Tanvi Gupta, Associate Environmental Scientist, Office of Environmental Analysis

Michael O'Callaghan, Senior Right-of-Way Agent

Hung H Do, Design Manager

Lance Hall, Senior Transportation Engineer, Office of Corridor Management South/West – Highway Operations/TMP

Kimberly White, Branch Chief, Office of Landscape Architecture

Tristan Williamson, Landscape Associate

Shilpa Mareddy, Air and Noise Branch Chief, Office of Environmental Engineering

Charles Palmer, Associate Environmental Planner/Principal Architectural Historian, Office of Cultural Resource Studies

Lindsay Busse, Associate Environmental Planner/Archaeology, Office of Cultural Resource Studies

Helen Blackmore, Senior Environmental Planner, Office of Cultural Resource Studies

Kathryn Rose, Senior Environmental Planner, Office of Cultural Resource Studies

Kenny Tsan, Office of Environmental Engineering

Chris Wilson, District Branch Chief, Environmental Engineering

City of South San Francisco

Matthew Ruble, Principal Engineer

Eunejune Kim, Director of Public Works

AECOM

Jeff Zimmerman, Senior Environmental Manager

Lynn McIntyre, Environmental Manager

Broden Farazmand, Environmental Planner

Maria Sedghi, Project Manager

Karin G. Beck, Senior Archaeologist

Kathleen Kubal, Archaeologist/Geoarchaeologist

Jenn Redmond, Archaeologist

Tierra Groff, Biologist

Stephanie Osby, Environmental Planner

Swathi Korpu, Traffic Engineer

Jason Hom, Civil Engineer

Apex Strategies

Eileen Goodwin, President, Public Education

Baseline Environmental Consulting

Patrick Sutton, Environmental Engineer

Illingworth & Rodkin, Inc.

Heather Bruce, Senior Consultant
Michael Thill, Principal Consultant
Micah Black, Staff Consultant

Verano Technical Services

Ramsey Hissen, Principal Consultant

WRECO

Analette Ochoa, Civil Engineer

Jennifer Abrams, Civil Engineer

Chapter 6 Distribution List

The following agencies, organizations, and individuals received printed or electronic copies of this document. Agency names marked with an asterisk (*) received copies through the State Clearinghouse.

Federal Agencies

Acting Chief, Regulatory Division,
James C. Mazza
United States Army Corps of Engineers*
450 Golden Gate Avenue, 4th Floor
San Francisco, CA 94102

Division Administrator, Vincent Mammano
Federal Highway Administration*
650 Capitol Mall, Suite 4-100
Sacramento, CA 95814

Regional Director, Paul Souza
United States Fish and Wildlife Service*
2800 Cottage Way, Room W-2605
Sacramento, CA 95825

NEPA Reviewer, Zac Appleton
United States Environmental Protection Agency,* Region 9
75 Hawthorne Street, ENF-4-2
San Francisco, CA 94105

Acting Regional Administrator, Deborah Jordan
United States Environmental Protection Agency,* Region 9
75 Hawthorne Street
San Francisco, CA 94105

Federal Elected Officials

Honorable Dianne Feinstein
United States Senate
333 Bush Street, Suite 3225
San Francisco, CA 94104

Honorable Alex Padilla
United States Senate
333 Bush Street, Suite 3225,
San Francisco, CA 94104

Honorable Jackie Speier
United States Congress, 14th District
155 Bovet Road Suite 780
San Mateo, CA 94402

State Agencies

Executive Director, Mitch Weiss
California Transportation Commission*
1120 N Street, MS-52
Sacramento, CA 95814

Executive Director, Kate Gordon
Office of Planning and Research
State Clearinghouse*
1400 Tenth Street
Sacramento, CA 95814

Director, David Shabazian
California Department of Conservation*
801 K Street, MS 24-01
Sacramento, CA 95814

Bay Delta Regional Manager, Gregg Erickson
California Department of Fish and Wildlife, Region #3*
2825 Cordelia Road, Suite 100
Fairfield, CA 94534

State Historic Preservation Officer, Julianne Polanco
Office of Historic Preservation*
1725 23rd Street, Suite 100
Sacramento, CA 95816

Director, Armando Quintero
California Department of Parks and Recreation*
Natural Resources Division
P.O. Box 942896
Sacramento, CA 94296

Director, Karla Nemeth
California Department of Water Resources*
Division of Environmental Services
3500 Industrial Boulevard
West Sacramento, CA 95691

Commissioner, Amanda L. Ray
California Highway Patrol*
Office of Special Representative
601 North Seventh Street
Sacramento, CA 95811

Secretary, Wade Crowfoot
California Natural Resources Agency*
1416 Ninth Street, Suite 1311
Sacramento, CA 95814

Chair, Liane M. Randolph
California Air Resources Board*
1001 I Street
P.O. Box 2815
Sacramento, CA 95812

Board Chair, E. Joaquin Esquivel
State Water Resources Control Board*
Division of Water Quality
P.O. Box 100
Sacramento, CA 95812

Chair, David Hochschild
California Energy Commission*
1516 Ninth Street, MS-29
Sacramento, CA 95814

Executive Secretary, Christina Snider
California Native American Heritage Commission*
1550 Harbor Boulevard, Suite 100
West Sacramento, CA 95691

President, Marybel Batjer
California Public Utilities Commission*
505 Van Ness Avenue
San Francisco, CA 94102

Chief, Environmental Planning and Management, Nicole Dobroski
California State Lands Commission*
100 Howe Avenue, Suite 100 South
Sacramento, CA 95825

State Elected Officials

Honorable Kevin Mullin
California State Assembly District 22
1528 South El Camino Real, Suite 302
San Mateo, CA 94402

Josh Becker
California State Senate District 13
1528 South El Camino Real, Suite 303
San Mateo, CA 94402

Regional Agencies

Executive Director, Therese McMillan
Association of Bay Area Governments
375 Beale Street, Suite 800
San Francisco, CA 94105

Executive Officer, Jack Broadbent
Bay Area Air Quality Management District
375 Beale Street, Suite 600
San Francisco, CA 94105

Executive Director, Therese McMillan
Metropolitan Transportation Commission
375 Beale Street, Suite 700
San Francisco, CA 94105

Executive Officer, Eileen White
San Francisco Bay Regional Water Quality Control Board, Region #2
1515 Clay Street, Suite 1400
Oakland, CA 94612

Executive Director, Larry Goldzband
San Francisco Bay Conservation and Development Commission
Bay Area Metro Center
375 Beale St., Suite 510
San Francisco, CA 94105

Local Agencies

City Manager, Mike Futrell
City of South San Francisco
400 Grand Avenue
South San Francisco, CA 94080

Joe LaClair, Planning Services Manager
County of San Mateo, Planning and Building
455 County Center
Redwood City, CA 94063

General Manager and Chief Executive Officer, Jim Hartnett
San Mateo County Transportation Authority
1250 San Carlos Avenue
San Carlos, CA 94070-1306

Executive Director Sean Charpentier
City/County Association of Governments of San Mateo County
555 County Center, 5th Floor
Redwood City, CA 94063

Planning Director, Steve Monowitz
County of San Mateo
455 County Center
Redwood City, CA 94063

Director of Economic and Community Development, Alex Greenwood
City of South San Francisco
400 Grand Avenue
South San Francisco, CA 94080

Public Works Director, Eunejune Kim
City of South San Francisco
P.O. Box 711
South San Francisco, CA 94083

Ivar C. Satero
Airport Director
San Francisco International Airport
P.O. Box 8097
San Francisco, CA 94128-8097

Rosanne Foust, President and CEO
San Mateo County Economic Development Association (SAMCEDA)
1900 O'Farrell Street, Suite 380
San Mateo, CA 94403

Local Elected Officials

Mark Addiego, City Council of South San Francisco, Mayor
400 Grand Avenue
South San Francisco, CA 94080

Mark Nagales, City Council of South San Francisco, Vice Mayor, District 2
400 Grand Avenue
South San Francisco, CA 94080

James Coleman, City Council of South San Francisco, District 4
400 Grand Avenue
South San Francisco, CA 94080

Eddie Flores, City Council of South San Francisco, Appointed At Large
400 Grand Avenue
South San Francisco, CA 94080

Beanflour Nicolas, City Council of South San Francisco, At Large
400 Grand Avenue
South San Francisco, CA 94080

Dave Pine, San Mateo County Board of Supervisors, District 1
Hall of Justice
400 County Center
Redwood City, CA 94063

Carole Groom, San Mateo County Board of Supervisors, District 2
Hall of Justice
400 County Center
Redwood City, CA 94063

Don Horsley, San Mateo County Board of Supervisors, District 3
Hall of Justice
400 County Center
Redwood City, CA 94063

Warren Slocum, San Mateo County Board of Supervisors, District 4
Hall of Justice
400 County Center
Redwood City, CA 94063

David Canepa, San Mateo County Board of Supervisors, District 5
Hall of Justice
400 County Center
Redwood City, CA 94063

Appendix A. Section 4(f) Evaluation

Section 4(f) of the Department of Transportation Act of 1966, codified in federal law at 49 United States Code (USC) 303, declares that "it is the policy of the United States Government that special effort should be made to preserve the natural beauty of the countryside and public park and recreation lands, wildlife and waterfowl refuges, and historic sites."

Section 4(f) specifies that the Secretary of Transportation may approve a transportation program or project . . . "requiring the use of publicly owned land of a public park, recreation area, or wildlife and waterfowl refuge of national, state, or local significance, or land of an historic site of national, state, or local significance (as determined by the federal, state, or local officials having jurisdiction over the park, area, refuge, or site) only if:

- There is no prudent and feasible alternative to using that land; and
- The program or project includes all possible planning to minimize harm to the park, recreation area, wildlife and waterfowl refuge, or historic site resulting from the use."

This section of the document discusses de minimis impact determinations under Section 4(f). Section 6009(a) of SAFETEA-LU amended Section 4(f) legislation at 23 United States Code (USC) 138 and 49 USC 303 to simplify the processing and approval of projects that have only de minimis impacts on lands protected by Section 4(f). This amendment provides that once the U.S. Department of Transportation (USDOT) determines that a transportation use of Section 4(f) property, after consideration of any impact avoidance, minimization, and mitigation or enhancement measures, results in a de minimis impact on that property, an analysis of avoidance alternatives is not required and the Section 4(f) evaluation process is complete. The Federal Highway Administration's (FHWA) final rule on Section 4(f) de minimis findings is codified in 23 Code of Federal Regulations (CFR) 774.3 and CFR 774.17.

Responsibility for compliance with Section 4(f) has been assigned to the Department pursuant to 23 USC 326 and 327, including de minimis impact determinations, as well as coordination with those agencies that have jurisdiction over a Section 4(f) resource that may be affected by a project action.

Description of the Proposed Project

The California Department of Transportation (Caltrans) in cooperation with the City of South San Francisco and the San Mateo County Transportation Authority (SMCTA) propose to construct a new overcrossing of United States Highway 101 (US 101) in the City of South San Francisco, San Mateo County. The new overcrossing, referred to as the Utah Avenue extension, would connect the Utah Avenue/South Airport Boulevard intersection on the east side of US 101 to San Mateo Avenue on the west side of US 101. The intersections of Utah Avenue/South Airport Boulevard and San Mateo Avenue

would also be reconstructed to include turning lanes, and to connect to the new overcrossing by through lane. The Airport Boulevard/Produce Avenue/San Mateo Avenue intersection on the west side of US 101 would also be modified or reconstructed.

The project area is between the US 101/East Grand Avenue interchange (0.7 mile to the north) and the US 101/Interstate 380 (I-380) interchange (0.5 mile to the south). San Francisco International Airport is located approximately 2.5 miles to the south. US 101 at the project location has four general purpose lanes in each direction. In the southbound direction, an auxiliary lane exits at the connector ramp to I-380. In the northbound direction, there are auxiliary lanes that connect to the on- and off-ramps at South Airport Boulevard.

Section 4(f) Properties in the Project Area

There are no public park, recreation lands, wildlife or waterfowl refuges that have the potential to be affected by the project. However, six historic-period properties within the area of potential effects (APE) were evaluated by professionally qualified consultant staff to determine eligibility for listing in the National Register of Historic Places (NRHP) or California Register of Historic Resources (CRHR). Five of the six properties were found to be ineligible for listing in the NRHP or CRHR, pursuant to Stipulation VIII.C of the Section 106 PA. One property in the APE, the Golden Gate Produce Terminal at 131 Terminal Court (produce terminal), was found to be eligible for listing in the NRHP and CRHR at the local level of significance under Criterion A/1.

The produce terminal is considered a Section 4(f) resource, due to its eligibility for listing in the NRHP. It is associated with the development of the South San Francisco Industrial Park and the Golden Gate Produce Terminal, which has occupied the property since 1962. The Golden Gate Produce Terminal was constructed to house produce wholesalers who were forced to abandon the original produce market in downtown San Francisco, which was demolished to accommodate the 1960s Golden Gateway redevelopment project. Although other produce terminals were constructed to house the displaced produce operators, most of the larger produce wholesalers relocated to the Golden Gate Produce Terminal, which continues to be the largest and busiest produce terminal in Northern California. In addition, the terminal is unique in that it was historically, and continues to be cooperatively, owned by the produce dealers.

The period of significance for the produce terminal is its 1962 date of construction. The boundary for the historic resource is its legal parcel (APN: 015-113-210). The east and west terminal buildings, with their loading docks, individual produce stalls, and central parking area, are contributing features. The building’s character-defining features include pre-cast concrete slab construction with pre-cut window and door openings; concrete loading docks with overhanging metal canopies; and original steel sash, multi-light windows. Although the historic integrity of materials has been compromised by past alterations, including the replacement of original doors and windows and the installation of solar panels on the rooftop of the terminal buildings, the property overall retains

sufficient integrity of location, design, setting, materials, workmanship, feeling, and association to meet NRHP/CRHR Criteria A/1.

Non-contributing features to the produce terminal's historical significance include the property entrance and guard shack, an administration building, and a freestanding loading dock. Although the guard shack and the administration building were part of the original produce terminal construction, these buildings have been modified since construction and have diminished integrity, and also are unremarkable examples of building types commonly constructed as ancillary buildings on commercial/industrial properties throughout California. The freestanding loading dock was constructed between 2002 and 2005 and is less than 45 years old.

Project Use of Section 4(f) Property

The project would construct a new overcrossing that would span US 101 from Utah Avenue to San Mateo Avenue, and cross over Terminal Court, above the produce terminal. Additionally, three parking spaces in front of the produce terminal would be removed for the proposed overcrossing support columns, and 21 parking spaces would be temporarily impacted during construction. A partial property acquisition, temporary construction easement, and aerial easement of this property would be required for the project.

A Finding of No Adverse Effect (FNAE) was prepared for the project in June 2022, which found that the project would not directly affect the produce terminal because there are no improvements planned that would alter, physically destroy, cause neglect and deterioration, or lead to the transfer, sale, or lease of the historic property and any of its character-defining features.

The FNAE found that the produce terminal's contributing features, including the east and west terminal buildings with their loading docks, individual produce stalls, and the central parking area, would not be changed. Additionally, character-defining features, like the pre-cast concrete slab construction with pre-cut window and door openings, concrete loading docks with overhanging metal canopies, and original steel sash, multi-light windows, would not be removed or blocked by the addition of the new overcrossing. The overcrossing would be located closest to the noncontributing features described above (e.g., property entrance and guard shack, administration building). It was also found that no visual, atmospheric, or audible elements would diminish the integrity of the property's significant historic features, based on the findings of the project's Visual Impact Assessment and Noise Study Report (AECOM 2021b; AECOM 2022c).

Determination of a De Minimis Impact

According to 23 CFR 774.17, a de minimis impact to a historic site is appropriate when either:

1. no historic property is affected by the project; or

2. the project will have “no adverse effect” on the historic property in question.

Caltrans, as assigned by the FHWA, makes the final determination on the de minimis finding. Based on the FNAE, the project would result in a de minimis impact on the Golden Gate Produce Terminal located at 131 Terminal Court. The FNAE was submitted to the California State Historic Preservation Officer (SHPO), with a request for concurrence on the FNAE. In accordance with the January 1, 2014 First Amended Programmatic Agreement among the Federal Highway Administration, the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act, as it Pertains to the Administration of the Federal-Aid Highway Program in California, the SHPO was informed in writing that a non-response for the purposes of a “no adverse effect” or a “no historic properties affected” determination will be treated as the written concurrence for the de minimis determination. Caltrans received acknowledgement from SHPO on September 13, 2022, that they had no objection to the finding of No Adverse Effect to the Golden Gate Produce Terminal (Appendix D). Based on review of the project and SHPO’s concurrence with the No Adverse Effect finding, Caltrans concludes that the project would have a de minimis impact with respect to Section 4(f).

NON-DISCRIMINATION POLICY STATEMENT

The California Department of Transportation, under Title VI of the Civil Rights Act of 1964, ensures "*No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance*."

Caltrans will make every effort to ensure nondiscrimination in all of its services, programs and activities, whether they are federally funded or not, and that services and benefits are fairly distributed to all people, regardless of race, color, or national origin. In addition, Caltrans will facilitate meaningful participation in the transportation planning process in a nondiscriminatory manner.

Related federal statutes, remedies, and state law further those protections to include sex, disability, religion, sexual orientation, and age.

For information or guidance on how to file a complaint, or obtain more information regarding Title VI, please contact the Title VI Branch Manager at (916) 324-8379 or visit the following web page: https://dot.ca.gov/programs/civil-rights/title-vi .

To obtain this information in an alternate format such as Braille or in a language other than English, please contact the California Department of Transportation, Office of Civil Rights, at 1823 14th Street, MS-79, Sacramento, CA 95811; PO Box 942874, MS-79, Sacramento, CA 94274-0001; (916) 324-8379 (TTY 711); or at Title.VI@dot.ca.gov.

Appendix C. Summary of Relocation Benefits

This page intentionally left blank

Your Rights and Benefits as a Displaced Business, Farm, or Nonprofit Organization Under the California Department of Transportation Relocation Assistance Program

California Department of Transportation

Introduction

In building a modern transportation system, the displacement of a small percentage of the population is often necessary. However, it is the policy of Caltrans that displaced persons shall not suffer unnecessarily as a result of programs designed to benefit the public as a whole.

Displaced businesses, farms, and nonprofit organizations may be eligible for relocation advisory services and payments.

This brochure provides information about available relocation services and payments. If you are required to move as the result of a Caltrans transportation project, a Relocation Agent will contact you. The Relocation Agent will be able to answer your specific questions and provide additional information.

Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 as Amended "The Uniform Act"

The purpose of this Act is to provide for uniform and equitable treatment of persons displaced from their business, farm or non-profit organization, by federal and federally assisted programs and to establish uniform and equitable land acquisition policies for federal and federally assisted programs.

49 Code of Federal Regulations Part 24 implements the "Uniform Act" in accordance with the following relocation assistance objective:

> To ensure that persons displaced as a direct result of federal or federally-assisted projects are treated fairly, consistently and equitably so that such persons will not suffer disproportionate injuries as a result of projects designed for the benefit of the public as a whole.

While every effort has been made to assure the accuracy of this booklet, it should be understood that it does not have the force and effect of law, rule, or regulation governing the payment of benefits. Should any difference or error occur, the law will take precedence.

Relocation Services

The California Department of Transportation has two programs to aid businesses, farms and nonprofit organizations which must relocate.

These are:

1. The Relocation Advisory Assistance Program, which is to aid you in locating a suitable replacement property, and

2. The Relocation Payments Program, which is to reimburse you for certain costs involved in relocating. These payments are classified as:

   - Moving and Related Expenses (costs to move personal property not acquired).
   - Reestablishment Expenses (expenses related to the replacement property).
   - In-Lieu Payment (a fixed payment in lieu of moving and related expenses, and reestablishment expenses).

   Note: Payment for loss of goodwill is considered an acquisition cost. California law and the federal regulations mandate that relocation payments cannot duplicate other payments such as goodwill.

You will **not** be eligible to receive any relocation payments until the State has actually made the first written offer to purchase the property. You will also receive at least 90 days' written notice before you must move.

Some Important Definitions...

Your relocation benefits can be better understood if you become familiar with the following terms:

Business: Any lawful activity, with the exception of a farm operation, conducted primarily for the purchase, sale, lease and rental of personal or real property, or for the manufacture, processing, and/or marketing of products, commodities, or any other personal property, or for the sale of services to the public, or solely for the purpose of this Act, and outdoor advertising display or displays, when the display(s) must be moved as a result of the project.

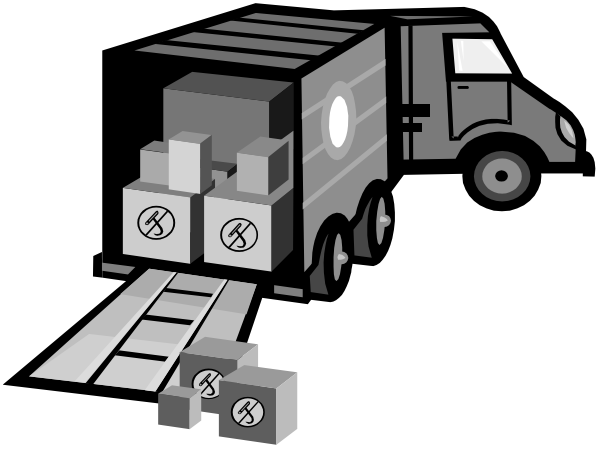
Small Business: A business having not more than 500 employees working at the site being acquired or displaced by a program or project.

Contributes Materially: A business or farm operation must have had average annual gross receipts of at least $5,000 or average annual net earnings of at least $1,000, in order to qualify as a bona-fide operation.

Farm Operation: Any activity conducted solely or primarily for the production of one or more agricultural products or commodities, including timber, for sale and home use, and customarily producing such products or commodities in sufficient quantity to be capable of contributing materially to the operator's support.

Nonprofit Organization: A public or private entity that has established its nonprofit status under applicable law.

MOVING EXPENSES



If you qualify as a displaced business, farm or nonprofit organization, you are entitled to reimbursement of your moving costs and certain related expenses incurred in moving. To qualify you must legally occupy the property as the owner or lessee/tenant when Caltrans initiates negotiations for the acquisition of the property **OR** at the time Caltrans acquires title or takes possession of the property. However, to assure your eligibility and prompt payment of moving expenses, you should contact your Relocation Agent before you move.

You Can Choose Either:

Actual Reasonable Moving Costs - You may be paid for your actual reasonable moving costs and related expenses when a commercial mover performs the move. Reimbursement will be limited to a move of 50 miles or less. Related expenses, with limitations, may include:

- Transportation.
- Packing and unpacking personal property.
- Disconnecting and reconnecting personal property related to the operation.
- Temporary storage of personal property.
- Insurance while property is in storage or transit, or the loss and damage of personal property if insurance is not reasonably available.
- Expenses in finding a replacement location ($2,500 limit).
- Professional services to plan and monitor the move of the personal property to the new location.
- Licenses, permits and fees required at the replacement location.

OR

Self-Move Agreement - You may be paid to

move your own personal property based on the lower of two acceptable bids obtained by Caltrans.

Under this option, you will still be eligible for reimbursement of related expenses listed above that were not included in the bids.

OR

In-Lieu Payment – A small business may be eligible to accept a fixed payment between $1,000 and $40,000, based on your annual earnings IN LIEU OF the moving cost and related expenses. Consult your Relocation Agent for more information about this option.

Actual Reasonable Moving Costs

You may be paid the actual reasonable and necessary costs of your move when a professional mover performs the move. All of your moving costs must be supported by paid receipts or other evidence of expenses incurred. In addition to the transportation costs of your personal property, certain other expenses may also be reimbursable, such as packing, crating, unpacking and uncrating, and the disconnecting, dismantling, removing, reassembling, and

reinstalling relocated machinery, equipment, and other personal property.

Other expenses such as professional services necessary for planning and carrying out the move, temporary storage costs, and the cost of licenses, permits and certifications may also be reimbursable. This is not intended to be an all-inclusive list of moving related expenses. Your Relocation Agent can provide you with a complete explanation of reimbursable expenses.

Self-Move Agreement

If you agree to take full responsibility for all or part of the move of your business, farm, or nonprofit organization, the Department may approve a payment not to exceed the lower of two acceptable bids obtained by the Department from qualified moving firms or a qualified Department staff employee. A low-cost or uncomplicated move may be based on a single bid or estimate at the Department's discretion. The advantage of this moving option is the fact that it relieves the displaced business, farm, or nonprofit organization operator from documenting all moving expenses. The Department may make the payment without additional documentation as long as the payment is limited to the amount of

the lowest acceptable bid or estimate. Other expenses, such as professional services for planning, storage costs, and the cost of licenses, permits, and certifications may also be reimbursable if determined to be necessary. These latter expenses must be pre approved by the Relocation Agent.

Requirements:

Before you move, you must provide Caltrans with the:

- Certified inventory of all personal property to be moved.
- Date you intend to vacate the property.
- Address of the replacement property.
- Opportunity to monitor and inspect the move from the acquired property to the replacement property.

Related Expenses

1. Searching Expenses for Replacement Property: Displaced businesses, farms, and nonprofit organizations are entitled to reimbursement for actual reasonable expenses incurred in searching for a replacement property, not to exceed $2,500. Expenses may include transportation, meals, and lodging when away from home; the reasonable value of the time spent during the search; fees paid to the real estate agents, brokers or consultants; and other expenses determined to be reasonable and necessary by the Department.

2. Direct Loss of Tangible Personal Property: Displaced businesses, farms, and nonprofit organizations may be eligible for a payment for the actual direct loss of tangible personal property which is incurred as a result of the move or discontinuance of the operation. This payment will be based upon the lesser of:

a) The fair market value of the item for continued use at the displacement site minus the proceeds from its sale.

OR

b) The estimated cost of moving and reinstalling the replaced item, based on the lowest acceptable bid or estimate obtained by the Department for eligible moving and related expenses, including dismantling and reassembly, but with no allowance for storage, cost of code requirement betterments or upgrades at the replacement site.

EXAMPLE:
You determine that the "document shredder" cannot be moved to the new location because of its condition, and you will not replace it at the new location.

Fair Market Value of the Document Shredder based on its use at the current location	$ 1,500
Proceeds: Price received from selling the Document Shredder	- $ 500
Net Value	$ 1,000

OR

Estimated cost to move	$ 1,050

Based on the "lessor of", the amount of the "Loss of Tangible Personal Property" = **$ 1,000**

Note: You are also entitled to all reasonable costs incurred in attempting to sell the document shredder (e.g. advertisement).

3. Purchase of Substitute Personal Property:
If an item of personal property, which is used as part of the business, farm, or nonprofit organization, is not moved but is promptly replaced with a substitute item that performs a

comparable function at the replacement site, the displacee is entitled to payment of the lesser of:

a) The cost of the substitute item, including installation costs at the replacement site, minus any proceeds from the sale or trade-in of the replaced item;

OR

b) The estimated cost of moving and reinstalling the replaced item, based on the lowest acceptable bid or estimate obtained by the Department for eligible moving and related expenses, including dismantling and reassembly, but with no allowance for storage, cost of code requirement betterments or upgrades at the replacement site.

EXAMPLE A:

You determine that the copying machine cannot be moved to the new location because it is now obsolete and you will replace it.

Cost of a substitute *Copying Machine* including installation costs at the replacement site.		$ 3,000
Trade-in Allowance	-	$ 2,500
Net Value		$ 500

OR

Estimated cost to move		$ 550

Based on the "lesser of", the amount of the "Substitute Personal Property" =		**$ 500**

EXAMPLE B:

You determine that the chairs will not be used at the new location because they no longer match the décor and you will replace them.

Cost of substitute chairs		$ 1,000
Proceeds: From selling the Chairs	-	$ 100
Net Value		$ 900

OR

Estimated cost to move	$	200
Based on the "lesser of", the amount of the "Substitute Personal Property" =	**$**	**200**

Note: You are also entitled to all reasonable costs incurred in attempting to sell the document shredder (e.g. advertisement).

4. Disconnecting and Reinstallation: You will be reimbursed for your actual and reasonable costs to disconnect, dismantle, remove, reassemble and reinstall any machinery, equipment or other personal property in relation to its move to the new location. This includes connection to utilities available nearby and any modifications to the personalty that is necessary to adapt it to utilities at the replacement site.

5. Physical changes at the new location: You may be reimbursed for certain physical changes to the replacement property if the changes are necessary to permit the reinstallation of machinery or equipment necessary for the continued operation of the business. ***Note:*** *The changes cannot increase the value of the building*

for general purposes, nor can they increase the mechanical capability of the buildings beyond its normal requirements.

6. The cost of installing utilities from the right of way line to the structure(s) or improvements on the replacement site.

7. Marketing studies, feasibility surveys and soil testing.

8. One-time assessments or impact fees for anticipated heavy utility usage.

Reestablishment Expenses

A small business, farm or nonprofit organization may be eligible for a payment, not to exceed $25,000, for expenses actually incurred in relocating and reestablishing the enterprise at a replacement site.

Reestablishment expenses may include, but are not limited to, the following:

1. Repairs or improvements to the replacement real property required by Federal, State or local laws, codes or ordinances.

2. Modifications to the replacement of real property to make the structure(s) suitable for the business operation.

3. Construction and installation of exterior signing to advertise the business.

4. Redecoration or replacement such as painting, wallpapering, paneling or carpeting when required by the condition of the replacement site or for aesthetic purposes.

5. Advertising the new business location.

6. The estimated increased costs of operation at the replacement site during the first two years, for items such as:

    a) Lease or rental charges
    b) Personal or real property taxes
    c) Insurance premiums, and
    d) Utility charges (excluding impact fees).

7. Other items that the Department considers essential for the reestablishment of the business or farm.

In-Lieu Payment (Fixed)

Displaced businesses, farms, and nonprofit organizations may be eligible for a fixed payment in lieu of (in place of) actual moving expenses, personal property losses, searching expense, and reestablishment expenses. The fixed payment may not be less than $1,000 or more than $40,000.

For a business to be eligible for a fixed payment, the Department must determine the following:

1. The business owns or rents personal property that must be moved due to the displacement.

2. The business cannot be relocated without a substantial loss of existing patronage.

3. The business is not part of a commercial enterprise having more than three other businesses engaged in the same or similar activity, which are under the same ownership and are not being displaced by the department.

4. The business contributed materially to the income of the displaced business operator during the two taxable years prior to displacement.

Any business operation that is engaged solely in the rental of space to others is not eligible for a fixed payment. This includes the rental of space for residential or business purposes.

Eligibility requirements for farms and nonprofit organizations are slightly different than business requirements. If you are being displaced from a farm or you represent a nonprofit organization and are interested in a fixed payment, please consult your relocation counselor for additional information.

Note: A nonprofit organization must substantiate that it cannot be relocated without a substantial loss of existing patronage (membership or clientele). The payment is based on the average of two years annual gross revenues less administrative expenses.

The Computation of Your In-Lieu Payment:

The fixed payment for a displaced business or farm is based upon the average annual net earnings of the operation for the two taxable

years immediately preceding the taxable year in which it was displaced. Caltrans can use a different two year period if it is determined that the last two taxable years do not accurately reflect the earnings of the operation.

EXAMPLE: Caltrans acquires your property and you move in 2013:

2011 Annual Net Earnings	$ 10,500
2012 Annual Net Earnings	$ 12,500
TOTAL	$ 23,000
Average over two years	**$ 11,500**

This would be the amount of your in-lieu payment. Remember - this is in-lieu of all other moving benefits. You must provide the Department with proof of net earnings to support your claim.

Proof of net earnings can be documented by income tax returns, certified financial statements, or other reasonable evidence of net earnings acceptable to the Department.

Note: The computation for nonprofit organizations differs in that the payment is computed on the basis of average annual gross revenues less administrative expenses for the two-year period specified above.

Before You Move:

A. Complete a "Request for Determination of Entitlement" form available from your Relocation Agent, and return it promptly.

B. Include a written statement of the reasons the business cannot be relocated without a substantial loss in net earnings.

C. Provide certified copies of tax returns for the two tax years immediately preceding the tax year in which you move. (If you move anytime in the year 2013, regardless of when negotiations began or the State took title to the property, the taxable years would be 2011 and 2012).

D. You will be notified of the amount you are entitled to after the application is received and approved.

E. You cannot receive the payment until after you vacate the property, AND submit a claim for the payment within 18 months of the date of your move.

Relocation Advisory Assistance

Any business, farm or non-profit organization, displaced by Caltrans shall be offered relocation advisory assistance for the purpose of locating a replacement property. Relocation services are provided by qualified personnel employed by Caltrans. It is their goal and desire to be of service to you and assist in any way possible to help you successfully relocate.

A Relocation Agent from Caltrans will contact you personally. Relocation services and payments will be explained to you in accordance with your eligibility. During the initial interview with you, your needs and desires will be determined as well as your need for assistance.

You can expect to receive the following services, advice and assistance from your Relocation Agent who will:

- Determine your needs and preferences.
- Explain the relocation benefits and eligibility.
- Provide information on replacement properties for your consideration.
- Provide information on counseling you can obtain to help minimize hardships in adjusting to your new location.
- Assist you in completing loan documents, rental applications or Relocation Claims Forms.

AND provide information on:

- Security deposits.
- Interest rates and terms.
- Typical down payments.
- Permits, fees and local planning ordinances.
- SBA loan requirements.
- Real property taxes.
- Consumer education literature.

If you desire, your Relocation Agent will give you current listings of other available replacement property. Transportation will be provided to inspect available property, especially if you are elderly or handicapped. Though you may use the services of a real estate broker, Caltrans cannot provide a referral.

Your Relocation Agent is familiar with the services provided by others in your community and will provide information on other federal, state, and local programs offering assistance to displaced persons. If you have special needs, your Relocation Agent will make every effort to secure the services of those agencies with trained personnel who have the expertise to help you.

If the highway project will require a considerable number of people to be relocated, Caltrans will establish a temporary Relocation Field Office on or near the project. Project relocation offices will be open during convenient hours and evening hours if necessary.

In addition to these services, Caltrans is required to coordinate its relocation activities with other agencies causing displacements to ensure that all persons displaced receive fair and consistent relocation benefits.

Remember - YOUR RELOCATION AGENT is there to offer advice and assistance. Do not hesitate to ask questions. And be sure you fully understand all of your rights and available benefits.

YOUR RIGHTS AS A DISPLACEE

It is important to remember that your relocation benefits will not have an adverse effect on your:

- Social Security Eligibility
- Welfare Eligibility
- Income Taxes

In addition, the Title VIII of the Civil Rights Act of 1968 and later acts and amendments make discriminatory practices in the purchase and rental of most residential units illegal if based on race, color, religion, sex, or national origin.

Caltrans' Non-Discrimination Policy ensures that all services and/or benefits will be administered to the general public without regard to race, color, national origin, or sex in compliance with Title VI of the 1964 Civil Rights Act (42 USC 2000d. et seq.).

And you always have the Right to Appeal any decision by Caltrans regarding your relocation benefits and eligibility.

Your Right of Appeal is guaranteed in the "Uniform Act" which states that any person may file an appeal with the head of the responsible

agency if that person believes that the agency has failed to properly determine the person's eligibility or the amount of a payment authorized by the Act.

If you indicate your dissatisfaction, either verbally or in writing, Caltrans will assist you in filing an appeal and explain the procedures to be followed. You will be given a prompt and full opportunity to be heard. You have the right to be represented by legal counsel or other representative in connection with the appeal (but solely at your own expense).

Caltrans will consider all pertinent justifications and materials submitted by you and other available information needed to ensure a fair review. Caltrans will provide you with a written determination resulting from the appeal with an explanation of the basis for the decision. If you are still dissatisfied with the relief granted, Caltrans will advise you that you may seek judicial review.

Americans with Disabilities Act (ADA) Notice:

This document is available in alternative formats for people with physical disabilities. Please call (916) 654-5413, or write to 'Department of Transportation - Right of Way, MS-37, 1120 N Street, Sacramento, CA 95814,' for information.

Appendix D. Consultation and Coordination

The following consultation and coordination actions that are included in this appendix were completed during the preparation of the environmental studies.

- Bay Area Air Quality Conformity Task Force
- Plan Bay Area 2050, List of 2021 Transportation Improvement Plan (TIP) Projects, Transportation Air Quality Conformity Analysis Report Appendix B (US 101/Produce Avenue Interchange project listing, from page 5 of 50)
- FHWA concurrence with the Air Quality Conformity Determination, February 6, 2023.
- Caltrans correspondence submitted to the State Historic Preservation Officer:
    a. December 9, 2021: Caltrans initiated consultation with the SHPO and requested concurrence with the NRHP eligibility determinations
    b. January 28, 2022: Caltrans notified SHPO that more than 30 days had passed with no objection, response, or request for extensions, and Caltrans was proceeding.
    c. September 13, 2022: Caltrans submitted a Finding of No Adverse Effect for the proposed project, regarding the one property found eligible for listing in the NRHP: the Golden Gate Produce Terminal. SHPO reviewed the finding and on September 13, 2022, provided a letter of no objection to the Finding of No Adverse Effect for the project. Receipt of this letter concluded consultation with the SHPO for this project.

Dear Project Sponsor

Based on the recent interagency consultation with the Air Quality Conformity Task force, Project TIP ID SM-110003 (FMS ID:4697.00) does not fit the definition of a project of air quality concern as defined by 40 CFR 93.123(b)(1) or 40 CFR 93.128 and therefore is not subject to PM2.5 project level conformity requirement. Please save this email as documentation confirming the project has undergone and completed the interagency consultation requirement for PM2.5 project level conformity. Note project sponsors are required to undergo a proactive public involvement process which provides opportunity for public review as outlined by 40 CFR 93.105(e). For projects that are not of air quality concern, a comment period is only required for project level conformity determinations if such a comment period would have been required under NEPA. For more information, please see FHWA PM2.5 Project Level Conformity Frequently Asked Questions (FAQ):
https://urldefense.com/v3/__http://www.fhwa.dot.gov/environment/air_quality/conformity/reference/faqs/pm25faqs.cfm__;!!ETWISUBM!jh7gx5VJSUitiyC7c1gdqbooCjSAtFxsh1zeIUiZgHumbspmrmVHunra0JhMJzv3HTb6$

SUBJECT: Project Level Conformity Determination for the US 101/Produce Avenue Interchange Project (CTIPS ID 206-0000-4708)

Dear Ms. El-Tawansy:

On January 27, 2023, the California Department of Transportation (Caltrans) submitted to the Federal Highway Administration (FHWA) a complete request for a project level conformity determination for the US 101/Produce Avenue Interchange Project. The project is in an area that is designated Non-Attainment or Maintenance for Ozone, and Particulate Matter (PM 2.5).

The project level conformity analysis submitted by Caltrans indicates that the project-level transportation conformity requirements of 40 CFR Part 93 have been met. The project is included in the Metropolitan Transportation Commission's (MTC) current Regional Transportation Plan (RTP) and Transportation Improvement Program (TIP), as amended. The design concept and scope of the preferred alternative have not changed significantly from those assumed in the regional emissions analysis.

As required by 40 CFR 93.116 and 93.123, the localized $PM_{2.5}$ and PM_{10} analyses are included in the documentation. The analyses demonstrate that the project will not create any new violations of the standards or increase the severity or number of existing violations.

Based on the information provided, FHWA finds that the US 101/Produce Avenue Interchange Project conforms with the State Implementation Plan (SIP) in accordance with 40 CFR Part 93.

If you need additional information or assistance regarding this matter, please contact Patrick Pittenger, at (916) 498-5854 or Patrick.Pittenger@dot.gov.

Sincerely,

Antonio Johnson
Director of Planning, Environment,
& Right of Way
Federal Highway Administration

Subject: [EXTERNAL] 106 U.S. 101/Produce Avenue Overcrossing Project, South San Francisco, San Mateo County

Dear Ms. Polanco,

Caltrans District 4 submitted, on December 9, 2021, the HPSR, ASR and HRER for the U.S. 101/Produce Avenue Overcrossing Project, South San Francisco, San Mateo County, containing the evaluations of five built resources that were determined not eligible for the National Register of Historic Places, and one built resource that was determined eligible (Golden Gate Produce Terminal, 131 Terminal Court, South San Francisco, APN 015-113-210).

Because more than 30 days have passed without objection, comment, or a request for an extension, Caltrans is notifying your office that we will move forward with the undertaking according to Stipulation VIII.C.6.a of the Section 106 PA. Please let me know if you have any questions.

Thank you,

Charles C. Palmer
Associate Environmental Planner/Principal Architectural Historian

Subject: 106 U.S. 101/Produce Avenue Overcrossing Project, South San Francisco, San Mateo County

Ms. Polanco,

The California Department of Transportation (Caltrans) is initiating consultation with you regarding the proposed project on United States Highway 101 in the City of South San Francisco, in San Mateo County (Undertaking).

A separate email is being sent with a link to the Historic Property Survey Report (HPSR), Archaeological Survey Report (ASR), and HRER for the proposed Undertaking. In accordance with Stipulation VIII.C.6 of the PA, Caltrans is requesting SHPO's concurrence with the National Register of Historic Places (NRHP) eligibility determinations for six properties within the Undertaking's Area of Potential Effect. Five properties have been determined ineligible for the NRHP, and one has been determined eligible.

Thank you,

Charles C. Palmer

Sacramento, CA 94273-0001

Subject: Finding of Effect for the Proposed Highway 101 – Produce Avenue Overcrossing Project, South San Francisco, San Mateo County, California

Dear Mr. Price:

Caltrans is continuing consultation regarding the above project in accordance with the January 1, 2014 *First Amended Programmatic Agreement Among the Federal Highway Administration (FHWA), the Advisory Council on Historic Preservation, the California State Historic Preservation Officer (SHPO), and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act, as it Pertains to the Administration of the Federal-Aid Highway Program in California* (106 PA). As part of your documentation, Caltrans submitted a Finding of No Adverse Effect (FNAE) for the proposed project.

Caltrans is proposing to construct a new overcrossing over U.S. Highway 101, extending from the Utah Avenue/South Airport Boulevard intersection to San Mateo Avenue (Undertaking). A full project description can be found on Page 3 of the Finding of No Adverse Effect Report.

As part of its identification effort, Caltrans identified one property that is eligible for listing on the National Register of Historic Places (NRHP): the Golden Gate Produce Terminal located at 131 Terminal Court.

Caltrans applied the Criteria of Adverse Effect as defined in 36 CFR 800.5(a)(1) and found that no historic properties will be adversely affected as part of this undertaking. The undertaking as proposed will not adversely affect the Golden Gate Produce Terminal's ability to convey its historic significance.

Based on my review of the submitted documentation, I have no objections to Caltrans' finding of no adverse effect for this undertaking.

If you have any questions, please contact Natalie Lindquist at natalie.lindquist@parks.ca.gov .

Sincerely,

Julianne Polanco
State Historic Preservation Officer

Appendix E. Environmental Commitment Record

To be sure that all of the environmental measures identified in this document are executed at the appropriate times, the following mitigation program (as articulated on the proposed Environmental Commitments Record [ECR] which follows) would be implemented. During project design, avoidance, minimization, and/or mitigation measures will be incorporated into the project's final plans, specifications, and cost estimates, as appropriate. All permits will be obtained prior to implementation of the project. During construction, environmental and construction/engineering staff will ensure that the commitments contained in this ECR are fulfilled. Following construction and appropriate phases of project delivery, long-term mitigation maintenance and monitoring will take place, as applicable. As the following ECR is a draft, some fields have not been completed, and will be filled out as each of the measures is implemented. Note: Some measures may apply to more than one resource area. Duplicative or redundant measures have not been included in this ECR.

This page intentionally left blank

Resource Category	Task Number	Task Description	Applicable Alternatives	Responsible Branch	Measure Type (avoidance and minimization measure [AMM]; or compensation)	Mitigation for significant impacts under CEQA?	Project Phase
Aesthetics	VIS-01	**Aesthetic Treatments.** New structures, including the overcrossing structure and retaining walls, will match or enhance the aesthetics of the corridor through context-sensitive designs. The visual simulations in Section 2.2.9.3 show one potential design for the overcrossing structure, but specific aesthetic treatments will ultimately be determined during the detailed design phase.	Build Alternative	Design	AMM	No	Construction
Aesthetics	VIS-02	**Construction Impact Measures.** • Contractor staging areas shall use unvegetated, preferably paved areas. The project requires acquisition of two parcels, at the IHOP Restaurant on South Airport Boulevard and the commercial building on San Mateo Avenue, and these properties would be available for contractor staging use. • Place unsightly materials, equipment storage and staging so that they are not visible within the foreground of the highway corridor to the maximum extent feasible. Where such siting is unavoidable, material and equipment shall be visually screened to minimize visibility from the roadway and nearby sensitive off-road receptors.	Build Alternative	Construction	AMM	No	Construction
Biological	BIO-01	**Best Management Practices (BMPs).** A water pollution control program (WPCP) and erosion control BMPs will be developed and implemented to minimize wind or water-related material discharges, in compliance with the requirements of the Regional Water Quality Control Board. The WPCP will provide measures to avoid and minimize stormwater and non-stormwater discharges; temporary construction BMPs will be used to the maximum extent necessary.	Build Alternative	Construction	AMM	No	Construction
Biological	BIO-02	**Vegetation Removal.** Vegetation removal is limited to landscaped plants, and will be minimized to the greatest extent feasible. No clearing or grubbing will be permitted beyond designated construction sites. All cleared vegetation will be removed from the BSA to avoid attracting wildlife. The contractor will be responsible for obtaining all permits, licenses, and environmental clearances for properly disposing such materials.	Build Alternative	Construction	AMM	No	Construction

Resource Category	Task Number	Task Description	Applicable Alternatives	Responsible Branch	Measure Type (avoidance and minimization measure [AMM]; or compensation)	Mitigation for significant impacts under CEQA?	Project Phase
Biological	BIO-03	**Tree Removal.** To minimize effects on trees that occur within the project footprint, the following minimization measures will be implemented: • Only those trees requiring removal will be cut down. • Whenever possible, trees will be trimmed rather than removed. To avoid potential damage to retained trees, trees will be safeguarded during construction through implementation of the following measures as applicable: • No construction equipment, vehicles, or materials will be stored, parked or staged within the tree dripline; and • Work will not be performed within the dripline of remaining trees. If trees are damaged during construction and become unhealthy or die, the damaged tree(s) will be removed and replaced. During final design, Caltrans will develop a landscaping plan that will identify the location and number of trees that will be replanted within the ROW. Trees that are removed will be replaced at a 1:1 ratio if sufficient space and sight distance requirement allow for safe replacement.	Build Alternative	Construction, Design	AMM	No	Construction
Biological	BIO-04	**ESA area at Colma Creek.** The bed and banks of Colma Creek shall be identified in project plans as an ESA, where temporary and permanent work is prohibited. No temporary lighting for construction would be implemented at Colma Creek due to the ESA.	Build Alternative	Construction, Biology	AMM	No	Preconstruction, Construction
Biological	BIO-05	**Preconstruction Nesting Bird Surveys.** Tree removal or trimming will be conducted during the non-nesting period, between September 1 and January 31, to the maximum extent feasible. If vegetation trimming or tree removal cannot be completed prior to January 31 and must occur between February 1 and August 31, a qualified biologist(s) will survey for nesting birds, including raptors. The BSA will include the project footprint and a buffer approximately 300 feet beyond its boundaries. If active raptor nests are detected within 300 feet of an active construction site, or if active nests of other migratory birds are detected within 50 feet, the biological monitor will establish an appropriate non-disturbance buffer to avoid direct effects of construction-related disturbance. All nest avoidance requirements of the Migratory Bird Treaty Act and the California Fish and Game Code will be observed.	Build Alternative	Biology	AMM	No	Preconstruction
Biological	BIO-06	To eliminate attraction to predators of protected species, all food-related trash items (e.g., wrappers, cans, bottles, and food scraps) will be disposed in solid, closed containers (trash cans) and will be removed from the BSA at the end of each day.	Build Alternative	Construction	AMM	No	Construction
Biological	BIO-07	To prevent listed species from becoming entangled or trapped in erosion-control materials, plastic mono-filament netting (i.e., erosion-control matting or wattles) or similar material will not be used in the BSA. Straw wattles will be made of natural fiber, and no plastic or synthetic material will be used.	Build Alternative	Construction	AMM	No	Construction

Resource Category	Task Number	Task Description	Applicable Alternatives	Responsible Branch	Measure Type (avoidance and minimization measure [AMM]; or compensation)	Mitigation for significant impacts under CEQA?	Project Phase
Cultural	CUL-01	During project construction, if previously unidentified cultural resources are unearthed, all earth-moving activity within and around the immediate discovery area will be halted until a qualified archaeologist can assess the nature and significance of the find. If remains are discovered during excavation, all work within 60 feet of the discovery will halt and Caltrans' Office of Cultural Resource Studies (OCRS) will be called. Caltrans OCRS staff will assess the remains and, if determined human, will contact the County Coroner as per Public Resources Code (PRC) Sections 5097.98, 5097.99, and 7050.5 of the California Health and Safety Code. If the Coroner determines the remains to be Native American, the Coroner will contact the Native American Heritage Commission who will assign a Most Likely Descendant. Caltrans will consult with the Most Likely Descendant on treatment and reburial of the remains. Further provisions of PRC 5097.98 are to be followed as applicable.	Build Alternative	Construction, Archaeology	AMM	No	Construction

Appendix G. Notice of Preparation

This page intentionally left blank

Notice of Preparation

To: State Clearinghouse
1400 Tenth Street
Sacramento, CA 95814

From: California Dept. of Transportation
111 Grand Ave, MS 8-B
Oakland, CA 94612

Subject: Notice of Preparation of a Draft Environmental Impact Report

California Dept. of Transportation (Caltrans) District 4 will be the Lead Agency and will prepare an environmental impact report for the project identified below. We need to know the views of your agency as to the scope and content of the environmental information which is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR prepared by our agency when considering your permit or other approval for the project.

The project description, location, and the potential environmental effects are contained in the attached materials. A copy of the Initial Study (☐ is ■ is not) attached.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to Tanvi.Gupta@dot.ca.gov at the address shown above. We will need the name for a contact person in your agency.

Project Title: _____

Project Applicant, if any: _____

Date 8/4/2021

Signature _____

Title Zach Gifford

Telephone 510-506-1264

Reference: California Code of Regulations, Title 14, (CEQA Guidelines) Sections 15082(a), 15103, 15375.

Notice of Preparation of an Environmental Impact Report

U.S. 101/Produce Avenue Interchange Project

The California Department of Transportation (Caltrans) District 4 is preparing an Environmental Impact Report (EIR) consistent with the requirements of the California Environmental Quality Act (CEQA), and a joint Environmental Assessment (EA) to meet the requirements of the National Environmental Policy Act (NEPA). The purpose of this Notice of Preparation (NOP) is to notify agencies, organizations, and individuals of this intent, and request input on the scope and content of the proposed EIR/EA.

Scoping Period for Receipt of Comments

Comments must be received by September 9, 2021. Send written comments to:

Caltrans District 4
Attn: Tanvi Gupta
P.O. Box 23660, MS 8B
Oakland, CA 94623-0660

Or by email to: Tanvi.Gupta@dot.ca.gov

Virtual Scoping Meeting

A virtual scoping meeting will be held on Tuesday, August 24, 2021, from 6:00 to 7:30 PM. At the meeting, attendees can ask questions about the project. However, questions and discussion at the meeting are not considered scoping comments and all scoping comments must be submitted by mail, e-mail, or at the project website to be shared with the entire project development team. Attendance at the virtual scoping meeting is not required to submit comments. Please visit http://www.ssf.net/101Produce for more information about the project and to join the virtual scoping meeting.

Project Description

The City of South San Francisco, and the San Mateo County Transportation Authority (SMCTA), are the sponsors of the US 101/Produce Avenue Interchange Project (the project), located in the City of South San Francisco, San Mateo County. The project area is shown in Figure 1. The California Department of Transportation is the lead agency responsible for the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) review and approval.

The project is considering one Build Alternative and a No Build alternative. The Build Alternative would include a new US 101 overcrossing extending from the Utah Avenue/South Airport Boulevard intersection to San Mateo Avenue (referred to as the Utah Avenue extension). The overcrossing would provide two lanes in each direction as well as sidewalks and Class II bike lanes.

The intersections at S. Airport Boulevard/Utah Avenue and San Mateo Avenue/Utah Avenue would also be reconstructed to include turning lanes and connect to the new overcrossing. The Airport Boulevard/Produce Avenue/San Mateo Avenue intersection would be modified, or reconstructed, to include new through lanes and turning lanes.

Bicycle and Pedestrian Improvements

The Build Alternative would include the following new bicycle and pedestrian facilities:

- Class II bike lanes would be constructed in each direction on Utah Avenue between San Mateo Avenue and South Airport Boulevard. Bike lanes would also extend for several hundred feet north and south on South Airport Boulevard and Utah Avenue east of South Airport Boulevard.
- Sidewalks would be constructed on the overcrossing and would extend along Utah Avenue on both sides of US 101 connecting to pedestrian facilities at the Utah Avenue/San Mateo Avenue intersection west of US 101 and the Utah Avenue/South Airport Boulevard intersection east of US 101.
- Signalized crosswalks would be constructed at the intersections of Utah Avenue/South Airport Boulevard and Utah Avenue/San Mateo Avenue.
- The signals at the intersections of Airport Boulevard and Produce Avenue and Produce and San Mateo Avenue would be modified. Class II bike lanes would be added to San Mateo Avenue and South Airport Boulevard at these intersections to separate bikes from vehicles making right turns. Sidewalks and pedestrian crossings would be provided in all directions (with the exception of the southbound freeway off and on ramps connecting to S. Airport Boulevard).

All project improvements would be designed following the applicable provisions of the Americans with Disabilities Act (ADA).

Property Acquisitions and Changes

No residential property acquisitions or residential temporary construction easements are currently anticipated as part of the project. However, the Build Alternative may require full or partial property acquisitions, as well as permanent easements to accommodate the proposed overcrossing structure and intersection improvements. Non-residential temporary construction easements may also be required as part of the Build Alternative.

No Build (No Action) Alternative

The No Build Alternative assumes no modifications would be made to the current Utah Avenue or improvements made to local roadway intersections, other than routine maintenance and rehabilitation of the facility and any currently planned and programmed projects within the City of South San Francisco.

The No Build Alternative would not alleviate current and future traffic or improve traffic on local streets. It would not enhance vehicular, pedestrian or bicycle safety and would not provide a local east-west connection across US 101 to help serve commercial and pedestrian traffic.

Anticipated Permits and Approvals

The following environmental permits and approvals have been identified as potentially be required for project construction:

- **Bay Area Air Quality Task Force**: Demonstration of the project's conformity to Clean Air Act and other requirements.
- **State Historic Preservation Officer (SHPO):** Concurrence on findings with respect to historic resources and requirements of Section 106 of the National Historic Preservation Act.
- **San Francisco Bay Regional Water Quality Control Board (RWQCB Region 2)**: Section 401 Water Quality Certification; National Pollutant Discharge Elimination System (NPDES) approval for work greater than one acre.

Figure 1: Project Location Map

Potential Environmental Effects/Topics to be Studied

Based on preliminary surveys and information, Caltrans identified the following main subject areas for analysis in the EIR/EA. The scope of environmental analysis could be modified based on input from this Notice of Preparation and project scoping.

- Aesthetics
- Air Quality
- Biological Resources
- Climate Change
- Community
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hazards & Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Noise
- Tribal Cultural Resources
- Paleontology
- Public Services
- Recreation
- Transportation, Bicycle, and Pedestrian Travel
- Utilities/Service Systems
- Mandatory Findings of SignificanceConstruction-Related Impacts

Project Code: 2022-0051169
Project Name: US 101/Produce Avenue project

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/birds/policies-and-regulations.php.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Summary

Project Code: 2022-0051169
Project Name: US 101/Produce Avenue project
Project Type: Road/Hwy - New Construction
Project Description: This project would include a new US 101 overcrossing extending from the Utah Avenue/South Airport Boulevard intersection to San Mateo Avenue (referred to as the Utah Avenue extension). The intersections at South Airport Boulevard/Utah Avenue and San Mateo Avenue/Utah Avenue would also be reconstructed to include turning lanes and connect to the new overcrossing. The Airport Boulevard/Produce Avenue/San Mateo Avenue intersection would be modified, or reconstructed.

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@37.64732031673966,-122.40718612363415,14z

Counties: San Mateo County, California

Endangered Species Act Species

There is a total of 18 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Built to deliver a better world

Appendix I. List of Technical Studies

The following technical studies were prepared in support of this document and project.

Air Quality Report, Baseline Environmental Consulting, April 2022

Archaeological Survey Report, AECOM, November 2021

Community Impact Assessment, AECOM, December 2020

Energy Analysis Report, AECOM, March 2022

Historic Property Survey Report, AECOM, November 2021

Historic Resource Evaluation Report, AECOM, November 2021

Initial Site Assessment (Hazardous Materials), AECOM, November 2021

Location Hydraulic Study, WRECO, March 2021

Natural Environment Study, AECOM, November 2020

Noise Study Report, Illingworth & Rodkin, February 2022

Noise Abatement Determination Report, AECOM, March 2022

Paleontological Evaluation Report, AECOM, November 2020

Preliminary Geotechnical Design Report, AECOM, 2021

Visual Impact Assessment, AECOM, November 2021

Water Quality Assessment Report, WRECO, October 2021

Traffic Operations Analysis Report, AECOM, July 2022

Subject: ***Comment Letter: Draft Environmental Impact Report/Environmental Assessment for the U.S. Highway 101/Produce Avenue Interchange Project, South San Francisco***

San Francisco International Airport (SFO or the Airport) staff have reviewed the Draft Environmental Impact Report/Environmental Assessment (EIR/EA) for the United States (US) Highway 101/Produce Avenue Interchange Project (the Proposed Project), located in the City of South San Francisco. We appreciate this opportunity to provide comments on the draft report.

R-1-1

According to the Draft EIR/EA, the Proposed Project is located over and adjacent to US Highway 101 (US 101) between post miles 21.3 and 21.7, in the City of South San Francisco. The Proposed Project would add an east-west connection across US 101 (also known as the Utah Avenue extension), modify three intersections, and provide additional pedestrian and bicycle access in the project vicinity. The proposed overcrossing would extend from the intersection of Utah Avenue and South Airport Boulevard to San Mateo Avenue. The intersections at South Airport Boulevard/Utah Avenue, San Mateo Avenue/Utah Avenue, and Airport Boulevard/Produce Avenue/San Mateo Avenue would be reconstructed to provide new turning lanes and pedestrian and bicycle facilities. The overcrossing would provide two through lanes, bicycle lanes, and sidewalks in each direction. The overcrossing would span from the east side of US 101 and extend over Terminal Court, an existing street.

R-1-2

As described in Exhibit IV-17 of the SFO ALUCP (see Attachment), the critical aeronautical surfaces above the Proposed Project location vary between approximately 140 feet above mean sea level (AMSL)[1] near Terminal Court, to over 250 feet above mean sea level (AMSL) near the South Airport Boulevard intersection. The height of the overcrossing is not described in the Draft EIR/EA but the maximum height of the lighting would be 35 to 40 feet above the new street level. Therefore, it is anticipated that the proposed structures would be below the critical aeronautical surfaces and the Proposed Project would not appear incompatible with the Airspace Compatibility Policies of the SFO ALUCP, subject to the issuance of a Determination of No Hazard from the Federal Aviation Administration (see below) for any proposed structures, and determinations from the City/County Association of Governments of San Mateo County as the designated Airport Land Use Commission.

This determination does not negate the requirement for the Proposed Project sponsor to undergo Federal Aviation Administration review as described in 14 Code of Federal Regulations Part 77 for both (1) the overcrossing and associated lighting and (2) any temporary cranes or other equipment taller than the permanent structure required to construct those structures. The Airport notes that as the western side of the

[1] In this context, AMSL is defined from the origin of the North American Vertical Datum of 1988 (NAVD88).

AIRPORT COMMISSION CITY AND COUNTY OF SAN FRANCISCO
LONDON N. BREED *MAYOR* | ELEANOR JOHNS *PRESIDENT* | MALCOLM YEUNG *VICE PRESIDENT* | EVERETT A. HEWLETT, JR. | JANE NATOLI | JOSE F. ALMANZA | IVAR C. SATERO *AIRPORT DIRECTOR*
Post Office Box 8097 San Francisco, California 94128 Tel 650.821.5000 Fax 650.821.5005 www.flysfo.com

Proposed Project (from Terminal Court to San Mateo Avenue) lies beneath a more restrictive airspace surface, it may be prudent to plan for lower cranes in this area to avoid a potential Determination of Hazard.

Due to the proximity of the Proposed Project to the Airport, Airspace Protection Policies (AP-1 through AP-4) from the SFO ALUCP are enclosed as reminders of incompatible site characteristics, especially as it pertains to wildlife attractants, particularly large flocks of birds, that pose threats to safe aircraft operations, and building materials/features that reflect and create bright lights/glare.

R-1-2 Cont.

Finally, the Airport requests to be included in discussions regarding the preparation of the Transportation Management Plan (TMP), which would address traffic disruptions from project construction. The Draft EIR/EA states that the TMP would "include outreach to inform local jurisdictions, agencies, and the public of the times and locations of upcoming construction, construction signs in approaching the project area, and incident management for traffic control in the vicinity of construction activities." Given the location of the project and the potential for temporary roadway closures of South Airport Boulevard, an important roadway for accessing Airport property, SFO would like to be involved in those discussions.

* * *

The Airport appreciates your consideration of these comments. If I can be of assistance, please do not hesitate to contact me at (650) 821-6678 or at nupur.sinha@flysfo.com.

Sincerely,

DocuSigned by:
Nupur Sinha

and associated with human disease of varying severity.

b. Biosafety Level 3 practices, safety equipment, and facility design and construction are applicable to clinical, diagnostic, teaching, research, or production facilities in which work is done with indigenous or exotic agents with a potential for respiratory transmission, and which may cause serious and potentially lethal infection.

c. Biosafety Level 4 practices, safety equipment, and facility design and construction are applicable for work with dangerous and exotic agents that pose a high individual risk of life-threatening disease, which may be transmitted via the aerosol route and for which there is no available vaccine or therapy.

4.5 Airspace Protection

The compatibility of proposed land uses with respect to airspace protection shall be evaluated in accordance with the policies set forth in this section. These policies are established with a twofold purpose:

1. To protect the public health, safety, and welfare by minimizing the public's exposure to potential safety hazards that could be created through the construction of tall structures.

2. To protect the public interest in providing for the orderly development of SFO by ensuring that new development in the Airport environs avoids compromising the airspace in the Airport vicinity. This avoids the degradation in the safety, utility, efficiency, and air service capability of the Airport that could be caused by the attendant need to raise visibility minimums, increase minimum rates of climb, or cancel, restrict, or redesign flight procedures.

4.5.1 FEDERAL REGULATIONS REGARDING TALL STRUCTURES

14 Code of Federal Regulations (CFR) Part 77, *Safe, Efficient Use and Preservation of the Navigable Airspace*, governs the FAA's review of proposed construction exceeding certain height limits, defines airspace obstruction criteria, and provides for FAA aeronautical studies of proposed construction. **Appendix F** describes the FAA airspace review process and the extent of FAA authority related to airspace protection.

4.5.2 PART 77, SUBPART B, NOTIFICATION PROCESS

Federal regulations require any person proposing to build a new structure or alter an existing structure with a height that would exceed the elevations described in CFR Part 77, Subpart B, Section 77.9, to prepare an FAA Form 7460-1, *Notice of Proposed Construction or Alteration*, and submit the notice to the FAA. The regulations apply to buildings and other structures or portions of structures, such as mechanical equipment, flag poles, and other projections that may exceed the aforementioned elevations.

DocuSign Envelope ID: 8DCB6F33-D66C-44EB-9A23-65A0991C3CA3

Exhibit IV-10 depicts the approximate elevations at which the 14 CFR Part 77 notification requirements would be triggered; see **Exhibit IV-11** for a close-up view of the northern half and **Exhibit IV-12** for a close-up view of the southern half of the area. These exhibits are provided for informational purposes only. Official determinations of the areas and elevations within which the federal notification requirements apply are subject to the authority of the FAA. The FAA is empowered to require the filing of notices for proposed construction based on considerations other than height. For example, in some areas of complex airspace and high air traffic volumes, the FAA may be concerned about the potential for new construction of any height to interfere with electronic navigation aids. In these areas, the FAA will want to review all proposed construction projects.

The FAA has developed an on-line tool for project sponsors to use in determining whether they are required to file a Notice of Proposed Construction or Alteration. Sponsors of proposed projects are urged to refer to this website to determine whether they are required to file Form 7460-1 with the FAA:

https://oeaaa.faa.gov/oeaaa/external/gisTools/gisAction.jsp?action=showNoNoticeRequiredToolForm

4.5.3 AIRSPACE MAPPING

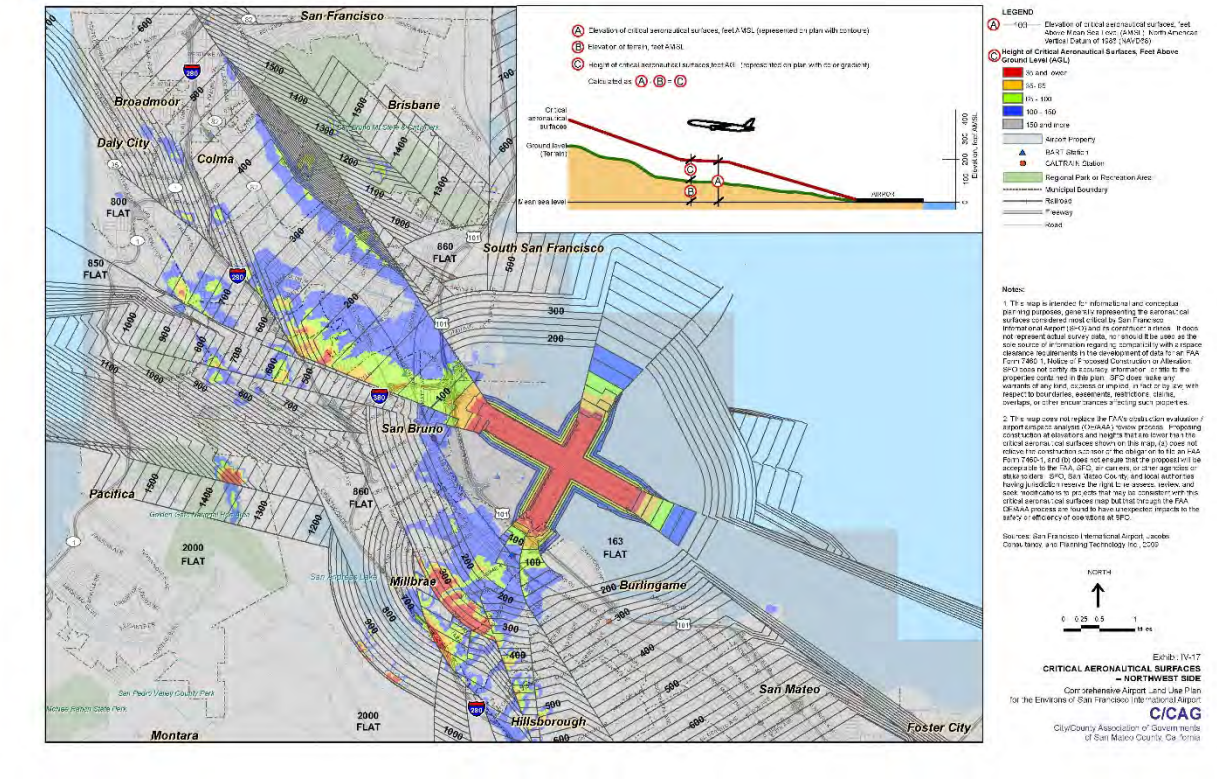
Part 77, Subpart C, establishes obstruction standards for the airspace around airports including approach zones, conical zones, transitional zones, and horizontal zones known as "imaginary surfaces." **Exhibit IV-13** depicts the Part 77 Civil Airport Imaginary Surfaces at SFO. The imaginary surfaces rise from the primary surface, which is at ground level immediately around the runways. The surfaces rise gradually along the approach slopes associated with each runway end and somewhat more steeply off the sides of the runways. The FAA considers any objects penetrating these surfaces, whether buildings, trees or vehicles travelling on roads and railroads, as obstructions to air navigation. Obstructions may occur without compromising safe air navigation, but they must be marked, lighted, and noted on aeronautical publications to ensure that pilots can see and avoid them.

Close-up views of the north and south sides of the Part 77 surfaces are provided in **Exhibit IV-14** and **Exhibit IV-15**, respectively. Additionally, **Exhibit IV-16** provides an illustration of the outer approach and transitional surfaces located on the southeast side of the Part 77 surfaces.

Together with its tenant airlines, SFO has undertaken a mapping effort to illustrate the critical aeronautical surfaces that protect the airspace required for multiple types of flight procedures such as those typically factored into FAA aeronautical studies, as shown on **Exhibit IV-17** and **Exhibit IV-18**. These aeronautical surfaces include those established in accordance with FAA Order 8260.3B, *U.S. Standard for Terminal Instrument Procedures (TERPS)*, and a surface representing the airspace required for One-Engine Inoperative (OEI) departures from Runway 28L (to the west through the San Bruno Gap).[16] The exhibits depict the lowest elevations from the combination of the OEI procedure surface and all TERPS surfaces. The surfaces are defined with Required Obstacle Clearance (ROC) criteria to ensure safe separation of aircraft using the procedures from the underlying obstacles. Any proposed structures penetrating these surfaces are likely to receive Determinations of Hazard (DOH) from the FAA through the 7460-1 aeronautical study process. These surfaces indicate the maximum height at which structures can be considered compatible with Airport operations.

[16] See Appendix F, Section F.3.2 for a discussion of one-engine inoperative procedures.

DocuSign Envelope ID: 8DDB6F33-D68C-44E3-9A2S-55A0991C3CA3



DocuSign Envelope ID: 8DCB6F33-D66C-44EB-9A23-65A0991C3CA3

Exhibit IV-19, which is provided for information purposes only, depicts a profile view of the lowest critical airspace surfaces along the extended centerline of Runway 10L-28R – the TERPS Obstacle Departure Procedure (ODP) surface, representing standard all-engines departures, and the approximate OEI surface developed by SFO through independent study in consultation with the airlines serving SFO. The exhibit also shows the terrain elevation beneath the airspace surfaces and various aircraft approach and departure profiles, based on varying operating assumptions. The exhibit illustrates a fundamental principle related to the design of airspace protection surfaces. The surfaces are always designed below the actual aircraft flight profile which they are designed to protect, thus providing a margin of safety. Note that the ODP climb profile is above the ODP airspace surface, and the OEI climb profile is above the OEI airspace surface.

4.5.4 AIRSPACE PROTECTION POLICIES

The following airspace protection policies (AP) shall apply to the ALUCP.

AP-1 COMPLIANCE WITH 14 CFR PART 77, SUBPART B, NOTICE OF PROPOSED CONSTRUCTION OR ALTERATION

AP-1.1 Local Government Responsibility to Notify Project Sponsors

Local governments should notify sponsors of proposed projects at the earliest opportunity to file Form 7460-1, *Notice of Proposed Construction or Alteration*, with the FAA for any proposed project that would exceed the FAA notification heights, as shown approximately on Exhibit IV-10. Under Federal law, it is the responsibility of the project sponsor to comply with all notification and other requirements described in 14 CFR Part 77. This requirement applies independent of this ALUCP.

AP-1.2 FAA Aeronautical Study Findings Required Before Processing Development Application

The sponsor of a proposed project that would exceed the FAA notification heights, as shown approximately on Exhibit IV-10, shall present to the local government permitting agency with his or her application for a development permit, a copy of the findings of the FAA's aeronautical study, or evidence demonstrating that he or she is exempt from having to file an FAA Form 7460-1. It is the responsibility of the local agency to consider the FAA determination study findings as part of its review and decision on the proposed project.

AP-2 COMPLIANCE WITH FINDINGS OF FAA AERONAUTICAL STUDIES

Project sponsors shall be required to comply with the findings of FAA aeronautical studies with respect to any recommended alterations in the building design and height and any recommended marking and lighting of their structures for their proposed projects to be deemed consistent with this ALUCP.

DocuSign Envelope ID: 8DCB6F33-D66C-44EB-9A23-65A0991C3CA3

AP-3 MAXIMUM COMPATIBLE BUILDING HEIGHT

In order to be deemed consistent with the ALUCP, the maximum height of a new building must be the lower of (1) the height shown on the SFO critical aeronautical surfaces map (Exhibits IV-17 and IV-18), or (2) the maximum height determined not to be a "hazard to air navigation" by the FAA in an aeronautical study prepared pursuant to the filing of Form 7460-1.

For the vast majority of parcels, the height limits established in local zoning ordinances are lower than the critical airspace surfaces. In those cases, the zoning district height regulations will control. Compliance with the zoning district height and the SFO critical aeronautical surfaces map, however, does not relieve the construction sponsor of the obligation to file a FAA Form 7460-1 *Notice of Proposed Construction or Alteration*, if required, and to comply with the determinations resulting from the FAA's aeronautical study.

For a project to be consistent with this ALUCP, no local agency development permits shall be issued for any proposed structure that would penetrate the aeronautical surfaces shown on Exhibits IV-17 and IV-18 or the construction of which **has not** received a Determination of No Hazard from the FAA, or which would cause the FAA to increase the minimum visibility requirements for any instrument approach or departure procedure at the Airport.

AP-4 OTHER FLIGHT HAZARDS ARE INCOMPATIBLE

Proposed land uses with characteristics that may cause visual, electronic, or wildlife hazards, particularly bird strike hazards, to aircraft taking off or landing at the Airport or in flight are incompatible in Area B of the Airport Influence Area. They may be permitted only if the uses are consistent with FAA rules and regulations. Proof of consistency with FAA rules and regulations and with any performance standards cited below must be provided to the Airport Land Use Commission (C/CAG Board) by the sponsor of the proposed land use action.

Specific characteristics that may create hazards to aircraft in flight and which are incompatible include:

(a) Sources of glare, such as highly reflective buildings or building features, or bright lights, including search lights or laser displays, which would interfere with the vision of pilots making approaches to the Airport.

(b) Distracting lights that that could be mistaken by pilots on approach to the Airport for airport identification lighting, runway edge lighting, runway end identification lighting, or runway approach lighting.

(c) Sources of dust, smoke, or water vapor that may impair the vision of pilots making approaches to the Airport.

(d) Sources of electrical interference with aircraft or air traffic control communications or navigation equipment, including radar.

(e) Land uses that, as a regular byproduct of their operations, produce thermal plumes with the potential to rise high enough and at sufficient velocities to interfere with the control of aircraft in

DocuSign Envelope ID: 8DCB6F33-D66C-44EB-9A23-65A0991C3CA3

flight. Upward velocities of 4.3 meters (14.1 feet) per second at altitudes above 200 feet above the ground shall be considered as potentially interfering with the control of aircraft in flight.[17]

(f) Any use that creates an increased attraction for wildlife, particularly large flocks of birds, that is inconsistent with FAA rules and regulations, including, but not limited to, FAA Order 5200.5A, *Waste Disposal Sites On or Near Airports*, FAA Advisory Circular 150/5200-33B, *Hazardous Wildlife Attractants On or Near Airports*, and any successor or replacement orders or advisory circulars. Exceptions to this policy are acceptable for wetlands or other environmental mitigation projects required by ordinance, statute, court order, or Record of Decision issued by a federal agency under the National Environmental Policy Act.

4.5.5 iALP AIRSPACE TOOL

In consultation with C/CAG, SFO developed the iALP Airspace Tool, a web-based, interactive tool to evaluate the relationship of proposed buildings with the Airport's critical airspace surfaces. The iALP Airspace Tool is designed to assist planners, developers, and other interested persons with the implementation of the airspace protection policies of the SFO ALUCP. The tool helps users determine: (1) the maximum allowable building height at a given site, and/or (2) whether a building penetrates a critical airspace surface, and by how much, given the proposed building height.

A more detailed description of the iALP Airspace Tool and a tutorial explaining how to use it is presented in **Appendix J**. Use of this tool, however, does not relieve a project sponsor of the duty to comply with all federal regulations, including the obligation to file Form 7460-1, Notice of Proposed Construction or Alteration, with the FAA.

[17] This is a threshold established by the California Energy Commission in its review of power plant licensing applications. See *Blythe Solar Power Project Supplemental Staff Assessment, Part 2*,. CEC-700-2010-004-REV1-SUP-PT2, July 2010. California Energy Commission. Docket Number 09-AFC-6, p. 25. This criterion is based on guidance established by the Australian Government Civil Aviation Authority (Advisory Circular AC 139-05(0), June 2004). The FAA's Airport Obstructions Standards Committee (AOSC) is studying this matter but has not yet issued specific guidance.

Response to Comment R-1-1

This comment contains introductory statements; no response is required.

Response to Comment R-1-2

Thank you for your comment. The overcrossing structure would require a minimum vertical clearance of approximately 19 feet above ground surface, and the proposed lighting would be 35 to 40 feet high. As this comment states, this would be below the critical aeronautical surfaces. Information on construction crane heights, as noted in your comment, has not been developed at this preliminary phase of design but can be provided during final design. Caltrans appreciates the detailed consideration by San Francisco International Airport (SFO), and will continue to inform SFO and other stakeholders of project developments.

Subject: 1415 San Mateo Avenue

EXTERNAL EMAIL. Links/attachments may not be safe.

I-1-1 Hi - I made a comment this evening during the Zoom meeting (101/Produce/Utah interchange) regarding the flooding problem on San Mateo Avenue. During king tides and heavy rain, our building on 1415 San Mateo Avenue floods, meaning the storm drains cannot handle the amount of water and the water seeps into our building; the street is flooded, even with the pump station at the canal down the street from us. I have attached a picture I just took now, showing our tenant having to place sandbags on her side trying to keep the water out. Every winter this occurs. This will create a huge problem moving forward with your project and it needs to be addressed. Thank you for your time and please contact us if you need clarification.

Response to Comment I-1-1

Thank you for your comment. As stated in Sections 2.3.1, 2.3.2, and 3.2.10, the Build Alternative would not lead to significant environmental impacts to hydrology, floodplains, water quality, or stormwater runoff. As shown in Figure 2.3.1 1 in the EIR/EA, part of the project area is within Zone AE EL 10, which represents areas that are subject to flooding by the aforementioned 100-year flood. This Zone AE includes the property at 1415 San Mateo Avenue.

The project would add an elevated bridge structure and intersection improvements within an already urbanized and paved area. This would add some fill within the flood zone, primarily for the bridge abutments and supporting columns. The hydrology evaluation conducted to date identified that these project changes would not change the overall land use and would not significantly increase the impervious area that would affect drainage. Therefore the project was determined to not have a significant encroachment into the existing floodplain. Additional hydrology analysis would be performed as part of final design. A drainage plan, including the collection, discharge, and treatment of runoff from the project's paved surfaces would be part of final design.

Thus, the project would not significantly change the existing flood risk within the project area, including at the property on San Mateo Avenue (it would not significantly increase or decrease the existing flood plain risk for the local area). While additional actions (i.e., drainage rehabilitation) are not within the scope of the Build Alternative, that does not preclude the City of South San Francisco or other future projects from studying and implementing additional features. This comment and issue have been forwarded to the City of South San Francisco.

Subject: Major concern about the US Highway 101/Produce Avenue Interchange Project

Please forward email and attachment to my fellow BPAC members.

Hi BPAC,

I-2-1

I'm sharing my public comment letter on the DEIR of the US Highway 101/Produce Avenue Interchange Project, which would expand Utah Ave. and widen an interchange at Produce Ave. In contrast to state law and CEQA Guidelines, the DEIR falsely claims "no impact" on increasing vehicle miles traveled, leading to faulty conclusions on environmental justice, air quality, climate change, and consistency with local and regional plans. While the city may claim that it's supporting the draft Active South City Plan because the project has a bicycle lane made of paint, by adding vehicle capacity, the city is also increasing driving, which goes against both the draft Active South City Plan and the draft General Plan with goals to reduce the need to drive. I'm also sure you're well aware that the project to expand the roadway is located in an Equity Priority Community and is in the single most polluted census tract in the entire San Francisco Bay Area (CalEnviroScreen 4.0), the textbook definition of environmental injustice.

I know the city has been working on this project for a long time, but I do not believe the impacts can be mitigated in the build alternative and urge my fellow BPAC members to take a stand against this project as it will induce vehicle travel, undermining the city's, region's, and state's climate and equity goals. Should the city move forward with the project, it is imperative for the city to conduct a thorough, holistic reevaluation of the project that accounts for its impact within the broader context of our region's transportation system, environment, and vulnerable communities. I look forward to working with you on this issue.

Darryl Yip

Re: Public Comment on DEIR for US Highway 101/Produce Avenue Interchange Project, Project ID 0413000212

Dear Caltrans and the City of South San Francisco ("city"),

I-2-2

Thank you for the opportunity to comment on the DEIR for the US Highway 101/Produce Avenue Interchange Project ("project"), Project ID 0413000212. We are South San Francisco residents with backgrounds in transportation planning, education, and climate advocacy. **As such, we can say with confidence that the DEIR for this project does not follow CEQA Guidelines 2022 to adequately evaluate the full impact of induced demand on vehicle miles traveled, and, therefore, fails to accurately account for the negative impacts it will have on the environment and surrounding vulnerable communities.** In contrast to the CEQA Guidelines, the DEIR (1) does not adequately evaluate the full impact of induced demand on vehicles miles traveled (Section 3.2.17.1). This results in it falsely stating that the project will have "no impact" on (2a) Environmental Justice (Section 2.2.6), (2b) Air Quality (Section 3.2.3), (2c) Climate Change (Section 3.3), and (3) that the project is consistent with local and regional plans (Section 2.2.2.1). We do not believe these impacts can be mitigated in the build alternative and urge the City of South San Francisco to halt this project as its DEIR does not meet CEQA standards.

I-2-3

1. Section 15064(h) of the CEQA Guidelines requires project sponsors to analyze **the cumulative and indirect impacts on vehicle miles traveled**, or VMT. This project's DEIR fails to meet that condition, as demonstrated by its section titled "CEQA Significance Determinations for Transportation" (Section 3.2.17.1). This section erroneously states there will be a "less than significant impact" on vehicle miles traveled, pursuant to CEQA Guidelines Section 15064.3, subdivision (b). That claim is only possible if the project is incorrectly analyzed in a vacuum without considering the numerous related projects planned throughout our region, including the US-101 Managed Lanes Project (all phases) by the San Mateo County Transportation Authority. **The DEIR's failure to incorporate a holistic review *of the cumulative and indirect impacts of all planned transportation investments* in its VMT analysis means that it does not reflect the true increase that this project will cause in traffic and its associated environmental harms[1].** The city can begin to correct this error by applying the elasticity-based National Center for Sustainable Transportation Induced Demand Calculator (2019) for capacity-increasing projects to estimate induced travel (Transportation Analysis under CEQA, Caltrans, 2020).

    a. The DEIR fails to assess the negative impacts this project will have on induced demand and the rest of our transportation system. Induced demand is a well-known phenomenon. Adding new road capacity attracts more travelers from

[1] The city is well aware of the project's relationship to other projects. Email exchanges on July 22, 2021, obtained via public records requests, between San Mateo County Transportation Authority project staff/contractors and the City of South San Francisco, specifically cite the need for "significant traffic improvements" to US-101 as a prerequisite for this overpass project. This makes the failure to analyze the broader environmental context even more unacceptable.

I-2-3 Cont.

other modes, times of day, and other routes (UCLA Transfers Magazine, UCLA, 2022), leading to longer vehicle trips, more frequent vehicle trips, and changes to land use (Transportation Analysis under CEQA, Caltrans, 2020). Projects that lower travel costs of driving like time, money, and uncertainties; increase capacity, especially along already congested routes; or provide significantly higher levels of roadway connectivity can and will induce vehicle travel, undermining investments like Caltrain electrification and the proposed Active South City Plan.

b. Moreover, this DEIR's analysis on induced demand looks at far too narrow a window of space and time to accurately assess its impact. Corridor-level analyses only pick up a portion of the potential induced travel where impacts are felt region-wide, and short-term analyses only pick up the start of the uptick in induced travel when long-term effects accrue over 10 years or more (SB 743 Expert Panel Final Report on Calculating Induced VMT from Highway Projects, Caltrans, 2020).

c. *Therefore, per CEQA Guidelines Section 15064(h), cumulatively analyze the transportation impacts of both this project and all three phases of the US-101 Managed Lanes Projects in a wide space and time.* In other words, do *not* just analyze VMT impacts immediately adjacent to the project, analyze VMT impacts across the entire freeway network, especially along the current and planned expansions along US-101. Do *not* just analyze VMT impacts over the next few years, analyze VMT impacts over the next 30-50 years to incorporate planned increases in commercial development and activity. Pursuant to the Transportation Analysis Under CEQA document from Caltrans, apply the National Center for Sustainable Transportation Induced Demand Calculator, which states that adding roadway capacity does indeed induce travel and traffic. For example, if one analyzes just the planned expansion of US-101 North of I-380, that project will induce regional VMT by at least 145.3 million miles a year, or 400,000 additional VMT a day, which is the equivalent of a car crossing the Golden Gate Bridge over 230,000 times or circling the earth 16 times in one day.

I-2-4

2. The DEIR's failure to evaluate the full impact of induced demand on VMT as required by CEQA Guidelines 2022 Section 15064(h) has resulted in false conclusions regarding Environmental Justice (Section 2.2.6), Air Quality (Section Section 3.2.3), and Climate Change (Section 3.3). *Therefore, the city needs to evaluate the full VMT impact on environmental justice, air quality, and climate change, per CEQA Guidelines Section 15064(h).*

   a. The DEIR's failure to assess the full impact of induced demand on VMT has resulted in a false conclusion of "no impact" on Environmental Justice (Section 2.2.6). The DEIR bases its current conclusion on the fact that "there is no housing in or immediately adjacent to the proposed project area". However, the pollution from increased driving–including but not limited to exhaust fumes, tire microplastics, and brake dust–will not be confined to areas immediately adjacent to the proposed project area. *The project is located in an MTC Equity Priority Community (EPC) with a high proportion of marginalized people of color* (Equity Priority Communities, MTC, 2021). *This EPC is in the 95th percentile of most polluted census tracts in California and is already the single most polluted census tract in the entire nine-county San Francisco Bay Area region* (CalEnviroScreen

4.0, CA OEHHA, 2021). Increased VMT and pollution in vulnerable communities of color that are already suffering disproportionate harms from infrastructure is a textbook example of environmental injustice.

b. The DEIR's failure to evaluate the full impact of induced demand on VMT, has also resulted in a false conclusion of "no impact" on Air Quality (Section 3.2.3). As established above, this project will result in increased air pollutants from vehicle traffic.

c. The DEIR's failure to evaluate the full impact of induced demand on VMT, has also resulted in the profoundly incorrect conclusion that the project will "lower GHG emissions" in its statement on Climate Change (Section 3.3). "Lower GHG emissions" is predicated on the thoroughly debunked assumption that adding roadway capacity will reduce congestion, when, in fact, the opposite is true. As established above, adding roadway capacity induces demand for driving, thus *raising*, not lowering, GHG emissions.

I-2-4 Cont.

3. The false conclusions in the DEIR also obscure the fact that the DEIR violates Section 15125(d) of the CEQA Guidelines, which requires an EIR to be consistent with general plans, specific plans, and regional plans. *The DEIR's failure to accurately assess the true increases to VMT means that the city must reevaluate it once environmental and equity impacts are correctly calculated to confirm whether or not it is still consistent with the long-term goals of those plans, per CEQA Guidelines Section 15125(d).*

a. In regards to local plans, the DEIR erroneously states that the project is consistent with the goals of the Climate Action Plan and the General Plan. The DEIR relies on the outdated goals of the General Plan Transportation Element from 2014 instead of the soon-to-be-approved Draft General Plan Mobility and Access Element and Climate Element from 2022. Therefore, the city needs to evaluate the full VMT impact on consistency with local plans and should evaluate based on the updated draft General Plan, per CEQA Guidelines Section 15125(d).

i. Section 2.2.2.1 of the DEIR states that the project is consistent with the city's Climate Action Plan under "Measure 1.1: Expand active transportation alternatives by providing infrastructure and enhanced connectivity for bicycle and pedestrian access." However, the city has explicit goals in its Climate Action Plan to reduce greenhouse gas emissions to 15% below 2005 levels by 2020 (Climate Action Plan, 2014). Moreover, the city has draft goals to in its draft Climate Element of the General Plan to become carbon-neutral by 2045 (Draft General Plan Climate Element, 2022). While the city does propose to include bicycle lanes made of paint, as established above, they are not enough to mitigate the induced demand that the project will have on driving and will worsen any incentives for the mode shift needed to help meet the goals of the city's Climate Action Plan and draft General Plan.

ii. Section 2.2.2.1 of the DEIR states that the project is consistent with the General Plan Transportation Element from 2014. While partially true, the city is in the process of revising the Transportation Element with updated goals (Draft General Plan Mobility and Access Element, 2022). The

I-2-5

newer goals, actions, and policies highlight ways that the city will *prioritize moving people, not cars*. These include, but are not limited to:

1. Goal MOB-2: "South San Francisco provides a multimodal network with convenient choices for everyone…To provide low-cost, low-impact travel options and *to focus on moving people rather than cars* (Resolution 86-2012)."

2. Action MOB-3.1.2: "*Implement an East of 101 area trip cap* with triennial monitoring and corrective actions if exceeded. Implement project-specific trip caps for large campus developments."

3. Policy MOB-3.2: "Optimize traffic operations on City streets while *avoiding widening roadways* or otherwise pursuing traffic operations changes at expense of multimodal safety, transit reliability, or bicycle and pedestrian comfort."

I-2-5 Cont.

b. Regarding regional plans, Section 2.2.2.1 of the DEIR incorrectly states that the project is consistent with Plan Bay Area. Although it is included in the list of projects in Plan Bay Area, the project is *not* consistent with regional plans as it actively goes against regional goals. Plan Bay Area has explicit goals to reduce per-capita carbon emissions from cars and light duty trucks and increase non-automobile mode share by 10% (Plan Bay Area 2050 Goals and Targets, 2021). As mentioned above, roadway expansions make it more attractive to drive and thus induce demand, increasing per-capita carbon emissions from cars and trucks and decreasing non-automobile mode share. Therefore, the city needs to evaluate the full VMT impact on consistency with regional plans, per CEQA Guidelines Section 15125(d).

I-2-6

For all of the reasons stated above, we do not believe the impacts can be mitigated in the build alternative and urge the city to halt this project. If the city moves forward, it is imperative for the city to conduct a thorough, holistic reevaluation of the project that accounts for its impact within the broader context of our region's transportation system, environment, and vulnerable communities. Thank you for your time and urgent action.

Response to Comment I-2-1

Thank you for your comments. Caltrans appreciates your detailed consideration but does not agree with your conclusion that the project would have significant environmental impacts to transportation, environmental justice, air quality, climate change, or consistency with local and regional plans. Please see the proceeding comment responses, which provide a detailed explanation of the modeling used for vehicle miles traveled (VMT), and how that modeling relates to the aforementioned resource areas.

Response to Comment I-2-2

The California Natural Resources Agency adopted new CEQA Guidelines consistent with Senate Bill (SB) 743 in December 2018, which went into effect in July 2020. The new CEQA Guidelines state in Section 15064.3 that, generally, VMT is the appropriate measure of transportation impacts, not LOS. As a result of this regulatory change, a project's effect on automobile delay (LOS) no longer constitutes a significant environmental impact. This does not preclude LOS as being an informational measure that is reported in a CEQA document—it just cannot be a measure of CEQA impact significance. The EIR/EA reports both VMT and LOS, but VMT is the measure of significance reported in Section 3.2.17.1 and its corresponding checklist.

Caltrans guidance for evaluation of VMT was issued in the Transportation Analysis under CEQA (Caltrans 2020c) and Transportation Analysis Framework (TAF) (Caltrans 2020d). As per CEQA and Caltrans guidelines, transportation projects that reduce, or have no impact on vehicle miles traveled (VMT), should be presumed to cause a less-than-significant transportation impact. Caltrans implemented this policy for projects that started after September 2020 and provided guidance describing the process in relation to CEQA.

VMT was extracted from the traffic forecast model for the sub area selected to capture all parallel and potential diversion routes in the project's traffic forecast study area. The traffic forecast study area extended on US 101 from just north of the East Grand Avenue interchange to just south of the San Bruno Interchange, and to east of Harbor Way and to west of South Linden Avenue. All streets within this rectangular study area were used to create a "sub area" street and intersection network to generate VMT for the study years of 2025 and 2045, for both the No Build and Build Alternatives. The total VMT on the street network within this study area was used to compare between alternatives. The table below provides the VMT comparison between the No Build and Build Alternatives. VMT is also reported in the EIR/EA in Section 2.3.8.3.

Year 2025 and 2045 VMT Summary from Forecast Model - No Build vs Build

Vehicle Miles Travelled (VMT)	2025 No Build	2025 Build	2045 No Build	2045 Build	2025 % Diff - Build Vs No Build	2045 % Diff - Build Vs No Build
VMT - Daily	1,127,743	1,126,771	1,167,053	1,166,514	-0.09%	-0.05%

The traffic forecast model used for the above estimate of VMT is the C/CAG-VTA Countywide model (https://ccag.ca.gov/programs/travel-demand-model/). The State requires that every congestion management agency (in coordination with the regional transportation planning agency, which is MTC), develop and maintain a database and countywide model to be used for transportation analysis, including evaluation of sub areas such as was done for this project. The C/CAG model's land use and transportation network are updated consistent with MTC's Bay Area Travel Demand Model. These data are the most up to date regional traffic forecast data, and are required to be applied for analysis of transportation projects on the State highway system including the US 101/Produce Avenue Interchange. As a travel forecast model, the C/CAG-VTA Countywide model generates VMT for the selected study area and for specified study years. This model also provided the basis for the traffic volumes used in the traffic operational analysis that provided volumes and speeds at a local street and freeway level used for evaluation of LOS and other measures of traffic performance reported in the Draft EIR/EA.

The Caltrans guidelines process includes an initial screening of project type and determines whether the project is likely to induce travel. If the proposed project does not induce travel, it can be screened out from a more formal and detailed analysis. The Build Alternative would not add any capacity (add lanes to mainline) to the freeway or ramps, and the overcrossing would carry collector level traffic volumes only. Additionally, the travel demand model results predicted only localized shifts with the proposed overpass over US 101, showing that the proposed project is not expected to induce travel within the study area, as indicated in the previous table.

A sub-area level comparison of the daily VMT between the Build Alternative and No Build Alternative from the travel demand model indicated that VMT would be slightly reduced as a result of the Build Alternative in both the opening year, 2025, and design year, 2045. This VMT reduction is likely the result of two factors:

- trips shifting to a shorter route with the proposed overcrossing in place; and
- the new, shorter route reducing distance traveled (i.e., drivers would have a less circuitous route across US 101 in some cases).

The Build Alternative would also improve pedestrian and bicycle conditions along the proposed overcrossing, and at adjacent intersections. While these improvements were not factored into the calculation and modeling of VMT, they are intended to encourage mode shift towards active transportation.

Based on the comparison of VMT between the No Build and Build Alternatives, which shows a reduction in VMT with the Build Alternative, the project would have a less-than-significant impact on transportation. Therefore, no mitigation is required.

Response to Comment I-2-3

Please see the response to comment I-2-2 regarding analysis of VMT for the Build and No Build Alternatives. The Draft EIR/EA noted that the limited distance of the proposed overpass (approximately ¼ mile long, with two lanes in each direction) attracted future year traffic volumes that were characteristic of a collector street, since it connects two minor arterials (Utah Avenue and San Mateo Avenue). The project does not connect to US 101 – it only crosses over the freeway.

Cumulative traffic from existing and future transportation investments are included in the C/CAG-VTA Countywide model used for the project VMT analysis. The countywide model includes transportation projects that are programmed in the Regional Transportation Plan, which was Plan Bay Area 2040, and most recently updated to Plan Bay Area 2050. The 101/Produce Avenue Interchange Project is included in Plan Bay Area, as are the US 101 Managed Lanes Projects, from Santa Clara County to Whipple Avenue, and from Whipple Avenue to I-380 that is currently in construction (the first two phases referred to in this comment). The US 101 Managed Lanes Project North (I-380 to the San Mateo/San Francisco County line) is also included, that is planned and in the preliminary design phase. These and other planned or programmed transportation projects are also included, and are phased in the model depending on their anticipated opening year with respect to this project's 2025 and 2045 future study years. Therefore, the C/CAG-VTA Countywide model includes programmed and planned transportation projects in the travel forecast that generated the VMT volumes and traffic conditions used in the evaluation of LOS and other traffic measures.

This comment identifies the induced travel demand calculator for capacity increasing projects. The calculator applies to facilities with Federal Highway Administration (FHWA) functional classifications of 1, 2 or 3. That corresponds to interstate highways (class 1), other freeways and expressways (class 2), and other principal arterials (class 3). Since this overcrossing is not a principal arterial, the calculator was not used for VMT analysis purpose and because the C/CAG-VTA Countywide model was available to generate VMT results consistent with regional travel demand modeling. The project would not modify the US 101 freeway, and would not add lanes or change the capacity of US 101.

This comment also states that a corridor analysis only evaluates a portion of induced traffic within a regional area, and evaluates only short-term time periods in comparison to effects over a 10-year time horizon. The regional C/CAG-VTA Countywide model includes the roadway network within the study area described in response to comment I-2-2. This includes US 101, and also all arterials and expressways. This is an important aspect of the Countywide model, as it allows evaluation of shifts in traffic that occur with and without a project in place. For the US 101/Produce Avenue Interchange project, the proposed overcrossing provides an alternative or additional crossing of US 101, in addition to the existing undercrossing of Airport Boulevard. The forecast modeling and traffic operational analysis showed a shift in traffic for vehicle trips that could use the overcrossing to access either side of US 101, and this resulted in slightly shorter trips and slightly reduced VMT. The study years of 2025 and 2045 represent the opening

year of the project (2025) and a future horizon year (2045, or 20 years out). Therefore, the traffic analysis did include and compare conditions in the long-term.

The cumulative traffic conditions were evaluated for the 2025 and 2045 study years for VMT and other traffic conditions, which addresses CEQA's requirement for cumulative impacts noted in this comment. As stated above, this included the three US 101 Managed Lanes projects that are under construction or proposed/planned, as well as other transportation projects planned by local and regional transportation agencies in the Bay Area.

Travel on local and regional roadways and freeways is constrained by the roadway network, such as at intersections or points of congestion. The traffic forecast model generates and includes new trips that can access new capacity, such as the proposed overcrossing, but the analysis also is constrained by other remaining congestion points that are accounted for in the traffic operational analysis. For example, traffic controls at intersections and constrained turning movements limit the number of vehicles that can ultimately access and use the roadway network and these conditions are represented in the traffic operational analysis that was completed for this project.

Response to Comment I-2-4

Please see the responses to comments I-2-2 and I-2-3 regarding the project's VMT analysis. The project would not increase VMT, as explained therein, and is projected to reduce VMT relative to the No Build Alternative. Therefore, additional calculations and analysis stand regarding operational emissions, to include greenhouse gas emissions.

This comment states that the Build Alternative would lead to significant environmental effects on environmental justice. As stated in Section 2.2.6.2 of the Draft EIR/EA, three U.S. Census Block Groups in the vicinity of the project meet the definition of an Environmental Justice Community used for this analysis. However, the project would not lead to a disproportionate impact to an Environmental Justice Community. Temporary impacts such as street closures, construction noise and dust would be limited to the construction period and would affect all people that travel through the project area by vehicle, regardless of transportation mode. Therefore, this does not represent a disproportionate impact.

As stated above in the responses to comments I-2-2 and I-2-3, the Build Alternative would not increase VMT. Conversely, it is projected to reduce VMT. Further, as shown in Section 2.3.6.3, the Build Alternative would not increase operational criteria air pollutant or mobile source air toxics emissions relative to the No Build Alternative. As shown in Tables 2.3.6-3 and 2.3.6-4, these emissions are projected to be lower with the Build Alternative. Construction emissions would be short-term, and project features PF-AIR-01 and 02 would be implemented as best practices for dust and exhaust during construction.

Response to Comment I-2-5

Please see the responses to comments I-2-2 and I-2-3 regarding the project's VMT analysis. The project would not increase VMT, as explained therein, and is projected to reduce VMT relative to the No Build Alternative.

This comment states that the project is inconsistent with the City of South San Francisco's Climate Action Plan (CAP). This claim is based on the CAP's goal of reducing greenhouse gas emissions to 15% below 2005 levels by 2020. However, as stated in the responses to comments I-2-2, 3, and 4, the Build Alternative would not increase VMT relative to the No Build Alternative – it is projected to reduce VMT. Additionally, the project would accommodate bicycle and pedestrian modes by implementing new Class II bike lanes, sidewalks, and signalized crosswalks. Although these non-vehicle improvements are proposed as part of the project, these amenities were not a factor in the comparison of VMT between the Build and No Build alternatives.

Please also note that the General Plan Transportation Element (Amended by Resolution 136-2014, adopted December 10, 2014) was reviewed in the Draft EIR/EA because it is part of the currently adopted General Plan. Regardless, the Build Alternative is projected to reduce VMT relative to the No Build Alternative, and would improve bicycle and pedestrian infrastructure, thus encouraging mode shift.

This comment further states that the project is inconsistent with Plan Bay Area 2050, citing Plan Bay Area goals to "reduce per-capita carbon emissions from cars and light duty trucks and increase non-automobile mode share by 10%." As stated above, VMT is projected to be reduced with the Build Alternative relative to the No Build Alternative. Further, the project would provide enhanced pedestrian and bicycle travel options.

Response to Comment I-2-6

Thank you for your comments. The Build Alternative is projected to slightly reduce VMT relative to the No Build Alternative. The VMT volumes for the No Build and Build alternatives were included in the Draft EIR/EA (Section 2.3.8.3). As stated in the response to I-2-2, the Build Alternative would not add any capacity (add lanes to mainline) to the freeway or ramps, and the overcrossing would carry collector level traffic volumes only. Additionally, the travel demand model results predicted only localized shifts with the proposed overpass over US 101, showing that the proposed project is not expected to induce travel within the study area.

Good Morning

My name is Anthony Middleton. I am the Business Development Specialist for Kiewit in Fairfield, Ca. I am reaching out today regarding an update on your following projects: US Highway 101/Produce Avenue Interchange Project.

- Is there an estimated cost update for this project?
- Is there a Release date update for this project?
- Do you happen to have a Conceptual design for this project?

Thank you for your time

Kiewit

Response to Comment I-3-1

The most recent project funding and schedule for the project is described in Section 1.4 of the Final EIR/EA. That section includes the schedule for the different phases, including construction (2025 to 2027) and the cost estimate (approximately $125 million in 2024 dollars).

Subject: Formal Notification of Consultation Opportunity Pursuant to Public Resources Code §21080.3.1 (Assembly Bill 52) and Government Code §65352.3 (Senate Bill 18) for the Infinite 131 Project and the Amendment to the South San Francisco General Plan, South San Francisco, San Mateo County, California

Dear Chairperson Zwierlein:

The City of South San Francisco (City) has received a project application for the Infinite 131 Project (project) and is conducting an environmental analysis pursuant to the California Environmental Quality Act (CEQA). The purpose of this letter is to provide you with: 1) a description of the project site and the proposed project; and 2) a summary of a records search of the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) and Sacred Lands File (SLF) at the Native American Heritage Commission (NAHC). This letter serves as formal notification pursuant to Public Resources Code §21080.3.1 (AB 52) and Government Code §65352.3 (SB 18).

Project Description

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco (see Figure 1 attached). The project site is identified as assessor's parcel number (APN) 015-113-210. Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot is north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The project site includes a portion of the shoreline band jurisdiction of the San Francisco Conservation and Development Commission, adjacent to the navigable slough. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO). The topography of the project site is relatively flat, approximately 6 feet above mean sea level.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. The project site consists of two warehouse buildings, a smaller administrative building, and open-air structures, including loading docks and trash compactors, associated with operations

of the Golden Gate Produce Terminal. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees.

The project proposes demolition of all existing on-site uses (i.e., warehouse buildings, administrative building, open-air structures) and the construction of Research and Design (R&D) uses and an on-site amenity space. Overall, the proposed project would construct approximately 1.6 million square feet (sf) of new uses across six buildings (I131S A, I131S B, I131S C, I131S D, I131N A, and I131N B). In addition, the proposed project would include two parking garages, associated with the I131N buildings and I131S buildings. The I131N parking garage would be approximately 551,631 sf in area and approximately 100 feet tall. It would include three below-grade levels of parking as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 sf in area and include two levels of below-grade parking. The proposed project would provide a total of 3,011 parking spaces, including 114 surface parking spaces. A total of 377 bicycle parking spaces would also be provided throughout the site, including 358 long-term bicycle parking spaces and 19 short-term bicycle parking spaces. The buildings would be linked together though a cohesive network of landscaping and open space. Two central landscaped courtyards would be located along the interior of the project site and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections as well as outdoor amenities.

The proposed project would be constructed in eight phases, including demolition of the warehouse buildings, administrative building, and open air structures. After receipt of the building permit, construction of the proposed project is anticipated to take approximately 5 years, with construction on the southern portion of the project site beginning in March 2026 and ending in October 2028 and construction on the northern portion of the project site beginning in November 2028 and ending in May 2031. The phases of construction would consist of (1) rough grading and site demolition, (2) deep foundation installation, (3) foundation installation, (4) superstructure construction, (5) building enclosure construction, (6) interior buildout, (7) sitework, and (8) final building inspections.

Demolition, grading, and excavation would generate approximately 40,214 cubic yards (cy) of material, including removed fencing, building materials, concrete, soil, and asphalt. In addition, during demolition and grading, approximately 22,299 cy of soil would be imported for site preparation. Utility work associated with the proposed project would require excavation to a depth of approximately 3 to 7 feet below the existing ground surface. The maximum depth of excavation would be 5 feet below sea level for the sanitary sewer main upgrade.

The proposed project would require a general plan, specific plan, and zoning code amendment to change the existing and use designations from Mixed Industrial High (MIH) and Mixed Industrial Medium (MIM), respectively, to Business Technology Park-High (BTP-H), and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (referred to as the off-site redesignation parcels), which are currently designated as MIH and zoned as T6 Urban Core (T6UC), would also seek general plan and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of the redesignation of these parcels.

Results of Records Searches

In August 2023, ICF (the City's cultural resources consultant) conducted a records search of the project site and a 0.25-mile radius at the NWIC on behalf of the City. The NWIC, an affiliate of the State of California

Office of Historic Preservation, is the official state repository of cultural resources records and reports for San Mateo County.

One previously recorded archaeological resource was recorded within the project site, as described below:

1. P-41-000051 (CA-SMA-47) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.

Four previously recorded archaeological resources were recorded within a 0.25-mile radius of the project site, as described below:

1. P-41-000045 (CA-SMA-41) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and San Mateo Avenue, between Airport Boulevard and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Basin Research Associates. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
2. P-41-000047 (CA-SMA-43) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and the San Bruno Canal, between Shaw Road and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Woodward-Clyde Consultants in 1995 and Basin Research Associates in 1988. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
3. P-41-000049 (CA-SMA-45) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.
4. P-41-002147 (CA-SMA-353H) – This site was originally recorded by Mooney & Associates in 2000 as a historic refuse scatter eroding out of a railroad embankment. Based on ceramics identified in the field, it was estimated that the scatter was deposited between 1890-1918. Subsequent archaeological site visits in 2005 and 2009 indicated that the area had been heavily disturbed, although some sparse historic artifacts were observed.

In June 2023, ICF requested a search of the NAHC SLF on behalf of the City. In July 2023, ICF received a response from the NAHC stating “the results of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.”

The Native American Heritage Commission provided your name as a representative of a California Native American Tribe who may have knowledge of cultural resources within or near the project area. The City would like to provide you with an opportunity to communicate concerns you might have regarding places within the project area that may be important to your community. The City requests your participation in the identification and protection of cultural resources, sacred lands or other heritage sites within the above

described project area with the understanding that you or other members of the community might possess specialized knowledge of the area.

Subject: Formal Notification of Consultation Opportunity Pursuant to Public Resources Code §21080.3.1 (Assembly Bill 52) and Government Code §65352.3 (Senate Bill 18) for the Infinite 131 Project and the Amendment to the South San Francisco General Plan, South San Francisco, San Mateo County, California

Dear Kanyon Sayers-Roods:

The City of South San Francisco (City) has received a project application for the Infinite 131 Project (project) and is conducting an environmental analysis pursuant to the California Environmental Quality Act (CEQA). The purpose of this letter is to provide you with: 1) a description of the project site and the proposed project; and 2) a summary of a records search of the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) and Sacred Lands File (SLF) at the Native American Heritage Commission (NAHC). This letter serves as formal notification pursuant to Public Resources Code §21080.3.1 (AB 52) and Government Code §65352.3 (SB 18).

Project Description

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco (see Figure 1 attached). The project site is identified as assessor's parcel number (APN) 015-113-210. Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot is north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The project site includes a portion of the shoreline band jurisdiction of the San Francisco Conservation and Development Commission, adjacent to the navigable slough. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO). The topography of the project site is relatively flat, approximately 6 feet above mean sea level.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. The project site consists of two warehouse buildings, a smaller administrative building, and open-air structures, including loading docks and trash compactors, associated with operations

of the Golden Gate Produce Terminal. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees.

The project proposes demolition of all existing on-site uses (i.e., warehouse buildings, administrative building, open-air structures) and the construction of Research and Design (R&D) uses and an on-site amenity space. Overall, the proposed project would construct approximately 1.6 million square feet (sf) of new uses across six buildings (I131S A, I131S B, I131S C, I131S D, I131N A, and I131N B). In addition, the proposed project would include two parking garages, associated with the I131N buildings and I131S buildings. The I131N parking garage would be approximately 551,631 sf in area and approximately 100 feet tall. It would include three below-grade levels of parking as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 sf in area and include two levels of below-grade parking. The proposed project would provide a total of 3,011 parking spaces, including 114 surface parking spaces. A total of 377 bicycle parking spaces would also be provided throughout the site, including 358 long-term bicycle parking spaces and 19 short-term bicycle parking spaces. The buildings would be linked together though a cohesive network of landscaping and open space. Two central landscaped courtyards would be located along the interior of the project site and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections as well as outdoor amenities.

The proposed project would be constructed in eight phases, including demolition of the warehouse buildings, administrative building, and open air structures. After receipt of the building permit, construction of the proposed project is anticipated to take approximately 5 years, with construction on the southern portion of the project site beginning in March 2026 and ending in October 2028 and construction on the northern portion of the project site beginning in November 2028 and ending in May 2031. The phases of construction would consist of (1) rough grading and site demolition, (2) deep foundation installation, (3) foundation installation, (4) superstructure construction, (5) building enclosure construction, (6) interior buildout, (7) sitework, and (8) final building inspections.

Demolition, grading, and excavation would generate approximately 40,214 cubic yards (cy) of material, including removed fencing, building materials, concrete, soil, and asphalt. In addition, during demolition and grading, approximately 22,299 cy of soil would be imported for site preparation. Utility work associated with the proposed project would require excavation to a depth of approximately 3 to 7 feet below the existing ground surface. The maximum depth of excavation would be 5 feet below sea level for the sanitary sewer main upgrade.

The proposed project would require a general plan, specific plan, and zoning code amendment to change the existing and use designations from Mixed Industrial High (MIH) and Mixed Industrial Medium (MIM), respectively, to Business Technology Park-High (BTP-H), and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (referred to as the off-site redesignation parcels), which are currently designated as MIH and zoned as T6 Urban Core (T6UC), would also seek general plan and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of the redesignation of these parcels.

Results of Records Searches

In August 2023, ICF (the City's cultural resources consultant) conducted a records search of the project site and a 0.25-mile radius at the NWIC on behalf of the City. The NWIC, an affiliate of the State of California

Office of Historic Preservation, is the official state repository of cultural resources records and reports for San Mateo County.

One previously recorded archaeological resource was recorded within the project site, as described below:

1. P-41-000051 (CA-SMA-47) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.

Four previously recorded archaeological resources were recorded within a 0.25-mile radius of the project site, as described below:

1. P-41-000045 (CA-SMA-41) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and San Mateo Avenue, between Airport Boulevard and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Basin Research Associates. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
2. P-41-000047 (CA-SMA-43) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and the San Bruno Canal, between Shaw Road and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Woodward-Clyde Consultants in 1995 and Basin Research Associates in 1988. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
3. P-41-000049 (CA-SMA-45) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.
4. P-41-002147 (CA-SMA-353H) – This site was originally recorded by Mooney & Associates in 2000 as a historic refuse scatter eroding out of a railroad embankment. Based on ceramics identified in the field, it was estimated that the scatter was deposited between 1890-1918. Subsequent archaeological site visits in 2005 and 2009 indicated that the area had been heavily disturbed, although some sparse historic artifacts were observed.

In June 2023, ICF requested a search of the NAHC SLF on behalf of the City. In July 2023, ICF received a response from the NAHC stating “the results of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.”

The Native American Heritage Commission provided your name as a representative of a California Native American Tribe who may have knowledge of cultural resources within or near the project area. The City would like to provide you with an opportunity to communicate concerns you might have regarding places within the project area that may be important to your community. The City requests your participation in the identification and protection of cultural resources, sacred lands or other heritage sites within the above

described project area with the understanding that you or other members of the community might possess specialized knowledge of the area.

Subject: Formal Notification of Consultation Opportunity Pursuant to Public Resources Code §21080.3.1 (Assembly Bill 52) and Government Code §65352.3 (Senate Bill 18) for the Infinite 131 Project and the Amendment to the South San Francisco General Plan, South San Francisco, San Mateo County, California

Dear Chairperson Cerda:

The City of South San Francisco (City) has received a project application for the Infinite 131 Project (project) and is conducting an environmental analysis pursuant to the California Environmental Quality Act (CEQA). The purpose of this letter is to provide you with: 1) a description of the project site and the proposed project; and 2) a summary of a records search of the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) and Sacred Lands File (SLF) at the Native American Heritage Commission (NAHC). This letter serves as formal notification pursuant to Public Resources Code §21080.3.1 (AB 52) and Government Code §65352.3 (SB 18).

Project Description

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco (see Figure 1 attached). The project site is identified as assessor's parcel number (APN) 015-113-210. Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot is north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The project site includes a portion of the shoreline band jurisdiction of the San Francisco Conservation and Development Commission, adjacent to the navigable slough. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO). The topography of the project site is relatively flat, approximately 6 feet above mean sea level.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. The project site consists of two warehouse buildings, a smaller administrative building, and open-air structures, including loading docks and trash compactors, associated with operations

of the Golden Gate Produce Terminal. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees.

The project proposes demolition of all existing on-site uses (i.e., warehouse buildings, administrative building, open-air structures) and the construction of Research and Design (R&D) uses and an on-site amenity space. Overall, the proposed project would construct approximately 1.6 million square feet (sf) of new uses across six buildings (I131S A, I131S B, I131S C, I131S D, I131N A, and I131N B). In addition, the proposed project would include two parking garages, associated with the I131N buildings and I131S buildings. The I131N parking garage would be approximately 551,631 sf in area and approximately 100 feet tall. It would include three below-grade levels of parking as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 sf in area and include two levels of below-grade parking. The proposed project would provide a total of 3,011 parking spaces, including 114 surface parking spaces. A total of 377 bicycle parking spaces would also be provided throughout the site, including 358 long-term bicycle parking spaces and 19 short-term bicycle parking spaces. The buildings would be linked together though a cohesive network of landscaping and open space. Two central landscaped courtyards would be located along the interior of the project site and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections as well as outdoor amenities.

The proposed project would be constructed in eight phases, including demolition of the warehouse buildings, administrative building, and open air structures. After receipt of the building permit, construction of the proposed project is anticipated to take approximately 5 years, with construction on the southern portion of the project site beginning in March 2026 and ending in October 2028 and construction on the northern portion of the project site beginning in November 2028 and ending in May 2031. The phases of construction would consist of (1) rough grading and site demolition, (2) deep foundation installation, (3) foundation installation, (4) superstructure construction, (5) building enclosure construction, (6) interior buildout, (7) sitework, and (8) final building inspections.

Demolition, grading, and excavation would generate approximately 40,214 cubic yards (cy) of material, including removed fencing, building materials, concrete, soil, and asphalt. In addition, during demolition and grading, approximately 22,299 cy of soil would be imported for site preparation. Utility work associated with the proposed project would require excavation to a depth of approximately 3 to 7 feet below the existing ground surface. The maximum depth of excavation would be 5 feet below sea level for the sanitary sewer main upgrade.

The proposed project would require a general plan, specific plan, and zoning code amendment to change the existing and use designations from Mixed Industrial High (MIH) and Mixed Industrial Medium (MIM), respectively, to Business Technology Park-High (BTP-H), and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (referred to as the off-site redesignation parcels), which are currently designated as MIH and zoned as T6 Urban Core (T6UC), would also seek general plan and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of the redesignation of these parcels.

Results of Records Searches

In August 2023, ICF (the City's cultural resources consultant) conducted a records search of the project site and a 0.25-mile radius at the NWIC on behalf of the City. The NWIC, an affiliate of the State of California

Office of Historic Preservation, is the official state repository of cultural resources records and reports for San Mateo County.

One previously recorded archaeological resource was recorded within the project site, as described below:

1. P-41-000051 (CA-SMA-47) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.

Four previously recorded archaeological resources were recorded within a 0.25-mile radius of the project site, as described below:

1. P-41-000045 (CA-SMA-41) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and San Mateo Avenue, between Airport Boulevard and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Basin Research Associates. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
2. P-41-000047 (CA-SMA-43) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and the San Bruno Canal, between Shaw Road and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Woodward-Clyde Consultants in 1995 and Basin Research Associates in 1988. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
3. P-41-000049 (CA-SMA-45) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.
4. P-41-002147 (CA-SMA-353H) – This site was originally recorded by Mooney & Associates in 2000 as a historic refuse scatter eroding out of a railroad embankment. Based on ceramics identified in the field, it was estimated that the scatter was deposited between 1890-1918. Subsequent archaeological site visits in 2005 and 2009 indicated that the area had been heavily disturbed, although some sparse historic artifacts were observed.

In June 2023, ICF requested a search of the NAHC SLF on behalf of the City. In July 2023, ICF received a response from the NAHC stating “the results of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.”

Dear Chairperson Nijmeh:

The City of South San Francisco (City) has received a project application for the Infinite 131 Project (project) and is conducting an environmental analysis pursuant to the California Environmental Quality Act (CEQA). The purpose of this letter is to provide you with: 1) a description of the project site and the proposed project; and 2) a summary of a records search of the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) and Sacred Lands File (SLF) at the Native American Heritage Commission (NAHC). This letter serves as formal notification pursuant to Public Resources Code §21080.3.1 (AB 52) and Government Code §65352.3 (SB 18).

Project Description

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco (see Figure 1 attached). The project site is identified as assessor's parcel number (APN) 015-113-210. Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot is north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The project site includes a portion of the shoreline band jurisdiction of the San Francisco Conservation and Development Commission, adjacent to the navigable slough. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO). The topography of the project site is relatively flat, approximately 6 feet above mean sea level.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. The project site consists of two warehouse buildings, a smaller administrative building, and open-air structures, including loading docks and trash compactors, associated with operations

of the Golden Gate Produce Terminal. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees.

The project proposes demolition of all existing on-site uses (i.e., warehouse buildings, administrative building, open-air structures) and the construction of Research and Design (R&D) uses and an on-site amenity space. Overall, the proposed project would construct approximately 1.6 million square feet (sf) of new uses across six buildings (I131S A, I131S B, I131S C, I131S D, I131N A, and I131N B). In addition, the proposed project would include two parking garages, associated with the I131N buildings and I131S buildings. The I131N parking garage would be approximately 551,631 sf in area and approximately 100 feet tall. It would include three below-grade levels of parking as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 sf in area and include two levels of below-grade parking. The proposed project would provide a total of 3,011 parking spaces, including 114 surface parking spaces. A total of 377 bicycle parking spaces would also be provided throughout the site, including 358 long-term bicycle parking spaces and 19 short-term bicycle parking spaces. The buildings would be linked together though a cohesive network of landscaping and open space. Two central landscaped courtyards would be located along the interior of the project site and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections as well as outdoor amenities.

The proposed project would be constructed in eight phases, including demolition of the warehouse buildings, administrative building, and open air structures. After receipt of the building permit, construction of the proposed project is anticipated to take approximately 5 years, with construction on the southern portion of the project site beginning in March 2026 and ending in October 2028 and construction on the northern portion of the project site beginning in November 2028 and ending in May 2031. The phases of construction would consist of (1) rough grading and site demolition, (2) deep foundation installation, (3) foundation installation, (4) superstructure construction, (5) building enclosure construction, (6) interior buildout, (7) sitework, and (8) final building inspections.

Demolition, grading, and excavation would generate approximately 40,214 cubic yards (cy) of material, including removed fencing, building materials, concrete, soil, and asphalt. In addition, during demolition and grading, approximately 22,299 cy of soil would be imported for site preparation. Utility work associated with the proposed project would require excavation to a depth of approximately 3 to 7 feet below the existing ground surface. The maximum depth of excavation would be 5 feet below sea level for the sanitary sewer main upgrade.

The proposed project would require a general plan, specific plan, and zoning code amendment to change the existing and use designations from Mixed Industrial High (MIH) and Mixed Industrial Medium (MIM), respectively, to Business Technology Park-High (BTP-H), and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (referred to as the off-site redesignation parcels), which are currently designated as MIH and zoned as T6 Urban Core (T6UC), would also seek general plan and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of the redesignation of these parcels.

Results of Records Searches

In August 2023, ICF (the City's cultural resources consultant) conducted a records search of the project site and a 0.25-mile radius at the NWIC on behalf of the City. The NWIC, an affiliate of the State of California

Office of Historic Preservation, is the official state repository of cultural resources records and reports for San Mateo County.

One previously recorded archaeological resource was recorded within the project site, as described below:

1. P-41-000051 (CA-SMA-47) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.

Four previously recorded archaeological resources were recorded within a 0.25-mile radius of the project site, as described below:

1. P-41-000045 (CA-SMA-41) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and San Mateo Avenue, between Airport Boulevard and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Basin Research Associates. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
2. P-41-000047 (CA-SMA-43) – Originally recorded by N. Nelson as a shell mound, the first site record was completed in 1909. Nelson recorded the site in South San Francisco, near US 101 and the San Bruno Canal, between Shaw Road and South Airport Boulevard. However, no evidence of the site was identified at this location during archaeological surveys conducted by Woodward-Clyde Consultants in 1995 and Basin Research Associates in 1988. Nor was evidence of the site identified during Geoprobing conducted in 2016 by AECOM. Based on these negative results, AECOM concluded that the resource was either mapped incorrectly or no longer present.
3. P-41-000049 (CA-SMA-45) – This site was originally recorded by N. Nelson in 1909 as a shell mound located in South San Francisco. No additional information is included in the record on file with the NWIC.
4. P-41-002147 (CA-SMA-353H) – This site was originally recorded by Mooney & Associates in 2000 as a historic refuse scatter eroding out of a railroad embankment. Based on ceramics identified in the field, it was estimated that the scatter was deposited between 1890-1918. Subsequent archaeological site visits in 2005 and 2009 indicated that the area had been heavily disturbed, although some sparse historic artifacts were observed.

In June 2023, ICF requested a search of the NAHC SLF on behalf of the City. In July 2023, ICF received a response from the NAHC stating “the results of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.”

The Native American Heritage Commission provided your name as a representative of a California Native American Tribe who may have knowledge of cultural resources within or near the project area. The City would like to provide you with an opportunity to communicate concerns you might have regarding places within the project area that may be important to your community. The City requests your participation in the identification and protection of cultural resources, sacred lands or other heritage sites within the above

described project area with the understanding that you or other members of the community might possess specialized knowledge of the area.

Subject: Formal Notification of Consultation Opportunity Pursuant to Public Resources Code §21080.3.1 (Assembly Bill 52) and Government Code §65352.3 (Senate Bill 18) for the Infinite 131 Project and the Amendment to the South San Francisco General Plan, South San Francisco, San Mateo County, California

Dear Chairperson Galvan:

The City of South San Francisco (City) has received a project application for the Infinite 131 Project (project) and is conducting an environmental analysis pursuant to the California Environmental Quality Act (CEQA). The purpose of this letter is to provide you with: 1) a description of the project site and the proposed project; and 2) a summary of a records search of the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) and Sacred Lands File (SLF) at the Native American Heritage Commission (NAHC). This letter serves as formal notification pursuant to Public Resources Code §21080.3.1 (AB 52) and Government Code §65352.3 (SB 18).

Project Description

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco (see Figure 1 attached). The project site is identified as assessor's parcel number (APN) 015-113-210. Surrounding land uses include industrial and commercial uses. Specifically, Terminal Court and a large Park N' Fly surface parking lot is north of the project site, a large surface parking lot and U.S. 101 (known as Bayshore Freeway) are adjacent to the eastern portion of the project site, a navigable slough that feeds into San Bruno Canal is south of the project site, and several mixed industrial and commercial buildings and San Mateo Avenue are west of the project site. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. The project site includes a portion of the shoreline band jurisdiction of the San Francisco Conservation and Development Commission, adjacent to the navigable slough. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO). The topography of the project site is relatively flat, approximately 6 feet above mean sea level.

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market facility, and associated surface parking. The project site consists of two warehouse buildings, a smaller administrative building, and open-air structures, including loading docks and trash compactors, associated with operations

of the Golden Gate Produce Terminal. The project site outside the existing building footprints is covered with asphalt and concrete paving, with minimal surrounding landscaping and no trees.

The project proposes demolition of all existing on-site uses (i.e., warehouse buildings, administrative building, open-air structures) and the construction of Research and Design (R&D) uses and an on-site amenity space. Overall, the proposed project would construct approximately 1.6 million square feet (sf) of new uses across six buildings (I131S A, I131S B, I131S C, I131S D, I131N A, and I131N B). In addition, the proposed project would include two parking garages, associated with the I131N buildings and I131S buildings. The I131N parking garage would be approximately 551,631 sf in area and approximately 100 feet tall. It would include three below-grade levels of parking as well as nine levels of above-grade parking. The I131S parking garage would be approximately 453,034 sf in area and include two levels of below-grade parking. The proposed project would provide a total of 3,011 parking spaces, including 114 surface parking spaces. A total of 377 bicycle parking spaces would also be provided throughout the site, including 358 long-term bicycle parking spaces and 19 short-term bicycle parking spaces. The buildings would be linked together though a cohesive network of landscaping and open space. Two central landscaped courtyards would be located along the interior of the project site and framed by the shape of the I131N and I131S buildings to prioritize pedestrian- and bike-friendly connections as well as outdoor amenities.

The proposed project would be constructed in eight phases, including demolition of the warehouse buildings, administrative building, and open air structures. After receipt of the building permit, construction of the proposed project is anticipated to take approximately 5 years, with construction on the southern portion of the project site beginning in March 2026 and ending in October 2028 and construction on the northern portion of the project site beginning in November 2028 and ending in May 2031. The phases of construction would consist of (1) rough grading and site demolition, (2) deep foundation installation, (3) foundation installation, (4) superstructure construction, (5) building enclosure construction, (6) interior buildout, (7) sitework, and (8) final building inspections.

Demolition, grading, and excavation would generate approximately 40,214 cubic yards (cy) of material, including removed fencing, building materials, concrete, soil, and asphalt. In addition, during demolition and grading, approximately 22,299 cy of soil would be imported for site preparation. Utility work associated with the proposed project would require excavation to a depth of approximately 3 to 7 feet below the existing ground surface. The maximum depth of excavation would be 5 feet below sea level for the sanitary sewer main upgrade.

The proposed project would require a general plan, specific plan, and zoning code amendment to change the existing and use designations from Mixed Industrial High (MIH) and Mixed Industrial Medium (MIM), respectively, to Business Technology Park-High (BTP-H), and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (referred to as the off-site redesignation parcels), which are currently designated as MIH and zoned as T6 Urban Core (T6UC), would also seek general plan and zoning code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of the redesignation of these parcels.

Results of Records Searches

Chapter 1
Introduction

The purpose of this noise technical report is to identify potential noise and vibration impacts associated with the proposed Infinite 131 Project (proposed project), which is to be developed by US Terminal Court Owner, LLC (project sponsor). The analysis provided in this report evaluates the potential for short- and long-term noise and vibration impacts associated with construction and operation of the proposed project. In addition, the report documents the assumptions, methodologies, and findings used to evaluate the impacts. The report also includes a description of the environmental setting for the proposed project, including existing noise conditions, as well as a discussion of applicable laws and regulations.

1.1 Project Description

The project sponsor is proposing construction and operation of the proposed project, which would include demolition of approximately 126,750 square feet (sf) of industrial and commercial operations at the Golden Gate Produce Terminal, along with approximately 116,572 sf of open-air structures (e.g., loading docks, trash compactor areas) on a 17.67-acre site (i.e., the project site). In its place, the proposed project would construct approximately 1.7 million sf of research-and-development (R&D) uses and amenities within seven buildings, ranging from one to six stories. The proposed project would require City of South San Francisco (City) *Shape SSF 2040 General Plan* (General Plan), Specific Plan, and Zoning Code amendments to change the existing land use and zoning designations from Mixed Industrial High (MIH) to Business Technology Park High (BTP-H) and allow development of the R&D campus. In addition, five parcels north of the project site at 120 Terminal Court, 196 Produce Avenue, 160 Produce Avenue, and 140 Produce Avenue (i.e., the off-site redesignation parcels), which are currently designated as MIH, would also seek City General Plan, Specific Plan, and Zoning Code amendments to be redesignated as BTP-H. However, the proposed project would not include the construction of any new uses as part of redesignation of these parcels.

The proposed project would also include two parking garages. A stand-alone structure would provide 1,378 parking spaces in a 12-level parking garage (three levels below grade and nine levels above grade) as well as 20 surface-level parking spaces. The I131S parking garage, located beneath the I131S buildings, would provide 1,538 parking spaces as well as 40 surface parking spaces. The project would include twenty-four 500-kilowatt (kW) emergency generators with Tier 2 engines. Six of the generators would be located at grade inside I131N in a separate generator room. The remaining 18 generators would be at grade in one of three outdoor service yards. The generators would all be housed in acoustic enclosures, which would help to reduce engine noise from the generators. Refer to Figure 1 for a conceptual site plan of the proposed project.

Once construction of the proposed project is complete and the site is operational, a small day-care facility would be opened to serve the general public and project employees. The proposed footprint for the facility would include a 4,050 sf single-story building and a 4,950 sf outdoor play area. The facility would open at 8:00 a.m. and operate until 5:30 p.m. Monday through Friday. Nine people would be employed at the day care, which would accommodate up to 50 children per day.

Conceptual Site Plan

1.2 Project Location and Site Description

The approximately 17.67-acre project site comprises one parcel at 131 Terminal Court in the city of South San Francisco. Refer to Figure 2 for a map of the project location. The project site, assessor's parcel number (APN) 015-113-210, is bounded by Terminal Court and a large Park 'N Fly surface parking lot to the north, a large surface parking lot and U.S. Highway (US) 101 (known as Bayshore Freeway) to the east, a navigable slough[1] that feeds into San Bruno Canal to the south, and several mixed industrial and commercial buildings, along with San Mateo Avenue, to the west. The project site is approximately 1 mile west of San Francisco Bay and 0.30 mile west of a portion of the San Francisco Bay Trail that runs along San Bruno Canal. In addition, the project site is approximately 1 mile northwest of San Francisco International Airport (SFO).

The project site is currently occupied by the Golden Gate Produce Terminal, a produce market, and associated surface parking. The project site consists of two warehouse buildings and a smaller administrative building, totaling approximately 126,750 sf. In addition, the site is also developed with approximately 116,572 sf of open-air structures, including loading docks and trash compactors, associated with operations at the Golden Gate Produce Terminal.

[1] The navigable slough is a remnant tidal channel that cuts through a commercial district in South San Francisco; the slough is connected to San Francisco Bay (ESA. 2019. *Navigable Slough Flood Management Study.* Prepared for the County of San Mateo, City of South San Francisco, and City of San Bruno. Chapter 2
Noise Fundamentals

2.1 Frequency, Amplitude, and Decibels

Continuous sound can be described by its *frequency* (pitch) and *amplitude* (loudness). A low-frequency sound is perceived as low in pitch; a high-frequency sound is perceived as high-pitched. Frequency is expressed in terms of cycles per second, or Hertz (Hz) (e.g., a frequency of 250 cycles per second is referred to as 250 Hz). High frequencies are sometimes more conveniently expressed in kilohertz (kHz), or thousands of Hz. The audible frequency range for humans is generally between 20 and 20,000 Hz.

The amplitude of pressure waves generated by a sound source correlates with the loudness of that source. The amplitude of a sound is typically described in terms of *sound pressure level* (SPL), also referred to simply as the sound level. The SPL, which refers to the root-mean-square (rms)[2] pressure of a sound wave, is measured in units called micropascals (µPa). One µPa is approximately one hundred billionth (0.00000000001) of normal atmospheric pressure. Sound pressure amplitudes for different kinds of noise environments can range from less than 100 to more than 100,000,000 µPa. Because of this large range of values, sound is rarely expressed in terms of µPa. Instead, a logarithmic scale is used to describe the SPL in terms of decibels, abbreviated dB. The decibel is a logarithmic unit that describes the ratio of the actual sound pressure to a reference pressure (20 µPa is the standard reference pressure level for acoustical measurements in air). Specifically, an SPL, in decibels, is calculated as follows:

$$SPL = 20 \times \log_{10}\left(\frac{X}{20\mu Pa}\right)$$

where X is the actual sound pressure and 20 µPa is the reference pressure. The threshold of hearing for young people is about 0 dB, which corresponds to 20 µPa.

2.1.1 Decibel Calculations

Because decibels represent noise levels on a logarithmic scale, SPLs cannot be added, subtracted, or averaged through ordinary arithmetic. On the dB scale, a doubling of sound energy corresponds to a 3 dB increase. In other words, when two identical sources are each producing sound of the same loudness, their combined sound level at a given distance would be 3 dB higher than one source under the same conditions. For example, if one bulldozer produces an SPL of 80 dB, two bulldozers would not produce a combined sound level of 160 dB. Rather, they would combine to produce 83 dB. The cumulative sound level of any number of sources, such as excavators, can be determined using decibel addition. The same decibel addition is used for A-weighted decibels, described below. Similarly, the arithmetic mean (average) of a series of noise levels does not accurately represent the

[2] Root mean square (rms) is defined as the square root of the mean (average) value of the squared amplitude of the noise signal.

overall average noise level. Instead, the values must be averaged using a linear scale before converting the result back into a logarithmic (i.e., dB) noise level. This method is typically referred to as calculating the "energy average" of the noise levels. Table 2-1 demonstrates the general results of adding noise from multiple sources. (Note that the examples summarized in this table are rounded to the nearest whole number.)

Table 2-1. Rules for Combining Sound Levels by Decibel Addition

When two decibel values differ by…	…add the following amount to the higher decibel value	Example
0 to 1 dB	3 dB	60 dB + 61 dB = 64 dB
2 to 3 dB	2 dB	60 dB + 63 dB = 65 dB
4 to 9 dB	1 dB	60 dB + 69 dB = 70 dB
10 dB or more	0 dB	60 dB + 75 dB = 75 dB

2.1.2 A-Weighting

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on human response to that sound. Although the intensity (i.e., energy per unit area) of the sound is a purely physical quantity, the loudness or human response is determined by the characteristics of the human ear.

Human hearing is limited in the range of audible frequencies as well as in the way it perceives the SPL in that range. In general, people are most sensitive to the frequency range of 1,000 to 5,000 Hz and perceive sounds within that range better than sounds of the same amplitude at higher or lower frequencies. To approximate the response of the human ear, sound levels of individual frequency bands are weighted (i.e., adjusted), depending on human sensitivity to those frequencies. The resulting SPL is expressed in A-weighted decibels, or dBA.

The A-weighting scale approximates the frequency response of the average young ear when listening to most ordinary sounds. When people make judgments regarding the relative loudness or annoyance of a sound, their judgments correlate well with the A-weighted sound levels of those sounds. Table 2-2 describes typical A-weighted sound levels for various noise sources.

2.2 Noise Descriptors

Because sound levels can vary markedly over a short period of time, various descriptors, or noise "metrics," have been developed to quantify environmental and community noise. These metrics generally describe either the average character of the noise or the statistical behavior of the variations in the noise level. Some of the most common metrics used to describe environmental noise, including those metrics used in this report, are described below.

Table 2-2. Typical A-Weighted Sound Levels

Common Outdoor Noise Source	Sound Level (dBA)	Common Indoor Noise Source
	— 110 —	Rock band
Jet flying at 1,000 feet		
	— 100 —	
Gas lawn mower at 3 feet		
	— 90 —	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	— 80 —	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower at 100 feet	— 70 —	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	— 60 —	
		Large business office
Quiet urban, daytime	— 50 —	Dishwasher in next room
	— 40 —	Theater, large conference room (background)
Quiet urban, nighttime		
Quiet suburban, nighttime		
	— 30 —	Library
Quiet rural, nighttime		Bedroom at night
	— 20 —	
		Broadcast/recording studio
	— 10 —	
Lowest threshold of human hearing	— 0 —	Lowest threshold of human hearing

- **Equivalent Sound Level (L_{eq})** is the most common metric used to describe short-term average noise levels. Many noise sources produce levels that fluctuate over time; examples include mechanical equipment that cycles on and off and construction work, which can vary sporadically. The L_{eq} describes the average acoustical energy content of noise for an identified period of time, commonly 1 hour. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustical energy over the duration of the exposure. For many noise sources, the L_{eq} will vary, depending on the time of day. A prime example is traffic noise, which rises and falls, depending on the amount of traffic on a given street or freeway.
- **Maximum Sound Level (L_{max})** and **Minimum Sound Level (L_{min})** refer to the maximum and minimum sound levels, respectively, that occur during the noise measurement period. More specifically, they describe the rms sound levels that correspond to the loudest and quietest 1-second intervals that occur during the measurement.
- **Percentile-Exceeded Sound Level (L_{xx})** describes the sound level exceeded for a given percentage of a specified period. For example, the L_{50} is the sound level exceeded 50 percent of the time (such as 30 minutes per hour), and L_{25} is the sound level exceeded 25 percent of the time (such as 15 minutes per hour).

- **Community Noise Equivalent Level (CNEL)** is a measure of the 24-hour average A-weighted noise level, which is also time weighted to "penalize" noise that occurs during the evening and nighttime hours when noise is generally recognized to be more disturbing because people are trying to rest, relax, or sleep during these times. Specifically, 5 dBA is added to the L_{eq} during the evening hours of 7:00 p.m. to 10:00 p.m., and 10 dBA is added to the L_{eq} during the nighttime hours of 10:00 p.m. to 7:00 a.m. The energy average is then taken for the whole 24-hour day.
- **Day-Night Sound Level (L_{dn})** is very similar to the CNEL described above. L_{dn} is also a time-weighted average of the 24-hour A-weighted noise level. The only difference is that no "penalty" is applied to the evening hours of 7:00 p.m. to 10:00 p.m. However, 10 dBA is added to the L_{eq} during the nighttime hours of 10:00 p.m. to 7:00 a.m. The energy average is then taken for the whole 24-hour day.

It is noted that various federal, state, and local agencies have adopted CNEL or L_{dn} as the measure of community noise. Although not identical, CNEL and L_{dn} are normally within 1 dBA of each other when measured in typical community environments, and many noise standards/regulations use the two interchangeably.

2.3 Sound Propagation

When sound propagates over a distance, it changes in both level and frequency content. The manner in which noise is reduced with distance depends on the factors described below. In general, noise attenuates (decreases) with distance. Roadway noise sources tend to be arranged linearly. Therefore, noise from roadway vehicular traffic attenuates at a rate of approximately 3.0 to 4.5 dB per doubling of distance from the source, depending on the intervening surface (paved or vegetated, respectively).[3] Point sources of noise, such as stationary equipment or construction equipment, typically attenuate at a rate of approximately 6.0 to 7.5 dB per doubling of distance from the source.[4] For example, a sound level of 80 dBA at 50 feet from the noise source will be reduced to 74 dBA at 100 feet, 68 dBA at 200 feet, and so on. Noise levels can also be attenuated by shielding the noise source or providing a barrier between the source and the receptor.

- **Geometric Spreading.** Sound from a single source (i.e., a "point" source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates (or drops off) at a general rate of 6 dB for each doubling of distance. Highway noise is not a single stationary point source of sound. The movement of vehicles on a highway makes the source of the sound appear to emanate from a line (i.e., a "line" source) rather than from a point. This results in cylindrical spreading rather than the spherical spreading that results from a point source. The change in sound level (i.e., attenuation or decrease) from a line source is generally 3 dB per doubling of distance.

[3] California Department of Transportation. 2013. *Technical Noise Supplement to the Traffic Noise Analysis Protocol.* September. Available: https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdfhttps://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/ tens-sep2013-a11y.pdf. Accessed: August 2, 2023

[4] The 1.5 dB variation in attenuation rate (6 dB versus 7.5 dB) can result from ground-absorption effects, which occur as sound travels over soft surfaces such as earth or vegetation (7.5 dB attenuation rate) versus hard surfaces such as pavement or hard-packed earth (6 dB rate).

- **Ground Absorption.** The noise path between the source and the observer is usually close to the ground. The excess noise attenuation from ground absorption occurs because of acoustic energy losses on sound wave reflection. For acoustically "hard" sites (i.e., sites with a reflective surface, such as a parking lot or a smooth body of water, between the source and the receptor), no excess ground attenuation is assumed because the sound wave is reflected without energy losses. For acoustically absorptive or "soft" sites (i.e., sites with an absorptive ground surface, such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the geometric spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance for a line source and 7.5 dB per doubling of distance for a point source.
- **Atmospheric Effects.** Research by the California Department of Transportation (Caltrans) and others has shown that atmospheric conditions can have a major effect on noise levels. Such factors include wind; air temperature, including vertical temperature gradients; humidity; and turbulence. Receptors downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas receptors upwind can have lower noise levels. Increased sound levels can also occur over relatively large distances because of temperature inversion conditions (i.e., increasing temperatures with elevation).
- **Shielding by Natural or Human-Made Features.** A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by this shielding depends on the size of the object, proximity to the noise source and receptor, surface weight, solidity, and the frequency content of the noise source. Natural terrain features, such as hills and dense woods, and human-made features, such as buildings and walls, can substantially reduce noise levels. Walls are often constructed between a source and a receptor with the specific purpose of reducing noise. In addition to the noise that diffracts over the top of a barrier, noise will also diffract around the ends of a barrier, resulting in "flanking" noise that can reduce the overall efficacy of the barrier. Assuming it is long enough to minimize the effects of flanking noise, a barrier that breaks the line of sight between a source and a receptor will typically result in at least 5 dB of noise reduction. A higher barrier may provide as much as 20 dB of noise reduction.

2.4 Human Response to Noise

Noise can have a range of effects on people, including hearing damage, sleep interference, speech interference, performance interference, physiological responses, and annoyance. Each of these is briefly described below.

- **Hearing Damage.** A person who is exposed to high noise levels can suffer either gradual or traumatic hearing damage. Gradual hearing loss occurs with repeated exposure to excessive noise levels. It is most commonly associated with occupational noise exposures involving heavy industry or other very noisy work environments. Traumatic hearing loss is caused by a sudden exposure to an extremely high noise level, such as a gunshot or explosion at very close range. The potential for noise-induced hearing loss is not generally a concern in typical community noise environments. Noise levels in neighborhoods, even in very noisy airport environs, are not loud enough to cause hearing loss.

- **Sleep Interference.** Exposure to excessive noise levels at night has been shown to cause sleep disturbance. *Sleep disturbance* refers not only to awakening from sleep but also effects on the quality of sleep, such as alterations to the patterns and stages of sleep. World Health Organization guidelines recommend noise limits of 30 dBA L_{eq} (8-hour average) for continuous noise and 45 dBA L_{max} for single sound events inside bedrooms at night to minimize sleep disturbance.[5]

- **Speech Interference.** Speech interference can be a problem in any situation where clear communication is desired. It is often of particular concern in learning environments, such as schools, or situations where poor communication could jeopardize safety. Normal conversational speech inside homes is typically in the range of 50 to 65 dBA.[6] Any noise in that range or louder may interfere with speech. As background noise levels rise, the intelligibility of speech decreases and the listener fails to recognize an increasing percentage of the words spoken. A speaker may raise his or her voice in an attempt to compensate for higher background noise levels, but this, in turn, can lead to vocal fatigue for the speaker.

- **Performance Interference.** Excessive noise has been found to have various detrimental effects on human performance, including information processing, concentration, accuracy, reaction times, and academic performance. Intrusive noise from individual events can also cause distraction. These effects are of obvious concern for learning and work environments.

- **Physiological Responses.** Acute noise has been shown to cause measurable physiological responses in humans, including changes in stress hormone levels, pulse rate, and blood pressure. The extent to which these responses cause harm, or are signs of harm, is not clearly defined, but it has been postulated that they could contribute to stress-related diseases, such as hypertension, anxiety, and heart disease. However, research indicates that links between environmental noise and permanent health effects are generally weak and inconsistent. Statistically significant health risks have been found for extended exposure to very high noise levels, such as the risks for workers who are exposed to high levels of industrial noise for 5 to 30 years.[7]

- **Annoyance.** The subjective effects of annoyance, nuisance, and dissatisfaction are possibly the most difficult to quantify, and no accurate method exists to measure the effects. This difficulty arises primarily from differences in individual sensitivity and habituation to sound, which can vary widely from person to person. What one person considers tolerable can be unbearable to another of equal hearing acuity. An important tool in estimating the likelihood of annoyance due to a new sound is a comparison to the existing baseline or "ambient" environment to which a person has adapted. In general, the more the levels or tonal (frequency) variations of a sound exceed the previously existing ambient sound level or tonal quality, the less acceptable the new sound will be.

7 World Health Organization. 1999. *Guidelines for Community Noise*. April. London, United Kingdom. Available: https://www.who.int/publications/i/item/a68672. Accessed: March 10. 2023.

In most cases, effects from sounds typically found in the natural environment are limited to annoyance or interference. Physiological effects and hearing loss are more commonly associated with human-made noise, such as that in an industrial or occupational setting.

Studies have shown that, under controlled conditions in an acoustics laboratory, a healthy human ear is able to discern changes in sound levels of 1 dBA. In the normal environment, the healthy human ear can detect changes of about 2 dBA; however, it is widely accepted that a doubling of sound energy, which results in a change of 3 dBA in the normal environment, is considered just noticeable for most people. A change of 5 dBA is readily perceptible, and a change of 10 dBA is perceived as being twice as loud. Accordingly, a doubling of sound energy (e.g., doubling the volume of traffic on a highway) resulting in a 3 dBA increase in sound would generally be barely detectable.

2.5 Noise-Sensitive Land Uses

The project site is surrounded primarily by commercial and industrial uses to the south, west, and north. Such uses are generally not considered to be noise sensitive. To the east, the project site is bounded by US 101. The nearest noise-sensitive land uses are two hotels (Travelodge and Best Western) east of the project site, across US 101 in the city of South San Francisco. The Travelodge hotel is approximately 250 feet from the project site, or 295 feet from the nearest portion of a proposed project structure. The Best Western hotel is approximately 800 feet east of the project site. The nearest existing residences are southwest of the intersection of Hermann Street and Tanforan Avenue in the city of San Bruno, approximately 1,100 feet (0.2 mile) southwest of the nearest project construction area (the project driveway) and 1,570 feet south of the closest proposed project building footprint.

A proposed residential development has been approved at 100 Produce Avenue and 124 Airport Boulevard. Although construction has not yet begun on this project, these multi-family residences would be occupied during project operation; they may also be occupied during some portions of project construction. The nearest portion of this residential development is approximately 950 feet north of the northernmost portion of the project site.

[page left blank intentionally]

Chapter 3
Ground-borne Vibration Fundamentals

This chapter describes basic concepts related to ground-borne vibration. Ground-borne vibration is a small, rapidly fluctuating motion transmitted through the ground. The effects of ground-borne vibration are typically limited to nuisance or annoyance for people, but at extreme vibration levels, damage to buildings may also occur.

In contrast to airborne sound, ground-borne vibration is not a phenomenon that most people experience every day. The ambient ground-borne vibration level in residential areas is usually much lower than the threshold of human perception. Most perceptible indoor vibration is caused by sources within buildings, such as mechanical equipment while in operation, people moving, or doors slamming. Typical outdoor sources of perceptible ground-borne vibration are heavy construction activities, such as blasting, pile driving, or earthmoving; trains with steel wheels; and traffic on rough roads. If a roadway is smooth, the ground-borne vibration from traffic is rarely perceptible, even in locations close to major roads. The strength of ground-borne vibration from typical environmental sources diminishes (or attenuates) fairly rapidly over distance.

For the prediction of ground-borne vibration, the fundamental model consists of a vibration source, a receptor, and the propagation path between the two. The power of the vibration source and the characteristics and geology of the intervening ground, which affect the propagation path to the receptor, determine the ground-borne vibration level and the characteristics of the vibration perceived by the receptor.

The sections that follow provide an explanation of key concepts and terms used in the analysis of environmental ground-borne vibration.

3.1 Displacement, Velocity, and Acceleration

When a vibration source (e.g., blasting, dynamic construction equipment, a train) impacts the ground, it imparts energy to the ground, creating vibration waves that propagate away from the source along the surface and downward into the earth. As vibration waves travel outward from a source, they excite the particles of rock and soil through which they pass and cause them to oscillate. The distance that these particles move is referred to as the *displacement,* which is typically very small, usually only a few ten thousandths to a few thousandths of an inch. *Velocity* describes the instantaneous speed of the motion, and *acceleration* is the instantaneous rate of change in the speed. Each of these measures can be described further in terms of *frequency* and *amplitude*, as discussed below.

Although displacement is generally easier to understand than velocity or acceleration, it is rarely used to describe ground-borne vibration because most transducers used to measure vibration measure velocity or acceleration directly, not displacement.

3.2 Frequency and Amplitude

The frequency of a vibrating object describes how rapidly it is oscillating. The unit of measurement for the frequency of vibration is Hz (the same as used in the measurement of noise), which describes the number of cycles per second.

The amplitude of displacement describes the distance that a particle moves from its resting (or equilibrium) position as it oscillates; this can be measured in inches. The amplitude of vibration velocity (the speed of the movement) can be measured in inches per second (in/sec). The amplitude of vibration acceleration (the rate of change in the speed) can be measured in in/sec per second.

3.3 Vibration Descriptors

As noted above, there are various ways to quantify ground-borne vibration, based on its fundamental characteristics. Because vibration can vary markedly over a short period of time, various descriptors have been developed to quantify vibration. The two most common descriptors used in the analysis of ground-borne vibration are the peak particle velocity (PPV) and vibration velocity level (Lv), each of which is described below.

- **PPV** is defined as the maximum instantaneous positive or negative peak amplitude of the vibration velocity. The unit of measurement for PPV is in/sec. Unlike many quantities used in the study of environmental acoustics, PPV is typically presented using linear values; it does not employ a dB scale. Because it is related to the stresses that are experienced by buildings, PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage. Both Federal Transit Administration (FTA) and Caltrans guidelines recommend using PPV for that purpose. It is also used in many instances to evaluate the human response to ground-borne vibration. Caltrans guidelines recommend using PPV for that purpose.
- **L_V** describes the rms vibration velocity. Because of the typically small amplitudes of ground-borne vibration, vibration velocity is often expressed in decibels, calculated as follows:

$$L_V = 20 \times \log_{10}\left(\frac{V}{V_{ref}}\right)$$

where V is the actual rms velocity amplitude and V_{ref} is the reference velocity amplitude. It is important to note that there is no universally accepted value for V_{ref}, but the accepted reference quantity for vibration velocity in the U.S. is 1 micro-inch per second (1×10^{-6} in/sec). The abbreviation VdB is commonly used for vibration decibels to distinguish them from noise-level decibels. L_V is often used to evaluate human response to vibration levels. FTA guidelines recommend using L_V for that purpose.

3.4 Vibration Propagation

Vibration energy spreads out as it travels through the ground, causing the vibration level to diminish with distance from the source. High-frequency vibrations reduce much more rapidly than low frequencies so that low frequencies tend to dominate the spectrum at large distances from the source. The propagation of ground-borne vibration is not as simple to model as airborne noise. This is because noise in the air travels through a relatively uniform medium, while ground-borne vibrations travel through the earth, which may contain significant geological differences. Geological factors that influence the propagation of ground-borne vibration include the following:

- **Soil Conditions.** The type of soil is known to have a strong influence on the levels of ground-borne vibration. Among the most important factors are the stiffness and internal damping of the soil. Hard, dense, and compacted soil; stiff clay soil; and hard rock transmit vibration more efficiently than loose, soft soils; sand; or gravel.
- **Depth to Bedrock.** Shallow depth to bedrock has been linked to the efficient propagation of ground-borne vibration. One possibility is that shallow bedrock acts to concentrate the vibration energy near the surface, reflecting vibration waves back toward the surface that would otherwise continue to propagate farther down into the earth.
- **Soil Strata.** Discontinuities in the soil strata (i.e., soil layering) can also cause diffractions or channeling effects that affect the propagation of vibration over long distances.
- **Frost Conditions.** Vibration waves typically propagate more efficiently in frozen soils than in unfrozen soils. Propagation also varies, depending on the depth of the frost.
- **Water Conditions.** The amount of water in the soil can affect vibration propagation. The depth of the water table in the path of the propagation also appears to have substantial effects on ground-borne vibration levels.

Specific conditions at the source and receiver locations can also affect vibration levels. For instance, how the source is connected to the ground (e.g., direct contact, through rails, by a structure) will affect the amount of energy transmitted into the ground. There are also notable differences when the source is underground, such as in a tunnel, versus on the surface. At the receiver, vibration levels can be affected by variables such as the foundation type, building construction, and acoustical absorption inside rooms where people are located. When vibration encounters a building, a ground-to-foundation coupling loss will usually reduce the overall vibration level. However, under certain circumstances, the ground-to-foundation coupling may also amplify the vibration level because of structural resonances from the floors and walls.

3.5 Effects of Ground-Borne Vibration

Vibration can result in effects that range from annoyance to structural damage. Annoyance or disturbance for people may occur at vibration levels that are substantially below those that would pose a risk of damage to buildings. Each of these effects is discussed below.

3.5.1 Potential Building Damage

When ground-borne vibration encounters a building, vibrational energy is transmitted to the structure, causing it to vibrate. If the vibration levels are high enough, damage to the building may occur. Depending on the type of building and the vibration levels, this damage could range from cosmetic architectural damage (e.g., cracked plaster, stucco, tile) to more severe structural damage (e.g., cracking of floor slabs, foundations, columns, beams, wells). Buildings can typically withstand higher levels of vibration from transient sources than from continuous or frequent intermittent sources. Transient sources are those that create a single isolated vibration event, such as blasting or the use of drop balls. Continuous/frequent intermittent sources include pile drivers (impact or vibratory), crack-and-seat equipment, and vibratory compaction equipment. Older fragile buildings, which may include important historic buildings, are of particular concern. Modern commercial and industrial buildings can generally withstand much higher vibration levels before damage occurs.

3.5.2 Human Disturbance or Annoyance

Ground-borne vibration can be annoying for people and cause serious concern for nearby neighbors, even when vibration is well below the level that could cause physical damage to structures. Ground-borne vibration is almost exclusively a concern inside buildings. It is rarely perceived as a problem outdoors where the motion may be discernible, but the reaction is less adverse without the effects associated with a shaking building. The normal frequency range at which most ground-borne vibration starts to be felt is generally from less than 1 to about 200 Hz.

When ground-borne vibration waves encounter a building, vibrational energy is transmitted to the building foundation. It then propagates throughout the remainder of the structure, causing surfaces (e.g., walls, floors, ceilings) to vibrate. This movement may be felt directly by building occupants. It may also generate a low-frequency rumbling noise as sound waves are radiated by the vibrating surfaces. At higher frequencies, building vibration can cause other audible effects, such as the rattling of windows, building fixtures, or items on shelves or hanging on walls. These audible effects due to ground-borne vibration are referred to as *ground-borne noise*. Ground-borne vibration levels that result in ground-borne noise are often experienced as a combination of perceptible vibration and low-frequency noise. However, sources that have the potential to generate ground-borne noise are likely to produce airborne noise impacts that mask the radiated ground-borne noise. Any perceptible effect (i.e., vibration or ground-borne noise) can lead to annoyance. The degree to which a person is annoyed depends on the activity in which they are participating at the time of the disturbance. For example, someone sleeping or reading will be more sensitive than someone who is engaged in physical activity. Reoccurring vibration effects often lead people to believe that vibration is damaging their homes, even though the vibration levels are well below the minimum thresholds for damage potential.[8]

Numerous studies have been conducted to characterize the human response to vibration. Over the years, vibration criteria and standards have been suggested by researchers, organizations, and governmental agencies. These studies suggest that the thresholds for perception and annoyance vary, according to duration, frequency, and amplitude of vibration. For a continuous or frequent

[8] California Department of Transportation. 2020. *Transportation and Construction Vibration Guidance Manual*. Final. CT-HWANP-RT-20-365.01.01. April. Sacramento, CA.

intermittent vibration source, such as construction activity, including the use of pile drivers or vibratory compaction equipment, the human response to vibration varies from barely perceptible at a PPV of 0.01 in/sec to distinctly perceptible at a PPV of 0.04 in/sec, strongly perceptible at a PPV of 0.1 in/sec, and severe at a PPV of 0.4 in/sec. [9]

3.6 Vibration-Sensitive Land Uses

As noted above, the potential effects of ground-borne vibration can be divided into two categories: building damage and potential human annoyance. Because building damage would be considered a permanent negative effect at any building, regardless of land use, any type of building would typically be considered sensitive to this type of impact. Fragile structures, which often include historic buildings, are most susceptible to damage and of particular concern. The closest land uses surrounding the project site have structures that would most likely be categorized as "historic and some old buildings," according to Caltrans' Vibration Guidelines for Potential Damage to Structures because of the age of the structures. Specifically, nearly all buildings immediately west of the project site were built between 1956 and 1968. In addition, the nearest existing residences, which are approximately 1,100 feet away from the project site (1,570 feet away from the nearest project building), would most likely be categorized as "older residential structures." The buildings within the planned residential development at 100 Produce Avenue and 124 Airport Boulevard, approximately 950 feet from project construction areas, would most likely be categorized as "newer residential structures" or "modern industrial/commercial buildings."

Human annoyance effects from ground-borne vibration are typically considered only inside occupied buildings and not at outside areas such as residential yards, parks, or open spaces. Buildings that would be considered sensitive to human annoyance caused by vibration are generally the same as those that would be sensitive to noise. These typically include residences, schools, hospitals, assisted-living facilities, mental care facilities, places of worship, libraries, performing arts facilities, and hotels and motels. Nearby vibration-sensitive buildings include the hotels and motels located about 250 to 800 feet east of the project site and the residences located approximately 1,100 feet southwest of the project site.

Chapter 4
Existing Noise Environment

A number of transportation- and industrial-related noise sources contribute to the ambient noise environment in the project vicinity. Traffic on major roadways, such as US 101, South Airport Boulevard, and San Mateo Avenue, heavily influence the ambient noise levels in this area. In addition, aircraft noise from planes taking off and landing at nearby SFO, along with Caltrain's passenger trains running north and south parallel to Hermann Street in San Bruno, influence the ambient noise environment.

Ambient noise is often measured to help characterize existing ambient noise levels in the vicinity of a given project. To quantify existing ambient noise levels near the project site, long- (24-hour) and short-term (15-minute) ambient noise measurements were conducted between Wednesday, March 1, and Thursday, March 3, 2023. On these days, weather conditions ranged from clear to overcast, with no precipitation. Winds were mild, with wind speeds averaging approximately 1 to 2 miles per hour.

Long- and short-term monitoring locations were selected to capture noise levels in areas with representative ambient noise levels throughout the day and night near the project site as well as areas that were representative of noise-sensitive receptors, including the hotel uses east of the project site and the residences to the southwest. The long-term measurements were conducted using a Piccolo Type 2 sound-level meter (SLM). The SLM measured 1-hour L_{eq} for a period of approximately 24 hours. The recorded 1-hour data were used to generate 24-hour average L_{dn}, 24-hour CNEL, and average 12-hour L_{eq} noise levels for the daytime hours of 8:00 a.m. to 8:00 p.m. In addition, the highest and lowest 1-hour L_{eq} noise level recorded during the measurement window was noted.

Five long-term noise measurement locations near the project site were selected. The 24-hour noise levels from the long-term measurements ranged from 69.6 to 77.2 dBA L_{dn}, with higher noise levels generally corresponding to areas near busier roadways (i.e., US 101) and the nearby Caltrain passenger rail line (parallel to Herman Street). In addition, four short-term noise measurements were conducted near the project site. Short-term measurements were conducted using a Larson Davis 831 Type 1 SLM, which measured L_{eq} every 10 seconds for 15 minutes as well as overall L_{eq} averaged over the 15-minute measurement interval. The measured short-term noise levels ranged from 57.8 to 73.0 dBA L_{eq}.

The relevant noise data from the noise measurement survey are shown in Tables 4-1 and 4-2 for the long- and short-term noise measurements, respectively. All noise measurement locations are shown in Figure 3. Refer to Appendix A for the complete dataset of noise measurement data from the field survey.

Table 4-1. Measured Existing Noise Levels in the Project Vicinity, Long Term

Site	Site Description	L_{dn}	CNEL	Highest Recorded 1-Hour L_{eq}[a]	Lowest Recorded 1-Hour L_{eq}[b]	12-Hour Daytime L_{eq}[c]
LT-1	San Mateo Avenue, between Peking Handi-Craft and W.M. Dickerson	77.2	77.4	74.7	64.6	73.6
LT-2	Within the parking lot between Best Western hotel and Travelodge hotel, ~120 feet south of electrical tower	69.6	69.9	69.8	58.7	65.8
LT-3	Corner of Pacific Avenue and Hermann Street	76.5	77.0	76.2	54.9	74.1
LT-4	On project site, approximately 450 feet south of Terminal Court	74.9	75.2	75.4	65.0	70.3
LT-5	Southeast corner of IHOP parking lot	73.2	73.5	69.9	63.3	68.8

LT = long-term (24-hour) ambient noise measurement.
All noise levels are reported in A-weighted decibels (dBA).
a. Highest 1-hour L_{eq} is the highest calculated L_{eq} level during a 24-hour period.
b. Lowest 1-hour L_{eq} is the lowest calculated L_{eq} level during a 24-hour period.
c. The 12-hour daytime L_{eq} was the average hourly L_{eq} noise level from 8:00 a.m. to 8:00 p.m.

Table 4-2. Measured Existing Noise Levels in the Project Vicinity, Short Term

Site	Site Description	Measurement Start Time	L_{eq}	L_{max}	L_{min}	Dominant Noise Source
ST-1	Travelodge parking lot, adjacent to US 101	9:20 a.m.	73.0	87.2	68.9	Highway traffic
ST-2	Parking lot between Bay Badminton Center and Peking Handi-Craft	10:35 a.m.	68.0	76.9	63.5	Mechanical equipment, nearby table saw
ST-3	Parking lot between Peninsula Auto Body and SF Elite Volleyball Club	9:03 a.m.	62.6	75.3	50.8	Roadway traffic
ST-4	Approximately 570 feet west from the southwest corner of the project site	11:39 a.m.	57.8	71.5	53.7	HVAC equipment hum from produce facility

ST = short-term (15-minute) ambient noise measurement.
All noise levels are reported in A-weighted decibels (dBA).
HVAC = heating, ventilation, air-conditioning

Chapter 5
Regulatory Framework

5.1 Federal

No federal laws, regulations, or policies for construction-related noise and vibration apply directly to the proposed project. However, FTA has developed general assessment criteria for analyzing construction noise. Although FTA standards are intended for federally funded mass-transit projects, the impact assessment procedures and criteria included in FTA's *Transit Noise and Vibration Impact Assessment* manual[10] are routinely used to evaluate a variety of projects proposed by local jurisdictions (i.e., not exclusively transit projects). The FTA construction guidelines state that each A-weighted sound level increase of 10 dB corresponds to an approximate doubling of subjective loudness. As a result, a 10 dB increase in the ambient noise level is often used as the threshold in determining if an increase in ambient noise levels because of construction would be considered substantial.

5.2 State

Governor's Office of Planning and Research

The *State of California General Plan Guidelines* document, published and updated by the Governor's Office of Planning and Research, provides guidance for evaluating the compatibility of various land uses with respect to community noise exposure. These guidelines for general land use planning describe noise acceptability categories for the different types of land uses considered by the State of California (State). California also requires each local government entity to perform noise studies and implement a noise element as part of its general plan. The purpose of the noise element is to limit the exposure of the community to excessive noise levels; the noise element must be used to guide decisions concerning land use. Section 5.3, below, examines noise guidelines found in the City General Plan.

California Department of Transportation

Caltrans provides guidelines regarding vibration associated with the construction and operation of transportation infrastructure. Table 5-1 provides Caltrans' vibration guidelines for potential damage to different types of structures. Generally, people are more sensitive to vibration during nighttime hours, when people generally sleep, rather than daytime hours. Numerous studies have been conducted to characterize the human response to vibration. Table 5-2 provides Caltrans' guidelines regarding vibration annoyance potential, expressed here as PPV.

5.3 Local

South San Francisco Municipal Code

Chapter 8.32 of the City Municipal Code contains noise regulations for South San Francisco. The code includes noise limits for sound that constitutes a noise disturbance, measured as the maximum permissible sound level at any receiving property. The City Municipal Code's quantitative noise limits and construction noise regulations are described below. Table 5-3 outlines the specific noise criteria that apply to various land uses in South San Francisco. Although these exact zoning/district designations are no longer in effect, the City generally applies the guidelines to the corresponding current zoning districts.

Table 5-3. Noise Level Standards for the City of South San Francisco

Land Use Category	Time Period	Noise Level (dBA)[a]
R-e, R-1, and R-2 zones or any single-family or duplex residential use in a specific plan district	10:00 p.m. to 7:00 a.m.	50
	7:00 a.m. to 10:00 p.m.	60
R-3 and D-C zones or any multi-family residential or mixed residential/commercial use in any specific plan district	10:00 p.m. to 7:00 a.m.	55
	7:00 a.m. to 10:00 p.m.	60
C-1, P-C, Gateway, and Oyster Point Marina Specific Plan districts or any commercial use in any specific plan district	10:00 p.m. to 7:00 a.m.	60
	7:00 a.m. to 10:00 p.m.	65
M-1, P-1	Anytime	70

Notes:
- Noise levels are identified as the maximum permissible sound levels for a cumulative period of more than 30 minutes in 1 hour.
- If the measured ambient noise level for any area is higher than the standard set listed above, the ambient level shall be the base noise level standard for purposes of identifying a noise disturbance.
- If the measurement location is on a boundary between two different zones, the applicable noise level standard shall be the more stringent noise zone plus 5 dBA.

a. The noise level standard for each land use for a cumulative period of more than 30 minutes in any 1 hour (L_{50}). Standards increase for durations of less than 15 minutes per hour.

Under the City Noise Ordinance, it is unlawful for any person to operate or cause to be operated any source of sound at any location within the city, or allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by such person, that causes the noise level, when measured on any other property, to exceed the limits specified in Table 5-3, with limited exceptions, including permitted construction activity**.** If the measured ambient level for any area is higher than the standard in the City Municipal Code for a particular use, then the applicable threshold for that use is 5 dB above the measured ambient level.[11]

The City Municipal Code also identifies special provisions for activities related to construction, alterations, and landscaping. With a valid permit, such activities may occur from 8:00 a.m. to 8:00 p.m. Monday through Friday, 9:00 a.m. to 8:00 p.m. on Saturdays, and 10:00 a.m. to 6:00 p.m. on Sundays and holidays. Other hours may be authorized by the permit if at least one of the following noise limitations is met:

1. No individual piece of equipment shall produce a noise level exceeding 90 dBA at a distance of 25 feet or
2. The noise level at any point outside of the property plane of the project shall not exceed 90 dBA.

Exception permits may be issued if an applicant can show that a diligent investigation of available noise abatement techniques indicates that immediate compliance with the requirements of Chapter 8.32 of the City Municipal Code would be impractical or unreasonable. Exception permits may contain conditions to minimize the public detriment caused by such exceptions. In addition, performance standards related to noise and vibration can be found in Chapter 20.300.010 of the City Municipal Code. Section E, Noise, states that no use or activity shall create ambient noise levels that exceed the levels of the standards established in Chapter 8.32, Noise Regulation.

[11] South San Francisco Municipal Code, Section 8.32.030(a), (b).

Section 20.300.010(F) states that vibration shall not be transmitted through the ground that is discernible without the aid of instruments by a reasonable person at the lot lines of a site. Vibration from temporary construction, demolition, and vehicles that enter and leave the subject parcel (e.g., construction equipment, trucks) is exempt from this standard. Section 20.300.010 also lists noise exposure requirements and limitations for new development, based on various land use types, which can be found below in Table 5-4. In these cases, noise levels at a new land use must meet the requirements for that designated land use.

Table 5-4. Noise Exposure – Land Use Requirements and Limitations

Land Use	CNEL Range (dBA)	Requirements and Limitations
Residential and other noise-sensitive uses (e.g., schools, hospitals, churches)	Less than 65	Satisfactory
	65 to 70	Acoustic study and noise attenuation measures required
	More than 70	Not allowed, with the exception of projects deemed appropriate by the City Council and, to the extent necessary, approved through the local agency override process, consistent with Public Utilities Code Section 21670 et seq.
Commercial	Less than 70	Satisfactory
	70 to 80	Acoustic study and noise attenuation measures required
	More than 80	Airport-related development only; noise attenuation measures required
Industrial	Less than 75	Satisfactory
	75 to 85	Acoustic study and noise attenuation measures required
	More than 85	Airport-related development only; noise attenuation measures required
Open	Less than 75	Satisfactory
	More than 75	Avoid uses involving concentrations of people or animals

2040 South San Francisco General Plan

The General Plan, adopted in October of 2022, contains a noise element (Chapter 16) that sets goals, policies, and implementing programs related to the goal of achieving acceptable noise levels in the city. In addition, the noise chapter sets land use compatibility noise standards for new developments. The following General Plan goals, policies, and programs adopted to avoid or minimize environmental noise are applicable to the project:

Goal NOI-1: Residents and Employees of South San Francisco Are Exposed to Acceptable Noise Levels.

Policy NOI-1.1: Ensure New Development Complies with Noise Compatibility Guidelines. Ensure that all new development within the city complies with the land use/noise compatibility guidelines shown in Table 11 (Table 5-5 of this report).

Action NOI-1.1.1: Enforce Exterior and Interior Noise Limits. Enforce the standards of Table 11, Land Use/Noise Compatibility Matrix (Table 5-5, above), which specify acceptable exterior and interior noise limits for various land uses throughout the city.

Table 5-5. Land Use Compatibility Noise Standards for New Development

Land Use Categories	Compatible Uses	CNEL	
		Interior[a]	Exterior[b]
Residential	Single-family, duplex, multi-family, mobile home, residence care uses	45[c]	65[d]
Commercial	Hotel, motel, transient lodging uses	45[c]	65
	Commercial, retail, bank, restaurant, health club uses	55	—
	Office building, R&D, professional office uses	50	—
	Amphitheater, concert hall, auditorium, meeting hall, movie theater uses	50	—
	Manufacturing, warehousing, wholesale, utility uses	65	—
Open Space	Park, neighborhood park, playground uses	—	65
Institutional/Public Facility	Hospital, school, classroom uses	45[c]	65
	Church, library uses	45[c]	—

Interpretation:

a. Interior environment excludes bathrooms, toilets, closets, and corridors.
b. Outdoor environment limited to private yard of single-family residential, multi-family residential, and mobile home park outdoor common space areas; hospital patio; park picnic area; school playground; and hotel and motel recreation area.
c. Noise-Level Requirement with Closed Windows: Mechanical ventilating system or other means of natural ventilation shall be provided pursuant to Uniform Building Code requirements.
d. Multi-family developments with private balconies that would not meet the 65 dBA CNEL standard are required to provide occupancy disclosure notices to all future tenants regarding potential noise impacts.

Action NOI-1.1.2: Incorporate Noise Compatibility Conditions of Approval. Continue to assess projects through subdivision, site plan, conditional use permit, and other development review processes and incorporate conditions of approval and mitigation measures that ensure noise compatibility where appropriate.

Action NOI-1.1.3: Require Noise Study in Applicable Areas. Require a noise study to be performed and appropriate noise attenuation to be incorporated to reduce interior noise levels to 45 dB CNEL or less prior to approving any multi-family or mixed-use residential development in an area with a CNEL of 65 dB or greater.

Action NOI-1.1.5: Require Noise Control for New Developments. Require the control of noise at the source through site design, building design, landscaping, hours of operation, and other techniques for new developments deemed to be noise generators.

Policy NOI-1.2: Enforce Noise Performance Standards. The City enforces the noise ordinance noise performance standards.

Action NOI-1.2.1: Update Municipal Code Section Related to the Noise Ordinance. Update the noise ordinance in the South San Francisco Municipal Code to establish standards for permissible construction hours and controls related to other potential nuisances, such as music, dogs, special events, and mechanical/sound equipment, and encourage enforcement and penalties for violations of the noise ordinance. The update should not interfere with the regular course of business in commercial and industrial zones.

- *General Activity Noise Performance Standards:* Establish general noise performance standards for the city's established land use zones.
- *Construction Noise:* Continue to restrict construction activities to acceptable time periods. Consider constructing temporary sound walls surrounding construction sites during construction.
- *Special Event Noise:* Allow single-event occurrences at specific sites, subject to special permit conditions, which alleviate noise to the greatest extent possible. Limit the permissible hours for special single events and the number of special single events that are allowed to take place each year.

Goal NOI-2: Prevent the Exposure of Residents and Employees of South San Francisco to Unacceptable Vibration Levels.

Policy NOI-2.1: Require Vibration Analysis for Sensitive Receptors. A vibration analysis shall be prepared by a qualified acoustical consultant for any construction-related activities within 100 feet of residential or other sensitive receptors that require the use of pile driving or other construction methods that have the potential to produce high vibration levels.

Policy NOI-2.2: Require Vibration Analysis for Rail Lines. A vibration analysis shall be prepared by a qualified acoustical consultant for new land uses located within 200 feet of existing rail lines.

Goal NOI-3: Historic Structures Are Not Exposed to Unacceptable Vibration Levels.

Policy NOI-3.1: Require Vibration Analysis for Historic Structure Protection. Prior to issuance of grading permits for any development project within 150 feet of a historic structure, if construction activities will require either (1) pile driving within 150 feet the historic structure or (2) utilization of mobile construction equipment within 50 feet of the historic structure, the property owner/developer shall retain an acoustical engineer to conduct a vibration analysis of potential impacts from construction-related vibration on the historic structure. The vibration analysis shall determine the vibration levels created by construction activities at the historic structure and, if necessary, develop mitigation to reduce vibration to the Caltrans threshold for historic buildings (i.e., PPV of 0.12 in/sec).

Lindenville Specific Plan

The Lindenville Specific Plan, adopted September 27, 2023, contains specific guidelines for development within the Lindenville neighborhood, located in the southern portion of South San Francisco. Chapter 3.3.3, Land Use Vision – Allowed Uses, lists one standard regarding noise.

Standard 5: Airport Land Use Compatibility Plan Consistency. All development shall adhere to land use compatibility requirements established in zoning code Chapter 20.300.03, Airport Land Use Compatibility Plan Consistency.

a. **ALUCP Safety Zone Compatibility**. Development projects in Safety Zones 2, 3, and 4 shall adhere to the land use restrictions, as defined by the ALUCP.

b. **ALUCP Noise Compatibility (Interior).** Future developments under the specific plan exposed to conditionally acceptable and generally unacceptable aircraft noise levels, as defined by the ALUCP or the South San Francisco General Plan, whichever is more restrictive, shall complete a detailed noise analysis that includes the required noise reduction measures and noise insulation features included in the design to ensure compatibility with appropriate noise standards.

c. **ALUCP Noise Compatibility (Exterior).** Exterior noise requirements shall adhere to zoning code Chapter 20.300.03, Airport Land Use Compatibility Plan Consistency, and the noise performance standards in the City's General Plan, with the following exceptions:

   i. For new multi-family residential projects and for the residential component of mixed-use development, use a standard of 60 dB CNEL in usable outdoor activity areas. Use noise attenuation techniques such as shielding by buildings and structures for common outdoor use areas. Outdoor uses shall be designed for passive recreational use.

   ii. For new parks and open spaces, use a standard of 60 dB CNEL. Parks and open spaces shall be designed for passive recreational use.

San Bruno Municipal Code

Although the project site is in the city of South San Francisco, project construction and operation have the potential to cause noise impacts at nearby sensitive land uses in the neighboring city of San Bruno. The nearest existing residences to the project site are the single-family residences west of the intersection of Hermann Street and Tanforan Avenue. Therefore, relevant portions of the San Bruno Municipal Code are summarized below.

The San Bruno Municipal Code contains regulations in Section 6.16, San Bruno Noise Ordinance, pertaining to noise. This section discusses noise limits for various noise sources in the jurisdiction. The relevant guidelines from the San Bruno Noise Ordinance are included below.

6.16.030, Ambient Noise Level Limits

Where the ambient noise level is less than designated in this section, the respective noise level shall govern (sound level A, decibels). Residential zone: 10:00 p.m. to 7:00 a.m., 45 dBA; 7:00 a.m. to 10:00 p.m., 60 dBA (Ordinance 1354, Section 1; prior code: Section 16-4.3).

6.16.050, Noise Levels Exceeding Ambient Base Level

Any noise level exceeding the zone ambient base level at the property plane of any property, or exceeding the zone ambient base level on any adjacent residential area zone line or at any place of other property (or, if a condominium or apartment house, within any adjoining apartment), by more than 10 dB shall be deemed to be prima facie evidence of a violation of the provisions of this chapter. However, during the period of 7:00 a.m. to 10:00 p.m., the ambient base level may be exceeded by 20 dB for a period not to exceed 30 minutes during any 24-hour period (Ordinance 1354, Section 1; prior code: Section 16-4.1-5).

6.16.060, Machinery Noise Levels

No person shall operate any machinery, equipment, pump, fan, air-conditioning apparatus, or similar mechanical device in any manner so as to create any noise that would cause the noise level at the property plane of any property to exceed the ambient base noise level by more

than 10 dB. However, during the period of 7:00 a.m. to 10:00 p.m., the ambient base level may be exceeded by 20 dB for a period not to exceed 30 minutes during any 24-hour period (Ordinance 1354, Section 1; prior code: Section 16-4.6).

6.16.070, Construction of Buildings and Projects

No person shall, within any residential zone, or within a radius of 500 feet therefrom, operate equipment or perform any outside construction or repair work on any building, structure, or other project or operate any pile driver, power shovel, pneumatic hammer, derrick, power hoist, or any other construction-type device that shall exceed between the hours of 7:00 a.m. and 10:00 p.m. a noise level of 85 dBA, as measured at 100 feet, or exceed between the hours of 10:00 p.m. and 7:00Âa.m. a noise level of 60 dBA, as measured at 100 feet, unless such person shall have first obtained a permit from the director of public works. No permit shall be required to perform emergency work (Ordinance 1354, Section 1; prior code: Section 16-4.7).

Chapter 6
Impacts and Mitigation Measures

6.1 Methodology

A combination of existing literature and accepted noise and vibration prediction and propagation algorithms was used to predict short-term construction and long-term operational noise levels and evaluate ground-borne vibration impacts. The specific methodology used for each analysis topic is described below.

6.1.1 Construction Noise and Vibration

The evaluation of potential noise and vibration impacts associated with project construction was based on the construction schedule, phasing, and equipment assumptions provided by the project sponsor. Using the construction assumptions derived for the proposed project, noise and vibration levels were estimated using the methods described below.

Construction Noise

Daytime Hours

Noise from construction of a given project varies, depending on the type of equipment in use, how many pieces of equipment are operating at any one time, the proximity of the equipment to a noise receptor, and the duration of equipment use. Estimates of combined construction and demolition noise levels for the proposed project were based on reference noise levels from the Federal Highway Administration (FHWA) roadway construction noise model, the FTA general assessment construction noise analysis method, and information provided by the project sponsor.[12,13] The FTA recommends combining noise levels from the two loudest pieces of equipment expected to operate simultaneously in roughly the same location. For the purposes of this analysis, and to provide a reasonably conservative assessment, the analysis included an evaluation of the three loudest pieces of equipment expected to operate during a given construction phase, assuming simultaneous operation in roughly the same location on the project site. This approach ensures a conservative analysis. Consideration was also given to overlapping phases in the analysis.

The FHWA noise source data used in the construction noise model include A-weighted L_{max} noise levels, measured at 50 feet from the construction equipment, along with utilization factors for the equipment. The utilization factor is the percentage of time each piece of equipment is typically

[12] Federal Highway Administration. 2006. *FHWA Roadway Construction Noise Model User's Guide*. FHWA-HEP-05-054. January. Available: https://www.fhwa.dot.gov/ENVIRonment/noise/construction_noise/rcnm/rcnm.pdf. Accessed: July 17, 2023.

[13] Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment*. FTA Report No. 0123. September. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: July 17, 2023.

operated at full power over a specified time period. It is used to estimate L_{eq} values from L_{max} values. For example, the L_{eq} value for a piece of equipment that operates at full power over 50 percent of the time is 3 dB less than the L_{max} value.[14]

Modeled construction noise levels were compared to applicable construction noise standards for daytime hours. Specifically, for South San Francisco, construction noise generated between 8:00 a.m. and 8:00 p.m. Monday through Friday, or 8:00 a.m. to 8:00 p.m. on Saturday or 10:00 a.m. to 6:00 p.m. on Sundays and holidays, was analyzed to determine if all individual pieces of equipment proposed for use would result in a noise level below 90 dBA at 25 feet or if combined construction noise levels would be below 90 dBA L_{eq} at the property plane. Daytime construction noise generated within 500 feet of a sensitive use in San Bruno would be limited to 85 dBA L_{eq} at a distance of 100 feet. However, because project construction would take place more than 500 feet from any sensitive uses in San Bruno, this threshold does not apply. Construction noise levels at the nearest existing residential land uses in San Bruno, which are approximately 1,100 feet from the project driveway, approximately 1,400 feet from the main project site, and approximately 1,570 feet from the nearest project building footprint, were modeled and compared to the existing ambient noise level to determine if a substantial temporary increase in noise would occur.

Non-Daytime Hours

Construction activities proposed for non-daytime hours would be those taking place outside of the specified daytime hours for construction identified in the City Municipal Code. As identified by the project sponsor, such activities could include concrete pours, crane work, drilling, and interior buildout work. The interior buildout work would take place inside the buildings during early-morning hours. As was the case for the daytime construction evaluation, described above, non-daytime construction noise was assessed by modeling combined construction noise levels, based on reference noise levels from the FHWA roadway construction noise model, the FTA general assessment construction noise analysis method, and information provided by the project sponsor.

Combined construction noise levels from activities occurring outside of daytime hours were compared to the maximum permissible sound level for surrounding noise-sensitive land uses. The nearest sensitive land uses to the project are the nearby hotel uses. Consideration is also given to the planned multi-family residential development at 100 Produce Avenue and 124 Airport Boulevard. During non-daytime hours, project construction noise is evaluated to determine if it would be in compliance with the overall local noise standards (included in Table 5-3) at the nearest sensitive land uses; the less stringent daytime construction-specific noise thresholds in South San Francisco would not apply. According to Table 5-3, the City nighttime noise standard for multi-family residential or mixed residential/commercial land uses, including transient lodging, is 55 dBA between the hours of 10:00 p.m. and 7:00 a.m., unless the existing ambient noise level exceeds this criterion. According to the City Municipal Code, if measured ambient noise levels are higher than the standard, generated noise levels may exceed measured ambient noise levels by up to 5 dB.

[14] Federal Highway Administration. 2008. *FHWA Roadway Construction Noise Model (RCNM), Software Version 1.1.* December 8. Prepared by: U.S. Department of Transportation, Research and Innovative Technology Administration, John A. Volpe National Transportation Systems Center, Environmental Measurement and Modeling Division.

For purposes of the non-daytime construction noise analysis, the lowest 1-hour L_{eq} noise levels at the nearest sensitive uses are used to establish non-daytime construction noise thresholds because measured ambient noise levels exceed the aforementioned standards. The lowest measured 1-hour nighttime noise level at the nearest hotel (Travelodge) was 63.3 dBA L_{eq}. According to City Municipal Code standards, non-daytime construction noise may be up to 5 dB greater than this measured noise level at this land use. Therefore, non-daytime construction noise is evaluated to determine if combined equipment noise would be expected to exceed approximately 68 dBA at the Travelodge hotel.

Regarding the proposed multi-family residential development at 100 Produce Avenue and 124 Airport Boulevard, existing noise levels are best represented by LT-4 because the distance from US 101 is similar to the distance from the closest edge of the proposed development. The lowest measured 1-hour nighttime noise level at LT-4 was 65.0 dBA L_{eq}. Because non-daytime construction noise is allowed to be up to 5 dB greater than the measured noise level, non-daytime construction noise is evaluated to determine if combined equipment noise would be expected to exceed approximately 70 dBA L_{eq} at the proposed residential development at 100 Produce Avenue and 124 Airport Boulevard. Although project construction may be completed prior to occupation of this development, an evaluation of non-daytime construction noise is conservatively included in this assessment.

For nighttime and early-morning construction noise experienced by receptors in San Bruno, because construction noise would take place more than 500 feet from the nearest sensitive uses, the nighttime (i.e., between 10:00 p.m. and 7:00 a.m.) noise criterion of 60 dBA, as measured at 100 feet, does not apply. Noise levels at the nearest existing residences are presented and compared to the existing ambient noise level, based on project-specific noise measurements, to determine if a substantial temporary increase (10 dB or greater) in noise would be expected to occur.

Noise – Construction Haul Trucks

The City Municipal Code does not include specific thresholds pertaining to construction haul truck noise. Anticipated daily haul truck noise was assessed to determine if a 3 dB increase over modeled ambient traffic noise levels, which is considered to be "barely perceptible," would occur as a result of hauling activity. Note that, in some cases, modeled traffic noise levels do not fully characterize the existing noise environment along a given roadway segment. For example, traffic noise from adjacent larger-capacity roadway segments may dominate the overall noise environment in some areas (i.e., noise from US 101 may be experienced along a quieter, smaller adjacent roadway segment). Therefore, along roadway segments where overall noise levels are influenced by traffic on other roadway segments, measured noise levels, when available, are also considered when evaluating potential haul truck noise impacts.

Construction Vibration

Building/Structure Damage

The operation of heavy-duty construction equipment can generate localized ground-borne vibration at buildings adjacent to the construction areas. Ground-borne vibration rarely causes damage to normal buildings. However, a structure's susceptibility to vibration-induced damage depends on its age, condition, distance from the vibration source, and the vibration level.

Vibration resulting from construction of the proposed project was analyzed using data and modeling methodologies provided by Caltrans' *Transportation and Construction Vibration Guidance Manual*.[15] This guidance manual provides typical vibration source levels for various types of construction equipment as well as methods for estimating the propagation of ground-borne vibration over distance. Table 6-1 provides the PPV levels of the most vibration-intensive construction equipment expected to be used for the proposed project at a reference distance of 25 feet. All of the analyzed equipment is classified as continuous/frequent intermittent vibration sources.

Table 6-1. Construction Equipment Vibration Levels

Equipment Item	Reference PPV at 25 feet, in/sec[a]
Auger drill	0.089
Large bulldozer[b]	0.089
Small bulldozer[c]	0.003

Source: California Department of Transportation. 2020. *Transportation and Construction Vibration Guidance Manual*. April. Available: https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tcvgm-apr2020-a11y.pdf. Accessed: August 13, 2023.
[a.] Obtained from Caltrans 2020.
[b.] Considered representative of other heavy earthmoving equipment such as excavators, graders, backhoes, etc.
[c.] Considered representative of smaller equipment such as a small backhoe and front-end loader.

The following equation from the guidance manual was used to estimate the change in PPV levels over distance:

$$PPV_{rec} = PPV_{ref} \times (25/D)^{n}$$

where PPV_{rec} is the PPV at a receptor; PPV_{ref} is the reference PPV at 25 feet from the equipment; D is the distance from the equipment to the receiver, in feet; and n is a value related to the vibration attenuation rate through ground. The default recommended value for n is 1.5. This equation was used to estimate the PPV at each of the closest vibration-sensitive receivers, based on an estimated worst-case distance between sources and receivers.

Annoyance/Sleep Disturbance

Regarding the potential for annoyance-related vibration impacts to occur, residential and transient lodging land uses (e.g., hotels and motels) are considered most sensitive to vibration during nighttime hours when people generally sleep. For the purposes of this analysis, should strongly perceptible vibration levels (i.e., a PPV of 0.1 in/sec, per the Caltrans guidelines for vibration annoyance potential) occur at nearby homes, hotels, or motels during nighttime hours, sleep disturbance could occur and annoyance-related vibration impacts would be considered significant.

6.1.2 Operational Noise

Noise associated with project operations was evaluated for individual operational noise sources, as described below. Primary sources of operational noise associated with the project include heating, cooling, and ventilation equipment; emergency generators (during testing); loading

[15] California Department of Transportation. 2020. *Transportation and Construction Vibration Guidance Manual*. Final. CT-HWANP-RT-20-365.01.01. April. Sacramento, CA.

docks; and traffic from operations associated with the project. Note that no planned events or large gatherings are proposed for the project courtyard, and there would be no amplified music or speeches in this area. Therefore, noise from gatherings in the project courtyard was not evaluated in this analysis.

Mechanical Equipment

The evaluation of operational noise impacts associated with proposed on-site mechanical equipment was based on the available equipment information for the project, as provided by the project sponsor. Noise at various distances from point sources (e.g., stationary equipment associated with project operations such as generators and heating and cooling equipment) was estimated using available source noise data for similar sources, along with a point-source attenuation rate of 6 dB per doubling of distance. Although final equipment makes, models, and locations have not been determined, an example case was modeled to estimate combined noise levels from project mechanical equipment. The potential for noise to exceed allowable levels was also evaluated.

Regarding the applicable operational equipment noise threshold, according to the City Municipal Code, mechanical equipment noise at nearby residential-type uses (assumed to include hotel land uses) shall not exceed 60 dBA during the hours of 7:00 a.m. to 10:00 p.m. or 55 dBA during the hours of 10:00 p.m. to 7:00 a.m., unless the existing ambient noise level exceeds these criteria. According to the City Municipal Code, if measured ambient noise levels are higher than the standards, generated noise levels may exceed measured ambient noise levels by up to 5 dB. For purposes of the operational equipment analysis, the lowest 1-hour L_{eq} at the nearest sensitive uses is used to establish operational equipment noise thresholds because measured ambient noise levels would exceed the aforementioned standards.

To establish a baseline noise level for the purposes of this analysis, the lowest recorded hourly L_{eq} was conservatively used. The lowest measured nighttime noise level at the nearest residential/ transient lodging land use (Travelodge) was 63.3 dBA L_{eq}. The lowest measured nighttime noise level at the Best Western was 58.7 dBA L_{eq}. The lowest measured nighttime noise level at the planned 100 Produce Avenue and 124 Airport Boulevard development was 65.0 dBA L_{eq}. Because operational equipment noise may be up to 5 dB greater than the measured noise level at the aforementioned uses, operational equipment noise was evaluated to determine if combined equipment noise would be expected to exceed approximately 68 dBA L_{eq} at the Travelodge, approximately 64 dBA L_{eq} at the Best Western, or approximately 70 dBA L_{eq} at the proposed residential development at 100 Produce Avenue and 124 Airport Boulevard.

Estimated equipment noise levels at the nearest existing residences in San Bruno are also considered. Under applicable San Bruno thresholds, mechanical equipment must not result in a noise level of 10 dB above ambient at the nearest property plane of a sensitive use. The lowest measured hourly L_{eq} noise level at the nearest residences in San Bruno was 54.9 dBA L_{eq}; therefore, operational equipment noise at these residences was analyzed to determine if combined noise would exceed approximately 65 dBA L_{eq}.

Emergency Generator Testing

The project would incorporate diesel generators, which would be used during power disruptions. Although use of the generators would be limited to primarily emergency circumstances, periodic testing would be required. Note that noise from the operation of generators during an emergency is considered exempt from local noise thresholds in South San Francisco. However, the testing of emergency generators is required to comply with applicable local noise limits for operational equipment. Note that emergency generators would not be tested during nighttime hours.

Noise from emergency generator testing at various distances was estimated using conceptual site plans, equipment specification data, and equipment layout information provided by the project sponsor, along with the general point-source attenuation equation of 6 dB per doubling of distance.

The City Municipal Code establishes daytime (i.e., 7:00 a.m. to 10:00 p.m.) and nighttime (i.e., 10:00 p.m. to 7:00 a.m.) noise limits for receiving land uses. These can be applied to noise generated by stationary equipment in South San Francisco (as presented in Table 5-3). According to the City Municipal Code, as described previously, if measured ambient noise levels are higher than the standards, generated noise levels may exceed measured ambient noise levels by up to 5 dB. For purposes of the generator noise analysis, because generator testing would take place during daytime hours, generator noise would be limited to 5 dB above the 12-hour average daytime L_{eq} at the nearest sensitive land uses. The nearest sensitive land use is the Travelodge, which had a measured daytime 12-hour L_{eq} noise level of 68.8 dBA $L_{eq(12)}$; 5 dB above this noise level would be approximately 74 dBA L_{eq}. The 12-hour average ambient daytime noise levels in the vicinity of the Best Western hotel and the planned 100 Produce Avenue and 124 Airport Boulevard development were 65.8 dBA L_{eq} and 70.3 dBA L_{eq}, respectively. Therefore, modeled generator noise levels are compared to a noise limit of 71 and 75 dBA L_{eq}, respectively.

Although the generators would not be located in San Bruno, and therefore not required to comply with noise limits for equipment in San Bruno, an analysis was done to determine if noise from the generators in South San Francisco would result in a substantial increase in noise levels at nearby homes in San Bruno. Noise from emergency generator testing experienced in San Bruno was evaluated to determine if a 20 dB increase over the daytime ambient noise level, consistent with San Bruno Municipal Code noise limits, would occur (because the noise would not last longer than 30 minutes in a given hour and because testing would not occur during nighttime hours).

Loading Dock Noise

The potential for loading dock noise to result in substantial noise increases in the project area was analyzed qualitatively to determine the potential for a substantial temporary increase in noise at nearby sensitive land uses; a quantitative analysis of loading noise would be necessary only if the development was a loading-intensive use, such as a distribution center.

Operational Traffic Noise

Traffic noise increases along nearby roadway segments resulting from project development were quantitatively modeled using traffic volumes and existing vehicle-mix assumptions (i.e., the proportion of automobiles, trucks, buses, and other vehicles) provided by the project traffic engineer (Fehr &

Peers). Provided daily turn movements were converted into average daily traffic (ADT) volumes and posted speeds were determined using Google Street View. Traffic volumes were provided for existing, existing-with-project, future, and future-with-project conditions.

Quantitative modeling of traffic noise from the project was conducted using a spreadsheet that was based on the FHWA Traffic Noise Model, version 2.5, for the following conditions:

- Existing
- Existing with project
- Future (2040)
- Future (2040) with project

The spreadsheet calculates the traffic noise level at a fixed distance from the centerline of a roadway, according to the traffic volume, roadway speed, and vehicle mix predicted to occur under each condition. The evaluation of potential direct traffic noise impacts compared traffic noise modeling for the existing condition to the existing-with-project traffic scenario; potential effects on existing noise-sensitive land uses along major project traffic access roadways were assessed. In addition, a comparison of existing traffic noise to future-with-project traffic noise was conducted to determine if cumulative traffic noise impacts would occur. If cumulative traffic noise impacts were modeled to occur, the project contribution to these impacts was assessed by comparing traffic noise from the future-no-project scenario to the future-with-project scenario.

In some cases, modeled traffic noise levels do not accurately characterize the existing noise environment along a given roadway segment; for example, traffic noise from an adjacent larger-capacity roadway segment may dominate the overall noise environment in some areas. Therefore, along roadway segments where overall noise levels are influenced by traffic on other roadway segments (e.g., US 101), measured noise levels (when available) are also considered when evaluating potential traffic noise impacts.

Parking Garage Noise

Noise sources in parking garages include moving vehicles, along with doors closing, cars starting, tires squealing, car alarms sounding, and other automotive noises occurring. Noise from underground, or below-grade, parking garages would largely be attenuated by the mass of the earth above them. In addition, the line of sight between the noise source and the nearest sensitive uses would be blocked. Therefore, the I131S parking garage located beneath the I131S buildings would not be expected to result in parking-related noise at nearby sensitive uses. However, noise from the aboveground parking garage associated with the proposed project would still have the potential to radiate out from the structure. Therefore, noise from the 1,378-parking space aboveground I131N parking structure was evaluated qualitatively to determine if a substantial increase in noise at nearby sensitive uses would occur.

On-Site Day Care and Outdoor Play Area

Activities taking place within the proposed day-care building would most likely not increase ambient noise because these sources would be blocked and attenuated by the walls of the building. However, children playing in outdoor play areas associated with the day care may generate audible

noise at nearby sensitive land uses. Noise measurements were obtained from a previous study involving an outdoor play area. Specifically, source noise levels from approximately 58 children playing at Linda Vista Elementary School in San Diego were used to estimate noise from children playing outside the proposed day care. It is anticipated that this would be reasonably representative of the outdoor play area at the day care, which would be attended by approximately 50 children daily. The measured noise levels from the previous study were normalized to a reference distance of 50 feet, then adjusted to account for the assumed number of children playing within the outdoor play area and the distances to the closest noise-sensitive receptors.

The City Municipal Code establishes daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise limits for the receiving land use. These can be applied to noise generated by children playing outdoors in South San Francisco (as presented in Table 5-3). According to the City Municipal Code (and as described previously), if measured ambient noise levels are higher than the standards, generated noise levels may exceed measured ambient noise levels by up to 5 dB. For purposes of the day-care outdoor play area noise analysis, because the facility would operate during daytime hours (8:00 a.m. to 5:30 p.m.), outdoor play area noise should not exceed 5 dB above the 12-hour average daytime L_{eq} at the nearest sensitive land uses. The nearest sensitive land use is the Travelodge, which had a measured daytime 12-hour L_{eq} of 68.8 dBA $L_{eq(12)}$; 5 dB above this noise level would be approximately 74 dBA L_{eq}. The 12-hour average ambient daytime noise levels in the vicinity of the Best Western hotel and the planned 100 Produce Avenue and 124 Airport Boulevard development were 65.8 dBA L_{eq} and 70.3 dBA L_{eq}, respectively. Therefore, modeled play area noise levels were compared to a noise limit of 71 and 75 dBA L_{eq}, respectively.

Note that the day-care center would not operate during project construction; therefore, children at the day care would not be exposed to project construction noise.

6.2 Thresholds of Significance

In accordance with Appendix G of the California Environmental Quality Act (CEQA) Guidelines, the proposed project would have a significant effect if it would result in any of the conditions listed below.

a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies.

b) Generate excessive ground-borne vibration or ground-borne noise levels.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

The following thresholds were used to evaluate the significance of impacts, based on applicable regulations, ordinances, and policies.

6.2.1 Short-Term Construction Noise Criteria

Daytime Construction Noise

The City identifies criteria for daytime construction noise in Chapter 8.32 of the City Municipal Code. Based on those requirements, and for the purpose of this assessment, construction noise is considered significant if it:

- Occurs during the daytime allowable hours and exceeds the provisions of City Municipal Code Section 8.32.050(d) (i.e., any individual piece of equipment exceeding 90 dB at a distance of 25 feet or 90 dB at any point outside of the property plane) or
- Occurs outside of daytime hours and causes ambient noise levels to exceed maximum permissible sound levels at nearby noise receptors (based on the land use category of the receiving property, as identified in Table 5-3).

In the city of San Bruno, daytime construction noise generated within 500 feet of a sensitive use is limited to 85 dBA L_{eq} at a distance of 100 feet. Nighttime construction noise at that distance is limited to 60 dBA L_{eq}. However, because project construction would take place more than 500 feet from residences, this threshold does not apply. Construction noise levels at the nearest residential land uses in San Bruno were modeled and compared to the existing ambient noise level to determine if a substantial temporary increase in noise would occur.

Non-Daytime (Night and Early-Morning) Construction Noise

Because the nearest noise-sensitive land use to the project site is a hotel, construction noise outside of the standard daytime hours in South San Francisco must comply with the nighttime noise standard for transient lodging (mixed-use/commercial land uses, according to Table 5-3) of 55 dBA at the nearest hotel-type land use between the hours of 10:00 p.m. and 7:00 a.m., unless the existing ambient noise level exceeds this criterion. According to the City Municipal Code, if measured ambient noise levels are higher than the standards, generated noise levels may exceed the measured ambient noise levels by up to 5 dB. As described in the Methodology section, based on the lowest measured hourly noise level (63.3 dBA L_{eq}) at the nearby sensitive land use, the Travelodge, non-daytime construction noise in South San Francisco was evaluated to determine if combined equipment noise would exceed approximately 68 dBA. The lowest measured noise nighttime noise level at the Best Western was 58.7 dBA L_{eq}; therefore, non-daytime construction noise was also evaluated to determine if it would exceed approximately 64 dBA at the Best Western. Finally, the lowest measured noise nighttime noise level at the planned 100 Produce Avenue and 124 Airport Boulevard residential development was 65.0 dBA L_{eq}; therefore, non-daytime construction noise was also evaluated to determine if it would exceed approximately 70 dBA at this planned development.

Construction Haul Trucks

The General Plan does not include specific thresholds pertaining to construction haul truck noise. Anticipated daily haul truck noise was assessed to determine if a 3 dB increase over ambient noise levels, which is considered to be "barely perceptible," would occur as a result of hauling activity.

6.2.2 Long-Term Operational Noise Criteria

Mechanical Equipment Noise

City Municipal Code Section 8.32.030 outlines maximum permissible sound levels, as measured at specified land uses. As shown in Table 5-3, maximum permissible sound levels are determined by the land use category of the receiving property. As described in the Methodology section, because generated noise levels may exceed measured ambient noise levels by up to 5 dB if the applicable municipal code noise standard is already exceeded, operational noise was compared to a threshold of 68 dBA at the nearest sensitive land use (the Travelodge), based on the lowest hourly ambient noise measurement of approximately 63 dBA L_{eq} at that location. Noise from mechanical equipment noise was also evaluated at the next-closest sensitive land uses, the Best Western hotel and the proposed multi-family residential development at 100 Produce Avenue and 124 Airport Boulevard. The lowest measured noise nighttime noise level at the Best Western and the planned 100 Produce Avenue and 124 Airport Boulevard residential development were 58.7 dBA L_{eq} and 65.0 dBA L_{eq}, respectively. Mechanical equipment noise is compared to a noise limit of 5 dB greater than the measured noise levels at these land uses. Therefore, mechanical equipment noise at these land uses was compared to approximately 64 dBA at the Best Western hotel and approximately 70 dBA at the planned 100 Produce Avenue and 124 Airport Boulevard residential development.

Emergency Generator Noise

For the reasons described above pertaining to noise from mechanical equipment, because all emergency generator testing would take place during daytime hours, emergency generator testing noise was compared to a threshold 5 dB greater than the daytime 12-hour L_{eq} noise level of 68.8 dBA $L_{eq(12)}$ at the nearest sensitive use (the Travelodge). Because a 5 dB increase above this noise level would be approximately 74 dBA L_{eq}, the threshold was applied to the assessment of emergency generator noise at this land use. Noise from emergency generator testing was also evaluated at the next-closest sensitive land uses, the Best Western hotel and the proposed multi-family residential development at 100 Produce Avenue and 124 Airport Boulevard. The 12-hour average ambient daytime noise levels in the vicinity of the Best Western hotel and the planned 100 Produce Avenue and 124 Airport Boulevard development were 65.8 dBA L_{eq} and 70.3 dBA L_{eq}, respectively. Therefore, modeled generator noise levels are compared to a noise limit of 71 and 75 dBA L_{eq}, respectively.

Traffic Noise

In general, an increase of 3 dBA in traffic noise is considered just noticeable, a change of 5 dBA in traffic noise is clearly noticeable, and a change of 10 dBA in traffic noise is perceived as a doubling of noise. This report applies the following thresholds of significance for direct traffic-related noise increases:

- A project-generated increase of 5 dBA in traffic noise if the resulting traffic noise remains below the satisfactory range at noise-sensitive receivers, as found in Table 5-4, and
- A 3 dBA or greater increase in traffic noise resulting from project implementation when the future noise level is above the satisfactory range for a noise-sensitive land use.

Regarding potential cumulative traffic noise impacts, a comparison of existing traffic noise to future-with-project traffic noise was conducted to determine if a 3 dBA or 5 dBA increase (as described in the bullets above) would occur. In instances where cumulative traffic noise impacts were modeled to occur, the project contribution to these impacts was assessed by comparing traffic noise from the future-no-project scenario to the future-with-project scenario. Specifically, a cumulative impact and cumulatively considerable contribution related to traffic noise would be identified if:

- A project-generated increase of more than 1 dBA is attributable to the project where a cumulative traffic noise increase of 3 dBA or more occurs (and where cumulative traffic noise levels would be *above* the satisfactory range at a noise-sensitive land use) or
- A project-generated increase of more than 1 dBA is attributable to the project where a cumulative traffic noise increase of 5 dBA or more occurs (and where cumulative traffic noise levels would remain *within* the satisfactory range at a noise-sensitive land use).

On-Site Day Care and Outdoor Play Area

Because the day-care facility would be operating only during daytime hours, outdoor play area noise was compared to a threshold 5 dB greater than the daytime 12-hour L_{eq} noise level of 68.8 dBA $L_{eq}(12)$ at the nearest sensitive use (the Travelodge). Because a 5 dB increase above this noise level would be approximately 74 dBA L_{eq}, the threshold was applied to the assessment of outdoor play area noise at this receiver. Noise from the play area was also evaluated at the next-closest sensitive land uses, the Best Western hotel and the proposed multi-family residential development at 100 Produce Avenue and 124 Airport Boulevard. The 12-hour average ambient daytime noise levels in the vicinity of the Best Western hotel and the planned 100 Produce Avenue and 124 Airport Boulevard development were 65.8 dBA L_{eq} and 70.3 dBA L_{eq}, respectively. Therefore, estimated outdoor play area noise levels are compared to a noise limit of 71 and 75 dBA L_{eq}, respectively.

6.2.3 Ground-Borne Vibration Criteria

The previously cited Caltrans vibration criteria included in the *Transportation and Construction Vibration Guidance Manual* are routinely used to evaluate a variety of projects (not merely transit projects) proposed by local jurisdictions, as outlined below. That guidance is used in this analysis.

- Generation of continuous/frequent intermittent construction-related ground-borne vibration levels that exceed the modern industrial/commercial building damage standard (i.e., PPV of 0.5 in/sec) at off-site commercial/industrial buildings or exceed the “older residential structure” damage criterion (i.e., PPV of 0.3 in/sec) at nearby older residential structures.
- Generation of continuous/frequent intermittent construction-related ground-borne vibration levels that exceed the “strongly perceptible” level (i.e., PPV of 0.1 in/sec) at off-site sensitive receptors (e.g., residences, hotels/motels) during nighttime hours when people normally sleep.

6.3 Project Impacts

6.3.1 Noise Impacts

Construction Noise

Construction for the proposed project has the potential to generate noise that could exceed applicable noise thresholds at nearby sensitive uses. The proposed project would be constructed in eight phases (i.e., rough grading/site demolition, deep foundations, foundations, superstructure, building enclosure, interior buildout, sitework, startup/building commissioning/final inspections). Demolition and construction activities are anticipated to begin in March 2026 and be completed by May 2031, lasting approximately 62 months. Most construction activities would be expected to occur on the project site, with some limited work for a project driveway occurring southwest of the project site. As a result, most construction equipment would generally be operating no closer than 1,400 feet from the nearest single-family residences in San Bruno and 250 feet from the nearest hotel in South San Francisco (assuming equipment could operate anywhere on the project site). Estimated noise levels for individual construction equipment proposed for use with the project are shown in Table 6-2, based on the FHWA Roadway Construction Noise Model.

Table 6-2. Noise from Equipment Proposed for Project Construction (L_{eq})

Equipment Type	Noise at 25 Feet (L_{eq})
Drill rig	83
Crane	79
Excavator	83
Dozer	84
Scraper	86
Gradall	85
Concrete pump truck	80
Front-end loader/forklift	81
Welder	76
Man lift/scissor lift/glass manipulator	74

Note: Noise levels are based on source noise levels and utilization factors from the FHWA Roadway Construction Noise Model.

Daytime Construction Noise

In South San Francisco, construction activities are allowed between 8:00 a.m. and 8:00 p.m. weekdays, 9:00 a.m. to 8:00 p.m. on Saturdays, and 10:00 a.m. to 6:00 p.m. on Sundays and holidays, provided they meet one of two noise limitations. Construction is allowed during the daytime hours specified on the permit if noise from each individual piece of equipment is limited to 90 dB at a distance of 25 feet or if combined construction noise does not exceed 90 dB at any point outside of the property plane of the project. Table 6-2 demonstrates that noise levels for each individual piece

of equipment proposed for the project would not exceed 90 dBA L_{eq} at a distance of 25 feet. For that reason, construction that takes place during daytime hours, as defined by the City Municipal Code, would not conflict with the City's construction noise regulations.

Combined construction noise is also assessed. To provide a reasonable worst-case analysis of potential combined noise levels from project construction, it was assumed that the three loudest pieces of equipment from each phase of construction would be operating simultaneously and close to one another anywhere on the project site (including at the project perimeter closest to sensitive uses). This ensures a conservative analysis because many construction phases (e.g., deep foundations, foundations, superstructure, building enclosure, interior buildout) would most likely be limited to the project building footprint, which is not adjacent to the project site perimeter, and therefore would be even farther from the nearest off-site sensitive uses.

A screening analysis was conducted to compare noise levels from the three loudest pieces of equipment proposed for use during each phase of construction to see which phase would produce the highest noise levels. These results are shown in Table 6-3. The screening analysis demonstrated that the rough grading/site demolition phase would be the loudest. This phase would include the use of two scrapers and a Gradall.

Table 6-3. Combined Noise Levels for Each Construction Phase at 50 Feet

Construction Phase	Average Composite Hourly Noise Level (L_{eq}) at 50 feet, dBA
Rough grading/site demolition	84
Deep foundations	83
Foundations	83
Superstructure	83
Building enclosure	83
Interior buildout	82
Site work	81
Startup/building commissioning/final inspection	76

Source: Construction assumptions were provided by the project sponsor. See Appendix A for modeling data. Modeling was conducted with the use of data from: Federal Highway Administration. 2006. *FHWA Roadway Construction Noise Model User's Guide*. FHWA-HEP-05-054. January. Available: https://www.fhwa.dot.gov/ENVIRonment/noise/construction_noise/rcnm/rcnm.pdf. Accessed: February 20, 2023.

At a reference distance of 50 feet, the combined noise level of two scrapers and a Gradall operating simultaneously and close to one another during rough grading and site demolition is estimated to be 84 dBA L_{eq}. Table 6-4 shows the anticipated worst-case combined noise levels from operation of these three pieces of equipment at the closest nearby noise-sensitive land uses. The closest noise-sensitive land uses in South San Francisco are the Travelodge and Best Western hotels east of US 101 and the planned residential development at 100 Produce Avenue and 124 Airport Boulevard. The Travelodge is approximately 250 feet from the project site, the Best Western is approximately 800 feet from the project site, and the planned multi-family residential development near Produce Avenue and Airport Boulevard is approximately 950 feet from the project site.

Table 6-4. Weekday Daytime Construction Noise Levels at nearby Land Uses for Rough Grading/Site Demolition

Receiver (distance from project site, feet)	Construction Phase	Average Construction Noise Level (L_{eq}), dBA	Average Daytime Ambient Noise Level (L_{eq}), dBA[a]	Increase over Daytime Ambient (L_{eq}), dBA
Travelodge (250 feet)	Rough Grading/Site Demolition	71	68.8[b]	2.2
Best Western (800 feet)		60	65.8[c]	-5.8
Planned 100 Produce Ave/124 Airport Blvd Development		59	70.3[d]	-11.3
Single-family residential (San Bruno, 1,100 feet)		58	74.1[e]	-16.1

Source: Appendix A.
Note: Combined construction noise levels from overlapping phases were also estimated, with nearly identical results. Because modeled construction noise from overlapping phases was comparable to modeled construction noise from individual phases, this analysis focuses on construction noise from individual phases. Refer to Appendix A for modeling files for overlapping construction phases.
a. Modeled noise levels for construction activities were compared to the average daytime ambient noise level (12-hour L_{eq}) measured between the hours of 8:00 a.m. and 8:00 p.m.
b. 12-hour L_{eq} was calculated from LT-5 data.
c. 12-hour L_{eq} was calculated from LT-2 data.
d. 12-hour L_{eq} was calculated from LT-4 data.
e. 12-hour L_{eq} was calculated from LT-3 data.

At a distance of 250 feet (i.e., at the nearby Travelodge), the rough grading/site demolition construction phase could result in a combined noise level of approximately 70 dBA L_{eq}. At the Best Western, located 800 feet from the project site, the noise level would be approximately 60 dBA L_{eq}. The 12-hour average ambient daytime noise levels in the vicinity of these two hotels were measured to be 68.8 and 65.8 dBA L_{eq}, as shown in Table 6-4. Combined construction noise levels are therefore anticipated to exceed the existing ambient noise level at the Travelodge by approximately 1 dBA. However, modeled construction noise would be approximately 6 dBA lower than the average ambient noise level during daytime hours at the Best Western.

Regarding the nearby proposed residential development at 100 Produce Avenue and 124 Airport Boulevard, approximately 950 feet north of the project site, the rough grading/site demolition construction phase could result in a combined noise level of approximately 59 dBA L_{eq} at this location. The measurement location that best represents this future noise-sensitive land use (LT-4) had a 12-hour daytime L_{eq} noise level of 70.3 dBA. Therefore, as shown in Table 6-4, combined construction noise levels would be approximately 11 dBA lower than the average ambient noise level during daytime hours at this location.

Although modeling demonstrates that construction noise at the nearby Travelodge may be approximately 1 dBA greater than the existing ambient noise level at this location, 1 dBA is below the threshold of perception for the average human ear, with a 3 dB change generally considered to be "barely perceptible." In addition, the increase would be temporary and intermittent, with construction lasting for 62 months. Furthermore, not all construction activities would occur at the perimeter of the project site closest to sensitive receptors. Some construction would occur at much greater distances as work moves throughout the project site. As described previously, project

construction noise during daytime hours would comply with the applicable City Municipal Code threshold (i.e., no piece of equipment proposed for project construction would produce a noise level that would exceed the 90 dB threshold at 25 feet). For these reasons, the daytime construction noise impacts on the nearest noise-sensitive land uses in South San Francisco would not be considered substantial.

The existing single-family residential land uses closest to the project site are in San Bruno. These would be approximately 1,100 feet southwest of the closest project construction area (i.e., the project driveway for access to Shaw Road); the residences would also be more than 1,570 feet southwest of the nearest project building. At a distance of 1,100 feet, noise from rough grading and demolition on the project site was modeled to be 58 dBA L_{eq}, without accounting for shielding and the associated attenuation from intervening buildings. Shielding from intervening buildings would further reduce this estimated noise level. The 12-hour average daytime ambient noise near the homes was approximately 74 dBA L_{eq}. Therefore, ambient noise at the nearest existing residences was an estimated 16 dBA higher than construction noise would be at these locations. When noise sources are more than 10 dBA different from one another, the combined noise level is equal to the louder noise level. Therefore, construction noise from the project site, as experienced at the nearby residences in San Bruno, would not be expected to be perceptible. Daytime construction noise impacts at the nearest single-family residential land uses would also not be considered substantial.

Non-Daytime Construction Noise

In addition to the daytime construction activities evaluated above, certain activities may be required to take place during nighttime and early-morning hours. These would include concrete pours, crane and/or large equipment (e.g., drill) work, and interior building work. Regarding concrete pours, there would be an estimated five mat slab pours, starting between 12:00 a.m. and 2:00 a.m., and 22 slab-on-metal-deck (SOMD) and slab-on-grade (SOG) pours, starting between 4:00 a.m. and 6:00 a.m. The project sponsor has stated that crane and drilling work may start as early as 5:00 a.m., with a total of 105 days for steel erection (i.e., crane work) and 40 days for drilling during early-morning hours. In addition, once the proposed building is constructed and enclosed, interior work may start before 8:00 a.m. However, this work would all take place internally and would not be expected to generate high noise levels outside. Noise from this activity was not quantitatively analyzed because it would generate less noise than the other analyzed phases. Nighttime and early-morning construction activities are evaluated below.

During non-daytime hours, project construction noise would not be compared to construction-specific daytime noise thresholds in South San Francisco. Rather, it would need to comply with the general City Municipal Code noise standards (included in Table 5-3) for South San Francisco. The City nighttime noise level standard for multi-family residential and transient lodging land uses (mixed-use/commercial land uses, according to Table 5-3) is 55 dBA between the hours of 10:00 p.m. and 7:00 a.m., unless the existing ambient noise level exceeds this criterion. According to the City Municipal Code, if measured ambient noise levels are higher than the standards, generated noise levels may exceed measured ambient noise levels by up to 5 dBA.

For purposes of the non-daytime construction noise analysis, the lowest 1-hour L_{eq} noise levels at the nearest sensitive uses are used to establish operational equipment noise thresholds because measured ambient noise levels would exceed the aforementioned standards. The lowest measured noise nighttime noise level at the nearest land use (Travelodge) was 63.3 dBA L_{eq}. The lowest

measured noise nighttime noise level at the Best Western was 58.7 dBA L_{eq}. The lowest measured nighttime noise level at the planned 100 Produce Avenue and 124 Airport Boulevard residential development was 65.0 dBA L_{eq}. Non-daytime construction noise may be up to 5 dB greater than the measured noise levels at these land uses, according to the City Municipal Code standards. Therefore, non-daytime construction noise was evaluated to determine if combined equipment noise would be expected to exceed approximately 68 dBA at the Travelodge, 64 dBA at the Best Western, or approximately 70 dBA at the planned 100 Produce Avenue and 124 Airport Boulevard residential development.

Modeling was conducted for nighttime and early-morning concrete pours, crane work/steel erection, and drilling. This analysis assumes that concrete pours could occur anywhere on the project site and that drilling and crane work could occur anywhere within or adjacent to the footprint of proposed project buildings or structures. Therefore, concrete pours and crane/drill work could occur as close as 250 and 295 feet, respectively, from the nearby Travelodge. Concrete pours and crane/drill work could occur as close as 800 and 820 feet, respectively, from the Best Western. Finally, concrete pours and crane/drill work could occur as close as 950 and 1,000 feet, respectively, from the planned 100 Produce Avenue and 124 Airport Boulevard development.

Modeling for early-morning and nighttime construction activities was conducted to estimate the combined noise level by activity at the nearby noise-sensitive land uses. Based on the construction equipment list provided by the project sponsor, early-morning or nighttime crane work could require the use of two cranes at one time. Similarly, early-morning drilling activities could involve the use of two drills simultaneously. Finally, early-morning concrete pours could involve the use of two concrete pumps near one another on the project site simultaneously.

Table 6-5 shows estimated noise levels for activities that may occur during nighttime or early-morning hours. As shown in this table, crane work (i.e., two cranes operating simultaneously) could result in an estimated noise level of approximately 61 dBA L_{eq} at the nearby Travelodge. Drilling activities (i.e., two drill rigs operating simultaneously) could result in an estimated noise level of approximately 65 dBA L_{eq} at the Travelodge. Concrete pours would result in an estimated noise level of 63 dBA L_{eq} at the hotel. These noise levels are all below the established non-daytime construction noise threshold of 68 dBA for this location (based on 5 dB above the existing ambient).

At the Best Western, crane work could result in an estimated noise level of approximately 52 dBA L_{eq}, drilling activities could result in an estimated noise level of approximately 56 dBA L_{eq}, and concrete pours could result in an estimated noise level of approximately 53 dBA L_{eq}. These noise levels are all below the established non-daytime construction noise threshold of 64 dBA for this location.

At the planned 100 Produce Avenue and 124 Airport Boulevard development, crane work could result in an estimated noise level of approximately 50 dBA L_{eq}, drilling activities could result in an estimated noise level of approximately 54 dBA L_{eq}, and concrete pours could result in an estimated noise level of approximately 51 dBA L_{eq}. These noise levels are all below the established non-daytime construction noise threshold of 70 dBA for this location.

Table 6-5. Non-Daytime Construction Noise Levels at nearest Sensitive Land Uses

Receiver	Distance (feet)	Non-Daytime Construction Activity	Construction Noise Levels (L_{eq}), dBA L_{eq}	Lowest Hourly Ambient Noise Level (L_{eq}), dBA[a]	Threshold Based on 5 dBA Increase over Ambient[a]	Exceeds Threshold?
Travelodge (South San Francisco)	250 (distance to project site)	Concrete pours – mat slabs	63	63.3	68	No
		Concrete pours – SOMD/SOG	63			No
	295 (distance to project building)	Drilling	65			No
		Crane work	61			No
Best Western (South San Francisco)	800 (distance to project site)	Concrete pours – mat slabs	53	58.7	64	No
		Concrete pours – SOMD/SOG	53			No
	820 (distance to project building)	Drilling	56			No
		Crane work	52			No
Residential (South San Francisco)	950 (distance to project site)	Concrete pours – mat slabs	51	65.0	70	No
		Concrete pours – SOMD/SOG	51			No
	1,000 (distance to project building)	Drilling	54			No
		Crane work	50			No
Residential (San Bruno)	1,100 (distance to project site)	Concrete pours – mat slabs	50	54.9	60	No
		Concrete pours – SOMD/SOG	50			No
	1,570 (distance to project building)	Drilling	50			No
		Crane work	46			No

Source: Appendix A.
The lowest ambient noise level is conservatively used to establish a baseline noise level. In South San Francisco, if existing noise exceeds the applicable noise threshold, a 5 dBA increase in noise over the existing noise level is allowed.

a. The noise threshold for construction noise at the Travelodge was based on the lowest hourly L_{eq} from LT-5. The noise threshold for construction noise at the Best Western was based on the lowest hourly L_{eq} from LT-2. The noise threshold for construction noise at the 100 Produce Avenue and 124 Airport Boulevard planned development was based on the lowest hourly L_{eq} from LT-4. The noise threshold for construction noise at residential land uses in San Bruno was based on the lowest hourly L_{eq} from LT-3, even though these land uses are outside of South San Francisco. The thresholds for South San Francisco are more stringent and therefore more protective of these uses during non-daytime hours.

Regarding the nearest existing single-family residences, which are approximately 1,100 feet from the nearest project construction area and approximately 1,570 feet from the footprint of the nearest project building in San Bruno, estimated noise levels at this location would be 46 dBA L_{eq} from crane work, 50 dBA L_{eq} from drilling work, and 50 dBA L_{eq} from concrete pours, as shown in Table 6-5. The lowest hourly ambient noise level near these residences would be 54.9 dBA L_{eq} during nighttime and early-morning hours. In addition, numerous buildings are located between the project site and the residences, which would greatly reduce the level of construction noise at these locations. Because estimated noise from project construction activities would be below the measured existing noise level and construction noise would be further reduced by intervening buildings, construction noise impacts at the nearest residences in San Bruno would not be considered substantial.

As demonstrated in this analysis, noise from limited early-morning and nighttime construction would not be expected to exceed the applicable thresholds.

Construction Traffic Noise

Demolition and construction activities would require the use of haul trucks to remove debris and excavated materials. To ensure a conservative analysis, haul truck noise modeling was conducted using the worst-case maximum number of haul truck trips on a given day. Specifically, based on information provided, up to 550 one-way truck trips may be made to or from the site on a worst-case day. Note that a smaller number of haul truck trips would take place on most construction days. In addition, no other site deliveries (e.g., vendor drop-offs) would occur while worst-case hauling activities would take place. Therefore, modeling for haul truck noise is based on a maximum of 550 one-way trips on a worst-case day.

Neither the municipal code nor the General Plan includes specific thresholds pertaining to construction haul truck noise. Therefore, anticipated worst-case daily haul truck noise was assessed to determine if a 3 dB increase over ambient noise levels, which is considered to be "barely perceptible," would occur.

The project sponsor identified two northbound and two southbound haul routes, depending on which end of the project site the trucks are accessing. Trucks would exit the site from the north side of the project site via Terminal Court. At Produce Avenue, trucks would turn right to access southbound US 101 or turn left and follow Produce Drive north before turning right onto South Airport Boulevard. Trucks would stay on South Airport Boulevard as it continues south, then make one more right turn before accessing the US 101 northbound ramp. Haul trucks leaving the south end of the project site would use the proposed project driveway to access Shaw Road and San Mateo Avenue west of the project site. Trucks would travel north to the point where San Mateo Avenue intersects Produce Avenue/Airport Boulevard. To access southbound US 101, haul trucks would turn right on Produce Avenue and continue to the entrance ramp. Trucks headed northbound would turn left at San Mateo Avenue onto Airport Boulevard and access the northbound US 101 ramp near Grand Avenue. Trucks would use these same routes to return to the project site.

Daily turn movements and vehicle-mix percentages provided by Fehr & Peers were used to model existing traffic noise along the haul truck routes. In addition, traffic noise modeling was completed for an existing-plus-haul-truck condition by adding the worst-case daily haul truck volumes to the existing daily traffic volumes along roadway segments where hauling would occur. This would be a worst-case existing-plus-haul-truck condition because it would be based on the predicted worst-case daily haul truck volumes.

Traffic noise modeling for the existing and existing-plus-haul-truck scenarios was conducted using a spreadsheet that was based on the FHWA Traffic Noise Model, version 2.5. Modeled noise levels were then compared to determine if a project-related increase in haul truck noise of 3 dB or more would occur along any evaluated segment. Table 6-6 shows the modeled traffic noise levels under both conditions for roadway segments where hauling would occur.

Although project haul trucks were modeled to result in a traffic noise increase of more than 3 dB along some roadway segments (with the largest modeled increase being 10.7 dB over existing conditions), the measured CNEL noise level along these roadway segments is also considered. As an example, along the roadway segment where a 10.7 dB increase was modeled to occur (i.e., Terminal Court west of the Produce Avenue/US 101 southbound on-ramp), resulting in a modeled existing-plus-haul-truck noise level of 64.5 dBA CNEL, the measured noise level was 75.2 dBA CNEL.[16] Therefore, measured noise levels were actually greater than the modeled existing-plus-haul-truck noise level. Existing ambient noise levels along this segment are such that the addition of haul trucks would not result in a meaningful increase in the overall ambient noise level.

As shown in Table 6-6, measured noise levels along all roadway segments where a haul truck–related noise increase of 3 dB or more was modeled to occur actually exceeded modeled existing-plus-haul-truck noise levels. As a result, existing ambient noise levels from other sources (e.g., US 101 noise) would mask haul truck–related noise increases along these roadway segments. In addition, most of the roadways where hauling would occur are surrounded by commercial and industrial land uses, which are not considered to be noise sensitive. For example, San Mateo Avenue (where a 4 dB increase was modeled to occur from haul trucks north of South Linden Avenue) is lined with various commercial and industrial land uses. Ambient noise along this corridor was measured to be 77.4 dBA CNEL.[17] Although there are hotel land uses along some haul route segments, measured ambient noise was greater than the modeled existing-plus-haul-truck noise level along roadway segments where a 3 dB increase (or greater) was modeled to occur. As a result, actual noise increases from haul trucks would not be considered substantial at these locations.

In conclusion, although existing-plus-haul-truck noise levels were modeled to exceed existing traffic noise levels by 3 dB or more along several roadway segments, all of these segments have measured noise levels greater than the modeled existing-plus-haul-truck noise levels. Noise increases from project haul truck activity along haul routes would not be considered substantial.

Summary of Construction Noise Impact Conclusions

Based on the construction noise modeling results, estimated noise levels for both daytime and non-daytime (i.e., early-morning and nighttime) construction activities would be below the applicable significance thresholds. In addition, construction haul truck noise impacts would not be expected to result in a 3 dB increase in noise along evaluated roadway segments. Therefore, daytime and non-daytime construction noise impacts on sensitive uses in South San Francisco would not be considered substantial.

[16] LT-4 (75.2 dBA CNEL).
[17] Compared to LT-1 (77.4 dBA CNEL).

Project Operation

Stationary Noise Sources

Mechanical Equipment Noise

Although general information regarding project heating, cooling, and ventilation equipment, as well as other operational mechanical equipment for the project, is available, final equipment makes and models have not been selected. The proposed locations for project equipment are also not final. However, it is known that project mechanical equipment would include multiple air handling units, air-source heat pumps, make-up air units, chillers, split-system air-conditioners, direct outside air systems, cooling towers, electric water boilers, pumps, and fans.

In general, air handling units, standard heating and cooling package units, and split-system air-conditioners can produce sound levels in the range of about 70 to 75 dBA at 50 feet, depending on the size of the unit.[18] With regard to cooling towers, a typical 100-horsepower, propeller-driven cooling tower generates a noise level of approximately 74 dBA at 50 feet. Depending on cooling capacity, a chiller generates a sound power level of 97 to 103 dBA, which equates to a noise level of 65 to 71 dBA at 50 feet.[19] A typical boiler generates a sound power level in the range of 96 to 99 dBA,[20] which equates to a noise level of 64 to 67 dBA at 50 feet. Pumps generate noise levels at 50 feet of approximately 81 dBA, and exhaust/ventilation fans generate noise levels at 50 feet of approximately 79 dBA.[21]

Although the exact makes, models, sizes, and locations for the proposed mechanical equipment are not known at this time, an example case of combined noise levels was modeled, based on the equipment information available at the time. The analysis evaluated combined noise from a select number of units that could be installed under the project. It conservatively assumed that all modeled pieces of equipment in each building would be located relatively close to one another. Although more equipment than evaluated could be installed under the project, overall noise levels would be generally dominated by the closest and loudest equipment. In addition, equipment located farther from the edge of the project roof would be somewhat blocked by equipment located closer to the roof, resulting in noise attenuation. Finally, the edge of the roof itself would also reduce equipment noise experienced by noise-sensitive uses located closer to the ground level of the approximately 114-foot-tall project building. As a result, the example analysis provides a reasonable estimate of combined noise levels from project equipment experienced at the nearest sensitive uses.

According to the project sponsor, boilers and pumps would be located inside buildings. As a result, because walls would somewhat reduce noise, an estimated 10 dB reduction in the noise level is assumed in the model for these types of equipment. In addition, all rooftop equipment would be located behind a solid screen. As a result, noise reduction of approximately 5 dB was assumed for equipment located behind a mechanical screen in the model.

US 101 SB on-ramp	South of Terminal Court	72.2	73.0	0.8	N/A	No	No

a. Measured ambient noise level near this segment is 12.5 dB higher than modeled existing-plus-haul-truck results (LT-1, 77.4 dBA CNEL).
b. Measured ambient noise level near this segment is 11.8 dB higher than modeled existing-plus-haul-truck results (LT-1, 77.4 dBA CNEL).
c. Measured ambient noise level near this segment is 13.6 dB higher than modeled existing-plus-haul-truck results (LT-1, 77.4 dBA CNEL).
d. Measured ambient noise level near this segment is 10.7 dB higher than modeled existing-plus-haul-truck results (LT-5, 73.5 dBA CNEL).
e. Measured ambient noise level near this segment is 8.4 dB higher than modeled existing-plus-haul-truck results (LT-4, 75.2 dBA CNEL).
Bold text denotes modeled 3 dB or greater increase attributable to project haul trucks.
NB = northbound; SB = southbound

[page left blank intentionally]

As described in the Methodology section, operational equipment noise was evaluated to determine if combined equipment noise would be expected to exceed approximately 68 dBA at the Travelodge or approximately 64 dBA at the Best Western, based on a 5 dB allowable increase over the lowest recorded hourly ambient noise level. In addition, an evaluation is conducted to determine if combined equipment noise would be expected to exceed 70 dBA at the planned residential development at 100 Produce Avenue and 124 Airport Boulevard. Equipment noise experienced at the residences in San Bruno was evaluated to determine if it would exceed approximately 65 dBA L_{eq}, which would constitute a 10 dB increase over the lowest recorded hourly ambient noise level at that location. Note that using the lowest recorded hourly noise level (which occurred during nighttime hours) to establish the operational equipment threshold is conservative because more of the equipment would be operating during daytime hours (i.e., air-conditioning equipment) than during nighttime hours. In addition, most project buildings would be six stories tall, with an estimated height of 114 feet. The Travelodge is one or two stories and an estimated 15 to 30 feet in height. Therefore, the edge of the project roof for the project buildings where most mechanical equipment would be located (I131N and I131 S) would be expected to block the line of sight between most mechanical equipment and this nearby hotel, resulting in a reduction in mechanical equipment noise. However, to ensure a conservative analysis, a quantitative reduction in noise was not applied for this shielding.

Combined noise levels from two boilers (in an equipment room), two chillers, two cooling towers, four pumps (in an equipment room), two air handlers or direct outside air system (DOAS) units, and two exhaust fans would result in an estimated noise level of 81.5 dBA L_{eq} at a standard distance of 50 feet. At the nearby Travelodge, approximately 295 feet from the closest project building, without accounting for the height difference between the rooftop equipment and the hotel, the noise level would be approximately 66.2 dBA L_{eq}. At the Best Western, approximately 820 feet from the nearest project building, the estimated combined equipment noise level would be reduced to 57.3 dBA L_{eq} in the example case described above. At the planned residential development at 100 Produce Avenue and 124 Airport Boulevard, located more than 950 feet from the nearest project building, the noise level would be approximately 56.0 dBA L_{eq}. Refer to Table 6-7 for a summary of the equipment noise modeling for this example case.

For the reasons described above, and based on the modeling results shown in Table 6-7, it is unlikely that combined mechanical equipment noise would result in a 5 dB increase over the existing ambient noise level at the nearby land uses. Specifically, modeled noise levels would not exceed the established 68 dBA L_{eq} standard at the Travelodge, the 64 dBA L_{eq} standard at the Best Western, or the 70 dBA L_{eq} standard at the planned residential development at 100 Produce Avenue and 124 Airport Boulevard (based on a 5 dB allowable increase over the lowest recorded hourly ambient noise level).

Regarding noise impacts on residences in San Bruno, which are approximately 1,100 feet from the nearest portion of the project site but 1,570 feet southwest of the nearest project building (where mechanical equipment would be installed), noise from the example case above would be reduced to approximately 51.7 dBA L_{eq}. It would be reduced further by the edge of the roof where the equipment would be located and the presence of intervening buildings between the project site and the residences. In addition, this noise level would be well below the conservatively established 65 dBA noise limit for this location (based on the lowest hourly L_{eq} recorded). For these reasons, noise from project mechanical equipment would not be expected to result in noise in excess of the thresholds at the residential land uses in San Bruno, which would be 1,570 feet from the closest project building.

Table 6-7. Example Combined Mechanical Equipment Noise

Type of Equipment	dBA L_{eq} Noise at 50 Feet (assuming 100% utilization)	Number of Pieces of Equipment Assumed	Combined Noise Level	Attenuated Noise[a]	Source for Estimated Equipment Noise
Boiler	67	2	70	60	H&K
Chiller	71	2	74	69	H&K
Cooling tower	74	2	77	72	H&K
Pump	81	4	87	77	FHWA
Air handling unit	75	2	78	73	H&K
Exhaust fan	79	2	82	77	FHWA
Combined Equipment Noise at 50 feet				**81.6**	
Combined Equipment Noise at 295 feet (Travelodge)				**66.2**	
Combined Equipment Noise at 820 feet (Best Western)				**57.3**	
Combined Equipment Noise at 950 feet (100 Produce Avenue/124 Airport Boulevard)				**56.0**	
Combined Equipment Noise at 1,570 feet (San Bruno Residences)				**51.7**

a. Assumes 10 dB of attenuation if equipment is internal to the building and 5 dB of reduction if equipment is behind a solid screen.

H&K = Hoover and Keith

Although modeled equipment noise levels would be below the applicable thresholds at nearby sensitive uses, the final equipment has not yet been selected. In addition, should more equipment be operational simultaneously than assumed in the example analysis included above, actual noise levels may be louder than the combined noise levels presented previously. Therefore, actual mechanical equipment noise levels could differ from, and be greater than, the levels cited above. However, General Plan policies and actions would ensure that noise from rooftop mechanical equipment would be in compliance with applicable thresholds. Specifically, Action NOI-1.1.5 from the General Plan requires all new developments that are considered to be noise generators to control noise at the source through their site designs, building designs, and other techniques. Although City Municipal Code noise standards still reflect the previous land use designation terminology, the standards are applied to comparable land uses under the current General Plan, according to the City. Therefore, with respect to project mechanical equipment, compliance with the noise standards in Table 8.32.030 from the current City Municipal Code (or comparable, once the Action NOI 1.2.1, Update Municipal Code, section related to the noise ordinance is implemented) would be demonstrated prior to the issuance of building permits and once the final makes, models, sizes, and locations have been determined. For these reasons, noise impacts from project mechanical equipment would not be considered substantial.

Emergency Generator Noise

Emergency generators included in the project could result in the generation of audible noise during testing. Generator testing for the project would be conducted on a monthly basis for 30 minutes on weekends or during non-business hours but never after 10:00 p.m. (when noise standards become more stringent). Noise from the operation of generators during an emergency is typically exempt from local ordinances. However, even though the testing of emergency generators is a short-term process (i.e., less than 1 hour) and intermittent (usually once or twice per month), noise resulting from generator testing must comply with local noise limits for operational equipment noise.

The project sponsor has specified that the project would involve the installation of twenty-four 500 kW emergency generators. Six of the generators would be located at grade inside I131N in a separate generator room. The remaining 18 generators would be at grade in the outdoor service yards around the project site. Specifically, six generators would be located outside I131N, eight generators would be located outside the I131S A and buildings, and four generators would be located outside the I131S C building.

Although the final makes and models of the generators have not been selected, specification data for a similar generator can be used to estimate generator noise. Based on the example generator specification data, a 500 kW generator (Cummins 500DFEK)[22, 23] could produce an unattenuated noise level of 101.5 dBA at 50 feet, including both engine and exhaust noise.

The City Municipal Code establishes daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise limits, based on the receiving land use, that can be applied to stationary equipment noise generated in the city (as presented in Table 5-3). As described in the Methodology section, if measured ambient noise levels are higher than the standards, the allowable noise level is instead the ambient noise levels plus 5 dB. For purposes of the generator noise analysis, and because generator testing would take place during daytime hours, generator noise would be limited to 5 dB above the 12-hour average daytime L_{eq} at the nearest sensitive land uses. The nearest sensitive land use (the focus of this analysis) is the Travelodge hotel, which had a measured daytime 12-hour L_{eq} noise level of 68.8 dBA; the adjusted noise limit would therefore be 5 dB above this noise level, or approximately 74 dBA L_{eq}.

Note that specific details about generator shielding and the precise attenuation features for the project generators are not known with certainty at this time. It is expected that six of the generators would be located indoors, and the remaining generators outdoors would be located in service yards with acoustic enclosures. These features would be expected reduce some of the noise from generator engines but would be unlikely to greatly reduce noise from exhaust, which is typically piped out of a building/generator enclosure. Exhaust noise usually dominates overall generator noise levels. Note that all walls must be solid to result in meaningful attenuation from shielding, with no gaps or open louvers. Although it is expected that the generator room and enclosures would result in some noise reduction, the precise noise reduction (in dB) cannot be estimated at this time. Because the type and sound rating of future shielding or exhaust mufflers is unknown, this analysis is conservatively based on unattenuated generator noise levels.

[22] Cummins, Inc. 2019. *Cummins Power Generation.* Sound Data, 500DFEK. October.

[23] Choice based on specification data provided by the project sponsor.

General locations for the proposed generators have been identified by the project sponsor. The nearest sensitive land use to all four generator locations (i.e., the generator room and the service yard locations) is the Travelodge, which is on the east side of US 101. This hotel is approximately 340 feet from the closest proposed generators (i.e., the six 500 kW generators located outside the I131N B building), approximately 410 feet from the six generators internal to the I131N A building, 770 feet from the four generators outside the I131S C building, and approximately 1,030 feet from the eight generators outside the I131S A and B buildings. At these distances, unattenuated noise from the testing of each of the twenty-four 500 kW generators located throughout the site, noting only one would be tested at a given time, is estimated to be between 93.2 dBA L_{eq} (for the closest generators) and 88.4 dBA L_{eq} (for the farthest generators). Therefore, unattenuated generator noise levels from the testing of all proposed generators would most likely exceed the City noise level standard of 5 dB over the ambient noise level of 68.8 dBA, or approximately 74 dBA L_{eq}. Because noise levels during testing of all generators may exceed the existing ambient noise level at the nearby hotel by 5 dB or more, noise effects at the nearby hotel land use in South San Francisco from generator testing would be considered substantial.

With respect to noise levels from generator testing at other nearby sensitive land uses in South San Francisco, the Best Western and the planned 100 Produce Avenue and 124 Airport Boulevard development would be farther from the nearest generators compared with the Travelodge. Specifically, the Best Western would be at least 810 feet from any generator service yard, and the planned 100 Produce Avenue and 124 Airport Boulevard development would be at least 1,100 feet from the nearest generator set (i.e., inside the I131N A building). At these distances, unattenuated noise from a 500 kW generator would be approximately 89.4 and 88.5 dBA L_{eq}, respectively. The 12-hour average ambient daytime noise levels in the vicinity of the Best Western hotel and the planned 100 Produce Avenue and 124 Airport Boulevard development were 65.8 dBA L_{eq} and 70.3 dBA L_{eq}, respectively. Therefore, modeled generator noise levels of 89 to 90 dBA L_{eq} at these locations would be more than 5 dB above the existing ambient noise level. Noise effects at the nearby Best Western hotel and planned 100 Produce Avenue and 124 Airport Boulevard development in South San Francisco from generator testing would also be considered substantial.

Regarding noise effects in San Bruno on existing residential land uses, San Bruno noise standards allow for a 20 dB increase over ambient conditions during daytime hours for noise that occurs for no more than 30 minutes in 1 hour. Although generator testing would not take place in San Bruno, and therefore would not be required to comply with the noise limits of the San Bruno Municipal Code, generator noise experienced at the nearest sensitive uses in San Bruno was evaluated to determine if substantial noise increases would occur. As described in the Methodology section, generator noise was evaluated to determine if a 20 dB increase in ambient noise would occur at residences in San Bruno, based on the noise guidance from that jurisdiction. The average ambient daytime (12-hour) noise level measured during daytime hours (7:00 a.m. to 10:00 p.m.) near the homes was 74.1 dBA L_{eq}. Therefore, if generator testing noise were to exceed 94.1 dBA at these homes, noise effects would be substantial.

The closest generators to the residential land uses in San Bruno would be the eight 500 kW generators outside the I131S A and B buildings, which would be at least 1,520 feet away. At that distance, generator testing noise from the proposed 500 kW generators is estimated to be 86.7 dBA L_{eq}. For generators in the service yards, which are farther away, and within the I131N A building, noise levels from testing would be reduced . As mentioned previously, these noise levels

do not account for attenuation from intervening buildings, which would further reduce noise. Because estimated noise levels from generator testing would be below the allowable limits at the residences in San Bruno, generator noise in San Bruno would not be considered substantial.

Although modeled noise levels from temporary and intermittent generator testing could exceed the applicable thresholds, no attenuation is accounted for in this model. Attenuation measures would be evaluated and included in the generator design prior to installation in order to comply with applicable General Plan policies and actions. Compliance with General Plan policies and actions would ensure that noise from generator testing would not be substantial. Specifically, Action NOI-1.1.5 from the General Plan requires all new developments that are considered to be noise generators to control noise at the source through their site designs, building designs, and other techniques. Although City Municipal Code noise standards still reflect previous land use designation terminology, the standards are applied to the comparable land uses under the current General Plan, according to the City. Therefore, project emergency generator compliance with the noise standards in Table 8.32.030 from the current City Municipal Code (or comparable, once the Action NOI 1.2.1, Update Municipal Code, section related to the noise ordinance is implemented) would be demonstrated prior to issuance of building permits once the final makes, models, sizes, and locations of the generators have been determined. For these reasons, noise effects from project mechanical equipment on nearby sensitive uses would not be considered substantial.

Loading Dock Noise

Four loading dock areas are proposed for the project, two at each end of the project site. Each interior loading area would be designed to serve two WB-40 intermediate semi-trailers as well as smaller delivery vehicles. Per information received from the project sponsor, a maximum of 20 deliveries would be made to the site on a worst-case day. The nearest sensitive land use to all four loading docks would be the Travelodge. This hotel could be as close as 310 and 420 feet from the north loading docks and approximately 800 and 920 feet from the south loading docks. Although there could be direct line of sight between the north loading dock and the Travelodge (across US 101), the temporary loading and unloading activities associated with the project would be short term and intermittent throughout the day (with a maximum of 20 deliveries expected on a given day), occurring only during daytime hours when people are less sensitive to noise. In addition, loading and unloading activities already occur at the existing commercial and industrial uses on the site; therefore, project implementation would not result in an increase in this type of activity at the site. Furthermore, US 101, which generates high levels of traffic noise, is located between the project loading docks and the nearby hotels. For these reasons, impacts from temporary and short-term increases in noise from project loading dock activity would not be considered substantial.

Operational Traffic Noise – Direct Impact Evaluation

Once operational, the project would result in an increase in traffic in the vicinity of the project site. Project-specific traffic data, including daily turning movements, speed limits, and existing vehicle-mix assumptions (i.e., the proportion of automobiles, trucks, buses, and other vehicles) were provided by the project traffic engineer (Fehr & Peers). Additional posted speeds were determined using Google Street View, as needed. Daily turning movements were converted to ADT volumes for existing, existing-with-project, future, and future-with-project conditions (note

that the future scenarios are evaluated separately below). To evaluate direct traffic noise impacts associated with the project, modeling was conducted for existing and existing-with-project conditions to estimate traffic noise increases resulting from project implementation along roadway segments in the project vicinity.

When assessing traffic noise impacts, the following thresholds are applied to determine the significance of project-related traffic noise increases:

1. An increase of more than 5 dB is considered a significant traffic noise increase, regardless of the modeled existing noise level, and
2. In places where the existing or resulting noise environment exceeds the land use compatibility standards and/or allowable noise level for the adjacent land uses (e.g., existing or existing-with-project noise levels are greater than 65 dBA for sensitive land uses), any noise increase greater than 3 dB is considered a significant traffic noise increase.

The General Plan Land Use/Noise Compatibility Matrix (Table 5-5, above) outlines acceptable CNEL noise levels for various land uses in the city. Prior to completing the quantitative traffic noise modeling, an initial screening analysis was conducted to determine which roadway segments would experience a 10 percent increase (or greater) in vehicle traffic resulting from project implementation. A 10 percent increase in traffic volumes would typically result in a 0.4 dB increase in traffic noise, which is much smaller than the 3 and 5 dB increase thresholds mentioned above. Therefore, these roadways need not be quantitatively modeled to confirm a 3 dB or greater increase would not occur.

Traffic noise modeling along segments with at least a 10 percent increase in volumes attributable to the project was conducted using a spreadsheet that was based on the FHWA Traffic Noise Model, version 2.5, as described in the Methodology subsection of this report. Traffic noise was evaluated in terms of how project-related traffic noise increases could affect existing noise-sensitive land uses in the project area. Refer to Table 6-8 for a summary of the quantitative traffic noise modeling results for existing and existing-with-project conditions on all segments with a 10 percent, or greater, increase in traffic attributable to the project.

One of the modeled roadway segments, the project driveway north of Shaw Road, does not currently exist; therefore, modeled with-project traffic noise cannot be compared to existing noise conditions. The existing-with-project noise level along this segment was modeled to be 59.4 dBA CNEL. It should be noted that all surrounding land uses along this segment are commercial and industrial, which are not considered to be noise sensitive. Therefore, although project-related traffic noise increases along this segment cannot be quantified, significant traffic noise impacts would not occur.

Two roadway segments were modeled to potentially result in a 3 dB or greater increase in traffic noise as a result of project implementation. Specifically, Shaw Road east of San Mateo Avenue and Terminal Court west of the Produce Avenue/US 101 southbound on-ramp were modeled to have a project-related 4.9 and 7.2 dB increase in traffic noise, respectively. Note that the traffic noise evaluation above is based on modeled traffic noise levels only. Some roadway segments may be influenced by traffic noise from adjacent roads and other noise sources, which is not accounted for in the individual segment traffic noise modeling results presented above. Because the modeling approach assumes that each roadway is isolated and not affected by surrounding roads, modeled noise levels can sometimes be lower than actual noise levels in a given area.

Table 6-8. Modeled Traffic Noise Levels for Segments with a 10% Project Increase or Greater

Roadway	Segment Location	Modeled Existing Conditions (dBA CNEL)	Modeled Existing-with-Project Conditions (dBA CNEL)	Change (dB)	3 dB Increase or Greater?
Produce Avenue	North of Terminal Court	68.5	69.6	1.1	No
Produce Avenue	North of US 101 SB off-ramp	69.6	70.4	0.8	No
Produce Avenue	South of San Mateo Avenue/South Airport Boulevard	69.5	70.3	0.9	No
Produce Avenue	South of US 101 SB off-ramp	68.5	69.5	1.1	No
Project Driveway	North of Shaw Road	67.7[a]	59.4	-7.7	No
San Mateo Avenue	North of South Linden Avenue	61.7	62.2	0.6	No
San Mateo Avenue	North of Tanforan Avenue/ Shaw Road	61.9	62.4	0.5	No
San Mateo Avenue	South of Tanforan Avenue/Shaw Road	61.0	61.8	0.8	No
Shaw Road	**East of San Mateo Avenue[b]**	**56.7**	**61.6**	**4.9**	**Yes**
South Linden Avenue	South of San Mateo Avenue	58.6	59.5	0.9	No
South Linden Avenue	West of San Mateo Avenue	58.4	59.4	1.0	No
Terminal Court	**West of Produce Avenue/US 101 SB on-ramp**	**53.8**	**61.0**	**7.2**	**Yes**
US 101 SB off-ramp	East of Produce Avenue	61.2	62.1	0.9	No
US 101 SB on-ramp	South of Terminal Court	72.2	72.8	0.6	No

Refer to Appendix A for the complete traffic noise modeling results.

Note: Modeled noise levels at a fixed distance of 50 feet from the roadway centerline.

Bold text denotes segments with a 3 dB or greater project-related increase in noise.

a. The project driveway does not currently exist. Therefore, measured existing ambient noise levels were used to calculate a proxy CNEL noise level near this segment. Note that adjacent land uses along this segment are not considered to be noise sensitive (adjacent uses are commercial and industrial).

b. Shaw Road east of San Mateo Avenue is theoretically the same as Shaw Road west of the project driveway. However, the data provided by the project traffic engineers (Fehr & Peers) were slightly different along these two segments, most likely due to some vehicles using private driveways along these segments. Refer to Appendix A for the modeled traffic noise results for Shaw Road west of the project driveway.

NB = northbound; SB = southbound

In order to assess if modeled increases would actually constitute significant traffic noise impacts, as discussed in the Methodology section, it is important to consider measured existing noise levels in certain areas in conjunction with modeled traffic noise levels. This is particularly true in areas where the roadway segment evaluated is not the dominating noise source in the area (e.g., where noise from a nearby highway may dominate). The existing-with-project traffic noise levels for the segments where a potentially significant impact was identified during modeling were compared to nearby measured ambient noise levels.

As shown in Table 6-8, the modeled existing and existing-with-project traffic noise levels on Shaw Road east of San Mateo Avenue were 56.7 dBA CNEL and 61.6 dBA CNEL, respectively (as shown in Table 6-8). The measured ambient noise level near this segment (represented by LT-1 along San Mateo Avenue) was 77.4 dBA CNEL. Therefore, the measured existing noise level near this segment is already almost 16 dBA higher than the modeled existing-with-project traffic noise level.

Regarding the segment of Terminal Court west of the Produce Avenue/US 101 southbound on-ramp, the modeled existing and existing-with-project traffic noise levels were 53.8 dBA CNEL and 61.0 dBA CNEL, respectively (as shown in Table 6-8). The measured ambient noise near Terminal Court west of the Produce Avenue/US 101 southbound on-ramp (represented by LT-4) was measured to be 75.2 dBA CNEL. Therefore, measured existing noise levels along this segment are already about 14 dBA higher than the modeled existing-with-project traffic noise level as a result of nearby US 101 traffic. Refer to Table 6-9 for a comparison of the modeled and measured noise levels along the potentially affected roadway segments identified above.

As shown in Table 6-9, measured ambient noise along the two segments (i.e., Shaw Road and Terminal Court) are substantially greater than the modeled existing and existing-with-project traffic noise levels because of the proximity of Shaw Road to industrial land uses and the relatively busy San Mateo Avenue as well as the proximity of Terminal Court to US 101. When adding decibels, if the difference between two noise sources is 10 dBA or more, the higher noise source will dominate, and the resultant noise level will be equal to the noise level of the higher noise source. Therefore, because measured existing ambient noise levels are 14 to 16 dB higher than modeled existing-with-project noise levels, the project-related traffic increase would not result in a perceptible increase in noise along these roadway segments. Project-related traffic noise impacts along these segments, and along all other evaluated segments (as discussed above and shown in Table 6-8), would not be considered substantial.

Operational Traffic Noise – Cumulative Impact Evaluation

To evaluate potential cumulative traffic noise impacts in the project area, traffic volumes from the existing scenario were compared to the future-with-project scenario. A cumulative traffic noise impact would occur at a noise-sensitive land use if a 3 dB increase in noise would occur in areas where existing and resulting noise levels are above the applicable land use compatibility standard or if a 5 dB increase in noise would occur in areas where existing and resulting noise levels are below the applicable land use compatibility standard. To provide a conservative assessment, the initial screening analysis evaluated a 3 dB increase along all segments. If a 3 dB increase was shown to occur, then further evaluation was done to determine if a cumulative impact would indeed occur (e.g., by confirming the presence of noise-sensitive land uses or by comparing to existing measured noise levels if they are higher than modeled noise levels). Subsequently, the proposed project's contribution to a cumulative impact is assessed by determining if the project contribution would be cumulatively considerable (i.e., if it would contribute 1 dB or more to the overall increase).

Table 6-9. Detailed Evaluation for Segments with a Modeled 3 dB Project-Related Traffic Noise Increase

Roadway	Segment Location	Modeled Existing Conditions (dBA CNEL)	Modeled Existing-with-Project Conditions (dBA CNEL)	Increase in Modeled Conditions (dB)	Measured Noise Level (dBA CNEL)	Nearest Most-Sensitive Land Use	Change Compared to Measured Ambient Noise (dB)
Shaw Road	East of San Mateo Avenue	56.7	61.6	4.9	77.4[a]	Commercial	-15.8
Terminal Court	West of Produce Avenue/ US 101 SB on-ramp	53.8	61.0	7.2	75.2[b]	Commercial	-14.2

Refer to Appendix A for the complete traffic noise modeling results, including modeling results for the cumulative-no-project and cumulative-with-project condition (which were not used in this analysis).

Note: Modeled noise levels at a fixed distance of 50 feet from the roadway centerline are presented.

[a.] The measured ambient noise level representative of this segment was LT-1 (77.4 dBA CNEL).

[b.] The measured ambient noise level representative of this segment was LT-4 (75.2 dBA CNEL).

SB = southbound

Traffic noise modeling was conducted using a spreadsheet based on the FHWA Traffic Noise Model, version 2.5, as described in the Methodology subsection of this report. Modeling results are included in Appendix A for all roadway segments where at least a 10 percent increase in traffic volumes (or 0.4 dB increase in noise) would occur from existing to future-with-project conditions. Table 6-10 shows all roadway segments where a 3 dB or more increase from existing to future-with-project conditions was modeled to occur. A 3 dB increase or greater from existing to future-with-project conditions was modeled to occur along eight of the evaluated roadway segments.

As shown below in Table 6-10, a 3 dB increase (or greater) from existing to future-with-project conditions was modeled to occur along eight roadway segments. A 3 dB increase indicates that a cumulative impact may occur, depending on the overall noise level (i.e., if it exceeds the applicable land use compatibility standard) and the proximity to noise-sensitive land uses. Conservatively assuming that a cumulative traffic noise impact could occur along these eight segments, the project contribution to the 3 dB increase is assessed to see if a 1 dB project-related increase would occur. Should a 1 dB project-related increase occur, then the project may have a cumulatively considerable contribution to that potential cumulative impact.

When comparing future-no-project and future-with-project conditions, two of the eight segments with a 3 dB or greater increase would have a project-related increase of 1 dB or more (from future-no-project to future-with-project conditions). A 3.9 dB project-related increase in noise was modeled to occur along Shaw Road east of San Mateo Avenue (which had a 6.7 dB increase from existing to future-with-project conditions). In addition, a 1.3 dB project-related increase was modeled to occur along Tanforan Avenue west of San Mateo Avenue (which has a 6 dB increase from existing to future-with-project conditions).

Although a 3.9 dB project-related increase was modeled to occur along Shaw Road east of San Mateo Avenue, the modeled future-with-project traffic noise level for this segment is substantially lower than the existing measured noise level in this area. Specifically, the existing and future-with-project traffic noise levels on Shaw Road east of San Mateo Avenue were modeled to be 56.7 dBA CNEL and 63.5 dBA CNEL, respectively (as shown in Table 6-10). In addition, project-related traffic noise along Tanforan Avenue west of San Mateo Avenue was modeled to increase by 1.3 dB from existing conditions to future-with-project conditions. However, the modeled future-with-project traffic noise level for this segment is substantially lower than the existing measured noise level in this area. Specifically, the existing and future-with-project traffic noise levels on Tanforan Avenue west of San Mateo Avenue were modeled to be 50.8 dBA CNEL and 56.8 dBA CNEL, respectively (as shown in Table 6-10). Existing ambient noise near these two roadway segments was measured to be 77.4 dBA CNEL (as shown in Table 6-11). Therefore, measured existing noise levels are already approximately 14 dB higher than the modeled future-with-project traffic noise level along Shaw Road east of San Mateo Avenue and approximately 21 dB higher than modeled future-with-project traffic noise levels along Tanforan Avenue west of San Mateo Avenue.

When adding decibels, if the difference between two noise sources is 10 dBA or more, the higher noise source will dominate, and the resultant noise level will be equal to the noise level of the higher noise source. Therefore, because measured existing ambient noise levels are at least 14 dB higher than modeled future-with-project noise levels, the project-related traffic increase would not result in a perceptible increase in noise along this roadway segment. As a result, the potential cumulative impact along this segment would not be expected to occur. In addition, the project contribution

Table 6-10. Cumulative Traffic Noise Evaluation for Potentially Affected Segments

Roadway	Segment Location	Existing Conditions (dBA CNEL)	Future (2040) No-Project Conditions (dBA CNEL)	Future-with-Project Conditions (dBA CNEL)	Increase from Modeled Existing to Future-with-Project Conditions (dB)	Potential Cumulative Impact?	Increase from Future-No-Project to Future-with Project-Conditions (dB)	Potential Cumulatively Considerable Project Contribution?
Mitchell Avenue	East of South Airport Boulevard/Gateway Boulevard	63.0	66.9	67.0	4.0	Yes	0.1	No
San Mateo Avenue	North of South Linden Avenue	60.6	65.3	65.4	4.8	Yes	0.1	No
San Mateo Avenue	North of Tanforan Avenue/Shaw Road	61.9	64.5	64.9	3.0	Yes	0.4	No
Shaw Road	East of San Mateo Avenue[a]	56.7	59.6	63.5	6.8	Yes	3.9	Yes
South Linden Avenue	West of San Mateo Avenue	57.1	63.7	64.0	6.9	Yes	0.3	No
Tanforan Avenue	West of San Mateo Avenue	50.8	55.6	56.8	6.0	Yes	1.3	Yes
Terminal Court	West of Produce Avenue/US 101 SB on-ramp	53.8	75.2 [b]	64.2	21.4	Yes	-11.0 [c]	No
Wondercolor Lane	East of South Airport Boulevard	53.7	58.9	58.9	5.1	Yes	-0.1	No

Refer to Appendix A for the complete traffic noise modeling results.

Note: Modeled noise levels at a fixed distance of 50 feet from the roadway centerline.

[a] Shaw Road east of San Mateo Avenue is theoretically the same as Shaw Road west of the project driveway. However, the data provided by the project traffic engineers (Fehr & Peers) were slightly different along these two segments, most likely due to some vehicles using private driveways along these segments. Refer to Appendix A for the modeled traffic noise results for Shaw Road west of the project driveway.

[b] According to the project traffic engineer (Fehr & Peers), Terminal Court west of Produce Avenue would not exist under 2040 no-project conditions due to implementation of the flyover. As a result, traffic data for future (2040) no-project conditions were not available for this roadway segment, and traffic noise for this scenario could not be modeled. The existing measured CNEL noise level in this area was 75.2 dBA CNEL (LT-4), which can be conservatively used in place of the modeled future-no-project noise level for this segment.

[c] Because Terminal Court west of Produce Avenue would not exist with implementation of the flyover (i.e., under future-no-project conditions), modeling for future conditions could not be conducted; measured noise is used in the assessment. The measured 75.2 dBA CNEL noise level (LT-4) is 21.4 dB louder than the existing modeled noise level and 11.0 dB louder than the modeled future-with-project noise level along this segment. This indicates that noise along this segment is dominated by traffic on nearby US 101 instead of vehicles along Terminal Court.

SB = southbound

Table 6-11. Detailed Traffic Noise Evaluation for Potentially Affected Segment

Roadway	Segment Location	Modeled Existing Conditions (dBA CNEL)	Future (2040) No-Project Conditions	Future-with-Project Conditions dBA CNEL	Measured Noise Level (dBA CNEL)	Noise-Sensitive Land Use along This Roadway Segment?	Change Compared to Measured Ambient Noise (dB)
Shaw Road	East of San Mateo Avenue	56.7	59.8	63.5	77.4[a]	No	-13.9
Tanforan Avenue	West of San Mateo Avenue	50.8	55.6	56.8	77.4[a]	No	-20.6

Refer to Appendix A for the complete traffic noise modeling results.

Note: Modeled noise levels at a fixed distance of 50 feet from the roadway centerline.

[a] Measured ambient noise level from LT-1 (77.4 dBA CNEL) is considered representative of this segment.

[page left blank intentionally]

to a potential cumulative impact along this segment would not be considered substantial. Regarding other evaluated segments, the project contribution to any identified cumulative impacts would also not be considered substantial, as shown in Table 6-10 and described previously. In conclusion, project-related cumulative traffic noise impacts for all evaluated segments would not be considered substantial.

Parking Garage Noise

Noise sources in parking garages include moving vehicles, along with doors closing, cars starting, tires squealing, alarms sounding, and other automotive noises occurring. Although parking area noise is difficult to predict because of the many variables (e.g., parking structure design, the number of vehicles moving through the structure at any given time), noise from parking areas is temporary and periodic. The nearest noise-sensitive uses are the hotel land uses across US 101. The hotels would be more than 790 feet from the proposed parking structure. The nearest existing residences are located in San Bruno at a distance of approximately 1,980 feet from this garage. The nearby planned residential development at 100 Produce Avenue and 124 Airport Boulevard would be more than 1,000 feet from this garage.

According to FTA's *Transit Noise and Vibration Impact Assessment* manual,[24] 1,000 cars in a peak activity hour would generate a sound equivalent level (SEL) of 92 dBA at 50 feet, which can be converted to an hourly L_{eq} (average) noise level of 56.4 dBA L_{eq} at 50 feet. Although it is not known at this time how many vehicles would use this garage during a peak hour, conservatively assuming 1,300 vehicles would be using the 1,378-space garage and 60 surface parking spaces at once, parking garage noise at a distance of 790 feet would be approximately 34 dBA L_{eq}. At a distance of 1,000 feet, the distance to the planned residential development at 100 Produce Avenue and 124 Airport Boulevard, parking garage noise would be approximately 32 dBA, based on the calculation described above. These noise levels would be well below the measured ambient noise levels at the nearest hotel land uses (with a daytime 12-hour L_{eq} noise level of 68.8 dBA) and nearby proposed residential development (with a daytime 12-hour L_{eq} noise level of 70.3 dBA). In addition, because US 101 is located between or adjacent to the nearest noise-sensitive land uses and the location of the proposed parking structure, and because the time of day when the parking structure would be most heavily used (daytime hours) would align with the time of day when traffic on US 101 would be heaviest, noise from US 101 would overshadow intermittent nuisance noise from the proposed parking structure.

At the nearest existing residences, which are 1,980 feet away, the noise level from 1,500 vehicles using the garage simultaneously would be approximately 26 dBA L_{eq} (without accounting for attenuation from intervening buildings). This noise level would be well below the measured 12-hour daytime noise level at these residences (i.e., 74.1 dBA L_{eq}). In addition, vehicle noise is currently generated on and around the project site, given the existing use at and adjacent to the site; therefore, noise from vehicle parking activities would be similar to noise under existing conditions. Because of the distance between the parking structure and nearby sensitive land uses, temporary and periodic noise from the parking structure would not be considered substantial.

Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: February 17, 2023.

On-Site Day Care and Outdoor Play Area

Along with the proposed R&D buildings, a proposed day-care facility would serve employees of the proposed project as well as the general public. The facility would accommodate up to 50 children. Information provided by the project sponsor indicates that the facility would operate Monday through Friday from 8:00 a.m. to 5:30 p.m. Although activities occurring within the facility would not be expected to increase noise levels in the vicinity of the project site, the potential exists for the facility's 4,950 sf play area to generate noise.

To estimate hourly noise levels at the nearest sensitive noise receptors, previously measured source noise levels from children playing were used. Specifically, the analysis used noise measurements conducted at Linda Vista Elementary School in San Diego. During the measurement survey, noise levels were measured from approximately 10:30 a.m. to 11:40 a.m. to capture morning recess and from 12:20 p.m. to 1:40 p.m. to capture the lunch recess. The measurements indicated an L_{eq} noise level of 64 dBA at an acoustical average distance of 120 feet, with an average of approximately 58 children playing simultaneously at various locations, including in flat asphalt playground areas, on climbing/play equipment, in a tetherball area, and on a decomposed granite field. The measured noise levels were normalized to a reference distance of 50 feet, then adjusted to account for the assumed number of children playing within the outdoor play area and the distances to the closest noise-sensitive receptors. Assuming 50 children were playing continuously within the project outdoor play area throughout an entire hour, the noise level at a distance of 50 feet would be approximately 71 dBA L_{eq}. Table 6-12 shows the estimated noise levels at the distances to the nearest sensitive land uses. Refer to Appendix A for more detailed modeling results.

Table 6-12. Summary of Outdoor Play Area Noise

Receiver	Distance between Outdoor Play Area and Receiver	Noise Level at Receiver (dBA L_{eq})	Measured Ambient Noise Level at Receiver (dBA $L_{eq[12\text{-}hour]}$)
Travelodge Hotel	840	46.1	68.8
100 Produce Ave/124 Airport Blvd	960	45.0	65.8
Best Western	1470	41.3	70.3

Source: Linda Vista Elementary School in San Diego during morning and lunchtime recess.

As shown in Table 6-12, estimated noise levels from children playing near the day care would not exceed locally measured ambient noise levels at the nearest sensitive land uses. For example, Travelodge is the nearest sensitive receptor, located approximately 840 feet east of the proposed outdoor play area. At that distance, the sound of 50 children playing is estimated to be approximately 46 dBA L_{eq}. The measured daytime 12-hour L_{eq} noise level near the Travelodge was 68.8 dBA. This would mean that noise from the outdoor play area would be about 13 dBA below the measured ambient level. The 12-hour average ambient daytime noise levels in the vicinity of the Best Western hotel as well as the planned 100 Produce Avenue and 124 Airport Boulevard development were 65.8 dBA L_{eq} and 70.3 dBA L_{eq}, respectively. The estimated noise levels for 50 children playing continuously for 1 hour at these locations are approximately 41 and 45 dBA L_{eq}, respectively. These estimated noise levels are approximately 21 and 29 dBA lower than the measured ambient noise levels at the Best Western and 100 Produce Avenue and 124 Airport Boulevard location.

Because estimated noise levels while the outdoor play area is in use would not exceed the existing ambient noise level at the nearby hotel, or the other nearby noise-sensitive receptors, noise effects from children playing near the on-site day care would not be considered substantial.

6.3.2 Vibration and Ground-Borne Noise Impacts

Damage to Structures

Construction of the proposed project would involve the use of equipment that could generate ground-borne vibration. PPV levels associated with the heavy-duty construction equipment proposed for use with the project at a distance of 25 feet, as well as other project-specific distances, are shown in Table 6-13. Note that project construction would not involve the use of pile drivers. The most vibration-intensive construction equipment proposed for use with the project are an auger drill rig and an excavator. For the purpose of this analysis, a large bulldozer is considered to be representative of heavy earthmoving equipment, such as an excavator.

Table 6-13. Vibration Levels for Project Construction Equipment at Various Distances

Equipment	Reference PPV at 25 Feet[a]	PPV at 10 Feet	PPV at 250 Feet	PPV at 800 Feet	PPV at 1,100 Feet
Auger drill rig	0.089	**0.352**	**0.003**	**> 0.001**	**> 0.001**
Large bulldozer[b]	0.089	**0.352**	**0.003**	**> 0.001**	**> 0.001**
Small bulldozer[c]	0.003	0.012	> 0.001	> 0.001	> 0.001

Source: Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment*. FTA Report No. 0123. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/ transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf. Accessed: February 17, 2023.
Note: **Bold** text indicates values that are used in the analysis below.
a. Obtained from FTA *Transit Noise and Vibration Impact Assessment*, 2018.
b. Considered representative of other heavy earthmoving equipment such as excavators, graders, backhoes, etc.
c. Considered representative of smaller equipment such as a small backhoe and front-end loader.

The potential for structural damage to occur at adjacent or nearby buildings can be evaluated by estimating PPV levels from construction equipment at nearby uses and comparing those levels to the Caltrans damage criterion for that type of building. The nearest off-site structures to the project site are the commercial and industrial buildings located along the western border of the project site. A setback from the property line is anticipated to keep vibration-intensive construction equipment away from these structures. However, the size of the setback is not known at this time. This analysis conservatively assumed that a large bulldozer, or similar equipment, would be operated with a 10-foot setback from the closest structure in place. An auger drill rig would be used only within the footprint of the proposed project buildings and therefore be would farther from the nearby existing structures (to the west) than the large earthmoving equipment, such as an excavator or large bulldozer. Because an excavator and large bulldozer would both generate approximately the same vibration level as an auger drill, this analysis focuses on the use of a large bulldozer or excavator within 10 feet of the nearest existing off-site structure. The PPV from an excavator at the nearest structure (i.e., 10 feet away) would be approximately 0.352 in/sec.

The structures along the western border of the project site (parallel to San Mateo Avenue) were constructed between 1956 and 1968. Based on the age of these structures, they would be categorized as "historic" and "some old buildings," according to the Caltrans vibration guidelines for damage to structures. The applicable damage criterion for these buildings from the Caltrans vibration damage guidelines is a PPV of 0.25 in/sec.[25] Because the estimated vibration level from an excavator at 10 feet (PPV of 0.352 in/sec) would exceed the applicable criterion, vibration-related damage could occur at this structure if vibration-intensive equipment were to be used at this distance. However, the equipment may be farther from the existing structures. Should a buffer distance of 13 feet between large earthmoving equipment and the nearest existing structure be maintained, estimated vibration levels would be below the applicable damage criterion. Note that the vibration levels at other buildings located more than 13 feet from the project site would be even lower, and vibration-related damage would therefore not be expected to occur at these other buildings. However, because it is unknown whether a 13-foot buffer between these structures would be maintained during project construction, vibration-related damage impacts on the existing structures west of the project site would be considered substantial and mitigation would be required.

Implementation of Mitigation Measure NOI-1, which would be required if vibration-generating construction equipment were to operate within 13 feet of adjacent structures, would reduce construction-related vibration impacts. Mitigation Measure NOI-1 would ensure that vibration would be kept below the level that may cause damage. It would also require monitoring to ensure that damage effects would not occur. With implementation of the mitigation, this impact would not be considered substantial.

Mitigation Measure NOI-1: Protect adjacent structures from construction-generated vibration

For construction with heavy ground-disturbing equipment that occurs within 13 feet of neighboring buildings, a construction vibration control plan shall be required to mitigate potential construction vibration impacts. The project sponsor shall incorporate into construction specifications for the proposed project a requirement for the construction contractor(s) to use all feasible means to avoid damage to adjacent and nearby buildings. Such methods to help reduce vibration-related damage effects may include maintaining a safe distance between the construction site and the potentially affected building (e.g., at least 13 feet for large earth-disturbing equipment) or using smaller and less-vibration-intensive equipment in proximity to the potentially affected building.

In the event that vibration-generating construction activity is required within 13 feet of nearby older buildings similar to "historic and some old buildings," the construction contractor shall implement a monitoring program to minimize damage to adjacent buildings and ensure that any such damage is documented and repaired. If required, the monitoring program shall include the following components:

- Prior to the start of any ground-disturbing activity within 13 feet of adjacent buildings, the construction contractor shall engage a structural engineer or other professional with similar qualifications to document and photograph the existing conditions of potentially affected buildings within 13 feet of proposed vibratory-generating construction activities.

[25] California Department of Transportation. 2020. *Transportation and Construction Vibration Guidance Manual*. Final. CT-HWANP-RT-20-365.01.01. April. Sacramento, CA. Available: https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tcvgm-apr2020-a11y.pdf. Accessed: February 14, 2023.

- Based on the construction and condition of the resource(s), the consultant shall also establish a standard maximum vibration level that will not be exceeded at nearby buildings, based on existing conditions, character-defining features, soil conditions, and anticipated construction practices (a common standard is a peak particle velocity of 0.25 inch per second for "historic and some old buildings," as shown in Table 5-1).
- To ensure that vibration levels do not exceed the established standard, the project sponsor shall monitor vibration levels at each structure and prohibit vibratory construction activities that generate vibration levels in excess of the standard.
- Should vibration levels be observed in excess of the selected standard, construction shall be halted and alternative construction techniques put in practice, to the extent feasible.
- When vibration-intensive activity (e.g., heavy earth-disturbing equipment) occurs within 13 feet of a building, the structural engineer shall conduct an inspection of the building for damage within 7 days of that activity. If inspections determine that no damage occurred, the 7-day period may be increased to 30 days for that activity. Should damage to adjacent buildings occur, the building(s) shall be remediated to their preconstruction condition at the conclusion of ground-disturbing activity on the site.
- Should all ground-disturbing construction activity occur 13 feet or more from the nearest existing structure, this monitoring plan shall not be required.

Vibration-Related Annoyance

Regarding annoyance-related vibration impacts, vibration-related annoyance is typically considered to be substantial if it results in sleep disturbance at nearby residences. For purposes of this analysis, should vibration from project construction exceed the Caltrans "strongly perceptible" criterion (i.e., PPV of 0.1 in/sec) at residential land uses during nighttime hours (when people generally sleep), impacts would be considered significant.

Note that most construction activities would occur during the hours of 8:00 a.m. to 8:00 p.m. Monday through Friday, 9:00 a.m. to 8:00 p.m. on Saturdays, and 10:00 a.m. to 6:00 p.m. on Sundays and holidays (the City's standard hours for construction). However, some construction activities are proposed for nighttime and early-morning hours. Specifically, the sponsor has explained that activities requiring the use of a crane, which does not generate meaningful vibration, or large equipment such as an auger drill rig could start as early as 5:00 a.m. to avoid some of the high winds that occur during the day in South San Francisco. Potential vibration-related annoyance impacts of the use of a drill rig during the early-morning hours are evaluated below.

The closest sensitive use where people are expected to be sleeping during nighttime and early-morning hours is the Travelodge hotel, which is approximately 250 feet east of the project site; additional hotels are located farther to the east. Residential land uses are located southwest of the project site at a distance of approximately 1,570 from the nearest proposed project building (where an auger drill rig could be used) and 1,400 feet from the main project site.

Assuming that vibration-intensive equipment could be used anywhere on the project site, an auger drill rig or large bulldozer operating at the perimeter of the site closest to the Travelodge could result in a PPV of approximately 0.003 in/sec. At the next-closest hotel (the Best Western,

approximately 800 feet east of the project site), an auger drill rig or large bulldozer would result in a PPV of less than 0.001 in/sec. At the nearby proposed residential development at 100 Produce Avenue and 124 Airport Boulevard (located approximately 950 feet from the project site) and at the nearest existing residences (located approximately 1,400 feet southwest of the main project site, excluding the project driveway), an auger drill rig would also result in a PPV of less than 0.001 in/sec. These vibration levels are all well below the Caltrans "strongly perceptible" criterion for vibration-related annoyance (i.e., PPV of 0.1 in/sec).[26]

Based on the estimated vibration levels for the project equipment presented above, early-morning or nighttime project construction activities would not be expected to result in sleep disturbance at nearby sensitive land uses. In addition, project construction equipment would typically be operating even farther from the off-site sensitive land uses than the distances assessed in this analysis, resulting in even lower vibration levels. Therefore, because the estimated vibration levels would not exceed the strongly perceptible criterion during early-morning or nighttime hours when people generally sleep, annoyance-related vibration impacts from project construction would not be considered substantial.

6.3.3 Impacts Associated with Airport Noise and Consistency with Airport Land Use Plan

The closest airport to the project site is SFO, which is approximately 1 mile to the southeast. Portions of the project site fall within the 65 dBA noise contour for this airport, according to the 2012 *Comprehensive Airport Land Use Compatibility Plan (ALUCP) for the Environs of San Francisco International Airport.* No portion of the project site is located within the 70 or 75 dBA CNEL noise contours.[27]

Land uses proposed under the project include commercial, office, and/or R&D land uses. The 2012 ALUCP designates commercial and industrial/production land uses as compatible with all airport-related noise levels, according to Table IV-1, Noise/Land Use Compatibility Criteria, of the ALUCP document.[28] Although residential land uses are designated as conditionally compatible within the 65 dBA CNEL contour, no residential land uses are proposed as part of the project. Therefore, the project would not conflict with the land use restrictions for the 65 dBA noise contour in the ALUCP.

1. The Project Driveway north of Shaw Road does not currently exist. Therefore, measured existing ambient noise levels were used to calculate a proxy CNEL noise level near this segment.

2. These two modeled roadway segments represent the same section of road branching from two different intersections (the San Mateo Avenue intersection with Shaw Road/Tanforan Avenue, and the proposed Project Driveway intersection with Shaw Road). Although these are the same segment, small discrepancies in the traffic data provided by the project traffic engineers (Fehr and Peers) exist between these segments. Both segment results are presented in the appendix, but only one is presented in the Report. The difference between the segments is small (and not expected to be perceptible) for the Existing With Project noise levels.

1. Introduction

1.1 Project Description

This transportation impact analysis (TIA) evaluates potential transportation impacts associated with the Infinite 131 development located west of Highway 101 in South San Francisco, California (herein referred to as the "Project"). The Project is located on a 17.67 acre site presently zoned as Mixed Industrial High and Mixed Industrial Medium. The Project includes demolition of approximately 126,750 square feet of industrial and operational uses that are currently occupied by the Golden Gate Produce Terminal, along with approximately 116,572 square feet of open-air structures such as loading docks and trash compactor areas. The Project would construct 1,632,000 square feet of research & development space, 21,000 square feet of conference space, a 20,000 square foot fitness center, 27,000 square feet of restaurant space, and 4,050 square feet of daycare space, for a total of 1.704 million square feet across seven campus buildings. The Project includes 2,976 proposed stalls, including 50 accessible spaces and 1,339 electric vehicle capable spaces. The Project would include amendments to the City's General Plan, Lindenville Specific Plan, and Zoning Code to change the existing land use and zoning designations to Business Technology Park High.

The Project site is bounded by the Park & Fly lot, US-101, and Produce Avenue to the east, Terminal Court to the north, the Navigable Slough to the south, and the San Mateo Avenue corridor to the west. The Park & Fly lot was recently entitled as the Infinite 101 development, a 696,000 square foot research and development campus by the same owner that would function as a separate phase to the Project. The Project site is approximately one mile south of the South San Francisco Caltrain Station, one mile north of the San Bruno Caltrain station, and one mile northeast of the San Bruno BART station. Primary bicycle and pedestrian site access is provided via the planned Class I Shared-Use Path along the western frontage of the site, which would connect to Shaw Road and Terminal Court/Produce Avenue. San Francisco International Airport (SFO) is located approximately two miles to the south.

The Project is subject to the City's TDM Ordinance (Chapter 20.400 of the City's Municipal Code) which requires the Project to implement a TDM program that achieves a 50 percent drive alone mode share target and complies with a trip cap. The TDM program elements include site enhancement strategies, on-site amenities, and programmatic and service strategies that encourage the use of alternative modes of travel. As described in the TDM Plan in **Appendix A**, the Project's TDM program would include all required measures including participation in Commute.org programs, a carpool/vanpool program, bicycle storage, showers, and lockers, a TDM coordinator, bicycle- and pedestrian-oriented site access, and encouragement telecommuting. Additionally, the Project would include fully subsidized transit passes, new shuttle services to Caltrain and BART, active transportation and transit capital improvements, on-site amenities, and a bicycle repair station. The measures will be monitored to ensure that they comply with the 50 percent non-drive-alone mode share required by the ordinance; failure to reach this goal would result in the implementation of additional measures and/or administration of penalties. Upon completion of both the Infinite 101 and Infinite 131 developments, monitoring would be coordinated between the two sites as a single campus.

Figure 1-1 shows the Project location, nearby intersections, and the surrounding roadway system. **Figure 1-2** presents the Project site plan. All figures in the report can be found at the end of their respective sections.

1.2 Significance Criteria

The impacts of the Project related to transportation will be considered significant under CEQA if any of the following thresholds of significance are exceeded, per Appendix G of the California Environmental Quality Act (CEQA) Guidelines:

- **Consistency with Plans & Policies:** A significant impact would a occur if the development of the Project would conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;
- **Vehicle Miles Traveled (VMT):** A significant impact would a occur if the development of the Project would generate per-employee VMT greater than the City's adopted threshold of 15 percent below the regional average, according to CEQA Guidelines Section 15064.3, subdivision (b) and City of South San Francisco Resolution 77-2020 related to VMT;
- **Design Hazards:** A significant impact would a occur if the development of the Project would substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or
- **Emergency Access and Evacuation:** A significant impact would a occur if the development of the Project would result in inadequate emergency access

The thresholds of significance used in this document are based on Appendix G criteria and the City of South San Francisco's adopted local policies. The criteria of significance apply to all Project scenarios as measured against the corresponding No Project scenarios.

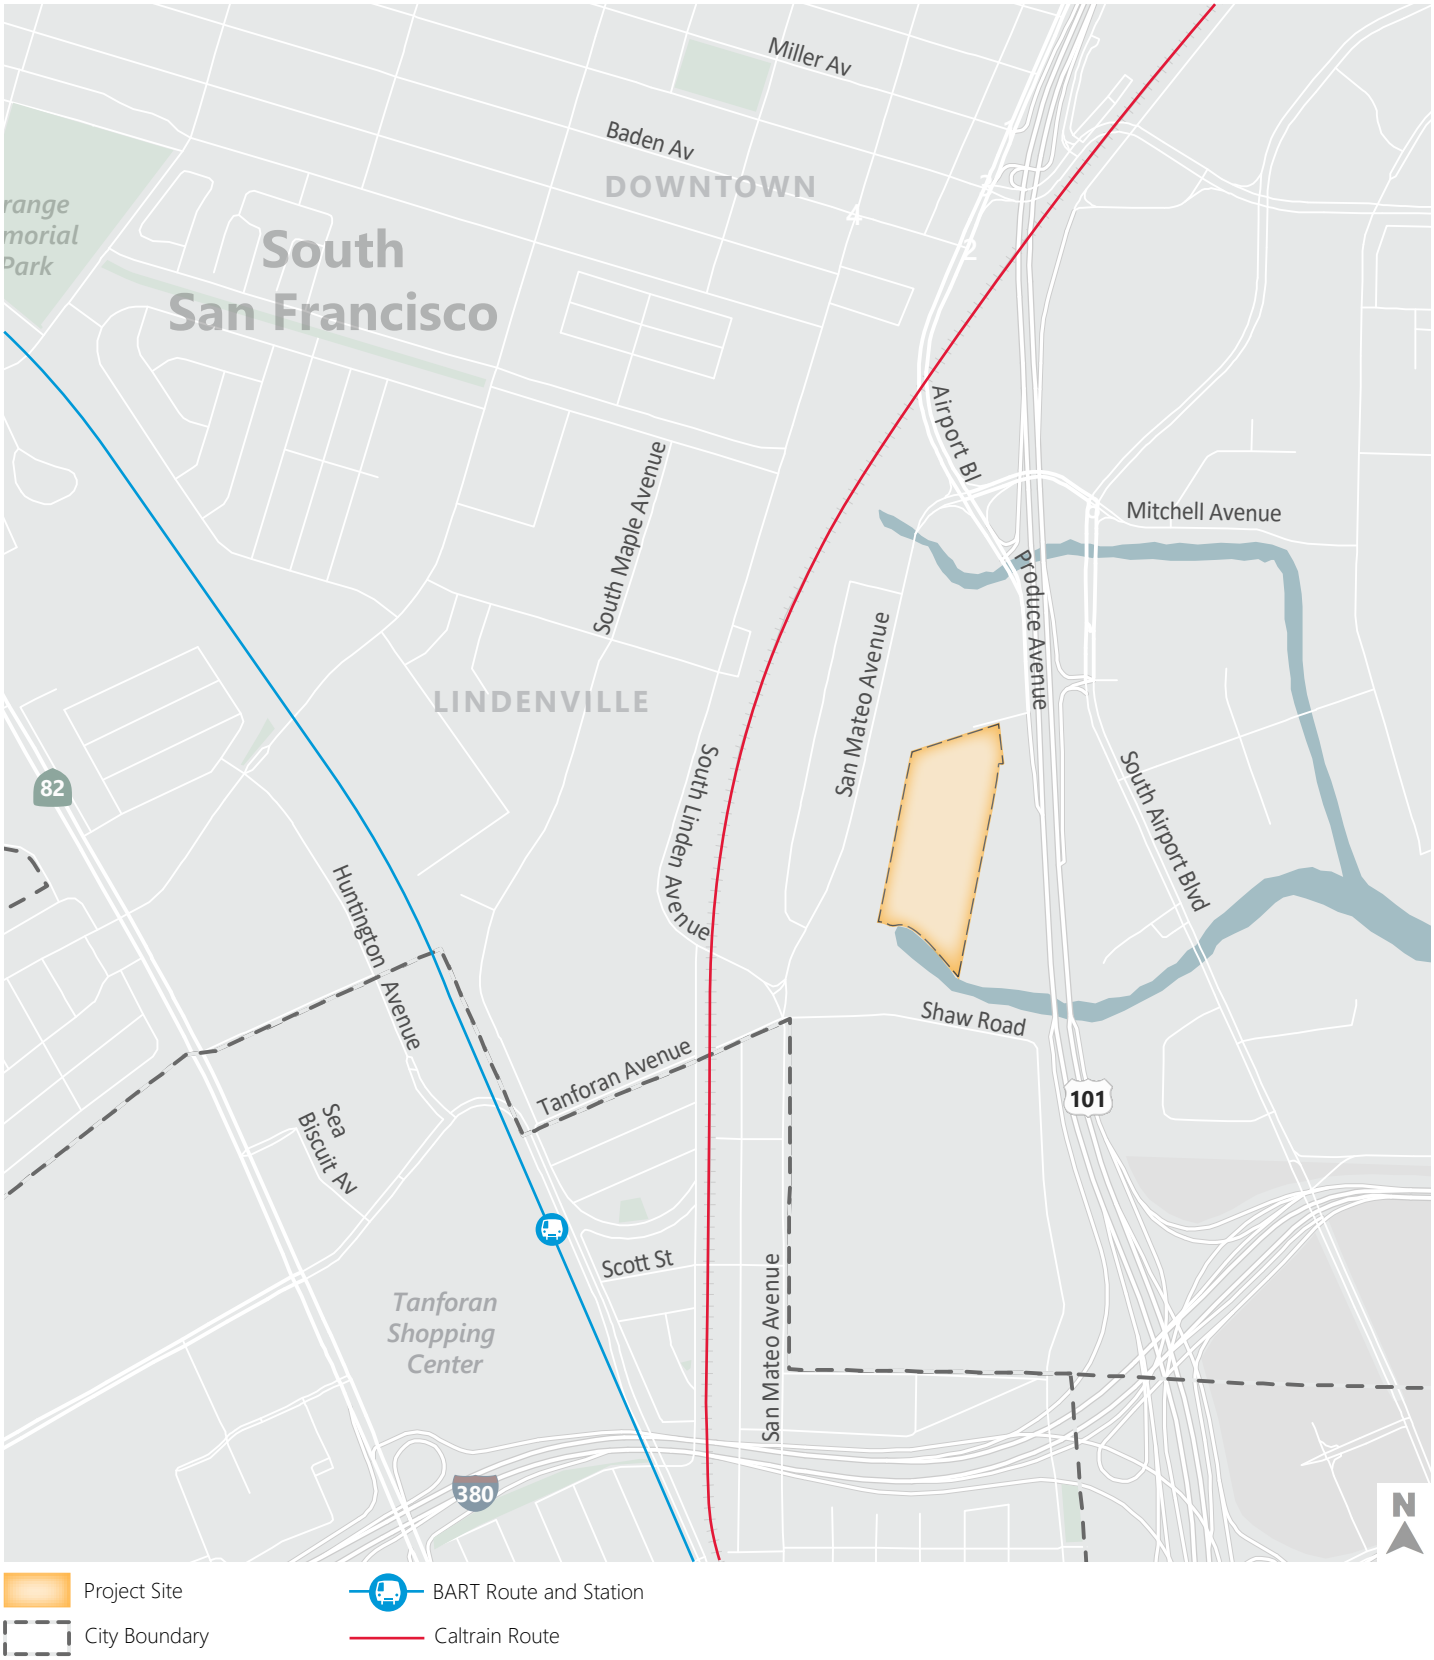

Figure 1-1
Project Location

Figure 1-2
Project Site Plan

2. Environmental Setting

This section describes the existing transportation and circulation setting near the Project site: the existing roadway network, transit network and service, pedestrian conditions, bicycle conditions, and emergency vehicle access.

2.1 Roadway Facilities

The Project site is located on the west side of U.S. Route 101 (US-101), south of Terminal Court, in the city's Lindenville District. Regional access to the Project site is provided via US-101, accessed via Produce Ave.

Key local roadways in the vicinity of the Project site are described below:

- *US-101* is an eight-lane freeway and principal north-south roadway connection between San Francisco, San José, and intermediate San Francisco Peninsula cities. In South San Francisco, US-101 is located directly adjacent to the Project site and serves the Project area with the Produce Ave/S Airport Boulevard Road exit. Access to the Project for vehicles traveling north on US-101 is provided by the S Airport Boulevard exit and underpass to the west side of the freeway. Access to the site for vehicles traveling south on US-101 is provided by the Produce Avenue exit.
- *Produce Avenue* is a three-lane arterial east of the Project, with two southbound lanes accessing the southbound US-101 onramp.
- *Terminal Court* is a two-lane cul-de-sac which intersects with Produce Avenue.
- *Shaw Road* is a two-lane local road south of the Project site and the Navigable Slough.
- *San Mateo Avenue* is a two-lane arterial west of the site which can provide access to Shaw Road from the north and the south.
- *Southline Avenue* is a new east-west street that will connect Sneath Lane and San Mateo Avenue/South Linden Avenue.

2.2 Transit Facilities and Service

The Project site is not directly served by regional rail, ferry, or bus transit services. Existing transit facilities are shown in **Figure 2-1** and described below.

Caltrain provides passenger rail service on the Peninsula between San Francisco and San José and limited-service trains to Morgan Hill and Gilroy during weekday commute periods. The South San Francisco Caltrain Station is approximately one mile north of the Project and is accessed from the Grand Avenue/Airport Boulevard intersection. Caltrain provides weekday service from 5:00 a.m. to 12:30 a.m., with two trains per hour during peak periods and hourly service during off-peak periods. In Fall 2024, Caltrain plans to complete its electrification project to support faster and more frequent rail service on the Peninsula; draft service plans published in October 2023 include a service increase in South San Francisco to four trains per hour per direction during peak periods (two express trains and two local trains) along with two trains per hour per direction during off-peak periods (local trains only).

Bay Area Rapid Transit (BART) provides regional rail service between the East Bay, San Francisco, and San Mateo County, connecting between San Francisco International Airport and Millbrae Intermodal Station to the south, San Francisco to the north, and Oakland, Richmond, Antioch, Dublin/Pleasanton, and Fremont in the East Bay. The San Bruno Station is the closest station to the Project site, about one mile southwest adjacent to the Tanforan Mall. The station is served by the Red Line (Richmond-Millbrae via SFO) and the Yellow Line (Antioch-SFO). BART provides service from 5:00 a.m. to 12:00 a.m. on weekdays and 6:00 a.m. to 12:00 a.m. on weekends. The Yellow Line operates at 10 minute frequencies during the day and every 20 minutes after 9:00 pm, while the Red Line operates every 20 minutes throughout the day and ceases service after 9:00 pm.

San Francisco Bay Area Water Emergency Transportation Authority (WETA) provides weekday commuter ferry service between the Oakland/Alameda ferry terminals and the South San Francisco Ferry Terminal at Oyster Point. The Ferry Terminal is located three miles northeast of the Project site. WETA provides three daily roundtrips during peak periods.

San Mateo County Transit District (SamTrans) provides bus service in San Mateo County. SamTrans Route 292 runs from San Francisco to Hillsdale and stops along Airport Boulevard about 0.7 miles north of the Project. Buses provide service every 30 minutes from 4:30 a.m. to 9:30 p.m. on weekdays and 6:50 a.m. to 6:50 p.m. on weekends.

The *Peninsula Traffic Congestion Relief Alliance (Commute.org)* provides weekday commute period first/last mile shuttles connecting employers in the East of 101 Area with BART, Caltrain, and the WETA Ferry Terminal. No shuttle service is present west of 101 near the Project site.

2.3 Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, trails, and pedestrian signals. Pedestrian facilities near the Project site serve walking trips connecting to shuttle stops, the Caltrain Station, multi-use trails, and nearby offices and businesses. Existing and proposed pedestrian facilities in the vicinity of the Project site are shown in **Figure 2-2**.

The Project site is located in an industrial-focused area with challenging pedestrian conditions. Sidewalks near the Project site are generally narrow, lack buffer zones from adjacent roadways, and are frequently interrupted by driveways. The following pedestrian facilities exist near the Project site.

- *San Mateo Avenue* has sidewalks on both sides of the street that are approximately five feet wide.
- *Shaw Road* has sidewalks on both sides of the street that are approximately five feet wide.
- *Produce Avenue* has a sidewalk on the west side of the roadway that is approximately five feet wide. Produce Avenue serves as a connection from South Airport Boulevard to the Project site. There are no sidewalks on the east side of Produce Avenue due to the US-101 freeway.
- *Terminal Court* has sidewalks that are approximately five feet wide. Terminal Court connects to Produce Avenue to the Project site. There are no marked pedestrian crossings connecting the north side of Terminal Court to the Project site.

2.4 Bicycle Facilities

Bicycle facilities consist of separated bikeways, bicycle lanes, routes, trails, and paths, bicycle parking, bicycle lockers, and showers for cyclists. Existing and proposed bicycle facilities in the vicinity of the Project site are shown in **Figure 2-2**. The California Department of Transportation (Caltrans) recognizes four classifications of bicycle facilities, as described below.

- Class I – Shared-Use Pathway: Provides a completely separated right-of-way for the exclusive use of cyclists and pedestrians with cross-flow minimized (e.g., off-street bicycle paths).
- Class II – Bicycle Lanes: Provides a striped lane for one-way travel on a street or highway. It may include a "buffer" zone consisting of a striped roadway between the bicycle lane and the nearest vehicle travel lane.
- Class III – Bicycle Route: Provides for shared use with motor vehicle traffic; however, they are often signed or include a striped bicycle lane.
- Class IV – Separated Bikeway: Provides a right-of-way designated exclusively for bicycle travel adjacent to a roadway protected from vehicular traffic. Types of separation include, but are not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

There are no existing bicycle facilities near the Project site. The Centennial Way Trail is located approximately 0.75 miles west of the Project site and may be accessed via Tanforan Avenue, South Linden Avenue, and Shaw Road. The Bay Trail is located approximately 0.25 miles east of the Project site but requires a circuitous one-mile diversion to the north via South Airport Boulevard to access the trail. Most streets near the Project site pose barriers to bicycle use due to high volumes of auto and truck traffic.

2.5 Emergency Vehicle Access

Emergency vehicles typically use major streets through the study area when heading to and from an emergency and/or emergency facility. Arterial roadways allow emergency vehicles to travel at higher speeds and provide enough clearance space to permit other traffic to maneuver out of the emergency vehicle's path and yield the right-of-way. The nearest existing fire station to the Project is Fire Station 62 at 249 Harbor Way, approximately 0.9 miles east of the Project site, via Mitchell Avenue and Produce Avenue, with access to the Project via the driveway on Terminal Court. Alternatively, emergency vehicles can travel along San Mateo Avenue to access the Project Site via the driveway on Shaw Road. Harbor Way has one travel lane in each direction and a two-way center left turn lane. Mitchell Avenue and Produce Avenue have two travel lanes with a center median. Travel time is approximately five minutes from Fire Station 62 to the Project site, and the Project site allows for larger vehicle turning movements.

2.6 Transportation Plans and Policies

2.5.1 General Plan

The South San Francisco 2040 General Plan establishes a vision for the City's future growth. Its Circulation Element includes 5 goals, 13 policies, and 26 actions covering topics such as complete streets, vehicle

miles traveled, connectivity, safety, active transportation, TDM, parking, and innovations. Each goal is presented in **Table 2.1**, accompanied by policies and actions that are particularly relevant the Project:

Table 2.1 South San Francisco General Plan Mobility Goals, Policies, and Actions

#	Goal	Project-Related Policies & Actions
1	South San Francisco prioritizes safety in all aspects of transportation planning and engineering.	**Policy MOB-1.2:** Strive to reduce vehicle speeds throughout the city to reduce the frequency and severity of collisions. **Action MOB-1.2.1.** Incorporate traffic calming treatments into all street projects to support lower design speeds.
2	South San Francisco provides a multimodal network with convenient choices for everyone.	**Policy MOB-2.1**: Incorporate complete streets improvements into all roadway and development projects. **Action MOB-2.1.1:** *Complete multimodal design and impact analysis*. Ensure that roadway and development projects are designed and evaluated to meet the needs of all street users, and that development projects contribute to multimodal improvements in proportion to their potential impacts on vehicle miles traveled. **Action MOB-2.1.3:** *Implement Active South City Pedestrian and Bicycle Plan.* All capital improvements and development projects incorporate bicycle and pedestrian improvements identified in the Active South City Plan, such as trails, bikeways, bicycle detection at traffic signals, high-visibility crosswalks, and pedestrian-oriented site plans. **Action MOB-2.1.4**: Implement transit speed, reliability, and access improvements. All capital improvements and development projects near regional transit stations or bus/shuttle routes incorporate improvements to advance speed, reliability, and access, such as in-lane farside bus stops, bus-only lanes, queue jumps, and pedestrian/bicycle gap closures. **Policy MOB-2.2:** Advance more equitable transportation within South San Francisco. **Action MOB-2.2.2*:*** *Develop free bus and shuttle service for residents.* Develop a dedicated funding source or leverage private sector contributions to fund the South City shuttle and free bus service for South San Francisco residents. **Policy MOB-2.3:** Interaction between truck routes and bicycle/pedestrian priority streets. When streets are designed as a truck route and a priority street for bicyclists and pedestrians (either in the General Plan or Active South City Plan), complete a more detailed review and study to prioritize intersections and street

#	Goal	Project-Related Policies & Actions
		design for active mobility and limit truck movements to the designated truck routes.
3	South San Francisco proactively manages traffic and parking demand.	**Policy MOB-3.1:** Promote mode shift among employers. Manage the number of vehicle trips, with a focus on promoting mode shift among employers. **Action MOB-3.1.2:** *Implement an East of 101 Trip Cap.* Implement an East of 101 area trip cap with triennial monitoring and corrective actions if exceeded. Implement project-specific trip caps for large campus developments. **Policy MOB-3.2:** Optimize traffic operations on City streets. Optimize traffic operations on City streets while avoiding widening roadways or otherwise pursuing traffic operations changes at expense of multimodal safety, transit reliability, or bicycle and pedestrian comfort. **Action MOB-3.2.1:** *Update traffic operations metrics.* Use appropriate metrics (e.g. travel time, vehicle queues, vehicle delay/level of service, and/or person delay) to evaluate and advance projects that manage traffic flow in coordination with the implementation of complete streets. **Action MOB-3.2.2:** *Incorporate new street connections.* Incorporate new street connections to better distribute vehicle trips across South San Francisco's street network, especially in the East of 101 Area. **Policy MOB-3.3:** Right-size parking supply and maximize the efficiency of curb space. **Action MOB-3.3.1:** *Incorporate parking maximums.* Incorporate maximum parking requirements for new residential and office/R&D projects that align with TDM Ordinance trip reduction goals.
4	South San Francisco's land use and transportation actions reduce vehicle miles traveled (VMT) and greenhouse gas emissions	**Policy MOB-4.1:** Increase substantially the proportion of travel using modes other than driving alone. **Action MOB-4.1.1:** *Use site plan review to improve connectivity.* Use the development review process to identify opportunities to enhance bicycle, pedestrian, and transit connectivity.
5	South San Francisco residents have easy access to play, fitness, and active transportation networks.	**Policy MOB-5.1:** Expand the low-stress bike and pedestrian network. Capitalize on opportunities to expand the low-stress bike and pedestrian network throughout the city.

The General Plan proposes new streets and major transportation investments. The Utah Avenue Interchange project would create an overpass across US 101, from South Airport Boulevard to San Mateo

Avenue (via the northern edge of the Project site) connecting Lindenville to the East of 101 area. The US 101 southbound offramp and the US 101 northbound on/off ramp would be reconfigured as part of that project. Produce Avenue would remain as the access for the US 101 south onramp and the Project Driveway. Several other projects identified in the General Plan will impact the transit access, traffic operations, and multimodal performance of the Project.

The Project was not included in the General Plan and therefore requires a General Plan amendment.

2.5.2 Active South City Plan

The Active South City Plan identifies priority projects and policies to improve bicycle and pedestrian access through the city. The plan proposes an additional 50 miles of bike facilities for the network. In the proximity of the Project, the Active South City Plan proposed the following bicycle facilities:

- *San Mateo Avenue* – Class II Bicycle Lanes
- *Airport Boulevard* – Class IV Separated Bikeway
- *Shaw Road* – Class I Shared-Use Path
- *US-101 Bicycle & Pedestrian Bridge* – Class I Shared-Use Path
- *Utah Avenue Overpass* – Class II Bicycle Lanes

The planned bicycle network in relation to the Project site is illustrated in **Figure 2-2**.

The Active South City Plan also identifies Airport Boulevard and San Mateo Avenue as candidates for pedestrian improvements to enhance walkability and reduce conflicts with other modes.

2.5.3 Transportation Demand Management Ordinance

South San Francisco Zoning Code includes a Transportation Demand Management (TDM) Ordinance (Chapter 20.400). The ordinance aims to reduce VMT of new developments, manage congestion, and promote efficient use of the existing transportation network through TDM measure adoption, and ongoing monitoring and reporting. Each development tier is required to meet a different point value for TDM measure adoption, trip cap, and monitoring requirements. Tier 4 projects are required to achieve at least 50 points, conduct annual monitoring to achieve a maximum of 50 percent of employees commuting via driving alone, and conduct annual monitoring of a site-specific trip cap. The Project's TDM Plan is provided as an attachment.

2.5.4 Lindenville Specific Plan

The Lindenville Specific Plan expands upon the General Plan's vision for a mixed-use neighborhood, employment hub, and cultural center around the Project site. The Specific Plan identifies conceptual street layouts and circulation improvements for the Lindenville District that are generally consistent with the General Plan and Active South City Plan. **Table 2.2** summarizes mobility goals and policies included in the specific plan.

Table 2.2 Lindenville Specific Plan Mobility Goals and Policies

#	Goal	Project-Related Policies & Actions
MOB-1	Multi-modal travel options are readily available and offer equal levels of comfort.	Policy MOB-1.1: Establish key pedestrian-oriented streets. Transform streets with higher density mixed use development and arts and makers uses into welcoming pedestrian environments with street trees, lighting, and landscaping. Create a relaxing pedestrian environment along a rehabilitated Colma Creek. Policy MOB 1.2: Establish key low-stress bicycle routes. Facilitate seamless low-stress bicycle connections to Lindenville via South Spruce Avenue, Centennial Way Trail, and Tanforan Avenue, accompanied by feeder routes to access local destinations. Policy MOB 1.3: Establish high-quality transit facilities. Prioritize public transit mobility and facilities on South Spruce Avenue and at shuttle hubs at major employment centers. Policy MOB 1.4: Facilitate vehicle access in and out of Lindenville. Accommodate regional auto access to US-101 and I-380 via Southline Avenue, San Mateo Avenue, South Airport Boulevard, and an extension of Utah Avenue. Policy MOB 1.5: Prioritize safety. Prioritize safety and accessibility over speed and vehicle flow in all streetscape and intersection projects. Policy MOB 1.6: Plan for the future. Incorporate design choices, like flexible curb space, that futureproof the transportation network for emerging technologies like autonomous vehicles.
MOB-2	There are high-quality connections to Downtown, El Camino, East of 101, and regional destinations for all modes.	Policy MOB 2.1: Connect bicyclists and pedestrians to Lindenville. Complete low-stress bicycle and pedestrian connections to the Centennial Way Trail, Bay Trail, and the Colma Creek Greenbelt. Policy MOB 2.2: Connect regional transit riders to Lindenville. Work with SamTrans and individual employers to maintain high frequency, high-capacity transit service with direct connections to the South San Francisco Caltrain station and the San Bruno BART station. Policy MOB 2.3: Provide drivers direct connections to Lindenville. Add vehicle capacity to reach East of 101 and farther destinations by completing the Utah Avenue interchange project including a reconfiguration of southbound US-101 ramps.
MOB-3	Lindenville's transportation offerings and streetscape design support a vibrant mixed use district.	Policy MOB 3.1: Apply TDM requirements. Apply and enforce the citywide Transportation Demand Management (TDM) ordinance for new development in Lindenville. Policy MOB 3.2: Add new connections. Create short blocks with new streets, alleys, and pathways to support connections for people who walk, bike, or use other micromobility options. Policy MOB 3.3: Prioritize pedestrian and bike access. Require property owners to prioritize pedestrian and bicycle access in site design in the mixed use and office

#	Goal	Project-Related Policies & Actions
		corridors and de-emphasize vehicle access using design, wayfinding, and building amenities. Policy MOB 3.4: Overhaul key streets, support gradual shift elsewhere. Encourage land use transition and mode shift by overhauling the transportation experience on select corridors (e.g., South Spruce Avenue and South Canal Street) and taking a more gradual approach on others (e.g., South Linden Avenue and Victory Avenue). Incremental changes might include converting some parking to parklets and pick-up/drop-off zones and providing pedestrian bulbouts at crosswalks. Policy MOB 3.5: Facilitate safe truck activity. Use traffic calming features and slower speed limits to facilitate safe truck interaction with other modes in districts zoned for industrial and commercial uses while phasing in weight limits and large truck restrictions in the districts zoned for mixed use. Policy MOB 3.6: Incorporate stormwater management. Integrate blue-green infrastructure within the street right of way and curb-to-curb widths where appropriate to meet stormwater goals.

Many streets in Lindenville are particularly narrow with limited opportunities to widen sidewalks, add bicycle facilities, maintain parking, and add landscaping on every street. The Specific Plan uses a layered network approach that prioritizes walking, biking, transit, truck, and auto access on specific streets. Near the Project site, the plan identifies the following priorities:

- San Mateo Avenue and Southline Avenue are identified as auto priority streets that provide regional access to US-101 and the future Utah Avenue overpass.
- Southline Avenue and Produce Avenue/Airport Boulevard are identified as transit priority streets to facilitate shuttle access to and from BART and Caltrain. A shuttle route through the Project site is suggested, along with a new bus stop at the Airport Boulevard/Produce Avenue/San Mateo Avenue intersection.
- Shaw Road and Tanforan Avenue are identified as bicycle priority streets, with connections to a new trail crossing of US-101 along the Navigable Slough as well as a north-south bikeway along the western edge of the Project site. These bikeways would provide parallel alternatives to San Mateo Avenue and Utah Avenue, which would serve a high volume of auto and truck traffic.

The Specific Plan emphasizes the need to modernize local street infrastructure to accommodate changing land uses and incorporate first/last mile shuttle services to provide connections with BART and Caltrain.

Bicycle Facilities

3. Transportation Analysis

This section includes an analysis and findings of Project effects on transportation services and facilities, including motor vehicle travel and operations, transit service, pedestrian facilities, and bicycle facilities. The amount and distance of motor vehicle travel were analyzed using vehicle miles traveled (VMT). Bicycle, pedestrian, and transit impacts were qualitatively assessed.

3.1 Project Travel Demand

Project trip generation was calculated using the ITE Trip Generation Manual 11th Edition fitted curve equation for R&D land use and daycare, along withreductions associated with the Project's TDM plan, consistent with the City's TIA Guidelines as summarized in **Table 3.1**. Amenity uses are included within the R&D trip generation given the expected high internalization rate and comparable employee densities of these uses. Trip generation includes a 34 percent reduction associated with the Project's TDM Plan, consistent with the City's TDM ordinance for a Tier 4 project. According to this trip generation analysis, the Project would generate approximately 1,056 AM peak hour trips and 999 PM peak hour trips.

Table 3.1 Vehicle Trip Generation

Land Use[1]	AM Peak Hour			PM Peak Hour		
	In	Out	Total	In	Out	Total
R&D & Amenities (1,700,000 Square Feet)	1,261	227	1,538	232	1,221	1,453
TDM Reduction (34%)[2]	-429	-77	-523	-79	-415	-494
Daycare (50 Students)	22	19	41	19	21	40
Project Trip Generation	**854**	**169**	**1,056**	**172**	**827**	**999**

Notes:
1. Trip generation rates are based on ITE 11th Edition (Land Use #760 – Research and Development Center, fitted curve equation and Land Use #565 – Daycare, fitted curve equation)
2. 34 percent trip reduction based on TDM Plan, consistent with City's TDM policy for Tier 4 project.

Source: Fehr & Peers, 2023

Estimated peak hour person trips and mode share is presented in

Table 3.2. Consistent with the mode share targets included in the City's TDM Ordinance and recent survey data at comparable sites, the Project is estimated to generate approximately 50 percent of its peak hour travel via single occupancy vehicle, 20 percent via transit, 20 percent via telecommute, and 10 percent via carpool, vanpool, and active transportation. These estimates are for planning purposes only; actual mode shares may vary depending on site-specific and employer-specific characteristics as well as continued evolution in telecommuting patterns.

Table 3.2 Estimated Peak Hour Person Trips and Mode Share

Mode	Mode Share	AM Peak Hour Trips	PM Peak Hour Trips
Single Occupancy Vehicle	50%	954	901
Carpool/Vanpool	8%	153	144
Transit	20%	381	361
Active Transportation	2%	38	36
Telecommute	20%	381	361
Total Person Trips	**100%**	**1,907**	**1,803**

Notes:
1. Estimates based on review of City's TDM surveys and US Census data for 2019 and 2022 conditions
2. HOV/Vanpool assumes average vehicle occupancy of 2.5 persons per vehicle
3. For planning purposes only; actual mode shares may vary depending on site-specific and employer-specific characteristics as well as continued evolution in telecommuting patterns.

Source: Fehr & Peers, 2023

3.2 Consistency with Plans & Policies

As previously noted in Section 1.1, the Project site is currently designated as Mixed Industrial High and Mixed Industrial Medium under the City's Lindenville Specific Plan and Zoning Code, respectively. Neither the General Plan nor the Lindenville Specific Plan analyzed this site as Business Technology Park-High; in order to construct and operate the proposed Project, amendments to the General Plan, Specific Plan, and City Zoning Code would be required.

The Project includes various design features that are consistent with the General Plan and Lindenville Specific Plan. The Project would provide multimodal circulation improvements within the site, along its eastern frontage, and along the frontage of the Navigable Slough. The Project is designed to separate bicycles and pedestrians from vehicle traffic, which will circulate along the periphery of the site and connect Terminal Court with Shaw Road. The central courtyard is designed for people walking and biking or accessing the site via the shuttle service to/from regional transit stations. Speed humps and raised crosswalks are included on the internal roadways to prevent high vehicle travel speeds where there may be conflicts with other road users. These design features align with General Plan Goals MOB-1, MOB-2, MOB-4, and MOB-5, Lindenville Specific Plan goals MOB-1, MOB-2, and MOB-3, as well as the Active South City Plan, and the Transportation Demand Management Ordinance.

The Project complies with the measures and monitoring requirements identified in the TDM Ordinance**.** The Project will implement a TDM Plan that includes an enhanced shuttle commitment to serve first-last mile connections to the site, address active transportation gap closures, and fully subsidized transit passes for employees. The TDM Plan is expected to achieve 50 points under the TDM ordinance and implement a 50 percent trip cap, which aligns with General Plan goals MOB-3 and MOB-4. Additionally, the Project does not affect the potential implementation of the Utah Avenue Overpass or its connections to the relevant roadways and ramps, as identified in the General Plan.

Although the project's site plan and TDM plan exhibit features that are consistent with goals, policies, and actions identified in the General Plan and Lindenville Specific Plan, the project overall remains inconsistent as it would add 1.7 million square feet of R&D uses and amenities to the Produce Avenue corridor, an area where additional density was not identified or studied in the Lindenville Specific Plan or General Plan. This intensification of uses would occur in a location with insufficient access and circulation facilities, limited transportation options, and challenging connectivity to the regional transportation network. Therefore, the Project conflicts with the goals and policies of the General Plan and Lindenville Specific Plan. The project's lack of consistency with adopted plans and policies addressing the circulation system would constitute a significant impact. As mitigation, the Project would be required to implement various actions consistent with those identified in the General Plan, Lindenville Specific Plan, and Active South City Plan, described in **Mitigation Measure TRANS-1** below.

Mitigation Measure TRANS-1: Advanced Implementation of Transportation Improvements Identified in General Plan, Lindenville Specific Plan, and Active South City Plan

The Project shall implement and/or fund the following improvements identified in the General Plan, Lindenville Specific Plan, and Active South City Plan:

1. Signalization of the U.S. 101 Off-ramp/Produce Avenue and U.S. 101 On-ramp/Produce Avenue/Terminal Court Intersections.
   The project shall implement two new traffic signals along Produce Avenue to improve traffic operations, safety, and bicycle and pedestrian access to the project site. The traffic signals shall be located at the intersections of the U.S. 101 off-ramp/Produce Avenue and U.S. 101 on-ramp/Produce Avenue/Terminal Court. The traffic signals shall be accompanied by changes to lane configurations, sidewalks, crosswalks, and bicycle facilities identified by the City to achieve consistency with adopted plans and policies.
2. Redesign of the Produce Avenue/San Mateo Avenue/Airport Boulevard Intersection
   The project shall implement a redesign of the Produce Avenue/San Mateo Avenue/Airport Boulevard intersection to improve traffic operations, safety, and bicycle, pedestrian, and transit access to the project site. A partial redesign of this intersection is already funded by the 100 Produce, 124 Airport, and 40 Airport projects, which will include removal of slip lanes on the northeast, northwest, and southwest corners. The project's redesign shall include the reconfiguration of turning lanes, improvements to pedestrian and bicycle facilities, and the addition of bus stops and shelters for SamTrans Route 292, as identified by the City.
3. Construction of a Class IV Separated Bikeway from Baden Avenue to Terminal Court via Airport Boulevard and Produce Avenue
   The project shall implement a Class IV separated bikeway on Produce Avenue and Airport Boulevard from Baden Avenue to Terminal Court, connecting the Caltrain Station to the project site. This bikeway would close existing gaps between the project site, Caltrain Station, and downtown South San Francisco, enabling continuous bicycle travel separated from auto and truck traffic. Improvements would include construction of a two-way facility along the west side of Produce Avenue from Terminal Court to Airport Boulevard/San Mateo Avenue, transitioning to a pair of one-way facilities through the Caltrain crossing to Baden Avenue.

4. Signalization of the San Mateo Avenue/Shaw Road/Tanforan Avenue Intersection:
   The project shall implement a new traffic signal at the intersection of San Mateo Avenue/Shaw Road/Tanforan Avenue. This traffic signal would facilitate access to the project site via Shaw Road while reducing potential for multimodal conflicts. The traffic signal shall be accompanied by accessible sidewalk and curb ramp upgrades at the intersection, as well as associated signal and intersection/sidewalk modifications at the adjacent San Mateo Avenue/South Linden Avenue intersection.
5. Engineering Study of a New Southbound U.S. 101 Off-ramp Connecting to the Utah Avenue Overpass
   The project shall fund an engineering study of a new southbound U.S. 101 off-ramp connecting to the proposed Utah Avenue overpass as envisioned in the General Plan and Lindenville Specific Plan. The engineering study shall be led by the city. As currently envisioned, the overpass would not include a southbound off-ramp. A second off-ramp would facilitate more direct access to the overpass and address long-term queueing concerns. The off-ramp would be accompanied by a new street connection between Utah Avenue and Produce Avenue north of the project site.
6. Engineering Study and Fair-Share Contribution toward a New Trail Crossing of U.S. 101 South of the Project Site
   The project shall fund an engineering study for a new Class I shared-use path crossing of U.S. 101 to connect the Bay Trail with Shaw Road. The engineering study shall be led by the city. An engineering study of the planned U.S. 101 crossing has not yet occurred, and a preferred alternative alignment has not been determined. The engineering study will consider potential trail crossing alignments, incorporate the preferred alternative alignment into its site plan, and quantify a fair share contribution toward construction of the crossing.

These mitigations shall be completed by the applicant prior to the project receiving a certificate of occupancy. If the City implements these improvements in advance of the project's construction, the project shall reimburse the City for the cost of construction. If another development implements these improvements and/or engineering studies prior to the project's construction, the project shall be responsible for a fair-share reimbursement of construction costs to the developer leading these improvements. This funding will ensure that transportation facilities serving the project site are appropriately sized to handle multimodal travel demand associated with the project as envisioned in each plan.

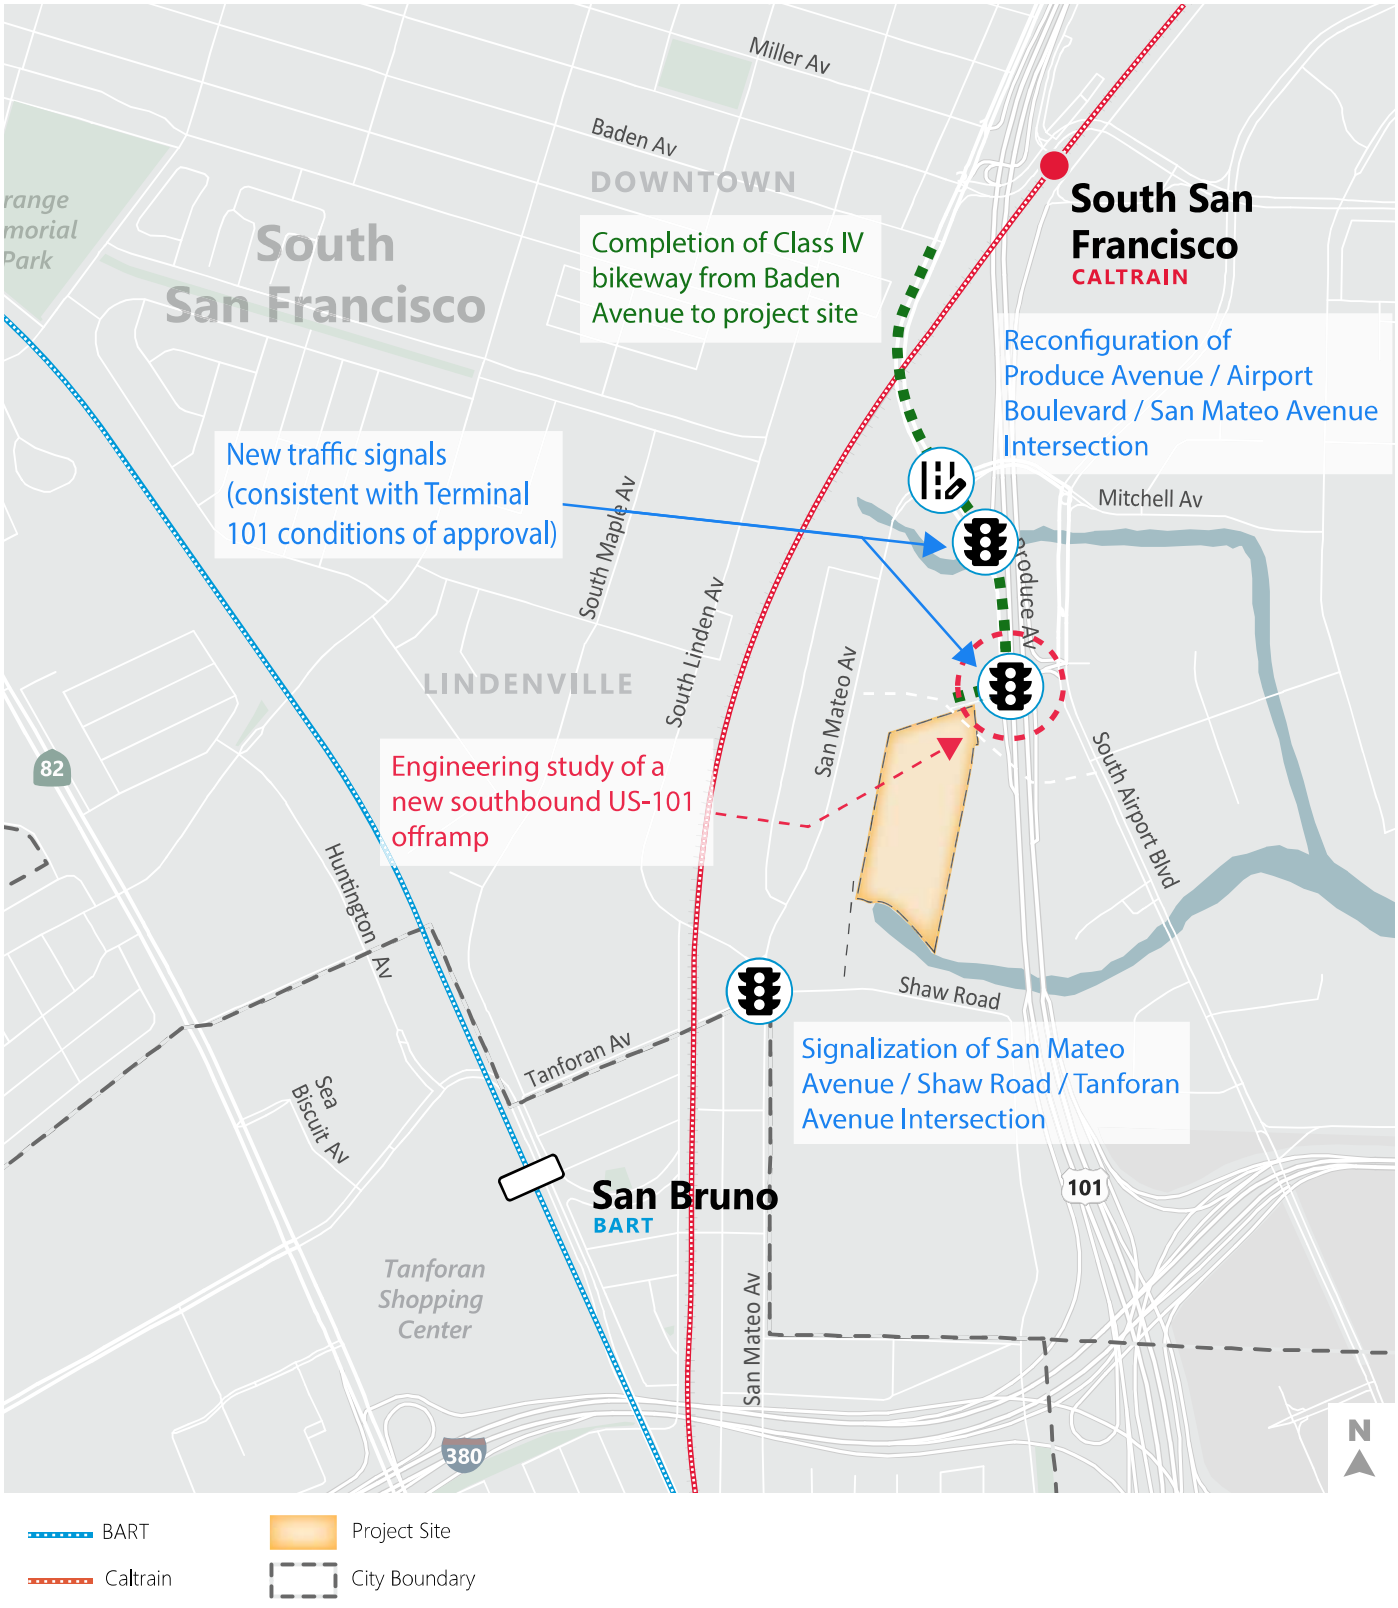

Figure 3-1
Transportation Mitigation Measures

With implementation of Mitigation Measure TRANS-1, the Project would advance offsite improvements consistent with Actions MOB-1.2.1, MOB-2.1.1, 2.1.3, 2.1.4, 3.2.1, and 3.2.2 to adequately address its effects on the transportation network. However, portions of this mitigation measure are under the jurisdiction of Caltrans and the City of San Bruno, and neither jurisdiction has a mechanism for funding this mitigation. Therefore, while the proposed mitigation could reduce the Project's impact, the impact would be significant and unavoidable because the City of South San Francisco cannot ensure its implementation,

3.3 Vehicle Miles Traveled

The Project's VMT was analyzed using the City of South San Francisco's VMT thresholds established in Resolution 77-2020 on June 10, 2020 and consistent with CEQA Guidelines Section 15064.3, subdivision (b). The adopted VMT threshold for employment-generating land uses determines that a project would have a significant transportation impact if its VMT is greater than 15 percent below the baseline for home-based work (HBW) VMT per employee. This threshold would be set at 12.7 (15 percent below the existing regional average of 14.9) HBW VMT per employee for office and R&D projects as shown in **Table 3.3**. This threshold of 12.7 HBW VMT per employee also applies to cumulative conditions.

Table 3.3 Home-Based Work Vehicle Miles Traveled Per Employee

Location	Estimated HBW VMT per Employee
Bay Area Region: Existing	14.9
HBW VMT Per Employee Threshold *(15% Below Existing)*	12.7
Project	17.5
Project with TDM Mitigation *(29.5% Reduction)*	12.3

Note: HBW= home-based work; VMT = vehicle miles traveled.
Source: Fehr & Peers, 2023; C/CAG-VTA Bi-County Transportation Demand Model, 2022.

As shown in **Table 3.3**, the Project without a TDM program is expected to generate 17.5 HBW VMT per employee under existing conditions, which is greater than the City's significance threshold of 12.7 HBW VMT. However, implementation of a TDM program is expected to reduce VMT to below the threshold of significance, as detailed in the following section. Therefore, the Project's impact to VMT would be less than significant.

3.3.1 Summary of TDM Program and Effectiveness

Per the City of South San Francisco Zoning Code Chapter 20.400, the Project is required to implement a combination of TDM programs, services, and infrastructure improvements as well as annual reporting and monitoring to reduce VMT. The Project's TDM Plan identifies several TDM measures consistent with the City's ordinance, including transit subsidies, participation in Commute.org programs, carpool/vanpool

programs, bicycle storage and amenities, designation of a TDM coordinator, bicycle- and pedestrian-oriented site access, encouraging telecommuting, first/last mile shuttle services, active transportation gap closures, onsite amenities, and bicycle repair stations.

Quantification of TDM reductions is based on the *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* by the California Air Pollution Control Officer's Association (CAPCOA) published in 2021. The Project would implement the following measures consistent with CAPCOA guidance:

> *Measure T-6 (Implement Commute Trip Reduction Program - Mandatory Implementation and Monitoring)* defines a commute trip reduction program with mandatory implementation and monitoring, which is consistent with several Project TDM measures defined in the City's ordinance along with City requirements for annual monitoring and reporting to ensure compliance. Project TDM measures that would be included in the mandatory trip reduction program include participation in Commute.org programs, carpool/vanpool programs and parking, bicycle storage, showers, and lockers, designation of a TDM coordinator, and fully subsidized transit passes. The Project would be subject to annual surveys and trip cap monitoring as described in the following section.
>
> *Measure T-20 (Expand Bikeway Network)* covers bikeway network expansion, which is consistent with the proposed active transportation gap closure measure covering both onsite and offsite bicycle improvements.
>
> *Measure T-25 (Extend Transit Network Coverage)* covers transit network expansion consistent with the proposed shuttle to connect the Project site with the existing BART station and Caltrain station to provide first/last-mile connectivity for employees and the public. This will add seven additional hours per day of transit service to the area. Prior to the expansion, there was no service within a half-mile radius surrounding the site. The free shuttles will connect the site with existing SamTrans, Caltrain, and BART service.

As shown in **Table 3.4**, the combination of these measures is expected to achieve a VMT reduction of 29.5 percent, which exceeds the 28 percent reduction needed to achieve a less-than-significant impact on VMT.

Table 3.4 TDM Program Elements

South San Francisco TDM Ordinance Requirements			CAPCOA Quantification of VMT Reductions[1]		
TDM Measure Description	Potential Points	Project Points	Measure	Title	Project Reduction
Fully Subsidized Transit Passes	15	15	T-6	Implement Commute Trip Reduction Program (Mandatory Implementation and Monitoring)	26.0%
Participation in Commute.org Programs	5	5			

South San Francisco TDM Ordinance Requirements			CAPCOA Quantification of VMT Reductions[1]		
TDM Measure Description	**Potential Points**	**Project Points**	**Measure**	**Title**	**Project Reduction**
Designated TDM Coordinator	1	1

Source: *City of South San Francisco TIA Guidelines* and *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (California Air Pollution Control Officer's Association, 2021)
Note: Each of the CAPCOA TDM strategies can be combined with others to increase the effectiveness of vehicle trip and VMT mitigation; however, the interaction between the various strategies is complex. Generally, with each additional measure implemented, a vehicle trip and VMT reduction is achieved, but the incremental benefit of vehicle trip and VMT reduction may be less than the benefit that measure would have if it was considered on its own. Thus, the list provides the maximum reductions expected and the effect of TDM measures should not be considered to be purely additive.

3.4 Design Hazards

3.4.1 US-101 Southbound Offramp/Produce Avenue Intersection

The Project would increase vehicle trips along southbound Produce Avenue and the southbound US-101 Produce Avenue off-ramp, which is presently a side-street stop-controlled off-ramp. The Project would contribute a net increase of approximately 170 vehicle trips in the AM peak hour and 30 vehicle trips in the PM peak hour to the westbound left turn movement from US-101 to Produce Avenue. The addition of vehicle trips in a side-street stop-controlled condition is expected to increase 95*th* percentile vehicle queues to spill back onto the US-101 off-ramp, which could present a hazardous condition (southbound vehicles on Produce Avenue do not have a stop sign, so vehicles turning left onto Produce Avenue would have to wait for gaps to turn left, and these queues are likely to block right-turning vehicles as well).

Additionally, the intersection meets AM and PM peak hour traffic signal warrants. Queueing conflicts at this intersection would pose a potentially significant impact.

The South San Francisco General Plan EIR (Impact TRANS-4) determined that implementation of the General Plan is likely to increase vehicle trips on City freeway ramps, which could exacerbate vehicle queues on ramps already in excess of their storage capacity. The Project would increase the severity of the significant impact.

As previously discussed in Section 3.2, the Project shall implement and/or fund adjacent improvements identified in the General Plan, Lindenville Specific Plan, and Active South City Plan via Mitigation Measure TRANS-1 (or reimburse the City or another developer if these improvements have already been implemented as mentioned in Mitigation Measure TRANS-1). This includes the signalization of the US-101 Offramp/Produce Avenue intersection consistent with the conditions of approval for the Terminal 101 project. Implementation of a traffic signal and associated lane reconfigurations would reduce vehicle queues while alleviating potential conflicts at the intersection. The Project would be responsible for implementing the traffic signal in collaboration with the City of South San Francisco and Caltrans.

With the implementation of this improvement measure, 95th percentile vehicle queues would not spill over onto the freeway mainline. The Project would be responsible for implementing the traffic signal in collaboration with the City of South San Francisco and Caltrans. However, portions of this mitigation measure are under the jurisdiction of Caltrans, and the City does not have a mechanism for funding this mitigation. Therefore, while the proposed mitigation could reduce the Project's impact, the impact would be significant and unavoidable because the City of South San Francisco cannot ensure its implementation,

3.4.2 US-101 Southbound Onramp/Terminal Court/Produce Avenue Intersection

The Project would increase vehicle trips entering and exiting Terminal Court at Produce Avenue, which is presently a side-street stop-controlled intersection. The Project would contribute approximately 730 vehicle trips in the AM peak hour and 700 vehicle trips in the PM peak hour to Terminal Court. The substantial increase in vehicle trips exiting Terminal Court during the PM peak hour may create a hazardous condition due to the lack of signal control and high-speed vehicle travel southbound on Produce Avenue onto US-101. Pedestrians and bicyclists crossing Terminal Court may also encounter conflicts with vehicles. The intersection meets the PM peak hour signal warrant with the Project.

As previously discussed in Section 3.2, the Project shall fund adjacent improvements identified in the General Plan, Lindenville Specific Plan, and Active South City Plan via Mitigation Measure TRANS-1 (or reimburse the City or another developer if these improvements have already been implemented as mentioned in Mitigation Measure TRANS-1). This includes the addition of a traffic signal that would address the intersection's traffic control needs. The Project would be responsible for implementing the traffic signal in collaboration with the City of South San Francisco and Caltrans. However, portions of this mitigation measure are under the jurisdiction of Caltrans, and the City does not have a mechanism for funding this mitigation. Therefore, while the proposed mitigation could reduce the Project's impact, the

impact would be significant and unavoidable because the City of South San Francisco cannot ensure its implementation,

3.4.3 San Mateo Avenue/Shaw Road/Tanforan Avenue intersection

The Project would increase vehicle trips entering and exiting via Shaw Road, which is presently side-street stop-controlled at San Mateo Avenue. The Project would contribute approximately 360 vehicle trips in the AM peak hour and 400 vehicle trips in the PM peak hour to Shaw Road movements. The increase in vehicle trips exiting Terminal Court during the PM peak hour may create a hazardous condition due to the lack of signal control. The intersection meets the PM peak hour signal warrant with the Project.

As previously discussed in Section 3.2, the Project shall fund adjacent improvements identified in the General Plan, Lindenville Specific Plan, and Active South City Plan via Mitigation Measure TRANS-1 (or reimburse the City or another developer if these improvements have already been implemented as mentioned in Mitigation Measure TRANS-1). This includes the addition of a traffic signal that would address the intersection's traffic control needs. The Project would be responsible for implementing the traffic signal in collaboration with the City of South San Francisco and City of San Bruno. However, portions of this mitigation measure are under the jurisdiction of the City of San Bruno, and the City does not have a mechanism for funding this mitigation. Therefore, while the proposed mitigation could reduce the Project's impact, the impact would be significant and unavoidable because the City of South San Francisco cannot ensure its implementation,

3.4.4 Site Circulation

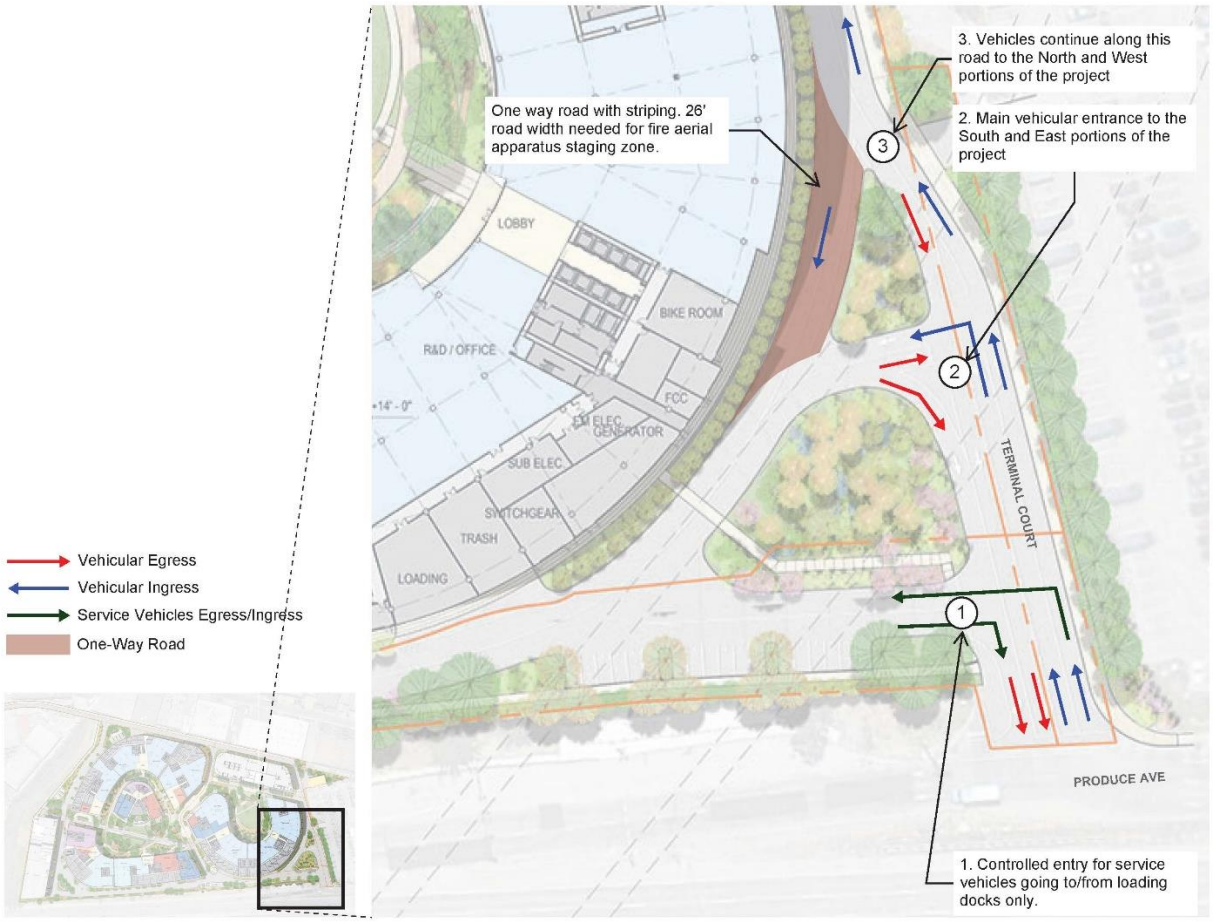
The Project's site plan is not expected to pose any onsite design hazards or incompatible land uses. The Project's internal streets, bicycle facilities, and pedestrian facilities would be designed consistent with applicable design standards and do not appear to pose potential conflicts.

The Project realigns Terminal Court to remove the existing cul-de-sac, allowing the street to function as an extension of the Project's driveway. This realignment will improve operations and queueing capacity entering and exiting the Project site.

In reviewing the Project's preliminary site plan, the City identified potential conflicts associated with the proximity of the Infinite 131 driveways in relation to Infinite 101 driveways. In response, the Project's site plan was amended to clarify circulation and access controls along Terminal Court, as illustrated in

Figure 3-2. Access to Infinite 101 and Infinite 131 would occur via two driveways about 200 to 300 feet from the Terminal Court/Produce Avenue intersection, while the third driveway adjacent to the Terminal Court/Produce Avenue intersection would be restricted for service vehicles only to limit potential conflicts. With these updates, the Project's site plan is not expected to present any design hazards.

Figure 3-2 Terminal Court Driveways



3.5 Emergency Access

Vehicle trips generated by the Project would represent a small percentage of overall daily and peak hour traffic on roadways and freeways in the study area. The Project would not include features that would alter emergency vehicle access routes or roadway facilities; fire and police vehicles would continue to have access to all facilities around the entire City. Emergency vehicles would have full access to the Project site from all driveways connecting to adjacent streets; each driveway would be equipped to handle all types of emergency vehicles. Therefore, the Project would result in adequate emergency access.

4. Impacts and Mitigations Summary

This section includes the evaluation of the Project's potential impacts. This section also describes the required associated mitigation measures that would reduce impacts of the Project.

4.1 Consistency with Plans & Policies

Impact TRANS-1: Development of the proposed Project would conflict with the General Plan and Lindenville Specific Plan and results in a significant impact based on lack of consistency with such plans and policies. (Significant / *Significant and Unavoidable with Mitigation*)

As discussed in Section 3.2, the Project site is currently designated as Mixed Industrial High and Mixed Industrial Medium under the City's Lindenville Specific Plan and Zoning Code, respectively. Neither the General Plan nor the Lindenville Specific Plan analyzed this site as Business Technology Park-High; in order to construct and operate the proposed Project, amendments to the General Plan, Specific Plan, and City Zoning Code would be required.

Although the project's site plan and TDM plan exhibit features that are consistent with goals, policies, and actions identified in the General Plan and Lindenville Specific Plan, the project overall remains inconsistent as it would add 1.7 million square feet of R&D uses and amenities to the Produce Avenue corridor, an area where additional density was not identified or studied in the Lindenville Specific Plan or General Plan. This intensification of uses would occur in a location with insufficient access and circulation facilities, limited transportation options, and challenging connectivity to the regional transportation network. Therefore, the Project conflicts with the goals and policies of the General Plan and Lindenville Specific Plan. The project's lack of consistency with adopted plans and policies addressing the circulation system would constitute a **significant impact**. As mitigation, the Project would be required to implement various actions consistent with those identified in the General Plan, Lindenville Specific Plan, and Active South City Plan.

Mitigation Measure TRANS-1: Advanced Implementation of Transportation Improvements Identified in General Plan, Lindenville Specific Plan, and Active South City Plan

Consistent with the improvements detailed in Section 3.2, the Project shall implement and/or fund following improvements identified in the General Plan, Lindenville Specific Plan, and Active South City Plan:

1. Signalization of the U.S. 101 Off-ramp/Produce Avenue and U.S. 101 On-ramp/Produce Avenue/Terminal Court Intersections.
   The project shall implement two new traffic signals along Produce Avenue to improve traffic operations, safety, and bicycle and pedestrian access to the project site. The traffic signals shall be located at the intersections of the U.S. 101 off-ramp/Produce Avenue and U.S. 101

on-ramp/Produce Avenue/Terminal Court. The traffic signals shall be accompanied by changes to lane configurations, sidewalks, crosswalks, and bicycle facilities identified by the City to achieve consistency with adopted plans and policies.

2. Redesign of the Produce Avenue/San Mateo Avenue/Airport Boulevard Intersection
   The project shall implement a redesign of the Produce Avenue/San Mateo Avenue/Airport Boulevard intersection to improve traffic operations, safety, and bicycle, pedestrian, and transit access to the project site. A partial redesign of this intersection is already funded by the 100 Produce, 124 Airport, and 40 Airport projects, which will include removal of slip lanes on the northeast, northwest, and southwest corners. The project's redesign shall include the reconfiguration of turning lanes, improvements to pedestrian and bicycle facilities, and the addition of bus stops and shelters for SamTrans Route 292, as identified by the City.
3. Construction of a Class IV Separated Bikeway from Baden Avenue to Terminal Court via Airport Boulevard and Produce Avenue
   The project shall implement a Class IV separated bikeway on Produce Avenue and Airport Boulevard from Baden Avenue to Terminal Court, connecting the Caltrain Station to the project site. This bikeway would close existing gaps between the project site, Caltrain Station, and downtown South San Francisco, enabling continuous bicycle travel separated from auto and truck traffic. Improvements would include construction of a two-way facility along the west side of Produce Avenue from Terminal Court to Airport Boulevard/San Mateo Avenue, transitioning to a pair of one-way facilities through the Caltrain crossing to Baden Avenue.
4. Signalization of the San Mateo Avenue/Shaw Road/Tanforan Avenue Intersection:
   The project shall implement a new traffic signal at the intersection of San Mateo Avenue/Shaw Road/Tanforan Avenue. This traffic signal would facilitate access to the project site via Shaw Road while reducing potential for multimodal conflicts. The traffic signal shall be accompanied by accessible sidewalk and curb ramp upgrades at the intersection, as well as associated signal and intersection/sidewalk modifications at the adjacent San Mateo Avenue/South Linden Avenue intersection.
5. Engineering Study of a New Southbound U.S. 101 Off-ramp Connecting to the Utah Avenue Overpass
   The project shall fund an engineering study of a new southbound U.S. 101 off-ramp connecting to the proposed Utah Avenue overpass as envisioned in the General Plan and Lindenville Specific Plan. The engineering study shall be led by the city. As currently envisioned, the overpass would not include a southbound off-ramp. A second off-ramp would facilitate more direct access to the overpass and address long-term queueing concerns. The off-ramp would be accompanied by a new street connection between Utah Avenue and Produce Avenue north of the project site.
6. Engineering Study and Fair-Share Contribution toward a New Trail Crossing of U.S. 101 South of the Project Site
   The project shall fund an engineering study for a new Class I shared-use path crossing of U.S. 101 to connect the Bay Trail with Shaw Road. The engineering study shall be led by the city. An engineering study of the planned U.S. 101 crossing has not yet occurred, and a preferred alternative alignment has not been determined. The engineering study will consider potential

trail crossing alignments, incorporate the preferred alternative alignment into its site plan, and quantify a fair share contribution toward construction of the crossing.

These mitigations shall be completed by the applicant prior to the project receiving a certificate of occupancy. If the City implements these improvements in advance of the project's construction, the project shall reimburse the City for the cost of construction. If another development implements these improvements and/or engineering studies prior to the project's construction, the project shall be responsible for a fair-share reimbursement of construction costs to the developer leading these improvements. This funding will ensure that transportation facilities serving the project site are appropriately sized to handle multimodal travel demand associated with the project as envisioned in each plan.

With implementation of **Mitigation Measure TRANS-1**, the Project would advance offsite improvements consistent with Actions MOB-1.2.1, MOB-2.1.1, 2.1.3, 2.1.4, 3.2.1, and 3.2.2 to adequately address its effects on the transportation network. However, portions of this mitigation measure are under the jurisdiction of Caltrans and the City of San Bruno, and neither jurisdiction has a mechanism for funding this mitigation. Therefore, while the proposed mitigation could reduce the Project's impact, the impact would be **significant and unavoidable** because the City of South San Francisco cannot ensure its implementation,

4.2 Vehicle Miles Traveled

Impact TRANS-2: Development of the Project would generate HBW VMT in excess of the City's Threshold of Significance. (*Less than Significant*)

As described in Section 3.3, the Project is required to implement a TDM Plan consistent with City of South San Francisco Zoning Code Chapter 20.400. The Project's TDM Plan identifies several TDM measures consistent with the City's ordinance, including transit subsidies, participation in Commute.org programs, carpool/vanpool programs, bicycle storage and amenities, designation of a TDM coordinator, bicycle- and pedestrian-oriented site access, encouraging telecommuting, first/last mile shuttle services, active transportation gap closures, onsite amenities, and bicycle repair stations. Annual reporting and monitoring is required to document compliance with mode share and trip cap targets.

Implementation of the Project's TDM program would reduce VMT below the City's threshold of significance of 12.7 HBW VMT per employee. Therefore, the Project's impact would be less than significant.

4.3 Design Hazards

Impact TRANS-3: Development of the Project would introduce potentially hazardous roadway conditions along Produce Avenue and Terminal Court. (Significant / *Significant and Unavoidable with Mitigation*)

As documented in Section 3.4, the Project would increase vehicle trips along Produce Avenue at the intersections of US-101 Offramp/Produce Avenue and US-101 Onramp/Produce Avenue/Terminal Court. The addition of vehicle trips along the US-101 southbound offramp would cause vehicle queues to spill over onto US-101, while both intersections would meet peak hour signal warrants. The South San Francisco General Plan EIR determined that implementation of the General Plan is likely to increase vehicle trips on City freeway ramps, which could exacerbate vehicle queues on ramps already in excess of their storage capacity. The Project would exacerbate this impact.

As mitigation, the Project shall fund the signalization of the US-101 Offramp/Produce Avenue and US-101 Onramp/Produce Avenue/Terminal Court intersections as previous identified in **Mitigation Measure TRANS-1**. The Project's site plan is otherwise not expected to present any design hazards.

Implementation of new traffic signals along Produce Avenue would reduce vehicle queues exiting US-101 while alleviating potential conflicts both intersections. However, as previously stated in Section 3.2, portions of this mitigation measure are under the jurisdiction of Caltrans and the City of San Bruno, and neither jurisdiction has a mechanism for funding this mitigation. Therefore, while the proposed mitigations could address the Project's impact, the impact to design hazards would be **significant and unavoidable** because the City of South San Francisco cannot ensure its full implementation.

4.4 Emergency Access

Impact TRANS-4: **Development of the Project would not result in inadequate emergency access under Existing Plus Project and Cumulative Plus Project conditions. (*Less than Significant*)**

The Project would provide adequate emergency vehicle access consistent with applicable design standards. Both driveways will accommodate all types of emergency vehicles accessed via Terminal Court and Shaw Road. The Project is not expected to introduce or exacerbate conflicts for emergency vehicles. Therefore, the Project would not result in inadequate emergency vehicle access, and the Project's impacts to emergency access would be less than significant.

Mitigation Measures: None required.

5. Local Transportation Analysis

This section evaluates the Project's effects on the local transportation network consistent with the City of South San Francisco's Transportation Impact Analysis Guidelines. This analysis is provided for informational purposes and is not associated with CEQA thresholds of significance.

5.1 Parking

The Project provides adequate parking.

The Project's proposed parking supply meets the parking maximums for R&D space set forth in Table 20.330.004 of the zoning code; (1.5 parking spaces per 1,000 square feet of R&D space). The Project provides a total of 2,976 parking spaces across two parking garages and a surface parking lot. Of these, 2388 spaces would be used primarily for R&D uses (consistent with the City's maximum allowable parking supply of 1.5 spaces per 1,000 square feet) and 579spaces would be used for other amenity uses. As documented in the Project's draft Parking Management Plan, amenity parking spaces would be designated for visitor use only and would remain consistent with the Project's mode share and trip cap targets.

> **Condition of Approval: Parking Management Plan**
>
> The Project applicant has submitted a draft Parking Management Plan. Prior to issuance of a certificate of occupancy, the applicant shall submit a Final Parking Management Plan for review and approval by the Chief Planner. If the Final Parking Management Plan identifies non-office/research and development building square footage that is no longer accessible to the general public, the total amount of parking provided on the site will be reduced proportionally and replaced with open space and/or landscaping in keeping with adjacent areas.

5.2 Passenger Loading

The Project provides adequate passenger loading.

The Project provides six onsite passenger drop-off spaces located on the north side of the office building, which connects to the building entrances via pedestrian pathways through the courtyard on the west side of the site. The loading zone can be accessed through the surface parking on the north side of the site. Passenger loading activities are not expected to obstruct pedestrian, bicycle, transit, or auto facilities. By dispersing loading activity across the site, the Project is unlikely to experience queuing that would infringe on roadways or bicycle or pedestrian facilities.

5.3 Bicycle and Pedestrian Access

Development of the Project would limit conflicts between vehicles, pedestrians, and bicyclists.

The Project's site plan would incorporate pedestrian and bicycle enhancements to reduce the risk of multimodal conflicts. Pedestrian and bicycle access to the Project site would be provided via a Class I trail connecting to Terminal Court and Shaw Road, as well as additional sidewalks connecting to Terminal Court. The site plan includes several walkways and plazas facilitating internal pedestrian and bicycle circulation. With implementation of **Mitigation Measure TRANS-1**, the Project would include more comfortable connections to regional transit via walking and biking, including a ¾ mile connection to the South San Francisco Caltrain Station, a ¼ mile walk to SamTrans bus stops, and a ¾ mile connection to the San Bruno BART Station.

The Project provides adequate bicycle parking.

The Project proposes to provide short-term and long-term bicycle parking spaces consistent with City code requirements. A total of 176 bicycle parking spaces would be provided throughout the site, including 149 long-term bicycle parking spaces and 27 short-term bicycle parking spaces. The short-term bicycle parking spaces would be located near the lobby entrances to the proposed buildings. The long-term bicycle parking spaces, as well as showers, would be provided on the ground floor of the I131N and I131S buildings and within a bicycle storage room in the parking garage.

5.4 Transit

The Project does not result in a deficiency in transit service or access.

The Project would rely heavily on BART and Caltrain ridership to meet its mode share and trip cap targets. As described in the Project's TDM Plan, the Project would provide a new first/last shuttle service as the primary means of connecting to regional transit providers. A shuttle stop would be provided near the center of the Project site. Implementation of **Mitigation Measure TRANS-1** would further enhance active transportation access to Caltrain, BART, and SamTrans services as previously noted.

5.5 Off-Site Traffic Operations

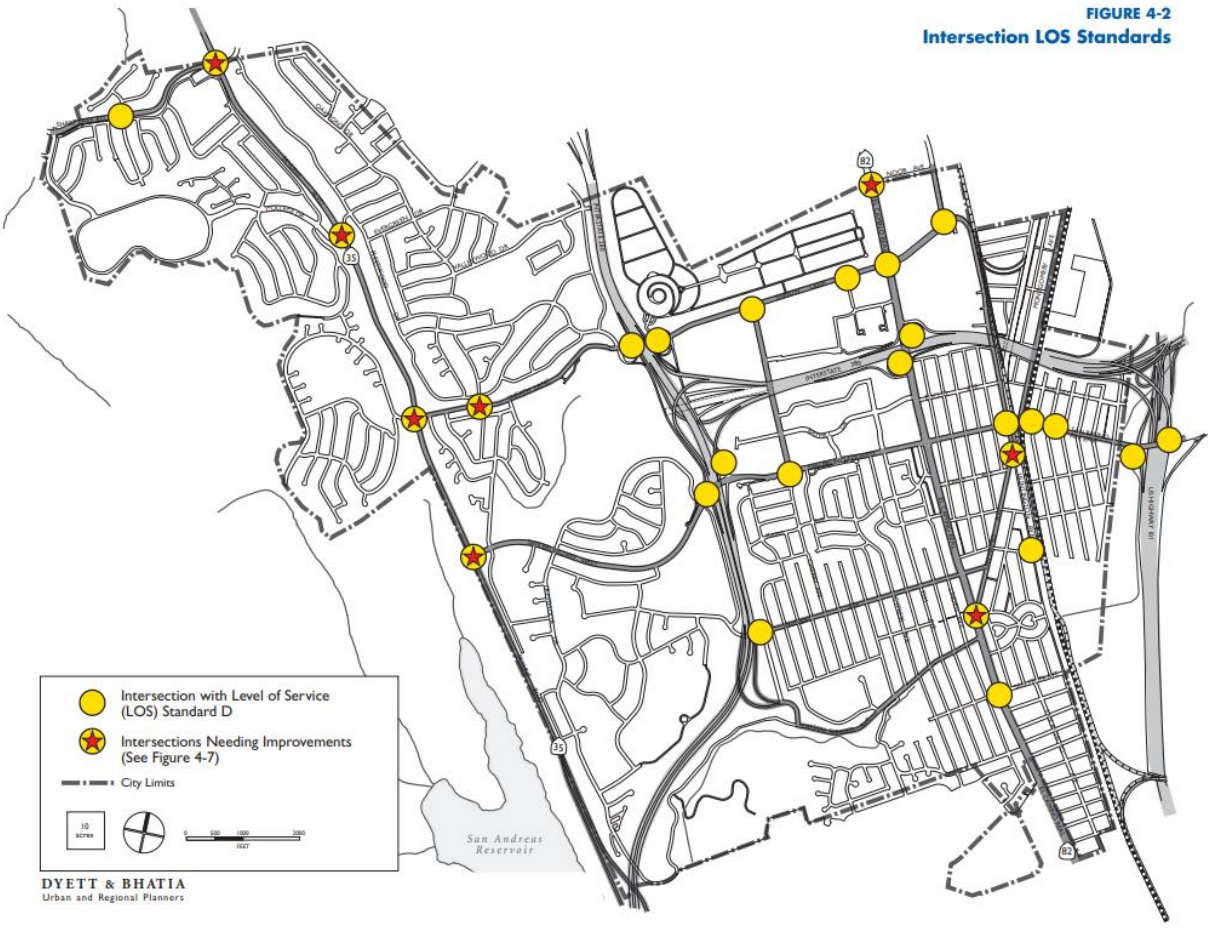
This section provides informational analysis of traffic operations within the cities of South San Francisco and San Bruno near the Project site.

5.5.1 Approach and Methodology

The City of South San Francsico no longer has a Level of Service (LOS) standard for auto operations. Instead, General Plan Policy MOB-3.2 directs the City to "optimize traffic operations on City streets while avoiding widening roadways or otherwise pursuing traffic operations changes at expense of multimodal safety, transit reliability, or bicycle and pedestrian comfort."

The City of San Bruno maintains a LOS D threshold at specific intersections identified in its General Plan and illustrated in **Figure 5-1**.

Figure 5-1 City of San Bruno LOS Standards



Study intersections were selected based on input from City of South San Francisco and City of San Bruno staff as well as analysis of trip distribution and assignment. Sixteen study intersections were analyzed in this study: six intersections within the City of South San Francisco and 10 intersections within the City of San Bruno:

City of South San Francisco:

0. Airport Boulevard-Produce Avenue/South Airport Boulevard-San Mateo Avenue
1. Produce Avenue/US 101 South Off-Ramp
2. Produce Avenue/Terminal Court (side street stop controlled)
3. South Airport Boulevard/Mitchell Avenue
4. South Airport Boulevard/US 101 North Ramps
5. San Mateo Avenue/South Linden Avenue

City of San Bruno:

6. San Mateo Avenue/Tanforan Avenue/Shaw Road (side street stop controlled)
7. El Camino Real / Sneath Lane
8. Huntington Avenue / Sneath Lane
9. I-280 NB Ramps / Sneath Lane
10. I-280 SB Ramps / Sneath Lane
11. El Camino Real / San Bruno Avenue
12. Huntington Avenue / San Bruno Avenue
13. San Mateo Avenue / San Bruno Avenue
14. US 101 SB & San Bruno Avenue
15. US 101 SB & San Bruno Avenue

Trip distribution and assignment were performed using the C/CAG Model and City of South San Francisco's subarea traffic model ("City Model"). This City Model is based on a subarea extraction from the C/CAG Travel Demand Model, which covers San Mateo County and the Bay Area region. The City Model provides greater network detail for South San Francisco and San Bruno than the C/CAG Model. It includes a 2019 base year and 2040 horizon year, which includes all land use and transportation changes documented in the 2040 General Plan.

Traffic operations analysis was performed using Synchro software based on Chapter 19 of the HCM 6th Edition. Analysis of signalized intersection operations is based on the average control delay experienced by motorists traveling through it. Control delay incorporates delay associated with deceleration, acceleration, stopping, and moving up in the queue. This method uses various intersection characteristics (such as traffic volumes, lane geometry, and signal phasing) to estimate the average control delay**. Tables 4-1** and **4-2** summarize the relationship between average delay per vehicle and LOS for signalized intersections and unsignalized intersections, respectively, according to the HCM 6th Edition.

Table 5.1 Signalized Intersection LOS Criteria

LOS	Description	Average Delay Per Vehicle (Seconds)
A	Operations with very low delay occurring with favorable progression and/or short cycle length.	≤ 10
B	Operations with low delay occurring with good progression and/or short cycle lengths.	> 10 and ≤ 20
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	> 20 and ≤ 35
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	> 35 and ≤ 55
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences.	> 55 and ≤ 80
F	Operation with very high delay values to most drivers occurring due to over saturation poor progression, or very long cycle lengths.	> 80

Source: Transportation Research Board, 2016. Highway Capacity Manual 6th Edition

Table 5.2 Unsignalized Intersection LOS Criteria

Level of Service	Description	Average Control Delay Per Vehicle (Seconds)
A	Little or no traffic delays.	≤ 10
B	Short traffic delays.	> 10 and ≤ 15
C	Average traffic delays.	> 15 and ≤ 25
D	Long traffic delays.	> 25 and ≤ 35
E	Very long traffic delays.	> 35 and ≤ 50
F	Extreme traffic delays with intersection capacity exceeded.	> 50

5.5.2 Analysis Scenarios

The effect of the Project on the surrounding transportation system were evaluated for the five scenarios listed below:

- Scenario 1: Existing Conditions
- Scenario 2: Existing Conditions plus Infinite 101
- Scenario 3: Existing Conditions plus Infinite 101 and Infinite 131
- Scenario 4: Cumulative Conditions (General Plan)
- Scenario 5: Cumulative Conditions (General Plan) with Infinite 131

Existing Conditions plus Infinite 101 represents the base condition with the addition of Infinite 101, which was previously entitled by the City. This condition represents a reasonably foreseeable near-term outlook that incorporates the signalization of the US-101 offramp at Produce Avenue and the Produce Avenue/Terminal Court intersection, which were identified as conditions of approval for the Infinite 101 project. Existing Conditions plus Infinite 101 and Infinite 131 represents the base condition with the full Infinite 101 and Infinite 131 project.

Cumulative Conditions represents 2040 land use and transportation conditions consistent with the South San Francisco General Plan as well as planned developments within the City of San Bruno (including buildout of the Bayhill Specific Plan and Tanforan Mall redevelopment). Cumulative conditions includes completion of the Utah Avenue overpass and associated changes to US-101 freeway ramps. Cumulative Conditions does not include the Infinite 131 Project as it is not consistent with the General Plan. Cumulative Conditions Plus Infinite 131 incorporates the Infinite 131 Project into the Cumulative 2040 forecasts.

5.5.3 Analysis Results: South San Francisco

The Project would contribute to congested intersection operations under existing and cumulative conditions, particularly east of US-101. As shown in **Table 5.3** and **Table 5.4**, no intersections presently operate at LOS F; however, with the addition of Infinite 101 and Infinite 131, three intersections will operate at LOS F under existing plus project conditions during the PM peak period. Nearly all intersections operate at LOS F under cumulative conditions in the PM peak period. Implementation of **Mitigation Measure TRANS-1** is included as a part of the Infinite 131 project in this analysis.

Table 5.3: South San Francisco LOS Analysis, AM Peak

Intersection	Existing (2023)						Cumulative (2040)			
	Existing		Existing + I101		Existing + I101 + I131		General Plan		General Plan + I131	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
Airport Boulevard / San Mateo Avenue / Produce Avenue	33.2	C	36.5	D	40.5	D	64.4	E	51.1	D
Produce Avenue & US 101 SB Off Ramp	13.7	B	2.8	A	3.3	A	*NA*		2.2	A
Produce Avenue & Terminal Court	21.4	C	6.6	A	7.0	A	11.0	B	19.3	B
Airport Boulevard & Mitchell Avenue	37.3	D	38.0	D	37.8	D	**>80**	**F**	**>80**	**F**
South Airport Boulevard & US 101 NB Ramps	23.3	C	77.0	E	77.5	E	48.5	D	**>80**	**F**
San Mateo Avenue & South Linden Avenue	9.4	A	8.8	A	8.6	A	64.5	E	61.6	E

Notes:

1. For signalized intersection, average intersection delay is shown. For unsignalized intersections, worst approach delay is shown.
2. The South San Francisco General Plan 2040 network assumes the replacement of the US-101 Southbound/Produce Avenue offramp with a new offramp connecting to the Utah Avenue overpass. However, the I101 and I131 projects would instead maintain and signalize this offramp in addition to the planned new offramp to Utah Avenue.

Table 5.4: South San Francisco LOS Analysis, PM Peak

Intersection	Existing (2023)						Cumulative (2040)			
	Existing		Existing + I101		Existing + I101 + I131		General Plan		General Plan + I131	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
Airport Boulevard / San Mateo Avenue / Produce Avenue	77.7	E	**>80**	**F**	**>80**	**F**	**>80**	**F**	**>80**	**F**
Produce Avenue & US 101 SB Off Ramp	20.1	C	31.0	C	31.7	C	*NA*		9.7	A
Produce Avenue & Terminal Court	61.5	F	33.2	C	54.7	D	**>80**	**F**	**>80**	**F**
Airport Boulevard & Mitchell Avenue	74.1	E	73.6	E	74.2	E	**>80**	**F**	**>80**	**F**
South Airport Boulevard & US 101 NB Ramps	29.2	C	**>80**	**F**	**>80**	**F**	65.9	E	**>80**	**F**
San Mateo Avenue & South Linden Avenue	9.8	A	10.0	B	10.2	B	**>80**	**F**	**>80**	**F**

Notes:

1. For signalized intersection, average intersection delay is shown. For unsignalized intersections, worst approach delay is shown.
2. The South San Francisco General Plan 2040 network assumes the replacement of the US-101 Southbound/Produce Avenue offramp with a new offramp connecting to the Utah Avenue overpass. However, the I101 and I131 projects would instead maintain and signalize this offramp in addition to the planned new offramp to Utah Avenue.

5.5.4 Analysis Results: San Bruno

Study intersections in San Bruno experience comparatively less traffic congestion than South San Francisco. As shown in Table 5.5 and Table 5.6, only one intersection presently operates at a level inconsistent with city LOS thresholds (Huntington/Sneath during the PM peak hour). With the addition of the Infinite 101 and Infinite 131 projects, no other intersections would perform at a level inconsistent with city LOS thresholds under existing plus project conditions. Under cumulative conditions without the Infinite 131 Project, one additional intersection performs at a level inconsistent with City LOS thresholds (El Camino Real / Sneath Lane). The addition of the Infinite 131 Project causes a third intersection to also perform at a level inconsistent with City LOS Thresholds (Huntington Avenue / San Bruno Avenue). Implementation of **Mitigation Measure TRANS-1** is included as a part of the Infinite 131 project in this analysis.

Table 5.5: San Bruno LOS Analysis, AM Peak

Intersection	Existing						Cumulative			
	Existing		Existing + I101		Existing + I101 + I131		General Plan		General Plan + I131	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
San Mateo Avenue / Tanforan Avenue / Shaw Road	13.2	B	20.3	C	25.5	D	37.9	D	59.1	E
El Camino Real / Sneath Lane	32.9	C	33.2	C	33.3	C	**>80**	**F**	**>80**	**F**
Huntington Avenue / Sneath Lane	38.0	D	36.1	D	36.4	D	**>80**	**F**	**>80**	**F**
I-280 NB Ramps / Sneath Lane	14.7	B	12.2	B	12.3	B	17.7	B	18.3	B
I-280 SB Ramps / Sneath Lane	19.7	B	19.3	B	18.8	B	54.4	D	50.3	D
El Camino Real / San Bruno Avenue	39.1	D	38.9	D	39.1	D	42.4	D	42.3	D
Huntington Avenue / San Bruno Avenue	17.0	B	17.9	B	18.0	B	30.9	C	35.1	D
San Mateo Avenue / San Bruno Avenue	24.2	C	19.9	B	20.3	C	30.6	C	38.2	D
US 101 SB & San Bruno Avenue	18.2	B	18.5	B	18.7	B	22.0	C	21.8	C
US 101 SB & San Bruno Avenue	21.6	C	22.0	C	22.2	C	22.3	C	22.7	C

Notes:

1. For signalized intersection, average intersection delay is shown. For unsignalized intersections, worst approach delay is shown.
2. **Bold** indicates intersection performance inconsistent with City of San Bruno LOS standards.

Table 5.6: San Bruno LOS Analysis, PM Peak

Intersection	Existing						Cumulative			
	Existing		Existing + I101		Existing + I101 + I131		General Plan		General Plan + I131	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
San Mateo Avenue / Tanforan Avenue / Shaw Road	15.2	C	38.4	E	>80	F	50.8	D	>80	F
El Camino Real / Sneath Lane	43.0	D	44.1	D	46.1	D	**>80**	**F**	**>80**	**F**
Huntington Avenue / Sneath Lane	**>80**	**F**	**>80**	**F**	**>80**	**F**	**>80**	**F**	**>80**	**F**
I-280 NB Ramps / Sneath Lane	14.5	B	14.7	B	14.6	B	25.0	C	26.0	C
I-280 SB Ramps / Sneath Lane	15.1	B	15.3	B	15.2	B	23.8	C	26.1	C
El Camino Real / San Bruno Avenue	41.5	D	41.9	D	42.0	D	43.6	D	43.7	D

San Mateo Avenue / San Bruno Avenue	23.1	C	25.6	C	26.0	C	32.3	C	36.9	D
US 101 SB & San Bruno Avenue	19.0	B	19.3	B	19.7	B	26.6	C	27.5	C
US 101 SB & San Bruno Avenue	30.6	C	31.4	C	32.1	C	36.8	D	36.7	D

Notes:

1. For signalized intersection, average intersection delay is shown. For unsignalized intersections, worst approach delay is shown.
2. **Bold** indicates intersection performance inconsistent with City of San Bruno LOS standards.

5.5.5 Improvement Measures

As previously noted, implementation of **Mitigation Measure TRANS-1** would address deficiencies associated with unsignalized intersections and freeway ramp queueing, and as a secondary effect would also address traffic operations needs to some extent. Limited options remain for capacity improvements or widening near the Project site due to lack of available right-of-way. Such changes would also generally conflict with City of South San Francisco General Plan Policy MOB-3.2 and intersection buildout conditions identified in the City of San Bruno's General Plan.

Introduction

This report presents a Transportation Demand Management (TDM) Plan, per City of South San Francisco Zoning Code Chapter 20.400, for the proposed research & development buildings known as the Infinite 131 Project, herein referred to as the "Project." A description of the proposed project is included on the following pages.

The City of South San Francisco TDM Ordinance strives to accomplish the following goals:

- Reduce the amount of traffic generated by new nonresidential development.
- Ensure that expected increases in traffic resulting from growth in employment opportunities in the City of South San Francisco will be adequately mitigated.
- Reduce drive-alone commute trips during peak traffic periods by using a combination of services, incentives, and facilities.
- Promote the more efficient utilization of existing transportation facilities and ensure that new developments are designed in ways to maximize the potential for alternative transportation usage.
- Establish an ongoing monitoring and enforcement program to ensure that the desired alternative mode use percentages are achieved.

The City requires the Project to enact a TDM program to achieve a maximum drive alone commute mode share of 50 percent pursuant to the City's Municipal Code Chapter 20.400. Additionally, the Project must implement annual monitoring of a site-specific trip cap. These requirements are consistent with a Tier 4 classification (large office/R&D project) under the TDM Ordinance and also meet the TDM requirements established by the City/County Association of Governments of San Mateo County (C/CAG).

This TDM Plan identifies a set of strategies, measures, and incentives to encourage future tenant employees at the Project to walk, bicycle, ride transit, or carpool when commuting to and from work. In order to accomplish this goal, this plan presents a range of proven strategies and measures.

Project Description

The Project would construct 1,632,000 square feet of research & development space, 21,000 square feet of conference space, a 20,000 square foot fitness center, 27,000 square feet of restaurant space, and 4,050 square feet of daycare space, for a total of 1.704 million square feet across seven campus buildings. The Project includes 2,976 proposed stalls, including 50 accessible spaces and 1,339 electric vehicle capable spaces. The Project is located adjacent to the Infinite 101 development, a recently entitled 696,000 square foot R&D. campus that would function as a separate phase to the Project. Upon completion of both the Infinite 101 and Infinite 131 developments, the two sites would function as a single campus. **Figure 1** illustrates the Project location, while **Figure 2** depicts site circulation.

Figure 1
Project Location

Figure 2

Project Site Plan

Project Setting

Transit Connections

The following transit services operate within South San Francisco near the Project site. Existing transit services are shown in **Figure 3**. Descriptions provided in this section reflect transit operations in Fall 2023.

BART

BART provides regional rail service between the East Bay, San Francisco, and San Mateo County, with connections to San Francisco International Airport and Millbrae Intermodal Station to the south, San Francisco to the north, and Oakland, Richmond, Pittsburgh/Bay Point, Dublin/Pleasanton and Fremont in the East Bay. Two BART lines serve South San Francisco Station: the Yellow Line connecting Antioch with San Francisco International Airport, and the Red Line connecting Richmond and Millbrae. Each BART line operates every 15-minutes throughout the day. The closest station is San Bruno BART Station, located approximately one mile southwest of the Project site in neighboring San Bruno.

Caltrain

Caltrain provides passenger rail service on the Peninsula between San Francisco and San José, and limited service to Morgan Hill and Gilroy during weekday commute periods. The South San Francisco Caltrain Station is located approximately one mile north of the Project site and San Bruno Caltrain Station is located approximately one mile south of the Project site in neighboring San Bruno. Both stations are served by local and limited trains from around 5:00 A.M. to 12:30 A.M., with approximately 30-minute headways during peak periods and 60-minute headways during off-peak periods. In early 2022, Caltrain relocated the South San Francisco Caltrain station several hundred feet to the south to provide a more direct connection to downtown South San Francisco. By late 2024, Caltrain plans to complete its electrification project to support the operation of faster and more frequent rail service on the Peninsula, and expects to modify its schedules accordingly.

WETA (San Francisco Bay Ferry)

The Water Emergency Transportation Authority (WETA) provides weekday commuter ferry service between the Oakland/Alameda ferry terminals and the South San Francisco Ferry Terminal at Oyster Point (known as the San Francisco Bay Ferry). There are three morning departures from Oakland/Alameda to South San Francisco, and three evening departures from South San Francisco to Oakland/Alameda. The South San Francisco Ferry Terminal is located approximately 3 miles to the northeast of the Project site.

SamTrans

SamTrans provides bus service in San Mateo County. There are no existing SamTrans bus stops within a reasonable walking distance of the Project site.

Figure 3

Existing Transit Service

First/Last Mile Shuttle Connections

There are currently no existing shuttles serving the Project site.

Bicycle and Pedestrian Connections

The Project site is located adjacent to US 101, a navigable slough, and existing industrial and parking facilities, which heavily constrain bicycle and pedestrian connectivity. Produce Avenue has a continuous sidewalk along the west side of the street that connects to the intersection with San Mateo Avenue and Airport Boulevard. People walking or biking to or from the site currently must use this route. At buildout, the Project has proposed a new trail connection with Shaw Road. Shaw Road has a sidewalk on the north side of the street to the west of the right-of-way and on the south side of street in both directions; there is no existing street crossing of Shaw Road at the right-of-way.

While the City continues to expand its bicycle and pedestrian network, the area surrounding the Project has historically experienced low volumes of pedestrians and bicyclists due to commute lengths, lack of continuous low stress facilities, and lack of network connectivity to residences and transit stations.

To address the gap in the bicycle and pedestrian network near the Project site, the City has proposed a bicycle and pedestrian bridge and trail in the vicinity of the Project site in its *Active South City Bicycle and Pedestrian Master Plan*. The trail would connect the Bay Trail and Centennial Way Trail via the Navigable Slough, Shaw Road, and an eventual grade separation of Caltrain at Tanforan Avenue. **Figure 5** illustrates existing and planned bikeway facilities as well as sidewalk infrastructure gaps in South San Francisco.

San Mateo County TDM Resources

The Project would have access to trip reduction services offered by Commute.org. Commute.org is a public agency whose mission is to reduce the number of drive-alone vehicles traveling to, from or through San Mateo County. The agency's goal is to help residents and commuters find alternatives to driving alone that are less stressful, less costly, and better the environment. The agency provides information and commute planning assistance to employees, employer programs, and city transportation demand management partnerships. Commute.org also provides first/last mile shuttle services in the East of 101 Area. **Figure 4** illustrates some current promotions and services offered by Commute.org that are open to all employees in San Mateo County.

Bicycle Facilities

Proposed Transportation Demand Management Program

This section summarizes the Project's proposed TDM program as presently envisioned in the planning process. When applying for a Certificate of Occupancy, the applicant shall submit a compliance form and appropriate attachments finalizing the TDM program and documenting how the program will be implemented before the site reaches 50% occupancy.

Proposed TDM Program

The City's TDM Ordinance has two components: a points-based planning checklist and annual performance monitoring thresholds. As a Tier 4 project, the Project is required to submit a completed TDM checklist that achieves a minimum threshold of 50 points, consistent with achieving a 50 percent drive alone mode share target (via survey) and compliance with an onsite trip cap (via counts).

As illustrated in Table 1, the Project would implement all required measures per the City's TDM Ordinance, including the following:

- 50% Transit Pass Subsidies and Pre-Tax Transit Benefits
- Participation in Commute.org Programs
- Carpool/Vanpool Programs and Parking
- Bicycle Storage, Showers, and Lockers
- Designated TDM Coordinator
- Bicycle and Pedestrian-Oriented Site Access
- Encourage Telecommuting & Flexible Work Schedules

The Project would also implement the following optional measures:

- Enhanced Shuttle Commitment
- Fully Subsidized Transit Passes
- Active Transportation Gap Closure
- Transit Capital Improvements
- On-Site Pedestrian-Oriented Amenities
- Bicycle Repair Station

Each measure is described in detail below.

Participation in Commute.org Programs

The Project will partner with Commute.org to provide TDM marketing services and promotions via its Certified Development Program (https://commute.org/resources/developers/). Commute.org offers a wide array of programs and marketing support to all eligible employers, property managers, and cities within San Mateo County. Key services that the Project will participate in include the Commute.org ride-matching program (designed to aid in carpool and vanpool formation); Guaranteed Ride Home services; and general educational and promotional programs and materials. The Project's designated TDM coordinator will obtain a certificate of participation from Commute.org each year as part of the annual monitoring and reporting process.

Carpool/Vanpool Programs and Parking

The Project will ensure that employer tenants offer carpool and vanpool programs that include subsidies or other monetary incentives (e.g., gas card after carpooling for a given amount of time, or parking subsidies for carpools), dedicated carpool and vanpool parking, as well as ride-matching services to help facilitate these shared trips. Elements of the carpool program (such as use of the regional ride-matching program) will be provided in partnership with Commute.org.

Bicycle Storage, Showers, and Lockers

The Project will provide safe and convenient bicycle parking per City code requirements, as well as showers, changing rooms, and lockers. The Project is proposing to provide short-term bicycle parking spaces and long-term bicycle parking spaces in excess of code requirements. Short-term bicycle parking will be located near main building entrances and will be easily accessible.

Designated TDM Coordinator

The Project will designate a TDM coordinator. This individual may either be an employee of the Project's property management or contracted through a third-party provider. The TDM coordinator shall provide oversight and management of the program's implementation.

In addition, the TDM coordinator will provide lists of mandatory and optional measures to all individual businesses. Tenants will be obligated (via lease language) to provide a point of contact for the Designated TDM Coordinator. The TDM Coordinator, in turn, will verify that tenants are implementing all required measures as part of the annual monitoring and reporting process.

Bicycle and Pedestrian-Oriented Site Access

The Project will enhance bicycle and pedestrian access by providing new connections and onsite circulation paths. The Project will provide pedestrian walkways between all core buildings and bicycle routes through the site. Bicycle access will primarily be provided via a new trail along the Navigable Slough connecting to Shaw Road.

Encourage Telecommuting & Flexible Work Schedules

The Project shall encourage employers to allow telecommuting at least one day per week to reduce overall vehicle trips, unless an employee's job functions cannot be performed from a remote location. When employees commute to work, employers shall encourage flexible work schedules that help shift travel outside of peak hours. Uptake of remote work, telecommuting, and flexible work schedules will be monitored via survey.

Enhanced Shuttle Commitment

The Project will provide first/last mile shuttles to the San Bruno BART Station and South San Francisco Caltrain Station. Since no shuttle routes are present near the Project site, the Project sponsor will establish new routes. A minimum of one vehicle would be dedicated to each route (two vehicles total) with service at least every 15 minutes during the AM and PM peak periods (totaling a minimum of six hours per day). The proposed shuttle routes are shown in **Figure 6**, though actual circulation patterns around the campus may vary.

New shuttle services should adhere to the City's suggested practices identified in its Transportation Analysis Guidelines:

- The Project sponsor is encouraged to work with Commute.org as a shuttle manager and participate in the San Mateo County Transportation Authority's Shuttle Call for Projects grant program.
- Shuttle services should be free and open to the public.
- Stops should be located "on the way" to enable more linear routes with minimal route diversions.
- Stops should be located along streets within the Project site. Stops in parking lots should be avoided to avoid adverse effects on travel times.
- Stops should be spaced at least 800 feet apart. Fewer stops consolidated around major ridership generators are generally preferable to ensure efficient operations.
- Stops should connect to accessible sidewalks and crosswalks with convenient paths of travel to nearby land uses.

Fully Subsidized Transit Passes

The Project will offer public transit passes or subsidies up to the IRS transit benefit maximum (currently $280 per person per month). This may be implemented through either a direct voucher program provided by the property manager, or through lease terms obligating employers to provide said subsidies. Should the measure be implemented through lease obligations, the designated TDM coordinator will be responsible for confirming that all employers are offering said benefits as part of the annual monitoring and reporting process.

Active Transportation Gap Closure & Transit Capital Improvements

The Project's Transportation Impact Analysis identifies several improvements to active transportation and transit conditions via Mitigation Measure TRANS-1:

> ***Mitigation Measure TRANS-1: Advanced Implementation of Transportation Improvements Identified in General Plan, Lindenville Specific Plan, and Active South City Plan***
>
> *The project shall implement and/or fund, as indicated below, the following improvements identified in the General Plan, Lindenville Specific Plan, and Active South City Plan:*
>
> 1. *Signalization of the U.S. 101 Off-ramp/Produce Avenue and U.S. 101 On-ramp/Produce Avenue/Terminal Court Intersections.*
>   *The project shall implement two new traffic signals along Produce Avenue to improve traffic operations, safety, and bicycle and pedestrian access to the project site. The traffic signals shall be located at the intersections of the U.S. 101 off-ramp/Produce Avenue and U.S. 101 on-ramp/Produce Avenue/Terminal Court. The traffic signals shall be accompanied by changes to lane configurations, sidewalks, crosswalks, and bicycle facilities identified by the City to achieve consistency with adopted plans and policies.*
> 2. *Redesign of the Produce Avenue/San Mateo Avenue/Airport Boulevard Intersection*
>   *The project shall implement a redesign of the Produce Avenue/San Mateo Avenue/Airport Boulevard intersection to improve traffic operations, safety, and bicycle, pedestrian, and transit access to the project site. A partial redesign of this intersection is already funded by the 100 Produce, 124 Airport, and 40 Airport projects, which will include removal of slip lanes on the northeast, northwest, and southwest corners. The project's redesign shall include the reconfiguration of turning lanes, improvements to pedestrian and bicycle facilities, and the addition of bus stops and shelters for SamTrans Route 292, as identified by the City.*
> 3. *Construction of a Class IV Separated Bikeway from Baden Avenue to Terminal Court via Airport Boulevard and Produce Avenue*
>   *The project shall implement a Class IV separated bikeway on Produce Avenue and Airport Boulevard from Baden Avenue to Terminal Court, connecting the Caltrain Station to the project site. This bikeway would close existing gaps between the project site, Caltrain Station, and downtown South San Francisco, enabling continuous bicycle travel separated from auto and truck traffic. Improvements would include construction of a two-way facility along the west side of Produce Avenue from Terminal Court to Airport Boulevard/San Mateo Avenue, transitioning to a pair of one-way facilities through the Caltrain crossing to Baden Avenue.*
> 4. *Signalization of the San Mateo Avenue/Shaw Road/Tanforan Avenue Intersection:*
>   *The project shall implement a new traffic signal at the intersection of San Mateo Avenue/Shaw Road/Tanforan Avenue. This traffic signal would facilitate access to the project site via Shaw Road while reducing potential for multimodal conflicts. The traffic signal shall be accompanied by accessible sidewalk and curb ramp upgrades at the intersection, as well as associated signal and intersection/sidewalk modifications at the adjacent San Mateo Avenue/South Linden Avenue intersection.*

5. *Engineering Study of a New Southbound U.S. 101 Off-ramp Connecting to the Utah Avenue Overpass*
   The project shall fund an engineering study of a new southbound U.S. 101 off-ramp connecting to the proposed Utah Avenue overpass as envisioned in the General Plan and Lindenville Specific Plan. The engineering study shall be led by the city. As currently envisioned, the overpass would not include a southbound off-ramp. A second off-ramp would facilitate more direct access to the overpass and address long-term queueing concerns. The off-ramp would be accompanied by a new street connection between Utah Avenue and Produce Avenue north of the project site.
6. *Engineering Study and Fair-Share Contribution toward a New Trail Crossing of U.S. 101 South of the Project Site*
   The project shall fund an engineering study for a new Class I shared-use path crossing of U.S. 101 to connect the Bay Trail with Shaw Road. The engineering study shall be led by the city. An engineering study of the planned U.S. 101 crossing has not yet occurred, and a preferred alternative alignment has not been determined. The engineering study will consider potential trail crossing alignments, incorporate the preferred alternative alignment into its site plan, and quantify a fair share contribution toward construction of the crossing.

These mitigations shall be completed by the applicant prior to the project receiving a certificate of occupancy. If the City implements these improvements in advance of the project's construction, the project shall reimburse the City for the cost of construction. If another development implements these improvements and/or engineering studies prior to the project's construction, the project shall be responsible for a fair-share reimbursement of construction costs to the developer leading these improvements. This funding will ensure that transportation facilities serving the project site are appropriately sized to handle multimodal travel demand associated with the project as envisioned in each plan.

In addition, the Project will incorporate an on-site shuttle stop with shelters. The shuttle stop will be centrally located and convenient for people to access main building entrances.

On-Site Pedestrian-Oriented Amenities

The Project will include a restaurant, fitness center, and conference center onsite to help reduce offsite trips.

Bicycle Repair Station

The Project will include at least one bicycle repair station that will include a toolkit and air pump within a designated secure area of a building to encourage bicycling and support employees and residents.

TDM Checklist & Quantification of TDM Effectiveness

Quantification of TDM reductions is based on the *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* by the California Air

Pollution Control Officer's Association (CAPCOA) published in 2021. The Project would implement the following measures consistent with CAPCOA guidance:

> *Measure T-6 (Implement Commute Trip Reduction Program - Mandatory Implementation and Monitoring)* defines a commute trip reduction program with mandatory implementation and monitoring, which is consistent with several Project TDM measures defined in the City's ordinance along with City requirements for annual monitoring and reporting to ensure compliance. Project TDM measures that would be included in the mandatory trip reduction program include participation in Commute.org programs, carpool/vanpool programs and parking, bicycle storage, showers, and lockers, designation of a TDM coordinator, and fully subsidized transit passes. The Project would be subject to annual surveys and trip cap monitoring as described in the following section.
>
> *Measure T-20 (Expand Bikeway Network)* covers bikeway network expansion, which is consistent with the proposed active transportation gap closure measure covering both onsite and offsite bicycle improvements.
>
> *Measure T-25 (Extend Transit Network Coverage)* covers transit network expansion consistent with the proposed shuttle to connect the Project site with the existing BART station and Caltrain station to provide first/last-mile connectivity for employees and the public. This will add seven additional hours per day of transit service to the area. Prior to the expansion, there was no service within a half-mile radius surrounding the site. The free shuttles will connect the site with existing SamTrans, Caltrain, and BART service.

As illustrated in Table 1, the Project's TDM program would meet the required 50-point threshold for Tier 4 projects and would reduce VMT by 29.5 percent.

Table 1: TDM Program Elements – City, C/CAG, and CEQA Requirements

South San Francisco TDM Ordinance Requirements			CAPCOA Quantification of VMT Reductions[1]		
TDM Measure Description	**Potential Points**	**Project Points**	**Measure**	**Title**	**Project Reduction**
Fully Subsidized Transit Passes	15	15	T-6	Implement Commute Trip Reduction Program (Mandatory Implementation and Monitoring)	26.0%
Participation in Commute.org Programs	5	5			
Designated TDM Coordinator	1	1			
Carpool/ Vanpool Programs and Parking	3	3			
Bicycle Storage, Showers, and Lockers	2	2			
Bicycle Repair Station	1	1			
Active Transportation Gap Closure	Up to 6	6	T-20	Expand Bikeway Network	0.2%
Enhanced Shuttle Commitment	10	10	T-25	Extend Transit Network Coverage	4.6%
Transit Capital Improvements	Up to 6	2			
Bicycle and Pedestrian-Oriented Site Access	1	1	N/A	N/A	N/A
On-Site Pedestrian-Oriented Amenities	3	3			
Encourage Telecommuting & Flexible Work Schedules	1	1			
Total Project Points		**50**	**Total Project Reduction**		**29.5%**
Required Points		50	Required Project Reduction		28%

Proposed Trip Cap

Tier 4 projects are subject to site-specific trip caps that limit the number of peak-direction vehicle trips that a site generates during peak periods. Trip caps should reinforce mode share and parking requirements for the site while allowing some flexibility to accommodate fluctuations in employee density, daily variations in travel patterns, and anticipated levels of guest/visitor travel activity. The proposed trip cap is 3,579 peak period, peak direction vehicle trips, based on the calculations below:

	Topic	Total	Assumptions
A	Maximum Occupancy	4,250	1,700,000 square feet, 1 employee per 400sf
B	Drive Alone Trips	2,125	50% drive alone for maximum occupancy
C	Carpool/Vanpool Trips	170	12% carpool/vanpool with average of 3 persons per vehicle
D	Visitors/Freight Trips	425	10% allowance for visitors and freight
	Proposed Trip Cap	**2,720**	B+C+D

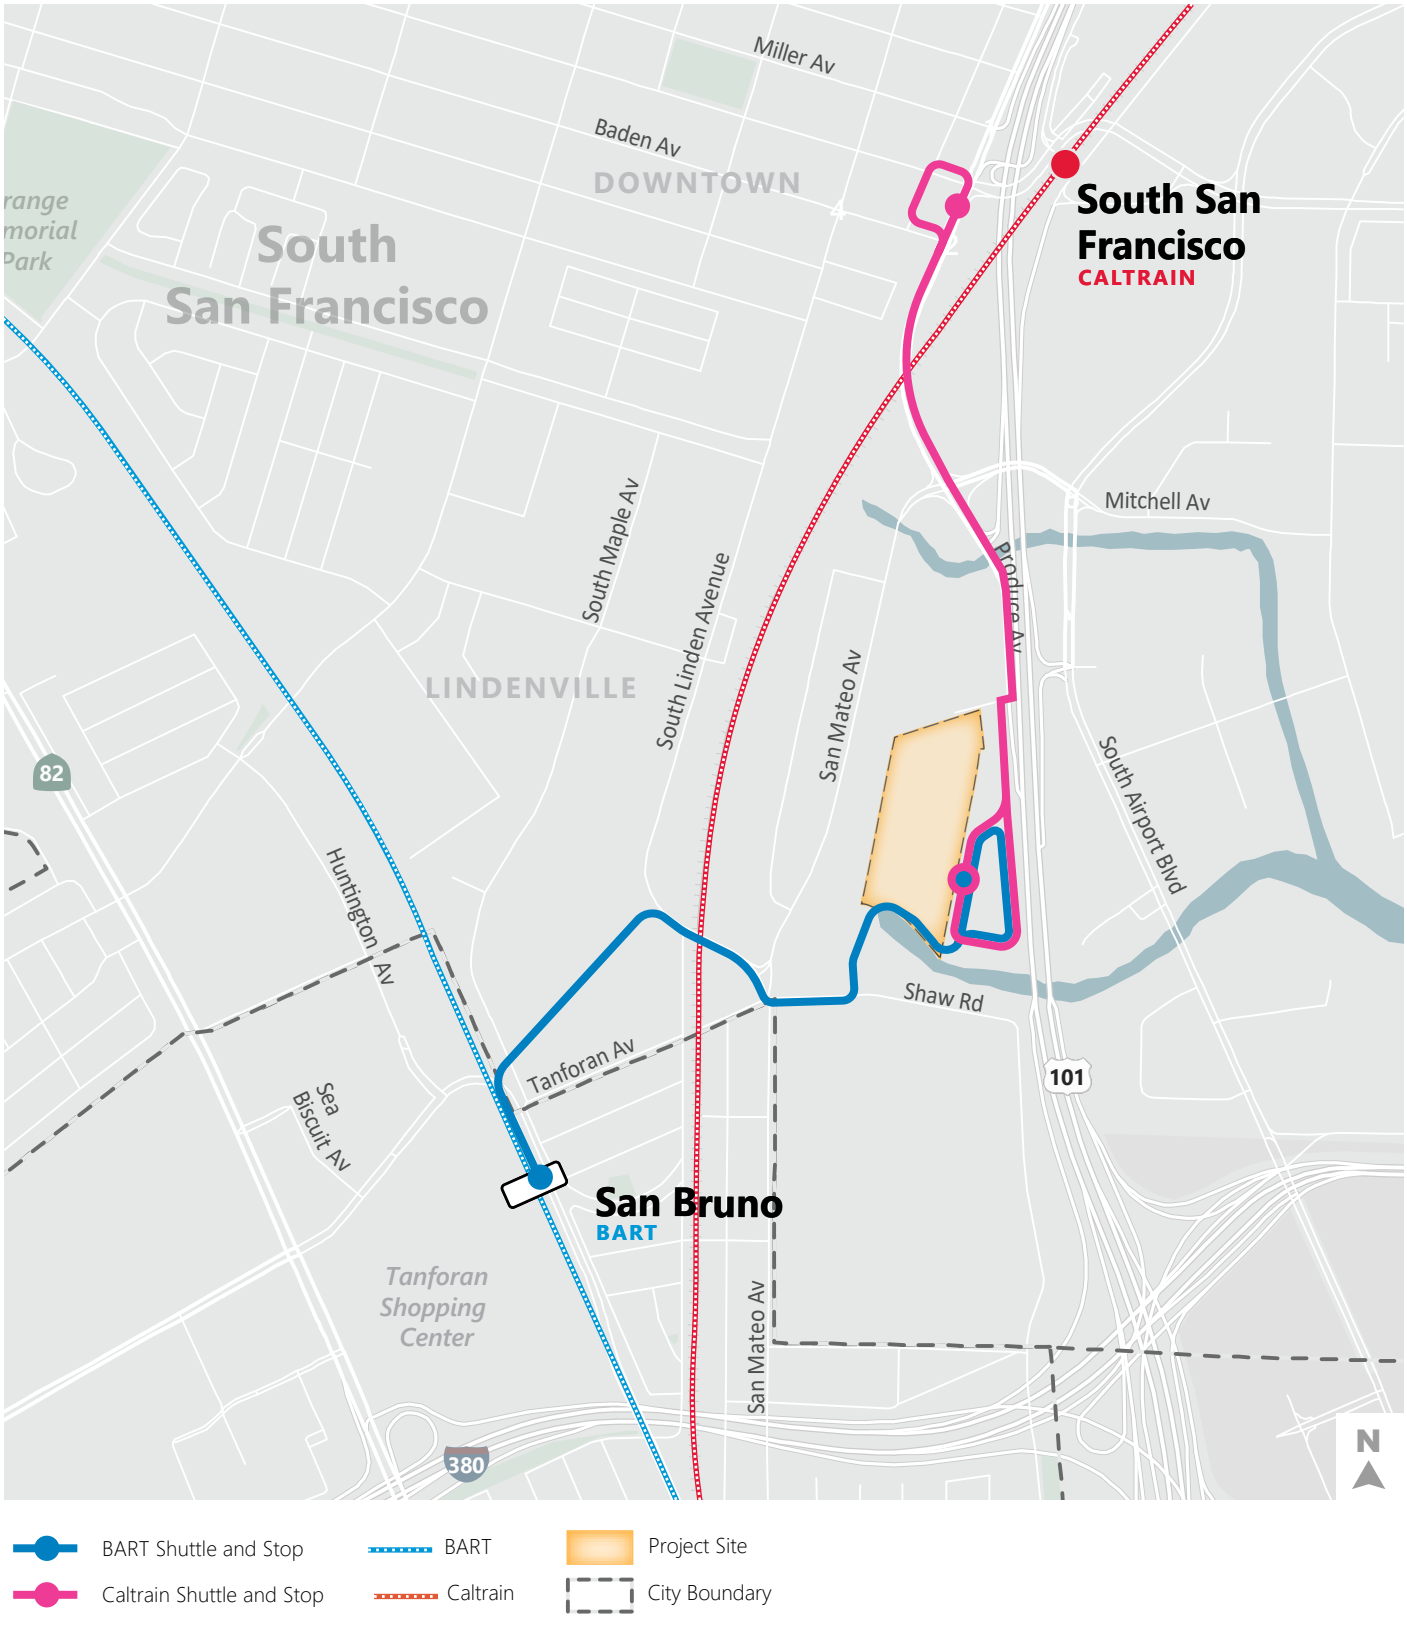

Figure 6
Project Shuttles

Monitoring and Enforcement

The TDM program will be monitored based on the requirements in the South San Francisco TDM Ordinance. The Project would comply with any future changes to the City's monitoring and enforcement practices as described in its TDM Ordinance. Upon completion of both the Infinite 101 and Infinite 131 developments, monitoring would be coordinated between the two sites as a single campus.

Monitoring Methods

Survey monitoring would apply to commute trips only. Participants are expected to provide a good faith effort in reducing non-commute trips, but these trips would only be monitored via vehicle trip counts.

Survey Approach

Mode share will be monitored via an annual survey to all employees to ensure the Project is meeting its target goal. Each year, the survey will achieve a response rate equal to either 51 percent of employees *or* large enough to identify the current drive alone mode share +/- 5 percentage points, at 95% confidence.

An example of a typical commute survey is included in the appendix; the City of South San Francisco (or a designated agent) shall ultimately prepare the final surveys and work with the designated TDM Coordinator to distribute surveys and coordinate with employer tenants. The site's TDM coordinator may expand upon this survey language to seek additional information as needed.

In order to calculate drive alone mode share, the TDM coordinator and City staff would sum the total number of trips completed via the following modes:

- Drove a car or motorcycle alone
- Dropped off by a friend/family member
- Dropped off by Uber, Lyft, taxi, etc.
- Non-responses if greater than 25 percent of the site's employee population

Trip counts would be included with the annual survey results and summarize total trips, AM peak period trips into the site (6:00 AM to 10:00 AM), and PM peak period trips out of the site (3:00 PM to 7:00 PM). In all instances, participants in the program must provide raw data to the City as part of their compliance package, including:

1. Respondent-level survey response data (deletion of columns containing emails or non-required fields is acceptable)
2. Count data as delivered by the contractor providing the counts for each location, with data separated into 15-minute increments or smaller.
3. Current employee population

Trip Cap Monitoring

Trip cap compliance would be monitored via annual vehicle counts at all Project access points. Counts would be conducted by an independent vendor over a period of one week during which school is in session.

Reporting

As a Tier 4 project, the Project will be required to prepare and submit to the City an annual compliance form documenting the continued implementation of TDM measures, for the lifespan of the Project. In addition to the compliance form, counts and survey results would be provided to the City in a standardized format as specified by staff. Formatted reports would be optional but not required.

Triennial Midday Parking Occupancy Survey

In addition to annual surveys and trip counts, the Project shall prepare a midday parking occupancy count every three years per City Ordinance requirements. The parking occupancy survey shall be for informational purposes and is not associated with a performance target.

Enforcement & Fines

The TDM Coordinator may use information from the employee surveys to adjust existing or implement new TDM program measures. If the alternative mode use goals are not achieved, the TDM Coordinator will provide an explanation of how and why the goal has not been reached and a detailed description of additional measures (or intensified marketing or implementation of existing measures) that will be adopted to reach the required mode use. Following three consecutive years of failure to meet the performance target, the Project shall pay any non-compliance fees and fines assessed by the City, as well as continue to make changes to the TDM program in an effort to reach compliance.

If the Project does not meet the required performance targets, the following penalties shall apply per the TDM Ordinance:

- First Violation: The City will direct the Project to modify its TDM program to achieve compliance. Modifications are likely to include adding or modifying TDM measures to increase mode shift.
- Second Violation: The City will direct the participant to coordinate with Commute.org or retain an independent consultant to identify additional program modifications to achieve compliance. Modifications are likely to include adding or modifying TDM measures to increase mode shift.
- Third Violation (and any subsequent violations): The City may assess a penalty per the City's fee schedule. Penalties shall be assessed for each additional violation in subsequent years.

The Project may appeal the decision to administer a penalty if special circumstances prevented meeting the required performance targets.

Appendix: Sample Survey Questions

1. **Which of the following best represents your employment at [location]? (check one)**

- Full-time Employee
- Part-time Employee
- Contract Employee

2. **In what ZIP code is your home located? (enter 5-digit ZIP code; for example, 94901)**

___[Fill in the blank]_____

- Prefer Not to Answer
    - *If prefer not to answer:* Approximately how many miles is it from your home to your office in South San Francisco?

3. **In the past week, what time did you usually arrive to work (check one)?**

___[Drop down in increments of 30 minutes, from 6 AM – 10AM, before 6AM, or after 10AM]____

4. **In the past week, what time did you usually leave work (check one)?**

___[Drop down in increments of 30 minutes, from 3 PM – 7PM, before 3PM, or after 7PM]_____

5. **In the past week, on which days did you use each of the following transportation modes to travel to work? If you used more than one mode, (e.g. you take Caltrain and then bicycle), identify the mode that was the longest part of your trip.**

Transportation Mode	Monday	Tuesday	Wednesday	Thursday	Friday
Drove a car or motorcycle alone					
Rode as a carpool passenger					
Drove a carpool with one or more other adults					
Vanpooled or Carpooled with 6 or more people					
Rode a bus, train, ferry, or other public transit					
Rode a Bicycle or Scooter					
Walked all the way					
Dropped off by a friend/family member					

Dropped off by Uber, Lyft, taxi, etc.					
Worked from home / telecommuted / worked offsite					
Did not work this day					
Other (please specify)					

6. **[Only ask if respondent answered transit] Which of the following services did you use last week? (Check all that apply)**
   - ☐ Caltrain
   - ☐ BART
   - ☐ SamTrans
   - ☐ Ferry
   - ☐ Public shuttle (such as to/from BART, Caltrain, or ferry)
   - ☐ Private shuttle/bus (i.e., Genenbus or other employer shuttle)

7. **[Only ask if respondent answered carpool] If you travel by carpool, how many total people traveled with you to work (not including yourself)?**
   - o 1 other person
   - o 2 other people
   - o 3 other people
   - o 4+ other people

8. **[Only ask if respondent answered drive alone] What is the primary reason you choose to drive alone?**

___[Fill in the blank]_____

Note: In addition to required survey questions, individual site surveys may add their own questions tailored to their respective TDM programs regarding awareness of services and reason for mode choice, but these questions are not required.

IPaC Information for Planning and Consultation **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

San Mateo County, California

Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

NOT FOR CONSULTATION

Mammals

NAME	STATUS
Salt Marsh Harvest Mouse Reithrodontomys raviventris Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/613	Endangered

Birds

NAME	STATUS
California Clapper Rail Rallus longirostris obsoletus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4240	Endangered

California Least Tern Sterna antillarum browni — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/8104

Marbled Murrelet Brachyramphus marmoratus — Threatened
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/4467

Western Snowy Plover Charadrius nivosus nivosus — Threatened
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/8035

Reptiles

NAME	STATUS

Green Sea Turtle Chelonia mydas — Threatened
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/6199

San Francisco Garter Snake Thamnophis sirtalis tetrataenia — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/5956

Amphibians

NAME	STATUS

California Red-legged Frog Rana draytonii — Threatened
Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/2891

Fishes

NAME	STATUS

Longfin Smelt Spirinchus thaleichthys — Proposed Endangered
No critical habitat has been designated for this species.

Tidewater Goby Eucyclogobius newberryi — Endangered
Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

NOT FOR CONSULTATION

You are still required to determine if your project(s) may have effects on all above listed species.

Bald & Golden Eagles

Bald and golden eagles are protected under the Bald and Golden Eagle Protection Act[1] and the Migratory Bird Treaty Act[2].

Any person or organization who plans or conducts activities that may result in impacts to bald or golden eagles, or their habitats[3], should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

Additional information can be found using the following links:

- Eagle Managment https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf
- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

There are bald and/or golden eagles in your project area.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.	Breeds Jan 1 to Aug 31
Golden Eagle *Aquila chrysaetos* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Jan 1 to Aug 31

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the

maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

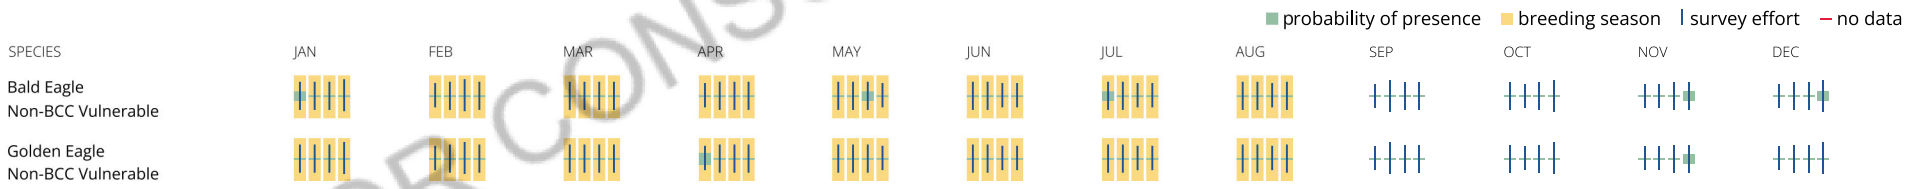
Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply). To see a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs of bald and golden eagles in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur. Please contact your local Fish and Wildlife Service Field Office if you have questions.

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats[3] should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Eagle Management https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/ documents/nationwide-standard-conservation-measures.pdf
- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

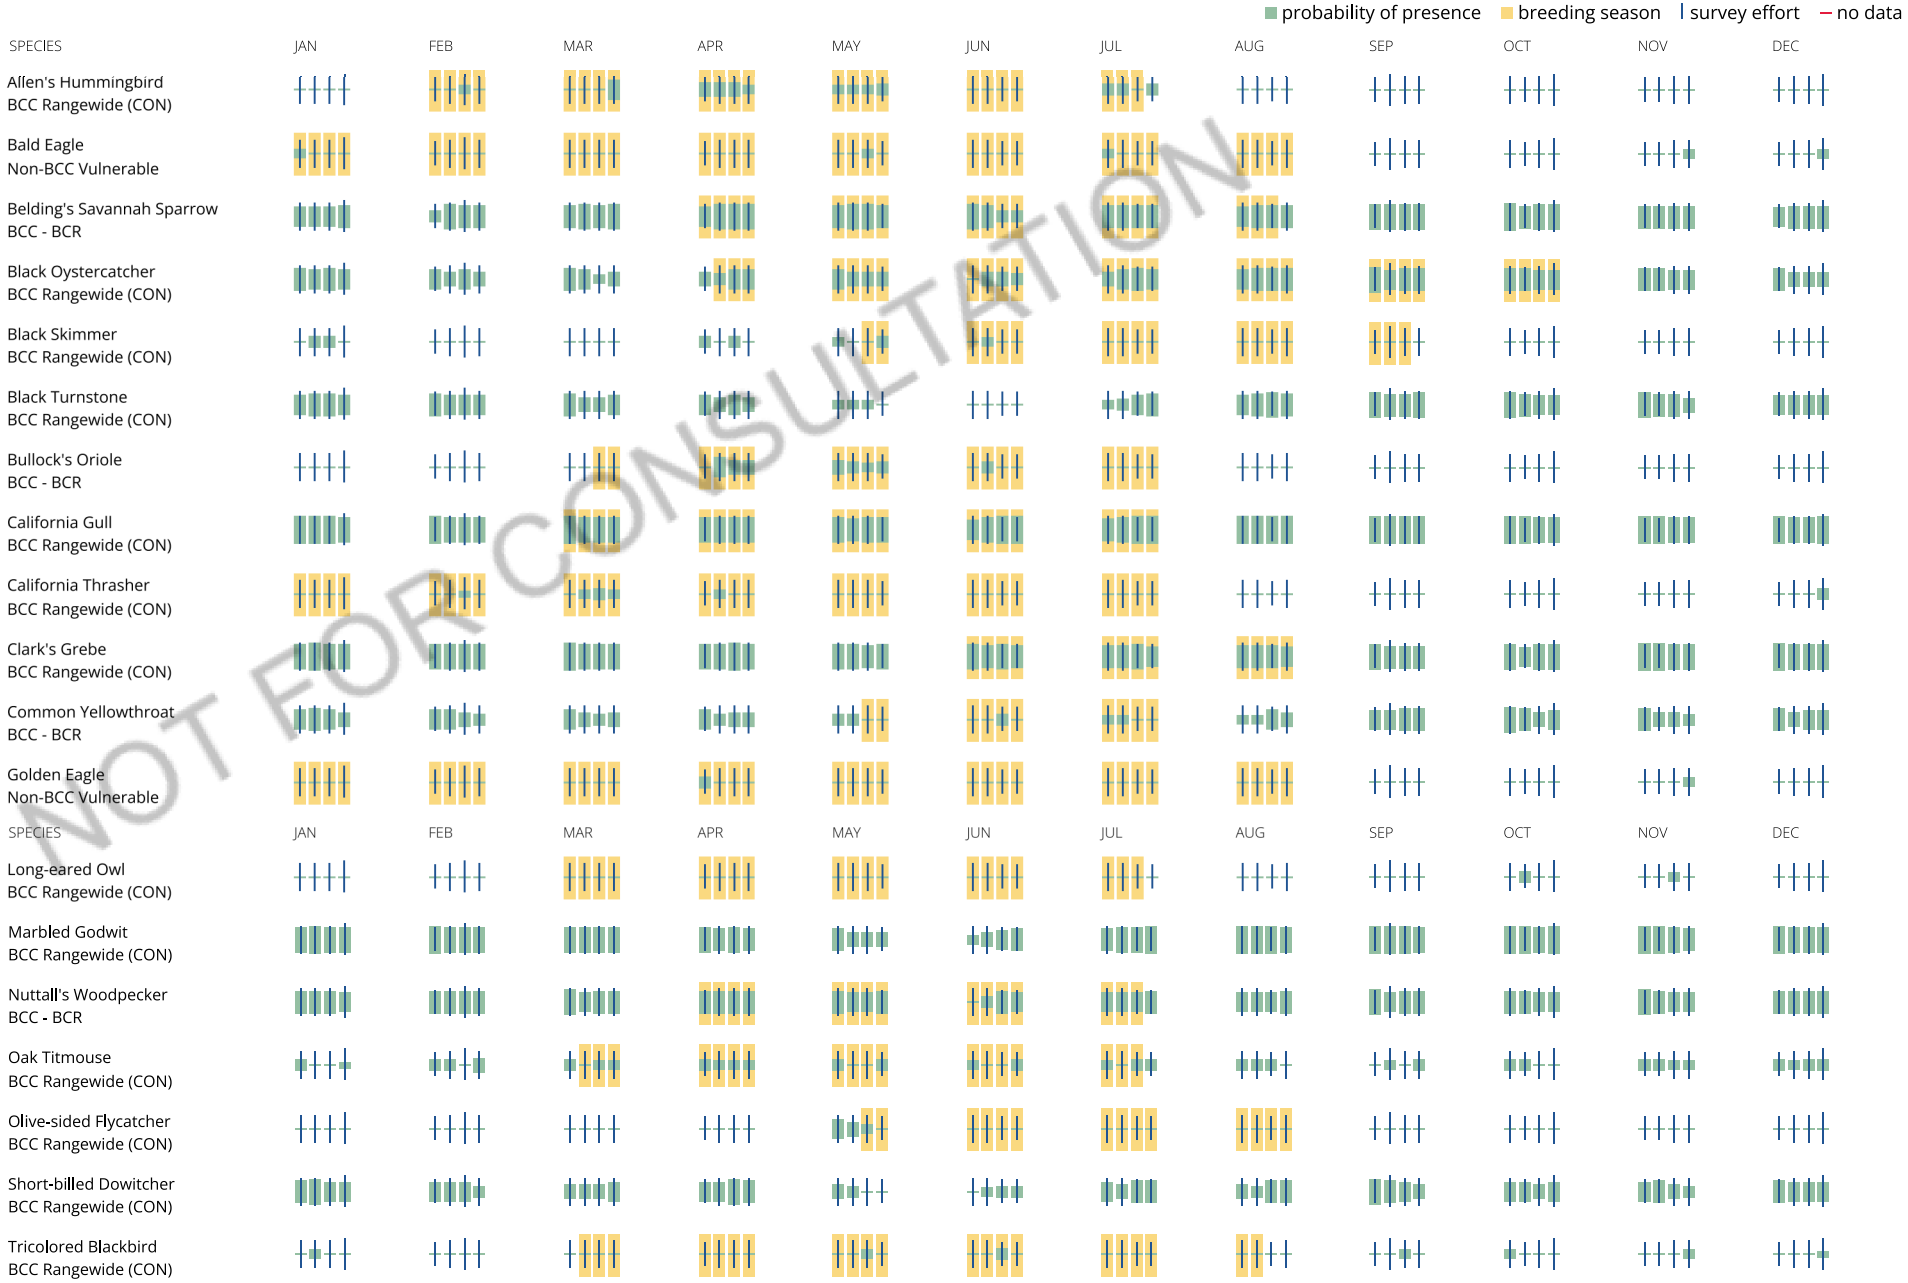
To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)

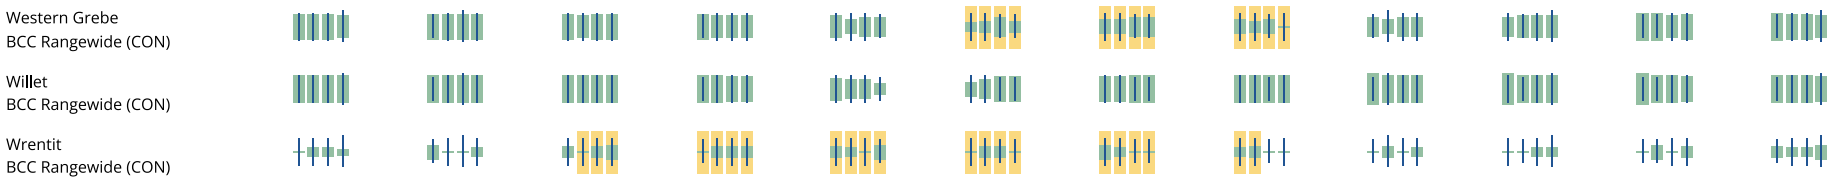
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



NOT FOR CONSULTATION



Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

NOT FOR CONSULTATION

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

This location overlaps the following wetlands:

ESTUARINE AND MARINE WETLAND

E2EM1N
E2SBN

A full description for each wetland code can be found at the National Wetlands Inventory website

NOTE: This initial screening does **not** replace an on-site delineation to determine whether wetlands occur. Additional information on the NWI data is provided below.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Appendix K:
Arborist Report

MEMORANDUM

To:	Bridget Metz Steelwave	**Date:**	July 27, 2022
From:	William Sowa	**Job No.:**	6545.00
Subject:	Terminal 131 Certified Tree Inventory		

Bridget,

Per your request, HMH was contracted to prepare a certified tree inventory for a commercial site along Highway 101 off Terminal Court in South San Francisco known as Terminal 131. There are exiting buildings in the center of the site with surface parking making up most of the site on all four sides of the structures. Observations of the current conditions suggests the site has been used for various commercial uses and surface parking. Upon review of the site there were no trees in the project area to be surveyed and thus no inventory to prepare for the site.

See page 2 map below for the project area.

Please let us know if you have any questions or comments.

Regards

William Sowa

Subject: Preliminary Geotechnical Engineering Recommendations
131 Terminal Court
South San Francisco, California

Ladies and Gentlemen:

Enclosed is our preliminary geotechnical investigation report for the proposed redevelopment project located at 131 Terminal Court in South San Francisco, California (Site).

Based on the results of our current evaluation, this report provides summary information regarding the Site's general geologic and seismic conditions as well as preliminary conclusions and recommendations regarding seismic hazards, Site preparation for building pads and pavements, and foundation type selection for the proposed buildings.

Based on our preliminary analysis of the subsurface soil conditions, we conclude that the proposed project is geotechnically feasible. We find that the primary geotechnical issues that should be addressed during the design and construction of the planned project include the potential for seismic shaking at the Site, the relatively high groundwater table, and the presence of undocumented fill and soft compressible soft at the near surface. We conclude that the proposed moderate to heavy buildings are most economical when supported on deep foundations bearing at the dense to very dense Colma Formation soils. Lightly loaded one and two story buildings may be supported with shallow foundations depending on the structural conditions and changes to grades. Our recommendations regarding the deep foundations, site grading, fill compaction, and other geotechnical aspects of this project are presented in this geotechnical investigation report. A design level study, including additional field investigation, will need to be completed prior to preparing the design drawings and construction.

We appreciate the opportunity to provide engineering services on this project. Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
HALEY & ALDRICH, INC.

1. Introduction

Haley & Aldrich, Inc., (Haley & Aldrich) prepared these preliminary geotechnical investigation recommendations (Report) on behalf of US Terminal Court Owner, LLC, for the proposed redevelopment project located at 131 Terminal Court in South San Francisco, California (Site). The approximately 18-acre Site is currently developed with two warehouse buildings, a smaller administrative building, and a row of solar canopy. The existing warehouses are open to the public as well as wholesale distributers. The remainder of the Site is surrounded by asphalt-paved parking and loading areas.

Based on the results of our current preliminary geotechnical investigation evaluation, this Report provides summary information regarding the Site's general geologic and seismic conditions as well as preliminary conclusions and recommendations regarding seismic hazards, Site preparation for building pads and pavements, and foundation type selection for the proposed buildings.

The proposed redevelopment project will include the construction of eight (8) new 6-story buildings with subsurface parking garages at several buildings and a new parking structure: Buildings A1, A2, B2, and B4 are located within the 101 Terminal Court parcel; buildings B1, B3, B5, and B6 are within the 131 Terminal Court parcel. There are two phases planned for the new redevelopment. Phase I consists of Buildings A1, A2, and related amenities; Phase II includes the remaining six buildings and amenities. The proposed Phase I buildings (A1 and A2) will be six stories in above grade height with one level of below grade parking. The six Phase II buildings (B1 through B6) are planned to have six stories of above grade height and two levels of below grade parking. There will also be a five-story parking structure with roof top parking and two levels of below grade parking. We assume the project will also include underground utilities, asphalt and concrete pavements, stormwater management facilities, and landscaping. The project is still in a conceptual planning phase.

Geotechnical recommendations for Phase I buildings in the adjacent 101 Terminal Court property were provided in the "Preliminary Geotechnical Investigation, Proposed Mixed-Use Development, 101 Terminal Court, South San Francisco" report prepared by Rockridge Geotechnical, Inc. (Rockridge, 2021) and the "Design-Level Geotechnical Investigation Report, 101 Terminal Court, South San Francisco, California" report prepared by Haley & Aldrich. Based on these references and additional geotechnical investigation, we prepared this Report to provide preliminary geotechnical recommendations for the proposed redevelopment of 131 Terminal Court.

2. Site and Subsurface Conditions

The Site lies west of U.S. Route 101 and is located approximately one mile northwest of the San Francisco International Airport as shown in Figure 1. Two warehouse buildings, a smaller administrative building, and a row of solar canopy occupy the Site. The buildings are two-story structures. Nearby site features include commercial buildings, industrial facilities, and a surface parking lot. Commercial buildings bound the west side of the Site. Surface parking lots, including 101 Terminal Court and a Park 'N Fly, are on the north and east of the Site, respectively. The San Bruno Canal cuts in from the bay shore (east) to the San Mateo Avenue (west) at the southern edge of the Site.

On 14 March 2022, Haley & Aldrich performed a Cone Penetration Test (CPT) with seismic shear wave velocity measurements to a depth of 100 feet on the west side of the Site. This CPT location (designated as SCPT-2) along with exploratory locations in the adjacent 101 Terminal Court, are shown in Figure 2 and the results are appended. The log of SCPT-2 in included in Appendix A. Based on SCPT-2, the subsurface profile consists of 5½ feet of undocumented fill, underlain by Young Bay Mud (marsh deposit) to a depth of 17 feet below ground surface (bgs). However, geotechnical investigation data in the 101 Terminal Court site indicate that undocumented fill is generally 7½ to 8½ feet thick underlain by Young Bay Mud to depths of 20 feet to 41 feet bgs. Thicker Young Bay Mud was encountered at the north of the Site (i.e., boring HA-4). The Young Bay Mud is mostly soft to medium stiff consistency and known to be highly compressible. Below the Young Bay Mud, SCPT-2 encountered the Colma Formation (alluvial deposit) consisting of interbedded medium dense to very dense sand, clayey sand, and silty sand and stiff to hard clayey sand and clay to a depth of about 60 feet bgs. Below the Colma Formation, SCPT-2 encountered the Old Bay deposit, which is characterized by stiff to hard fat clay to a depth of approximately 73 feet bgs. This Old Bay deposit is underlain by interbedded dense to very dense sand and silty sand and very stiff to hard sandy clay and clay to the termination depth of 100 feet bgs. None of the borings that we drilled in 101 Terminal Court encountered competent mélange bedrock (Franciscan Complex) at the maximum exploration depths. The seismic test results indicate that the average shear wave velocity of the soils within the upper approximately 100 feet of the Site is approximately 684 feet per second (ft/s).

Depths to groundwater levels were measured within borings and inferred from pore pressure dissipation tests performed at various depths at the CPT locations. These tests indicated that groundwater levels were at depths ranging from 5 to 8 feet bgs in mid-March 2022. Rockridge (2021) reported groundwater at depths ranging from 3 to 9 feet bgs in their CPTs during their exploration in December 2020. High groundwater as shallow as 1 foot bgs was recorded in the past. Groundwater fluctuates over time due to tides of the San Francisco Bay, rainfall, irrigation, construction activities, well pumping, and other factors.

The conclusions and recommendations are based on the conditions encountered during our subsurface investigation. If soil or groundwater conditions exposed during future design phases or construction vary from those presented herein, Haley & Aldrich should be notified to evaluate whether our preliminary conclusions and recommendations should be modified.

3. Geology

3.1 REGIONAL GEOLOGY

The Site is located on the San Francisco Peninsula at the western Shoreline of the San Francisco Bay in the Coast Ranges Geomorphic Province. The Coast Ranges Province is defined by northwest-trending mountain ridges and valleys that run approximately parallel to the San Andreas Fault Zone. The bedrock within the province generally consists of Tertiary marine sedimentary deposits and volcanic rocks. The upper bedrock is at least 100 feet bgs at the north end of the Site and dips sharply to at least 250 feet bgs at the southern edge of the Site. The Site and surrounding area are inland of the former Bay margin shoreline and east of the Santa Cruz Mountain Range, except for San Bruno Mountain, which is located north of the Site. Based on mapping by Bonilla (1998), the Site is predominately underlain by Quaternary surficial deposits of artificial fill over tidal flat. The "Qaf/tf "unit, described as artificial fill over tidal flat, consists of clay, silt, sand, rock fragments, organic matter, and man-made debris placed over tidal flats. Historical stream channels that cross through the Site are mapped as the "Qaf" unit and described as artificial fill consisting of clay, silt, sand, rock fragments, organic matter, and man-made debris. The southwestern edge of the Site is near the mapped contact with the Colma Formation. The "Qc" unit described as the Colma Formation consists of mostly sandy clay, and silty sand; yellowish orange to gray.

3.2 REGIONAL SEISMICITY

The Site is not within an Earthquake Fault Zone, as defined by the Alquist-Priolo Earthquake Fault Zoning Act, and no known active or potentially active faults exist on the site (California Department of Conservation, 2021). The major active faults closest to the Site are the San Andreas, San Gregorio, and Hayward-Rodgers faults, in which the closest Hayward-Rodgers Creek fault is less than 3 miles away. The 2014 Working Group on California Earthquake Probabilities (WGCEP) at the U.S. Geological Survey (USGS), in coordination with the California Geological Survey (CGS) and Southern California Earthquake Center, predicted a 72 percent chance of a magnitude 6.7 or greater earthquake occurring in the San Francisco Bay Area in 30 years (i.e., before the year 2044). More specifically, the 30-year probabilities of a magnitude 6.7 of greater earthquake are 14 percent for the Hayward-Rodgers Creek fault, 6.4 percent for the San Andreas fault, and 2.5 percent for the San Gregorio Connected.

4. Conclusion and Preliminary Recommendations

Based on our review of subsurface information for the Site, it is our opinion that the Site is geotechnically feasible. We conclude the primary geotechnical issues affecting the design and construction of the planned redevelopment include strong Site seismicity and potential seismic hazards; soft, compressible weak clayey soil; undocumented fill; and high groundwater. Our estimates of liquefaction-induced settlements are about 1 to 5 inches of total settlement with about ½ to 2½ inches of differential settlement over 50 feet or adjacent columns. Because of the thick Young Bay Mud layer, we estimate up to 5½ inches of settlement will occur under the new fill and building pad at the Site with a maximum grade raise of 3 feet and conventional shallow spread footing foundation using a maximum allowable dead plus live bearing pressure of 2,000 pounds per square foot (psf). This magnitude of settlement under static loading conditions will exceed general requirements for building performance.

At this Site, there are substantially denser coarse alluvial soils (Colma Formation) below the Young Bay Mud that are judged suitable for supporting the proposed structures. Because of this, it may be more economical to support the proposed structures on deep foundations bearing at the alluvial layer. Our recommendations for deep foundations, including Tubex and auger-cast piles, are given in the next sections.

4.1 SEISMICITY AND SEISMIC HAZARDS

During a major earthquake, seismic shaking has the potential to occur at the Site, as is typical throughout the Bay Area, and as experienced during the 1989 Loma Prieta event. Shaking during an earthquake can result in ground failure, such as that associated with soil liquefaction, lateral spreading, and cyclic densification. Haley & Aldrich's assessment of these potential seismic hazards are presented in the following sections.

4.1.1 Site Seismicity

A seismic hazard analysis was performed using the USGS Unified Hazard Tool (https://earthquake.usgs.gov/hazards/interactive/) website. Our deaggregation analysis utilized the USGS Dynamic Conterminous U.S. 2014 (v.4.2) edition. For our analyses, we evaluated the Site as Site Class D, based on an average shear wave velocity over the top 100 feet (30 meters) of the Site (Vs30) of about 684 ft/s; this value was calculated based on the average shear wave velocity measured at SCPT-1 and SCPT-2 during our field investigation on 14 March 2022.

Based on the seismicity of faults that may impact the Site and the results of the deaggregation analysis, a design earthquake with a moment magnitude (M_w) of 7.86 was selected for the seismic hazard evaluation. The peak horizontal ground acceleration (PHGA) for the Site, which is based on the Maximum Considered Earthquake (MCE) with a return interval of 2,475 years, or a 2 percent probability of exceedance in 50 years, is 1.07g. The risk-based site-modified peak ground acceleration (PGA_M) for the Site is 0.97g; this value was computed based on procedures outlined in ASCE 7-16. Recommended code-based seismic parameters for designing the proposed structures in conformance with the 2019 California Building Code (CBC) and ASCE 7-16 are presented in Table I.

TABLE I
Seismic Design Parameters

Seismic Parameter	Design Value
Site Class (ASCE 7-16 Table 1613.5.2)	D
Risk Category	II
MCE_R[1] Ground Motion (Period = 0.2 second), S_s	2.056 g
MCE_R Ground Motion (Period = 1.0 second), S_1	0.851 g
Peak Ground Acceleration, PGA	0.881 g
Site Amplification Factor at 0.2 second, F_a	1.0
Site Amplification Factor at 1.0 second, F_v (for T_s calculation only)	--
Site Amplification Factor for PGA, F_{PGA}	1.1
Site-Modified Peak Ground Acceleration, PGA_M	0.97 g
Site-Modified Spectral Acceleration Value at 0.2 second, S_{MS}	2.056 g
Site-Modified Spectral Acceleration Value at 1.0 second, S_{M1} (for T_s calculation only)	--
Design Spectral Acceleration at 0.2 second, S_{DS}	1.371 g
Design Spectral Acceleration at 1.0 second, S_{D1} (for T_s calculation only)	--

Notes:
1) *MCE_R = Risk-targeted maximum considered earthquake*
2) *g = acceleration of gravity*
3) *Per ASCE 7-16 Supplement 1, the provided values for Fv, S_{M1}, and S_{D1} are only valid for calculation of Ts = S_{D1} / S_{DS} for the purpose of developing seismic response coefficients (Cs). Site-specific seismic response analysis is required for evaluation of periods exceeding Ts.*
4) *Design values presented above are based on a site located at latitude / longitude = 37.643154 / -122.407188.*

4.1.2 Soil Liquefaction

Liquefaction is the process in which saturated, cohesionless soil experiences a temporary loss of strength due to the buildup of excess pore water pressure during cyclic loading resulting from earthquake ground motions. The type of soils most susceptible to liquefaction are loose, clean, saturated, uniformly graded sand and silt that have low clay content. Flow failure, lateral spreading, differential settlement, loss of bearing strength, ground fissures, and sand boils are evidence of liquefaction.

According to an evaluation by CGS (2021) for seismically induced hazards, the project site is mapped within a Seismic Hazard Zone that may have the potential for liquefaction.

We evaluated liquefaction potential at the Site by performing analyses in accordance with the methodology presented in publications prepared by Idriss and Boulanger (2008 and 2014). Our liquefaction analyses were performed using data from our explorations, which extended to depths of approximately 83 to 100 feet bgs. The parameters used in the liquefaction evaluation are shown in Table II.

TABLE II

Values Used in Liquefaction Evaluation

Liquefaction Evaluation Parameter	Value
Depth to Groundwater, Current (feet bgs)	5 - 8
Depth to Groundwater, during Design Earthquake (feet bgs)	1.0
Design Peak Ground Acceleration	0.97g
Predominant Earthquake Moment Magnitude, M_w	7.86
Factor of Safety for Liquefaction Triggering	1.3

Based on our analyses, we conclude that the potential for on-Site liquefaction to occur within the upper 50 feet bgs is moderate to high across the Site. The potentially liquefiable soils include sand, silty sand, and sandy silt, which were identified between approximately 18 and 80 feet bgs, especially from 18 to 30 feet bgs, where the medium dense to dense silty sand resides. Estimated liquefaction settlements at the SCPT-2 location is about 5 inches in the upper 50 feet. We have included the estimated liquefaction settlements from other exploration locations in Table III – Estimated Liquefaction Settlement. Although the results of the analysis are reported for the borings, the sampling intervals can over predict the settlement. As such, we are disregarding these estimates.

TABLE III

Estimated Liquefaction Settlement

Exploration No.	Exploration Depth (feet)	Estimated Settlement in Upper 50 feet (in.)	Estimated Settlement for Full Depth (in.)
CPT-2[1]	100	3.8	5.7
CPT-3[1]	83	3.3	4.5
CPT-4[1]	98	1.3	2.2
SCPT-1[1]	100	2.8	5.7
SCPT-2	99	4.8	7.7
CPT-2[1]	100	3.8	5.7
CPT-3[1]	83	3.3	4.5
HA-1[1,2]	102	4.1	4.3
HA-2[1,2]	102	0.4	3.1
HA-3[1,2]	118	5.0	5.0
HA-4[1,2]	127	7.9	12.4
HA-5[1,2]	114	6.5	6.5

Notes:

1) *These borings and CPTs were performed at the adjacent property, 101 Terminal Court.*
2) *Due to sampling intervals, these settlements are not considered representative.*

4.1.3 Lateral Spreading

Lateral spreading is a potential hazard commonly associated with liquefaction where extensive ground cracking and settlement occurs as a response to lateral migration of subsurface liquefiable material. These phenomena typically occur adjacent to free faces such as slopes and creek channels.

The free face for San Bruno Canal is located at the southern edge of the Site. We have no surveyed geometry of the canal, and therefore estimated the geometry based on Google Earth. We completed a preliminary lateral spreading analysis based on Zhang et al. (2004). Assuming a Site setback distance of 55 feet and free face height of 6 feet, we estimate the lateral spreading at the southern edge of the Site to be approximately 30 to 130 inches. During the design level phase of the project, more detailed topography should be collected and a detailed analysis presented.

4.1.4 Cyclic Densification

Seismically induced compaction or densification of non-saturated granular soil (such as sand above the groundwater table) due to earthquake vibrations can result in settlement of the ground surface. Based on the results of our subsurface exploration program and given the estimated high-water table during a seismic event, we conclude that the potential for cyclic densification at the Site is low.

4.1.5 Tsunami

The Site is subject to mapping in the California Tsunami Hazard Area of San Mateo County. Based on maps published by the State of California (2021), the Site is located outside of the area predicted to be affected by tsunamis. We therefore judge that the potential for a seismically induced wave to impact the Site to be nil.

4.2 EXPANSION POTENTIAL

The near-surface native soils observed and/or sampled during the exploration program consisted of clayey gravel, silty sand, lean clay, and clayey sand with or without gravel, having very low to low expansive potential. Our recommendations to mitigate these expansive soil conditions are discussed in the “Earthworks” section. Given the low expansive nature of the surficial soil (fill), no mitigation measures are required. Although not anticipated, if slabs are supported on Bay Mud (marsh deposits), we should review these conclusions and recommendations.

4.3 WEAK SOIL DEPOSIT AND FOUNDATION SETTLEMENT

Including results from the adjacent 101 Terminal Court property, our subsurface investigation indicates that approximately 7½ to 8½ feet of fill is present below the asphalt concrete and the fill is primarily underlain by the soft Young Bay Mud to depths ranging from 17 to 41 feet. The existing fill is variable with respect to the quality of materials and compaction level. The N-values suggest there are areas of fill where at least some of the fill materials were likely placed without compaction. This preliminary investigation did not explore within the existing building. Fill under the buildings may be of better quality and with a higher consistency.

The underlying Young Bay Mud (marsh deposit) appears to be the limiting soil with respect to strength and compressibility. The amount of settlement expected will depend on the building loads and the construction material (wood, concrete, or steel), the building loads, and the anticipated grade changes.

Lightly loaded buildings of one to two stories may be able to be supported on shallow foundations. Moderately and heavily loaded buildings will require deep foundations.

At this Site, there are substantially denser coarse alluvial soils (Colma Formation) below the Young Bay Mud that are judged suitable for supporting the proposed structures. Because of this, it may be more economical to support the proposed structures on deep foundations bearing at the alluvial layer. Our recommendations for deep foundations, including Tubex and auger-cast piles, are given in the next sections.

Support of the floor slab will depend on elevation relative to existing fill and building loads. Lightly loaded buildings without significant grade change may be able to be supported on-grade with remedial earthwork. If the buildings have moderate or heavy loading, or if substantial fill is placed, structural slabs may need to be considered.

4.4 CONSTRUCTION DEWATERING AND TEMPORARY SHORING OPTIONS

Groundwater is expected to be encountered as shallow as approximately 1 foot bgs. Construction of utilities and other improvements that extend below groundwater levels will require dewatering and shoring programs capable of adapting to varied soil and groundwater conditions. We anticipate that water will have a low flow rate, although zones of sandy soils may present moderate to rapid water flow.

Given the presence of generally fine-grained soils, though with some granular zones, the use of pumping from sumps within excavations is expected to be feasible for trench dewatering. However, the larger (e.g., underground parking) excavations may require the use of well point dewatering, unless watertight shoring embedded into the clay layer is used. Pumping from sumps may be effective in removing water from the bases of trenches but will not prevent or reduce the greater risk of trench wall caving and sloughing caused by seepage.

We anticipate that the base of excavations will be soft and/or unstable if groundwater is present or within a few feet of the base of the trenches. If that is the case, we recommend placing stabilization material at the base of excavations. The use of a geotextile separation fabric may be necessary below stabilization material to help prevent the stabilization material from pushing into the unstable base materials.

Construction of the below-grade levels will require excavation depths 12 to 25 feet bgs depending on the number of below grade levels of parking. These excavation depths include an excavation of approximately 1 foot below the base of the slab to accommodate a gravel layer, mud slab, and waterproofing material. As such, a support of excavation system is required to facilitate below-grade construction and to mitigate the flow of groundwater entering the excavation. The most appropriate shoring system(s) should take into account the requirements for protecting adjacent properties and improvements, as well as cost. We qualitatively evaluated the following systems:

- Conventional soldier pile and lagging; and
- Concrete diaphragm wall or soil-cement column walls.

Conventional soldier pile and lagging walls are difficult to install with soft compressive clays and allow water into the excavation. Mixed-in-place soil-cement column walls provide a relatively rigid shoring system that is capable of significantly limiting lateral deformations and ground subsidence adjacent to the shoring system. This system is considered to be a low-permeability shoring system and would provide superior resistance to lateral groundwater infiltration into the excavation. These walls will require internal and/or external lateral supports around the excavation perimeter to resist lateral pressures.

4.5 FOUNDATIONS AND SETTLEMENT

Our subsurface investigation indicates that the subsurface profile consists of soft and compressible Young Bay Mud in the upper 20 feet of the Site with potentially thicker Mud north of the Site. Based on the consolidation test results, we estimate up to 5½ inches of settlement will occur under the new fill and building pad at the Site with a maximum grade raise of 3 feet and conventional shallow spread footing foundation using a maximum allowable dead plus live bearing pressure of 2,000 psf. We also estimate that approximately 50 percent of the total settlement will occur within about 7 months after the loads are applied. At our HA-4 location (northwest of this Site), where the Young Bay Mud is thickest, it will take longer time to consolidate. This magnitude of settlement under static loading conditions will exceed general requirements for building performance.

At this Site, there are substantially denser coarse alluvial soils (Colma Formation) below the Young Bay Mud that are judged suitable for supporting the proposed structures. Because of this, it may be more economical to support the proposed structures on deep foundations bearing at the alluvial layer. Our recommendations for deep foundations, including Tubex and auger-cast piles, are given in the next sections.

If building loads are light, less than 50 kips of dead plus live load, and very limited fill is placed, consideration may be given to supporting the structure on shallow foundations, including spread and isolated footing or a mat slab. An allowable bearing capacity of 2,000 psf for dead plus live load may be used for preliminary estimating.

4.6 EARTHWORKS

4.6.1 Site Preparation and Grading

The proposed building and parking lot areas should be cleared of existing pavements, trees, abandoned utilities and other obstructions. The proposed building and parking lot areas should be stripped of soil containing over 3 percent organic matter (if present). We anticipate the excavation for this project can be made using conventional earth-moving equipment.

4.6.2 Subgrade Preparation

The Site should be rough graded to accommodate the proposed grading plan. Recommendations for mitigating existing fill are presented for each building type below. In proposed at grade building areas, subgrade preparation should extend at least 5 feet beyond the limits of the proposed building slabs and any adjoining flatwork. In exterior concrete slab and pavement areas, subgrade preparation should extend at least 2 feet beyond the limits of these improvements.

We estimate that approximately 7½ to 8½ feet of undocumented fill is present below the asphalt concrete pavement, although the CPT pushed at the Site encountered 5½ feet of fill. At the building area, loose or disturbed soil or undocumented fill soils should be over-excavated to a minimum of 1 foot below existing grade or finished pad elevation, whichever is deeper. The exposed subgrade should be scarified to a depth of at least 12 inches, moisture conditioned, and compacted in accordance with the recommendations given in the section entitled "Fill Placement and Compaction."

4.6.3 Imported, "Non-Expansive" Fill

All imported fill soils should be nearly free of free organic or other deleterious debris, essentially non-plastic, and less than 3 inches minus in maximum dimension. Specific requirements for import fill are provided below.

TABLE IV
"Non-Expansive" Fill Grading Requirements

Sieve Size	Percentage Passing Sieve
3 inch	100
1½ inch	85 to 100
#200 Screen	8-40
Atterberg Limits	**Percent**
Plasticity Index	12 or less
Liquid Limit	Less than 30

Fill materials should be approved by the project geotechnical engineer prior to placement and delivery to the Site. A representative sample of the proposed import fill should be delivered to our laboratory for evaluation at least 5 working days prior to importing to the Site.

4.6.4 Material for Fill

Except for organic laden soil, the on-Site soil can be used as general engineered fill if it is free of deleterious matter and satisfies the criteria in Table V. Soil for use in engineered fill should be inorganic and free of deleterious materials and hazardous substances. For this project, inorganic soil is soil with an organic content of less than 3 percent by weight or without visible organic matter deemed excessive by Haley & Aldrich.

TABLE V
General Engineered Fill Grading Requirements

Sieve Size	Percentage Passing Sieve
3 inch	100
1½ inch	85-100

4.6.5 Reuse of On-Site Material

Any existing asphalt or aggregate base that is removed during demolition may be suitable to be pulverized and mixed with the underlying base for use as engineered fill if it has an organic content of less than 2 percent by dry weight and meets the following requirements presented under the "Material for Fill" section of this report.

The processed asphalt concrete/base material may be used as Class 2 Aggregate base if it meets the following requirements from Section 26 of the Caltrans Standard Specifications:

TABLE VI

Class 2 Aggregate Base Grading Requirements

Sieve Size	Percentage Passing
1 inch	100 min.
¾ inch	90 to 100
No. 4	35 to 60
No. 30	10 to 30
No. 200	2 to 9

Note Quality Requirements:

Sand Equivalent: 25 min *R-value: 78 min*

Site recycled material may be processed and reused as engineered fill, "non-expansive" fill, or aggregate base if it meets the requirements presented in this report for the specific materials.

4.6.6 Fill Placement and Compaction

Fill materials should be placed and compacted in horizontal lifts, each not exceeding 8 inches in uncompacted thickness. Compaction of fill should be performed by mechanical means only. Given the equipment limitations, thinner lifts may be necessary to achieve the recommended degree of compaction. Fill should be placed in accordance with Table VI, Summary of Compaction Recommendations.

TABLE VII

Summary of Compaction Recommendations

Area	Compaction Recommendations (See Notes 1 through 4)
Subgrade Preparation and Placement of General Engineered Fill,[5] Including Imported Non-Expansive Fill	Compact upper 12 inches of subgrade and entire fill to a minimum of 90 percent compaction at near to slightly over optimum moisture content. Where interior flatwork is exposed to vehicular traffic, compact aggregate base to a minimum of 95 percent compaction at near optimum moisture content.
Trenches[6]	Compact trench backfill to a minimum of 90 percent compaction at near to slightly over optimum moisture. Where trenches will be under the pavement section, flatwork, or other improvements, the upper 12 inches, measured from finished grade of the trench backfill should be compacted to a minimum of 95 percent compaction.

Area	Compaction Recommendations (See Notes 1 through 4)
Exterior Flatwork	Compact upper 12 inches of subgrade to a minimum of 90 percent compaction at near to slightly over optimum moisture content. Compact aggregate base to a minimum of 90 percent compaction at or above optimum moisture content. Where exterior flatwork is exposed to vehicular traffic, compact aggregate base to a minimum of 95 percent compaction at near optimum moisture content.
Paved Areas	Compact upper 12 inches of subgrade to a minimum of 95 percent compaction at near to slightly over optimum moisture content. Compact aggregate baserock to a minimum of 95 percent compaction at near optimum moisture content.

Notes:

1) *Depths are below finished subgrade elevation.*
2) *All compaction requirements refer to relative compaction as a percentage of the laboratory standard described by ASTM D-1557 (latest version). All lifts to be compacted shall be a maximum of 8 inches loose thickness.*
3) *All compacted surfaces, such as fills, subgrades, and backfills need to be firm and stable, and should be unyielding under compaction equipment.*
4) *Where fills, such as backfill placement after removal of existing underground utility lines, are greater than 7 feet in depth, the portion of the fill deeper than 7 feet should be compacted to a minimum of 95 percent compaction.*
5) *Includes building pads.*
6) *In landscaping areas, this percent compaction in trenches may be reduced to 85 percent. Water jetting or flooding to obtain compaction of backfill should not be permitted.*

4.6.7 Weak or Wet Subgrade Mitigation

The depth to groundwater was at depths between 5 and 8 feet bgs or shallower during our subsurface explorations in March 2022. High groundwater as shallow as 1 foot bgs was recorded in the past. Excavations for foundations, utilities, and other improvements may encounter weak or wet soil conditions depending on the depths and elevations of these features. If weak or wet soil subgrade is encountered during grading and adequate compaction cannot be achieved, the geotechnical engineer should be notified immediately to assess the condition of the weak or wet subgrade and provide Site-specific recommendations for stabilizing and/or repairing the exposed subgrade. Potential subgrade repair options include:

- Over-excavating and removing the weak or wet soil and replacing it with select non-expansive fill underlain by geotextile tensile fabric (Mirafi 500X or equivalent); or
- Stabilizing the exposed subgrade by thoroughly blending a lime or cement admixture into the weak or wet soil at a concentration of approximately 5 percent of dry weight of soil being treated, and subsequently compacting the treated subgrade to at least 90-percent relative compaction.

4.7 DEEP FOUNDATIONS

As discussed earlier, the marsh deposit is underlain by an alluvium layer and Colma Formation soil consisting of interbedded medium dense to very dense sand, clayey sand, and silty sand and stiff to hard clayey sand and clay to depths between 65 and 70 feet bgs. Sounding SCPT-2 encountered the dense to very dense layer from 45 to 65 feet bgs. Based on this, we recommend the proposed buildings be supported on deep foundations borne within the dense soil layer and deep foundations be extended to a depth of at least 45 to 60 feet bgs. In this report, we considered Tubex and auger-cast piles, or

equivalent, for this project. We recommend a minimum diameter of 16 inches for Tubex piles and 18 inches for auger-cast piles.

4.7.1 Vertical Pile Capacity

4.7.1.1 Tubex Piles

We recommend that 16/22-inch-diameter, 3/8-inch-thick, Tubex pipe piles, or equivalent, be used on the project. The steel pipe diameter is 16 inches, and the grout shield diameter is 22 inches. Vertical pile capacity was evaluated based on the computer program APILE v2019 (Ensoft, Inc.)

The ultimate axial capacity of a 16/22 Tubex pile installed from the existing ground surface for the general soil profile is presented on Figure 3. The weight of the foundation is not included in the ultimate resistance shown in these figures. The piles should extend to at least 45 to 60 feet into the dense to very dense coarse alluvial soils (Colma Formation) to develop support from friction in the fill and native soils as well as the end bearing in that layer.

Axial capacity is based on Federal Highway Administration (FHWA) procedures for designing Tubex pile. For skin resistance calculations, this method uses the Nordlund method for granular soils and the Tomlinson method for cohesive soils. The program also uses the Thurman variation of the Meyerhof recommendations for calculation of tip resistance. For the cohesive soils, we estimated undrained shear strength based on correlations with the tip resistance and laboratory tests. Skin resistance in the upper 5 feet of soil is neglected in our analyses to account for potential disturbance and seasonal moisture changes.

For allowable static axial capacity in Tubex pile design, we recommend a factor of safety of 2.5 ultimate axial resistance. For allowable uplift capacity, a factor of safety of 2.0 should be applied to the ultimate uplift capacity. No reduction in axial capacity based on group action is required for piles spaced at least 3 diameters on center-to-center. We also estimated an unfactored downdrag load of 190 kips due to consolidation of the Young Bay Mud and a seismic downdrag load of 30 kips. The downdrag loads should be considered as a structural load but need not be considered in the geotechnical capacity of the pile.

4.7.1.2 Auger-Cast Piles

We recommend that a minimum of 18-inch-diameter ACIP piles be used on the project. The estimated axial capacities are presented in the attached Figure 4. The piles should extend to at least 45 to 60 feet into the dense to very dense coarse alluvial soils (Colma Formation) to develop support from friction in the fill and native soils as well as the end bearing in that layer.

Axial capacity for ACIP pile was evaluated using the computer program SHAFT v2017 (Ensoft, Inc.) based on the FHWA procedures for drilled shafts. This method uses Alpha and Beta-values to estimate for skin resistances in cohesive and cohesionless soils, respectively. The end bearing resistance is estimated based on soil strength and SPT-N value at 60 percent efficiency near the tip of the pile for these soils. Skin resistance in the upper 5 feet of soil is neglected in our analyses to account for potential disturbance and seasonal moisture changes.

For allowable static axial capacity in ACIP pile design, we recommend a factor of safety of 2.5 be applied to the ultimate axial capacity. For allowable uplift capacity, a factor of safety of 2.0 should be applied to the ultimate uplift capacity. No reduction in axial capacity based on group action is required for piles spaced at least 3 diameters on center-to-center. We also estimated an unfactored downdrag load of 125 kips based on consolidation of the Young Bay Mud and a seismic downdrag load of 65 kips. The downdrag loads should be considered as a structural load but do not need to be considered in the geotechnical capacity of the pile. Pile foundations should be designed to resist the appropriate load combinations for downward and upward vertical loading, neglecting the potential vertical support provided by pile caps or grade beams.

4.7.2 Lateral Resistance

Lateral loads, which may be imposed on the piles by wind or earthquake forces, can be resisted by horizontal bearing support of soil adjacent to the piles. The lateral capacity of a pile depends on its length, stiffness in the direction of loading, proximity to other piles, and degree of fixity at the head, as well as on the engineering properties of the soils.

Structural details and loading conditions are not available to us yet. Our recommended parameters for the subsurface condition encountered in SCPT-2 for the design of lateral capacity are presented in Table VII, which includes parameters that can be used in the LPILE program (Ensoft, Inc.) The contribution of the fill found within the upper 5½ feet of the soil profile should be neglected in the design. The values presented in the table assume groundwater at the ground surface. The depths of each soil layer should be adjusted accordingly based on nearby CPT and boring logs. We anticipate that the marsh deposit is thickest at the north of the Site. If the piles will be constructed in groups, a P-multiplier may be required to account for group effects, depending on the pile layout geometry. Please contact us for further information if this information is required.

TABLE VIII

Lateral Capacity Input Parameters for SCPT-2

Layer	P-y Model	Depth (feet)	Effective Unit Weight (pcf)	Friction Angle (degrees)	k (pci)	Undrained Cohesion (psf)	E50
Fill	Sand (Reese)	0 to 5½	52.6	31	60	n/a	n/a
Marsh Deposit	Soft Clay (Matlock)	5½ to 17	47.6	n/a	n/a	500	0.007
Alluvium[1]	Sand (Reese)[1]	17 to 30	62.6	34	60	n/a	n/a
Colma Formation	Sand (Reese)	30 to 65	62.6	38	125	n/a	n/a
Old Bay Deposit	Stiff Clay with Free Water (Reese)	65 to 73	47.6	n/a	1000	2700	0.005
Alluvium	Sand (Reese)	73 to 100	62.6	38	125	n/a	n/a

Notes:

1) For seismic condition, use "Liquefied Sand Hybrid Model" with a SPT Blow Count of 24 for this layer.

Recommendations for pile testing should be included in a design-level report.

4.8 CONCRETE SLAB-ON-GRADE AND EXTERIOR FLATWORK

The project structural engineer should provide the interior concrete floor slab thickness and reinforcement. It is recommended that concrete floor slabs, including adjacent entrance slabs, be supported on at least 6 inches of imported, non-expansive fill with floor slabs. This may include the 6 inches of capillary break or baserock material. The fill should extend a minimum horizontal distance of 5 feet beyond all building areas, including the outer edge of perimeter footings and footings extending beyond perimeter walls. As a minimum, the floor slab should be directly underlain by at least a 6-inch-thick layer of Class 2 aggregate base or a 6-inch-thick water vapor retarder system, as described below. The soil subgrade beneath the interior floor slab system should be prepared and compacted as described in the section "Fill Placement and Compaction." The subgrade should not be allowed to dry during construction. If the previously compacted soil subgrade is disturbed during foundation and/or utility excavation, the subgrade should be scarified, moisture-conditioned, and rerolled to provide a firm, unyielding surface prior to placing the capillary break material or casting the concrete floor.

To reduce water moisture transmission through the floor slab, we recommend installing a capillary moisture break and a minimum 15-mil-thick Class C water vapor retarder beneath the floor. Typically, finished spaces with slab-on-grade floors, such as offices, will utilize capillary moisture breaks and vapor retarders to reduce the potential for water vapor transmission through the floor, which can adversely impact flooring materials and carpeting. If moisture transmission through the slab is acceptable or if the slab is subject to vehicle loading, the slab-on-grade floor may be placed over a 6-inch-thick layer of Caltrans Class 2 Aggregate Base or subbase that has been compacted to at least 95 percent relative compaction.

4.9 FLEXIBLE PAVEMENT DESIGN

The State of California Resistance (R)-value method for flexible pavement design was used to develop recommendations for pavement sections. The thickness of pavement depends on the R-value of the subgrade soil and the volume of traffic anticipated.

Based on the encountered soil type and R-value test results from the adjacent Site, we recommend using a design soil subgrade R-value of 18 and relying on the subgrade preparation method discussed in the "Earthworks" section of this report.

We assume that flexible pavement throughout the Site will be designed using traffic indexes (TI) ranging from 4.5 to 9.0. Design sections for flexible pavement sections bearing directly over compacted native soil (R-value = 18), are presented in Table IX.

TABLE IX

Flexible Pavement Design (R-Value = 18)

Traffic Index	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)	Total (inches)
4.5	2.5	7.0	9.5
7.0	4.0	12.0	16.0

4.10 RIGID PAVEMENT DESIGN

Rigid pavement design was performed in conformance with the AASHTO 1993 design method, including vehicle loads calibrated to a standard equivalent single axle load of 18,000 pounds and a maximum tandem axle load of 32,000 pounds. The thickness of rigid pavement depends on the R-value of the subgrade soil and the volume of traffic anticipated. The thickness of rigid pavement depends on the R value of the subgrade soil and the volume of traffic anticipated. For this Site, as stated in the "Flexible Pavement Design" section, we assume a design R-value of 18 for the existing subgrade. We assume that rigid pavements throughout the Site will be designed using TI up to 10.0. Based on these design parameters, we recommend using the pavement designs presented on Table X.

TABLE X

Rigid Pavement Design

Traffic Index	Portland Cement Concrete (inches)	Class 2 Aggregate Base (inches)	Total (inches)
≤7.0	6.0	6.0	12.0
7.0 to 9.0	8.5	6.0	14.5
9.0 to 10.0	10.0	6.0	16.0

Notes:

1) Class 2 Aggregate Base to be placed over the subgrade prepared per "Fill Placement and Compaction".

The modulus of rupture of the concrete should be at least 600 pounds per square inch at 28 days, and the unconfined compressive strength of the concrete should be at least 3,500 pounds per square inch at 28 days. Contraction joints should be constructed at a 12.5-foot spacing for the 6-inch-thick concrete pavement and 15-foot spacing for the 7-inch-thick concrete pavement. Where the outer edge of a concrete pavement meets asphalt pavement, the concrete slab should be thickened by 50 percent at a taper not to exceed a slope of 1 in 10. For better long-term performance, consideration should be given to reinforcing the slab with a minimum of No. 3 bars at 18-inch spacing in both directions. If there is a conflict between the civil and geotechnical design recommendations for contraction joint spacing or slab reinforcement, we defer to the civil engineer's recommendations. Recommendations for subgrade preparation and aggregate base compaction for concrete pavements are provided in the "Fill Placement and Compaction" section of this report.

4.11 TEMPORARY EXCAVATION SHORING

Temporary shoring walls will be required to support the vertical sides of the deep excavation. The shoring system should be designed to provide temporary lateral support for the excavation while ensuring safety and stability of the buildings, utilities, and other infrastructure adjacent to the excavation. If temporary shoring will act as a groundwater cut-off, embedment depth may be deeper than what is needed for the support of excavation. Final toe depths should be further reviewed and selected by the design-build shoring contractor.

We assume that a cement-mix column cut-off wall is the preferred method of shoring for this project, given the constraints from the adjacent public streets, but it is still conceptual at this time. However, we have included recommendations for a cement-mix column cut-off wall with both tiebacks and with internal bracing for completeness. The cut-off wall will include steel members (presumably I- or W-section beams) to resist lateral earth pressures.

During the design phase of the project, detailed recommendations should be provided.

4.12 RETAINING WALLS

Retaining walls are anticipated for the parking structure ramp between the lowest floor level up to the next level. Basement retaining walls will also be needed for the one to two levels of below grade parking. Retaining walls should be designed to resist both static lateral earth pressures, lateral pressures caused by seismic loading, and additional surcharge pressures associated with vehicular traffic (if appropriate). Our recommended soil parameters for the design of retaining walls are provided in Table XI based on SCPT-2. The depths of each soil layer should be adjusted accordingly based on nearby CPT and boring logs. We anticipate that the marsh deposit is thickest at the north of the Site. Hydrostatic pressure of 62.4 psf was applied to at-rest and active conditions below the ground surface beneath the groundwater table.

TABLE XI

Recommended Soil Parameters for Retaining Wall Based on SCPT-2 (Below Groundwater)

Depth below Surface (feet)	Soil Description	Equivalent Fluid Pressure (pcf)		
		At-Rest K_0	Active K_a	Passive K_p
0 to 5½	Fill (GM, GC, SM, SC)	90	85	235
5½ to 17	Marsh Deposit (CL, CH)	95	85	180
17 to 50	Alluvium (SP-SM, SC, SM)	90	80	280

We recommend that the retaining walls be designed for the more critical of either:

- An at-rest equivalent fluid weight (triangular distribution), plus a traffic surcharge as a uniform (rectangular distribution) lateral pressure of 100 psf applied to the entire vertical face of the retaining wall, where vehicular parking, streets and/or driveways are located within a horizontal distance of H, where H is the height of the adjacent retaining wall in feet; or
- An active equivalent fluid weight (triangular distribution), plus a uniform seismic increment (rectangular distribution) of 15 times the height of the wall in psf, where the height is in feet.

Additional drainage recommendations should be provided in a design-level report.

5. Limitations

The services provided for this project include professional opinions and judgments based on currently existing data. These services have been performed according to generally accepted geotechnical engineering practices that exist in the area at the time the report was written. No other representation, expressed or implied, and no warranty or guarantee are included or intended in this letter or in any opinion, documented or otherwise.

These preliminary conclusions and recommendations are for the due diligence phase of the project. If US Terminal Court Owner, LLC, decides to proceed with the redevelopment, we recommend that Haley & Aldrich be retained to perform those services as the Geotechnical Engineer of Record and prepare a design-level geotechnical report.

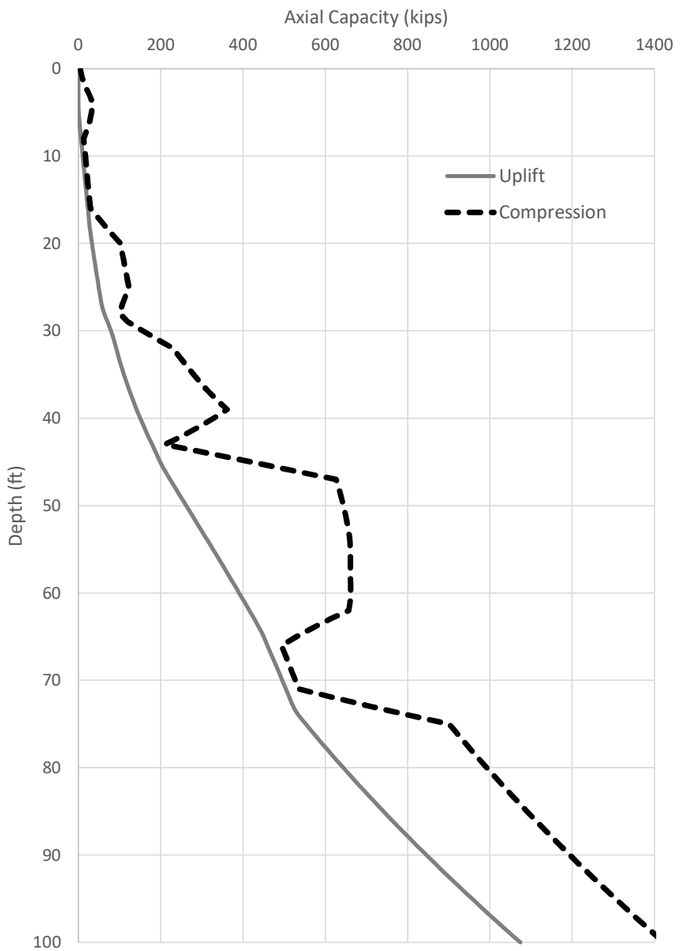
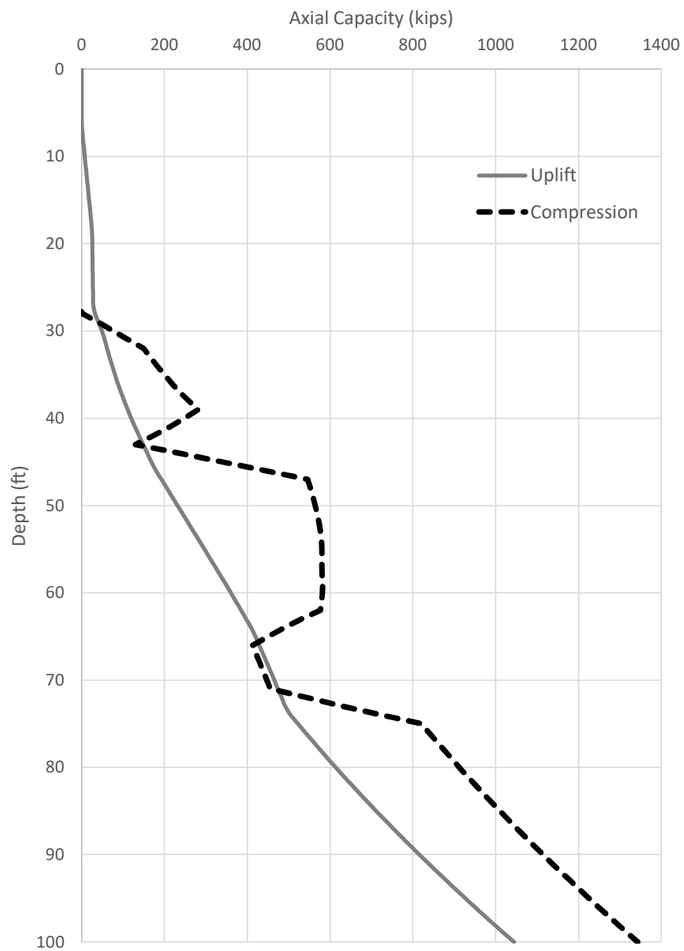
ULTIMATE PILE RESISTANCES -
STATIC CONDITION



Notes:
1) The net weight of the pile should be treated as a load applied to the top of the pile in compression. This load is not accounted for in these charts. This weight may be considered as additional resistance in uplift.
2) A recommended factor of safety of 2.5 should be applied to the ultimate compressive resistance shown above. For uplift considerations, a factor of safety of 3.0 should be applied to the side resistance shown above.
3) An unfactored downdrag of 190 kips was calculated and should be considered as a structural load. This load does not need to be considered when calculating the geotechnical capacity of the pile.

ULTIMATE PILE RESISTANCES -
SEISMIC CONDITION



Notes:
1) The net weight of the pile should be treated as a load applied to the top of the pile in compression. This load is not accounted for in these charts. This weight may be considered as additional resistance in uplift.
2) A recommended factor of safety of 2.0 should be applied to the ultimate resistance shown above. For uplift considerations, the factor of safety of 2.0 should be applied to the side resistance shown above.
3) An unfactored seismic-induced downdrag of 30 kips was calculated and should be considered as a structural seismic load. This load does not need to be considered when calculating the geotechnical capacity of the pile.

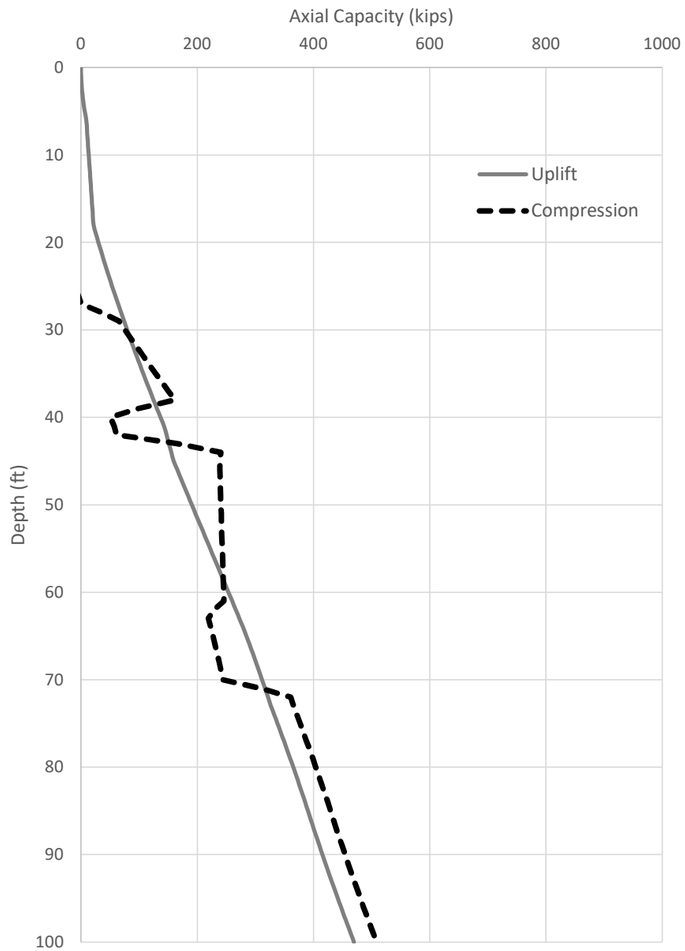
1) The net weight of the pile should be treated as a load applied to the top of the pile in compression. This load is not accounted for in these charts. This weight may be considered as additional resistance in uplift.
2) A recommended factor of safety of 2.5 should be applied to the ultimate compressive resistance shown above. For uplift considerations, a factor of safety of 3.0 should be applied to the side resistance shown above.
3) An unfactored downdrag of 125 kips was calculated and should be considered as a structural load. This load does not need to be considered when calculating the geotechnical capacity of the pile.

ULTIMATE PILE RESISTANCES -
SEISMIC CONDITION



Notes:
1) The net weight of the pile should be treated as a load applied to the top of the pile in compression. This load is not accounted for in these charts. This weight may be considered as additional resistance in uplift.
2) A recommended factor of safety of 2.0 should be applied to the ultimate resistance shown above. For uplift considerations, the factor of safety of 2.0 should be applied to the side resistance shown above.
3) An unfactored seismic-induced downdrag of 65 kips was calculated and should be considered as a structural seismic load. This load does not need to be considered when calculating the geotechnical capacity of the pile.

APPENDIX A
Cone Penetration Test Results

GREGG DRILLING, LLC.
GEOTECHNICAL AND ENVIRONMENTAL INVESTIGATION SERVICES

March 16, 2022

Haley & Aldrich
Attn: Rati

Subject: CPT Site Investigation
101 & 103 Terminal Ct
South San Francisco, California
GREGG Project Number: P7222007 & P7222008

Dear Rati:

The following report presents the results of GREGG Drilling Cone Penetration Test investigation for the above referenced site. The following testing services were performed:

1	Cone Penetration Tests	(CPTU)	☒
2	Pore Pressure Dissipation Tests	(PPD)	☒
3	Seismic Cone Penetration Tests	(SCPTU)	☒
4	Membrane Interface Probe	(MIP)	☐
5	Hydraulic Profiling Tool	(HPT)	☐
6	Groundwater Sampling	(GWS)	☐
7	Soil Sampling	(SS)	☐
8	Vapor Sampling	(VS)	☐

A list of reference papers providing additional background on the specific tests conducted is provided in the bibliography following the text of the report. If you would like a copy of any of these publications or should you have any questions or comments regarding the contents of this report, please do not hesitate to contact me at 949-903-6873.

Sincerely,
Gregg Drilling, LLC.

CPT Reports Team
Gregg Drilling, LLC.

Cone Penetration Test Sounding Summary

-Table 1-

CPT Sounding Identification	Date	Termination Depth (feet)	Depth of Groundwater Samples (feet)	Depth of Soil Samples (feet)	Depth of Pore Pressure Dissipation Tests (feet)
SCPT-1	3/14/2022	100.07	-	-	23.62
CPT-2	3/15/2022	100.07	-	-	24.93
CPT-3	3/15/2022	83.01	-	-	21.33
CPT-4	3/15/2022	97.6	-	-	23.29
SCPT-2	3/14/2022	99.41	-	-	18.54

Cone Penetration Testing Procedure (CPT)

Gregg Drilling carries out all Cone Penetration Tests (CPT) using an integrated electronic cone system, *Figure CPT*.

The cone takes measurements of tip resistance (q_c), sleeve resistance (f_s), and penetration pore water pressure (u_2). Measurements are taken at either 2.5 or 5 cm intervals during penetration to provide a nearly continuous profile. CPT data reduction and basic interpretation is performed in real time facilitating on-site decision making. The above mentioned parameters are stored electronically for further analysis and reference. All CPT soundings are performed in accordance with revised ASTM standards (D 5778-12).

The 5mm thick porous plastic filter element is located directly behind the cone tip in the u_2 location. A new saturated filter element is used on each sounding to measure both penetration pore pressures as well as measurements during a dissipation test (*PPDT*). Prior to each test, the filter element is fully saturated with oil under vacuum pressure to improve accuracy.

When the sounding is completed, the test hole is backfilled according to client specifications. If grouting is used, the procedure generally consists of pushing a hollow tremie pipe with a "knock out" plug to the termination depth of the CPT hole. Grout is then pumped under pressure as the tremie pipe is pulled from the hole. Disruption or further contamination to the site is therefore minimized.

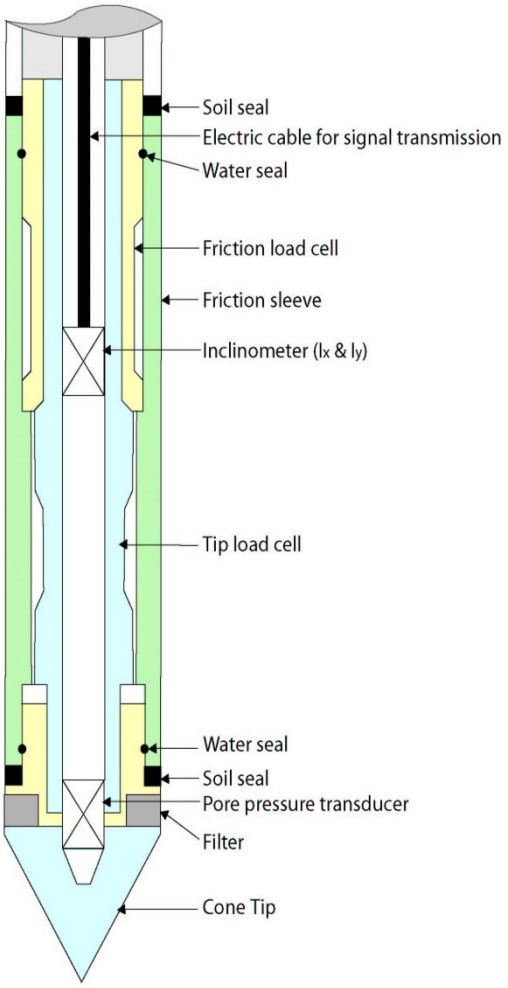

Figure CPT

Gregg 15cm^2 Standard Cone Specifications

Dimensions	
Cone base area	15 cm^2
Sleeve surface area	225 cm^2
Cone net area ratio	0.85
Specifications	
Cone load cell	
Full scale range	180 kN (20 tons)
Overload capacity	150%
Full scale tip stress	120 MPa (1,200 tsf)
Repeatability	120 kPa (1.2 tsf)
Sleeve load cell	
Full scale range	31 kN (3.5 tons)
Overload capacity	150%
Full scale sleeve stress	1,400 kPa (15 tsf)
Repeatability	1.4 kPa (0.015 tsf)
Pore pressure transducer	
Full scale range	7,000 kPa (1,000 psi)
Overload capacity	150%
Repeatability	7 kPa (1 psi)

Note: The repeatability during field use will depend somewhat on ground conditions, abrasion, maintenance and zero load stability.

Cone Penetration Test Data & Interpretation

The Cone Penetration Test (CPT) data collected are presented in graphical and electronic form in the report. The plots include interpreted Soil Behavior Type (SBT) based on the charts described by Robertson (1990). Typical plots display SBT based on the non-normalized charts of Robertson et al (1986). For CPT soundings deeper than 30m, we recommend the use of the normalized charts of Robertson (1990) which can be displayed as SBTn, upon request. The report also includes spreadsheet output of computer calculations of basic interpretation in terms of SBT and SBTn and various geotechnical parameters using current published correlations based on the comprehensive review by Lunne, Robertson and Powell (1997), as well as recent updates by Professor Robertson (Guide to Cone Penetration Testing, 2015). The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg Drilling LLC does not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and does not assume any liability for use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software. Some interpretation methods require input of the groundwater level to calculate vertical effective stress. An estimate of the in-situ groundwater level has been made based on field observations and/or CPT results, but should be verified by the user.

A summary of locations and depths is available in Table 1. Note that all penetration depths referenced in the data are with respect to the existing ground surface.

Note that it is not always possible to clearly identify a soil type based solely on q_t, f_s, and u_2. In these situations, experience, judgment, and an assessment of the pore pressure dissipation data should be used to infer the correct soil behavior type.

Cone Penetration Test (CPT) Interpretation

Gregg uses a proprietary CPT interpretation and plotting software. The software takes the CPT data and performs basic interpretation in terms of soil behavior type (SBT) and various geotechnical parameters using current published empirical correlations based on the comprehensive review by Lunne, Robertson and Powell (1997). The interpretation is presented in tabular format using MS Excel. The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg does not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and does not assume any liability for any use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software.

The following provides a summary of the methods used for the interpretation. Many of the empirical correlations to estimate geotechnical parameters have constants that have a range of values depending on soil type, geologic origin and other factors. The software uses 'default' values that have been selected to provide, in general, conservatively low estimates of the various geotechnical parameters.

Input:

1 Units for display (Imperial or metric) (atm. pressure, p_a = 0.96 tsf or 0.1 MPa)
2 Depth interval to average results (ft or m). Data are collected at either 0.02 or 0.05m and can be averaged every 1, 3 or 5 intervals.
3 Elevation of ground surface (ft or m)
4 Depth to water table, z_w (ft or m) – input required
5 Net area ratio for cone, a (default to 0.85)
6 Relative Density constant, C_{Dr} (default to 350)
7 Young's modulus number for sands, α (default to 5)
8 Small strain shear modulus number
  a. for sands, S_G (default to 180 for SBT_n 5, 6, 7)
  b. for clays, C_G (default to 50 for SBT_n 1, 2, 3 & 4)
9 Undrained shear strength cone factor for clays, N_{kt} (default to 15)
10 Over Consolidation ratio number, k_{ocr} (default to 0.3)
11 Unit weight of water, (default to γ_w = 62.4 lb/ft^3 or 9.81 kN/m^3)

Column

1 Depth, z, (m) – CPT data is collected in meters
2 Depth (ft)
3 Cone resistance, q_c (tsf or MPa)
4 Sleeve resistance, f_s (tsf or MPa)
5 Penetration pore pressure, u (psi or MPa), measured behind the cone (i.e. u_2)
6 Other – any additional data
7 Total cone resistance, q_t (tsf or MPa) $q_t = q_c + u\,(1\text{-}a)$

8	Friction Ratio, R_f (%)	$R_f = (f_s/q_t) \times 100\%$
9	Soil Behavior Type (non-normalized), SBT	see note
10	Unit weight, γ (pcf or kN/m^3)	based on SBT, see note
11	Total overburden stress, σ_v (tsf)	$\sigma_{vo} = \sigma\, z$
12	In-situ pore pressure, u_o (tsf)	$u_o = \gamma_w (z - z_w)$
13	Effective overburden stress, σ'_{vo} (tsf)	$\sigma'_{vo} = \sigma_{vo} - u_o$
14	Normalized cone resistance, Q_{t1}	$Q_{t1} = (q_t - \sigma_{vo}) / \sigma'_{vo}$
15	Normalized friction ratio, F_r (%)	$F_r = f_s / (q_t - \sigma_{vo}) \times 100\%$
16	Normalized Pore Pressure ratio, B_q	$B_q = u - u_o / (q_t - \sigma_{vo})$
17	Soil Behavior Type (normalized), SBT_n	see note
18	SBT_n Index, I_c	see note
19	Normalized Cone resistance, Q_{tn} (n varies with I_c)	see note
20	Estimated permeability, k_{SBT} (cm/sec or ft/sec)	see note
21	Equivalent SPT N_{60}, blows/ft	see note
22	Equivalent SPT $(N_1)_{60}$ blows/ft	see note
23	Estimated Relative Density, D_r, (%)	see note
24	Estimated Friction Angle, ϕ', (degrees)	see note
25	Estimated Young's modulus, E_s (tsf)	see note
26	Estimated small strain Shear modulus, Go (tsf)	see note
27	Estimated Undrained shear strength, s_u (tsf)	see note
28	Estimated Undrained strength ratio	s_u/σ_v'
29	Estimated Over Consolidation ratio, OCR	see note

Notes:

1 Soil Behavior Type (non-normalized), SBT (Lunne et al., 1997 and table below)

2 Unit weight, γ either constant at 119 pcf or based on Non-normalized SBT (Lunne et al., 1997 and table below)

3 Soil Behavior Type (Normalized), SBT_n Lunne et al. (1997)

4 SBT_n Index, I_c $I_c = ((3.47 - \log Q_{t1})^2 + (\log F_r + 1.22)^2)^{0.5}$

5 Normalized Cone resistance, Q_{tn} (n varies with Ic)

$Q_{tn} = ((q_t - \sigma_{vo})/pa)\ (pa/(\sigma'_{vo})^n$ and recalculate I_c, then iterate:

When $I_c < 1.64$, n = 0.5 (clean sand)
When $I_c > 3.30$, n = 1.0 (clays)
When $1.64 < I_c < 3.30$, $n = (I_c - 1.64)0.3 + 0.5$
Iterate until the change in n, $\Delta n < 0.01$

6 Estimated permeability, k_{SBT} based on Normalized SBT_n (Lunne et al., 1997 and table below)

7 Equivalent SPT N_{60}, blows/ft Lunne et al. (1997)

$$\frac{(q_t/p_a)}{N_{60}} = 8.5\left(1 - \frac{I_c}{4.6}\right)$$

8 Equivalent SPT $(N_1)_{60}$ blows/ft $(N_1)_{60} = N_{60}\, C_N$,
where $C_N = (pa/\sigma'_{vo})^{0.5}$

9 Relative Density, D_r, (%) $D_r^2 = Q_{tn} / C_{Dr}$
Only SBT_n 5, 6, 7 & 8 *Show 'N/A' in zones 1, 2, 3, 4 & 9*

10 Friction Angle, ϕ', (degrees) $\tan\phi' = \frac{1}{2.68}\left[\log\left(\frac{q_c}{\sigma'_{vo}}\right) + 0.29\right]$
Only SBT_n 5, 6, 7 & 8 *Show'N/A' in zones 1, 2, 3, 4 & 9*

11 Young's modulus, E_s $E_s = \alpha\, q_t$
Only SBT_n 5, 6, 7 & 8 *Show 'N/A' in zones 1, 2, 3, 4 & 9*

12 Small strain shear modulus, Go

a. $G_o = S_G\,(q_t\ \sigma'_{vo}\ pa)^{1/3}$ *For SBT_n 5, 6, 7*

b. $G_o = C_G\, q_t$ *For SBT_n 1, 2, 3& 4*

Show 'N/A' in zones 8 & 9

13 Undrained shear strength, s_u $s_u = (q_t - \sigma_{vo}) / N_{kt}$
Only SBT_n 1, 2, 3, 4 & 9 *Show 'N/A' in zones 5, 6, 7 & 8*

14 Over Consolidation ratio, OCR $OCR = k_{ocr}\, Q_{t1}$
Only SBT_n 1, 2, 3, 4 & 9 *Show 'N/A' in zones 5, 6, 7 & 8*

The following updated and simplified SBT descriptions have been used in the software:

SBT Zones		**SBT_n Zones**	
1	sensitive fine grained	1	sensitive fine grained
2	organic soil	2	organic soil
3	clay	3	clay
4	clay & silty clay	4	clay & silty clay
5	clay & silty clay		
6	sandy silt & clayey silt		

7	silty sand & sandy silt	5	silty sand & sandy silt
8	sand & silty sand	6	sand & silty sand
9	sand		
10	sand	7	sand
11	very dense/stiff soil*	8	very dense/stiff soil*
12	very dense/stiff soil*	9	very dense/stiff soil*

*heavily overconsolidated and/or cemented

Track when soils fall with zones of same description and print that description (i.e. if soils fall only within SBT zones 4 & 5, print ‘clays & silty clays’)

Estimated Permeability (see Lunne et al., 1997)

SBT_n	Permeability (ft/sec)	(m/sec)
1	$3x\ 10^{-8}$	$1x\ 10^{-8}$
2	$3x\ 10^{-7}$	$1x\ 10^{-7}$
3	$1x\ 10^{-9}$	$3x\ 10^{-10}$
4	$3x\ 10^{-8}$	$1x\ 10^{-8}$
5	$3x\ 10^{-6}$	$1x\ 10^{-6}$
6	$3x\ 10^{-4}$	$1x\ 10^{-4}$
7	$3x\ 10^{-2}$	$1x\ 10^{-2}$
8	$3x\ 10^{-6}$	$1x\ 10^{-6}$
9	$1x\ 10^{-8}$	$3x\ 10^{-9}$

Estimated Unit Weight (see Lunne et al., 1997)

SBT	Approximate Unit Weight (lb/ft^3)	(kN/m^3)
1	111.4	17.5
2	79.6	12.5
3	111.4	17.5
4	114.6	18.0
5	114.6	18.0
6	114.6	18.0
7	117.8	18.5
8	120.9	19.0
9	124.1	19.5
10	127.3	20.0
11	130.5	20.5
12	120.9	19.0

Pore Pressure Dissipation Tests (PPDT)

Pore Pressure Dissipation Tests (PPDT's) conducted at various intervals can be used to measure equilibrium water pressure (at the time of the CPT). If conditions are hydrostatic, the equilibrium water pressure can be used to determine the approximate depth of the ground water table. A PPDT is conducted when penetration is halted at specific intervals determined by the field representative. The variation of the penetration pore pressure (*u)* with time is measured behind the tip of the cone and recorded.

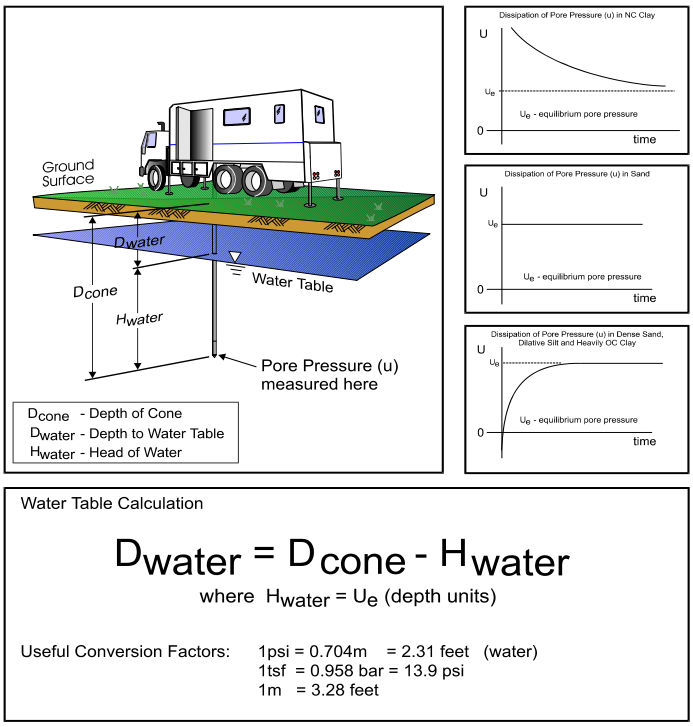
Pore pressure dissipation data can be interpreted to provide estimates of:

- Equilibrium piezometric pressure
- Phreatic Surface
- In situ horizontal coefficient of consolidation (c_h)
- In situ horizontal coefficient of permeability (k_h)

In order to correctly interpret the equilibrium piezometric pressure and/or the phreatic surface, the pore pressure must be monitored until it reaches equilibrium, *Figure PPDT*. This time is commonly referred to as t_{100}, the point at which 100% of the excess pore pressure has dissipated.

A complete reference on pore pressure dissipation tests is presented by Robertson et al. 1992 and Lunne et al. 1997.

A summary of the pore pressure dissipation tests completed for this project is included in Table 1.



Water Table Calculation

$$D_{water} = D_{cone} - H_{water}$$

where $H_{water} = U_e$ (depth units)

Useful Conversion Factors: 1psi = 0.704m = 2.31 feet (water)
1tsf = 0.958 bar = 13.9 psi
1m = 3.28 feet

Figure PPDT

Seismic Cone Penetration Testing (SCPT)

Seismic Cone Penetration Testing (SCPT) can be conducted at various intervals during the Cone Penetration Test. Shear wave velocity (Vs) can then be calculated over a specified interval with depth. A small interval for seismic testing, such as 1-1.5m (3-5ft) allows for a detailed look at the shear wave profile with depth. Conversely, a larger interval such as 3-6m (10-20ft) allows for a more average shear wave velocity to be calculated. Gregg Drilling's cones have a horizontally active geophone located 0.2m (0.66ft) behind the tip.

To conduct the seismic shear wave test, the penetration of the cone is stopped and the rods are decoupled from the rig. An automatic hammer is triggered to send a shear wave into the soil. The distance from the source to the cone is calculated knowing the total depth of the cone and the horizontal offset distance between the source and the cone. To calculate an interval velocity, a minimum of two tests must be performed at two different depths. The arrival times between the two wave traces are compared to obtain the difference in time (Δt). The difference in depth is calculated (Δd) and velocity can be determined using the simple equation: v = Δd/Δt

Multiple wave traces can be recorded at the same depth to improve quality of the data.

A complete reference on seismic cone penetration tests is presented by Robertson et al. 1986 and Lunne et al. 1997.

A summary the shear wave velocities, arrival times and wave traces are provided with the report.

Attention: Ms. Ianthe Schaub

Subject: ASTM Phase I Environmental Site Assessment
131 Terminal Court
South San Francisco, California

Ladies and Gentlemen:

The enclosed report presents the results of a Phase I Environmental Site Assessment (Phase I) conducted at the above-referenced property, located at 131 Terminal Court in South San Francisco, California (herein referred to as the "Subject Property"). This work was performed by Haley & Aldrich, Inc. (Haley & Aldrich), in accordance with our proposal to SteelWave, LLC dated ("Agreement") as authorized on 6 March 2022. This Phase I was conducted in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule).

The objective of a Phase I is to assess whether known and suspect "recognized environmental conditions" (REC), historical RECs (HREC), or controlled RECs (CREC) are associated with the Subject Property, as defined in the ASTM E 1527-13 Standard.

This Phase I has revealed evidence of one CREC associated with the Subject Property.

Thank you for the opportunity to perform these services for you. Please do not hesitate to contact us if you have any questions or comments.

Sincerely yours,
HALEY & ALDRICH, INC.

Maggie Bradshaw
Environmental Scientist

Enclosures

Executive Summary

Haley & Aldrich, Inc. (Haley & Aldrich) has performed a Phase I Environmental Site Assessment (Phase I) of the 131 Terminal Court property in South San Francisco, California (herein referred to as the "Subject Property"). The scope of work is described and conditioned by our proposal dated 11 February 2022. This Phase I was performed for US Terminal Court Owner, LLC in support of the potential acquisition of the Subject Property. This Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All Appropriate Inquiries (AAI) Rule.[1]

SUBJECT PROPERTY DESCRIPTION

The Subject Property consists of a single parcel totaling approximately 17.67 acres and is developed with two warehouse buildings and a smaller administrative building. The Subject Property is currently owned by Golden Gate Produce and is occupied by approximately 25 wholesale produce tenants. The warehouses are open to the public as well as wholesale distributers. The warehouse is surrounded by asphalt-paved parking and loading areas.

OBJECTIVE

The objective of a Phase I is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the Subject Property. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the Subject Property. Our opinion regarding a REC's potential impact on the Subject Property is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intention to purchase the Subject Property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

Our opinion regarding a REC's potential impact on the Subject Property is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intended use for the Subject Property.

RECs were not identified in connection with the Subject Property.

[1] American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) ("ASTM E 1527-13 Standard"). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The following CREC was identified in connection with the Subject Property.

CREC #1: Leaking Underground Storage Tank (LUST) Case Closure with Residual Hydrocarbon-Impacted Soil and Groundwater

The northern portion of the Subject Property was formerly a commercial fueling facility operated by Nella Oil Company, which consisted of two dispenser islands and three underground storage tanks (USTs; one diesel and two gasoline). In 1998, soil and groundwater were found to be impacted with hydrocarbons, and several investigation, monitoring, and remedial activities were conducted between 1998 and 2012. In 2012, three USTs (one containing diesel and two containing gasoline) and associated petroleum hydrocarbon-impacted soil were removed and excavated from the Subject Property. In 2014, San Mateo County Health, Environmental Health Services Division (SMCEH) issued a case closure letter for the Subject Property, although hydrocarbon-impacted soil and groundwater were allowed to remain at the property in the vicinity of the former fueling facility under Low-Threat UST Case Closure Policy (LTCP). Grab groundwater sampling results from the closure document indicate concentrations of total petroleum hydrocarbons as gasoline (TPHg) up to 51,000 micrograms per liter (µg/L), total petroleum hydrocarbons as diesel (TPHd) up to 4,500 µg/L, and benzene up to 2,800 µg/L from soil borings located at the northern end of the Subject Property, directly downgradient of the former UST area. These concentrations exceed both Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs) and applicable commercial/industrial ESLs. Proposed future redevelopment, change of land use, or removal of soil and/or groundwater from the Subject Property will require a notification to the SMCEH.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

HRECs were not identified in connection with the Subject Property.

DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which "do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The ASTM E 1527-13 Standard notes that "conditions determined to be *de minimis* are not recognized environmental conditions."

De minimis conditions were not identified in connection with the Subject Property.

POTENTIAL ENVIRONMENTAL CONCERNS

The following potential environmental concern was identified in connection with the Subject Property.

Potential Environmental Concern #1: Kinder Morgan Product Pipeline Easement

An easement for an active non-highly volatile liquids (HVL) product pipeline operated by Kinder Morgan is located along the eastern side of the Subject Property (Figure 2). Although no documented releases were found during this Phase I, there is a potential for future releases to impact the Subject Property.

SUMMARY AND RECOMMENDATIONS

In summary, we identified one HREC during this Phase I.

The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

1. Introduction

This report presents the results of an ASTM Phase I Environmental Site Assessment (Phase I) conducted at 131 Terminal Court in South San Francisco, California (herein referred to as the "Subject Property"; Figure 1). The approximately 17.6-acre Subject Property is developed with two large warehouse structures and three smaller structures surrounded by asphalt-paved parking areas (Figure 2). The Subject Property is currently owned and operated by Golden Gate Produce Terminal, a produce wholesaler and distributer. This Phase I was conducted in consideration of US Terminal Court Owner, LLC's intention to purchase the property.

1.1 OBJECTIVE

The objective of a Phase I is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the Subject Property by evaluating site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties as well as potential releases at surrounding properties that may impact the Subject Property. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the Subject Property.

RECs are defined in the ASTM E 1527-13 Standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment." The definitions of RECs, HRECs, and CRECs are included in the Glossary section of this report.

1.2 SCOPE OF SERVICES

This work was performed by Haley & Aldrich, Inc. (Haley & Aldrich) and this Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All Appropriate Inquiries (AAI) Rule[2] and in accordance with our proposal to SteelWave, LLC dated ("Agreement") as authorized on 6 March 2022. The Phase I limitations are attached hereto as Appendix A.

As part of this Phase I, Haley & Aldrich conducted visual observations of site conditions and of abutting property use and interviewed a key site manager and applicable tenant representatives (site reconnaissance); reviewed federal, state, tribal, and local environmental database information, federal and state environmental files, previous reports (if identified and provided), and site historical use records; and formulated conclusions regarding the potential presence and impact of RECs.

1.3 NON-SCOPE CONSIDERATIONS

The ASTM E 1527-13 Standard includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing materials, biological agents, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered

[2] American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) ("ASTM E 1527-13 Standard"). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, and mold. These items were not included in this Phase I of the Subject Property.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, our assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as "electrical or hydraulic equipment known or likely to contain PCBs…to the extent visually and or physically observed or identified from the interview or records review."

Note that PCBs may be present in miscellaneous building materials such as caulking, sealants, insulation and sound dampening materials, paint, gaskets, roofing and siding materials, waterproofing compounds, enamel coatings, and other chemical products manufactured prior to 1979. Evaluating the Subject Property building for potential PCB-containing building materials and possible PCB-containing materials other than "electrical or hydraulic equipment known or likely to contain PCBs" was outside the scope of this Phase I.

1.4 LIMITING CONDITIONS/DEVIATIONS

Haley & Aldrich completed this Phase I in substantial conformance with the ASTM E 1527-13 Standard. In our opinion, no additions were made to or deviations and deletions made from the ASTM work scope in completing this Phase I.

1.5 USER RESPONSIBILITIES

The completion of this Phase I is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E 1527-13 Standard and the AAI Rule. User responsibilities are discussed in Section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix XI of the ASTM E 1527-13 Standard.

2. Site Description

A description of the Subject Property is detailed in the sections below. Refer to Figure 1 for a project locus and Figure 2 for a site plan showing relevant site features and adjacent properties.

2.1 SITE OWNERSHIP, LOCATION, AND VICINITY DESCRIPTION

Site Description		
Owner/Operator	Golden Gate Produce Terminal LTD 131 Terminal Court South San Francisco, California	
Occupant and Current Site Use	The warehouse buildings are leased to at least 25 different wholesale produce tenants. There is truck access along both sides of the buildings for wholesale distribution and the stalls are open to retailers, food service professionals, and the public. Customer parking is located between the warehouse buildings and is covered by solar panel awnings.	
Size	Approximately 17.6 acres	
Building Square Footage	Western warehouse building: approximately 60,000 square feet Eastern warehouse building: approximately 85,700 square feet	
USGS 7.5 Minute Topographic Map	San Francisco South, 2018	
Site County	San Mateo County (unincorporated)	
Zoning	FC-Freeway Commercial	
Parcel Information	015-113-210	
Utilities	Water:	California Water Service
	Sewerage:	California Water Service
	Electricity:	Pacific Gas & Electric (PG&E)
	Gas/Oil/LPG:	PG&E
Heating/Cooling System	Not available	

Site Vicinity Description		
General Area Description	The Subject Property vicinity consists primarily of commercial and industrial warehouse properties.	
Adjoining Property Description	North:	Terminal Court, followed by an indoor sports center and a Park 'N Fly airport parking lot and shuttle service.
	East:	A paved parking lot followed by Bayshore Freeway (US 101).
	South:	The San Bruno Canal followed by Giannini Garden Ornaments Inc., a pottery store.
	West:	From north to south: Peking Handicraft Inc., a fabric wholesaler and distributer; Market Produce Sales, a produce wholesaler; Greenstar Laundry and Linen; Corporate Identity Systems, a screen printer; and a building containing KK Graphics print shop, Peeters Transportation moving company, and Stufurhome, a furniture wholesale distributer.

2.2 PHYSICAL SETTING

Subsurface explorations and/or hydrogeologic investigations were not performed for this Phase I. Subject Property geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the vicinity of the Subject Property. It is unknown to what extent localized variations in groundwater depth and flow occur on the Subject Property.

Physical Setting		Source
Topography Summary	The Subject Property is generally flat.	1, 2
Site Elevation	Approximately 21 feet above mean sea level	1, 2
Overburden Soils	The Subject Property vicinity is generally underlain by artificial fill primarily consisting of clayey fine sand, silt, clay, rock fragments, and organic material.	3
Bedrock Formation	The Subject Property is underlain by Pleistocene-Holocene alluvial deposits.	4
Depth to Bedrock	Depth to bedrock was not determined for this Phase I.	
Depth to Groundwater	Depth to groundwater typically ranges between 1 to 5 feet below ground surface (bgs).	3
Surface Water Flow Direction	Surface water appears to flow towards the south-southeast based on observed surface topography.	1, 2

Physical Setting		Source
Regional Groundwater Flow Direction	Regional groundwater flow appears to flow to the east-southeast based on proximity of the San Bruno Canal, adjacent to the Subject Property to the south, and the San Francisco Bay. However, the groundwater flow direction measured at the north end of Subject Property is to the northeast.	1, 2, 3
Nearest Surface Water Body	The San Bruno Canal is located adjacent to the Subject Property to the south, which flows out to the San Francisco Bay approximately 1 mile to the east.	1, 2
Floodplain	Yes, the Subject Property is located within a 500-year flood area (0.2% annual chance). A small portion along the southern boundary is located within a 100-year flood area (1% annual chance).	2
Mapped Wetlands	A small portion of the Subject Property along the southern boundary is located within a national wetlands area.	2
Mapped Pipelines	An active non-highly volatile liquids (HVL) product pipeline operated by Kinder Morgan is located along the eastern side of the Subject Property.	5

- *Case Closure, Remedial Action Oversight, Former Olympian Fueling Facility at 131 Terminal Court, South San Francisco, California*, prepared by San Mateo County Health System, dated 27 March 2014.
- *Asbestos Survey Summary Report*, prepared by Bio Max Environmental, Inc., prepared for Golden Gate Produce Terminal, dated 5 March 2018.

3.1 LEAKING UNDERGROUND STORAGE TANK (LUST) CASE

The northern portion of the Subject Property was formerly a commercial fueling facility operated by Nella Oil Company, which consisted of two dispenser islands and three underground storage tanks (USTs; one diesel and two gasoline). Investigations and remedial activities were completed at the Subject Property between 1998 and 2012.

In October 1998, soil samples were collected from an excavation trench during piping upgrade activities. Total petroleum hydrocarbon as gasoline (TPHg), total petroleum hydrocarbon as diesel (TPHd), benzene, and methyl tertiary butyl ether (MTBE) were detected in the soil at maximum concentrations of 7,600 milligrams per kilogram (mg/kg) TPHd, 2,400 mg/kg TPHg, 1 mg/kg benzene, and 9 mg/kg MTBE. In October 1999, nine soil borings were advanced near the UST areas and dispenser islands to further assess subsurface impacts to soil and groundwater. Hydrocarbon-impacted groundwater was encountered in the boring west of the dispenser island, with concentrations of TPHg at 21,000 micrograms per liter (µg/L), TPHd at 8,800 µg/L, and benzene at 1,200 µg/L.

In March 2000, five additional soil borings were advanced, and five groundwater monitoring wells (MW-1 to MW-5) were installed. Maximum soil concentrations of 780 mg/kg TPHg and 0.79 mg/kg benzene were detected in one boring northwest of the dispenser islands. Maximum groundwater concentrations were detected in the same boring at 69 µg/L TPHd, 16,000 µg/L TPHg, and 850 µg/L benzene. MTBE was not detected above laboratory reporting limits in any of the groundwater samples. In June 2001, three additional monitoring wells were installed (MW-6 through MW-8) to determine the down-gradient extent of the groundwater plume. Petroleum hydrocarbons were not detected above laboratory reporting limits in soil. TPHd and MTBE were detected in groundwater at maximum concentrations of 700 µg/L, and 10 µg/L, respectively. TPHg and benzene were not detected in groundwater.

In October 2002, it appeared that the benzene groundwater plume was limited on the Subject Property near monitoring well MW-1. The benzene groundwater concentration at that time exceeded the indoor air risk-based screening level of 84 parts per billion (ppb; i.e., µg/L), and groundwater remediation was recommended near MW-1 to reduce the concentration of benzene to below the risk level.

Starting in April 2007, seven wells (MW-1, MW-3, and MW-5 through MW-8 [MW-4 was destroyed in 2004]) were sampled quarterly. In 2007 the sample frequency was reduced to semi-annually, and in 2009 the sample frequency was again reduced to annual sampling. Samples were analyzed for TPHg; TPHd; benzene, toluene, ethylbenzene, and xylene (BTEX); and MTBE. In the final round of groundwater sampling in 2012, TPHg, TPHd, and BTEX concentrations were detected in wells MW-1 and MW-2. Maximum TPHg and TPHd concentrations of 7,000 and 2,100 µg/L, respectively, were detected in well MW-1. Maximum benzene concentrations of 2,400 µg/L were also detected in MW-1. MTBE was only detected above the laboratory detection limit in well MW-2 at a concentration of 96 µg/L. In August 2012, the seven monitoring wells were destroyed.

In October 2012 the three USTs (one diesel, two gasoline) and the fueling island were removed from the Subject Property. Seventy cubic yards of surrounding hydrocarbon-impacted soil was excavated. In December 2012 an additional 789 cubic yards of soil was excavated from the Subject Property to depths ranging from 6 to 10 feet bgs. Four confirmation samples taken from the bottom of the excavation along the northwest (downgradient) side indicated TPHg, TPHd, benzene, and MTBE were either not detected at laboratory detection limits or were at low concentrations below the screening limit.

In 2013, following the excavation, grab groundwater samples were collected from borings during both the wet and dry season to confirm groundwater conditions. Post-remediation groundwater sampling in the former source area showed a maximum benzene concentration of 19 µg/L. Post-remediation groundwater sampling downgradient of the former source area showed a maximum benzene concentration of 2,800 µg/L. It was noted that dissolved-phase benzene concentrations detected downgradient of the former source area were likely affected by a high amount of the suspended sediments in the grab groundwater sample.

In October 2013, CRA requested case closure for the Subject Property under Low-Threat UST Case Closure Policy (LTCP). In March 2014, San Mateo County Health, Environmental Health Services Division (SMCEH) confirmed no further action was required and case closure was granted, with residual hydrocarbon-impacted soil and groundwater remaining at the Subject Property. SMCEH indicated in their closure letter that changes in land use or removal of soil and groundwater from the affected area may pose a risk, and SMCEH must be notified in the event of an excavation or development of the Subject Property.

3.2 ASBESTOS SUMMARY REPORT

In February 2018, asbestos sampling was conducted on the Subject Property at terminal stalls 40C, 40D, and 40E. Asbestos containing material (ACM) was detected in several samples, including the floor materials found in the upstairs offices and hallway. A complete asbestos survey should be performed prior to any demolition of the buildings to determine the extent of pre-demolition abatement.

4. Site History

Haley & Aldrich assessed past usage of the Subject Property and adjoining properties through a review of:

- Sanborn Fire Insurance Maps (partial coverage) dated 1953, 1956, and 1970;
- Topographic Maps dated 1896, 1899, 1915, 1939, 1947, 1950, 1956, 1968, 1973, 1980, 1995, 1996, 2012, 2015, and 2018;
- Aerial Photographs dated 1943, 1946, 1956 ,1963, 1974, 1982, 1993, 1998, 2006, 2009, 2012, and 2016;
- City Directories dated 1970, 1976, 1981, 1986, 1992, 1995, 2000, 2005, 2010, 2014, and 2017;
- Municipal records;
- Previous Reports; and
- Interviews with Subject Property personnel.

Copies of information obtained from historical references reviewed are included in Appendix C. Unless otherwise noted below, per the ASTM standard, sources were reviewed dating back to 1940 or first developed use, whichever is earlier, and at 5-year intervals if the use of the property has changed within the time period.

4.1 SUBJECT PROPERTY

The table below provides a detailed summary of pertinent information from the historical sources reviewed:

Dates	Description of Subject Property	Sources
1869 to 1950	The Subject Property consisted of undeveloped marshland.	Topographic Maps, Aerial Photographs
1950s to 1960	The Subject Property was filled in sometime between 1950 and 1956 and undeveloped until the 1960s. In 1956 the aerial photograph shows the Subject Property was cleared and graded, and the stream was directed offsite to the south (San Bruno Canal) in preparation for development.	Topographic Maps, Aerial Photographs
1960s to 2000	The current warehouses were constructed in 1962. The 1963 aerial photograph shows the two warehouses and the guard shack in their current configurations, surrounded by asphalt-paved parking spaces. According to the city directories, the Subject Property has been occupied by wholesale produce tenants since at least 1970. In 1990, the warehouses were renovated for seismic upgrades. From 1985 to 2012 the northern end of the Subject Property operated as a commercial fueling facility consisting of two dispenser islands, two diesel USTs, and one gasoline UST which were owned and operated by Nella Oil Company.	Topographic Maps, Aerial Photographs, City Directories, Previous Reports

Dates	Description of Subject Property	Sources
2000 to present	In 2002, the office building was constructed at the northeast corner of the Subject Property. In 2004, Golden Gate Produce purchased the Subject Property. In 2012, the fueling facility closed, and the USTs and fueling islands were removed. In 2016, solar panels were added to the roofs of the two warehouse buildings. In 2017, solar panel awnings were constructed over the parking area between the warehouse buildings.	Aerial Photographs, Previous Reports

4.2 ADJOINING PROPERTIES

The table below provides a summary of pertinent information from the historical sources reviewed regarding adjacent properties:

Dates	Description of Adjacent Properties	Sources
1896 to 1920s	North: Undeveloped marshland South: Undeveloped marshland East: Undeveloped marshland West: Undeveloped marshland	Topographic Maps
1920s to 1950	North: The 1943 aerial photograph shows a commercial building was constructed on the property to the north at 120 Terminal Court. South: Undeveloped marshland East: The 1947 topographic map shows the Bayshore Highway (US 101) was constructed beyond the adjacent property to the east. West: Undeveloped marshland	Topographic Maps, Aerial Photographs

Dates	Description of Adjacent Properties	Sources
1950 to 1970	North: The 1968 topographic map and aerial photograph show an additional commercial building was constructed on the adjacent property to the north at 196 Produce Avenue. South: The San Bruno Canal was channelized adjacent to the Subject Property to the south. Beyond the canal, commercial and light industrial warehouse buildings were constructed. East: The 1956 aerial photograph shows the adjoining property to the east was graded and prepared for development. The 1963 and 1968 aerial photographs show the property is used for parking and appears unpaved. In 1970, the pay station was constructed at the northern end of the property. West: The 1963 aerial photograph shows the marsh was filled and San Mateo Avenue was constructed to the west of the Subject Property. By 1978, the multiple large commercial buildings were constructed on the properties between San Mateo Avenue and the Subject Property.	Topographic Maps, Aerial Photographs, Previous Reports
1970 to 1995	North: In 1971 the property at 196 Produce Avenue was occupied by Barrett Larry Inc, a gasoline service station. From 1973 through 1976, 196 Produce Avenue was occupied by Open Road Industries Inc, a recreational vehicle dealership. South: No change East: The 1973 aerial photograph shows the property was paved and is used for parking. A ticket booth is located at the northern entrance to the property. The 1993 aerial photograph shows a small building was constructed at the northern end of the property. West: The 1974 aerial photograph shows an additional building was constructed to the northwest of the Subject Property.	Topographic Maps, Aerial Photographs, City Directory
1995 to 2009	North: The 1998 aerial photograph shows the building at 196 Produce Avenue is no longer there, and the property is now a paved parking lot. South: No change East: No change West: No change	Aerial Photographs

Dates	Description of Adjacent Properties	Sources
2009 to present	North: The 2012 aerial photograph shows the adjacent property to the north is vacant for possible re-grading and redevelopment. The 2016 aerial photograph shows the building at 120 Terminal Court was replaced with the present Park 'N Fly canopy structure. South: No change observed to the buildings. The properties are currently occupied by Giannini Garden Ornaments, Inc, De Mar Medical supply store, and Ahern equipment rental. East: No change. Aerial photographs show periodic re-paving of the asphalt parking lot. West: No change observed to the buildings. The properties are currently occupied by: • Peking Handicraft Inc. a fabric wholesaler and distributer; • Market Produce Sales, a produce wholesaler; • Greenstar Laundry and Linen; • Corporate Identity Systems, a screen printer; and • a building containing KK Graphics print shop, Peeters Transportation moving company, and Stufurhome, a furniture wholesale distributer.	Aerial Photographs, EDR Report

5. Environmental Records Review

5.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

Haley & Aldrich used the electronic database service, Environmental Data Resources (EDR) to complete the environmental records review. The database search was used to identify properties that may be listed in the referenced agency records, located within the ASTM-specified approximate minimum search distances as shown in the table below. A description of each database searched is in Section 11.2 of this report. The complete environmental database report is provided in Appendix D. Pertinent information obtained from the database is summarized in Section 5.3 below.

Database Searched	Approximate Minimum Search Distance	Subject Property Listed?	Number of Sites within Search Distance[1]
1. NPL Sites	1 mile	No	0
2. Delisted NPL Sites	0.5 mile	No	0
3. CERCLIS[2] Sites	0.5 mile	No	2
4. CERCLIS-NFRAP[2] Sites	0.5 mile	No	8
5. Federal ERNS	Site only	No	Not Applicable
6. RCRA non-CORRACTS TSD Facilities	0.5 mile	No	0
7. RCRA CORRACTS TSD Facilities	1 mile	No	3
8. RCRA Generators	Site & Adjoining	No	17
9. Federal Institutional/Engineering Controls	Site Only	No	Not Applicable
10. State/Tribal Equivalent NPL Sites	1 mile	No	4
11. State/Tribal Equivalent CERCLIS[2] Sites	0.5 mile	No	18
12. State/Tribal Registered Storage Tanks	Site & Adjoining	No	13
13. State/Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	4
14. State/Tribal Leaking Storage Tanks	0.5 mile	Yes	170
15. State/Tribal Institutional Controls/Engineering Controls[3]	Site Only	No	Not Applicable
16. State/Tribal Voluntary Cleanup Sites	0.5 mile	No	4
17. State/Tribal Brownfield Sites	0.5 mile	No	0
18. Orphan Site List[4]	Site & Adjoining	No	9
19. CERS HAZ WASTE[5]	0.25 mile	No	41
20. SWEEPS UST[5]	0.25 mile	Yes	22
21. HIST UST[5]	0.25 mile	Yes	46
22. RCRA NonGen/NLR[5]	0.25 mile	Yes	99
23. FINDS[5]	Site Only	Yes	6
24. ECHO[5]	Site Only	Yes	1
25. San Mateo Co. BI[5]	0.25 mile	Yes	151

Database Searched	Approximate Minimum Search Distance	Subject Property Listed?	Number of Sites within Search Distance[1]
26. CORTESE[5]	0.5 mile	Yes	60
27. HAZNET[5]	Site Only	Yes	1
28. HIST CORTESE[5]	0.5 mile	No	56
29. Notify 65[5]	1.0 mile	No	5
30. WDS[5]	Site Only	Yes	1
31. CIWQS[5]	Site Only	Yes	1
32. CERS[5]	Site Only	Yes	1
33. HWTS[5]	Site Only	Yes	2

Notes:

1. *Some sites may be included on multiple databases.*
2. *The United States Environmental Protection Agency (USEPA) retired the CERCLIS database in October 2013. In January 2016, the Superfund Enterprise Management System (SEMS), which replaces the CERCLIS database, became active. The CERCLIS database records search included as part of this assessment includes currently ascertainable data from the SEMS and SEMS-Archive databases as reported through the database vendor.*
3. *EDR does not search State/Tribal Institutional Controls/Engineering controls in California. This information was searched using the following EDR databases: CA DEED, CA LIENS, and LIENS2.*
4. *Haley & Aldrich also searched the Orphan Site List provided in the database report for the Subject Property and sites adjoining the Subject Property. Orphan sites are those that, due to incorrect or incomplete addresses, could not be mapped.*
5. *If applicable, other relevant databases, not specifically required by ASTM were included in the database review.*

5.2 ADDITIONAL ENVIRONMENTAL RECORDS OR FILE REVIEW

To supplement the environmental record search, we contacted the following state and local government agencies and searched applicable online databases. If copies of the documents reviewed were obtained, pertinent material is included in Appendix D. Relevant information obtained is included in the appropriate sections of the report and/or discussed in Section 5.3 below. Adjacent properties were also included in requests for additional information if a significant incident or release was identified. Those adjacent properties reviewed for this assessment include 101 Terminal Court.

Agency	Request Sent or Files Searched		Files Exist and Are Available for Review	Files Reviewed
	Subject Property	Adjoining Properties		
Department of Toxic Substances Control (DTSC)[1]	Yes	Yes	On 9 March 2022, DTSC responded that they had no hard copy records pertaining to the Subject Property. The DTSC's website, EnviroStor, generally contains all existing DTSC information on permits and corrective action at hazardous waste facilities, as well as site cleanup projects. There were no EnviroStor files pertaining to the Subject Property. The adjacent property at 101 Terminal Court had an inactive handler profile and is discussed in Section 5.3.2.	Yes
San Francisco Bay Regional Water Quality Control Board (RWQCB)[2]	Yes	Yes	On 10 March 2022, RWQCB indicated there is a closed case for the Subject Property with files available on the State Water Resources Control Board (SWRCB's) website, GeoTracker. GeoTracker generally contains information on sites that impact groundwater, especially those that require groundwater cleanup, and permitted facilities. GeoTracker files pertaining to the Subject Property are discussed in Section 5.3.1.	Yes
California Governor's Office of Emergency Services (Cal OES)[3]	Yes	Yes	The online Cal OES database was accessed on 3 March 2022. There were no records for the Subject Property, or pertinent information on adjoining properties.	N/A
Bay Area Air Quality Management District (BAAQMD)[4]	Yes	Yes	On 7 March 2022, BAAQMD responded with a record of equipment permits between 1985 and 2012 for the gas station on the Subject Property. Permits for the Subject Property and adjacent properties are discussed in Sections 5.3.1 and 5.3.2.	Yes
SMCEH[5]	Yes	Yes	On 9 March 2022, SMCEH responded with several records pertaining to the Subject Property and adjacent properties. See Sections 5.3.1 and 5.3.2.	Yes

Agency	Request Sent or Files Searched		Files Exist and Are Available for Review	Files Reviewed
	Subject Property	Adjoining Properties		
City of South San Francisco (City)[6]	Yes	Yes	On 14 March 2022, the City responded that they had no records for the Subject Property.	N/A

Notes:

1. *The California Department of Toxic Substances Control maintains records related to site cleanups, hazardous waste, and USTs.*
2. *The San Francisco Bay Regional Water Quality Control Board maintains information regarding water, monitoring wells, USTs, and cleanups.*
3. *The California Governor's Office of Emergency Services maintains records of hazardous materials spill reports.*
4. *The Bay Area Air Quality Management District maintains information regarding indoor air, asbestos, equipment permitting, and violations related to air quality.*
5. *The San Mateo County Health, Environmental Health Services Division maintains records related to hazardous materials and waste, USTs, and site mitigation.*
6. *The City of South San Francisco maintains information regarding permits, zoning and planning, and fire department records.*

5.3 DETAILED DESCRIPTION OF RELEVANT INFORMATION

5.3.1 Subject Property

Listing	Description	Potential Impact
GeoTracker, SMCEH Records, BAAQMD, Hist UST, CA FID UST, SWEEPS UST, LUST, RGA LUST, HWTS, HAZNET, CORTESE, CERS	Nella Oil Company held permits to operate a gasoline dispensing facility on the Subject Property between 1985 and 2012. The HWTS and HAZNET listings indicate the gas station was operated by Flyers Energy (Station #412). The Subject Property is associated with the GeoTracker closed case number T060812439. In 2012, three USTs (one containing diesel and two containing gasoline) and associated petroleum hydrocarbon-impacted soil were removed and excavated from the previous Olympian Cardlock fueling facility at the northern end of the Subject Property. In 2014, SMCEH issued a case closure letter for the site, although hydrocarbon-impacted soil and groundwater remains at the property in the vicinity of the former fueling facility. Grab groundwater sampling results from the closure document indicate concentrations of TPHg up to 51,000 µg/L, TPHd up to 4,500 µg/L, and benzene up to 2,800 µg/L.	This constitutes a CREC. See Section 7.3.
San Mateo County Business Inventory (San Mateo Co BI), HAULERS, FINDS	Several tenants of Golden Gate Produce Terminal are enrolled in the business plan program for storing motor vehicle fuels or waste. Additionally, several tenants are listed in the HAULERS database if they transport 10 or more used/waste tires.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.

5.3.2 Nearby Sites

Several sites were listed in the database report within the applicable search radii or identified in regulatory records reviews. Due to their location with respect to the Subject Property (on the opposite side of a hydrogeologic barrier, distance from the site, location of the site relative to inferred groundwater flow, subsurface utilities and building levels, etc.), or their status (closed out release, etc.), several of the sites are not likely to adversely affect the Subject Property and are not discussed herein. Only those sites adjacent to the Subject Property and sites with a potential to have impacted the Subject Property are discussed below. The complete database report and relevant records review information is included in Appendix D.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property
SamTrans, 196 Produce Ave Adjacent to the north, downgradient	GeoTracker, LUST, CORTESE, Hist CORTESE, CERS RCRA NonGel.NLR, FINDS, ECHO, San Mateo Co. BI	This property is associated with the GeoTracker closed case number T0608100436. Between 1987 and 1989, SamTrans removed and closed eight former USTs containing diesel, wase oil, and light oil. Soil and groundwater samples collected during the tank removal indicated leaks around each of the tanks.	The case was addressed to the satisfaction of the SMCEH. Due to the distance and downgradient location of this property to the Subject Property, this does not appear to impact the Subject Property.
Parking Corporation of America, 120 Terminal Court Adjacent to the north, downgradient	GeoTracker, LUST, CPS-SLIC, CERS	This property is associated with the GeoTracker closed case number SL0608187305. USTs present when SamTrans operated on the property were found to be leaking. Petroleum impacted soils were excavated from the property and SMCEH issued a no further action (NFA) letter in 2010.	The case was addressed to the satisfaction of the SMCEH. Due to the distance and downgradient location of this property to the Subject Property, this does not appear to impact the Subject Property.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property
Park 'N Fly, 101 Terminal Court Adjacent to the east, downgradient	HWTS, HAZNET, San Mateo Co. BI, HIST UST, CA FID UST, RCRA NonGen/NLR	In 1994, a 10,000-gallon gasoline UST was installed near the pay booths at the northern end of the property. In 2005, the UST was removed and was observed to be in good condition upon removal. In 2012, the permit for the fueling equipment was closed. The property currently contains a small vehicle maintenance garage that performs oil changes and light bus maintenance.	No releases from the UST were reported. Due to the downgradient location of this property to the Subject Property, this does not appear to impact the Subject Property.
Sturdy Oil/Ahren Rentals, 251 Shaw Road Adjacent to the south, upgradient	San Mateo Co. BI, HIST CORTESE, HWTS, CERS HAZ WASTE, HAZNET, CERS, RCRA NonGen/NLR	Ahren Rentals is listed as a handler of hazardous waste. They have several minor violations that were returned to compliance by the next site visit without escalation.	No releases were reported. This does not appear to impact the Subject Property.
Heat & Control Inc/ Giannini Garden Ornaments Inc, 255 Shaw Road Southeast 177 feet, downgradient	San Mateo Co. BI, HWTS, CERS HAZ WASTE, HAZNET, CERS, RCRA NonGen/NLR	Giannini Garden is listed as a handler of hazardous waste. They have several administrative violations that were returned to compliance by the next site visit without escalation.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.
Lubrivan Truck Services, 1320 San Mateo Ave Adjacent to the southwest, downgradient	LUST, CORTESE, HIST CORTESE, CERS	This property is associated with the closed GeoTracker case T0608100312. A leak was first reported in 1986. In 1992 impacted soil was excavated. In 2003, the site was issued an NFA letter.	The case was addressed to the satisfaction of the SMCEH. Due to the distance and downgradient location of this property, this does not appear to impact the Subject Property.
Giant Horse Printing Inc./KK Graphics Inc, 1336 San Mateo Ave Adjacent to the west, upgradient	RCRA NonGen/ NLR, San Mateo CO. BI	This property is no longer a generator of hazardous waste and is no longer reporting.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Property
Corporate Identity Systems, 1342 San Mateo Ave Adjacent to the west, upgradient	San Mateo Co. BI. RCRA-LQG, EMI, CERS HAZWASTE	This site is a listed as a large quantity generator of hazardous waste for 2019. There are no violations associated with this property.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.
Static Nine Garage/ SB Garage LLC, 1350 San Mateo Ave Adjacent to the west, upgradient	San Mateo Co. BI, CERS, CERS HAZ WASTE, RCRA NonGen/NLR	This property is occupied by an automobile repair shop. They had several administrative violations that were returned to compliance by the next site visit without escalation.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.
Greenstar Laundry & Linen, 1352 San Mateo Ave Adjacent to the west, upgradient	San Mateo Co. BI	This property is an active dry cleaner and commercial laundering facility. There are no violations or spills associated with this property.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.
Pacific Bell, 1384 San Mateo Ave Adjacent to the west, upgradient	RCRA NonGen/ NLR, FINDS, ECHO	This property is no longer a generator of hazardous waste and is no longer reporting. No violations were recorded for this property.	No spills, releases, or other incidents were reported. This does not appear to impact the Subject Property.
Peking Handicraft, 1388 San Mateo Ave Adjacent to the west, upgradient	GeoTracker, LUST, CORTESE, HIST CORTESE, CERS	This property is associated with the closed GeoTracker case T0608100837. A LUST event was reported in 1995, and the case was closed in 1998.	The case was addressed to the satisfaction of the RWQCB. This does not appear to impact the Subject Property.

5.4 VAPOR MIGRATION

The ASTM 1527-13 standard states that "for the purposes of this practice, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." Thus, this section specifies whether or not we perceive a risk of vapor migration to the Subject Property.

To assess a vapor migration risk we conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Investigations on the Subject Property have found impacts of TPHg, TPHd, benzene, and MTBE in the soil and groundwater associated with the leaking USTs formerly located at the north end of the Subject Property. Benzene concentrations in groundwater exceed Environmental Screening Levels (ESLs) established to assess potential vapor intrusion risks at commercial/industrial properties, and therefore, a vapor migration risk exists for the Subject Property. This is also considered a CREC for the Subject Property. See Section 7.3.

5.5 ENVIRONMENTAL LIEN AND AUL

According to EDR's Environmental Lien and AUL Search™ Report, dated 10 March 2022, there are no environmental liens or activity use limitations (AULs) for the Subject Property. This research was completed by EDR using the following Assessor Parcel Number provided by Haley & Aldrich:

- 015-13-210

A copy of the Environmental Lien and AUL Search™ Report and Deed is included in Appendix D.

6. Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe Subject Property conditions was conducted by Zachary Stephens of Haley & Aldrich, on 7 March 2022. Access to the Subject Property was provided by Ianthe Schaub of SteelWave, LLC.

Haley & Aldrich personnel observed accessible interior areas of the Subject Property building(s), including common areas, parking areas, mechanical spaces, and tenant spaces. Haley & Aldrich also observed the exterior portions of the Subject Property, including the property boundaries, and observed adjoining property conditions from the Subject Property boundaries and/or public thoroughfares. No weather-related conditions or other conditions that would limit our ability to observe the Subject Property or adjoining properties occurred during our site visit.

An interview with Mario Caimotto of Golden Gate Produce Terminal, the key site manager, was performed in conjunction with the site visit. In addition, as required by the ASTM E 1527-13 Standard, a tenant representative of Golden Gate Produce Terminal was also interviewed. Per the ASTM Standard, past owners, operators, and occupants of the Subject Property who are likely to have material information regarding the potential for contamination at the Subject Property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Haley & Aldrich was not provided with contact information in order interview past owners and/or operators at the Subject Property. Based upon historical data collected from other sources, this potential data gap is not expected to adversely impact the results of this assessment.

The findings of the site visit and interviews are discussed below. Site photographs are included in Appendix E.

ASTM E 1527-13 Standard Section 10.8 requires that, prior to the site visit, the current Subject Property owner or key site manager and user, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review. Documents were not provided.

6.1 CURRENT USE OF THE PROPERTY

The Subject Property is currently occupied by Golden Gate Produce Terminal, a wholesale produce market open to the public. Golden Gate Produce Terminal is comprised of over 50 individually rented stalls for vendors to sell and distribute produce.

6.2 GENERAL DESCRIPTION OF STRUCTURES

There are three main structures located on the Subject Property. A small two-story building, located at the northern end of the Subject Property, is used as an administrative office. There are two long, two-story structures that are separated into several small individual produce stalls. The larger of these two structures is approximately 85,700 square feet, and the smaller approximately 60,000 square feet. The second story of some of the stalls in these structures are used as offices.

6.3 USE, STORAGE, AND DISPOSAL OF PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS

Petroleum products and/or hazardous materials were observed or reported to be used, stored, and/or disposed of at the Subject Property as described below.

Petroleum/hazardous materials observed at the Subject Property included:

Petroleum Product or Hazardous Substances	Quantity Stored & Container	Storage Location	Use	Disposal	Observations/ Evidence of Release
Polyethylene	Several 1-liter containers	Three different stalls at 101 Terminal Ct	Fruit ripening agent	Unknown	Chemical is emulsified and heated to steam fruit in large rooms.
Lacquer thinner	10 Gallons	Material storage room	Painting	Unknown	No indication of spillage or release.
Propane	Several containers	Stored in lock boxes around the Subject Property	Fuel for forklifts	Unknown	No indication of spillage or release.

An easement for an active non-highly volatile liquids (HVL) product pipeline operated by Kinder Morgan was observed along the eastern side of the Subject Property. See Section 7.6.

6.4 OTHER SUBJECT PROPERTY OBSERVATIONS

The table below summarizes items that were observed and/or reported at the Subject Property during the site visit other than those items related to use, storage, and disposal of petroleum or hazardous materials (described in Section 6.3 above). If items were observed or reported, they are further described either in the table or below.

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Potable Water Supply	Yes	Potable water is supplied by California Water Service.
Nearest Drinking Water Source	N/A[1]	
Sewage Disposal System	Yes	The Subject Property is connected to the municipal sanitary sewer system.
Septic System	No	
Unidentified Storage Containers	No	
Wastewater Discharge	No	
Stormwater Discharge	Yes	Stormwater is discharged via sheet flow towards stormwater drains located throughout the Subject Property.
Odors	No	

Description	Observed or Reported at Time of Site Visit	Observations/Comments
PCBs Associated with Electrical or Hydraulic Equipment	Yes	A pad-mounted electrical transformer was observed at the southwest corner of the Subject Property. Information about potential-PCB content was not observed.
Elevators (Traction or Hydraulic)	No	
Vehicle Maintenance Lifts	No	
Emergency Generators	No	
Sprinkler System Pumps	No	
Heating System	Yes	An HVAC unit is present in the office building.
Cooling System	Yes	An HVAC unit is present in the office building. There are several industrial fridges associated with produce storage.
Stains or Corrosion on Floors, Walls, or Ceilings	No	
Floor Drains	No	
Sumps	No	
Catch Basins	No	
Pits, Ponds, Lagoons, and Pools of Liquid	No	
Stained Soil or Pavement	No	
Stressed Vegetation	No	
Solid Waste and Evidence of Waste Filling	No	
Dry Wells	No	
Monitoring Wells	No	Monitoring wells associated with the LUST case were previously located at the Subject Property, but were destroyed in August 2012.
Water Supply Wells	No	
Irrigation Wells	No	
Injection Wells	No	
Abandoned Wells	No	

6.5 ADJOINING PROPERTY OBSERVATIONS

The Subject Property is bounded by Terminal Court, followed by Park 'N Fly, a pay to park parking lot. The adjoining property to the east is a large parking lot occupied by Amazon, Urban Worldwide, and a temporary COVID testing clinic. Directly south of the Subject Property is the San Bruno Canal, followed by a pottery store. West of the Subject Property are several industrial buildings occupied by different companies and services, including a produce market, a manufacturer, a laundry service, and office space.

6.6 USER RESPONSIBILITIES

The AAI Rule requires that the User of the report consider the following:

- whether the user has specialized knowledge about previous ownership or uses of the Subject Property that may be material to identifying RECs;
- whether the user has determined that the Subject Property's Title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;
- whether the user is aware of commonly known or reasonably ascertainable information about the Subject Property including whether or not the presence of contamination is likely on the Subject Property and to what degree it can be detected; and
- whether the user has prior knowledge that the price of the Subject Property has been reduced for environmentally related reasons.

While such information is not required to be provided to the environmental professional(s), the information can assist the environmental professional in identifying recognized environmental conditions. The "All Appropriate Inquiries" Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for a landowner liability protection (LLP) to CERCLA liability.

Haley & Aldrich did not receive a completed user responsibilities questionnaire. The absence of the questionnaire is not considered significant to the conclusions of this Phase I.

7. Findings and Opinions

7.1 DATA GAPS

Our ability to identify and evaluate RECs at the Subject Property is conditioned upon data gaps identified as part of this Phase I.

No significant data gaps were identified during the performance of this Phase I. Thus, it is our opinion that sufficient information was obtained to identify Subject Property conditions indicative of releases or threatened releases of hazardous substances and petroleum hydrocarbons. Our opinion is limited by the conditions prevailing at the time our work is performed and the applicable regulatory requirements in effect.

7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

Our opinion regarding a REC's potential impact on the Subject Property is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intended use for the Subject Property.

RECs were not identified in connection with the Subject Property.

7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The following CREC was identified in connection with the Subject Property.

CREC #1: LUST Case Closure with Residual Hydrocarbon-Impacted Soil and Groundwater

The northern portion of the Subject Property was formerly a commercial fueling facility operated by Nella Oil Company, which consisted of two dispenser islands and three USTs (one diesel and two gasoline). In 1998, soil and groundwater were found to be impacted with hydrocarbons, and several investigation, monitoring, and remedial activities were conducted between 1998 and 2012. In 2012, three USTs (one containing diesel and two containing gasoline) and associated petroleum hydrocarbon-impacted soil were removed and excavated from the Subject Property. In 2014, SMCEH issued a case closure letter for the Subject Property, although hydrocarbon-impacted soil and groundwater were allowed to remain at the property in the vicinity of the former fueling facility under LTCP. Grab groundwater sampling results from the closure document indicate concentrations of TPHg up to 51,000 µg/L, TPHd up to 4,500 µg/L, and benzene up to 2,800 µg/L from soil borings located at the northern

end of the Subject Property, directly downgradient of the former UST area. These concentrations exceed both RWQCB Tier 1 ESLs and applicable commercial/industrial ESLs. Proposed future redevelopment, change of land use, or removal of soil and/or groundwater from the Subject Property will require a notification to the SMCEH.

7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

HRECs were not identified in connection with the Subject Property.

7.5 DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which "do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The ASTM E 1527-13 Standard notes that "conditions determined to be *de minimis* are not recognized environmental conditions."

De minimis conditions were not identified in connection with the Subject Property.

7.6 POTENTIAL ENVIRONMENTAL CONCERNS

The following potential environmental concern was identified in connection with the Subject Property.

Potential Environmental Concern #1: Kinder Morgan Product Pipeline

An easement for an active non-highly volatile liquids (HVL) product pipeline operated by Kinder Morgan is located along the eastern side of the Subject Property (Figure 2). Although no documented releases were found during this Phase I, there is a potential for future releases to impact the Subject Property.

8. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E 1527 of the property located at 131 Terminal Court in South San Francisco, California. Any exceptions to or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed one CREC in connection with the Subject Property:

- CREC #1: LUST Case Closure with Residual Hydrocarbon-Impacted Soil and Groundwater

9. Environmental Professional Certification

The undersigned declare the following:

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312 and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Brooke Mellin, P.G.
Assistant Project Manager

10. Credentials

This Phase I report was prepared by Maggie Bradshaw, and the site visit was conducted by Zachary Stephens, under the direct supervision of Brooke Mellin, who served as the Environmental Professional(s) for this project. Qualification information for the project personnel is provided below.

Maggie Bradshaw
Environmental Scientist

Ms. Bradshaw holds a B.S. in Conservation Resource Studies from UC Berkeley. Ms. Bradshaw is an environmental scientist with 5 years of experience. She performs ASTM Phase I Environmental Site Assessments for undeveloped, commercial, and light industrial properties. She also has experience conducting Phase II investigations, including collecting subsurface soil and groundwater samples, and providing data analysis of results.

Brooke Mellin, P.G.
Assistant Project Manager

Ms. Mellin holds a B.A. in Geology and an M.A. in Earth and Planetary Science from UC Berkeley and is a California Professional Geologist. Ms. Mellin has over 8 years of environmental consulting experience and has been involved in a wide range of environmental investigation and remediation projects including soil, soil gas, and groundwater cleanup sites.

11. Glossary and Other Descriptions

11.1 GLOSSARY

All Appropriate Inquiry (AAI) — that inquiry constituting "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA, 42 U.S.C §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), assuming compliance with other elements of the defense.

Business Environmental Risk — a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

Controlled Recognized Environmental Condition (CREC) – a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Data Gap — a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De Minimis Conditions — conditions which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Environmental Professional — a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

Historical Recognized Environmental Condition (HREC) — a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Key Site Manager — the person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.

Material Threat —a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Orphan Site — (not ASTM E 1527-13 definition) — sites that could not be mapped due to poor or inadequate address information.

Recognized Environmental Condition (REC) — the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

11.2 DESCRIPTIONS OF DATABASES SEARCHED

Numerous regulatory databases were searched during this Phase I. Each database reviewed is described in the database report presented in Appendix D. Those databases required by the ASTM E 1527-13 Standard are identified below.

1. **NPL Sites:** The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for cleanup by the U.S. Environmental Protection Agency (USEPA).

2. **Delisted NPL Sites:** The Delisted National Priorities List (NPL) is a list of formal NPL sites formerly considered the highest priority for cleanup by the USEPA that met the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) for deletion from the NPL because a no further response was appropriate.

3. **CERCLIS Sites:** The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess whether they should be considered for inclusion on the NPL.

4. **CERCLIS-NFRAP Sites:** CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.

5. **Federal ERNS:** The Federal Emergency Response Notification System (ERNS) list tracks information on reported releases of oil and hazardous materials.

6. **RCRA non-CORRACTS TSD facilities:** The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.

7. **RCRA CORRACTS TSD facilities:** The RCRA CORRACTS TSD Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

8. **RCRA Generators:** The RCRA Generator list is maintained by the USEPA to track facilities that generate hazardous waste.

9. **Federal Institutional Controls/Engineering Controls:** The Federal Institutional Control list and Engineering Control list are maintained by the USEPA. Some Institutional Control and Engineering Control information may not be made publicly available and therefore will not be included on this registry.

10. **State and Tribal Equivalent CERCLIS Sites:** The (ASTM E 1527-13 Standard) requires searching "State and Tribal Equivalent NPL Sites." In California, the equivalent NPL is the RESPONSE database and the equivalent CERCLIS is the ENVIROSTOR database, which are maintained by the California Department of Toxic Substances Control (DTSC).

11. **State and Tribal Registered Storage Tanks:** In California, local regulatory agencies (e.g., County health departments and fire departments) and the State Water Resources Control Board (SWRCB) maintain lists of aboveground and underground storage tanks registered with those agencies (e.g., County health departments). For tribal property, the USEPA Region 9 maintains a list of underground storage tanks on Indian land.

12. **State and Tribal Landfills and Solid Waste Disposal Sites:** In California, the SWRCB in coordination with the Regional Water Quality Control Boards (RWQCB), and the Integrated Waste Management Board (IWMB) maintain lists of regulated waste disposal sites.

13. **State and Tribal Leaking Storage Tanks:** In California, the SWRCB in coordination with the RWQCBs maintains lists of Leaking Storage Tanks (LUST/LAST). The LUST/LAST lists are a listing of release sites that have an underground or aboveground storage tank listed as the source. For tribal property, the USEPA Region 9 maintains a list of leaking USTs on Indian land.

14. **State and Tribal Institutional Controls/Engineering Controls:** The USEPA maintains lists of sites with Institutional controls or Engineering controls in place. In addition, DTSC maintains a list of environmental deed restrictions.

15. **State and Tribal Voluntary Cleanup Sites:** In California, the DTSC, RWQCBs, and local regulatory agencies (e.g., County health departments) maintain lists of Voluntary Cleanup sites.

16. **State and Tribal Brownfield Sites:** In California, the DTSC maintains a list of Brownfield sites which includes any property where a redevelopment or re-use may be compromised by the presence or presumed presence of hazardous materials or petroleum.

17. Other site-specific relevant databases searched:

    - **CERS HAZ WASTE** - List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.
    - **SWEEPS UST** – The Statewide Environmental Evaluation and Planning System underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained.
    - **HIST UST** – Hazardous Substance Storage Container database is a historical listing of UST sites.
    - **RCRA NonGen / NLR - RCRA** - Non Generators / No Longer Regulated. RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.
    - **FINDS** – The Facility Index System contains both facility information and 'pointers' to other sources that contain more detail.
    - **ECHO** – Enforcement & Compliance History Information. ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.
    - **CORTESE** – The CORTESE Hazardous Waste and Substances Sites list includes a list of public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is known migration. The sites on this list were those included on the SWRCB Leaking Underground Storage Tank (LUST) list, the IWMB Solid Waste Information System (SWF/LF, also referred to as (SWIS), and the DTSC Cal-Sites. The CORTESE listing is no longer updated.
    - **HWTS** – Hazardous Waste Tracking System. DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and

manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

- **HAZNET** – Facility and Manifest Data. Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.
- **HIST CORTESE** – Hazardous Waste & Substance Site List. The sites for the list are designated by the State Water Resources Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.
- **NOTIFY 65 -** Notify 65 records contain facility notifications about any release that could impact drinking water and thereby expose the public to a potential health risk. The data comes from the SWRCB's Proposition 65 database.
- **WDS** – Waste Discharge System. Sites which have been issued waste discharge requirements.
- **CIWQS** – California Integrated Water Quality System. The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.
- **CERS** - CalEPA Regulated Site Portal Data. The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials.
- **San Mateo Co. BI** – San Mateo County Business Inventory list includes Hazardous Materials Business Plan, hazardous waste generators, and underground storage tanks.

APPENDIX A
Limitations

APPENDIX A

Haley & Aldrich, Inc. Limitations

Environmental site assessment ("ESA") reports prepared by Haley & Aldrich, Inc. (Haley & Aldrich) are for the sole and exclusive use of its Client. Haley & Aldrich represents that the ESA was prepared in accordance with the ASTM International Standard E1527-13 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ("ASTM E 1527 13"). The findings, opinions, conclusions and information contained in the ASTM E 1527-13 ESA are limited to, and solely based upon, information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed.

All users of this ASTM E 1527-13 ESA are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms & Conditions, and Limitations for this ASTM E 1527-13 ESA. The findings, opinions, conclusions and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed. Haley & Aldrich has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Haley & Aldrich shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E 1527-13 ESA is prepared for the exclusive use of Haley & Aldrich's client in connection with the subject property for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property. There are no intended beneficiaries other than Haley & Aldrich's client. Haley & Aldrich shall owe no duty whatsoever to any other person or entity by issuing the ASTM E 1527-13 ESA. Use of this ASTM E 1527-13 ESA by any person or entity, including by Haley & Aldrich's client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the ASTM E 1527-13 ESA is adequate for such other use. Use of this ASTM E 1527-13 ESA by any person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entity's sole risk and shall be without legal exposure or liability to Haley & Aldrich.

Haley & Aldrich may authorize third-party reliance on the ASTM E 1527-13 ESA by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E 1527-13 ESA only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E 1527-13 ESA and the Proposal and its attachments, Terms & Conditions, and Limitations; (3) to accept the form and substance of Haley & Aldrich's reliance letter; and (4) to deliver to Haley & Aldrich a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party's acceptance of the aforementioned conditions. Upon Haley & Aldrich's receipt of the signed reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Haley & Aldrich's ASTM E 1527-13 ESA for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject property. The relying party(ies) agrees to bind each of its respective successors and assigns to the aforementioned terms and conditions.

This ASTM E 1527-13 ESA reflects site conditions observed and described by records available to Haley & Aldrich as of the date of ASTM E 1527-13 ESA preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E 1527-13 ESA. Accordingly, Haley & Aldrich's client and any other party to whom the ASTM E 1527-13 ESA is provided recognize and agree that Haley & Aldrich shall bear no liability for deviations from observed conditions or available records after the time of ASTM E 1527-13 ESA preparation. Haley & Aldrich makes no express or implied representation that the information contained in the ASTM E 1527-13 ESA has continued viability after 180 days of the ASTM E 1527-13 ESA's completion date, and any use or reliance on the ASTM E 1527-13 ESA after 180 days of the ASTM E 1527-13 ESA's completion date by Haley & Aldrich's client or any other authorized person or entity will be at that party's sole risk and without liability to Haley & Aldrich.

Notwithstanding anything contained herein, Haley & Aldrich shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject property after the effective date of the ASTM E 1527-13 ESA. Likewise, Haley & Aldrich shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

1.0 INTRODUCTION

On behalf of Olympian, JV (Olympian), Conestoga-Rovers & Associates (CRA) has prepared this *Site Assessment Report* for the referenced site in response to San Mateo County Environmental Health Department (SMCEHD) letters dated June 16, 2009 and January 21, 2010. Agency Correspondence is included in Appendix A. Presented below are the site background, a summary of previous investigations, current site assessment activities and results, and conclusions and recommendations.

2.0 SITE BACKGROUND

2.1 SITE DESCRIPTION

The site is an active commercial fueling facility located near the intersection of Terminal Court and Produce Avenue in South San Francisco, California (Figure 1). The site consists of two dispenser islands, and three gasoline and diesel underground storage tanks (USTs). The entire site is paved with asphalt and concrete. The locations of these features are shown on Figure 2.

The site is located in a commercial industrial area of South San Francisco. The property adjoins Golden Gate Produce Terminal to the west and Park 'N' Fly parking lot to the east. Bayshore Freeway 101 is located approximately 200 feet (ft) east of the site. The site topography is relatively flat and is approximately 6 feet above mean sea level (ft msl). The nearest surface water is Coma Creek, approximately 0.25 miles north of the site. The San Francisco Bay is approximately 1 mile east of the site.

2.2 REGIONAL GEOLOGY AND HYDROGEOLOGY

Geology: The site is located in the Coast Range Geomorphic Province of California. According to the geologic map by Jennings and Burnett (1961), the general site area is underlain by unconsolidated artificial fill primarily consisting of clayey fine sand, silt, clay, rock fragments, and organic material underlain by Quaternary alluvium and dune deposits. Bedrock in the area primarily is Mesozoic ultrabasic rocks, including serpentine.

The soil beneath the paved site generally consists of sandy gravel fill to 3.0 feet below ground surface (ft bgs), interbedded clayey sand, sand and silty clay to approximately

9.0 ft bgs, underlain by dark grey, low estimated permeability, silty clay ("Bay Muds") to a total explored depth of 18 ft bgs.

Hydrogeology: According to the Department of Water Resources, Bulletin 118 (2004), the site is located within the South San Francisco Groundwater Basin.

The shallow groundwater table typically ranges between 1 to 5 ft bgs (Table 1). Groundwater levels measured on March 10, 2010 indicate that groundwater beneath the site flows primarily toward the northeast at a gradient of approximately 0.06 ft/ft. Groundwater flow conditions observed during the first quarter 2010 are consistent with conditions observed during previous groundwater monitoring events. Groundwater elevation contours are presented on Figure 6.

3.0 PREVIOUS INVESTIGATIONS

Below is the chronology of previous site assessment, feasibility testing and remedial activities at the site. Historical soil and groundwater analytical data are presented in Tables 1 and 2.

***October 1998 Trench Sampling*:** During the product piping upgrade activities in October 1998, TEC Accutite (TEC) collected soil samples T-1 through T-3 from the piping trench at approximately 2.5 ft. bgs. Total petroleum hydrocarbon as gasoline (TPHg), total petroleum hydrocarbon as diesel (TPHd), benzene, and methyl tertiary butyl ether (MTBE) were detected in the soil at maximum concentrations of 7,600 milligrams per kilogram (mg/kg) TPHd; 2,400 mg/kg TPHg; 1 mg/kg benzene; and 9 mg/kg MTBE were detected.

October 1999 Soil and Groundwater Investigation: To assess the subsurface condition, TEC advanced nine onsite soil borings (B-1 through B-9) and collected soil and grab groundwater samples. Maximum soil concentrations were detected at 280 mg/kg TPHd in boring B-2 at 4 ft bgs; 16 mg/kg TPHg in boring B-3 at 4 ft bgs, 0.063 mg/kg benzene in boring B-3 at 4 ft bgs; and 0.84 mg/kg MTBE in boring B-6 at 4 ft bgs. Maximum groundwater concentrations were detected in boring B-3 at 8,800 µg/L TPHd, 21,000 µg/L TPHg, and 1,200 µg/L benzene.

***March 2000 Monitoring Well Installations*:** On March 17, 2000, TEC drilled five soil borings (B-10 through B-14), and installed five monitoring wells (MW-1 to MW-5). Maximum soil concentrations of 780 mg/kg TPHg and 0.79 mg/kg benzene were detected in boring B-11 at 9 ft bgs. Maximum groundwater concentrations were detected

in boring B-11 at 69 µg/L TPHd, 16,000 µg/L TPHg, and 850 µg/L benzene. No MTBE was detected above laboratory reporting limits in any of the groundwater samples.

***July 2001 Monitoring Well Installations*:** On July 2, 2001, TEC installed three groundwater monitoring wells (MW-6 through MW-8) to determine the down-gradient extent of the groundwater plume. No petroleum hydrocarbons were detected above laboratory reporting limits in soil. TPHd and MTBE were detected in groundwater at a maximum concentration of 700 µg/L in well MW-8, and 10 µg/L in well MW-6, respectively. No TPHg and benzene were detected in groundwater.

October 2002 Risk Assessment: On October 14, 2002, TEC submitted the *Impact Evaluation of the Subsurface Utilities as Preferential Pathway and Risk Assessment of the Impact of Groundwater Petroleum Hydrocarbons on Indoor Air*. TEC concluded and recommended the following: the benzene groundwater plume is limited onsite near monitoring well MW-1 and the nearest utility lines on Terminal Count do not appear to impact the plume's path; the benzene groundwater concentration exceeds the indoor air risk based screening level of 84 part per billion (ppb); and in order to obtain case closure at the site, groundwater remediation near well MW-1 is recommended to decrease the benzene concentration below the risk level of 84 ppb.

February 2003 Feasibility Study: On February 4, 2003, TEC submitted the *Feasibility Study for Groundwater Remediation*. TEC recommended in-situ groundwater bioremediation, specifically oxygen release compound (ORC) injections.

April 2003 Treatability Study Workplan: On April 10, 2003, TEC submitted the *Treatability Study Workplan for Groundwater Remediation* justifying the implementation of ORC injections, which was subsequently approved by SCMHD in a letter dated July 22, 2003.

October 2003 ORC Injections: On October 16, 2003, TEC oversaw the drilling of 16 direct-push soil borings (A through P) by Vironex to be used as ORC injection points. Borings A through E were advanced to 10 ft bgs, and borings F through P were advanced to 8 ft bgs. A 1,600 square foot treatment area consisting of 16 points on 10 foot spacing was used to inject 930 pounds of ORC in the vicinity of MW-1. The ORC remedial technique proved ineffective. The event is summarized in TEC's November 10, 2004 *Remedial Action Report*.

July 2005 Site Dual-Phase Extraction (DPE): The site was subsequently transferred to a new environmental consultant Ecologics. Ecologics performed interim remedial activities consisting of dual-phase extraction (DPE) at the site. Insufficient

documentation is available to evaluate the DPE activities, but Ecologics concluded that DPE remediation was ineffective.

May 2006 Remedial Action Workplan: On May 1, 2006, Ecologics submitted a workplan which proposed excavating the impacted soil in the vicinity of well MW-1.

May 2008 Site Assessment Report: The site was subsequently transferred to a new environmental consultant CRA. On May 30, 2008, CRA submitted a site assessment report which evaluated the results of three soil gas samples and a grab groundwater sample from soil boring B-15. Due to elevated hydrocarbon concentrations, CRA recommended that a feasibility study be conducted to determine the most cost effective way to remediate the hydrocarbons remaining at the site.

Quarterly Monitoring: Quarterly groundwater monitoring and sampling has been performed at the site since April 2000 and includes a network of seven wells (MW-1 through MW-3 and MW-5 through MW-8). SMCEHD's February 22, 2007 letter approved Cambria's proposed reduced groundwater monitoring schedule to sample wells MW-1, MW-2, and MW-8 semi-annually. Samples are analyzed for TPHd, TPHg, BTEX, and MTBE. Groundwater sampling frequency was reduced to annual based on regulatory direction from the SCDEHM in a letter dated July 16, 2009.

4.0 SITE ASSESSMENT ACTIVITIES

The objectives of this investigation were to further define the horizontal and vertical extent of hydrocarbon impacted soil associated with the fueling facilities and any other potential source at or near the site. Additionally, the highest identified concentrations of dissolved hydrocarbons in groundwater have been reported in well MW-1. This well is located cross- and somewhat up-gradient from the USTs and related product piping.

A grab-groundwater sample from previous boring B-11 reported high concentrations of dissolved gasoline and benzene, and well MW-1 has historically reported elevated concentrations of dissolved hydrocarbons, as well. To further define the extent and origin of hydrocarbons in both these areas, CRA plans to advanced 10 additional borings and collect both soil and grab-groundwater samples in the vicinity of previous boring B-11 and well MW-1. All work was completed according to CRA's *Additional Site Assessment Work Plan* dated June 11, 2009, and CRA's Standard Field Procedures presented in Appendix B.

Personnel Present: CRA's Staff Scientist Calvin Hee supervised the drilling and sampling of the ten borings. All soil boring and sampling activities were overseen by CRA Senior Geologist Ron Scheele, a California Professional Geologist.

Permits: San Mateo County Environmental Health Department issued subsurface drilling permits for soil boring activities. The City of South San Francisco Engineering Division issued an encroachment permit to drill in the public right-of-way. Copies of the permits are included in Appendix C.

Drilling Company: Vapor Tech Services (C57# 916085) of Berkeley, California performed the drilling and sampling activities.

Drilling Date: Drilling and sampling activities were performed on March 29, 2010.

Utility Location: CRA marked out the proposed boring locations with white paint and notified underground service alert (USA) to have the utilities marked out. In addition, CRA retained California Utility Surveys of San Ramon, California to locate and mark out any underground utilities that were not marked by USA.

Utility Clearance: To avoid damage to any subsurface utilities, each boring location was advanced to a depth of 5 feet using a hand auger.

Soil Boring and Sampling Method: Soil borings B-16 through B-25 were advanced using a hand auger and a direct-push drilling rig (GeoProbe 420M). Hydrocarbon field screening was performed using a photo-ionization detector (PID). Soil samples were collected where hydrocarbon staining, odor or elevated PID readings were encountered, or at a minimum of every 2.5 ft. A light hydrocarbon sheen was observed in soil samples collected from borings B-16 and B-19. During hand augering activities, soil samples were collected using a slide hammer loaded with 2-inch diameter stainless steel tube, and subsequently capped and labeled. During direct-push drilling below 5 ft, soil samples were collected in acetate liners, and subsequently capped and labeled. All samples collected were placed on ice and transported to an analytical the laboratory under chain-of-custody. Soil boring logs including lithology descriptions and PID screening data are presented in Appendix D.

Soil Boring Depths: Soil borings B-16 through B-21, and B-24 was advanced to 10 ft bgs. Soil boring B-22 was terminated at 6 ft bgs due to drill refusal likely related to a large rock. Soil boring B-17 also encountered difficult drilling conditions which prevented collection of a soil sample from 7.5 to 10 ft bgs. Soil boring B-23 and B-25 were advanced to 12 and 15 ft bgs, respectively.

Soil Sample Analyses: Select soil samples were analyzed for TPHd by EPA Method SW8015B, TPHg by EPA Method 8015Bm, and BTEX/MTBE by EPA Method SW8021B by McCampbell Analytical of Pittsburg, CA, a state-certified laboratory. The laboratory analytical report is included in Appendix E.

Groundwater Depths: Saturated soil was generally encountered between approximately 5.0 to 6.5 ft bgs. A perched water bearing zone was encountered at approximately 2.0 ft bgs in borings B-16 and B-19.

Grab Groundwater Sampling Method: Upon completion of each soil boring, ¾-inch PVC temporary screen casing was lowered into each boring except B-22 which was too shallow to encounter groundwater. Grab groundwater samples were collected using clean disposable tubing equipped with a check valve. Grab groundwater samples were decanted into the appropriate sampling containers, labeled, placed on ice and transported to the lab under chain-of-custody.

Grab Groundwater Sample Analyses: Grab groundwater samples were analyzed for TPHd by EPA Method SW8015B (with and without silica gel cleanup), TPHg by EPA Method 8015Bm, and BTEX/MTBE by EPA Method SW8021B by McCampbell Analytical of Pittsburg, CA, a state-certified laboratory. The laboratory analytical report is included in Appendix E.

Geotracker: All required data has been uploaded to the California State Water Resources Control Board's Geotracker database.

Waste Profiling and Disposal: Soil cuttings and waste water generated during drilling activities was temporarily stored on site in DOT-approved 55-gallon drums pending analysis for disposal. Documentation of waste profiling and disposal is included in Appendix F.

5.0 ASSESSMENT RESULTS

5.1 HYDROGEOLOGICAL FINDINGS

A perched water-bearing zone was sometimes encountered onsite at approximately 2.0 ft bgs. A dark grey, silty clay ("Bay Muds") was encountered at 8.5 to 10 ft bgs in all borings, except for boring B-23 which was drilled to a total depth of 12 ft bgs. The lower

depth of the Bay Mud and overlying sand layer in borings B-23 and B-14 suggests that an east-west trending fluvial channel may be present across the north edge of the site.

5.2 HYDROCARBON DISTRIBUTION IN SOIL

Diesel range hydrocarbons were detected in the soil samples collected from borings B-16 through B-20, B-22, B-24, and B-25 during this investigation. Detected concentrations of TPHd ranged from 1.8 milligrams per kilogram (mg/kg) in B-18-7.5 to 2,800 mg/kg in B-18-2.5. The highest concentrations were detected in samples collected in the vicinity northwest of the northern most dispenser island. Notes included in the laboratory report indicated that the samples contained gasoline-range compounds which may have overestimated the TPHd results. Detected concentrations of TPHg were detected in soil samples collected from borings B-16 through B-19, and B-24 ranging from 1.4 mg/kg (B-24-5.0) to 3,900 mg/kg (B-18-2.5). Benzene concentrations were detected in soil samples collected from borings B-16 through B-18, and B-24 at concentrations ranging from 0.0054 mg/kg (B-17-2.5) to 13 mg/kg (B-18-2.5). No MTBE was detected in any soil samples collected during this investigation.

Hydrocarbon impacted soil appears to be limited to onsite. Elevated hydrocarbon concentrations are present in soil primarily northwest of the northern most dispenser island. Elevated hydrocarbon concentrations are present between 2.5 and 5.0 ft bgs which correlates with the fluctuations of the shallow groundwater table. Historical sample results also suggest that additional hydrocarbon impacted soil remains beneath the fuel lines, and possibly beneath the dispensers, and adjacent to the USTs.

5.3 HYDROCARBON DISTRIBUTION IN GROUNDWATER

Diesel-range hydrocarbons were detected in all grab groundwater samples collected during this investigation, except from B-21, and ranged from 190 micrograms per liter (µg/L) (B-25-W) to 200,000 µg/L (B-16-W) when a silica gel cleanup was performed. A lighter than water immiscible sheen was observed in water samples from borings B-16 through B-19. Similar to soil analytic results; grab groundwater samples were described as having significant levels of both diesel- and gasoline-range compounds. Gasoline-range hydrocarbons were detected in six out of ten groundwater samples at concentrations ranging from 91 µg/L (B-20-W) to 69,000 µg/L (B-18-W). Benzene was detected in 5 of 10 groundwater samples ranging from 8.0 µg/L (B-23-W) to 6,800 µg/L (B-18-W). MTBE was detected in B-16-W, B-20-W, and B-24-W at concentrations of 800 µg/L, 7.2 µg/L, and 10 µg/L, respectively.

Elevated hydrocarbon concentrations are present in groundwater primarily northwest and west of the dispensers. The hydrocarbon plumes generally trend toward the northwest, consistent with the groundwater flow direction. The hydrocarbon plumes are primarily onsite and are adequately defined.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 CONCLUSIONS

The following conclusions are drawn from historical data and findings from this investigation:

- Shallow soil and groundwater beneath the site is impacted by both gasoline and diesel. In addition to the hydrocarbon impact that likely remains beneath the UST fuel lines, elevated hydrocarbon levels are also present northwest of the UST dispensers at depth of 2.5 to 5.0 ft bgs, coincident with the fluctuations of the shallow groundwater table. This shallow hydrocarbon-impacted area correlates with a smear zone resulting from hydrocarbon plumes originating from the UST system. The highest hydrocarbon concentrations in soil and groundwater are representative of free product and denote a secondary source. Variations in the historical groundwater flow direction and/or a possible unidentified fuel line along the west side of the dispensers may explain the anomalous cross gradient location of the hydrocarbon impact.

6.2 RECOMMENDATIONS

Based on the above conclusions, CRA offers the following recommendations:

- Although the majority of the hydrocarbon impacted soil appears to be localized to onsite, additional delineation of this secondary source is needed, particularly in the vicinity around boring B-18, to minimize the extent of remedial excavation.

All of Which is Respectfully Submitted,

GROUNDWATER ELEVATION CONTOUR and
HYDROCARBON CONCENTRATION MAP
OLYMPIAN CARDLOCK FACILITY
131 TERMINAL COURT
South San Francisco, California
March 10, 2010

161558_EM001-1Q10-GWHC.DWG

EXPLANATION

- Monitoring well location
- Soil boring location
- Destroyed well location
- Soil boring / grab groundwater sample location
- Storm drain line
- Water line
- Gas line
- Electrical line
- Catch basin
- 96,000 — TPHd concentration in groundwater, in micrograms per liter (µg/L)
- NA — Not Available / Not Analyzed
- 100 — TPHd isoconcentration contour line, in micrograms per liter (µg/L) dashed where inferred
- * — Does not match diesel chromatagram pattern
- <1.0 (2000) — Old sample data in gray with year in parenthesis

Notes:

all soil data prior to 2010 obtained by previous consultant

TPHg = Total petroleum hydrocarbons as gasoline by EPA Method 8015

TPHd = Total petroleum hydrocarbons as diesel by EPA Method 8015

BTEX = Benzene, Toluene, Ethylbenzene, Xylenes by EPA Method 8020

MTBE = Methyl-tert-butyl ether (EPA Method 8020)

a = Hydrocarbon response in the diesel range but does not resemble diesel

b = MTBE confirmed by EPA Method 8260

<X = Concentration less than laboratory reporting limits

fbg = Feet below grade

-- = Not applicable

NA = Not avaliable, not analyzed

Notes:
TOC = Elevation of the top of casing in feet relative to mean sea level
TOC elevation survey completed in July 2001 by Virgil Chavez Land Surveying
ft btoc = measured in feet below top of casing
ft amsl = measured in feet above sea level
TPHd = Total petroleum hydrocarbons as diesel by EPA modified Method SW8015C, (with sillica gel cleanup)
TPHg = Total petroleum hydrocarbons as gasoline by EPA modified Method SW8015C
Benzene, Toluene, Ethylbenzene, Xylenes by EPA Method SW8021B
MTBE = Methyl-tert-butyl ether (MTBE) (EPA Method 8020 or 8021B)
TBA = tert-Butyl Alcohol (EPA Method 8260)
µg/L = Micrograms per liter
ND = compound not detected above laboratory reporting limits
<X = Concentration less than laboratory reporting limits
-- = Not analyzed / not applicable / not available
* = MTBE confirmed by EPA Method 8260
** = Does not match diesel pattern
# = See laboratory report for notes and/or a description of chromatogram pattern
NA = Not avaliable, not analyzed

Note: Total Dissolved Solids (TDS) analyzed for MW-3 on 7/13/01 showed concentration of 19,524 ppm.

SUBJECT: OLYMPIAN FUELING FACILITY AT 131 TERMINAL COURT SOUTH SAN FRANCISCO, CALIFORNIA

Dear Mr. Bertetta:

Thank you for the May 13, 2009 *Revised Feasibility Study/Corrective Action Plan(CAP)*, and the April 27, 2009 *Groundwater Monitoring Report-First Quarter 2009* prepared by Conestoga-Rovers & Associates for the above referenced site. San Mateo County Groundwater Protection Program (GPP) generally concurs with the proposed remediation method (excavation), and proposed data gaps with regard to the horizontal and vertical extent of saturated soil contamination.

However the use of Environmental Screening Levels (ESLs) as clean-up goals for this site must be adequately justified. Assumptions used in the development of ESLs may not correspond to site-specific conditions at the site. (i.e. depth to groundwater at the site is 1-4 fbg vs. 10 fbg used in ESLs).

Due to the perceived lack of an immediate risk to human health or the environment under the current land use as a service station with currently detected concentrations, GPP will allow the proposed remedial excavation to occur upon the planned removal of the Underground Storage Tank (UST) system during the later half of 2012. However, should repairs or upgrades to the tank system facilitate access to impacted soil, or if the USTs are removed prior to this time, implementation of the proposed excavation will be required within 60 days. Should fueling operations at this site continue after 2012, an alternative remedial method must be selected and implemented by January 1, 2013.

Please submit a workplan to complete characterization of the vertical and lateral extent of saturated soil contamination as recommended in the CAP **by January 8, 2010**. Please include justification for the use of unmodified ESLs as clean-up goals or propose clean-up goals based on site-specific conditions. In addition you may reduce the frequency of monitoring and sampling of site wells to an annual basis, to occur during the first quarter.

I can be reached at (650) 372-6298 or by e-mail at jmadden@co.sanmateo.ca.us to answer any questions you may have regarding this letter. Thank you for your cooperation.

Sincerely,

Jacob Madden
Hazardous Materials Specialist
Groundwater Protection Program

SUBJECT: OLYMPIAN FUELING FACILITY AT 131 TERMINAL COURT SOUTH SAN FRANCISCO, CALIFORNIA

Dear Mr. Bertetta:

Thank you for the January 11, 2010, *Additional Site Assessment Workplan* prepared by Conestoga-Rovers & Associates (CRA) for the above referenced site. It appears that CRA has two separate objectives. First, advance 15 borings to define the extent of the future excavation in the vicinity of the tanks and dispensers, and second, advance nine borings to define the source and extent of contamination in the vicinity of B-11 and MW-1. San Mateo County Groundwater Protection Program (GPP) concurs with the proposed scope of work with the following comments.

- It may be beneficial to postpone implementation of the 15 borings in the vicinity of the tanks and dispensers to immediately prior to the planned excavation in order to obtain current information for remedial decision making, and possible pre-characterization of soil. In addition, it appears that several proposed sample locations are located adjacent to previous borings (MW-2, MW-5 and B1 through B-6) that were below ESL's and even below detection limits. GPP cannot support fund reimbursement for these proposed borings at this time without further justification. Please be aware at the time of tank removal, sidewall samples will likely be required by CUPA staff to determine if a new release has occurred.

- It appears that justified site-specific clean-up goals were not included in the subject workplan as requested. Clean-up goals will need to be proposed prior to approval of a final remedial action plan (RAP). This may determine if excavation is even required or the extent of any remedial effort.

- Although not stated in the subject workplan, it is assumed that data collected during this investigation will be used to prepare a brief excavation RAP which may be included with the site assessment report.

Please submit a site assessment report/RAP with justified site-specific clean-up goals no later than **May 28, 2010.**

If you choose to postpone implementation of the 15 borings to define the future excavation extent, you may also postpone the RAP portion of the assessment report. However, at a minimum please submit the assessment report/RAP for the 15 proposed borings no later than **June 15, 2012.**

The next annual groundwater monitoring report is due no later than **May 15, 2010.**

I can be reached at (650) 372-6298 or by e-mail at jmadden@co.sanmateo.ca.us to answer any questions you may have regarding this letter. Thank you for your cooperation.

Sincerely,

Jacob Madden

APPENDIX B

STANDARD OPERATING PROCEDURES

APPENDIX B

STANDARD FIELD PROCEDURES

Conestoga-Rovers & Associates

STANDARD FIELD PROCEDURES FOR HAND-AUGER SOIL BORINGS

This document describes Conestoga-Rovers & Associates standard field methods for drilling and sampling soil borings using a hand-auger. These procedures are designed to comply with Federal, State and local regulatory guidelines. Specific field procedures are summarized below.

Objectives

Soil samples are collected to characterize subsurface lithology, assess whether the soils exhibit obvious hydrocarbon or other compound vapor odor or staining, estimate ground water depth and quality and to submit samples for chemical analysis.

Soil Classification/Logging

All soil samples are classified according to the Unified Soil Classification System by a trained geologist or engineer working under the supervision of a California Professional Geologist (PG) or a Certified Engineering Geologist (CEG). The following soil properties are noted for each soil sample:

- Principal and secondary grain size category (i.e. sand, silt, clay or gravel)
- Approximate percentage of each grain size category,
- Color,
- Approximate water or product saturation percentage,
- Observed odor and/or discoloration,
- Other significant observations (i.e. cementation, presence of marker horizons, mineralogy), and
- Estimated permeability.

Soil Boring and Sampling

Hand-auger borings are typically drilled using a hand-held bucket auger to remove soil to the desired sampling depth. Samples are collected using lined split-barrel or equivalent samplers driven into undisturbed sediments beyond the bottom of the augered hole. The vertical location of each soil sample is determined using a tape measure. All sample depths use the ground surface immediately adjacent to the boring as a datum. The horizontal location of each boring is measured in the field from an onsite permanent reference using a measuring wheel or tape measure.

Augering and sampling equipment is steam-cleaned prior to drilling and between borings to prevent cross-contamination. Sampling equipment is washed between samples with trisodium phosphate or an equivalent EPA-approved detergent.

Sample Storage, Handling and Transport

Sampling tubes chosen for analysis are trimmed of excess soil and capped with Teflon tape and plastic end caps. Soil samples are labeled and stored at or below 4°C on either crushed or dry ice, depending upon local regulations. Samples are transported under chain-of-custody to a State-certified analytic laboratory.

Field Screening

One of the remaining tubes is partially emptied leaving about one-third of the soil in the tube. The tube is capped with plastic end caps and set aside to allow hydrocarbons to volatilize from the soil. After ten to fifteen minutes, a portable photoionization detector (PID) measures volatile hydrocarbon vapor concentrations in the tube headspace, extracting the vapor through a slit in the cap. PID measurements are used along with the field observations, odors, stratigraphy and ground water depth to select soil samples for analysis.

Water Sampling

Water samples, if they are collected from the boring, are collected from the open borehole using bailers. The ground water samples are decanted into the appropriate containers supplied by the analytic laboratory. Samples are labeled, placed in protective foam sleeves, stored on crushed ice at or below 4°C, and transported under chain-of-custody to the laboratory.

Duplicates and Blanks

Blind duplicate water samples are collected usually collected only for monitoring well sampling programs, at a rate of one blind sample for every 10 wells sampled. Laboratory-supplied trip blanks accompany samples collected for all sampling programs to check for cross-contamination caused by sample handling and transport. These trip blanks are analyzed if the internal laboratory QA/QC blanks contain the suspected field contaminants. An equipment blank may also be analyzed if non-dedicated sampling equipment is used.

Grouting

The borings are filled to the ground surface with cement grout poured or pumped through a tremie pipe.

Waste Handling and Disposal

Soil cuttings from drilling activities are usually stockpiled onsite on top of and covered by plastic sheeting. At least four individual soil samples are collected from the stockpiles for later compositing at the analytic laboratory. The composite sample is analyzed for the same constituents analyzed in the borehole samples. Soil cuttings are transported by licensed waste haulers and disposed in secure, licensed facilities based on the composite analytic results.

Ground water removed during sampling and/or rinsate generated during decontamination procedures are stored onsite in sealed 55-gallon drums. Each drum is labeled with the drum number, date of generation, suspected contents, generator identification and consultant contact. Disposal of the water is based on the analytic results for the well samples. The water is either pumped out using a vacuum truck for transport to a licensed waste treatment/disposal facility or the individual drums are picked up and transported to the waste facility where the drum contents are removed and appropriately disposed.

Conestoga-Rovers & Associates

STANDARD FIELD PROCEDURES FOR GEOPROBE® SOIL AND GROUNDWATER SAMPLING

This document describes Conestoga-Rovers & Associates' standard field methods for GeoProbe® soil and groundwater sampling. These procedures are designed to comply with Federal, State and local regulatory guidelines. Specific field procedures are summarized below.

Objectives

Soil samples are collected to characterize subsurface lithology, assess whether the soils exhibit obvious hydrocarbon or other compound vapor odor or staining, estimate ground water depth and quality and to submit samples for chemical analysis.

Soil Classification/Logging

All soil samples are classified according to the Unified Soil Classification System by a trained geologist or engineer working under the supervision of a California Professional Geologist (PG) or a Certified Engineering Geologist (CEG). The following soil properties are noted for each soil sample:

- Principal and secondary grain size category (i.e., sand, silt, clay or gravel)
- Approximate percentage of each grain size category,
- Color,
- Approximate water or separate-phase hydrocarbon saturation percentage,
- Observed odor and/or discoloration, and
- Other significant observations (i.e., cementation, presence of marker horizons, mineralogy)
- Estimated permeability

Soil Sampling

GeoProbe® soil samples are collected from borings driven using hydraulic push technologies. A minimum of one and one half ft of the soil column is collected for every five ft of drilled depth. Additional soil samples can be collected near the water table and at lithologic changes. Samples are collected using samplers lined with polyethylene or brass tubes driven into undisturbed sediments at the bottom of the borehole. The ground surface immediately adjacent to the boring is used as a datum to measure sample depth. The horizontal location of each boring is measured in the field relative to a permanent on-site reference using a measuring wheel or tape measure.

Drilling and sampling equipment is steam-cleaned or washed prior to drilling and between borings to prevent cross-contamination. Sampling equipment is washed between samples with trisodium phosphate or an equivalent EPA-approved detergent.

Sample Storage, Handling and Transport

Sampling tubes chosen for analysis are trimmed of excess soil and capped with Teflon® tape and plastic end caps. Soil samples are labeled and stored at or below 4°C on either crushed or dry ice, depending upon local regulations. Samples are transported under chain-of-custody to a State-certified analytic laboratory.

Field Screening

After a soil sample has been collected, soil from the remaining tubing is placed inside a sealed plastic bag and set aside to allow hydrocarbons to volatilize from the soil. After ten to fifteen minutes, a portable GasTech® or photoionization detector measures volatile hydrocarbon vapor concentrations in the bag's headspace, extracting the vapor through a slit in the plastic bag. The measurements are used along with the field observations, odors, stratigraphy and ground water depth to select soil samples for analysis.

Grab Groundwater Sampling

Groundwater samples are collected from the open borehole using bailers, advancing disposable Tygon® tubing into the borehole and extracting ground water using a diaphragm pump, or using a hydro-punch style sampler with a bailer or tubing. The ground water samples are decanted into the appropriate containers supplied by the analytic laboratory. Samples are labeled, placed in protective foam sleeves, stored on crushed ice at or below 4° C, and transported under chain-of-custody to the laboratory.

Duplicates and Blanks

Blind duplicate water samples are usually collected only for monitoring well sampling programs, at a rate of one blind sample for every 10 wells sampled. Laboratory-supplied trip blanks accompany samples collected for all sampling programs to check for cross-contamination caused by sample handling and transport. These trip blanks are analyzed if the internal laboratory quality assurance/quality control (QA/QC) blanks contain the suspected field contaminants. An equipment blank may also be analyzed if non-dedicated sampling equipment is used.

Grouting

If the borings are not completed as wells, the borings are filled to the ground surface with cement grout poured or pumped through a tremie pipe.

PERMITS

2009 SUBSURFACE DRILLING PERMIT APPLICATION

ENVIRONMENTAL HEALTH SERVICES DIVISION

SAN MATEO COUNTY HEALTH DEPARTMENT
1009 ALAMEDA DE LAS PULGAS, SUITE 150, SAN MATEO CA 94403
VOICE (650) 372-6200 FAX (650) 627-8244

ALLOW FIVE (5) WORKING DAYS FOR PROCESSING PERMIT

Fees: $544 (env/wells) and $340 (geo borings only)

DRILLING DATE & TIME MUST BE SCHEDULED WITH COUNTY STAFF AT LEAST THREE (3) WORKING DAYS IN ADVANCE

PURPOSE OF APPLICATION: ☐ GROUNDWATER MONITORING WELL INSTALLATION/DESTRUCTION ☑ CONSTRUCT SOIL BORINGS ☐ VAPOR WELL INSTALLATION/DESTRUCTION ☐ PERMIT EXTENSION OF PERMIT #MW_____
NO. OF WELLS_____ NO. OF BORINGS 10 WELL/BORING NAMES B-6 thru B-25

PURPOSE OF DRILLING: ☑ ENVIRONMENTAL ☐ GEOTECHNICAL
REQUIRED BY: ☐ COUNTY GROUNDWATER PROTECTION PROGRAM ☑ RWQCB/DTSC/USEPA (Provide approval letter) ☐ OTHER (i.e. voluntary)

Site Name_____ Assessor's Parcel #_____ (one per permit)
Drilling Location Address 131 Terminal Ct. City South San Francisco
To Be Constructed In: ☐ Public Property ☑ Private Property ☐ Refuse ☐ Other_____
Maximum Proposed Depth Wells/Borings 10 (feet) Drilling Method Direct push
Boring Diameter 2" Casing Diameter NA Screen Interval NA
Development Method NA (additional 72 hour staff notification required)
Destruction Method (6 gallons water tank per 94 lb cement, up to 5% bentonite): ☐ Pressure grouting (provide well construction logs) ☐ Overdrilling

WELL/BORING OWNER: (WELL/BORING OWNER NAME OR CONTACT NAME SHOULD MATCH SIGNATURE)

Name Oyster JV Contact Person Steve Hirtle / Tree Bedrock
Address 1300 Industrial Rd. Suite 2 City, State, ZIP San Carlos, CA 94070
Telephone (650) 596-9950 Email_____
It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application. It is my responsibility to notify the County of any known damage to the well, and to maintain the well in good condition. *Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature on permit application.)*
Well/Boring Owner's/Contact Person's Signature [signature] Date 2-24-10

PROPERTY OWNER: (NAME AS APPEARS ON ASSESSOR'S ROLLS SHOULD MATCH SIGNATURE)

Name Golden Gate Produce Terminal Contact Person Primo R. Rubetta
Address 131 Terminal Ct City, State, ZIP SSF CA 94080
Telephone 650-583-4886 Email 6607212@aol.com
I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage to the well. *(Letter signed by property owner, containing above language, or copy of drilling permit may be substituted for signature on permit application.)*
Property Owner's Signature [signature] Mgr Date 3-4-10

Drilling Company: Vapor Tech Services Contact Person Glen Kaspe
Address: 1378 66th Street C57 Drillers License # 916065
City, State, ZIP Berkeley CA 94702 Telephone/Email (415) 378-0415
I certify that the well/boring will be constructed in compliance with the conditions of this permit (see reverse), the San Mateo County Ordinance, and the State Water Well Standards, and that the license listed above is considered current and active by the Contractors State License Board.
Driller's Signature [signature] Date 2-23-10

Consultant Company: CRA Project Manager Robert Foss
Address: 5900 Hollis St. Telephone (510) 420-3348
City, State, ZIP Emeryville CA 94608 Email Rfoss@craworld.com
I certify that this application is correct to the best of my knowledge. I certify the well/boring will be constructed/destroyed in compliance with the conditions of this permit (see reverse), the San Mateo County Ordinance, and the State Water Well Standards. I understand that I am responsible for General Conditions "D and E" of this permit. I certify if I indicated the purpose of drilling is geotechnical, then no one will use the boring to collect any samples for environmental analyses. *(Responsible Professional must be a California Professional Geologist or Civil Engineer.)*
Responsible Professional's Name (Please print legibly) Robert Foss
Responsible Professional's Signature Robert Foss Date 3/4/10
California Professional Geologist (PG) No. 7445 **or Civil Engineer No.**_____

 2009 SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate & correct map of existing and proposed well/boring locations must be included with the permit application. The well/boring location map must include the following.

1. North arrow, existing & historic site features, wells, approximate property lines and any other pertinent existing & historic features and information.
2. Proposed well/boring locations to scale.

A work plan describing the drilling and construction/destruction methodology, at a minimum, is required by County Staff. Upon review of information on this application and the submitted work plan, and subject to approval noted below, a permit will be issued allowing well/boring owner, driller, and responsible professional (consultant) to perform the specified work. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit must be available on site while work related to the permit is being performed. Drilling date and time must be scheduled with County staff at least three (3) working days in advance of field work. Drilling may begin at the notified date and time whether County staff is present or not.

GENERAL CONDITIONS:

A. Well and boring construction and destruction under this permit is subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

B. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its' officers, agents and employees, free and harmless from any and all expense, cost or liability in connection with or resulting from work or stoppage work associated with the permit including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

C. All borings must be properly destroyed (grouted/sealed) within 24 hours of drilling unless special conditions are approved in writing as part of this permit.

D. Analytical results of all soil and groundwater samples collected during the execution of drilling under this permit must be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is required within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

E. In addition to the County copy of the State DWR Form 188, boring logs and well construction details for all borings/wells except geotechnical borings, signed by a Responsible Professional, must be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. As-built locations/dimensions must be finalized in subsequent report of findings submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction.

F. Permit is valid only for the purpose specified herein. No change in construction procedure, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County.

G. Permit is valid for one mobilization only and is automatically canceled if not exercised, or if an extension is not applied for and granted by County GPP, within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time, at least one minute prior to notified start time, will result in the Consultant will be billed an Inspection Cancellation fee of $249 for 2009 if GPP staff attempted to perform an inspection.

H. Wells installed under this permit may not be used for domestic, municipal, commercial, or irrigation water supply.

I. All work plans and reports related to work performed under County oversight must conform to County GPP guidelines, Regional Water Quality Control Board guidelines, and State Water Well Standards.

J. Top-of-casing elevation of all wells must be surveyed to the nearest 0.01-foot relative to Mean Sea Level (NAVD88) and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

K. Latitude and longitude of all wells must be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

L. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, and potentially re-permit the work as a new mobilization.

SPECIAL CONDITIONS:_____

Approved:_____ RO/SD#_____ Date:_____

Revised every January 1

2009 SUBSURFACE DRILLING PERMIT APPLICATION

PERMIT APPLICATION INSTRUCTIONS AND FEES

San Mateo County Health Department Groundwater Protection Program (GPP) is the permitting agency for all subsurface drilling for environmental and geotechnical purposes within San Mateo County except in the City of Daly City. All drilling in the City of Daly City is permitted by the City of Daly City Water and Wastewater Department personnel at (650) 991-8200 with appropriate notification to GPP for GPP lead sites. San Mateo County Health Department Land Use Program (LUP) reviews all water well permit applications (www.smhealth.org/environ/forms) for public supply well, domestic well, agricultural well, cathodic protection well, exploratory well, and geothermal heat exchange well construction and destruction and permit applications for all reconnaissance, investigation, and excavation work strictly for land use purposes. Please contact the LUP at (650) 363-4305 to discuss permitting, notification, and drilling requirements for these types of wells and drilling.

A subsurface drilling permit is required if groundwater is anticipated to be encountered, drilling extends deeper than 11 feet, or groundwater or vapor wells are to be installed or destroyed. Allow 5 working days (Monday through Friday) for processing permit after receipt by San Mateo County before you will be allowed to drill under the permit. The permit is good for 120 days. A 120-day extension may be granted for permits which have not been used during the original 120-day time frame upon completion of this Subsurface Drilling Permit Application and payment of the permit extension fee if applied for prior to the original permit expiring. Permits are good for only one mobilization. The Date and the Time of the beginning of the drilling must be scheduled with the County inspector at least 1 working days (Monday through Friday) prior to the drilling via phone call, voice mail, fax, or email. This may occur concurrently with the processing time; however, please allow 2 working days (Monday through Friday) after the permit application is received by San County for the County inspector to review the permit application prior to providing notification. Notification can not be accepted at the time of Subsurface Drilling Permit Application submission or any time prior to the County inspector reviewing the permit application. Cancellation of field work can happen up to 1 minute prior to the notified start time via voice mail or email. However, should the cancellation of the field work not occur in time and GPP staff attempted to perform an inspection, then the Consultant will be billed an Inspection Cancellation fee of $249 for 2009. The permit is still valid until its expiration date.

Section 1: Purpose of Application
At least one of the four boxes must be selected; however, multiple boxes may be selected as long as all of the wells and borings are on the same assessor's parcel or public right-of-way (see Section 4). A boring under this permit application is defined as a constructed hole lasting less than 24 hours before being properly destroyed. After 24 hours, the constructed hole is considered a well under this permit application which needs to be constructed appropriately unless special conditions are approved as part of the permit. If Permit Extension is selected, then write in the permit number of the permit to be extended. List the number of wells and borings anticipated to be drilled and what they will be named. This number may change in the field based on conditions encountered.

Section 2: Purpose of Drilling
At least one of the two boxes must be selected; however, both boxes may be selected as long as both purposes of drillings are to be conducted on the same assessor's parcel or public right-of-way (see Section 4).

For Geotechnical Drilling in which only borings will be constructed, the 2009 fee is $340. This type of drilling may also be conducted under San Mateo County's Annual Geotechnical Drilling Permit in which consulting companies pay an annual fee of $680 to perform this type of drilling an unlimited amount of times. Please note, a Notification Form similar to this Subsurface Drilling Permit Application must be completely filled out and submitted at least 3 business days prior to drilling under the Annual Geotechnical Drilling Permit.

For Environmental Drilling of both borings and wells, Geotechnical Drilling of wells, or any combination of these with Geotechnical Drilling of borings only, the 2009 fee is $544. If there are several wells and borings over several contiguous assessor's parcels and public right-of-ways, then discuss the fee with the County inspector for that district by calling the main number at the top of the application. The County inspector may charge only one fee for borings and wells constructed across contiguous assessor's parcels and public right-of-ways during one mobilization. However, this is dependent on how much the County inspector believes will need to be inspected in the field and how much review time of required submittals will be needed.

For Permit Extensions, the 2009 fee is 50% of the fee for the type of drilling the day the permit extension is requested. If the rest of the information is to remain the same, then only Section 8 with the registered professional's signature needs to be completed. If any portion of the original application is to be updated, then the appropriate section(s) would need to be filled out completely with any required signatures.

Section 3: Required By
One of the three boxes must be selected. The County Groundwater Protection Program would relate only to investigations of known contaminated sites the County is the lead agency on. For drilling required by the Regional Water Quality Control Board (RWQCB), Department of Toxic Substances Control (DTSC), or the United States Environmental Protection Agency (USEPA), please include a copy of their approval letter. Other would refer to investigations required by the County CUPA (Hazardous Materials Program), County Land Use or Solid Waste Programs, or the County or City Planning or Building Departments or voluntary investigations for due diligence or property transactions.

2009 SUBSURFACE DRILLING PERMIT APPLICATION

PERMIT APPLICATION INSTRUCTIONS AND FEES (CONTINUED)

Section 4: Drilling Information
All applicable spaces must be filled in. Site name refers to the name of the project under which the investigation is being conducted. Assessor's parcel number is the 9-digit number corresponding to the specific private property drilling is proposed to be conducted on (County Assessor's web site property.smcgov.org under Property Assessment or www.sanmateocountytaxcollector.org under Secured Property Taxes). Each permit can include only one assessor's parcel number. If the drilling is to be conducted only in public right-of-ways, then the assessor's parcel number space should be filled in with NA for not applicable. If drilling is to occur on both a private property and a contiguous public right-of-way, then two permits (one for the private property and one for the public right-of-way) must be filled out. Address and City refer to the location of the specific property drilling is proposed to be conducted on. The Address for a public right-of-way would simply be the name of the specific section of the public right-of-way (such as 100 block of Main Street). To be Constructed in must have one box selected. Again, this differentiates between a public right-of-way and a private property. Refuse is a special land use designation which needs to be indicated on the permit application. The rest of this section is self-explanatory, may change in the field based on conditions encountered, and must be filled in except for Development Method if only borings are being constructed and destroyed within 24 hours.

Destruction Method requires the use of a maximum of 6 gallons of water per 94 pounds of cement. This measurement (for both water and cement) must be able to be demonstrated in the field upon request from the inspector (such as using a 5-gallon bucket for measuring the water and using entire bags of cement). For pressure grouting, the well construction log must be submitted. The sand pack may not be more than 3 feet above the top of the screened interval, the screened interval may not be longer than 25 feet, and the bottom of the original boring may not be more than 2 feet deeper than the bottom of the constructed well. The total depth of the well and the fact that there are no obstructions in the well must be verified in the field. Type I/II cement grout must be premixed into the well, followed by application of 25 psi pressure maintained for 5 minutes (which should be able to be demonstrated in the field). If the well does not meet pressure grouting criteria, it must be destroyed by drilling out to the total depth of the original boring. The well casing and all annular material must be removed, and the borings then permanently grouted to the surface using Type I/II cement grout. A general observation made by San Mateo County inspectors is that grouting borings using a ¼ inch PVC pipe, typically used to collect grab groundwater samples in borings, does not work without a grout pump. The destruction methodology should be described in the required work plan. Free falling grout is only allowed if the boring is dry, or if water is present in less than 10% of the boring, and less than 30 feet deep.

Section 5: Well/Boring Owner
The name of the entity owning the wells and borings must be listed along with their contact person (if different from the name of the well/boring owner), address, telephone number, and email address. The contact person must be directly associated with or an agent of the entity owning the wells and borings such as a property manager, real estate manager, contractor, or lawyer but not the environmental consultant listed on the permit application in Section 8. A telephone number and an email address must be provided to allow the County inspector to contact the well/boring owner to verify information if necessary. By providing an email address, the well/boring owner will receive an electronic copy of the permit. The permit application must be signed and dated by either the entity listed as the owner of the wells and borings or the contact person. Signatures (Sections 5 through 8) do not need to be wet; however, one copy of the permit application must contain all of the information besides the signatures in a legible format. ALL SIGNATURES REQUIRED (SECTIONS 5 THROUGH 8) DO NOT NEED TO BE ON THE SAME COPY OF THE PERMIT APPLICATION.

Section 6: Property Owner
The name of the entity owning the property must be listed and needs to match the name listed with the County Assessor for this property. The contact person must be directly associated with or an agent of the entity owning the property such as a property manager, real estate manager, contractor, or lawyer but not the environmental consultant listed on the permit application in Section 8. A telephone number and an email address must be provided to allow the County inspector to contact the property owner to verify information if necessary. By providing an email address, the property owner will receive an electronic copy of the permit. The permit application must be signed and dated by the entity listed as the property owner only. AGENTS CAN NOT SIGN FOR THE PROPERTY OWNER. For public right-of-way, a copy of the Encroachment permit can be substituted for the property owner signature. It is known by San Mateo County that the City of San Mateo will not issue an encroachment permit until the subsurface drilling permit is issued, but the City of San Mateo will issue a letter of intent to issue an encroachment permit which is acceptable to San Mateo County as a substitute for the property owner signature in City of San Mateo right-of-way.

Section 7: Drilling Company
The name of the company proposed to drill the wells and borings must be listed along with the drilling company contact person, address, telephone number, and email address. In addition, the driller's C57 license number must be provided. A telephone number and an email address must be provided to allow the County inspector to contact the drilling company to verify information if necessary. By providing an email address, the drilling company will receive an electronic copy of the permit. The permit application must be signed and dated by the driller's contact person. If the drilling company changes, then a new subsurface drilling permit application should be filled out completely except for Sections 5, 6, and 8.

Section 8: Consulting Company
The name of the company overseeing the proposed drilling of the wells and borings must be listed along with the project manager, address, telephone number, and email address. The responsible professional overseeing the work must print their name legibly, sign their name and date, and provide either their California Professional Geologist number or California Civil Engineering number.

DESCRIPTION OF WORK: *(ATTACH MAP AND PLANS AND/OR REFERENCE APPLICABLE CITY STANDARD PLAN DRAWINGS)*

Subsurface Investigation: - Advancement of soil borings to 10' bgs
- collect soil & GW samples

GENERAL CONDITIONS

1. Construction permits shall have the approval of the City Engineer and/or a designated representative and shall be in conformance with Standard Plan Drawings of the City of South San Francisco
2. All work shall be done subject to the supervision and to the satisfaction of the Public Works Department Cuts in the street must be neat and straight, and sidewalks must be saw cut **IMPORTANT: Call "Before you Dig" 1-800-227-2600.**
3. Excavation and shoring that is 5 feet deep or more shall conform to CAL/OSHA requirements.
4. Excavations MUST be covered at the end of each working day as directed by the Public Works Inspector
5. Provisions for two-way traffic shall be maintained at all times and must conform to Caltrans construction safety standards
6. The first two inspections are included in the cost of the Encroachment Permit For each additional inspection, the Contractor shall pay $100 prior to additional inspections. Payments shall be made in the Engineering Division
7. Encroachment Permit Deposits will be refunded upon proper installation of facilities, compaction of backfill, and replacement of pavement to satisfaction of the Public Works Inspector. Please call (650)877-8554 for a final inspection. Refund of deposit will **automatically** be processed upon receiving a satisfactory final inspection. Please allow a few weeks for processing.
8. If permitted work involves utilities (electric, gas, water, communications, etc) within the City's right-of-way, an additional $500 deposit will be assessed for as-built drawings, to be provided to the City. The $500 deposit will be released when the City receives an Auto CAD file with as-built information from the Utility Companies and provided that the Auto CAD file is received within 6 months of the permit issuance date or deposit will be forfeited.
9. Applicant shall hold the City of South San Francisco and its employees, agents and representatives harmless and assume all liablility for claims which may arise by or because of this permit, nor by issuance of this permit shall the City of South San Francisco and its employees, agents and representatives assume any obligation for future changes made by or because of design, construction, maintenance and/or traffic.

Dear Robert:

Enclosed within are:

1) The results of the **32** analyzed samples from your project: **#161558; Olympian-Terminal Ct.,**
2) A QC report for the above samples,
3) A copy of the chain of custody, and
4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager

WorkOrder: 1003860

April 14, 2010

Dear Robert:

Enclosed within are:

1) The results of the **9** analyzed samples from your project: **#161558; Olympian-Terminal Ct.,**
2) A QC report for the above samples,
3) A copy of the chain of custody, and
4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager

* water samples are reported in µg/L, wipe samples in µg/wipe, soil/solid/sludge samples in mg/kg, product/oil/non-aqueous liquid samples in mg/L, and all DISTLC / STLC / SPLP / TCLP extracts are reported in µg/L.

cluttered chromatogram resulting in coeluted surrogate and sample peaks, or; surrogate peak is on elevated baseline, or; surrogate has been diminished by dilution of original extract/matrix interference.

+The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation:

b1) aqueous sample that contains greater than ~1 vol. % sediment
b6) lighter than water immiscible sheen/product is present
e2) diesel range compounds are significant; no recognizable pattern
e4) gasoline range compounds are significant.
e7) oil range compounds are significant

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

SOIL GAS SAMPLING AND RISK ASSESSMENTWORK PLAN

Olympian Cardlock Facility
131 Terminal Court
South San Francisco, California

1.0 INTRODUCTION

On behalf of Olympian JV, Conestoga-Rovers & Associates, Inc. (CRA) has prepared this *Soil Gas Sampling and Risk Assessment Work Plan* for the above referenced site. CRA acquired Cambria Environmental Technology, Inc. (Cambria) on April 2, 2007. In a letter dated January 31, 2007, Cambria proposed a work plan to determine if the remaining impacted soil and groundwater poses a threat to human health. Presented below is the site background, a summary of previous investigations, an evaluation of the contaminant distribution, and the proposed scope of work and schedule.

2.0 SITE BACKGROUND

2.1 Site Description

The site is an active commercial fueling facility located near the intersection of Terminal Court and Produce Avenue in South San Francisco, California (Figure 1). The site consists of two dispenser islands, and one diesel and two gasoline underground storage tanks (USTs). The entire site is paved with asphalt and concrete. The locations of these features are shown onFigure 2.

The site is located in a commercial industrial area of South San FranciscoThe property adjoins Golden Gate Produce Terminal to the west and Park 'N' Fly parking lot to the east. Bayshore Freeway 101 is located approximately 200 ft (ft) east of the site. The site topography is relatively flat and is approximately 6 feet above mean sea level (ft msl). The nearest surface water is Coma Creek, approximately 0.25 miles north of the site. The San Francisco Bay is approximately one mile east of thsite.

2.2 Geology and Hydrogeology

Geology: The site is located in the Coast Range Geomorphic Province of California. According to the geologic map by Jennings and Burnett (1961), the general site area is underlain by unconsolidated artificial fill primarily consisting of clayey fine sand, silt, clay, rock fragmentsand organic material underlain by

Quaternary alluvium and dune deposits. Bedrock in the area primarily is Mesozoic ultrabasic rocks, including serpentine.

The soil beneath the site generally consists of sandy gravel or sandy silt from approximately 0.5 to 4 feet below ground surface (ft bgs), underlain by silty sand to approximately 10 ft bgs, and dark grey, low estimated permeability, silty clay ("Bay Muds") to a total explored depth of 18 ft bgs. Boring logs are presented in Appendix B.

Hydrogeology: According to the Department of Water Resources, Bulletin 118 (2004), the site is located within the South San Francisco Groundwater Basin. In the *Proposed Groundwater Amendments to the Water Quality Control Plan* (RWQCB-SFBR 2000) the subject site is located in a proposed groundwater management zone and classified as a non-potable water resource, due to high levels of total dissolved solids (TDS). Analysis of groundwater from monitoring well MW-3 in July 2001 detected TDS at 19,524 milligrams per liter (mg/L), indicative of non-potable water quality (>3000 mg/L) for the shallow groundwater at the site.

Shallow groundwater typically ranges between 1 to 3.5 ft bgs (Table 1). Groundwater predominantly flows toward the northeast with a gradient of 0.03. Quarterly groundwater monitoring has been performed since April 2000.

3.0 PREVIOUS INVESTIGATIONS

Investigations and remedial activities were completed since 1998, after petroleum hydrocarbons were detected in soil samples collected during product piping upgrade activities. A summary of investigations and remedial activities are presented below. Boring and well locations are presented on Figure 2. Groundwater analytical data is presented in Table 1. Boring and well construction logs are presented in Appendix B.

October 1998: During the product piping upgrade activities in October 1998, TEC Accutite (TEC) collected soil samples T-1 through T-3 from the piping trench at approximately 2.5 ft. bgs. Total petroleum hydrocarbon as gasoline (TPHg), total petroleum hydrocarbon as diesel (TPHd), benzene, and methyl tertiary butyl ether (MTBE) were detected in the soil at maximum concentrations of 7,600 milligrams per kilogram (mg/kg) TPHd; 2,400 mg/kg TPHg; 1 mg/kg benzene; and 9 mg/kg MTBE were detected.

October 1999 Soil Investigation: To assess the subsurface condition, TEC advanced nine onsite soil borings (B-1 through B-9) and collected soil and grab groundwater samples. Maximum soil concentrations

REGISTERED COMPANY
ISO 9001
ENGINEERING DESIGN
Worldwide Engineering, Environmental, Construction, and IT Services

were detected at 280 mg/kg TPHd in boring B-2 at 4 ft bgs; 16 mg/kg TPHg in boring B-3 at 4 ft bgs, 0.063 mg/kg benzene in boring B-3 at 4 ft bgs; and 0.84 mg/kg MTBE in boring B-6 at 4 ft bgs. Maximum groundwater concentrations were detected in boring B-3 at 8,800 µg/L TPHd, 21,000 µg/L TPHg, and 1,200 µg/L benzene.

March 2000 Well Installations: On March 17, 2000, TEC drilled five soil borings (B-10 through B-14), and installed five monitoring wells (MW-1 to MW-5). Maximum soil concentrations of 780 mg/kg TPHg and 0.79 mg/kg benzene were detected in boring B-11 at 9 ft bgs. Maximum groundwater concentrations were detected in boring B-11 at 69 µg/L TPHd, 16,000 µg/L TPHg, and 850 µg/L benzene. No MTBE was detected above laboratory reporting limits in any of the groundwater samples.

July 2001: On July 2, 2001, TEC installed three groundwater monitoring wells (MW-6 through MW-8) to determine the down-gradient extent of the groundwater plume. No petroleum hydrocarbons were detected above laboratory reporting limitsin soil. TPHd and MTBE were detected in groundwater at a maximum concentration of 700 µg/L in well MW-8, and 10 µg/L in well MW-6, respectively. No TPHg and benzene were detected in groundwater.

October 2002 Risk Assessment: On October 14, 2002, TEC submitted the *Impact Evaluation of the Subsurface Utilities as Preferential Pathway and Risk Assessment of the Impact of Groundwater Petroleum Hydrocarbons on Indoor Air*. TEC concluded and recommended the following: the benzene groundwater plume is limited onsite near monitoring well MW-1 and the nearest utility lines on Terminal Count do not appear to impact the plume's path; the benzene groundwater concentration exceeds the indoor air risk based screening level of 84 part per billion (ppb); and in order to obtain case closure at the site, groundwater remediation near well MW-1 is recommended to decrease the benzene concentration below the risk level of 84 ppb.

February 2003 Feasibility Study: On February 4, 2003, TEC submitted the *Feasibility Study for Groundwater Remediation.* TEC recommended in-situ groundwater bioremediation, specifically oxygen release compound (ORC) injections.

April 2003 Treatability Study Workplan: On April 10, 2003, TEC submitted the *Treatability Study Workplan for Groundwater Remediation* justifying the implementation of ORC injections, which was subsequently approved by SCMHD in a letter dated July 22, 2003.

October 2003 ORC Injections: On October 16, 2003, TEC oversaw the drilling of 16 direct-push soil borings (A through P) by Vironex to be used as ORC injection points. Borings A through E were advanced

REGISTERED COMPANY
ISO 9001
ENGINEERING DESIGN
Worldwide Engineering, Environmental, Construction, and IT Services

to 10 ft bgs, and borings F through P were advanced to 8 ft bgs. A 1,600 square foot treatment area consisting of 16 points on 10 foot spacing was used to inject 930 pounds (lbs) of ORC in the vicinity of MW-1. The ORC remedial technique proved ineffective. The event is summarized in TEC's November 10, 2004 *Remedial Action Report.*

July 2005, Site Dual-Phase Extraction (DPE): Ecologics initiated interim remedial activities consisting of dual-phase extraction (DPE) at the site. Insufficient documentation is available to evaluate the DPE activities, but Ecologics concluded that DPE remediation was ineffective.

2006 Remedial Action Workplan: On May 1, 2006, Ecologics submitted a workplan which proposed excavating the impacted soilin the vicinity of well MW-1.

Quarterly Monitoring: Quarterly groundwater monitoring and sampling has been performed at the site since April 2000 and includes a network of 7wells (MW-1 through MW-3 and MW-5 through MW-8). SMCHD's February 22, 2007 letter approved Cambria's proposed reduced groundwater monitoring schedule to sample wellsMW-1, MW-2, and MW-8 on a semi-annually basis. Samples are analyzed for TPHd, TPHg, BTEX, and MTBE.

4.0 CONTAMINANT DISTIBUTION

4.1 Hydrocarbon Distribution in Soil

Historical soil sampling results indicate that a release occurred from the product piping, on the north side of the USTs. Maximum concentrations of 7,600 mg/kg TPHd, 2,400 mg/kg TPHg, 1 mg/kg benzene, and 9 mg/kg MTBE were detected at a depth of 2.5 ft along the product piping trenches (T-1 through T-3). Following product piping upgrades in 1998, a total of 19 soil samples were collected across the site and analyzed for TPHd, TPHg, BTEX, and MTBE. Most of the soil samples had little to no hydrocarbon impact suggesting the majority of impacted soil is limited to a small area between the dispensers and USTs, extending to the west towards boring B-4.

4.2 Hydrocarbon Distribution in Groundwater

Dissolved-phase benzene is the primary contaminant of concernat the site, with low levels of MTBE in several of the wells. A small benzene plume remains in the center of the site, in the vicinity of the dispensers, and it is adequately defined. A maximum benzene concentration of 960 ug/L was detected in

REGISTERED COMPANY ISO 9001 ENGINEERING DESIGN
Worldwide Engineering, Environmental, Construction, and IT Services

MW-1 during the first quarter 2007 sampling event. A maximum MTBE concentration of 70 ug/L was detected was detected in MW-2 during the first quarter 2007 sampling event

5.0 PROPOSED SCOPE OF WORK

CRA proposes soil gas sampling in the vicinity of the source area and underground utilities to determine the potential future risk to human health from vapor intrusion. Due to the shallow groundwater table (approximately 2 and 3 ft bgs), shallow soil gas sampling results will be modeled using the Johnson & Ettinger Vapor Intrusion Model. The risk assessment results will determine if the site should proceed to closure (possibly with a commercial deed restriction), or whether interim remediation is necessary. Figure 3 presents the proposed soil gas sampling locations. A summary of the soil gas sampling and risk assessment is outlined below.

5.1 Soil Gas Sampling

Onsite soil gas samples will be collected above the groundwater table (approximately 1 ft bgs) near source area wells MW-1 and MW-2, and adjacent to down-gradient underground utilities (Figure 2). Currently the source area is paved with no overlying building structures. Soil gas sampling will be completed based on the Department of Toxic Substances Control's (DTSC) January 28, 2003 *Advisory-Active Soil Gas Investigation* (DTSC *Advisory*) and SMCHD's *Using a Geoprobe to Collect Subsurface Vapor Samples for Human Health Risk Evaluation (Vapor Sampling Guidelines)*, revised March 9, 2006. CRA will complete the following tasks:

Health and Safety Plan: To protect the public and site personnel during the fieldwork, a site-specific Health and Safety Plan (HSP) will be distributed to all members of the project team. The HSP addresses physical health threats posed by drilling and potential health threats posed by contact with petroleum hydrocarbons. The HSP also prescribes appropriate personal protective equipment (PPE) to protect site workers.

Permits: A soil boring permit will be obtained from SMCHD, as needed.

Utility Location: The proposed boring and well locations will be marked and Underground Service Alert (USA) will be notified of our plans to drill in the site vicinity. A private utility locator may be contracted to survey underground utilities on private property or to confirm USA markings.

REGISTERED COMPANY ISO 9001 ENGINEERING DESIGN
Worldwide Engineering, Environmental, Construction, and IT Services

Soil Gas Sampling Method: CRA will collect soil gas samples from three locations (SG-1, SG-2, and SG-3) based on the SMCHD's Vapor Sampling Guidelines. A soil gas sample will be collected near source area wells MW-1 and MW-2 using direct push technology, specifically the post-run tubing (PRT) system utilized by Vironex. Temporary soil gas sampling points will be sampled by hydraulically pushing a direct-push rod equipped with an expendable drive point and a PRT expendable point holder to the desired depth. The direct-push rod will be retracted slightly to expose the PRT holder, and the PRT adapter and tubing will be fed down the rods and connected to the PRT holder. Next, the tubing will be connected to a purging device (a purge Summa™ canister) to induce the flow of gas from the subsurface and through the sampling inlet and sampling system. Hydrated bentonite will be placed at the top of the direct push rod, where the sample tubing comes out of the rod, and also at the surface around the annulus of the borehole and the direct push rod to create a seal and prevent ambient air from migrating down and into the sample.

Soil Gas Purging and Sampling Apparatus: Two Summa™ canisters (a purge and sample canister) will be connected to the Teflon™ tubing from the boring using a tee valve per SMCHD's Vapor Sampling Guidelines. The bentonite seal will be allowed to set for approximately 30 minutes prior to performing the vacuum test (leak test). To check for leaks of the purging and sampling apparatus, the vapor tight valve is vacuum tested for 10 minutes by adjusting the purge canister valve. After the vacuum test, the purge canister is used to purge three volumes of the sample tubing line prior to sample collection to remove air trapped inside the line. Isopropyl alcohol will be utilized as a tracer gas for the investigation. After purging, the purge canister will be closed and isopropyl alcohol (2-proponal) moistened paper towels will be placed around all fitting connections and joints, and at the borehole.. The presence of tracer gas in the sample results will indicate if the sampling system was compromised. The vacuum of the Summa™ canister will be used to draw soil gas through the flow controller until a negative pressure of approximately 5 inches of Hg is observed on the vacuum gauge. Soil gas will be purged and sampled at a low flow rate (approximately 200 milliliters per minute) to minimize the potential for contaminant partitioning and potential short circuiting from the surface. Each sample will be labeled and logged on a chain-of-custody form.

Sample Quality Assurance / Quality Control: A duplicate sample will be collected from one location suspected to be the most impacted. The duplicate sample will be collected immediately after the original sample from the same sample depth.

Chemical Analysis: The soil gas samples will be kept at ambient temperature and submitted under chain-of-custody to a state certified laboratory for analysis. The samples will be analyzed by Modified EPA Methods TO-15 for BTEX, MTBE, and isopropyl alcohol, TO-3 for TPHg, and ASTM D-1946 for oxygen, carbon dioxide, and methane

5.2 Risk assessment

CRA will evaluate the potential indoor air impact from benzene vapor migration for both residential and commercial/industrial land use scenarios The risk assessment will includethe following.

- A discussion of chemicals of concern (COCs),
- A discussion of potential exposure pathways for hypothetical onsite residential occupants, current commercial occupants, and potential construction workers
- A human health risk assessment using the using Johnson and Ettinger's Subsurface Vapor Intrusion Model (J & E Model) as used by the San Francisco Bay Region-Regional Water Quality Control Board (RWQCB) when developing their ESLs. The J & E Model will use the following site specific and default model parameters to evaluate the risk to human health from vapor intrusion.

Table A. Input Parameters for the J & E Model.

PARAMETER	UNIT	RATIONALE
Chemicals: benzene and MTBE		
Soil gas concentration	ug/m^3	Concentration based on soil gas results
Soil gas sampling depth	cm	Field measurement

6.0 REPORTING

After the analytical results are received, a *Human Health Risk Assessment* will be prepared that will, at a minimum, include the following:

- A description of drilling and soil gas sampling methods;
- Tabulated soil gas data;
- Tabulated vapor intrusion modeling input parameters;
- Vapor intrusion modeling results;
- Conclusions and recommendations.

7.0 SCHEDULE

Upon receiving written work plan approval from the SMCHS, CRA will commence implementation of the work plan. CRA will submit a Human health Risk Assessment to SMCHS within approximately 8 weeks following the completion of field activities.

Groundwater Elevation Contour and Hydrocarbon Concentration Map

March 14, 2007

EXPLANATION

- MW-1 — Monitoring well location
- SB-1 — Soil boring location
- MW-4 — Destroyed well location
- 0.02 — Groundwater flow direction and gradient
- XX.XX — Groundwater elevation contour, in feet above mean sea level (msl), dashed where inferred
- Well ID / ELEV. / TPHg / Benzene / MTBE / TPHd — Well designation; Groundwater elevation (msl); TPHg, Benzene, MTBE and TPHd concentrations are in micrograms per liter (µg/L)
- NS — Not Sampled

Notes:

TOC = Elevation of the top of casing in feet relative to mean sea level

TOC elevation survey completed in July 2001 by Virgil Chavez Land Surveying

ft btoc = measured in feet below top of casing

ft amsl = measured in feet above sea level

TPHd = Total petroleum hydrocarbons as diesel by EPA modified Method SW8015C

TPHg = Total petroleum hydrocarbons as gasoline by EPA modified Method SW8015C

Benzene, Toluene, Ethylbenzene, Xylenes by EPA Method SW8021B

MTBE = Methyl-tert-butyl ether (MTBE) (EPA Method 8020 or 8021B)

TBA = tert-Butyl Alcohol (EPA Method 8260)

µg/L = Micrograms per liter

ND = compound not detected above laboratory reporting limits

<X = Concentration less than laboratory reporting limits

-- = Not analyzed / not available

* = MTBE confirmed by EPA Method 8260

= See laboratory report for notes and/or a description of chromatogram pattern

Note: Total Dissolved Solids (TDS) analyzed for MW-3 on 7/13/01 showed concentration of 19,524 ppm.

Fred Bertetta Jr.
c/o Janet Heikel
Olympian Oil Company
1300 Industrial Road, Suite 2
San Carlos, CA 94070

SUBJECT: OLYMPIAN FUELING FACILITY AT 131 TERMINAL COURT SOUTH SAN FRANCISCO, CALIFORNIA

Dear Mr. Bertetta:

Thank you for the October 15, 2006 *Quarterly Monitoring Report - Third Quarter 2006* report and the January 31, 2007 letter prepared by Cambria for the above referenced site. San Mateo County Health Department Groundwater Protection Program (GPP) had witnessed the startup of dual-phase extraction at the site on December 6, 2005; however, it appears no information is available from the registered professionals in charge at that time regarding this remediation event. The letter's proposal to submit a soil vapor sampling work plan and the proposed groundwater monitoring schedule are accepted as presented. This work plan would appear to more appropriately satisfy a previous request included in GPP's October 7, 2004 letter to develop remediation goals for the site. The work plan should also include a full description and justification of the default values, site-specific values, and assumptions used in the model.

The September 19, 2005 letter proposed active remediation targets (ARTs) of non detect for all constituents of concern. GPP staff accepted these ARTs of non detect without any dilution or elevated reporting limits for all of the constituents of concern. GPP staff also noted that these ARTs may be well below reasonably justified clean up goals which would allow GPP staff to close the site prior to reaching non detect and therefore the State of California UST Cleanup Fund may not be willing to pay for the additional cleanup of the site between the reasonably justified clean up goals to the ARTs. Please submit the work plan by **May 31, 2007**. Please also refer to previous GPP letter's regarding the voluntary aspect of commercial deed restrictions.

As always, you may submit requested items at any time prior to the due date in order to expedite the progress of the overall site investigation and potential remediation. If there has been a change in the responsible party contact information for this site or you wish to receive future correspondence from GPP staff electronically, then please send GPP staff a letter or email officially notifying GPP staff of the new contact information. I appreciate your cooperation. Should you have any questions, please call me at (650) 363-4565.

Sincerely,

Charles Ice
Hazardous Materials Specialist
Groundwater Protection Program

APPENDIX C

SMCHD Soil Vapor Sampling Guidelines

USING A GEOPROBE TO COLLECT SUBSURFACE VAPOR SAMPLES FOR HUMAN HEALTH RISK EVALUATION

- Do not mobilize to sample subsurface vapor if measurable precipitation or site irrigation near the sampling location has occurred within the previous 5 days;
- Drill continuous cores as necessary to identify permeable strata (target vapor sampling locations) then backfill the borings with Portland cement (previous assessment may have provided this data);
- Connect a PRT adaptor to approximately 10 to 15 feet of tubing (assuming the total depth of the boring will be approximately 5 feet below grade), install a vapor tight valve on the other end of the tubing, close the vapor tight valve, and seat the PRT adaptor into the bottom of the lead drill rod;
- Hydraulically push the Geoprobe rod to the target vapor sampling depth then raise the drill rod approximately 6 inches[1];
- Place hydrated bentonite around the drill rod to inhibit surface air migration down the outer portion of the drill rod (do not simply add water to a pile of bentonite chips or pellets placed around the drill rod);
- Connect a tee fitting to the top of each purge and sample Summa canister and install a pressure gauge on the top of this fitting;
- Connect 1 to 2 feet of tubing to the tee fitting on each purge and sample canister (the consultant may opt to install an optional valve on the downhole side of the tee connected to the purge canister);
- Connect the free ends of each of the above tubes to a separate (third) tee fitting;
- Connect a 100 to 200 milliliter/minute flow regulator to the downhole side of the third tee fitting and connect the laboratory supplied particulate filter to the downhole side of the regulator (if required);
- Connect the vapor-tight valve in Bullet #3 to the downhole side of the filter (or regulator if the filter was built-in to the regulator);
- Vacuum test the connections between the summa canisters and valve on the downhole side of the regulator for 10 minutes by opening and closing the purge canister valve to place a test vacuum on the assembly (terminate further work if gauge vacuum can not be maintained for 10 minutes);

- If gauge vacuum was maintained for 10 minutes and it has been at least 30 minutes since the drill rod was sealed at the surface with bentonite, then open the purge canister valve and the valve on the downhole side of the regulator to begin purging ambient air from the sampling apparatus and borehole (record the time purging commenced);

- Close the purge canister valve when three volumes of air have been purged from the sample apparatus and borehole (the consultant must know how to calculate the appropriate purge volume prior to mobilization - the adequacy of purging must be based on the inches of pressure drop on the purge canister gauge and not time);

- Open the sample canister valve to begin sample collection (record the time sample collection begins);

- Drop a few pieces of isopropyl alcohol (leak test compound) moistened gauze down the inside of the drill rod and on the downhole side of the valve on the borehole side of the regulator (tinfoil is useful to hold the gauze in place – be careful not to pour isopropyl alcohol directly on the tubing and sample apparatus connections);

- Remoisten the gauze with isopropyl alcohol every 5 minutes[2];

- Close the sample canister valve when the sample canister gauge indicates approximately 5 inches Hg of vacuum remain in the canister (this should take approximately 25 minutes for a 6L Summa canister connected to a 200 milliliters/minute flow regulator);

- Record the time sample collection was stopped and replace the tee fitting on the sample canister with the laboratory supplied brass plug;

- Label the sample and record on the chain of custody the sample name, final vacuum, and the canister and flow controller serial numbers;

- Store the sample in a container that blocks sunlight and do not subject the sample to significant changes in pressure and temperature (avoid airline shipping of sample containers);

- Remove the drilling rod and sampling apparatus and backfill the borehole with Portland cement mixed at 6 gallons of water per 94-pound bag of cement.

FOOTNOTES:

1 - Hard drilling conditions may shear off the PRT fitting during drilling. In these conditions you must install the PRT fitting/valve assembly after reaching the target drilling depth, but before lifting the drilling rod 6 inches.

2 – Isopropyl alcohol moistened gauze must be added to all fitting connections if the reduction in sample canister gauge vacuum indicates sample collection will exceed one hour.

GENERAL NOTES:

Assemble and leak check the sampling apparatus prior to mobilizing to the field. County staff may ask the consultant to reschedule the work if the in-field vacuum leak test fails and cannot be rectified in a timely manner.

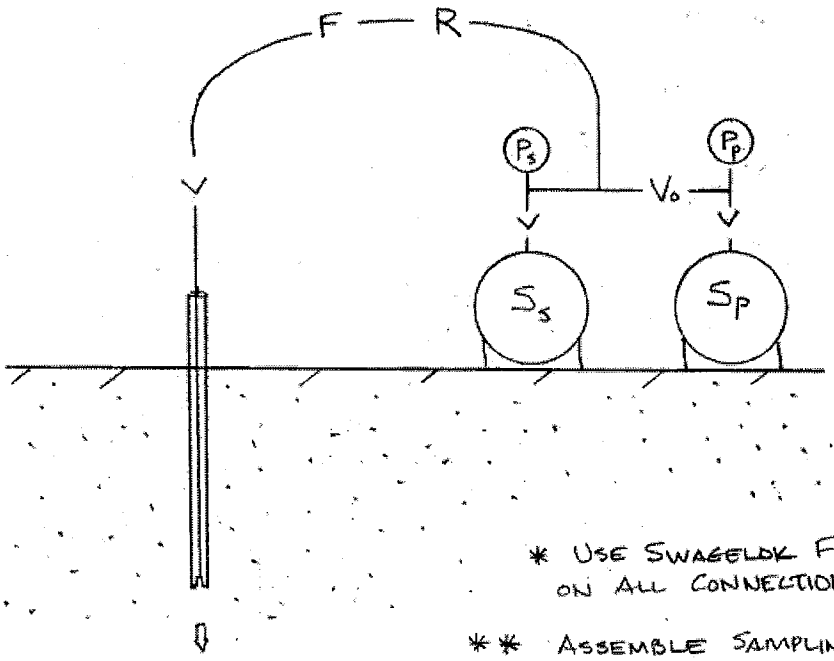
Use Swagelok® type fittings or equivalent for all connections. Wear a new pair of gloves when you assemble the sampling apparatus to limit potential cross-contamination.

Collect at least one duplicate sample from the area of expected impact. Do not chill the samples (discard if condensation observed in the sample tubing). Use EPA Method TO-14A or TO-15 for BTEX/MTBE and EPA TO-3 for TPH-gas (TO-3 can give high reporting limits for BTEX and MTBE due to matrix interference and TO-14A has less QA/QC for TPH-gas).

Additionally, analyze the samples for O_2, CO_2, methane, and isopropyl alcohol. The reporting limit for O_2, CO_2, and methane must be less or equal to the concentrations of these gases in the atmosphere. The reporting limit for isopropyl alcohol must be $\leq$ 100 ug/m3 (0.1 ug/L). Ensure the laboratory reporting limits for the chemicals of concern are below Regional Water Quality Control Board Environmental Screening Levels or previously approved site specific risk levels. Analyze Summa canister samples within 14 days of collection.

SCHEMATIC OF SUBSURFACE VAPOR SAMPLING SET-UP

V = VALVE
V_o = OPTIONAL VALVE
P = PRESSURE GAUGE
S_s = SAMPLE SUMMA CANISTER
S_p = PURGE SUMMA CANISTER
R = FLOW REGULATOR
F = FILTER



* USE SWAGELOK FITTINGS ON ALL CONNECTIONS

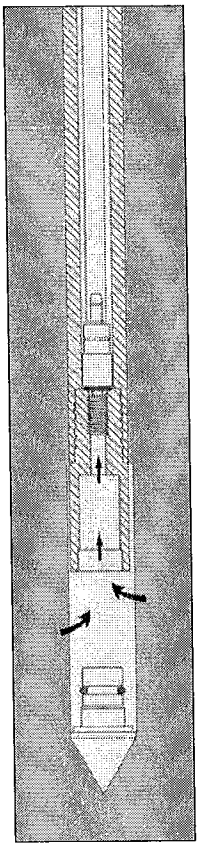
Soil Gas Sampling – PRT System Operation

from Geoprobe Systems®

www.geoprobe.com
1-800-436-7762



Soil Gas Sampling using the Post-Run Tubing (PRT) System.

Soil Gas Sampling — PRT System Operation

Basics

Using the Post-Run Tubing System, one can drive probe rods to the desired sampling depth, then insert and seal an internal tubing for soil gas sampling. The usual Geoprobe probe rods and driving accessories and the following tools are required:

- PRT Expendable Point Holder
- PRT Adapter
- Selected PRT Tubing

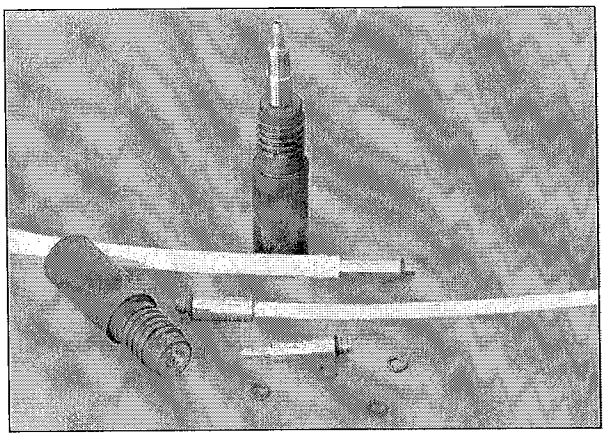
Preparation

1. Clean all parts prior to use. Install O-rings on the PRT Expendable Point Holder and the PRT adapter.
2. Inspect the probe rods and clear them of all obstructions.
3. TEST FIT the adapter with the PRT fitting on the expendable point holder to assure that the threads are compatible and fit together smoothly.

   NOTE: PRT fittings are left-hand threaded.

4. Push the adapter into the end of the selected tubing. Tape may be used on the outside of the adapter and tubing to prevent the tubing from spinning freely around the adapter during connection -- especially when using Teflon tubing **(Figure 1)**.

   REMEMBER: The sample will not contact the outside of the tubing or adapter.



PRT SYSTEM PARTS
PRT Expendable Point Holder, PRT Adapters, Tubing, and O-rings.

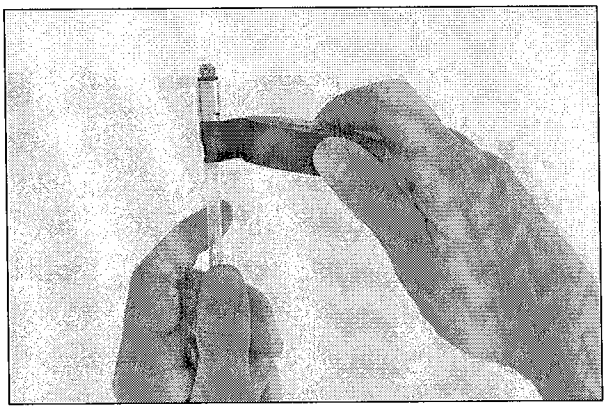


Figure 1. Securing adapter to tubing with tape. NOTE: Tape does not contact soil gas sample.

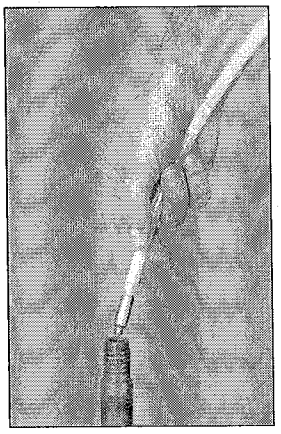

Figure 2. Insertion of tubing and PRT adapter.

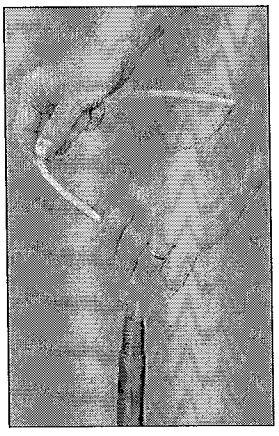

Figure 3. Engaging threads by rotating tubing.

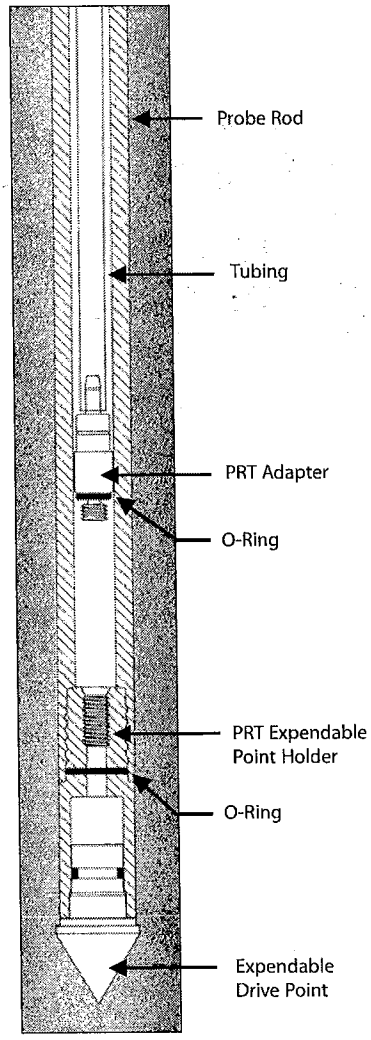
Soil Gas Sampling — PRT System Operation



A cross section of probe rods driven to depth and then retracted to allow for soil gas sampling. The PRT adapter and tubing are now fed through the rods and rotated to form a vacuum-tight connection at the point holder. The result is a continuous run of tubing from the sample level to the surface.

Probing

Drive the PRT tip configuration into the ground. Connect probe rods as necessary to reach the desired depth. After depth has been reached, disengage the expendable point by pulling up on the probe rods. Remove the pull cap from the top probe rod, and position the Geoprobe unit to allow room to work.

Connection

1. Insert the adapter end of the tubing down the inside diameter of the probe rods **(Figure 2)**.

2. Feed the tubing down the rod bore until it hits bottom on the expendable point holder. Allow about 2 ft. (610 mm) of tubing to extend out of the hole before cutting it.

3. Grasp the excess tubing and apply some downward pressure while turning it in a counterclockwise motion to engage the adapter threads with the expendable point holder **(Figure 3)**.

4. Pull up lightly on the tubing to test engagement of the threads. (Failure of adapter to thread could mean that intrusion of soil may have occurred during driving of probe rods or disengagement of drive point.)

Soil Gas Sampling — PRT System Operation

Sampling

1. Connect the outer end of the tubing to the Silicone Tubing Adapter and vacuum hose (or other sampling apparatus).

2. Follow the appropriate sampling procedure for collecting a soil gas sample **(Figure 1)**.

Removal

1. After collecting a sample, disconnect the tubing from the vacuum hose or sampling system.

2. Pull up firmly on the tubing until it releases from the adapter at the bottom of the hole. (Taped tubing requires a stronger pull.)

3. Remove the tubing from the probe rods. Dispose of polyethylene tubing or decontaminate Teflon tubing as protocol dictates.

4. Retrieve the probe rods from the ground and recover the expendable point holder with the attached PRT adapter.

5. Inspect the O-ring at the base of the PRT adapter to verify that proper sealing was achieved during sampling. The O-ring should be compressed. This seal can be tested by capping the open end of the point holder applying vacuum to the PRT adapter.

6. Prepare for the next sample.

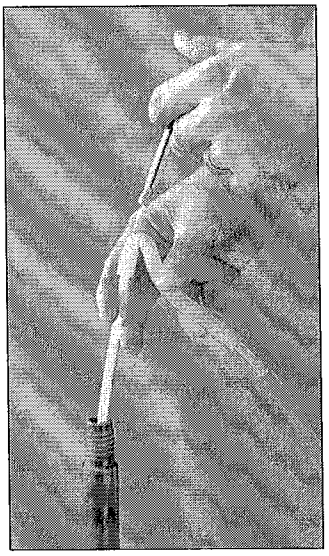


Figure 1. Taking a soil gas sample for direct injection into a GC with the PRT system.

1.0 INTRODUCTION

Conestoga-Rovers & Associates (CRA) prepared this report on behalf of Olympian JV (Olympian) in accordance with annual reporting requirements.

1.1 SITE INFORMATION

Site Address	131 Terminal Court, South San Francisco, CA
Site Use	Olympian Cardlock Facility
Client and Contact	Olympian JV, Janet Heikel
Consultant and Contact Person	CRA, Ron Scheele
Lead Agency and Contact	SMCEH, Jacob Madden
Agency Case No.	55014

2.0 SITE ACTIVITIES AND RESULTS

2.1 CURRENT ACTIVITIES

On March 2, 2012, CRA contracted Muskan Environmental Sampling (MES) to conduct annual monitoring and sampling activities at 131 Terminal Court, South San Francisco, California.

2.2 CURRENT RESULTS

Groundwater Flow Direction	Northeast
Hydraulic Gradient	0.02
Average Depth to Water	3.31 ft
Were Measureable Separate Phase Hydrocarbons Observed	No
Current Remediation Techniques	Monitored Natural Attenuation

Groundwater levels measured on March 2, 2012 indicate that groundwater beneath the site flows primarily toward the northeast at a gradient of approximately 0.02 ft/ft. Groundwater flow conditions observed during the first quarter 2012 are consistent with

conditions observed during previous monitoring events. Groundwater elevation contours are presented on Figure 2.

Groundwater samples were collected from wells MW-1, MW-2, and MW-8. Wells MW-3, MW-5, MW-6, and MW-7 are not part of the sampling schedule. The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) and total petroleum hydrocarbons as diesel (TPHd) with silica gel cleanup by modified United States Environmental Protection Agency (EPA) Method 8015Bm and 8015B, respectively; benzene, toluene, ethylbenzene, and xylenes (BTEX) and methyl tertiary-butyl ether (MTBE) by EPA Method 8021B.

TPHg, TPHd, and BTEX concentrations were detected in wells MW-1 and MW-2. Maximum TPHg and TPHd concentrations of 7,000 and 2,100 micrograms per liter (µg/L), respectively, were detected in well MW-1. Maximum benzene concentrations of 2,400 µg/L were also detected in MW-1. MTBE was only detected above the laboratory detection limit in well MW-2 at a concentration of 96 µg/L.

The increase in dissolved-phase hydrocarbon concentrations in MW-1 is likely related to the lower groundwater elevation, the lowest recorded since July 13, 2001. Dissolved-phase hydrocarbon concentrations in MW-2 are slightly less than previous quarters. Overall, wells continue to exhibit stable to decreasing hydrocarbon concentration trends. A summary of groundwater analytical results is presented in Table 1 and Figure 2.

All necessary groundwater monitoring data from the first quarter 2012 sampling event has been submitted to the GeoTracker database.

2.3 PROPOSED ACTIVITIES

- During the second quarter 2012, additional soil borings will be drilled and soil samples will be collected to assist in delineating the extent of hydrocarbon-impacted soil and to estimate the extent of a proposed remedial soil excavation. Results of the subsurface investigation will be presented in a Remedial Action Plan (RAP). CRA will implement the proposed remedial excavation once the onsite UST fueling system has been removed by the facility operator (NELLA Oil). Removal of the underground storage tank fueling system is tentatively scheduled for September 2012.
- No further groundwater monitoring and sampling activities are planned for 2012.

All of Which is Respectfully Submitted,
CONESTOGA-ROVERS & ASSOCIATES

Tarah Kirnan

Ron Scheele, P.G.

Conestoga-Rovers & Associates, Inc. (CRA) prepared this document for use by our client and appropriate regulatory agencies. It is based partially on information available to CRA from outside sources and/or in the public domain, and partially on information supplied by CRA and its subcontractors. CRA makes no warranty or guarantee, expressed or implied, included or intended in this document, with respect to the accuracy of information obtained from these outside sources or the public domain, or any conclusions or recommendations based on information that was not independently verified by CRA. This document represents the best professional judgment of CRA. None of the work performed hereunder constitutes or shall be represented as a legal opinion of any kind or nature.

APPENDIX A

STANDARD FIELD PROCEDURES FOR GROUNDWATER MONITORING AND SAMPLING

CONESTOGA-ROVERS & ASSOCIATES' STANDARD FIELD PROCEDURES FOR GROUNDWATER MONITORING AND SAMPLING

This document presents standard field methods for groundwater monitoring, purging and sampling, and well development. These procedures are designed to comply with Federal, State and local regulatory guidelines. Conestoga-Rovers and Associates' field procedures are summarized below.

Groundwater Elevation Monitoring

Prior to performing monitoring activities, the historical monitoring and analytical data of each monitoring well shall be reviewed to determine if any of the wells are likely to contain non-aqueous phase liquid (NAPL) and to determine the order in which the wells will be monitored (i.e. cleanest to dirtiest). Groundwater monitoring should not be performed when the potential exists for surface water to enter the well (i.e. flooding during a rainstorm).

Prior to monitoring, each well shall be opened and the well cap removed to allow water levels to stabilize and equilibrate. The condition of the well box and well cap shall be observed and recommended repairs noted. Any surface water that may have entered and flooded the well box should be evacuated prior to removing the well cap. In wells with no history of NAPL, the static water level and total well depth shall be measured to the nearest 0.01 foot with an electronic water level meter. Wells with the highest contaminant concentrations shall be measured last. In wells with a history of NAPL, the NAPL level/thickness and static water level shall be measured to the nearest 0.01 foot using an electronic interface probe. The water level meter and/or interface probe shall be thoroughly cleaned and decontaminated at the beginning of the monitoring event and between each well. Monitoring equipment shall be washed using soapy water consisting of Liquinox™ or Alconox™ followed by one rinse of clean tap water and then two rinses of distilled water.

Groundwater Purging and Sampling

Prior to groundwater purging and sampling, the historical analytical data of each monitoring well shall be reviewed to determine the order in which the wells should be purged and sampled (i.e. cleanest to dirtiest). No purging or groundwater sampling shall be performed on wells with a measurable thickness of NAPL or floating NAPL globules. If a sheen is observed, the well should be purged and a groundwater sample collected only if no NAPL is present.

Wells shall be purged according to low flow protocol using an aboveground peristaltic pump. Groundwater wells shall be purged at a low flow rate not to exceed 500 milliliters per minute (mL/min) until groundwater parameters of conductivity and/or dissolved oxygen have stabilized to within 10 percent for three consecutive readings. Temperature, pH, and conductivity shall also be measured and recorded approximately every 3 to 5 minutes. The total volume of groundwater removed shall be recorded along with any other notable physical characteristic such as color and odor. If required, field parameters such as turbidity shall also be measured prior to collection of each groundwater sample.

Groundwater samples shall be collected after well parameters have stabilized at a low flow rate not to exceed 500 mL/min. Groundwater samples shall be decanted into clean containers supplied by the analytical laboratory. New latex gloves and Teflon lined tubing shall be used for sampling each well.

Sample Handling

Except for samples that will be tested in the field, or that require special handling or preservation, samples shall be stored in coolers chilled to 4° C for shipment to the analytical laboratory. Samples shall be labeled, placed in protective foam sleeves or bubble wrap as needed, stored on crushed ice at or below 4° C, and submitted under chain-of-custody (COC) to the laboratory. The laboratory shall be notified of the sample shipment schedule and arrival time. Samples shall be shipped to the laboratory within a time frame to allow for extraction and analysis to be performed within the standard sample holding times.

Sample labels shall be filled out using indelible ink and must contain the site name; field identification number; the date, time, and location of sample collection; notation of the type of sample; identification of preservatives used; remarks; and the signature of the sampler. Field identification must be sufficient to allow easy cross-reference with the field datasheet.

All samples submitted to the laboratory shall be accompanied by a COC record to ensure adequate documentation. A copy of the COC shall be retained in the project file. Information on the COC shall consist of the project name and number; project location; sample numbers; sampler/recorder's signature; date and time of collection of each sample; sample type; analyses requested; name of person receiving the sample; and date of receipt of sample.

Laboratory-supplied trip blanks shall accompany the samples and be analyzed to check for cross-contamination, if requested by the project manager.

Waste Handling and Disposal

Groundwater extracted during sampling shall be stored onsite in sealed U.S. DOT H17 55-gallon drums and shall be labeled with the contents, date of generation, generator identification, and consultant contact. Extracted groundwater may be disposed offsite by a licensed waste handler or may be treated and discharged via an operating onsite groundwater extraction/treatment system.

Analytical Report

Conestoga-Rovers & Associates	Client Project ID: #161558; Olympian-Terminal Ct. SF	Date Sampled: 03/02/12
		Date Received: 03/05/12
5900 Hollis St, Suite A	Client Contact: Ron Scheele	Date Reported: 03/09/12
Emeryville, CA 94608	Client P.O.:	Date Completed: 03/08/12

WorkOrder: 1203117

March 09, 2012

Dear Ron:

Enclosed within are:

1) The results of the **3** analyzed samples from your project: **#161558; Olympian-Terminal Ct. SF,**
2) QC data for the above samples, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
McCampbell Analytical, Inc.

The analytical results relate only to the items tested.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

1.0 INTRODUCTION

On behalf of Olympian, JV (Olympian), Conestoga-Rovers & Associates (CRA) has prepared this *Subsurface Investigation and Remedial Action Plan* for the property (Site) located at 131 Terminal Court in South San Francisco, California. This report was prepared in response to San Mateo County Environmental Health Department, Groundwater Protection Program's (GPP) letter dated July 21, 2011 (Appendix A). In addition to the agency requested investigation, this report also proposes to perform a limited onsite remedial excavation following removal of the underground storage tanks (USTs), currently scheduled to occur in September 2012.

Presented below is the Site background, a summary of previous investigations, recent Site assessment investigation results, details of the proposed remedial excavation and associated post-excavation groundwater monitoring.

2.0 SITE BACKGROUND

2.1 SITE DESCRIPTION

The Site is an active commercial fueling facility located near the intersection of Terminal Court and Produce Avenue in South San Francisco, California (Figure 1). The Site consists of two dispenser islands, one diesel UST, and two gasoline USTs which are operated by Nella Oil Company. The entire Site is surrounded by chain link fencing and is paved with asphalt and concrete. Site features including previous soil boring locations and identified underground utilities are presented on Figure 2.

The Site is located in a commercial/industrial area of South San Francisco. The property adjoins the Golden Gate Produce Terminal to the west and the Park 'N' Fly parking lot to the east. The Bayshore Freeway, (California State Highway 101) is located approximately 200 feet (ft) east of the Site. The Site topography is relatively flat and is approximately 6 feet above mean sea level (ft msl). The nearest surface water is Colma Creek located approximately 0.25 miles north of the Site. The San Francisco Bay is approximately 1 mile east of the Site.

2.2 REGIONAL GEOLOGY AND HYDROGEOLOGY

Geology: The Site is located in the Coast Range Geomorphic Province of California. According to the geologic map by Jennings and Burnett from 1961, the general vicinity is

underlain by unconsolidated artificial fill primarily consisting of clayey fine sand, silt, clay, rock fragments, and organic material underlain by Quaternary alluvium and dune deposits. Bedrock in the area primarily is Mesozoic ultrabasic rocks, including serpentine.

The soil beneath the Site generally consists of sandy gravel fill to 3.0 feet below ground surface (ft bgs), interbedded clayey sand, sand and silty clay to approximately 9.0 ft bgs, underlain by dark grey, low estimated permeability, silty clay ("Bay Muds") to a total explored depth of 18 ft bgs.

Hydrogeology: According to the Department of Water Resources, Bulletin 118 from 2004, the Site is located within the South San Francisco Groundwater Basin.

The shallow groundwater table typically ranges between 1 to 5 ft bgs (Table 1). Groundwater levels measured on March 2, 2012, indicate that groundwater beneath the Site flows primarily toward the northeast and ranged from 2.7 to 3.7 ft bgs. Groundwater gradient is consistently to the northeast.

3.0 PREVIOUS INVESTIGATIONS

Below is the chronology of previous Site assessment, feasibility testing and remedial activities at the Site. Current and historical groundwater and soil analytical data are presented in Tables 1 and 2, respectively.

***October 1998 Trench Sampling*:** During the product piping upgrade activities in October 1998, TEC Accutite (TEC) collected soil samples T-1 through T-3 from the piping trench at approximately 2.5 ft. bgs. Total petroleum hydrocarbon as gasoline (TPHg), total petroleum hydrocarbon as diesel (TPHd), benzene, and methyl tertiary butyl ether (MTBE) were detected in the soil at maximum concentrations of 7,600 milligrams per kilogram (mg/kg) TPHd; 2,400 mg/kg TPHg; 1 mg/kg benzene; and 9 mg/kg MTBE.

October 1999 Soil and Groundwater Investigation: To assess the subsurface condition, TEC advanced nine onsite soil borings (B-1 through B-9) and collected soil and grab groundwater samples. Maximum soil concentrations were detected at 280 mg/kg TPHd in boring B-2 at 4 ft bgs; 16 mg/kg TPHg in boring B-3 at 4 ft bgs, 0.063 mg/kg benzene in boring B-3 at 4 ft bgs; and 0.84 mg/kg MTBE in boring B-6 at 4 ft bgs. Maximum groundwater concentrations were detected in boring B-3 at 8,800 micrograms per liter (µg/L) TPHd, 21,000 µg/L TPHg, and 1,200 µg/L benzene.

***March 2000 Monitoring Well Installations*:** On March 17, 2000, TEC drilled five soil borings (B-10 through B-14), and installed five monitoring wells (MW-1 to MW-5). Maximum soil concentrations of 780 mg/kg TPHg and 0.79 mg/kg benzene were detected in boring B-11 at 9 ft bgs. Maximum groundwater concentrations were detected in boring B-11 at 69 µg/L TPHd, 16,000 µg/L TPHg, and 850 µg/L benzene. No MTBE was detected above laboratory reporting limits in any of the groundwater samples.

***July 2001 Monitoring Well Installations*:** On July 2, 2001, TEC installed three groundwater monitoring wells (MW-6 through MW-8) to determine the down-gradient extent of the groundwater plume. No petroleum hydrocarbons were detected above laboratory reporting limits in soil. TPHd and MTBE were detected in groundwater at a maximum concentration of 700 µg/L in well MW-8, and 10 µg/L in well MW-6, respectively. No TPHg or benzene was detected in groundwater.

October 2002 Risk Assessment: On October 14, 2002, TEC submitted the *Impact Evaluation of the Subsurface Utilities as Preferential Pathway and Risk Assessment of the Impact of Groundwater Petroleum Hydrocarbons on Indoor Air*. TEC concluded and recommended the following: the benzene groundwater plume is limited onsite, near monitoring well MW-1, and the nearest utility lines on Terminal Court do not appear to impact the plume's path; the benzene groundwater concentration exceeds the indoor air risk based screening level of 84 part per billion (ppb); in order to obtain case closure at the Site, groundwater remediation near well MW-1 is recommended to decrease the benzene concentration below the risk level of 84 ppb.

February 2003 Feasibility Study: On February 4, 2003, TEC submitted the *Feasibility Study for Groundwater Remediation*. TEC recommended in-situ groundwater bioremediation, specifically oxygen release compound (ORC) injections.

April 2003 Treatability Study Workplan: On April 10, 2003, TEC submitted the *Treatability Study Workplan for Groundwater Remediation* justifying the implementation of ORC injections, which was subsequently approved by SMCHD in a letter dated July 22, 2003.

October 2003 ORC Injections: On October 16, 2003, TEC oversaw the drilling of 16 direct-push soil borings (A through P) by Vironex to be used as ORC injection points. Borings A through E were advanced to 10 ft bgs, and borings F through P were advanced to 8 ft bgs. A 1,600 square foot treatment area consisting of 16 points on 10 foot spacing was used to inject 930 pounds of ORC in the vicinity of MW-1. The ORC remedial technique proved ineffective. The event is summarized in TEC's November 10, 2004 *Remedial Action Report*.

July 2005 Site Dual-Phase Extraction (DPE): The Site was subsequently transferred to a new environmental consultant Ecologics. Ecologics performed interim remedial activities consisting of dual-phase extraction (DPE) at the Site. Insufficient documentation is available to evaluate the DPE activities, but Ecologics concluded that DPE remediation was ineffective.

May 2006 Remedial Action Workplan: On May 1, 2006, Ecologics submitted a workplan which proposed excavating the impacted soil in the vicinity of well MW-1.

August 2006: The Site was subsequently transferred to Cambria Environmental Technology, Inc. - CRA.

May 2008 Site Assessment Report: On May 30, 2008, CRA submitted a *Site Assessment Report* which evaluated the results of three soil gas samples and a grab groundwater sample from soil boring B-15. Due to elevated hydrocarbon concentrations, CRA recommended that a feasibility study be conducted to determine the most cost effective way to remediate the hydrocarbons remaining at the Site.

May 2010 Site Assessment Report: In May 2010, CRA submitted a *Site Assessment Report* which presented the results of soil boring investigation (B-16 through B-25) as requested by the GPP. Results indicated that elevated hydrocarbon concentrations were present in soil primarily northwest of the northern most dispenser island. Elevated hydrocarbon concentrations (gasoline and diesel) were detected primarily between 2.5 and 5.0 ft bgs, which correlates with the fluctuations of the shallow groundwater table. The report concluded that additional investigation was warranted to delineate the extent of the secondary source of hydrocarbons.

Quarterly Monitoring: Quarterly groundwater monitoring and sampling has been performed at the Site since April 2000, and includes a network of seven wells (MW-1 through MW-3 and MW-5 through MW-8). In a letter dated February 22, 2007, GPP approved a reduced groundwater monitoring schedule of semi-annual for wells MW-1, MW-2, and MW-8. Groundwater sampling frequency was subsequently reduced to annual based a GPP letter dated July 16, 2009. Wells are currently analyzed for TPHd, TPHg, BTEX, and MTBE. A Well Construction Summary is included as Table 3.

4.0 SUBSURFACE INVESTIGATION

The objectives of this subsurface investigation were to 1) further delineate the horizontal and vertical extent of onsite hydrocarbon impacted soil, specifically around boring B-18, and 2) to verify whether any hydrocarbon-impacted soil is present around the existing fueling facilities. The USTs, dispensers, and associated piping are tentatively scheduled for removal by the facility operator in September 2012. To meet these objectives, CRA supervised the drilling of 23 soil borings (B-26 through B-48). All work was completed according to CRA's *Additional Site Assessment Work Plan* (Work Plan) dated June 11, 2009 and *Work Plan Addendum* dated June 23, 2011.

Personnel Present: CRA's Staff Scientist Andrew Renshaw supervised the drilling and sampling of the borings. All soil boring and sampling activities were overseen by CRA Senior Geologist Ron Scheele, a California Professional Geologist.

Permits: GPP issued a subsurface drilling permit for soil boring activities. A copy of the approved permit is included in Appendix B.

Drilling Company: Vapor Tech Services (C57# 916085) of Berkeley, California performed the drilling and sampling activities.

Drilling Date: Drilling and sampling activities were performed from May 7, 2012 through May 10, 2012.

Utility Location: CRA marked out the proposed boring locations with white paint and notified underground service alert (USA) to have the utilities marked out. In addition, CRA retained NorCal Geophysical Consultants Incorporated of Cotati, California to locate and mark out underground utilities that were not marked by USA.

Utility Clearance: To avoid damage to any subsurface utilities, each boring location was cleared to a depth of 5 feet using a vacuum truck and/or a hand auger.

Soil Boring and Sampling Method: Soil borings B-26 through B-48 were advanced using a hand auger/vacuum truck for the first five feet and a direct-push drilling rig to the full depth of each boring. Hydrocarbon field screening was performed using a photo-ionization detector (PID). Soil samples were collected at approximately every 2.5 feet and at the base of the boring. During borehole clearance activities to 5 ft bgs, disturbed soil samples were collected within a clean 2-inch diameter steel tube, covered with Teflon and a plastic cap, labeled and placed on ice in a laboratory supplied cooler. During direct-push drilling below 5 ft bgs, soil samples were collected in acetate liners,

and subsequently covered with Teflon, capped, labeled and placed on ice. All samples collected were transported to a State-certified analytical laboratory under proper chain-of-custody procedures. Soil boring logs including lithology descriptions and PID screening data are presented in Appendix C.

Soil Boring Depths: All soil borings were advanced to a minimum of 10.5 ft bgs except for borings B-29 and B-39, which were terminated at approximately 6 ft bgs due to difficult drilling conditions (refusal). Borings B-27, B-30, B-43, B-44, B-45, and B-46 were all advanced to depths of 13 to 13.5 ft bgs.

Soil Sample Analyses: All collected soil samples were analyzed for TPHd by EPA Method SW8015B, TPHg by EPA Method 8015B, and BTEX/MTBE by EPA Method SW8021B by McCampbell Analytical of Pittsburg, California. The laboratory analytical report is included in Appendix D.

Groundwater Depths: Saturated soil was generally encountered between approximately 2.0 to 6.0 ft bgs, with some borings detecting saturated conditions from 8.5 ft bgs to below 10.5 ft bgs.

Geotracker: All required data will be uploaded to the California State Water Resources Control Board's Geotracker database as required.

Waste Profiling and Disposal: Soil cuttings and waste water generated during drilling activities were temporarily stored onsite in DOT-approved 55-gallon drums pending waste profiling and disposal. CRA plans to dispose of this waste during the UST removal in the fall of 2012. Documentation of the waste profiling analysis is included in the laboratory reports located in Appendix D.

5.0 SUBSURFACE INVESTIGATION RESULTS

5.1 HYDROGEOLOGICAL FINDINGS

During drilling activities, groundwater was usually observed in the more permeable soil layers of sand and gravel. Typical groundwater depths ranged from 2 to 6 ft bgs; however, there were some borings where groundwater was observed at 8 to 10 ft bgs (borings B-32, B-40 to B-42) and other borings where no groundwater was present (borings B-35 through B-37, B-47 and B-48) or where there was insufficient time for groundwater to accumulate into the boring prior to its destruction. A dark grey, silty clay ("Bay Muds") was typically encountered at 8 to 10 ft bgs.

5.2 HYDROCARBON DISTRIBUTION IN SOIL

TPHg were detected in most borings except for B-36, B-37, B-39, B-43, and B-45 through B-47, where TPHg were not detected above laboratory reporting limits. The highest TPHg concentrations were detected in borings B-26, B-31 and B-35 and ranged from 1,100 to 5,000 mg/kg. Elevated TPHg concentrations (>1,000 mg/kg) were detected between and northwest of the dispenser islands, and all within the top 5 ft of soil, except for boring B-31 where TPHg was detected at 1,500 mg/kg at 7.5 ft bgs. Figure 3 shows the maximum TPHg concentrations from 0 to 5 ft bgs. Figure 4 shows the maximum TPHg concentrations from 5 to 10 ft bgs. Soil analytical results are summarized in Table 2.

TPHd was detected in most of the borings during this investigation. The highest TPHd concentrations were detected in borings B-26, B-35 and B-42 and ranged from 1,100 to 1,700 mg/kg. Elevated TPHd concentrations (>1,000 mg/kg) were detected between and northwest of the dispenser islands, and all within the top 5 ft of soil. The highest TPHd concentration were detected in boring B-31 at a concentration of 870 mg/kg at 7.5 ft bgs. Notes included in the laboratory report indicated that the samples contained gasoline-range compounds which may have overestimated the TPHd results. Figure 5 shows the maximum TPHd concentrations from 0 to 5 ft bgs. Figure 6 shows the maximum TPHd concentrations from 5 to 10 ft bgs.

Benzene concentrations were detected in most borings except for borings B-36 through B-39, B-45, B-46 and B-48. The highest benzene concentration was detected in boring B-26 at a concentration of 56 mg/kg at 5 ft bgs. In addition to boring B-26, elevated benzene concentrations (> 1 mg/kg) were detected from borings B-29, B-31, B-32, B-35 and B-42. Similar to the TPH laboratory results, elevated concentrations of benzene were detected below 5 ft bgs in boring B-31 at 7.5 ft bgs and in boring B-29 at 5.5 ft bgs. Figure 7 shows the maximum benzene concentrations from 0 to 5 ft bgs. Figure 8 shows the maximum benzene concentrations from 5 to 10 ft bgs. Soil analytical results are summarized in Table 2.

Little to no MTBE was detected during this investigation. The highest MTBE concentration was detected in boring B-43 at a concentration of 0.23 mg/kg at 12.5 ft bgs.

Overall, hydrocarbons are present in soil primarily between and northwest of the dispenser islands. The majority of hydrocarbon-impacted soil is present between 2.5 and 5.0 ft bgs which correlate with the fluctuations of the shallow groundwater table. A relatively smaller area of deeper hydrocarbon-impacted soil is also present around borings B-29, B-31 and B-35. Based on the results of previous and recent investigations,

the lateral extent of hydrocarbons in soil is adequately defined and primarily limited to onsite and in close proximity to the current dispenser islands. No elevated levels of hydrocarbons were observed in close proximity to the USTs which indicates that the fuel piping system or dispensers are the primary release source.

5.3 HYDROCARBON DISTRIBUTION IN GROUNDWATER

Based on historical groundwater monitoring data and grab-groundwater samples from borings, elevated dissolved-phase hydrocarbons are located northwest of the dispenser islands and primarily onsite. Groundwater sample results are included in Table 1.

6.0 PROPOSED REMEDIAL EXCAVATION

In keeping with agency-approved *Revised Feasibility Study/Corrective Action Plan* for the Site, CRA proposes a remedial excavation to address removal of a secondary hydrocarbon source with the goal of obtaining regulatory site closure. The remedial excavation will be conducted immediately following removal of the UST system which will allow access to hydrocarbon impacted soil underlying the fuel dispensers. It is assumed that no hydrocarbon-impacted soil will be encountered around the USTs.

Approximately 1,500 tons of hydrocarbon-impacted soil has been identified for removal as depicted in Figure 9. The proposed limits of the remedial excavation were based on soil and grab-groundwater data from numerous borings. Per a request from the GPP, CRA also proposes to excavate those areas where elevated hydrocarbon concentrations were detected in grab-groundwater samples. The proposed remedial excavation includes an area of shallow impacted soil (2,752 square [sq] ft from 0 to 6 ft bgs) and two smaller areas of deeper impacted soil (341 sq ft from 6 to 10 ft bgs). It is estimated that approximately 720 cubic yards (cy) or 1,370 tons will be removed from the shallow excavation area, using a conversion factor of 1.9 tons/cy. The deeper areas will extend to approximately 10 ft bgs and include approximately 130 tons of additional soil.

A qualified excavation contractor will perform the excavation and loading of hydrocarbon impacted soil for offsite transport and disposal to a licensed disposal facility. In addition, CRA will oversee groundwater removal via extraction from the open excavation pit. Extracted groundwater will either be transported offsite under manifest to a licensed disposal facility, or treated onsite using a temporary groundwater treatment system and discharged to a local sanitary or storm sewer. CRA will complete the following tasks as part of the proposed remedial exaction.

6.1 SITE HEALTH AND SAFETY PLAN

CRA will prepare a comprehensive site health and safety plan to protect site workers, inspectors, and the public. The plan will be reviewed and signed daily by each site worker, kept onsite, and followed during all CRA-directed field activities.

6.2 PERMITS

CRA, or the hired excavation contractor, will perform all required regulatory notifications and acquire all the required permits from the various agencies prior to proceeding with the proposed excavation. It is anticipated that notifications and/or permits will be needed for the following activities: well destruction, Site grading and air quality management. A permit may also be obtained if groundwater from the excavation needs to be discharged into the sanitary or storm sewer.

6.3 UTILITY LOCATION

CRA will mark the proposed excavation extents and will notify USA a minimum of 48 hours prior to excavation. A recently completed private subsurface utility survey identified multiple subsurface utilities and utility trenches. The locations of the marked utilities, including surface features within and around the anticipated excavation area, were also surveyed. Based on the location of identified underground utilities, some of the utilities may have to be supported, rerouted or removed to complete the UST removal activities and/or the proposed remedial excavation activities.

6.4 WELL DESTRUCTION

Monitoring wells MW-1 and MW-2 are located within the proposed remedial excavation limits and MW-5 is located in close proximity to the USTs. Prior to UST system removal, CRA will destroy MW-1, MW-2 and MW-5 under permit by over-drilling the wells to their total depth. CRA proposes the destruction of these wells to ensure that they are not damaged or compromised during the UST system removal or remedial excavation activities. CRA will hire a licensed driller and receive the appropriate well destruction permits prior to mobilization. CRA's Standard Field Procedures for Well Destruction are presented in Appendix E.

6.5 EXCAVATION

CRA will implement a targeted remedial excavation including the following tasks as indicated below:

- In conjunction with the UST system removal, CRA will oversee the mobilization and set-up of temporary fencing around the perimeter of the Site for security purposes, if warranted, to protect the public and site workers.
- A qualified excavation contractor will remove additional asphalt to access the targeted areas for proposed remedial soil excavation.
- A qualified excavation contractor will remove approximately 1,500 tons of hydrocarbon-impacted soil using an excavator. The volume and areas of excavation may change based on field conditions.
- Shoring may be installed along the eastern side of the onsite utility trench to preserve the integrity of the water and communication utilities and also protect the adjacent sidewalk areas while removing the deeper impacted soil. Without shoring, it may be necessary to temporarily or permanently re-route subsurface water supply and communication lines located along the northwest side of the proposed excavation to enable the removal of impacted soil, especially at the deeper level.
- Either a temporary holding tank or a dewatering system will be mobilized to store and/or treat hydrocarbon-impacted groundwater, depending on the volume of groundwater generated during excavation dewatering. If minimal quantities of groundwater generated, the groundwater will be transported offsite under manifest to a licensed recycling/disposal facility. If a temporary dewatering system is required, groundwater will be treated onsite, as appropriate, and discharged under permit to the local sanitary or storm sewer.
- All removed soil will either be directly loaded for transport, or temporarily stockpiled onsite until disposal arrangements are arranged. If stockpiled, the soil will be underlain and covered with appropriate plastic sheeting, while implementing proper erosion control measures. Upon approval from the receiving landfill, CRA will oversee the transport and disposal of hydrocarbon-impacted soil under manifest to a licensed disposal facility.

6.6 CONFIRMATION SOIL SAMPLING

Recent and historical investigations have laterally and vertically delineated the extent of hydrocarbon-impacted soil and therefore CRA does not propose the collection of any confirmation soil samples from the excavation limits. Field observations and screening, using a PID, will be used to determine that adequate soil has been removed. However, if any suspected hydrocarbon-impacted soil is encountered and left in-place due to inaccessibility, a confirmation soil sample may be collected.

6.7 CONFIRMATION GROUNDWATER SAMPLING

During the excavation it is anticipated that standing groundwater will accumulate in the open excavation pit. To assist with backfilling and further address hydrocarbon concentrations in groundwater, standing groundwater will be pumped from the open excavation pit. Depending on the volume of water which accumulates in the open excavation pit, CRA intends on collecting up to three grab-groundwater samples to assess the groundwater quality re-entering the open excavation pit. Grab groundwater samples from the open excavation will be analyzed for TPHd and TPHg by EPA Method 8015M and BTEX and MTBE by EPA Method 8260B.

To facilitate groundwater disposal, a grab groundwater sample may also be collected from the holding tank(s) and analyzed for all required constituents as required for permitted disposal. CRA's standard field procedures for excavation sampling are included in Appendix E.

6.8 SOIL SEGREGATION, REUSE AND DISPOSAL

Excavated soil may be temporarily stockpiled onsite or directly loaded into hauling trucks for immediate offsite transportation. If the excavated soil does not exhibit VOC impact from field scanning with a PID, CRA proposes that the soil be temporarily stockpiled onsite in preparation for reuse as backfill in the excavation. Stockpiled soil that does exhibit significant VOC impact based on PID readings (typically >50 parts per million by volume) will be segregated for storage, properly underlain and covered with plastic sheeting, manifested, transported, and disposed of according to all State and Federal regulations at an approved waste disposal facility. Disposal documentation will be provided with the final report.

6.9 BACKFILLING

The excavation will be backfilled with reusable clean excavated soil (if any is identified) and/or by imported engineered fill, typically virgin material from a local quarry. A minimum compaction measurement of 90% relative density, or that dictated by the local permit agency, will be achieved and compaction documentation will be supplied with the final remedial completion report.

6.10 WATER COLLECTION, TREATMENT, AND DISPOSAL

Any displaced groundwater will be temporarily stored onsite in adequately-sized holding tank(s). The groundwater will either be transported offsite under manifest for disposal or treated onsite with a sediment filter and GAC, and then discharged to the sanitary sewer under permit. If additional laboratory analysis is required by the accepting utility agency prior to groundwater discharge, the required analysis will be performed and reported, as necessary.

6.11 REPORTING

After the analytical results are received, CRA will prepare and submit a *Remedial Excavation Completion Report* to the GPP that, at a minimum, will contain:

- A description of the well destruction activities,
- A description of the excavation activities including sampling and dewatering activities,
- Tabulated analytical results,
- Figures depicting the excavation limits, location of all samples, and associated analytical results,
- Laboratory reports and chain-of-custody forms,
- Soil and wastewater treatment and disposal methods, and
- Conclusions and recommendations.

Additionally, CRA will prepare and submit State of California *Well Completion Reports* for the destroyed wells to the Department of Water Resources.

7.0 POST-EXCAVATION SAMPLING AND SITE CLOSURE

Based on discussions with the GPP, post-excavation groundwater samples will need to be collected downgradient of the Site during the dry and wet seasons to confirm that the remedial excavation has been effective in reducing hydrocarbon concentration in groundwater. Prior to backfilling, CRA will collect a grab-groundwater sample from the open excavation pit. Based on an evaluation of the grab-groundwater results, a groundwater sampling location will be identified down-gradient of the excavation and discussed with the GPP. A groundwater sample will then be collected from either a temporary boring or a new monitoring well. Groundwater samples will be analyzed for TPHd, TPHg, BTEX, and MTBE, consistent with the former well monitoring program. Provided the post-excavation groundwater concentrations are at levels that are supportive of low risk site closure, a *Site Closure Request* will be prepared and submitted to the GPP.

8.0 SCHEDULE

Upon receiving written RAP approval from the GPP, CRA will commence implementation of the RAP. CRA will immediately submit well destruction permits and begin scheduling well destruction activities. Discussions with Olympian, the facility operator and the property owner have been initiated and are scheduled to continue in August 2012, to coordinate field activities and identify any potential concerns. According to the facility operator, UST system removal activities are currently scheduled to begin in early September 2012.

TABLE 1

GROUNDWATER ELEVATION AND ANALYTICAL DATA
OLYMPIAN CARDLOCK FACILITY
131 TERMINAL COURT
SOUTH SAN FRANCISCO, CALIFORNIA

Sample ID	*Date*	*Depth to Water*	*Groundwater Elevation*	*TPHd*	*TPHg*	*Benzene*	*Toluene*	*Ethylbenzene*	*Xylenes*	*MTBE*	*TBA*	*ETBE*	*TAME*	*DIPE*	*1,2-DCA*	*EDB*	*EtOH*
TOC	*Sampled*	*(ft btoc)*	*(ft amsl)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*	*(µg/L)*

Notes:
TOC = Elevation of the top of casing in feet relative to mean sea level
TOC elevation survey completed in July 2001 by Virgil Chavez Land Surveying
ft btoc = measured in feet below top of casing
ft amsl = measured in feet above sea level
TPHd = Total petroleum hydrocarbons as diesel by EPA modified Method SW8015C, (with sillica gel cleanup)
TPHg = Total petroleum hydrocarbons as gasoline by EPA modified Method SW8015C
Benzene, Toluene, Ethylbenzene, Xylenes by EPA Method SW8021B
MTBE = Methyl-tert-butyl ether (MTBE) (EPA Method 8020 or 8021B)
TBA = tert-Butyl Alcohol (EPA Method 8260)
µg/L = Micrograms per liter
ND = compound not detected above laboratory reporting limits
<X = Concentration less than laboratory reporting limits
-- = Not analyzed / not applicable / not available
* = MTBE confirmed by EPA Method 8260
** = Does not match diesel pattern
# = See laboratory report for notes and/or a description of chromatogram pattern
NA = Not avaliable, not analyzed

Note: Total Dissolved Solids (TDS) analyzed for MW-3 on 7/13/01 showed concentration of 19,524 ppm.

Notes:

all soil data prior to 2010 obtained by previous consultant
ft bgs = Feet below grade ground surface
TPHd = Total petroleum hydrocarbons as diesel by EPA Method 8015
TPHg = Total petroleum hydrocarbons as gasoline by EPA Method 8015
Benzene, Toluene, Ethylbenzene, Xylenes by EPA Method 8020 or 8021
MTBE = Methyl-tert-butyl ether analyzed by EPA Method 8020 or 8021
<X = Concentration less than laboratory reporting limits
a = Hydrocarbon response in the diesel range but does not resemble diesel
b = MTBE confirmed by EPA Method 8260
c = heavier gasoline range compounds are significant (aged gasoline?)
d = no recognizable pattern
e = weakly modified or unmodified gasoline is significant
f = strongly aged gasoline or diesel range compounds are significant in the TPHg chromatogram
g = gasoline range compounds are significant
h = unmodified or weakly modified diesel is significant
i = diesel range compounds are significant; no recognizable pattern
j = oil range compounds are significant
k = kerosene/kerosene range /jet fuel range

AGENCY CORRESPONDENCE

SAN MATEO COUNTY
HEALTH SYSTEM

July 21, 2011

SMCo Site# 550158
APN 015-113-210

Fred Bertetta Jr. c/o Janet Heikel
Olympian Oil Company
1300 Industrial Road, Suite 2
San Carlos, CA 94070

SUBJECT: OLYMPIAN FUELING FACILITY AT 131 TERMINAL COURT SOUTH SAN FRANCISCO, CALIFORNIA

Dear Mr. Bertetta:

Thank you for the *Work Plan Addendum,* submitted June 24, 2011 to the Geotracker website, by Conestoga-Rovers & Associates (CRA) for the above referenced site. San Mateo County Groundwater Protection Program (GPP) concurs with the proposed additional borings in the vicinity of B-18. Please note this scope of work is in addition to the conditionally approved borings in the vicinity of the tanks and dispensers and work in both areas should occur concurrently. Please keep in mind that the subsequent site assessment report and remedial action plan (RAP) for excavation are due no later than **June 15, 2012.**

As always, you may submit requested items at any time prior to the due date in order to expedite the progress of the overall site investigation and potential remediation. I can be reached at (650) 372-6298 or by e-mail at jmadden@co.sanmateo.ca.us to answer any questions you may have regarding this letter. Thank you for your cooperation.

Sincerely,

Jacob Madden
Hazardous Materials Specialist
Groundwater Protection Program

FA 51497

 2012 SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate & correct map of existing and proposed well/boring locations **must** be included with the permit application. The well/boring location map **must** include the following.

1. North arrow, existing & historic site features, wells, approximate property lines and any other pertinent existing & historic features and information.
2. Proposed well/boring locations to scale.

A work plan describing the drilling and construction/destruction methodology, at a minimum, is **required** by County Staff. Upon review of information on this application and the submitted work plan, and subject to approval noted below, a permit will be issued allowing well/boring owner, driller, and responsible professional (consultant) to perform the specified work. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. Drilling may begin at the notified date and time whether County staff is present or not.

GENERAL CONDITIONS:

A. Well and boring construction and destruction under this permit is subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

B. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its' officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

C. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling unless special conditions are approved in writing as part of this permit. Borings lasting longer than 24 hours without a variance are considered wells.

D. Analytical results of all soil and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

E. A copy of the State DWR Form 188, boring logs and well construction details for all borings/wells except geotechnical borings, signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. As-built locations/dimensions **must** be finalized in subsequent report of findings submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction.

F. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

G. Permit is valid for mobilizations associated with originally permitted boring/monitoring well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted by County GPP, within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time, at least one minute prior to the notified start time, will result in the Consultant being billed an Inspection Cancellation fee of $264 for 2012 if GPP staff attempted to perform an inspection.

H. Wells installed under this permit may not be used for domestic, municipal, commercial, or irrigation water supply.

I. All work plans and reports related to work performed under County oversight **must** conform to Business and Profession Codes and State Water Well Standards.

J. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

K. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

L. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, and potentially re-permit the work as a new mobilization.

SPECIAL CONDITIONS: _____

County Approval: _____ RO/FA# 1695 Date: 5-1-2012

Revised every January 1

Analytical Report

Conestoga-Rovers & Associates	Client Project ID: #161558; 131 Terminal Court, South San Francisco,	Date Sampled: 05/07/12-05/10/12
5900 Hollis St, Suite A		Date Received: 05/11/12
	Client Contact: Dan Glaze	Date Reported: 05/18/12
Emeryville, CA 94608	Client P.O.:	Date Completed: 05/18/12

WorkOrder: 1205353

May 18, 2012

Dear Dan:

Enclosed within are:

1) The results of the **95** analyzed samples from your project: **#161558; 131 Terminal Court, South San Francisco**
2) QC data for the above samples, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
McCampbell Analytical, Inc.

The analytical results relate only to the items tested.

Sample Receipt Checklist

Client Name: **Conestoga-Rovers & Associates** Date and Time Received: **5/11/2012 2:34:39 PM**

Project Name: **#161558; 131 Terminal Court, South San Francisco, CA** LogIn Reviewed by: Maria Venegas

WorkOrder N°: **1205353** Matrix: Soil Carrier: Rob Pringle (MAI Courier)

Chain of Custody (COC) Information

Chain of custody present?	Yes ☑	No ☐
Chain of custody signed when relinquished and received?	Yes ☑	No ☐
Chain of custody agrees with sample labels?	Yes ☑	No ☐
Sample IDs noted by Client on COC?	Yes ☑	No ☐
Date and Time of collection noted by Client on COC?	Yes ☑	No ☐
Sampler's name noted on COC?	Yes ☑	No ☐

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes ☐	No ☐	NA ☑
Shipping container/cooler in good condition?	Yes ☑	No ☐	
Samples in proper containers/bottles?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes ☑	No ☐	
Container/Temp Blank temperature	Cooler Temp: 0.7°C		NA ☐
Water - VOA vials have zero headspace / no bubbles?	Yes ☐	No ☐	No VOA vials submitted ☑
Sample labels checked for correct preservation?	Yes ☑	No ☐	
Metal - pH acceptable upon receipt (pH<2)?	Yes ☐	No ☐	NA ☑
Samples Received on Ice?	Yes ☑	No ☐	

(Ice Type: WET ICE)

** NOTE: If the "No" box is checked, see comments below.*

Reporting Limit for DF =1; ND means not detected at or above the reporting limit	W	50	5.0	0.5	0.5	0.5	0.5	ug/L
	S	1.0	0.05	0.005	0.005	0.005	0.005	mg/Kg

* water and vapor samples are reported in µg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts in mg/L.

cluttered chromatogram; sample peak coelutes w/surrogate peak; low surrogate recovery due to matrix interference; %SS = Percent Recovery of Surrogate Standard; DF = Dilution Factor

The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation:
d1) weakly modified or unmodified gasoline is significant
d2) heavier gasoline range compounds are significant (aged gasoline?)
d7) strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9) no recognizable pattern

Reporting Limit for DF =1; ND means not detected at or above the reporting limit	W	50	5.0	0.5	0.5	0.5	0.5	ug/L
	S	1.0	0.05	0.005	0.005	0.005	0.005	mg/Kg

* water and vapor samples are reported in µg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts in mg/L.

cluttered chromatogram; sample peak coelutes w/surrogate peak; low surrogate recovery due to matrix interference; %SS = Percent Recovery of Surrogate Standard; DF = Dilution Factor

The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation:
d1) weakly modified or unmodified gasoline is significant
d2) heavier gasoline range compounds are significant (aged gasoline?)
d7) strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9) no recognizable pattern

Reporting Limit for DF =1; ND means not detected at or above the reporting limit	W	NA	NA
	S	1.0	mg/Kg

* water samples are reported in µg/L, wipe samples in µg/wipe, soil/solid/sludge samples in mg/kg, product/oil/non-aqueous liquid samples in mg/L, and all DISTLC / STLC / SPLP / TCLP extracts are reported in µg/L.

cluttered chromatogram resulting in coeluted surrogate and sample peaks, or; surrogate peak is on elevated baseline, or; surrogate has been diminished by dilution of original extract.

%SS = Percent Recovery of Surrogate Standard. DF = Dilution Factor

The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation:
e1) unmodified or weakly modified diesel is significant
e2) diesel range compounds are significant; no recognizable pattern
e4) gasoline range compounds are significant.
e7) oil range compounds are significant
e8) kerosene/kerosene range/jet fuel range

BATCH 67428 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1205353-095A	05/10/12 8:16 AM	05/11/12	05/15/12 2:44 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Analytical Report

Conestoga-Rovers & Associates	Client Project ID: #161558	Date Sampled: 05/10/12
		Date Received: 05/11/12
5900 Hollis St, Suite A	Client Contact: Dan Glaze	Date Reported: 05/17/12
Emeryville, CA 94608	Client P.O.:	Date Completed: 05/16/12

WorkOrder: 1205352

May 17, 2012

Dear Dan:

Enclosed within are:

1) The results of the **1** analyzed sample from your project: **#161558,**
2) QC data for the above sample, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius

BATCH 67472 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1205352-001A	05/10/12 2:55 PM	05/11/12	05/16/12 1:10 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

WorkOrder: 1205353 A

May 23, 2012

Dear Dan:

Enclosed within are:

1) The results of the **1** analyzed sample from your project: **#161558; 131 Terminal Court, South San Francisco**
2) QC data for the above sample, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius

Dear Dan:

Enclosed within are:

1) The results of the **1** analyzed sample from your project: **#161558; 131 Terminal Court, South San Francisco**
2) QC data for the above sample, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius

Emeryville, CA 94608	Client P.O.:	Date Completed: 06/06/12

WorkOrder: 1205353 **D**

June 06, 2012

Dear Dan:

Enclosed within are:

1) The results of the **1** analyzed sample from your project: **#161558; 131 Terminal Court, South San Francisco**
2) QC data for the above sample, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
McCampbell Analytical, Inc.

The analytical results relate only to the items tested.

BATCH 67890 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1205353-097A	05/07/12	05/30/12	06/06/12 1:42 PM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not applicable to this method.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

STANDARD FIELD PROCEDURES

Conestoga-Rovers & Associates

STANDARD FIELD PROCEDURES FOR WELL DESTRUCTION

This document presents standard field methods for destroying groundwater monitoring wells. The objective of well destruction is to destroy wells in a manner that is protective of potential water resources. The two procedures most commonly used are pressure grouting and drilling out the well. These procedures are designed to comply with Federal, State and local regulatory guidelines. Specific field procedures are summarized below.

Pressure Grouting

Pressure grouting consists of pumping neat Portland cement through a tremie pipe to the bottom of the well and filling the well casing with cement from the bottom to the top. Displaced groundwater is contained at the wellhead and discharged into an appropriate container for disposal. The cement is composed of about five gallons of water per 94 lb. sack of Portland Type I/II Cement. Once the well casing is completely filled with cement, 25 pounds per square inch of air pressure is applied to the grout column using an air-compressor. The process is continued until the grout column is stable under pressure. In some instances, the well casing can also be pressurized by extending the well casing to the appropriate height and filling it with grout. In either case, the additional pressure allows the grout to be forced into the sand pack. After grouting the sand pack and casing, the well vault is removed and the area resurfaced or backfilled as required.

Well Drill Out

When well drill out is required, the well location is cleared for subsurface utilities and a hollow-stem auger drilling rig is used to drill out the well casing and filter pack materials. First, drill rods are dropped down the well and used to guide the augers as they drill out the well. Once the well is drilled out, the boring is filled with Portland cement injected through the augers or a tremie pipe under pressure to the bottom of the boring. The well vault is removed and the area resurfaced or backfilled as required.

STANDARD FIELD PROCEDURES FOR EXCAVATION SAMPLING

After confirming a release from underground gasoline storage tanks, product piping or pump islands, soil excavation is often done to remove hydrocarbon-bearing soils that may pose a threat to groundwater quality beneath a site. Soil samples are routinely collected to monitor the progress of the excavation and to confirm that soils containing hydrocarbons above regulatory limits have been completely removed. CRA has developed standard operating procedures for collecting soil samples during routine excavation operations to ensure that the samples are collected, handled and documented in compliance with State and local regulatory agency regulations.

Excavation Sampling

Prior to collecting soil samples during excavation operations, CRA field staff screen the removed soils with a portable photo-ionization detector (PID) to qualitatively assess the presence or absence of volatile hydrocarbons. The removed soil is typically segregated based on hydrocarbon concentration and stockpiled on site on plastic sheeting. When the PID measurements indicate that the hydrocarbon-bearing soil has been satisfactorily removed, CRA collects soil samples from the excavation sidewalls and bottom for confirmatory analysis at a State-certified analytic laboratory.

The soil samples are collected in steam-cleaned brass or steel tubes from either a driven split-spoon type sampler or the bucket of a backhoe or excavator. When a backhoe or excavator is used, approximately three inches of soil are scraped from the surface and the tube is driven into the exposed soil.

Grab Groundwater Sampling

If groundwater enters the excavation, grab groundwater samples can be collected from the open excavation. Grab groundwater sample can be collected from excavator equipment, disposable Tygon® tubing placed into the excavation, or other appropriate sampling equipment placed into the water. The groundwater samples are decanted into the appropriate containers supplied by the analytic laboratory.

Sample Storage, Handling and Transport

Upon removal from the sampler or the backhoe, soil samples are trimmed flush, capped with Teflon tape and plastic end caps. Soil samples are labeled and stored at or below 4°C on either crushed or dry ice, depending upon local regulations. Groundwater samples are labeled, placed in protective foam sleeves, stored on crushed ice at or below 4° C. All samples are transported under chain-of-custody to a State-certified analytic laboratory.

Duplicates and Blanks

Duplicate or blind duplicate samples can be collected, if requested. For water sampling, laboratory-supplied trip blanks can accompany samples to check for cross-contamination caused by sample handling and transport. These trip blanks are analyzed if the internal laboratory quality assurance/quality control (QA/QC) blanks contain the suspected field contaminants. An equipment blank may also be analyzed if non-dedicated sampling equipment is used.

1.0 INTRODUCTION

On behalf of Olympian JV (Olympian), Conestoga-Rovers & Associates (CRA) has prepared this *Remedial Action Completion Report* for the property (Site) located at 131 Terminal Court in South San Francisco, California (Figure 1). This report was prepared in response to San Mateo County Environmental Health Department, Groundwater Protection Program's (GPP) letter, dated August 15, 2012 (Appendix A), and documents the completion of remedial actions proposed in CRA's *Subsurface Investigation and Remedial Action Plan (RAP)* dated July 25, 2012. In addition to the remedial excavation activities, this report describes pre-excavation well destruction activities and upcoming post-remedial groundwater monitoring and reporting activities.

2.0 SITE BACKGROUND

2.1 SITE DESCRIPTION

The Site is located near the intersection of Terminal Court and Produce Avenue in South San Francisco, California (Figure 1). It was operated as a commercial fueling facility and consisted of two dispenser islands, two diesel USTs, and one gasoline UST which were owned and operated by Nella Oil Company (Nella). The property is owned by Golden Gate Produce. The entire Site is currently vacant, surrounded by chain link fencing and paved with asphalt. Former site features are presented on Figure 2.

The Site is located in a commercial/industrial area of South San Francisco. The property adjoins the Golden Gate Produce Terminal to the west and the Park 'N' Fly parking lot to the east. The Bayshore Freeway, (California State Highway 101) is located approximately 200 feet (ft) east of the Site. The Site topography is relatively flat and is approximately 6 feet above mean sea level (ft msl). The nearest surface water is Colma Creek located approximately 0.25 miles north of the Site. The San Francisco Bay is approximately 1 mile east of the Site.

In October 2012, Nella arranged for the removal of the fueling system. The system consisted of two dispenser islands, two diesel USTs and one gasoline UST. Details of the removal are documented in Blue Rock Environmental Inc.'s report titled *UST System Removal Sampling Report* dated October 23, 2012.

2.2 GEOLOGY AND HYDROGEOLOGY

Geology: The Site is located in the Coast Range Geomorphic Province of California. According to the geologic map by Jennings and Burnett from 1961, the general vicinity is underlain by unconsolidated artificial fill primarily consisting of clayey fine sand, silt, clay, rock fragments, and organic material underlain by Quaternary alluvium and dune deposits. Bedrock in the area is primarily Mesozoic ultrabasic rocks, including serpentine.

The soil beneath the Site generally consists of sandy gravel fill to 3.0 feet below ground surface (ft bgs), interbedded clayey sand, sand and silty clay to approximately 9.0 ft bgs, underlain by dark grey, low estimated permeability, silty clay ("Bay Muds") to a total explored depth of 18 ft bgs.

Hydrogeology: According to the Department of Water Resources, Bulletin 118 from 2004, the Site is located within the South San Francisco Groundwater Basin.

The shallow groundwater table typically ranges between 1 to 5 ft bgs. Groundwater levels measured on March 2, 2012, indicate that groundwater beneath the Site flows primarily toward the northeast and ranged from 2.7 to 3.7 ft bgs. Groundwater gradient is consistently to the northeast.

3.0 WELL DESTRUCTION ACTIVITIES

3.1 PREFIELD ACTIVITIES

Prior to initiating any well destruction field activities, CRA obtained well destruction permits from the GPP and an encroachment permit from the City of South San Francisco (Appendix B). A site specific health and safety plan was prepared and reviewed by all appropriate personnel. All proposed well destruction locations were pre-marked with white paint and Underground Service Alert (USA) was notified to identify potential subsurface utilities in the area.

3.2 WELL DESTRUCTION

On August 27 and 28, 2012, seven groundwater monitoring wells (MW-1, MW-2, MW-3, MW-5, MW-6, MW-7 and MW-8) were properly destroyed by Woodward Drilling Company of Rio Vista, California. The wells were destroyed using the pressure

grouting method, as approved by the GPP. Prior to pressure grouting, the total depth of each well was verified using a water level meter or measuring tape to ensure no obstructions existed in the well casing prior to grout placement. Due to silt accumulation, wells MW-1 and MW-3 required clearing of silt from the bottom of the well casing prior to grout placement. Grout consisting of neat Portland Type I/II cement was tremied into each well. After each well was filled with grout, 25 pounds per square inch (psi) of air pressure was applied to the grout column in the well for at least 5 minutes. If the grout in the well casing subsided after the initial application of air pressure, the well was topped off with grout and 25 psi of air pressure was re-applied for an additional 5 minutes. The process was repeated until the grout in each well was stable. Upon completion of pressure grouting of each well, the well boxes outside of the proposed excavation extents were removed and surfaces returned to pre-existing conditions (asphalt). The well boxes within close proximity to the excavation were removed during the excavation. Wastes generated during well destruction activities were placed in 55-gallon DOT approved drums and temporarily staged onsite for disposal during the upcoming remedial excavation.

3.3 DWR WELL COMPLETION FORMS

Department of Water Resources (DWR) Well Completion Reports have been completed and submitted. Copies of the DWR Well Completion Reports are included in Appendix C.

4.0 REMEDIAL ACTIONS

In December 2012, CRA contracted with American Integrated Services (AIS) of Fairfield, California to permit, excavate, backfill and restore the Site according to the RAP. AIS also provided the transport and offsite disposal of all soil. A summary of these remedial activities is presented below.

4.1 PERMITTING AND NOTIFICATIONS

CRA and AIS procured the following permits to complete the work scope:

- City of South San Francisco Hauling Permit.
- City of South San Francisco Grading Permit.

Copies of the above permits are included in Appendix B.

Notification of excavation activities was also given to GPP, Cal-OSHA, USA, BAAQMD, and the property owner.

4.2 EXCAVATION ACTIVITIES

Remedial excavation activities were conducted during December 2012. A total of 789 cubic yards of soil (approximately 3,209 square feet) was excavated from the Site to depths ranging from 6 to 10 ft bgs, as shown on Figure 3. Due to elevated PID readings and a request from the GPP, additional soil was excavated from below the former dispensers and along the southern boundary. Minimal groundwater was observed in the excavation pit. Moist soil and Bay Mud were observed at approximately 9 to 10 ft bgs.

During excavation, an interfering utility pole support guy wire and associated below ground anchor were removed and re-installed within the excavated area. Pacific Gas and Electric assisted with supporting the utility pole and replacement of the guy wire and anchor.

Following excavation, clean imported fill materials from Steven's Creek Quarry in Cupertino, California were placed into the excavation pit and compacted to a minimum of 90 percent relative density. A copy of the compaction report is included in Appendix E.

4.3 CONFIRMATION SOIL SAMPLING

As requested by GPP, four confirmation soil samples were collected along the north and northwest excavation boundary to determine the soil concentrations left in place in this area. The confirmation soil sampling locations are shown on Figure 3. The confirmation soil samples were collected from the base of the excavation at either 6 or 10 ft bgs. Soil samples were submitted under chain-of-custody to McCampbell Analytical of Pittsburg, California. The samples were analyzed for Total Petroleum Hydrocarbons as diesel (TPHd) by EPA Method 8015, Total Petroleum Hydrocarbons as gas (TPHg) by EPA Method 8015, benzene, toluene, ethylbenzene, total xylenes, naphthalene and methyl-tertiary butyl ether (MTBE) by EPA Method 8260.

Little to no hydrocarbons were detected in the four confirmation soil samples. The soil results are summarized on Figure 3 and tabulated in Table 1. A copy of the analytical report is included as Appendix D.

4.4 WASTE TRANSPORT AND DISPOSAL

AIS transported 996 tons of excavated soil via truck to Potrero Hills Landfill in Suisun City, California. Copies of the waste manifests documenting the transport and disposal of the soil, including the formerly stored well destruction wastes, are included in Appendix E.

4.5 FINAL SITE CONDITIONS

Following the excavation, backfilling, and compaction activities, the affected area was paved with six inches of asphalt to match the surrounding area.

5.0 POST-REMEDIAL GROUNDWATER MONITORING

As per CRA's RAP, post-remedial groundwater monitoring will be performed to evaluate the hydrocarbon concentrations remaining in groundwater. A grab groundwater sample will be collected from two soil borings drilled in and downgradient of the former source area. The proposed boring locations are shown on Figure 4.

The two soil borings will be permitted and drilled to first encountered groundwater (approximately 5 to 10 ft bgs). A grab groundwater sample will be collected from each soil boring using a new disposal bailer inserted into a temporary well casing, and the samples submitted for analysis of TPHd, TPHg, BTEX, and MTBE. Two rounds of drilling and groundwater sampling will be performed, once during the wet season (early-2013) and once during the dry season (mid-2013). Provided that the post-remedial groundwater quality is supportive of low risk site closure, a *Site Closure Request* will be prepared and submitted to the GPP.

Olympian Oil Company
1300 Industrial Road, Suite 2
San Carlos, CA 94070

SUBJECT: OLYMPIAN FUELING FACILITY AT 131 TERMINAL COURT SOUTH SAN FRANCISCO, CALIFORNIA

Dear Mr. Bertetta:

Thank you for the *Subsurface Investigation and Remedial Action Plan,* submitted July 25, 2012 to the Geotracker website, by Conestoga-Rovers & Associates (CRA) for the above referenced site. San Mateo County Groundwater Protection Program (GPP) concurs with the proposed remedial action with the following comments and conditions.

- Please consider expanding the excavation boundaries to include borings B-48 and B-38 in order to remove potential secondary source. Confirmation samples collected during the fuel system removal may help inform modifications to the proposed excavation boundaries.

- In addition to the wells to be destroyed in the vicinity of the proposed excavation (MW-1, MW-2 and MW-5) please destroy all remaining wells (MW-3, MW-6, MW-7, and MW-8) as they do not appear to be located in areas useful for continued monitoring.

- Due to limited analytical data between the proposed excavation boundary and the street, please collect confirmation samples along this north and northwest excavation boundary in order to determine maximum soil concentrations left in place in this area.

- In addition to the proposed post-remedial groundwater monitoring samples to be collected directly down-gradient of the proposed excavation, please monitor post-remedial groundwater concentrations in the residual source area (i.e. B-16, B-18). This may be conducted by collecting grab samples from temporary borings over time or from properly installed monitoring wells. Well or boring locations with construction details should be approved by this office prior to installation.

Please notify this office at least two (2) business days prior to conducting any field work and submit a final report of remedial excavation no later than **January 11, 2013.**

As always, you may submit requested items at any time prior to the due date in order to expedite the progress of the overall site remediation. I can be reached at (650) 372-6298 or by e-mail at jmadden@smcgov.org to answer any questions you may have regarding this letter. Thank you for your cooperation.

Sincerely,

Jacob Madden

FA52077

 2012 SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate & correct map of existing and proposed well/boring locations **must** be included with the permit application. The well/boring location map **must** include the following.

1. North arrow, existing & historic site features, wells, approximate property lines and any other pertinent existing & historic features and information.
2. Proposed well/boring locations to scale.

A work plan describing the drilling and construction/destruction methodology, at a minimum, is **required** by County Staff. Upon review of information on this application and the submitted work plan, and subject to approval noted below, a permit will be issued allowing well/boring owner, driller, and responsible professional (consultant) to perform the specified work. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. Drilling may begin at the notified date and time whether County staff is present or not.

GENERAL CONDITIONS:

A. Well and boring construction and destruction under this permit is subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

B. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its' officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

C. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling unless special conditions are approved in writing as part of this permit. Borings lasting longer than 24 hours without a variance are considered wells.

D. Analytical results of all soil and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

E. A copy of the State DWR Form 188, boring logs and well construction details for all borings/wells except geotechnical borings, signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. As-built locations/dimensions **must** be finalized in subsequent report of findings submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction.

F. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

G. Permit is valid for mobilizations associated with originally permitted boring/monitoring well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted by County GPP, within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time, at least one minute prior to the notified start time, will result in the Consultant being billed an Inspection Cancellation fee of $264 for 2012 if GPP staff attempted to perform an inspection.

H. Wells installed under this permit may not be used for domestic, municipal, commercial, or irrigation water supply.

I. All work plans and reports related to work performed under County oversight **must** conform to Business and Profession Codes and State Water Well Standards.

J. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

K. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

L. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, and potentially re-permit the work as a new mobilization.

DESCRIPTION OF WORK: *(ATTACH MAP AND PLANS AND/OR REFERENCE APPLICABLE CITY STANDARD PLAN DRAWINGS)*
Roadwork: Destroy two monitoring wells by drill-out method in the City of South San Francisco right of way in Terminal Ct, see attached traffic control plan.
Sidewalk work: Contractor staging a vehicle on sidewalk at 131 Terminal Ct for a maximum of two days, dates currently not known, see attached traffic control plan.

GENERAL CONDITIONS

1. Construction permits shall have the approval of the City Engineer and /or a designated representative and shall be in conformance with Standard Plan Drawings of the City of South San Francisco.
2. All work shall be done subject to the supervision and to the satisfaction of the Public Works Department. Cuts in the street must be neat and straight, and sidewalks must be saw cut. **IMPORTANT: Call "Before you Dig" 1-800-227-2600.**
3. Excavation and shoring that is 5 feet deep or more shall conform to CAL/OSHA requirements.
4. Excavations MUST be covered at the end of each working day as directed by the Public Works Inspector. Provisions for two-way traffic shall be maintained at all times and must conform to Caltrans construction safety standards. The first two inspections are included in the cost of the Encroachment Permit. For each additional inspection, the Contractor shall pay $100 prior to additional inspections. Payments shall be made in the Engineering Division.
7. Encroachment Permit Deposits will be refunded upon proper installation of facilities, compaction of backfill, and replacement of pavement to satisfaction of the Public Works Inspector. Please call (650)877-8554 for a final inspection. Refund of deposit will **automatically** be processed upon receiving a satisfactory final inspection. Please allow a few weeks for processing.
8. Applicant shall hold the City of South San Francisco and its employees, agents and representatives harmless and assume all liability for claims which may arise by or because of this permit; nor by issuance of this permit shall the City of South San Francisco and its employees, agents and representatives assume any obligation for future changes made by or because of design, construction, maintenance and/or traffic.
9. All construction projects are required to comply with the Bay Area Air Quality Management District's (BAAQMD) dust control

RE: Grading Permit No. E12-0310 for 131 Terminal Court

Dear Mr. Harding:

The City has processed the Grading Permit for 131 Terminal Court. Your copy is attached. If you have any questions, please call me at (650) 829-6663.

Please notify Rob Lecel, Senior Environmental Compliance Inspector at (650) 877-8555, ext. 3882, and Kelvin Munar, Public Works Inspector at (650) 829-6652, ext. 6661, at least 72 hours prior to start of construction.

If you have any questions, please call me at (650) 829-6663.

Sincerely,

Dennis Chuck
Senior Civil Engineer

Attachment: Grading Permit No. E12-0310

GRADING PERMIT
NO. E 12-0310

South San Francisco, California

In accordance with South San Francisco Municipal Code Chapter 15.08 and Section 19.24.150 and City Council Resolution No. 22-87 this Grading Permit is issued as of the date that this Permit is signed by the City Engineer on Page 7, to the Permittees named on Schedule 1, Line 2, to conduct grading operations in an amount estimated on Schedule 1 Line 3A, on the site described on Schedule 1 Line 3 and shown on the grading plan, title of which is set forth on Schedule 1 Line 4B, which is hereinafter referred to as "Plan", subject to the following terms and conditions:

1. Permittees shall cause the grading to be done under the immediate supervision of a State registered geotechnical engineer who shall certify upon completion of the grading work that the work was done under his, or her, supervision in accordance with the "Plan" and "Geotechnical Report" described in Schedule 1 Lines 4A and 4B.

2. This permit shall expire on the date set forth in Schedule 1 Line 7. The permit may be extended by the City Engineer, at his option, upon written request of the applicant.

3. In accordance with the provisions of the Uniform Building Code, as adopted in Chapter 15.08 of the South San Francisco Municipal Code: during the period between November 1 and May 1, no grading work in excess of two hundred (200) cubic yards is permitted except as required to maintain temporary erosion control devices, desilting basins and the approved winterization improvements. The Permittees shall accomplish all emergency public safety related work, as required by the City to correct hazards within twenty-four (24) hours of receiving oral or written notification by the City Engineer or his authorized representative. If the Permittees do not commence the emergency work within twenty-four (24) hours of contacting, or attempting to contact, the Permittees at their twenty-four (24) hours phone number listed on Page 6 of this permit, the City Engineer may order City forces or a private contractor to accomplish the work and charge the costs to the Permittees.

4. Permittees shall control dust by the use of an adequate number of water trucks and any other methods recommended by the soils engineer to protect public and private property in the vicinity or adjacent to the area from annoyance or damage from dust caused by the grading operations. Permittees shall conduct dust and erosion control operations seven days a week, twenty-four hours a day. Should Permittees neglect to control the dust or erosion as herein provided, City may suspend the grading operation by written notice to Permittees, requiring that all operations cease until a reasonable schedule or plan for dust control is filed with the City Engineer.

5. Permittees shall make available to the City Engineer or his representative, any and all documents, maps or reports concerned with the grading operations and shall permit inspections of the fill material at the site by the City Engineer or his

representative, in order that adequate inspection may be made to determine whether the property is being filled and graded in accordance with this permit.

6. Permittees should conduct the grading operations so as not to damage the property in the vicinity of the grading site and so as to not leave uncompleted dangerous cuts or embankments. Should Permittees leave uncompleted work in a hazardous condition or with dangerous cuts or embankments, the City may order the work completed or the dangerous cuts or embankments removed or made safe at the cost and expense of the Permittees.

7. Permittees shall clear and prepare the site as recommended in the geotechnical report and as required by the geotechnical engineer. Materials for the fill shall consist of materials approved by the geotechnical engineer and may be obtained from the excavation of lands, borrow pits or any other approved sources.

8. Permittees shall compact all fills in lifts as recommended in the soils report and as required by the geotechnical engineer. Field destiny tests shall be made at intervals determined by the geotechnical engineer. No additional layers of fill shall be spread until the field density tests indicate that the specified density has been obtained. The geotechnical engineer shall have authority to and shall order work stopped until the underlying layers have been compacted to the specified density, should compaction tests show compaction below standard. Where loose materials remain on the slope after the final elevation of the slope has been obtained, the loose materials shall either be removed or to be compacted, in accordance with the requirements of the geotechnical report and the geotechnical engineer.

9. Permittees should have the geotechnical engineer to maintain on the site at all times during the placement of fill, or the pertinent work, a qualified representative who shall certify to the proper compaction of all fills and to the adherence with all other requirements set forth herein as the work progresses.

10. Permittees shall file with the City, prior to issuance of this permit, an agreement between the Permittees and the geotechnical engineer providing that the geotechnical engineer will inspect an supervise the grading operations to assure that it is being conducted in accordance with the terms of this permit, and further providing that upon completion of the grading work and the construction and installation, the geotechnical engineer shall submit a final report to the City Engineer stating that all cut, fill and slope areas have been constructed and compacted in accordance with the "Geotechnical Report" and the "Plan" specified in the terms of this permit. Permittees shall further file with the City a final grading map showing thereon the location of control compacted filled ground, original and final contour lines and finished grade elevations, as constructed and locations of all surface and sub-surface drainage pipes and structures. The drainage pipes and structures shall be private property unless there is dedication formally made by the property owner and accepted by the City Council.

11. Permittees shall file with the City, prior the issuance of a permit, an agreement between Permittees and their geotechnical engineer preparing the geotechnical report for the grading operation and conducting on-site inspections and reports and specifying that the geotechnical engineer will indemnify and hold harmless,

Permittees and the City it's officers, employees, agents, boards and commissions, whether elected or appointed, from and against all claims, suits, losses, and damages arising out of the performance of the work hereunder, which is (1) for bodily injury, illness, or death, or for property damage, and (2) caused in whole or in part by any willful or negligent act or omission of the geotechnical engineer in connection with the performance of their work herein. In the event of concurrent negligence, then the liability for any and all claims for personal injury (including death) and property damage arising out of performance of this permit shall be apportioned under the California theory of comparative negligence as established presently, or as may hereafter be modified. Each party to this permit involved in the proposed work will be responsible for all costs, including attorneys fees, arising from any claim to which this permit applies.

12. Permittees shall hold harmless indemnify and, at City's request, defend City, it's officers, employees, agents, boards and commissions, whether elected or appointed, from and against all claims, demands, actions, causes of action, losses, damages, liabilities, costs and expenses, including but not limited to reasonable attorney's fees or obligations, or in connection with personal injury (including, but not limited to death), or damage to property (both real and personal) which arises out of, or is in any way connected with, the negligent act, error or omission of Permittee or its agents, subcontractors or employees in connection with the performance of the work defined herein.

13. The Permittees shall take out and maintain during the life of this Grading Permit the following policies of insurance:

(A) Worker's Compensation and Employers' Liability Insurance in the statutory coverage.

In signing this agreement, the Permittee makes the following certification:

> "I am aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Workers Compensation or to undertake self-insurance in accordance with the provisions of the code, and I will comply with such provisions before commencing the performance of the work authorized by this Agreement."

(B) Commercial General Liability Insurance:

In an amount not less than FIVE HUNDRED THOUSAND DOLLARS ($500,000) for injuries including, but not limited to, death to any one person and subject to the same limit for each person, in an amount not less than ONE MILLION DOLLARS ($1,000,000) combined single limit per occurrence for bodily injury, personal injury and property damage.

(C) Automobile Liability (Code 1 Insurance):

In an amount not less than FIVE HUNDRED THOUSAND DOLLARS ($500,000) combined single limit per accident for bodily injury and property damage.

(D) Contractual Liability Insurance:

Permittees shall take out and maintain during the life of this Grading Permit an insurance policy in the amount of at least ONE MILLION DOLLARS ($1,000,000), insuring City, its elective and appointive boards, commissions, officers, agents and employees, and Permittees against damages sustained by reason of any action or actions at law or in equity, and/or any claims or demands by reasons of any breach or alleged breach of any contract or provisions therefore, or by reason of any contractual liability, or alleged contractual liability arising out of any contract entered into by Permittee and/or any of its agents or employees in order to perform the work defined herein.

(E) It is agreed that the insurance required by Subsections B, C, and D shall be in an aggregate amount of not less than ONE MILLION FIVE HUNDRED THOUSAND DOLLARS ($1,500,000) and shall be extended to include as insureds: the City of South San Francisco, its elective and appointed officers, boards, Commissions, agents, employees and volunteers, with respect to operations performed by the Permittees as described herein. The coverage shall contain no special limitations on the scope of protection afforded to the City. Evidence of the insurance described above shall provided to the City upon execution of this Grading Permit and shall be subjected to approval by the City Attorney as to form, amount and carrier. The policy of insurance shall also contain a provision indicating that such insurance shall not be reduced or cancelled except upon thirty (30) days written notice to the City. In addition, the following endorsement shall be made on the policy of insurance:

> " Notwithstanding any other provisions in this policy, the insurance afforded hereunder to the City of South San Francisco shall be primary as to any other insurance or reinsurance covering or available to the City of South San Francisco, and such other insurance or reinsurance shall not be required to contribute to any liability or loss, until and unless, the approximate limit of liability afforded hereunder is exhausted."

14. The City Engineer shall designate the haul route for Permittees, should one be necessary, and shall file a description of the haul route with the City Clerk together with this permit. The haul route, if any, is set forth in Schedule 1, Line 5A. Permittees or Permittees' hauling contractor shall file with City, a corporate surety bond in the principal sum set forth in Schedule 1, Line 5B, to secure the performance and to assure compliance with the provisions of Section 13.04.160 and Chapter 15.08 of the South San Francisco Municipal Code, or its successor.

15. Permittees shall conduct the grading work and place the fill in accordance with the "Plan", and Geotechnical Report referred to.

16. In addition to the requirements set forth above, this Permit is subject to the special conditions set forth in Exhibit "A" to Schedule 1.

17. The City Engineer is authorized to enforce the terms and conditions of this permit. If Permittees neglect, refuse or otherwise fail to comply with terms and conditions of this permit, the City Engineer shall proceed as follows:

(A) Notice to Comply. The City Engineer shall issue in writing to Permittees a Notice to Comply, stating therein the act or acts required to comply with the terms and conditions of the permit, establishing a time for the performance of the act or acts, which shall not be less than five (5) days after receipt of the notice, and informing Permitees that upon failure to so comply, a Notice of Suspension will issue on the sixth day after receipt of the Notice to Comply. Permittees, within five (5) days after receipt of the notice. Comply may file a Request for review with the City Manager, who within five (5) days after receipt therefore shall set a conference meeting with the City Engineer and Permittees for the purpose of confirming, modifying or ordering withdrawal of the Notice to Comply. If Permittees file the Request for Review, issuance of a Notice of Suspension shall be stayed until the City Manager confirms, modifies or revokes the Notice to Comply.

(B) Notice of Suspension. The City Engineer shall issue a notice of suspension if:

(1) Permittees neglect, refuses or otherwise fail to do the act or acts required the Notice to Comply within the time stated, unless Permittees have filed a Request for Review.

(2) Permittees neglect, refuse or otherwise fail to do the act or acts required by the Notice to Comply as confirmed or modified by the City Manager within five (5) days after the confirmation or modification.

Within five days after receipt of the Notice of Suspension, Permittees may file an appeal with the City Council, upon receipt of which the City Clerk shall set a hearing before the Council for the next regular meeting, for the purpose of having the Council confirm, modify or revoke the Notice to Comply and Notice of Suspension. If Permittees file the Appeal, the Notice of Suspension shall be stayed until the Council confirms, modifies or revokes the Notice to Comply and Notice of Suspension. If the Council confirms or modifies same, then Permittees shall comply within five (5) days after Council's order, and upon Permittees' neglect, refusal, or failure to perform the act or acts so required, then on the sixth day after Council's order, the permit shall stand suspended and Permittees shall cease grading the parcel. If on the thirtieth day after the order Permittees have not performed the act or acts so required, then the permit shall stand revoked, unless on or before the thirtieth day the Council extends the time for performance.

18. The City Engineer may order a review of this permit, the "Plan" and "Geotechnical Report" and performance of work for the purpose of modifying the permit or requiring remedial work, after hearing thereon, notice of which shall be given to Permittees ten (10) days prior to the date set for hearing. If the City Engineer determines at the hearing that modification and/or remedial work is required, then he may require a modification and/or order Permittees to perform

the remedial work, setting a time therefore of not more than thirty (30) days, which time may be reasonably extended. If Permittees fail to so comply, the City Engineer may order a suspension of the permit, suspension of work, or revocation of the permit. Permittees may within five (5) days after receipt of the order from the City Engineer file an appeal from the order with the City Manager. The City Manager shall within ten (10) days thereafter confirm, modify or revoke this order. Permittees may then file an appeal with the City Council within five (5) days after issuance of the order by the City Manager, and the hearing on the appeal shall be set by the City Clerk at the next regular meeting. The Council may confirm, modify or revoke this order.

19. This permit shall not become effective until executed by both the Permittees and the City Engineer.

20. This permit shall expire on the date set forth on Schedule 1, Line 7 and, if applicable, may be limited, or suspended, during the period from November 1 to May 1, in accordance with the provisions of chapter 15.08 of the South San Francisco Municipal Code, or its successors.

Dated: 11/28/12 , City Engineer

This permit is accepted by the undersigned who agree to comply with and be bound by the terms thereof, and this permit shall bind the Permittees, their assigns and successors in interest.

Date: 11-20-12.

SCHEDULE 1

1. GRADING PERMIT NO.

2. Permittees: AIS Property Owner: Mario Caimotto Grading Contractor: AIS

Address: 1070 Horizon Drive Ste A 131 Terminal Court
Fairfield CA 94533

3. Grading Site: 131 Terminal Court

3A. Earthwork Quantities: Cut: 600 Fill: 600 Import: 600

4A. Geotechnical Report: (Soils Report and Engineering Geology Report):

See attached letter from Conestoga Rovers Associates.

4B. Grading Plans:

See attached drawings

4C. Grading Specifications: All grading work and installation of drainage improvements shall be accomplished in accordance with the recommendations and specifications contained in the Geotechnical Report and grading plans referenced above and in accordance with direction of the soils engineer in the field.

5A. Haul Route: See attached route description

5B. Bond Amount: $ 10,000

6. Special Conditions (See Exhibit "A" to Schedule 1)

7. Expiration Date: _____

Description of Import and Export Haul Route: (131 Terminal Court)

Import - from Pilarcitos Quarry in Half Moon Bay to job site & reverse route

101N - So. Airport Blvd. exit - left on So. Airport Blvd. - Left on So. Airport Blvd. - Left on Produce Avenue - Right at Terminal Court

Terminal Ct. to Product Avenue - Right onto Product Avenue - 101S on ramp - I380W

Import & Export - from Brisbane Recycling to job site & reverse route

101S - So. Airport Blvd. exit - Left on Produce Avenue - Right at Terminal Court

Left on Produce Avenue from Terminal Ct. - stay on Produce, which becomes Airport Blvd. - 101N - Candlestick Park exit

Export - from Brisbane Recycling to job site & reverse route

101S - So. Airport Blvd. exit - Left on Produce Avenue - Right at Terminal Court

Left on Produce Avenue from Terminal Ct. - stay on Produce, which becomes Airport Blvd. - 101N - Hwy 80 East (Bay Bridge) to landfills (Pittsburg)

EXHIBIT "A"
GRADING PERMIT NO.

SPECIAL CONDITIONS - SCHEDULE 1, LINE 6

1. Permit does not constitute consent by City for the following:

   This Permit shall not be construed to mean that Permittees have acquired a right or consent from City and is not a grant or acknowledgment or a right, consent, or permission by City to:

   A. Perform any work or construct any improvements except the grading of earth and the installation of surface and subsurface drainage facilities.

   B. Interfere with, damage, take or destroy any property, interests in property, or established rights of others (including the public or any public agencies) having such interest in the subject grading site shown on the "plan" and/or adjacent properties.

   C. Construct, place, or maintain the fill, excavations, graded slopes, drainage systems, and appurtenant works in such a manner as to interfere with, damage, take or destroy any property, interests in property, or established rights of others (including the public and any public agencies) having such interests in the subject grading site shown on the "plan" and/or adjacent properties.

   D. Proceed with the excavation, grading, filling, slope construction, and appurtenant works without obtaining any and all rights, consents, and permits from private owners, public agencies and others having property interests, regulatory jurisdiction over, and/or rights in the subject grading site shown on the "plan", and the adjacent properties affected by the proposed work and fill.

   E. Perform further grading within a subdivision after completion of the grading specified in this permit. If further grading is proposed, a new Grading Permit may be required in accordance with Chapter 15.08 of the South San Francisco Municipal Code, or its successor, or this permit may be amended at the option of the City Engineer.

2. Other Permits and Consents:

   Permittees shall obtain from private owners, public agencies (including those with proprietary rights and regulatory jurisdiction), and others any and all rights, consents, and permits which may be necessary to proceed with and complete the grading and appurtenant works, and in obtaining same acts solely for its own purposes and not as an agent or representative of the City.

3. Interference with, or damage to, property, etc:

A. Permittees shall construct, place, and maintain the graded site and appurtenant works in such a manner as not to interfere with, damage, take, or destroy any property, interest in property or established rights of others (including the public and public agencies) having such interest in, or regulatory jurisdiction over, the subject grading site shown on the "plan" and adjacent properties.

B. Compliance with the terms of the Grading Ordinance and Permit conditions shall not be a defense in any action to abate any public or private nuisance arising from the work authorized by this permit.

4. All agreements with respect to grading between Permittees and other agencies and adjoining owners are to remain in effect for the duration of this permit.

5. Grading shall be performed in accordance with the provisions of this permit, the approved plans and the specifications and recommendations contained in the soils report(s) listed in Line A and B of Schedule 1 of this permit.

6. Any changes in the grading plans prior to completion of the work shall be in conformance with the Permittees' geotechnical consultant or civil engineer's revised recommendations, and shall be subject to review and approval by the City Engineer.

7. If, in the course of fulfilling their responsibility under the Grading Ordinance, the Permittees' geotechnical consultant or their civil engineer find that the work is not being done in conformance with the Grading Permit requirements or the approved plans, the discrepancies shall be reported immediately in writing to the City Engineer.

8. Grading, or the installation of structures within public rights-of-way or easements, is prohibited without first obtaining an encroachment permit from the City Engineer or his authorized agent in accordance with Chapter 13.04 of the South San Francisco Municipal Code, or its successor. The applicant must obtain a Building Permit from the City's Building Division for all retaining walls, sanitary sewers, utilities or any structures to be constructed within the grading site.

9. The general grading contractor shall not commence the work authorized by this permit within areas of the grading site requiring permits or approvals from other governmental agencies in order to perform the grading work within said areas (in accordance with the approved plans) without the Permittees having first obtained the necessary permit(s). Copies of these approvals shall be provided to the City Engineer for the City records. All areas of the grading site to which the Permittees do not have access approvals shall be marked in the field with a continuous fence at least three feet high in a manner acceptable to the City Engineer.

10. An extension of the time of this permit may be approved administratively by the City Engineer. An application for such extension must be submitted in writing no later than one month prior to the permit expiration date.

11. The Permittees, their contractors and consultants shall coordinate their activities with the City's representatives and consultants, the developer's contractors and sub-contractors, public utilities and City public works forces.

12. Issuing this permit does not constitute approval by the City of South San Francisco of the design and location of future structures, parking facilities, driveways, retaining walls, fences, landscaping, roadways, sewers, and utilities.

13. The Permittees are hereby advised that this Grading Permit does not authorize dredging or filling of the San Francisco Bay waters or areas designated as wetlands.

14. Maintenance and/or repair of the graded site and appurtenant works shall be the responsibility of the owners and/or their successors.

15. The Permittees hereby acknowledge that they will provide a commitment to take maximum geotechnical care and attention in the field performance of the grading and that they will correct any geotechnical problems which develop during construction at their expense.

16. The Contractor's grading schedule shall be submitted to the Permittees' geotechnical consultant, the City Engineer and the City's geotechnical consultant for review and comment before the commencement of grading.

17. No less than seven (7) days prior to the commencement of the grading authorized by this permit, the Permittees shall conduct a pre-grading conference to review conditions and implementation of this permit. The Permittees, their contractors and subcontractors, supervisors, foremen, equipment operators and consultants, and the City Engineer, his representatives, staff and consultants shall be in attendance at the pre-grading meeting.

18. The contractor shall notify the City Engineer forty-eight (48) hours prior to the start of this grading work.

19. One copy of the approved grading plans and specifications shall be kept on the site at all times during the progress of grading work.

20. The Permittees shall retain a licensed geotechnical engineer to monitor and inspect the fill and other grading at the site in accordance with the terms of this permit. At a minimum, inspection services shall be provided at a level that will permit the consultant to state that all grading and subsurface drainage work was performed in accordance with the requirements of the project soils and geotechnical reports and in accordance with their recommendations.

21. If the Permittees' geotechnical consultant and/or erosion control specialist of record are changed during the course of the work, the work shall be stopped until the replacement has agreed to accept responsibility within the area of the consultant's technical competence, for all work performed in accordance with this permit.

22. The Permittees' geotechnical consultant shall inspect the grading work to verify compliance with the approved plans and specifications and submit to the City Engineer during the period that grading is being accomplished: daily progress reports regarding grading work and weekly progress reports regarding adherence to the grading work schedule and a discussion of work completed to date.

23. All work is to be done under the supervision of the Soils Engineer, who shall prepare a final grading observation report and certify upon completion that all work has been done in accordance with their requirements. The Soils Engineer shall provide documentation verifying the adequacy of all imported fill materials and their lack of contamination by unacceptable levels of hazardous materials, as defined by Federal, State, and local regulations.

24. The Permittees hereby commit to the prompt correction of any geotechnical or grading problems which may develop during the construction at no expense to the City, its agents, employees, representatives or consultants.

25. The Permittee's civil engineer shall, upon completion of the grading, and prior to the owner receiving a Building Permit, submit a written report to the City Engineer, together with final, record drawing, grading and drainage plans, stating that all grading has been completed to the lines and grades shown on the approved Grading Plans. Said report and plans shall include data on pad elevations, inclination of cut and fill slopes and the location and grades of slope benches. Any variations from approved plans shall be noted along with recommendations for appropriate actions required to correct any significant deficiencies.

26. Prior to receiving a Building Permit for any structure within the grading site, the project soils engineer shall verify in writing that the grading and earthwork within the building pad area is complete and in conformance with the approved soils report and his recommendations. The Soil Engineer's lot pad certification(s) shall be submitted to the City Engineer for review and approval.

27. Permittee shall post a corporate surety bond in the amount shown on Line 5B of Schedule 1, as provided for in Chapter 15.08 of the South San Francisco Municipal Code, or its successor, to secure performance of the following conditions of the Grading Permit: Maintenance of adequate dust control measures, removal of soil, mud and other materials caused to overflow upon the public streets or obstruct the City storm drains, and remedial work necessary to cure or remove public nuisances caused by dangerous cuts or embankments made in the course of performing the grading work, and to indemnify the City in accordance with Municipal Code Section 13.04.160, or its successor, with respect to transportation of earth and fill material as provided in Paragraph 14 of this permit.

28. The Permittees shall provide 24 hours a day, 7 days a week maintenance of all graded or otherwise disturbed areas. The maintenance work shall include the control of dust, earth erosion and pollutants, the repair and cleaning of drainage and silt retention facilities, the

irrigation of erosion control plantings, and the repair of stockpiles, surcharge fills, slumps, and potentially hazardous conditions.

29. A regular maintenance program for unimproved graded areas shall be submitted to the City Engineer for review and approval prior to commencing grading work. The approved maintenance program shall be implemented by the developer's contractor, to the satisfaction of the City Engineer.

30. In locations where the grading plans indicate a retaining wall, a vertical cut may not be made until a Building Permit for the wall has been obtained and construction of the wall is to commence. In the event the Permittees or their subcontractors leave the grading work in an incomplete condition with dangerous cuts left standing, the City may take whatever measures are necessary to eliminate the hazards and charge the cost to the developer.

31. All exposed or finished banks or slopes of any fill or excavation adjacent to the Bay shall be protected from erosion by approved planting, hydro-seeding, cribbing, walls, terracing or other suitable method or combination found to be consistent with the requirements of the San Francisco Bay Conservation and Development Commission and the Corps of Engineers. Unprotected graded surfaces shall be planted. The Permittee's shall construct and install drainage facilities adequate to prevent erosion and conduct the accumulation of runoff of surface waters to an approved place of discharge.

32. Erosion mitigation measures shall be installed where necessary to control and minimize erosion on finished slopes as specified in the grading and winterization plans for the project. The erosion control and winterization improvements shall be continuously maintained by the property owner following the completion of the grading work.

33. Temporary sediment basins shall be used to control runoff and siltation during construction until slope erosion planting has been established. Accumulated silt and sediment shall be removed and used as topsoil for re-vegetation. If not needed for re-vegetation, the soil shall either be hauled off site or incorporated into the engineered fills as appropriate.

34. Adequate silt retention basins and debris catching devices shall be constructed at the entrance to all existing storm drains prior to grading operations to insure that winter rains will not cause mud from the freshly graded slopes to overflow into City streets, the San Francisco Bay or obstruct existing storm drains.

35. Adequate interceptor ditches shall be constructed at the top of all slopes to insure that storm water will not flow over the slopes and cause erosion.

36. All areas being graded, areas that have been disturbed and all on-site hauling roads shall be adequately sprinkled to prevent dust or sprayed with an effective dust palliative to prevent dust from being blown into the air and carried into the adjacent public streets or adjacent private property. Dust control shall be for 7 days a week and 24 hours a day.

37. All graded surfaces and materials, whether filled, excavated, transported or stockpiled, shall be wetted, protected, covered, or contained in such a manner as to prevent any nuisance from dust or spillage upon adjoining property or streets. Equipment and materials on the site shall be used in such a manner as to avoid excessive dust.

38. Public streets shall be cleaned, swept, and/or flushed each day during, and immediately after ceasing hauling operations, to the satisfaction of the City Engineer.

39. All graded areas shall be planted and fertilized as soon as practicable with a fast growing grass cover and continually irrigated until the grass cover has been established.

40. Grading and noise therefrom, including, but not limited to, vehicle maintenance and the warming of equipment motors, shall not be permitted except during the hours of 8:00 a.m. through 6:00 p.m., Monday through Friday. Neither grading nor hauling is permitted on Saturdays, Sundays or Holidays unless written permission is first obtained from the City Engineer.

41. The Permittees shall be continuously responsible for fencing around excavations of fills which would be hazardous without such fencing.

42. The Permittees shall fully implement the approved winterization plan prior to November 1 of each year that this permit remains in effect. Should circumstances arise that would prevent the implementation of the approved winterization plan prior to November 1, the Permittees shall submit a revised winterization plan prior to September 1 of each year for the review and approval of the City Engineer. The approved, revised, winterization plan shall be implemented prior to November 1 of that year.

43. The Permittees shall be responsible for maintaining all drainage ditches, drainage pipes and desilting basins during stormy weather and to remove accumulated silt from the desilting basins to insure their safe functioning under all conditions. In the event the Permittee or the contractor neglects to maintain the desilting basins or remove silt, which may cause the clogging of the storm drains, the City shall take whatever measures are necessary to eliminate the hazards and charge the cost to the Permittee.

44. The Permittees shall provide personnel and equipment at the grading site during storms to prevent incomplete work from endangering life or property.

45. All equipment used in grading operations shall meet spark arrester and fire fighting tool requirements as specified in the California Public Resources Code or required by the California Department of Forestry.

46. All earth hauling vehicles shall conform to California Highway Patrol vehicle safety standards. Vehicles found to not conform to these standards shall be removed from service until repaired or altered.

47. The hauling contractor shall completely cover its trucks with a tied down tarp so that no dust or dirt is blown off the trucks during transit. It should be understood that the trucks will not be overloaded and that all load requirements shall conform to State Highway Standards. The haul route shall be confined to official truck routes previously adopted by the City Council.

48. All earth hauling trucks shall have side and rear boards installed. Earth shall not exceed the height of the side and rear boards. All boards shall be maintained in good condition.

49. The Police Department reserves the right to randomly require earth hauling trucks to be weighed at a commercial weigh station.

50. Earth hauling trucks, whether loaded or unloaded, shall not enter or leave the site between the hours of 6:00 p.m. through 8:00 a.m. each week day unless alternate times are approved in writing by the City Engineer.

51. Revisions to the approved grading plans that are recommend by the project geotechnical engineer due to unforeseen field conditions, shall be immediately reported and explained in writing to the City Engineer.

CITY OF SOUTH SAN FRANCISCO
GRADING PERMIT APPLICATION

Please print or type:

1. (a) Ryan Harding, American Integrated Services
(Name of Applicant and Company)

(b) 1070 Horizon Dr. Suite A, Fairfield CA 94533
(Applicant's Business Address)

(c) _____

2. Mario Caimotto, 131 Terminal Court, South San Francisco. (650) 583-4886 (Owner) [current ~~Former~~ tenant is Olympian JV 1300 Industrial Rd. Ste 2 San Carlos CA ATTN: Janet Heikel]
(Name, Address, & Telephone No. of Grading Site Property Owner)

3. (a) American Integrated Services c/o Ryan Harding
1070 Horizon Dr. Suite A, Fairfield CA 94533
(Name and Address of Grading Contractor and Contact Person)

(b) 805-452-6434 888-423-6060
(Daytime Telephone No.) (24-hour Emergency Telephone No.)

4. Description and Location of Grading Site (include Assessor's Parcel No.):

131 Terminal Court. Work area near property entrance at former UST area. APN 015113210

5. Description and Purpose of Grading Work (continue on separate sheet if more space is needed):

Environmental excavation of hydrocarbon impacted soils per San Mateo County Health Dept.

6. Description of Proposed Import and Export Haul Routes (or attach map):

see attached routes

7. Earthwork Quantities: Cut: 600 C.Y.; Fill: 600 C.Y.

8. Proposed Expiration Date of Grading Permit (should not exceed Certificate of Liability Insurance expiration date): 1/31/13

9. Attachments:

a. Geotechnical Report (Soils Report with grading specifications and Engineering Geology report).

b. Grading Plan (designed by a Registered Civil Engineer if grading in excess of 5,000 C.Y.).

c. Certificates of Insurance insuring City in the amount of $1,500,000. (Worker's Compensation, Public Liability, Property Damage, and Contractual Insurance - refer to Condition #13 of the permit form).

d. Corporate Surety Bond (typically $50,000 or more, but may be reduced to $10,000 by the City Engineer for small projects with minor impacts).

e. Copy of a contract between the project soils engineer and/or the civil engineer and the applicant to provide inspection services and submit all progress reports, test results, a final report and grading certification in accordance with the requirements of the Grading Permit. The agreement must contain a provision specifying that the applicant's consulting Engineer(s) will indemnify and hold the City harmless due to his or her actions (refer to Condition #11 of the permit form).

f. Plan checking fee and grading permit inspection fee (refer to attached schedule) payable to the City of South San Francisco.

g. Drainage calculations for a 10 year design storm justifying size of the existing and proposed storm drainage facilities.

h. Winterization, dust, erosion and pollution control plan conforming to the A.B.A.G. Manual of Standards for Erosion and Sediment Control Measures, with sediment basin design calculations. Describe the "best management practices" to be used during and after construction to control pollution in the site's storm and construction water runoff.

i. Environmental Impact Report, certified Negative Declaration or Notice of Exemption for the project or a memorandum from the City's Planning Division stating that the project is C.E.Q.A. exempt.

j. Copy of the State Water Resources Control Board "General Construction Activity Storm Water Permit" for the site. (Applies to land disturbance operations within a total project area of five (5) acres or greater). Provide a copy of the site's "storm water pollution prevention plan".

HAULING PERMIT APPLICATION

EXHIBIT "A"
HAULING OF EXCAVATED EARTH
PERMIT NO. E12-0312

1. Conestoga-Rovers and Assoc. (Daniel Glaze-Project Coordinator)
5900 Hollis Street, Emeryville, CA 94608

(Name, Title, Business Name and Address of Applicant)

2. American Integrated Services
1070 Horizon Drive, Suite A Fairfield CA 94533
(Name and Address of Hauling Contractor)

3. 510-376-0657 (Tel. # of Applicant) 707-427-2234 (Tel. # of Hauling Contractor)

4. CA Bus Lic. #757133 To be applied for by vendor
(Contractor License No. and Business License No. of Hauling Firm)

5. Export: 600 Import 600
(Quantity of Earth to be Transported (in Cubic Yards)

6. Excavation Site Location: 131 Terminal Court, South San Francisco

7. Disposal Site Location: Potrero Hills Landfill, Suisun City, CA

8. Size and Description of Earth Hauling Trucks: End dumps or transfers

9. Description of Import and Export Haul Route: See attached

10. Proposed Date of Expiration for the Hauling Permit: 12/31/2012

11. Attach a map of the property to be graded showing existing and proposed elevations and limits of all areas to be excavated.

Instructions to Applicant and Standard Conditions:

1. File an original and two copies of this Hauling Permit application and all attachments.

2. Applicant shall provide all necessary public safety protection and protection of public and private property in the vicinity of the land to be excavated.

3. The hauling contractor shall either cover the earth hauling trucks or thoroughly sprinkle the earth material so that no dust is blown off the trucks during transit. All hauling trucks shall not be overloaded and all vehicles shall conform to State highway standards. Earth hauling vehicles shall be confined to the haul route approved by this permit and to official truck routes previously adopted by the City Council.

4. All earth hauling trucks shall have side and rear boards installed. Earth shall not exceed the height of the side and rear boards.

5. Public streets and private driveways shall be cleaned, swept, and/or flushed each day to the satisfaction of the City Engineer immediately after ceasing hauling operations.

6. Excavation and hauling shall not be permitted except during the hours of 8:00 a.m. through 6:00 p.m., Monday through Friday. Neither excavation not hauling is permitted on Saturdays, Sundays, or holidays unless written permission is first obtained from the City Engineer.

7. A bond or cash deposit of not less than $2,000 (in an amount to be determined by the City Engineer) shall be posted with the City before a Hauling Permit will be granted.

8. A non-refundable earth Hauling Permit fee of $100, or $.01 per cubic yard, whichever is greater, shall be paid to the City of South San Francisco before a Hauling Permit will be granted.

9. A separate Hauling Permit will be issued for each hauling project.

Application submitted by:

Date: 11/9/2012

Dan Glaze
Project Coordinator - CRA

PERMIT NO. E12-0312

HAULING OF EXCAVATED EARTH

HAULING earth or materials from the site in connection with the
Environmental contamination removal and restore to original conditions
131 Terminal Court, So. San Francisco CA 94080

1. Applicant or permittee shall file with the City Engineer a bond in the sum of two thousand dollars ($ 2,000) to indemnify the City of South San Francisco for any damage which may be caused to any sidewalk, street, or storm drain by reason of hauling said earth and debris.

2. Applicant or permittee shall remove from any sidewalk, street, or storm drain all earth or material which may be deposited or spilled on said areas in connection with the hauling operation, and the bond therefore required shall be in such form as to indemnify City for costs of removing same from said areas.

3. Applicant or permittee shall conduct the hauling operation over the routes and on the terms and conditions set forth below and attached hereto as Exhibit "A".

4. This permit shall expire on the 31 day of December 2012 ~~, 2006~~, unless extended in writing by the City Engineer. The City Engineer may revoke this permit for cause.

Analytical Report

Conestoga-Rovers & Associates	Client Project ID: #161558-141; 161558	Date Sampled: 12/10/12-12/13/12
5900 Hollis St, Suite A		Date Received: 12/14/12
	Client Contact: Dan Glaze	Date Reported: 12/21/12
Emeryville, CA 94608	Client P.O.:	Date Completed: 12/20/12

WorkOrder: 1212409

December 21, 2012

Dear Dan:

Enclosed within are:

1) The results of the **4** analyzed samples from your project: **#161558-141; 161558,**
2) QC data for the above samples, and
3) A copy of the chain of custody.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
McCampbell Analytical, Inc.

The analytical results relate only to the items tested.

All target compounds in the Method Blank of this extraction batch were ND less than the method RL with the following exceptions:
NONE

F2 = LCS recovery for this compound is outside of acceptance limits.

BATCH 73214 SUMMARY

Lab ID	Date Sampled	Date Extracted	Date Analyzed	Lab ID	Date Sampled	Date Extracted	Date Analyzed
1212409-001A	12/10/12 1:20 PM	12/14/12	12/18/12 4:41 PM	1212409-002A	12/13/12 1:25 PM	12/14/12	12/19/12 7:36 AM
1212409-003A	12/13/12 11:20 AM	12/14/12	12/20/12 7:29 AM	1212409-004A	12/13/12 11:15 AM	12/14/12	12/20/12 8:10 AM

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Laboratory extraction solvents such as methylene chloride and acetone may occasionally appear in the method blank at low levels.

APPENDIX E

COMPACTION REPORTS

Summary Report #1

December 17, 2012
Revised on January 14, 2013

American Integrated Services
Attn: Ryan Harding (email)

Job No: J8889

Job Name: CRA Excavation
~~121 Terminal Court~~ **131 Terminal Court*
South San Francisco, CA

Client Project #: 72067

December 12, 2012

Jake Hiner reported to Bill Burnette with AIS at the jobsite. Performed nuclear density testing for earthwork activities. At the time of arrival, the contractor had backfilled the south half of the excavation fill. The excavation is an area of contaminated soils which were removed and replaced with drain rock and quarry fines. The south half was ready for testing at the time of arrival. Contractor had placed and compacted about 4'of fill in an area of 60' x 40'. Performed (2) nuclear density tests at -1' below finish grade. Contractor provided (2) pot hole tests at -2.5 and -1.5. Tests did not appear to match the maximum density curve on record sampled by client. Collected sample, lab results are pending. Obtained (1) soil sample

Work observed was, to the best of Jake's knowledge, in conformance with approved plans, specifications and applicable standards of workmanship.

Steve Corona picked up (1) soil sample from the jobsite.

December 13, 2012

Jake Hiner reported to Ryan with AIS at the jobsite. Observed and performed nuclear density testing for earthwork activities. Contractors backfilled the north half of the excavation. Excavation was a result of the removal of contaminated soils. Depth of pit is 10' dimensions of fill is 40' x 20'. The first 2' of fill was ¾" drain rock. Intermediate fill is Stevens Creek quarry fines. Contractor backfilled the northwest portion of the excavation. Performed (4) nuclear density tests. Test results pending completion of laboratory maximum density. Obtained (1) soil sample.

Work observed was, to the best of Jake's knowledge, in conformance with approved plans, specifications and applicable standards of workmanship.

December 14, 2012

Jake Hiner reported to Ryan with AIS at the jobsite. Observed and performed nuclear density testing for earthwork activities. Contractor backfilled the northeast portion of the excavation. At the time of arrival, the northeast portion was 3' below finish subgrade. Fill area is 20' x 40' Stevens Creek quarry fines were used as backfill up to 1' below grade. Fill was compacted in 8' lifts with a sheep foot wheel attachment. Observed fill placement up to finish subgrade. Performed (3) nuclear density tests. All (3) test met or exceeded project specifications, contractor was informed.

Work observed was, to the best of Jake's knowledge, in conformance with approved plans, specifications and applicable standards of workmanship.

Steve Corona picked up (1) soil sample from the jobsite.

Laboratory test results are enclosed if testing was done during the period covered by this report.

Limitations: These inspections were performed in accordance with requirements, but please note this report shall not be relied upon by others, as acceptance or guarantee of the work. Even with diligent inspection techniques, the contractor is solely liable for defects or failures to adhere to the code.

Attn: Ryan Harding (email)
Revised on January 14, 2012

Job No: J8889

Job Name: CRA Excavation
~~121 Terminal Court~~ **131 Terminal Court*
South San Francisco, CA

Client Project #: 72067

December 19, 2012

John Sasser reported to the jobsite. Performed soils compaction testing and performed EG class II AB at parking area, running parallel to terminal court. Performed 3 inch place density tests selected by client. All tests met or exceeded compaction requirements. See attached. No samples taken.

Work observed was, to the best of John's knowledge, in conformance with approved plans, specifications and applicable standards of workmanship.

Laboratory test results are enclosed if testing was done during the period covered by this report.

Limitations: These inspections were performed in accordance with requirements, but please note this report shall not be relied upon by others, as acceptance or guarantee of the work. Even with diligent inspection techniques, the contractor is solely liable for defects or failures to adhere to the code.

1.0 INTRODUCTION

On behalf of Olympian, JV (Olympian), Conestoga-Rovers & Associates (CRA) has prepared this *Case Closure Request* for the property (Site) located at 131 Terminal Court, South San Francisco, California (see **Figures 1 and 2**). This report also includes the results of recent post-remediation groundwater sampling which was proposed in CRA's *Remedial Action Completion Report* dated February 4, 2013 and approved by San Mateo County Environmental Health Department, Groundwater Protection Program (GPP) in a letter dated March 6, 2013 (see Appendix A). Presented below are the groundwater sampling activities and results, conceptual site model, low-threat UST case closure evaluation, and recommendations.

2.0 POST-REMEDIATION GROUNDWATER SAMPLING

2.1 FIELD ACTIVITIES

The objective of the groundwater sampling activities were to confirm groundwater conditions following the remedial soil excavation activities that were conducted in December 2012. Grab groundwater samples were collected during the wet and dry seasons. Grab groundwater samples were collected from soil borings drilled within and down gradient of the former source area. Grab groundwater sampling locations are shown on **Figure 3**.

Personnel Present: CRA's Staff Tim Dias supervised the installation and sampling of the four borings. All soil boring and sampling activities were overseen by CRA Senior Geologist Ron Scheele, a California Professional Geologist.

Permits: San Mateo County Environmental Health Department issued subsurface drilling permits for both soil boring activities. Copies of the permits are included in Appendix B.

Drilling Company: Woodward Drilling (C57# 916085) of Rio Vista California performed the borehole clearance, drilling and sampling activities.

Drilling Date: Drilling and sampling activities were performed on March 19, 2013 and July 26, 2013.

Utility Clearance: CRA marked out the proposed boring locations with white paint and notified underground service alert (USA) to have the utilities marked out. To avoid damaging any potential subsurface utilities, each boring was drilled using a hand auger.

Drilling and Groundwater Sampling Procedures: Each boring was drilled using a hand auger to approximately 1 to 2 ft below first encountered groundwater. Upon reaching the target boring depth, a new ¾-inch, PVC temporary screen casing was lowered into each boring and a grab groundwater sample was collected using a clean disposable tubing connected to a peristaltic pump. Grab groundwater samples were decanted into the appropriate sampling containers, labeled, placed on ice and transported to the laboratory under chain-of-custody procedures.

Groundwater Depths: Saturated soil was encountered between approximately 6.0 to 8.0 ft bgs.

Groundwater Analyses: Grab groundwater samples were analyzed for TPHd by EPA Method SW8015B (with the Dawn Zemo Separation Method with silica gel cleanup), TPHg by EPA Method 8015Bm, and BTEX/MTBE by EPA Method SW8021B by McCampbell Analytical of Pittsburg, CA, a state-certified laboratory. The laboratory analytical reports are included in Appendix C.

Geotracker: All required data was uploaded to the California State Water Resources Control Board's Geotracker database.

Waste Profiling and Disposal: Soil cuttings and waste water generated during drilling activities were temporarily stored onsite in DOT-approved 55-gallon drums. The waste was sampled and profiled into Potrero Hills Landfill, located in Suisun, California, for disposal. The waste manifest is included in Appendix D.

2.2 GRAB GROUNDWATER SAMPLING RESULTS

During the first groundwater sampling event on March 19, 2013, borings B-49 and B-50 were drilled and sampled. Boring B-49 was drilled in the center of the Site (former source area), and a grab groundwater sample was collected from the backfill material. Boring B-50 was drilled in the northeast edge of the Site, and a grab groundwater sample was collected from the native soil. Hydrocarbons in groundwater were detected in B-49 at the following concentrations: total petroleum hydrocarbon as diesel (TPHd) at 53 micrograms per liter (µg/L), total petroleum hydrocarbon as gasoline (TPHg) at 110 µg/L, and benzene at 19 µg/L and ethylbenzene at 0.64 µg/L. No toluene, xylenes

or MTBE were detected. Hydrocarbons in groundwater were detected in B-50 at the following concentrations: TPHd at 3,800 µg/L, TPHg at 36,000 µg/L, benzene at 590 µg/L, toluene at 2,100 µg/L, ethylbenzene at 670 µg/L, and xylenes at 3,400 µg/L. No MTBE was detected above the elevated laboratory reporting limits.

During the second groundwater sampling event on July 26, 2013, borings B-53 and B-54 were drilled and sampled. Boring B-53 was drilled in the center of the Site (former source area) and a grab groundwater sample was collected from the backfill material. Boring B-54 was also drilled in the northeast edge of the Site and a grab groundwater sample was collected from the native soil. Hydrocarbons in groundwater were detected in B-53 at the following concentrations: TPHd at 62 µg/L, TPHg at 50 µg/L, benzene at 5.5 µg/L and methyl tertiary butyl ether (MTBE) at 11 µg/L. No toluene, ethylbenzene or xylenes were detected. Hydrocarbons in groundwater were detected in B-54 at the following concentrations: TPHd at 4,500 µg/L, TPHg at 51,000 µg/L, benzene at 2,800 µg/L, toluene at 7,700 µg/L, ethylbenzene at 1,300 µg/L, and xylenes at 6,800 µg/L. No MTBE was detected above the elevated laboratory reporting limits.

Note that all grab groundwater samples were turbid and contained greater than 1% by volume of suspended sediments, particularly samples B-50 and B-54 which were collected from the native soils. Consequently, the dissolved-phase TPHg and benzene concentrations in samples collected from borings B-50 and B-54 are likely less than reported. Tabulated results are included on **Table 1** and shown on **Figure 3**.

3.0 CONCEPTUAL SITE MODEL

3.1 SITE BACKGROUND

3.1.1 SITE DESCRIPTION

The Site is located in a commercial/industrial area of South San Francisco at the intersection of Terminal Court and Produce Avenue. The property adjoins the Golden Gate Produce Terminal to the west and south, and the Park 'N' Fly parking lot to the east. The Bayshore Freeway, (California State Highway 101) is located approximately 200 feet (ft) east of the Site. The Site topography is relatively flat and is approximately 6 feet above mean sea level (ft msl).

3.1.2 SITE HISTORY

The property is owned by Golden Gate Produce. In 1982, the property was developed into a commercial cardlock fueling facility and leased to the Olympian Oil Company (Olympian). The facility consisted of two dispenser islands, two diesel underground storage tanks (USTs), and one gasoline UST. Olympian operated the commercial cardlock fueling facility until July 2002 when the facility was subleased leased to Nella Oil Company (Nella). Nella operated the commercial cardlock fueling facility until September 2012, at which point the UST system was removed.

3.2 PREVIOUS INVESTIGATIONS

Below is the chronology of previous site assessment, feasibility testing and remedial activities at the site. Historical soil analytical data are presented in **Table 2** and historical groundwater monitoring and analytical data are presented in **Table 3**.

***October 1998 Trench Sampling*:** During the product piping upgrade activities in October 1998, TEC Accutite (TEC) collected soil samples T-1 through T-3 from the piping trench at approximately 2.5 ft. bgs. TPHg, TPHd, benzene, and MTBE were detected in the soil at maximum concentrations of 7,600 milligrams per kilogram (mg/kg) TPHd; 2,400 mg/kg TPHg; 1 mg/kg benzene; and 9 mg/kg MTBE.

October 1999 Soil and Groundwater Investigation: To assess the subsurface condition, TEC advanced nine onsite soil borings (B-1 through B-9) and collected soil and grab groundwater samples. Maximum soil concentrations were detected at 280 mg/kg TPHd in boring B-2 at 4 ft bgs; 16 mg/kg TPHg in boring B-3 at 4 ft bgs, 0.063 mg/kg benzene in boring B-3 at 4 ft bgs; and 0.84 mg/kg MTBE in boring B-6 at 4 ft bgs. Maximum groundwater concentrations were detected in boring B-3 at 8,800 µg/L TPHd, 21,000 µg/L TPHg, and 1,200 µg/L benzene.

***March 2000 Monitoring Well Installations*:** On March 17, 2000, TEC drilled five soil borings (B-10 through B-14), and installed five monitoring wells (MW-1 to MW-5). Maximum soil concentrations of 780 mg/kg TPHg and 0.79 mg/kg benzene were detected in boring B-11 at 9 ft bgs. Maximum groundwater concentrations were detected in boring B-11 at 69 µg/L TPHd, 16,000 µg/L TPHg, and 850 µg/L benzene. No MTBE was detected above laboratory reporting limits in any of the groundwater samples.

***July 2001 Monitoring Well Installations*:** On July 2, 2001, TEC installed three groundwater monitoring wells (MW-6 through MW-8) to determine the down-gradient extent of the groundwater plume. No petroleum hydrocarbons were detected above laboratory reporting limits in soil. TPHd and MTBE were detected in groundwater at a maximum concentration of 700 µg/L in well MW-8, and 10 µg/L in well MW-6, respectively. No TPHg or benzene was detected in groundwater.

October 2002 Risk Assessment: On October 14, 2002, TEC submitted the *Impact Evaluation of the Subsurface Utilities as Preferential Pathway and Risk Assessment of the Impact of Groundwater Petroleum Hydrocarbons on Indoor Air*. TEC concluded and recommended the following: the benzene groundwater plume is limited onsite, near monitoring well MW-1, and the nearest utility lines on Terminal Court do not appear to impact the plume's path.

February 2003 Feasibility Study: On February 4, 2003, TEC submitted the *Feasibility Study for Groundwater Remediation*. TEC recommended in-situ groundwater bioremediation, specifically oxygen release compound (ORC) injections.

April 2003 Treatability Study Workplan: On April 10, 2003, TEC submitted the *Treatability Study Workplan for Groundwater Remediation* justifying the implementation of ORC injections, which was subsequently approved by SMCHD in a letter dated July 22, 2003.

October 2003 ORC Injections: On October 16, 2003, TEC oversaw the drilling of 16 direct-push soil borings (A through P) by Vironex to be used as ORC injection points. Borings A through E were advanced to 10 ft bgs, and borings F through P were advanced to 8 ft bgs. A 1,600 square foot treatment area consisting of 16 points on 10 foot spacing was used to inject 930 pounds of oxygen releasing compound (ORC) in the vicinity of MW-1. The ORC remedial technique proved ineffective. The event is summarized in TEC's November 10, 2004 *Remedial Action Report*.

July 2005 Site Dual-Phase Extraction (DPE): The Site was subsequently transferred to a new environmental consultant Ecologics. Ecologics performed interim remedial activities consisting of dual-phase extraction (DPE) at the Site. Insufficient documentation is available to evaluate the DPE activities, but Ecologics concluded that DPE remediation was ineffective.

May 2006 Remedial Action Workplan: On May 1, 2006, Ecologics submitted a workplan which proposed excavating the impacted soil in the vicinity of well MW-1.

August 2006 Consultant Change: In August 2006, Cambria Environmental Technology, Inc. (Cambria) was retained as the environmental consultant for the Site. Cambria was subsequently acquired by CRA in 2007.

September 2007 Site Assessment: In September 2007, CRA supervised the soil gas sampling from three locations and a grab groundwater sampling from soil boring B-15. Due to elevated hydrocarbon concentrations, CRA recommended that a feasibility study be conducted to determine the most cost effective way to remediate the hydrocarbons remaining at the Site. Details are documented in CRA's *Site Assessment Report* dated May 30, 2008.

May 2010 Site Assessment: In May 2010, CRA supervised the drilling of 10 soil borings (B-16 through B-25) to delineate the extent of hydrocarbons around the fuel system. Results indicated that elevated hydrocarbon concentrations were present in soil primarily northwest of the northern most dispenser island. Elevated hydrocarbon concentrations (gasoline and diesel) were detected primarily between 2.5 and 5.0 ft bgs, and correlated with the fluctuations of the shallow groundwater table. The report concluded that additional investigation was needed to delineate the extent of the secondary source of hydrocarbons. Details are documented in CRA's *Site Assessment Report* dated May 27, 2010.

May 2012 Subsurface Investigation: In May 2012, CRA supervised the drilling of 23 soil borings (B-26 through B-48) to further delineate the horizontal and vertical extent of onsite hydrocarbon-impacted soil to facilitate planning of a proposed remedial soil excavation. Details are documented in CRA's *Subsurface Investigation and Remedial Action Plan* dated July 25, 2012.

August 2012 Well Destruction: In August 2012, CRA oversaw the destruction of seven groundwater monitoring wells (MW-1, MW-2, MW-3, MW-5, MW-6, MW-7 and MW-8). Details of the well destruction activities are documented in CRA's *Remedial Action Completion Report* dated February 4, 2013.

September 2012 Fuel System Removal: In October 2012, Nella removed their fueling system at the Site. One gasoline and two diesel USTs, associated piping and dispensers were removed and disposed of. The UST pits and pipe trenches were backfilled with clean imported fill and asphalt surface restored. Details of the removal activities are documented in Blue Rock Environmental Inc.'s report titled *UST System Removal Sampling Report* dated October 23, 2012.

December 2012 Remedial Soil Excavation: In December 2012, CRA oversaw the over-excavation of 789 cubic yards of hydrocarbon-impacted soil from the Site. An area of approximately 3,209 square feet was excavated to depths ranging from 6 to 10 ft bgs (see **Figure 4**). The excavation was backfilled with clean imported fill and asphalt surface restored. Details of the removal activities are documented in CRA's *Remedial Action Completion Report* dated February 4, 2013.

Quarterly Monitoring: Quarterly groundwater monitoring and sampling of seven wells (MW-1 through MW-3, MW-5 through MW-8) was performed at the Site from April 2000 through March 2012, prior to their destruction. Details of all historical groundwater monitoring and sampling are presented in CRA's *Groundwater Monitoring Report-Annual 2012*, dated April 5, 2012.

3.3 SOURCE OF CONTAMINATION

The chemicals of concern (COC) currently identified at the Site include TPHd, TPHg, BTEX, and MTBE in both soil and groundwater. The petroleum hydrocarbons resulted from a gasoline release from former USTs. The volume and timing of the petroleum hydrocarbon release is unknown although evidence of a recent release was observed during removal of the fuel lines in October 2012.

3.4 SITE CHARACTERIZATION

3.4.1 GEOLOGY

The Site is located in the Coast Range Geomorphic Province of California. According to the geologic map by Jennings and Burnett from 1961, the general vicinity is underlain by unconsolidated artificial fill primarily consisting of clayey fine sand, silt, clay, rock fragments, and organic material underlain by Quaternary alluvium and dune deposits. Bedrock in the area is primarily Mesozoic ultrabasic rocks, including serpentine.

The soil beneath the Site generally consists of sandy gravel fill to 3.0 feet below ground surface (ft bgs), interbedded clayey sand, sand and silty clay to approximately 9.0 ft bgs, underlain by dark grey, low estimated permeability, silty clay ("Bay Muds") to a total explored depth of 18 ft bgs.

3.4.2 HYDROGEOLOGY

According to the Department of Water Resources, Bulletin 118 from 2004, the Site is located within the South San Francisco Groundwater Basin. Shallow groundwater in the vicinity is considered of poor quality (high total dissolved solids) and of limited yield. Total dissolved solids were measured at 19,524 parts per million in a groundwater sample collected from MW-3 on July 13, 2001. Shallow groundwater beneath the Site typically ranges between 1 to 5 ft bgs. The groundwater flow direction is consistently towards the east northeast, with a typical gradient of approximately 0.02 ft per foot.

3.4.3 HYDROCARBON DISTRIBUTION IN SOIL

Historically, the highest hydrocarbon concentrations in soil have been detected between and northwest of the former dispenser islands and within the top 5 ft of soil. In 2012, a remedial soil excavation of this source area removed a majority of the hydrocarbon mass beneath the site. Little to no hydrocarbons were detected in the four confirmation soil samples collected along the west and north edges of the excavation (see **Figure 4**).

3.4.4 HYDROCARBON DISTRIBUTION IN GROUNDWATER

Historically, the highest hydrocarbon concentrations in groundwater have been detected in a source area located northwest of the former dispenser islands; the maximum benzene concentration was detected at 6,800 µg/L in boring B-18. In 2012, a remedial soil excavation of this source area removed a majority of the hydrocarbon mass that was leaching into shallow groundwater. In 2013, post-remediation groundwater sampling in the former source area (borings B-49 and B-53) showed a maximum benzene concentration of 19 µg/L. Post-remediation groundwater sampling downgradient of the former source area (borings B-50 and B-54) showed a maximum benzene concentration of 2,800 µg/L. As discussed above in Section 2.0, dissolved-phase benzene concentrations detected down gradient of the former source area were affected by a high amount of the suspended sediments in the grab groundwater sample, and therefore are likely less than reported.

3.5 REMEDIATION STATUS

In October 2003, a 1,600 square foot treatment area in the vicinity of MW-1 was injected with 930 pounds of ORC.

In September 2012, approximately 70 cubic yards of hydrocarbon-impacted soil was excavated during removal of the former UST system. The UST pits and pipe trenches were backfilled with clean imported fill.

In December 2012, approximately 789 cubic yards of hydrocarbon-impacted soil were excavated during a remedial soil excavation. The remedial excavation encompassed an area of approximately 3,209 square feet with depths ranging from 6 to 10 ft bgs (see **Figure 4**). The excavation was backfilled with clean imported fill and asphalt surface restored.

3.6 WELL AND SENSITIVE RECEPTOR SURVEY

3.6.1 DESIGNATED BENEFICIAL GROUNDWATER USE

The Site is located within the Westside D Groundwater Basin. The Regional Water Quality Control Board designates groundwater in the Westside D Groundwater Basin as beneficial for municipal and industrial and process uses and potentially beneficial for agricultural uses. However, as discussed above in Section 3.4.2, TDS concentrations in shallow groundwater beneath the site exceed the Basin Plan limit above which groundwater cannot be reasonably expected to supply a public water system. Based on this, groundwater beneath the site is inappropriate for drinking water use.

3.6.2 WELL AND SURFACE WATER SURVEY RESULTS

No water supply wells or surface water bodies exist within 1,000 ft radius of the Site. The nearest surface water is concrete-lined Colma Creek located approximately 0.25 miles northeast of the Site. The San Francisco Bay is approximately 1 mile east of the Site.

3.6.3 PERFERENTIAL FLOW PATHWAYS

In March 2007, two borings (B-12 and B-13) drilled next to the offsite water line confirmed that the water line trench was not acting as a preferential pathway for hydrocarbon migration. In September 2007, a boring (B-15) drilled next to the onsite storm sewer confirmed that the storm sewer trench was not acting as a preferential pathway for hydrocarbon migration. In May 2010, grab groundwater sampling from

additional borings (B-16 through B-25) confirmed that the hydrocarbon plume was primarily onsite and subsurface utilities did not appear to be acting preferential pathways.

3.6.4 LIKELIHOOD OF IMPACT TO WELLS

No water supply wells were identified within a 1,000 ft radius of the Site, therefore there is no likelihood of there being an impact to water supply wells.

3.6.5 LIKELIHOOD OF IMPACT TO SURFACE WATER

No surface water receptors were identified within a quarter mile radius of the Site, there is no likelihood of there being any impact to surface water.

3.7 RISK ASSESSMENT

3.7.1 CONCEPTUAL SITE EXPOSURE MODEL

This Site consists of a paved vacant lot. The fueling facility has been removed and source areas excavated. Residual levels of gasoline- and diesel-range hydrocarbons remain in shallow soil and groundwater beneath the Site.

3.7.2 EXPOSURE PATHWAYS - ONSITE HUMAN RECEPTORS

No complete exposure pathways were identified at the Site. The Site is paved therefore there is not a complete exposure pathway for contact with surficial soil. There are no nearby drinking water wells and therefore the ingestion of impacted groundwater is not likely. There are no buildings onsite and the entire Site is paved therefore inhalation of hydrocarbon vapors in indoor or outdoor air is not a complete exposure pathway. As a result, the residual hydrocarbons pose little threat to human receptors.

3.7.3 EXPOSURE PATHWAYS - OFFSITE HUMAN RECEPTORS

The Site is located in a developed commercial/industrial area and is bounded to the north by Terminal Court, to the west, southwest, and south by Golden Gate Produce's Administrative building, locking docking and associated parking areas, and to the east

by a long term airport parking lot. No hospitals, schools, child daycare centers, or residential senior care centers within a 1,000 ft radius of the Site (Google, 2013). As a result, there does not appear to be any potential exposure to the offsite sensitive receptors.

3.7.4 IDENTIFIED HUMAN EXCEEDANCES

Based on the lack of complete onsite exposure pathways and lack of offsite sensitive receptors, no human exceedances were identified.

3.7.5 IDENTIFIED ECOLOGICAL EXCEEDANCES

Based on the low likelihood of there being any impact to surface water, an ecological risk assessment has not been performed and therefore no ecological exceedances have been identified.

4.0 LOW-THREAT UST CASE CLOSURE EVALUATION

The Site conditions were evaluated against the general criteria and media-specific criteria of the Low-Threat UST Case Closure Policy (LTCP). A written evaluation of each criteria is provided below and a completed LTCP Checklist is provided in Appendix E.

4.1 GENERAL CRITERIA REQUIREMENTS

The Site meets all of LTCP's eight general criteria. Provided below is a brief synopsis of how the listed general criteria requirements of the LTCP have been satisfied at the Site.

a. *The unauthorized release is located within the service area of a public water system;* **Satisfied**: The Site and surrounding properties are within a public water system service area provided by the California Water Service Company of San Jose California.

b. *The unauthorized release consists only of petroleum;*

   Satisfied: The Site's unauthorized release was identified as a gasoline and diesel fuel release related to the cardlock fueling facility.

c. *The unauthorized ("primary") release from the UST system has been stopped*;

Satisfied: The primary release was related to a release the former UST system which was removed from the Site in 2012. As a result, the Site's unauthorized primary release has been stopped.

d. *Free product has been removed to the maximum extent practicable*;

Satisfied: SPH has never been observed at the Site and a remedial excavation encompassing a large portion of the Site has removed the hydrocarbon-impacted soil.

e. *A conceptual site model has been developed*;

Satisfied: A conceptual site model has been completed by CRA and is summarized above in Section 3.0.

f. *Secondary source removal has been addressed*,

Satisfied: A remedial excavation has removed the hydrocarbon-impacted soil associated with the secondary source area.

g. *Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code section 25296.15.*

Satisfied: Soil and groundwater have been tested for MTBE and the results uploaded to Geotracker. MTBE in groundwater was most recently analyzed on July 26, 2013 where a maximum MTBE concentration of 11 µg/L was detected in B-53.

h. *A "nuisance" as defined by Water Code section 13050 does not exist at the site.*

Satisfied: Water Code section 13050 defines "nuisance" as anything which meets **all** of the following requirements:

(1) Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with comfortable enjoyment of the property

(2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; and

(3) Occurs during, or as result of, the treatment or disposal of wastes.

Based on the existing Site conditions and the previous environmental site assessment work performed at the Site, (which is summarized in the conceptual site model of this report), a nuisance meeting the three criteria listed above does not exist at the Site

4.2 MEDIA-SPECIFIC CRITERIA REQUIRMENTS

Provided below is a brief synopsis of how the media-specific criteria requirements of the LTCP have been satisfied at the Site.

4.2.1 GROUNDWATER-SPECIFIC CRITERIA

It is a fundamental tenet of the LTCP that if the closure criteria described in the policy are satisfied at a release site, WQOs will be attained through natural attenuation within a reasonable amount of time, prior to the need for use of any affected groundwater. If a site has groundwater with a designated beneficial use which is affected by an unauthorized release, to satisfy the media specific criteria for groundwater stated in the LTCP, the contaminant plume that exceeds WQOs must be stable or decreasing in areal extent and meet all of the additional characteristics of one of the five classes of sites listed in the draft policy. The Site falls into the LTCP's groundwater-specific criteria Class 2. The rationale for meeting the three requirements of Class 2 is provided below:

(2a) *The contaminant plume that exceeds water quality objectives is less than 250 feet in length.*
Satisfied: Prior to the remedial excavation in 2012,TPHd, TPHg, benzene and MTBE plumes were shown to be primarily onsite and extending less than 250 ft in length. (See CRA's *Site Assessment Report* dated May 27, 2010). The plumes were delineated in all directions and defined downgradient of the source area by monitoring well MW-8 and grab groundwater samples from borings B-12, B-13, B-14, and B-15. Historically, stable to decreasing benzene concentrations have been detected in only two onsite wells (MW-1 and MW-2). The area around wells MW-1 and MW-2 was over-excavated in 2012.

(2b) *There is no free product.*
Satisfied: No SPH has been observed in any of the Site wells. Thus, the requirement that there is no free product has been satisfied.

(2c) *The nearest existing water supply well or surface water body is greater than 1,000ft from the defined plume boundary.*
Satisfied: No water supply wells or surface water bodies have been identified within a 1,000 ft radius of the Site. The nearest surface water is concrete-lined Colma Creek located approximately 0.25 miles (1,320 ft) northeast of the Site.

4.2.2 PETROLEUM VAPOR INTRUSION TO INDOOR AIR

The Site is vacant with no onsite facilities or buildings, so there is no indoor inhalation health risk. In addition, a large portion of the Site was over excavated so there is little risk of vapor intrusion to any potential Site redevelopment.

4.2.3 DIRECT CONTACT AND OUTDOOR AIR EXPOSURE

The Site is vacant and paved so there is no likelihood of direct contact to soil or outdoor air exposure from soil. Hydrocarbon concentrations in excavation confirmation samples collected from shallow soil (6 to10 ft bgs) were below the criteria presented in Table 1 of the LTCP.

The highest benzene concentration in shallow soil was detected at 0.016 mg/kg in confirmation sample EX3-10 at 10 ft bgs. Benzene is below both the commercial/industrial and residential thresholds outlined in Table 1 of the LTCP.

The highest ethylbenzene concentration in shallow soil was detected at 0.047 mg/kg in confirmation soil sample EX2-6 at 6 ft bgs. Ethylbenzene is below both the commercial/industrial and residential thresholds outlined in Table 1 of the LTCP.

The highest naphthalene concentration in shallow soil was detected at 0.040 mg/kg in confirmation sample EX2-6 at 6 ft bgs. Naphthalene is below both the commercial/industrial and residential thresholds outlined in Table 1 of the LTCP.

Based on the low levels of benzene, ethylbenzene and naphthalene, the Site meets the low-threat media-specific criteria related to direct contact and outdoor air exposure as they relate to the residual hydrocarbons in shallow soils underlying the Site.

5.0 RECOMMENDATIONS

Based on our review, Site conditions meet the general and media-specific criteria established in the LTCP, and therefore pose a low threat to human health, safety, and the environment, as well as satisfy the case closure requirements of Health and Safety Code section 25296.10 and Resolution 92-49 that requires that cleanup goals be met within a reasonable time frame. Therefore, on behalf of Olympian JV, CRA respectfully requests environmental case closure.
