

Longitude:	-122.41786
Case Type:	Cleanup Program Site
Case Worker:	RL
Local Agency:	Not reported
RB Case Number:	41S0027
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE)
Site History:	The Site was developed in 1958 by the American Linen Supply Company which operated a commercial laundry and dry cleaning business there. The dry-cleaning business used tetrachloroethene (PCE) until 1992. Since 1958, wastewater from the laundry operations was discharged to a large solids settling tank located outside the northeastern side of the building, prior to the wastewater being released into the sanitary sewer. Two underground storage tanks (USTs), used for gasoline and diesel were removed in 1987 but petroleum fuels are not the primary chemicals of concern (COCs). The primary chemicals of concern (COC) are volatile organic compounds due to past dry-cleaning operations. Part of the contamination appears to be related to a release at 416 Browning Way (see 41S0175), which is currently undergoing groundwater treatment via injections. Contamination under the site building is being addressed by insitu injections and interim remediation (soil excavation and disposal) occurred previously.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Type:	Cleanup Program Site
Case Worker:	AJK
Local Agency:	Not reported
RB Case Number:	SL373231180
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Surface water
Potential Contaminants of Concern:	Benzene, Toluene, Xylene, Aviation, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	The Equilon-San Francisco site (formerly Shell Oil) is an operating petroleum product distribution terminal, which is used to store gasoline, diesel fuel, jet fuel, and fuel additives. The 5.242-acre site is located in an industrial section near the northeast corner of the San Francisco International Airport in South San Francisco. The

SHELL (Continued) **S104573784**

terminal was constructed in 1964 and currently has ten (10) aboveground storage tanks (ASTs) with capacities of 500 to 90,000 barrels. The plant stores three (3) grades of gasoline and jet fuel that are received from incoming Equilon Enterprises LLC (Equilon) and Southern Pacific Pipe Line Corporation pipelines and distributes the grades from a two-lane truck loading rack. In addition, diesel fuel is stored at the plant for on-site consumption, where both fuel additives and diesel fuel are received from tank trucks.

Case Type:	Cleanup Program Site
Case Worker:	KAW
Local Agency:	Not reported
RB Case Number:	41S0113
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Aviation
Site History:	This site is governed by an airport-wide site cleanup order No. 99-045. Currently under long-term monitoring. Shell Oil Company operated the Barge Plant on Plot 22 from about 1955 to 1994. The Barge Plant was demolished in 1996. Total petroleum hydrocarbons as jet fuel and as gasoline, benzene, toluene, ethylbenzene, and total xylenes are the contaminants of concern (COCs). In July 1996, a dual phase extraction (DPE) system was installed to remove remaining contamination. The DPE system was removed, and the site is now a paved lot. In January 2017, the Water Board approved a Revised Risk Management Plan for the site. Annual groundwater monitoring is required. Order WQ 2021-0006-DWQ requires a PFAS investigation of the Site.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description:	Leaking Underground Storage Tank Cleanup Site

Violations:

Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-19-2018
Citation:	23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description:	Failure to maintain monitoring and maintenance records and/or maintain records of appropriate follow-up actions.
Violation Notes:	Returned to compliance on 01/19/2018. No record could be located as to how the 7/21/17 alarm L2 fill sump alarm was cleared and the cause of this alarm. There is no work order available to show that a technician came out to check the sump and clear the alarm. There was an SB 989 on this date and this may be cause of the alarm.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,

Site ID:	96696

AVIS CAR RENTAL (Continued) **1000374181**

Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-22-2015
Citation:	HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description:	Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes:	Returned to compliance on 01/22/2015. 3 gallons fuel was removed from the turbine sump. I instructed the operator to determine the cause of the leak.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-19-2018
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 01/19/2018. send training records within 30 days.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-21-2020
Citation:	23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes:	Returned to compliance on 01/21/2020. OBSERVATION: The Veeder Root 322 sensor in the fill sump failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. The sensor connection to the Veeder Root panel was corrected and retested to pass during the inspection. CORRECTIVE ACTION: Continue to maintain properly functioning monitoring equipment for the UST system.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-21-2020
Citation:	23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description:	Failure to have current UST Monitoring Plan available on site.
Violation Notes:	Returned to compliance on 03/25/2020. OBSERVATION: Owner/Operator did not maintain a current UST monitoring plan on site. In CERS, UST Monitoring Plan, Under Dispenser Containment (UDC) Monitoring, UDC Leak Sensor Model was listed as 794380-322. This should be listed as 208. In CERS, UST Monitoring Plan, Comments / Additional Information can be updated to include The fill sump is monitored by a Veeder Root

AVIS CAR RENTAL (Continued) **1000374181**

322 sensor. CORRECTIVE ACTION: Within 30 days submit an updated Monitoring Plan at https://cers.calepa.ca.gov/ Maintain a current copy of the UST monitoring plan on site. Within 30 days, submit documentation to the SMC CUPA that a current monitoring plan is maintained on site.

Violation Division: San Mateo County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 96696
Site Name: AVIS RENT A CAR SYSTEM
Violation Date: 12-25-2014
Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description: Failure to maintain leak detection alarm logs and/or maintain records of appropriate follow-up actions
Violation Notes: Returned to compliance on 01/22/2015. Annular space alarms on Sept 14,16 and 17th. No work order was associated with these alarms. All alarms must be responded to promptly. I instructed the facility operator Mr. Crowe to develop a protocol to address alarms.
Violation Division: San Mateo County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 96696
Site Name: AVIS RENT A CAR SYSTEM
Violation Date: 01-21-2020
Citation: HSC 6.7 25284, 25286 - California Health and Safety Code, Chapter 6.7, Section(s) 25284, 25286
Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: Returned to compliance on 03/25/2020. OBSERVATION: UST tank information is not current in CERS. In the California Electronic Reporting System (CERS), UST Tank Information, Vent, Vapor Recovery (VR) and Riser / Fill Pipe Piping Construction, Vent Piping Transition Sumps was marked as Single-walled. This should be marked as none. Any change of information must be updated in CERS within 30 days of the change. CORRECTIVE ACTION: Within 30 days submit an updated UST tank information at https://cers.calepa.ca.gov/
Violation Division: San Mateo County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 96696
Site Name: AVIS RENT A CAR SYSTEM
Violation Date: 01-22-2015
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of sensor to be located in the proper position/location.
Violation Notes: Returned to compliance on 02/02/2015. 208 sensor was at approx a 45 degree angle in the piping sump. 3 gallons of fuel was removed from the other side of the sump. The tech dipped the 208 in the fuel and it was enough to shut down the turbine.

Violation Date:	01-21-2020
Citation:	23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description:	Failure to have an approved UST Monitoring Plan.
Violation Notes:	Returned to compliance on 03/25/2020. OBSERVATION: Facility does not have an approved Monitoring Plan. In CERS, UST Monitoring Plan, Under Dispenser Containment (UDC) Monitoring, UDC Leak Sensor Model was listed as 794380-322. This should be listed as 208. In CERS, UST Monitoring Plan, Comments / Additional Information can be updated to include The fill sump is monitored by a Veeder Root 322 sensor." CORRECTIVE ACTION: Within 30 days submit an updated Monitoring Plan at https://cers.calepa.ca.gov/

Violation Date:	01-18-2019
Citation:	23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description:	Failure to maintain records of repairs and upgrades on site, or off site if approved by the UPA, for the life of the UST.
Violation Notes:	Returned to compliance on 01/18/2019. High liquid annular alarms in the alarm history log yet no follow up from 8/18, 9/18 until december. These alarms were noted on the alarm history and DO monthly inspection report. Be sure to follow up on any alarms asap as it could indicate a serious problem.

Violation Date:	01-19-2018
Citation:	23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description:	Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes:	Returned to compliance on 01/19/2018. MLLD failed to detect leak at calibrated 3.0 GPH. Technician is adjusting and will re-test. Technician has attempted to adjust the leak detector and it is still not detecting the leak. There is lots of corrosion in there as well. This will need to be replaced.

Violation Description:	Failure to submit the Designated Underground Storage Tank Operator Identification Form within 30 days of installing a UST system or within 30 days of a change in DO.
Violation Notes:	Returned to compliance on 02/09/2020. OBSERVATION: Christine Pang performed the 5-9-19, 4-12-19, 3-15-19, 2-15-19, and 1-25-19 monthly designated operator (DO) inspection reports. The San Mateo County (SMC) Certified Unified Program Agency (CUPA) has not been notified within 30 days of the change in facility designated operator. Any changes shall be reported to the CUPA with 30 days. CORRECTIVE ACTION: Within 30 days, submit an updated Owner Statement of Designated UST Operator Compliance: to the SMC CUPA at https://cers.calepa.ca.gov/ submit notification to the CUPA identifying all the designated operators for this facility by [date, 30 days from now].

Violation Source: CERS,

Site ID: 96696
Site Name: AVIS RENT A CAR SYSTEM
Violation Date: 01-22-2015
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description: Failure to maintain on site an approved monitoring plan.
Violation Notes: Returned to compliance on 01/26/2015. The monitoring plan is incorrect. I am rejecting it in CERS. The annular sensor is a 303 not a 302.
Violation Division: San Mateo County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 96696
Site Name: AVIS RENT A CAR SYSTEM
Violation Date: 01-18-2019
Citation: 23 CCR 16 2712(b)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(2)
Violation Description: Failure to maintain monitoring records for release detection and/or maintain records of appropriate follow-up actions.
Violation Notes: Returned to compliance on 02/01/2019. Facility had high liquid alarms in annular space in 9/26/18 and 9/27/18 as well as 8/13, 8/14, and 8/15 however there was no record of maintenance or how this alarm was cleared. In 12/12/18 there was a service technician onsite to troubleshoot the alarm. Is there a reason it took this much time to respond to the alarm? Respond to all UST alarms and ensure there are records available for every alarm on the alarm log as to how they were cleared. These alarms were noted on all of the DO monthly inspection reports yet there was no action taken until December. Be sure these reports are reviewed monthly and signed by operator.

Violations:
Site ID: 96696

AVIS CAR RENTAL (Continued) **1000374181**

Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-19-2018
Citation:	23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description:	Failure to maintain monitoring and maintenance records and/or maintain records of appropriate follow-up actions.
Violation Notes:	Returned to compliance on 01/19/2018. No record could be located as to how the 7/21/17 alarm L2 fill sump alarm was cleared and the cause of this alarm. There is no work order available to show that a technician came out to check the sump and clear the alarm. There was an SB 989 on this date and this may be cause of the alarm.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-22-2015
Citation:	HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description:	Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes:	Returned to compliance on 01/22/2015. 3 gallons fuel was removed from the turbine sump. I instructed the operator to determine the cause of the leak.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,

Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-19-2018
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 01/19/2018. send training records within 30 days.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-21-2020
Citation:	23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes:	Returned to compliance on 01/21/2020. OBSERVATION: The Veeder Root 322 sensor in the fill sump failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. The sensor connection to the Veeder Root panel was corrected and retested to pass during the inspection. CORRECTIVE ACTION: Continue to maintain properly functioning monitoring equipment for the UST system.

Violation Date:	01-21-2020
Citation:	23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description:	Failure to have current UST Monitoring Plan available on site.
Violation Notes:	Returned to compliance on 03/25/2020. OBSERVATION: Owner/Operator did not maintain a current UST monitoring plan on site. In CERS, UST Monitoring Plan, Under Dispenser Containment (UDC) Monitoring, UDC Leak Sensor Model was listed as 794380-322. This should be listed as 208. In CERS, UST Monitoring Plan, Comments / Additional Information can be updated to include The fill sump is monitored by a Veeder Root 322 sensor. CORRECTIVE ACTION: Within 30 days submit an updated Monitoring Plan at https://cers.calepa.ca.gov/ Maintain a current copy of the UST monitoring plan on site. Within 30 days, submit documentation to the SMC CUPA that a current monitoring plan is maintained on site.

Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-18-2019
Citation:	23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description:	Failure to maintain records of repairs and upgrades on site, or off site if approved by the UPA, for the life of the UST.
Violation Notes:	Returned to compliance on 01/18/2019. High liquid annular alarms in the alarm history log yet no follow up from 8/18, 9/18 until december. These alarms were noted on the alarm history and DO monthly inspection report. Be sure to follow up on any alarms asap as it could indicate a serious problem.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-19-2018
Citation:	23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description:	Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements:

AVIS CAR RENTAL (Continued) **1000374181**

	Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes:	Returned to compliance on 01/19/2018. MLLD failed to detect leak at calibrated 3.0 GPH. Technician is adjusting and will re-test. Technician has attempted to adjust the leak detector and it is still not detecting the leak. There is lots of corrosion in there as well. This will need to be replaced.
Violation Division:	San Mateo County Environmental Health
Violation Program:	UST
Violation Source:	CERS,

Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-18-2019
Citation:	23 CCR 16 2712(b)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(2)
Violation Description:	Failure to maintain monitoring records for release detection and/or maintain records of appropriate follow-up actions.
Violation Notes:	Returned to compliance on 02/01/2019. Facility had high liquid alarms in annular space in 9/26/18 and 9/27/18 as well as 8/13, 8/14, and 8/15 however there was no record of maintenance or how this alarm was cleared. In 12/12/18 there was a service technician onsite to troubleshoot the alarm. Is there a reason it took this much time to respond to the alarm? Respond to all UST alarms and ensure there are records available for every alarm on the alarm log as to how they were cleared. These alarms were noted on all of the DO monthly inspection reports yet there was no action taken until December. Be sure these reports are reviewed monthly and signed by operator.

Violations:
Site ID: 96696
Site Name: AVIS RENT A CAR SYSTEM
Violation Date: 01-19-2018
Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description: Failure to maintain monitoring and maintenance records and/or maintain records of appropriate follow-up actions.
Violation Notes: Returned to compliance on 01/19/2018. No record could be located as to how the 7/21/17 alarm L2 fill sump alarm was cleared and the cause of this alarm. There is no work order available to show that a technician came out to check the sump and clear the alarm. There was an SB 989 on this date and this may be cause of the alarm.
Violation Division: San Mateo County Environmental Health

Violation Source:	CERS,
Site ID:	96696
Site Name:	AVIS RENT A CAR SYSTEM
Violation Date:	01-21-2020
Citation:	23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes:	Returned to compliance on 01/21/2020. OBSERVATION: The Veeder Root 322 sensor in the fill sump failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. The sensor connection to the Veeder Root panel was corrected and retested to pass during the inspection. CORRECTIVE ACTION: Continue to maintain properly functioning monitoring equipment for the UST system.
Violation Division:	San Mateo County Environmental Health

ALAN BAKER PROPERTY (Continued) **S117398362**

File Location: Local Agency
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: Extracted from Environ's November 20, 2009 Remedial Investigation Report and May 21, 2010 Work Plan for Vapor Intrusion, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in a commercial and industrial area of South San Francisco on Point San Bruno east of downtown South San Francisco and Highway 101, and approximately 400 feet south-southwest of the intersection of Sylvester Road and East Grand Avenue. The site consists of approximately 3 acres, divided into the Associated Road Parcel, the Alan Baker property, and 105 Associated Road. Development and known historical uses of the site are discussed below. The Associated Road parcel (approximately 1.02 acres) is currently vacant and undeveloped, and is generally unpaved (a small asphalt-paved area islocated at the entrance located at the south). No street address is linked to the Parcel; street frontage consists of approximately 30 feet along Associated Road (from which the Parcel is accessed), west of the intersection with Sylvester Road. S&S Tours, a charter bus company, leased the Parcel from approximately 1997 through 201 for vehicle parking. A prior report and adjacent site personnel stated that the company also washed buses at the Parcel. Mr. Patel later leased the Parcel in approximately 2004-2005 to a private individual for equipment storage. The Parcel is currently used for the parking and storage of trailers, as well as warehouse transfer operations between neighboring sites (105 Associated Road and 160 Sylvester Road). The Alan Baker property consists of two land parcels at 160 and 180 Sylvester Road, respectively, both of which are developed with warehouse-type buildings. Both buildings are predominantly used for warehouse storage space, and include a small percentage (of the overall square footage) that is used as office space. 160 Sylvester Road (approximately 0.87 acres) is occupied by the Alan Baker Company, which operates a storage and distribution warehouse at the property. Based on Environ's observations and understanding from Alan Baker personnel, the warehouse appears to be primarily used by a neighboring business for the storage of dry goods (e.g. spices, dry food products). 180 Sylvester Road (approximately 0.36 acres) is occupied by Weapon-R Competition Products, an automotive aftermarket products retailer and manufacturer. The building at 105 Associated Road, approximately 29,900 square feet, was constructed in 1955. Between approximately 1956 and 1978, the building was occupied for relatively short periods by a variety of light industrial tenants, including the Morris Manufacturing Company (reportedly a store fixture manufacturing company, and also a subsidiary of Kidde fire safety products), a refrigeration company, an auto part assembly and a distribution company, and various sales operations. The current tenant, San Francisco Spice Company, initially occupied the western portion of the building for use as a food product manufacturing and distribution facility in 1977, and took over the entire building in 1989. The eastern portion of the building was occupied by an auto auction warehouse and a furniture assembly and upholstery facility for relatively short periods during the 1980s. Previous investigations at the site conducted by Environ included Phase I and Phase II environmental site assessments of the Associated Road Parcel and 105 Associated Road property completed in 2006 and several soil,

ALAN BAKER PROPERTY (Continued) **S117398362**

groundwater, and/or soil gas investigations conducted in February 2006, October 2006, June 2007, and October 2009. The primary chemicals of concern at the site appear to be chlorinated volatile organic compounds, chiefly tetrachloroethene, trichloroethene, and their breakdown products cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride in soil gas and/or groundwater. These chemicals were detected at concentrations that exceeded San Francisco Regional Water Quality Control Board's residential and/or commercial Environmental Screening Levels for vapor intrusion concerns for soil gas and/or groundwater. Isolated detections of other chemicals in soil gas and/or groundwater beneath the site and vicinity include 1,1-dichloroehane, 1,1-dichloroethene, 1,1,1-trichloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, benzene, toluene, xylenes, and chloroform. Sampling efforts to date have not identified a significant point source of VOCs in soil at the Associated Road Parcel. A soil gas and groundwater "hotspot" appeared to be located beneath the eastern side of the Parcel immediately adjacent to the Alan Baker property, where TCE and cis-1,2-dichloroethene were identified as the primary contaminants present at that location. Maximum concentrations of TCE in soil gas and groundwater and cis-1,2-DCE found in 2006 are above applicable RWQCB Environmental Screening Levels for soil gas and groundwater. PCE was detected at only two sampling locations in soil gas, but at concentrations below ESLs for soil gas under a commercial land use scenario. Previous sampling also identified a hotspot at the Alan Baker property, specifically with the findings of VOCs in soil gas, soil, and groundwater at the east side of the Site, in proximity to the former gasoline UST and the eastern yard area between the buildings at 160 and 180 Sylvester Road. Through 2007, the PCE detections beneath the Alan Baker property were the only detections of PCE found above laboratory reporting limits in soil and groundwater sampling at the Site and adjacent properties during the investigations conducted by Environ. Concentrations of PCE, TCE, and cis-1,2-DCE detected in groundwater samples collected at the Site in June 2007 (sample locations GP-32 and AB-14) were significantly lower (up to one order of magnitude) than the maximum concentrations found in groundwater during previous investigations in March and April 2006.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Type:	Cleanup Program Site
Case Worker:	RL
Local Agency:	Not reported
RB Case Number:	41S0175
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE)
Site History:	Order No. R2-2015-0012 Site Cleanup Requirements for 531-535 OAK, LLC, and Goss-Jewett Company of Northern California for the Property at 416 Browning Way, South San Francisco 2/11/2015. Goss-Jewett owned the Site from 1957 to 2011 and operated a dry cleaning supply distribution business from 1957 to 2000 at the Site. The company provided laundry chemicals, including detergents and spotting chemicals, packaging products such as hangers and polyethylene bags, and bulk deliveries of tetrachloroethene (PCE). The PCE was stored in a 4,100 gallon aboveground storage tank (AST) that was in the southwestern corner of the building. In 2000, the Site was leased to Pain Therapeutics, which converted the warehouse into office space. The Site is currently operated as B.I.A. Cordon Bleu, a wholesale manufacturer and distributor of porcelain and stoneware, bakeware, and dinnerware. There were no reported spills or releases from the Site during Goss-Jewett s operations. There has been no known use of chlorinated solvents at the Site since Goss-Jewett ceased operations in 2000. The initial investigation of the Site was conducted by

416 BROWNING (FMR GOSS-JEWETT FACILITY) (Continued) **S102445327**

Geomatrix on behalf of Goss-Jewett in response to a directive from the Regional Water Board dated May 14, 2007. The Regional Water Board was overseeing the investigation of the release of volatile organic compounds (VOCs) in the vicinity of the neighboring property located at 290 South Maple Avenue, which is adjacent and east of the Site. Since the Site was previously a dry cleaning supply distribution business, and it is located up-gradient and cross-gradient of 290 South Maple Avenue, the Regional Water Board directed Goss-Jewett to investigate the Site for the presence of VOCs. The results of the 2007 investigation confirmed the presence of highly- elevated concentrations of VOCs, including PCE and its breakdown products, at the Site. The results of additional investigations have confirmed the presence of highly-elevated concentrations of VOCs in soil, soil vapor, and groundwater samples collected in the southwestern portion (former AST area) and the northeastern portion of the Site. Based on the results of these investigations, in 2015 and 2016 more than 2,000 tons of contaminated soil were removed from areas that had been identified as having high PCE concentrations in soil, and the open exposed excavations treated with a dechlorination agent prior to being backfilled. Workplan approved for additional soil removal and groundwater treatment in 2018; additional remedial actions ongoing. Indoor Air sampling indicated concentrations of PCE slightly above commercial environmental screening levels.

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/06/2013
Comments: Document was not prepared with DTSC oversight. Document was not prepared by DTSC. Letter from San Mateo Groundwater Protection Program approving a Report and Workplan for the Morena trust site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/04/2014
Comments: Document was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) approving a pilot test to use soil vapor extraction (SVE) as a remedy for tetrachloroethene (PCE) vapor. GPP stated that case closure will not be recommended following determination of a site-specific slab attenuation factor.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 06/18/2015
Comments: Document was not prepared by DTSC. Response from San Mateo County Groundwater Protection Program (GPP) indicating indoor air intrusion remains a concern and requesting an additional progress report to monitor rebound and indoor vapor results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 02/25/2015
Comments: Document was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) in response to the Sub-Slab Vapor Remediation Progress Report submitted December 22, 2014. GPP expressed concerns that soil and vapor impacts may still be present and contributing to subsurface vapor issues on site. GPP requested a workplan to investigate potential indoor air.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/30/2015
Comments: Letter was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) noting that standard indoor air sampling protocols were not followed for the 11/16/2015 indoor air report and requesting a cool season sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/25/2016

MORENA TRUST (Continued) **S118757333**

Comments:	Document was not prepared with DTSC oversight. In response to a May 22, 2015 letter from San Mateo County Groundwater Protection Program (GPP), Trinity Source Group (Trinity) conducted a cool-weather assessment of indoor air. Sub-slab vapor probes were also sampled. Maximum reported concentrations were 2.1ug/m3 for tetrachloroethene (PCE) and 0.086 ug/m3 for trichloroethene (TCE) for the indoor air sampling. PCE was detected from in 14 of the 16 subslab probes samples from 48.8 to 25,600 ug.m3. TCE was detected in 8 of the 16 subslab probes at concentrations ranging from 94.0 to 1540ug/m3.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	06/08/2012
Comments:	This document was not prepared with DTSC oversight and was not approved by DTSC. Phase I submitted by Trinity.

Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	07/23/2012
Comments:	This document was not prepared with DTSC oversight.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	04/02/2018
Comments:	DTSC has approved the Work Plan for Additional Indoor Air Sampling at the Morena Trust Site. Indoor air sampling is being done in two units to reevaluate indoor air conditions following modifications to the building foundation. Sampling will take place in two seasons.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Health & Safety Plan
Completed Date:	04/03/2018
Comments:	Health and Safety Plan prepared to protect workers conducting environmental work at the Morena Trust site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Pilot Study/Treatability Workplan
Completed Date:	03/07/2019
Comments:	DTSC has reviewed and approved the Work Plan to implement a Pilot Test of a Sub-Slab Depressurization System (SSDS) at the Starlite/Canal Building at 111 Starlite Street in South, SF. The Subslab Depressurization System mitigates the intrusion of subsurface tetrachloroethylene (PCE or perc) vapors by passively depressurizing the subsurface relative to the occupied building and creating a preferential pathway for those vapors to escape. Field implementation is scheduled to begin in second quarter 2019 and the pilot test period will continue for an additional 6-12 months after. If the pilot test demonstrates that an SSDS is successful in mitigating the subsurface intrusion of PCE vapors, the remedy will be recommended and proposed in a Removal Action Workplan which the neighboring community will have the opportunity to comment on.

Completed Date: 06/04/2014
Comments: Document was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) approving a pilot test to use soil vapor extraction (SVE) as a remedy for tetrachloroethene (PCE) vapor. GPP stated that case closure will not be recommended following determination of a site-specific slab attenuation factor.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 06/18/2015
Comments: Document was not prepared by DTSC. Response from San Mateo County Groundwater Protection Program (GPP) indicating indoor air intrusion remains a concern and requesting an additional progress report to monitor rebound and indoor vapor results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 02/25/2015
Comments: Document was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) in response to the Sub-Slab Vapor Remediation Progress Report submitted December 22, 2014. GPP expressed concerns that soil and vapor impacts may still be present and contributing to subsurface vapor issues on site. GPP requested a workplan to investigate potential indoor air.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/30/2015
Comments: Letter was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) noting that standard indoor air sampling protocols were not followed for the 11/16/2015 indoor air report and requesting a cool season sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/25/2016
Comments: Document was not prepared with DTSC oversight. In response to a May 22, 2015 letter from San Mateo County Groundwater Protection Program (GPP), Trinity Source Group (Trinity) conducted a cool-weather assessment of indoor air. Sub-slab vapor probes were also sampled. Maximum reported concentrations were 2.1ug/m3 for tetrachloroethene (PCE) and 0.086 ug/m3 for trichloroethene (TCE) for the indoor air sampling. PCE was detected from in 14 of the 16 subslab probes samples from 48.8 to 25,600 ug.m3. TCE was detected in 8 of the 16 subslab probes at concentrations ranging from 94.0 to 1540ug/m3.

Completed Date: 07/23/2012
Comments: This document was not prepared with DTSC oversight.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/02/2018
Comments: DTSC has approved the Work Plan for Additional Indoor Air Sampling at the Morena Trust Site. Indoor air sampling is being done in two units to reevaluate indoor air conditions following modifications to the building foundation. Sampling will take place in two seasons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 04/03/2018
Comments: Health and Safety Plan prepared to protect workers conducting environmental work at the Morena Trust site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 03/07/2019
Comments: DTSC has reviewed and approved the Work Plan to implement a Pilot Test of a Sub-Slab Depressurization System (SSDS) at the Starlite/Canal Building at 111 Starlite Street in South, SF. The Subslab Depressurization System mitigates the intrusion of subsurface tetrachloroethylene (PCE or perc) vapors by passively depressurizing the subsurface relative to the occupied building and creating a preferential pathway for those vapors to escape. Field implementation is scheduled to begin in second quarter 2019 and the pilot test period will continue for an additional 6-12 months after. If the pilot test demonstrates that an SSDS is successful in mitigating the subsurface intrusion of PCE vapors, the remedy will be recommended and proposed in a Removal Action Workplan which the neighboring community will have the opportunity to comment on.

Property History: Prior to DoD use, the Site was the Tanforan Race Track, primarily used for horse races. Around 1911, it was briefly used as an airfield. During World War I, the Site was used as a military training center. In 1942, former Camp Tanforan was acquired for use as a temporary assembly center for persons of Japanese ancestry shortly following the bombing of Pearl Harbor in December 1941. The U.S. Army took possession of the property on 3 April 1942, and initial construction was completed on 25 April 1942. The camp was constructed to house 7,900 people. The first group of Japanese

CAMP TANFORAN (Continued) **1024903722**

internees arrived on 28 April 1942, and the Site reached a maximum capacity of 7,893 internees. Internees were housed in newly constructed barracks as well as the existing horse stables at the Site. Mess halls, recreation buildings, latrines, showers, and infirmaries were constructed to accommodate the internees. By 13 October 1942, the last of the internees were sent to a more permanent relocation center further inland. The Site closed as an assembly center on 26 October 1942. Between November 1942 and March 1944, various branches of the DoD temporarily used the Site for housing troops. The Site officially transferred from the Department of the Army to the Department of the Navy on 1 March 1944. Under the U.S. Navy, the Site was known as the Naval Advance Personnel Depot San Bruno. Additional buildings constructed by the U.S. Navy included a boiler house, paint locker, rifle range building, and incinerator.
The lease to the property was scheduled to terminate on 30 June 1946. An aerial photograph dated 29 July 1946 shows that all DoD-constructed buildings except one former barracks and one mess hall were removed. The lease termination documents for the property were not found during research. Following DoD use, the Site reopened as a race track until the early 1960s, and it was destroyed by a fire in 1964. In 1971, a commercial mall known as the Tanforan Park Shopping Center was constructed at the location. Additional commercial developments were constructed on the northern portion of the Site in the 1980s. The Tanforan Park Shopping Center reopened as The Shops at Tanforan after major renovations and a BART station were completed in 2005.

Completed Document Type: Community Profile
Completed Date: 02/21/2017
Comments: Completed and signed Community Profile

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 02/11/2020
Comments: This Completion Report describes the Response Plan implementation. The response actions included implementing the site management plan to manage soil during construction and addressing tetrachloroethene in soil gas at 400 Cypress Avenue. A vapor mitigation system was installed to prevent vapor intrusion into residential units.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/12/2019
Comments: Work Plan completed and approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 05/29/2020
Comments: Phase I complete. CLRRA response actions required for a portion of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 05/29/2020
Comments: Phase I ESA/AAI. CLRRA Response Actions required on a portion of the site.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/25/1987
Comments: Completed Site Screening. The site was a metal recycling facility for 60 years. DHS certified closure in 1986. During its sale, levels exceeding closure criteria were found (650-1020 ppm Lead). DHS allowed development of the site for industrial uses if site will be covered with one foot cap of fill material and if declaration of covenants, conditions and restrictions is recorded.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 06/01/1986
Comments: Certified site. In June of 1982, Tinmet submitted a closure plan to DHS. Closure was carried out from July 1982 through October 1985. Closure activities consisted of the removal of on-site commercial waste products, contaminated soils and sludges from various areas, shredder residue, two underground storage tanks, and liquid from the evaporation pond. The closure plan was overseen and approved by DHS. The primary chemicals of concern in soil, sludge, surface water, and groundwater were lead and zinc. Soils were removed to an average concentration of 500 ppm total lead. The SF Regional Water Quality Control Board oversaw surface and groundwater monitoring at the site during closure. In late 1985, soils containing elevated levels of lead were removed from an adjacent Southern Pacific (SP) Railroad right-of-way containing greater than 1,000 ppm of lead at the surface were excavated to a depth of six inches and disposed as hazardous waste. The excavated area, the trench, and a drainage ditch in the SP right-of-way were backfilled with clean imported soil. The objective of the soil remediation program on the SP right-of-way was to eliminate contact between surface water runoff from the site and soils containing elevated lead concentrations. However, concentrations of lead remained in areas of the right-of-way as high as 3,950 ppm. Following completion of remedial activities at the

VIROLOGIC INC (Continued) **1000298667**

adjacent SP right-of-way, DHS certified closure of the site.

Alternate Address:	270 EAST GRAND AVENUE
Alternate City,St,Zip:	S SAN FRANCISCO, CA 94080
Background Info:	This approximately 20-acre Site is currently Brittania Point Grand, a commercial park occupied by a number of biotechnology companies. Office buildings, parking areas, and landscaping are the essential features of the Site. The Site is bounded to the north by East Grand Avenue, to the south by railroad tracks, to the east by Littlefield Avenue, and to the west by Harbor Way and the rest of Brittania Point Grand. The Site was formerly the location of a processing plant for the recovery of tin and steel from scrap tinplate. The plant had been in existence from 1922 until operations ceased in 1982. Operations at the Site prior to 1922 are unknown. The plant operated under a succession of owners, the last of which was Tinmet Corporation (Tinmet), which purchased the plant and its owner, MRI Corporation. During plant operations, a two-acre evaporation pond existed on-site for the collection of plant effluent. Large piles of scrap steel generated in the detinning process were also stored on-site. NC Land Associates purchased the Site in 1987. Britannia Point Grand purchased the Site from NC Land Associates in 1997 and redevelopmed it to its current commercial use.
Comments Date:	06011986
Comments:	Certified site. In June of 1982, Tinmet submitted a closure
Comments Date:	06011986
Comments:	plan to DHS. Closure was carried out from July 1982 through
Comments Date:	06011986
Comments:	October 1985. Closure activities consisted of the removal of
Comments Date:	06011986
Comments:	on-site commercial waste products, contaminated soils and
Comments Date:	06011986
Comments:	sludges from various areas, shredder residue, two underground
Comments Date:	06011986
Comments:	storage tanks, and liquid from the evaporation pond. The

VIROLOGIC INC (Continued) **1000298667**

Comments Date:	06011986
Comments:	closure plan was overseen and approved by DHS. The primary
Comments Date:	06011986
Comments:	chemicals of concern in soil, sludge, surface water, and
Comments Date:	06011986
Comments:	groundwater were lead and zinc. Soils were removed to an
Comments Date:	06011986
Comments:	average concentration of 500 ppm total lead. The SF Regional
Comments Date:	06011986
Comments:	Water Quality Control Board oversaw surface and groundwater
Comments Date:	06011986
Comments:	monitoring at the site during closure. In late 1985, soils
Comments Date:	06011986
Comments:	containing elevated levels of lead were removed from an adjacent
Comments Date:	06011986
Comments:	Southern Pacific (SP) Railroad right-of-way containing greater

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

EXXON CO U.S.A. 7-2059 (Continued) **S100178951**

Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Gasoline
Site History: Extracted from URS's June 26, 2009 Work Plan for Additional On-Site Source Area Assessment and Off-Site Monitoring Well Installation, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The intersection of El Camino Real and San Bruno Avenue has been the location of retail gasoline service stations for more than 50 years. The northeast corner of the intersection is presently occupied by a Valero gasoline service station. An ExxonMobil station previously occupied this address. Petroleum hydrocarbon impacted soil and groundwater were discovered beneath the site in 1988; " A groundwater extraction system was installed on the site and operated from 1991 to 1996. Approximately 67 pounds of petroleum hydrocarbons and 1,300,759 gallons of groundwater were removed from 1991 to 1996; " Four 10,000-gallon fuel USTs and one 550-gallon waste oil UST were installed in 1982 and removed in 1997; " Four 550-gallon fuel USTs were discovered and removed during the 1997 UST excavation activities. The USTs were of an unknown age, but are assumed to have been originally installed in about 1945; " Approximately 2,800 tons of soil was removed from beneath the site during the 1997 UST excavation activities; and " Quarterly groundwater monitoring has occurred at the site from 1993 until 2001. Semiannual groundwater monitoring has occurred at the site since the first quarter of 2002 to present. Source areas at the former ExxonMobil station site include the former central and southern UST basins and the former dispenser islands. At the former ExxonMobil site, remedial pilot studies included high vacuum dual phase extraction (HVDPE), soil vapor extraction (SVE), air sparging (AS) and biosparging.The HVDPE, SVE, AS and biosparging pilot test results at the former Exxon station indicated the movement of air through the subsurface (both sparging and vapor extracting) could potentially reduce residual contaminant mass in the hot spot areas at these two sites. However, pilot testing also suggests that the complex/variable nature and geometry of unconsolidated materials beneath the Site appears to create preferential pathways for air and contaminant movement, thereby limiting the effectiveness of physical contaminant mass recovery/removal. On June 30, 2004, ERI installed and collected soil vapor samples from sampling points SV-1, SV-2, SV-3, SV-4 and SV-6 at the former ExxonMobil site. During installation, pea gravel was observed at soil vapor point SV-5. Due to safety concerns with encountering underground piping/equipment, installation of soil vapor sampling point SV-5 was not completed. Tracer gas was detected in soil vapor samples SV-1, SV-2, SV-3, SV-4 and SV-6. Due to soil vapor sample collection from low permeability clayey soils and the use of 5-L Summa"! canisters, ERI concluded that a leak likely occurred at the well seal tubing interface. Based on the data collected, ERI determined that the soil vapor samples collected from SV-3 were valid (ATC, 2007a). On September 24, 2004, ERI collected soil vapor samples from sampling points SV-2 and SV-3 using a custom made sampling manifold connected to a flow regulator, pressure gauges and a 1-L Summa"! canister. Gauze strips soaked in isopropyl alcohol (tracer gas) were wrapped around the well head sampling valve while collecting soil vapor samples from soil vapor points SV-2 and SV-3. Because tracer gas was detected above acceptable limits, the results of soil vapor sampling conducted in September 2004 utilizing soil vapor points SV-2 and SV-3 were not representative of soil vapor conditions beneath the Site. ERI concluded that due to the low

EXXON CO U.S.A. 7-2059 (Continued) **S100178951**

permeability of the native soils, the soil vapor points short circuit at the well seal before sufficient vacuum is generated to extract soil vapor from the native material. On September 4, 2007, ATC conducted soil vapor assessment activities at the former ExxonMobil station. As previously mentioned, potential sources on the former ExxonMobil site include two former UST systems in use before 1997 and the current UST system that was installed in 1997. Based on the laboratory analytical results reported during this soil vapor assessment, all concentrations of detected VOCs in the soil vapor samples were below the Shallow Soil Gas Screening Levels for Evaluation of Potential Vapor Intrusion Concerns (volatile chemicals only), Table E-2 (RWCQB, 2008) and do not pose a human health risk. The geometry of fuel hydrocarbon impacts at the source areas (former dispenser islands, former southern UST basin, and former central UST basin) has been defined by the qualitative and quantitative work conducted to date. " The geologic setting at the site appears to create preferential pathways for air and contaminant movement. " The upper five feet of soil at the site consists of clayey soils which may act as a natural cap/barrier to volatilization and vertical contaminant migration. However, these conditions could accentuate the effect of preferential pathways, such as utility corridors.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/11/2021
Date Data Arrived at EDR: 11/12/2021
Date Made Active in Reports: 02/01/2022
Number of Days to Update: 81

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Elevation:	21 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12016481 SAN FRANCISCO SOUTH, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

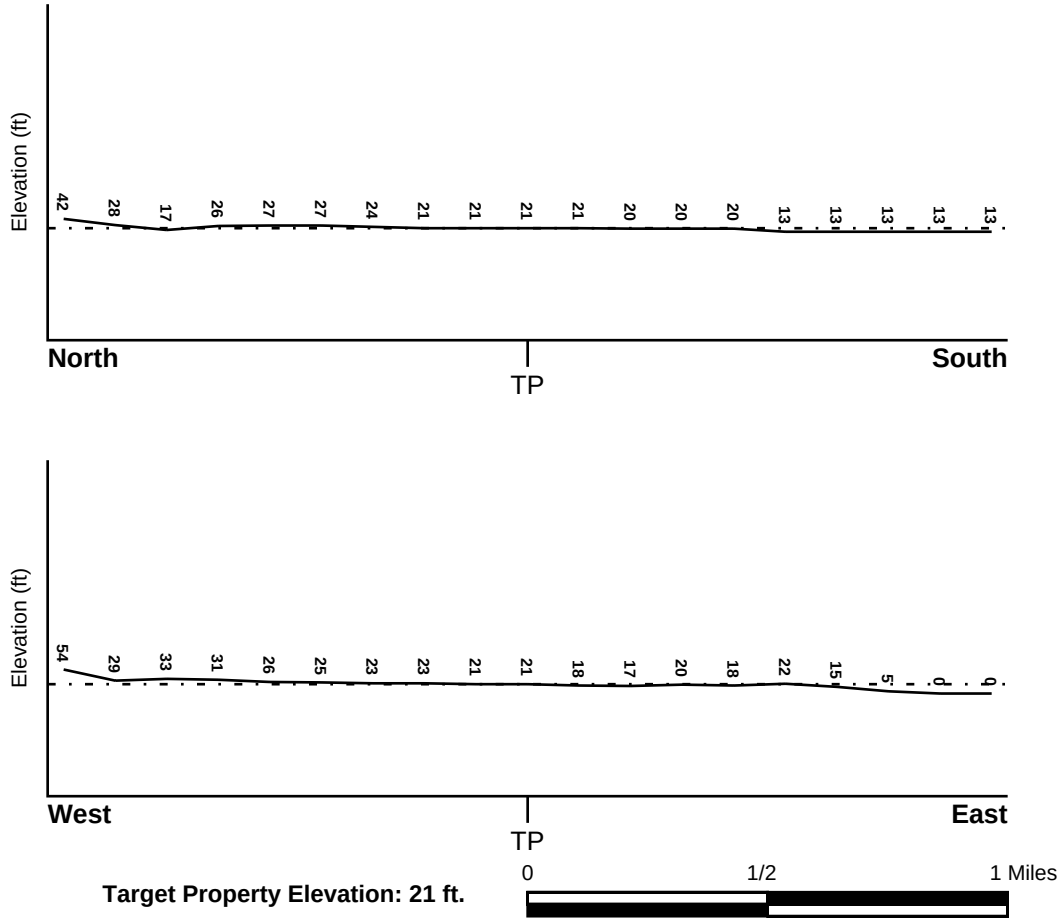
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06081C0043E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06081C0041E	FEMA FIRM Flood data

06081C0044E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN FRANCISCO SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Public Records Request Number: PR2-030322-03

Locations: 101 + 131 Terminal Ct., South San Francisco, CA 94080 (APN: 015-113-210 and -240)

Dear Ms. Javier:

We have received your Public Records Act Request at the Department of Toxic Substances Control (DTSC). Upon thorough review of our files, we found no records pertaining to the site(s) referenced above.

We were unable to locate an address in the county database using the APNs provided and we are unable to search our records using APNs as our databases do not include this information. If you have a specific address or cross streets, please let us know.

For information regarding public reports on hazardous waste shipments of generators, transporters, and TSDFs, you can access our Hazardous Waste Tracking System (HWTS) online at: https://hwts.dtsc.ca.gov/. Select the “Reports” tab for search options. If you are interested in retrieving detailed reports, please contact the HWTS unit via e-mail: hwtsreports@dtsc.ca.gov or phone: 1-800-618-6942. Customized reports may require a fee. For copies of manifests, please send an e-mail to mcr@dtsc.ca.gov.

In addition, the DTSC provides access to public records online via EnviroStor; another data management system that tracks our efforts in cleanup, permitting, enforcement, and investigation of known/suspected hazardous waste sites and facilities. The available data is updated in real-time. You can access Envirostor online at www.envirostor.dtsc.ca.gov. Navigate the website easily by clicking the "How to Use EnviroStor" tab, then selecting the option “Take a Tour”.

If you have any questions or would like further information regarding your request, please contact me via phone: 510-540-3800 or e-mail: Berkeleyfileroom@dtsc.ca.gov.

Sincerely,

Carl Rose
Regional Records Coordinator

Subject: RE: PRA 21-0717 File Review Request

CAUTION: External Email

Hello Marie Rose,

The San Francisco Bay Regional Water Board received your March 3, 2022 file review request, which seeks records related to the address as described below. Based on a thorough search, the San Francisco Bay Water Board does not possess any additional records responsive to your request. It appears in Geotracker database for the address located at 131 Terminal Court, South San Francisco, CA that was regulated and closed by the local agency, the site documents are available to access online with the file number 41-4032.

I find no record information for the other address you requested. I would recommend contacting the local agency, San Mateo County Health Department, LOP for any further information they may have.

Thank you,

Melinda Wong

455 County Center
Redwood City, CA 94063

Reference: Olympian Sites

Subject: Proposed PFP startup actions - 35 South Linden Avenue, South San Francisco; 131 Terminal Court, South San Francisco; 190 East Grand, South San Francisco; 501 Serramonte Boulevard, Daly City

Dear Mr. Ice:

The following sections discuss each of the subject sites with regard to our discussion at the August 24, 2004 meeting and a review of recently submitted documents (quarterly monitoring reports, feasibility studies, etc.). EcoLogics has submitted PFP documents to Sacramento and obtained permits required to operate equipment at the sites. The items listed below (for each site) should resolve any outlying issues you may have as we proceed toward the onset of Active Remediation. We will be contacting you with proposed dates (seventy-two hour notification) should you or a representative of your office want to observe commencement of site operations.

35 South Linden Avenue

The feasibility study conducted was discussed. Our understanding is that the studies recommendation of dual phase extraction was acceptable and that EcoLogics workplan (ICAP, June 21, 2004) was in accordance with the feasibility study. A proposed schedule for implementing the ICAP under the PFP project is attached as Attachment A.

As stated in the ICAP, the initial operation at the site will provide data to determine the need for additional on-site wells and allow removal of free product. It is important to eliminate the continuing source of dissolved-phase mass and reduce plume migration even if the contaminant plume has not been fully defined. The action needed to complete plume definition, however, would also be addressed and expedited to incorporate impacted areas into the remediation effort, as required for site closure.

190 E. Grand Avenue

In the August 24, 2004 meeting, the Olympian JV representative requested that the feasibility study prepared by TEC Accutite be reviewed. This feasibility study selects high-vacuum dual phase extraction as Alternative 1. If the TEC feasibility study is

approved by San Mateo County Health Services, then EcoLogics proposes to conduct the pilot study as part of the proposed site PFP project. If the pilot test is successful, a remedial action plan would be submitted under the PFP project to continue remediation using HVDPE. A proposed schedule for conducting the pilot test and activating the PFP project is attached as Attachment B.

131 Terminal Court

A feasibility study was completed by TEC Accutite (February 2003) and the remedial alternative chosen was in-situ groundwater bioremediation using oxygen release compound (ORC). ORC was injected in the vicinity of well MW-1 in October 2003. Well MW-1 was showing a decline prior to the October injection of ORC. This decline continued at approximately the same rate until the end of December 2003. The March 2004 well sampling showed a decrease in hydrocarbon concentrations, but subsequent sampling results have indicated that the well is rebounding. The release period for the injected ORC has most likely ended. Therefore, to complete remediation of the site under a PFP program, EcoLogics is proposing the use of a mobile high-vacuum dual phase extraction system. This has been the chosen alternative at the Linden Avenue site and E. Grand Avenue which have very similar subsurface conditions. Since conditions are similar to other sites with HVDPE or DPE recommendations and site remediation will be per a PFP project, Ecologics would like to perform a short-term pilot test using HVDPE. If successful, a remedial action plan would be submitted for approval. A proposed schedule for conducting the pilot test and activating the PFP project is attached as Attachment C.

501 Serramonte Boulevard

EcoLogics understanding at this site is that a CAP is in place with dual phase extraction as the approved remediation method. A modification of the current system and restart of the system was to be completed. However, the previous system has been removed from the site (details unknown). Ecologics proposes to use a high-vacuum dual phase extraction system with similar capabilities to continue remediation of the site. In addition, the Ecologics system has a sparging component that could be implemented if needed. Portions of the groundwater treatment system remain at the site and will be repaired and used as needed. Permits are in place to allow continued remediation. All continuation work would be completed under the PFP project. A proposed schedule for continuing remediation and activating the PFP project is attached as Attachment D.

Should you have any questions, you can reach me on my cell phone at 408-857-0648.

SELF-MONITORING REPORT
December 2004
SMCo Site #550158

131 Terminal Court
South San Francisco, California

December 24, 2004

1.0 INTRODUCTION

This report presents the procedures and results of groundwater monitoring at 131 Terminal Court, South San Francisco, California (Figure 1). The purpose of this report is to fulfill quarterly self-monitoring requirements and to continue a groundwater monitoring history for the site. The field measurements and analytical results of quarterly groundwater sampling are included in this report.

For this reporting period, groundwater from one monitoring well was sampled and analyzed. The sample collected was analyzed by McCampbell Analytical, Inc. for Total Petroleum Hydrocarbons as gasoline (TPHg), Methyl tert Butyl Ether, Benzene, Toluene, Ethylbenzene, and total Xylenes (MBTEX), and Oxygenates (including MTBE confirmation).

Section 2.0 of this report discusses the groundwater sampling and analytical procedures. Section 3.0 presents the results obtained during the monitoring event.

2.0 GROUNDWATER SAMPLING AND ANALYTICAL PROCEDURES

The locations of the groundwater monitoring and extraction wells are shown on Figure 2. The wells have been completed in the first water-bearing zone beneath the site. Table 1 summarizes the construction details of the monitoring wells for this site.

Groundwater sampling was conducted on December 9, 2004. Water level measurements were made on December 9, 2004. The following protocol was used by EcoLogics when obtaining groundwater samples:

- Water levels were first measured in all wells with an electronic interface tape before sampling. Purging preceded sampling to ensure collection of non-stagnant water. Monitoring well MW-1 was purged using an electric purge pump. Three casing volumes of groundwater were removed from the monitoring well prior to sampling. The purged water was monitored for temperature, pH, and conductivity. Purging was considered complete when these parameters had stabilized. The well was sampled after greater than 80 percent recovery. Appendix A includes a copy of the Purge/Sampling Worksheet which list method of purging and number of casing volumes removed.

- To prevent potential cross-contamination, all measuring, purging, and sampling equipment was washed in an Alconox detergent solution, rinsed with tap water, and then rinsed with distilled water.

- The sampling procedure for the monitoring well involved extracting groundwater with a clean disposable bailer on a clean nylon cord. Water collected for analysis of TPHg/MBTEX and oxygenates was decanted into four 40-milliliter vials with Teflon-lined septa. Samples were preserved using hydrochloric acid and acidified to a pH of less than 2.0. The vials were labeled and placed in a refrigerated cooler and accompanied by the chain-of-custody document. Samples transported to the laboratory were analyzed within the specified holding time.

- The TPHg/MBTEX samples were extracted using method SW5030B. TPHg was analyzed using analytical method 8015Cm and MBTEX were analyzed by analytical method 8021B. The oxygenate sample was extracted using method SW5030B and analyzed using method SW8260B.

- Groundwater produced during purging was placed in a drum and labeled. The water will be treated and discharged in the near future. The treatment and disposal will be documented in future quarterly monitoring reports.

3.0 RESULTS

The results of water level measurements and groundwater sampling are presented in the following sections.

3.1 Groundwater Elevations, Gradients, and Flow Direction

Water level measurements made on December 9, 2004 are presented in Table 2. Measurements made prior to December 2004 are presented in Appendix D. A hydrograph of historical groundwater elevation data for well MW-1 is presented in Appendix B. Groundwater elevation contours are presented in Figure 2.

On December 9, 2004, the groundwater gradient was 0.05 on the northern portion of the site and fairly flat on the southern portion of the site. The general groundwater flow direction was northeasterly (N 78° E), but ranges from N 32° E to S 54° E. Flow direction and gradient data are presented in Figure 2.

3.2 Floating Product Thickness

On December 9, 2004, no measurable amount of floating product was present in the sampled well.

3.3 Analytical Results

The analytical results for the December 2004 sampling event are presented in Table 3. Historical analytical results are attached as Appendix D. Figure 3 presents a summary of analytical results (TPHg, MBTEX, and detected 8260B compounds) for this sampling event. The certified analytical report for the December 2004 sampling event is included in Appendix C.

Well MW-1 contained 1,300 ug/L of TPHg. Benzene was present in well MW-1 at a concentration of 210 ug/L. MTBE was detected by the EPA method 8260B analysis in well MW-1 at 0.74 ug/L. For the oxygenated volatile organics plus 1,2-Dibromoethane (EBD) and 1,2 Dichloroethane (1,2-DCA), only ethanol and t-Butyl alcohol (TBA) were detected. Ethanol was reported at a concentration of 220 ug/L and TBA was reported at a concentration of 14 ug/L.

3.3 Remediation Progress

Oxygen Release Compound (ORC) was injected into the area around monitoring well MW-1 in October 2003 by TEC Accutite. Monitoring indicated a reduction in hydrocarbons during the first half of 2004 at which time a rebound occurred. ORC has a life expectancy for the release of oxygen of up to 12 months, according to the manufacturer. Therefore, based on the increase in concentrations and the time since the injection, this remediation using the oxygen release compound appears to have ended. Another reduction of concentrations occurred in the second half of 2004 and appears to be consistent with the natural decline of concentrations that has occurred in well MW-1 at the site since 2001. Time trend plots for TPH as gasoline and benzene in well MW-1 are presented as Appendix E.

4.0 SELF-MONITORING PROGRAM SCHEDULE

The monitoring schedule for 2005 is presented in Table 5.

5.0 CERTIFICATION

To the best of my knowledge all statements and information provided above are true and correct.

Dear Roger:

Enclosed are:

1). the results of 1 analyzed sample from your **#100-2.4; Olympian, 131 Terminal Court project,**

2). a QC report for the above sample

3). a copy of the chain of custody, and

4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits. If you have any questions please contact me. McCampbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Yours truly,

Angela Rydelius, Lab Manager

cluttered chromatogram; sample peak coelutes with surrogate peak.

+The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation: a) unmodified or weakly modified gasoline is significant; b) heavier gasoline range compounds are significant(aged gasoline?); c) lighter gasoline range compounds (the most mobile fraction) are significant; d) gasoline range compounds having broad chromatographic peaks are significant; biologically altered gasoline?; e) TPH pattern that does not appear to be derived from gasoline (stoddard solvent / mineral spirit?); f) one to a few isolated non-target peaks present; g) strongly aged gasoline or diesel range compounds are significant; h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) reporting limit raised due to high MTBE content; k) TPH pattern that does not appear to be derived from gasoline (aviation gas). m) no recognizable pattern; n) TPH(g) range non-target isolated peaks subtracted out of the TPH(g) concentration at the client's request.

DHS Certification No. 1644

Methyl-t-butyl ether (MTBE)	0.74				NA	0.5
Surrogate Recoveries (%)						
%SS1:	92					
Comments						

* water and vapor samples and all TCLP & SPLP extracts are reported in µg/L, soil/sludge/solid samples in µg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples in mg/L.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

surrogate diluted out of range or surrogate coelutes with another peak.

h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) sample diluted due to high organic content.

Notes:
TPHg = Total petroleum hydrocarbons as gasoline (EPA Method 8015)
BTEX = Benzene, Toluene, Ethylbenzene, Xylenes (EPA Method 8020, EPA method during the 10/7/02 sampling event)
MTBE = Methyl-tert-butyl ether (MTBE) (EPA Method 8020)
Fuel additives = Methyl tert butyl ether (MTBE), ethyl tert-butyl ether (ETBE), tert-Amyl methyl ether (TAME), Di-isopropyl ether (DIPE), tert-Butyl Alcohol (TBA), 1,2-Dichloroethane (1,2-DCA) and 1,2-Dibromoethane (1,2-EDB) (EPA Method 8260)
* = MTBE confirmed by EPA Method 8260
** = does not match typical diesel
*** = Hydrocarbon response in gasoline range but does not resemble gas
<X = Concentration less than laboratory reporting limits
NA = not analyzed
Total Dissolved Solids (TDS) analyzed for MW-3 on 7/13/01 showed concentration of 19,524 ppm.
--- = Not available

To: "Darrell Cullen"
Date: 8/14/2012 12:04 PM
Subject: Flyers #412-131 Terminal Court, SSF
Attachments:

Darrell,
This email is written to address the deficencies noted in your inspection report dated 4/24/2012. Attached is the hazardous waste manifest for the drum that you requested be picked up. Also, we will not be constructing anything to protect the drums. The site will be closing down in September and will no longer be a gas station. Currently there should not be any drums onsite, if we do end up another drum it will be picked up.
Please let me know if you have any questions.
Thanks

Amanda Appelt

TANK 2 10,000	SINGLE WALL GLASS	DIESEL
TANK 3 10,000	SINGLE WALL GLASS	GAS
TANK 4		

"PROCEDURES TO CLOSE UNDERGROUND STORAGE TANK(S) SYSTEMS"

1) Submit to the San Mateo County Environmental Health Services Division (Division) a completed "Underground Storage Tank System Closure Permit Application." Prepare State Water Resources Control Board Facility and Tank Pages. These forms are available from the Division or you may download the forms by logging on to www.unidocs.org.
   - Include a complete **"Tank Page"** for each tank to be closed.
   - Include a complete **"Facility Page"** (**if**) tank to be closed is agriculture, home heating oil, or non-regulated.
   - Include "Proof of Financial Responsibility"

2) Include with the submitted application the designated fee, workmen's compensation insurance verification, and plot plan drawing. The drawing consists of an aerial view of the facility which shows the tank(s) location and the following information:
   - Scale
   - North Arrow
   - Property Line
   - Location of structures near the tank(s)
   - Location of relevant existing equipment (including the tank(s) to be removed), associated piping, and fuel dispensers
   - Area Roadways

3) The Division must be notified a minimum of three (3) days prior to commencement of work in order to schedule a removal inspection. The removal inspection appointment **must be confirmed with the district inspector**. A representative of the Division must be present at the time of removal.

4) Site safety plan must be available for review at job site. All underground utilities must be identified. Be aware, the California Government Code (CGC), Section 4216 requires contractors to contact USA North (**1-800-277-2600**) two days prior to excavation work.

5) Contact the local fire and building agency for their policy regarding closure of underground storage tanks. It is the contractor's responsibility to notify and coordinate the closure with the local fire agency.

6) It must be demonstrated to a representative of the Division that residual product and any associated waste (i.e. sludge) have been removed from the interior of the tank(s) prior to purging. Documentation of proper disposal of residual product and associated waste using a Uniform Hazardous Waste Manifest (UHWM) must be submitted to the Division within thirty (30) working days following removal of the tank(s).

7) It must be demonstrated to a representative of the Division that the tank(s) explosive atmospheres have been adequately purged and that an explosive risk does not exists at the time of removal. **10% of Lower Explosive Limit [% LEL] or 5% oxygen**.

8) Underground tank(s) and associated piping removed from excavations must be shipped under UHWM to a permitted treatment, storage and disposal (TSD) facility or Class I landfill. Underground tanks may be cleaned using a high-pressure washer to reduce the % LEL. However, the high-pressure washing process does not render the tank(s) non-hazardous; and the tank(s) must be transported off-site under a Uniform Hazardous Waste Manifest. Any piping associated with the tank(s) which are to remain underground must be flushed of all residual product and capped or sealed to the satisfaction of the Division. Copies of all UHWM must be submitted to the Division within thirty (30) working days following removal of the tank(s).

9) To determine the extent of any contamination, soil and/or water samples must be collected form the excavation pit after the tank(s) are removed. Soil samples must also be taken every twenty (20) feet along piping runs at the interface of backfill material and native soil. Soil samples must be collected from the excavation stockpile (approximately one discrete sample per twenty (20) cubic yards). The samples must be collected by a qualified, independent third party. All samples shall be protected against contamination and/or degradation during their collection, transport, and analysis. Submit to the Division, within thirty (30) days following removal of the tank(s), a written sample analysis report, which includes chain of custody documentation, sample location map, and depth to sample measurements. The reports analysis results

and conclusions are subject to critical review; and the report must be approved by the Division to be recognized as valid.

10) A groundwater investigation will be required if any of the following conditions exist or if a representative of the Division deems one necessary to assure that the public health and safety is protected:
    - Soil contamination concentrations exceeding 100 PPM total petroleum hydrocarbons (TPH) or total oil and grease (TOG) within two feet of native soil beneath the tank.
    - Detectable concentrations of petroleum hydrocarbon are found in soil at or below the seasonable high groundwater level.
    - Detectable levels of any petroleum hydrocarbon in soil below the tank and the soil contains layers of sand, gravel and/or other high permeability material.
    - Groundwater in excavation pit has detectable levels of any petroleum hydrocarbon. (pit may be pumped and allowed to recharge).
    - Site has history of leaks or tanks are in poor condition upon removal.

11) Transported tanks must have all openings sealed, except for opening atop the tank fitted for ventilation with "T" or other device which will preclude rain entering a stored tank.

12) An additional hourly fee will be charged for inspection time exceeding four (4) hours.

The listed items are general closure requirements, modifications may be necessary in certain situations. A deficient application or incomplete information will only cause a delay in the permit process, if you have questions or need assistance call the Division at (650) 363- 4305. The Underground Tank Closure Permit expires 90 days from the approval date. If the tanks have not been closed within 90 days, a new closure permit application and fees are required. The closure must be scheduled 72 hours in advance.

Applicant Declaration:

I certify the application information is correct and factual. I declare that I have read and will follow the "Procedures to Close Underground Storage Tank(s) Systems." I further agree to comply with all applicable San Mateo County Ordinances; Health and Safety Code Chapter 6.7; Title 23,California Code of Regulation; and Title 22,California Code of Regulations.

Re: Current Financial Responsibility for site #'s 213, 215, 216, 219, 270, 411, 412 & 489
Please see attached facility address list.

Dear Sir or Madam:

I am the chief financial officer of Flyers Energy LLC, 2360 Lindbergh Street, Auburn, CA 95602. This letter is in support of the use of the Underground Storage Tank Cleanup Fund and the financial test of self-insurance to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by sudden accidental releases and/or non-sudden accidental releases in the amount of at least $1,000,000 (One Million Dollars) per occurrence and $2,000,000 (2 Million Dollars) annual aggregate arising from operating underground storage tanks.

This financial test or a financial test under an authorized State program assures underground storage tanks at the following facilities by this owner. (See attached list)

A financial test is also used by this owner to demonstrate evidence of financial responsibility in the following amounts under other EPA Regulations or state programs authorized by EPA under 40 CFR parts 271 and 145:

EPA Regulations	Amount
Closure (§§ 264.143 and 265.143)	$ 0
Post Closure Care (§§ 264.145 and 265.145)	$ 0
Liability Coverage (§§ 264.147 and 265.147)	$ 0
Corrective Action (§§ 264.10(b))	$ 0
Plugging and Abandonment (§§ 144.63)	$ 0
Total	$ 0

This owner has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

1. Amount of annual UST aggregate coverage being assured by a financial test..... $1,005,000

2. Amount of corrective action, closure and post closure care costs, liability coverage, and plugging and abandonment cost covered by a financial test ..... $ 0

3. Sum of lines 1 and 2..... $1,005,000

4. Total tangible assets $235,437,066

5.Total liabilities $169,455,371

6.Tangible net worth $65,981,695

Is line 6 at least 10 million? ..... Yes
Is line 6 at least 10 times line 3? ..... Yes
Have financial statements for the latest fiscal year been filed with the Securities and Exchange Commission? ..... No
Have financial statements for the latest fiscal year been filed with the Energy Information Administration? ..... No
Have financial statements for the latest fiscal year been filed with the Rural Electrification Administration? ..... No
Has financial information been provided to Dun and Bradstreet, and has Dun and Bradstreet provided a financial strength rating of 4A or 5A? (Answer "yes" only if both criteria have been met.) ..... Yes

I hereby certify that the wording of this letter is identical to the wording specified in 40 CFR Part 280.95(d) as such regulations were constituted on the date shown immediately below.

Respectfully,

Thomas A. Dwelle
Chief Financial Officer

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the Required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR:

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☐ 1 million dollars annual aggregate
or
☒ 2 million dollars annual aggregate

B. *Flyers Energy, LLC* *hereby certifies that it is in compliance with the requirements of Section 2807,*
(Name of Tank Owner or Operator)
Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.
The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
State UST Fund	STATE WATER RESOURCES CONTROL BOARD	N/A FOR UST CLEANUP FUND	$995,000 PER OCCURRENCE AND ANNUAL AGGREGATE	Continuous	YES	YES
CHIEF FINANCIAL OFFICER LETTER	Flyers Energy, LLC 2360 Lindbergh Street AUBURN, CA 95602	N/A	$5,000 PER OCCURRENCE	ANNUAL	YES	YES

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

This is to certify that we have issued a valid Workers' Compensation insurance policy in a form approved by the California Insurance Commissioner to the employer named below for the policy period indicated.

This policy is not subject to cancellation by the Fund except upon **10** days advance written notice to the employer.

We will also give you **10** days advance notice should this policy be cancelled prior to its normal expiration.

This certificate of insurance is not an insurance policy and does not amend, extend or alter the coverage afforded by the policy listed herein. Notwithstanding any requirement, term or condition of any contract or other document with respect to which this certificate of insurance may be issued or to which it may pertain, the insurance afforded by the policy described herein is subject to all the terms, exclusions, and conditions, of such policy.

RE:
Underground Storage Tank Closure
131 Terminal Court
South San Francisco, CA

CC:

URGENT FOR REVIEW PLEASE COMMENT PLEASE REPLY PLEASE RECYCLE

NOTES/COMMENTS:

Daryl,

Enclosed is our application with attachments for removing three underground storage tanks at the above referenced site and payment of $2,335.00. Please feel free to contact me with any questions you may have.

Thank you.

Alison

WORK PLAN FOR

Flyers #412
131 Terminal Court
South San Francisco, CA 94080

Upon approval to remove two 10,000 gallon and one 6,000 gallon single wall glass product tanks located at the above referenced location, Musco Excavators, Inc. will contact Underground Service Alert, OSHA and the Bay Area Air Quality Management District.

The tanks will be pumped free of liquid, exposed and triple rinsed into an Adams Services hauling truck and the rinsate will be manifested to DeMennon/Kerdoon in Compton, California. Once the tanks have been rinsed, we will inert them by using 15 pounds per 1,000 gallons of dry ice pellets and 20' vent risers will be placed at the opening of each tank to allow proper venting prior to the removal. While venting the tanks, a Venture Blower will assist in reducing the LEL to 10% or Oxygen levels to 5%. These levels will be confirmed by using a recently calibrated LEL meter and Oxygen infuser. We will cap all of the tank openings with threaded plugs, leaving a vent hole in one to allow for temporary venting, while being transported. Once the tanks are removed, they will be placed on certified hauling trucks provided by Adams Services and transported under manifest Simens Water Technologies Group in Los Angeles, California. The product lines will be excavated, removed and placed in a debris bin supplied by Adams Services and transported under manifest to Simens Water Technologies, as well.

With the tanks removed, soil samples shall be collected in the presence of a County Inspector. Two soil samples will be collected from below each tank, one at each end and tested for TPHG, TPHD, BTX&E, MTBE (EPA 8260) and LUFT, if required, as noted in the San Francisco Regional Water Quality Control Board Guidelines (SFRWQCBG) or as directed by the field inspector. A maximum of two feet of native soil will be removed before samples are collected. If it is not possible to obtain a soil sample from below a tank due to the presence of groundwater, side-wall samples may be obtained at the high water level, along with a groundwater sample and shall be analyzed in accordance with the SFRWQCBG. Soil samples shall be collected from the excavation stockpile, one per 20 cubic yards of material. Additionally, samples will be collected along every 20' of piping trench or change in direction. The samples will be sent to Kiff Analytical, LLC a California certified lab, for testing. The sample analysis should be completed within one week. If extensive contamination is present, Flyers Energy will work with San Mateo County Environmental Health (SMCEH) in determining a remediation plan.

The excavated soil from above the tanks and any over excavated soil will be placed on and covered with 6 mil visqueen. Once clearance is given to backfill, the excavation will be backfilled in 12" lifts with suitable compactable fill and tested by a licensed geotechnical firm, confirming a minimum of 90% compaction is achieved. A final compaction report will be generated and available for review.

The necessary Agencies will be notified at least 72 hours prior to the tank removal. A site specific Health and Safety Plan will be on-site during the project along with a fire extinguisher and no smoking signs. A written sample analysis report will be provided to SMCEH within 30 days following the tank removal.

Re: **UST System Removal Sampling Report**
Olympian Cardlock Facility
131 Terminal Court
South San Francisco, California

Dear Mr. Cullen,

Blue Rock Environmental, Inc. (Blue Rock) is pleased to submit this report, on behalf of Flyers Energy LLC (Flyers), regarding soil and water samples collected during the recent removal of underground storage tank (UST) system at the subject site (Figure 1).

It is notable that a historical fuel release at the site is the subject of an ongoing regulatory case with the San Mateo County Groundwater Protection Program (case # 550158). Blue Rock understands that Conestoga-Rovers & Associates (CRA), working on behalf of Olympian, JV (the responsible party for that case), is currently in the process of implementing their *Subsurface Investigation and Remedial Action* dated July 25, 2012, which involves the excavation of previously documented soil impact from below the area of the former product piping / dispenser islands extending northwesterly toward Terminal Court. The proposed excavation area generally encompasses the locations where concentrations of total petroleum hydrocarbons as diesel (TPHd) and gasoline (TPHg) exceed 100 mg/kg, which is approximately 2,750 square feet from the depth 0 to 6 feet below ground surface (ft bgs) with localized deeper excavation extending to 10 ft bgs. An estimated 1,500 tons of impacted soil are planned for removal. Blue Rock understands that this work is tentatively scheduled to follow shortly after UST system removal activities. Information for the historical release case can be found at:
http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608126439

The purpose of this sampling, typical of all UST removals, is to evaluate the potential for a release from the system, or in this case, a newer release attributable to Flyers tenure at the site. Flyers has operated the UST system at the site since July 1, 2002. The results of sampling, discussed in the section below, were indicative of the historical release and not a new one.

UST System Removal Activities

On September 25, 2012, Musco Excavators, Inc. (Musco) of Santa Rosa, California removed three USTs from the site: two 10,000-gallon single-wall fiberglass diesel USTs (in a common pit) and one 6,000-gallon single-wall fiberglass gasoline UST (in a separate pit) (Figure 2). No obvious holes were observed in any of the tanks. All associated piping and dispenser islands were also removed.

Groundwater Sampling and Analysis

After all UST system components were removed soil and groundwater sampling began. Water samples were collected from the UST pits. The depth to water was approximately 5.5 ft bgs in the diesel UST pit was approximately 8 ft bgs in the gasoline UST pit.

One groundwater sample was collected from each pit. At the diesel UST pit, the groundwater sample was collected directly into laboratory supplied containers (Diesel Pit Water). At the gasoline UST pit, the groundwater sample was collected in a new disposable poly bailer and transferred to the sample containers (Gasoline Pit Water). The sample containers were labeled, documented on a chain-of-custody form, and placed on ice in a cooler for transport to the project laboratory.

The water samples were analyzed by Kiff Analytical, LLC (Kiff), a California DHS-certified laboratory, for concentrations of:

- TPHd by Modified EPA Method 8015 (Diesel Pit Water)
- TPHg and BTEX by EPA Method 8260B (Gas Pit Water)
- Fuel Oxygenates (MTBE, DIPE, ETBE, TAME, TBA) by EPA Method 8260B (Gas Pit Water)
- Ethanol by EPA Method 8260B (Gas Pit Water)

Soil Sampling and Analysis

A total of 17 soil samples were collected from the sidewalls of the UST pits at depths at, or just above, standing water, and below the piping and dispense locations. Six samples were collected in the diesel UST pit (S-1-5 through S-6-5) and four samples were collected in the gasoline UST pit (S-7-8 through S-12-8). Five samples were collected below former dispenser island and piping locations (S-13-3 through S-17-3). Soil samples were collected directly in clean brass tubes, covered with Teflon® lined plastic end caps, labeled, documented on a chain of custody form, and placed on ice in a cooler for transport to the project laboratory.

The soil samples were analyzed by Kiff for concentrations of:

- TPHd by Modified EPA Method 8015 (all samples)
- TPHg and BTEX by EPA Method 8260B (all samples)
- Fuel Oxygenates (MTBE, DIPE, ETBE, TAME, TBA) by EPA Method 8260B (all samples)
- Ethanol by EPA Method 8260B (all samples)

Laboratory Analytical Results and Discussion

Fuel constituents were detected in numerous samples. The most elevated concentrations of TPHd and TPHg (i.e. >100 mg/kg) were detected in samples collected below the former piping runs and dispenser islands, which is consistent with the area of impact previously identified for remedial excavation proposed by CRA. Low levels of MTBE were detected in a limited number of samples at levels consistent with what was previously documented at the site.

It is noteworthy that ethanol was not detected in any of the samples. Ethanol replaced MTBE as the primary fuel oxygenate in California following the latter's phase-out in 2003. The period of ethanol use in gasoline encompasses nearly the entire period of Flyers tenure on the site (i.e. July 2002 to present), and its absence in soil and groundwater samples indicates no significant gasoline release during that that time.

Analytical results for soil and groundwater samples are summarized in Table 1, and the laboratory report and chain-of-custody are attached.

Recommendations

The UST system removal sample results appear to be consistent the subsurface conditions previously documented for the Olympian, JV leaking UST case. No further action appears warranted or is recommended in relation to Flyers operation of the former UST system.

Certification

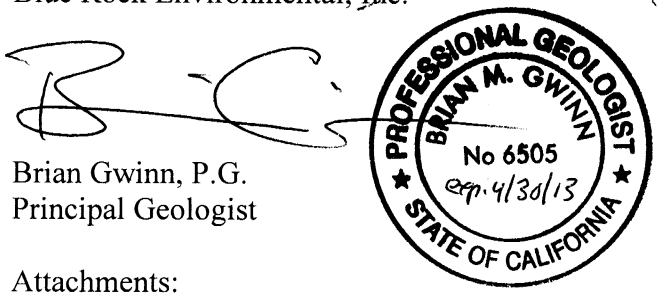
This report was prepared under the supervision of a California Professional Geologist at Blue Rock. All statements, conclusions, and recommendations are based upon published results from past consultants, field observations by Blue Rock, and analyses performed by a state-certified laboratory as they relate to the time, location, and depth of points sampled by Blue Rock. Interpretation of data, including spatial distribution and temporal trends, are based on commonly used geologic and scientific principles. It is possible that interpretations, conclusions, and recommendations presented in this report may change, as additional data become available and/or regulations change.

Information and interpretation presented herein are for the sole use of the client and regulating agency. The information and interpretation contained in this document should not be relied upon by a third party.

The service performed by Blue Rock has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area of the site. No other warranty, expressed or implied, is made.

If you have any questions regarding this project, please contact me at (650) 522-9292.

Sincerely,
Blue Rock Environmental, Inc.



Brian Gwinn, P.G.
Principal Geologist

Dear Mr. Gwinn,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the National Environmental Laboratory Accreditation Program (NELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Troy G. Turpen

Case Narrative

All soil samples were reported on a total weight (wet weight) basis.

The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for sample Gas Pit Water.

LCS and Matrix Spike/Matrix Spike Duplicate results associated with samples S-11-3, S-12-3, S-13-3, and S-14-3 for the analyte Ethanol were outside of control limits. This may indicate a bias for the sample that was spiked. Since Ethanol was not detected above the Method Reporting Limit in the associated samples, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with samples S-11-3, S-12-3, S-13-3, and S-14-3 for the analyte Methyl-t-butyl ether were affected by the analyte concentrations already present in the un-spiked sample.

LCS and Matrix Spike/Matrix Spike Duplicate results associated with samples S-7-8, S-8-8, S-9-8, S-10-8, S-15-3, and S-16-3 for the analyte Ethanol were outside of control limits. This may indicate a bias for the sample that was spiked. Since Ethanol was not detected above the Method Reporting Limit in the associated samples, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with sample S-17-3 for the analyte Ethanol were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Darrell,

Please find attached the UST System Removal Sampling Report for the subject project. Please let me know if you would also like a hard copy.

Please feel free to contact me with any questions about this project.

Sincerely,

Brian Gwinn, PG

Re: **UST System Removal Sampling Report**
Olympian Cardlock Facility
131 Terminal Court
South San Francisco, California

Dear Mr. Cullen,

Blue Rock Environmental, Inc. (Blue Rock) is pleased to submit this report, on behalf of Flyers Energy LLC (Flyers), regarding soil and water samples collected during the recent removal of underground storage tank (UST) system at the subject site (Figure 1).

It is notable that a historical fuel release at the site is the subject of an ongoing regulatory case with the San Mateo County Groundwater Protection Program (case # 550158). Blue Rock understands that Conestoga-Rovers & Associates (CRA), working on behalf of Olympian, JV (the responsible party for that case), is currently in the process of implementing their *Subsurface Investigation and Remedial Action* dated July 25, 2012, which involves the excavation of previously documented soil impact from below the area of the former product piping / dispenser islands extending northwesterly toward Terminal Court. The proposed excavation area generally encompasses the locations where concentrations of total petroleum hydrocarbons as diesel (TPHd) and gasoline (TPHg) exceed 100 mg/kg, which is approximately 2,750 square feet from the depth 0 to 6 feet below ground surface (ft bgs) with localized deeper excavation extending to 10 ft bgs. An estimated 1,500 tons of impacted soil are planned for removal. Blue Rock understands that this work is tentatively scheduled to follow shortly after UST system removal activities. Information for the historical release case can be found at:
http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608126439

The purpose of this sampling, typical of all UST removals, is to evaluate the potential for a release from the system, or in this case, a newer release attributable to Flyers tenure at the site. Flyers has operated the UST system at the site since July 1, 2002. The results of sampling, discussed in the section below, were indicative of the historical release and not a new one.

UST System Removal Activities

On September 25, 2012, Musco Excavators, Inc. (Musco) of Santa Rosa, California removed three USTs from the site: two 10,000-gallon single-wall fiberglass diesel USTs (in a common pit) and one 6,000-gallon single-wall fiberglass gasoline UST (in a separate pit) (Figure 2). No obvious holes were observed in any of the tanks. All associated piping and dispenser islands were also removed.

Groundwater Sampling and Analysis

After all UST system components were removed soil and groundwater sampling began. Water samples were collected from the UST pits. The depth to water was approximately 5.5 ft bgs in the diesel UST pit was approximately 8 ft bgs in the gasoline UST pit.

One groundwater sample was collected from each pit. At the diesel UST pit, the groundwater sample was collected directly into laboratory supplied containers (Diesel Pit Water). At the gasoline UST pit, the groundwater sample was collected in a new disposable poly bailer and transferred to the sample containers (Gasoline Pit Water). The sample containers were labeled, documented on a chain-of-custody form, and placed on ice in a cooler for transport to the project laboratory.

The water samples were analyzed by Kiff Analytical, LLC (Kiff), a California DHS-certified laboratory, for concentrations of:

- TPHd by Modified EPA Method 8015 (Diesel Pit Water)
- TPHg and BTEX by EPA Method 8260B (Gas Pit Water)
- Fuel Oxygenates (MTBE, DIPE, ETBE, TAME, TBA) by EPA Method 8260B (Gas Pit Water)
- Ethanol by EPA Method 8260B (Gas Pit Water)

Soil Sampling and Analysis

A total of 17 soil samples were collected from the sidewalls of the UST pits at depths at, or just above, standing water, and below the piping and dispense locations. Six samples were collected in the diesel UST pit (S-1-5 through S-6-5) and four samples were collected in the gasoline UST pit (S-7-8 through S-12-8). Five samples were collected below former dispenser island and piping locations (S-13-3 through S-17-3). Soil samples were collected directly in clean brass tubes, covered with Teflon® lined plastic end caps, labeled, documented on a chain of custody form, and placed on ice in a cooler for transport to the project laboratory.

The soil samples were analyzed by Kiff for concentrations of:

- TPHd by Modified EPA Method 8015 (all samples)
- TPHg and BTEX by EPA Method 8260B (all samples)
- Fuel Oxygenates (MTBE, DIPE, ETBE, TAME, TBA) by EPA Method 8260B (all samples)
- Ethanol by EPA Method 8260B (all samples)

Laboratory Analytical Results and Discussion

Fuel constituents were detected in numerous samples. The most elevated concentrations of TPHd and TPHg (i.e. >100 mg/kg) were detected in samples collected below the former piping runs and dispenser islands, which is consistent with the area of impact previously identified for remedial excavation proposed by CRA. Low levels of MTBE were detected in a limited number of samples at levels consistent with what was previously documented at the site.

It is noteworthy that ethanol was not detected in any of the samples. Ethanol replaced MTBE as the primary fuel oxygenate in California following the latter's phase-out in 2003. The period of ethanol use in gasoline encompasses nearly the entire period of Flyers tenure on the site (i.e. July 2002 to present), and its absence in soil and groundwater samples indicates no significant gasoline release during that that time.

Analytical results for soil and groundwater samples are summarized in Table 1, and the laboratory report and chain-of-custody are attached.

Recommendations

The UST system removal sample results appear to be consistent the subsurface conditions previously documented for the Olympian, JV leaking UST case. No further action appears warranted or is recommended in relation to Flyers operation of the former UST system.

Certification

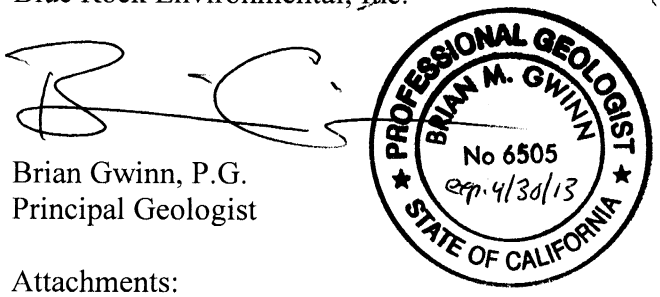
This report was prepared under the supervision of a California Professional Geologist at Blue Rock. All statements, conclusions, and recommendations are based upon published results from past consultants, field observations by Blue Rock, and analyses performed by a state-certified laboratory as they relate to the time, location, and depth of points sampled by Blue Rock. Interpretation of data, including spatial distribution and temporal trends, are based on commonly used geologic and scientific principles. It is possible that interpretations, conclusions, and recommendations presented in this report may change, as additional data become available and/or regulations change.

Information and interpretation presented herein are for the sole use of the client and regulating agency. The information and interpretation contained in this document should not be relied upon by a third party.

The service performed by Blue Rock has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area of the site. No other warranty, expressed or implied, is made.

If you have any questions regarding this project, please contact me at (650) 522-9292.

Sincerely,
Blue Rock Environmental, Inc.



Brian Gwinn, P.G.
Principal Geologist

Dear Mr. Gwinn,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the National Environmental Laboratory Accreditation Program (NELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Troy G. Turpen

Case Narrative

All soil samples were reported on a total weight (wet weight) basis.

The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for sample Gas Pit Water.

LCS and Matrix Spike/Matrix Spike Duplicate results associated with samples S-11-3, S-12-3, S-13-3, and S-14-3 for the analyte Ethanol were outside of control limits. This may indicate a bias for the sample that was spiked. Since Ethanol was not detected above the Method Reporting Limit in the associated samples, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with samples S-11-3, S-12-3, S-13-3, and S-14-3 for the analyte Methyl-t-butyl ether were affected by the analyte concentrations already present in the un-spiked sample.

LCS and Matrix Spike/Matrix Spike Duplicate results associated with samples S-7-8, S-8-8, S-9-8, S-10-8, S-15-3, and S-16-3 for the analyte Ethanol were outside of control limits. This may indicate a bias for the sample that was spiked. Since Ethanol was not detected above the Method Reporting Limit in the associated samples, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with sample S-17-3 for the analyte Ethanol were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Darrell Cullen - 131 Terminal Closure Letter

From: Darrell Cullen
To: amandaa@4flyers.com
Date: 11/6/2012 4:12 PM
Subject: 131 Terminal Closure Letter
CC: Madden, Jacob
Attachments: Madden, Jacob

Hi Amanda:
here is a closure letter for the UST removal at Flyers #412 at 131 Terminal. Please confirm receipt of this letter. Let me know if you need anything else.

Darrell Cullen, REHS
Hazardous Materials Specialist
County of San Mateo
(650) 372-6230
NEW EMAIL: dacullen@smcgov.org

November 6, 2012

Flyers Energy LLC
Attention: Ms. Amanda Appelt
2360 Lindbergh Street
Auburn, CA 95602

Subject: Removal of Three Underground Storage Tanks
Site: Facility #412, 131 Terminal Court South San Francisco, CA 94080

Ms. Appelt:

This letter confirms the removal of three (2-10,000 gallon and 1-6,000 gallon) single-wall fiberglass underground storage tanks used for storing diesel and regular gasoline at 131 Terminal Court in South San Francisco, California. These tanks were removed under San Mateo County oversight on September 25, 2012. Remediation of contaminants associated with this tank removal has been under the direction of the San Mateo County Groundwater Protection Program. No further action is required at this time for the CUPA (Certified Unified Program Agency) programs regarding the removal of this underground storage tank.

This site is currently an open Leaking Underground Fuel Tank (LUFT) case with the Groundwater Protection Program. This letter does not relieve you of any requirements set forth through the Groundwater Protection Program for LUFT sites. **Please continue forward with any requirements and/or involvement with Groundwater Protection Program staff.**

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site, which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Thank you for your cooperation in this matter. I may be reached at (650) 372-6230.

Respectfully,

Darrell Cullen, REHS
Hazardous Materials Specialist

OFFICE OF THE CITY CLERK

RE: PUBLIC RECORDS REQUEST of March 09, 2022, Reference # R004883-030922

Dear Marie Rose,

The City of South San Francisco received a public information request from you on March 09, 2022. Your request mentioned:

"Haley & Aldrich is an environmental engineering company conducting a Phase I Environmental Site Assessment of the properties located at:

101 Terminal Court, South San Francisco, CA 94080; APN 015-113-240
131 Terminal Court, South San Francisco, CA 94080; APN 015-113-210

We are interested in any environmental files (hazardous material/hazardous waste storage or spills, underground/aboveground storage tanks, etc.) you may have for these properties or neighboring properties. Please let me know if you need anything else to conduct this review.

Thank you for your attention to this request."

The City of South San Francisco has reviewed its files and has determined there are no responsive records per your request.

If you have any questions, or wish to discuss this further, you may contact the City Clerk's Office at (650) 877-8518.

Sincerely,

Gabriel Rodriguez
Deputy City Clerk

City Hall: 400 Grand Avenue • South San Francisco, CA 94080 • P.O. Box 711 • South San Francisco, CA 94083
Phone: 650-877-8518 • Fax: 650-829-6641 • www.ssf.net

To monitor the progress or update this request please log into the Public Records Center.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

QUITCLAIM DEED

This Quitclaim Deed dated as of February 2, 2004 is executed by Sunset Produce Co., a California corporation ("Sunset") and S.S.P. Partners, a California Partnership ("SSP"), AS GRANTORS, GRANT TO GOLDEN GATE PRODUCE TERMINAL, LTD., A CALIFORNIA LIMITED PARTNERSHIP, GRANTEE, AS FOLLOWS:

RECITALS

1. On or about July 1, 1994, Sunset and SSP entered into an Assignment of Lease wherein Sunset assigned its interest in and to certain leasehold interests hereinafter described to SSP.
2. The Leasehold interest assigned by Sunset to SSP are those interests described in that certain Lease dated March 30, 1962 together with the addendums thereto dated May 1, 1962, September 15, 1962 and November 4, 1962, all of which are between Golden Gate Produce Terminal, Inc., a California Corporation, as Lessor and Sunset as Lessee affecting Stalls 24 through 34 at Golden Gate Produce Terminal at South San Francisco, California on real property more particularly described in Exhibit A attached hereto and by this reference incorporated herein: all of the foregoing documents are by this reference incorporated herein and shall hereinafter be referred to as the "Leasehold Interest".
3. On or about August 26, 1994, a Memorandum of Assignment of Lease was recorded referencing the foregoing recitals. As a result of the recordation of said Memorandum of Assignment of Lease, an exception has consistently been reflected in the Title history of the lands of Golden Gate Produce Terminal, Inc., a California Corporation. Sunset and SSP desire to execute this Quitclaim Deed for the purpose of clearing any exception to title created by the prior filing and recordation of any Memorandum of Assignment of Lease. Accordingly, Sunset Produce Company, A California Corporation and S.S.P. Partners, A California Partnership hereby remises, releases, and quitclaims to Golden Gate Produce Terminal, Ltd., a California Limited Partnership all of its right, title and interest in and to the real property located at Golden Gate Produce Terminal in South San Francisco, California, said real property being more particularly described in Exhibit A attached hereto and by this reference incorporated herein.

Executed this 2nd day of February, 2004.

Attention: Ianthe Schaub

Subject: Phase II Environmental Investigation Results
131 Terminal Court
South San Francisco, California

Dear Ms. Ianthe Schaub:

Haley & Aldrich, Inc. (Haley & Aldrich) is pleased to submit this letter report to US Terminal Court Owner, LLC which presents the results of the Phase II environmental investigation conducted at the Subject Property located at 131 Terminal Court in South San Francisco, California (Figure 1). The purpose of this investigation was to assess the existing subsurface environmental conditions at the Subject Property that will be encountered during future redevelopment activities.

Background

The approximately 17.6-acre Subject Property is developed with two large warehouse structures and three smaller structures surrounded by asphalt-paved parking areas (Figure 2). The Subject Property is currently owned and operated by Golden Gate Produce Terminal, a produce wholesaler and distributor. A canopy of solar panels covers a row of parking between the warehouses.

In conjunction with this letter report, Haley & Aldrich has also prepared a Phase I Environmental Site Assessment (Phase I) for the Subject Property, which identified a controlled REC (CREC) and a potential subsurface environmental concern that may warrant mitigation measures as part of the redevelopment.

The CREC was related to the former commercial fueling facility operations at the Subject Property which consisted of two dispenser islands and three underground storage tanks (USTs; one 6,000-gallon diesel and two 10,000-gallon gasoline). Monitoring and remedial activities were conducted between 1998 and 2012. In 2012, the three USTs (one containing diesel and two containing gasoline) and associated petroleum hydrocarbon-impacted soil were removed and excavated from the Subject Property. In 2014, the San Mateo County Environmental Health Services Division (SMCEH) issued a case closure letter for the Subject Property, although hydrocarbon-impacted soil and groundwater were allowed to remain at the property in the vicinity of the former fueling facility under a Low-Threat UST Case Closure Policy (LTCP). Grab groundwater sampling results from the closure document indicate concentrations of total petroleum hydrocarbons as gasoline (TPHg) up to 51,000 micrograms per liter (µg/L), total petroleum

hydrocarbons as diesel (TPHd) up to 4,500 µg/L, and benzene up to 2,800 µg/L from soil borings located at the northern end of the Subject Property, directly downgradient from the former UST area. These concentrations exceed both Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs) and applicable commercial/industrial ESLs. Proposed future redevelopment, change of land use, or removal of soil and/or groundwater from the Subject Property will require a notification to the SMCEH.

One potential subsurface environmental concern at the Subject Property is due to an easement for an active non-highly volatile liquids (HVL) product pipeline operated by Kinder Morgan located along the eastern side of the Subject Property (Figure 2). No documented releases were found during the Phase I; however, there is a potential for future releases to impact the Subject Property.

Haley & Aldrich understands US Terminal Court Owner, LLC is planning to redevelop the Subject Property and the adjacent property 101 Terminal Court, including construction of multiple multi-story buildings with subsurface parking garages. Given these redevelopment plans, Haley & Aldrich's Phase II environmental investigation included advancing borings at locations within the Subject Property and collecting soil and/or groundwater samples. Our assessment was conducted to determine: 1) whether the soil conditions to be encountered during the future construction activities may require special on-site handling and off-site disposal; 2) whether the groundwater generated from the construction dewatering will require special treatment prior to discharge or disposal; and 3) whether the remaining soil and groundwater concentrations would pose a vapor intrusion risk.

Field Investigation

Haley & Aldrich conducted the Phase II environmental investigation in March 2022, which included advancing five soil borings at the Subject Property for the collection of soil and groundwater samples to characterize the existing subsurface conditions within areas of the Subject Property where historical activities or features may pose an environmental concern. Relevant historical Subject Property features or potential environmental concerns evaluated for their potential subsurface impact to the site through this Phase II Investigation included: 1) the former USTs; and 2) the Kinder Morgan pipeline. The relevant historical features and the Phase II Investigation sampling locations are shown on Figure 2.

PRE-FIELD ACTIVITIES

Prior to conducting subsurface work, the drilling locations were cleared by Coast Wide Locators and Underground Service Alert was notified. A drilling permit was obtained from SMCEH for the borings (provided as Appendix A). To help ensure worker safety, a site-specific Health and Safety Plan was prepared for the field activities.

SOIL AND GROUNDWATER INVESTIGATION

The drilling activities were performed by Environmental Control Associates, a California C-57 licensed driller. To minimize the risk of encountering unmarked and undetected underground utilities during drilling and to ensure the health and safety of workers, the first 5 feet of each boring was advanced

using a hand auger. A total of six borings were advanced for sample collection (HA-6 through HA-11); locations are shown on Figure 2. A truck-mounted Geoprobe® direct-push technology (DPT) drill rig was used to advance the borings to groundwater. Boring logs are presented in Appendix B.

The soil and groundwater sampling program included the following:

- Soil boring HA-12 was advanced to 5 feet below ground surface (bgs) in the northernmost extent of the Subject Property, at the approximate location and/or downgradient of the former USTs, including the one 6,000-gallon diesel and two 10,000-gallon gasoline tanks. Two soil samples were collected at 2.5 and 3.75 feet bgs and one groundwater sample was collected at first encountered groundwater, approximately 4.5 feet bgs.
- Soil boring HA-13 was advanced to 8 feet bgs and slightly upgradient of the former UST location. One soil sample was collected from the vadose zone.
- Soil boring HA-14 was not advanced due to limited schedule and that two additional borings had been advanced adjacent to the Kinder Morgan pipeline.
- Soil boring HA-15 was advanced to 5 feet bgs at a central point at the Subject Property. One soil sample was collected from the vadose zone.
- Soil boring HA-16 was advanced to 16 feet bgs in the westernmost extent of the Subject Property and adjacent to the Kinder Morgan pipeline. A soil sample was collected from the vadose zone and a grab groundwater sample was collected at first encountered groundwater, approximately 15.5 feet bgs.
- Soil boring HA-17 was advanced to 12 feet bgs in the southernmost extent of the Subject Property and adjacent to the Kinder Morgan pipeline. A soil sample was collected from the vadose zone and a grab groundwater sample was collected at first encountered groundwater, approximately 8.5 feet bgs.

Recovered soil was screened for the presence of volatile organic compounds (VOCs) with a photoionization detector (PID) and logged in the field in accordance with the visual-manual procedures of American Society for Testing and Materials (ASTM) Standard D-2488-09a. Sampling locations were selected in the field to include observed visual or olfactory impacts and/or PID detections.

All soil and groundwater samples were collected following standard environmental sampling and handling procedures and submitted under chain of custody documentation to Eurofins TestAmerica of Pleasanton, California. Eurofins Test America analyzed the samples following the appropriate United States Environmental Protection Agency (USEPA) Methods. Laboratory analytical reports are included as Appendix C.

Upon completion of the sampling program, the borings were backfilled with bentonite grout and the surface completed with concrete. All down-hole equipment was decontaminated prior to starting each new boring location by washing the equipment with laboratory-grade detergent and water followed by a water rinse.

LABORATORY ANALYSES

The soil and groundwater samples were collected in laboratory-provided jars and bottles, which were labeled and placed in a resealable plastic bag and stored in a cooler with ice for transportation under chain of custody documentation to Eurofins TestAmerica, a California-certified analytical laboratory. Select soil samples were analyzed for:

- TPH as gasoline range organics (TPH-GRO) and VOCs using USEPA Method 8260B, preserved using USEPA Method 5035;
- TPH as diesel range organics (TPH-DRO) and TPH oil range organics (TPH-ORO) using USEPA Method 8015B;
- California Code of Regulations (CCR) Title 22 (T22) metals using USEPA Method 6010B/7471A; and
- Leachability characterization for waste profiling (Toxicity Characteristic Leaching Procedure [TCLP] and/or Soluble Threshold Limit Concentration [STLC]) were performed on the soil sample if metals such as lead or chromium were detected at concentrations greater than 20 times the TCLP or 10 times the STLC hazardous waste criteria.

Collected groundwater samples were analyzed for:

- TPH-DRO and TPH-ORO using USEPA Method 8015B; and
- TPH-GRO and VOCs using USEPA Method 8260B.

INVESTIGATION-DERIVED WASTE

The generated investigation-derived waste (IDW) consisted of soil cuttings and decontamination water which was containerized in a 55-gallon Department of Transportation drums (two soil and one decontamination water). Waste characterization samples were collected from the IDW and the drums were subsequently removed from the Site on 2 May 2022.

Results

The analytical results are summarized below, with copies of the Eurofins Test America analytical laboratory reports included in Appendix C. To evaluate if subsurface environmental conditions of concern may exist that need to be addressed prior to redeveloping the properties, the detected concentrations were compared against the commercial/industrial ESLs established by the San Francisco Bay RWQCB, dated July 2019 (Rev 2). The soil ESLs assess potential direct exposure human health risks for commercial/industrial properties and the groundwater ESLs assess potential vapor intrusion human health risks for commercial/industrial properties.

Haley & Aldrich compared the analytical results to the regulatory criteria for determining disposal options for the proposed excavated soil. The criteria were used to determine whether soil is considered non-hazardous based on the 22 CCR Total Threshold Limit Concentrations (TTLCs) and STLCs, and the Resource Conservation and Recovery Act (RCRA) TCLP criteria. In the event that a reported concentration exceeds its respective TTLC, the soil is considered a California-only hazardous waste and

must be disposed at an appropriate off-site location. If a reported concentration exceeds 10 times the STLC value, a California Waste Extraction Test (WET) is required to determine if the soil is hazardous or non-hazardous. If the WET result exceeds the STLC value, the soil is considered California-only hazardous waste and must be disposed at an appropriate off-site location. If a reported concentration exceeds 20 times the TCLP absolute value, a TCLP test must be conducted to determine if the soil is hazardous or non-hazardous. If the result of the TCLP test exceeds the TCLP value for that compound, the soil is considered RCRA-hazardous waste and must be disposed at an off-site Class I hazardous waste landfill.

SOIL

Detected analytical results from soil sampling activities are presented in Table 1; the laboratory analytical report is provided in Appendix C. Specific comparison to cleanup goal or disposal criteria are summarized below.

- TPH-DRO and TPH-GRO were detected at concentrations greater than laboratory reporting limits and below their respective commercial/industrial ESLs in soil borings HA-12 and HA-13.
- Select VOCs were detected at concentrations greater than laboratory reporting limits and below commercial/industrial ESLs, including: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, sec-butylbenzene, benzene, ethylbenzene, isopropylbenzene, naphthalene, n-butylbenzene, n-propylbenzene, tert-butylbenzene, and total xylenes. These constituents were detected in the 2.5 feet bgs and 3.75 feet bgs samples collected from boring location HA-12.
- Arsenic was detected at concentrations ranging from 3.2 to 29 milligrams per kilogram (mg/kg), exceeding the commercial/industrial ESL of 0.31 mg/kg. However, all but three of the detected concentrations are below the background arsenic concentration accepted by the RWQCB for San Francisco Bay Area soil, 11 mg/kg.[1]
- Total chromium was detected in all six soil samples at concentrations ranging from 40 to 110 mg/kg. Three of the six shallow soil samples had detected concentrations of total chromium at exceeding 10 times the STLC (50 mg/kg) and 20 times the TCLP level (100 mg/kg) of 56, 70, and 110 mg/kg. For the soil sample collected from boring HA-17 with total chromium detected at 110 mg/kg, chromium STLC and TCLP analysis was requested. The resulting leachable chromium concentrations did not exceed the STLC of 5 mg/L or the TCLP level of 5 mg/L. As such, total chromium concentration of 56 and 70 mg/kg would also likely not exceed the STLC or TCLP levels. Furthermore, hexavalent chromium was not detected HA-12 or HA-13 which
- Lead was detected in five of the six soil samples at concentrations ranging from 4.5 to 300 mg/kg. The lead concentration of 300 mg/kg collected at 8.0 feet bgs for boring HA-17 exceeds 10 times the STLC (50 mg/kg) and 20 times the TCLP level (100 mg/kg). The resulting leachable lead concentrations, STLC of 7.2 mg/L, did exceed the STLC of 5 mg/L and did not exceed the TCLP level of 5 mg/L. Therefore, soil generated in the vicinity of HA-17 would likely be characterized as California-hazardous waste if excavated for off-site disposal.

[1] Duvergé, 2011. Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region. December.

- Zinc was detected in all six soil samples at concentrations ranging from 28 to 2,900 mg/kg. One sample collected from boring HA-17 at 8 feet bgs with a detected concentration of lead at 2,900 mg/kg, which exceeds 10 times the STLC of 2,500 mg/kg. The resulting leachable zinc concentration did not exceed the STLC of 5 mg/L. Therefore, this soil would be likely be characterized as non-hazardous waste if excavated for off-site disposal.
- Additional CCR T22 metals detected at concentrations greater than laboratory reporting limits and below their respective commercial/industrial ESLs include antimony, barium, beryllium, cobalt, copper, mercury, nickel, selenium, and vanadium. CCR T22 metals molybdenum, silver, and thallium were not detected at a concentration greater than the laboratory limits.

GROUNDWATER

Detected analytical results from groundwater sampling activities are presented in Table 2; the laboratory analytical report is provided in Appendix C. Three groundwater samples were collected at 131 Terminal Court. Of the three samples, only the grab groundwater sample collected from HA-12 located hydraulic downgradient of the former USTs had detected concentration of petroleum hydrocarbons. The following sections provide a summary of the groundwater data collected from boring HA-12, screened against commercial/industrial groundwater vapor intrusion ESLs .

- TPH-DRO and TPH-gasoline GRO was detected in borings HA-12 at concentrations of 2,300 µg/L 16,000 µg/L, respectively, though there is no commercial/industrial ESL.
- Select VOCs were detected in the grab groundwater samples collected from boring location HA-12 at concentrations exceeding commercial/industrial vapor intrusion ESLs:
  - Benzene was detected at a concentration of 1,200 µg/L, which exceeds the commercial/industrial vapor intrusion ESL of 1.8 µg/L.
  - Ethylbenzene was detected at a concentration of 1,400 µg/L, which exceeds the commercial/industrial vapor intrusion ESL of 15 µg/L.
  - Naphthalene was detected at a concentration of 290 µg/L, which exceeds the commercial/industrial ESL of 20 µg/L.
  - Total xylenes were detected at a concentration of 970 µg/L, which exceeds the commercial/industrial ESL of 400 µg/L.
- Select VOCs were detected in the grab groundwater samples collected from boring location HA-12 at concentrations greater than laboratory reporting limits and below commercial/industrial vapor intrusion ESLs, including: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, sec-butylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, tert-butylbenzene, and toluene.

Conclusions

Haley & Aldrich completed the Phase II environmental investigation of the Subject Property located at 131 Terminal Court in South San Francisco, California, which included the collection of soil and groundwater samples. The findings of this investigation conclude:

- Soil and groundwater samples were collected adjacent to the Kinder Morgan pipeline. Based on the limited analytical data, the results do not indicate historical releases impacting the soil or groundwater in this area of the Subject Property.
- Subject Property soil conditions are not anticipated to impact redevelopment of the property and are not likely to be characterized as hazardous waste if excavated for off-site disposal, with the limited exception of soil in the vicinity HA-17 which is classified as California-hazardous waste due to elevated leachable lead concentrations detected in the shallow soil. Arsenic concentrations are above background concentrations, but some local landfills accept arsenic levels up to 500 mg/kg.
- Groundwater results indicate a potential vapor intrusion risk at the Subject Property in the vicinity of HA-12, which is located at the area of the former USTs that served as a former fueling station. Groundwater data collected by others in 2012 indicated elevated concentrations of VOCs, consistent with data collected during this Phase II investigation in this area of the Subject Property. As such, the area around HA-12 is considered an Area of Concern (AOC) 1. The extent of AOC 1 is limited to the south by HA-13, to the north by the property line and post-remediation sampling, to the west and east by data collected in 2012 . The "Case Closure Request" document dated 9 October 2013 prepared by Conestoga-Rovers & Associated presenting previous groundwater sampling results are presented in Appendix D. Other groundwater results collected during this Phase I do not indicate the potential for a vapor intrusion concern.

Recommendations

Based on the above conclusions, we recommend the following be considered when planning for the Subject Property's redevelopment:

- If future design and construction of occupiable structures are proposed in the vicinity of AOC 1 (see Figure 2), additional subsurface soil vapor and groundwater characterization and potential vapor intrusion mitigation measures may be warranted. However, we understand that the current conceptual building development does not include construction of occupiable structure(s) in the vicinity AOC 1 therefore a vapor mitigation measure may not be required;
- Ensure the dewatering activities, including the pumping, treatment, and discharge of groundwater, comply with the applicable Publicly Owned Treatment Works (POTW) and National Pollutant Discharge Elimination System (NPDES) permit requirements and include treatment measures given the impacted groundwater conditions identified in the vicinity of AOC 1;
- Prepare a Site Management Plan and safety plan (HASP) to outline the soil handling procedures that may be required for segregating, testing, and subsequent disposal of shallow soils from the construction site. If excavation and/or grading activities are to be performed in the vicinity of HA-17 where hazardous waste would be excavated, further site-specific health and safety measures would be required.
- It is anticipated site soil will be suitable for disposal at Class III landfills. The sampling results provide a preliminary evaluation of the expected waste profile for the soil to be disposed off site during construction activities. Additional sampling of the actual soil generated and stockpiled for off-site disposal may be required for future waste profiling.

- As documented in the March 27, 2014, SMCEH case closure documentation, SMCEH must be notified of any proposed change in land use or removal of soil and groundwater in close proximity to the former USTs located at the northern end of the Subject Property so they can evaluate whether the residual contamination may pose a risk to public health and the environment.

Haley & Aldrich cautions that the findings of our limited environmental assessment are based on our review of analytical test results performed on a limited number of soil and groundwater samples.

We appreciate the opportunity to provide environmental consulting services on this project. Please do not hesitate to contact us if you have any questions or comments.

Sincerely yours,
HALEY & ALDRICH, INC.

Notes:
Detected results are **bold.**
1. Arsenic occurs naturally in soils in California. A regional background value of 11 mg/kg was established for low-lying soils of the San Francisco Bay Area (Duverge, 2011).
Data is compared to the Commercial/Industrial: Shallow Soil Exposure Environmental Screening Levels (ESLs), SFRWQCB, July 2019.
STLC - soluble threshold limit concentration
TCLP - toxicity characteristic leaching procedure
TTLC - total threshold limit concentration
Data are reported to the laboratory reporting limit (< RL).
µg/kg = micrograms per kilogram
-- indicates value is not available.
Data exceeding 10x STLC or 20x TC are highlighted with green color.
Data exceeding Commercial/Industrial ESLs are highlighted with peach color.

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling **start date & time** must be scheduled with County staff at (650) 464-0047 or drilling@smcgov.org **at least 2 full working days (i.e. 48 hours) in advance.**
Visit smchealth.org/ehfees for Groundwater Protection Program fees.

PURPOSE OF APPLICATION: ☐ Groundwater Monitoring/Vapor Well Installation ☒ Construct Soil Borings (variance request if to be left open >24 hrs) ☐ Groundwater Monitoring/Vapor Well Destruction Extension of Permit # _____

No. of Wells _____ No. of Borings 6 Well/Boring Names HA-6 through HA-11

PURPOSE OF DRILLING: ☒ Environmental LEAD AGENCY ☐ Geotechnical ☐ County GPP (permit approval is not to be considered work plan approval) ☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case # _____ Assessor's Parcel # (required) 015113240 (one per permit)

Drilling Location Address: 101 Terminal Court City: South San Franci Zip: 94080

To Be Constructed In: ☐ Public Property ☒ Private Property ☐ Refuse

Maximum Proposed Depth (wells/borings) 10 (feet) Drilling Method: hollow stem

Boring Diameter: 8" Casing Diameter: _____ Filter Pack Interval: _____ Screen Interval: _____

Destruction Method: ☐ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☐ Overdrilling (guide rods for total depth prior to starting required)

WELL/BORING OWNER

(Well/boring owner name or contact person should match signature)

Name: Steelwave Acquisitions, LLC Contact Person: Steve Dunn

Address: 999 Baker Way, Suite 200 City, State, Zip: San Mateo, CA 94404

Telephone: 415.309.6778 Email: sdunn@steelwavellc.com

It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*

SUBSURFACE DRILLING PERMIT APPLICATION CHECKLIST

CHECKLIST

- ☐ Legibly filled in all appropriate blanks and boxes, except signature and date (review instructions to verify appropriate fields to leave any lines blank or unchecked).
- ☐ Have all required signatures (can be on separate pages, do not need to be wet signatures).
- ☐ Include appropriate fee with application. Payment can be made by credit card over phone to (650) 372-6200 (indicate when and how application submitted).
- ☐ Include scaled site map of site in relation to cross streets and drilling location in relation to site features.
- ☐ Show approximate location(s) and ID/Name of well/borings.
- ☐ For well installations, indicate (i.e. mark on permit application) anticipated destruction method of these wells. May be asked to provide written description for small diameter (<2") wells.
- ☐ For well destructions via pressure grouting, included well construction logs and grout volume calculations. An approved work plan is required for all well destructions.
- ☐ Shallow (<10') vapor wells do not need to be permitted. However, still must comply with well standards for installation and destruction (i.e. do not use bentonite alone in vadose zone for sanitary seal and remove all non-native material).
- ☐ Notify permitting inspector 2 full working days prior to start of drilling. **Separate notification to case worker if known contaminated site.**
- ☐ Consultant must submit all required information within 60 days of drilling (preferably to drilling@smcgov.org).
- ☐ For Borings and wells: require logs, site map, and analytical data.
- ☐ For wells: require surveyed coordinates and elevation, Well Completion Report (or indicate upload to Department of Water Resources Online System of Well Completion Reports DWR's OSWCR).

COMMON MISTAKES TO AVOID ON APPLICATION

Listed **potential** buyer as Property Owner,

Listed case's address rather than drilling location's address.

Failed to include Assessor's Parcel Number of the drilling location.

- Provided variance justification memo if temporary wells/borings may need to be left open for more than 24 hours to wait for groundwater recharge with estimate of maximum time needed.

- Permit is for **one mobilization** only. If work included in this permit cannot be done in a single mobilization, another permit may be required.

- Well owner must submit indication of annual use of wells (monitoring reports in association with corrective action requests satisfies this requirement); otherwise, wells need to be destroyed within year of last originally intended use.

- Any application for drilling within a landfill (geotechnical or environmental) must be accompanied by a work plan. Work plans must be approved by San Mateo County Environmental Health Services (EHS) and the Groundwater Protection Program prior to drilling.

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology must be submitted to County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS

A. ***Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.***

B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by EHS representative.

C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.

E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.

G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an inspection cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees.

I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.

J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.

K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

SPECIAL CONDITIONS: _____

(agency use only) _____

_____

Agency Use Only:

Signature: ICHA FA # _____ Date: 3/14/2022

PERMIT APPLICATION INSTRUCTIONS AND FEES

A subsurface drilling permit for borings and wells is required if groundwater is anticipated to be encountered or if drilling extends to 10 feet or deeper. Sub-slab and vapor wells shallower than 10 feet do not require a permit. Should groundwater be encountered shallower than 10 feet unexpectedly, then contact San Mateo County EHS Groundwater Protection Program (GPP) immediately and a permit application will be required retroactively. GPP is the permitting agency for all subsurface drilling for environmental and geotechnical purposes within San Mateo County. San Mateo County EHS Land Use Program (LUP) reviews all water well permit applications (smchealth.org/environ/forms) for public supply, domestic, agricultural, cathodic protection, exploratory, and geothermal heat exchange well construction and destruction and permit applications for all reconnaissance, investigation, and excavation work strictly for land use purposes. Please contact the LUP at (650) 372-6200 to discuss permitting, notification, and drilling requirements.

A 120-day extension may be granted for permits which have not been used during the original 120-day time frame. Submit another Subsurface Drilling Permit Application and payment for the permit extension fee at 50% of the fee for the type of drilling. Extension must be requested prior to the original permit expiring. If there are several wells and borings over several contiguous assessor's parcels and public right-of-ways, then discuss the fee with the County inspector at (650) 464-0047 or drilling@smcgov.org. The County inspector may charge only one fee for borings and wells constructed across contiguous assessor's parcels and public right-of- ways. However, this is dependent on how much the County inspector believes will need to be inspected in the field and how much review time of required submittals will be needed.

Section 1: Purpose of Application

At least one of the four boxes must be selected; however, multiple boxes may be selected as long as all of the wells and borings are on the same assessor's parcel or public right-of-way (see Section 4). A **boring** under this permit application is defined as a constructed hole lasting less than 24 hours before being properly destroyed. After 24 hours, the constructed hole is considered a **well** under this permit application which needs to be constructed appropriately unless special conditions are approved as part of the permit. If permit extension is selected, then write in the permit number of the permit to be extended. List the number of wells and borings anticipated to be drilled and what they will be named. This number may change in the field based on conditions encountered.

Section 2: Purpose of Drilling

At least one of the two boxes must be selected; however, both boxes may be selected as long as both purposes of drilling are to be conducted on the same assessor's parcel or public right-of-way (see Section 4). Geotechnical drilling may also be conducted under San Mateo County's Annual Geotechnical Drilling Permit in which consulting companies pay an annual fee to perform this type of drilling an unlimited amount of times for 365 days after obtaining the Annual Geotechnical Drilling Permit. Fees are listed at **smchealth.org/ehfees.** Please note, a Notification Form (not available on website) similar to this Subsurface Drilling Permit Application must be completely filled out and submitted at least 2 business days (48 hours) prior to drilling under the Annual Geotechnical Drilling Permit.

Section 3: Lead Agency

One of the three boxes must be selected. The **EHS GPP** would be selected only for investigations of known contaminated sites that the County is the lead agency. For drilling required by the Regional Water Quality Control Board **(RWQCB)**, Department of Toxic Substances Control **(DTSC)**, or the United States Environmental Protection Agency **(USEPA)**, please include a copy of their approval letter. **None** would refer to investigations required by the County CUPA (Hazardous Materials Program), County Land Use or Solid Waste Programs, County or City Planning or Building Departments or voluntary investigations for due diligence or property transactions.

Section 4: Drilling Information

All applicable spaces must be filled in. Agency Case # refers to the lead agency's case number, if overseen by an agency, for the project under which the investigation is being conducted. **Assessor's parcel number** is the 9-digit number corresponding to the specific private property the drilling is proposed to be conducted on (can be found under Secured Property Taxes at **sanmateocountytaxcollector.org** or **here**).Each permit **must** include only one assessor's parcel number. If the drilling is to be conducted only in public right-of-ways, then the assessor's parcel number space should be filled in with N/A for not applicable. If drilling is to occur on both a private property and a contiguous public right-of-way, then two permits (one for the private property and one for the public right-of-way) must be filled out. **Address, City, and Zip** refer to the location of the specific property drilling is proposed to be conducted on. The address for a public right-of-way would simply be the name of the specific section of the public right-of-way (ie. 100 block of Main Street). **To be Constructed in** must have one box selected. Again, this differentiates between a public right-of-way and a private property. **Refuse** is a special land use designation which needs to be indicated on the permit application.

PERMIT APPLICATION INSTRUCTIONS AND FEES (CONTINUED)

Section 4: Drilling Information (continued)

The rest of this section is self-explanatory, may change in the field based on conditions encountered, and must be filled in except **Destruction Method** for borings only. Schematics may be submitted instead of filling in the well construction details, particularly if wells will be constructed differently from each other.

Destruction Method requires the use of a maximum of 7 gallons of water per 94 pounds of cement. This measurement (for both water and cement) must be able to be demonstrated in the field upon request from the inspector (such as using a 5-gallon bucket for measuring the water and using entire bags of cement). For **pressure grouting**, the well construction log and grout calculations must be submitted. The sand pack may not be more than 3 feet above the top of the screened interval, the screened interval may not be longer than 25 feet, and the bottom of the original boring may not be more than 2 feet deeper than the bottom of the constructed well. The total depth of the well and the fact that there are no obstructions in the well must be verified in the field. Type I/II cement grout must be tremied into the well, followed by application of 25 psi pressure maintained for 5 minutes. If the well does not meet pressure grouting criteria, it must be destroyed by drilling out to the total depth of the original boring. For **overdrilling**, the well casing and all annular material must be removed using a guide rod for the entire depth of the well inserted prior to drilling, and the boring tremie grouted to the surface using Type I/II cement grout. A general observation is that grouting borings using a ¾ inch PVC pipe, typically used to collect grab groundwater samples in borings, does not work with a screened section. Free falling grout is only allowed if the boring is dry, or if water is present in less than 10% of the boring, and less than 30 feet deep. Grout calculations must be provided in a well destruction workplan.

Section 5: Well/Boring Owner

The **name** of the entity owning the wells and borings must be listed along with their contact person (if different from the name of the well/boring owner), address, telephone number, and email address. The **contact person** must be directly associated with or an agent of the entity owning the wells and borings such as a property manager, real estate manager, contractor, or lawyer but not the environmental consultant listed on the permit application in Section 8. A **phone** number and an **email** address must be provided to allow the inspector to contact the well/boring owner to verify information if necessary. By providing an email address, the well/ boring owner will receive an electronic copy of the permit. The permit application must be **signed** and **dated** by either the entity listed as the owner of the wells and borings or the contact person. **Signatures (Sections 5 through 8)** do not need to be original; however, one copy of the permit application must contain all of the information besides the signatures in a legible format. ALL SIGNATURES REQUIRED (SECTIONS 5 THROUGH 8) DO NOT NEED TO BE ON THE SAME COPY OF THE PERMIT APPLICATION.

Section 6: Property Owner

The **name** of the entity owning the property must be listed and needs to match the name listed with the County Assessor for this property. The **contact person** must be directly associated with or an agent of the entity owning the property such as a property manager, real estate manager, contractor, or lawyer but not the environmental consultant listed on the permit application in Section 8. A **telephone** number and an **email** address must be provided to allow the inspector to contact the property owner to verify information if necessary. By providing an email address, the property owner will receive an electronic copy of the permit. The permit application must be signed and dated by the entity listed as the property owner only. **AGENTS CANNOT SIGN FOR THE PROPERTY OWNER.** For public rights-of-way, a copy of the encroachment permit can be substituted for the property owner signature. The City of San Mateo, among others, will not issue an encroachment permit until the subsurface drilling permit is issued, but the City of San Mateo will issue a letter of intent to issue an encroachment permit which is acceptable as a substitute for the property owner signature in City of San Mateo rights-of-way.

Section 7: Drilling Company

The **name** of the company proposed to drill the wells and borings must be listed along with the drilling company **contact person**, **address**, **phone number**, and **email address**. In addition, the **driller's C57 license number** must be provided. By providing an email address, the drilling company will receive an electronic copy of the permit. The permit application must be signed and dated by the driller's contact person. If the drilling company changes, then a new subsurface drilling permit application should be filled out completely except for Sections 5, 6, and 8.

Section 8: Consulting Company

The **name** of the company overseeing the proposed drilling of the wells and borings must be listed along with the **project manager**, address, **phone** number, and **email** address. The responsible professional overseeing the work must **print** their name legibly, **sign** their name and date, and provide either their **California Professional Geologist or Civil Engineering** number. Field contact name and number, if known, are optional but beneficial for all parties involved.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative
320-85798-1

Comments
Sample "HA-16-GW" (320-85798-18) was not assigned 8015 Diesel analysis due to not receiving container needed.

Receipt
The samples were received on 3/16/2022 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.8º C.

Receipt Exceptions
Sample "HA-16-GW" (320-85798-18) was not assigned 8015 Diesel analysis due to not receiving container needed.

All TerraCore samples were preserved via freezing on 3/15/22 at 19:45 by client.

GC/MS VOA
Method 8260B: The following samples were collected in properly preserved vials; however, the pH was outside the required criteria when verified by the laboratory: HA-17-GW (320-85798-17) and HA-16-GW (320-85798-18). The samples were analyzed within the 7-day holding time specified for unpreserved samples.

Method 8260B: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: HA-6-GW (320-85798-13), HA-7-GW (320-85798-14), HA-11-GW (320-85798-15), HA-17-GW (320-85798-17) and HA-16-GW (320-85798-18). Elevated reporting limits (RLs) are provided.

Method 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: HA-12-S-3.75 (320-85798-7) and HA-12-GW (320-85798-16). Elevated reporting limits (RLs) are provided.

Method 8260B: Internal standard (ISTD) response for Dioxane-d8 for the following samples in analytical batch 320-574383 was outside acceptance criteria: HA-7-S-5.5 (320-85798-2), HA-8-S-3.5 (320-85798-3), HA-12-S-2.5 (320-85798-8), (CCV 320-574383/3), (LCS 320-574383/7), (LCSD 320-574383/8) and (MB 320-574383/10). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) responses for Dioxane-d8 and TBA-d9 for the following samples in analytical batch 320-574383 were outside acceptance criteria: HA-13-S-4.5 (320-85798-9), HA-15-S-4.0 (320-85798-10), HA-16-S-10 (320-85798-11) and HA-17-S-8.0 (320-85798-12). These ISTDs do not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) response for Dioxane-d8 for the following samples in analytical batch 320-574607 was outside acceptance criteria: HA-11-GW (320-85798-15) and (MB 320-574607/11). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) response for Dioxane-d8 for the following samples in analytical batch 320-574629 was outside acceptance criteria: (CCV 320-574629/3) and (LCS 320-574629/7). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) response for Dioxane-d8 for the following sample in analytical batch 320-574838 was outside acceptance criteria: HA-12-S-3.75 (320-85798-7). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) response for TBA-d9 for the following sample in analytical batch 320-576134 was outside acceptance criteria: HA-12-S-3.75 (320-85798-7). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) responses for 2-Butanone-d5, Dioxane-d8 and TBA-d9 for the following sample in analytical batch 320-576394 were outside acceptance criteria: HA-12-S-3.75 (320-85798-7). These ISTDs do not correspond to any of the requested

Job ID: 320-85798-1 (Continued)

Laboratory: Eurofins Sacramento (Continued)

target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) response for TBA-d9 for the following sample in analytical batch 320-576394 was outside acceptance criteria: (CCV 320-576394/3). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) responses for Dioxane-d8 and TBA-d9 for the following sample in analytical batch 320-576394 were outside acceptance criteria: (CCB 320-576394/1010). These ISTDs do not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Internal standard (ISTD) response for Dioxane-d8 and/or TBA-d9 for the following samples in analytical batch 320-575445 was outside acceptance criteria: HA-12-S-3.75 (320-85798-7), (LCS 320-573664/2-A), (LCSD 320-573664/3-A) and (MB 320-573664/1-A). These ISTDs do not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with preparation batch 320-573663 and analytical batch 320-574383. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with analytical batch 320-574607. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with preparation batch 320-573663 and analytical batch 320-574629. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with preparation batch 320-573663 and analytical batch 320-574838. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B/CA_LUFTMS: The following samples were collected in properly preserved vials; however, the pH was outside the required criteria when verified by the laboratory: HA-17-GW (320-85798-17) and HA-16-GW (320-85798-18). The samples were analyzed within the 7-day holding time specified for unpreserved samples.

Method 8260B/CA_LUFTMS: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: HA-6-GW (320-85798-13), HA-7-GW (320-85798-14), HA-11-GW (320-85798-15), HA-17-GW (320-85798-17) and HA-16-GW (320-85798-18). Elevated reporting limits (RLs) are provided.

Method 8260B/CA_LUFTMS: The following sample was diluted to bring the concentration of target analytes within the calibration range: HA-12-S-3.75 (320-85798-7) and HA-12-GW (320-85798-16). Elevated reporting limits (RLs) are provided.

Method 8260B/CA_LUFTMS: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with analytical batch 320-574605. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B/CA_LUFTMS: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with preparation batch 320-573663 and analytical batch 320-574384. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B/CA_LUFTMS: Insufficient sample volume was available to perform a matrix spike / matrix spike duplicate (MS/MSD) associated with preparation batch 320-573663 and analytical batch 320-574630. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch.

Method 8260B/CA_LUFTMS: The ending continuing calibration verification (CCV) for analytical batch 320-574630 (CCV 320-574630/32)

Job ID: 320-85798-1 (Continued)

Laboratory: Eurofins Sacramento (Continued)

was outside acceptance limits with a low bias. Two consecutive CCVs (CCV 320-574630/34 and CCV 320-574630/35) were analyzed the next morning, outside the 12-hour tune window to demonstrate that the instrument was still in calibration.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8015B: The following samples were diluted to bring the concentration of target analytes within the calibration range: HA-6-S-2.5 (320-85798-1), (320-85798-D-1-H MS) and (320-85798-D-1-I MSD). Elevated reporting limits (RLs) are provided.

Method 8015B: The following sample was diluted due to abundance of target analytes: HA-12-S-3.75 (320-85798-7). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8015B: Surrogate recoveries for the following samples were outside control limits: HA-8-S-3.5 (320-85798-3), HA-9-S-5.0 (320-85798-4), HA-16-S-10 (320-85798-11) and HA-17-S-8.0 (320-85798-12). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-574065 and analytical batch 320-574865 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8015B: Due to the high concentration of Motor Oil Range Organics [C28-C40], the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 320-575209 and analytical batch 320-576732 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 8015B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-575209 and analytical batch 320-576732 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8015B: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was earlier the typical diesel fuel pattern used by the laboratory for quantitative purposes: HA-12-S-3.75 (320-85798-7), HA-12-S-2.5 (320-85798-8), HA-12-GW (320-85798-16) and (320-85728-D-3-C).

Method 8015B: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: HA-6-S-2.5 (320-85798-1), HA-8-S-3.5 (320-85798-3), HA-10-S-3.5 (320-85798-5), HA-11-S-5.5 (320-85798-6) and HA-13-S-4.5 (320-85798-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 3005A: The following samples were scheduled for dissolved metals and were not filtered in the field: HA-12-GW (320-85798-16), (320-85798-E-16-A MS) and (320-85798-E-16-A MSD). These samples were filtered and preserved upon receipt to the laboratory.

Method 6010B: The following samples were diluted to bring the concentration of target analytes within the calibration range: HA-9-S-5.0 (320-85798-4) and HA-17-S-8.0 (320-85798-12). Elevated reporting limits (RLs) are provided.

Method 6010B: The following samples were diluted due to the nature of the sample matrix: HA-8-S-3.5 (320-85798-3), HA-11-S-5.5 (320-85798-6) and HA-13-S-4.5 (320-85798-9). Elevated reporting limits (RLs) are provided.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-574722 and analytical batch 320-575058 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-575028 and analytical batch 320-575402 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Job ID: 320-85798-1 (Continued)

Laboratory: Eurofins Sacramento (Continued)

Method 7471A: The matrix spike / matrix spike duplicate (MS) recovery for preparation batch 320-575887 and analytical batch 320-575969 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) recoveries were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C SGC: The following samples were decanted prior to preparation: HA-6-GW (320-85798-13), HA-7-GW (320-85798-14), HA-11-GW (320-85798-15) and HA-17-GW (320-85798-17). These samples are associated with method 8015B_DRO in preparation batch 320-574065.

Method 3510C SGC: The following samples formed emulsions during the extraction procedure: HA-6-GW (320-85798-13), HA-7-GW (320-85798-14), HA-11-GW (320-85798-15), HA-12-GW (320-85798-16) and HA-17-GW (320-85798-17). The emulsions were broken up using sodium sulfate. These samples are associated with method 8015B_DRO in preparation batch 320-574065.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
